into the Prosecution, that *Gallus*, to prevent being sent into Banishment, threw himself upon his Sword, and died on the Spot. The Zeal shewn by the Senate upon this Occasion was so grateful to the Emperor, that he returned them his Thanks for it; and it is observed, that this *Cornelius Gallus* and *Sabvidianus Rufus* were the only Persons given up by *Augustus* to the Severity of the Laws during his whole Reign; and it is very possible, that the former, in some measure, met with his Fate to gratify the *Egyptians* upon their first becoming Subjects to *Rome*, and to whom he had rendered himself hateful.

5. *Publius Petronius* was made Governor of *Egypt* in the Year before *Christ* 26 and, in the Year after, *Augustus* formed a Design, which very plainly shews how far the *Indian Trade* had already made an Impression upon his Mind. He had been informed, that the Southern *Arabians*, that is, the *Arabians*, who inhabited the Side of the Gulph opposite to *Egypt*, were a Nation very rich in Gold, Silver, and precious Stones: He, therefore, determined either to make them Friends to his Government, or to bring them under Subjection, by which means two very desirable Ends would have been answered; for, in the first place, a very rich Commerce, and very commodious, would be secured to his new Subjects; and next, he flattered himself there would be such Discoveries made, as might enable him to extend either his Conquests or his Trade on that Side much farther. As this Scheme of his was really of great Importance, so the Means he took to have it executed were exceedingly well contrived, and plainly shew how much he had studied it. He knew that the Thing was difficult in itself, and that, unless it was conducted by Persons who were well acquainted in the Country, it would certainly miscarry. He, therefore, directed *Herod*, King of *Judea*, who had been always his fast Friend, to assist in the Execution of the Project; and gave the like Orders to an *Arabian Prince*, whose Dominions bordered on those Nations that were to be affected by this Project, which rendered his Assistance of the utmost Importance.

6. *Gallus*, a Roman of the Equestrian Order, was the General sent on this Expedition, for which *Augustus* furnished him with ten thousand of the Allies; to these were added five hundred Men from *Herod* above-mentioned, and a thousand more that were brought him by *Sylleus* from *Obodas*, King of the *Nabatean Arabs*. This *Obodas*, had succeeded *Malchus* in the Kingdom, and *Sylleus* was his chief Minister, and a Person of great Craft, Vigour and Application; He, knowing the Country, undertook to be *Gallus's* Guide in this Expedition, and thereby made it miscarry by betraying him in it. It was proposed to march through the Country of the *Nabateans*, and from thence to enter on this Expedition; but *Sylleus* falsely informing *Gallus*, that there was no safe Passage thither by Land, thus put him on building a Fleet to pass thither by Sea; and therefore, having provided an hundred and thirty Transports at *Cleopatra's*, a Port at the Bottom of the *Arabian Gulph*, or *Red Sea*, he there put his Army on board them, and sailed to *Luccome*, a Port of the *Nabateans*, lying on the Eastern Side of that Sea: This being a very dangerous Navigation, by reason of the many Rocks and Shoals that are in that Part of the *Arabian Gulph* and *Sylleus* piloting him the worst Way through it, he was fifteen Days in the Passage, and lost several of his Ships in it; and when he was landed, all his Army falling sick of a Disease common in that Country, he was forced to lie by all the remaining Part of the Summer, and the Winter following to wait their Recovery.

We have all these Circumstances from *Strabo*, who was the intimate Friend of *Gallus*, and must, therefore have been perfectly well acquainted with every thing relating to this Expedition; and it is his Observation, that tho' *Obodas* was very hearty in this Affair, yet leaving it, as it was too much the Custom of the *Arabian Princes*, to his Minister, he ventured upon these extraordinary Measures, with a View, as our Author conjectures, to his own private

Advantage; for his Design was, that the *Romans* should conquer a great Part of the Country, but with such Difficulty, and under such Disadvantages, that they might be weary of keeping it, and that so it might, with the rest of his Master's Dominions, fall into his Hands; for he had already projected the Poisoning of King *Obodas*, which he afterwards executed. It is, also, worthy of Observation, that this Disease, which carried off such Numbers of the *Romans*, was a Swelling in their Gums, their Thighs, and their Legs, or, in plain *English*, the Scurvy. In the Beginning of the Spring, when his Army had recovered their Health and Spirits, *Gallus* continued his March, but through such Roads, as made it absolutely necessary to carry a Supply of Water on the Backs of Camels, which was another Contrivance of *Sylleus*, who, if he pleased, might have shewn them a much easier and shorter Passage.

After a tedious March of many Days, they arrived in the Country of *Arata*, in the Neighbourhood of *Obodas*, who came thither to meet the *Roman General*, treated him with great Kindness, and made him many Presents. They made, from thence, another fatiguing March of fifty Days, through a sandy and desert Country, belonging to a King whose Name was *Sabus*; and then came into the Country of the *Agrarians*, the chief City of which they took; and in this Country they found great Relief, being in itself very fruitful and pleasant, and inhabited by a People who were naturally peaceable. Continuing their March for six Days, they came to a River, where, for the first time, they saw an Enemy; for, the neighbouring Nations, having heard of their Approach, assembled to stop their Passage; a Battle ensued, in which the *Arabians* were routed, or rather slaughtered; for here were ten thousand of them killed, with the Loss of no more than two *Romans*: The *Barbarians*, indeed, were armed with Lances, Swords, Bows and Slings; but they were naturally a timorous People, and made but poor Use of their Weapons. They took soon after the City of *Asca*, the King having abandoned it.

Thence they marched to *Atrilla*, which they took without any Trouble; and, making it a Place of Arms, they provided themselves there with Corn, and other Necessaries. Thence they moved on to *Marfhas*, a City of the *Ramanitanians*, not far from *Ilafarus*, which Place they besieged for six Days, and were then obliged to decamp for want of Water. The Treachery of the Guides being by this Time fully detected, they took another Road in their Return, and, in the Space of sixty Days, reached the Port of *Nagra* on the *Arabian Gulph*, though they had been six Months in penetrating into that Part of the Country, from which, without any great Difficulty, they returned in two. There they again embarked, and in eleven Days, and without any Accident, arrived safely at *Myos Hormos*: From thence they continued their March to *Coptos*, and so back to *Alexandria*.

Ælius Gallus brought home with him, after two Years Absence, but a small Part of his Army, having lost the rest, not in Battle, but by Hunger, Fatigue, Sickness, and the Hardships they endured; for, in the whole Expedition, there were no more than seven fell by the Sword. After all, there was but very little gained by all this Labour, either in point of Conquest or Discovery; which was absolutely owing to the treacherous Arts of *Sylleus* before mentioned, who, being at *Rome* some Years afterwards, and there charged with these and other Offences, and fully convicted, suffered an insidious Death, the just Reward of his superlative Wickedness. Yet, as unsuccessful as this Enterprize proved, it was undoubtedly a well laid Design; and, if it had taken Effect, must have contributed greatly to the opening a free Commerce throughout the whole Gulph, from the City *Arfinoe* to the City of *Ptolemais*; and, as *Strabo* likewise suggests, it would have afforded a short and easy Passage across the Straights of *Babel-Mandel*, to the Region of the *Troglodytes*; the Reduction of which must have been very advantageous, because, as we shall

¹ *Dion. Cassius*, lib. liii. p. 512. *Sueton in Augusto*, c. 66. The learned *Casaubon* has confounded in his Notes upon *Strabo* this *Cornelius*, the Person of *Strabo*, and himself an excellent Poet, with *Ælius Gallus*, of whom we are to speak immediately; and, indeed, the Mistake was easy, considering they were of the same Name, flourished at the same time, and were both Prefects of *Egypt*. ² *Jeseph. Antiq. Jud. lib. xii. c. 12.* ³ *Strabo*, lib. xvi. p. 780. ⁴ *Dion. Cassius*, lib. liii. ⁵ *Strabo*, lib. xvi. p. 780, 781, lib. xvii. p. 819. ⁶ *Strabo*, *Dion. Cassius*, lib. xvi. p. 782.

shew very speedily, the Commerce of that Country, when opened, proved very beneficial to the *Egyptians*. One good Effect, and, perhaps, the only one that followed from this Expedition, was, the spreading the Fame of the *Romans*, and of *Augustus*, through the *Indies*; which produced two several Embassies; an Honour the *Romans* never received before, and which might, very probably, operate favourably for their Commerce; and, if so, the Expence of this Undertaking (which fell, however, mostly on the Allies) was not wholly thrown away.

6. But while *Aelius Gallus* was endeavouring to extend the *Roman* Conquests in *Arabia*, there happened a very unlooked for Invasion in *Egypt*. *Candace*, Queen of *Ethiopia*, for this, it seems, was a Name common to those Princesses, as *Cleopatra* to the Queen of *Egypt*, made an Irruption into the Frontiers of the Province, and carried off three Cohorts of *Roman* Soldiers from *Syena*, *Elephantina*, and *Pbilis*, where they likewise threw down the Emperor's Images. As soon as *Petronius*, the Prefect of *Egypt*, was informed of the Invasion, he marched with near ten thousand Foot, and about eight hundred Horse, in order to come up with the Enemy, though they were upwards of thirty thousand. They were not much inclined to fighting, but retired before him to the City of *Pfelca*, where they made a Halt: There *Petronius* sent Embassadors to demand the Prisoners, and to know the Causes of the War. But finding that Negotiation would do nothing, and having waited three Days as they desired, without receiving any satisfactory Answer, he resolved to attack them, as he accordingly did, and defeated them intirely. They were, in truth, very poorly armed, most of their Shields being made of raw Hides; and, for offensive Weapons, they had some Swords, some Pole-axes, and some nothing but long Sticks, so that they were speedily routed.

Many were taken in this Engagement, and sent by Water to *Alexandria*; but most got into *Pfelca*, which was soon taken; and in it an infinite Number of People of all Ranks. From hence he advanced to *Premnis*, a Place exceedingly strong by Situation; in the Neighbourhood of which there are many Mountains, which being blown by the Winds, on the Army of *Cambyses*, buried a great Part of them; which forced him to a precipitate Retreat. This Place reduced, he marched forwards to the Royal City *Negata*, where *Candace*, and her Son, then were. She now offered to treat, and to restore the Prisoners, and the Statues of the Emperor. *Petronius*, however, attacked and plundered the City: From whence the Son of *Candace* privately fled. Having now pierced near eight hundred Miles into the Enemy's Country, and finding it grow very full of Woods and Deserts, and the Weather proving extremely hot, he determined to return, after putting a strong Garrison into *Premnis*, and causing it to be victualled for two Years, that he might have a sure Passage into *Ethiopia*; and then he marched safely back to *Alexandria*. There, having divided the Prisoners, he sent a thousand of the chief of them to *Augustus*, who was then just returned out of *Spain*; but of these many died by the Way. The rest of the Prisoners were sold by the Soldiers, into whose Hands they fell, to the Amount of many Thousands.

By leaving four hundred Men in *Premnis*, he provided effectually against any future Irruptions of *Ethiopians*; for he foresaw, that however terrified they might be, while he continued with an Army in their Country, they would, notwithstanding, return to their former furious Disposition, as soon as that Check was withdrawn. In this he was far from being mistaken; for when it was known, that he was returned to *Alexandria*, then *Candace* immediately drew together the whole Force of her Empire, and marched it down to *Premnis*, which lay towards the Frontiers of *Egypt*, and besieged it. We have already had an Instance, that the *Ethiopians* were no great Soldiers in the Field; and therefore we may easily conceive, that they were incapable of reducing a Fortrefs strengthened by Works, after the *Roman* Manner, and well supplied with Men and Provisions. A great deal of Time they spent before it, without making any great Progress; and the *Roman* Prefect, having Intelligence of what had happened, immediately

collected his Forces, and moved towards it, in order to raise the Siege. On his Approach, the *Ethiopian* Army quitted the Place with the utmost Precipitation; and, as soon as they were at a safe Distance, *Candace* sent to know from the *Roman* General, what his Demands were; and upon what Terms she might hope for Peace. *Petronius* answered, that he formed no Pretensions on the *Ethiopians*; and that what he had done was in Discharge of his Duty, and for the Preservation of the *Roman* Province. As to the rest, he could not pretend to propose any Terms of Peace, but they must be content to send their Embassadors to *Cesar*, in order to excuse what was past, and know his Pleasure, as to their Conduct, in Time to come. This amazed *Candace* more than the War: She declared that she knew not *Cesar*, or where to seek him; and seemed to doubt whether this was not an evasive Answer given, to furnish themselves with a Pretence for conquering her Dominions. But *Petronius* quickly eased her of these Apprehensions, by offering to send her Embassadors to *Cesar*; and to conclude a Peace till their Return. This Proposal was readily accepted, and the Embassadors dispatched to the *Roman* Camp; with which the *Ethiopian* War ended, and the Province was again restored to Quiet.

We have an Account of this Expedition, and of the Embassy sent by *Candace* to *Augustus Cesar*, in the Natural History of *Pliny*; but he says not a Word of the Invasion; which, however, is fully related by *Strabo*, who was, of his own Knowledge, perfectly acquainted with these Matters; and has recorded them very faithfully. By this War, as he justly observes, the *Romans* came to be acquainted with the Nations bordering on *Egypt*, and who, by being subdued by the *Ethiopians*, now passed under their Name. In consequence of this, they were undeceived as to the strange Reports they had heard, of the Strength and Courage of these People; for they found them half-naked, badly armed, far from being of a martial Disposition; living in Tents, on the Produce of their Herds and Flocks; and quitting their Habitations, as the Conveniency of feeding those Herds and Flocks, directed them. They likewise saw, that their Black Cattle, Sheep, and every thing but their Dogs, were of a dwarfish and diminutive Kind, as well as the People themselves, who, with the Help of a strong Fancy, might have passed for Pygmies: So that, here, all their Terror wore off; and they concluded themselves fully able to maintain the Frontiers of the *Roman* Province, against all its Enemies on this Side. But, however satisfied the *Roman* Soldiers might be of all this, who resided in *Egypt*, and were Eye-witnesses of these Things, yet the Learned at *Rome* still followed the Fictions of the *Greeks*; and therefore *Pomponius* speaks of some Nations without Noses, others without Mouths, and some without Tongues, that lived beyond the Mountains on the other Side of *Ethiopia*, towards the *Red Sea*: All which Fictions I attribute to the indistinct Accounts they received from the People on the Frontiers between *Egypt* and *Ethiopia*, as to various Kinds of Apes and Monkeys. One thing, however, this Expedition plainly effected, that it extended the Knowledge of the *Romans* 800 Miles, and drove these Monsters to much farther.

7. When *Augustus* had settled his Government at *Rome*, and obtained, in a legal way, the supreme Authority over the Empire, he began to think of visiting the East, where he had many Things to settle; and accordingly, in the tenth Year of his Administration, and in the twenty-first before *Cerius*, having devolved on *Agrippa* the Affairs of the West, *Augustus* went as far as the Island *Samos*, in his Journey Eastward, and there he passed the Winter. While he was at *Samos*, came the Embassadors from *Candace*, Queen of *Ethiopia*, to excuse what had happened in that Country, and to beg a Peace; which he granted them very readily, and the Embassadors returned into their own Country, full of Amazement at the Sight of the Power and Glory of the *Roman* Prince: And it was owing, in all Probability, to their Report, on their Return home, that a firm Peace ensued between the *Ethiopians* and the *Romans* in the Province of *Egypt*, which subsisted for many Years. The next Year

* I do not see probably owing to this Expedition, that *Pomponius* sent the Embassy hereafter mentioned.

† *Deo. Cas. lib. 7. c. 24.*

‡ *Deo. Cas. lib. 7. c. 24.*

Augustus went into *Syria*, settled the Affairs of the Empire with the *Partian* Monarch, and recovered the Ensigns, which he had taken from *Craffus*.*

This spread his Fame over all the East, inasmuch, that *Porus*, King of *India* on this side the *Ganges*, who had before sent an Embassy to compliment him, thought proper now to send a second time, from an Apprehension, probably, that *Augustus* might imitate *Alexander*, and attempt to penetrate as far as the *Indus*. Of these Embassadors only three lived to execute their Commission; and, finding *Augustus* at *Zin-roch*, there delivered him the Letters of King *Porus*. It appears from hence, that, according to the oriental Custom, *Porus* was the common Name of all the Princes of that Country: And it likewise shews, that there were no great Revolutions in those Parts of the World, since the same Kingdoms continued for the Space of three hundred Years.

In this Letter from *Porus* to *Augustus*, there was first set forth the Grandeur and Power of the *Indian* Prince, which consisted in his having under him six hundred petty Princes; which some modern Writers have compared to the *Rajahs*, now subject to the Great Mogul; but I can scarce think, that these Princes could be so considerable; for then the Empire of *Porus* must have been very extensive, and must consequently have swallowed up that of *Sandracontus*, which makes to great a Figure in ancient History, and with which the *Romans* could not but be well acquainted. It seems therefore, to me, very probable, that these six hundred Princes were no more than the Heads or Chiefs of so many Towns; and, taken in this Sense, the Empire of *Porus* was just twice as big as when it was subdued by *Alexander*. After this Display of his own Greatness, the *Indian* Prince acquainted *Augustus*, that he was moved by the Fame of his great Actions, to send this solemn Embassy to request his Friendship, and the Acceptance of the Presents, which attended it; desiring him to believe, that he had conceived the highest Respect for his Person and Power, and that there was nothing he could desire of him, with which he would not readily comply^b.

The Presents, which accompanied this Letter, were borne by eight Slaves, and consisted of Tygers, which were then first seen by the *Romans*, Birds of a prodigious Size, Serpents fifteen Feet long, and Shells of Tortoisés four Feet and an half over; which Presents seem to have been calculated rather to deter, than to invite the *Romans* into the Country from whence they came. Amongst the Embassadors, that were sent on this Occasion, there was a Brahman, whom *Dion Cassius*, in his History^c, calls *Zarmanus*; but *Strabo*, as we shall see, calls him by another Name, who was so well pleased with the Reception he met with, that he followed *Augustus* to *Athens*; and there, having caused his funeral Pile to be prepared, he told the Emperor, that, having lived to a good old Age, and never having experienced the Frowns of Fortune, he judged it proper, as a wise Man, to put it out of her Power to give him any Instance of her Inconstancy, by voluntarily embracing Death, while he was yet in the Possession of Health and Strength, and, which he valued much more, the full Exercise of his Faculties. In all Probability, he emulated, in this Action, the ready Bravery of *Calanus*, who died in the like manner, in the Presence of *Alexander* the Great. However that may be, certain it is, that he shewed no less Constancy and Courage; for, coming out naked, and his Body anointed, as if he had been going to Exercise, he mounted the Pile, whereon he laid himself down; and, ere being set thereto, he was consumed to Ashes. The *Athenians*, astonished at this Action, erected a Tomb to his Memory, which was standing in the Days of *Plutarch*, who says nothing, however, of any Inscription; but *Strabo*, who lived at the very time, has preserved it in his excellent Work, and says it ran thus: Here lies *Zaimanochagas*, an *Indian* of *Bargota*, who, according to the Custom of his Country, the *Indies*, voluntarily quitted this Life^d. It is very clear, from the Whole of this Transaction, that the Fame of *Augustus* had extended itself into the most distant Parts of the East, that were at that Time known to the *Euro-peans*; and from hence it is evident, that the Trade car-

ried on from *Egypt* to those Countries, through the *Red Sea*, instead of being interrupted or restrained, was preserved and protected by the *Romans*, after they had reduced *Egypt* into a Province.

Petronius did not hold the Government of *Egypt* long; for in the Year before *Christ* 18. he was succeeded by *Aelius Gallus*, of whose Expedition into *Arabia* we have already given a large Account. This celebrated Governor of *Egypt* was the Patron and Friend of *Strabo* the Geographer, whose Work we have already so often quoted, and which we shall be obliged to mention frequently, before we bring this Chapter to a Conclusion. This learned Man was a Native of the City of *Amasia* in *Pontus*, a Stoic Philosopher^e, and justly famous for his excellent Geography; to qualify himself for writing which, he not only studied, as his Book plainly shews, the best Writers on that Science, that were then extant; but had likewise travelled through most of the Countries, which he describes: That is to say, Westward, from *Armenia* to that Part of *Italy*, which is opposite to the Island of *Sardinia*; and Southward, from the *Euxine* Sea into *Ethiopia*. This last Journey he made in the Company of *Aelius Gallus*, who went to take a View of the Frontiers of *Egypt*, as far as *Syene*; all which Circumstances of *Strabo's* Life we learn from himself; and these serve to shew, that he must have lived to a very great Age, since he published his Work in the Reign of *Tiberius*, and pretty late in that Reign too^f. He is also thought to have written some other Books, particularly an History, some Passages of which are cited by *Josephus*, but this is perished long ago, to the inexpressible Loss of the learned World; for he was so accurate a Writer, and took care to be so perfectly informed as to every Fact he related, that whatever fell from his Pen, must, on that account, have been extremely valuable and useful. We may likewise see, from this second Expedition of *Gallus*, how attentive the *Romans* were to the Concerns of this Province, and how desirous of being acquainted with every thing that belonged to it.

Indeed the securing to *Rome* all possible Advantages from so great an Accession of Territory, seems to have been one of the principal Objects of the Policy of *Augustus*; for he took care to establish a regular Commerce between *Rome* and *Alexandria*, as well for the sake of a continual Supply of Corn, as for the bringing thither the Merchandizes, that they acquired by their *Indian* Traffick; so that, as we shall see hereafter, many of the *Romans* themselves, who hitherto had not been much addicted to Trade, were, with the Sight of these rich Commodities, induced to embark their Fortunes therein, becoming thereby Principals in this Sort of Traffick, and making use of the *Egyptian* Merchants as their Factors. Thus we have shewn, how this Trade came into the Hands of the *Romans*, and what Pains were taken by *Augustus* to settle and secure it, by reducing, if it had been possible, the Nations on the opposite Side of the *Arabian* Gulph, whose Piracies were the only Evils, to which it remained exposed; and how, by this Care, a new Turn was given to the Temper of the *Romans*, who, in succeeding Times, became as active and vigorous in the Management of this Business, as they had been before unattentive to any thing of this Nature. But it is time for us to take our Leave of the Reign of *Augustus*, of which we have already said so much, in order to give the Reader, in as few Words as possible, an Account of such Facts as relate to this Subject, and are recorded in the Histories of succeeding Emperors: After which we shall proceed to an exact Description of the Manner in which this Trade was carried on by the *Roman* Factors; and give some Account of the immense Profits that annually resulted from it.

Tiberius, who succeeded *Augustus* in the Possession of the *Roman* Empire, was not of a Disposition to forget or leave unimproved any Part of his Dominions, much less a Province capable of yielding such Advantages as *Egypt*, in the Management of which he steadily pursued the Maxims of his Predecessor; for so careful was he to prevent any Danger, that might arise from the sending a Person of considerable Rank to govern that Country, that he made

Choice of one of his Freedmen for that Employment: And when his Nephew *Germanicus* took the Liberty of visiting that Province without asking his Leave, he reprimanded him for it very severely; and it is with good Reason supposed, that it was chiefly from the Suspicion he conceived on account of this Journey of his into *Egypt*, that he caused him to be poisoned; so jealous he was of any Inquiries into the State of a Country that furnished him with so great a Revenue.

Caligula, the Son of *Germanicus*, who succeeded *Tiberius*, tho' in all other things as bad a Prince as he was a Man, yet encouraged and protected Commerce, keeping always a strict Eye to the maritime Force of the Empire, which, under him, was at its greatest Height. With respect to *Egypt*, he understood the Worth of the Country so well, and had so true a Notion of its Strength, that when he had rendered himself universally odious to his Subjects, he had Thoughts of retiring thither, in order to have passed there the Remainder of his Days; but he was cut off by a sudden Conspiracy before he could execute his Intention.

It is uncertain whether *Caligula*, or his Successor *Claudius*, began the Custom of letting the Revenues of *Egypt* to Farm; but, certain it is, that they were lett out in this manner under the Reign of the latter, which produced, accidentally, a very extraordinary Discovery. There was one *Annius Plinius* who farmed the Customs of the *Red Sea*, and who, on that Account, visited the Coast in a Vessel of his own; and being once on the Shore of *Arabia*, on some Business relating to his Office, he was suddenly driven to Sea by a strong North Wind, which blowing for sixteen Days together, he was thrown first on the Coast of *Caramania*, and then on a certain Island, in a Port of which he came to an Anchor; the Name of the Port, as he was informed by the Inhabitants, being *Hippurus*: He was there very kindly entertained by the King of the Country for six Months, who furnished him with whatever he wanted, and was extremely delighted with the Accounts he gave him of the *Romans*, and of their Power; but what struck him most was, the Sight of the *Roman Coin*, it appearing to him a very singular thing, that though the several Pieces were of the same Weight and Value, yet, by their different Impressions, they shewed, at first Sight, by whom and on what Occasion they were coined.

This, and the Explications given him by *Plinius*, induced him at last not only to provide for the safe Return of the *Roman* into his own Country, but engaged him likewise to send four Embassadors to *Rome*, the chief of whom was one *Rachias*, who was a Man of great Figure in that Country. It seems, from the Account that *Pliny* has given us of this Adventure, that he had seen and conversed with those, who had what he relates from the Mouth of this *Rachias*. The most remarkable Points mentioned by him were these: That the Island he came from contained five hundred great Towns; that it had a spacious Port on the South Side belonging to a City called *Palestimonachon*, which was the Capital of the Island; and so populous, that it was esteemed to contain not fewer than two hundred thousand Inhabitants. In the Neighbourhood of this City there was a Lake called *Megasha*, two hundred seventy-five Miles in Circumference, in which there were several Islands very fruitful in Pasture. Out of this Lake there ran two Rivers, one to the South, called *Palyanthalas*, which fell into the Sea by three Mouths, on one of which Pool the City called by the same Name, the smallest of these being of the Breadth of five Stadia, and the largest fifteen. The other River ran Northwards towards the Continent of *India*, called *Cydara*. Opposite to the Island there ran a large Promontory of *India*, called *Colaicum*, distant four Days Sail; and in the midst of the Passage there lay an Island sacred to the Sun.

The Sea on the Coast was of a very deep Green, with Trees at the Bottom, the Branches of which were sometimes beaten off by the Heads of their Ships. The Sight of the Northern Constellations surpris'd the Embassadors at *Rome* very much, and seem'd to them like a new Heaven. In their own Country, they said, they observed the Moon only from the eighth to the sixteenth Day, and spoke much

of the bright Star *Canopus*, which was visible in their Hemisphere. But what most amazed them was, the falling of their Shadows to the North; and that the Sun rose to the Left, and set to the Right. They affirm'd, that the Coast of their Island, opposite to the Continent of *India*, was ten thousand Stadia in Extent, and that it reach'd towards the South-east beyond the *Emadian Mountains*. They added, that the Country of the *Seres* lay within Sight of them; and *Rachias* affirm'd, that his Father had traded with them. He said, that the Country inhabited by that People was much infested by wild Beasts; that the *Seres* were of a gigantic Stature, red-haired, their Eyes blue, and their Voices hoarse and tough, so that they were unintelligible to Strangers; that in other respects they were like other Men, and traded fairly; for when Commodities were laid down on their Side the River, they came and took them away, if they liked them; and left in Exchange enough to satisfy those who brought them. As to the Island from whence these Embassadors came, *Pliny* tells us, that it was *Taprobana*; and that Gold and Silver was esteem'd there, as well as at *Rome*, which he thinks strange; as also precious Stones, and Pearl, especially if they were bright and transparent. He tells us farther, that the Embassadors were wont to say, that there was greater Plenty of Riches in their Island, but that the *Romans* made more use of them. They likewise observ'd, that they had no Slaves amongst them; that they never slept in the Day-time; that their Houses were but low; that they knew not what Law-suits were; and that they worshipp'd *Bacchus*. They likewise inform'd the *Romans* that their Country was extremely well cultivated, and that it produced other Fruit-trees in abundance, but that they had no Vines: That on their Coast they had Plenty of Fish; and that the People were much given to Fishing, and especially to the catching of Torroises, the Shells of which were so large, that they made use of them to cover their Houses: That their Climate was so wholesome, that a Man of 100 Years of Age was no uncommon Sight. The Account they gave of their Government was this, that their King was elected by a Plurality of Voices, and was assisted by a Senate composed of thirty Persons, who were likewise chosen by the People, together with some other Circumstances which have been already taken Notice of in the Account we gave of the Voyage of *Lambulus*.

We shall hereafter have Occasion to inquire more particularly into the Situation of this Island, which makes a great Figure in the Writings of the Antients; as also of some other Islands, Part real and Part imaginary, which are mentioned in their Works, and which it will be necessary to explain, that the Reader may not be misled into wrong Notions on this Subject, or suppose, that because the Antients speak of prodigious Riches found in these Islands, that we are less knowing than they, since we are not at present acquainted with any Island that produces the Commodities they mention.

The Emperor *Nero*, who succeeded *Claudius*, was very attentive to the Affairs of *Egypt*, and not only took care to maintain his Fleets in perfect good Condition in both Seas, but likewise sent Persons on Purpose thro' *Egypt* into *Ethiopia*, in order to have a clear and distinct Account of its Products and Inhabitants; to which he was very probably incited from the Scheme he had formed of returning into *Egypt*, in case he found it impossible for him to maintain himself against his Enemies at *Rome*: And it was from the Report of these People that the Distance was determin'd between *Syene* or the Frontiers of *Egypt*, and the Island of *Meroe*, to be eight hundred and seventy Miles: And we may judge of the great Commerce carried on to *Arabia* in the Reign of that Prince, from the vast Quantity of Incense that he is said to have burnt at the Funeral of his Wife *Poppaea*. The Reigns of the three succeeding Emperors, *Galba*, *Otho*, and *Vitellius*, were too short to afford us any thing remarkable, and therefore we must pass on to *Flavius Vespasian*, who received the Empire in *Egypt*, where *Tiberius Alexander*, who was then Governor of that Country, declared for him, and *Vespasian*, making haste to *Alexandria*, no sooner found himself in the full

Possession of that City, than he ventured to assume the Imperial Ornaments, not doubting that he should now be able to compass his Design, and make himself entirely Master of the whole Roman Empire, which in Effect he did.

His Son *Titus*, who succeeded him, having in the Lifetime of his Father made a sudden Journey into *Egypt*, and being received with great Honours at *Alexandria*, this alone created a Suspicion that he intended to revolt, and set up for himself; which plainly shews the settled Opinion of the *Romans* at that Time, that the Possession of *Egypt* was sufficient to give any Prince a Power of making himself Master of the whole Empire.

As we have now conducted the History of this Commerce to a proper Period, it is requisite to give a particular Description of the manner in which it was carried on, and of the extraordinary Changes it produced in the Customs of the *Romans*, who, till they became acquainted with this Traffick, had never shewn themselves much inclined to Trade, but left it rather to the *Greeks* and other Foreigners established amongst them.

The Navigation to the *Indies* was profecuted, when the *Romans* first became Masters of *Egypt*, by sailing down the *Arabian Gulph*, to a Port near the Promontory of *Sagrus*, which *Ptolemy* the Geographer places in the Latitude of fourteen Degrees; which, beyond Controversy, is that Point of the *Arabian Coast* which is now called *Cape Fartak*, and which, in the best modern Maps, is laid down in the Latitude of fourteen Degrees, forty Minutes; which agrees very well with the Situation assigned by *Ptolemy*: And from hence their Vessels sailed to the Mouth of the River *Indus*; that is, to the Head of *Pattala*, so often mentioned in the History of *Alexander* the Great. But afterwards this Navigation was changed; for, under the Reign of the Emperor *Claudius*, there was one *Hypalus*, who was, probably, a Citizen of *Alexandria*, of *Greek* Extraction, that found out a shorter and easier Passage: And this by the Observation of the Time when the Trade-wind blew, which enabled him to pass, at once, through the Straights, and across the *Indian Ocean*, directly to *Pattala*; which was looked upon as to extraordinary a Thing, that the South-west Wind was afterwards called by his Name, and so became a perpetual Monument of his good Fortune, in this respect.

Yet in succeeding Times (but all within this Period) they made still farther Discoveries, with respect to this *Indian Voyage*; in which, however, they met with perpetual Interruptions, from the Piracies of the *Arabians*, which constrained them to carry, besides their ordinary Complement of Men, a certain Number of Soldiers, or Archers, on each Ship, to defend them from these Robbers. At length, however, the great Profits, arising from this Trade, overruling the Number of such as engaged in it, they conquered all Difficulties, and settled an annual Trade from *Alexandria*, to the Mouth of the River *Indus*, after this manner: The Goods that were intended for the *Indian Markets*, were embarked at *Alexandria*; from whence they were carried to *Julio*, two Miles from thence; and thence up the River *Nile*, to *Coptus*, at the Distance of three hundred and three Miles; which City *Ptolemy* places in the Latitude of twenty-five Degrees twenty Minutes; which agrees very well with the Accounts that modern Travellers give us of the Situation of its Ruins at this Day. If the Wind was fair, they commonly performed their Voyage in twelve Days. At *Coptus* the Vessels were unloaded; and the Goods on Camels Backs, were transported, in eight Days, to *Berenice*, which lay at the Distance of two hundred and fifty-eight Miles; and there they remained in Warehouses, till the proper Season of the Year for the Continuance of their Voyage, which was about the Rising of the Dog-star. When they were embarked for the last Time, they steered directly for the *Arabian Coast*, and in thirty Days arrived at *Ocelis*, which *Ptolemy* lays down in the Latitude of twelve Degrees, tho' undoubtedly that is too far South. Or else the Fleet sailed to *Cana*, or *Moca*, all Ports on the opposite Coast of *Arabia*; but

the two last were only frequented by the Merchants of the Country; and therefore were not visited but by such as intended to take in Frankincense, and other *Arabian* Commodities; for which they exchanged Arms, Knives, and Glass Vessels, and other Things.

But *Ocelis* was the principal Place, because there they met with Merchants from the *Indies*, with all Sorts of Goods; and it likewise lay very commodiously for prosecuting their Voyage to the Continent of *India*, where they usually made the Port of *Muziris* in forty Days, which *Ptolemy* lays down in the Latitude of fourteen Degrees, if his Tables have not suffered some Alteration. But this Port being found inconvenient, from the continual Depredations of Pirates in its Neighbourhood, it was thought necessary to seek a better Station; and this led them to the Port of *Bevara*, where, by the Help of *Indian* Proes, they transported their Goods up a navigable River, to a great trading Town, called *Madufa*; and, having completed their Affairs, so as to have the Advantage of the Trade-wind back, they usually returned to *Alexandria* towards the latter End of *December*, or the Beginning of *January* at furthest. The *Indian* Commodities, which were thus brought to *Egypt*, were again unladen, and carried to *Berenice*; from whence they were transported by Land to *Coptus*, thence by the *Nile* to *Alexandria*, and so to *Rome* by the annual Fleet from *Alexandria*, which was settled by *Augustus*.

The Expence, or, properly speaking, the Stock which was annually invested by the *Romans*, in the Commodities fit for this Commerce, amounted, in the Time of *Pliny*, to fifty Millions of Sesterces, which makes about four hundred and three thousand Pounds of our Money: And, by the Profit of the Goods returned, they gained one hundred per Cent.

It may not be amiss, to add to this general Account some Particulars as to the Commodities in which these *Indian* Merchants dealt. In the first place, we ought to reckon Spices, and particularly Cinnamon; of which we have a large Account given us by *Pliny*, wherein there are some Circumstances that deserve to be considered: In the first Place, he observes, that very strange Stories were told by the Antients, in regard to these Spices, on purpose to enhance their Value; such as, that they were collected under Trees, in which the Phoenix built her Nest, being pressed down, and broken, by the Prey she brought to feed her Young; or else shot down with Arrows headed with Lead. To this Story succeeded another, no less incredible, viz. that Cinnamon-trees grew in certain Marishes, guarded by frightful Dragons. And when People grew too wise to believe this, it was next said to come from very distant Countries, where it grew in such Abundance, that the Seed of it might be perceived at a great Distance; by which, as they pretended, the Fleet of *Alexander* discerned the Coast of *Arabia*. All these Accounts he declares to be false; and then tells us what, in his Opinion, was the Truth; which is, that Cinnamon grew in *Ethiopia*, and the adjacent Country of the *Troglochytes*, from whom the *Ethiopians* purchased it, that they might keep this Trade intirely in their own Hands. This precious Commodity they exported in small Boats, without either Oars or Sails; and, putting to Sea in the midst of Winter, they, by the Help of the South-east Wind, doubled the Cape of *Argosse*, and so arrived at the famous Port of *Ocelis*, where they trafficked with the Merchants from *Egypt* for Glass, Copper, and Brass Ware, fine Linen, and Toys. This Navigation was so tedious, that these People very seldom returned in less than five Years; and many of them perished in these dangerous Voyages. At *Ocelis* the King set the Price upon it, which was formerly so high, that a Pound of Cinnamon was sold at *Rome* for one thousand Sesterces, which was about eight Pounds of our Money: And it even arose to a much higher Price, when it was pretended, that the Woods of Cinnamon in *Ethiopia* were burnt down by the *Troglochytes*: But, at the time *Pliny* wrote, it was much sunk in its Value, and yet remained dear enough, in his Opinion.

⁶ *Id. lib. xiii. c. 19.*

He likewise tells us, that the Emperor *Vespasian* was the first, who in the Capitol, and in the Temple of *Peace*, dedicated Chaplets of Cinnamon, inclosed in fine Gold; and in the Temple erected to the Memory of that Emperor, there was a green Cinnamon-tree preserved in a golden Vessel, which, every Year, thrust out Drops of a whitish Liquor, which afterwards grew hard like a Gum: And this seems to have been Camphire. He tells us also, of Ginger, Pepper, and Cloves, which were brought by the same *Indian Fleet*: And these Spices, when the *Indian Trade* was first known to the *Romans*, were, of all its Commodities, held most valuable.

They likewise brought, in these Fleets, Abundance of precious Stones, particularly Diamonds; of which *Pliny* distinguishes six Kinds, the best of which was the *Indian*; and after that the *Arabian* Diamond; which was esteemed the richest Jewel in those Days, as it is in ours. Pearls were next in Price; and these, too, were brought from the Coast of *India*, and from *Arabia*. We may guess at the Value of them, by what is reported of *Cleopatra's* dissolving in Vinegar, and then swallowing, a Pearl that was esteemed worth near fifty thousand Pounds of our Money: But it is a remarkable Observation, which *Pliny* takes from *Tenghella*, that Pearls bore a very high Price, before *Egypt* became a *Roman Province*; but afterwards they grew common; and, in his Time, the Ladies had their Shoes embroidered with them. Emeralds were next in Price: And of these there were twelve Sorts; the very best of which were those brought from the Northern *Indies*; and the next, those of *Arabia* and *Egypt*. The Opal, which was a Stone of great Value, and of different Colours, was likewise brought in these Fleets: Of which *Pliny* tells us a remarkable Story, of one *Nemius*, a Senator, who was proscribed by *Antony*, for the sake of a fine Ring, in which one of these Stones was set, valued at twenty thousand Sesterces. The *Indian Rubies* were likewise in high Esteem, especially such as were of a very bright Colour; but they were then, it seems, as they are now, exceedingly scarce. Add to these the *Topaz*, and an infinite Number of other Stones, that were then accounted Jewels. We are next to reckon Metals, especially Gold, of which they had great Quantities, by means of this Trade; as also Ebony, and other rich Woods, with Incense, Gums, Ivory, and other Oriental Commodities.

Against the Use of all these *Pliny* inveighs bitterly, affirming that they were principally procured to oblige Women; and that the Riches of the Empire were squandered away, merely to make the *Roman Ladies* vain. As an Instance of this, he tells us, that he had often looked with Amazement upon *Lollia Paulina*, the Dowager of *Caligula*, whose Head-dress, Necklace, and Bracelets, alone, were adorned with Emeralds, Pearls, and other precious Stones, to the Amount of forty Millions of Sesterces, which makes upwards of three hundred and twenty thousand Pounds of our Money. He adds, that her Father *Marcus Lollius* had acquired the immense Wealth, with which all these fine Things were purchased, by taking great Bribes from the Princes of the East; for which being called to an Account, and finding that *Caius Caesar*, the Grandson of *Augustus*, would not screen him, as he expected, he swallowed a Dose of Poison; and thereby prevented the Judgment of the Laws which he so much feared. These Facts, taken together, are sufficient Proofs of the Wealth, as well as Luxury, of the *Romans*; and of that prodigious Alteration made in their Affairs, by the Conquest of *Egypt*, and the Passage thereby opened to the Commerce of the *Red Sea*, and of the *Indies*; which never failed, of enriching the Countries where it was settled, to a Degree almost beyond Credit.

10. That I may render the History of the antient Trade of *India* as clear, as intelligible and satisfactory to the Reader as it is possible, and that I may leave him with few or no Difficulties about it, I will take this Opportunity, after letting down at large, what *Pliny*, and other antient Writers, have delivered as Matter of Fact, to add some Observations that may reconcile them to the State in which Things are

now found, and which almost all the Writers, who have gone before me, have thought impracticable. I must, however, beseech the candid and ingenious Reader, not to suspect me of Vanity; for I freely profess, that it is not from any Sagacity or Penetration of mine, but merely from Industry, and the Comparison of antient and modern Writers, that I am enabled to set him right in this Matter, and to lay open the Truth in such a manner, as to convince him, that both the Antients and the Moderns have delivered nothing but what is founded in Fact; and that their seeming Contradictions arise only from their not having been sufficiently considered.

In the first place, I must observe, that there is nothing reported by Antiquity, which has given so much Trouble to modern Critics, as the Appellation of *Happy*, conferred on the South Part of the Peninsula of *Arabia*, which in itself is a very desert and barren Country, and produces nothing in Appearance capable of meriting that Title. The learned Mr. *Huet*, Bishop of *Acheron*, was the first who hit upon the true Reason; and far be it from me, to conceal the Lights I have derived from the short List given by the great Man, who, in his Treatise of the Commerce of the Antients, tells us, that *Arabia the Happy* was so called from the Convenience of its Ports, and the prodigious Riches acquired by its Inhabitants, from their extensive Commerce. This single Thought, properly pursued, will enable us to resolve all the Difficulties that have arisen about the Commerce of the *Indies*.

Strabo, speaking of the *Sabeans*, tells us, that, in their Country, Gold, Silver, precious Stones, and every other valuable Commodity, appeared with Profusion, in so much that they were justly esteemed the most opulent Nation in the World.

We may add to this, that almost all the other Nations of the World, which were distinguished for their Trade and Wealth, derived it from thence. It was from hence, that the antient *Egyptians* drew their Supplies; from hence the *Syrians* had their richest Commodities; from hence *Solomon* received such valuable Presents; from hence the *Egyptians*, under the *Pharaohs*, obtained their most valuable Merchandize; and from hence, as the foregoing Account shews, the *Romans* brought all the Riches of the East. The great Difficulty, then, lies in finding out, how these People came by this prodigious Wealth. This Secret, when once revealed, will appear plain and easy: The Situation of this Country, and their easy Knowledge of the Trade-winds, or Monsoons, threw the whole Trade of the *Indies* into their Hands; and as they were the most subtle People in the World, they took care to conceal their Navigation with the utmost Caution. It is clear from the Account we have already given out of *Pliny*, that Abundance of Fables were invented, to keep up the Price of Cinnamon, and other Spices; and the last Account, which he gives as the true one, was, in fact, as much a Fable as any of the rest; and serves only to shew, that the *Arabians*, who were always famous for the Facility of their Invention, knew how to proposition the Secrets they told, to the Lights which other Nations had received.

The Cinnamon, and other Spices, sold in the Port of *Ocilia*, were undoubtedly brought from the Island of *Ceylon*, to which the *Arabians* sailed by the Help of one Monsoon, and returned by the other. When therefore we are told, that *Hippalus* first discovered the South-west Wind would carry a Ship directly to the Coast of *India*, we must refer this to the *Greeks*, and other *European Nations*; for the *Arabians* understood this kind of Navigation long before, as appears plainly by the vast Abundance of such Commodities with which their Markets were stocked; and as none of these, except Incense, and other Perfumes, were the Growth of *Arabia*, it is manifest, that they brought them from the Islands of *India*.

I say, it is manifest, that they brought them, and that they were not brought to them; because, if they had, the Secret must soon have broken out, and the Navigation to the Eastern Islands have been made thoroughly known to the *Egyptians*, the *Greeks*, and the *Romans*, which never was. They had, indeed, some concealed Nations of

^f *Plin. Nat. Hist. lib. ix. c. 35.*

^g *Plin. Nat. Hist. lib. ix. c. 35.*

certain rich Islands in the Indian Seas, such as *Taprobana*, *Palaemunda*, and *Panchaia*; but they were very confused indeed. As to the first, they have described it so imperfectly, that it is almost impossible to guess where it lies; the second was no other than the Island of *Pattala*, long before discovered by *Alexander*; and the other was a mere Invention, or a Story palmed upon them by the *Arabians*, as *Plutarch* very judiciously observes^a.

It is true, that several antient Writers speak of the *Indian Merchants*, that frequented the Ports of *Arabia*; but they came only from the Coast of *Malacca*, and the Countries bordering upon *Persia*; and were as little acquainted with the Countries from whence the *Arabians* transported their most valuable Merchandize, as the *Greeks* and *Romans* themselves, who also frequented their Coasts, and carried on a considerable Commerce with them; but not in these rich Commodities; for *Pliny* observed, that they came only from *Ocitis*, and that the Price was set by the King of that Country, which other Writers have confirmed^b.

This Account is so much the more probable, as it corresponds exactly, both with antient and modern Relations; for, with respect to the former, it shews how the Country might of old be as rich and opulent as the *Greek* Writers represent it; and, on the other hand, how it comes to be in so different a Condition at this Day; for that the Air is excessive hot, the Climate near the Coast very unwholesome, the best Part of the Soil sandy and barren, and the Country in general producing nothing but Incense, and rich Gums, of all the valuable Commodities, that were formerly brought from thence, are Facts that cannot be now disputed: And, upon a View of what antient Writers have delivered, we shall easily discover, that many of the wisest of them suspected the very thing that I maintain, that is, that the Wealth of this Country was the Result of Commerce, and not of its natural Fertility; for *Strabo*^c long ago observed, that they obtained vast Quantities of Gold, and precious Stones, in Exchange for their Aromatics; and that these rich Goods were again exchanged for such Commodities and Manufactures of the West, as they stood most in need of, or with which they were most affected: And hence it was, that, in spite of the Difficulties attending its Navigation, the *Arabian* Gulph was one of the most frequented Seas in the then known World. In the second Place, I observed, that this accounts perfectly well for the Mistakes that we meet with in antient Writers, as to the Places where Spices, and other valuable Commodities, are found. Their Reports as to *Arabia*, and its Fruitfulness in Spices, were so far founded in Truth, as that they knew no Country where they were to be found, but that; and the Desire of possessing so rich and valuable a Place, was what principally moved *Augustus*, and some of the succeeding Emperors, to think of conquering *Arabia*, which had been before in Danger, from the Power of *Alexander*; on the same Account^d.

It was probably the Fear of the *Romans*, that induced the *Arabians* to frame the new Tale, of Cinnamon's growing in the Country of the *Ethiopian*s and *Troglodytes*, and that it was brought to them with infinite Difficulty; I say, they might very possibly be induced to circulate this Story, in order to engage the *Romans* in a War with those People; which would have been an effectual Means of keeping their Forces on the other Side of the Gulph. It is very plain, from what *Pliny* says, that this Notion of Spices growing in *Ethiopia*, was a very new thing, and that he thought he had made a great Discovery, in publishing it to the World: And what still confirms this the more, is, the Fact he gives us from his own Knowledge; viz. that the first Cinnamon-plant that ever was seen at *Rome*, was brought thither in the Reign of *Tiberius*, and was consecrated in the Temple erected to the Memory of *Flavius Vespasianus*^e.

But I know it may be objected, that abundance of Doubts have been moved about the Cinnamon of the Antients, as it is quite another thing from the Spice known to us by that Name. In Answer to this, I must remark, that the Objection rises from the Descriptions left us by the Antients, of a thing they had never seen, but took their Ac-

counts upon Trust from the *Sabeans*, who, with respect to them, had the Monopoly of that Commodity; so that, in the first Place, there is no great Credit due to their Descriptions; and the less, because they agree as little with each other, as with our Accounts of that Spice, from those who are best acquainted with it. In the next Place, we are to consider, that in the Island of *Ceylon*, from whence we have all our Cinnamon, they distinguish no less than nine different Sorts, by the Adjunction of so many different Epithets to the Word *Coronda*, which, in their Language, signifies Cinnamon: The third Sort, for Instance, is called *Cappereon Coronda*, which is as much as to say, the Camphire Cinnamon; and there is a Kind of wild Cinnamon, that grows on the Continent of *India*, near *Goa*, called by the Naturalists in *India*, *Canella Malabarica sive sfris*, or the wild *Malabar* Cinnamon; which so exactly resembles the *Cappereon Coronda*, that it is not to be distinguished but by the Taste: And, in all Probability, it was a Root of this Plant that *Pliny* saw consecrated in a golden Urn, in the Temple of *Augustus*; or, at least, his Description agrees very well with this. In the third Place, if we consider, the imperfect and discordant Descriptions, which the Antients give of this Spice, and the many Kinds of it that are known to the Moderns, we cannot wonder at the Doubts that have arisen about it; nor can we reasonably believe, that any Argument, drawn from thence, ought to weigh against the positive Matters of Fact, that have been laid down, and are not liable to any Dispute^f.

The third Observation I shall make with regard to the Commerce of the *Romans* in the East, is in relation to the precious Stones they brought from thence; about which as many Doubts and Difficulties have been raised, as about the Spices; and for the very same Reason, because they were not well acquainted with the Subject, but spoke of Things at second-hand, and generally from the Reports of the *Arabian* Merchants, from whom they received them. Thus, for Instance, their Description of the *Opal* does by no means agree with the Stones of that Kind that are known amongst us; and, as for the *Topaz*, it is impossible to know what to think of it, since they sometimes describe it of a green, as well as at other times, of a gold Colour, which is the only one known to us. As to their *Emeralds*, they distinguish the *Indian* from the *Egyptian*, but we know not now of any *Indian* Emeralds; by which I mean, Emeralds that are actually found in *India*; for the oriental Emerald is a Phrase in Trade, and means no more than a very perfect Stone in point of Colour and Hardness, which the best Judges have esteemed to be the *Egyptian* Emerald; though some say, that the Inhabitants of the *Philippines* actually received them from *Peru*, before that Country was discovered by the *Spaniards*; and that these, coming into *Europe*, from *India*, were, on that account, distinguished by the Name of oriental Emeralds^g.

Before I part with this Subject, I cannot but observe, that the Heat, expressed by *Pliny*, against these Ornaments, and his sarcastic Remark, that if the antient Conquerors of *Rome* could return from the Dead, they would regret their Triumphs, when they saw, that the sole Effect of them, was to deck the fine Ladies, their Descendants, with an infinite Number of Jewels of high Price, is ill-founded. There is, no doubt, a Luxury in Stones, as well as in other Things; But, on the other hand, they are much mistaken, who affirm, there is no intrinsic Worth in them, and that they ought not to be regarded, or valued. The intrinsic Worth of Iron, and other Metals, consists in their Usefulness; the intrinsic Worth of Silver and Gold, in their being proper Measures of the Value of other Things; and the former, with respect to Mankind, is not a Grain more important than the latter: Without useful Metals, we should be much at a Loss at home; and, without these common Standards, as to the Worth of which, all Nations are agreed, we could not conveniently carry on any Commerce abroad. It is in this last Light, therefore, that precious Stones are to be considered; they are extremely beautiful to the Eye, which gains them a general Esteem, they are wonderfully firm and durable; and this augments their

Credit: To say, that these Circumstances do not constitute a kind of intrinsic Worth, is to confound, instead of rectifying, our Notions. And, therefore, how sparkling soever the Thought of *Pliny* may be, it is not, at the Bottom, founded in Truth; and I must, for my own Part, confess, that I do not think the Vanity of a *Roman* Lady, dressed out with Jewels to the Value of forty Millions of their Money, was at all greater, or more worthy the Contempt of a Philosopher, than the Vanity of her Ancestor, in his triumphal Car; since, in the Eye of Reason, one Species of Pride is as much, and as truly, a Folly, as another; of which the elder *Vespasian* was very sensible, when, being extremely fatigued with the Length of his Triumph, he could not help saying, I suffer, very justly, for being Fool enough to delight in such a Spectacle as this at these Years. But it is now time to return from these Remarks to the Prosecution of our Subject; which leads us to shew more particularly, what Improvements were made in this kind of Commerce, after the *Romans* took the Management of it into their Hands.

11. The ancient *Egyptians* had very early and constant Quarrels with their Neighbours the *Ethiopians*, which kept them at a great Distance from, and hindered them from engaging in any Commerce with them, at least of great Importance: But, after the Kingdom of *Egypt* fell under the Dominion of the *Greeks*, these Disputes subsided, and the Nations began to entertain a friendly Intercourse; for the Encouragement of which, the City of *Copius* was originally designed. This Commerce between the *Egyptians* and *Ethiopians* was particularly promoted by *Ptolemy Philadelphus*, for the sake of obtaining Elephants; for the Taming of which he was very famous: When the *Romans* came to the Possession of this Country, they were likewise very desirous of penetrating into *Ethiopia*, for many Reasons, but more especially for the obtaining of Elephants, and their Teeth: And so eager was *Nero* in this Matter, that he sent an Officer, with a Detachment of his own Lifeguards, into *Egypt*, on purpose to invade *Ethiopia*, if they might not have Leave to march through it peaceably. These People performed their Errand, and returned with a fair Account of what they had seen; which did not, by any means, answer the Expectations that were raised by the Descriptions that had been formerly given of that Country. They found it, for the most part, poor and barren, the People, on the Frontiers of *Egypt*, living mostly upon Millet; and those beyond them, upon Milk and Venison: By degrees, however, there grew a considerable Commerce with this Country, from whence they brought Elephants, Rhinoceroses, and other wild Beasts, Ivory, and particularly that Sort of it which was easiest wrought into Images, Chairs, Thrones, and other Utensils; as also rich Gums, and precious Stones, especially Emeralds and Topazes.

At last, they proceeded to the very Extremity of the *Arabian* Gulph, on the Coast of the *Trogodytes*, who had been painted in such disagreeable Lights by old Writers; and there carried on a very lucrative Commerce with these People, at a Port of their own, called *Adula*, which *Ptolemy* the Geographer places in the Latitude of $14^{\circ} 20'$, and must consequently have been in that Part of the Country which is now in the Hands of the *Turks*, and there they met with very just and honest Usage from these Barbarians, as they were then pleased to call them. Over-against this Port of *Adula* lay the Island of *Orine*; and there were some considerable Cities within-land, from whence the most valuable Commodities were brought down to this Port, which was looked upon as the Staple of the Ivory Trade, and for the Myrrh that was most esteemed, with various Sorts of Gums, and some precious Stones.

It was in consequence of their Possession of *Egypt*, that the *Romans* carried on a considerable Traffick into the *Persian* Gulph, at the Mouth of the River *Euphrates*; as

also along the Coast of *Persia*, to the Frontiers of the *Indies*; but the Produce of all this Commerce, as it came to *Rome*, in the Fleet from *Alexandria*, was generally considered as *Egyptian*, at least by the common People; as, on the other hand, all the Commerce of *Egypt* was, at *Rome*, called by the general Name of the Trade of *Alexandria*. This City, which had made so great a Figure from the Time of its first Foundation, and, indeed, in Right of its Founder, which was afterwards made the Capital of their Dominions by the *Ptolemies*, received great Additions, in point of Wealth, under the *Romans*; inasmuch that *Josephus* reports, that the *Romans* drew as much from thence in a Month, as from the rest of *Egypt* in a Year; and that, in point of Riches, it did not only equal, but exceed even *Rome* itself; which is the more probable, since, under the *Ptolemies*, who were remarkably tender of imposing high Duties, and thereby injuring the Commerce of their Subjects, the Customs of the Port of *Alexandria* amounted annually to a Million and an half of our Money. And *Diodorus Siculus* reports, from his own Knowledge, that, at the Time he was there, the Freemen of the City were above three hundred thousand: So that it must have been then as populous as *London* is at present, even upon the lowest Computation, and supposing that the far greater Part of its Inhabitants were wholly supported by Trade.

To say the Truth, *Alexandria* within this, and the Period which will be contained in the next Chapter, seems to have attained to that Grandeur for which its Founder designed it, since it embraced, in a great measure, the whole Trade of the *Roman* Empire. This was principally owing to these two Causes: First, the Convenience of its Situation, by which it lay open to the *Mediterranean*; and the Care taken by the *Romans* to preserve, and even to enlarge its Ports: And next, to the *Indian*, or *Oriental* Commerce, which has always had an attractive Quality, and drawn, where ever it was seated, almost all the Trade of the World beside. Thus, for Instance, when the *Phoenicians* and *Genese* shared that Trade between them, they ingrossed all the rest: Then it was, for a small Time, attached to *Lisbon*; and came afterwards, in consequence chiefly of their *Indian* Commerce, to the *English* and the *Dutch*. This, I think, is the clearest and most satisfactory Answer that can be given to that Objection, which we so often hear made to this Commerce, that it carries out a vast Quantity of Silver; and which, as I conceive, was first started by *Pliny*, who actually complains, that the *Arabians* received ready Money for their *Indian* Commodities, and laid out nothing in Return. This, I say, is the most satisfactory Answer, because it shews, that whatever Loss may attend this Trade in the first Instance, yet those who are possessed of it, are sure to have a large Balance in their Favour, in consequence of the general Resort it occasions, and the Returns that are made from those Countries which take their *Indian* Commodities of their Hands. How far this Objection may lie to the Trade of *Europe*, in general, with the *Indies*, is another Question, and shall be largely considered at the Close of this Chapter; when I hope to demonstrate, that all that has been hitherto said on this Topic, flows from a Misapprehension of the Nature of Commerce; and that, upon the Whole, whatever Country maintains the greatest, and most extensive Trade, under proper Regulations, must be the greatest Gainers by Trade, tho', in some particular Branches of it, they may be said to lose. At present, our Business is to pursue this Subject one Step farther, and to shew what additional Improvements the Commerce of the East, by the Way of *Egypt*, received, while in the Hands of the *Romans*, till the Seat of the Empire was removed from *Rome* to *Constantinople*, which created a great Alteration in the Face of Affairs in this, as well as in all other respects.

SECTION X.

An Account of the Affairs of Egypt, and of the Commerce carried on by the Romans, through that Country, to the East, till the Seat of the Empire was transferred from Rome to Constantinople.

1. A succinct Account of the Attention paid to Commerce in general, and to this Branch in particular, from the Reign of Trajan, to that of Marcus Aurelius.
2. The State of this Commerce, during that Period, and the Mistakes that have been made about it rectified.
3. A succinct Account of the Roman Emperors, from the Accession of Marcus Aurelius, to the Death of Alexander Severus.
4. This View of their Reigns continued, from Maximin to Aurelian.
5. The History of Tadmor, or Palmyra; and of the Indian Commerce carried on there, from the Rise to the Destruction of that City and Principality.
6. An Account of the succeeding Emperors, from Aurelian to Constantine the Great.
7. The Situation of the Commerce of the Romans, at the Cloſe of this Period.

THE Rest which the Roman Empire had enjoyed under two such excellent Princes, as *Flavius* and *Titus Vespasian*, was intirely forgotten under the tyrannical Yoke of *Domitian*, the last Prince of that Family, and one of the worst that ever profaned the Imperial Purple. As he lived in Blood, so he died by the Hand of an Assassin, who thought he did the World good Service, by removing one who had shewn himself an open Enemy to Mankind. He was succeeded in the Empire by *Cocceius Nerva*, who reigned only a Year and four Months; and in that Time, shewed a laudable Intention to have remedied all the Evils introduced by his Predecessor: And that he might secure the Happiness of his Country, in case he should be taken off by an unexpected Death, he, without any Regard to his own Family, chose for his Successor *Ulpianus Trajan*, a Spaniard by Birth, and one who was recommended to him only for his Virtues. The raising this Man to the Empire, was not more fortunate to him, than happy for his Subjects; for he was a Prince endowed with all the Qualities that were necessary to the Support of that high Dignity, and with the Talents that were peculiarly requisite to restore the Reputation of the Roman Name, and the Forces of a Government now sinking under its own Weight.

He was raised to the Empire in A. D. ninety-eight; and having first secured all the Provinces on the Side of *Germany*, he began to turn his Eyes to the opposite Frontier; and having ordered the Governor of *Syria*, to enter *Arabia* the Story with an Army, he struck such Terror into the East, that some *Indian* Princes sent their Embassadors to *Rome*, where he received them with great Civility and Kindness. He made afterwards an Expedition into the East, where he extended, by his Conquest, the Bounds of the Empire, as far as the River *Tygris*: And, having made himself Master of the City *Ctesiphon*, he was again proclaimed Emperor, and had the Name of *Parthicus* given him by the Senate. He was a great Admirer of the Fortune of *Alexander*; and in some Things affected to imitate him: For which Reason, as he was now near the *Indian* Ocean, he determined to visit it; which Design he also put in Execution. While he was at the Mouth of the *Euphrates*, he saw a Ship there that was bound to the *Indies*; with which he was exceedingly pleased, and declared that he would have taken that Opportunity of making the Voyage, if he had been a younger Man than he was.

He rendered divine Honours to *Alexander* the Great on the Spot where he died; and often expressed a very high Esteem for his Virtues, and an earnest Desire to imitate his great Designs for the Benefit of Mankind; with which View he directed a large Fleet to be built in the *Red Sea* for the Defence of the Navigation on that Side; and undertook himself the Reduction of Part of *Arabia*, in hopes of securing by that means the Trade of the East to his Subjects, who were extremely harassed by the con-

tinual Piracies of the *Arabians*: With this View he entered the Country of the *Atranians*, which lay on the South Side of the *Persian* Gulph; but found that Region so barren and destitute of Provisions, that he was constrained to retire from before the Capital of their Country, to which he had laid Siege. In this Enterprize, however, he fatigued himself so much, that he fell into a Looseness, of which he died in *Cilicia*, after he had reigned only nineteen Years. He was a Prince careful, in all respects, of the Interests of the Empire, but particularly of what concerned the East; and, therefore, he took care to cause the Canal between the *Nile* and the *Red Sea* to be cleaned and repaired, so that it was thence forward called the Canal of *Trajan*.

He was succeeded, A. D. 117, by *Adrian*, who had been his Ward; and to whom, for his constant Fidelity in all the various Scenes of his Life, *Trajan* bequeathed the Empire. There were few of the *Roman* Princes who had either greater Talents for governing, or the Qualities of whose Minds were better suited to the Times in which they lived, than those of *Adrian*, whose Knowledge was extensive, his Temper firm, his Capacity equally great as a Soldier, and a Statesman. At his Return to *Rome* from the East, he remitted at once all the Taxes due to his Predecessor. Then he made a Journey into the Western Provinces, where having restored all things, he returned to *Rome* with great Glory, and, with the like Diligence, applied himself to settling the Affairs of the East. In the fifteenth Year of his Reign he made a Tour into *Egypt*, and resided for some time at *Alexandria*, where he took a great deal of Pains to examine into the Character of its Inhabitants, and has left us in his Letters several curious Remarks; among which we may reckon these two: first that though the *Alexandrians* seemed to have amongst them many Religions, yet, in fact, they all of them worshipped but one God, which was *Gain*: The second, that it was the busiest Place in the World, where there was no Room for Beggars, since they made even blind Men get their own Bread. He found the City labouring under many Difficulties, many of their Privileges being lost by their frequent Seditions; all of which, however, he restored, repaired such Parts of the City as had suffered in these Commotions, restored all the public Foundations of the *Ptolemies*, and made some excellent Regulations for the Security of Commerce. In his Return through *Syria* he received the Submission of the City of *Palmyra*, as we shall hereafter shew more largely: And it was about this time, that *Arrian* undertook, by his Direction, the Examination and Description of the *Euxine* Sea: And, indeed, his Care of the Public was in nothing more remarkable, than in restoring the Sea-Laws, and in the Edicts he made in favour of Mariners.

Titus Antoninus succeeded in the Empire, by Virtue of his Nomination, A. D. 138; and proved as worthy a Prince as ever sat upon the Throne: He is generally called, in or-

Sueton. p. 135. Aurel. Vict. ⁵ Ptolem. lib. iv. c. 5. ⁶ Dion Cassius, lib. lxxix. Spartian. de vita Adrian. Aurel. Vict. ⁷ Papp. de vita Aureliani. Spartian. de vita Hadrian. ⁸ The Title of this celebrated Work of *Arrian* is as follows. *Arriani Epistola in Adriam in qua Persicus Pontus Euxinus.* ⁹ Digest. de lege Rectoris, l. 9. Tit. 2. lib. xiv. Digest. ad. S. C. Trebellianum, lib. xxxvi. l. 49.

der to distinguish him from the Princes of his Family, *Pliny*, for his Regard to his Predecessor, and the Purity of his Life, by which he was as illustrious as from his Imperial Dignity: He was naturally a Lover of Peace, and strict in the Administration of Justice: His Care of Trade was equal to that of any of his Predecessors; for the promoting it, he caused all the High-roads throughout the Empire to be repaired; and for the Convenience of such as were engaged in Business, he directed, that the Diversions of the Play-house should begin later on those Days, on which the Merchants met on the Exchange. As the Works of the best Historian of these Times, which regarded his Reign, are long since lost, we have a much worse Account of it, than it deserved; and therefore we cannot enter into any Particulars, relating immediately to our Subject; but this we know in general, from an Oration, that has escaped Oblivion, that the Commerce of the *Romans* was never better protected, and, consequently, was never more extensive or flourishing, than while the Reins of Government were held by this excellent Prince, whose constant Maxim it was, that the Glory of the Monarch consisted solely in the Happiness of his Subjects; and by the Prosecution of this Maxim he secured to himself the peaceable Possession of his Dominions while living, and the greatest Respect to his Memory after his Decease.

2. It is by no means my Intention to enter here even into a succinct History of the *Roman Emperors*; all I aim at is, to give the Reader such an Account of them, as may render what I have to say with regard to this Trade; while in the Hands of the *Romans*, perfectly intelligible; that so I may avoid putting him under a Necessity of consulting many other Books, that he may be able to understand this; a Fault which having often observed in other Works of this Nature, rendered me the more careful in avoiding it. We have an ancient Writer who has given us a very complete Description of the *Mare Erythraum*, or *Red Sea*; which has long past, under the Name of *Arrian*, as I have hinted, more than once, before; but is, I think, answerably shewn by the learned *Mr. Dodwell* to have been written by some other Author. This Writer, whoever he is, has shewn us, that, within the Compass of Time mentioned in this Section, there were very great Improvements made in the Navigation of the *Romans* to this Part of the World: And, therefore, I am not a little surpris'd, that so learned a Man as *Bishop Huet* should suggest, that the Trade to the *Indies* was sunk in some measure till revived by *Trajan*, and supported by the Fleet which he caused to be sent into the *Red Sea*. The avowed Design of that Fleet was to crush the Pirates in those Seas: But these sort of People never trouble any Seas where there is not a great Trade carried on; and, therefore, the building such a Fleet was by no means a Proof, that the Trade of the *Indies* was at that time any way lessened, but rather the contrary. The Secret, and true Design, of *Trajan's* equipping this Fleet was, that it might facilitate a Project he then had of rivalling *Alexander* by the Conquest of the *Indies*: And the Reason he laid it aside was, that he began to suspect, that it would be impossible to keep such Conquests, even supposing it possible to make them.

He, therefore, began to turn his Eyes towards *Arabia*, with a Design to establish, and even to enlarge the Conquest that had been made by his Lieutenant *Cornelius Palma*. Of these Conquests we have very indistinct Accounts in History; for they must have been much more considerable than those Accounts make them, since there are yet extant several Medals struck on taking of Towns in that Country. It is likewise very certain, that either *Trajan*, or some of the Emperors who succeeded him, reduced the greatest Part of *Arabia the Happy* under their Dominion; for the Writer I have before mentioned, who describes the *Red Sea*, speaks of a Port without the Streights of *Babel-mandel*, called *Eudemon*, or the *Happy*, which, he says, was formerly a Place of very great Commerce: But a little before our Time, continues he, it was destroyed by *Cæsar*.

Some Writers, indeed, ascribe the Ruin of this Place to *Caius Cæsar*, the Grandson of *Augustus*; for whose Use King *Juba* wrote a large Work in relation to these Countries: But if we consider what *Pliny* says, that *Caius Cæsar* only looked into *Arabia*, and that *Alius Gallus*, of whose Expedition I have already spoken, penetrated further than any other *Roman* into *Arabia*, we shall easily see, that this is a Mistake; and that this *Cæsar* lived much later, than is to say, within the Compass of the Period of which we are now writing.

It appears, moreover, from the Description of the *Red Sea*, so often cited, that, by this Time, I mean under the Emperors who succeeded *Trajan*, the *Romans* had extended both their Power, and their Trade, very far on this Side, and were, in a manner, Masters of all *Arabia*; though when, or how, it was subdued, is a Point not so easily resolved; nor do I intend to trouble my Readers with a tedious Inquiry into so perplexed a Subject. It is sufficient for my Purpose, that I have cleared the Matter thus far, and have shewn the true Period within which these Conquests were made; by the Mistake of which, we must be led into many others, capable of misleading us intirely in regard to the History of the *Indian Commerce*, by inclining us to believe, that it was in a declining State in that Period, when, in Truth, it flourished most.

This Port of *Eudemon*, which I before-mentioned to have been destroyed, was afterwards restored and repaired, and became so famous a Mart for all the Commodities of the East, and, withal, was so much frequented by the Subjects of this Empire, that it was called, by way of Emphasis, the *Roman Port*; and is the very same which is now called *Aden*, a Name that signifies nearly the same thing in *Arabic*, that *Eudemon* did in *Greek*, according to the well-known Custom of the *Arabians*, who every-where restore the old Names of Places that they become Masters of. It is also very clear, that, at this Time, the *Romans* carried on a great Trade in Countries much beyond the Limits of their Knowledge in former Times, that is to say, along the Coasts of *India*, *Persia*, *Cambaya*, and the *Peninsula of Malacca*; but they were still as far from being acquainted with the Spice Countries as ever. The Author of the Description of the *Red Sea* does indeed speak of the *River Ganges*, and of the Countries lying on the Gulph of *Bengal*, but not with the same Accuracy that he does of other Places; from whence, I think, it may be fairly concluded, that he drew the Accounts he had of them from Hearsay, that is, from the Reports which the *Roman Merchants* received at *Barygaza* and *Muziris*, which were Ports of *Malacca*; and the latter is, with great Probability, thought to be that which is now called *Dem*.

It was by the prodigious Profits arising from this Commerce, that, on the one hand, the People of *Alexandria* grew so rich, and so mutinous, as all the Historians of these Times represent them; and that, on the other hand, the *Roman Emperors*, of whom we have been speaking, and who were by far the best, if we except one or two that enjoyed that Dignity, were engaged to make so many Visits to that City in particular, and to take so much Care as they did of all Things relating to Trade in general; which had an extraordinary Effect on the Manners of the *Romans*, and altered their Notions to such a Degree, that even the most considerable Persons of the Empire, for Birth and Quality, were not at all ashamed of becoming Merchants; and this, in all Probability, was the Cause, that their Capitals became larger, and their Trade through *Egypt* much more considerable than in former Times. How far this might contribute to the corrupting the Minds of the People, by the increasing Luxury, I shall not pretend to determine; but, most certain it is, that the Times do not appear to have been worse within this Period, but rather better; and, therefore, it seems more agreeable to Truth, to attribute that Corruption of Manners, which was afterwards visible amongst the *Romans*, and had very not ruined their Empire, to the bad Example of succeeding

* This Part of the Work of *Dion Cassius*, whose History is here meant, perished, before *Xiphilin* made his Abridgment. † This curious Piece is printed in the fifth Volume of *Dr. Hudson's* Collection of ancient Geographers, under the Title of *Arriani Periplus Maris Erythraei*, which is the Edition I use. ‡ We have this Circumstance from *Eutropius*; and the Reader, by consulting *Dion Cassius*, will find, that the *Roman* times regarded him as the Conqueror of the *Indies*; which was either great Flattery, or they must have reckoned *Arabia Felix* Part of the *Indes*. § *Periplus Maris Erythraei*, p. 14. ¶ *Ibid.* † *Ibid.* ‡ *Hist. lib. 12. c. 14.*

Princes, than to the great Wealth that was poured in upon them by their extensive Trade. Of these Princes, and of their Conduct, it is necessary, that we should say something, in order to preserve the Thread of our History, and that the Connection may be preserved throughout; but, at the same time, we shall use all possible Brevity, in order to restrain this Section within due Bounds.

3. *M. Aurelius Antoninus*, surnamed *the Philosopher*, succeeded *Aurelius Pius*, A. D. 161. and succeeded *Lucius Verus* in the Government, which was the first Time the *Romans* had seen two Emperors at once; neither had it, in this Instance, any ill Consequence: For, as *M. Aurelius* was fully esteemed the very best of all the *Roman* Emperors, so his Collegue *Lucius*, during the nine Years of his Reign, behaved towards him with all that Modesty and Respect, which was due from him to the Author of his Greatness. After his Decease, *M. Aurelius* governed alone, with the utmost Wisdom and Moderation, neglecting nothing that could contribute to maintaining the great Character he had gained, and securing, at once, the Love and Esteem of his Subjects. He made a Visit to *Egypt*, in the fifteenth Year of his Reign; and though the Inhabitants had, a little before, shewn an Inclination to revolt, yet he behaved towards them very kindly, and renewed all their Privileges: So that there is not the least Reason to doubt, that the Trade of the *Romans* through that Country, was preserved in its full Extent.

His Son *Commodus*, who succeeded him in the Empire, A. D. 180 was as wicked and cruel a Prince, as his Father had been just and virtuous: His Reign was a continual Scene of Blood and Debauchery; and as the Empire, in general, suffered exceedingly under his scandalous Administration, so the Trade of the East was particularly endangered by an Invasion of the *Saracens*, who were now first heard of in *Arabia*, where they defeated the *Roman* Armies, in the last Year of the Reign of this Prince^a, who was murdered by some of his Favourites, that he had intended to remove in the same Way.

Helvius Pertinax was raised to the Empire in A. D. 193. and as his Reign was very short, I should not dwell upon it at all, but for the singular Circumstance of his Name, which signifies Obstinat, and was given him for a Reason that the Reader may, perhaps, think worth his Notice. His Father was a Woodmonger; but, having acquired a considerable Fortune, he was willing, that his Son should have entered the World in another Character, than that of a Trader; to which, however, he was so strongly inclined, that all his Father's Persuasions, for some time, had no Effect: And from thence he was called *Pertinax*^b. He shewed his Conduct afterwards, and rose regularly, through a long Series of Civil and Military Employments, to the Empire: With his Preference to which, all Degrees of People were pleased, except the Soldiers, who, after a Reign of three Months, murdered him^c.

After his Death followed many Disturbances; but at last A. D. 193. *Severus* was raised to the Empire, in which, however, he had *Niger*, who was declared Emperor in the East, for his Competitor. In the fifth Year of his Reign, he entered *Arabia* with an Army, and laid Siege to *Bra*, the same Place that had been formerly attacked by *Trojan*, out of a covetous Disposition, and that he might make himself Master of the vast Wealth, that he understood was in the Place; but he was repulsed with great Loss, and forced to retire. His Passion for Money, however, was so strong, that he returned thither a second Time; and had certainly taken the Place, if his Covetousness had not hindered him: For the Breach being made, he was apprehensive, that his Soldiers, if they took it by Storm, would share the Plunder amongst themselves; and therefore he would needs give the Besieged time to capitulate, which they employed in repairing the Breach; and did it so effectually, that the *Roman* Army refused to return to the Assault: So that he was obliged to raise the Siege a second time^d. This Instance sufficiently shews us, to how great a Height of Power the Profits of their Trade had, in those

Days, raised the *Arabians*, since a small Principality amongst them, was capable of defending its Liberties against two such Princes as *Trojan* and *Severus*: And we may add to this another great Prince no less powerful, viz. *Alexander*, who re-established the Empire of the *Persians*. In the succeeding Year *Severus* visited *Egypt*, and made some Stay in *Alexandria*, where he repaired the Tomb of *Pompey*, and granted to the City a Senate and publick Council, which hitherto the *Romans* had constantly refused them^e. This Emperor travelled over all *Egypt*; inquired carefully into every thing that related either to his Government, or Commerce; and, having seen the Body of *Alexander*, he ordered the Tomb to be walled up, that others might not satisfy their Curiosity in like manner^f. His Son *Carausius* succeeded him, A. D. 211. and proved as great a Tyrant as any that had hitherto sat upon the Throne. He was, however, extremely fond of *Egypt*; and admitted one *Ceramus*, an *Alexandrian*, into the Senate of *Rome*, contrary to the established Maxim of *Augustus*, that no *Egyptian* should ever enter that August Assembly^g. Towards the End of his Reign, he went to *Alexandria* upon a very odd Errand: He had heard, that the People treated his Vices and Follies with Hatred and Contempt: He, under Pretence of visiting it, as his Father had done, entered it with his Troops; and, having directed them to kill, without Distinction, all they met, destroyed an infinite Number of all Ranks and Ages. He afterwards abolished their Privileges; destroyed a great Part of the City; demolished the Museum; banished the learned Men who lived there, and all Strangers, Merchants only excepted, to whom he vouchsafed his special Protection^h. This Tyrant was soon after killedⁱ, in an Expedition he made into the East; to the great Joy of the Senate and People of *Rome*.

Macrinus, one of his Officers, and his Murderer also, succeeded him: But we find no News in his Reign, nor that of his Successor, the execrable *Heliogabalus*, worthy of Notice.

Alexander Severus was raised to the Empire while a Boy, A. D. 222. He proved an excellent Prince, and a great Blessing to the Empire; and, being governed, during his whole Reign, by very wise and prudent Counsels, did every Thing that could be expected from him, for promoting the Welfare and Happiness of his Subjects. He was particularly attentive to Trade, and the Ease and Comfort of such as were engaged in it. He took off many of the high Duties imposed by his Predecessors: And it is remarkable, that he was the first of the *Roman* Emperors who made any Distinction between Merchants, and Tradesmen or Mechanics; which he did by dividing them into separate Companies, and appointing Judges to hear and decide the Disputes that might arise amongst the Members of either Company. Towards the End of his Reign, he made an Expedition into the East; from whence he returned victorious, and was honoured with a Triumph. But the Soldiers, who were, in a great measure, corrupted by the Licence allowed them under former Emperors, being no longer able to bear the Strictness of his Discipline, or endure the Purity of his Manners, took an Opportunity to murder him a little after Dinner, when he was left almost alone, in his Tent, in the twenty-seventh Year of his Age, and fourteenth of his Reign^k.

4. The execrable Murder of so good an Emperor was followed by the Soldiers setting up a perfect Monster, both in Body and Mind, called *Maximin*; which obliged the Senate to set up other Emperors, in order to preserve some Degree of Decency in the Government, which they found very difficult for them to do, the Army being as much bent to maintain their Power, as the Senate were to support their Authority: But at last *Maximin*, on whose Account these Disturbances began, being slain, and *Gordian* and his Nephew, who were exalted to the Empire in the Year 236. being slain also, the People would needs have a Share in making Emperors; and therefore obliged the Senate to declare the younger *Gordian*, who was a Boy of thirteen, and the third of his Name, *Augustus*. It is natu-

^k *Dion Cassius, lib. lxxvii. Herodian, lib. iii. Spartian. de Vita Severi.*

ral to suppose, that, in the Midst of these Confusions, the whole Oeconomy of the Empire suffered; and, indeed, suffered in every Part, by the Ambition of their Governors, who all imagined, that, by courting the People under their Subjection, they might be able to raise themselves to Sovereignty. The Army, disdaining the Youth of *Gordian*, could scarce be persuaded to follow him to the *Persian* War; and tho' he was there successful against the Enemy, yet he found it impossible to triumph over the Malice of his own Troops, who, taking the Opportunity, when he had tew of his Friends about him, and being headed by *Philip*, who was the Captain of his Guard, murdered him, when he had held the Empire about six Years^a.

M. Julius Philippus, who had thus betrayed his Trust, and murdered his Prince, was, by the Army, raised to the Empire. He was an *Arabian* by Birth, and attended, so far as the Disturbances of his Reign would give him Leave, to the Concerns of the Government with great Diligence; but a Sedition rising in his Army, and he sending *Decius* to quiet it, the Soldiers threw an imperial Mantle over his Shoulders, and, declaring for him against *Philip*, a Battle was soon after fought between them, in which the latter was slain, after a short Reign of four Years. This *Decius*, who was an *Hungarian* by Birth, governed the Empire with Reputation for two Years and an half, and was then slain in a Battle against the *Goths*, by the Treachery of *Vibius Celsus*, who succeeded him in the Empire, and associated his Son *Vulpius*; but they scarce held it long enough to be accounted Emperors: for the *Scythians*, and other barbarous Nations, invading the *Roman* Territories on all Sides, who ever had Courage and Fortune enough to resist these Barbarians, was presently saluted Emperor by his Soldiers: And thus the Misery of the Empire was increased by what ought to have been her Defence, the having many brave Men, and good Officers, in her Service^b.

It was in this manner that *Emilianus*, an *African*, was raised to the Purple, which he held but a few Months; for another Army having proclaimed *Valerian*, who was a Man of Quality and great Abilities, the Army that had chosen *Emilian*, thought proper to dispatch him out of the way, rather than involve themselves in any Danger about a disputed Title. The Emperor *Valerian* assumed the Purple *A. D.* 253. and, having a great Reputation, brought the Affairs of the *Roman* Government into some Order; for, having repulsed the *Germans* on one Side, and the *Goths* on the other, he resolved to march himself against the *Persians*, who had created new Disturbances in the East. In the Year 258. he was at *Byzantium*, in his Way towards the East; and, having spent the next Year in a slow War against the *Persians*, it came, in the Year following, to a decisive Engagement, in which he was beaten, and afterwards taken Prisoner.

He had associated his Son *Gallienus* in the Empire, soon after he was raised to it; and this Son now succeeded him in the imperial Dignity, and governed alone near nine Years, but without either Peace or Reputation; for he gave himself up to a luxurious and indolent Life, without taking the least Care to free his Father out of the Hands of the *Persians*, or to prevent his Dominions from being over-run by the numerous Armies of Barbarians, that attacked them on either Side. While Affairs were in this Posture, almost every great Province gave the Title of Emperor to whoever commanded it; and *Egypt*, among the rest, where the Country was ruined, and the City of *Alexandria* desolated by War, Pestilence and Famine, all at one time. These Miseries, however, were not sufficient to hinder them from creating new Disturbances; for in the Year 262. they gave the Title of Emperor to *Emilian*, who was then Prefect of *Egypt*, against whom *Gallien* sent *Theodotus*, who, was an *Egyptian* by Birth, and who having shut up *Emilian* in the *Bractium*, or Palace of *Alexandria*, at last made him Prisoner, and in that Condition sent him to *Rome*, where, by the Order of the Emperor, he was strangled. In this unfortunate Dispute the City of *Alexandria* suffered very severely for; the *Bractium*, or royal Quarter which was very large, and very magnificent,

was intirely destroyed, and rendered desert; so that in succeeding Times the Ruins of it were at some Distance from the City, which, we may hence conclude, began about this Time to decline; and no Wonder that it did, since the whole *Roman* Empire was now visibly sinking under its own Weight, and crumbling into as many Parts as there were Provinces^c.

The *Roman* People, perceiving that *Gallienus* took too little Care of Affairs, began not only to hate, but to despise him. This created some Insurrections in *Italy*; and *Gallienus* putting himself at the Head of an Army, in order to repress them, he was there murdered; and soon after, his Son and his Brother were cut off at *Rome*. He had for his Successor *Claudius Gothicus*, who received that Name for a great Victory he obtained over the *Goths*, in which he destroyed three hundred thousand of them, and sunk two thousand of their Ships or Barks, for which the Senate decreed him a golden Shield, and ordered his Statue to be set up in the Capitol. The *Romans* began now to conceive Hopes of seeing better Days; and indeed there is no Instance of any Prince, who, during so short a Reign, made himself so much beloved, since he died, at the Close of his second Year, at *Syracum*^d.

He recommended, on his Death-bed, *Valerius Aurelianus*, whom he had sent into *Thrace* against the *Goths*; but the Army, instead of proclaiming him Emperor, set up *Quintillus*, the Brother of *Claudius*, in a Fit of Zeal for that Monarch's Memory; but, finding their new Emperor a Man of too severe Morals for those licentious times, they murdered him in a Fortnight, and proclaimed the Person, whom *Claudius* recommended. This *Aurelian*, who was raised to the Empire in 270. was a Person of great military Capacity, a Lover of strict Discipline, and, in every respect, proper to restore the distracted Affairs of the Empire, and to retrieve the antient Glory of the *Roman* State. He soon freed the Western Provinces from the Apprehensions they were under, from their barbarous Neighbours; and, having likewise settled the domestic Oeconomy of the Empire, to the Satisfaction of the Senate, he began to turn his Eyes towards the East, where a new Power was erected, and had assumed the imperial Title: But as the Rise and Progress of this Power, has a very close Connection with our Subject, it is necessary, that we should examine it more at large; which will enable us to take notice of many Particulars, that must otherwise have been buried in Obscurity^e.

5. While the *Roman* Empire was thus torn by intestine Confusions, and while many wore the Title of Emperor, with Power enough to oppress, and too little to protect their Subjects, a new Principality started up, or rather discovered its Power to the World; of which, as I have already observed, I am necessarily obliged to speak more at large, because it owed that Grandeur, which it possessed in so high a Degree, intirely to the Commerce of the *Indies*; so that it may serve us for an Instance, that there is no Situation so wild, as not to be improved and rendered pleasant; no Country so barren, as not to admit of Cultivation; no Spot of Ground so unhappily placed, as not to become the Seat of Pleasure, if, by any Art or Contrivance, any Commerce of Importance can be fixed there.

The Place, of which I am to speak, was originally built by King *Solomon*, after he had conquered the King of *Hamatb Zoba*, a little *Syrian* Prince, within whose Dominions the Country lay, upon which this City was afterwards erected. It was called by *Solomon*'s, *Tadmor*; and from that Situation in the midst of a sandy Desert, which surrounded it on all Sides, *Tadmor* in the *Hillernese*. But, as the Singularity of its Situation was sufficient to charm whoever attentively considered it, so in the Decline of the *Greek* Empire in the East, it became a free City, or rather the Head of a small Principality, under the Name of *Palmyra*, from whence the Country under its Jurisdiction was called *Palmyrene*^f. This City and Country are very well described by *Pliny*.

Palmyra, says he, is excellently situated, as well in re-

gard to the Pleasantry of the adjacent Country, as from the great Abundance of Water. And this little Territory seems to be set apart by Nature for a peaceful and undisturbed Retreat, being surrounded on every Side with dry and sandy Deserts, which reach as far as the very Confines of Arabia*. This little State lay between the two mighty Empires of Rome and Parthia, when the Disputes between them were at the highest, having the Parthians on the East, and the Roman Territory on the West; so that it seemed to be perpetually in Danger; and yet, though exceedingly rich, it was so wisely governed, as to escape any great Loss during all those Confusions; and never ran any great Hazard except from Mark Antony, who, being distressed for Money to pay his Army, sent a Body of Horse to plunder it; but the Inhabitants, having Notice of his Intention, removed their Effects, and so prevented that Desolation with which they were threatened¹. The Source of its great Wealth was the Share it had in the Commerce of the Indies. This Commerce was thus carried on: The Goods were brought by Sea to the Mouth of the Euphrates, and, perhaps, a little higher; and thence they were sent by Land in Caravans for some hundred Miles through the Deserts to Palmyra, which stood one Day's Journey from the Euphrates, one hundred and twenty-seven Miles from Damascus, and about two hundred and three Miles from the maritime Coast of Syria, by the Ports of which it dispersed these Goods to all the different Parts of the Roman Empire, that did not immediately correspond with the Port of Alexandria.

When Trajan overturned the Parthian Empire, the Principality of Palmyra declared for the Romans; and A. D. 130. they submitted themselves to Adrian, who was then marching with his Army from Syria into Egypt; who was to well pleased with the Situation of the Place, and the Behaviour of the People, that he granted them the Privileges of a Colony, and adorned the City with so many beautiful Structures, that the Inhabitants, in Compliment to their Benefactor, called their City for some time *Adrianopele*². From the Time of Adrian, to that of Aurelian, which comprehended the Space of 140 Years, this City, and the Territory under its Jurisdiction, so flourished and increased, that when the Emperor Valerian was taken Prisoner by Sapor, King of Persia, Odenatbus, who then governed Palmyra, was able to bring a powerful Army into the Field, to recover Mesopotamia from the Persians, and even to penetrate as far as their capital City Ctesiphon; which was so acceptable a Service to the Roman Empire, then governed by Gallienus, a lazy and inactive Prince, that, with the Consent of the Senate, he took Odenatbus into Partnership with him, and gave him the Title of *Augustus*³; which Incident, by a strange Turn of Affairs, proved the Cause of the utter Ruin and Subversion of the Place.

For Odenatbus, and his Son Herodes, being soon after murdered by Meenius their Kintman, his Wife Zenobia, in Right of her Son Wabalaibus, then a Minor, assumed the Government of the East; which she managed with so much Prudence and Discretion, that, after the Death of Gallienus, she made herself Mistress of Egypt, and held it during the short Reign of the Emperor Claudius.

On the Accession of Aurelian to the Imperial Dignity, he refused the Title of *Augustus* to this Family, though he willingly honoured them with that of Viceroy, as appears by his Coin⁴; neither did he shew any Inclination to deprive them of the Government of the East: But the high-spirited Zenobia would be contented with nothing less than the Partition of the Empire; and Aurelian could not bear the Thoughts of sharing the Sovereignty with a Woman: Which produced the War between them; in which the hazarded two Battles, and was defeated in both, and afterwards shut herself up in the City of Palmyra, where, for a long time, she made an obstinate Defence; but, finding it to no Purpose, and that sooner or later the City would be taken, she quitted it privately, and, with her Son,

attempted to make her Escape: But, Aurelian being informed of it, caused her to be pursued; and she was overtaken on the very Banks of the Euphrates⁵. Aurelian was far from treating her with Severity: He reserved her indeed for his Triumph; but, in other respects, he treated her very kindly, and with much Esteem. On his Return to Rome, she was led through the City, as a Proof of his Victory; and the Roman Writers agree, that there never was seen a more magnificent Spectacle. She was, in her Person, of the largest Size, but exquisitely beautiful. I mention the Circumstance of her Stature, because we are particularly told, that the Jewels she wore upon this Occasion, were so many, and so large, that they were a great Burden to her, and tired her to such a Degree, that, though a strong Woman, and much used to Exercise, she was forced to halt several times in her Passage⁶. After this fatiguing Ceremony was over, she had a Country-house given her near the Tiber, where she lived many Years, with her Family, in great Honour, and in perfect Tranquillity. She was indeed, in all respects, the most accomplished Lady of her Time, and equally remarkable for her unblemished Chastity, her extensive Learning, her masculine Courage, and her deep Policy.

If the Inhabitants of Palmyra could have forgot the Figure they made under her Reign, or could, from her Example, have learned to bear a Change of Fortune with Discretion, they might have escaped without suffering much by this unlucky Accident; but believing, after Aurelian was returned into Europe, that there was no Danger of his coming back, they cut the Throats of the Soldiers he had left in Garrison; which incensed him to such a degree, that he took a sudden, and yet inflexible Resolution, of marching in Person to chastise them; which he accordingly did; and having, with little Opposition, made himself Master of the Place, he caused the Inhabitants to be destroyed without Mercy, and gave the City to be pillaged by his Soldiers; which produced so dreadful a Desolation, that even the Emperor himself, who was far enough from being of a gentle Disposition, was touched therewith, and gave Orders, that the few who had escaped, should be spared; and he likewise gave Instructions for restoring the Plunder, taken by his Soldiers out of the Temple of the Sun⁷.

This dreadful Destruction of Palmyra, which happened A. D. 272, put an End to this Principality; but it is not probable, that the City was then ruined to the Degree which Travellers see it now, because we often find it mentioned in History as a considerable City after this, though not as the Seat of Government, as it had been in Times past, when there were no less than sixteen Cities in its Neighbourhood under its Jurisdiction, the Ruins of which are yet visible, and very plainly shew how great the Power and Magnificence of those Princes must have been, by whom they were erected: And, as for the Ruins of Palmyra itself, they are allowed by all who have visited them, to be equal, if not superior, to any thing of the same kind yet remaining in the World⁸. As for the Course of that Part of the Indian Traffick which passed this Way, it has, after some Variation, been in a great measure fixt to Aleppo, particularly that Part of it which is the Consequence of an Intercourse with the Persians, some Provinces of that Empire being, within this Period, always regarded as Part of the Indies. But it is now Time to quit the Story of this City's Ruin, in order to pursue the Thread of our Narration, which leads us to another Insurrection against the Emperor Aurelian, which was said to take Rise from the same Cause; I mean, too great Wealth amassed together by the Commerce of the Indies.

We have already observed, that Zenobia had added to her Dominions Egypt, as well as some other Countries. On the Ruin of her Affairs, there was a Roman Merchant in Egypt, whose Name was M. Firmianus, who dealt in Paper, Glue, and other Commodities, with which he furnished the Inhabitants of Arabia, and other Parts of the East; and became thereby so rich, that he had Money enough

to maintain an Army, which he undertook to raise under Colour of supporting the Cause of *Zenobia*; but, in fact, with a View to have secured to himself the Sovereignty of *Egypt*, where he found the People inclined enough to mutiny; and was soon in a Condition to render himself formidable; the rather, because the first Step he took was to lay an Embargo upon the Fleet that was bound from *Alexandria* to *Rome*. But this, instead of contributing, as he vainly imagined it would, to his Safety, drew upon him immediate Ruin; for *Aurelian*, knowing well the Consequences that this must produce at *Rome*, marched with all imaginable Diligence to *Egypt*; and, having easily made himself Master of *Alexandria*, he blocked up *Firmius* in a Castle, and soon after took him Prisoner, and caused him to be put to Death, with horrid Torments^a.

He likewise settled the Trade of that Country on a new Foot, by the Regulations which he made, and which seem to have been very advantageous to the *Romans*, whatever Hardships they might bring upon the *Egyptians*. These Precautions, however, could not have affected the Inhabitants of this Country so deeply, or the Severities exercised by *Aurelian* have depressed them to such a Degree, as History mentions, if they had remained at Peace among themselves, and had been content to enjoy quietly, what was left them after their Misfortunes: But this they could not do, for their mutinous and restless Temper threw the Inhabitants of *Alexandria* into such factious Disputes, as occasioned a kind of civil War amongst them; which produced the Ruin of many of the public Buildings, and finest Edifices, that were yet left standing; so that, with their own Hands, they laboured incessantly to demolish, what had been raised by the Industry and public Spirit of their Ancestors; and thus the Desolation of this great and rich City was increased, and in a manner finished, by the Madnels of her Citizens^b.

Soon after, this *Aurelian* was murdered by some of the principal Officers of his Army; and the Senate and Soldiers were, for some time, in Suspense, before they proceeded to an Election, which, at last, fell upon *Tacitus*, who was at the Head of the Senate, and seventy-five Years of Age: For which Reason, he laboured, with the utmost Diligence, to have avoided, had it been possible, the Acceptation of this Dignity; but, finding that his Endeavours were vain, and knowing that it was sometimes as dangerous to refuse the Purple as to accept it, he yielded, at last, to the Intreaties of the Senate, and became, as it were, Emperor by Force.

6. The Reign of *Tacitus* began and ended in the Year 276. For, having sent a Relation of his to govern *Syria*, while himself was in the Neighbourhood of that Province, and this Man having discharged his Duty but indifferently, the People first murdered him; and then, fearing they might be punished for this Action, endeavoured to secure to themselves Impunity, by cutting off the Emperor also^c. He was succeeded by *Probus*, who was a most excellent Prince: For he first settled Peace at home, and then visited the Provinces, where he, likewise, gained great Honour, and secured the Empire from all Apprehensions of Disturbance from any of the barbarous Nations that had hitherto interrupted its Quiet. His Reign, however, was disturbed by an Infection in *Egypt*, where the Soldiers and the People made *Saturninus*, a worthy Officer, Emperor against his Will. *Probus* had made him General of the Forces in the East, with a particular Caution, that on no Account whatever, he should enter *Egypt*: But he, being extremely desirous to see the Curiosities of that Country, and, perhaps, not the less so for this Prohibition, made a Journey to *Alexandria*; which City he had scarce entered, when the People, out of that Spirit of Fickleness, of Flattery, and of Folly, for which they were famous, saluted him *Augustus*. He acted right, at first, by quitting the Place instantly, and returning to *Palestine*; but, fearing afterwards, that he should be punished for what the People had done, he changed his Conduct, and assumed the Purple. *Probus*, at first, would

not believe the News of his Revolt, so great was his Confidence in this Man's Virtue; but when it was confirmed, he marched against him with an Army; and, after several hard-fought Battles, besieged him in a Castle; which was taken by Storm, and *Saturninus* killed, in spite of all the Care the Emperor took to save him^d.

This Revolt did not hinder *Probus* from labouring to restore the Affairs of *Egypt* to their former flourishing Condition; in order to which, he caused all the Mouths of the Nile to be cleaned and repaired, and enlarged the Ports of that Province: He further declared his Resolution to take the same Care, and employ the same Patas, in all the other Provinces of the Empire. This generous Disposition, this Desire of establishing universal Peace, this Hope of finding it possible to govern Mankind upon Principles of Humanity, inspired him with an Openness of Heart, and Freedom of Speech, which drew upon him a sudden and violent Death: For tho' it may be a new, a strange, and seemingly absurd Maxim, yet Reason and Experience will shew it a true one, that more Care and Art ought to be employed in covering and concealing good Designs, than bad ones; and that, for this plain Cause, the Majority of the World are bad, or, at least, weak Men, who prefer their present Interest, or what they think so, to any future Good, how great soever: And therefore, whoever proposes to act for the Benefit of all, will be sure to provoke the Displeasure of many, and awake the Affections of very few. This was the Case of *Probus*, for his great and good Projects being interrupted by a War with the *Persians*, he was so indifferet as to hint, in the midst of the Preparations for it, that he hoped there would come a Time when Soldiers would be no longer necessary; which, with the hard Labour he put them upon, in draining the Waters about *Syennium*, irritated his Forces to such a Degree, that they first mutinied, and then murdered him^e, when he had reigned six Years with universal Applause, and had restored the Affairs of the Empire miraculously.

After his Death, the Army, A. D. 282 declared *Carac* Emperor, who entered on a Scene of Trouble; and entered only to go off again: For the barbarous Nations began, on every Side, to be in Motion, as soon as the Death of *Probus* was known. And his Successor, advancing with the Army as far as the River *Tigris*, was there found dead in his Tent, in the midst of a Storm of Thunder and Lightning, in the second Year of his Reign. He had associated his eldest Son *Carinus* in the Empire, and his younger Son *Numerianus*, who was with him, and who was acknowledged by the Army, and continued the War some time after his Father's Death, till by the Treachery of *Aper*, who was Captain of his Guard, and who hoped to succeed him, he was murdered in his Tent: Upon which the Army chose *Dioclesian* Emperor, who revenged the Death of his Predecessor, by killing *Aper* with his own Hands^f.

Dioclesian was raised to the Empire A. D. 284. and as soon as he found himself established, entered into a War with *Carinus*, in which the latter was slain. In 286, *Dioclesian* associated *Maximinian* in the Empire, that they might be the more able to act against all the Enemies of the *Romans*; and the Troubles still increasing, the two Emperors named *Constantius Chlorus*, and *Maximian Galerius*, *Cæsars*. At this Time one *Achilleus* had caused *Egypt* to revolt, and assumed there the Imperial Ornament, and maintained himself better than five Years; but when other Parts of the Empire were quieted, *Dioclesian* in the Year 296, entered *Egypt*, attacked, defeated, and killed *Achilleus*, and, as some Writers say, till the Soldiers to pillage the City of *Alexandria*. But the People, who inhabited the Country between *Egypt* and *Libya*, were now become so powerful, and the Affairs of the *Romans* in that Province were in such Confusion, that *Dioclesian* could find no better Expedient for securing the Peace and Safety of the Province, than yielding up a large Part of Country to that Nation, with whom he concluded

^a *Zosim. lib. i. Epph. in Vit. Aurelian.*

perpetual Alliance, and agreed to pay them an annual Tribute for protecting the Frontiers from other Barbarians, which was paid to the Time of *Justinian*. This is sufficient to shew, how far the Power and Credit of the *Romans* was sunk; and it is natural to suppose, that with them, had Things continued in this State, the Commerce of *Egypt* would have sunk likewise. But in succeeding Times, when the Troubles of the Empire were appeas'd, and the Emperor *Constantine*, surnamed the Great, mounted the Throne, Things began to change their Face, and new Measures were taken for restoring and settling the Affairs of *Egypt*, as will be shewn in its proper Place. At present, this Part of our Plan is executed, and the History of this Commerce connected with that of the Princes by whom it was established, and under whom it flourished.

7. All the Proof we have of the flourishing State of the *Indian* Commerce, in the latter Part of this Period, are drawn from the Circumstances of Things related in History; which, however, sufficiently demonstrate it in general, tho' they do not enable us to enter into Particulars. The great Attention shewn by many of the Emperors, in regard to the Provinces of the East, and the Victories obtained over the *Persians*, and other Nations, kept up such an high Idea of the *Roman* Power in all that Part of the World, that we hear of *Indian* Embassadors sent to almost every Emperor, from *Alexander Severus* to *Dioclesian*: And therefore we have the greatest Reason that can be to believe, that their Commerce was, at this time, carried on with all the Vigour and Success imaginable.

Another Proof of this, is the Accounts we have of the profuse Reigns of *Caracalla*, *Helioababalus*, and *Carinus*: From which we learn, that there were prodigious Quantities of *Indian* Commodities at *Rome*; and it is particularly taken notice of, that *Helioababalus* first wore a Robe entirely made of Silk, at that Time one of the dearest and rarest Commodities they received from the East.

But the strongest and clearest Proof we derive from the Laws made in this Period, in favour of Trade in general, and for settling the particular Duties on the Goods imported from the *Indies*, by the Way of *Egypt*: For these plainly shew, that this Commerce was now more extensive than ever. We may add to this the several Seditions and Rebellions which happened in *Egypt*, and which were the pure Effects of the vast Wealth of the Inhabitants of that Country, derived to them from the Progress they made in their own Manufactures, and the Means that within this Period they found out, of vending their Paper, Glazs, Lincen, and other Goods, throughout the East; by which private Men acquired such immense Fortunes, as enabled them even to maintain Armies at their own Expence; which was the Case of *Marcus Firmus*, whose Riches induced him to attempt making himself Master of the Province, and of becoming, from an *Indian* Merchant, an *Egyptian* Monarch. Indeed, if the Resources of their Traffick had not been so odiously great, it would be very difficult to a count for the People of *Egypt's* recovering themselves, after so many Pillagings as they were expost to, in consequence of the Disorders and Confusions of those Times, which must have carried immense Wealth out of the Province.

It is impossible to turn one's Thoughts upon this Subject, without remembering that the City of *Rome* was adorned with many of its most costly Ornaments, at the Expence of *Egypt*, and particularly of *Alexandria*, from whence they were transported in Ships that were contrived on Purpose, and were of a most extraordinary Size. Thus, for Instance, *Flavius Vespasian* dedicated, in his Temple, which he erected to the Goddess of Peace, the largest Statue that had been seen, of *Egyptian* Porphyry; and of that Kind, that was called *Basaltus*, of an Iron-colour, which represented the Nile, under the Figure of an old Man, with sixteen Children playing about him, signifying the Number of Cubits which that River rises, when at the

highest. Innumerable Instances might be given of the same Kind, but that one is sufficient; and it is impossible to conceive how such prodigious Expences could be defrayed, as must have been necessarily occasioned by the Luxury of those Times; and particularly the Love they had to Building, in a manner which employed many more Hands than any that has been practis'd in later Ages. And, to be convinced, that ancient Writers have not deceived us in what they have delivered upon this Subject, we need only consult what modern Travellers have written, of the Ruins that are still remaining in that Country; which not only come up to, but even very far exceed, all the Accounts we have in Books: So that the Wealth and Splendor of this Country must have been very astonishing, in its flourishing Condition, since the very Remains of *Roman* Magnificence in *Egypt*, are capable of surprising such as behold them; and are observed to strike those most, who are best acquainted with the Nature and Value of such Things.

These are all certain and indubitable Signs of immense Riches: And tho' these might fall into the Hands of particular Persons, even in Countries that were not, generally speaking, more opulent than their Neighbours; yet we are sure this could not be the Case in *Egypt*, since it was not *Alexandria* alone, but all the Cities of the Province that were enriched with such Ornaments: So that their Wealth seems to have been very equally spread; or rather, there was such an Abundance of it, that not a Corner of the Kingdom remain unimproved. The City of *Arsinoe*, the Ruins of which are yet to be seen, as it stood near the *Arabian* Gulph, and at the Mouth of the Canal that had been cut from the Nile to the Sea, was crowded with fine Works, costly Obelisks, and Pillars of incredible Size; which must have been brought thither with inexpressible Difficulty: And yet so intent were the *Romans*, in whatever might contribute to the Improvement of their Trade to the East, that, finding an Obelisk of exquisite Beauty, that had been set up by *Ptolemy Philadelphus*, in Memory of his Wife and Sister, whose Name the City bore, and which was 120 Feet high, incommoded the Dock, because they were then wont to build larger Ships than were used in *Ptolemy's* Reign, *Maximus*, who was then Governor of the Province, caused it to be taken down, and removed to *Alexandria*.

But if it should be objected, that there is no reasoning, with any Certainty, about things of this Nature, if the Expence, at the Time they were made, cannot be known, it is a very easy Matter to answer this, since, at the same Time that this Obelisk was hewn out of the Quarries in the *Higher Egypt*, there were six more cut, of the same Size, for which the Workmen received fifty *Egyptian* Talents, which amounts to upwards of thirteen thousand Pounds of our Money; and the Expence of carrying them must have been far larger.

But to sum up all in a Word: Even at the Close of this Period, I mean, when the Emperor *Dioclesian* was in *Egypt*, he thought it necessary to burn all the Books of Chemistry that could be collected, from a Notion, that it was by this Art the *Egyptians* became possessed of such prodigious Sums of Gold and Silver, as made them mutinous and ungovernable; which is a clear and certain Sign, that the *Romans* themselves had not a just Notion of the mighty Profits that accrued from the Commerce that the *Egyptians* carried on.

But it is now high Time to inquire into the Discoveries that were made, in consequence of this Trade, and the Accounts that were from time to time transmitted, of the State and Condition of the Countries, which their Merchants, and other Travellers, visited; a Thing extremely requisite, even for the understanding of modern Voyages and Travels, where we often meet with Pillagings, that either tend to explain the Accounts given by the Antients, or to refute them; the Worth of which we cannot comprehend, unless we are acquainted with the Accounts themselves: And, indeed, in laying these together, consists the

¹ *Procop. Bell. Persic. lib. i. cap. 19.*

² *Tacitus* tells us, that, in the Reign of *Tiberius*, there was a Law made, that no Man should adorn himself by wearing Silken Garments: But, in order to understand the true Sense of that Law, it is to be observed, that the *Romans* had two Sorts of Silk Manufacture; the one, in which the Warp was Silk, and the Wool Thread, which was called *Subsericeum*; and this was the Cloathing when the Law of *Tiberius* forbid Men to wear: The other Manufacture, which was all Silk, called *Helicostium*, and was worn only by Women, till *Augustus* tells us, in the Life of *Helioababalus*, that effeminate Emperor wore his Imperial Robe made of purple Silk.

³ *Procop. lib. i.*

⁴ *Voyages de Thevenot, t. u. c. 5.*

⁵ *Plin. Nat. Hist. lib. xxxvii.*

⁶ *Id. ibid.*

great Difficulty of a Work of this Kind, since, except the Voyages of *Sambulus* and *Nearchus*, which we have already given the Reader, in their full Extent, there is nothing of this Kind preserved; that is to say, there is nothing preserved intire, and in the Manner in which Relations of this Sort are, and ought to be written; but the Observations of Travellers are scattered through a Multitude of Books, relating to Geography, History, Philology, Politicks, and other Kinds of Learning; from all which I have drawn them out, and ranged them in such an easy and natural Order, as that I flatter myself the Reader will peruse them with the same Ease and Satisfaction, as if they were the Observations of a modern Traveller, and the Fruits of a single Voyage.

By running through these, he will be completely Master of all that can be known upon this Subject at this Day; and by comparing what these old Writers have delivered, concerning the Religion, Government, Laws, Manners and Customs of the *Indians*, the Animals, Trees, Fruits, Plants, Stones, and other Curiosities of the *Indies*, with

the succeeding Voyages and Travels of such as have visited the same Countries, in later Times, he will be able to discover not only where the Antients have erred, and to how great a Degree, but will be also able to distinguish the Causes of those Errors; and sometimes, perhaps, will find, that they are not altogether so great as they have been represented, but that some of the Mistakes which they are charged, have been, in Reality, owing to the Mistake of their Meaning, or to the over-straining it, where, by taking it in a milder Sense, it might have been brought very near the Truth. Add to this, that these Accounts are, to the full, as curious and entertaining, have as much Spirit and Variety, contribute at once to inform and to delight as much, as any modern Accounts whatever: For tho' it may be true, that for want of the Lights which we possess, they are less exact, yet, as far as their Lights went, they were most certainly capable of giving as clear, as circumstantial, and as pleasing Accounts, as any that have come after them.

SECTION XI.

An Account of the Religion, Government, Laws, Customs and Manners of the Indians, as they are recorded in the Works of antient Authors.

1. *Of the Religion of the Indians, their Sacrifices, and other Rites, with some Reasons tending to prove, that in these early Times they were not Polytheists or Idolaters.*
2. *An Account of their antient Monarchies, the Power of their Princes, their Palaces, Magnificence of their Courts, &c.*
3. *The Division of the People into seven Classes; a distinct Account of each Class; and a short View of the good Consequences flowing from this excellent Regulation.*
4. *Of their Drejs, and of the Changes introduced by their Commerce with the Greeks, who had embraced the Manners and Customs of the Persians.*
5. *Of the exalted Virtue, strict Honour, and uncorrupted Probity of this Nation; and the Means they used to extinguish Ambition, Malice, Fraud, and other Vices.*
6. *Their Frugality in Eating and Drinking, the Plainness of their Houses and Furniture; with other Instances of their extraordinary Temperance and Moderation.*
7. *Their natural Magnanimity, and noble Contempt of Death; the Custom of Wives burning themselves with the Bodies of their Husbands, and the Reasons assigned for it. The Strictness and Severity of their Laws.*

IT is natural, in speaking of the Inhabitants of any Country, to begin first with their Religion. In this respect the *Greek* Writers report of the antient *Indians* many Things, which seem more agreeable to their own Notions, than to the Conduct of the People of whom they speak. They report that they worshipped the Sun and the heavenly Bodies; and we are farther told of a most glorious Temple of the Sun, the Walls of which were of red Marble, resembling fire, and interspersed with Streaks of Gold: The Image of the Sun on the Pavement so intermixed with Pearls, and precious Stones, that the Reflexion of them appeared almost as radiant as the heavenly Body it represented. And when they were thoroughly acquainted with the *Greek*, they are said to have imitated their Customs by setting up an Image of an Elephant, which they called *Agax*; two Statues of Gold to the Honour of *Alexander*, and two others of *Porus* in Brass. Their Worship of the Sun is said to have consisted in a kind of circular Dance, by which they seemed to intimate, that by the Motion of that Luminary the Universe subsisted. It appeared from their Sacrifices, and other religious Rites, that they held the *Egyptian* or *Pythagorean* Principle of the *Metempsychosis*, or the Passage of the Soul from one Body to another; and this Notion of theirs, that the same Soul, which animated a Man, might be now in a Plant or in a Beast, restrained many of them from any other Sacrifice than that of Labation: Others are said to have offered Animals, but without cutting their Throats, that they might avoid spilling the Blood, which they thought rendered the Victim impure; and, therefore, the Priest contented himself with strangling them. It was farther remarked, that in this Ceremony the holy Man did not wear a Wreath, or Crown, as the Priests of all other Nations did.

In their grand Solemnities, they were wont to make very pompous Processions in Honour of their Divinities; in which they, from a Principle of Conscience, displayed all their Wealth, as a Testimony of their believing it derived to them from the Bounty of the Gods. On such Occasions, a great Number of Elephants marched at the Head of the Procession, covered with Ornaments of Gold and Silver; then followed many Chariots, richly adorned with the same Metals; the labouring Oxen, yoked in Couples, succeeded next; after them the Soldiers, richly dressed, carrying Pots, Kettles, Basons, Cups, Tables, and other Utensils for the Feast, all of Plate richly adorned with Diamonds, Rubies, Beryls, Carbuncles and Pearls: They, sometimes, also led tame Leopards, Lions, and Tygers, in these Processions; and, at other times, they carried Cages full of Birds, the Melody of whose Songs, joined to the Tabor and Pipe, made up all the Music of the Feast.

When, by excessive Rains falling in the Northern Part of the *Indies*, their Rivers swelled beyond measure, and the flat Country was too much and too long under Water, then the King or Sovereign, in every little District, made use of certain Ceremonies to appease the Wrath of the Gods, and to procure fair Weather. In these Ceremonies they are said to have sacrificed Bulls and Horses that were Coal-black, because such Cattle were rare, and of great Price; and they likewise threw a Golden Bathel into the River, which Ceremonies the *Greeks* likewise used to obtain the Favour of *Jupiter*, the Giver of Rain. As they were a very temperate and abstemious People, they never drank Wine but at these Feasts; and even their Princes themselves, as *Apollonius* reports, drank that liquor only when they offered to the Sun. There's, however, great Reason to doubt, whether much Credit is to

^a *Plinius ex Ctesio. 2. Curt. lib. viii. c. 9. Philostr. lib. iii. c. 3. Integre.*

^b *Herod. lib. iii. c. 100. Philostr. ubi sup.*

^c *Strabo, lib. xv. p. 710.*

^d *Apollonius in Indico. Strabo ubi sup.*

be given to these Relations. The *Greeks* themselves were so addicted to Idolatry, that they had no other Idea of Religion, than as it consisted in the Worship of a Multitude of Divinities; and, therefore, in their Reports of the *Indians*, they attributed the Ceremonies they saw practised to Principles like their own. But it is very plain, even from the Writings of their best Authors, that at the time *Alexander* the Great invaded this Country, the *Indians* had not the Use of Images; and even *Apollonius* confesses, that the Representation of the Sun was the only one he saw. It is likewise very certain, that these People made a great Secret of their religious Opinions; which was another Cause why the *Greeks* had recourse to their own Inventions, which were very fertile; and, by this means, represented the Sentiments of the *Indians*, as conformable to their own. The *Brachmans*, however, who were, for the most part, their Priests, and, as we shall see hereafter, were in that respect, in some sort, superior to their Kings, disclaimed all these superstitious Notions, and either worshipped in the open Air, turning their Faces to the East, without any regard to the Sun, or other heavenly Bodies, or in Temples that had neither Images, nor Ornaments of any kind. They likewise professed their Belief in One God, the Author of all Things, the Creator and Sovereign of the Universe, and the Father of Spirits; conformable to which, when *Onesferitus*, in the Name of *Alexander* the Great, threatened *Dindamis* with Death if he did not immediately rise, and go and wait upon that Prince, he told him, smiling, that the King's putting him to Death would do him no hurt at all: For, said he, when this Head is divided from this Body, they will return to the Earth from whence they came; and the Spirit, now included in them, to Him, by whose Power it was included; for the Body, said he, is the Cloathing of the Soul, and has no more to do with the Man than his Garments^a.

It is true, that, since these early Times, the *Indians* have deviated much into Idolatry; but it is no less true, that the *Brachmans*, who are the wiser and better Sort, have always professed a different Opinion; and, upon certain Occasions, have ventured to declare, in Confidence, that they did not believe in Idols; but that they considered them as Symbolical Representations, which were necessary to fix the Attention, and to exercise the Piety, of the common People, who were not able to comprehend, or were not fit to be trusted with, the Secrets of their Religion. This is all we know, and indeed all that can be known, of the Religion of the ancient *Indians*, except that the very Burning of themselves proceeded from a Principle of Religion, and from the Hopes of avoiding, by that kind of Death, the being transmigrated into any Animal; upon which Principle, Women, to this Day, burn themselves with their Husbands Bodies, in hopes that their Souls shall again enter the World with those of their Husbands in an happy Condition, and in an human State, that is, without passing through Plants or Beasts^b.

2. As to the Government of the Country, it was, generally speaking, monarchical, though there were some Republics amongst them: But the *Cutebans* had a very singular Custom; for, amongst them, their Kings were chosen purely on the Score of Beauty; and, therefore, when their Children were but two Months old, they were examined by proper Judges, who, if they found them perfect in all their Limbs, well made, and likely to prove handsome, they suffered them to live, otherwise they put them to Death; and it is in virtue of this Precaution, that they were considered as the handsomest People in the World. It is worthy of Observation, that the Custom of Women burning themselves with their Husbands was first introduced here; which was occasioned by their frequently deserting them for the sake of younger Men; and, where this could not easily be done, removing them out of their Way by Poison. In all the other Countries of the *Indies* the Crown was hereditary, and the eldest Son constantly succeeded his Father without any Difficulty or Dispute: But, as to the regular History of these Principalities, there are none that have been preserved, if we except that of the *Indian Emperors*, concerning which *Megasthenes* received in the

Indies the following Information: *Bacchus*, when he had settled a Principality in the Neighbourhood of *Nyssa*, devolved the Government upon *Spartembraz*, his Friend, who reigned fifty-two Years, and left the Crown to his Son *Budyas*, who ruled twenty Years, and was succeeded by *Crudevus*, his Son; and so, in a continued Descent from Father to Son, except where a King died without Issue, and, in that Case, a new Prince was elected; the Succession in this Order came to the famous *Sandracottus*, who was the hundred and fifty-third Successor of *Bacchus*^c.

But besides this great Monarch, who had a considerable Territory, and Abundance of tributary Princes, every Tribe of *Indians* had its particular Prince, who was at once King and Priest within his own Dominions, according to the ancient Custom of most Countries; from whence it came, that the *Hebrews* used the same Word to signify both Prince and Priest. The *Indian* Monarchs were far from having absolute Power, or from living in a State of Luxury and Ease: Of the contrary, they were obliged to hear every Day the Causes that were brought before them, and to give Audience to such of their Subjects as had any thing to say to them: Nor were they allowed, by their Laws, to go into the Bath, or even to dine, before all these Suitors were answered. In Matters of great Consequence, they could not act without the Advice of their Council; and, in Points of Religion, they received the Instructions of the *Brachmans* with implicit Obedience; so that, in all respects, they were circumscribed, and had it not in their Power to violate the Constitution^d. This was very probably the Reason, that these small Principalities, which had neither great Power, nor much Wealth, to support them, subsisted for so many Ages. It is, however, to be observed, that to prevent the People from being overborn by the Torrent of a sudden Invasion, there was always a supreme Monarch over a certain Country, who could draw together the Forces of all these subordinate Chiefs on any public Occasion that required it: And thus it was that the numerous Armies were raised, which in the foregoing History have been mentioned; and, in this respect, the ancient Constitution of *India* was very like the *Gothic* Form of Government, and came very near the Constitution in this Island, before it was invaded by the *Romans*.

The Reception which *Apollonius* met with from the King of *Taxilis*, affords us a very agreeable Picture of the Court of an *Indian* Monarch. When the Philosopher arrived there, he found the Palace a large and convenient Structure, but, in every respect, perfectly plain; so that, if he had not been informed, that it was the Royal Dwelling, he would have taken it for the House of some considerable Citizen. He found there neither Guards nor Attendants: There were only a few Slaves at the Gate, and three or four Persons of an ordinary Rank, who desired to speak with the King. *Apollonius* entered with them into the Royal Apartments, where he found every Thing plain and neat, disposed, however, in so excellent an Order, that they struck him with much greater Awe and Reverence, than the lofty and sumptuous Palace of the King of *Babylon*, which he had visited before. The Appearance of the Monarch, whose Name was *Pbraotes*, or *Pbraotes*, was in every respect suitable to the Modesty of his Palace; a noble and majestic Presence was the sole Mark of Dignity he bore, and he was attended by a very slender Retinue; so that *Apollonius*, recollecting what he had heard of the *Brachmans*, and of their Disciples, concluded that the Princes of *India* were, also, a kind of Sages; and, therefore, he addressed him by his Interpreter in these Words: It appears to me, Sir, that Philosophy is your supreme Delight, and the Rule of your Actions: Permit me, therefore, to have the Honour of congratulating you thereupon. What you say is true, replied the King; and I am extremely glad, that your Sentiments agree with mine. Is it the Laws of your Country, continued *Apollonius*, or is it your Majesty's particular Taste, that removes from your Court all that Magnificence and Pomp, that are usually found in the Dwellings of Princes? It is both the Law, replied the Prince, and my

own private Judgment, that have banished that outside Shew, which is certainly no more than a false Glory, and has no sort of Correspondence with true Merit. I use, with Moderation, the little Splendor that our Laws permit; and, though I may truly say, that there are few Monarchs more powerful than myself, yet, with like Veracity, I can affirm, that I can be content with a little, and leave the rest to my Friends. Happy Economy, cried out *Apollonius*, which teaches you, by despising Wealth, to purchase a Treasure of superior Nature! But, replied the King, it is not only to my Friends that I part with my Riches: I even bestow some upon my Enemies, that my Subjects may enjoy Rest and Tranquillity. It is in that, and that alone, that I place all my Glory^a.

Apollonius, afterwards, inquired into the King's manner of living; to which that Monarch answered very graciously, I never drink Wine, but when I sacrifice to the Sun: What I take in hunting I distribute among my Friends, contenting myself with the Benefit I receive from the Exercise. As for my Food, it consists of Herbs, the Fruit of the Palm-tree, and other Vegetables, which I cultivate with my own Hands. After this he bathed with the King, and was entertained at a sumptuous Dinner, at which no more than five Persons were present; at which were served Fish, Fowl, whole Lions, Kids, the Paws of Tygers, Koots, Fruits, and Bread. Every one rose from his Place, and took at the Table what he thought fit, returning to his Place, and eat it there at his Leisure. Branches of Laurel, Myrtle, and other odoriferous Trees, were scattered in the Room, yielding an agreeable, but not an over-coming Scent. All Dinner-time the Table was furnished by thirty Musicians; and, at the same time, several young *Indians* diverted the King with Feats of Activity. When every body had done eating, several Cups were brought of a very large Size, out of which every Man drank what he thought fit; his Head, according to the Custom of the Country, being entirely covered by the Cup^b.

It is not to be supposed, that in a Country of so large Extent as the *Indies*, all the Princes should pursue the same regular Plan, or preserve a like Severity of Morals: And, indeed, the contrary of this is evident from what History informs us, with respect to the Kingdom of *Mughian*, when lay towards the Mouth of the River *Indus*, in that Part of the Country, which, from its Likeness to the *Delta* of *Egypt*, bore the same Name; the Princes of which lived in all the Splendor, and in all the Luxury, of the *Persians*, or rather exceeded them in both. A Multitude of Women were perpetually about the King's Person; so that he was, by their Actions, their Songs, and their Discourse, perpetually excited to lascivious Pleasures. Whenever this Monarch appeared in public, his Officers carried silver lanterns before him, to perfume the Air. He lay at full Length in a Litter of Cloth of Gold, garnished with Pearls, long Strings of which hung down on every Side. His Habit was a long Robe of Linen, embroidered with Gold and Purple. His Concubines accompanied him with a Pomp equal to his own; and his Guards carried Branches of sweet-smelling Wood, filled with Bells of every Kind, the wild Notes of which were esteemed by the *Indians* beyond any kind of Music. After his Train follow'd the Queen, with a Magnificence equal, in all respects, to that of her Consort.

The only Kind of Exercise used by this King, was Hunting: And when he took this Diversion in a Park, he was always in his Chariot, surrounded by his Concubines, who shot at the wild Beasts, as well as he; but if he pursued his Sport in the open Field, he went alone, mounted upon his Elephant. The Entry of his Palace was adorned with a barely Doric, composed of many Pillars richly gilt, on each of which a Vine of Gold twined itself to the very Top, adorned with the Figures of several kind of Birds, painted of different Colours. This State-room was open to all the World, at the Hours of Audience especially; but at these Seasons, while the King gave Audience to Embassadors, and Cades, or did any other kind of Business, he had

several Women about him; some of whom combed his Hair, some perfumed his Hands, and others his Feet: His Face was very closely shaved, except the very Point of the Chin, from whence there hung a long Beard. At Table, and on all other Occasions, he was served by these Ladies; and was so jealous of stricter Designs against his Person, that if any looked upon him too readily, or came nearer than he thought convenient, he ordered them to be put to Death. So passionately fond this Monarch was of Horses, that he commanded Holidays on their Account, as if they had been really Part of the Royal Family: It may not, however, be amiss to caution the Reader as to both these Accounts, which, it must be confessed, are liable to some Objections: And, in my Opinion, an Author has no more a Right to produce a suspicious Witness, and avail himself of his Testimony, than he would have to deceive, in the same manner, a Court of Justice. In both Cases, there is an Injury done to Truth; and tho' it be true, that the latter may have more fatal Consequences than the former, yet the Fallifier of Truth does his utmost, in one Case as well as the other: And so far the Crime is alike in both. The Author of the latter Account is *Ouseiriz*, who was Captain of *Alexander's* Ship, and had, doubtless, Opportunities of knowing the Truth of the Fact, if he could have had Candour enough to have related it; but he had naturally such a Love for the Marvellous, that he could not help exaggerating whatever he reported, as *Strabo*, and other Writers, agree, and as the Facts themselves plainly declare. *Quantus Curtius*, an elegant Writer, but one who was likewise fond of Wonders, copied this Story where-ever he found it; which may, possibly, be true, but has an Air of Improbability, at least.

As to the former, *Apollonius Tyanensis*, I ought to have given the Reader a complete Section of his Travels, if it had not been for the former Objection; which, I must confess, weighed with me so far as to engage me to lay aside that Design. He was a very famous Philosopher of the *Pythagorean* Sect, born about the time of the Commencement of the Christian Era, and who lived to the Age of ninety-six, or thereabouts. He was a Man of very singular Character; for he affected great Purity of Manners, and, at the same time, aimed at two Things, which seem incompatible therewith: The first of these was Magic, in which he pretended to have extraordinary Skill, and took a great deal of Pains to persuade the World, that he had great Familiarity with the Demons, and was able, by their Helps, to perform mighty Feats. The other great Aim of his Life, was the restoring and supporting *Polytheism*, or Idolatry, which was then very much on the Decline.

To accomplish these Views, he travelled more than any Man of his Time. His principal Disciple was one *Damis*, who followed him in most of his Peregrinations, and particularly into the *Indies*: And this Man it was, that left behind him Memoirs of his Master's Life, which were drawn up in a very confused Way, and in a Style that was very uncouth. *Platostratus* undertook to polish these, and to put them into proper Order; and this Work of his it is which I cite. But whether it be thro' his Fault, or from the Defect of the original Memoirs of *Damis*, it follows out, that there many Things very punctually related in the Story of his Travels, which, even at this Distance of Time, we know could not be true. One Instance of this may suffice, for the Reader's Satisfaction, which I shall bring within as short a Compass as possible.

In his Way to *India*, *Apollonius* passed thro' *Babylon*, which, in his Life, is described as a City of twenty-four Egyptian Circuits; and, in short, appears, in every respect, as it stood in the Days of *Nebuchadnezzar*^c, tho' it is certain this City was long before destroyed; and *Pliny*, who was his Cotemporary, assures us, and that very truly, that nothing but the Temple of *Belus* remained intire, all the rest being become a perfect Desert. He likewise represents it as the Seat of the *Partbian* Kings, which it never was; for these Princes spent the Winter at *Ctesiphon*, near *Selucia*, and the Summer at *Ecbatana*. There are many other Slips of the same Kind; by whose Negligence committed, it is not

^a *Plutarch*, lib. vi. c. 27. § 2. sequen.

^b *Plutarch*, de vita *Apollonii Tyanensis*, lib. i. c. 13.

^c *Plutarch*, lib. iii. c. 26.

^d *Ouseiriz*, ap. *Strabonem*, p. 710. § *Cant. lib. vii. c. 9.*

easily to say; but inasmuch as the Work of *Philostratus* abounds with such Mistakes, it was neither fit for me to insert the Travels of *Apollonius* in this Collection, nor even to quote him as to any particular Facts relating to the *Indies*, without giving the Reader a fair Account of his Character, that to it may be in his Power to judge of the Credit due to the Matter which he relates.

It is likewise necessary to observe, that the principal thing he proposed by this Journey to the *Indies*, was to be better informed by the *Brachmans*, as to the Theory and Practice of Magic; in which, it is pretended, he succeeded perfectly well: And yet, as we shall see hereafter, from a Cloud of Witnesses, the *Brachmans* were, of all People in the World, the last that ought to have been applied to for the Ends at which he aimed, since they were strict Deists in point of Opinion, and heartily abhorred Fraud, in which, without doubt, Magic is, and ever was founded, as confining in nothing more than the Invention of cunning Tricks, to amuse and impose upon the Ignorant. On the Whole, therefore, we may, perhaps, come near the Truth, if we believe, that the *Indian Princes* lived in much greater Splendor than he relates, since we have the Authority of an antient Author to prove, that the Palace of a Descendant of *Porus* was much more magnificent than those of the *Partian Kings* at *Susa* and *Ecbatana*; yet this might be without any Diminution of their Virtue; for it is not the Possession of Wealth, but the ill Use of it, that constitutes Luxury and Effeminacy. In other respects, the Character he has given *Phyatoes*, has nothing in it absurd or improbable, because, supposing him to have acted on the Principles ascribed to him by *Apollonius*, he would have done no more than his Ancestor *Axiles* did, who, by smooth Words, and rich Gifts, got the better of *Alexander* the Great, and not only preserved, but enlarged his Dominions, by the Wisdom of his Behaviour.

3. The Virtues of Kings are not to be depended upon for the Preservation of States; which is a Maxim taught by the Light of Reason, as well as supported by that of Experience: But perhaps no History furnishes us with any Instance of a Nation, that took such early and effectual Care to secure themselves from the bad Effects of arbitrary Power, as the *Indians*. In every Principality there was a Senate, without whose Advice the King could do nothing of Importance; and, in case any Man thought himself injured by the joint Power of the King and Senate, he was not without Remedy, but might, if he pleased, appeal to the People. It was for this Reason, and to facilitate the Preservation of their respective Privileges, that in every *Indian* State the People were divided into seven Classes, Tribes, or whatever else you will please to call them, each of which had a sufficient Number of Heads, vested with a competent Degree of Power, for the Preservation and Protection of their Brethren: And it was the capital Maxim in their Laws, that every Man belonged to some Class, or other; so that all were alike free; and there was no such thing as Servitude known amongst them.

The first of these were the *Brachmans*, or *Philosophers*; of whom we shall speak particularly in the next Section, and shall, therefore, content ourselves with only naming them here, in their Order. The second were the Husbandmen and Farmers, who composed the Body of the State; and the signal Service they rendered to the Public, by cultivating the Land, and securing Plenty, joined to their exemplary Frugality, obtained them the highest Respect. It was for this Reason, that in all Wars, whether civil or foreign, they were exempted from taking up Arms: Neither could they be injured or disturbed in their Labours, without a Breach of the Law of Nations; a Crime no *Indian* Prince was ever hardy enough to commit. It was, therefore, no uncommon Sight, to behold a bloody Battle on one Side of a Plain, and on the other, Men sowing or reaping, without the least Apprehension, either from the Fury of the Victor, or the Despair of the Vanquished. They were, likewise, exempted from all publick Offices: For it was held, that their very Profession was a publick Office, since it contributed to the Good of all, by main-

taining a constant and uninterrupted Plenty. The King, however, was acknowledged the sole Proprietor of all the Lands in his Dominions, from which he received a certain Tribute; and besides that, a fourth Part of the net Produce; out of which Revenue, all the Expences of the State were defrayed.

The third Class was composed of *Graiers*, *Shepherds*, and *Huntmen*: These had the Care of their Herds and Flocks, and had the sole Privilege of breeding, buying, and selling Horses: And as the Country was much infested by *Lions*, *Tygers*, *Elephants*, *Birds of Prey*, and other pernicious Animals, the *Huntmen* were not only regarded as a Race of People very useful to the State, and allowed to possess, in full Property, the Fruits of their Labour, but received also an annual Proportion of Corn, as an Acknowledgment for their preserving the rest, which could not have been either sown or reaped in Safety, but under their Protection. As these People led a wandering kind of Life, they had no Villages or Settlements; but pitched their Tents, fed their Cattle, and pursued their Hunting in the Woods or Mountains: So that they did no Prejudice to any Part of the arable Ground.

Under the fourth Class were comprehended *Artificers* and *Merchants*. They paid the King a certain Tribute, except such as were employed in making Arms, or in the Construction or Service of the Fleet, who were paid for their Labour by the Public.

The fifth Class was composed of *Officers* and *Soldiers*, or, to use a modern Phrase, the fifth Class was the *Militia*. They had no other Business to mind, than the Preservation and Protection of the State, and were obliged to take Arms whenever the King thought fit, for the public Service. They were lodged and maintained at the King's Expence, who provided for their Families when they were absent in War. At that time, the whole Society contributed to the Support of what was intended for the common Good; some furnished Elephants, some Horses; one Province Forage and Provision, and another Arms. The *Megallians*, who were a People inhabiting on the other Side the *Hyphiss*, supported constantly five hundred Elephants, and a considerable Body of Troops besides. The *Chryseans*, the *Arangians*, and the *Parangians*, who were all Subjects of the same Prince, kept constantly on Foot for his Service, an Army of thirty thousand Men, eight hundred Horses, and three hundred Elephants. The Soldiers, after their Return from the War, were kept constantly to martial Exercises, and a very strict Discipline, tho' at the Close of the Campaign, they delivered up the Arms and the Horses, which were furnished them at the public Expence.

The sixth Class was composed of the *Inspectors*, who had the Care of examining and looking into the Affairs of Town and Country, and were intrusted with the Superintendance of Arts and Commerce, each Man in his particular District; and these People made from time to time, exact Reports to the Prince, if the Government they lived under was Monarchical, or, if a Republic, to the chief Magistrates, of the Condition that all things were in, within the Limits of their respective Jurisdiction. And if we can give Credit to what the Historians report, we must allow the *Indians* to have been the wisest and happiest of Nations, since they positively asert, that before they were conquered by, or intermixed with *Foreigners*, there never was an Instance of an Inspector's neglecting, or betraying his Trust, to the Prejudice of the Crown, or to the Oppression of the Subject. It is requisite to add, that the Women were under the Care of female Inspectors, who had a Power of correcting all Excesses in Dress, in the Luxury of the Table, and Digressions from the strict Rules of Morality.

This Country was subject to Inundations, like that of *Egypt*, and perhaps to those that were more considerable; for the Snow melting on the Hills of *Paropamisus*, *Caucasus*, *Imaus*, and the *Emodian* Mountains, together with the prodigious Quantity of Rain that falls in the Winter-months, of *April*, *May*, and *June*, floods the Country to

¹ *Elianus de Animalibus*, lib. xiii. c. 43.

² *Diodor. Sicul. lib. iii.*

⁴ *Plin. Nat. Hist. lib. vi.*

such a degree, that when the Waters are sunk, it is simply impossible, that any Boundaries, Land-marks, or other Signs of Property, should be discerned. To prevent any Disputes that this might occasion, there were, in every District, a certain Number of Inspectors, who were Men of such Skill and Dexterity, that by retracing every Man's Limits, they prevented any Disputes. The same Persons had likewise the Care of the public Recevoirs of Water, and of the Sluices: So that, by their Diligence, the Country never suffered in the driest Summer. Another Branch of their Charge was, to look into the Conduct of the Grasers and Huntsmen, such as wrought in the Woods, and in the Mines. They were also Surveyors of the Highways; and in that Quality they appointed Guides, who, at every ten Stadia informed the Traveller which Way the Road lay; where he might have Lodging; and how far it was to the next Stage.

The Inspectors that resided in Towns, were divided into six Classes: Of these, some looked into the Management of Tradesmen and Artificers; others had the Care of the Inns, where they examined such Strangers as arrived, in relation to their Business in the Country, and gave Directions, that they should not stay above three Days in one Town. They likewise prevented Strangers, as far as they were able, from committing any thing contrary to good Manners; visited them, if they were sick; examined them as to the Nature of their Distemper, that they might be sure it was not contagious: Took care that they wanted for nothing; and, in case of their Deaths, that their Effects were disposed of pursuant to their Wills. Others kept a Register of Births and Burials, and set down very exactly the Time, the Place, and other Circumstances: These likewise looked into Weights and Measures, and saw that they were agreeable to the Standard: They also prevented the same Man from dealing in different Goods, saw that Manufactures were properly finished, and set their Seal, to prevent Disputes; inquired into Workmen's Wages, and caused them to be regularly paid: They received likewise, the King's Revenues, which consisted in Duties on Goods sold, and not on the Stock in Trade; but if any Man was convicted of selling, without bringing it to Account, he suffered Death.

The military Inspectors had many things committed to their Care: As, for Instance, they were charged to keep a certain Number of Boats in constant Readiness, for the Passage of Rivers, and for transporting Forage and Provisions by Water; as also a certain Number of Cattle for Carriages, and for removing Baggage. The Magazines were likewise under their Care; and it was their Duty to look to the Arms that were laid up in them, that they might be constantly in good Order, and fit for Service. Some of them had the Charge of the Elephants, others of the War-chariots; and others again inspected the Conduct of the Soldiers in their Quarters.

It is not a little surprising, that such as composed the Council of the Prince, were thrown into the seventh and last Class: Yet these were nearest the Throne, and had the largest Share both in the Pains and in the Honours of Government. All Affairs relating to the Public were submitted to the Deliberation of the Senate; and their Authority was, in some respect, superior to that of the Crown: For they had the sole Power of Life and Death in their Hands, and possessed all the Dignities of the State. These Senators seemed the more honourable, from the Continuance of their Offices in their Families, from Time immemorial; for by the fundamental Laws of their Constitution, it was forbidden for any Man to pass out of one Class into another, even by Marriage. A Farmer could not become an Artificer, or an Artificer a Merchant or Soldier: By which prudent Precaution, all kinds of Professions rose to the highest Perfection, the Lights of the Father being communicated to the Son, and so downwards, every Calling being, in this respect, as it were, one Family. We might very reasonably suspect the Truth of all this, tho' confirmed to us by the concurrent Testimony of ancient Historians, if this Division of the *Indians*

did not subsist even to our Times: For these Classes are precisely the several *Indian* Casts, of which modern Travellers speak at this Day; so that, as to the Form of the ancient *Indian* Government, it is a Fact out of all Dispute: And one may safely affirm, that there scarce ever existed a better Constitution.

4. The *Indian Bacchus*, whoever he was, has the Honour of being the Author of this wise and wonderful System of Government, which was every where established in the *Indies*, at the time of *Alexander's* Expedition, when the Subjects of every little Principality, the Inhabitants of every free City, lived exactly in the manner as we have described; and were, in all respects, the most civilized, and the best regulated People in the World. All the Writers of those Times, and even such as are the least given to Fables, represent the *Indians* as a very robust People, and of extraordinary Stature; some of them seven Foot high, particularly *King Porus*, who was vanquished by *Alexander*. The Inhabitants of the lower Provinces, lying on the Banks of the River *Indus*, were of as dark Complexions as the *Ethiopi*ans: And the only Difference between them was, that the *Indians* had long lank black Hair, whereas the Hair of the *Ethiopi*ans was short and curled. It was a Custom among the *Indians*, to wear long Beards, which they dyed of several Colours; some white, some red, some green, and some of a purple Colour.

Their Habits also differed very much: Some of them wore the Skins of Lions and Tygers; others covered themselves with a single Piece of Cloth, which reached from their Heads to their Knees. As for the Soldiers, their Dress consisted in a Turbant, and a light Coat: All their Cloaths were commonly white, and were made either of Worsted or Cotton; for tho' many Authors speak of the latter, as if they were Linen-garments; yet it is certain, that Flax is not of the Growth of the *Indies*. The only Shew they made of their Riches, was by wearing a sort of Ivory-pendants in their Ears, now and then a purple Robe, white or striped Shoes, and Umbrellas of several Colours, which the Heat of their Climate rendered necessary, as well as agreeable.

But the *Macedonians*, and other *Greeks*, who were the Remains of *Alexander's* Army, introduced amongst them, by degrees, the Luxury which they had themselves learnt from the *Persians*; and tho' the *Indians* soon shook off their Yoke, yet they found it impossible to quit the ill Customs these Strangers had brought amongst them: And from this Time it was, that these People began to wear Cloth of Gold and Silver, and to embroider with Pearl, and other Stones of Price; and to endeavour to display, to the utmost, the Riches with which their Country furnished them. It is from this Account of the Matter, that we are enabled to judge of the Truth, or, at least, of the Probability, of what Authors report concerning this Nation; as on the one hand it is certain, that they were a plain, open, and generous People, who despised Pomp and Shew, before they were corrupted by Strangers, so it is no less certain, that after they became acquainted with the *Greeks*, and with the *Persians*, by their means, the Courts of their Princes, at least, received considerable Alterations; and they began to affect Pomp and Splendor to almost as high a degree as any of their Neighbours, which was the more easy for them to do, since they were possessed of much greater Riches; and saw too, that this Display of new Wealth had a great Effect upon Strangers, and produced an unusual degree of Reverence and Complaisance: For it is with Nations as with private Families, the only Way to avoid ill Customs, is to remain unacquainted with them.

5. It does by no means appear, that, upon their going into this Change in their Habits and Cloaths, they sunk at all in their Morals; but, on the contrary, maintained the high Reputation they had acquired for their steady Virtue, and strict Honour, for several Ages. Their Heralds wore a Gold Anchor, embroidered on their Coats, to signify that, in their Alliances, they were unalterable; and that a Treaty concluded with them, held them as fast as an Anchor; a Character they justly deserved. They aimed

* *Indian lib. v. P. 10. c. 1. l. 1. c. 1.* * *Asian. lib. v. Plutarch. in Alexandro. 2. Curt. lib. viii. Herod. lib. iii. Book*
 * *Strabo. lib. xv. 2. Curt. lib. viii. P. 10. c. 1. l. 1. c. 1.* * *Asian. Indus, Ceylus, Hyndus.*

the Courage, but more the Clemency of *Alexander*; and did no less Justice to the Bravery of their own Prince *Por*, making care that the Statue of the one should be constantly accompanied by that of the other. Their *Brachmans* were continually inculcating Principles of Virtue in their Sermons to the People, which Sermons are still continued, though the Subjects of them are much changed: For the *Brachmans*, finding their People began to relish the fabulous Theology of the *Greeks*, invented one of their own, which is now the current Religion of the *Indies*.

But what must appear an incontestable Proof of their great Regard for Virtue, is, the Law they established; by Virtue of which, when any eminent Person died, Inspectors were appointed to examine strictly into his Life and Actions, of which they composed a Memoir, concluding with his Character; in which, if they were guilty either of Partiality or Prejudice, they lost their Offices, and were declared infamous to all Posterity; but there were very few Instances of their incurring this Punishment. It was in consequence of this Law, that they never erected any Monuments to the Memory of the Dead; for they supposed that this Memorial of their Virtues secured their Fame more effectually.

They had, naturally, a great Love for Order, and were exceedingly attentive to whatever might promote, or preserve it. They could not be said to have borrowed any Part of their Policy from foreign Nations, because, as we have often observed, they had not, for a long Series of Ages, any Correspondence with Strangers; And though it be true, that the *Egyptians*, *Spartans*, and *Romans*, divided their Subjects into Tribes, yet it is certain, that none of these Nations carried this Regulation near so far as the *Indians*, who took in all sorts of People; so that, by the Frame of their Constitution, the lowest, as well as the highest Orders of Men, were under the immediate Inspection of their Government; and could not be wanting, in any respect, to their Duty, without falling under the Censure of their Superiors; which was a Thing of infinite Consequence to the Well-being and Tranquillity of the State.

It was in virtue of this Regulation, that the Government was perfectly acquainted with the Rank and Fortune of every one of its Subjects; so that none were permitted to travel so much as from one Town to another, in any other manner than was suitable to their Characters. Thus, for instance, their Princes, and great Lords, rode upon Elephants; such as were next to them in Rank were allowed four Horses in their Retinue; the next in Degree travelled on Camels; the ordinary sort of People rode either on Horses or on Asses.

It is easy to conceive, that by adhering strictly to these Rules, Pride and Ambition were hardly known, or, at least, could not gain much Ground amongst them. If at any time, in spite of all the Care that could be taken, Disputes arose about Place or Precedency, they were terminated in a public Audience before the King and Senate. There, also, all Controversies relating to Property were heard and decided almost as soon as they arose; and it was, by this means, that all the Mischiefs arising from Law-suits were prevented, and the Peace and Quiet of the Nation effectually preserved.

Their Monarchs, in regard to the Love of Peace, set their Subjects a constant and persuasive Example: For though they had all of them great Armies, and those perfectly well disciplined and provided, perpetually on Foot, yet they very rarely brought them into the Field; though it appears from the Example of *Porus*, and from the Resistance that *Alexander* met with from the free Cities of *India*, they were capable of making a great Figure, as a warlike People, if they had affected it: And this appeared still more clearly from the Conduct of the famous *Sambacetus*, and his Successors, who were content to purchase Peace, though at the Head of Armies, capable of acquiring and maintaining Conquests.

6. In a Country so happily situated as theirs, and which has been, in all Ages, renowned for its Abundance, they might certainly have lived with as much Delicacy as their Neighbours the *Persians*, who, from the most hardy and frugal, became the most luxurious and profuse People in the East. But, amongst the *Indians*, the Love of Temperance, instilled into them as a Principle of Religion by the *Brachmans*, prevented any Excess of this kind, and restrained them to a very moderate Use of that Plenty which they possessed.

They had not, properly speaking, any Wine of their own Growth; and the Liquor so called by ancient Writers, was drawn either from Rice, or from the Cocoa-tree: But, as both sorts of Liquor were very apt to intoxicate, they were very seldom used but in Sacrifices, public Feasts, and in very small Quantities at the Tables of their Kings. If at any time a Prince so far forgot his Dignity and Character, as to suffer himself to be over-taken with Liquor, their Laws allowed any Woman, who was about him, to put him to Death while he was drunk; and his Successor was obliged to espouse this Woman, and make her the Partner of his Throne. The common Drink of the *Indians*, in general, was Milk and Water.

As for their Food, the System of the *Metempsychosists*, which prevailed generally throughout the *Indies*, kept their Tables within due Bounds, allowing nothing more for their Supply than Corn, Roots, Fruit and Milk-meats; yet some kind of Animal Food they had, such as Tygers, and other wild Beasts; and Fish too; but they were very plainly dressed, without any Sauces, or other Allurements to the Taste, that they might not be tempted to eat more than was necessary for the Support of Nature, and, thereby, render themselves liable to Diseases. As they lived sparingly, they slept not much at their Ease, having nothing but a Mat, or the Skin of a Beast, between them and the Ground. Their Houses were low, composed, for the most part, either of thin Planks, or of Reeds, small, with little Furniture, and no Ornaments at all, unless we should account for such their Roofs being made of Tortoise shells. Thus, in all respects, they were perfectly uniform, and led their Lives in the quiet Possession of what their Labour and Industry procured; content with what they possessed, and willing rather to part with somewhat of their own, to secure that Peace, which they held their greatest Blessing; than desirous of employing Force to enrich themselves at others Expence. It was, indeed, the great Felicity of these People, that they acted in every respect upon Principle; and were so addicted, from their Infancy, to a regular Life, and an equal Contempt of Danger and of Pleasure, that they were not liable to the common Failings of Men, but were capable of resisting Temptations, and of despising Threats.

7. If we had no other Proofs of the constant Courage, and magnanimous Spirit of the *Indians*, we might be convinced of it from that Readiness with which almost every Rank of People not only met, but, if Occasion required it, hastened Death; and, if we may be allowed the Expression, went out to receive him. It was not the *Brachmans* only, who, from the Maxims of Philosophy, were able to steel themselves against the common Weakness of human Nature; but even Women, who, by Constitution and Education, were in the *Indies*, as well as every where else, naturally of a more timid Disposition than the Men. The Accounts we have of this differ something from one another; but, by a little Attention, they may be easily reconciled. It was certainly in the Beginning a voluntary Act, arising from an extravagant Affection, which induced them to quit that Life which appeared to them more hateful and terrible, than Death itself: But, afterwards, there were some Reasons which made it requisite to encourage this Practice by Laws; yet still the Spirit and Courage of the Women, who thus devoted themselves to Death, rather than survive their Husbands, deserved Admiration. An ancient Writer, of great Integrity, as

^l *That is to say, when some attribute this to the Laws, and others to the Will of the Women themselves, they may be proved to agree, by showing that the Laws made this honourable, and, in some measure, requisite; and yet without imposing an absolute Necessity, for that would have rendered it no longer commendable.*

^m *Strabo, lib. xv. Curt. lib. viii.*

ⁿ *Pomp. Mela, lib. iii.*

well as great Learning, hath given us a large Account of this Matter, occasioned by an Instance that fell out after a Battle between the successors of *Alexander* the Great, in which *Eumenes* defeated *Antigonus*. The latter had, in his Army, a Body of Troops that had been drawn out of *India*, where they had been left in Garrison by *Alexander*, and were commanded in this Action by *Cetens*, who, fighting very gallantly, was killed upon the Spot; the rest of the Story, with his Observations upon it, I shall give you in the Author's own Words.

• He left, says he, two Wives behind him, who followed him all the Campaign. One he had lately married, the other had been his Wife for some Years; and both loved their Husband exceedingly. It had been an ancient Custom in *India*, for Men and Women to marry themselves according to their own Liking, without consulting their Parents; and, in regard that young People would rashly marry, and often repent afterwards, as being deceived in their Choice, many Wives were corrupted, and fell in Love with other Men; and because they could not, with Credit and Reputation, leave their first Choice, they would often poison their Husbands; to the more ready effecting of which, the Country did not a little contribute, by bearing many poisonous Herbs; some of which, if mingled in ever so small a Quantity, in Meat or Drink, would infallibly kill the Person to whom it was given. This wicked Art growing every Day to a greater Perfection, and many being destroyed by this Means, notwithstanding the Examples that were made to prevent it, another Law was enacted to this Purpose, that Wives should be burnt with the Bodies of their deceased Husbands, except they were with Child, or had borne Children; and that the who would not observe the common Law of the Land, should remain for ever after a Widow; and, as one convicted of the greatest Impiety, should be excluded from all sacred Rites, and all other Benefit and Privilege of the Laws.

• This being thus established, henceforward this wickedness of the Wives was changed into a contrary Practice; for, as every Wife, to avoid that unfulfillable Disgrace, was to die, they became not only careful to preserve the Health, and provide for the Well-being of their Husbands, as that which was likewise their own Preservation, but the Wives strove, one with another, who, by burning with his Corpse, should gain the highest Reputation. An Example of which fell out at this Time; for altho' by the Law, one only was to be burnt with the Husband, yet, at the Funeral of *Cetens*, both strove which should die, as for some honourable Reward of their Virtue: Whereupon the Matter was brought before the Generals, for their Decision. The younger declared, that the other was with Child, and therefore her Death could not satisfy the Law: The elder pleaded, that it was more agreeable to Justice, that she, who was before the other in Years, should be preferred before her in Honour; for, in all other Cases, the constant Rule is, to yield Respect to the Elder.

• The Captains being informed by the Midwives that the Elder was with Child, preferred the Younger; upon which, the who lost her Cause, went out weeping, rending her Veil in Pieces, and tearing her Hair, as if some sad and dreadful News had been told her; the other, rejoicing in the Victory, made torch with to the funeral Pile, crowned by the Women of her House, and, by her Kindred, brought forth, most richly adorned, as to some nuptial Festival, all of them setting forth her Praises, as they went, in Songs suited to that Occasion.

• As soon as she came to the Pile, she threw off her Garments, and distributed them amongst her Servants and Friends, leaving these behind her as Tokens to those who loved her. Her Ornaments consisted in Multitudes of Rings upon her Fingers, set with all manner of precious Stones, of divers Colours; upon her Head, were a great Number of little golden Stars, between which were placed sparkling Stones, of all Sorts; about her Neck, she wore abundance of Jewels, some small, others

• large, increasing by degrees in Bigness, as they were put on, one after another; at length, she took Leave of all her Family and Servants, and then her Brother placed her upon the Pile; and, to the great Admiration of the People, (who looked thither to the Sight) with an heroic Courage, she there ended her Life.

• The whole Army, solemnly, in their Arms, marched thrice round the Pile, before it was kindled; she, in the mean time, disposing of herself towards her Husband's Body, discovered not, by any Shrieks, or otherwise, that she was at all daunted at the Noise of the crackling Flames; so that the Spectators were affected, some with Pity, and others with Admiration and Astonishment of her Resolution; however, there are some who condemn this Law as cruel and inhuman.

Such are the Sentiments of this able Historian; and we find them confirmed by some of the greatest Writers of *Greece* and *Rome*. *Strabo*, speaking of the same cruel Custom, assigns the like Reasons for it, and so had *Greece*, long before. There cannot, therefore, be any Doubt made as to the Matter of Fact; by which we plainly see, that what was originally a peculiar Act of Generosity, became in time a common Practice, and was, in the End, established by Law, and so became a Principle of their Religion; inasmuch that Women, who refuse to comply with the Custom of their Country, are reputed infamous; and accordingly the modern Practice is, to shun them, and let them turn Whores, for a Livelihood; for none of their own Relations will look upon them, or assist them the least Support, because they consider their Cowardice as a Reflection on their Family; and, for that Reason it is, that the Relations of the Woman, and not of the Husband, always attend them to the funeral Pile, oblige them to drink a kind of stupefying Liqueur, called *Dutry*, and then thrust them into the Flames.

In many Places in the *Indies*, the Custom is now in some measure laid aside, but in others it still prevails; and they erect Monuments to the Memory of these brave Ladies, in order thereby to encourage this Practice: And, not far from *Goa*, there are at this Day a *Cast* of *Indians* called *Linguits*, who have still a worse Custom; for, when the Men die, the Manner of interring them is, by setting them in a Pit, where the living Wife stands by the Body of her deceased Husband, the Earth is ram'd down to their Shoulders, and then their Necks are twisted round, and broke; after which, a little Hillock of Earth is raised over their Heads.

I mention this, to shew how tenacious the *Indians* are of their Customs, whether good or bad, as well as to justify the Truth of what the Antients have delivered in this respect. Before I quit this Subject, I think it will be proper to say somewhat of its Antiquity; for, undoubtedly, the *Tyrians* found it practised amongst them while they had the Monopoly of the *Indian* Trade; since the true Story of *Dido* is this; that, to avoid a second Marriage, she voluntarily burnt herself, and, after the *Indian* Custom, became a living Sacrifice to the *Manes* of her deceased Husband.

The other Laws of the *Indians* were exactly of the same Nature, founded on the Principles of strict Justice, and executed with the utmost Degree of Severity: For Instance, a Man who had given false Testimony in any Cause, civil or criminal, had his Hands and Feet cut off. He who maimed another, not only suffered the Law of Retaliation, that is to say, lost the same Member, whatever it was, but lost his Hand likewise with which he did the Fact; but, in case he put out the Eye, or took away the Use of an Hand from a Mechanic, or one who got his Bread by his Labour, he suffered Death without Mercy, as a just Punishment for depriving another Man of the Means of living. The same Sentence was passed upon him who discovered any kind of Poison, if he did not, at the same time, discover a Remedy capable of preventing its Effects. We may easily discern, that the Design of these Laws was, to support that strict Discipline, which was thought requisite for maintaining the Quiet and the Prosperity of the State.

In a Word, the *Indian* Constitution was wholly of a Piece; and, if we take it throughout, was the best calculated for the Good of the Whole, of any Form of Government devised by the Wit of Man. By considering it, as we find it stated at large in this Section, we shall easily discern, why the ancient *Indians* were so jealous of Foreigners settling amongst them; since it is very evident, that a mixed People could never be brought to live peaceably under such a Constitution, which required a suitable Education, from their very Infancy, to dispose the Minds of Men to submit to it. It is also no less clear, that they discouraged as long as they found it practicable, all foreign Trade, from the same Principle; on which they reasoned after this manner: The great End of Commerce is to procure and to maintain Plenty; and as this was already well provided for by the Nature of their Constitution, and their Laws, in favour of Husbandmen, it seemed to them, that there was no foreign Trade requisite for completing the Happiness of their Subjects; but that, on the contrary, it must be attended by Consequences detrimental to that Form of Government, upon which their Felicity depended; which they thought therefore justified this Prohibition.

Hence, likewise, we discover the true Grounds of that Policy which restrained the Ambition of *Indian* Princes, and deterred them from making Conquests. The Prosperity of an *Indian* Kingdom did not depend upon an Extent of Territory, or a Multitude of Subjects; but upon the strict Obedience of those Subjects to the Laws, which never would have been secured by over-running their Neighbours; for either the conquered Nation must have been incorporated with their own, which would have been a Work difficult, if not impracticable, or these new Subjects must have lived after their old manner, which would have produced numberless Inconveniences. It was therefore the Interest, even of the most powerful of their Monarchs, rather to satisfy the Avarice of such as invaded them, by costly Gifts, than to run the Hazard of ruining their Dominions, and their Subjects, by long and bloody Wars, which never could produce them any Good, and were, in their Nature, pregnant with Mischiefs.

But what is most wonderful, and best deserves our Notice, was the Care taken by the *Indian* Constitution, to conciliate the Love of Peace with undaunted Courage, and the surprising Expedients they made use of, to inspire their Subjects with a Contempt of Death, at the same time that the great End of all their Laws was, to render their Lives easy and happy. Where People are frequently exposed to Dangers, the Sense of Danger wears off, and they acquire an habitual Courage; but where People lead an easy, regular Life, in the full Possession of all that they desire, they naturally become timorous and effeminate. This, however, was not the Case of the ancient *Indians*, among whom, there were daily Instances of Men dying, because they were not inclined to live longer; and of Women that chose to accompany their Husbands in Death, rather than endure Life without them. By these Examples, a Spirit of Heroism was kept up, and the *Brachmans*, by sealing their Doctrines with their Blood, secured an implicit Belief of all they taught; that is, of all the Principles on which their Religion and Government were founded.

There cannot, therefore, surely, be any thing more instructive, more entertaining, or more worthy of the Reader's Attention, than an ample and distinct Account of these extraordinary Men, their Tenets, Discipline, and manner of Living; by a thorough Examination of which, we shall be able to discover what mighty things the human Understanding is capable of achieving, when it is not depressed by Tyranny, or weakened by a luxurious way of Living. We shall see too, with how much Justice the *Brachmans* held the first Place assigned them in their Casts or Tribes, as Men who spent their Lives in the Study of Truth, and in teaching it to others; whereby they maintained and exercised a Power equal to Kings, in virtue only of the Wisdom of their Words, and the Conformity of their Actions to their Professions; and how the Being of this most excellent Constitution depended on the Maintenance of this Order of Men, in their primitive Integrity.

SECTION XII.

The Learning, Discipline, Offices, Manner of Living, and Privileges of the Brachmans; including also an Account of their peculiar Doctrines in Theology and Divinity.

1. The Care taken of the Women, before the Children of the Brachmans were born; and the Pains bestowed on the Education of their Sons, in order to fit them for this Profession.
2. The Discipline in their Schools, and their Exercises, in order to form their Minds, and qualify them for their public Offices.
3. Their Conduct, in quality of Priests and Prophets; their Precautions for securing their Authority; and Punctuality in Discharge of their Duties.
4. A rational and distinct Account of their Philosophy; and an Explanation of the Doctrine of the Metempsychosis, as it was taught by them.
5. The Time at which they were allowed to quit this austere Course of Life, to marry and to settle in Towns, with their Privileges.
6. Of the Germanians, Sarmanians, or elected Brachmans; the manner of their coming into the Society; their Studies and Employments.
7. Of the Brachmans, which Alexander the Great met with in the Indies; with some Conjectures as to their Form of Government.
8. Of the Mistakes, Fables, and improbable Reports, concerning these Sages, and their Philosophy.
9. Of the Proofs derived from the present State of the Brachmans, or Bramins, in the Indies, in Support of the foregoing Particulars.
10. Some Remarks upon what modern Authors have delivered upon this Subject.
11. The Conversation of Alexander the Great, with Dindamis the Brachman.

THE *Brachmans* were a Tribe, or Cast of *Indians*, who accustomed themselves to the Study of sublime Things, and were esteemed the first Cast, on Account of the Excellence and Importance of their Duty, upon the right Discharge of which depended, in a great measure, the Safety and Prosperity of the State, as will more clearly appear, when we come to speak of their civil and sacred Functions: They were divided into *Brachmans* and *Germanians*: The former were *Brachmans* by Descent, the latter by Election, as shall be explained hereafter. Their Attention to their Posterity began very early, and even while their Children were in their Mo-

ther's Womb. As soon as it was known, that one of their Wives was become pregnant, such of their Society as were charged with the bringing up of Children, went to visit the Mother, under colour of giving her their Blessing, but, in Reality, that they might have an Opportunity of bestowing on her good Counsels; such as engaging her to abstain, during her Pregnancy, from what might be hurtful to the Child, informing her what Exercises she might use, and what it was fit for her to avoid. According to the Reception she gave to these Admonitions, they regulated their Conjectures, as to the Genius and Disposition of the Child.

¹ Strab. lib. xv. Arrian. de Exped. Alexand. lib. vii. Porphy. de Abstinent. lib. iv. Pallad. de Brachm. S. Anstros. de Moribus Brachm. Num. 31.

As he grew up, he passed gradually from the Care of one Master to another, all watching attentively, not only over his Progress in Learning, but more especially, in regard to the Purity of his Manners; and, in the mean time, the greatest Care was taken, that neither the Abilities of his Mind, or the Strength of his Body, should be weakened by too great Tenderness or Indulgence. As he grew up to Years of Discretion, it appeared that he wanted Talents for acquiring their Knowledge, or a Constitution capable of undergoing the Hardships of that Life which these Philosophers led, he was not constrained to pursue their Course of Life, but allowed to follow any other. But, on the contrary, if he was assiduous in his Studies, and exact in the Performance of what was directed by his Superiors, he was initiated into their Mysteries, and brought up to all the Learning of the Sect. Their Schools were kept in a little Grove, at a Distance from the Town to which they belonged, where there was a Throne of Ebony placed for the Superior, from whence he delivered his Lectures, and this with such an Air of Gravity, as made too deep an Impression on the Minds of his Auditors, as that they never presumed to speak, or to much as to stir, during the time of his Discourse. If, thro' any Accident, they did either, they were turned out of the School for that Day, as rude and intemperate Persons*.

To lay the Truth, the Subjects of these Lectures were of so exalted a Nature, and were delivered with such Seriousness and Dignity, that they naturally commanded a most profound Reverence, especially from such as from their tender Years were filled with the highest Respect for their Instructors, and taught to conceive just Notions of the Consequences of what was thus delivered to them. In these Lectures, they insisted chiefly on the Principles of natural Religion, the Immortality of the Soul, and the Duties of Men towards each other, and to their Creator. They explained the Advantages that arose from a strict Morality, and took Pains to shew, that a Life of Hardships, in which a Man was continually exposed to what the World thought the greatest Evils, such as Abstinence from Meat and Drink, a perpetual Solitude, and the bearing the Intemperance of the Air, and the Inclemency of the Seasons, was, notwithstanding, preferable to any other Course, inasmuch as it led to the Possession of true Wisdom, the obtaining a perfect Command over their Passions, and the Enjoyment of Health; together with an undisturbed Peace of Mind: They likewise set forth the Perfections of the Supreme Being, the Wisdom and Goodness of Providence, the admirable Harmony of the Universe, the Position of Man in the Scale of Beings, the End of his Creation, the Dignity of his Nature, and the Means of exalting it to the highest Degree of Perfection†.

It is a thing well known to those who have studied Mankind, that it is not so much for want of Lights, as for want of Will to follow those Lights, that People fall into dangerous Errors, and gross Vices. Amongst the Brachmans this was rendered almost impracticable; for, being obliged daily, to attend several Hours to the wise Discourses of their Chief, their having constantly before their Eyes so many Examples of rigid Virtue, and the Reproaches to which they were exposed, if they, at any time, failed in their Duty, kept them equally firm in their Principles and Practice. We may add to this, the Ambition of obtaining the Rank of their Cast, which was the first in the State, and to which the highest Honours were paid by the People, must have contributed not a little, to keep up their Spirits, and to encourage them in the Pursuit of those Studies which were attended with so high a Reward.

2. As to their Exercises, they spent a great Part of the Day and Night in Prayer, in singing Hymns to the Deity, in making Vows for the Prosperity of their Prince and People, and for procuring the Blessing of Heaven upon all their Endeavours. When they were not thus occupied, they retired to their Cells, where they meditated on the great Truths of Philosophy, amused themselves with Experiments, or discoursed with such of their Friends as came

to see them: But if, at any time, they were sensible, that they exceeded in this, by talking too much, too freely, or upon improper Subjects, they imposed a voluntary Penance upon themselves, which, consisting in an absolute Silence, for a certain Space of Time, made a sufficient Atonement for their former Indiscretion.

It is inconceivable to what Heights of Science the best of Life conducted them; for their Spirits being continually active, their Heads perfectly clear, and their Hearts full of that Confidence which is the Result of Innocence, they considered themselves, and were considered by others, as a Race of People superior to common Men. In some Instances, this led them to a sort of Behaviour, which looked like Pride; for they never visited any: And when near Friends came to see them, they constantly entertained them with moral or philosophical Discourses, suited to the Capacities of their Hearers; and meddled very little, if at all, with the common Concerns of Life, despising alike the Pleasures which other Men sought, and the Difficulties of which they complained. They are, on this Account, charged with Haughtiness, Self-conceit, and Vanity, by some of the Antients, and by most of the Moderns. But whoever attentively considers the Necessity there is of keeping exalted Ideas of a future State constantly in View, in order to lead such a Life here, as these Men did, when, at the same time that it was so honourable for themselves, was likewise of so great Consequence to Society, they will plainly see, that nothing but such a Frame of Spirit as the Brachmans are said to have possessed, could have enabled them to have gone through so fatiguing a Course of Life, with Satisfaction to themselves, and to the Benefit of their Countrymen.

In a Word, the Abatement of their Pride, as it is called, must have been attended with an Abatement of their Virtue; of which we have an Example in *Calanus*, who, being once prevailed upon to visit *Alexander the Great*, and to converse with the *Grecians*, came soon after to have such a Complaisance for them, as to quit his Country, and follow that Monarch into *Persia*; for which he was denuded and despised by his Brethren, as a Renegade; and with Reason, unless we can imagine, that the Manners and Morals of the *Brachmans*, at that time equally free from all Superstition and Impurity, were not superior to those of the *Macedonians*, who were visibly the most ambitious, the most unjust, and the cruellest People upon the Earth; who thought they were to lord it over all other Nations, and that the Victories of their Princes were to serve no other End, than filling their Pockets, and gratifying their Passions. For, unless we can prefer such a Conduct, to the peaceable, modest, and quiet Behaviour of the *Indians*, we must allow his Brethren to have been in the right, and *Calanus* in the wrong: And consequently, we must confess, that the Appearance of Pride in the *Brachmans* was really *manus*, than the Reflexion of too bright a Virtue, which vulgar Eyes are not able to bear.

3. They were as venerable in their public Character, as unblameable in their private Lives; and it was the Policy of the latter, that recommended them to the former: for the *Indians*, in the earliest Ages, were throughly persuaded, that Sanctity of Manners was the Quality in itself requisite in Priests. The *Brachmans* acted, every where, the highest the *Indies*, in this Capacity; so that whenever Sacrifices were made to the Gods, either to deprecate their Wrath, or by way of Thanksgiving for their Favour, the *Brachmans* constantly officiated: It was on such Occasions that they made solemn Sermons to the People, in which they usually inculcated three Things: The first was, Reverence to the Divine Being, from whom they received all the Benefits who was alone capable of granting them what they wished, and of defending them from what they feared, and to whom they were accountable for the Use they made of the Benefits he bestowed upon them. The second was, Obedience to the Laws, and a hearty Concern for the Welfare of the Society. The third regarded the Love of Liberty, and the Obligations they were under to sacrifice their own

particular and immediate Happiness, to the preserving the Form of Government, under which they lived, in its full Vigour, in order to provide thereby for the Security and Welfare of their Posterity³.

The Sacrifices they offered, were absolutely pure, and consisted chiefly in burning Incense, and other Perfumes, upon their Altars; and, while these were burning, they delivered in the most pathetic Terms, a solemn Prayer to God, in the Name of the People. They likewise took upon them the Office of *Augurs*, in which they delivered Oracles to the People, as they presented their Petitions to the Deity; but, if it so fell out, that a Man was thrice mistaken in his Attempts to prophesy, he was thenceforward condemned to perpetual Silence; which seems to have been a very wise Contrivance for preventing the Failings of particular Men from bringing their Order into Disrepute. Another Function of their Ministry consisted in Ablutions, when they washed the People in the River *Ganges*, as a Token of their being cleansed from all Impurity, delivered from the Stain of Sin, and rendered acceptable in the Eyes of God: This was an exterior Rite, signifying a general Repentance of past Offences, and a sincere Renovation of their Desire to fulfil the Will of God in every respect, agreeable to other symbolical Institutions, which were common in the Religion of the *Brachmans*⁴.

It was, by this regular Discharge of their Duty, on all public Occasions, and by the Austerity of their Lives, that they maintained their Influence over the People, and supported that Dignity and Precedence which the Laws had given them, and which they would very soon have lost, if their Characters had been stained by their Negligence, or their Vices. It was, without doubt, a very great Power that they enjoyed; and we should scarce credit what the Antients have delivered upon this Subject, if the Remains of that profound Veneration and Respect did not, in a great measure, subsist even at this Day. The *Brachmans* are still acknowledged the first Cast among the *Indians*, are yet considered as their Priests and Prophets; and, in short, the Privileges of which they are now possessed, are so many rational and convincing Testimonies of the Truth of what these old Writers have delivered.

4. As the *Brachmans* were possessed of all the Science in this Nation, and were, in a manner, the only Men of Learning in it, they, for the better and more effectual Cultivation of Knowledge, applied themselves to different Branches; that is, after they had first ran through the general Discipline of their Schools; for it was a Maxim of theirs, and that not at all ill-founded, that the Sciences depended upon each other; and that, to be perfectly Master of one, it was necessary that a Man should have a Tincture of the rest.

They stuck to one Sort of Knowledge. Some of the *Brachmans* addicted themselves to Philosophy; and it was by them that System was formed, which has been since known in the World by the Name of the *Indian* or *Pythagorean*, and which is, in Truth, the Basis of the new Philosophy, and, therefore, deserves to be particularly considered. They thought that there was One necessary self-existent Being, from whom all other Spirits were derived, and all the Matter of the Universe created by his Will. They represented this Being, as pervading the Whole, and yet occupying no Space; and, as they ascribed the Existence of the Universe to his Power, so they acknowledged the Preservation and Direction thereof to be the Effects of his Wisdom. They had a very distinct Idea of the solar System; though the Writers that have mentioned their Opinions, have represented them very confusedly; so that all we can gather from them is, that they regarded the Universe as a Sphere; of which, it is said, they made the Earth the Centre; but I rather think the Sun; and that their dancing round his Figure, represented the Effects of the Motion of the Sun round its own Axis. The Manner in which they spoke on these Subjects, and the Difference of their Opinions from those of the *Greeks*, occasioned the Mistake.

They held, that Water was the Principle of all Things, and that the Heavens and the Stars were not composed of Elemental Matter, that is, not of the same Matter with

our lower World. They made use of some odd Comparisons, or rather of Parables, that were a little strained, to express their Notions about Things that do not so properly fall under the Cognizance of the human Understanding, and will, therefore, appear dark and confused, tho' treated with the utmost Care, and by Men of the most distinguished Abilities. In Points that more nearly concerned Mankind, they were explicit enough. They taught, for Example, that as the World had a Beginning, so it should likewise have an End, and that by Fire. They were of Opinion, that all Countries produced whatever was requisite for making their Inhabitants happy; and that reasonable Men ought rather to contract their Appetites, that they might be content with what Nature, in all Places, bestows, than augment the Inconveniencies, to which human Nature is subject, by desiring what is the Product of other Lands. As to Spiritual Beings, they divided them into three Classes, Angels, Demons, and Men: The first they were thought perfectly good, the latter absolutely bad, the third capable of both; and therefore, they depicted Death, because they stedfastly believed a Regeneration, the highest Degree of which they took to be the Deliverance of the Spirit from the Body, and its Association with the Angels⁵.

The Doctrine of the *Metempsychosis* they had in common with all the Eastern Philosophers; and the Meaning of it seems to have been this: They conceived, that whatever grew, or had any Faculties, must be endowed with Spirit; from whence they inferred, that such Bodies were the Cases of Spirits, or rather Prisons, in which they were confined till they purged or purified themselves, and so purchased their own Redemption. Upon this Principle they built their Doctrine of Abstinence from Flesh, because they thought that in all Animals Spirits were included; and that in such especially, as were useful and serviceable to Men, resided those Spirits, that, though impure, had yet Principles of Good in them, the Souls of a worse kind being thrust into the Bodies of wild Beasts; which, therefore, they permitted to be eaten by those who were not of their Sect or Cast: And they imagined, that in proportion as Men heightened or depressed their animal Faculties in this Life, they should fare in the next; that is to say, such as gratified their brutal Passions, passed into Beasts; and such as cultivated the Virtues of the Mind, rose, by degrees, through the several Classes of Mankind, till, in the End, they merited an entire Freedom from Body, and were received into the Company of Angels⁶.

Such, as far as I am able to gather from the Lights left us by the Antients, were the Opinions of the *Brachmans* who taught Philosophy. Another Sort of them there were, who bent their Studies principally to the cultivating of Policy, or the Laws and Constitutions of their Country; it was to these that, in critical Conjunctions, their Princes addressed themselves for their Advice, without which they were not at Liberty to act in difficult Cases. At such Times the Monarch had not the Power of sending for such as he desired to consult, but was obliged to go to the Grove where they resided, and where he was constrained to comply with their Ceremonies and Manner of living, by laying aside all Marks of Grandeur, eating, as they did, Herbs, Fruit and Puls, and listening attentively to their Discourses. They did not permit such Conversations to last above a Day and a Night, and the latter was generally the Time in which they gave such Audiences. There were a third Sort, that applied themselves chiefly to Morality; in which they instructed the People who came to visit them, and to hear their Discourses⁷. It is highly probable, that they passed thro' these Offices in the different Periods of their Lives; so that they were advanced in Years before they arrived at the Capacity of teaching in the School of Philosophy, at the Head of which there was always the oldest and gravest *Brachman* of the Country: But this is what I gather from comparing the Accounts we have of them, and is not positively said by any Author; so that, if the Reader thinks it improbable, he is at Liberty to reject it.

5. The *Brachmans* pass their Days in Groves, at a

⁷ Palladius et al. lib. 7. de vita Brachmanorum.

small Distance from Towns, where they eat and slept under the Trees upon the Ground, or else in Caves. As to their Drefs, Authors differ very widely: It is generally said, that they went naked, and were, from thence, called *Gymnosophists*; but this muſt be underſtood only when they were at home, that is, in their Groves: For, when they were employed in their public Functions, they wore a Turbant on their Heads, a Linen Garment on their Bodies, which was called the ſacred Robe; had a Staff in their Right Hand, and a Ring upon one Finger. Some Authors, indeed, ſpeak of very different Clothing: *Hierocles* mentions a Robe of that kind of Stone, which may be ſewn into an inconſumable Cloth^a. *Megasthenes* aſſerts, that their Garments were made of the Barks of Trees^b; and, very probably, their Cuſtoms, in this reſpect, might vary in different Ages.

After they had ſpent thirty-seven Years in their Miſtery, they were allowed to quit it, to live the Remainder of their Days at Eaſe in the Towns, dreſſed like other People; might eat the Fleſh of wild Beaſts, and take as many Wives as they thought fit, in order to preſerve the Race of the *Brachmans*. But it was an eſſential Rule, to ſuch as entered into the Matrimonial State, that they were not to reveal any of the Secrets of their Philoſophy to their Wives; and this for two Reaſons: Firſt, becauſe there was great Reaſon to doubt, whether they would be diſcreet enough to conceal what they were thus taught: And, ſecondly, it was no leſs doubted, if they ſhould, whether this Accellion of Knowledge might not incline them to Pride and Diſobedience. This is certainly a very plain and probable Account of the Marriages of the *Brachmans*; and we diſcern therein the ſame wiſe Precaution, the ſame Regard to the particular Intereſt of this Caſt, and the ſame Reſpect to the Good of the Whole, that is ſo manifeſt in the Proviſions made for all other Caſts of People, in virtue of the *Indian* Conſtitution^c.

Notwithſtanding they had quitted the Order, as we may call it, yet they were treated with the utmoſt Reſpect, and enjoyed all the Privileges annexed to their Caſt, as much as if they had ſtill remained in their Groves, and continued to officiate as Priests. That is to ſay, they were exempted from all Duties, they were permitted to gather Herbs, Fruits, and Puls, where-ever they thought fit; and were allowed Oil, for anointing their Bodies, at the public Expence: They were likewiſe made welcome at the Feaſts of the Great, where they gave their Advice, and diſcourſed freely, on public Affairs: And it was commonly cut of the Number of theſe married *Brachmans*, that the Senators^d were choſen, in whom was vetted to large a Share of the Adminiſtration. Thus, in every Station, they were attended with Reverence, and found themſelves particularly conſidered both by their Princes and Fellow-Subjects; whoſe Interests as they perfectly underſtood, ſo they conſtantly purſued them; and, by interpoſing, when their Princes were inclined to arbitrary Meaſures, they hindered the Violation of the Laws, and ſecured the Happineſs of the People.

Thus they paſſed their Days, even to old Age, without any Danger of being neglected, or meeting with Contempt: The Law ſecured them from this, as an habitual Temperance and from moſt Diſeaſes; of which they were, generally ſpeaking, ſo much athamed, from an Apprehenſion, that they would be looked upon, eſpecially if of a long Continuance, as the Effects of Exceſs, that they, geneſally ſpeaking, choſe to die rather than bear them. When the Inconveniencies of old Age began to weigh them down, they had certainly recourſe to this violent Remedy; and, having ordered a Pile of Wood to be erected in ſome public Place, they attended it, dreſſed in their beſt Apparel, and with whatever Ornaments they poſſeſſed. There they ſung certain Hymns, ſetting forth the Vanity of human Life, wherein Men amuſe themſelves with Dreams and Shadows, except the Few who are mindful of that heavenly Country, which their Souls are to inhabit; and then laid themſelves down upon their Faces, and remained there ſtill and quiet, without to much as a

Groan, till they were conſumed to Aſhes^e, leaving the Example of their Death to inſpire their Countrymen with Courage to adhere ſteadily to the Principles which they had taught them, in ſpite of any Checks or Miſfortunes that they might meet with. Thus living and dying, they were always uſeful to Society; and, as their Diſciple began even before their Entrance into Life, ſo it ended only with their laſt Breath; for they were wont to compare the Weakneſs and Infirmities of old Age to the imperfect Senſes of a Child while in the Womb, and their bearing themſelves to their being brought forth a ſecond time to a new Life, ſtiling that Action their Regeneration.

6. We are now to ſpeak of the ſecond Sort of *Brachmans*, or of ſuch as became ſo by Election, and who were taken from different Claſſes, being ſuch as deſired to be admitted into the Order: For, as the *Brachmans* profreſſed themſelves Lovers of Wiſdom, they thought it neither juſt nor reaſonable to exclude thoſe who were deſirous of attaining, by voluntary Application, what they, by a regular Education, had acquired. Theſe, as *Megasthenes* reports, were called *Germanians*^f; but they are ſtilled *Sarmatians* by *Clemens Alexandrianus*^g. The Manner in which they were admitted was this: They went to the Magiſtrates of the City to which they belonged, and, in the firſt place, made a clear and diſtinct Diſcovery of all their Intereſts, which they delivered up to them for the Maintenance of their Wives, in caſe they had any; and, if they had Children, they were taken care of by the King. After this Step they preſented themſelves to the Perſon who was at the Head of this Body of Sages, and deſired to be admitted amongſt them: Upon which they were ſtrictly examined, as to the Sincerity and Steadineſs of their Reſolution, and the Deſire they had to paſs the Remainder of their Days in the Study and Praſtice of Philoſophy. An Inquiry was next made into the Behaviour of their Anceſtors, in which they attended as high as their great Grandfathers; and if they found, that any, within ſix or three Degrees, were juſtly chargeable with Pride, Intemperance, or Covetouſneſs, ſuch a Candidate was rejected; but if nothing of this ſort appeared, then a ſtrict Inquiry was made into his own Life and Converſation; and if he had a good Memory, had been always remarkable for Modesty, for a peaceable and humane Behaviour throughout his whole Life, and had never given any Marks of a proud, revengeful, or luxurious Diſpoſition, he was admitted^h.

Theſe differed from the *Brachmans* in this, That they inhabited moſt of them between the Rivers *Hyphſis* and *Ganges*; where they had Houſes and Temples not only neat and convenient, but alſo handſomely adorned, at the King's Expence. At a certain Hour they were called to the Temple, by the Sound of a Bell, where they aſſiſted at public Prayers; and from whence they were not allowed to ſtir till the Bell rung again, to inform them, that the Service was over for that Day. The King's Officers then gave each of them a Porringer of boiled Rice, or ſome ſort of Food which was equivalent; and then they eat before they ſeparated. The Habits they wore were made of the Bark of Trees, or of coarſe Cotton; they paſſed all their Days in the ſtrict Chſtity, and never drank any Strong Liquor whatever. As they ſtudied the Divinity, Philoſophy, and Policy, of the *Brachmans*, they attained, in time, to a great Degree of Wiſdom, and were conſulted by their Kings; and preſided with equal Honour at the Sacrifices that were made by the People. In a Word, it appears that they were received into a full Participation of all their Privileges, except that of quitting the Order, and of Marrying; which there was the leſs Reaſon they ſhould enjoy, ſince, of their own Accord, they had quitted that State already. It was of this kind of *Brachmans* that moſt of the *Stoics* were told, that we find recorded in the Tale of *Apolonius*; for, inſtead of cultivating the high and ſublime Sciences, they amuſed themſelves chiefly in acquiring natural Secrets; which Science, in thoſe Days, was thoſe

Magic: They were likewise a kind of itinerant Physicians, and took a great deal of Pains to make themselves successful this Way; but we are informed that their Medicines consisted chiefly, if not wholly, in Draughts, or Fomentations; and we are told by *Strabo*^a, that they possessed the Knowledge of certain Secrets, that were equally extraordinary and ridiculous.

The Reader, after perusing these Accounts, will be able to resolve, without much Trouble, most of those Difficulties, which some modern Critics^b have represented as inexplicable. For Instance, when he is told that one Author says, that the *Brachmans* live always in Woods, and another that they were frequently seen at Courts, and admitted into the Cabinets of Princes; instead of taking this for a flat Contradiction, he will perceive, that the former speaks of the *Brachmans* that were still pursuing their Studies; and the latter, of such as had completed their Course; and, according to the Rules of the Society, had Liberty to retire, to marry, to live in Cities, and to be chosen Senators. He will likewise be able to account for the seeming Difference between living together in a kind of collegiate State, and rambling through the Country like a kind of Doctors; because the former must be understood of the *Brachmans* by Descent, and the latter of their Associates, who, at their own Request, were admitted to the Pursuit of such Studies. In a Word, it is in this as in most other Things, a hasty Collection of the various Accounts, given by different Authors, thrown together without Order or Method, serves no other Purpose than giving us confused and indistinct Notions; whereas when we take the Pains to range Things methodically, and under their proper Heads, this Obscurity is dispelled, and we see the whole Matter in a clear and true Light.

7. The Account we have of *Alexander's* attacking and destroying a Kingdom of the *Brachmans*, is very extraordinary: And, from the Lights afforded us from History, not easily to be accounted for, since we are no-where told, that these Philosophers affected Government, or desired to make themselves Princes. It is likewise related, that *Alexander* put to Death near fourscore thousand of these People; which cannot, certainly, be understood of the *Brachmans*, taken in a strict Sense^c. And therefore I am apt to think, that in this Country, upon the Death of some hereditary Prince, without Issue, a *Brachman*, who, perhaps, was a Senator, succeeded him in his Throne by Election: And in that Case, it is natural to believe, there might be a more than ordinary Number of his Cast resident in his Dominions. It is true, that *Diodorus* the *Sicilian*, and many other of the Writers of Antiquity, called the Subjects of King *Sambus* expressly the *Brachman* Nation; but from the Account that we have given, the Reader will be able to deliver himself from this Difficulty, from his Knowledge, that the *Brachmans* are not a Nation by themselves, but a Class or Cast in every Nation; tho' it was very natural for a *Greek* Writer, when he heard of a *Brachman* Prince, and a Senate of *Brachmans*, to conclude that this was their Kingdom: But there is no Reason, that we should be misled by his Mistake, especially when it can be so easily accounted for, and plainly set to Rights, by the Distinction we have proposed.

As it is my Business to give the Reader all the Information I can, I will take this Opportunity of inferring and explaining another Passage in the History of *Alexander* the Great, which happened at the time that he destroyed the Kingdom of this *Brachman* Prince *Sambus*. It happened, that at the Siege of *Harmatelia*, which was the principal City of that Kingdom, the Inhabitants wounded many of the *Macedonians* with poisoned Arrows; amongst the rest *Ptolemy Lagus*, afterwards King of *Egypt*; for whose Misfortune *Alexander* was exceedingly concerned, because all who had been hitherto wounded, died, in spite of all the Care that could be taken of them: But the Life of *Ptolemy* was saved by the King's having a Dream, in which he was informed, that a certain Herb, common in the Country, would cure this Poison; which it did effectually^d. Now

this Dream was, undoubtedly, no more than an Artifice, and *Alexander* received his Information from some *Brachman*; for, as we have seen before, no such Poison could be used, unless the Remedy was likewise known; and this gives a fair Account of the Performance of this Cure, without a Miracle. This Pretence of the Dream, however, was a well-chosen Stroke of Policy, because it intimated, that *Alexander* was particularly favoured by the Gods; which was an Opinion he always laboured to establish, especially among his own People: For, as to the *Indians*, it can hardly be supposed, that the Tale of the Dream would go down with them, because they knew the Remedy before, and could therefore account for the Discovery of it to the King, without the Interposition of any Divinity.

8. As the *Brachmans* were, in reality, a very extraordinary People, and had amongst them some very strange Customs, it was natural enough for Authors, who delight in relating Wonders, to give us some very improbable Stories about them. It appears from a Passage in *Strabo*, that they injured themselves to Fatigue; for he speaks of two *Brachmans*, one of whom gave a Proof of Patience, by lying on the hard Ground, and there suffering whatever the Sun and the Rain pleased. The other, who was not so far advanced in Years, exhibited his Proofs, by standing a whole Day, sometimes on the Right Foot, sometimes on the Left, while, with both his Hands, he bore up a large Piece of Wood in the Air^e.

All this is very credible; and the *Greek* Writers tell us something of the same Kind, with regard to their great Philosopher *Socrates*; but *Pliny* carries these Exercises of Patience beyond all Bounds, when he says, that the *Brachmans* gazed upon the Sun with fixed and steadfast Eyes, from his Rising to his Setting; and that they sometimes stood whole Days upon one Foot, in the midst of burning Sands^f. Yet *Solinus* advances this a Step farther; and for Fear it should be thought, that they did all this to no Purpose, he is so kind as to assure us, that they discovered mighty Secrets by thus surveying the Sun^g.

We have already given an Account of the Marriages of the *Brachmans*, and have assigned the true Reason why their Cast was less numerous than the rest, notwithstanding that the *Indian* Women are generally very prolific. But *Suidas* hath a very extraordinary Story upon this Subject^h: He says, that the *Brachmans* dwelt in an Island in the Ocean, where the Air is so pure, that they lived one hundred and fifty Years; they are obliged to be contented there, not with Bread and Water, but with Water, and a few Apples: They do nothing but pray to God. In the Months of *July* and *August*, the Fruits being more plentiful, warm them with the Fire of Love; so that they go to find out their Wives beyond the *Ganges*, and stay with them forty Days, and then repass into their Island. So soon as a Woman hath brought forth two Children, her Husband goes to see her no more: She, on her side, comes not near any Man more; and if any Woman has been barren for five Years together, her Husband makes no further Trial of her, and repasses the Sea no more with the others. This was not the Way to stock the Country greatly; nor was it very populous, as *Suidas* observes: But he should not have forgotten to acquaint us, that these are Stories made at Pleasure, and Romances, which idle Scribblers have forged.

But, notwithstanding all these Fables that disfigured their History, we find, in all Ages, the most intelligent and polite Writers extremely favourable to these Sages; and *Apuleius*ⁱ, who was both an elegant and a hard Writer, has left us such a Character of these Men, as extremely deserves our Notice; and therefore I shall finish my Citations with his judicious Account of our Philosophers: 'These is also, says he, among the *Indians*, a noble sort of Men called *Gymnosophists*. I have a very great Value for them, because they are skillful Men, not, indeed, in laying the Vine, nor in grafting a Tree, nor in tilling the Ground. They do not know how to cultivate a Piece of Land, or to melt Gold, or to break a Horse, or to tame a Bull, or to shear a Sheep or a Goat, or to lead them to the Pasture.

^a *Geograph. lib. xv. p. 431.* where he says, that by their Medicines they could make a Person beget many Children; and those either Boys or Girls, as they chose themselves. ^b See the Article of *Gymnosophists*, in *Bayle's* Dictionary. ^c *Diodor. Sicul. lib. xvii. Strabo lib. vii.*

^d *Ptolemy in Alexander.*

^e *Diodor. Sicul. ubi supra.*

^f *In Florida.*

^g *Plin. Nat. Hist. lib. vii. c. 2.*

^h *Suidas.*

What is it then? Instead of all this, they know one thing: Both the most ancient Masters, and the youngest Scholars, study Wisdom; nor is there any thing for which I commend them more than for their Aversion to Indolence and Sloth. When the Cloth is laid, before the Meat is brought upon the Table, all the Youths are called together from several Places and Offices; but they are not suffered to sit down, till they have answered the Masters, who ask them, What Good they have done, since Break of Day till Dinner-time? One will answer, that having been chosen Arbitrer between two Persons at Variance, he has removed all Subjects of Hatred and Suspitions between them, and reconciled them together. Another will say, That he obeyed his Parents Commands. A third, That he found out some Truth by his own Meditation, or learnt it from another. Thus they all give an Account of the Good they have done. He who has nothing to say why he should be admitted to Table, is sent back to his Work without his Dinner.

9. I think it necessary to take some Notice here of what has been said by the Moderns upon this Subject; more especially by such as might either be supposed better Judges from their Learning, or better qualified to come at the Truth, by their having travelled in the Indies, and being acquainted with those of this Sort of Sages that still remain there. A learned French Writer observes, that Dr. Hyde, in his most learned Book on the Religion of the Persians, has advanced a new Notion, in supposing, that the *Brachmans* were so called from *Abram*: But he is mistaken in this; for, though Dr. Hyde inclines to this Opinion, yet he did not advance it, since it had been long before maintained by *William Postell*, who asserts, that the *Brachmans* were descended from one of the Sons of that Patriarch by *Keturah*. I agree, however, with this Critic, that the Notion is improbable; and that it is much more likely they were so called from the Word *Bram*, or *Brama*, which signifies an enlightened Man, and is also the Name of the reputed Founder of their Sect.

Their fundamental Notions remain so much the same, that it is really wonderful they have not, in the Course of so many Ages, received greater Alteration, especially considering the Revolutions that have happened in their Country, and that they have been now, for many Centuries, under a foreign Yoke; for the *Mogul* is a *Tartar* by Descent, and a *Mohammedan* by Religion; and yet it is with the *Indians* who are his Subjects, that we are best acquainted. *Francis Xavier*, whom the Papists stile the Apostle of the *Indies*, says, in one of his Letters, that, having acquired the Friendship of a *Brachman*, very eminent for his Knowledge and Learning, he opened himself to him in the following Terms: 'The Secret of our Religion consists in these two Points; first, in knowing that there is one God, the Creator of Heaven and Earth, and the Author of all Good, who alone is to be worshipped; the second is, that the Idols are the Images of evil Geni: But Care must be taken not to divulge this to the People; it is a Doctrine quite out of their Reach; and the Principles of good Policy require, that they should not be made acquainted with any Divinity. These were the Principles of our old Philosophy; Prosecute your Studies, and pursue Truth; but, if you should be so happy as to reach it, communicate your Discoveries only to a few. The Many are to be held with a tight Rein, and are to be kept in strict Subjection; which cannot possibly be done, if they are not hindered from seeing to the Bottom of Things, and their Imaginations flattered with pleasing Appearances.'

Our old, and our modern Travellers, agree very well, in their Accounts of the modern *Bramins*, with what I have before delivered: The celebrated Signor *Pietro della Valle*, a noble Roman, a learned and candid Writer, and whose Travels are justly esteemed as accurate as any that were ever made into this Part of the World, tells us, that though the Sects of the *Indians* are multiplied to eighty-four, yet they may be reduced to four; 1. the *Brachmans*, the Soldiers, the Merchants, and the Mechanics.

In the essential Points of Religion, says he, all agree; for all believe the Transmigration of Souls; which, according to their Merits and Demerits, they think, are sent by God into other Bodies, either of Animals, more or less clear, and of more or less painful Life; or else of Men, more or less noble and handsome, and more or less pure of Race, wherein they place not a little of their van Superstition, accounting all other Nations and Religions, besides themselves, unclean; and some more than others, according as they more or less differ from their Customs: All equally believe, that there is a Paradise in Heaven with God, but that thereinto go only the Souls of their own Nation, more pure, and without any Sin, who have lived piously in this World; or, in case they have sinned, that after diverse Transmigrations into various Bodies of Animals and Men, having, by often returning into the World, undergone many Pains, they are, at length, purged, and at last die in the Body of some Man of *Indian* and noble Race, as the *Brachmans*, who amongst them are held the noblest and purest, because their Employment is nothing else but the divine Worship, the Service of Temples, and Learning; and they observe their own Religion with more Rigour than any others.

He likewise says, they acknowledge there is a Devil, whom they describe much in the same manner that we do. And they likewise think, that many wretched Souls, unworthy ever to have Pardon from God, as the last of the great Punishments which they deserve, become Devils also; than which they judge there cannot be a greater Misery. The greatest Sin in the World they account the eating of Blood, especially that of Men; and then, above all, the eating of human Flesh, as some barbarous Nations do, who are therefore detested by them more than all others. Hence the strictest among them, as the *Brachmans*, and particularly the *Botti*, not only kill not, but eat not, any living thing; and even from Herbs tinged with any reddish Colour, representing Blood, they wholly abstain. Others of a larger Conscience eat only Fish; and the lowest sort, and such as have scarce any Conscience at all, tho' they will not kill, will nevertheless eat all sorts of Animals fit for Food, except Cows; to kill and eat which, they have an absolute Abhorrence; for they say, that the Cow is their Mother, on account of the Milk she gives them, and the Oxen she breeds, with which they plough, and make use of them, from the Scarcity of other Animals, upon almost all Occasions; so that they think they have Reason to say the World is supported by a Cow, which, from being used as a Proverb, is now converted into a Fable. Moreover, as Cows are well kept in *India*, and much taken Care of, they believe that the best Souls, to whom God has given little Pain in this World, pass into them; which is a new Motive of Veneration.

The same Author informs us, that the Race of the *Germanians* are still in Being, tho' under another Name. I shall give the Reader the Author's own Words, and leave him to judge of them. 'The *Goghis*, says he, are not *Brachmans* by Descent, but by Choice, as our religious Orders are. They go naked; most of them with their Bodies painted and smeared with different Colours; yet some of them are only naked, with the rest of their Bodies smooth, and only their Foreheads dyed with Sanders, and some red, yellow, or white Colour; which is also imitated by many secular Persons, out of Superstition and Gallantry. They live upon Alms, despising Cloaths, and all other worldly Things. They marry not, but make severe Profession of Chastity, at least in Appearance; for in secret it is known, that many of them commit as many Debaucheries as they can. They live in Society, under the Obedience of their Superiors, and wander about the World, without having any settled Abode. Their Habitations are the Fields, the Streets, the Porches, the Courts of Temples and Groves, especially under those where any Idol is worshipped by them; and they undergo, with incredible Patience, Day and Night, no less the Rigour of the Air, than the cruel five Heat of the Sun, which, in these sultry Countries, is a thing sufficiently to be admired.'

7. *Voies*

In the Accounts that has been published of Sir Thomas Roe's Voyage to the Indies, which was drawn up by his Chaplain, we have the original Rule delivered to the Indians by *Brama*, in relation to sparing the Lives of Animals: It runs thus: "Thou shalt not kill any living Creature, whatsoever it be, having Life in the same; for thou art a Creature, and so is it; thou art indeed with Life, and so is it; thou shalt not therefore spill the Life of any of thy fellow Creatures that live." Other Precepts, they say, were delivered unto them by their Law-giver, about their Devotions in their Washings and Worshipings; wherein they are commanded to observe Times for Fasting, and Hours for Watching, that they may be the better fitted for them. Other Directions they have about their Festivals; wherein they are required to take their Food moderately, not pampering their Bodies. Concerning Charity, they are farther commanded to help the Poor, as far as they are possibly able. Other Precepts they say were likewise given them in Charge, as, *Not to tell false Tales, nor to utter any Thing that is untrue; not to steal any thing from others, be it never so little; not to defraud any by their Coming in Bargains or Contrabts; not to oppress any, when they have Power to do it.* This Writer farther informs us, that some of the *Bramins* had told him, "They acknowledged one God, whom they described with a thousand Eyes, with a thousand Hands, and as many Feet; that thereby they may express his Power, as being all Eye to see, and all Foot to follow, and all Hand to smite Offenders. The Consideration whereof makes that People very exact in the Performance of all moral Duties, following close the Light of Nature in their Dealings with Men; most carefully observing that royal Law, in doing nothing to others, but what they would be well contented to suffer from others."

There is a very curious Piece, relating to this Subject, that has been prescribed by the Royal Society, written by Mr. *Jehn Majball*, who lived long in the Indies, and had taken a great deal of Pains to make himself perfectly acquainted with the Notions of the modern *Bramins*; and what he says is so conclusive, that the Reader must be satisfied, that what the Antients have delivered to us concerning the Religion and Philosophy of the *Brachmans*, was strictly true. Upon what Ground, says he, some Travellers have siled these People Polytheists, or Atheists, "I cannot tell. It is very observable here, that their Priests or *Bramins*, and holy Men, whom they call *Jagees*, or *Gigbis*, when they have Occasion to write any thing, they always put a Figure of One in the first Place, to shew, they say, they acknowledge but One God, who, they say, is *Burme*, that is, immaterial. When they preach to the People, and instruct them, which is commonly every Feast-day, Full Moon, or the time of an Eclipse of either Luminary, they tell the common People much of God, Heaven and Hell, but very imperfectly, obscurely and mystically: They say, that when God thought of making the World, he made it in a Minute. They account this World the Body of God: For all that, they say he is immaterial; and say, that the highest Heavens are his Head, the Fire his Mouth, the Air his Breath and Breat, the Water his Seed, and the Earth, and the Mountains the feet of his Legs and Feet; but assert, in general, that God is the Life of every Thing; yet is the Thing neither greater or less for him.

They hold, that God dwelt in a Vacuity before that he created the World; and that, as he dwelt in the Vacuity, he created several Beings out of himself: The first were Angels, the second Souls, the third Spirits, all differing in Degrees of Purity; the first being more pure than the second, and the second than the third. The Angels, they say, neither act Good or Evil; the Souls either Good or Evil; but the Spirits, or *Dewtas*, as they call them, act scarce any Thing but Evil. They have a good Opinion of the Angels, and think their State mighty happy, hoping, when they die, they shall be made Partakers of the same Bliss and Pleasure. They believe, that every thing that hath Life hath a Soul, but especially Man; and they accordingly, affirm, that as these Souls behave themselves in

their pre-existent State, so are their Actions in this World either good or bad, by a sort of fatal Necessity, which is very hard to conquer or overcome. Hence it is, say they, that there are so many different Humours and Dispositions of Men; for their Souls, before their Entrance into their Bodies, being tainted with different Affections, cause the like Difference in the Parties, whose Bodies are their Vehicles; so that if a Man happens to have a sudden or unfortunate Death, they immediately ascribe the same to the Parytsown Wickedness, or the bad Life that his Soul led, before that it entered into his Body: For, say they, the aforeacted Evil that his Soul did in its other Life, brought these Accidents upon him, by getting the upper Hand of him, and by being too powerful and strong: And these, that die thus, they believe their Souls turn into Devils.

They maintain *Pythagoras's* Transmigration, or *Metempsychosis*, but in a grosser Sense than he did: For they believe that Mens Souls, that have not lived so well as they ought, go, as soon as the Body dies, not only into the Birds and Beasts, but even into the basest Reptiles, Insects, and Plants; where they suffer a strong sort of Purgation to expiate their former Crimes. But as for the Souls of the *Jagees* or *Gigbis*, that is, of religious Men and Saints, they fancy that they go and inhabit, with the good *Dewtas* or Angels among the Stars. As for the Spirits, or inferior Angels, they believe that they are very evil, and have a hand in all Wickednesses, Murders, Wars, Storms and Tempests; so that when they solemnize the Funeral of those that are dead, they always present Dishes of Meat as Offerings to those Spirits, and sometimes sacrifice unto them, that they may not hurt the Souls of the Dead.

As they acknowledge the Being of a mighty God, so they hold, that he created the World, and every Thing therein. They believe, that there are almost infinite Numbers of Worlds; and that God has oftentimes annihilated, and re-created the same; but how he came first to create the World, and Mankind, they relate to have been thus: Once, on a time, (say they) as he was set in Eternity, it came into his Mind to make something; and immediately, no sooner had he thought the same, but the same Minute was a perfect beautiful Woman immediately presented before him, which he called *Adea Suktee*; that is, the first Woman: Then this Figure put into his Mind the Figure of a Man; which he had no sooner conceived in his Mind, but that he also started up, and represented himself before him; this he called *Manepuisse*, that is, the first Man: Then, upon a Reflection of these Things, he resolved further to create several Places for them to abide in; and, accordingly, assuming a little Body, he breathed in a Minute the whole Universe, and every thing therein, from the least to the greatest.

A Divine of the Church of *Rome*, who had resided long in the Indies, and filled there with great Dignity a very high Post, in a Relation which is not yet printed, and therefore the more curious, gives us the following Account: "The *Brachmans* are, at this Day, the only People among the *Indians* that have a Right to cultivate the Sciences; and of this Right they are so jealous, that they suffer scarce any of those Rays to shine upon the World, which might be expected from Persons, boasting themselves in Possession of so much Light. Their Call is the most noble and the most considerable of all, and is even looked upon to be as much superior to Princes, as Wisdom, and useful Knowledge, are, in their Nature preferable to Grandeur and Power, which Kings so easily abuse. The Sciences cultivated by these *Brachmans*, and in which they make a greater or less Progress, in proportion to their Parts and Application, may be reduced to eighteen. The first is a kind of Grammar, which contains the Rules necessary for the understanding of that Language, which they call *Grasham*; in which they converse amongst themselves, and wherein all their Books are written: From hence their Sciences ascend in a very regular Scale, from the more simple and easy, to those

Miscellanea Curiosa, vol. 3. p. 257.

Extract from a Manuscript written by Dom *Francisco Roci*, Archbishop of *Cranpanor*.

“ those which are more difficult and complex. The last, which is esteemed the Perfection of all Sciences, is filed *Vellata*, or *Vendata*; which is, as much as to say, the Close, or the Sum of all Things. This is a kind of metaphysical Theology, which the *Brachmans* receive not with a Spirit of Inquiry, but with profound and implicit Submission, as a kind of Divine Doctrine, which is, in its Nature, superior to all Examination or Dispute. Thus, these Men suffer their Wisdom to be bounded by that of their Ancestors, which, as they desire not to transcend, it is very probable they do not equal.”

10. I have treated this Subject more largely, because I find many Things omitted by very great Men, who have undertaken to give us Accounts of the *Brachmans*, their Learning, Manners, and the particular Turn of their Philosophy. The celebrated *Boyle* has vouchsafed them Two Articles in his Dictionary, but seems in both to have aimed more at exposing the Contradictions of such ancient Writers as have mentioned these Philosophers, than to give his Readers any distinct and methodical Account of them from what he had himself read*. In one of his Articles indeed he tells us, that the Book, written by *Palladius* on this Subject, deserves to be consulted; and in his Notes informs us, that this Author was published from a Manuscript in the Royal Library, by Sir *Edward Byfse*, *Clarencieux* King at Arms; and furnishes us with some Remarks on the Editions of the Book, or rather on the Change of the Title Pages; for there never was but one Edition, which I have read with a great deal of Care; and am from thence enabled to give the Reader some Lights, beyond what he can receive from Mr. *Boyle*.

The Editor of that Book collected every thing that had been written upon this Subject, of which he composed a very curious Miscellany, addressed to the Earl of *Clarendon*, then Lord High Chancellor of *England*. The Treatise of *Palladius* of the *Indian* Nations, and of the *Brachmans*, was indeed never published before; yet it contains very little, if any thing, new upon the Subject, since the Discourse of St. *Ambrose*, of the Manners of the *Brachmans*, which is addressed to one *Palladius*, and had been long before published in *Latin*, contains the Substance of what is related by the other in *Greek*; but the Letters of *Dindamis* or *Dandamis*, which are added to these Two Pieces, are absolutely new, and never were published but by Sir *Edward Byfse*; for which Reason I thought the Substance of them would be acceptable to the Reader, and therefore I inserted it in a former Section.

Strabo mentions the Application of *Alexander* to this Philosopher, and so does *Plutarch*; but both *Ambrose* and *Palladius* gives us a large Account of a Conference that Monarch had with this *Brachman*, which they received from the *Indians* themselves; which is the more probable, since it is certain they had formerly Books upon this Subject, which, very probably, contained the very same Accounts that are preserved to us in these: They are much more curious, and will afford the inquisitive Reader far greater Satisfaction, than any thing that I know of, that has been written of this kind; and therefore I wonder, that so judicious and so learned a Man as Mr. *Boyle* did not rather chuse to give us some Quotations from these scarce and valuable Pieces, than from Books that were in every body's Hands, and had been so often quoted before.

The Bounds prescribed to this Work, and the many Things that are to be treated of in this single Chapter, will not allow me to insert the Whole of either of these Pieces: But, after having given such a Character of them, the Reader, perhaps, would not excuse me, if I should close this Section, without putting it in his Power to judge for himself, by adding a Specimen from a Book, which, so great a Man has told us, ought to be consulted by whoever pretends to write upon this Subject. I will therefore subjoin the Discourse between *Alexander* and the *Indian* Philosopher; which, I think, will be sufficient to satisfy his Curiosity, and discharge me effectually of this Part of my Task.

11. “ When *Alexander* had heard, from the Report of *Onesicritus*, whom he had sent to him, that neither Promises nor Threats would induce *Dindamis* to come to him, he was the more desirous of seeing one, who, tho’ naked and old, was able to overcome the Conqueror of so many Nations. He went, therefore, with a few of his Friends, to the Wood where the Philosopher was; and when he drew near it, alighting from his Horse, laying aside his Crown, and every thing that had an Appearance of Pomp or Shew, he went alone to the old *Brachman*, and sat himself down at his Feet. God save you, *Dindamis*, said he: I am come to you, because you refused to come to me. And to what Purpose do you come? said he: What is there in our Solitudes that you can desire to carry away? What you want, we have not; and what we have, is not necessary to you. We honour God, love Man, neglect Gold, and contemn Death: You, on the other hand, fear Death, honour Gold, hate Man, and contemn God. Teach us, replied *Alexander*, some of your Wisdom: They say, that you are full of Divinity; and that you often confer with God himself: Now, I would willingly know in what you excel the *Greeks*; in what you are better; in what wiser than other Men. And I, returned *Dindamis*, would willingly bestow on you, what I have received from God, but that I know, your Bosom affords not Room for such a Gift: Thy Mind is filled with vast Desires, and insatiable Avarice, and a diabolical Thirst of Empire; all which I fight against me, who would endeavour to extract them from your Breast. You are desirous of going to the Ocean: I after that would conquer some other Part of the World, to satisfy those Desires which would labour you with Sadness when you had no more to conquer. How then is it possible I should content you? who, if all the World were subjected to your Service, would not even then be at Rest. You are made much less than the World; and yet you would conquer all, and obtain whatever Mankind possess, but, after all, you could have no more than you see me lying on, or like you sit upon. The Case would be exactly the same, if we should remove from hence; for you and I would then be still equal in our Possessions. I desire only to use the Elements of Air, Water, and Earth, as other Men use them; and therefore whatever I have, I justly possess; for if you were possessed of all the Rivers in the World, you could only drink Water from them as I do. If you will but learn Wisdom of me, you will want nothing; for he has all who desires no more than he has. For it is Desire that is the Mother of Poverty; which, without knowing the proper Remedy, you seek to cure; for whoever seeks to possess all Things, will never find what he seeks; and, meeting with no Rest in what he possesses, but expecting it from what is yet to be possessed, he still excruciates himself more and more. You will have the greatest Wealth possible, and enjoy it with the utmost Pleasure, if you would live thus with me; for, if you could taste the Wisdom I teach you, you would possess all the Riches I have. The Heavens serve me for a Canopy, the Earth is my Bed; I drink out of the River, and the Field here supplies me with Food; I do not eat other Animals like a Lion, neither do the Remains of other Animals consume in me, and so make my Body their Sepulchre; but I feed naturally upon Fruits, as on the Milk my Mother gave me.

“ But you are desirous of knowing what it is I possess, more than other Men, and how far I am wiser. Thus, as you see, agreeable to the Manner in which I was created: I live as I came from my Mother's Womb, naked, without Riches, and without Care. I know what God has done, and I know what will be done by him. You, on the other hand, are amazed at the Production of Things to come, because you understand not the Works of God, which he sheweth you every Hour, such as Famine, Plagues, Wars, Droughts, Rains, and fruitful Seasons; all which I know how, whence, and to what End they come: Which Knowledge is com-

"municated to me by Providence; and it rejoices me, that God is pleased to communicate his Works to my Understanding, so that I know, and am persuaded of his Justice. It, at any time, Kings address themselves to me, as to a Messenger of God, under the Apprehensions of War, or any other Evil, I pray to God in their Behalf; and, having restored their Courage by Words of Consolation, I send them back with some comfortable Message.

"Tell me which is best, to kill and destroy Men, and thereby obtain a Fame for Mischief, or, by preserving them, and doing them good, to acquire that of a Benefactor? And which agrees best with the Character of the Sons of God, to war against and overturn what God hath established, or, rather, peaceably to support, and earnestly endeavour to restore, whatever is decayed, as the Servant of the Deity? It is not, O King, either thy great Power, thy immense Wealth, the Multitude of Elephants, the costly Robes that are about thee, the numerous Armies under thy Command, or what thou hast taken from other Nations in War and Battle, that can assist thee, but a proper Attention to my Words, and a due Regard to the Councils I give thee. Neither am I afraid of thee, O Alexander, though thou shouldst kill me; for I should go immediately to God, who knows my Cause, and from whom my Life has not been hid: For what can there be hid from him? The Sun, the Moon, the Stars, all serve him for Eyes; and he will judge whoever does an Injury to his Neighbour; neither is there any Place to which thou canst fly, to avoid his Justice in that State of Retribution.

"Therefore, O Alexander, seek not to overturn what God has established, or to ruin and deface what he hath pleased him to adorn: Neither shed the Blood of Citizens, or lay waste whole Nations, that they may feel the Weight of thy Power: For, is it not better for thee to live, than to make others die? and, thereby, render your own Death a Blessing to others? Tell me why, having but one Soul thyself, thou wouldst destroy whole Nations? Why shouldst thou rejoice at filling the World with Mischief? Why shouldst thou regard the Distresses of others as thy Gain? Why smile, because others weep? Share here with me my naked Solitude, and thereby enrich thyself at once, and others. Henceforward renounce all Wars, and embrace here that Peace which Submission to Providence bestows: Be not longer of your Power of doing Mischief, but enjoy here with us all the real Pleasures of Life: Throw off that Garment made of a Sheep-sleece, and be no longer proud of wearing the Spoils of a dead Beast: You will then, by imitating us, do Honour to yourself, and become such an one as you were created to be; for the Soul exercises itself in Virtue, when in this State of Solitude. Prefer therefore, King Alexander, our seemingly savage Life, in which you will be happier than you have hitherto been. Even now your Macedonians expect you to raise new Wars, to slaughter other Nations, and to despoil fresh Countreys; for they are fat, if other People be fat; uneasy, if they make not the rest of the World so; and, having nothing in View but their own Gain, regard not what how great Injustice they commit, to they augment it.

"How happy a Life mightst thou lead, by doing what God intended thou shouldst do, pursuing thy own Good without Prejudice to others! Now, while it is yet Time, hear what I say, and listen to the good Advice I give thee: For, if thou art deaf to these Admonitions, I shall hereafter, when we are delivered out of this World, see thee flailing in the Air, and bitterly lamenting the Evils brought upon thyself, by inflicting Evil upon others. You will then think of my Words; for none of you—Horse and Foot will follow you there, or, by their Clamours, disturb your Meditations, which will be wholly employed in the Remembrance of Mischief done as thou wilt then feel, to thyself: For will I know the just Punishments which God's Angels inflict upon wast M n. You will then say to me, Dandamis gave me good Counsel: For then will be present to thy

"View all the Murders thou hast committed, or caused to be committed; and of these how canst thou possibly excuse thyself?"

All this Alexander heard patiently, and without the least Displeasure; but an evil Spirit hindered him from profiting by this good Advice. He answered, therefore, the Philosopher thus: "I am thoroughly sensible of the Truth of all you have said; for, descending of an holy Race, thou art here conveniently situated, where, without any Trouble, thou enjoyest with the greatest Pleasure the whole Circle of thy Days, and possessest all the Riches of Nature in a perfect and uninterrupted Peace. I, on the other hand, live in the midst of Tumult, and of Toils: For much I fear even those, who by their Office ought to defend me from Fear; and seldom rise the Apprehensions of my Enemies so high, as those I have of my Friends; for I am daily in greater Dread of their Treachery, than of the Force of my Foes. Thus, between the Necessity of having Guards for my Safety, and the Dread that these very Guards may deprive me of Safety, I live in perpetual Anxiety.

"My Days are spent in troubling, distressing, and distressing other People; and, in the Nights, I am filled with Terrors and Suspicions, left, by some sudden and secret Enemy, I should be cut off myself. If I put to Death those I fear, I become hateful; if, again, I am mild and gentle, I am contemned: And how, out of such a Variety of Dangers, I shall be able to snatch myself, I know not; for, if I sought to quit the World, and to live with you in the Deserts, it would not be in my Power. It is impossible for me to quit the Station I am in; and, therefore, I hope that this will excuse me to God, who placed me in this Station, and made me what I am. But thou, O wife and good Man, who have heard my Complaints, and soothed my Grievs by the Wisdom of thy Words, dissuading me from War and Battles, be pleased to accept the Gifts I offer; and do not contemn me so far, as to reject the Tribute I bring to thy Wisdom."

As he spake these Words, the Slaves, who waited with the Presents, brought them in, and spread abroad great Variety of Gold and Silver Vessels, rich in themselves, and exquisitely wrought; together with large Quantities of Oil and Bread.

At the Sight of all this, Dandamis could not help smiling. At last he delivered himself thus: "Who do you think could persuade the Birds, that haunt these Woods, to the Use of Gold and Silver, and to sing the better for it? Or, if this you conceive impossible, why should you judge me to be worse than they? Why should I accept from you what I cannot neither eat or drink? Why should I take what I can make no Use of? Why retain under my Care what cannot contribute to my Benefit? and to bind and insure myself, who have hitherto been free; for I desire not to purchase, in any Shape, what in these Solitudes I cannot sell. God bestows upon me here Fruits on every Side, which I pull and eat freely. God sells Man nothing for Gold; nay, he even bestows his Wisdom freely upon such as are able and qualified to receive it. I am covered with that Garment with which my Mother brought me forth. The Air I freely breathe, and esteem my Lambs at Liberty, while unrestrained by any Garment; and Honey cannot be sweeter to the Taste, than whatever from the Relish of Hunger: I eat and drink. If these Cakes were good before, why were they exposed to the Fire? For my part, I suffer not that Element to touch what I eat, any more, than in the Flesh of other Animals, I chuse to eat at second-hand what they have eaten before: Take then away these Cakes that are baked; but, that I may not seem to despise every thing you offer me, I am content to accept this Oil."

Dandamis, having said this, immediately rose; and going into the Wood, gathered up a considerable Quantity of dry Sticks, which having raked in a Heap, he set Fire to them; and then, turning to Alexander, said, "The Brute-man hath all Things, and enjoys Abundance, because he enjoys all he desires." Then pouring Oil into the Fire, while it burnt up very sweetly, he sung an

Hymn to God, the immortal Giver of all good Things, thanking him for the manifold Gifts he had bestowed. Which things when *Alexander* had seen and heard, he went away astonished, causing all his Gifts, except the Oil, to be carried back. At the same time, *Dandamis* gave him many other Pieces of sound Advice, desiring him to remember, that the *Brachmans* were such as himself, and not such as *Calanus*, whom they esteemed the worst of Men, for having deserted their Society, to embrace the Manners of the *Greeks*.

There is great Reason to believe, that these Facts are reported but confusedly, and with many Variations, by the Authors I have cited; but as there appears to be a great Certainty of their coming originally from the *Brachmans* themselves, they deserve to be attentively considered, because they very plainly prove, that the Correspondence between *Alexander* and *Dandamis* was very famous amongst those People, and had made a great Impression upon them. As to the modern *Bramins*, it is certain, that they fall very short of their Predecessors in Learning, and have very much corrupted their religious Principles, by the Liberties they have taken; which we need not wonder at, since the same thing has happened to almost every kind of Philosophy; and, we may likewise add, every kind of Religion.

It is not evident, from any of the Accounts given us by the Antients, that the *Brachmans* had any Book or Writings, which contained the Principles of their Science: And the contrary seems probable from the Nature of their Education. The modern *Bramins*, however, tell us, that the first Being created by God, was *Brabma*, the Author of their Sect; of whom they have many Images, which have commonly four Heads, because he is said to have been the Author of a Book, containing four Chapters, or Sections; wherein are contained the Principles of the Religion and Philosophy, which he taught. This Book is still extant amongst them, and is what we may call their Bible; neither is it absolutely unknown to other Eastern Nations, having been translated out of the Eastern Tongue, by one *Aviaboumatb a Giogbi*, who embraced the *Mohammedan* Religion, into *Arabic*, under the Title of *Morat al mâini*; that is, *the Mirror of Science*: But they say, that the true Sense of it cannot still be understood, without the Assistance of some learned *Bramin*.

* The Name of this Book, in the *Indian* Language, is *Akerstend*; which is as much as to say, the Cistern of living Waters. It is composed of fifty distinct Treatises, each subdivided into ten Chapters; and in this Book their Theology, Philosophy, and Policy, are contained, but chiefly in Parables and Enigmas; so that ordinary Readers can make little or no Use of it.

All these, however, are Inventions far later than the Times of which we are now speaking; and, as we have hinted before, the old *Brachmans*, tho' they took their Name from the Word *Brabma*, yet they did not consider that as the Name of any particular Person, but as expressive of that Character which they affected; the natural Signification of that Word, in their old Language, being no more than a *Man enlightened*, or one filled with divine Science. As they had no Books, much less had they Images; neither is it clear, that they made Use of any fabulous Theology, in order to amuse the People; but, on the contrary, told them in plain and pathetic Terms, what they conceived fit for them to know and practise.

All the rest came in by degrees: And this is the true Reason, why it is so difficult for the modern *Bramins* to give any rational Account of that Doctrine which they preach to the People, because it is all invented, and has not the least Relation to that secret and solid Science, which the most Learned of them still retain by Tradition from their Ancestors. We may from hence easily apprehend, why the Lectures of some learned *Bramins* are necessary, to render the Book before-mentioned intelligible: The Purpose of those Lectures, no doubt, must be to explain away the best Part of that celebrated Treatise, by shewing, that whatever is delivered therein, relating to Idols, Saints, and Demigods, are, in Fact, but Parables relating to the Attributes of the true God, and his Providence; concerning which, their Ancestors discoursed clearly, plainly, and without making use of any of these Figures or Fables.

Having thus used my utmost Endeavours, to set this Subject in a clear Light, and to reduce the scattered Pages of ancient Authors, relating thereto, into such a Method, as that they might contribute to illustrate each other, and leave nothing obscure, I shall proceed next to the Animals in the *Indies*, as they are described to us by ancient Authors; and shall fairly shew wherein they deviated from Truth; wherein their Accounts have been mistaken by the Moderns; and in what Cases their Descriptions, tho' heretofore rejected with Contempt, have of late Years, and upon a stricter Examination, been again admitted as clear, and more suitable to Truth, than those which had been hastily received in their stead, upon the Credit of those who were not proper Judges of what they saw.

SECTION XIII.

Of the Land-Animals in the East-Indies, as described by ancient Authors, compared with modern Writers: And some Remarks upon both.

1. A Description of the Elephant with a particular Account of the different Methods of hunting that Animal, as described by the Antients.
2. The modern Method of hunting Elephants, described by the Embassadors from Louis XIV. to the King of Siam.
3. His great Sagacity, wonderful Docility, and remarkable Fidelity of this Creature.
4. Some other singular Properties of the Elephant, from ancient Authors, with Remarks.
5. The Modesty of Elephants, and their Aversion to Indecencies in the human Species.
6. The Nations of the Indians, and other Oriental Nations, with respect to these Creatures; and more especially the white Elephant.
7. Some miscellaneous Observations as to the Size, Value, and medicinal Uses of Elephants, their Skin, Bones, Fat, &c.
8. An exact Description of the Rhinoceros, from various Authors.
9. An Account of his Size, Food, Manner of living in the Woods; and of the Uses of his Horn, Fish, Fat, &c.
10. Some extraordinary Passages in modern Travels, relating to this Animal.
11. Of the Lion and the Lioness.
12. Of the Tiger, as described both by the Antients and Moderns; with some remarkable Instances of the Strength and Agility of these Creatures.
13. A particular Account of the Leopard and Panther; both from old Authors and new.
14. Of the Camel; its Size, Strength, Shape, and other Properties; and the Uses for which it serves in the Indies.
15. Of the Dromedary, and of its prodigious Swiftness.
16. An exact Description of the Giraff, or Camelopard; and sufficient Proofs, that there is such an Animal.
17. Of the wild Ass, reputed the most beautiful Creature in the World.
18. Of the Manticore, and other Beasts mentioned by the Antients, and unknown to us from their Descriptions.
19. An Account of Apes, Monkeys, &c. with some Conjectures as to the Mistakes of the Antients, and wild Men, Satyrs, &c.
20. Of the Musk-Cat, and the various Qualities of that Animal.
21. Of the Dragons in the Indies; the strange Reports of the Antients concerning them, how far confirmed, how far exploded by the Discoveries of the Moderns.
22. Of the Gryphon of the Antients, and the Fables related concerning

concerning it. 23. The Chameleon particularly described; its remarkable Properties, and the Causes of those Errors that have been spread about it. 24. Of the Ants of India, the Wonders related of them, and how far they are supported by Facts. 25. Various Remarks, and curious Observations, on this Subject.

IT has, in the foregoing Sections, been fully shewn, that the People of the *Indies* were very singular in all respects. This, tho' it might be, in some measure, due to Education, and other Accidents, yet ought to be chiefly ascribed to their Nature and Constitutions, since we know by Experience, that the Characters given of most Nations by ancient Authors, are excellent Pictures of them, even at this Day. To say the Truth, *India* was alike singular in all things, and particularly happy in one, that while the rest of the World constantly pushed through all Obstacles, to come at a Share of her Riches, the Inhabitants of *India* themselves felt no Inclination to wander, and were never compelled by any kind of Wants, to go and proclaim their Indigence in foreign Climates. The accurate Description of the Singularities and Riches, with which this Country abounded, was naturally the Work of every Traveller, and of every Author too, that pretended to write any thing of a Region so remarkable.

Amongst these, it is natural to suppose, that, next to the Men, the Animals struck them first; and of these, that Animal most, which of all the rest was, in every respect, the most extraordinary. This, without Question, was the Elephant, a Creature found only in the *Indies*, and in the Southern Provinces of *Africa*. The *Indian* Elephant, however, was, in every respect, superior, not only in the Eyes of Men, but even of those Creatures themselves, if we may credit what some Authors relate.

These Creatures are, generally speaking, either of a dark Colour, or of a white; but the latter are very rare.

Their Bodies are heavy and gross, and far enough from being beautiful in their Appearance: Their Eyes are like those of a Hog; their Legs and Feet resemble Columns; yet they bend their Fore-legs, when they rest themselves, or sleep: They cannot bend their Heads, or turn their Necks; their Ears lie pretty much behind, and are very close: Their Trunk, as long as their Fore-legs, and reaches down to the Ground; it is strong, tough, and hollow; they can open and shut it, and by the Help of little Caruncles, like small Points, they are able to take up any thing; a Pin, for Instance, or a Grain of Mustard-seed: They make use of their Trunks in Eating and Drinking, conveying with them what they take into their Mouths. The whole Force of the Animal chiefly consists in this Member, in which if he be deeply wounded, the Creature dies. There lies behind the Ear a little Cavity, covered with a Membrane, no thicker than the Head of a Drum, and any Wound in that Part also is mortal. At the two Corners of the Mouth grow two large Teeth, and between these the Trunk is placed, in the Male: These Tusks, or large Teeth, are six or seven Foot long; but in the female Elephants, they rarely exceed a Foot. They feed on Grass, Nurs, Sugar-canes, and other things of a like Nature; and they are chiefly afraid of Smoke or Fire, of the Lion, and of some kind of Serpents.

They are naturally as wild as Tygers, or any other Beasts; and are therefore, like them, caught by Hunting, by the Call of *Inchans*, which, as we have before shewn, is one of the several Parts of their Profession. The Manner in which they hunted them, is very remarkable, and thus related by good Authors: In the first Place, they inclosed a Plain somewhat less than a Mile over, with a large and deep Ditch, over which, in several Places, there were wooden Bridges; and in the midst, there were Cabins erected for the Reception of the Elephants. Into this inclosure they conducted some female Elephants, to whom the Males were sure to come in the Night: As soon as the Huntsmen heard them, they withdrew, and took up the Bridges, sumoning the Inhabitants of the neighbouring Village, to assist in bringing them away. Some Days

after, when they judged them to be sufficiently weakened by Hunger and Thirst, they returned, mounted upon tame Elephants, with which they pursued and fatigued them, till they were quite spent. Then they bridled them, and gave them some Cuts over their Jaws, and over their Neck, that they might humble them more effectually; and then, mounting them, they forced them, by Blows, to proceed to their Stables.

They used, besides this, another Method as singular as the former: They hunted them out of the Forest with a great Noise, and drove them before them all Day long: When it was Evening, they drove them back again; but, in the mean time, the Huntsmen had taken care to set the Brushwood on the Skirts of the Forest, on Fire. The Elephants, being extremely afraid of that Element, when they drew near the Flames, were so astonished, that they stood stock-still, and suffered themselves to be easily taken; and then they beat them till they grew tame. This, however, seldom answered the End at once; and, therefore, to complete the Business, they fastened them to Pillars, and there, by Hunger and Beating, made them perfectly tame. Sometimes, however, the Loss of their Liberty threw them into so deep a Melancholy, that they began to pine and languish, refusing all Sustainance, and seeming disposed to seek a Remedy for their ill Usage in Death. Their Keepers, in this case, had Recourse to Singing and Music; which soon dissipated the Grief of the Animal, and brought it to its Stomach again.

Pliny assures us, that the *Troglodytes*, who live on the Frontiers of *Ethiopia*, and who hunted these Creatures merely for the sake of feeding upon them, did it in quite another manner: They got up into high Trees, and there they waited the coming of the Elephants in Herds: They suffered all to pass them but the hindmost; upon which he who had the most Courage, and was esteemed most active, leapt down on the Back of this Elephant; and, striking his Heels into the Creature's Sides, and laying hold of the Tail with his Left Hand, he sat fast: Then bending backwards, with a Hatchet, which he held in his Right, he hamstringed the Elephant on one Side; and as he grew faint thro' Loss of Blood, and began to slacken his Pace, the Man got down, and took his Leave with another Stroke with his Hatchet, at the Sinews on the other Side. He afterwards tracked the Elephant by his Blood; and, having found where the Creature lay, seized him when dying, and cut him to Pieces. Of this Sort of Venison the *Troglodytes* were so fond, that they seldom eat any thing else: Nor would they listen to any Proposals that were made them by *Ptolemy Philadelphus*, to forbear destroying Elephants; for the preserving and tanning of which, that Monarch had a particular Passion. The Elephants in the *Indies* were never hunted in this barbarous manner.

2. The modern Method of hunting Elephants is particularly described by the Embassadors sent by the late *Louis XIV.* to the King of *Siam*. They say that it is a Diversion in its Nature truly Royal; and from their Account of it, the Reader will be probably of the same Opinion. The Ground originally encompassed, say they, is in Extent near twenty Leagues; and this is bounded by a double Row of Fires, which burn all Night. At each Fire, that is to say, at the Distance of about ten Yards, there are two Men posted with Pikes; and the intervening Space is filled up by Elephants trained to War, and small Pieces of Cannon. When the Hunting begins, a Body of armed Men enter the inclosed Space, and by degrees proceed to frighten the wild Beasts. The Fire, the Elephants, and the small Pieces of Cannon, gradually advance, till such time as they are very near the wild Elephants; and then they begin to attack them with their Lances. When one of them is surrounded, and taken, the War Elephants, which are trained for this Purpose, place themselves on each Side of him;

^a *Plin. Hist. p. 1. l. 7. c. 39. Pim Nat. Hist. lib. viii.*

^b This Description is taken from a Manuscript Ac-

^c *Plin. Hist. p. 1. l. 7. c. 39. Pim Nat. Hist. lib. viii.*

^e *Plin. Hist. lib. viii.*

and, if he is troublesome, bear him soundly, but without wounding him; while others go behind, and push him along: Then the Men who are employed in this Hunting, fetch the Remainder; in like manner tie them with Ropes; and, mounting them, force them along to a Post, to which they are fastened, till, by Hunger, they are made as tame as Sheep*. At this Hunting they took twenty. The King of *Siam*, then reigning, had revived this Method of hunting Elephants, was present himself, mounted on an Elephant of War, and gave his Orders. The Embassadors were informed by his Prime Minister, that this Prince had, at this time, two thousand Elephants of War, and forty-five thousand Men, in his Service.

Father *Jakard*, who was of this Embassy, tells us farther, that there was a kind of Amphitheatre, which was built in the Form of a long Square, walled on every Side, and a convenient Terrace on the Top, on which the Spectators were placed. On the Inside, there was a kind of Palisades, composed of large wooden Pillars, fixed in the Earth, at the Distance of about two Feet one from another; behind which the Huntsmen retired, when pursued by the enraged Beast. A large Extent of Ground was taken in towards the Country, and over-against it, near the City, a smaller Part; at the End of which there was a long Passage, so narrow, that an Elephant could not pass thro' it without Difficulty; which led into a Court where the Elephants were tamed. On the Day appointed for the Chase, the Huntsmen entered the Woods, mounted on female Elephants, properly trained to the Sport, being themselves covered, as not to be seen by the wild Elephants. When they were so far advanced in the Forest, as that they judged themselves near the Haunts of those wild Beasts, they made the female Elephants roar; to which the Males never failed to answer with a most dreadful Noise: By which the Huntsmen judging of the Distance they were from them, began to return, and, leading the Females gently towards the Amphitheatre, the wild Elephants followed them very peaceably, till they entered within the Inclosure, and the Barrier behind them was shut.

The Females continued their March thro' the Amphitheatre, and entered, one after another, the narrow Passage on the opposite Side. The wild Elephant, at the Entrance of that Passage, stopped; and then they put in Practice every Method to force him forward, by making the female Elephants that were on the other Side cry, while the Huntsmen in the Amphitheatre pushed the Elephant forward with loud Cries; and when he turned upon them, they took Shelter behind the Pillars. At last having got him to the Entrance of the Passage, one ran before him; and the wild Elephant following with all imaginable Fury, his Passage was presently stopped by two sliding Barriers that were let fall, one before, the other behind him. The Animal, finding himself in this Situation, not able to get either forward or backward, made prodigious Efforts, and set up a hideous Cry. They then endeavoured to pacify him, by throwing Buckets of Water over him, rubbing him with Leaves, and wetting his Ears with Oil: They likewise brought tame Elephants, both Male and Female, who cuffed and made much of him with their Trunks.

In the mean time, they fastened Ropes under his Belly, and to his Hinder-legs. Then an Officer, mounted on an Elephant trained for that Purpose, advanced, and retired several times thro' the Passage, to show the wild one how he might come out; and the Barrier before him being removed, he readily followed the other Elephant to the End of the Passage. As soon as he came to the Entrance of the little Paddock, they fastened him, by the Help of the Ropes, to two of the Elephants that waited for him, one on each Side. Another marched before him, and pulled him along by a Rope, while a fourth, that was behind, thrust him on, by pushing him with his Head, till they brought him to a great Post, fixed like the Mast-head of a Ship: There they let him till the next Day, to cool himself; and while he was turning round this Pillar, came a *Brahman*, dressed in white, mounted on a tame Elephant, who gently sprinkled him with a kind of consecrated Wa-

ter, out of a gold Vessel; by which Ceremony they fancy the Elephant is deprived of his Fierceness, and rendered fit for Service. The Day following he went with the rest, and in a Fortnight's Time was quite tame[†].

3. The Elephant, tho' the largest of all Beasts, some of them being twenty Feet in Compass, is extremely docile, very industrious, and has Sense to much superior to a Beast, that it seems, in some measure, to approach human Reason. It is very certain, that this Creature is capable of Fidelity, deep Affection, and Gratitude; and that to such a degree, as to be extremely afflicted on the Loss of its Governor: But this Passion rises to a surprising Height, if by any Accident he injures his Keeper; who is sometimes put out, when the Creature is seized with that kind of Fury to which its Species is subject. The Compassion and Tenderness of its Nature appears in various Circumstances: The Loss of its Companion distresses the Elephant more than any thing; for it is reported, that it never makes a second Choice. In some Countries they had a Custom of taking Elephants, by digging deep pits, and covering them with Hurdles, strewed with Leaves, if a female Elephant beheld her Young one thus caught, she would throw herself into the same Pit, there to remain, at the Hazard of her Life and Liberty. In a Wood, she never abandoned it in any Danger, but would rather suffer herself to be killed. In passing a River, she carried it on her Trunk, if the River was fordable; but if they were obliged to swim, the young one passed first, before the Water was raised by the Entrance of so many Creatures of vast Size, the Elephants going usually in an Herd. If at any time, they found one of their own Species wounded in the Woods, they took all imaginable Care to procure and relieve it, by bringing Food to the Place where it lay, and such Remedies as might contribute to its Cure: If, in spite of all their Endeavours, it died, they found means to intert and cover it with Leaves, that the Body might not be exposed, and torn to Pieces by wild Beasts[‡].

When they were tamed, they were taught to kneel at the Approach of the King, as if they meant to adore him, after the Fashion of the East. Some Princes had no less than twenty of them belonging to their private Use, which, in their Turns, did Duty before their Courts, and in time of Battle defended them with the utmost Zeal. All the Writers of the Life of *Alexander* agree, that the Elephant on which *Porus* was mounted, took incredible Care of the Prince, sitting him safely down when he was wounded, drawing the Darts out of his Body with its Trunk; and then, gently replacing him in his Seat, carried him safely back to his Quarters. The Reader will observe, that we do not deliver these Facts as either certain or credible: We mention them only as related by ancient Authors, and leave the rest to his own Judgment.

Ellion, in his History of Animals, mentions several things very curious and remarkable as to these Creatures: He tells us, with respect to their Fidelity, that a young *Indian* Lord, having caught a small white Elephant, brought it up with the utmost Tenderness, and was exceedingly beloved by that Animal. The King of the Country, having a very extraordinary Account of the Beauty and Docility of the Beast, demanded it from its Master for his own Use; but the young Lord not being able to part with it, chose rather to fly to the Mountains. He was pursued together by the King's Orders, where, from the Top of a Rock, he for a long time defended himself, by throwing Stones, in which he was perfectly well seconded by his Elephant; but at last the Soldiers getting up, and the young Man being much wounded, the Elephant was obliged to sustain the Combat; when, after rushing bravely to her Enemies, threw some of them over the Precipice; and having put the rest to Flight, returned, took up her wounded Master, and carried him off. What a Reproach continues that Naturalist, is the Fidelity of this Beast to the Ingratitude of some Men, who, having received in manner of Favours and Support from others, leave them at last, to perish under Misfortunes, or, perhaps, to complete their Fortunes, assist in their Ruin[§]!

* *Journal du Voyage de Siam*, p. 373.† *Voyage de Siam*, liv. v. p. 298.‡ *Journal du Voyage de Siam*, liv. v. p. 298.§ *Ellion. Hist. Anim. lib. ix. c. 5.*¶ *Journal du Voyage de Siam*, liv. v. p. 298.

Plutarch tells us something of the like Kind, that happened at the Time the City of *Argos* was taken by *Storin*, by *Pyrrhus*: A Soldier of his, mounted on an Elephant, having received a dangerous Wound, fell from his Back upon the Ground. The Creature, sensible of the Accident, scattered with his Trunk all that were about him, till he found his Master; and then lifted him gently upon his Fore-teeth, and returning to the Gate by which they had entered, overturned, without Mercy, all that stood in his Way^a.

But if these Creatures were valuable, on account of their Fidelity and Tractableness, they were no less serviceable by their Courage and Strength: They were disciplined for War, and placed either in the Front, or in one of the Wings, in a general Engagement; and as soon as the Signal was given, either by the Sound of Trumpets, or by the Sight of Blood, for which Elephants have a natural Abhorrence, they rushed on the Enemy with incredible Violence, overturning whole Battalions, and spreading Terror, Confusion, and Death, where-ever they came. The Smell and Cry of the Elephants was enough to disperse the Enemies Cavalry from acting, the best Horses flying on their Approach, and running out of the Field, in spite of all that could be done to restrain them. *Cæsar* had but one in his Army, and yet it proved sufficient to procure him Victory over the *Gauls*^b.

The Use of these Creatures in War was common amongst the *Persians* and the *Syrians*; and it was from them the *Romans* learned the Use of them, which they improved very much. Sometimes they did not trust intirely to the Force of the Elephants, but erected Towers upon their Backs; from whence their Archers fought with great Advantage. *Antiochus Eupator*^c, when he invaded *Judea*, had thirty such Elephants in his Army; on each of which thirty-two Men fought in a Tower; while an *Indian* was set before, conducted the Elephant.

The *Indians* themselves, used them in somewhat a different manner, and, perhaps, with greater Advantages than other Nations; for they made them always the first Line of the Army, their Foot being drawn up behind them, as if they were intrenched. There was a Space of about one hundred Yards left, from one Elephant to another, thro' which their Infantry might safely advance, and retire: But it was impossible for the Enemy to penetrate thro' those Intervals, in order to begin the Attack. The Elephants at *Perus*, to the Number of two hundred, were thus ranged in the front Line, when he was attacked by *Alexander the Great*: And it was owing to the long Spears of the *Macedonians*, and to the invincible Strength of their Phalanx, that the Elephants could not bear them down; which decided the Fate of the Day: For the *Indians*, being despitised at a Sight which they had never beheld before, began to think these People were invincible; and, therefore, could not be brought to return again to the Charge, any more than the Elephants; for it is the Nature of these Creatures, when once beaten, to turn upon those behind them^d.

4. The *Romans* frequently produced them in Shews, and on their Amphitheatres. It was in the Year 655, after the building that City, that this Spectacle appeared for the first time. They were then opposed to Bulls; but they were afterwards brought to fight with Men. When *Pompey*, in his second Consulship, dedicated the Temple of *Venus*, he exhibited twenty Elephants, which were to fight against a Troop of *Getulians*, who were a People of *Africa*, equally remarkable for their natural Courage, and for their military Skill. This Combat was very singular, and made a great Impression upon the People: For one of the Elephants, being so wounded in the Fore-foot, that he could hardly stand, fell upon his Knees; and, murthering upon the *Getulians*, tore from them their Shields, which he threw into the Air with incredible Agility and Swiftness; so that they fell down, without hurting any of the Spectators. Another Elephant was in this Fight killed outright, by an Arrow which struck through his Eye into his Brain: The Elephants, at this Sight, endeavoured to

burst through; but, being repulsed, they seemed, with heavy Moanings, to beseech the Pity of the People; who were so much affected therewith, that, forgetting the Respect due to *Pompey*, they began to curse him, and to wish all those Mischiefs might light upon his Head, which soon after fell upon him^e. But this did not hinder *Cæsar* the Dictator from exhibiting another Shew of Elephants, when he brought forth twenty, which were opposed to five hundred Foot: And, finding that the People were extremely pleased with it, he again exhibited twenty Elephants, with Towers upon their Backs; in each of which were sixty Defendants: And to these, he opposed not only five hundred Foot, but as many Horses. The Emperors *Claudius* and *Nero* caused single Elephants to fight with experienced Fencers; with which the *Roman* People were exceedingly delighted.

It is to be observed, that, with all their Force, the Elephants are far from being cruel; so that, unless they are provoked, they never commit any Violence. We are told a very remarkable Passage, in Support of this natural Clemency of these Creatures, which is this: A certain King, whose Name was *Bocchus*, having delisted thirty Persons, who had offended him, to be torn to Pieces by Elephants, they were tied to so many Posts, and the Elephants turned loose upon them, with Soldiers behind, who pushed and pushed them forward, in order to put them in a Rage: Which, at last, they did, but to their own Destruction; for, instead of attacking the naked and defenceless Men, they fell upon those who injured them; and could not, by any means, be rendered the Instruments of this Monarch's Cruelty. It is further asserted, that, in passing through a Flock of Sheep, they separate them into two Lines, with their Trunks, that they may march through, without treading or trampling upon them.

It is from *Pliny* also, we learn, that a certain noble *Roman*, whose Name was *Mutianus*, who had been three times Consul, taught an Elephant the Knowledge of the *Greek* Alphabet; in which, it is said, he wrote these Words, by placing the Letters in their proper Order, *viz. This I wrote, and dedicated the Celtic Spoils*. Another gave a manifest Proof of Memory, by performing in the Morning, perfectly, certain Lessons, which he had been beat for not performing over Night. Almost every Elephant understands so much of the *Indian* Language as concerns him, or he hears from his Keeper; and to gentle they are, that a Child of twelve or thirteen Years old may mount and guide them as he pleases.

As extraordinary as these Stories may seem, one might be almost tempted to believe them, considering that *Arian*, the most sincere, the least credulous, and, by far, the most authentic Writer of the Life of *Alexander the Great*, gives us the following Story, of his own Knowledge: I have seen, says he, an Elephant, that had two Cymbals fastened to its Fore-legs, upon which it beat, or played, a regular Air, with its Trunk; while others danced about it, with their Steps making a regular Cadence. Yet this Animal, as gentle and as quiet as he seems to be, gives sometimes Proofs of his Memory, by revenging the Injuries he receives, at some Distance of Time. One Instance of which we have, from an eminent Writer of the last Age^f; and this too, of his own Knowledge: He was at *Macassar*, in the Year 1658; and there saw the King's Elephant passing quietly along, with his Driver upon his Back: But, soon after, he returned alone; which surprising the Company, they began to inquire how it happened, and were told, that the Day before, his Keeper had a Cocoa-nut given him, which he threw twice at the Elephant's Head, with all his Force, in order to break it; and, going into the Town, when they saw him pass by, it so happened, that some People were selling Cocoa-nuts in the Street; and as soon as the Elephant had Sight of them, he snatched one out of the Basket with his Trunk, and beat it to pieces about his Rider's Head; by which he killed him on the Spot. This, says my Reverend Author, came of jelling with Elephants.

are no more than the Signs or Shadows of them; which is just as reasonable, as it, upon reading *Aesop's* Fables in Greek, which, by the way, is only a Translation of the old Persian Writer *Lokman*, we should reproach the Greeks with their Folly, in believing that Birds could argue, or Beasts hold a Conversation. It was, in all Ages, and is to this Day, the Custom of the oriental Nations, to wrap up all their Wisdom, either in short Sentences or Proverbs, or in Allegories and Parables; which if, for want of sufficient Information, we cannot perfectly understand, it does not follow, either that these People believe these Stories literally, or that they may not couch under them Truths of very great Importance.

It must at the same time be confessed, that the Monarchs of the Indies sometimes carry their Passion for supplanting and giving Credit to these Sort of Fables, to a very great Height; of which we have an Instance, in regard to the Animal now under our Consideration; an Elephant, perfectly white, is in itself a great Curiosity, and therefore worthy of being preserved, with peculiar Care, in the Stables of Kings; but this Point is carried much farther; and, as the Reader will see, in some Voyages that follow, very long and bloody Wars have happened in this Quarter of the World on account of the white Elephant, the Possession of which is esteemed of so great Consequence, that it finds Place amongst, or, otherwise, comes at the End of a Prince's Titles. In order to account for this, we are told, by such as have inquired very diligently into the Matter, that the high Esteem the Indians have for a white Elephant, is grounded on a Fable related of *Fee*, their principal Idol, who is the same with *Chaca*, *Saca*, or *Acia*, as he is called by the *Japaneese*, and about whom the *Bonzes* tell a thousand impertinent Stories. They say, that he was born eight hundred times, in different Species, before he was born of a Woman; and that, when he was born of her, he issued through his Mother's Sides, through which he gnawed with his Teeth. The Truth is, *Acia* was a Sorcerer, who persuaded People of any thing he pleased; his Mother, being big of him, dreamt, that a white Elephant issued through her Mouth: Hence it is, that white Elephants are held in Veneration in *India*, *China*, *Tangan*, *Siam*, and *Pegu*, where they are served in Gold-plate; and Noblemen, of great Distinction, visit them in great Crowds, and pay to them the same Honour as to Kings. Yet a Man would be exceedingly mistaken, who should from hence conceive, that these Stories are really believed by Kings; the contrary of which is so true, that the *Bonzes* themselves make no Difficulty of acknowledging, to any intelligent Person, that talks to them on the Subject, that all these are Fables, invented at Pleasure, serve only to amuse the common People, and keep them from prying into what their Betters do not think it fit for them to understand.

7. It is now time to leave the Elephant; with respect to which, however, it would be very easy to assemble twice as many curious Relations: But, before we quit it, it will not be amiss to give the Reader a few Particulars about this wonderful Creature, which may be depended upon, and serve, in many respects, to settle his Opinion with regard to the Facts before related. The largest and finest Elephants in the World are those of the Island of *Ceylon*; next to them, those of the Continent of *India*; and, lastly, the Elephant of *Africa*. The Moors, who deal in these Creatures, throughout all the Indies, have a fixed Price for them, if found and strong. They measure from the Nail on one of his fore Feet, to the Top of his Shoulder, and, for every Cubit he is high, they give a thousand Pardoes, which is, in our Money, about 100*l*. An Elephant of the largest Size, is nine Cubits, or thirteen Feet and an half high; so that the largest Elephant is worth about 900*l*. unless he be of the *Ceylon* Breed, for then he will fetch four times that Sum.

The Female Elephant goes sixteen or eighteen Months with her Young; which, when brought forth, is as big as

a Calf: They are fifty or sixty Years old before they come to their full Strength, or are fit to have Towers upon their Backs, or Coaches, such as are used in *Cochin-China*, where Elephants carry in such Machines twelve Persons, besides him who rules the Elephant, and sits before upon the Shoulders, and a Boy, who belongs to him, and sits upon the Elephant's hinder Parts, and who, if the Reader please, may be called the Coachman, and Postillion. As to the Age of these Creatures, nothing can be said with Certainty. If we could depend upon what we are told by *Philostratus*, in his Life of *Arsacius Tyanicus*, we should believe, that this great Traveller saw the very Elephant upon which *Porus* rode in the Battle he fought against *Alexander* the Great, with two Hoops of Gold on his Teeth, signifying, that *Alexander*, in Esteem of his Fidelity, had consecrated him to the Sun. At this rate, that Elephant must have been above four hundred Years of Age. That they live still between two and three hundred Years, is not only affirmed by the best Authors of Antiquity, but also by such as are best acquainted with them in the Indies; and that they are in full Vigour at much above a hundred, is very certainly known.

They feed, when wild, upon Grass, or on the green Boughs of Trees; when they cannot get these, they will eat Roots; if they can get into Corn-fields, they commit terrible Ravages: When tame they will eat almost any thing, but are particularly fond of Sugar-canes, or whatever else is sweet; they will likewise drink Wine or Ale; and it is observed, that, when they drink Water, they first stir, and make it thick, with their Feet: The Reason generally assigned for this is, that they hate to see their own Figure in the Water, which is a mere Fancy; and the true Cause, that the Gravel and small Stones which they swallow by this Means, may help to digest their Food; which is likewise practised by Geese, Ducks, and other Water-fowl, but is the more necessary to the Elephant, because this Creature is very much troubled with Indigestion, and the Colic.

The famous *Sir Thomas Brown* censures the Antients, for supposing that the Elephant slept standing; and yet the Fact is really so; and, which is more extraordinary, they shake their Heads continually while they sleep. *Sir Thomas* was, however, thus far right, that this does not proceed from their being unable to lie down, because in Places where they are wild, the Print of them is frequently seen upon the Grass. In all Parts of *India*, but in *China* especially, they make use of almost every Part of this Animal in Medicine. The Broth, made of its Flesh, is excellent for a Loofens; and the Flesh burned, becomes a Specific for the Flux of Urine. The Gall is very good for the Eyes; and the Humour of the Elephant's Eye, mixed with Breast-milk, is also held a most excellent Ophthalmic. They likewise use the Gall to take away an offensive Breath. A Powder, made of the Ashes of the Skin, burnt, and mixed with Oil, is an excellent Balsam for green Wounds; and the Bone, at the Pit of the Stomach, powdered, is a noble Stomachic. I shall speak, in another Place, of the Use and Value of the Elephants Teeth; but it may not be amiss to observe here, that, in the Indies, they reckon three Sorts of Ivory; the best, that which is taken out of the Mouth of the Beast, immediately after it is killed; the second Sort, when the Teeth are taken out of the Head of an Elephant that has died a natural Death; and the third or worst Sort, what is found in the Woods, where the Elephants have shed or lost their Teeth. The Pace of an Elephant is equal in Speed to that of a Horse on full Trot, and they will travel at this Rate some Hours. The most cautious of our modern Travellers justify to the full what *Pliny* says of this Creature, and what *Cicero* had said before him, that no Animal seems to approach, by its Actions, so near to the Reason of Man, as this.

8. The Rhinoceros, next to the Elephant, has been always esteemed the most extraordinary Animal in the Indies, both with respect to Size, and to Shape. This Creature is com-

mon in the Isle of *Java*, as also in the Kingdoms of *Bengala* and *Patala*. There is scarce any Creature more frequently mentioned by ancient Writers, than this; and yet there are very few that have been so imperfectly described. I shall pass by the Sentiments of some learned Men, who conceive this to be the Unicorn of the Scriptures^a: I say, I shall pass them by, because I do not see how the Question can ever be decided; only thus much seems to be certain, that the Unicorn is there mentioned for his Strength, and for his Strength's lying in his Horn, which is exactly true of the Rhinoceros. *Pliny*^b, who is so fond of Wonders, and so copious in his Recital of most of them, is very short in his Description of this Animal, not having vouchsafed us as many Lines upon the Subject, as he has written Chapters upon the Elephant. All he tells us of it, amounts to this, that *Pompey*, in his Shews, exhibited, among other strange Beasts, a Rhinoceros, with one Horn, and no more, and that in his Snout. This, continues he, is by Nature a dreadful Enemy to the Elephant; and, by rubbing his Horn against hard Stones, makes it so very sharp, that he is able to pierce with it the Belly of that Creature; at which Part he aims, because it is tenderer than the rest. In point of Description, he tells us, that he is full as long as the Elephant, but that his Legs are shorter, and his Skin of the Colour of Box. *Alian*, who insists so largely upon other Animals, that are very common, did not think it necessary to describe the Rhinoceros, because all the World had seen it at *Rome*, in the Shews given by the Emperors, for the Amusement of the People. *Strabo* is as short in his Description as *Pliny*; though he tells us, that he had seen this Creature at *Alexandria*, and cites *Artemidorus* on the same Subject. *Dion Cassius* contents himself with observing, that this Animal had never been seen at *Rome* before the Triumph of *Augustus*^c, in which he contradicts *Pliny*.

It would be to no purpose to collect a greater Number of Citations, unless we could meet with some that were larger and fuller in the Description of this Animal; and, therefore, it is necessary, in order to give the Reader a tolerable Idea of it, to have recourse to the Moderns. *Bontus*^d has described it in his excellent Work, and so has *Father Le Comte*^e; and, as they agree perfectly well, I shall only relate what we are told by the latter. The Rhinoceros, says he, is one of the most extraordinary Animals in the World: He seems to me to resemble, in many Respects, the wild Boar, except, that he is much bigger, has shorter Legs, and a heavier Body. His Skin is intirely covered with large and thick Scales of a dark Colour, and excessively hard. They are divided into little Squares or Buttons, which arise somewhat above the Skin, in a manner not much unlike those of the Crocodile. It is by this means that its Legs seem to be inclosed in a kind of Boots, and its Head wrapped up behind, in a sort of Hood, or Capuchin; for which Reason, the *Portuguese* call this Creature the Monk of the *Indies*. Its Head is very large, but its Mouth is not very big; its Snout long, and armed with a large Horn, which renders it extremely terrible even to Tygers, Buttaloes, and Elephants. But what seems to be the most most wonderful in this Animal, is its Tongue, which Nature has covered with a Membrane so tough and strong, that, in Effect, it differs nothing from a File, so that he tears his Prey to pieces barely by licking it. As we see some Animals that delight in feeding on Thistles, the little Points of which, by pricking the Extremities of the Nerves in their Tongues, afford them an agreeable Sensation, so the Rhinoceros feeds with greatest Pleasure on the Branches of such Trees as are thick-set with the roughest and strongest Thorns. I have myself often given this Creature Twigs of such Trees as were thick-set with Briars that were exceedingly sharp and strong; and have been amazed to see how greedily, and with what Address, he chewed and fed upon them, without being at all incommoded by their Points. It is true, that sometimes his Mouth is a little bloody, but that serves only to render the Taste of his Food more agreeable; and

has apparently no other Effect on his Tongue, or Taste, than Salt and Pepper on ours. Some other Authors add to this Description, that he has under his fore Legs a kind of very ugly loose Skin, that hangs down over his Belly, of a Texture not unlike that of the Wings of a Bat; which, all together, must render this Creature equally singular and disagreeable.

The ingenious Mr. *Kolben*^f, in his excellent Account of the Cape of *Good Hope*, has given us a still more accurate Description of the Rhinoceros; and, indeed, by comparing it with all that I have met with on this Subject, I am thoroughly satisfied, that it is more clear, more distinct, and more agreeable to Truth, because the Author seems to have had more Attention, and less Quickness of Fancy, than other Writers. Its Skin, says he, is without Hair, or other Covering; but is of itself so hick and hard, that even the most sharp pointed Knife will hardly pierce it. Painters generally represent this Creature with Scales, but it has really nothing of that kind. Its Skin indeed is so full of Scratches and Scabs, that, at a Distance, they may be very well taken for Scales, especially as they frequently run over and across each other. His Nose, or Snout, is not unlike that of an Hog; on the End of which, he has an Horn of a dark-brown Colour, which, without doubt, by the continual Use he makes of it, is bent back towards his Head, so that it in some measure resembles a Ploughshare. This Horn is of very different Sizes, according to the Age of the Animal; but, in Length, never exceeds two Feet. It has another Horn a little above the large one, towards the Front of its Head, which is of a yellow Colour, but small in a young Rhinoceros, and in an old one, does not exceed six Inches at the most. In its Figure, it resembles a Bowl cut in half; the Cavity is turned towards the Head: This lesser Horn hinders the larger one from doing all the Mischief that it otherwise might: Its Ears are less, and its Limbs shorter than those of the Elephant: Its Eyes are exceedingly small, and it only lies strait forward; which is the Reason, that when it runs or pursues its Prey, it is always in a straight Line, sucking, tearing, and throwing up, whatever it meets with in its Passage, so that neither Bush, Tree, Thicket, or large Stones, ever oblige it to quit its Path. With the Horn upon his Nose, he tears up Trees by the Roots, throws Stones that lie in his Way over his Head, to a great Distance, and with a prodigious Noise. When he meets with nothing to obstruct him, and is in a Rage, he will make great Ruts in the Ground, and throw, from time to time, large Quantities of Earth over his Head. His Grunt is very much like that of an Hog, and not very loud, if he is not angry; but, if he is in Pursuit of his Prey, he makes such a terrible Noise, as may be heard at a great Distance; and, as he is very dreadful to all Kinds of Beasts, they fly at the Sound of it in the utmost Terror.

9. The principal Food of the Rhinoceros, are Bashes, Shrubs, Boughs of Trees, and other things of the same Nature: For tho' this Creature be a Beast of Prey, and one of the most terrible in this Part of the World, yet it is both able to subsist, and does subsist, for a great while together, without feeding on Flesh^g. What the Antients report, of the Rhinoceros having a natural Antipathy to the Elephant, is strictly true; and they never meet in the Woods, but it is fatal to the latter, if it does not see the Rhinoceros time enough to make its Escape; for the Elephant places all its Safety in Flight; and, if once attacked, is scarce able to make any Defence through Fear^h. It is very seldom that the Rhinoceros attacks a Man, and hardly ever, unless he happens to be dressed in Red; a Colour to which he has a mortal Aversion. When he comes up with the Man whom he pursues, he lifts him by the Tail with his Horn, and throws him directly over his Head with such Force, that he never fails of finding him dead when he comes to devour him, which he does by licking all the Flesh from the Bones, with his Tongue, in the same manner that he destroys other Animals. But, however furious, and however swift, this terrible Creature may be, yet it is

The Rhinoceros as described by of Ancients

The Rhinoceros drawn from the life

An Indian Monarch giving Audience from his Elephant

far from being difficult to avoid it, provided a Man has a tolerable Presence of Mind; for the Rhinoceros seeing only straight forward, and turning being very troublesome, striking twice or thrice out of the Road, is sufficient to escape all Danger: For this Creature very rarely turns back, or changes his Path, but destroys, without Mercy, whatever he finds in it.

The general Name of this Creature, in the *Indies*, is *Abada*; and in *Persian*, it is called *Kerkeden*, much esteemed for the Virtues of its Horn: And therefore, notwithstanding the Danger of the Exercise, industriously hunted by the Natives of the Country, who, when they are so lucky as to kill it, suffer nothing to be lost, but apply every Part of it to some Use or other. The Flesh is said to be hard and stringy, but, in other respects, wholesome and well-tasted; so that the *Europeans* eat it readily, and think it no contemptible Venison.

The Horn is extremely precious, and sells at a great Rate, from the Property it is supposed to have, of discovering Poison: The Fact is universally believed in the *Indies*, and a Man would be as much laughed at there for doubting it, as he would be here for believing it: Yet some Writers of unquestionable Credit, have asserted the Truth of this from their own Knowledge, particularly Mr. *Kolben*, who assures us, that, at the Cape of *Good Hope*, they make Cups of this Horn, which are finely adorned with Gold or Silver; and that, upon pouring Wine into them, a great Ebullition follows; but, if there be any Poison mixed with the Wine, the Cup infallibly breaks, as it also does, if the Poison be put in unmixed. The Experiment, we are told, has been made so frequently, and with such constant Success, that Thousands of Persons settled at the Cape of *Good Hope*, might be produced, as Witnesses to the Truth of it.

For my own Part, I must confess, that I think it almost as difficult to believe, that Mr. *Kolben* himself, or any other Writer of Reputation, should endeavour to impose upon Mankind by such a Report, if there was no Truth in it, as to believe the Fact. I therefore incline to think, that the Relation is only delivered in too general Terms; and that, instead of asserting, that this Horn breaks, on the pouring into a Cup made of it any kind of Poison, an Inquiry ought to be made, what sort of Poison really breaks it? For I very much suspect, that if we knew what kind of Poison it is, we should be able to account for it from natural Causes: And I am the rather led to this Opinion, from what the same Author tells us, of the bubbling, or boiling of Wine, when poured into the same Cup.

10. The *Indians* fancy, that, in splitting the Horn, they discern, on each Side, the Figure of a Man, marked out by little white Spots; as also Birds of several Kinds, as we see in *Egyptian* Pebbles: But, without doubt, this is the Effect of a very strong Fancy, with regard to both. It is, however, highly probable, that, as it serves to raise the Price of this Commodity, it also serves to support its Credit; for the more Wonders are reported of any thing, the more readily the common People believe them. In the Island of *Java*, where there are many of these Creatures, they are most valued, and the Virtues of their Horns in the highest Esteem; so that when they are sent to be turned, they always order a Person to stand by, to collect the shavings, that no Part may be lost: For of this sort of shavings, they give a certain Quantity, boiled in Water, or in Broth, for Convulsions, Fainting-fits, and other Diseases that proceed from Disorders in the Nerves. The Blood shavings, of this Animal, is held to be extremely medicinal: And therefore, when it can be got fresh, they set it in a Cup made of the Rhinoceros's Horn, in the Sun, till it grows hard; and then they preserve it in a Bottle close stopp'd, for the following Uses: They conceive it to be a specific for all Obstructions, and, at the same, admirable for healing and consolidating broken Vessels; but, above all, it is held an infallible Cure for the Spitting of Blood. The manner of taking it is, by mixing a few Grains of the shavings, in a Dish of Tea or Coffee.

It is most certain, that, on the first coming of the *Eu-*

ropeans into these Countries, they found the People universally persuaded of the Efficacy of these Drugs: And we are told by the famous *John Hugo Linschoten*, one of the most candid Writers on this Subject, that in *Bengal* the Rhinoceros Horn was sold at a very high Price. He tells us likewise some other Circumstances, that deserve to be mentioned: 'These Horns, says he, are much valued throughout all *India*, as effectual Remedies against Venom and Poison; for which, likewise, the Teeth, Claws, Flesh, Skin, Blood, Urine, and Dung, of this Animal, are likewise much valued: And that this is not an idle Notion, but an Opinion founded in Truth, I can, from my own Experience, attest. There is, however, one thing, which is to be remembered, that all these Horns are not of equal Value and Price, because all of them are not of equal Goodness; for some will sell for 200 or 300 Pardoes, while others of the same Size and Colour will not fetch above three or four Pardoes. The Reason which the Natives assign for this Difference, is their feeding in different Places; for they believe, that the Virtue of the Horn is derived from the Herbs by which the Creature is nourished; and therefore, they have almost an equal Esteem for the Horns of the wild Goats that feed in the same Places.'

I shall conclude this Account with the Relation of *Father Borri*, in his Account of *Cochin-China*, as to the Hunting of the *Abada*, which, however, he describes as covered over with Scales; tho' this might, perhaps, arise, from his seeing him only at a Distance. His Account is curious; and therefore I shall give it in the Author's own Words, the rather because it not only confirms many things before related, but furnishes us also with some Particulars that are new. 'When I was at *Nuocmon*, a City in the Province of *Pulucambi*, says he, the Governor went out to hunt a Rhinoceros, that was in a Wood near our Dwelling-place: He had with him above an hundred Men, some on Foot, and some on Horseback; and eight or ten Elephants. The Rhinoceros came out of the Wood; and, seeing so many Enemies, was so far from giving any Tokens of Fear, that it furiously encountered them all, who opened, and making a Line, let the Rhinoceros run through, till it came to the Rear, where the Governor was mounted on his Elephant, waiting to kill it. The Elephant endeavoured to lay hold with his Trunk, but could not, by reason of the Rhinoceros's Swiftnes: And leaping, to wound the Elephant with its Horn, the Governor knowing it could receive no Hurt, by reason of the Scales, unless they struck it on the Side, waited, till leaping it laid open the naked Place; and, casting a Dart, dexterously struck it thro', from Side to Side; with great Applause, and Satisfaction of all the Multitude of Spectators, who, without any more to do, laid it upon a great Pile of Wood, and, setting Fire to it, leapt and danced about, while the Scales were burning, and Flesh roasting; cutting Pieces as it roasted, and eating them. Of the Entrails; that is, the Heart, Liver, and Brain, they made a more dainty Dish, and gave it to the Governor, who was upon a Rising-ground, diverting himself with their Merriment. As I was present at the taking of this Creature, I obtained from the Governor the Hoofs; which I esteemed not inferior to his Horn: And this is thought as effectual in expelling Poison, as that of the Unicorn.' This seems to countenance my Sentiment, that these Horns, as Alcalis, may serve as Remedies for a certain kind of Poisons.

11. The Lion, of which so many extraordinary Stories are told us by the Antients, is also a Native of the *Indies*, and more common there than in any other Part of the World, except *Lilya*. The Lion of the true Kind, of full Size, and with a flowing Mane of yellow Hair, is by all Authors acknowledged to be, at once, the most majestic, and the most dreadful Sight, that is furnished by the Animal Creation. The Lioness has no Mane; her Ears are shorter and wider; and she has more Fierceness, and less Dignity in her Countenance, than the Lion.

⁴ Foiege

NUMB. 32.

⁵ de Bot. Hist. Animal. lib. vi. c. 31.

⁶ Elian. lib. xvii. c. 26.

It is positively insisted on, both by *Aristotle* and *Pliny**, that the Bones of the Lion are much firmer, and more solid than those of any other Beast; which some Moderns have denied: But such as have had the best Opportunities of inquiring into, and being satisfied as to the Matter of Fact, assure us, that the Antients are in the right; and that the Cavity in the Leg bones of a Lion is not larger than those of a Tobacco-pipe; so that when they are suffered to lie and dry in the Sun, that Cavity is intirely filled up; and they become so smooth, so strong, and perfectly united, that they will strike Fire like Flints. When he falls upon his Prey, he first brings it to the Ground, and then beats its Breath out with his Paw, before he tears or eats it; and generally accompanies this Death-stroke with a loud Roar.

Their Strength is prodigious, and much beyond their Size; which is the Reason, that other Beasts fly at the Sight of them. We are told by *Pliny*, that they never prey upon Men, till they become very old, and cannot provide themselves with other Food; in which time of Distress, they watch about the Skirts of Villages, and even of great Towns, that they may catch and devour such as come out carelessly in a Morning, or are returning in an Evening.

The Romans thought there was something ominous in the manner in which Lions were introduced into their Amphitheatres. *Sylla* the Dictator exhibited one hundred Lions, which fought all at once. After him *Pompey* exposed six hundred; and his Competitor, *Julius Caesar*, exposed four hundred. All which, the Romans observed, happened in Times when their Liberty was declining. But what contributed to spread this Notion the most of all, was the Contrivance of *Mark Antony*, who, after the Defeat of *Brutus* and *Cassius*, caused himself to be drawn through Rome in a Chariot, to which two Lions were yoked, at the same time that there sat with him one *Cytheris* an Actress, his favourite Mistress, before he became acquainted with *Cleopatra*. This, says *Pliny*, seemed to preface, that Men of high Spirit, and noble Courage, should be tamed, and brought into Subjection to such as were only remarkable for their Pride and Luxury: And for my Part, continues he, I consider the very Sight of so monstrous a Spectacle, as none of the least of the Calamities of these unhappy Times.

It was not at Rome only, that such Notions prevailed; the Carthaginians seem also to have had the same Sentiments; for when *Hanno*, who was one of their most excellent Citizens, and greatest Generals, had found a Way to tame a Lion, so that he stroked and handled him like a Dog, they took occasion from thence to drive him into Banishment, believing that the Liberties of a People could not be safe, where that Man had any Power, who had Skill enough to alter the Nature of the fiercest Beast, and make him tame and gentle as a Spaniel.

It is very doubtful, whether there be any Truth in what is reported of the Lioness bringing forth but five times in her Life, and having at first five Whelps, then four, and the last time but one: Neither is there much Credit due to what is said, of their living to a great Age; since we know, by Experience, that they are not a very long-lived Animal. But with respect to its Magnanimity, and disdaining to eat such as approach in an humble and suppliant manner, it is affirmed as well by modern Travellers, as the Writers of Antiquity: And it is on all hands agreed, that if this Beast does not lash himself with his Tail, or set up his Mane, a Man may safely go by him.

There are a kind of Lions that have no Manes, but are smooth like the Lioness: These are said to be a mongrel Breed between the Leopard and the Lioness. As to the Antipathy between the Lion and the Cock, and the former's flying, if he hear the latter crow, it is no better than a Fable; of which there are more related of this, than almost any other Animal. And, in Truth, one cannot but wonder, how so grave a Writer as *Pliny* could bring himself to set down so many improbable Stories as he did, upon this Subject; which, as they could only serve to tire, without instructing the Reader, I think it best to omit. The

Flesh of this Animal is often eaten, is not at all unpleasant, and is not known to prove unwholesome; but, whether any Part of this Creature be of any Use in Physick, I am not able to say.

12. The Tyger is justly reported by the Antients one of the fiercest, swiftest, and strongest of all wild Beasts. Other Animals, of which we have hitherto spoken, are found in several Countries besides the Indies; but the true Tyger is, in a manner, peculiar to that Part of the World: They differ from the Leopard in Size, and in Spots; for the Tyger is much bigger, having yellow Spots that are very round, with black Hair about them; whereas the Leopard is spotted with black, almost in the Shape of Horse-shoes. The Female, which is called the Tygress, is even fiercer than the Male, as appears from what *Pary* tells us of the Manner in which the Huntsmen caught her young ones in those Times. They provided themselves, says he, with a very swift Horse, on which one of the boldest went in Search of the Tyger's Den, while the rest remained with their Boat by the River-side. When he who was on Horseback had an Opportunity, by the Absence of their Dam, he carried away the Whelps, and rode as hard as he was able to join his Companions; but the Tygress, missing her Young, frequently came up with the Huntsman before he reached the River-side, who, as soon as he found himself in Danger, dropped one of the Whelps, which the Tygress taking up, and carrying back to her Den, gave him Time to escape with the rest to his Companions, who immediately quitted the Place with the utmost Expedition. This Story shews the quick Scent, and prodigious Speed, of this Creature; of which, however, *Pliny* does not give us any particular Description.

By comparing, however, the several Accouns we have of this Creature in modern Travels, it appears, that their Eyes are wonderful bright and shining, their Necks short and strong, their Teeth and Claws prodigiously sharp, their tabby Skins of a beautiful Colour, and their Hair short and glossy. The Kingdom of Malabar is, of all others, the most famous for these Animals, of which they distinguish three Sorts: The first is somewhat bigger than a wild Cat, makes a frightful Noise, not unlike the Lowing of a Cow, and does a great deal of Mischief. The second Sort, which is most common, is of the Size of a small Calf, wonderfully brisk and active, and, without excessively cruel. The third is called the Tyger Royal, and is very near as big as a Horse, for the Skin of one of them will serve for a Coverlid for a Bed six Foot long; and for this they are much used in the Indies. The Fur of all the Species of this Creature are very valuable, both in the Indies, and in Europe. They are used there chiefly for Beds and Palankins; and here for Horse-furniture, and for lining Cloaths in the Winter, especially in the North.

As the Lion never eats any Creature till it is dead, so the Tyger tears his Prey to Pieces while it is living; and if he meets by chance with a dead Sheep, or Horse, he will not touch them: But if, at any time, they fall in with an Herd or Flock, where they have Plenty of Cattle at their Mercy, they seldom eat them at all, but content themselves with sucking their Blood; by which it is incredible what Havock they make. A Tyger, Tygress, and two of their young ones, have been known to destroy upwards of an hundred Sheep in a Night's time, in this manner: They generally hide themselves behind Bushes or Hedges, in an inclosed Country, from whence they leap at once, with almost incredible Force, upon whatever passes by: Neither are they at all afraid of Men, but, whenever they have an Opportunity, seize them generally in the Middle, carry them into the Woods, and there tear them to-pieces, and devour them. The Flesh of this Creature is remarkably white and tender: Such as have eat it affirm, that it is as delicate as any kind of Veal, and much better tasted: And the Flesh of young Tygers is said to be as tender and sweet as that of Fowls.

The Antients report, that Tygers often mingle with Dogs; which, having been observed by the Indians, they were wont to carry a certain Number of Bitches into the

Wood

A Lion & Tigris as described by most accurate Writers on Natural History — Vol. I. Pa. 485. 66 2/3

A Tiger, Tigress & Leopard common in most of the Deserts of India.

Woods, where the Tygers frequented, and there left them tied to Trees. By this Contrivance they obtained a Species of Dogs fo fierce and strong, that they were not afraid of attacking even a Lion: And it was of this Breed that *Sopithee*, an Indian King, presented some to *Alexander* the Great; of which we have a particular Account in the History of *Diodorus Siculus*. *Alexander*, having a mind to make an Experiment of their Strength and Courage, let loose a large Lion upon two of them, which not being able to manage him, he ordered two other Dogs to be let go: The Lion, being surrounded by these four, was very soon over-powered; upon which the Indian King sent a Person with a Sword, who cut off the Right Thigh of one of the Dogs by little and little; and, in spite of all the Pain he endured, the Dog neither howled, nor let go; but held the Lion fast, till he fell down dead. The Number of these Creatures, given to *Alexander* by this Indian Prince, was one hundred and fifty, which that Hero esteemed a very valuable Present.

A Dutch Traveller informs us, that in the Kingdom of *Congo* the Tygers seldom or never attack white Men; and, as a Proof of it, he tells us, that when he was there, a Tyger surpris'd a white Man and a Black asleep, and immediately tore the Negro to-pieces, but left the White untouched: And we have the same thing ascribed by other Writers, but, I think, without any good Grounds, farther than as it may be supposed, that the Tygers are better acquainted with the Blacks in those Countries; and, therefore, may be more apt to attack a Prey they have been used to.

In the Voyages of *Walter Schouten* we have a very curious Account of these Creatures; and, as that Dutch Writer is highly esteemed for his strict Regard to Truth, the Reader will not, probably, be displeas'd with the Translation of what he has given us upon this Subject. 'It is very true, says he, that the Tyger thirsts as much after human Blood, as after that of Beasts. He catches a Man exactly as a Cat does a Mouse, and carries him off with as much Ease. At the first Leap he sticks his fore Paws into the Shoulders, or, rather, a little below them; and, having brought the Man down, he strikes his Teeth, on both Sides, through his Ribs. One may very well say, that a Man is lost, upon whom a Tyger sets his Eyes: The Sight of them, and the being attacked, are, in a manner, instantaneous; so that the Fright, and the being paid all Fright, is over in two or three Minutes. The Defarts of *Bengal* are somewhat less dangerous in the Light than in the Dark; for then the Tygers quit their Thickets and Caverns, and come even into Houses and Villages, where they seize any they find abroad, and tear them to-pieces. They have even the Boldness to attack Men on Horseback; as also the largest and strongest Buffaloes of that Country, which are of an extraordinary Size: They, generally, leap upon their Shoulders, and tear them to-pieces in an instant; some Instances of which happened while we were there. It is looked upon as a Thing certain among the *Indians*, that the Tyger and Rhinoceros live in great Harmony together. There are many of both Sorts of these Creatures in the Woods of *Bengal*, and it is never known, that they attack each other. The Reason which the *Indians* give for this is very singular: They say that Tygers, after gorging themselves with the Flesh of Men or Beasts, grow extremely sick, and find Relief by eating the Dung of the Rhinoceros, which, as it feeds chiefly upon green Herbs, that are of great Virtue, they are still very wholesome, even when they have pass'd through his Body; of which they appear to be very thoroughly persuaded, since they frequently make use of the same Medicine themselves.' The same Writer tells us, that in this Part of the *Indies* they are forced to travel in Company, for fear of these merciless Creatures; and that their Dogs, when they hear the Cry of them in the Woods, tremble, and sweat in a most surprising Manner. The People, however, at certain Seasons of the Year, assemble in great Numbers to

hunt the Tygers, and carry along with them several of their Conjurers, who pretend to enchant them, which is, at once, a strong Proof both of their Folly and their Fear'. There are a smaller Sort of Tygers in *Africa*, and, it is said, in *America*; but it is very doubtful whether the latter are at all of the same Species: And, as to the former, though they are very fierce, and do infinite Mischief, especially in the Dutch Settlements, near the *Cape of Good Hope*, yet they are far below the Size of an Indian Tyger, and are only equal at most to the second Sort. This Difference is occasioned, in all Probability, by some Mixture in the Breed; for it appears plainly, by comparing the Accounts of ancient Writers with those of modern Travellers, that it was the large Indian Tyger was known to the former, and not the smaller Sorts, which, if then existing, were called by other Names.

13. The Leopard and Panther are the Male and Female of the same Species, which, though not equal in Size, is very little inferior in Strength, to the Lion, and not at all less mischievous. It is not, however, very common for them to attack Men, at least if they are not under the Necessity of doing it; for, in that Case, there is no Creature bolder. The Skins of these Animals were much valued by the Antients, on account of the Beauty and Regularity of their Spots, which, as I before observed, were small, and of a semicircular Figure, not unlike an Half-moon: But on the Shoulder they were supposed to have a larger Mark, which not only resembled, but was in a manner governed by the Moon, increasing as she did, and decreasing likewise in the same manner; having now blunt Points, now sharp, and sometimes a complete Orb, like the Full Moon*. One would find it more difficult to believe, that such Opinions as these would gain Credit with Men of Learning and Sense, if there were not Instances, even in our Days, of as ridiculous Notions prevailing with Men who pretend to follow no other Lights than those of Reason and Experience.

The Antients tell us, that these Creatures had a very singular way of hunting. They derive from Nature a kind of mucky Smell, which being agreeable to Deer, Goats, and other Animals, they were wont to frequent the Haunts of the Panthers, till at the Sight of her fierce Countenance they were frighted, and fled; which this Creature observing, she contrived to hide herself behind the Bushes, that, when these Animals were attracted by her Smell, she might leap on them at once; by which Method she easily surpris'd them. The *Indians* hunt them very assiduously, as well for their Flesh, which they esteem very wholesome as well as savoury, as for the sake of taking their Young, which they breed up tame, and then present them to their Kings, who breed them up for hunting; and find them not only superior to any kind of Dogs in Swiftnes and Strength, but in Fidelity also; for they constantly bring back what they take without tearing it: And, even to this Day, it is found, that they make use of the same Method of inciting their Prey that has been before described from the Antients. The *Arabians* call this Creature *Beber*; the *Turks*, *Joz*; and the *Tartars*, *Jem*: But the general Name of them through the East, is, *Pars*, which is a *Persian* Word; and it signifies, also, the Country of *Persia*, properly so called: And hence it is, that the Person, who has the Care of these Creatures that are kept for the hunting of the Grand Signor, is called *Parfqi*: And so jealous they are in the *Indies* of this kind of Sport, that no private Man is permitted to hunt with Leopards.

When the Panther has young ones, it is reported, that the Leopard, though much stronger, will not defend himself against her, but suffers himself to be very ill treated, till the young ones are grown up, and able to shift for themselves. It is certain, that, however fierce in their Nature, the Panthers are extremely tender of their Whelps; of which *Pliny* gives us a very singular Instance. A Panther, by some Accident or other, had her whole Litter tumbled into a deep Pit, out of which she was not able to deliver them. In this Distress she went to the next

Highway, in hopes of finding some Passenger, that might be kind enough to assist her. The first who came by, was the Father of *Philinus* the Philosopher, about whom the Panther played and frisked, without offering to hurt him. The Man would willingly have escaped from her Careless, but found it impossible. At last she lay down at his Feet, and seemed to bemoan herself; and then taking hold of his Robe, led him gently to the Place where her Offspring lay: By which discovering the Cause of this Change in the Nature of the Beast, he descended into the Pit, and reached up her young ones. When the Whelps were once in Safety, they fell to leaping and playing with their Dam, who, in Company with her young ones, led their Benefactor safely out of the Wilderness^a.

There are many strange things reported by the Antients, as to the Amours between the Leopard and the Lions. The latter, they say, is exceedingly prone to the Company of the former; and fearing that the Lion should detect her Infidelity by the strong Smell of the Leopard, she keeps, for some time, at a Distance from her Consort; but, when she finds herself pregnant, she deserts him entirely, and resorts to the Haunts of the Leopard; because, when the Lion finds her young ones spotted, he tears the spurious Breed to pieces, and chastises the Lionsess herself severely^b. In the Travels of *Apollonius Tyaneus*, we meet with many Instances of the Tenderness of Panthers to their Young, and of their Gentleness and Fidelity. *Philostratus* informs us, that from their natural Wantonness the Panthers were held sacred to, and Symbols of *Bacchus*; but other Authors ascribe this to their Love of Wine, in which they differ extremely from other Beasts^c. But, whatever the Cause might be, the Fact is certain, that they were held sacred to that Divinity; and that the Chariot of *Bacchus* is the quaintly represented as drawn by Leopards: But as it is sometimes either drawn nor attended by Tygers, I am inclined to think, that both were used for the same Reason, viz. to shew that he was the Conqueror of the *Indies*, where these Creatures naturally reside; if there was not a moral Reason for this Representation, which might be intended to shew, that even the fiercest and most intractable Natures were softened and civilized by the Charms of social Mirth^d.

There was an old Law at *Rome*, which forbid the bringing any of these Species into *Italy*; but for what Reason it was made, or why they were more afraid of those than of other wild Creatures, does not appear. However, when *Cneius Asinius* was Tribune of the People, he procured a Licence, notwithstanding this Law, to bring over Leopards for the *Circensian Games*. *Scaurus* was the first Man, who in his *Edilship* exhibited one hundred and fifty Leopards. *Pompey* the Great exceeded this very far; for he produced four hundred and ten. But, at the Dedication of the Temple of *Marcellus*, *Augustus* exhibited to the People four hundred and twenty Leopards, and a tame Leopard in a Cage, which was never seen before. But the Emperor *Constantine* produced four tame Leopards at once^e.

But this is now thought no extraordinary thing; for, in the *Indies*, they tame even those of the largest and fiercest Kind, and keep them at their Tables, where they feed as freely and as quietly as Dogs^f. As to the Age to which these Creatures attain, we meet with nothing certain, either in old Authors, or in new; but it is probable, that as in other respects they resemble, so in their Age they come near the Lion, which is not observed to enjoy a very long Life. Some report, that the Tygers and Leopards mingle; which may be true in *Africa*, but such Conjunctions are not frequently observed in the *Indies*. It may not be amiss to add, that in hunting with these Beasts, when tame, they sit on the Crupper of the Huntsman's Horse, with their Eyes covered till the Game is roused; and then they are let go^g.

14. The Camel is, at once, as useful and as remarkable a Creature as any that has been yet mentioned; nor is there one that makes a greater Figure in the Works of the An-

tients, who seem to have considered it with greater Attention; and therefore speak of it more accurately than of almost any other Animal, in this Part of the World^h. The Camel is cloven-footed, hath a large, fleshy Bunch on his Back, which is peculiar to the Species, another lesser Bunch on the bending of each Knee, which appears to be of Use in supporting his Body: His Tail is like that of an Ass in Shape, but has four Knots in it, like that of the Cowⁱ.

This is the Description of *Aristotle*; but a *Chinese* Writer that I have before cited, gives us, in my Judgment, a much better Picture of a Camel: And, therefore, I will submit it to the Reader's Inspection^k: 'This Creature, says he, is a kind of Ship by Land; for he transports vast Quantities of Goods from one Country to another, in a short Space of Time, at small Cost, since he eats seldom, and scarce ever drinks in his Passage. His Form is singular, and not so beautiful as his Qualities are valuable; for in the Neck and Fore-part of him he is made most like a Sheep; In his Body he resembles a Horse: His Back and Hind-limbs are peculiar to his Species; for scarce any other Creature has any Resemblance to him therein. Nature has furnished this Animal with a Palate, to which Thistles, and such-like harsh Food, are most agreeable; two Stomachs admirably contrived for Digestion, and so lined, as to receive a Quantity of Water sufficient to moisten his dry Food for many Days. Besides this, he derives, from the same bounteous Hand, two Qualities, that the Sagacity of Man could never reach; for by his Scent he distinguishes Springs, how deep soever they lie: And whoever digs where a Camel scrapes, will never miss of finding Water, let the Soil seem ever so unpromising. Their second Property is, foreseeing venomous and burning Winds, which fly swiftly, and are mortal in a Moment: A little while before they come, the Camels run together, cry, and hide their Noses in the Earth; but as soon as they are past, they lift up their Heads, and continue their Journey^l.

Aristotle affirms, that they go twelve Months, and never bring forth more than one Foal. *Pliny* either copies him, or is of the same Opinion; but *Suidas* holds, that they go but ten Months complete, and bring forth in the beginning of the eleventh. According to *Aristotle*, they are very private in their Copulation, retiring into unfrequented Shades, and remaining there whole Days; at which Seasons they are very furious^m. At other times they are a very gentle and tractable Creature, understand their Drivers perfectly, and, instead of a Whip, are quickened in their Pace either by a Pipe, or the Driver's Whistling.

Indeed all Authors agree, that, next to the Elephants, they are of all Animals the most sagacious: They sleep, like them, to receive their Burdens, and arise as soon as they have their accustomed Load. But, with all this, they are very vindictive; and, if beaten, bear Malice a long time; and, whenever they have an Opportunity, fall out of taking Revenge. The *Arabians*, who are best acquainted with them, reckon two sorts of Camels: the first they call *Hegen*, which are the larger and the stronger Sort, and will carry a thousand or twelve hundred Weight, their Backs being almost flat. The second are called *Bactri*; they are less, and cannot carry above half the Weight: These have two Lumps upon their Backs. The *Indians* and *Persians* make the same Distinction, tho' they make use of other Terms; for they call the stronger the Northern Camels, because bred, for the most part, on the Frontiers of *Tartary*: The lesser they call Southern Camels.

It is certain, that they will travel four or five Days without Water, and some say much longer; they go a pretty round Pace, and at the Rate of thirty or forty Miles a-day, which they will continue, if Occasion requires, for thirty or forty Days together. They are a very timorous Animal; so that if at any time they are surpris'd by a Lion, Tyger, Leopard, or other Beast of Prey, they are disconcerted without making the least Resistance. It is remarkable of this Creature, as well as of the Elephant, that it troubles the Water before it drinks, and, very probably, for

the same Reason. In one respect this Creature is very singular, which is in having no Teeth in its upper Jaw, and yet it feeds without any Inconvenience from hence; and, perhaps, the want of Teeth, is, in some Cases, rather an Advantage to it.

The Smell of this Animal is so disagreeable to Horses, that they will not endure it; and, by the Knowledge of this, *Cyrus* gained a complete Victory over *Cresus*, King of *Lydia*; for, knowing the other trusted much to his Superiority in Cavalry, *Cyrus* posted a Body of Camels over-against them, and the Horses no sooner perceived their Scent, than they fell into Confusion, and ran away*. As to the Age of this Creature Authors are much divided. *Aristotle* asserts, that they do not live much above fifty Years; but *Pliny* says, that if they escape Accidents, they often approach, and sometimes reach, an hundred^b. Modern Writers agree rather with the former than the latter.

There are few Creatures that are in all respects so valuable; for, besides the Services they render by Carriage, their Hair, which they shed every Year, is extremely valuable; for, of this Hair, Camblets, and other Manufactures, are wrought; and the very Urine of the Beast yields a considerable Profit, since that the true Sal Armoniac is made. The Lump on the Back is most of it Fat, which, when melted, becomes an Ointment of excellent Use in discharging hard Swellings, and in curing all Sorts of Pains in the Limbs, from whatever Cause. The Flesh is well-tasted, and the Broth much used by the *Cbinese* in asthmatic Cases: The Milk of the Camel is thinner, and therefore esteemed more wholesome, than any other, especially in Consumptions: Of the Dung, dried, a kind of Snuff is made, which is said to cure Bleeding at the Nose.

The received Opinion amongst the Antients, that the Camel preserved Water in its Stomach^c, has been ridiculed by some of the Moderns as equally foolish and false; but others assert, that, on Dissection, there appear four Ventricles, capable of holding a considerable Quantity of Water, with Holes into the Stomach, by which, it is supposed, this Creature forces the Water, contained in them, to mix with the dry Food that is in its Stomach, by holding its Breath. It is, on the other Side, asserted, that, in *Arabia*, there are a Race of Camels that never drink at all, but are supplied with Moisture from the Grass, and Tops of green Trees, on which they feed; but, with respect to this, I do not pretend to decide, desiring only to report fairly such Facts as I have met with.

The Camel is as much the Theme of modern Travellers, as of the antient Naturalists, and they agree exceedingly well in their Descriptions with the former; so that we have all the Reason in the World to believe, that both may be depended on. The modern Travellers observe, that there cannot be any thing better suited, than the Nature of this Animal, to the Commerce of the *Indies*. They tell us, that from the very time the Camel is brought forth, it is accustomed to Burdens; that they take care to place its Legs in their proper Posture under it, and then lay such a Weight upon it, as keeps it in that State for a certain time; and, by repeating this Method, they beget such a Habit in the Beast, as renders it tractable and obedient for Life. This appears to be the more necessary, because, naturally, the Camel has a great Degree of Obstinacy; and, though it readily kneels to receive its usual Load, yet, as soon as it feels that Weight upon its Back, it rises at once, and will not suffer any Augmentation^d.

The Capacity of this Creature, to bear Hunger and Fatigue, is very extraordinary; and the Moderns assert more upon this Head than the Antients. We are particularly told, by a Writer eminent for his Candour, that a Camel, in a Fit of Lust, will go forty-two Days without eating; during which time, they are so furious, and so mischievous, that there is no going near them, and therefore they take care to put them into Places where they can do no hurt. Some assert, that this Creature is enabled to fast longer

than any other, by a sort of gradual Consumption in his own Body, which supplies, for a certain time, to the Stomach, what should be derived from Food; but then it weakens him exceedingly, inasmuch, that a strong Camel, after the Fit of Lust is over, is scarce able to sustain a tenth Part of his usual Load^e.

These Animals are at all times very sober Feeders, so that they are able to subsist on a very little Matter, which enables them to perform such prodigious Journeys, as, for the Convenience of Commerce they are put upon; all over the East; so that it is visibly the Wisdom of Providence, that destined this Creature to be the Native of Countries where such a Beast was absolutely necessary for the Service of the Inhabitants; and it may be regarded, as an additional Proof of this, that the *African* Camel, which fares harder, and has still greater and more uncouth Journeys to take, is larger, stronger, and capable of carrying heavier Burdens, than the Camels of *Asia*. The Moderns have likewise discovered some medicinal Virtues in the Camel, which do not appear to have been known to the Antients: As for Instance; that the Brain of it, when dried, is in a manner a Specific for the Falling Sickness; that its Urine is an excellent Preservative for the Teeth and Gums; and that its Dung is capable of resolving white Swellings, and is an excellent Cure for green Wounds^f. It is no wonder, therefore, that the *Arabs* account their Camels their greatest Wealth; and, it is the clearest Proof of their Firmness in their Customs, that they are not, in this respect, at all changed from what they were in the Days of *Aristotle*, who asserts, that some of them were possessed of 3000 of these Animals^g.

15. The Dromedary is, in the Opinion of all the Naturalists, a Species of the Camel; and, though it be weaker, and less capable of carrying Burdens, yet, in other respects, it is of no less use. Instead of one large Lump on its Back, as the Camel has, the Dromedary has two Lumps of Fat, so disposed, that the Vacancy between them is a kind of natural Saddle; and, as they are lighter made than the Camel, and serve only to carry a Passenger, so they go much easier, and at a much greater Rate; for whereas the Camel has a shuffling uneasy Pace, in which it goes at the Rate of ten Leagues a-day, or thereabouts, the Dromedary has a regular, brisk, and not very uneasy Trot, in which it will, without Difficulty, perform a Journey of forty Leagues in a Day. The Feet of this Creature are observed to be as soft as a Sponge, so that they are not hurt either by Stones or Sand, but travel on much at the same Rate, let the Road be what it will; they kneel to receive their Riders, as the Camel does for his Load, and rise as soon as a Man is fixed upon their Back^h.

They are likewise capable of faring hard, and will endure Thirst for four or five Days, but are not able to bear altogether so much Fatigue as the Camel. The *Arabians* call them *Raguabill*, or *Elnabari*; and the strongest and best are bred in the Northern Countries: They make use of them in the *Indies* for going Post, and Expresses frequently perform a Journey of eight hundred Miles upon them in the Space of a Week. There is one thing very singular in these Animals, which is, that they go much better, and have greater Spirits in hot Weather, than if there be any Wind stirring; and, it is observed, that the slightest Breeze makes them sluggish and lazyⁱ.

We have in the Memoirs of the Royal Academy of Sciences, a very curious Paper in relation to this Creature; it consists in the Account given by the *Persian* Ambassador to Mr. *Constance*, who, from being a Servant in an *English* Factory, became first Minister to the King of *Siam*; and who, at the Request of the Missionaries, took upon him to inquire of that Ambassador, what he knew in relation to the Dromedary, which is hardly known to the *Siamese*. He told him, that they were brought originally from *Turkestan*, which is the only Part of *Asia* where they are bred in Perfection; that they were very much esteemed in *Persia*, on account of their carrying so

much easier than the Camel, by their having two Bunches on their Backs. That, however, these Bunches were not made by any Irregularity of the Spine, which was as flat and even under them, as in any other Part of the Back; but that they were a kind of glandulous Substances, about six Inches in Height. He added, that, as to the common Report of their having a Supply of fresh Water in their Stomachs, which, in extreme Necessity, Travellers sometimes were forced to have recourse to in the Defarts for the saving of their Lives, it was absolutely a Fable, without the least Foundation*.

The famous *Stab Iban*, who governed the *Indian* Empire with so much Reputation, contrived a Method, by which he made the *Dromedaries* extremely useful to him in time of War; which was a thing unthought of by any of his Predecessors, because they are a timorous Animal, and can't be brought to charge like a Horse: But this Emperor made them useful in another way: A Rebellion broke out near the City of *Agra* in his Absence, on a Supposition, that it was impossible for him to march back again before the Rebels had assembled Forces enough to make themselves Masters of his Capital. He was no sooner informed of this, than he mounted 12,000 of his choicest Troops upon *Dromedaries*, and, in the Space of nine Days, made a March of seven hundred Miles; which so astonished the Rebels, when they heard that the Emperor was within a few Miles of them, that they dispersed without a Blow, and he had the Honour of suppressing, by the Quickness of his Invention, an Insurrection, that, if the Chiefs of it had gained time to have executed their Purpose, might possibly have deprived him of the Government; for, it was afterwards known, that some of the Generals of his Army had secret Intrigues with the Malecontents; but this sudden Victory, gained by the Swiftness of his *Dromedaries*, disappointed them intirely, and obliged them to lay aside their Design†.

10. The Giraffe, or *Camelopardus*, as it is called by the Antients, was a Creature better known to them than it is to us. According to the Accounts they give us of it, it resembled the Camel only in its Head and Neck, which it carried more upright; and had from thence a holdier and a fiercer Aspect. The Hair was either red mixed with white, or white mixed with red. It was of the Height of a Horse, and shaped like it in the Chest: but towards the Rump it was so slender, as to be more like the Ape than any other Creature. All that *Pliny* tells us of it is, that the *Ethiopians* called it *Nabis*; and that the first time it was seen at *Rome*, was when the *Circenian* Games were exhibited by *Cæsar* the Dictator. Since that time, says he, this Creature comes now-and-then to *Rome*, more to be gazed on for the Singularity of its Appearance, than for any Savageness in its Nature; of which, says he, it has little, that some stile it a wild Sheep.

The celebrated *Panclmyrus*, who was at *Constantinople* when one of these was brought thither, in the Reign of the Emperor *Michael Paleologus*, towards the Close of the thirteenth Century, gives us a larger Description of it than is any where to be met with; and therefore I shall transcribe it; the rather because this is an Author not frequently cited: The Giraffe, says he, is an Animal so rare, and so wonderful, that I have thought it not improper to insert a Description of it, to refresh the Memories of such as saw it, and to make it known to such as, perhaps, have not heard of it before. It is of the Bigness of an Ass; its Colour white, spotted like a Panther, but with red. Its Shape resembles that of those Camels which have a Rising in their Back, from their Tails to their Shoulders: Its Fore-legs are longer than its Hinder ones; its Neck slender like that of a Crane, with a small Head, shaped like that of a Camel: The Belly white; and a broad Streak of Black down its Back, from the Neck to the Tail; its Legs exceedingly thin, and its Hoofs cloven, like those of the Deer. It was so gentle, that it suffered itself to be touched, and even to be guided, by a Child. The Food of this Animal was Herbs, Meal, and Barley. When attacked, it does not defend itself with its Heels, as Horses do; nor with

Horns, like Oxen; nor with Tusks, like the wild Boar; nor with its Nails, as Cats; but with its Teeth, which, however, are not very sharp, and leave rather to reputation Injury, than to revenge it: Nay, even these Teeth, have nothing in them venomous, like those of most other Animals. This Creature was brought from *India*, and presented to the Emperor, who ordered it to be led thro' the principal Streets of the City, for several Days, for the Diversion of his Subjects. This is a clear and plain Description from an Eye-witness; so that there is not the least Reason to suspect, as some have done, that this is an imaginary Animal, and a Creature that never had Existence in Nature. I do not indeed pretend to say, that some such imaginary Animals are to be met with in the Writings of the Antients: On the contrary, I shall give some Instances of this kind hereafter. At present, I think it better to pretend the Reader with another Description, from an Eye-witness likewise: But it will be necessary to premise, in the first Place, that the Author I am now going to quote, was certainly mistaken as to his Fact, for the Creature he mentions, could not be that described by *Pliny*, and by the Author I have before cited, whose Description agrees very well with what *Pliny* says of them.

Bellennus describes them thus: I saw, says he, at one of them at *Grand Cairo*; each having two little Horns in the Forehead, about five Inches long; between which appeared a Bunch, like a third Horn, about two Inches high: From the Tail to the Crown of the Head, was about eighteen Feet: His Legs were each of a Length before and behind; but the Upper-joint, or Shoulder-bone, was much longer than the Thigh: His Neck sloped, like the Ridge of a House; his whole Body resembling, in Colour, that of a Deer; but sprinkled all over with large square Spots. His Feet were cloven, like those of an Ox; his Upper-lip hanging over the under: His Tail slender, indifferently thin on the end, and tufted at the End; his Mane like that of a Horse: and he limped in moving, first on the Right Leg, and then on the Left: When he eat, drank, or took any thing from the Ground, he stretched out his Fore-legs; or otherwise they would have hindered him. His Tail, as *Joseph Barbarus* writes, is two Feet in Length; of a dark-blue Colour, long and round like an Eel; which he gathers Herbs, Leaves, and Grass, into his Mouth, with wonderful Dexterity.

There is, without doubt, a very wide Difference between these Descriptions, inasmuch that I very much doubt whether they belong to the same Animal: But the Question is, which most resembles the *Cameloparus* of the Antients: And I must confess, that, in my Opinion, it is the first; at least it is certain, that this is the Creature which is called a Giraffe in the *Indes*, and is frequently found in the Woods of *Bougal*. As for the Creature which *Bellennus* saw at *Cairo*, it is an Animal common enough in *Ethiopia*; and is described by Father *Alois Mendez* under the Name of *Struthio-camelus*, that is, the Ostrich Camel; because, says he, it resembles, in its Shape, the Ostrich: But this Creature is allowed by all who have seen it, to be the tallest Animal in the World: For, though much slenderer, it is higher than an Elephant: Its fore Legs are commonly twelve Hands high, so that a Man on Horseback can pass under their Belly, as many who have seen them in *Ethiopia*, positively attest. But it can scarce be believed, that if this Creature had been ever seen at *Rome* by such a Writer as *Pliny*, he would have given us so short and dry a Description of it as that above-mentioned, when it must have been infinitely a greater Curiosity, than any that had ever been seen there.

On the other hand, it is very clear, that *Panclmyrus* saw the very Creature that *Pliny* describes; and, therefore, we have good Reason to believe, that the Creatures *Bellennus* saw were by him only stiled *Giraffes*, as Mr. *Ladd* in his History of *Ethiopia*, blames Father *Mendez* very much for calling the Creature he saw *Struthio-camelus*, and not *Camelopardus*, or *Cameloparulus*, which is the Word used by *Pliny*. The Amount of all this Reasoning is, that

The WILD ASS or as some Writers call this Creature the ZEBRA & The GIRAFFE or CAMELOPARDUS of Arabia.
The MANTICORA of CITESIAS.

more, than to shew, that we are in much greater Danger of being imposed on by the Criticisms of the Moderns, than by either the Credulity or the Negligence of the Antients; for, before we can accuse *Pliny* of having passed slightly over to extraordinary a Creature as this *Ethiopian Giraffe* is supposed to be, we must first be sure, that this was really the Creature he saw; whereas, I think, I have made it more than probable, that it was not: After all, if there be, as it is certain there is, a Creature called a *Giraffe*, or *Giraffe*, in the *Indies*, which agrees exactly with the Description of the Animal seen at *Constantinople* between four and five hundred Years ago, and which was then allowed to be the *Giraffe* of the Antients, I cannot apprehend, why we should not admit this to be the Creature mentioned by *Pliny*, which involves us neither in Absurdity nor Contradiction, rather than agree with *Bellinus* and *Ludolf*, in supposing this prodigious Animal, which *Father Mendez*, and many other Travellers, have seen in *Ethiopia*, to be the *Camelopardus* of the Antients; though it does not, in any respect, agree with the Descriptions they have given of this Creature.

18. The wild *As*, as we find it described by the Antients, is undoubtedly an imaginary Creature; and the very Description of it, is, in a manner, a sufficient Proof. *Ctesias* tells us, that it is of the Size of a Horse; that it has a fine white Front, and on it a Horn, of the Length of a Cubit; the Upper-part of which is red, and the lower black; The Head of a purple Colour, the Eye of a bright blue, and the Body white, but streaked with several Colours; and the Coat of a most exquisite Beauty. When first pursued by the Hunters, it does not move at any great Rate; but, increasing its Speed by degrees, it flies, at last, with such prodigious Swiftness, that no Horse can come near it. The only Method of taking it, is by watching when it goes into the Meadows to feed its Young; of which it is so tender, that it will never abandon them, however distressed; it exposes itself, in their Defence, to all Dangers, with a most desperate Courage, combating the Hunters both with its Horn and Heels, till, in the End, being stuck full of Darts, it dies through Loss of Blood: The *Indians*, as soon as it falls, cut off its Horn, and its Hoofs, which are of the most bright and beautiful Red; and next, seizing the young ones, they carry them home, and breed them up tame, Experience having taught them, that if this Creature once attains its full Strength, which it does in about two Years, it is impossible, by any Art, to conquer the Savageness of its Nature. As *Ctesias* resided at the *Persian Court*, and wrote all his Account of the *Indies* from Hearsay, we need not wonder, that he fell into such Mistakes: Neither is it at all improbable, that some of these Vermilion Horns and Hoofs, which were dyed of this Colour by Art, might be carried to the *Persian Court*; and this Story of the wild *As* invented, to make them sell at a dearer Rate; since many Instances might be given of Frauds of the like Nature, practised with the same View, in regard to other Commodities.

This Story, however improbable, seems to have kept its Ground for a long time, since *Pliny* tells us, that the *Indian As* had only one Horn; and that no other Creature, that did not divide the Hoof, had Pattern Bones: But he gives us no distinct Description of this Animal. The oriental Histories speak much of the wild *As*, and acknowledge it to be the swiftest and most beautiful of all four-footed Animals. In the old *Persian Language*, this Creature was called *Gur*, or *Gour*, and *Babaram*, one of the ancient Kings of that Country was surnamed *Babaram Gur*, though Authors do not well agree as to the Reason. Some report, that it was because he once shot, when he was hunting, a Lion, and a wild *As*, that were fighting, with the same Arrow: But others affirm, that it was be-

cause he delighted much in the hunting of these Animals, and was, at last, killed by one of them. The Circumstance, however, of this Creature's fighting with a Lion, is very singular, and shews the Opinion entertained in the East of the Courage and Strength of the wild *As*. We may add to this another Proof of the same Nature, viz. that one, indeed the last of the *Khaliffs*, of the *Omniaides*, was called *Mervan Hemar*, or *Mervan* the *As*, (for the *Arabians* use the Word *Hemar* both for a wild and tame *As*) on account of his great Courage and Strength. This singular Animal is not, however, particularly described by any who have travelled in the *Indies*. But it is also a Native of various Countries in *Africa*. And this affords us an Opportunity of obliging the Reader with an exact Description and Print of it, from an Author of unquestionable Credit. He describes it thus:

The wild *As* is one of the loveliest Animals I have ever seen; he is of the Size of an ordinary Saddle-Horse; his Limbs nicely turned, and well proportioned; his Coat very soft, and close; from his Main to his Tail, there runs a large black Lint, from whence proceeds abundance of Streaks, which, falling regularly down on both Sides, meet under his Belly; these Streaks are of different Colours, some white, some yellow, others of a Chestnut, which are blended and mixed on their Sides, so as to strike the Eye exceedingly by their beautiful Mixture: The Head and the Ears are in like manner streaked with very beautiful Colours: The Hair of his Mane and Tail, for the most part, either white or of a Chestnut-colour, with a small Intermixture of Yellow. This Creature is so swift, that no Horse can come near him; so that it is with infinite Difficulty he is overtaken; and whenever they are so lucky as to catch one, it is sold at a very extravagant Rate.

Father Tellez informs us, that the Great *Mogul* gave two thousand Ducats for one of them. Abundance of Pains have been taken at the Cape of *Good Hope* to tame them, but to no purpose; though they have been taken very young: And it is reported, that, of all Creatures in the World, it has the strongest and most ungovernable Passion for Liberty. The Reader, after reading this Description, which agrees exactly with that given us by another Traveller, of great Reputation, will ask why it is called an *As*; and the only Answer that can be given is, that, with all its Beauty, it has the long and large Ears of that Animal, from whence it derives its Name. Mr. *Ludolf* complains of this most heavily, and wishes that, to free the Animal from this Disgrace, it might have its Ears cut off. We owe to this Writer another remarkable Proof of the Beauty and Value of this Creature; who informs us, that an *Abyssinian* Ambassador at *Batavia* having made a Present of one of them to the *Dutch* Governor-General of the *Indies*, he, by the next Ship, sent it to the Emperor of *Japan*, who was so charmed with it, that he made the Company Returns in Money and in rich Silks, to the Value of one hundred and sixty thousand Crowns.

Mr. *Thevenot* tells us, that he saw one in its Passage through *Egypt*, that was a Present to the Grand Signor; and was so exquisitely beautiful, that he could not help suspecting there was some Art used in colouring its Coat; for which, however, there does not appear to be any just Foundation. Some of our old Travellers to the *Indies* report, that, near the Mouth of the River *Ganges*, the Natives shewed them abundance of Horns, which they ascribed to be the Horns of wild *As*s: Whence it appears, that the Author first-mentioned did not invent the Story he tells us concerning them. There is a very extraordinary Creature, not only described, but expressed in a wooden Cut, by *Purchas*: He tells us, that it is bred in the Kingdom of *Congo*, and is there called *Zebra*. It is, says he, of all Creatures the most comely, resembling an

^l *English Merchant*, who passed through the Territories of the *Mogul*, in the Beginning of the last Century; who says, that the *Indians* affirm them

^m to be the Unicorn's Horn: And told him farther, that some of them were of very great Price; and that it was only of the best valuable Horns that

ⁿ they made drinking Cups, and adorned their Bucklers with Pieces of them; of which he saw many.

^o See his *Pilgrims*, Vol. ii. p. 984.

^p where there is a Print of the *Zebra*, or *Zabu*: But in his *Pilgrimage*, p. 621. he gives us a larger Account from the Conversation of *Andrew*

^q *Bazell*, who, being Sergeant in a *Portuguese* Company, thought fit, on some Occasion or other, to run away from them, and lived nine Months

^r in the Woods, which gave him frequent Opportunities of observing this, and other wild Beasts.

Horse of the finest Make, and overlaid with party-coloured Laers or Girts from Head to Tail. It is very clear, from this Description and from the Cut, that this *Zebra* is no other than the wild Ass. *Purchas* had his Account from *Andrew Buxtel*, who lived long in the Kingdom of Congo, and had shot many of these Creatures wild in the Woods; for they were so little acquainted with Fire-Arms, that, when he had shot one, the rest of the Herd stood gazing at him, till he had brought down three or four more: Which Account of his is the more credible, inasmuch as it agrees perfectly with other Relations concerning this Creature.

19. The Antients mention, besides the wild Ass, another Indian Animal, which they called in *Greek* the *Alouéceros*; in *Latin*, the *Licorn*, or *Unicorn*. This Creature is thus described by *Pliny*: It is, says he, the fiercest and most furious Beast in the World; in its Body, resembling a Horse; in his Head, not unlike a Stag; his Feet having some Likeness to those of an Elephant; and his Tail, resembling that of a Boar. The Noise made by this Creature is hideous and terrible; in his Forehead he has a black Horn, about three Feet in Length, with which he defends himself, that, as it is said, he cannot possibly be taken alive. Another Writer of Antiquity contradicts the latter Part of this Account, and affirms, that the *Indians* not only take, but tame them, and make use of them to draw in Chariots; but he owns, that this is impracticable, if they are above two Years old when they are taken; and that they are always governed by a sharp Bit, or rather a Bit with little Spikes in it. He mentions also their black Horns, and says, that the Cups made of them, will not hold any Poison. All these Stories seem to be founded in the admirable Properties of the Horn of the *Rhinoceros*, which is, perhaps, the only Unicorn that ever existed.

The *Manticora* is another Creature, which all the ancient Writers have mentioned on the Credit of *Ctesias*. But *Aristotle*, in speaking of it, says, that if *Ctesias* be to be believed, there is such an Animal, and then copies his Description; which is this: The *Manticora* has a Face and Ears resembling a Man, blue Eyes, and the rest of its Body red, of the Size and Shape of that of a Lion. It is armed with a triple Row of Teeth, and devours both Men and Beasts, having a Tail armed with a Sting, like a Scorpion; his Voice resembles the Noise of a Flute and Trumpet sounded together. This Beast is excellently swift, and one of the most dreadful in the World. If we consider this Description attentively, and make some reasonable Abatements for the Credulity of its Author, and the Passion he had for Wonders, we shall see that it is no other than a Species of the Tyger; I mean that kind which has a Head like a Monkey, and which has been shewn in *Europe* under the Name of the *Man-tyger*; and it is indeed a Creature of a very horrid Aspect, so that, seen at a Distance, it might well enough strike the Fancy so, as to give Rise to this Description.

As *Ctesias* only described the *Manticora*, so *Ælian* alone mentions another strange Creature in the *Indies*, called *Porpagas*, of which he gives us the following Account. This Animal, which is as big again as an ordinary Horse, is much esteemed by the *Indians*, for the exquisite Beauty of its Hair. The Tail of this Animal is about three Feet in Length, and the Hair of it much finer and softer than that of a Horse, which makes the Women of that Country esteem it for Head-dresses: But few Ornaments are dearer or harder to be met with; for, notwithstanding its large Size, there is scarce any Animal swifter than the *Porpagas*, or that is taken with greater Difficulty. It defends itself against the Hunters, and their Dogs, with wonderful Courage and Obstinacy; and sometimes, being too hard for the Dogs, the Huntsmen come in to their Assistance, and, by a Shower of small poisoned Arrows, quickly destroy the Beast. Its Skin is almost as valuable as its Tail; but, as for its Flesh, it is absolutely useless.

No modern Writer mentions any Creature in the *Indies*, that has the least Resemblance to this Description; and,

one might have imagined, that it was surely a Creature of Fancy, if Mr. *Kolben*, whom we have so often mentioned, had not assured us, that a Creature of this Kind had been actually seen in *Africa*, not far from the Cape of *Good Hope*. The Story, in his own Words, runs thus: I remember to have seen, in the Lodgings of Captain *Olofsberg*, the Picture of an Animal which exactly resembled the Description given of the *Porpagas*. I took an Opportunity of inquiring after the Beast itself, and received from the Captain the following Account: That, travelling once in the Country of the *Hottentots*, at a considerable Distance from the Cape, he saw an Animal exactly like that represented in the Picture; and, having never seen, or indeed heard of, any thing like it before, he took some time to consider it, with singular Attention; by which means, he so effectually fixed in his Mind the Shape, Size, and Look, of the Creature, that, at his Return, he drew this Picture of it. As to this Representation, continues Mr. *Kolben*, it does not make it altogether so big as the *Porpagas* is represented; and there are besides some other little Differences, which I shall remark: In the first place, this Picture give the Creature a Mane, like that of a Horse; in the next, the Shape and Size of it resembles that of a large Buffalo. I could not obtain any farther Accounts of this Animal from any other Person, there having been nobody that remembered the seeing any such Creature in the Country of the *Hottentots*, except the Gentleman I have before-mentioned.

It is requisite to inform the Reader, that most of the Animals found in the *Indies* are likewise found in *Africa*, and more especially in *Ethiopia*, and in the Neighbourhood of the Cape of *Good Hope*; and though it be true, that the proving such Creatures, as the Antients mention are found in these Parts, is no direct Proof of their being found in the *Indies*; yet, it certainly demonstrates, that many of the Animals, mentioned by the Antients, are not Creatures of Imagination, but have a real Existence. We ought likewise to remember, that, as the *Romans* extended their Dominions to the Frontiers of *Persia*, so they had an Opportunity thereby of being well acquainted with the Curiosities of the most inland Parts of the Northern *Indies*; towards the Frontiers of *Tartary*, in which most of their wild Beasts are bred; for, as most of our modern Travellers have not gone any very great Distance from the Sea Coast, and, consequently, have not had much Opportunity to make themselves so thoroughly acquainted with these Parts, as that, on their Reports, we should be able to determine positively, whether there are such Creatures in the *Indies* or not. Add to this, that many of them are but very indifferent Judges of what they relate, as appears from their contradicting each other in their Descriptions, as the Reader will easily perceive from those of the *Rhinoceros*. On the Whole, where the Accounts of the Antients are equally irreconcilable to Reason, and unsupported by modern Testimonies, we may very reasonably give them up; but otherwise, it is certainly as advisable to preserve them in Collections of this Nature, than, in proportion as our Discoveries increase, we may be the better able to discern how far they are contradicted or confirmed by those Discoveries, which is a Point of great Consequence towards perfecting natural History; the Consideration of which was what chiefly determined me to take so much Pains about it. The Reader will therefore find, that the Perusal of this Chapter will greatly contribute to the perfect Understanding of the foregoing Voyages.

20. There was nothing contributed more to mislead and distract the Antients, in what they have delivered concerning the Animals in the *Indies*, than the vast Number of Apes and Monkeys that were Natives of that Country, and of such different Shapes and Sizes, that it was a very difficult thing to distinguish their various Sorts; and, for want of doing which, it was very easy to mistake them for different kinds of Beasts. There are in the *Indies* of

^a *Plin. Nat. Hist. lib. viii. c. 21.* ^b *Ælian de Animal. lib. xiii. c. 9.* ^c *lib. xvi. c. 9.*

^h *Ctesias in Indis, Ælian de Animal. lib. xiii. c. 9.*
ⁱ *Ælian de Animal. lib. ii. c. 1.* ^j *Ælian de Animal. lib. ii. c. 1.*

these Creatures of all Colours, and almost of all Shades of Colours, black as well as white, red as well as grey, and some that with red Bodies have their Heads and Faces of a fine Sky-blue; and these last sort are much of the Size of our common Dogs. In some Places there are such Numbers of them, that they cover the Tops of the Houses, and by throwing Things down hinder People from going along the Street; others from a like Spirit of Mischief post themselves in hollow Ways, where they almost murder such as pass by, throwing down broken Rocks and Stones.

The ancient *Indians*, as they had an Aversion to spilling Blood, found a Way to make these Creatures, which are by Nature active, not only quiet, but useful. In such Places as produced Pepper and Cacao-trees, they were wont, in the Sight of the Monkeys, to cut the highest Branches within their Reach, and lay them regularly on the Ground. This they did in a Morning, and then leaving the Place, these natural Mimicks pulled all the Fruit that was out of Man's Reach, and laid it in the same Order upon the Ground, where the *Indians* coming in the Night, found their Harvest gathered to their Hands, and carried it away. When their Numbers made them excessively troublesome, the *Indians*, as *Strabo* and *Diodorus Siculus* inform us, turned this imitating Faculty upon them to their own Destruction, for coming to their Haunts with Basins full of Water, or of Honey, they washed their Faces in the Sight of these Animals, and then substituting Pots of thin Grew instead of the Water or Honey, retired out of Sight. The Monkeys, as soon as they were gone, came down and washed their Faces likewise, and sticking their Eyes together, became blind, and were easily taken. In other Places they brought Boats into the Woods, and putting them on and off, left them well lined with Glue, or a sort of Bird-lime, so that when the Monkeys put them on, they stuck fast, and hindered them from making their Escape. A third Method they invented of taking them was by the Help of Springs at the Back of Looking-glasses, which when the Monkeys came to handle, as they had seen the Men do before, held them fast, and disabled them from making a Retreat; but the most dangerous of their Enemies was the Lion, for finding their Flesh equally pleasant and wholesome, he pursued them with greater Eagerness than any other sort of Beasts.

It is a very singular Passage that *Strabo* relates of their giving an Alarm to the Army of *Alexander the Great*. Every body knows that the *Macedonians* were distinguished by the Severity of their Discipline, and the exact Order in which they marched; it happened, that in passing through that Part of *India*, which lies between the Rivers *Indus* and *Ganges*, they travers'd a Wood, and passed on the Edge of a Mountain, which served these Creatures for a Retreat, and encamped in their Neighbourhood all Night. The next Morning, when the Army began to move, they saw at a Distance many thousands of these Creatures drawn up in Batails, and not doubting but that it was the Army of their Enemies, the Trumpets sounded, and *Alexander* himself began to prepare for an Engagement; but the *Indian* Prince *Taxiles*, who was then with *Alexander*, soon informed him of his Mistake, and assured him that upon his advancing these Creatures would again betake themselves to their Woods and Mountains, as in Effect they did. The most remarkable Property of these Animals is their Attachment to each other, and living in a kind of Society, of which the Ancients took great Notice; and as to the Truth of the Fact, a single Instance from a modern Traveller of great Reputation may suffice. The famous Monsieur *Tavernier* tells us, that returning from *Agra* with the English President to *Surat*, they passed within four or five Leagues of *Amenabad*, through a little Forest of *Mangoes*. "We saw there, says he, a vast Number of very large Apes, both Male and Female, many of the latter having their Young in their Arms. We were each of us in our Coaches, and the English President stopped his to tell me that he had a very fine new Gun, and knowing that I was a good Marksman, desired me to try it by shooting one of the Apes. One of my Servants, who was a

"Native of the Country, made a Sign to me not to do it, and I did all that lay in my Power to dissuade the Gentleman from his Design; but to no Purpose, for he immediately levelled his Piece and shot a She-Ape, which fell through the Branches of the Tree on which she was sitting, her young ones tumbling at the same time out of her Arms upon the Ground. We presently saw that happen which my Servant apprehended, for all the Apes, to the Number of sixty, came immediately down from the Trees and attacked the President's Coach, with such Fury, that they must have infallibly destroyed him, if all who were present had not flown to his Relief, and by drawing up the Windows, and posting all the Servants about the Coach, protected him from their Repentment. I must confess I was not a little afraid, though they did not offer to meddle with me, because they were very large, and of incredible Strength, and their Fury was so great, that they pursued the President's Coach for near three Leagues."

It is very natural to suppose, that from the Sight of the larger sort of these Creatures the Ancients were confirmed in their Notions of Fawns, Satyrs, and wild Men; and if I might presume to speak my own Opinion freely, as to the Attendants of *Bacchus*, as they appear on the Coins, Gems, and Bas-Reliefs of the Ancients, I should say that these were no more than so many different sorts of Apes thus represented to signify his Conquest of these Countries. I would not be understood to assert, that the Ancients considered them in this Light, the contrary of which is very certain; but what I mean is, that their Fables altered and distorted the original Fact, and occasioned frequent Changes in the Figures to make them suit the better with the Stories they invented, whereas originally the Chariot drawn by Leopards, and followed by these Inhabitants of the Woods, was a very natural Picture of the Conqueror of the *Indies*. I might enlarge considerably on this Topick, and shew from a Variety of Authors, that in truth all the Satyrs and wild Men mentioned by old Writers, were no other than Apes and Baboons of an overgrown Size; and this might be likewise confirmed by comparing the Accounts given by those Writers, with the Relations of modern Travellers; but as this would take up a great deal of Room, and as I have Reason to believe that the Notion is in itself so plain and so agreeable to Truth, that it does not stand in Need of any Arguments to support it, I shall not prosecute it farther at this Time, the rather, because this Chapter begins already to grow very long, and I have still some remarkable Creatures that before I finish it I find it necessary to mention.

20. Among the other Wonders of the *Indies*, it is a little strange, that the Animal, which produces Musk, was so long before it was known to the Ancients; for *Pliny*, the most curious and the most diligent Collector among their Writers, has left us nothing that seems to have the least Relation to this Subject, the first Notice of which we received from *Arnobius* and *Apuleius*. Yet this Perfume was always in very great Esteem in the *Indies*, and when properly tempered, must be acknowledged the richest of its kind. It is taken from an Animal called the Mofch or Musk, which is very common throughout all *China* and the *Indies*, and is about the Size of a Fawn, or rather a little less; this Creature is said to be so lazy, that the Hunters are hardly able to make it stir, but are obliged to discover its Haunts, which once done, they kill it without the least Resistance. When this is done, they cut off a little Excrecence cover'd with Down, which grows near its Navel, from whence they take a kind of Blood, or rather Juice, clotted, of a most odoriferous Smell; and then they skin and cut it to Pieces.

But besides this Liquor, which is a kind of Essence of Musk, there are three other Methods of making this valuable Commodity, though not in the same Degree of Perfection. The first is, by taking the Hind Quarters of the Animal from its Kidneys, and steeping them in its Blood; they are then bruised and beat in a Mortar into a sort of Pap, which is dried and put up in little Purfes made of that Animals Skin. When it is proposed to make a greater Quantity of Musk, though not quite so

¹ Voyages de Tavernier, Vol. V. p. 37. 199. 202. In the Duke de Bourbon's Menagerie there was one of these blue-faced Apes shewn for many Years.

² Strab. lib. xv. Diodor. Sicul. lib. xvii. *Ælian. de Animal. lib. xv. c. 14. Plin. Hist. Nat. lib. viii. c. 21. Philostrat. lib. iii. c. 4.*

³ Strab. ubi supra. ⁴ Voyage des Indes, lib. i. c. 3. ⁵ Mandislo, p. 81. *Le Brun. p. 121.* ⁶ Dictionnaire de Commerce, Tom. iii. p. 1463.

nich, the Flesh of the whole Animal is taken chopped to Pieces, and beat in a Mortar into a kind of Paste, which is afterwards moistened with the Blood, and so put up into Purfes made of the Skin of the Beast, as the former. The third Sort, which is also tolerably good, though much short in Value to either of the former, is made only of the Fore-part of the Animal, from the Reins to the Head; and thus no Part of this valuable Creature is ever lost^m. In *China*, where all Preparations of this Kind are best understood, it is managed in quite a different Manner. They take from the Animal a little Cod or Bag, which lies under its Belly, about thrice as big as a Man's Thumb; it contains a Sublance not much unlike Tallow, which is dried till it is fit to powder, and then it appears of a light Yellow, and has a Smell that is exceedingly agreeable. It is sold even in *China* itself for its Weight in Silver; but they are prohibited from selling it net to Strangers, and therefore, for common Sale, they make a counterfeit Musk in the following Manner. They take rotten Wood, which they steep in the Blood and Juices of the Animal, and then sew it up in Purfes made of its Skin, and having dried it, vend it for the true Muskⁿ. They ascribe to it many Virtues in that Country, and amongst the rest one that is very singular, which is this; they say, that being worn under the Stocking when People are obliged to travel through Woods or Mountains where there are abundance of Serpents, they are preserved thereby from being attacked by them; and the Reason assigned for this seems to be natural and probable enough: The Animal, say they, which produces Musk, feeds chiefly upon Serpents, and therefore the Smell makes them quit the Place, from an Apprehension of their own Danger^o. This rich Perfume has lost much of its Credit in this Part of the World, and is consequently much sunk in its Price; the very best Musk from *China* is sold at *Amsterdam* for about nine Florins an Ounce by the *East-India* Company; and that of *Fergal*, which is esteemed the second Sort, is not worth above five Florins: The *Russian* Musk, which has the strongest Smell, but loses its Scent in a small Space of Time, may be had for less than a Florin an Ounce. There are some People who have still a high Opinion of the Virtues of this Drug. They say that it is an excellent Remedy for almost all nervous Disorders; and to confirm this, they assure us, that though in their own Country, the *Dutch* are frequently attacked by Apoplexies, yet at *Batavia*, and other Places in the *East-Indies*, where Musk is very much used, they do not find themselves subject to these Disorders. It is upon this Principle that they attribute the Increase of nervous Complaints within fifty or sixty Years past in these Parts of *Europe*, to the quitting the Use of this Perfume, which is said to have been owing to the Averfion which the Queen of *France*, Consort to *Louis XIV.* had to the Smell of Musk, which first drove it out of that Court, and by Degrees made it unfashionable every where else^p. I do not pretend to answer for the Truth of this Observation; but as it is certainly very curious, and the Examination of it may possibly be of Use to Mankind, I thought it might not be amiss to report it.

After this History of the Beasts of *India*, it is natural to say somewhat of the Reptiles and Insects there, of which we have a very large Account from the Ancients, and those not at all less remarkable than what has been already taken Notice of with regard to other Animals, the rather because in their Kind they appeared much more surprizing, and withal more terrible to Strangers: For as there is a Kind of innate Dislike to the Reptiles of our own Countries, which are generally in our Eye; so when we see Creatures to which we have such an Averfion, of a Size infinitely beyond what we have beheld before, it naturally inspires us with Horror, our Antipathy rising in the same Proportion that the Object becomes more dreadful; especially if the Creature be fierce or venomous in its

Nature, and capable as well of hurting as of fighting us. From hence, very probably, it comes to pass, that such extraordinary Relations of these frightful Creatures have been, in all Ages, well received; because it is natural for us to hear with Pleasure, of Mischiefs to which we are not exposed, the Prospect of distant Dangers, adding to the Sense of our own Safety, and gratifying our Curiosity at the same Time.

22. The Dragon was a Creature frequently mentioned by the old Naturalists, and described as one of the most dreadful in the World. *Aristotle* mentions the Dragon's living in continual Enmity with the Eagle; and also says, that when the Dragon is surfeited with eating Apples it has Recourse to Lattice for Relief^q. *Egypt* and *Ethiopia* were Countries the most famous, next to the *Indies*, for producing Dragons of unusual Size. We have, in an ancient Author, a very large and circumstantial Account of the taking a Dragon on the Frontiers of *Ethiopia*, which was One and twenty Feet in Length, and was carried to *Ptolemy Philadelphus*, who very bountifully rewarded such as ran the Hazard of procuring him this Beast^r. Yet, terrible as these were, they fall abundantly short of Monsters of the same Species in *India*; with respect to which, *St. Ambrose* tells us, that there were Dragons seen in the Neighbourhood of the *Ganges*, near seventy Cubits in Length^s. It was one of this Size that *Alexander* and his Army saw in a Cave, where it was fed, either out of Reverence or from Curiosity, by the Inhabitants; and the first Lightening of its Eyes, together with its terrible Hissing, made a strong Impression on the *Macedonians*, who, with all their Courage, could not help being frightful at so horrid a Spectacle^t. The Dragon is nothing more than a Serpent of enormous Size; and they formerly distinguished three Sorts of them in the *Indies*, viz. such as were found in the Mountains, such as were bred in Caves, or in the flat Country, and such as were found in Fens and Marshes: The first is the largest of all, and are covered with Scales as resplendent as polished Gold. They have a Kind of Beard hanging from their lower Jaw, their Eye-brows large, and very exactly arched; their Aspect the most frightful that can be imagined, and their Cry loud and shrill; their Crest of a bright Yellow, and a Protuberance on their Heads, of the Colour of a burning Coal. Those of the flat Country differ from the former in nothing but in having their Scales of a silver Colour, and in their frequenting Rivers, to which the former never come. Those that live in Marshes and Fens, are of a dark Colour, approaching to a Black, move slowly, have no Crest, or any Rising upon their Heads^u. *Strabo* says, that the painting them with Wings, is the Effect of Fancy, and directly contrary to Truth: But other Naturalists and Travellers, both ancient and modern, affirm, that there are some of these Species winged^v. Yet, after all these terrifying Accounts, *Pliny*, and many other Writers, assure us that both Sorts are rather dreadful than dangerous, their Bite having nothing in it venomous^w; the Reason of which is asserted by later Authors, and several Fables alledged in Support of their Opinion^x. But what makes the greatest Figure in the Works of the Ancients with relation to this extraordinary Animal, is, the Stone supposed to grow in its Head, and reputed of inestimable Value^y. It is said to be naturally divided into Facets like a Diamond of the brilliant Cut, and to have as high a Lustre. But, to preserve this Quality, it is necessary that it should be taken out of the Head of the Animal the Moment it is killed; for otherwise it loses all its Virtues and all its Beauty, and yet becomes so extremely hard, that no Tool will touch it. *Pliny*^z gives us a long Catalogue of medicinal and magical Properties, which he ascribes to the Skin, Flesh, Bones, Eyes, and Teeth of the Dragon; which are too ridiculous to be repeated; and, besides such Stories have now entirely lost their Credit, since the

^m *Ibid.* ⁿ Account of *China* before cited. ^o *Du Halde's China.* ^p *Neroca de Amsterdam*, p. 150. ^q All Kinds of high Dragons are much in Request among the better Sort of People over all the *Indies*, as appears from their prohibiting the Exportation of any such Animals. ^r *Monnier de la Carrière*, who observes, that our not using ourselves to Perfumes, occasions their giving us the Vapours. ^s *Strabo* lib. vii. c. 1. ^t *Strabo* lib. vii. c. 1. ^u *Strabo* lib. vii. c. 1. ^v *Strabo* lib. vii. c. 1. ^w *Pliny* lib. xii. c. 8. ^x *Pliny* lib. xii. c. 8. ^y *Pliny* lib. xii. c. 8. ^z *Pliny* lib. xii. c. 8. ^{aa} *Pliny* lib. xii. c. 8.

Indians, at present, confine the Value of these Animals to the Stone in their Heads; which, however, no *Euro-pean* could ever find, and to the Quality that their Bones are supposed to have of resisting Poison. It is for this Reason that they are as assiduous as ever in hunting Dragons; concerning which, old Writers tell us, this was their constant Method. They hung before the Mouth of the Dragon's Den a Piece of Stuff strowed with Gold, which attracted the Eyes of the Beast, till, by the Sound of soft Music they lulled him to Sleep, and then cut off his Head.

As for the Dragons on the Mountains, they cost them much more Pains; for they were forced to pursue them with Lances and Arrows, with great Danger to themselves. The Dragon, in his Turn, hunted the Elephant, and, if we may credit some Authors of great Rank in the learned World, was from Infinct his mortal Enemy. In order to destroy him, he mounted a Tree in the Forest where the Elephants fed, from whence, as soon as one of them came by, he threw himself on his Back, and twisting himself round him, thrust his Head into his Nostril, and thereby strangled him. The Hate of this Animal towards the Elephant, was thought an apt Symbol of human Malice, for in his Fall, the Elephant crushed him to Death; so that the Combat was equally fatal to both.

The Ancients tell us further, that it was not for the annual Inundations, this Country would be infested with a vast Variety of other Serpents and destructive Insects of different Kinds, which, as in all hot Climates, breed here in prodigious Numbers. Amongst others they mention a kind of Viper of a most dangerous Nature, and some other Reptiles, the Bite of which is infallibly mortal, when the Simples, which have a specifick Quality of curing these Wounds, are not immediately taken, with which Simples the Country through the especial Care of Providence plentifully abounds. There are some of these Vipers, they say, twelve or fifteen Foot long, others not above half a Foot; and these, together with the Scorpions, are the most dangerous, because they are so small, that it is very difficult to guard against them. But the annual Inundations in a great Measure purge the Country of those dangerous and destructive Creatures, without which it would scarce be habitable. The *Macedonians* suffered exceedingly from these venomous Animals before the *Indians* acquainted them with the proper Remedies, and the only way before that by which they could defend themselves, was by hanging their Beds between Trees, and sleeping, as it were, in the open Air.

Several modern Travellers report almost as strange Things of these *Indian* Serpents as the Ancients; for instance, *Peter Van Caerden*, who was Admiral of a *Dutch* Fleet in the *Indies*, assures us, that at *Calicut* they are as big about as Hogs, their Bodies six Foot long, and their Heads larger and longer than that of a wild Boar, yet the Natives assured him that these Animals were not venomous. It is very remarkable that he tells us these monstrous Creatures haunted chiefly their Marshes, so that, according to the foregoing Distinction, they must have been the least of that Species in that Country, and probably they were so; for the same Author tells us, that there were others, which if they but drew Blood of a Man, their Bite was mortal upon the Spot. He adds, that besides these he saw many of the Size of Water-Snakes. While he was at Anchor on the Coast of *Mozambique*, a Boy that was washing himself by the Ship-side was seized by the Middle by a Serpent of enormous Size, that dragged him under Water at once in the Sight of the whole Fleet.

Mr. Recleren tells us, that while he lived in the Island of *Banda*, his Fowls were continually stolen, and on his complaining to his Neighbours, they told him they were carried away by the Serpents, which he was not very forward to believe. However, having set some People to watch, they in the Night alarmed him with the Cry of the Serpent, which had got in amongst the Fowls. They pursued it, cut off its Head and Tail with Hatchets, which they had in their Hands, and then opened its Belly, in which they found a Pig, a Duck, and five Fowls, and

what is not a little extraordinary, they skinned these Creatures, and together with the Body of the Serpent, boiled, and made Broth of them.

An Author, whom we have cited more than once, assures us, that he has seen of these Animals twenty-five Foot long, and five round, their Throats so large, that they were able to swallow a Stag whole. These monstrous Serpents live both on Land and in the Water, where, when they have gorged themselves with their Prey, they sleep, which Opportunity the Natives take to kill and eat them, esteeming the Flesh excellent, and not at all venomous. The same Writer says, that at *Golconda* there are Serpents of a prodigious Size, the Bite of which is instantly mortal; and observes farther, that whenever these Creatures are seen at Sea, it is a certain Sign of their being near the *Indian* Coast.

Admiral *Verbeven* tells us a singular Story of a Sea-Serpent in the Straights of *Sinapoua*. A Seaman washing himself by the Ship-side was seized by one of these Creatures, upon which he roared so loud, that one of his Companions threw him a Rope and pulled him into the Ship; but the Serpent had tore such a Piece out of his Side, that he died immediately. The Serpent continued about the Ship, till at last it was taken, and was the largest they had ever seen. Upon opening its Belly, they found therein the Piece of Flesh which he had torn from the Sailor, and which they buried with him.

Mr. Thevenot, a most careful and candid Writer, informs us, that the Country about *Golconda* is terribly infested by Serpents, the Bite of which is mortal, unless Care be taken to apply proper Remedies immediately: Of these he mentions two, which are both very extraordinary, the one is holding a light Coal very near the Wound, which draws out the Venom by Degrees, and which is very singular, the Patient does not feel any great Inconvenience from the Heat during the Time of the Operation. The other Remedy is the Snake-stone, or, as they call it, *Cobra*, the Manner of making and applying of which he describes very particularly.

The best are made in the City of *Diu*, and are composed of the Roots of certain Plants burnt to Ashes, which Ashes are mixed with a particular kind of Earth, and then burnt a second Time. Of this Composition reduced into a Paste, they form the Stone made of the Size of a Pigeon's Egg; this is applied in case a Person is bit by any kind of Serpent or Viper, or wounded by a poisoned Arrow in the following manner: They first prick the Wound with a Needle till the Blood comes, and then clap the Stone to it, which sticks fast, and remains there till it falls off of itself. It is afterwards put into Breast, or, if that cannot be had, into Cows Milk, where it purges itself of the Poison; and if this be not done immediately the Stone bursts.

Dr. Fryer, who was ten Years in the *Indies*, and who, as a Physician, was certainly a proper Judge of such Matters, speaks also of these Snakes-Rones, he says, they are made by the *Gioghis*, and that they are counter-poison to all deadly Bites. If the Stone sticks, says he, it attracts the Poison, and put into Milk, it recovers itself again, leaving its Virulency therein, which is discovered by its Greenness. I have mentioned this Circumstance of the *Cobia*, the rather because the common Notion in the *Indies* is, that it is a Stone taken out of a Serpent's Head, which, as we have seen, is altogether fabulous.

22. In respect to the Dragon, the Ancients have only exceeded as far as we can judge from modern Relations in certain Circumstances the Truth; but as to the Gryphon, all they say appears the pure Effect of Imagination, and so strange an Animal they make it, that I was in some doubt whether it belonged to this or to the subsequent Section; but perceiving that it would be liable to the same Objections there, I thought it might be as well to dispatch it here. According therefore to the Accounts we have of it, it is hard to say whether it be Beast or Bird Inhabitant of the Earth, or of the Air. They say it has four Feet, and is of the Size of a Lion; thus far then it is plainly a Beast; but then they say farther, that it is entirely covered with Feathers, and has the Head and Beak of an Eagle.

It has either Wings, or something like them, that is to say, a Membrane resembling that which the Bats fly with. The Colour of the Body is a dark brown, or black; but the Breast is of a bright red, or, as some say, purple *.

This Creature was consecrated to *Apollo*, and fastened to the Chariot of the Sun, because among its other singular Properties, it was held, that the Gryphon could stealthily look upon the Sun in its full Splendor. It was supposed to inhabit the Woods and Mountains, where the Ancients imagined it discovered and guarded the Gold Mines; but they do not tell us to what Uses it converted this Metal, or why departing from the Instinct of Beasts it shared in the Follies of Men. It is also affirmed, that this Animal was one of the fiercest and most cruel, fearing no other Enemies than the Lion, the Tyger, and the Elephant, over which also it sometimes triumphed. The *Indians*, whenever they attacked it, went in considerable Bodies, and generally in a Moon-light Night, in hopes of finding it asleep, which, however, they rarely did, and were forced to buy the Treasures, guarded by the Gryphon, at the Expence of their Blood. The Watchfulness of this Animal was one of its most remarkable Qualities; and in all the Fables that are related concerning it, it is a Circumstance always thrown in, that the Gryphon seldom or ever sleeps †.

If there had been any such Creature, it fell undoubtedly under our Cognizance, because the Ancients affirm that they are no where else to be met with but in the Northern Part of the *Indies*, which however does not agree extremely well with the Talk they assign them of guarding the Gold Mines, because in truth there are no such Mines there. It must however be acknowledged, that some of the Ancients themselves have given us plainly to understand, that they looked upon all that had been said of the Gryphon as mere Fables; but whence those Fables arose, or why they were invented, is a Question, that the Reader from the Scope of this Work, which is to leave nothing unexplained, may expect should be answered.

On this Head I must say, that I take the Origin of it to have been an *Egyptian* Hieroglyphick, and my Reason for it is, because taken in this Light, it has a Meaning, and otherwise none. In this Sense then the Gryphon was a Figure invented, which signifies the Power of the Sun in the Sign of the Lion; and hence proceeded the Notion that the Gryphons guarded the Mines of Gold, because according to the old Doctrines of the *Egyptian* Chemistry, the Sun in this Sign had an extraordinary Operation in that Respect; and hence also some of the old Alchemists, or at least some Writers as are imposed on us under ancient Names make use of the Gryphon, and some other such-like imaginary Creatures for the better veiling of their Secrets; but when the *Greeks* first saw these Figures without being let into their Meaning, they took them, as it was natural enough for them to do, for the Representations of real Animals, and the *Indies* being the Place where the most extraordinary Creatures they were acquainted with resided, they took the Liberty of supposing that the Gryphons came from thence, and from the Northern *Indies*, because there were more wild Beasts there than any where else.

This I take to be the true Account of the Rise of this Notion, which afterwards came to be employed symbollically, of which Sir *Thomas Brown* † has given us a very rational Account. It doth well make out, says he, the Properties of a Guardian, the Fars, implying Attention; the Wings, Celerity; in Execution the Lion like Shape, Courage and Audacity; the hooked Bill, Reserve and Tenacity. It is also an Emblem of Valour and Magnanimity, as being compounded of the Eagle and Lion, the noblest Animals in their respective kinds; and so it is applicable to Princes, Generals, Presidents, and all in chief Authority, which is the Reason that the *Heralds* laid hold of it, and we see it borne in the Coats of Arms of the noblest Families in *Europe*.

In taking leave of this Subject, it will be proper for me to observe, that the Gryphons mentioned in Scripture † are no more than a kind of Eagle, and not the imaginary Gryphon; and therefore in our Translation, it is very well rendered after *Tremellius*, as I conceive, the Ostridge, which is, properly speaking, the Sea-Eagle.

23. There is no Creature of which the Ancients have talked more than of the Cameleon, and perhaps, of all the Animals they have mentioned, there is not one of which they have reported more Absurdities, or shewn a less Regard to Truth. In all Probability, they were originally misled by the Reports of the *Indians* themselves, who have always been inclined to exaggerate, and have shewn less Care in examining the real Nature of Creatures than in framing such Stories of them as might best suit their Parables and Enigmas. It must, however, be allowed, that the Ancients are not all alike faulty in this respect, either in believing the Dreams of others, or reporting their own; for though *Pliny* and *Solinus* † positively affirm, that the Cameleon lives wholly on Air; yet *Aristotle* †, who went before them, and has written largely upon the Subject, says not a single Word of this supernatural Quality. Indeed, it is wonderful, that ever this Opinion prevailed at all, because the very Formation of the Animal plainly refutes it, as is very well observed by the learned Sir *Thomas Brown* †.

The Word Cameleon, in *Greek* signifies a little Lion; and this Name must have been given it from some Resemblance it had to that Animal, not surely in its Figure, for therein it approaches the Crocodile, but rather from its Vigilance in catching its Prey, a Notion irreconcilable to its living upon Air. It is for this Purpose certainly, I mean of catching its Prey, that it has a long sharp Tongue, which it can thrust out to a Length equal to one Third of its Body; and though very slow in its Motion, yet it manages this Member with extraordinary Agility; and therefore, from the established Law of Nature, we may presume: that its Tongue is of extraordinary Use, and as we cannot conceive that it should be of any Use with respect to drawing in the Air, which might be done without, it naturally leads us to believe that it serves to furnish the Animal with other Food. In the next Place, it hath very remarkable Teeth, which is another Indication of its living on Prey; and what seems to put it beyond all Doubt, is, the Formation of its Stomach and Guts; to which we may add its voiding Excrement, a Fact admitted by *Pliny* †, though manifestly destructive of his own Opinion.

It is no Wonder, therefore, that this Notion was soon exploded, or that we find *Augustine*, *Stobaeus*, *Forer*, *Licetus*, and many other great Men, opposing themselves to this popular Sentiment. But *Bellonius* positively affirms, that it feeds on Flies, Caterpillars, Beetles, and other Insects, and that from the best Reason in the World; because, upon Dissection, he found these Animals in their Bellies; † to which we may add what other learned Writers have affirmed as to its drinking Water, and delighting to catch Meal-worms. We will therefore quit the Ancients, as insufficient Guides in this respect, and have Recourse to the Moderns, by whom this singular Animal has been very fully and faithfully described.

The Cameleon then, according to their Account, resembles a large Lizard, except that it has two great wide Ears, which lie pretty far back upon its Neck. It lives commonly in the Cliffs of Rocks, or in Holes of a Wall. It has four Feet and five Claws upon each Foot, which serve for its perching upon the Branches of Trees or Shrubs, where it likewise secures its Station, by twisting its Tail round them. Its Motion on the Ground is as slow as that of a Tortoise, but upon Trees it moves from Branch to Branch with great Agility †. The largest of these Animals are about eleven or twelve Inches in Length from the Head to the Extremity of the Tail, and about three

* *Cyprus* in *Indies* cap. 13. *Hierod.* lib. iii. *Plin.* lib. vi. *Philos.* lib. iii. *Aelian.* lib. 10. *Philotus* *Cadice* 72. *Servius* in *Edg.* lib. 10. *Cyprus*, *Plin.* *Philos.* *ubi supra*. † *Vulgar* Error, *lib. iii. cap. 11*. † *Leviticus* xi. 13. Where among the prohibited Fowls are reckoned the Eagle, the Ostridge, and the Cyprus. It is however to be observed, that the Word Gryphon came first in from the *Greek* Translation of the Septuagint, and the sense whether the Ostridge be, strictly speaking, that kind of Eagle which the *Greeks* called a Gryphon, is a Question that has nothing to do with the Veracity of the sacred Text; for *Moses* undoubtedly forbade the Hebrews (some Fowl that was well known and common in their Country, nor is it of any Importance to us whether we know exactly what Bird it was, or not. † *Plin. 1. *Nov. de P. Acad.* Tom. xi. part 1. p. 53.

Inches round, that is to say, when they puff out and extend themselves; for, otherwise they have not half that Bigness, and, in all Probability, it was from this strange Property of swelling and lessening their Bodies, that the Notion of their living upon Air was first derived.

When they do not puff up themselves, their Skin hangs loose, in such a Manner, that the Spine of their Back is plainly seen through it, their Ribs may be counted, and the Tendons of their fore and hind Limbs are plainly visible. It was from the Consideration of the Creature in this Condition, that *Terullian* was led to say, a Camelion was no more than a living Skin*. It must be confessed, that this Property is not only very singular, but, in some measure, also inconceivable, for that it distends itself by receiving Air, is a Point generally agreed; and yet, how this Air should pass from the Lungs into the Habitude of the Body, is a Thing not hitherto accounted for.

There is another Quality of this strange Animal no less admirable, which is, that when it is thinnest, and the Skin hangs as it were upon the Bones, the Motion of its Heart cannot be perceived, which one would imagine in such a State, must be very sensible. Its Skin is very cold to the Touch, and very uneven in its Surface, full of little Points like Shagreen; but, at the same Time, not at all rough, but very finely polished. The Colour, when the Creature is still, and in the Shade, is, for the most part, of a Blue-grey, about the Feet it is of a White, inclining to Yellow, and, on the Body, there are some Streaks of a pale Red, which is likewise intermixed with Yellow.

Aristotle says their Skin is black; but it is certain, that the Camelion seen in *Europe* hath its Skin naturally of a Blue-grey, which it likewise retains after it is taken off. At first also it retains the Streaks before-mentioned, but by degrees, and as it grows dry, they wear out, and are no longer visible. When these Animals are placed in the Sun, they change their Colour intirely, and assume that which is called an *Isabella*, composed of a pale yellow on the Surface, and a deep red underneath. When removed out of the Sun, this beautiful Colour goes off, and the natural Blue-grey returns by degrees. The Camelion being touch'd and disturbed when in the Sun, they appeared immediately on its Shoulders and Legs black Spots as big as ones Nail. Sometimes again its Skin appears chequered with brown Spots, inclining to a dark green.

Upon wrapping the Camelion in Linnen, it was taken out white. *Abravandus* says, that he saw one so changed in this manner, that it seemed to disappear, being not distinguishable in its Colour from the very Linnen it lay upon; but this Description seems to be a little exaggerated; for commonly it is observed to change only to a light grey, and its natural dark Colour comes on again in the Space of two or three Minutes. But notwithstanding this, the Experiment most evidently refutes what *Plutarch* and *Solinus* gravely tells us, that the Camelion assumes all Colours except white. *Aristotle* likewise seems to be in the wrong in affirming, that it changes its Colour through its whole Body, whereas in all the modern Experiments the Skin, instead of being uniform, has been spotted with different Colours. It must however be confessed, that most of these Circumstances have varied in different Experiments, so that it is very difficult to speak exactly of all these Particulars.

It is natural to conclude with some Account of the Discoveries made by the Moderns as to its Food, which seems to put that Point entirely out of Dispute. They have found that it is so far from living upon the Air and Sunshine, as some learned Men reported, and credulous People believed, that it is in Fact a Beast of Prey, and more ravenous than could be expected from its Size.

The Tongue of the Camelion is the Weapon with which he does all this Mischief. It is covered constantly with a kind of natural Glue, which draws to it Flies and other little Animals, which stick fast therein, and are drawn back there into the Creature's Mouth, with such prodigious Agility, that it is hardly possible to perceive

this Motion of throwing out and recalling the Tongue. Upon examining this Member closely with a Microscope, we discern a Multitude of very small Fibres, which run winding like a Screw from the Root to the Point of the Tongue, which, doubtless, contributes very much to that extraordinary Quickness of Motion with which this Creature useth it. Upon Dissection, there are found in the Ventricle and in the Intestines the Flies and Worms which it has swallowed.

It voids from Time to Time a kind of Stones of a Size and Weight superior to any thing it could swallow; and these Stones have afforded Matter for fresh Observations. After having examined them closely, and making some Experiments on them with distilled Vinegar, it has been found that they have the Head of a Fly, or some such thing in the Centre, round which the stony Mass forms itself, and rises to a considerable Bulk before it is thrown out. I do not find that the Moderns have at all enquired into one Fact expressly asserted by *Alian*, which is, that this Creature is not afraid of, or affected by the Bite of the most venomous kinds of Serpents; which perhaps might lead us into new Discoveries.

24. The Description and History of the Ants of *India* recorded by ancient Authors, is at once the more singular and extraordinary of any thing they have related concerning this Part of the World, and the more so, because it is on the one hand confidently reported, not by one or two Authors only, but by almost all the great Writers of Antiquity; and on the other, the strictest Enquiry that can be made by the Moderns, furnishes us with no sort of Intelligence, to prove that either there are, or ever were, any such Animals as these in Nature. It would take up too much of the Reader's Time to enter into a particular Account of all the Stories that the old Writers tell us with regard to the *Indian* Pismires; and therefore to cut the Matter short, I shall report what *Pliny* says upon this Head, as containing the Substance of what other Writers have delivered.

There are still to be seen, says he, in the Temple of *Hercules*, at *Erybrae*, the Horns of a certain *Indian* Ant, which were there set up to employ the Wonder as well as Curiosity of all Posterity. These Ants in the Northern *Indies*, and especially in the Country of the *Dardians*, burrough in the Ground like Rabbits, and from thence throw up abundance of fine Gold from the Mines under the Earth, in which they make their Holes. These Creatures are of the Colour of Cats, and of the Size of Wolves or Foxes in *Egypt*. This Gold, which they throw up in the Winter Season, the Natives of that Country endeavour to steal from them in the extrem Heat of Summer, taking that Opportunity, when the Pismires, to shun the raging Heat of the Sun, lie close shut up in their Caves. Yet this is even then performed with great Danger; for if these Creatures gain any Scent of them, they pursue with incredible Boldness and Speed, neither can the Swiftnes of their Camels save them; but they are frequently torn in Pieces by these furious Animals, eager to recover that Gold in which they so much delight.

Aristotle hath treated largely of the Nature of Ants in general, and seems to have examined the Subject with great Diligence and Application; yet he says nothing of these *Indian* Ants, though the Story had been told by Writers who flourished long before him, and therefore in all Probability he looked upon it as a Fable. *Philostratus* says, that these Creatures are not only found about the Sources of the *Indies*, but also in *Ethiopia*; and yet such Travellers as have visited that Country, say nothing of any such Animals, which it is impossible they should have omitted, if they had either seen or heard of it. It appears however clearly both from *Strabo* and *Arian*, that this Tale, and all the Circumstances relating to it, came originally from *Magasthenes*, who pretends that he had seen the Skins of these Animals, which were spotted like the Skins of Tygers; and he also reports another Circumstance not mentioned by *Pliny*, which is, that the Inhabitants, by feat-

tering the Limbs of Animals, cut to Pieces near the Dens or Holes of the Pismires, drew them to feed upon these; and while they were thus employed, carried away their Golden Stores. *Nearchus* also has asserted, that he likewise saw the Skins of these Ants in the *Macedonian* Camp; but both *Strabo* and *Arrian* seem to give no Credit to these Relations.

One might be tempted to imagine, that the original Reporters of these Stories mistook the Creature of which they spoke, and which they ought rather to have stiled it a Mole than an Ant; I say we might suspect this, if in any later Writer there was the least Notice taken of this Method of coming at Gold; but as there is not, I must confess I look upon the whole as a Fable, invented by the *Indians*, to prevent Strangers from being too busy in looking after their Gold Mines. *Pomponius Mela* reports the Fact without the least Mark of Diffidence. "*India*, says he, produces Ants not inferior in Size to the largest Dogs, which, after the manner of Gryphens, are said to discover and watch over Gold with incredible Sollicitude." A Thing in itself so incredible, that it is amazing any could speak of it without Suspicion.

That there are, however, vast Numbers of Ants in this Country, and of a large Size, is very certain; and these too very mischievous; so that to avoid their Depredations, the Inhabitants in some Places are obliged to have their Chests fixed upon four Feet, and those Feet set in a Vessel full of Water to prevent the Ants from getting into them. But then the largest of these Creatures are not said to be above a Finger's Length, which with respect to such a Creature is a prodigious Bigness. There are also infinite Numbers of these destructive Animals in *Africa*, which raise Hills of a surprizing Height; but these are not said to be above half an Inch in Length, so that after all the Enquiry possible, I have not been able to discover any Fact that could be depended upon capable of giving Light into what the Ancients have related upon this Head. It is not however amiss to preserve even the most extravagant of their Accounts, because future Travellers, by perusing them, may have an Opportunity of making such Enquiries as may possibly discover what gave Rise to these Fables; for it would be easy to shew from many Instances, that a strict Examination of Falshoods has frequently led to the Discovery of very important Truths.

25. After the Perusal of this Chapter, the Reader will be able to judge for himself as to the Capacity of the Ancients, with respect to the Description of the *Indies*, and be able to decide wherein they deserved Praise, and how far they are liable to Censure. It will be clear to him, that in some Respects they had the Advantage of us, though not in many. As for instance, in the Knowledge of the Nature, Disposition and Strength of Elephants, which were much in use both with the *Greeks* and *Romans*, after *Alexander* had opened a Passage to the *Indies*. This must have given them many Opportunities of examining carefully into all the Qualities of that Creature, which are Opportunities that we have not. *Aristotle* has written about them with great Judgment and Accuracy; but as to the Work of *Elihu*, I must confess he seems to have studied to amuse, rather than inform his Readers.

The Terror of the *Roman* Arms was so great, especially after they had reduced *Egypt* into the Form of a Province, that the *Indians* were extremely afraid of them, and therefore made use of all the different Methods they could invent to hinder them from making that Use they might have done of their Maritime Power. It was with this View that they sent Embassadors to their Emperors, and with them Presents of wild Beasts, and Serpents, that on the one hand they might persuade them of their Submission, and on the other fright them from undertaking Expeditions into a Country, where they were to run so many Hazards from Beasts as well as Men. It was from the same Principle that they filled their Ears with dreadful and false Reports. If they had Spices, they pretended that they were obtained with infinite Difficulty, and by such a dangerous Navigation, as scarce any Man in his Senses would attempt; if

they had Gold, it was taken from the Dens of Gryphens, and other fierce and terrible Beasts, so that it appeared infinitely better to obtain this precious Commodity by Traffick, than to expose themselves to the Dangers which the poor *Indians* ran in procuring it; if their Markets were furnished with precious Stones, they likewise were collected with incredible Hazard; which kind of Fables joined to the Diffidence of the Country, and the natural Aversion which the *Roman* Legions had to serving in Climates different from their own, for many Age had as good Effect in securing the *Indians* from their boundless Ambition.

The false Religion of the *Romans*, and their great Propensity to Superstition, was another invincible Bar to their going at any true Knowledge of the Countries they visited. Their Heads were so full of Fables, Omens, and Prodigies, that it was very easy to make them believe that the *Indies* was inhabited by Giants, and that the *Ganges*, and all the other Rivers in it, swarmed with Monsters. We have a strong Proof of this in what happened when the Learning of *Rome* was at its greatest Height. It was found necessary to change the Course of the River *Orontes*, to facilitate the bringing up their Fleet to *Antioch*; a prodigious Work, that, however, they undertook and executed; which shews that there was nothing that enterprising a People might not have performed, if they had not been liable to the Terrors of Superstition. When the Waters of the River were turned out of their old Channel, they discovered a Sepulchre of Earth, above sixteen Foot long, filled with Bones of an enormous Size; and which, nevertheless, the People of that Country persuaded them were those of a Man; upon which the Oracle of *Apollo*, at *Claros* in *Ionia*, was consulted, and they were informed, that these were the Remains of *Orontes*, a Native of the *Indies*; which was enough to confirm them in the Opinion they had conceived, that the Inhabitants of that Country, were much superior in Size to the rest of Mankind.

The great Reverence paid by them to Antiquity, was another Source of Errors. One would imagine, from reading some of their Writers, that they had from never to be wiser than those who went before them: Almost all the voluminous Work of *Pliny*, is taken from *Greek* Authors, and those not of the best Credit. Whoever will take the Trouble of comparing the Geography of *Pomponius Mela*, with the History of *Herodotus*, will plainly perceive, that he has borrowed from him the best Part of what he has written, particularly that Passage relating to the Ants that dig Gold. And hence it comes to pass, that when we diligently trace any of the incredible Stories we meet with in old Writers upwards, we find the original Author to be *Cicero*, *Herodotus*, or *Megasthenes*, derry'd, and yet copied in all Ages.

But for those Things which fell immediately under the Eyes and Observation of their best Writers, such as *Aristotle*, *Strabo*, *Diodorus Siculus*, *Arrian*, *Plutarch*, and many others, they are very candidly and fairly reported; at least, as far as the Lights they had would permit. We must not, therefore, either implicitly believe whatever they have delivered, for, if we do, we shall fall into the same Errors that they did from that very Cause, of trusting to the Ancients; and, on the other hand, we must not imagine that wherever they differ with the Moderns, or are not absolutely supported by them, they are constantly in the wrong, and deserve no Credit at all; because, such a Notion may, and supprisingly will, betray us into new Mistakes; because, in some Things, the Ancients had better Opportunities of knowing than we; and Experience has shewn us, that, after several Things, they have told us, have been exploded for Fables, they have, upon further Discoveries, been acknowledged for Truths.

The only true Rule of judging, is, to consider the Nature of the Thing related, the Character of the Author who relates it, and how far he is supported or contradicted by others; but, in such Cases as do not afford us an Opportunity of having Recourte to that Rule, the best

¹ *Strabo*, lib. xv. *Arrian*, in *Indicis*, c. 15. ² *Geograph.* lib. iii. cap. 7. ³ *P. way is to avoid all hasty Decisions, and to wait till new Enquiries afford us new Lights. But it is now Time to proceed to the Accounts which these Writers have given us of the other Animals of the *Indies*, that live either in the Water or the Air; and in regard to them as well as to the Land-Animals, we shall confine ourselves only to a few of the most remarkable; and, even with respect to

them, set down nothing more than what seems most striking and worthy of Notice; which Method, if we did not pursue, each of these Sections might be very easily swelled into a Volume; so that, if any think them rather too much extended, I flatter myself they will alter their Opinion, when they consider how much is omitted, in order to bring only the capital Points within Bounds.

SECTION XIV.

An Account of the most remarkable FISH and FOWL in the East-Indies, as described by ancient and modern Authors, with proper Observations and Remarks.

1. The Nations of the Ancients with regard to several Kind of Whales, Sea-elephants, and other Fish of enormous Size in the Indian Ocean, with a particular Account of the Hound-fish.
2. An exact Description of the River-cow, with the Reason why the Teeth of this amphibious Animal are preferred to Ivory.
3. The fabulous Accounts of the Dolphin examined, with a singular Relation from Ælian on that Subject.
4. Of the Purpura, or Purple-fish; the History of the famous Die made from this Fish by the Tyrians; and an Enquiry into the Causes of our losing this Secret.
5. The Pearl-fishery in the Indies, described from ancient and modern Authors; with many Remarks upon that Subject.
6. Of the Flying-fish in the Indies, from ancient Writers, compared with Martinus's Account of a Flying-fish in China, and the *Tobivo* in Japan.
7. The several kind of Tortoises in the Indies, their extraordinary Size, the Uses and Value of their Shells.
8. The Crocodile described by ancient Authors; the vast Size of these Creatures in the Indies, and many curious Passages relating to them, drawn from Works of modern Travellers.
9. Of the Cynocides, or Blue-worm in the Ganges, a kind of Serpent that seems to be unknown to the Moderns.
10. The Indian-Eagle described; an Account of all the remarkable Properties of that Bird, and a distinct Relation of what is said as to the *Actites*, or Stone found in the Nests of Eagles, and its Virtues.
11. A Description and succinct History of the Ostrich, in which many Errors relating to that Bird are corrected, and the Causes of them explained.
12. Of the Pelican, the singular Qualities of this Creature, and the many Fables that have been invented concerning it.
13. The History of the Phoenix, from the Writers of Antiquity; the Fables on this Subject examined, and the true State of the Question explained.
14. Of the Semendal, or Scaligers Phoenix, a Bird really found in the Indies.
15. An accurate Description of the Casoar, one of the largest and most extraordinary Fowls in the Indies, and which seems to have been unknown to the Ancients.
16. Of some other remarkable Birds mentioned by Eastern Writers, or in the Relations of modern Travellers.
17. Miscellaneous Observations and Remarks on the foregoing Descriptions, tending to the farther Illustration of the Subject.

IT seems to have been an established Opinion among the Ancients, that, of all the Elements, Water breeds the most, the largest, and the greatest Variety of living Creatures; or, at least, was inhabited by such, and of all Seas, or Collections of Salt-water, that which washed this Shore of the *Indies*, was held to be the most fruitful in large Fish, and those too of the greatest Size in their respective kinds. We have already mentioned, in the Circumnavigation of *Nearbus*, how the Fleet of *Alexander* the Great was alarmed by a Shoal of Porpuffes, and what mighty Whales were seen by them in those Seas. *Pliny* carries the Matter much farther; he talks of Whales in the *Indian* Sea, that covered four Acres of Land; and mentions a lesser-kind, called *Pristes*, which in all Probability, were a Sort of Fin-fish, two hundred Cubits, or three hundred Feet in Length; and at this, says he, we need not wonder, since, in that Country, even the Locusts are four Cubits in Length; and that there are Eels in the River *Ganges* that measure thirty Feet. He farther observes, that, in the Red-sea, there is a Pinnisula, called *Cadura*, which runs far out into the Sea, and makes thereby a Bay so commodious, and so well covered from all Winds, that the Fish lie there as quiet and as still as in a Mill-pond; and there, says he, are bred those Whales of an enormous Size, which, sometimes venturing out to Sea are caught by Storms, especially about the Dog-days, and thrown on the opposite Coast of *Persia*, where the People eat the Flesh, and build themselves Cabins of the Bones, as we have, long ago, heard from *Nearbus*, whose Voyage on that Coast, seems to be the best Account that even in the Days of *Pliny* they had of those Seas.

In the *Ganges* there were Fish resembling Dolphins in Shape, called *Platanistæ*, which were more than twenty Feet long; and these I take to have been a kind of Sturgeon; but what most astonished them was, the Reports they had, that in the *Indian* Ocean there were Fish resembling all kinds of Land-animals; and of these they mention particularly the Sea-elephant, which they held to be five Times as large as the Creature from which it borrowed its Name, and of these they had not bare Reports only, but some of them had been seen and measured. As for Sea-lions, Sea-dogs, and Calves, they were common in those Seas, and though extremely terrible in their Descriptions, yet appear plainly to have been nothing more than different Species of the Seal, as I take the Sea-lions in the *West-Indies* to be. But of these, that which seems to have been the most dangerous was the Sea-hare; which Creature, *Pliny* affirms, was in the Mediterranean, a mere Lump, or very ill-shaped Fish; but, in the *Indian*-Seas, he assures us, that it was very like the Land-hare, and of a Nature so venomous, that the very Touch of it caused Sickness at the Stomach, strong Vomitings, and other deadly Symptoms.

What is related of the Hound-fish, or Sea-dog, seems very fabulous; and, one would imagine, was invented by the Pearl-fishers, in order to set the higher Price upon their Commodities. It is affirmed of these Monsters, that they attack the Divers when under Water, who are forced to keep them off with long Poles, at the Head of which are Spears, or sharp Points. The safest Way, as they found, by Experience, was, to attack these Animals first, for this struck a Terror into them, and kept them at a Distance; but the Danger was not then over, since,

* Nat. Hist. lib. ix.

* Plin. lib. ix. Ælian. lib. xvi.

when the Divers had done their Business, and began to ascend, the Sea-dogs returned to their Charge, and followed them with greater Fury than ever, while the Man was less able to defend himself, as being obliged to employ one Hand in holding the Rope which drew him up, so that he had only the other, in which he held the Pole, which was to keep off his Enemy. But the greatest Difficulty of all was, to pull him up into the Ship; for these furious Animals were ready, at the Instant he rose from the Water, to leap after him, and devour him in Sight of his Companions. To avoid so cruel a Death, the Man was forced to draw up his Legs and Feet as close as he could to his Body, while those on Board drew him up with a quick Jerk, and some of them with Hand-spikes, Trout-spears, and what ever else came to hand, stood ready to defend him from the Sea-dogs, in case they leaped after him out of the Water. These Creatures were no less subtle than cruel; and therefore getting under the Keel of the Vessel, they kept themselves very secure, and were ready again to renew their Attack upon the next Diver that was let down.

Now, though many Circumstances of this Account are very improbable, yet, it must be allowed, that the Pearl-divers run very great Hazards from those voracious Animals, with which these Seas abound, as we have already shewn by various Instances of Men torn to Pieces even in the Harbours, and in the Sight of the Crews of a whole Squadron, not by the Hound-fish, or Sea-dog, but by Sharks, Crocodiles, or Sea-serpents¹. It is highly probable that they were in all Ages liable to the like Misfortunes, and that the Reports of these, which, in themselves, were true, gave Birth to this and other Stories of the same Kind, which however fabulous in their Circumstances, were not at the Bottom absolutely void of Foundation.

2. It was in the same Manner that they magnified by misapprehending what they were told concerning amphibious Creatures; and hence it is that they report these come out of the Sea and Rivers, and make strange Havock in the Meadows and Corn-fields, which shews what an Impression the Accounts they had received of the Sea-horse, or Sea-cow, for it is called by both Names, had made upon them; for though they were in some measure acquainted with it in *Egypt*, and some of them had been brought to *Rome*, yet those of the *Indies* were much larger; and, indeed, there were few Animals more capable of striking with Astonishment by their Description, such as were unacquainted with them before.

The Sea-cow in the *East-Indies* resembles in Size and in Shape the Rhinoceros; and as that Animal has Legs shorter than the Elephant, so the Legs of this amphibious Creature are still shorter than his. When it rises out of the Sea or River to come on Shore, it spouts a vast Quantity of Water through its Nostrils. The Head, in its Make, resembles that of a Horse, except that it is much bigger, and therefore from thence, and from the Clumfiness of its Limbs, it derives its Name of the Sea or River Cote. The Coat is hairy, but very close, the Skin an Inch thick at least. It has on each Side two strong Teeth about a Foot and half in Length, weighing each of them about ten Pounds. These are esteemed the very best Ivory, or rather better than any Ivory, if we understand that Word strictly of the Elephants Teeth, because they have one Property which those Teeth have not, and that is, that they never lose their Colour, which is exceedingly white, whereas the finest Ivory grows yellow by Degrees.

The Sea Cow hath Udders, and suckles her young ones in the same manner that the Land Cows do their Calves, and they are often found with them in the Meadows; the Feet of these Creatures are divided into four, and they move pretty fast, notwithstanding their Bulk, when they are pursued. Their Flesh is esteemed more delicate than any other, and the Fat is as hard and as sweet as Butter. It is said, that feeding upon this Animal will change all the Juices in the Human Body, and therefore it is held the best

Restorative, and the most effectual Cure for Scurveys, Gouts, and other ill Habits of Body². It is allowed that these Creatures feed mostly upon Grass, and may possibly eat Corn too if it comes in their Way; but that they come up in Drovers, and breaking into Corn-fields, trample down and destroy the whole Fruits of a Harvest, is a thing not to be believed. We will now proceed to the Fish, properly so called, that are taken notice of by those Writers, or at least of such as are most remarkable.

3. The Dolphin seems to have exercised in a very particular manner the Attention of the Ancients, who have described it with greater Care, and preferred more Particulars relating to it than any other Fish, though at the same time it must be confessed, that the Accounts they have given us serve rather to raise our Admiration than to increase our Knowledge, because it so falls out, that with the Help of all they have told us, we are not able to affirm, with any Certainty, what Fish it was they distinguished by this Name. They report that it was excessively swift in swimming, that it carried its Head a little above Water, and that it had an extraordinary Kindness for Mankind. They likewise say, that the Dolphin was very common in the *Mediterranean*, the *Atlantick Ocean*, and the *Indian Sea*³.

It is very certain, that at present we meet in none of those Seas with any Fish that resembles the Figure of the Dolphin, as represented by the Ancients, neither is it known that any Fish has those Properties which they ascribe to the Dolphin. *Pliny* tells us a remarkable Story of a Dolphin that took a Fancy to a Boy in the Kingdom of *Naples*, and carried him on his Back across an Arm of the Sea to and from School every Day, the Boy calling him *Simo*, which Fact, he says, he would not have related, but that he found it mentioned before in several authentick Writers as a thing so well known, that it could not admit either of Doubt or Dispute⁴.

I have but just mentioned this Passage, because it hath been already transcribed by many Writers; but there is another Story in *Ælian* to the full as remarkable, which is worthy the Reader's Notice. It happened under the Reign of *Ptolemy Philadelphus*, that some young Men were bathing themselves in the Sea at the Mouth of the Port of *Alexandria*, when a Dolphin swam in amongst them, and taking a particular Liking to one of them, encouraged him to get upon his Back, which the young Man did, and it carried him a good way out to Sea. This being several times repeated, the Spectacle at last became common, and was beheld by Multitudes of Spectators. The End, however, was as tragical as the Beginning had been pleasant; for the Dolphin having one Day forgot to shut close the sharp Fin upon his Back, one of the Spikes ran into the young Man's Thigh, and he fainted with the Loss of Blood. The Fish perceiving his Distress by his not conducting him as usual, brought him back to the Shore, and then beholding the Condition he was in, remained likewise on the Sand, and perished with him⁵.

It would be an easy Matter to collect many more Relations of this sort from the Writings of the ancient Naturalists, if what has been said was not more than sufficient to shew, that upon certain Occasions they let no Bounds to their Credulity, and their Fondness for wonderful Stories. They likewise report of this Animal, that it was of such a social Nature, as to swim in Company with others of its own kind, for the sake of resisting mutually with greater Strength any Attempts that might be made upon them. They likewise assure us, that the Dolphins were drawn towards the Shore, and kept there by the Sound of Music, which is as incredible as any of the rest, and seems calculated purely for Amusement. Some other Circumstances they report which are more probable, such as that the Dolphin was naturally an Enemy to the Crocodile, and defended itself from the Attacks of that furious Creature, by raising the sharp Fin upon its Back⁶.

Certain it is, that from a Notion of its Friendship to Men the Ancients forbore eating its Flesh, and the Cyre-

¹ *Plin. lib. x. cap. 81.*

⁴ *De Animal. lib. vi. cap. 15.*

⁵ *Ælian. lib. v. cap. 6. Plin. lib. xi. cap. 37. Cæsar.*

ians carried their Reverences so far as to erect a Temple to it. It was from the same Notion that *Alexander the Great* appointed a Boy to execute the Office of High-Priest to *Nephture*, because the prevailing Opinion then was, that the Dolphins had a great Tenderness for Youths. As for the Fish that is known to us by this Name, they have been described in the former Chapter, and will be mentioned in subsequent Voyages; and therefore without dwelling longer on a Topic, upon which some learned Men have written large Treatises, we will proceed in our Discourse to other Inhabitants of the *Indian Seas* that have exercised the Pens of the Writers of Antiquity.

4. Of the *Purpura*, or *Purple Fish*, many Authors speak largely; and from them we gather, that there were several different sorts, some fed amongst rotten Mud, others on Sea-Weeds, a third sort in the Gravel; but that which was the richest, and yielded the strongest Dye, was called *Dialute*, or the *Wandering Fish*, that fed in all the different Soils beforementioned. This Fish had a long sharp Tongue, of the Size of ones Finger, so hard, and sharp at the Point, as to be able to pierce into other Shell-fish, and suck them; and thus living on their Blood, it became, when digested in the Body of that Fish, the noble Dye which was so much esteemed, and carried to great a Price, that the *Tyrrians* gained not only immense Wealth, but immortal Reputation, by their Skill in managing their Trade therein.

The manner in which they carried on this Fishery was thus: At the proper Season, which was in the Beginning of the Autumn, or the Beginning of the Spring, they let down into the Sea certain small Nets, in which were Cockles, or some other small Shell-fish, which had been for some time out of the Water. These opening their Shells for Sustainance, the *Purple Fish*, which, as we observed before, was a Fish of Prey, came presently about them, and greedily thrusting their Tongues into the Shells of the other Fish, they closed upon them, and so they were drawn up together. Then, as some Writers say, the Vein of the *Purple Fish* was opened, and the Colour drawn out. But *Pliny* gives us a much clearer and more copious Account of this Matter; for he tells us, that as soon as the Fish was caught, they did not take out the Colour, but the Vein which contained it; and having obtained a sufficient Quantity, they mixed it with Salt, and in this Condition it remained three Days; then to eight Gallons of Water they put one hundred and fifty Pounds of Colour, and boiling it over a gentle Fire, skimming it from Time to Time, it came in about five Hours to look perfectly clear and bright. In order, however, to judge the better of this Dye, and to know when it was perfectly boiled, they dipped now and then a Lock of Wool into it, by considering of which they knew when it required a higher and when a lower Degree of Fire.

After the Colour was thus prepared, they put into it such a Quantity of Wool as they intended to dye, which soaked in it for five Hours; then it was taken out, dried and carded, and afterward thrown into the Dye-Tub again; and after it was dried a second time was delivered to the Manufacturers to be spun, and wrought into Cloth. This was what was properly called the true Purple, which had been used in *Rome* Time out of Mind, when *Pliny* wrote, but not in common; for *Romulus* never appeared in this Colour, but when he put on his Robe called *Trabea*, and even in the Days of *Augustus* it was at a high Price; but afterwards it grew cheaper, or at least it grew more common, as *Pliny* tells us at large.

There seems to be no doubt that this was the finest and richest Colour known to the Ancients, especially the *Dibapha*, or double-dyed *Tyrian Purple*; for whatever Changes there might happen in Fashions, that from the first to last was esteemed the best. A great Question has been raised how this Colour came to be lost, since all the different kinds of Shell-Fish, from whence it was taken, were found in various Parts of *Europe*, as well as in the *Indies*; and the losing this Colour has been always mentioned as an extraordinary Misfortune, and as one of the Things in which we fall most short of the Ancients. But, perhaps, when this

Matter comes to be more seriously examined, the Loss will not be found so great, nay, I doubt, if upon the whole, we ought to account it any Loss at all.

In the first place, let us consider how it is possible the Art of managing this Dye should have been forgot, which was in so many Hands esteemed at so great a rate, and in general Credit throughout *Europe*; I say, let us consider this, and we shall plainly see, that it could have been lost no other Way than by the coming in of some other Colour, or rather of some other Dye, which afforded as fine a Colour, and at a cheaper Rate. We learn from *Pliny*, that a Pound of the true *Tyrian Purple* was worth a thousand Denarii, or upwards of thirty-two Pounds of our Money, which was surely an exorbitant Price; and therefore, if in succeeding Times a Method has been found of dyeing Purple at a cheaper rate, there is no Ground for saying that we fall short of the Ancients, that a valuable Colour has been lost, or that either their Knowledge or their Industry, at least in this Respect, was greater than ours.

But after all, there seems to be some Reason to doubt whether the Fact be true, I mean, that this Secret is lost, since both our own Royal Society, and the Academy of Sciences at *Paris*, have made considerable Discoveries on this Head, that is to say, their Members have made several Experiments on the Purple extracted from Shell-fish; and if their Experiments have succeeded but indifferently, I do not think it can be understood as a Proof, that the Ancients excelled us in this Particular. Father *Gage*, in his Survey of the *West-Indies*, tells us boldly, that the *Spaniards* have retrieved there the Secret of the ancient Purple, and that they dye Cloths, which are sold for twenty Crowns a Yard. I must confess this is a Fact, that I do not find confirmed by later Writers, and therefore I think there is Reason to suspect the Truth of it.

Father *Labat*, a much more careful and accurate Writer, has given us a very curious Account of the Attempts made in the *French Islands in America* to recover this kind of Dye, which is very worthy of the Reader's Notice; and therefore I shall give him as clear and as succinct an Account of it as I can. They have in those Parts a kind of Shell-fish, about the Bigness of the Top of one's Thumb, resembling in its first Appearance the common sort of Snails; but when examined more closely, and after the Fish is taken out, it appears one of the most curious and beautiful Shells that can be imagined. It is, though very thin, of a very strong Substance, and of a beautiful Azure Colour. The Flesh of the Fish is extremely white, but its Intestines of so bright a red, that the Colour is seen through its Body; and it is this Colour which tinges the Slime it throws out, when taken of a Violet, or rather of a deep Blue. In order to oblige these Animals to throw out a greater Quantity of this Slime, they are put alive into a Dish, and struck one against another, either with the Hand, or with a little Twig, upon which the Dish is presently covered with this kind of Slime, in which, if a Piece of Linnen be dipped, it is immediately dyed red, and by degrees becomes, as it grows dry, of a deep Purple. But Father *Labat* observes very cautiously, and like a Writer, very careful of speaking Truth, that if this be the Purple of the Ancients, we have not hitherto the Art of fixing it; for how deep soever the Colour may appear when the Linnen is dried, it soon decays, and if washed, is speedily taken out.

This Fish, while admired only for its Shell, was called simply *le Burgau*; but since this Discovery it is called *le Burgau de Teinture*. Our Author himself made several Experiments toward arriving at a finer Colour from a Plant in the same Country, and nor without Success, which I think plainly proves that he had no great Hopes of obtaining any fixed and perfect Colour from the Shells. On the whole therefore, I think it as plain as any thing can well be made, that the Purple of the Ancients gave way to some brighter and cheaper Colour; and if ever this Secret should be recovered, it would prove a Curiosity only, and never could be brought again to a Manufacture, because in

All the Experiments that have been made in this Country, and in *France*, it has been found, that a great Difficulty would arise in procuring Shells enough to furnish a sufficient Quantity of this Colour for Use; whence it follows, that after all the Improvements that could be made for fixing and perfecting this Dye the Dearness of it would hinder it from coming again into Use, as heretofore it drove it out.

Before I part with this Subject, I think it may not be amiss to observe, that in some Lakes in the North, and in the West of *Scotland*, there are a kind of Mussels, which have in them a purple Vein at the Extremity of the Shell, in which there is contained a Drop or two of a Liquor that stains Linnen of a deep Crimson, which is not at all apt to wear out, but continues as long as the Cloth can be worn; but I do not know whether this Fish be very common, or whether this Purple Vein be natural to it, or the Effect of some Disease, which has been suspected of the true Purple*.

5. We will now proceed from this Source of Riches which at present is lost to another that still subsists, I mean the Pearl-Fishery; for it is allowed that the finest and most perfect Pearls are, and in all Ages have been, brought from the *Indies*. It is true, they do not at this Day fetch so high a Price in *Europe* as they did formerly; but still the Oriental Pearls are of considerable Value, and are like to continue so, inasmuch as they have all the Properties that are requisite to render them fit to be reckon'd amongst the most beautiful Jewels that can be, neither is there any Counterfeits that at all approach them in their Lustre: Though People have attained in that Art to a Degree of Perfection scarce to be expected.

The Fish that produces the Pearl is a kind of Oyster, but much larger than the common Sort, or indeed than any that are found in our Seas; they are common on the Coast of *Perisa*, near *Ormus*, about *Cape Comorin*, and on the Coast of the Island of *Ceylon*. The Shell-fish which produces them is called the Mother of Pearl. The Ancients had an Opinion that Thunder and Storms had some Effect in producing them; for which we shall be able to give a tolerable Account, without admitting any thing wonderful, in the Fact. The Fishing of Pearl was a Thing always attended with great Hazard and Danger; such as were employed in it being obliged often to dive in Places thirty Fathom deep, where they were exposed to many ravenous Monsters, peculiarly thirsting after human Blood. They were let down out of the Vessel to which they belonged with a Weight of Stone, fixed either to their Side or to their Feet, that they might defend the quicker and remain the more steady under Water. In their Right-hand they had a sharp Iron, which they used for removing the Oysters from their Beds; and on their Left-arm hung a Basket, in which they put the Fish when they were caught, and about this Arm also a Cord was tied, by which they gave Notice to those in the Ship when to pull them up by another Cord that was about their Middle*. Some Writers, say they, carried their Basket or Bag, into which they put their Fish, about their Necks.

The largest Sort of Fish were found far in the Sea; and if they were at any Time driven upon the Coast it was by tempestuous Weather. And hence the Opinion arose, that great Thunders and Storms contributed to swell and to increase the Pearl. The Fact therefore was true, that after Tempests the largest Pearls were found: But the Opinion grounded upon this, that the Thunder was the Cause of the Pearls Increase, seems to have no Foundation in Reason. So easy a Thing it is to mistake Effects for Causes, and to introduce Errors in Natural Philosophy, by reasoning wrong upon Facts. When the Divers touched the Oysters, especially those of the largest Size, they cling so strongly to the Rock, that, very often, there was no removing them, even with the Help of their iron Instrument. In the Oysters they brought up, when opened, the Pearls appeared like little Drops of

fair Water or Dew, which hardened with being exposed to the Air, and were then carefully taken off the Shell. In one Oyster there was commonly ten or twelve, in some more, in some less; but the more there were the smaller; and if there was but one, it was generally of a very considerable Size, and of greater Value than many small ones; so that these Shells were esteemed the richest of all*. The Shell itself is also of some Value, as having a prodigious Lustre, and being extremely fit for Inlaying and other Uses.

Philostratus has a very curious Passage in relation to this Subject, if his Accounts could be absolutely depended upon; but whether they be or be not, as what he relates is very remarkable, it deserves at least to be related; and then let the Reader think of it as he pleases. The Story, as he tells it is this; some of the *Indian* Pearl-fishers have a Method of obtaining that valuable Commodity, without bringing up the Oysters at all. In order to this, the Divers carry down with them a certain kind of rich Perfume, which they hold before the Mother-of-pearl; and while the Fish sucks it, which it will do very greedily, they gently open the Shell, from whence a Liquor distils Drop by Drop, that presently harden into Pearls*. It might be alledged, in Support of this Story, that both *Athenæus* and *Pliny* seem inclined to believe that Pearls are at first Liquid; which is, indeed, agreeable enough to their Form and to their Lustre†.

At this Day, there are four considerable Pearl-fisheries in the *East*. The first is on the Coast of the Island of *Baharen*, in the *Persian* Gulph, of which the *Portuguese* were formerly Masters, but now this Fishery belongs to the *Persians*. The second is near *Catifa*, on the Coast of *Arabia the Happy*, over-against *Habaren*. The Pearls taken at these Fisheries are most esteemed in the *Indies*, though of a yellowish Cast; for they assert, that the Pearls of a brighter Water do not last, but turn of a muddy Yellow in the Space of about thirty Years; whereas those which have originally a little Mixture of the Lemon-colour, are thoroughly ripened and never abate of their Lustre. A great Part of the Pearls taken in this Fishery, are carried to *Balsora*; from whence they are distributed all over the *Indies*; those again which are transported into *Perisa* and *Muscovy*, are sold at *Bandarcong* two Days Journey from *Ormus*. They fish twice a Year; first in the Months of *March* and *April*, and again in the Months of *August* and *September*. The Depth where they fish is from four to twelve Fathoms; and the deeper the Oyster is found, the Pearls are the brighter, because the Water is not so hot there, the Sun not being able to penetrate so deep.

The third Fishery is on the Coast of the Island of *Ceylon*, at a Place which is called *Manar*. The Pearls found there are of a good Water, but small; and the greatest do not surpass two Carats; nay, it is seldom that they are found of that Weight; But, in Recompence of this, there is great Quantity of Seed-pearl fit to powder. The fourth and last Fishing is at *Japan*; the Pearls there are of a Water white enough, and heavy, but ill shaped, most of which fall into the Hands of the *Dutch East-India* Company; because the *Japonesse* themselves have no Esteem for Jewels of any Kind*. The poor People employed in these Fisheries live very meanly, and scarce get a Subsistence by them; even those who deal in Pearls are far enough from being rich, through the Oppression of their Princes on one Side, and the Art of the *Dutch* on the other: who finding that the bright Pearl taken on the Coast of *Ceylon*, are most esteemed, and go off at the greatest Rate in *Europe*, employ a *Brachman* to buy them up as they are caught, which he does at a very low Rate. The Persons concerned in this Trade, launching out into greater Expences than they can afford, and thereby subjecting themselves to the dreadful Necessity of parting with the Fruits of their Industry to such as are possessed of Money*.

* This is the Sentiment of *M. Baumur*, who made many Experiments on the Purple fish on the Coast of *Provence*. *¶ Voyage de Indes, Vol. 5. p. 265.* *¶ Liban. de Animal. lib. 3. cap. 11. Lib. xv. cap. 8. Amman. Alacel. lib. xxviii. cap. 12.* *¶ Plin. Nat. Hist. lib. 9. cap. 35.* *¶ Plin. Nat. Hist. lib. 9. cap. 35.* *¶ Tavernier Voyage aux Indes. Tom. 10. lib. 21. cap. 25. 24.* *¶ Athen. Deipn. lib. iii. p. 93. Plin. lib. ix. cap. 35.* *¶ Tavernier Voyage aux Indes.*

• This tempts some of them to a very base Practice, which is throwing a poisonous Drug into the Sea, near the Banks where the best Fish lie; upon which they immediately remove to another Coast, where such as are in the Secret fish for them, and become rich before their Roguery is found out. There are now several Pearl-fisheries established in the *West-Indies* and in other Parts of the World, as we shall shew in their proper Places. But, as the Value of those Pearls arise from their approaching in their Colour and Water to the Oriental Pearl, this sufficiently shews that the Excellence attributed to them by ancient Writers, is not at all prejudiced by the Discoveries made in later Times, to which the Policy of the *Indian* Princes contributes not a little; for by purchasing the fairest Pearls at high Rates, they keep up their Price to the *Europeans*, so that there never came such Numbers into this Part of the World as to sink them much in their Value; hence it is whatever becomes of the Pearls of other Countries, those of the East still keep up their Credit, and a Pearl of the Weight of four Carrats, is worth ten or twelve Pounds, and of a larger Size and well shaped much more.

6. As the Pearl-fish and the Pearl-oyster were deservedly admired for their Value and Price, so the *Indian-Seas* afforded other Fish that were held extremely remarkable for their extraordinary Properties. Amongst these the Flying-fish were thought none of the least extraordinary. The Flying-fish that are common in the *West-Indies*, are of the Size of a Herring, with a round Head, and a Sort of large Fins, which serve them for Wings, and with which they fly about the Height of a Pike from the Sea, and are then forced to drop again into that Element, because their Wings become dry; but these no way resemble the Flying-fish in the *East-Indies*, or at least those mentioned by the Ancients; for they came out of the Sea, or out of Rivers, at certain Seasons, and leaped about in the Meadows like Grass-hoppers. The Story is strange, and we have it told in very fucinct and general Terms by *Albenamus*, who is the only Author who reports it. But *Marco Polo*, one of our most ancient Travellers, mentions something of the like Nature, and says, that from its living in this Manner, the Creature is called the *Sea-locust*.

Martinus, who has written as copiously, and with as great Reputation of the Empire of *Cbina*, as any Author whatever, confirms this; and informs us, that the *Chinefe* call it *Hongioqu*; but he is very short in his Description; for he tells us only that it is a yellow Fish, or, rather a Bird; for in the Summer, says he, it flies on the Mountains, but towards the End of Autumn, it throws itself into the Sea, and becomes a Fish of a most exquisite Taste. He tells us, likewise, of another Creature that he saw, that had the Head of a Bird and the Tail of a Fish, which it was reported had some very singular Qualities.

It appears from these Citations, that we ought not, absolutely, to reject the strange Things told us by ancient Authors, without Examination; because, though the Facts they relate cannot be verified, yet, as in this Instance, it may be plainly made appear, that they are not pure Inventions; and, therefore, it is better to preserve even what seems incredible in their Writings, in order to encourage Enquiries that may, in Time, bring out the Truth. It may not be amiss to observe, that, in *Japan*, they have likewise a Flying-fish of about a Foot long, which, in their Language, is called *Tobiwao*; and is said to be very scarce, but excellent Eating.

It were to be wished, that such as travel in these Countries, would be more careful in examining the Animals they meet with upon the Spot, and in committing their Descriptions to Writing immediately; because, we should not then be so much at a Loss as we now are, what to make of their Descriptions.

7. The Tortoise, though it cannot be said to be a Creature peculiar to the *Indies*, yet the *Indian* Tortoises are so much larger than any others, that, in this respect, they deserve to be particularly considered. Of these Creatures there are three different Sorts. The first live entirely on Land; the second in the Sea; and the third in fresh Waters. The Figure of this Creature is very extraordinary. It has a Head so very small that it seems to bear no Proportion to its Body. They have not either Teeth or Tongue, and yet the Tortoise not only breaks to Pieces the hardest Shells, but even Stones with its Lips; which, by their excessive Hardness, very effectually supply the seeming Want of Teeth. The Feet of this Animal are very short, and its Motion remarkably slow. It has, on its Back, a Lump of Flesh, which communicates with its Shell, by which it is entirely covered, and it even extends beyond its Body, when the Animal withdraws itself into it, and thereby proves a sure Defence against all Dangers from without; and are so strong that a Waggon well laden, may pass over them as over a Stone, without any Injury either to the Shell, or the Creature within it. They are five or six Foot long, which is a monstrous Size, considering the Bulk of these Creatures in other Countries; and yet some ancient Writers speak of Tortoises in the *Indies* of a much larger Size, the Shells of which are said to be big enough to cover a small Cabin; and it is said, that in the Island of *Taprobana* they made use of no other Covering for their Houses.

There were various Methods practised in taking these Creatures; for sometimes they gorged themselves to such a Degree in the Meadows, that they were not able to retire; and then, whoever found them, turned them on their Backs. Sometimes the Sea-tortoises were, in like manner, left on Shore at the Time of Ebb; and sometimes they placed round Sticks in their Road to the Meadows; and as soon as they set their fore Feet upon them, those who watched for that Purpose, laid hold of one End of the Stick, lifting it suddenly up, turned the Creature over. Their Flesh is both wholesome and pleasant, and their Eggs, which in Size resemble those of a Hen, are excellent.

Pliny reports, that their Flesh, their Blood, and even their Excrements, are very medicinal. Among other Receipts from this Creature, he gives us that which follows. Take, says he, three Land-tortoises, he means those of the smaller Kind, throw them on a Fire made of Vine-twigs; and as soon as their Shells begin to part from each other, pull them out immediately; and having taken their Shells off, boil them in a Gallon of Water, with a small Quantity of Salt, till a third Part of the Liquor be consumed; the Broth will be then, says he, a sovereign Medicine for such as are troubled with the Palsy, the Gout, or Rheumatism.

But that, for which this Creature is chiefly valued, is, his Shell, of which, over all the *Indies*, but particularly in *Cbina*, they make a Multitude of useful Things, as well as many beautiful Toys. These were Arts far from being unknown to the Ancients; for, as we learn from *Pliny*, *Carbilus Pollio*, a Man of a wonderful Invention, was the first who introduced the Use of Tortoise-shell-plates for In-laying all Sorts of Household Furniture. It is reported, that the *Portuguese* settled in the *East-Indies*, place Sea-tortoises near the Fire till their Shells begin to rise; and then taking them off in an Instant with a flat Knife, they afterwards throw the Creature back into the Sea, where, they affirm, that, in a single Year, they gather a new Shell, as firm and as beautiful as the former.

Besides the Uses that have been already mentioned, there is another to which those Tortoises are applied, the Flesh of which is not fit for eating, and that is boiling it into Oil, which Oil not only serves for Lamps, but also for many physical Uses; and more especially for restoring

wasted Limbs, or such as have had their Sinews shrunk. The Tortoise is exceedingly annoyed by the Sea Eagle, which taking the smaller sort in his Talons, carries them a great way up into the Air, and then letting them fall on a Rock, breaks the Shells, and so feeds upon their Flesh, which, but for this Contrivance, would be secure from his Fury?

8. The Crocodile is another amphibious Creature common to Africa and the Indies; but the Indian Crocodiles are by far the largest, and those that frequent the Marshes near the River Ganges are believed to be the biggest in the World. Aristotle has given us a very large Description of this Animal, which is withal very accurate and just: He informs us, that the Female Crocodile lays sixty Eggs or upwards at a time, each of the Size of a Goose's Egg, and the Animal, when hatched, is of the same Proportion; but as it grows as long as it lives, it reaches in some Countries a larger, and in others a less Size; Aristotle mentions fifteen Cubits, which is two-and-twenty Feet and a half, as the largest Size he had heard of; but in the Indies there are Crocodiles of twice that Bigness, for which we shall hereafter assign a probable Reason.

The Crocodile is of the Lizard kind, and therefore we need not enter into a particular Description of it; it has no Tongue, and moves only the upper Jaw. Its Teeth, which are very strong and sharp, shut into each other like the Teeth of two Combs. It is also armed with terrible Claws; and his Back and Legs are covered with Scales so strong, that they are not to be pierced. He passes the Day mostly on Shore, and retires in the Night mostly into the Water, where having gorged himself with Fish, he comes on Shore when the Sun is up, and sleeps upon the Sand. Pliny says, that for four Months in the Winter the Crocodile retires to some Cave or Den, where it sleeps for that Time, without receiving any Sustainance.

As this Creature is only bred in hot Countries, so it seems incapable of living in colder Climates. There was one brought into France in 1681, and being landed at Rochelle was brought from thence by Land to Versailles; but they were frequently obliged to lay it before the Fire, for otherwise it would not have survived the Journey. It would eat nothing after it left the Ship, and died when it had been kept about a Month at Versailles. When they dissected it, they found in its Stomach a considerable Quantity of Sand, and some Snails with their Shells whole. It appears from hence, that the Accounts of this Creature that are given us by the Ancients are justified by Experience.

Thus far of Crocodiles in general, we will now speak particularly of those in the Indies, and compare the Accounts given us of them by the Writers of Antiquity, with the Relations of such modern Travellers as are thought to deserve most Credit. Strabo informs us, that when Alexander found the River Hydaspes much infested with Crocodiles, and Egyptian Beans growing on its Banks, he made no sort of Question that he had found the Head of the Nile in the Indies; nay, to such a Degree was he persuaded of the Truth of this Discovery, that he actually directed a Fleet to be prepared in order to have sailed that way into Egypt, from whence it seems highly probable, that before Alexander's Expedition the Ancients did not know that there were Crocodiles in the Indies.

It is from Strabo likewise that we learn that these ravenous Creatures have an Aversion to Swine's Flesh, which, however, is a Point that deserves to be enquired into. Ptolemy, in the Life of Apollonius Tyanicus, enters into an express Comparison between the Rivers Indus and Nilus, which, he observes, have a great Resemblance, especially in these two Particulars, their overflowing annually, and their being full of Crocodiles; but in this as in many other things, that Writer is plainly mistaken, for the River Nilus is not the only River in Africa, in which Crocodiles are bred, nor are these Creatures peculiar to the Indus, but infest generally most of the large Rivers in the Indies, and

particularly the Ganges, where are the largest Crocodiles perhaps in the World; and it is observed by St. Ambrose, that it passed for a kind of Miracle among the Indians, that at the Season of the Year when the Brachmans passed that River to go to their Wives, they were never infested by these terrible Animals.

If we could confide in what the Missionaries have told us of this Subject, we might add some curious Particulars to the natural History of Crocodiles. Father Francis Collin asserts positively, that this Creature voids no Excrement, nor has any Passage for it, which I doubt is not agreeable to Truth. It is likewise affirmed both by him and Father Nazarette, that the Female Crocodile destroys her Young, swallowing them as they run from the Sands, where they are hatched, into the Water, which is another wonderful Circumstance that never occurred to the Ancients, or for any thing I know to any other of the Molems. As to what both these reverend Writers relate of Musk-bags being found in this Animal, it is singular, but not at all improbable, because almost all Writers agree, that the Flesh of the Crocodile has a very musky Scent; and in the West-Indies the Mouths of the Rivers where these Creatures haunt have their Waters so strongly tinged with this Smell and Taste, that they are not drinkable.

Gasper Balbi, whose Travels through the Indies are extremely curious in his Description of the City of Pige, which he visited in 1576, has the following extraordinary Passage: "The Inhabitants of this City lead, for the most part, a lazy and scandalous Life, they are very stultish in their Houses, in which, generally speaking, they keep Hogs. They drink the Water in their Ditches rather from Superstition or Custom, than from any other Reason, which is the more wonderful, since the Crocodiles in those Ditches are not only numerous, but of an extraordinary Size, insomuch that many of them exceed thirty Feet in Length, and yet the People, who see some or other devoured by them every Day are so stupid as to reverence them as they do the Apes; and this from a firm, as well as foolish Persuasion, that the Souls of such as are devoured by the Crocodiles find the direct Road to Heaven. The Subtlety of these Creatures is very extraordinary. When the People come with their Pitchers to take up Water, they conceal themselves under the great Weed, or under the Reeds, which grow on the Side of the Ditch, and laying hold of the Perlon by the Hand, or by the Foot, pull them to him. Men and Women have been seen in this manner with their Heads and Hands above Water, roaring out for Help, till such time as they were dragged to the Hole where the Crocodile lay, and who was distinctly heard to devour them. Remonstrances having been once made to the King on that Subject, he ordered the largest Crocodile, and which was known to have done most Mischief, to be taken and killed. This Creature was of an enormous Size, and of a most terrible Appearance. After his Death there were not so many People killed as before; and it seems not a little wonderful, that they did not pursue the Extermination of these Animals for the Preservation of the Inhabitants. It is observed here, that though the Elephant, which is a very hot Creature, not only drinks out of those Ditches, but frequently goes into them to cool and refresh himself; yet the Crocodiles never venture to attack him, which is supposed to be owing to the Bigness of the Creature; for it is observed, that the Crocodile is as cowardly as it is cruel."

Peter Vanden Broek tells us, that on the Coast of Carmandel the Crocodiles are very common in all the Rivers, insomuch that the People are afraid to pass them, or to go by Water; and this with great Reason, since while he was there there were several, both Men and Women, devoured by them. In the Island of Java, when the Dutch first visited it, the Rivers were full of Crocodiles, and People were often devoured by them; yet the Chinese, who lived

1. The large Indian Eagle described by Aristotle and other Writers of Natural History, with the Lapis Lazuli or stone found in its nest. 2. The Ostrich in its common posture in running.

3. The Casuarina or Casuar a Bird of a very singular Kind found in Sumatra, Banda, and the Moluccas. 4. The Water Plover or Omeritulus of Pliney from a Hunting taken from the Life.

in that Island, had the Secret of taming them, fatted, and afterwards killed and eat them; which will appear the less strange, when we are told, that *Aristotle* relates the same Thing as done in his Time in *Egypt*¹. In the Island of *Ceylon*² they are much infested with Crocodiles, which the *Portuguese* call *Lagartos*, they are generally about eighteen Feet long, and the Inhabitants of that Country report, that they have a Stone in their Head, which is a Specifick for all gravelly Complaints, and is even capable of dissolving the Stone.

The *Arabians* call this Creature *Temsa*, the *Persians* *Nibenk*, the *Turks* *Lowi*, and the *Chinese* *Tben*; they all agree, that they are as long-lived as a Man; and this seems to account for their monstrous Size, since I do not find, that what the Ancients relate of their growing as long as they live is disputed by the Moderns; and that in *India* they should be larger than in any other Country, may be accounted for from two Causes, the first is, the Heat of the Climate, which is allowed to have a great Effect on such kind of Animals; the second is, the preposterous Reverence shewn to these destructive Creatures in many Places, by which they are preserved to a greater Age, and consequently arrive at a larger Size than in other Countries, where the People have Wisdom and Resolution enough to rid themselves of these Monsters.

9. The *Ganges*, and as some ancient Writers report, the River *Indus* also nourishes in it a Worm or rather Serpent, of a most singular kind, considering either its Form or its Properties; its Skin is of a dark blue, from whence it receives its Name *Cyanoides*; it is in Length six Cubits: *Pliny* by some Error runs in the transcribing, has sixty Cubits, and is about two Foot round; it has but one Tooth in each Jaw, which is about four Inches long, with which laying hold of whatever Animal comes to drink at the River, whether Horse, Cow, Camel or Elephant, it pulls them under Water, and there tears to pieces and devours them, the Entrails only excepted.

This dreadful Creature is caught with a Hook hid under the Belly of a Sheep or Goat, and the Use made of it when dead, is to the full as singular as what is related of it while living. The Fishermen after it is caught hang it up by the Tail in the open Air, where, by the Heat of the Sun, in the Space of three Weeks it consumes into a kind of Oil, which has this singular Quality, that it takes Fire of itself if exposed to the Air, and is absolutely unextinguishable. It was for this Reason, that the Emperors of *Persia* who were Masters of the Provinces bordering upon the River *Indus*, and the *Indian* Princes, Successors to *Sandracontus*, who were in Possession of the same Provinces after the Successors of *Alexander* quitted their Claim to them, reliev'd all this Oil for their own Use, and employ'd it in Time of War to set the Gates of any City on Fire, which they intended to take by Storm³.

This Serpent appears to have been at least as strong, and at the same time much more fierce, than the Crocodile; which, as we have heard, never ventur'd to attack the Elephant. The original Writer of this strange Story, was *Ctesias*⁴: who was told it at the *Persian* Court, where perhaps they had some such Oil brought from the *Indies* with this Fable tack'd to it, to make it esteem'd more valuable; which from numerous Instances we have shewn, was a common Artifice of these People to fright other Nations from making any Expeditions into their Country. The Reader may perhaps be surpriz'd at my supposing it possible, that there should be any such Oil; and therefore I think myself oblig'd to mention my Reason for it: Our Chymists have a Secret of making a black Powder which is called *Pulvis Infernalis*, that will take Fire by being expos'd to the open Air; and therefore, I see nothing absurd in admitting, that there might be an Oily Composition which had the same Quality. It is also certain, that the *Greeks* had a kind of Wild-fire of the same Nature, which they employ'd in burning the Ships of the *Saracens* when they block'd up the Port of *Constantinople*.

It is certain, that none of our modern Travellers mention any Thing, that has the least Relation to this extraordinary Creature; but in all Probability, the Accounts given us by these ancient Writers, took Rise from some of the Water-Serpents that are common in the Mouths of most Rivers in the *Indies*, of which we have spoken before under the Head of Dragons, and of these great Numbers are brought down into the Sea on the Coast of *China*, as they are also by the Rivers that run thro' the *Terra Australis*, or the *Southern-Continent*, as we observ'd before in the Account given of Captain *Abel Tasman's* Voyage for the Discovery of that Country; and if there be any Probability in the Arguments drawn by *Philostratus*, of the Likeness of *Ethiopia* to the *Indies*, from the Resemblance between the *Nile* and the *Indus*, we might from hence infer, that there is a like Correspondence between the Climates of the *Southern-Continent* and the *Indies*.

The same *Philostratus*⁵, differs from other Writers as to this Serpent in several Circumstances; first, he says, it is found in the River *Hypophates*, next, he affirms it to be white; and lastly, he says nothing of its Teeth or of its Fierceness. *St. Ambrose*⁶ mentions another very singular Worm in the *Ganges*, which he says looks at first like a long Pipe, with the Horns of the Animal appearing at one End; then it changes to a Sort of Worm, rolls itself up soon after in a Ball or Case, like that of the Silk-Worm, and when it comes out from thence, puts on the Appearance of a Butterfly. He adds, that from the Ball they draw a kind of Silk, of which are made the finest Stuffs in the Country; but, this too, if any such Creature there be, is not known to the Moderns, which is the more extraordinary, because it is generally believed that we are much better acquainted with the Manufactures of the *Indies*, than the Ancients; so that upon the whole, I am apt to suspect, that this is no more than a mistaken or erroneous Account of the Silk-Worm.

It cannot, however, be amiss, to preserve all these Relations, because however improbable or even incredible, they may appear, yet it is not impossible, that there may be something of Truth at the bottom, even of the most extravagant Relations. This at least is certain, that for many Ages the *Indians* concealed not only the Sources of their Riches, but the Secret of their Manufactures, and especially that of Silk, as we shall have Occasion to shew at large; and it is no less certain, that in order to conceal them, they invented a Multitude of Fables, with which for a long Time they impos'd upon the World. One would suspect that something of this Spirit remains still among the *Chinese*, from the improbable Accounts that are given us by the Missionaries, of that Country, and every thing in it; but more of this in its proper Place; at present, we have done with the Animals that inhabit the Water, and are next to examine the Volatiles of the *Indies*.

10. The Eagle is generally considered by all Naturalists, as the King of Birds, which Title is supposed to have been bestow'd on this Creature for its superior Strength; for the natural Terror that it strikes into the whole feather'd Race, and for the Boldness of its Flight in which it soars higher than any Bird whatever⁷. It was very possibly, the Consideration of these Properties, that induced *C. Marius* when a second Time Consul, in the Year after the Building of *Rome* 650, and the Year before *Christ* 103, to suppress the Figures of the Wolf, the Minotaur, the Horse, and the wild Boar, which hitherto (as well as the Eagle) had been borne on the Roman Ensigns, in Order to substitute the Figure of the Eagle, with her Wings half display'd in their Stead, as an Emblem more significant than any, or than all the former, and more capable of exciting the Ardour, Courage, and Emulation of the Soldiers, than any that could be devised; and this Alteration of his was sufficiently justified by the Event⁸.

Pliny distinguishes six kind of Eagles, among which however, he allows only one to be the true Royal Eagle,

Where he observes that seldom or never, any Corps of Roman Troops encompass'd with fewer than two Eagles. But *Aristotellus* had long before this borne an Eagle on his Buckler, as we are inform'd by *Pausanias*, lib. iv. p. 319.

of which we are now to speak. It is a very difficult Thing to assign the true Size of this Bird, because the Records of History, and the Experience of later Ages do not very well agree. The Antients report, that the Eagle is very long-lived, so as to reach a full Century, and to grow as long as he lives, which if certain, might induce us to believe what *Athenæus* tells us, that at the Inauguration of *Ptolemy Philadelphus*, there were Eagles carried in the Procession, the Wings of which when extended, measured thirty Feet¹. A modern Naturalist assures us², that not far from *Dresden* in *Saxony*, an Eagle's Nest was discovered, in which there were three young Birds full fledged, but not quite able to fly, tho' their Wings expanded reached seven Yards. But in the Memoirs of the Royal Academy at *Paris*³, there is a large Account of a She-Eagle dissected there, which falls very far short of what is mentioned in the former Relations; for this Bird measured but two Foot nine Inches from the Beak to the Tail; the Extent of her Wings was but seven Feet, and the whole Weight of the Bird no more than ten Pounds. In all Probability this was a very small Eagle, and perhaps not of any of those Sorts mentioned by the Antients, who agree very well in their Accounts, and particularly in this, that the *Indian* Eagles excelled the rest in Courage and Strength, and consequently in Size.

The same Writers observe, that this Bird has a very brisk Eye, which is fixed pretty deep in the Head, covered in some Measure by the Bone which projects over it, and strengthened by a Membrane of a singular Texture, being made up of several small Scales. The Ball of the Eye is of a bright Isabella, and has all the Life and Beauty of a Topaz. The Tongue of the Eagle is not pointed like that of other Birds, but in a manner square, of a sort of cartilaginous Substance with two hard Points at the Bottom like the Barbs of the Head of an Arrow. The Wind-pipe of this Animal is prodigiously strong, and in breathing is distended to such a Degree, as to be near two Inches in Diameter. Its Bones are very thick and hard and have scarce any Marrow: Its Brain is said to be of so hot a Nature, as when given in Powder to occasion Madness: Its Blood is very thick, and in a Manner fibrous: Its Gall sharp, penetrating, and capable of eating into whatever it touches, and its very Feathers are of such a corrosive Quality, that they destroy if mixed with them, the Feathers of other Birds⁴.

The Voracity of the Eagle is so great, that it requires a considerable Extent of Country to furnish Prey sufficient for his Subsistence; and hence it is observed, that two Eagles never live near each other. *Aristotle* and *Pliny* tell us, that when the young Eagles grow up and begin to fly, the old ones not only drive them from their Airies, but also force them to quit the adjacent Country⁵. These voracious Birds not only prey on all Sorts of large Fowl, but hunt also Rabbits, Hares, Sheep, Goats and Fawns, which they kill and carry away. We have an Account from *Alian*⁶, of an Eagle of extraordinary Size, which ravaged Part of the Island of *Crete*, and was so furious, that he hunted Bulls and Oxen, as well as smaller Creatures: The Manner in which he destroy'd them was this, he fixed his Talons betwixt their Horns, and then began to tear their Heads with his Beak, and often covering their Eyes with his Wings; the Creatures mad and blind, ran as fast as they were able, till they either fell over Precipices, or stuck fast in some Morass, where the Eagle tore out their Bellies, and having thus killed them, devour'd them at his Leisure.

As this Creature lives entirely on the Flesh of Animals, he tastes no Liquid but their Blood, and never drinks Water but when he is sick. It is said that the Stork is the only Creature able to resist him; and in one of the old Poets we have a large Description of a Battle between these Birds, in which, however, there is a greater Appearance of Imagination than Reality⁷. Other Animals are so fearful of the

Eagle, that they tremble at his Cry; and even the Dragon is said to retire for Shelter to his Den. The Sea Eagle hovers over that Element, or over the Lakes, and darts with prodigious Force into the Water, seizes the Fish in their Talons, carry them on Shore and devour them; 'tis for this Reason that the *Indians* prosecute them with a cruel and never ceasing War, and are said to destroy them with burning Arrows.

One of the most singular Qualities of this Bird is, the Capacity he has of beholding without Inconvenience the Sun in his Meridian Lustre; and of this Property he is so jealous, as to destroy (if the Antients say Truth) such of its Progeny as wink, when in their Nests the old one turns their Heads towards the Sun⁸. But with respect to the young ones that are able to bear this Trial, the Eagles cherish them with as much Tenderness as any other Bird, and defend them with the most obstinate Resolution in case any Attempt be made to take them. They fly round their Nest, and vary their Flights for the Instruction of their Young; and afterwards taking them on their Backs, they soar with them aloft in order to try their Strength, shaking them off into the Air; and if they perceive them too weak to sustain themselves, they with surprising Dexterity fly under them again, and receive them on their Wings to prevent their Fall. The Eagle is supposed to be the only sort of Bird indued with this kind of Instinct, and this serves to explain one of the boldest and most beautiful Similes in the Sacred Writings⁹.

The young Eagle, perfected by such Instructions, wings his Flight into the superior Regions of the Air, and notwithstanding his great Bulk, frequently soars out of Sight, flying always directly towards the Sun. Hence is derived the Fancy of the Poets, that *Ganymede* was carried by an Eagle up to Heaven, and there became the Cup-bearer of the Gods; and hence also another Notion took Rise, that the Souls of Heroes were in like manner conveyed to the Celestial Regions¹⁰. It is pretended, that the true Reason why some of the young Eagles are not able to bear the piercing Light of the Sun is their having some Defect in their Eye-lids; for it is said, that they are furnished by Nature with two Membranes for this Purpose, one of which we have before spoken, which covers the Eye, and shuts out the Light entirely, the other of a thinner and more delicate Texture, which being drawn over the Eye, preserves it from being any way injured by the strongest Rays of Light¹¹. It is however very remarkable, that in the Memoirs of the Royal Academy at *Paris*, relating to the Dissection of this Bird, there is nothing said of this second and thinner Membrane, though the Eye and the other ically Membrane are very accurately described¹².

In this, however, all Writers ancient and modern agree, that the Eagle is not at all incommoded by the Sun-beams, and that it is very probable he renews his Strength, or preserves his Youth by touring so near that Fountain of Light and Heat. We are particularly told by some Writers, that once every ten Years he makes an unusual Progress in his Journey, and that for this Reason: He finds his Wings and other Feathers heavy and unfit for flying, which induces him to rise with all his Force, in order to reach as near the Sun as possible; and having thus heated his Pluimage excessively, he drops at once into the Sea, after which all his Feathers fall off by degrees, and others succeed them¹³.

Alian assures us, that the Eagle is exceedingly grateful¹⁴, an Instance of which he gives us in a Bird of that kind, which attended the great Conqueror *Pyrrhus* all his Life, and which he was wont to feed with his own Hand; and which after the Death of that illustrious Person, refused to take any Nutriment from another Hand, but chose rather to starve. He mentions likewise another Fact still more remarkable, which is, that an Eagle flew into the Funeral Pile of one by whom it was brought up, and was there consumed with the dead Body of his Benefactor.

Aristotle assures us ^a, that the Eagle lives to a great Age, and is at last starved to Death; the upper Bill growing over the under in such a manner as that the Bird can receive no sort of Sustainance. In the *Persian* Language the Eagle is called *Hemai*, that is to say, the Royal Eagle, which is held in a manner sacred throughout the East, because they are persuaded, that though this be the boldest and fiercest of all Birds, yet it injures no Creature living, but feeds upon Bones that it finds in the Deserts ^b. But we must have a care to distinguish this Royal Eagle from the *Ossifrage* or Bone-breaker, which is another kind of Eagle that lives chiefly on Shell-fish, as also on Carrion, and is reported to have frequented Church-yards, and to have torn open the Graves in order to feed upon the dead Bodies.

It is necessary before we leave this Subject to mention the Eagle-Stone, or *Lapis Aëtiæ*, as it was called by the Antients. This was held to be found in the Eagles Nest; and *Pliny* says ^c, that there were generally two without, which the Eagle could not hatch. That Writer says there are four sorts of Eagle-Stones, the first bred in *Africa*, small and soft, with a little Piece of white Clay included within it, which had a very pleasant Smell; and this was said to be the Female Eagle Stone. The second was found in *Arabia* of the Size of a Walnut, and of a reddish Colour; it had also a little Stone in the middle, and was accounted the Male. The third was found in *Cyprus*, which resembled those found in *Africa*, but was broader and flatter. The fourth was called *Taphiusius* from the Region in which it was found, and was soft like Clay. These Eagle-Stones, of which I have one before me, are in truth little bigger than a Hazle-Nut, of a greyish Colour, and have another Stone within them which rattles. They are light, and seem to be some kind of Vegetable petrified, having a black Spot at one End, as if they had been broken off from a Stalk. *Pliny* says they were much esteemed for their Medicinal Virtue, which consisted in making the Female of every kind of Animal go its full Time with Young. At the Time of Delivery, however, it was to be removed, for otherwise they held that the Creature could not be delivered; and this Notion prevailed in the last Century, when these Stones were sold at a great rate; but at present such Notions are out of Date, and considered as mere Fictions.

11. After the Eagle the Ostrich was the Bird most considered in the *Indies* on account of its large Size, the Singularity of its Shape, and other extraordinary Qualities. The Antients thought its Neck and Head resembled those of a Camel, the Eyes sparkling, the Beak blunt, and the Nostrils very wide ^d. The Neck, the Head, and the Thighs of this Creature, is without Feathers; the Legs remarkably strong, and the Feet cleft or divided into two Toes. There were some Years ago no less than eight of these Birds exhibited at *Paris*, of which *M. Perrault* has given us a Description. They were seven Feet high from the Ground to the Top of the Head, that is to say, four from the Flat of the Back to their Feet, and three from the rising of the Neck to the Top of their Heads, from the Rump to the Head, the Neck being extended in a right Line from the Back, they were six Feet in Length. The Tail about a Foot, the Wing without the Feathers a Foot and a half, and with the Feathers three Feet. It is of the Feathers of the Ostrich that the Plumage heretofore worn on the Helmet, and the Feathers now used in Hats, are made. As they grow on the Bird they are alternatively white and black, or black and grey ^e.

Almost all other Birds have two sorts of Feathers, one downy and soft to keep them warm, and defend them from Water; the other strong and stiff, to assist them in flying. In the Ostrich, however, it is quite otherwise; for tho' the Feathers of this Bird be long, yet the Substance is downy and soft, which, notwithstanding, does not seem to keep them very warm, neither do they enable them to fly. There is another thing remarkable in their Feathers, because they are likewise stiffer therein from those of other Birds. The latter have more of the feathery Substance on one Side of the

Quill than on the other, and on both Sides so ranged, as to end in a kind of Point. In the Feathers of the Ostrich the Quill runs directly through the middle, and the End is in a manner round. To apprehend this the better, it is necessary to observe, that the former kind of Mechanism is of great Use in flying, for these two Reasons; first, that the Air resists the Stroke of the Wing powerfully, and thereby enables the Bird to rise; the second, that the Air makes the least possible Resistance in the shutting of the Wing for the next Stroke, so that the Bird loses little of that Advantage which she gained by the former Stroke. It is for the same Reason that the Quill extends to the very Extremity of the Feathers, so that the Wing forms a kind of Arch when expanded, by which means the Bird presses upon, and is sustained by the Air gathered under it. But there is nothing of this kind observable in the Structure of the Feathers of the Ostrich, which are not connected to each other, but lie loose on each Side of the Quill, and are not at all stiff or gummy like those of other Birds.

Hence *Aristotle* long ago observed ^f, that the Feathers of the Ostrich resembled more the Hair of Beasts than the Plumage of other Fowls, that is to say, were rather contrived to cover the Body, than to assist the Bird in her Flight. To say the Truth, this Animal, as *Aristotle* rightly observes, is incapable of raising itself from the Ground; but then it runs at a great rate, so that they hunt it with Grey-hounds, the Huntsmen mounted on fleet Horses bred on purpose of the Sport.

The Antients were of Opinion, that the Wings of the Ostrich was one great Cause of its Swiftness; but the *French* Author before cited has taken a great deal of Pains to shew from the Structure of the Feathers, that they cannot possibly have any such Effect, because they are intirely destitute of the Qualities requisite for that Purpose, which though contrary to the Sentiments of ancient Naturalists, was, however, a thing known long ago to some of the Curious ^g. It has been likewise asserted, that the Ostrich had an Instinct in gaining the Wind, which by swelling its Wings, forced the Creature along at a great rate; but modern Experience contradicts this likewise, and it is generally affirmed, that this Bird very seldom runs with the Wind, but on the contrary is often in danger of falling, by running opposite thereto when the Gale is brisk. It is notwithstanding generally allowed, that the Ostrich throws Stones behind her in her Flight with equal Agility and Force.

The Inside of this Animal is, to the full, as curious and remarkable as the Out. The Stomach of this Bird is about sixteen Inches long, and eight wide, separated by a muscular Piece of Fleth, which, in the Middle, may be two Inches thick, or somewhat more. In these two Cavities were found considerable Quantities of Grass, Hay, Barley, Beans, Bones, and Flints, some of which were of the Bigness of a Hen's Egg, together with seventy Pieces of little copper Money, of the Size of our Farthings. The greater Part of these were Three-fourths consumed by their rubbing one against another, and against the Flints, and not by any acid Spirit which had corroded them; which manifestly appeared from hence, that whereas one Side was quite smooth and polished, by continually rubbing; the other, being preserved by its lying hollow, had the Impression quite fair.

All that was contained in the Stomach of the Creature, whether Stones, Bones, or Beans, were all over of a greenish Colour. The ancient Naturalists, therefore, had certainly no Idea of the true Manner in which Stones, Iron, and such like Things were consumed in the Stomach of the Ostrich, since, they plainly assert, that this was done by some particular Quality in the Juices; so that, as the Stomachs of other Creatures were fitted for the Dissolution of Fish, raw Fleth, and Bones, that of the Ostrich had the peculiar Power of consuming Metals and Stones. For, if the Stomach of this Animal had any singular or particular Quality of digesting Metals, they would, most certainly, be digested in the same Manner as other

Food

^a *De Hist. Animal. lib. ix. cap. 1.* ^b *Herbelot's Biblioth. Orient. p. 456.* ^c *Hist. Nat. lib. x. cap. 3. lib. xxxvii. cap. 21.* ^d *Aristot. de Part. Animal. lib. iv. cap. 14.* ^e *Pliny. Hist. Nat. lib. x. cap. 1.* ^f *Memoires de l'Academie, Tom. iii. p. iii. p. 113.* ^g *De Part. Animal. lib. iv. cap. 1.* ^h *Aristot. de Hist. Animal. lib. iv. cap. 4.* ⁱ *As to its prodigious Swiftness, the Author of the Book of Job observes, xxxix. 18.*

^k When the Ostrich stretcheth herself on high, she scorneth the Horse, and his Rider.

Food is digested, that is by melting and dissolving them into a Liquid; whereas Experience shews us, that this Operation is performed in the Stomach of the Ostrich in the same Manner as it would be performed out of it, if Pieces of Copper were to be rubbed and bruised with a Mixture of acid Herbs, and by the Help of rough Bodies. It is, therefore, highly probable, that the Ostrich, being a voracious Animal, has occasion to swallow hard Things to assist in bruising and confuming its Food, and that abusing this Instinct of Nature, it swallows Iron and Copper, which, instead of answering that Intention, becomes poisonous, and turns to the Destruction of the Animal. This seems to be put quite out of Dispute, by a Fact which has been attested by those who have the Care of the *Menagerie at Versailles*, who affirm, that when the Ostriches kept there, have swallowed considerable Quantities of Copper and Iron, they have died soon after; and therefore they have had Orders given them to hinder People from throwing Nails or Pieces of Copper to these Birds^a.

The hot Constitution of this Creature, may be very well supposed to contribute not a little to its Fruitfulness. The Ostrich lays, generally speaking, Four-score Eggs in a short Space of Time, each of them weighing twelve or fifteen Pounds, so that one is sufficient to serve six or seven People for a Meal^b. The Shell of these Eggs is very near as hard as a Stone, so that it cannot be for fear of breaking them, that the Ostrich abandons them, and leaves them to be hatched by the Heat of the Sun, as the common Opinion is; but either from Forgetfulness, as she lays every Egg in a different Place, or from a certain kind of Instinct, which is therefore made a very proper Symbol of Cruelty^c; not that it is really so in itself, because the young Ostriches do not stand in Need of their Parents Care: But that it appears so in the Eyes of Men; and by Comparison with the Tenderness of other Animals, and of other Fowls especially.

The Fact, upon which this Observation is grounded, is sufficiently made out by the Multitude of Ostriches that are seen in those Countries where they inhabit. Such as several Islands in the *East-Indies*, a great Part of *Arabia*, *Syria*, *Africa*, and *South-America*, in all which Countries there are large Deserts, in which they multiply exceedingly.

The *Arabians* are said to be so credulous, that, as an eminent Traveller informs us, they are content to believe that the Ostriches hatch their Young by looking at them. I will give the Reader the Story in his own Words. "We read, says he, in an old *Arabian* Manuscript, that when this Fowl would hatch her Eggs, she does not cover them as other Fowls do, but both the Male and Female contribute to hatch them by the Efficacy of their Looks only; and, therefore, when one has Occasion to go to look for Food, it advertises its Companion by its Cry, and the other never stirs during its Absence, but remains with its Eyes fixed upon the Eggs, till the Return of its Mate, and then goes, in its Turn to look for Food: And this Care of theirs is so necessary, that it cannot be suspended for a Moment, for if it should, their Eggs would immediately become addle^d."

This Story, no doubt, is fabulous; but why do I say so, when, at the Bottom, the *Arabians* believe no more of it than we do? In reality, it is no more than a parabolical Fiction, to express the perpetual Attention of Providence, in which the Egg represents the Universe, and the parental Inspection of the Ostrich, the continual Interposition of the Father of all Things for its Preservation. Thus, in the Letter, this Story is idle and foolish, and so are most Fables; but the Interpretation or Moral is noble and just.

The *Ethiopians* eat the Eggs of this Bird, and esteem them the most exquisite Food that can be, and the common People eat the Flesh of the Ostrich in all Countries where they are found; though it is admitted, that it

is dry, and very indifferent; but there must, probably, have been something very exquisite in the Relish of its Brains, since the Emperor *Heliogabalus* caused several Plates filled with this Sort of Food to be served at one of the Entertainments that he gave to the Nobility of *Rome*, of which it was common for him to ransack the whole Empire for Dainties. We learn also from *Eliau*^e, that to the Time in which he wrote, the *Indian* Princes esteemed the Brains of the Ostrich, one of the greatest Delicacies their Country produced.

12. The *Phoenix* is the Theme on which the *Greek* Writers seem to have exhausted their Eloquence; and that with so good Success, as, in some measure, to have imposed on the wiftest of the *Latin* Writers. The Author of this Fiction, at least, as high as we are able to trace it, was *Herodotus*^f; and yet he does not deserve to be treated as a fabulous Writer, for what he has left us upon this Subject, since he acknowledges fairly, that he knew nothing more of this Bird than from Report and from Picture. On his Authority, however, the Story was so often repeated, that, by Degrees, it gained Credit with the learned as well as the Vulgar, inasmuch that *Pliny*^g gives us a long and plausible Account of it.

"The Birds of *India*, says he, are most of them of different Colours, and such as a Man can hardly describe. But the *Phoenix* is the most noble of all; neither know I whether it be a Fable or a Truth, that there is but one in the World, and that but rarely seen. It is said to be of the Size of an Eagle, its Neck as resplendent as Gold, the Body of a deep Purple, the Tail composed of blue Feathers, mixed with red, the Head adorned with a beautiful Tuft of different Colours. *Manilius*, a noble *Roman* Senator, distinguished by his Excellence in every kind of Learning, was the first who wrote at large of this singular Bird; and by him it is reported, that the *Phoenix* is never seen to eat: That, in *Arabia*, this Bird is held sacred to the Sun; that he lives Six hundred and sixty Years, and that finding himself old and beginning to decay, he builds himself a Nest with the Twigs of *Cassia*; and having filled that Nest with Frankincense and other Aromatics, he therein expires. But from his Bones and Marrow is produced a little Worm, which, in Time, becomes a young *Phoenix*; and the first Thing it does, is to celebrate the Funeral of its Parent, by transferring the whole Nest to the City of the Sun, which is near *Panchaia*, and leaving it there upon the Altar. The same *Manilius* reports, that the great Year agrees exactly with the Term of this Bird's Life, when the heavenly Bodies return to their first Points, and the Seasons revolve again in their former Order, this Year commencing at *Noon*, when the Sun enters the Sign *Aries*. According to his Computation, therefore, this great Year began when *P. Licinius*, and *M. Cæcilius* were Consuls; but *Cornelius Valerianus* writes, that *Quintius Plautius*, and *Sextus Papinius*, being Consuls, the *Phoenix* appeared in *Egypt*. It is also said, that this Bird was brought to *Rome* when *Claudius* was Censor, that is, in the Year of the City Eight-hundred, and was openly shewn in a full Assembly, as the publick Records attest, but in this respect falsely, nobody at this Time doubts^h."

Such is the Account given us by *Pliny*; yet in such general Estimation was this Story grown, that *Pope Clement*ⁱ in his Epistle to the *Corinthians*, written in the Name of the Church of *Rome*, makes use of this History of the *Phoenix* to prove to them the Possibility of the Resurrection; the Passage is very curious, and therefore I shall transcribe it for the Entertainment of the Reader. "Let us, says he, consider that Prodigy which happens in the East, where they behold a certain Bird called the *Phoenix*, which is the single Bird of its Species. This Animal lives five hundred Years, and when it perceives its End approaching, it makes a Nest of Myrrh, Incense, and other Aromatics, in which it seats itself, and after a

" certain time there, finishes its Days. Out of its Flesh when corrupted, there springs a kind of Worm, which feeding for some time on the Remains of this Animal, begins at length to be covered with Feathers; and when it becomes stronger, it carries away the Nest, which contains the Relicks of its deceased Parent, and passing from *Arabia* into *Egypt*, bears them to the City of *Heliopolis*. There in full Day, and in the Sight of a Multitude of Spectators, it flies to the Altar of the Sun, and having thereon deposited its Burden, immediately retires. The *Egyptian* Priests having consulted their Annals, and having from them made an exact Computation, find, that this happens precisely at the Close of five hundred Years."

This Fable was not only current in *Italy*, but in *Africa*, as appears from the Writings of *Tertullian*¹, who makes use of this Example with the same Intention as *St. Clement*. The Ancients, however, differed much about the manner in which the Phoenix died. According to the former Accounts, it expired in the ordinary way; but a Multitude of Writers affirm, that having raised its Funeral Pile, it set Fire thereto, and fanning that Fire with its Wings, was therein consumed to Ashes, out of which Ashes arose the new Phoenix thus consecrated to the Sun². The Date of its Life was a Point no less controverted. An *Ethiopian* Prince, in a Letter of his to a Pope, cited by *Vossius*, says, that it lives three hundred Years. *Herodotus*, *Ælian*, *Pbilistrotus*, and *Aurelius Victor*, extend the Term of its Life to four hundred and forty, or five hundred Years³. *Pliny*, on the Authority of *Manilius*, as we have seen before, to six hundred and sixty, *Martial* and *Lactantius* to a thousand; but the *Arabian*, *Egyptian*, and *Rabbinical* Writers, far beyond this, in consequence, as they pretend, of its not having tasted the forbidden Fruit.

In the midst, however, of these Contradictions, and though several of the ancient Authors freely profess their Suspicions of the whole Story, yet *Tacitus*⁴ does not seem to question the Fact, but rather to admit, that such a Bird had been sometimes seen in *Egypt*; and another Historian says, that its coming to *Rome* was considered as an ill Omen by the *Aurians*, and thought to portend the Death of the Emperor *Tiberius*. Father *Martinius*, in his *Chinese Atlas*⁵, assures us, that it was seen in *China* in the Beginning of the Reign of *Kabour IV.* and that it was thought to come from the *Indies*. All the Circumstances of the Story are so apparently fabulous, that it would be losing time to refute them. If the curious Reader has a mind to see this done effectually, he may consult Sir *Thomas Browne*⁶, who has handled this, as he does every other Subject, with great Learning and Capacity; but I have chosen rather to insist on the Facts reported by ancient Writers, than to enter into a Detail of Arguments, which would extend this Article to an extravagant Length, and be at the same time quite beside the Purpose.

It may not be amiss, however, before we conclude, to say somewhat of the Origin of this Fable, which some have imagined arose, or was at least strengthened by the same Word, signifying in *Greek* both the Phoenix and the Palm-tree⁷. Thus much is certain indeed, that a Mistake of this kind has brought this Bird into the Scriptures, the Authority of which can never be brought to justify such Fables, though some, to shew their Learning, are for finding in them whatever Facts or Reasons they have a mind to establish. The true Source, however, of this Notion, lay like that of the Gryphon in the *Egyptian* Hieroglyphicks. It was from the *Egyptians* that *Plato* and the rest of the Ancients borrowed their Notion of the great Year which they never fully understood, and the Reigns of their several Gods, which have given so much Trouble to our most learned Chronologers, were in truth no more than the Periods of the Planets, that is to say, the Spaces of Time in which they finished, according to the *Egyptian* Sylltem, their Revolutions; and this is the true Cause why, after all

the Pains that has been taken about them, the Accounts we have are almost as perplexed as ever.

The true Story of the Phoenix, though applied by the Christian Fathers to the Resurrection, was by the ancient *Egyptians* understood of another sort of Resurrection; for they conceived, that when the great Year of all was accomplished, the Universe was to be destroyed by Fire, and a new System arise out of the Ruins of the old. This I conceive they borrowed from the *Indians*; at least thus much is certain, that this was, and still is, a Principle of their Philosophy, which, as the learned Dr. *Burnet*⁸ of the *Charter-house* well observes, they explained by another Symbol, viz. that of a Spider, which after spinning various Webs, reforms them again all into himself, and re-produces the same Matter under other Forms; and thus Philosophical Similitudes, which imperfectly expressed what Reason could scarce comprehend, came by the Mistakes of vulgar Minds to corrupt natural Philosophy, by introducing imaginary Creatures, which never had, or could have, Existence according to the Laws of Nature.

13. After the Fable of the Phoenix had been rejected by almost all the Learned, it was again in some measure reformed by the great *Julius Cæsar Scaliger*⁹, a Man, whose Eminence in all kind of Learning gave him so high a Reputation in the World, that his Opinions were received as a kind of Oracles: He thought that the Accounts given of a certain Bird found in the Southern Countries of the *Indies*, called *Semenda*, or *Semendal*, had some Relation to the Phoenix, and that consequently all that had been advanced in relation to this Bird was not absolutely false and fictitious.

In order to judge the better of this, it will be requisite to enter into the Description of this last mentioned Bird, and see how far it accords with that of the Phoenix. The *Semendal* is said to have a Triple Bill, or three Bills raised one over another, by the Help of which, when she is near her Death, she makes a most delightful Harmony. Then forming a Pile of odouriferous Wood, she sets Fire thereto, and fanning it with her Wings, suffers herself to be consumed to Ashes, out of which a Worm is produced that afterwards changes into the same kind of Fowl¹⁰.

This is visibly nothing more than the old Fable a little varied, and yet it is true enough, that there is in the Island of *Java*, and in the Spice Islands belonging to the *Dutch*, a kind of Bird that has two Bills, and therefore is called by the Inhabitants the *Double Bill*; but as to its singing, I find no Evidence to that Point. As it is a Native of the *Moluccas*, it is very probable that it may make its Nest of Spices; but that it consumes itself therein there is no good Testimony to prove, notwithstanding what the single Traveller, on whose Relation the original Fact is grounded, has advanced.

It may indeed be alledged, that some Eastern Writers have countenanced this Notion by their Relations; but then we know that such Accounts as these are liable to great Suspicions, and especially to that of giving an Air of Matter of Fact to Parables. On the whole therefore, there is just as little Reason to credit the modern Story of the *Semendal*, as to yield any Belief to what the Ancients have related concerning the Phoenix, or to express the thing plainly, and in few Words, they are both Fables equally destitute of Foundation. It is very hard to discover the Motive why even the greatest Men are unwilling to give up Authority, when it is directly contrary not only to Reason, but the Laws of Nature; and yet that this is frequently the Case, many Instances might be brought to prove, but this before us is more than sufficient; and therefore I shall trouble the Reader no farther upon this Subject.

What has been already said was necessary to shew, that no Pains have been spared to examine these Points, and to set the Truth in a fair Light, which was thought the more requisite, because most Writers of Voyages are so much inclined to report strange and wonderful things, and to call

into their Assistance the Relations of the Ancients, that without the Aid of such clear and explicit Commentaries, as we have given, it is simply impossible to cure the Minds of many People of that sort of superstitious Credulity which these kind of Relations naturally induce. And with the Retention of which, we should have been forced to interrupt the Thread of subsequent Voyages, if we had not once for all dispatched the Subject in this and the foregoing Chapter.

14. The Pelican is a very singular Bird, concerning which the Ancients have written largely, and yet there have been very great Disputes among the Moderns as to the Bird which they have described, the Reason of which, as well as of the Fables current about this Creature, will quickly appear. *Aristotle* and *Ælian* call it by the same Name, viz. Pelican, or Pelecan; but *Pliny* describes it under the Name of *Onocrotalus*, yet their Accounts agree so exactly, that there seems to be no Reason to doubt they meant one and the same Bird. The Author last mentioned tells us there is but one thing remarkable in this Creature, which is, that it has a false Stomach, into which it swallows its Prey when first taken, and throws it out again from thence in order to feed upon it.

There are some of these Birds that live mostly on Land, and others that resort constantly to the Waters; yet the Figure of both is the same. There were several of them kept for many Years in *France*, and in the Memoirs of the Royal Academy of Sciences, we have a very distinct Account of them. According to their Description the Pelican is five Foot high from the Beak to its Feet, the Wings when extended eleven Feet from one Extremity to the other. Their Beak about fourteen Inches in Length, and an Inch and an half broad at the End, its Legs fifteen Inches, the longest of its Claws four Inches and a half, the Length of its Neck about ten Inches.

There is scarce any Bird except the Eagle of so great Strength as the Pelican, which is also a Bird of Prey, and flies to a great Height. *Culmanus*, in a Letter of his to *Gejus* the famous Naturalist, tells us of a tame Pelican that soared so high as to appear in the Air no bigger than a Swallow, and which having for a long time attended the Army of the Emperor *Maximilian*, that Prince ordered it to be maintained, and allowed for that Purpose four Crowns a Day, which Bird lived in *Germany* fourscore Years. This Fact is the more credible, because in the Menagery of *Lewis XIV.* there were many Pelicans, and it was observed, that they were the only kind of Birds of which there died not one in the Space of twelve Years. Two of them were by Order of that Prince dissected at *Paris*. The first was intirely covered with white Feathers, except the Wings in which there were some black, and others brown; and in the Feathers on the Body there was a little Mixture of red. The other was altogether of a Flesh Colour, without any Mixture of black or of white Feathers. Some of the rest of the Pelicans in the Menagery were all over grey, except the Extremity of their Wings, which was white. Some had a large Tuft of Feathers behind the Head, and some wanted that Tuft, so that it may be affirmed there are few Birds more differently feathered than this.

But there is one Mark which sufficiently distinguishes this Bird from all others: It has under its Beak a large Bag which is quite naked, and hangs down on its Neck. In this Pouch it keeps its Food till it is properly prepared for Digestion, and then it there be nothing hard or undissolved, it swallows the whole at once; but if there be, it discharges it, and picks out what is easiest for Digestion. *Aristotle* had observed this long ago; for he tells us, that the Water Pelican was wont to swallow Shell-fish, keeping them in her Stomach till they opened, and then threw them up and picked out the Fish. *Ælian* says the same thing, which sufficiently proves that we are not mistaken as to this Bird, but that the Pelican known to us is the very same Creature which is described by the Ancients.

The old Fathers of the Christian Church exceeded the Greeks themselves in the Fables they reported upon this Sub-

ject; they had heard that the Pelican fed her young ones out of this Pouch, or false Stomach; and this being told them either imperfectly, or with Addition of some fabulous Circumstances, they from thence framed a Parable or Similitude between this and the most solemn Mystery in the Christian Religion; and to render it the more apt, they devised new Circumstances, and enlarged every Part of the Story to make it answer their Intention the better. The Tale then ran thus; that the Female Pelican killed her young ones by caressing them too much with her Beak, and then mourned over them for three Days, till the Male Pelican becoming still more sensible, tore his Breast open with his Beak, and by the Effusion of his own Blood, restored the young Pelicans to Life. This, without Question, is very wild and extravagant, and has nothing to countenance it in the Works of any of the Naturalists; whereas the learned *Vossius* very justly concludes, that these Stories were invented by such as were in Love with the Allegations and Hieroglyphicks.

We find in the Writings of a very learned *German* Author, whose Name is *John-George Volkamer*, that he saw at the Fair of *Leyden* a Pelican, which the Man who kept it affirmed to have been in his Custody upwards of fifty Years. It was much larger and stronger than an Eagle, but otherwise very like it both in Size and in the Colour of its Feathers, except that from its Head to its Wings it was grown quite white through Age; he assures us, that of all Birds it lives the longest, that it renews its Feathers like the Eagle, and that it often survives to upwards of an hundred. He adds, that its false Stomach, which hangs upon its Neck, is big enough to admit ones Hand, and that he actually thrust his own into the Pouch of the Pelican, where he felt the Food it had taken half dissolved, and so hot, that he was not able to endure it. He tells us likewise, that from thence it feeds its young ones. The Ancients having long ago observed the same thing, this, as I observed, gave the first Rise to the Stories which have been told of this Bird's feeding its young ones with its Blood: Yet in Fact there is nothing extraordinary in this, since the same thing has been observed of very many, and perhaps might be observed of most Birds who fill their Gizzards full of whatever they meet with when their Females are hatching, and disgorge it again for the Support of the Hen and her Brood.

It is therefore through want of Attention to the Animals in our own Country, that we are so much struck with the Singularities reported by Travellers of the Animals in other Countries, for without doubt, if we examined carefully what passes every Day under our Eyes, we should not only be less apt to be surprized at such Relations, but be also better able to judge how far they ought or ought not to be believed. It is in this Respect that the Study of natural History is exceedingly useful not only by guarding us against Credulity, but enabling us to correct the confused and disconcerted Accounts given us by such as from a superstitious View of Foreign Creatures venture to describe them, and often add such Circumstances from Hearsay as are not to be depended upon, but out of which an intelligent Naturalist will be able notwithstanding to pick the Truth.

15. All who have visited the most Southern Islands of the *Indies*, particularly *Sumatra Banda*, and the rest of the *Molluccas*, agree in relating some extraordinary Particulars of a very large Bird, common in those Islands, and of which it does not appear that the Ancients had any Knowledge. This Bird the Natives call *Emen*, but the *Dutch* usually distinguish it by the Name of the *Cassin*. This Creature is thus described by Mr. *John Nieboeff*, a *Dutch* Traveller, very justly esteemed for the Fidelity and his Exactness of his Relations, and therefore I shall set down his Description in his own Words.

“ This Bird, says he, carries his Head very upright, and then it is about five Foot from the Ground; the Length of his Body, from the Breast to the Tail, is about three, or perhaps a little more. The Head appears smaller in Proportion than the Body, and is very

“ smooth, and in Colour of a dark Blue; on the Chest
 “ there hangs two Excellences like Bags: The Eyes are
 “ large and fierce, behind which are the Ear-holes, and
 “ almost at the Extremity of the Bill two Nostrils;
 “ and from the Midst of the Bill to the Crown of the
 “ Head grows a hard yellow Substance like a Cockle-shell,
 “ especially in the Males. They have very long and grofs
 “ Legs, covered with a yellowish Rind; their Feet are
 “ thick, knobby, and without Spurs; instead of which
 “ they have on the Fore-part three long, horny Claws, in
 “ which they differ from the Ostrich, whose Feet are
 “ cloven both before and behind. They are covered all
 “ over with Feathers, or rather Plumes of a dark Red,
 “ mixed with Black: These upon the Breast and Thighs
 “ grow two and two together; but those on the Tail
 “ are of much greater Length, and stronger; underneath
 “ the Feathers which grow on both Sides, are hidden
 “ certain Pens, which serve them in running; for these
 “ Birds are scarce able to raise themselves from the
 “ Ground. They are exceeding greedy, devouring every
 “ Thing they meet with, even to Iron and burning
 “ Coals, all which they evacuate backwards without any
 “ Alteration; nay, they sometimes do not throw out what
 “ they have eat till a Year after, without the least Signs of
 “ any Digestion; for the rest they live upon Herbage.
 “ Their Strength consists in their Legs and Feet, and they
 “ run so fast that no Man can overtake them; and when
 “ exasperated, kick with their Feet backwards and side-
 “ ways like a Horse. They lay greenish Eggs upon
 “ the Ground among the Shrubs, scarce so big as our
 “ Hen eggs, speckled with dark green Spots, the Yolks
 “ thereof are eaten by the Inhabitants. They have not
 “ either Tongue or Tail.”

This Bird was first seen in Europe in the Year 1597, when the Dutch brought home one on their Return from their first Voyage to the Indies. It had been given them as a great Curiosity by one of the Javanese Princes, as a Mark of their Friendship; and the Description of it having made a great Noise in the World, Lewis XIV. when he formed his Menagery at Versailles had one sent him in the Year 1671, by the Governor of the Island of St. Lawrence, or Madagafcar, who brought it of some Merchants who touched at that Island in their Return from the Indies. This was the first of its Kind that had been seen in France, and it lived at Versailles about four Years. The King had afterwards several of these Birds sent him, which gave the Members of the Royal Academy an Opportunity of examining and dissecting some of them: The largest was five Foot and a half high, its Legs two Foot and a half, its Head and Neck a Foot and a half, the largest of its Claws five Inches long, and the Nail of its smallest Claw three Inches and a half. The Wing, which was composed only of five bare Quills, was so small that it was entirely covered by the Feathers on its Back. The Head, Neck, and Chest of this Creature were absolutely bare, and the rest of its Body might be more properly said to be covered with Hair than with Feathers: In all other Respects the Description given by them of this Bird, agrees exactly with that which we have before given, and therefore it would be tedious to repeat it, only it may not be amiss to observe, that the Head and Neck are said to have resembled a Turkey-cock's, and to have been spotted with blue, violet, and red, a large Comb behind its Head, and its Gills, instead of hanging immediately under its Beak, appeared on the Bottom of its Neck, where it joined the Breast. In its Size it came nearest to the Ostrich, and was, in every Respect, as greedy and voracious.

16. There are, besides these, a great many remarkable Birds in the Indies, of which modern Travellers have given us very exact Accounts; and of these we will mention a few. The *Dronte* is a very singular Creature, and common in all the Southern Parts of the Indies. In Bigness it is betwixt an Ostrich and a large Turkey, and has some Resemblance to the last, in his Feathers and Tail. His Head large, not unlike that of a Cuckoo, but

covered all over with a Skin. The Eyes are large and black, the Neck crooked and very thick, the Bill very long, thick, and of a pale Blue, except towards the Extremities; the uppermost thereof is blackish, and the undermost yellowish, but both Shape and Bent of his Body is very thick and round, covered with soft grey Feathers, like those of an Ostrich. The Belly and upper Parts are so thick as almost to touch the Ground, which is the Reason he is very easily caught. On both Sides he has certain Pens instead of Wings, of a pale Yellow Colour, and, instead of a Tail, five curled Plumes of the same Colour. His Legs short and thick, with four large Claws. The Meat, especially that on the Breast, is fat and pleasant enough, and three or four of these Creatures afford a Meal for one hundred Persons. In his Stomach is sometimes found a certain porous hard Stone.

The Cormorant, which is very common in the Island of Java, and indeed in most Parts of the East-Indies, seems to me to be the Water-pelican of the Ancients. They resemble our Geese in Shape, but much exceed them in Size, and have underneath their Beaks a large Bag, which they can extend and draw together at Pleasure, and in it keep such Fish as they have swallowed. Their Feet are like those of the Swan, and their Bills are crooked towards the Extremities. They are so greedy after Prey that they rush out from among the Flags with such Violence, that they are easily taken. They swallow Oysters with their Shells, and keep them in their Bags till they open, when they spew them out again, and pick out the Oyster.

If we could depend upon the Accounts given us by the Missionaries of the Birds found in China, we might venture to yield implicit Credit to whatever the Ancients have delivered, their Stories of the Phoenix not excepted; for to say the Truth, the Missionaries affirm of their own Knowledge Things full as strange; and we must either believe these or renounce their Testimony entirely. The Reader shall have an Instance of this from Father Navarrete, and in his own Words, that we may not seem to justify the Truth of this Observation, by giving an extravagant Turn to what he relates.

“ On the Sea-coasts, says he, of the Chinese Islands, there is a very singular Bird called *Tabon*; now what I, and many besides me admire is, that being no bigger in Body than an ordinary Chicken, though its Legs are very long, it lays an Egg larger than that of a Goose; so that the Egg is really bigger than the Bird itself; and no Man living would judge that the Egg could be contained within it: In order to lay its Eggs, it digs in the Sand above a Yard in Depth; after laying it fills up the Hole, and makes it even with the rest; there the Eggs hatch with the Heat of the Sun and Sand. When the Chickens are hatched, by natural Instinct, they break through the Sand upwards; and so get out of that Dungeon their Parent put them into; then they walk directly to the Sea in search of Weeds to feed on. Another Thing in it is wonderful, which is, that they are not stifled when they come out of the Shell with the Heat and Weight of the Sand, how they breathe till they get out, and how they have the Strength to break through so great a Weight. They are Prodigious of the Almighty's making. The Indians, to find these Eggs, stick sharp Canes into the Ground, when they find the Sand light, they stop and throw it up something above the Length of a Man's Arm, and there they find them. They are of a pleasant Relish; one of them is enough for a Man who has a good Stomach; the staler the Egg the better. One Morning, having lain on Shore, and near the Place where these Birds resorted, we repaired thither carefully, and making a Noise, a great Company of them came out of their Holes, in which we found many Eggs, some hot, some cold, some white, some of the Colour of the Sand, which were stale ones. I had before eaten of the latter, and now eat of those that were fresh and warm; but, in truth, the stale ones were much better. There were

Voyages de

“ among

" among them some which had Chickens, and I observed, that the *Indians* eat them eagerly, and they courted me to eat, but I could not endure to look at them, and it went against my Stomach to see other People eat them. Once they pressed me so much, that at last, not without great Aversion, I resolved to taste one; I did so, and made an End of it, regretting very much that I had not eaten of them before. I must own it, that, since I was born, I never eat any Thing more pleasant and palatable, and I am convinced, there is nothing in the World to compare to it."

There may be, and doubtless there is, a great deal of Truth in this Relation; that is to say, there is such a Bird, its Eggs are very large, and they are eaten as the Author describes; but then every thing is so much exaggerated, that the whole has the Air of a Fable, which shews plainly to how little Purpose large Collections are made of such kind of Writers, since what they relate cannot either entertain or instruct, because it is impossible to read such Stories without suspecting and disbelieving them. But to return to the remarkable Birds mentioned by the Moderns.

All the Writers that have mentioned *Macassar* inform us, that no Country in the World produces so many speaking Birds. Amongst these there is none more extraordinary than the *Lory*, which is as big as a Parrot, but infinitely more beautiful in its Plumage; its Breast, which is very large and high, being covered with bright yellow Feathers; the Wings are green, the Head black, and shining with a yellow Bill. The *Indians* give sometimes thirty Crowns for such a Bird, because they will learn and speak several Languages, and are very tame. There is another with large and long Tails, sometimes three Quarters of a Yard long; these are blue on the Back, and yellow under the Belly, and commonly called *Kakkataws*, or *Indian Ravens*. Another kind there is which is white all over, except a yellow Tuft on the Head, which they set upright when they are vexed: They have also some Resemblance both in Shape and Bigness to our Magpies, or Black-birds; these imitate a Man's Voice much more distinctly than Parrots, they are of a bluish Colour, mixed with dark purple Spots and Streaks; they have a yellow Tuft on the Head, which is black, and as smooth as Velvet.

The *Kokoy*, which is common in the *Indies*, is a kind of Heron, but much exceeding ours in Beauty, being yellow before, and green over all the rest of its Body. On the Head he has a delicate Plume spreading all over the Neck; the young ones eat tolerably well, but the old ones eat tough, and taste much of Fish. The *Kolibry* is the least of all Birds, being no bigger than a House-Fly, it hath a very sharp Bill, with which it sucks its Sustainance out of the Flowers, though some are of Opinion it feeds upon the Dew; it has all the Colours of the Rainbow, and its Wings are not unlike those of Pigeons or Ducks. It builds a very neat Nest to the South, under the Branches of Orange, Lemon, or Cotton Trees, to defend itself against the Injuries of the North Winds. Its Eggs are no bigger than Plate. There is another which sings exceedingly fine, but

not so beautifully coloured; it weighs no more than 24 Grains.

17. These Observations plainly discover, that no Part of the World was better stocked with useful, valuable, and beautiful Creatures, than the *Indies*. For Domestic Service, besides the Horse, and the Ass, which are common with us in *Europe*, they had the Elephant, the Camel, and the Dromedary, fitted in every respect for carrying on the inland Commerce of that Country, which was in all Ages very considerable. They had for the Service of Agriculture a very strong Race of black Cattle, and for the Pleasure of Hunting, they had the finest Dogs that we read of in History for Courage, Speed, and Strength. If their Woods were full of wild Beasts, they had it in their Power to lessen the Number of these Enemies; and to run this to their Profit, as well as to their Diversion, the Stag, Horns, Teeth, or other Animal Productions, sufficiently compensating the Trouble they took, and the Dangers to which they were exposed in the Chase.

The Sea that washed their Coast, and the Rivers that watered their Country, were abundantly provided with Fish, so that no People had either better or greater Plenty, which to the lower sort was a great Relief; they likewise drew a very considerable Profit from their Fisheries, especially those of Purple and Pearl, and from the Sale of Tortoise-Shell, which was highly valued in those times for its admirable Clearness, and for the Beauty and Variety of its Colours. The Birds and Fowls in the *Indies* were likewise of all sorts, and all of them the largest and finest in their respective kinds. The Birds of Prey, and particularly the Pelican and the Cormorant, were of great Service; for the former feeding naturally upon Snakes, Serpents, and other Vermin, cleared the Country of them in those Months when they were most numerous and most dangerous; and as for the latter, they taught them in *China*, and other Parts of the *Indies*, to catch Fish, and to bring them to such as kept those Creatures, as we shall see hereafter in its proper Place. As for Geese, Ducks, Hens, and other Domestic Fowl, they were, and are still, as common and as cheap as in any Country in the World; and of the beautiful Feathers of a Multitude of other Birds, they made Hats, Umbrellas, Screens, and other Utensils of exquisite Workmanship, and at the same time of great Price.

There is no great Wonder therefore, that all the ancient Writers, such as *Strabo*, *Pliny*, *Arrian*, *Plutarch*, *Arian*, and many others, should so highly extol this Country, and speak of every thing found therein with Astonishment. Be notwithstanding all this, it must appear somewhat surprising, that the Antients were acquainted with Animals, Trees, Fruits, and Precious Stones, of the most delicate Parts of the *Indies*, to which without doubt they never penetrated at all, notwithstanding what we find reported in their Writings of the Islands of *Taprobana*, *Panchia*, the Country of the *Seres*, and other Places, which renders it necessary for us to give a clear Account of that Point, which shall be done in the two succeeding Sections, which will conclude our Labours with respect to the ancient History of *India*.

* *Histoire de Macassar*, lib. 1. c. 4.

SECTION XV.

An Account of the Descriptions left us by the Ancients of the Eastern and Northern Parts of the Indies, the Notions they had of their Riches, together with an Enquiry into the Reasons which hindered the extending their Discoveries on that Side.

1. A brief Description of the Country of the Sinae or Thinae from ancient Authors. 2. Observations on the foregoing Description, proving, that this Country was the Kingdom of Siam. 3. Of the Indian Islands, as described by old Authors; and more particularly of the famous Island of Taprobana, and their Mistake about it. 4. This Point more particularly inquired into, and the Taprobana of the Ancients shewn to be no other than the Island of Ceylon. 5. Of the Country called Serica, and the Nation of the Seres, from the best Writers of Antiquity. 6. An Objection arising from the Knowledge which the Ancients had of the Chinese fully stated, and clearly resolved. 7. A second Objection taken from the Commerce of the ancient Chinese, stated and examined. 8. A third Objection from the seeming Discordancy of these Accounts, explained and refuted. 9. An Account of the Island of Panchana, and a full Proof of its being absolutely imaginary. 10. The high Ideas which the Ancients had of the Riches of the undiscovered Indies. 11. Their Errors as to the Possibility of establishing a regular Commerce with these Countries. 12. The Causes which impeded their Discoveries, and occasioned the Decline of that Trade which they actually had to the Indies. 13. The Conclusion of this Part of our Subject, with Observations and Remarks on the principal Passages therein.

IN what has been delivered in the former Sections, we have confined ourselves to such Points as regard the actual Discoveries of the Ancients. But it is no less necessary to give the Reader some Account of another sort of Discoveries, I mean such as were made by their Geographers, who by the Help of such Relations, as were from Time to Time published of these distant Countries, and which are long ago lost, compiled a systematical Account of the Regions bordering upon, and even of those that lay very far beyond the Ganges. It is, however, certain, that they were but very indifferently informed as to the Course of this River; and Cellarius corrects the Mistake of Artemidorus in Strabo, who says, that from the Mountains called *Emelli*, it runs South as far as the Town of Ganges, and afterwards East, because it is contrary to the Discoveries of our Times.

The first remarkable Town mentioned by Ptolemy beyond the furthest Mouth of the Ganges was *Pentapolis*, or rather this was the Name of a District; next to that lay the Emporium, or Mart of *Laracura*, beyond the Mouth of the River *Tocofanna*, then the Country called *Argentea*, with several Towns; next to that lay the Country of the *Bisygeti*, who were Man-eaters, their capital *Bisynga* an Emporium. From hence Southward lay the *Aeres Cherfontus*, now *Malacca*. On the West Side of it *Tatela* an Emporium, and on the East Side the Cape *Makel-Celen*, with several Towns. Many are of Opinion, that this was *Solomon's Ophir*, which seems to be favoured by *Josephus*, who says, *Solomon's* Vessels sailed into a Country of *India*, formerly called *Sophira*, but then the *Golden Land*; *St. Jerom* says, it was also in *India*, but calls it an Island.

Bochart alleges it was the Island *Taprobana*, now *Ceylon*, and founds his Conjecture upon an Etymology. But *Cellarius* rejects as mere Dreams the modern Disputes about *Ophir*, and sees no just Cause why the latter Opinions should be better than the former. He says, the Length of the Expedition mentioned in the sacred History shews, that *Ophir* must have been at a great Distance from *Palestina*, or the *Arabian* Gulph; yet he is not displeas'd that *Bochart* distinguishes betwixt the *Indian* and the *Arabian Ophir*, because the Gold of *Ophir*, mentioned in the Book of *Job*, could not, because of the Ignorance of those Times, be easily understood of the *Indian* Gold. *Bochart* places the *Arabian Ophir* near the Country of the *Sabaeans*, and thinks the *Arabs* called the *Indian Ophir* by its Name when they discovered it. Beyond this *Cherfontus* to the North lay the Country of the *Lagere*, who were Pirates and Robbers. The River *Sobannus* runs through it. Next to that lay

Ptolemy's Sinus Magnus, in which were *Balanga* and *Cergaba* Metropolitan Towns; and here *Ptolemy* finishes the Maritime Coast of *India* beyond *Ganges*. The Inland Parts were so obscure, that it is needless to insist upon them by the Situation of the Country; these Places last mentioned seem to have been in that Kingdom which is now called *Siam*.

The next Country described by *Ptolemy* is that of the *Sine*, which he places farthest towards the East of all the Regions mentioned by him, as lying beyond the Great Bay or Opening of the Sea, which he styles *Sinus Magnus*, and says, their Country extended very far to the South. It is well observed by *Cellarius*, that this Country is not to be confounded with the modern *China*, although it reaches as far North as *Serica*. *Ptolemy* calls the Country beyond this to the East and South, *Terra Incognita*, and bounds it on the West by *India* beyond the *Ganges*. He places about the Equator the *Ethiopes Ichthyophagi*, or Fish-eating *Ethiopian*s, and beyond the Equator the River *Cantlares* and *Catigara*, which he calls a Harbour of the *Sine*. *Martianus Heracleota* places the *Sine* likewise at the Extremity of the habitable World towards the East, and next to the *Terra Incognita*, or Country to that time undiscovered.

It must be allowed, that all this is very dark and very perplexed, so that it is extremely difficult to pass any certain Judgment as to the Places mentioned. On the other hand, however, it ought to be considered, that even these dark and obscure Accounts are infinitely better than the Fables that preceded them, and the ridiculous Stories that prevailed of these Countries and their Inhabitants in succeeding Times. If we compare what *Ptolemy* has written with the confused Accounts that *Pliny* has collected from ancient Authors, we may easily discern that one contented himself with Fables, and transcribed whatever came to hand, to shew a Variety of Reading, whereas the other examined very carefully such Descriptions as he received from the Merchants that traded in these Countries, and by comparing them with each other, he gathered from them such Lights as enabled him to draw up a short and imperfect Account indeed, but at the same time such an Account as appears very conformable to Truth; and would appear much more so, if the Manuscripts of *Ptolemy* were not incumbered with so many various Readings, which renders it extremely difficult to come at the true Sense of that learned Writer.

In the following Ages again, when *Science* once more gave way to *Fable*, the World was amused with wild and ridiculous Accounts of these Countries, and he who wrote the strangest things was read with the greatest Approbation.

¹ Geograph. Antig. Tom. ii. p. 747. The Passage in *Artemidorus*, which he corrects, is found in *Strabo*, lib. xv. p. 494. ² Geograph. lib. vii. cap. 3. Tab. 2. ³ *Apic.* ⁴ *Antiquit. Judaic.* lib. viii. cap. 2. ⁵ *Geograph. Sacr.* ⁶ *Job* xxii. 24. xxviii. 16. ⁷ *Itin. Pèr. d. arate* munda, cap. 11. p. 276, 279, advances an Opinion very probable and worthy of Notice, viz. that the *Sine* of these ancient Writers are the *Siamese*. The very learned *Bishop Huet* is for extending this Denomination to the *Tonquinese*, the *Cochinchinese*, &c. but I am for adhering to *Possin's* Conjecture strictly, because *Ptolemy* owns all beyond these unknown. ⁸ *In Peripl. Maris Erythrae.*

For this is a certain and a just Observation, that in times of Ignorance, what is most wonderful is the best received, and that on the contrary in the learned Ages plain and undorned Relations are the most esteemed. The Design of *Ptolemy* was to improve, as far as he was able, that Branch of Knowledge, to the Study of which he had addicted himself, and not to report the Notions of other Men, who wrote for the sake of seeming wiser than the rest of Mankind; and therefore confidently set down as things certain what Fables soever they met with relating to these distant Parts of the World. But in *Ptolemy's* Account, as we before noted, the true Method of treating the Subject is pursued, the Sea-coast distinctly described; and if the Names only of a few Cities are mentioned, those few seem to be all that from good Memoirs he was able to mention; so that the known and the unknown are not confounded; but the Reader is clearly informed, that beyond such a Tract these Eastern Countries were absolutely undiscovered, and therefore they were properly the Objects of future Inquiries.

This was the way, and indeed the only way of coming at real, certain, and useful Knowledge; neither is it to be doubted, that the full Discovery of these Eastern Countries would have been pursued, if the Troubles and Disturbances which overwhelmed the Roman Empire had not equally destroyed the Passion for exploring unknown Countries, and the Means of gratifying it. But besides the Countries situated on the Continent, the Ancients had some Knowledge also of the Islands of *India*, partly from their own Commerce, and partly from the Reports of the *Indians*, with whom they traded on the Main; and therefore of these we are next to give some Account from the same Authorities.

1. *Ptolemy* places the Islands of the exterior *India* betwixt the Mouths of the *Indus* and *Ganges*. Thus, in the Bay of *Cembus* lies *Barat*, and from thence to the Bay of *Calbis*, *Milizageris*, *Heptanafia*, *Peperina*, *Triaclira*, *Trinectia*, *Leuce*, *Pamgeris*; and in the Bay of *Argaris* the Island *Cory*. *Taprobana*, which is the noblest and largest of all the Islands in this Sea, is placed by *Ptolemy* between the Bay of *Calbis* and *Argaris*. The Ancients differed much about its Situation, some placing it near the Continent, others twenty Days Sail from it; and some questioned whether it was an Island, or the Beginning of another Continent, particularly *Mela*; though before him it was generally reckoned an Island, as appears by *Dionysius* in his *Periegeta*, which the Learned agree to have been writ in the Time of *Augustus*.

Strabo compared it to *Britain* for Dimensions; *Pliny*, in his Account of the Embassy which the Inhabitants sent to *Claudius Cæsar* (supposing the Island he speaks of *Taprobana*) says, it contained five hundred Towns, and that *Palaemundum* their Capital, and the Seat of their King, had two hundred thousand Inhabitants, that they had a Lake called *Megisba* of 375 Miles in Circuit, which contained several fruitful Islands, and sent out two Rivers, one of which fell with three Mouths into the Harbour of *Palaemundum*, that in some Places was five Stadia in Breadth, and in others fifteen; this Harbour lay in the South Side of the Island, and they had another on the North called *Cidara*, four Days sail from *India*, the Island of the *Sun* being in the Middle betwixt them. *Ptolemy* places it nearer the Continent, and though he makes it very long, and extends it beyond the Equator, reckons but thirty Towns in it; nor does he say any thing of the great Lake, nor of the Town and River *Palaemundum*, all which occasioned the Learned to doubt whether his and *Pliny's* *Taprobana* was the same; and though most agree now, that *Taprobana* was *Ceylon*, yet others will have it to be *Sumatra*: But *Salmafius*, *Bochart*, and *Vossius*, think it is *Ceylon*, it being incredible that the *Romans* or *Alexandrines* ever failed so far as *Sumatra*.

Cellarius thinks also that *Ptolemy's* *Taprobana* was *Ceylon*, though he placed it too far South, and extended it beyond the Equator. It was anciently, as many Authors affirm, called *Insula Palaemundi*, and *Saire*, and the Inhabitants *Saire*. Yet some, as is said before, will have

Palaemundum to be different from *Taprobana*. The Towns and Capes mentioned by *Ptolemy* in this Island, were, 1. In the North Cape *Boreum*, over-against *Cory*, or *Conigicum* in *India*. 2. In the West lay *Margana* and *Jogana*, with Cape *Anarimundum*; next to them the River *Soana*, the *Portus Priapeus*, Cape *Jovis*, and the Bay of *Præfides*. On the South Shore lay the Mouth of *Hypanus*, the Towns *Odeca*, *Dana*, or *Dagana*, sacred to the Moon. The Promontory of the Birds of *Dionysius*, with a Town of the same Name, and *Cetæum*. On the East-side lay the Harbours of *Mordus*, of the *Sun*, *Ribata* and *Spatana*, with the Town *Procurus*, and a River called *Ganges*; and towards the North lay the great Mats of *Maduti* and *Talacori*. In the inland Parts northward were the royal Seat *Anurogrammum*, and the Metropolis *Magrammum*.

Pliny's Island of the *Sun* is different from that which others place near *Celrocha* and *Carmania*, and some think it to be *Cory*. *Ptolemy* reckons in the Bay of *Ganges* the Island *Bazacata*; and far from hence southward, under the Equator, the Island of good Fortune; and near the great Bay, against the County of the *Sine*, he places the three Islands of the *Satyrs*; and from hence southward, the Island of *Jebadum*, which produced Gold, and whose Capital was named *Argentia*, *Cellarius* corrects *Stephanus* for making this the Metropolis of *Taprobana*. Ancient Authors mention several other Islands in these Parts; but *Cellarius* looks upon many of them to be fabulous, and takes their *Course* to be the same with the *Arcia* *Christoforus*, or *Peninsula* of *Malacca*.

4. In the Examination of these Points, I have hitherto followed other Writers, and reported their Sentiments on the Subject, for the Reader's Information; but as I am afraid that what has been hitherto said, will appear a little dark and perplexed, I think it may not be amiss to endeavour, by a due Comparison of Facts, to find out the Truth; and, without an unnecessary Display of Learning, set this seemingly confused Matter in the clearest Light to the English Reader.

In the first Place, then, I lay it down as a Thing certain, that the Name of *Taprobana* was long known; the Ancients before they had any Opportunity of being acquainted with the Country itself; and as they were told in general, that this Island was very large, thoroughly inhabited, abounding not only with all the Necessaries and Conveniences of Life, but also with Spices, precious Stones, Gold, and other rich Commodities, they were very desirous of knowing it more perfectly; and therefore, whenever they met with any Accounts of an Island in the *Indian* Sea that was fertile, pleasant, and abounding with rich Commodities, they immediately pronounced it *Taprobana*, of which they had heard so much.

Thus that Island, which was visited by *Iambulus*, of which we have before given a large Account, was, without Hesitation, taken for *Taprobana*; though the Author of that Voyage does not either call it so, or describe it in such a Manner as to justify their Supposition, when thoroughly considered. In like manner, *Pliny* makes no Scruple of asserting that the Island which *Innius Placamus* discovered, and from whence Embassadors were sent to the Emperor *Claudius*, was *Taprobana*; which, however, we have discovered, as the Reader has already seen. Hence it was that such different Accounts were given of this Place; one Author affirming it near the Continent, another at a great Distance from it, according as they affixed the Name of *Taprobana* to this or that Island which had been discovered in their Times.

I must confess, it seems very probable, that some of the more ancient Writers, such as *Dionysius*, *Strabo*, and *Pliny*, when they speak as Geographers of the Island of *Taprobana*, mean the true Island to be called, that is, the Island described by *Ptolemy*; but as for the Island discovered under the Reign of *Claudius*, which was first called *Palaemundum*, and afterwards *Saire*, it was not *Taprobana*, but an Island at the Mouth of the River *Indus*, which had been long before known to, and examined by

^a De *Suo Orbis*, lib. iii. cap. vii. where, however, he mentions this as the Sentiment of *Hipparchus*.

^b *Insula Taprobanae signis* *Cæsar* *Insularum*.

^c *Geograph.* lib. xi.

^d *Perieget. Vers.* 952. which is thus

^e *Hist. Nat.* lib. vi.

^f *Phil. ab. 1692.*

^g As I have before given this Account at large, I only mention so much of it here as is necessary to connect the Discourse.

Alexander the Great; and I conceive that the calling of this Island by the Name of *Taprobana*, was the principal Occasion of all the Mistakes and Confusion that has been discovered in subsequent Accounts.

But as for the *Taprobana*, which *Strabo* mentions very cautiously, and, as a Writer afraid of offending the Truth, and which *Ptolemy* more largely describes from the Accounts that were current in his Time at *Alexandria*, it is most likely to be the Island of *Ceylon*. I shall not trouble the Reader with a long Account of the Reasons which other Writers have assigned for this Opinion, but content myself with giving him as succinctly as I can, the Motives which have induced me to believe that the Islands *Taprobana* and *Ceylon* are the same. In the first Place, the Situation of *Taprobana*, as laid down by *Ptolemy*, agrees very well with that of the Island of *Ceylon*. He mentions four Places in *Taprobana*, and sets down their Latitudes thus. The Mart, or Emporium of *Talaceni* 11° 20', *Nagadiba* 8° 30', *Maugranman*, which was the Metropolis of the Island, 7° 20', the Bay of *Prasodes* 1° 0'. The best modern Maps lay down the Island of *Ceylon*, from one to ten Degrees of North Latitude, the Capital of the Island lying very nearly in the same Position with that which *Ptolemy* has assigned it. In the next Place, the Ancients say that *Taprobana* was famous for producing the largest Breed of Elephants, which is true of *Ceylon*, where the Elephants are acknowledged to be the largest and strongest in the *Indies*. Thirdly, *Taprobana* was celebrated for its Spices; and in *Ceylon* there are found not only Ginger, Pepper, and Cardamums, but Cinnamon also is the staple Commodity, and is very justly esteemed the finest in the World. Fourthly, there are said to have been abundance of precious Stones in this Island of *Taprobana*; and, except Diamonds, all Sorts of Jewels are found in *Ceylon*, and particularly Rubies, Topazes, and Sapphires, the best in all the *Indies*. Lastly, *Taprobana* is celebrated for its great Fertility in various Sorts of Corn, and this too, may be affirmed of *Ceylon*, where they have not only five Kinds of Rice, which ripen one after another, but also eight other Kinds of Grain, of which they make either Bread or Oil. On the whole, therefore, when we consider that all the Variations in the Accounts given us by the Ancients of the Island of *Taprobana*, may be so easily accounted for; and that this last and clearest Description by *Ptolemy*, is so reconcileable to the Accounts we have of *Ceylon*, I see no Reason why we should not acquiesce in the Sentiment of the learned *Vossius*, that the *Taprobana* of the Ancients is the *Ceylon* of the Moderns.

It may, indeed, be objected that *Ptolemy* extends the Island of *Taprobana* southward beyond the Line, which does not, by any Means, agree with *Ceylon*; but I answer to this, that *Ptolemy* sometimes uses the plural Number, and mentions the Islands of *Taprobana*; so that it is not impossible that he might include some of the *Maldives* under that Name. I do not say that this is certain, but that it is possible, and, I might add, probable too; because since the Ancients were acquainted with the Sea in which the Island of *Ceylon* lies, and the Coast that is opposite to it on the Continent, it is not easy to conceive how they could be absolutely ignorant of so considerable an Island, which lay directly in the Way of all the Commerce carried on in this Part of the *Indies*. On the other Hand, if the Ancients were really acquainted with *Ceylon*, as it is very improbable that they should not, this furnishes us with a new Argument, and, indeed, the strongest Argument of all, that their *Taprobana* was our *Ceylon*; for, if

it was not, it is most certain that the Ancients have left us no Account of any Island that resembles it, which is a Piece of Negligence of a Nature directly opposite to their usual Exactness.

5. It is to be observed farther, that except *Taprobana*, the Ancients do not mention any Islands on the Coast of *India* of any Consequence; and from hence it is plain, that they were not acquainted either with the larger or lesser Islands that lay farther to the East. It is necessary, therefore, that we should return once more to the Continent, in order to mention another Eastern Nation, very famous in Antiquity. These were the *Seres*; and their Country is by *Ptolemy* called *Serica*, which he represents as bordering upon *Scythia*; so that according to his Description, this Country of *Serica* lay thus. On the West it was bounded by *Scythia* beyond Mount *Imans*. On the North, and on the East, by Countries unknown; on the South by *India*, beyond the *Ganges*. *Ptolemy* mentions many Regions into which this Country is divided, and abundance of Cities in them, in all which he has been copied by many succeeding Writers; but it is not easy to say what Part of the higher *Asia* they have described under the Name of *Serica*.

Many of our Critics are of Opinion that *Serica* is the northern Part of *China*, which may possibly be true; but in that Case, it is not very accurately described. But the Accounts they give us of the People, are much stronger and better Proofs, that by the *Seres* they meant the *Chinese*, than any that can be drawn from the Description of their Country. The *Seres*, say they, were a People that spoke a Language peculiar to themselves, and very guttural, which is exactly true of the *Chinese*. They were very just in their Dealings with Strangers, but had a very odd Way of carrying on Commerce; for they took all the Goods that were brought them, without giving any Thing immediately in Exchange: Yet, afterwards, they fully satisfied the Strangers for what they had thus taken, in their own Commodities. This, as we shall hereafter see, was likewise the constant Practice of the *Chinese*, as it still is of the *Japanese*. It is also affirmed of the *Seres*, that they were the first Manufacturers of Silk, that they were, generally speaking, clothed in that Manufacture, and that they made their Exchange either in Silk or in Goods made of Silk, which agrees perfectly well with the Practice of the *Chinese*. So that, on the whole, we have no Reason to doubt that the *Seres* and the *Chinese* were the same People; especially as all the ancient Writers agree, that the *Seres* were extremely fond of their own Country, very diffident of Strangers, and not inclined to travel, which are all of them Circumstances very applicable to the Inhabitants of *China*, before their Country was subdued by the *Tartars*.

It must, however, be confessed, that there are some Variations in these ancient Accounts, and that several Writers mention Circumstances that do not so well agree with the *Chinese* as those that have been related; and yet there seems to be no just Cause from the Consideration of these Mistakes, to reject the Matter of Fact, which, from the foregoing Circumstances, appears to be so well founded; for, if we consider the Contradictions met with in modern Writers, and particularly such as have treated of this Country, instead of being surpris'd at the Mistakes of the old Geographers, we may justly wonder, that their Errors were so few, and of so little Consequence; more especially, if we reflect on the prodigious Difference between their Lights and ours.

* I have been guided in my Remarks on this Subject, by comparing the Tables of *Ptolemy* with the best modern Maps, and the Particulars mentioned of this Island by ancient Writers, with the Remarks made by Mr. *Robert Knox*, who was many Years on the Island, as well as those of *Riblers*, a *Portuguese*, who likewise resided for a great while in *Ceylon*.

† In *Ptolemy's* Catalogue of famous Cities, with their Longitudes and Latitudes, which is very accurately published in the third Volume of Dr. *Hobson's* Collection of the ancient *Greek* Geographers, *Ptolemy* uses the plural Number, and seems to make *Taprobana* the chief of several Islands; and it is remarkable, that our first Voyages to the *East-Indies*, assert, that the little Princes of the *Maldives* were subject to the King of *Ceylon*.

‡ As *Ptolemy* was forced to supply, from his own Judgment, the Situation of the Regions he mentions; and as all the Maps drawn from his Tables, depend likewise, in a great measure, on the respective Judgments of those who drew them, the Reader cannot but discern the Reasonableness of what I have asserted in the Text.

§ All this will be fully justified in our succeeding Collection of Voyages, which, by their being placed in the proper Order of Time, will enable the Reader to understand this Matter perfectly, and to see clearly the Truth of these Observations, which are not intended to lessen the Credit of the Ancients, but to represent Things as they really are.

¶ This Difference chiefly consists in their Writings from the Memoirs picked up by their Merchants, from the Reports of the *Indians*; whereas we take our Accounts not only from such as have actually visited their Countries themselves, but from those who have resided there many Years, and have had all possible Opportunities of knowing the Facts which they relate.

6. There are, however, some Objections that will naturally occur to the intelligent Reader, and ought not to be passed over in Silence, because if they cannot be fully answered, they have a direct Tendency to overturn the best Part of what we have delivered, and therefore it is requisite that we should consider them more at large. The first is, that if we suppose the Ancients to have been acquainted with *China*, and the *Celeste*, it absolutely contradicts what has been before asserted of their knowing little or nothing of the Countries beyond the *Ganges*, and extends their Knowledge of the East to such a Degree, as is absolutely incompatible with the Sentiments of the most learned Writers upon this Subject, as well as with the foregoing Part of our own Work; so that instead of clearing this Matter, we should only perplex it the more, and be so far from making it perspicuous to the *English* Reader, that on the contrary we should entangle him in new Doubts, and leave him up on the whole in at least as great Obscurity as we found him. That this, notwithstanding, is very far from our Intention, appears plainly from the Pains already taken, and from our stating this Objection fully and fairly; and it ought likewise to pass for a strong Testimony of our aiming at Satisfaction in this Point, that we so freely mention the Difficulties that occur in the Execution of this Undertaking.

In order to the clear Solution of this Point, it is necessary to remember, that in this Section we do not handle the actual Discoveries of the Ancients, but the Accounts given by their Geographers, which are very different things. We suppose, agreeable to the best Lights that Antiquity affords, that the Ancients never actually sailed farther than the Mouths of the *Ganges*, and that they might do by coasting round Cape *Camerin*, and so along the Coast of *Coremandel*; neither is it very probable that they made many Voyages so far, but rather that the best Part of their Knowledge was derived from Travels made by Land through the Countries that lie between the Rivers *Indus* and *Ganges*.

Upon this Supposition, all that they have written may be very well accounted for, and the seeming Differences between what is related in the foregoing Sections and this very easily reconciled. To make this Matter clearer, we will examine in their natural Order the Seas mentioned by ancient Writers, which will in a great measure enable us to extricate ourselves from those Doubts. In the first place then they navigated the *Mare Erythraeum*, which lies between the *Arabian* Gulph, and the opposite Side of *India*; and having in their Commerce often heard of *Taprobana*, they were led into many Mistakes about that Island, till by degrees their Vessels sailing on the Coast of *Malabar* in doubling Cape *Camerin*, discovered *Ceylon*, which is the true *Taprobana*. The Gulph of *Bengal* was their *Mare Eoum*, and the upper Part of it towards the Continent *Sinus Gangeticus*, or the Bay of the *Ganges*, because the Mouths of that River fell into this Bay. The Gulph of *Siam* was their *Sinus Magnus*, or *Great Bay*; but this they knew by Hearsay only, their Navigation never extending thither.

But it may be demanded what Proof there is of this? To which I answer, all that the Nature of the Subject will admit affirmative and negative. As to the first, it is plain they never were thoroughly acquainted with the Island of *Taprobana*. *Strabo* makes it of the Size of *Brittain*, and writes no doubt from Information only pretty near the Truth; but *Ptolemy* extends it much beyond its real Bounds, by supposing (at least this is the only way of accounting for it) the *Maldives* belonging thereto, or dependent thereon. Yet the Situation of the principal Places he mentions therein are not repugnant to Truth, so that the West and North Parts of it were tolerably known in his Time, but not the South. The *Maldives* very imperfectly, if at all; and therefore the *Romans* and *Alexandrines* had not pushed their Commerce very far on this Side, much less into the *Sinus Magnus*, or Bay of *Siam*. This appears from the very Name, which undoubtedly was given it from a Notion that it was a very wide spreading Sea, whereas in Fact it is much narrower than the *Sinus Gangeticus*.

As to the negative Proofs, they are stronger and more in Number: For in order to have sailed into the *Sinus Mag-*

nus, they must have passed through the Straights of *Malacca*, which had opened to their View all the *Indies* that are now known, and of which there is not a Word in *Ptolemy*, or even in *Ammianus Marcellinus*, and consequently no Colour for believing they had any other Knowledge of that Bay than from the Relation of the *Indians*, with whom they traded. Their actual Discoveries therefore went no farther than we before mentioned; but by the Help of these Discoveries, the Report of Travellers, and his own Sagacity, *Ptolemy* formed his Tables, which seem to extend the Knowledge of the Ancients so much farther. We might, to verify this Matter, mention a Multitude of Errors in those Tables, and in other Accounts of those Times, which could arise from no other Cause than their Authors setting down the Names and Situation of Places from very indifferently Memoirs, and yet from the best they had; but that this is unnecessary, since *Ptolemy* himself ingeniously owns that beyond the Country of the *Sine*, or *Sinae*, which is certainly the Kingdom of *Siam*, they knew nothing to the East at all.

It is most evident from these Observations, that we have done the strictest Justice to the Ancients, both with respect to the Voyages made by them, and the Uses they made of the Knowledge derived from thence; and have shewn, that instead of treating their Geographical Descriptions with Contempt, as some have done on Account of the many Mistakes in them, we ought rather to applaud their Diligence in making the best Use of the Materials in their Power, and thereby furnishing to such as are their professed Admirers very plausible Arguments for maintaining, that the Ancients knew almost as much of these Countries as ourselves. Indeed, while they speak in general Terms only, they seem to justify this Opinion; for they assure us, that this better Part of the World is inhabited by the *Indians*, the *Sere*, and the *Scythians*; that is, in the Language of the Moderns, by the *Indians*, the *Chinese*, and the *Tartars*, which is very true; but when they endeavour to assign the Bounds of the several Countries which these Nations inhabit, they shew us plainly, that they did not understand what they themselves said, by their bringing the *China* almost as far as the *Ganges*, and placing beyond them a Race of Man-eaters in *China* properly so called. To sum up all, and answer the Objection in few Words, the Accounts left us by the Ancients do not prove that they visited any Part of the *Indies* beyond the *Ganges*, though the Informations they received in their Commerce enabled their Geographers to lay down Tables of a few other Countries, about which, however, they were much mistaken in their Conjectures.

7. It may very possibly happen, as it very often does, in the discussing such perplexed Subjects, that by removing one Objection the Means is afforded of raising another; and that perhaps no less specious than the former. It may in short be said, that from the Account we give of the Knowledge the Ancients had of the *Sere*, which we allow to be the *Chinese*, we admit that they had extended their Dominions very much beyond what they possess at this Day; and, as great Conquests are evident Proofs of extraordinary Power, it follows, that the *Sere* could not have been such a dispersed People as they are represented, but must have possessed a very large and flourishing Empire, which, if they had done, it must have been famous through the East, as the other Empires raised in that Part of the World were. The Force of this Objection, therefore, consists in making the Description given us by the Ancients inconsistent with itself, and by overturning that, our Answer to the former Objection will be overturned also.

Now to this I answer, that the Matter of Fact, which is that the *Chinese* were known to the Ancients by the Name of the *Sere*, has been clearly made out; and therefore there is no receding from that, let its Consequences be what they will. But it so falls out, that we have not only the Authority of the ancient Writers before cited, to prove that the *Sere* or *Chinese* extended themselves very far on this Side, but also the Accounts of the *Chinese* themselves, which assert, that they were Masters of *Cochin-China*, and

* The Reader will naturally call to mind on this Occasion what we have already said of *Megasthenes* and other Persons, whose Negotiations with the *Indians* gave the Ancients not only the first, but the best Lights they had into the Situation of those Countries, and the Names of their Inhabitants.

Pegu; that is, in all Probability, those Countries were subject and tributary to them. It is likewise very probable, that they were Masters of *Tibet*, or *Tibet*, from whence it will follow, that whoever traded in the Countries near the Mouth of the River *Ganges*, might very well obtain some such dark and imperfect Relations of the *Seres* as those are which the Ancients have left us; and upon this Occasion I shall not scruple to advance, that their Dark-ness and Imperfection, instead of being considered as Marks of Falseness, ought in reality to pass for Proofs of their being true; for it plainly appears from a Multitude of Instances, which we have already given in this Work, that not only the *Chinese*, but the *Indians* also, were very little inclined to let Strangers into the Histories of their Countries, or into the Secrets of their Governments; and therefore it was very natural for such as endeavoured to make Enquiries into these Matters, to report things slightly and imperfectly. We may be the better satisfied of this, if we consider, that it appears from all the Accounts of the *Indies* published by the Ancients, that these Countries were extremely populous, full of large Cities well fortified, and a great Number of Sea-ports, in which a great Trade was driven amongst themselves; these Particulars plainly prove, that, however barbarous their Customs might appear to Strangers, yet within themselves these Eastern Nations were perfectly well governed, and in the strict Sense of the Word thoroughly civilized.

What serves chiefly to confound us is our considering the *Indians* of those Times in the same View that they are represented to us by modern Travellers, which is what we ought not to do, for though it be reasonable, and in that Light we have made use of it often as a probable Argument, that the Accounts given us by ancient Writers of Wives burning themselves with the dead Bodies of their Husbands, the *Brachmans* living in a kind of Collegiate State, and the whole People being divided into Tribes, are true, because in a great measure we observe the same things among the *Indians* at present, yet it does not follow that in every respect the modern *Indians* resemble their Ancestors. On the contrary, we ought to reflect, that the Accounts we have from the Ancients, refer to the first and flourishing Ages of the *Indian* Principalities, when they were absolutely free and independant, when their Philosophy was pure and sublime, their political Constitutions in their full Vigour, their Laws well supported, and thoroughly executed, their military Establishments so well adjusted to the Regulation of their civil Affairs, that in times of imminent Danger, they were able suddenly to set on Foot Armies so puissant, that their very Countenance was sufficient to teach the most ambitious Princes Moderation, as was the Case of *Alexander*, and some of his Successors. The *Indians*, therefore, in those Days, were another sort of People than the *Indians* known to us; and though the latter may still retain in some measure the Manners of the former in private Life, yet in their publick Conduct, they can furnish us with no Idea of their Progenitors. In few Words, though they have preserved some of their Customs, they have lost all their Spirit.

It is the same thing with respect to the *Chinese*, they are no longer what they have been; and if we admire the Wisdom of their present Government, and the wonderful Exactness with which their Affairs are administered, we ought to conceive much higher and more magnificent Notions of their Power and Splendor in former Times. That Accuracy and Regularity which strikes us so much at present are no more than the Remains of those Institutions which took place when their Empire was much greater and more glorious than at this Day. It is true, that we have received from the Missionaries, great Lights with regard to the *Chinese* History; but we are very far from having any thing complete in this kind, even at this Day. We have only general and short Accounts of the Revolutions that have happened in that Country, and of the Conquests made of its frontier Provinces; no wonder therefore that we are not better acquainted with the Conquests made by them, and yet, as I hinted above, we do not want Authority to prove, that the *Chinese* actually extended their Power into Countries that might make their Fame known to the *Alexandrian* Traders; and perhaps in its proper Place we shall

be able to account for their relinquishing those Conquests.

Here, however, it is sufficient to observe, that it appears very clearly from what we know of the *Chinese* History, that there was a constant Fluctuation in their Possessions, and that sometimes a Spirit of Dominion, and at others a pacifick Disposition took Place; and there are extant, even in the modern Languages, Discourses addressed to the *Chinese* Emperors by their Ministers, exhorting them to be content with their hereditary Countries, and rather contract their Power than extend it, that they might govern with greater Ease to themselves, and with Effects more beneficial to their Subjects. After these Reflections, it will be easy to understand how the Ancients came to know so much, and, at the same Time, so little of these People. It was then penetrating southward and westward, that gave the Ancients an Opportunity of knowing any thing of them at all, since it is very certain, that if they had been always restrained within the Bounds of *China*, strictly so called, they would never have been heard of; and therefore these Accounts, instead of contradicting the Facts before-mentioned, when thoroughly looked into, and coolly considered, carry in them the highest Probability, and the most evident Marks of Truth. That, upon Enquiry, the Ancients being informed that the Country, which is now called *Tibet*, was under the Power of the *Seres*, should, from thence conclude it the native Soil of those People, and their Geographers be induced from thence to give it the Name of *Serica*, has nothing in it strange at all, any more than that they should imagine that the Metropolis of this Country was the Capital of the *Seres*, and the chief Seat of their Empire. Thus it is hoped this Difficulty is entirely taken away, the Credibility of the Testimonies before alledged, fully established, and the Difference between the ancient and modern Geography of these Countries rationally accounted for, without offering any Injury either to the old Writers or the new, and consequently what is laid down in this Section, perfectly reconciled to all that has been asserted in the former.

8. There is a third Point in reference to this Subject, which requires some Attention, and then I think we may safely proceed. As the last Objection respected the Country of the *Seres*, so it is very possible that some Doubts may arise as to the People who are described by *Pliny* and other old Writers, equally removed in their Manners from the rest of Mankind, as separated from them by the great Distance of their Country. It may, I say, be suggested, that the Customs of the *Seres*, as they stand recorded in ancient Writers, have no sort of Resemblance to those of the *Chinese*, if the Accounts I have just now given of them be well founded; for, whereas I make them a potent, wise, and polite People, they paint them as a kind of Savages, differing in their Dialect from the rest of Mankind, and slurring, as much as might be, all Conversation with Strangers.

Now, to reconcile these Contradictions, we are to consider, first, that the Ancients themselves speak very differently of the *Seres*, sometimes commending them for their strict Justice and Probity, for the Purity of their Manners, and for their having no Desire to injure their Neighbours; and at others, as a Race of intractable People, absolutely bent to conceal themselves in their Woods and Fortresses, and trading no other Way than by Exchange, and that too by leaving and taking of Goods without any Intercourse between the Merchants who sold them, and those who purchased. Secondly, it appears from the Diversity of these Accounts, that the Ancients were entirely led in this Matter by Hear-say, and by the Hear-say of a People who were not much inclined to let them into all they knew. Thirdly, it is necessary to remember that the *Indians*, from whom the Ancients had every Title of what they report concerning the *Seres*, might give them such Informations as were grounded on Truth, but were so unintelligible to the *Greeks*, that they were not able to report them without Misrepresentation.

As for Instance, the *Indians* might tell them, that the *Seres* made use of a Language very different from that of other Men, and in this they would have told them no

more

more than has been justified by Experience; but in repeating this, the Ancients have represented the Tongue of the *Chinese* as if it had nothing in common with human Speech, which is a manifest Exaggeration. That the ancient *Seres* had a great Aversion to Strangers, and an invincible Resolution of continuing in their own Country, is another Fact true in itself, but strangely misrepresented. All the *Chinese* Histories agree, that this Nation had, as indeed they still have, a great Jealousy of Foreigners, and by their Laws forbade their sitting amongst them; yet the same Histories shew, that notwithstanding this Jealousy and these Laws, they have always had a great many Foreigners in their Country; and these not only *Syrians* or *Tartars*, *Indians*, *Persians* and *Turks*, who were in some sort their Neighbours, but *Jews*, *Christians*, and *Mohammedans*; and that for such a Length of Time, that it is almost impossible to account for their coming into and settling in *China*, as is evident from the learned Dissertations that have been wrote expressly upon these Subjects. The Amount of all this, therefore, can be stretched to nothing more than our not having very distinct Relations of what passed a long Time ago in a very distant Country, which is not very wonderful. But, however obscure, however contradictory, these Accounts may be in other Respects, yet in this they agree perfectly well, that such a Jealousy always subsisted in this Nation, though for particular Reasons, and under particular Circumstances, they were content to dispense with these Laws, which from this Spirit of Jealousy they had enacted.

To make this Matter still plainer, let us consider the *Chinese* in their present Situation, and in regard to the different manner in which they carry on Commerce at home and abroad. Their Junks sail annually to almost all the different Ports in the *India*; but particularly to *Batavia*, where they trade as other People do, and comply with all the Regulations that are thought necessary in those Places for the Security and right Management of Commerce, from whence they have acquired very justly the Character of being as active, as industrious, and as general Traders, as any in that Part of the World. This, one would think, might effectually purge them from the Imputation of having a Dislike to Strangers, and an Unwillingness to correspond with other Nations, and, in short, of all Intractability on the Head of Commerce. Yet when we look into their Management at home, we shall find many things that may very well justify such a Charge even at this Day. For there are but one, or at most but two, of their Ports open to Strangers, *viz.* *Canton* and *Amy*; they do not suffer any *European* Nations to make Settlements in their Dominions, if we except the *Portuguese*, and even they are not only Subjects, but in a manner Slaves to the *Chinese*; their Port Duties are not high only, but very extravagant; the Precautions they take against, and the Hardships they put upon Foreigners, are so many, and so inconvenient, that it is plain they only tolerate Trade instead of encouraging it. If this therefore be, as most certainly it is, the Case, why should we accuse the ancient Accounts of Absurdity and Contradiction?

It would be needless and unnecessary to enter into a Digression about the Navigation of the ancient *Seres*, how far it extended, and what the Consequences were that attended it. I say, it would be needless and unnecessary; because, after all the Pains that could be taken, we should find it very difficult, if not impossible, to give a tolerable Account of it; but in general, however, we know that in very ancient times they traded to most of the *Indian* Islands, settled Colonies in many of them, and as there is good Ground to believe, were the Ancestors of the *Chingalese*, which are the most powerful Nation in the Island of *Ceylon*. These Circumstances seem absolutely to contradict another Part of their general Character, which is, that they have no Inclination to leave their own Country on any Terms. In all probability, their Settlements abroad were created by domestic Contusions, when Numbers chose rather to seek new Habitans, than to be exposed to certain Death or Destruction from the Rage of their Adversaries, which, nevertheless, implies no Alteration in the Nature of the People; for it is one thing to be a roving Disposition, and another to prefer Banishment to Death.

Upon the whole, if there be any thing certain in the *Chinese* History, it is this; that both the People themselves have the most sincere Love for their Country, and desire to remain in it; and that this is manifested in them by their Laws, and the Propagation of this Spirit made a capital Point of their Politicks. On scanning therefore this Matter as strictly as it is possible, we see, that taking all Things together, the oldest Accounts of the *Chinese* are not liable to more Objections, or incumbered with greater Difficulties than the modern; and therefore, if the Ancients have represented the *Seres* as a People of an odd Humour, and their Practice and Principles considered somewhat inconsistent with themselves, we have the more Reason to be positive, that the *Seres* and the *Chinese* are the very same Nation, because from the Knowledge we have of them at present, it is impossible to conceive that any Character given of them in past Ages, should come nearer the Truth than that which from a superficial View seems incompatible therewith. In cases of this Nature, Nations are to be described as they really are, and of such Temper and Disposition as their Actions speak them; other Accounts may be more plausible, and to such as take up with the first Appearance of things more credible; but unquestionably, the best way is to write the Truth, because in the end, and after the strictest Examination, it will be found, that Truth will always justify itself.

9. There still remains an Island mentioned in ancient Writers as lying in the *Indian* Ocean, though never discovered by any of the Moderns, of which we promised, and of which it is necessary that we should give a clear Account, the rather, because though surrounded with a Mist of Fables, there is at the Bottom something which deserves our Notice, and which may enable us to detect such kind of Relations when we meet with them elsewhere. The Name of this Island is *Panchaia*, and it is supposed to lie between the *Arabian* Gulph and the opposite Coast of *India*. There was but one ample and distinct Relation of this Country, which is still preserved almost entire in the Works of the learned *Diodorus Siculus*, which therefore we shall fairly transcribe for several Reasons. First, that the Nature of such kind of Relations may plainly appear, and the Reader be able to judge for himself of the Difficulty of distinguishing between Facts faithfully related, and Fictions so elegantly dressed out. Secondly, that he may be better understand the Detection of this fabulous History. And, thirdly, that he may be satisfied we do not impose upon him our own Notions and Sense of Things, but admit him freely and fairly to the Sight of our Authorities.

There are, says our Author, many things observable in *Panchaia*, or *Panchaia*, that deserve to be taken notice of. The natural inhabitants are those they call *Panchaia*; the Strangers that dwell among them are People of the Western Parts, together with *Indians*, *Cretans*, and *Syrians*. In this Island there is a famous City called *Panara*, not inferior to any for Wealth and Grandeur. The Citizens are called the Suppliants of *Jupiter Triphylius*, and are the only People of *Panchaia* that live under a Democracy without a Monarch. They chuse every Year the Presidents or Governors that have all Matters under their Cognizance; but what concerns Life and Death, and the most weighty Matters, they refer to the College of their Priests. The Temple of *Jupiter Triphylius* is about sixty Furlongs distant from the City in a fair, open Plain. It is in great Veneration for its Antiquity, and the Stateliness of the Structure, and Fertility of the Soil. The Fields round about the Temple are planted with all sorts of Trees, not only for Fruit, but for Pleasure and Delight; for they abound with tall Cypress Trees, Plane Trees, Laurels and Myrtles. The Place well furnished with running Water; for near the Temple there's such a mighty Spring of sweet Water rushes out of the Earth, so that it very soon becomes a navigable River. Thence it divides itself into several Currents, and waters all the Fields therabouts. It produces thick Groves of tall and many Trees, amongst which, in Summer, abundance of People spend their Time, and a Multitude of Birds of all sorts build their Nests, which creates great Delight, both by affecting the Eye with the Variety of their Colours, and charming the Ear with the Sweetness of their Notes. There are many Gardens, sweet and pleasant Meadows, thick

with all sorts of Herbs and Flowers, and so glorious is the Prospect, that it seems to be a Paradise worthy the Habitation of the Gods themselves. Besides all these, there are a Multitude of Vines of all sorts springing up on high, and so curiously interwoven one among another, that they are exceeding pleasant to the View, and greatly augment the Delights of the Place.

The Temple was built of white Marble most artfully jointed and cemented, two hundred Yards in Length, and as many in Breadth, supported with great and thick Pillars, curiously adorned with carved Work. In this Temple were placed huge Statues of the Gods of admirable Workmanship, and amazing Bulk; round the Temple are built Apartments for the Priests that attend the Service of the Gods, by whom every thing in that sacred Place is performed. All along from the Temple is an even Course of Ground four Furlongs in Length, and one hundred Yards in Breadth; on either Side of which are erected vast brazen Statues, with four-square Pedestals; at the End of the Course breaks forth the River from the Fountain before-mentioned; from whence flows most clear and sweet Water, the drinking of which conduces much to the Health of the Body. This River is called the Water of the Sun. The whole Fountain is lined on both Sides, and flagged at the Bottom with Stone at vast Expence, and runs out on both Sides for the Space of four Furlongs: It is not lawful for any but the Priests to approach the Brink of the Fountain.

All the Land about for two hundred Furlongs round, is consecrated to the Gods, and the Revenues bestowed in maintaining the publick Sacrifices and Service of those Gods beyond these consecrated Lands, is an high Mountain dedicated likewise to the Gods, which they call the Throne of *Cælus* and *Triphtylus Olympus*; for they report, that *Uranus*, when he governed the whole World, pleasantly diverted himself in this Place; and from the Mount observed the Motion of the Heavens and Stars; and that he was called *Triphtylus Olympus*, because the Inhabitants were composed of three several Nations; *Pantheonians*, *Oceanites*, and *Dians*, who were afterwards expelled by *Ammon*; for it is said, that he not only rooted out this Nation, but utterly destroyed all the Cities, and laid *Dota* and *Asterysa* even with the Ground. The Priests every Year solemnize a sacred Festival in this Mountain with great Devotion. Behind this Mount, in other Parts of *Panbaia*, they say there are abundance of wild Beasts of all kinds, as Elephants, Lions, Leopards, Deer, and many other wonderful Creatures, both for Strength and Proportion. In this Island there are three chief Cities, *Hipacia*, *Dalis*, and *Oceanis*; the whole Country is very fertile, and especially in the Production of all sorts of Wine in great Plenty.

The Men are warlike, and use Chariots in Battle after the ancient manner. The whole Nation is divided into three Tribes; the first is composed of the Priests, with whom are joined the Artificers; the second consists of the Husbandmen; and the third of Militia and Shepherds. The Priests govern all, for they give Judgment in all Controversies, and have Authority in all publick Transactions of State. The Husbandmen till the Land; but the Fruit is brought into the common Treasury, and who is judged the most skilful in Husbandry, receives the largest Share of the Fruits for a Reward in the first Place, and so the second and the rest according to that Rule, as every one merits in the Judgment of the Priests. In the same manner the Shepherds and Herdsmen carefully bring into the publick Stock the Victims and other things both by Number and Weight, as the Nature of the Things are; for it is not lawful for any to appropriate any thing to themselves, except a House and Garden for all the young Breed of Cattle, and other things; and all the Revenues are received by the Priests, and they justly distributed to every one as their Necessity requires, only the Priests have a double Proportion.

They wear soft Garments, for their Wool is much finer here than any where else: both Men and Women likewise deck themselves with golden Ornaments, Necklaces of Gold, and Bracelets about their Arms, and,

like the *Perfians*, have Rings hanging in their Ears; their Shoes are such as others wear, and of different Colours. Their Soldiers, who are hired for Pay, defend the Country, and have their proper Posts, and in proper Parts of the Island Fortresses, the Hills being infested with Thieves and Robbers, who often surprize the Husbandmen. To conclude, these Priests, for Delicacy, State, and Purity of Life, far exceed all the rest of the Inhabitants. Their Robes are of white Linen, and sometimes of pure soft Wool. They wear likewise Mitres embroidered with Gold. Their Shoes are Sandals, curiously wrought with exquisite Workmanship; and in their Ears hang golden Ear-rings, like Womens. They attend chiefly upon the Service of the Gods, singing harmonious Songs in their Praise, setting forth their glorious Acts and Benefits bestowed upon Men. The Priests, say they, came originally from *Crete*, and were brought over into *Panbaia*, by *Jupiter*, when he was upon Earth, and governed all the World, and alledged their Language for a Confirmation of this Assertion, inasmuch as they retain many Words of the *Cretan* Tongue among them; and moreover say, that they derived from their Ancestors that Civility and Kindness wherewith they entertain the *Cretans*, the Fame and Report of their ancient Conspiquity, descending continually in a perpetual Succellion to their Posterity; they shew likewise a Record, written, as they say, by *Jupiter's* own Hand, at the Time when he was on Earth, and laid the Foundation of the Temple.

There are in this Island likewise Mines of Gold, Silver, Brass, and Iron, but not lawful for any to export them. Nay, it is not permitted to any of the Priests to go out of the Verge of the consecrated Ground; and if any do, it is lawful for any Person who finds them, to kill them. They have, under their Charge, innumerable Vessels, and other consecrated Things, both of Gold and Silver, which have been laid up there in Honour of the Gods for many Ages. The Gates of the Temple are of admirable Workmanship, beautified with Gold, Silver, and Ivory, and Thyne-wood. The Bed of the God is six Cubits long, and four broad, of massy Gold, most curiously wrought in every Part; and near adjoining stands the Table, as large, and of the like Materials and Workmanship with the other in every Respect. In the Middle of the Bed is placed a great golden Pillar, whereon are Letters inscribed in that called by the *Egyptians* sacred Writing, expressing the famous Actions of *Uranus*, *Jupiter*, *Diana*, and *Apollo*, written, as they say, by *Mercury* himself: But this may suffice concerning the Islands lying in the Ocean over-against *Arabia*.

Such is the Account delivered to us of this Island by *Diadorus Siculus*, who had this Account from a more ancient Writer, one *Euemerus*, a *Messonian*; so that he is not to be charged with inventing the Fable, but with giving it a Stamp of Authority, by taking it into his History. But if the Reader should enquire what induced the original Author of the Story to frame so circumstantial a Relation out of his own Head, and attempt therewith to cheat and impose upon Posterity, it falls out very luckily, that we are able to resolve this Question, and to set the Truth in the clearest Light possible; from whence it will appear, that these Fictions of the Ancients were not devised with a malicious Intention of imposing Fables for Matters of Fact upon credulous Readers, tho' undoubtedly, they very often had this Effect; but they were contrived chiefly for another and better Purpose, as appears plainly from the Case before us.

Plutarch not only knew that the whole of this Relation was an absolute Fiction, but he likewise knew, and fairly informs his Reader of the End for which it was framed. He says, that the Author of it was an irreligious Man, or an Atheist, who, in delivering this Story of the Island *Panbaia*, aimed chiefly at inculcating his own Opinions without running the Hazard of being punished by Law. Now those Opinions of *Euemerus* the *Messonian*, which *Plutarch* very prudently styles atheistical, were no other than these, that most of the Deities worshipped

in his Time, such as *Uranus, Jupiter, Apollo*, and the rest, were, in Fact, no other than Men famous in their Life-times, and, by the Flattery of Posterity, magnified as Gods after their Decease. This Opinion was certainly well founded and agreeable to Truth; but if that Author had delivered it simply and plainly as his own, he had probably died a Martyr for speaking Truth improperly and against the Laws; and therefore he invented this History of *Panthea*, to insinuate that the Priests there had a Record of this Matter written in golden Characters. By this Means he, without Danger to himself, intimated to his intelligent Reader, that whatever the Vulgar might believe of these Deities, yet, in Fact, they were no other than Men; and the Stories related of them the bare Inventions of Priests.

I must confess, that it is my own Opinion, *Plutarch* did not unveil this Mystery with a Design of exposing its Author, as he seems to do, for an impious Man, and an Atheist, but with an Intention to deliver this Matter more clearly, and by giving the Key of *Euemerus's* Story more effectually to divulge the Truth: For, whoever considers the Drift and Design of his Dissertation concerning *Isis* and *Osiris*, will easily discern that he wrote it with much the same View that *Euemerus* invented his Fable of *Panthea*; and as for the hard Words he bestows on that Writer, they served only to cover and screen himself; since, undoubtedly, had he not filed these Notions impious and atheistical, he had passed (with the Vulgar at least) for as impious and atheistical a Writer as *Euemerus*, whose Fiction he unveils.

A great Happiness it is, that the Christian Dispensation has freed Mankind entirely from this tyrannical Yoke of Superstition, and opened a free Passage to Men's Thoughts, without Danger or Distrust. But it has, notwithstanding, so fallen out, that, even under the Light of the Gospel, Superstition has sometimes prevailed to such a Degree, that learned Men have found themselves under a kind of Necessity of making use of the same Artifice, as appears by Sir *Thomas More's Utopia*, and other Works of the like Nature, which, however, are penned in such a Manner as very seldom to mislead the Reader, or impose upon him Fictions for Truth. Thus, we have at length finished both the real and feigned Accounts of the *Indies*, as delivered to us by the Ancients, and are now at Liberty to take Notice of their Observations and Reflections upon these Accounts, which are of so much greater Importance, as they certainly kept up the Fame of these Countries, and in a great measure excited that Spirit which lead to the more perfect Discovery of them.

10. As slight as the Knowledge was which the Ancients had of the Inland Parts of *India*, yet they took great Pains to propagate a very high Opinion of its Fertility and Riches. *Diodorus Siculus* gives a very pompous Description of the Advantages possessed by *India* beyond any other Country. He asserts, that the Air is remarkably settled and serene, the Seasons equally regular and pleasant, the Mountains covered with Fruit-trees of the most exquisite Kinds; the flat Country so rich as to yield two Crops every Year, one of Wheat, and the other of Millet-Rice, or some such Grain; the Waters so delicate and pure as greatly to contribute to Health and long Life, and most of the Rivers overflowing annually like the *Nile*, and thereby lessening the Labour of the Inhabitants in the Cultivation of their Grounds.

After this Representation of the golden Age, as still remaining in *India*, we are further assured, that the Treasures which the Earth contains in her Bosom, are much superior to those born upon her Surface, and that Gold, Silver, Brass, Iron, and Tin, are more common there than in any other Country. Yet, after this magnificent Detail of the Plenty, and Riches of the *Indies*, he plainly puts the *River Ganges*, as the Boundary of all the *Indian* Regions, with which he was acquainted; for, into that, he says, the rest of the Rivers of *India* fall; and in the Neighbourhood of this River he places the *Gandarides*, a Nation so powerful that *Alexander* was glad to leave them untouched, as having four thousand Elephants trained to War, and a

proportionable Number of Horse and Foot; which sufficiently shews, that, in his Opinion, the Conquest of this Country was not to be attempted.

He likewise sets another Bound to the Desire of discovering, by affirming, that a great Part of this Country lies under the Line, for so he must be understood, and not under the Tropic of *Capricorn*, as some of his Interpreters would have it; for, he adds immediately after, that in many remote Parts of *India*, the Sun casts no Shadow, neither is the North Pole, or any of the Constellations near it seen there in the Night, which was sufficient to deter the Travellers of those Times from all Hopes, and even from all Wishes of penetrating into these Regions.

Strabo likewise gives us a large and magnificent Account of the Plenty and Riches of *India*, and assures us that it abounds with all kinds of Wealth, more especially Pearls, Carbuncles, Diamonds, and other precious Stones; he mentions likewise Aromaticks and Spices, as Part of the Commodities brought from the *Indies*, but he does not tell us in what particular Parts of *India* these valuable Commodities are found; and indeed all the Writers of Antiquity are alike faulty in this Point.

Pliny, who had read almost every Author extant on this Subject, is very clear in the general, as to the Plenty of all things necessary for the Service of Mankind in this Country, and gives us very copious Accounts of the rich Metals and various kinds of precious Stones that were brought from thence, some of which he tells us were found in Rivers, others in the Clefts of Rocks, and not a few in the Mines of Gold and Silver; but with respect to the Places where these Mines lay, or how they were to be reached, he is silent; and we may say the same thing of *Arrian*, and all the ancient Writers cited by *Athenaeus*; for though they are profuse in their Commendations of *India*, and in their Panegyrics on its Wealth and Riches, yet they never distinguish where we are to look for this precious Commodity, or where that, is to be found; but content themselves with assuring us, that all are to be met with in the *Indies*.

This was owing, beyond all Question, to the Conduct of the *Indians* in their Commerce with the Ancients; for they always pretended that things were brought to them from distant Countries with infinite Hazard and Danger; and these Pretences served at once to heighten the Value of their Goods, and to deter Strangers from going in Search of them, as it likewise hindered them from making such Enquiries as might have acquainted them with the Truth, which was, that many of the valuable Commodities of the *Indies* were actually the Produce of those Countries they visited.

It may not be amiss to observe here, that in the Description of the *Erythraean* Sea ascribed to *Arrian*, and in all the other Works of the same Nature that are still extant, the *Indians* are every-where represented as much given to, and extremely well versed in, all the Arts of Commerce. It appears from those Accounts, that there was a very considerable Trade carried on in all their Sea-ports, and that where-ever the Situation of their Rivers afforded them an Opportunity of conveying their Merchandise in small Vessels within Land, they had great Cities upon their Banks full of Artificers and Manufacturers, where every thing was carried on with the utmost Regularity, so that the Firm of their Industry was equal to that of their Riches. I make therefore no Scruple of asserting, that these were the flourishing Times of that Country, and that the *Indians* have been since on the Decline, which will appear the more credible, if we consider, that the prodigious Trade of *China*, which is the great Source of the Wealth and Happiness of its People, is, properly speaking, a domestic Commerce; that is to say, the best Part of it is carried on amongst themselves, and from one Province of that Empire to another.

It is not therefore at all wonderful, that People that practised in Trade should be able, by studied Relations, to impose upon Strangers, who finding them all in the same Story, took this for an incontestable Argument of Truth; and hence it is that we are told of rich Mines of Gold in

† The Court of *Atropagus* at *Alexis* punished severely such as broached new Opinions in Religion, or derided the old.

* See the List of Authors cited by *Pliny* in his *Natural History* in *Father Harshavin's* Edition.

† *Diod. Sicul.*

the Northern *Indies* on the Frontiers of *Scythia*, and of Diamonds and Precious Stones found there, whereas in all probability, the Gold which the Ancients met with in *India* came from the Peninsula of *Malacca*; the Diamonds were found near Cape *Comorin*, and the Rubies and other colour'd Stones were brought from *Taprobana* or *Ceylon*. We will conclude these Remarks on the Riches of the *Indies* with a few Lines from the Poem of the famous Geographer *Dionysius*, whom some Critics place as high as the Reign of *Augustus*, and which *Prifian* has thus rendered into *Latin*. They occur towards the End of the Poem, and contain a most lively and elegant Picture of the Riches of the *Indies*, with as much Accuracy and Correctness as any Prose Writer whatever, and may serve as a Specimen both of the Matter and of this Manner of Writing.

Respice nunc r. liquas Aste sub snibus eras.
Perfiliis ad pontum Carmani, solis ab ortu;
Litora pars habitant, medie pars limina terræ.
Gargisæ post hos tendunt orientis ad ignes.
Occanum juxta: radiis proprioribus inde
Est Scythiæ Tellus australis, flumen ad Indum,
Qui ponto rapidus rubro contrarius exit:
Gargite nam celori rectus decurrit ad Austrum,
Caucasus orienti primum de montibus altis:
Devidæ cujus Patalæne cingitur unda.
Separat innumeras & vasto gurgite gentes.
Ad partes rapidi qua vergunt lumina Solis,
Ortas, Aribasque simul, linique Arabias
Uentis latis, & Sarracinas simul omnes.
Pospenti Montis sub celsa rupe, Arivas
Nomine eorum, qui terras ubera nullo
Et montes habitant, squalent nam sentibus aspris;
Cur sit lapidem qui rubrum littore carpunt,
Satis, qui deus nigri flavique coloris
Saracorum cedunt venis, hæc merce beati.
Ubi non Terras hinc Tethysæ æquora claudunt,
Quo primo Titan ascendens lumine cernit.
Ubi Color populus niger est, flagrantibus ortu,
Atque gerunt similes byacinto fronte Capillos.
Effundunt alii terras aurique metallum:
Alii tæxunt tenuissima, quæmina lini:
Vilentes stringunt elephantis ab ore recensos:
Servantur ripes alii torrentibus imbri
Beryll gemmas glaucæ, nitidæque adamantæ,
Atque auræ viridi legitur que splendet Iaspis,
Curlique decus liquidi, gratique Topazii
Purpureque amethystos inest, suffusa colore.
Dicitur magnas sic tellus illa ministrat.
Affluantque rigant hæc: totam fontibus annes:
Arboribusque viget variis, milioque frequenti,
Et præto rubræ perferret arundinis illa.
Hic alii superant præcepro corpore tantum,
Inflant equitum faciles ut more Elephantos:
Alii circum sapienti pectore nudi
Luminibusque vident relictis, mirabile, solem:
Et radios oculis, & sacramento retractant,
Signaque concipiunt arcana luce futuri.
Phitacus hic viridis decoratus torque rubenti
Nascitur, humane simulat qui verbera lingue.

shorter and easier Passage to the *Indies* than they had been hitherto acquainted with. The Guards that were appointed to patrol on the Shore of the *Arabian Gulph* found an *Indian* half dead upon that Shore, and brought him to the King; all they could tell of him was, that he alone had escaped a Shipwreck; but as they understood not his Language, they were not able to say whence he came. The King caused him to be well taken care of, and to be instructed in the *Greek Language*, in which, when he had attained a sufficient Knowledge to discourse, he acquainted him, that in a Voyage from the *Indies*, being driven out of the usual Course, he lost all his Companions by Hunger; and the Ship being stranded, he escaped alone on Shore, where the Guards found him.

This Man offered to pilot a Ship to his own Country, which he did, and carried one *Eudoxus* with him. The Voyage was very happily performed, and they found in the Country to which this *Indian* carried them *Aromaticks*, and several sorts of Precious Stones, some of which the *Indians* found in their Rivers, and others they dug out of the Earth in the same manner that *Crytal* is found. *Eudoxus* conceiving that he had acquired Experience enough by this Voyage, set up for a great Navigator, and undertook several Voyages to very little Purpose, because he followed his own Notions instead of endeavouring to acquire proper Lights from the *Indians*, notwithstanding it clearly appears from the Accident that befel this Man, that the *Indians* were much bolder and better Seamen than the *Greeks*.

But these last were so persuaded of their own Skill, and had such a Contempt for the Nations they held *Barbarians*, that nothing could induce them to change their Sentiments, or prevail on them to think of obtaining Lights from those they so much despised. *Bishop Huet*, speaking of this Passage, seems to be of Opinion, that from the Time of *Ptolemy Philadelphus* the *Egyptians* had neglected their *Indian Commerce*, and recovered it by this Accident. I must confess this does not appear at all probable to me, and I am rather inclinable to believe, that this *Indian* carried the Ship he navigated to a Part of the *Indies* with which till then they had never been acquainted; and this by the perfect Knowledge he had of the *Monsoons*, or constant Trade-Winds; for I cannot believe that the *Indians*, in these early Ages, had any other Secret which enabled them to make long Voyages in less time than other People. This is an Instance of the first Error.

As to the second, one might collect many; but that I may not dwell too long upon this Subject, I will take notice only of one. They had a Notion that the Eastern and unknown Part of the *Indies* was bounded by the Ocean, and that this Ocean communicated with the *Hyracian*, or *Caspian Sea*; and upon this they grounded their Hopes of discovering the most distant Part of the *Indies* by the Navigation of the latter. *Strabo* declares plainly, however, that he believes this Navigation never had been performed; but at the same time admits, that it was practicable. This he did on the Credit of *Patrocles*, who was sent to make Discoveries on this Side by the *Seleucide*; and this he labours very earnestly to prove by that kind of reasoning, which will always affect the Vulgar among the Learned, and which no great Man ever wants to establish what he thinks probable.

Pliny also mentions the Voyages of *Patrocles*, and seems to insinuate that he actually discover'd some such Passage; but what he says is very dark and perplexed, so that after all, one can affirm nothing positively from his Writings. The Opinion however grew common, and passed for current, even upon such obscure Testimonies; and this drew after it, as a necessary Consequence, a Notion that only an inconsiderable Part of the World remained undiscovered; and this, together with the whimsical Apprehension that one Zone was intolerably hot, and two as intolerably cold, damped the Spirit of enquiring, and confined Men to the Spots where they happened to be born, or, at most, to those which their Ancestors had discovered by Accident or good Fortune, rather than Industry. Indeed, this circumscribing Scheme is so strong in the Ancients, and even in those Works, which, at first Sight, appear calculated for a different Purpose; as for Instance, the Story of the Island *Atlantis*, related by *Plato*, and the famous Expedition

11. The principal Hindrance that the Commerce of the Ancients met with was owing to the following Causes; first, the over-valuing their own Knowledge, and supposing all Nations at a Distance from them *Barbarians*, and more or less so in proportion to that Distance; the next was their adhering to their old Notions in *Cosmography*, notwithstanding the Arguments their own Experience furnished to the contrary; and thirdly, their discontinuing their Voyages to distant Countries during domestick Contentions, by which those Routs were lost which were known in former times, and their Discoveries so confounded, that it is scarce possible to affirm any thing about them with Certainty.

The two former were voluntary Errors, the last was rather their Misfortune than their Fault. We have an Account in *Strabo* of a very singular Navigation to the *Indies* performed in the Reign of *Ptolemy Evergetes*, which, if carefully pursued, might have opened to them a much

Expedition of *Hanne*, that they contain much more to affright and terrify, than to allure and invite Men to undertake long Voyages, and endeavour great Discoveries, which had this bad Effect, that it quite dastardized common Minds, and rendered them incapable of being wrought into a Temper fit to go through the Hardships that must be met with in such Undertakings.

The third Disadvantage they laboured under was, the frequent Revolutions their own Countries were exposed to; for this laid them under many and great Difficulties. They had this Method or that prescribed to them by a superior Power, and they were to pursue such Plans only as were agreeable to the Government under which they lived, and those too no longer than they were agreeable. Another Inconvenience was, the Interposition of the State on any Discovery, or supposed Discovery. It was to be cultivated or neglected at the Will of the Government, and not of the Adventurers, for the Spirit of Negotiation was not so free as it is now; but any Attempts out of the ordinary Mode of Commerce gave Jealousies to such as ought to have been best pleased with them.

These Discouragements, at particular Times, and under particular Circumstances, interrupted several kinds of Commerce, and kept the whole in such a Condition as hindered private Men from turning their Thoughts this Way; for, otherwise, no doubt, they would have thought of settling Colonies, and securing some Footing in the *Indies*, in order to have examined the whole of it, and putting the Navigation of it into a certain and irreversible Order; so that nothing which happened at home might have affected those Colonies; But after the Time of *Alexander*, or at least, of his immediate Successors, we find nothing of this sort thought of, but every Thing abandoned to Chance and the Humour of the Times.

12. There were many Impediments besides those already mentioned, which hindered the Progress of Discoveries among the Ancients, and some of them of such a Nature as to be almost invincible. Their Ships were built in such a Manner, as did not, by any means, render them fit for long Voyages; for their Contrivance was such, that they could not bear a high Sea, or go safely before the Wind at any great Rate. In the next place, their Ships wanted Room; and though this seems to be contradicted by the Accounts we have of Vessels that carried several hundred Men, yet, when these come to be closely examined, they appear to be no other than a sort of Barges, or rather Gallies, fit for transporting Men across an Arm of the Sea, or for fighting, where this could be done in a few Hours after they were on Board; and this will be the more evident, if we reflect on the Scenes of naval Combats mentioned in the *Greek* and *Roman* Histories. The Labour of working their Ships was likewise intolerable in a long Voyage; and these Inconveniences taken together, appeared in the Eyes of their Seamen so dreadful, that they were more apt to mutiny, especially when employed in Discoveries than can well be imagined, so that if it had not been for some Accidents, and their being encouraged by the Examples of the *Arabians* and *Indians*, it is scarce credible, that they would have made such long Voyages as they really did.

If it should be inquired how the *Arabians* and *Indians* made such frequent Voyages in spite of these Inconveniences, the Answer is easy, they made use of another sort of Vessels, which, though less stout in Appearance, were much better Sailers; nor would it be difficult to prove, even from the Accounts of *Strabo* and other ancient Writers, that the *Indians* actually made use in those Days of the *Paraos* or *Proes*, which before a Wind are allowed to be the best sailing Vessels in the World. The Ancients wanted likewise the Assistance of Charts, which are so essentially necessary to Navigation; for it appears plainly from the Voyages already inserted, and from the Accounts we have in *Pliny*, and in other Authors, that they were guided solely by a kind of Tables, containing the Names of Places on the Coast, and their Distances from each other; neither had they any Ideas of sailing in a different manner, because they knew not how to regulate their Course in an open Sea, which forced them upon the Choice of that sort of Navigation which is now with Reason held to be the most

dangerous, and in which they could make use of such Vessels only as had a small Draught of Water; and this was particularly inconvenient in the Navigation of which we are speaking, because the *Indian* Coasts are very foul, and by sailing near them they lost the Advantage of the Trade-Winds, which before the Invention of the Compass, afforded the only means of making long Voyages with Safety.

It must be owned that many of these Facts have been disputed, and that too by very learned Men, who have endeavoured to persuade us, that the Ancients wanted very few of the Inconveniences possessed by modern Navigators, as will be largely shewn in another Place; but at present it may be sufficient to observe, that most of their Arguments are drawn from their own Explications of perplexed and obscure Passages in *Histories* or *Poets*, whereas ours are grounded on the Scope of their general Histories, and on Declarations in our Favour, as express as can be desired. For instance, *Vegetius* assures us, that the Seas were shut from *November* to *March*, and that it was not thought safe to undertake any Voyage of Consequence before the Month of *May*. This very plainly proves the Defects of their Navigation, and that they lost a great Part of the Year for want of those Helps and Advantages, which purely from a Spirit of Contradiction these learned Men would persuade us they enjoyed.

It may not be amiss to remark, that supposing their Opinion to be true, it is so far from adding to the Credit of the Ancients, that it really does a greater Injury to their Reputation, than the contrary Assertion taken in the strongest Sense; for if the Ancients had the Use of the Compass, and of Sea-Charts, as these learned Writers maintain, their not making a better Use of them is altogether inexcusable, and shews such a want of Spirit, and such a Defect of Genius, as is absolutely irreconcilable to their Performances in other Arts; but what seems to put the Matter beyond all Question is this, that the *Arabians* becoming Masters of the *Greek* Learning as well as of their Empire, and translating into their own Language the best Books that were written on these Subjects, met with nothing that at all corroborates this Notion of the great Knowledge of the Ancients, with respect to the Instruments of Navigation necessary in long Voyages.

Sir *John Charlin*, who was a Man of much reading, as well as of a good Understanding, and withal a great Traveller, has delivered his Sentiments upon this Subject in the following Terms, which I the rather cite in this Place, because I shall not hereafter have any Opportunity of entering again on such Reflections in the Course of this Chapter. "I cannot tell, says he, whether the *Chinese* found out the Art of Navigation and the Compass, as they did the Art of Printing and Artillery; we should consult the learned Men amongst them to be assured of it. But for the other *Asiatics*, I boldly assert, they are beholden to us for this wonderful Instrument which they had from *Europe* by the Hands of the *Arabs*, a long time before the *Portuguese* Conquests: For, first, their Compasses are exactly like ours, and they buy them up of the *Europeans* as much as they can, scarce daring to meddle with their Needles themselves. Secondly, it is certain the old Navigators only coasted it, when I impute to the Want of this Instrument to guide them, and indirect them in the wide Ocean. We cannot pretend to say they were afraid of venturing far from home; for the *Arabs*, the first Navigators in the World in my Opinion, at least for the Eastern Seas, have, Time out of Mind, sailed from the Bottom of the *Red-Sea* all along the Coast of *Africa*, down to the Tropick of *Capricorn*, which is a Space of fifty Degrees; and the *Chinese* have always traded with the Inhabitants of the Islands of *Java* and *Sumatra*, which is also a very considerable Voyage. So many Islands uninhabited, and at the same time productive, so many Lands unknown to the People I speak of are a Proof that the old Navigators had not the Art of sailing on the wide Sea. I have nothing but Argument and Conjecture to offer touching this Matter, having never met with any body in *Perfia*, or the *Indies*, to inform me when the Compass was first known among them, though I made Enquiry of the most learned

“ Men in each Country. I have failed from the *Indies* to *Perfa* in *Indian* Ships, when no *European* has been on Board but myself: The Pilots were all *Indians*, and they used the Forestaff and Quadrant for their Observations. These Instruments they have from us, and made by ours, not in the least varying therefrom, except that the Characters are *Arabic*; and by the way I observed, that the *Arabs* are the most skilful Navigators of all the *Asiatics* and *Africans*; but neither they nor the *Indians* make use of Charts, and indeed they do not much want them; some they have, but they are copied from ours, for they are quite ignorant of Perspective.”

13. After the copious Detail we have given of the Progress of the Commerce of the Ancients in the East, we shall conclude this Section with a very succinct Comparison between their Endeavours and Successes in this Respect, and the Labours in the same way of the Moderns. In the first place then we have made it highly probable, that even in the most flourishing State of their Trade, their actual Discoveries did not reach farther to the East than the Peninsula of *Malacca*; for as to the *Sinus Magnus*, they could know nothing of it but by Hear-say, unless they had known all the rest of the *Indies*. On the Continent again the *Sine*, which were the *Siamese*, were the last People they knew on that Side. In regard to the Northern *Indies*, they knew very little with any sort of Certainty beyond the *Emilian* Mountains; and most evident it is, even from their best Writers, that they had not so much as Reports of the Nations inhabiting beyond the Mountains of *Imaus*. But we have discovered Eastward the Country of *Cochin-China*, and all the Countries dependant upon it, the Kingdom of *Tonkin*, the vast Empire of *China*, all the Islands of the *Sonaa*, the *Moluccas*, the *Old* and *New Philippines*, and the Country of *New Guinea*, so that considered in this Light, our Discoveries exceed theirs by twenty Degrees of Longitude. Towards the North again, besides what has been discovered by Land, the *Dutch* have most certainly proceeded as high as forty-five Degrees siting to the North-east of *Japan*, so that without exaggerating the Part of *Asia* made known to us by our *East-India* Voyages, is equal to all the rest of *Asia* that was known to the Ancients. It is not therefore at all strange, that our *India* Trade should so much exceed theirs, though carried on at so much greater Distance.

In the next place, it may be observed, that though the Trade to the *Indies* was never carried to Perfection by the *Egyptians*, *Tyrians*, or *Romans*, yet it was known to them, and made the Subject of their Books for a long Course of Ages, since from the first Kingdom of *Tyre* to the Reign of *Constantine the Great* includes above eight hundred Years, whereas all our Discoveries of the *East-Indies* were made within two Centuries after a Passage was found thither by the *Cape of Good Hope*, so that in this respect the Industry of the Ancients is very far surpassed by that of the Moderns.

The third Observation I shall make is with regard to the Difference between a Land Force and a Naval Power. We have seen how many fruitless Attempts were made by the *Affrican* and *Persian* Monarchs to extend their Conquests towards the East; and we have likewise seen of how short a Continuance the Conquests were of *Alexander the Great*, and his Successors, together with the Attempts made by the *Romans*, after they had reduced *Egypt* to a Province, and were Masters of a great Part of *Asia*, which, all of them, are nothing in Comparison of the Empire established by the *Portuguese*, or rather the Comparison falls as far short as the Power of the little Kingdom of *Portugal*, when thrown into the Balance with that of the Empire of *Rome*; and the Establishments of the *English* and *Dutch* in those Parts; but more especially of the latter plainly demonstrate, that with respect to the Advantages derived from Conquests, a Maritime Power is infinitely superior to the Strength even of the most extended Empires.

The *Romans* had in this respect in all Appearance the highest Advantages; they were Masters of the Country to the very Mouth of the *Arabian* Gulph on one Side, and had a very large Tract of Country on the other. The Terror of their Name was so great, that they had hardly any Opposition to fear by Land or Sea; and if one Expedition had failed, they might very soon have repaired the

Loss sustained in it, and have been in a Condition to have undertaken another. Yet we see nothing of this happened; and it was not above twice or thrice thought of, and then to no great Purpose. *Augustus* had formed a Design of reducing the Peninsula of *Arabia*, to which he was excited by many Reasons; such as that the Inhabitants of the Coast between the *Arabian* and *Persian* Gulphs were in Possession of the whole Trade of the East; there were some of the Nations on the Coast opposite to *Egypt* that were extremely addicted to Piracy, and greatly disturbed the Navigation of the *Romans*, which probably happened from their having lighter Vessels, and such as sailed better, so that if at any time they met with Ships of greater Force, they were able to leave them, and make their Escapes; the Situation of the Country also might probably be a strong Inducement to the attempting this Conquest, because it seemed to promise the intire Possession of the Oriental Commerce without Interruption. But we have seen how that Expedition, undertaken with so great Precaution, and with such a Force as was never employed in the East by any modern Potentate, was intirely defeated. The Emperors *Flavius* and *Titus Vespasian*, had also some Thoughts of pushing their Conquests on this Side; but History does not inform us, that they ever took any effectual Steps towards putting those Designs in Execution. *Trajan* made the last Attempt upon *Arabia* from the *Persian* Side, with a potent and victorious Army; and this with no other View, than to have made himself Master of the Wealth which the *Arabians* had amassed by their extensive Commerce; but he likewise failed, and from a too quick Sense of his Disappointment, broke his Heart.

Let us now consider what Prospect the *Portuguese* had of reaching and making Conquests in the *Indies*. Instead of crossing from the Mouth of the *Arabian* Gulph to the Coast of *Malabar*, which is a Voyage only of a few Days they were to sail round the whole Continent of *Africa*, then a Coast in a great measure unknown; and at the same time the adjacent Seas were remarkable for their being almost constantly subject to Storms and Tempests, inasmuch, that when the utmost Cape was first discovered, the Discoverer called it the *Tempestuous Cape*; but the King of *Portugal* foreseeing the Advantages that would result from this Navigation, changed that Name for *The Cape of Good Hope*, and with a few Ships, and a very small Force, attempted and settled not only a Commerce with the *Indies*, but raised a very considerable Empire there in spite of all the Opposition that could be given him. This manifestly shews not only the Superiority of the Moderns over the Ancients in Point of Navigation, but likewise that the most distant Voyages are best suited to the raising a Maritime Power, that is to say, a Power by Sea that is permanent, and not raised and overthrown suddenly, as the Maritime Powers among the Ancients frequently were. It also effectually demonstrates, that it is not a mighty but a well-conducted Force that is proper for establishing distant Conquests; and that where a Nation is once possessed of a considerable Fleet, there is no Country at such a Distance as to be out of her Reach, neither are her Settlements in any Danger of being destroyed, while they are worth keeping, and while the Government at home is sufficiently attentive to their Preservation; so that the Circumstances which seem at first Sight the most discouraging in regard to the attaining Foreign Power and Maritime Force, are, in reality, those which most contribute to the Establishment of it; and to the preserving it when established by securing a constant Supply of all that is necessary for that Purpose.

It is by long Voyages, only made with Danger and Uncertainty, that People require the Means of making long Voyages with Ease and Safety; the Perils they escape once they know how to avoid again; they become acquainted by degrees, and by Experience, with the Nature of Things which never could have been reached by the Penetration even of the sharpest Understanding; and by thus becoming acquainted with the Laws, or rather with the Course of Nature, they gain insensibly a kind of Superiority over Nature; so that in some Sense the very Winds and Seas may be said to obey them. When the *Portuguese* first undertook their *Indian* Expedition, they neither had good Ships, nor knew how to build them. It was

not therefore in Virtue of their great naval Force, that they became Masters of these Countries, but it was their Desire of becoming Masters of them, that put them upon raising one capable of achieving it.

It is very remarkable, that the first Place in the *Indies* at which they arrived, was *Malabar*, a Country which, as we have shewn, was known to the Ancients, and that too for a long Tract of Time, but so imperfectly that they were not so much as able to give us a tolerable Description of it. Whereas in the Space of fifty Years, or less, the *Portuguese* were Lords not only of that, but of all the adjacent Countries, raised and deposed Princes as they thought fit, and disposed of Kingdoms at their Pleasure. The great Island of *Ceylon*, which, as we have proved, was the *Taprobana* of the Ancients, of which, after so many Voyages to the *Indies*, they have given us such lame Accounts, was not only perfectly discovered within the Space of Time before mentioned, but in the Hands of the *Portuguese*, who imposed a Tribute upon the Inhabitants, though all the Force they had then in the *Indies*, was not equal to a thousandth Part of their Number.

These Reflections will lead the intelligent Reader into many more upon this Subject, and enable him to comprehend perfectly the Difference between the Attempts made by the Ancients, and the Exploits of the Moderns in this Part of the World, which, at present, is all our Business; and having thus travelled through the darkest and most perplexed Part of our Subject on which we were obliged to enlarge ourselves, in order to be perfectly understood, and to assist the Reader, that though every Thing within this Period of Time, was confused and embarrassed enough; yet it was far from being so utterly unintelligible, as it has been hitherto represented; we may have leave to be more concise for the future, in respect to those Things that are better known, and with regard to which therefore long Digressions are unnecessary.

In order to connect the ancient and modern History of the Commerce between *Europe* and the *East-Indies*, it is requisite that we should give a short Account of the Inter-

course between the Subjects of the *Greek Empire* and the People of the *Indies*; for the Reader must naturally apprehend that after the imperial Seat was transferred from *Rome* to *Constantinople*, *Egypt* remaining still a Province no less useful to the latter than the former, this Commerce which had hitherto been in a manner annexed to the Possession of *Egypt*, must have been not only preserved, but encouraged and extended.

He will likewise, no doubt, be glad to see the Changes that happened in it, the new Routs that were opened to and from the *Indies*, by which the Commodities of those Countries came by so many different Channels into *Europe*, and which by the Riches they derived to the several Nations that intermeddled with this Commerce, excited the Spirit of Discovery which has since laid open that Trade directly to all the modern maritime Powers, and made their Establishments in the *Indies*, the most solid Proofs of their having a just Right to that Title. These, God willing, we shall dispatch within the Compass of two short Sections, and then we shall enter on the Travels to the *Indies*, which first acquainted the northern and western Parts of the World, with the Interior of those Countries, the Nature of their Inhabitants, the Constitution of their Governments, and the History of the most remarkable Events which had fallen out in them.

A Sort of Travels that, as they appeared strange and surprising in the Times in which they were first published, so when exhibited simply and plainly as their Author wrote them, and without the whimsical Additions by which they were disfigured in our old Translations, they cannot fail of being thought equally curious and instructive even at this Day, the rather because we love to trace Things to their Beginnings, and to see what strange Impressions the Sight of Countries, People, and Manners so different from their own, made upon the Minds of those who first visited those remote Regions, and that too in an Age not altogether so free from Superstition and Prejudice as this in which we live.

SECTION XVI.

A concise History of the Rise, Progress, and Decline of the Constantinopolitan Empire, together with the Commerce of its Subjects in the East; as also a brief Detail of the Rise of the Arabian Empire, the Recovery of the Indian Commerce in Egypt, and the reviving the Trade of Alexandria.

1. A Description of the City of Constantinople, and a short View of the many Advantages derived to it from its commodious Situation.
2. The great Care taken by the Successors of Constantine for the Support of maritime Power.
3. The great naval Strength of that Empire, and the Disposition of its Fleets.
4. The Ruin of the Silk-Trade under the Emperor Justinian.
5. Silk-worms first brought to Europe, and a compendious History of that Manufacture to the present Times.
6. A large Account of the several Indian Commodities that were brought to Constantinople.
7. A concise View of the State of that Empire, from the Reign of Justinian to that of Heraclius.
8. The Victories of Heraclius over the Persians, and the Embassies sent him from the Indies.
9. The Rise and Progress of the Arabian Empire, to the Time of the Conquest of Egypt.
10. The Foundation of Grand Cairo, and the Revival of the Indian Trade in Egypt.
11. The History of the Arabian Commerce continued, with the Revival of that of Alexandria.
12. The State of Constantinople, to the Time of its being taken by the Turks.
13. Observations and Remarks upon the foregoing History.

THE best Writers of Antiquity differ very much as to the Reasons which induced *Constantine the Great*, to remove the Seat of Empire from *Rome* to the new City, which he called by his own Name. Some ascribe it to his Care of the Eastern Provinces, and others to his being sensible that the *Romans* hated him. Whatever his Reasons were, most certainly the Majesty of old *Rome* could not have been translated to a City better situated for Empire than this, which the Emperor *Constantine* styled new *Rome*. Its old Name was *Byzantium*, and it had run through a great Variety of Accidents before *Constantine*, who first thought of re-

building *Troy*, cast his Eyes upon it, and immediately discerned that no Place was so fit to become the Metropolis of the *Roman Empire*, and Mistress of the World. It stands on a Point of Land on the ancient *Bosphorus of Thrace*, where there is a narrow Strait which serves to divide *Europe* and *Asia*, and, at the same time, forms a Communication between the *Mediterranean* and the *Black-Sea*.

The City stretches itself out in the Manner of an Amphitheatre, having on its Right-hand the *Archipelago*, and all the *Mediterranean*; and on the Left, the *Black-Sea* up to the *Pallus Meotides*; so that it has all *Asia* in Front,

Front, and all *Europe* behind. It is in Virtue of this Situation that this City is very justly stiled the Key both of the Mediterranean and black Sea. The Emperor, its Founder, took all imaginable Care to render it the most magnificent Place in all the World, to adorn it with Churches, Palaces, and other publick Buildings; and to provide for its Security, by all the Arts of Fortification practised in those Days. But still the Conveniency of its Situation seems to have had a greater Share in rendering it populous, and in preventing succeeding Emperors from thinking either of going back to *Rome*, or of chusing any other Place of Residence, than all the Pains taken by *Constantine* to render it equally stately and commodious.

The spacious Fields of *Thrace* that lay immediately behind it, furnished Corn in Abundance, and that Part of *Asia* which was over-against it, was, for many Ages, the best peopled, and the best cultivated Country in the World. The Markets were always full of Flesh and Fowl, at the cheapest Rates; and for Fish it had, and has still a greater Abundance than any other City in the Universe, insomuch that twenty Boats have been laden with one Net. The Inhabitants were supplied with Wines of the richest Growths, in the greatest Plenty, so that in ancient Times, they were reproached with being continually at the Bottle; and, even to this Day, the *Greeks* lie under the same Imputation; though the *Greeks* being restrained by their Religion, are less addicted to this Vice, though not wholly exempt from it neither. As to Timber, *Constantinople* is so plentifully supplied from the Woods which extend from *Propontis* quite to *Calchis*, in a Tract of more than forty Days Journey, that in the Space of so many Ages as she has already stood, she has never felt the least Inconvenience, notwithstanding she has supplied all the neighbouring Parts with what was requisite for building Ships and Houses, and even *Egypt*, *Arabia*, and *Africa*, have likewise received Materials from her Stores.

But the greatest Beauty, the greatest Advantage, the most distinguishing Felicity of this imperial City is, her Port, by Nature, the most lovely in the World, being six Miles in Compass, a full Mile over, and every where so deep that Ships may lie with their Heads ashore, without Danger. This Harbour is not more safe and spacious than convenient; for when the Winds are N. N. E. or N. W. so that no Ships can come in from the Mediterranean, they bring in those from the black Sea; and when they were about the opposite Points of S. S. W. or S. E. they bring up the Vessels from the Mediterranean; so that considered in this Light, *Constantinople* seems designed by Nature to be the Centre of Commerce for *Europe*, *Asia*, and *Africa*.

2. It was very probably the Sense which they had of these prodigious Advantages that induced the Emperors, for a long Series of Time, to bend a great Part of their Endeavours to the Encouragement of Merchants and Mariners. The Emperor *Constantius*, for Example, exempted them from all Charges and Contributions to which the other Subjects of the Empire were liable; and this in so ample a Manner that no pretended Cases of Necessity could affect them. Succeeding Emperors distinguished between Merchants and Mariners, subjecting the former to Duties and Impositions, but exempting the latter, and extending their Privileges to a very great Degree. The Reason of this was, because that Merchants reaped all the Profits of Commerce to all the Hazards and Dangers of which the Mariners alone were exposed. As the Emperors had frequent Occasion to fit out Fleets for the publick Service, and as the manning of these might have been very prejudicial to Commerce, a Law was provided which remedied this Inconvenience, and that in so singular a Manner, that it deserves to be particularly taken Notice of.

There were certain Lands, in the Nature of Fiefs, granted for this Service; that is to say, the Owners possessed them together with the Privileges incident to Mariners, upon express Condition, that in Consideration of these Estates, they should furnish according to their respective Values, a certain Number of Seamen, whenever the publick Service required them. Thus the Burthen was laid upon

Lands, and not upon Persons; and as the Circumstances of People might change, and this Duty of providing Seamen, become inconvenient, or even impracticable; for the original Possessors of such Estates, the Law provided that they might be at Liberty to dispose of them to such as might be more capable of complying with the Terms upon which they were held.

By this Method the *Greek* Emperors were able to fit out very great Fleets in case of Necessity, as appears by that of the Emperor *Leo*, in the Middle of the fifth Century, which was intended against the *Vandals*, and consisted of eleven hundred Sail, which, however, were all destroyed on the Coast of *Africa* by the Treason of him who commanded them. This alone is a strong Proof of the great maritime Power of the *Constantinopolitan* Empire, while it flourished; but we have a much more signal Proof in the Establishments made by these Emperors for the several Fleets appointed for the Defence and Support of their Empire, which Establishments appear very clearly from the several Bodies of their Laws still remaining, and which prove, beyond all Contradiction, that so long as this Empire continued in a flourishing Condition, the utmost Care was taken for the Encouragement and Protection of Commerce, by a right Application of that maritime Force we have before described.

3. The Province of *Egypt* was of no less Importance to the *Greek*, than to the *Roman* Empire; and the utmost Care was taken to regulate the annual Fleets from that Province, so that the City of *Constantinople* might be regularly supplied with whatever Provisions she had Occasion for from thence, and have likewise the most valuable Returns that were made from the *Indian* Commerce by the way of the *Red-Sea*. It was by this means that immense Riches were regularly drawn from thence, and the best Part of the Profits of that advantageous Trade constantly conveyed to the imperial Residence, as appears by a Multitude of Laws yet extant in relation to the Fleet of *Alexandria*, on Board of which those Treasures were carried to *Constantinople*. The next stationed Fleet was that of *Africa*, which was chiefly designed for the Benefit of *Old Rome*; for all the Commerce of *Alexandria* being diverted to *Constantinople*, that Supply of Provisions, for which hitherto *Rome* had depended upon the Fleet of *Egypt*, was now to be received by this of *Africa*; and for a long Course of Years this Expedient answered the End very well.

The third Fleet was that of the East, the principal Station of which was at *Seleucia*, a City of *Syria*, seated on the River *Oronites*; and this Fleet seems to have been divided into several Squadrons, and from the many Laws made about it, appears to have been of very great Importance. It was chiefly by the Help of this Fleet that the Commerce of *Persia* and the *Higher Asia* was carried on, which was very rich, and included some Branches of that of the *Indies*. Great Care was taken in the regulating this Trade, to prevent the Empire from suffering by the sending of *Persian* Spies, in the Garb of Merchants, into the *Roman* Provinces. The Places therefore to which the *Persian* Merchants might repair, were pointed out, and settled by Law; as also the Seasons at which Fairs were to be held, and the Time they were to last, by which Contrivance a Door was opened for conveying all the Trade of *Asia* into this Channel; for when the Goods purchased at different Places were brought by the respective Fleets attending the Provinces in which those Fairs were held to *Seleucia*, they were there embarked on Board the Grand Fleet for *Constantinople*.

Besides these there was another Fleet in the *Pontus Euxinus*, or *Black Sea*, which brought annually vast Quantities of Corn to *Constantinople*, together with abundance of rich Commodities, and amongst them some from the *Indies*, which were brought thither by a Rout, that will be explained in the next Section. This Fleet served likewise to awe the several barbarous Nations inhabiting the Coasts of that Sea, and thereby contributed exceedingly to the Tranquillity of the Empire. It is very probable from the Laws that we find in the Code of the Emperor *Justinian*, that besides these great Fleets, every maritime Province of the Empire had its peculiar Squadron stationed at a certain Port, which every Year carried the Revenues of the Province to *Constantinople*. There were likewise vast Numbers of flat-

bottomed Vessels maintained at the publick Expence on all the great Rivers that passed through the Empire for the transporting Troops, and other requisite Services, as occasion required.

Whoever considers this Distribution of things attentively, will easily discern that there never was a Government in the World, the Peace and Prosperity of which depended more immediately on the right Management of Maritime Affairs, than that of this Empire. But as it was very extensive, and as an equal Care was necessary for the preserving Order in every Part of it, we need not wonder, that in Process of Time many Errors crept in, and a Multitude of Laws were made necessary for remedying the Inconveniencies they produced, till by degrees the new Regulations clashing with the old ones, occasioned greater Mischiefs than all the rest, and joined to a Depravity of Manners among their Governors; and the Invasions from barbarous Nations, to which they were continually exposed, brought on their Ruin of an Empire, which was grown too bulky to be well managed.

4. It is very certain, and we shall quickly have an Opportunity of making it evident, that so long as the Greek Empire was in a safe and flourishing Condition, the Subjects thereof had a general Correspondence in the East, and carried on a considerable Commerce to the Indies by different Canals. It would take up too much Room to state a Multitude of Facts from the Byzantine Historians, which might establish this Assertion; but that we may not leave this Part of our History less perfect than the rest, it seems reasonable to report some few Instances which may answer this Purpose, and that too in a narrow Compass. The learned Historian Procopius, who has preserved a Multitude of curious Passages in respect to the Reign of the Emperor Justinian, in which he flourished, has among the rest two very singular Facts that fall in exactly with our Design.

He tells us, that this Emperor, who began his Reign A. D. 528, and who had found a way to grant Monopolies of almost every sort of Commodity, except Silks, took the following Method of getting that likewise into his Hands. It seems, this Manufacture was carried on no where but in the Cities of Berytus and Tyre in Phœnicia, and Silks were of a sudden grown to a most extravagant Price, which was said to arise from the Covetousness of the Persian Monarch, who had imposed a heavy Duty upon Silks, which the Roman Merchants were obliged to pay for all they purchased in his Dominions; the Emperor finding this considered as a great Hardship, published an Edict, by which he pretended to settle the Price of Silk at eight Crowns of Gold for a Pound, and threatened with Confiscation of their Goods such as should presume to sell it dearer.

This ruined the Merchants who dealt in that Commodity, who found themselves obliged by this Law to sell Silk for less than it cost them; and therefore they quitted Trade, and disposed privately of all the Silk they had to Persons they could confide in. The Emperess Theodora, having Intelligence of this, caused all their Goods to be confiscated, and imposed a large Fine on them besides. By this Contrivance all the Silk in the Empire fell into her Hands; and by the Assistance of one Peter Bersamez, who was her Instrument, she sold it out publicly at the Rate of six Crowns an Ounce for that of an ordinary Dye; and the superiour Colours were sold at different Rates up to twenty-four Crowns an Ounce, all the Manufacturers working for them. By this iniquitous Practice the Emperor and Emperess got immense Wealth, and Bersamez their Agent much more; but in the mean time the Merchants of Constantinople were ruined and undone, the Manufacturers at Berytus and Tyre reduced to absolute Beggary, and Numbers of industrious Persons forced to leave their Wives and Families in order to seek Employment in Persia.

This is a very curious Passage, inasmuch as it shews us the State of the Silk Trade at that Time, the Places in which Silk was wrought up, and the Value of that Commodity. But the second Article we shall borrow from that Historian is still more curious, because it shews how the Price of Silk was reduced, not only throughout the Greek Empire, but throughout all Europe. Before we come to this, however, it is requisite to observe, that even in the midst of this Extortion there had been a Time when Silk was much dearer. For under the Reign of the Emperor

Aurelian Silk had been sold for its Weight in Gold; that is to say, a Pound of one was weighed against a Pound of the other; but as these Gold Crowns, or Aurei, as they are called in old Historians, were made by dividing a Pound of Gold into one hundred Parts, it is plain, that the Emperess's Agent sold Silk of common Colours for seventy-two Aurei, and Silk undyed perhaps cheaper. We may conceive from hence the Hardships that the Merchants were laid under by their being obliged to sell it for twelve Aurei, which considering that they imported it from Persia, and the Persians at that time probably from India, it must have come to them at a much dearer Rate.

5. This excessive Price of Silk, whatever temporary Mischiefs it might produce, had a very good Effect in the main; for the Emperor perceiving that his Subjects were chiefly tied to a continual Trade with Persia, for the sake of this Commodity, discovered a great Desire to see them freed from this Inconvenience; upon which two Indian Monks, or rather two Monks that had travelled to the Indies, went to the Emperor, and told him, that they could very easily settle that Manufacture amongst his Subjects, so as that they might never be under the Necessity of dealing with any Strangers, much less with the Persians, for that Commodity. This Silk, said they, which is so precious here, is in Serinda, the most populous and most civilized Country in the Indies, where we have spent many Years, spun by certain little Worms, which Insects they receive from Nature. As for these Worms, it is impossible to transport them; but their Eggs may be brought from thence without any Difficulty, and hatched here by giving them a certain Degree of Heat.

Such were the Proposals made by the Monks to Justinian, who readily closed with them, making them great Promises, in case they were able to bring this Matter to bear, which without much Difficulty they did; for returning to the Indies, they brought from thence a considerable Quantity of the Eggs, nourishing the Worms when they came out with the Leaves of Mulberries; and thus, says my Author Procopius, was the Art of making Silk introduced into the Greek Empire.

This Transaction fell out A. D. 550, but it was a long time before it spread itself much beyond the Bounds of the Greek Empire; for we find, that A. D. 1130, Roger King of Sicily, having conquered a Part of Greece, brought over into his own Country the Art of managing Silk-Worms, which was quickly transferred from thence to Calabria, and other Parts of Italy, where it flourished for some Ages, before it was transferred to the Southern Parts of France, which the great Historian Mezeray tells us, happened under the Reign of Francis the First, in which, however, he is mistaken; for Lewis XI. A. D. 1470, introduced it into his Dominions, and sent for Persons skilful in the Art of managing Silk, not only from Genoa, Venice, and Florence, but also from Greece; and by his Letters Patent, dated in the Year 1480, granted them great Privileges. But the Price of this Commodity was still kept up at a great Height.

Our King Henry VIII. who was a very magnificent Prince, wore commonly Woollen Hose, unless by Chance he had a Pair of Silk from Spain. His Son Edward VI. had a Pair of Silk Stockings presented him by Sir Thomas Gresham, which Present of his was much taken Notice of. Queen Elizabeth, in the third Year of her Reign, had a Pair of black knit Silk Stockings given her by Mrs. Montague, and she never wore Worsted afterwards. In the Year 1600, Mr. William Lee, a Native of Nottingham, and educated in St. John's College at Cambridge, invented the Art of Frame-work Knitting, which has since been much improved. Having thus traced the Silk Manufacture from the Indies hither, we will now return to the proper Subject of this Section, and endeavour to make good what we have before asserted, that the Indian Commerce did not suffer by this Change of the Seat of Empire.

6. It appears clearly from hence, that under the Greek Emperors, Voyages to the Indies were become more common than in former times; but we could scarce have believed that so many different kinds of Indian Commodities, and almost from every Part of India, were common at Constantinople, if it were not verified to us by the publick Laws of the Empire.

Empire, collected into a Body by the Emperor *Justinian*; from whence it appears, that there were several Duties imposed upon a Multitude of Goods brought from the *Indies*, such as Spices of different kinds; for instance, Cinnamon, which came from the Island of *Ceylon*, but not in any great Quantity; for it was always very dear, the *Xilo Cinnamonum* was no other than the Wood of the Cinnamon Tree, on which there was also a Duty; but it does not appear of what Use it was, or whence it grew into Esteem; perhaps it was used in the same manner that we do other Woods, in Decoctions. *Cassia*, described at large by several ancient Authors, from whom it appears to have been a sort of milder Cinnamon; this likewise comes from *Malabar* and *Ceylon*. We learn from some very judicious Writers, and who are well acquainted with the Manner of collecting Spices in the *Indies*, that the *Cassia Lignea* is, in truth, nothing more than the thick Bark of the true Cinnamon Tree, which has very little Flavour, by which they mean that this is the Spice known to the Ancients by that Name; but the Modern *Cassia* is another thing, and somewhat of a higher Flavour.

Pepper of several kinds, such as long Pepper, white Pepper, and black Pepper, all of them from the *Indies*. *Pliny* is very angry that this Spice should be so much admired; for, as he observes, other things are either pleasant to the Sight, the Smell, or the Taste, whereas there is nothing in Pepper agreeable to any of these Senses; and yet, says he, what grows wild, and is of no Value in the *Indies*, is with us sold by Weight, like Gold or Silver, for no other Reason, adds he, but because it comes from *India*. In his Time the long Pepper was worth about nine or ten Shillings a Pound of our Money, white Pepper was of half that Value, and black about half a Crown a Pound; and it seems to have been as dear at *Constantinople*. Ginger, of which *Pliny* tells us, that many in his Time thought it the Root of the Pepper Tree; but he assures us, that was a vulgar Mistake, for that in Reality, it was the Root of a little Herb, which grew commonly in the Meadows of *Aethiopia*, and in the Country of the *Troglodytes*. This Spice is likewise described by *Dioscorides*, who agrees very well with *Pliny*. But after all, Ginger does not grow, either in the Manner, or in the Countries they mention. It is, indeed, a kind of Lilly, the Flower of which is red mixed with green. It grows in the most remote Parts of the *Indies*, and over a great Part of *China*; but since it has been transplanted into the *West-Indies*, we have the best Part of our Ginger from thence. The *Chinese* esteem it very much, especially as a wet Sweet-meat, and transport a great deal of it to *Batavia*, where it is generally eat after Meals to assist Digestion. It did not bear a very high Price among the Ancients; for in the Time of *Pliny* it was not above three Shillings a Pound; and at *Constantinople* it was not worth so much. It may not be amiss to observe, that in those Days they adulterated their Spices very dexterously; from whence it is evident, that they were much in use, and consequently they must have been brought from the *Indies* in considerable Quantities.

Precious Stones of all Sorts, such as Diamonds from different Parts of the *Indies*; Pearls from the Coast of *Perfa* and *Ceylon*; Emeralds, which were always held by the Ancients for Oriental Stones, though there is great Reason to doubt the Truth of that Fact; but, however, they had good Cause to believe it, because they were brought to them from the East, however they came thither. Another precious Stone, called *Ceraunium*, because it was supposed to be found in Places where Thunder had fallen. *Pliny* mentions it, and indeed gives us a long Account of it, but such a one as does not help us at all in finding out what Stone he means. He says, it is white, like *Chrysol*, that it derives Light from the Sun and Moon, and has a sort of Fire in it which seems to change its Place as the Stone is turned this Way or that, and that this Jewel comes from that Part of the *Indies* which borders upon *Perfa*. *Tertullian* mentions it among the Ornaments worn by Women, and assures us, that it had a glittering Appearance as if there had been Fire in it. We may venture to assert, that either this Stone is not known to us, or is a kind of Opal; for, except that, I know of no Stone that in any respect agrees with this Description.

The Hyacinth or Jacinth, which was brought from *Calicut*, or *Cambaye*; it received its Name from its Resemblance to the Flower so called, and must therefore have been of a purple Colour, inclining to a blue. The Jacinth known to us, are of different Colours; but none of them resemble the Stone known to the Ancients; for ours are either of a Flame-Colour, of an amber Cast, almost white, or of a pale Red. It is therefore probable, that the Jacinths of the Ancients were a kind of Sapphire. They were very much valued for graving, and were held to have many Virtues, which in reality were never yet to be found in any Stone.

Beryls, which *Pliny* says approach nearly to the Colour of an Emerald, and which owe most of their Beauty to their being cut hexangularly, and he distinguishes many kinds of them; some that had a yellow Cast, others of a blueish Colour, and some mixed with white. He assures us, that the *Indians* valued these more than any other Stones, especially when they were long, for then they bored and wore them without setting; and had also a Method of putting a gold Wire through them, which made them appear extremely beautiful at a Distance. One might write a large Dissertation upon this single Stone, since there are many very learned Naturalists that believe what we call the Beryl was the Diamond of the Ancients. Certain it is, that the Beryls we have from the *Indies*, do not at all resemble the foregoing Description, except that they are sometimes found very long and large, but rather of a greenish Colour than a blue. They are mostly to be met with in *Cambaye*, *Malabar*, or *Pegu*; but the finest and largest of which sometimes Cups and other small Vessels are made, come from the Island of *Ceylon*. There is, indeed, a Stone which some take to be a kind of Beryl, but which is better known by the Name of *Aqua Marina*, or *Aigue Marine*, from its Resemblance in Colour to the Water of the Sea. Of these some are very hard, and of such Beauty, that many Jewelers have been imposed upon by them, and have taken them for Diamonds.

Saphires, about which we are more at a Loss than about any other Stone whatever; but this seems to be certain, that whatever the Sapphire of the Ancients was, it had no Sort of Resemblance to that Stone known to us by the same Name; for it appears that the Saphires of the Ancients were not transparent, so that possibly they might be a kind of *Lapis Lazuli*. It is not, however, impossible that the Ancients might be acquainted with the true Sapphire, tho', if they were, they mention it by some other Name, and my Reason for supposing they might know it, is, that our Sapphire comes from *Calicut*, *Canaanor*, and the Island of *Ceylon*, from whence they had most of their precious Stones, and especially such as were coloured. We might add to these, many other kinds of precious Stones, of which, at this Day, we know no more than the Names: But that we are afraid of fatiguing the Reader, and therefore we shall only mention one Remark on this Subject, and that is, with regard to the Doubts and Difficulties that attend it. It seems to be a very strange Thing, that we should be more at a Loss about the Jewels mentioned in old Authors than almost about any other Thing; but when we consider what *Pliny* tells us, that the *Indians* were very dextrous in making false Jewels of all Colours; and when we observe that he mentions some true Stones, which, losing their Lustre, recovered it again by being put into Vinegar, in which Salt of Nitre had been dissolved. I say, when we consider, and lay these Circumstances together, with the Addition of their Descriptions, it may very well beget a Doubt in us, whether many of the precious Stones mentioned by the Ancients, might not be Compositions; but whatever they were, they came from the *Indies*, and this is another Proof, that even in the most early Times, the *Indians* were much better skilled in these Matters than any other Nation.

We likewise find amongst the rest of the *Indian* Commodities charged with Duties, all Sorts of Silk and Cotton Manufactures, which they brought as we do from those Countries, and probably for the same Reason, because they found that Method cheaper than bringing the Commodity

dity and working it up at home. Ivory was also brought from thence as well as from *Africa*, and great Quantity of Skins and Furs which are distinguished under the two Heads of *Babylonian* and *Parthian*; and they likewise brought many wild Beasts, such as Lions, Bears, Leopards, Panthers, and some Birds. As to Metals, we find none mentioned except Iron or Steel, under the Title of *Ferrum Indicum*; and this, we are told by *Pliny*, came from the Country of the *Seres*, and was esteemed the very best in the World; and next to it was the *Parthian* Iron, but whether it came wrought or unwrought does not very clearly appear, but the former is the most probable. That they might, under the Reigns of the *Greek* Emperors, have this fine Iron or Steel from *China*, where that Commodity is still met with in the greatest Perfection; I will not deny but that it came from thence in the Time of *Pliny*, is not easy to comprehend, and therefore I am apt to believe that they received it from the *Siamese*, who might inform them that they had it from the *Seres*.

We find Cotton also, and a Sort of Mohair amongst the Commodities that were brought from the *Indies*; and though the true Purple was to be had in *Europe*, yet it seems that of the *Indies* was most admired, and in the greatest Esteem, otherwise it cannot be imagined that they would have taken the Pains to have brought it from Countries at so great a Distance. It would take up too much Time, should we endeavour to trace out the different Ways by which all these *Indian* Commodities were brought to *Constantinople*. It is sufficient for our Purpose that they were brought thither, since this clearly shews that the Subjects of the *Greek* Empire had a considerable Trade to the *Indies*.

We might alledge, to prove this still more largely the Testimony of *Amianus*, *Miscellinus*, and several of the *Byzantine* Historians, which however would lead us into abundance of critical Disputes, and therefore we shall waive their Authorities, especially since the Account already given of the *Indian* Monks, or Monks who had travelled to the *Indies*, for with respect to our Subject, it is much the same Thing which they were, is as clear a Testimony on this Head as we could wish. It is also very certain, and the Reader will meet with the clearest Proof of it in a succeeding Section, that by this Time, or very soon after, the *Syrans* had not only reached *China*, but were even established there, and formed a Christian Church, the Members of which were very numerous in all the Provinces of that extensive Empire; neither can it be imagined that, upon this Establishment, they should immediately relinquish all Correspondence with their Countrymen; though this might, and indeed really did happen in Process of Time, and for Reasons that will appear hereafter.

7. We have very different Characters given us of the Emperor *Justinian* by different Writers, according as their Humours led them; but upon the whole, it is very certain that he was one of the best Princes this Empire ever had, took the greatest Pains to settle and support the Government, to regulate the Laws, and to leave every thing in such a Condition that succeeding Princes might be able to govern without Trouble, by adhering to the Rules which he had laid down.

He deceased in the eighty-third Year of his Age, *A. D.* 527, and was succeeded by his Nephew *Justin II.* in whose Time the Empire was so shaken by domestick Confusions, and towards the latter End of his Reign invaded by the *Persians* on the one Side, and by the *Avars* on the other, that the Weight of Government became absolutely insupportable, insomuch that he fell distracted. *Tiberius* had thereupon the Administration of the Empire committed to his Care, with the Title of *Cesar*; and after the Death of *Justin*, he succeeded him in the Empire, which he governed with great Magnanimity, and had such Success against the *Persians*, as reduced their Power very low.

He was succeeded, *A. D.* 582, by *Mauricius*, who married his Daughter *Augusta*, and in the Beginning of his Reign, was very prosperous, repelled the Invasion of the *Persians*, and when that Kingdom fell into Confusion, and their King *Georges* expelled, he received that Mo-

narch into his Dominions, and treated him with great Generosity and Kindness; he likewise raised a great Army to restore him, which he also performed very happily; and by this Means the Commerce between the *Greeks* and the *Persians* was renewed, to the great Advantage of both Empires. The Close of this Emperor's Reign was not at all answerable to its Beginning; for the *Avars*, under the Command of their King *Chaganus*, invaded the Empire; and notwithstanding all the Precautions the Emperor could take to prevent the Progress of their Arms, ravaged all *Thrace*, and were on the Point of besieging *Constantinople*; but in this however they were prevented by a Plague, which swept off most of their Army, upon which their King, who had twelve thousand of *Mauricius's* Subjects Prisoners, offered to ransom them for Half a Crown a piece, which not being granted, he put them all to Death. This so much incensed the People of *Constantinople*, that they rebelled, and called the Emperor a cruel, and greedy Tyrant. He, on the other hand, was afflicted with this unhappy Accident, that he begged the Prayers of all religious People, that this Offence might be pardoned, or that he might receive his Punishment for it in this World. In this he soon had his Wish; for *Phocas*, who from a common Soldier, came to be General of his Army, rebelled against him, was proclaimed Emperor by the Army, and pursued *Mauricius* to *Chalcedon*, where he put him with his Wife and Children to Death, which *Mauricius* suffered with great Patience, uttering these Words, *Thou art just, O Lord, and thy Judgment is righteous*. These Events fell out in the Year 602.

This *Phocas*, as he attained the Empire by Treason and Murder, so he governed with all the Circumstances of Cruelty and Barbarity that could render a Tyrant odious; for being sensible at first that his Title was bad, he endeavoured to secure himself in the Possession of the Empire, by destroying, without Mercy, all who were any way related to the Imperial Family, or who were so distinguished by their Virtues, or their Employments, as to give him any Umbrage; and this leading him to shed the Blood of a Multitude of the Nobility, raised a general Abhorrence of his Government over all the Empire. But, besides these domestick Troubles, *Phocas*, almost from the Beginning of his Reign, was pressed by a formidable Foreign Enemy. This was *Chosroes* King of *Persia*, who, in Gratitude for the Kindness shewn him by the Emperor *Mauricius*, was no sooner informed of his Murder, than he invaded the Provinces of the *Greek* Empire bordering upon his Dominions; and this War, as it grievously distressed a great Part of the Empire, served to increase the Hatred of the People against the Monster who had occasioned it. As Misfortunes of this kind seldom come alone, and as it is natural for ambitious Neighbours to take all Advantages over a declining Government, so while the Affairs of *Phocas* were in this Condition, the *Avars*, *Silavonians*, and other barbarous Nations, broke into and ravaged his Dominions. He, in the mean time, instead of reforming, continued his Cruelty and Lewdness, till he was surpris'd in his Palace by *Phisicus*, whose Wife he had ravished, and delivered to the Son of *Heraclius*, one of his Generals, who had taken Arms against him. *Heraclius*, after upbraiding *Phocas* with his Crimes, cut off his Feet, Hands, and Privities; and at last beheaded him. Such was the End of this barbarous and blood thirsty Tyrant, who, notwithstanding, was flattered by the Churchmen of his Time; crowned by the Patriarch of *Constantinople* while the Emperor *Mauricius* was still living, and owned by the *Roman* Pontiff, on whom he bestowed the Title of Universal Bishop.

8. The general Corruption of the People, and a Succession either of Tyrants or weak Princes, had so incensed the *Greek* Empire, that when *Heraclius* ascended the Throne, which was *A. D.* 610, he found it scarce possible to make the necessary Provisions for the Security of the State; and therefore, when he was assisted by *Chosroes* King of *Persia*, he did not believe with that Constancy that might have been expected from a Man of his great Courage, for, instead of aiming to oppose them, he endeavoured to purchase Peace; but when this was found impracticable, he compromised Matters with the *Avars*, who were Enemies no less formidable than the *Persians*.

and addressed himself to the War, though his Treasury was so exhausted, that he was forced to coin the Church Plate. While he was engaged in this War, the *Avars* broke the Peace, and advanced even to the Gates of *Constantinople*, which they besieged, but without Success. *Heraclius* soon after concluded the *Persian* War with much Honour to himself, after it had lasted six Years.

It was one of the most fatal of which we find any mention in History; for it exhausted the Strength, and in its Consequences proved the Ruin of both Empires; for while the *Persians* were victorious at first, they over-ran all *Egypt*, plundered the People without Mercy, interrupted their Commerce, and destroyed their Magazines. When the *Greeks* in their Turn had the better of the *Persians*, they revenged these Wrongs so effectually, that they entirely broke the Force and Spirits of the *Persians*, which scarce proved a greater Misfortune to that Nation than to the *Romans* themselves; for if the *Persians* had not been in so weak a Condition, the *Saracens* would never have been able to have over-ran their Country in the manner they did, and which afterwards afforded them an Opportunity of reducing the most valuable Provinces of the *Greek* Empire.

It is very remarkable, that upon the first News of the Victories which *Heraclius* gained over the *Persians*, one of the principal Monarchs of the *Indies* sent to compliment him upon that Occasion, and made him a Present of a considerable Quantity of fine Pearl, and precious Stones, and some Years afterwards repeated this Civility much to the Emperor's Satisfaction. This is a very singular Circumstance, and shews that there must have been some previous Correspondence between these Princes; but it was one of the last Instances of Friendship which passed between these States; for before the Decade of this Emperor, all the Provinces from which any Correspondence could be carried on with the *Indies*, were torn from the *Greeks*; and as this is a Circumstance which very nearly concerns our Subject, it is requisite, for the better understanding it, that we should enter into a more particular Account of this remarkable Event.

9. *Mohammed*, the Author of a new Religion, and of a new Empire, set up for a Prophet about two Years before *Heraclius* began to reign; but the *Hegira*, or Flight from *Meca*, which is the Era of the *Mohammedans*, and which happened when *Mohammed* was fifty-four Years old, is fixed, according to the best Historians, to July 6, *A. D.* 622. *Mohammed* survived this ten Years, and though at his first assuming the Sovereignty, he had no more than thirty Subjects; yet before his Death he had laid the Foundation of a very powerful Monarchy. He was succeeded by his Father-in-law *Abuallab*, surnamed *Abubekre*, by which Name only he is mentioned in most Histories. The Meaning of it in *Arabic* is, *The Father of the Virgin*; and he was so called, because his Daughter *Asfa* was the only one of *Mohammed's* Wives whom he married while a Virgin.

This *Abubekre* was the first *Khaliff*, which is another *Arabic* Word that signifies a *Vicar*, or *Substitute*, and a *Successor*, and the *Kaliffs* were esteemed both with respect to *Mohammed*. In the second Year of his Reign he invaded *Persia*; and in the third and last he sent *Khalid*, one of his ablest Commanders, with an Army of 36,000 Men to invade the *Greek* Empire, which he performed with Success, and defeated a great Army which *Heraclius* sent against him.

Omar succeeded *Abubekre* in the thirteenth of the *Hegira*; in the first Year of his Reign he became Master of *Damascus*, and in the second he reduced all *Syria*, having forced *Heraclius*, who came in Person to its Relief, to retire precipitately. The next Year he made himself Master of *Jerusalem*, and all the Country of *Palästina*, while one of his Lieutenants intirely subdued *Persia*, and put an End to that ancient Kingdom in the Person of *Jezelegerd*, who was the last of their Princes.

After this Conquest the *Saracens*, as they were then called, demanded Tribute of *Egypt*; and *Cyrus* Bishop of *Alexandria*, knowing the distressed Condition of the Empire, and fearing the Consequences of a War, consented to pay an annual Tribute of 200,000 Aurei, with which for two Years the *Saracens* were contented, and very probably would have been so for a long Space of Time, if the Em-

peror *Heraclius* had not taken this in ill Part, and treated it as a sacking of his Subjects to enrich the Infidels. He bestowed therefore the Government of *Egypt* on an *Armenian*, whose Name was *Manuel*, with the Title of *Profectus Augustalis*, who, when the Tribute was demanded next answered, that they had formerly a Priest, but now a Soldier, to deal with. *Omar* thereupon sent *Anron* his General with a potent Army into that Country, where, when it was too late, *Heraclius* would have renewed the Treaty made by *Cyrus*, and would willingly have paid the former Tribute. But *Anron*, in the Space of two Years, conquered the best Part of the Country, and laid Siege to *Alexandria*. While he lay before the Place, which held out fourteen Months, the Emperor *Heraclius* died, and being succeeded by his Son, who was a Minor, the *Saracens* at their Leisure prosecuted the Conquest of *Egypt*, and soon after annexed thereto all the adjacent Countries.

Omar the second *Khaliff* reigned but ten Years and a half, and in that Space of Time subdued *Syria*, *Chaldea*, *Mesopotamia*, *Persia*, *Egypt*, and Part of *Africa*; that is to say, as far as *Tripoli* in *Barbary*. By this Blow the *Romans*, as they stiled themselves, or *Greeks*, as they were stiled by others, lost all their Eastern Provinces, and the Trade to the *Indies* intirely, which for the present suffered an absolute Interruption, the *Arabs* being at that time intirely addicted to War; and though they were avaritious enough, had no great Notion of Commerce. It is scarce to be conceived how great an Alteration the Rise of this new Empire made in the Face of Affairs, and what prodigious Desolation ensued before these Conquerors came to be softened to such a Degree, as to cultivate the Arts of Peace, and to endeavour, by the Rules of Policy, to establish and maintain the mighty Empire they had acquired, the greatest indeed and most extensive that the World had ever seen, reaching Westward as far as *Spain*, and Eastward to the very Frontiers of the *Indies*. Our Subject obliges us to examine the Progress of their Power in *Egypt*, because it not only opened once again the Trade through the *Red-Sea*, but also that of *Europe*, by the same Canal to the *East-Indies*.

10. That Impetuosity and Violence which enabled the *Saracens* to make themselves Masters in so short a time of such vast Dominions, was not like to suffer them to continue long under one Head, which, however, was undoubtedly the Design of *Mohammed* their Founder. We have not room to enter here into all the Reasons of that Division which happened among the *Arab* Princes, and therefore shall content ourselves with one, which was the great Distance of their Provinces, that naturally gave an Opportunity to such as were intrusted with the Government of them to set up for themselves.

We have already shewn how all that Part of *Africa*, which had been under the Dominion of the *Romans*, fell into their Hands; and we shall next observe, that *Abulcassim* *Mohammed* *Ben* *Abduab*, being in Possession of Part of *Africa*, set up for himself in the Year of the *Hegira* 296, and took the Title not of *Khaliff*, but of *Mabali*, which signifies Director, or Chief Priest. He fixed the Seat of his Government at *Cairo*, which is a Name the *Arabs* bestowed on the ancient City of *Cyrene*, or rather a new City built on the Ruins of the old one. He left the Government to his Son *Cajem*, who removed the Seat of Empire to *Mabadie*, a new City which his Father had erected; and his Grandson *Abou* *Tenim* *Maad*, better known by his Surname *Moez* *Ledinillab*, who succeeded in the Year of the *Hegira* 341, prosecuted the Design which his Ancestors had entertained of making himself Master of *Egypt*.

With this View he sent his General *Gaubar*, who was a *Greek* by Birth, to invade that Country, of which he made himself intirely Master; and in the Year of the *Hegira* 358, laid the Foundation of a new City, which *Moez* *Ledinillab* resolved should be the Capital of his Dominions. As the *Arabs* were exceedingly addicted to Astrology, particular Care was taken that the first Stone of this City should be laid, when the Planet *Mars* was in the Ascendant; and as this Planet is by them called *Caber*, the new City was called *Caberab*, or *Al* *Caberab*, that is, the Victorious; and is the same which the *Europeans* call *Cairo*, or *Grand* *Cairo*. I have been the more careful in marking the Date of this City's Foundation, which agrees with the Year of

our Lord 968, because many, otherwise accurate Writers, have been led into Mistakes about it; particularly the learned Bishop *Huet*, who in the forty-eighth Chapter of his History of the Commerce of the Ancients, says, it was built A. D. 795; and in the fifty-eighth Chapter of the same Work, tells us, it was built A. D. 984.

As soon as *Morze Ledmillab* was informed that this City was finished, he removed, with all his Treasure, from his old Capital, and made his Entry into *Cairo* in the Year of the *Hegira* 362, and there took the Title of *Khaliff*. His Successors were stiled *Khaliffs of Egypt*, to distinguish them from the *Khaliffs of Bagdad*, who were esteemed the true Successors of *Mohammed*. This City was very conveniently situated on the *Nile*, and became in Time no less considerable for its Commerce, than for its being the Seat of Empire: And it was by this Means that the old Trade, by the Way of the *Red-Sea*, was once more restored to *Egypt*, which flourished exceedingly under this new Race of Princes, as appears by the Revenue which it produced to its *Khaliff*, and which, as *Elmacinus* tells us, amounted to no less than three hundred Millions of Crowns of Gold.

The *Khaliffs of Egypt* were nine in Number, and the last of them was *Albad*, who was deposed by *Saiadin*, General of *Noureddin*, Sultan of *Damascius*, in the Year of the *Hegira* 567, A. D. 1171. *Saladin* entering the Palace of the *Khaliff*, who died immediately after he was deposed, found there prodigious Riches, and amongst the rest a noble Proof of the Commerce of the *Indies*, which was the finest Ruby in the World, perfectly fine and bright, and weighing very near an Ounce and a half. This prodigious Wealth, and the having a great Army absolutely at his Devotion, tempted him to set up for himself; and having made himself Master of *Egypt*, he soon after extended his Dominions over all the Countries of *Damascius*, *Palästina*, and *Syria*. He left, at his Death, his Kingdom of *Egypt* to his second Son *Oskman*, who died in the Year of the *Hegira* 595, and was succeeded by his Brother, who was soon deprived by his Uncle *Malek Al Adel*, whose Grandson *Malek Al Salek*, succeeded in the Year of the *Hegira* 647. He enlarged the City of *Cairo*, and fortified it with a strong Wall, and was victorious over *St. Lewis of France*, in the Year of the *Hegira* 648. But this Prince was however the last of his House; for not long after, the *Mamluks*, or *Mamelucs*, as they are generally called, who were a kind of mercenary Soldiers, revolted from him, and forced him to take Shelter in a wooden Tower, which hung over the *Nile*. To this Tower the Mutineers set Fire, and thereby compelled the unfortunate Monarch to jump into the *Nile*, where he was drowned.

By this Accident *Egypt* once again changed its Masters; for these *Mamelucs* became Sovereigns of the Country, and chose their General, whose Name was *Ibek*, Sultan, who thereupon took the Name of *Abmalek Al Azis*. He was the first Prince of the Dynasty of these *Mamelucs*, which were distinguished by the Name of *Babarites*, or *Marines*; for these People were, generally speaking, either young *Turks* or *Tartars*, sold into *Egypt* by the Merchants, from whom again they were bought by the Sultan, educated at his Expence, and employed to defend the maritime Places in the Kingdom. The plain Reason of this Institution was, because the native *Egyptians* were found so weak and effeminate, from a long Course of Slavery that, they were unfit for Arms; and perhaps this is the Case of all Nations, when in the State of the *Egyptians*, that is to say, when they have no Property to fight for, are neither to be the better for Victory, nor can be worse by any Defeat. These Foundlings made excellent Soldiers; for, having no Relations or Friends, but amongst their own Corps, they turned all their Thoughts to the excelling in their Profession, as they placed all their Hopes in acquiring the principal Posts in their Militia. This extraordinary Event fell out in the Year of the *Hegira* 648, A. D. 1250. They elected, on the Death of a Prince, another out of their own Body, and held the Kingdom without Interruption till the Year of the *Hegira* 710, when they were deprived of it exactly in the same Manner in which had they acquired it.

For, as they found it necessary to keep up a numerous standing Army, because, though they made but a Part of the Sultan's Troops, yet it was impossible for them to trust either the *Arabs* or the *Egyptians*; they therefore had Recourse to the purchasing all the Children they could meet with, but particularly the *Circassians*, which inhabit a Part of the Coast of the *Black-Sea*, and have, in all Ages, had a barbarous Custom of making Merchandise of their Children; and for the better procuring of these Children, the *Mamelucs* entered into a Treaty with the *Greek Emperors*, for sending an annual Fleet into the *Black-Sea*. These Children they trained up in their own Discipline; but by an unaccountable Blunder in Politicks, never incorporated them into their own Corps, but disposed of them in Garrisons in the Heart of their Country, in in a fort of Fortresses, which they called *Borge*; and from thence this new Corps of *Mamelucs* took the Name of *Borgites*; and growing more numerous than the old Corps, deprived *Keloun*, who was the last Sultan of the first Dynasty of the Empire, and transferred it to themselves.

It is of this second Dynasty of the *Mamelucs*, of which most Authors are to be understood when they speak of the *Mamelucs* as the Children of Christians, for such the *Circassians* were. These *Borgites* remained Masters of *Egypt* to the Year of the *Hegira* 923, A. D. 1517, when their last Prince *Tbamam Bey*, was defeated by *Selim* the first Emperor of the *Turks*, who caused him to be hanged over one of the Gates of *Grand Cairo*; and to the *Turkish* Empire, *Egypt* has been a Province ever since. It was under these *Mamelucs* that the *East-India* Trade was, in a great measure, restored to its old Channel; that is to say, all Sorts of *Indian* Commodities were conveyed by the *Red-Sea* to the Coasts of *Egypt*; from thence to *Grand Cairo*, and so by the *Nile* to *Alexandria*, where a great Part of them was purchased by the *Europeans*; and it was by this Commerce that *Egypt* was so rich in their Time, that the Predecessor of *Tbamam Bey* gave, at his Accession to the Throne, by Way of Largess to his Soldiers, ten Millions of Ducats at once. Having thus, as briefly as possible, run through the History of *Egypt*, it will be requisite to enter more particularly into the Commerce of the *Arabians* in the East, without which, the subsequent Part of the Work could not be perfectly understood; and this likewise, we shall do with all imaginable Brevity, in order to preserve a due Proportion between this Section and the rest, as well as that necessary Connection between the several Parts of this History; so that the different Turns which this Trade to the *Indies* hath taken, may the more evidently appear. A Task difficult to accomplish in so narrow a Compass, and the more so, because we travel through an unbeaten Road, and are obliged to charge our Guides almost at every Stage.

11. One would naturally imagine, from the foregoing Accounts of the *Arabians* and *Mohammedans* in general, that they were not the People in the World best disposed for cultivating Trade, and settling themselves in different Parts of the World with a View to Commerce; yet it will appear plainly in the Course of this Work, that they were actually dispersed into the most distant Countries in the *Indies*, nay, and through *China* itself, without the Assistance of Force, and where they could not have been led by the Spirit of Ambition, for which we have seen them hitherto distinguished. It is therefore necessary that we should give the Reader a fair Account of this Matter, and make him acquainted with the Means by which they spread themselves in so extraordinary a Manner, became sole Masters of the *Indian* Commerce, even in the *Indies* themselves, and thereby drew it into such Countries as were under their Dominions; from whence it was carried out to other Parts of the World, but still in such a Manner, that the best Part of the prodigious Profits arising from that Trade, centered in them. In order to this, and that the whole may be brought into as little Room as possible, we shall, upon this Head observe, that, from their own Histories it is clear, the *Arabs* formed their Settlements four several Ways; by Conquest, by Discovery, by Trade, and by Mission: By the first they possessed themselves of all the Provinces, which made the

vast Empire; by the second, they got Footing in *Africa*, down to *Cape Corientes*, among the poor unarmed *Cafres*, who had it not in their Power to prevent them from seizing on what Parts they saw good. Their Colonies of *Magadoxo*, *Brava*, and *Quiloa*, were somewhat in the Nature of ours in these latter Times, but not so difficult to maintain, because of the Proximity of the *Red-Sea*, whence the *Arabs* had all Sorts of Assistance. By the two other, they seated themselves in all other Parts, but more especially by Commerce.

These Voyages were not in those Days so safe and so frequent, and therefore the Merchants were under a Necessity of making a long Stay at the principal Ports, where they took Wives; their Religion allowing Plurality. Their new Families brought on others, and the Princes being sensible it was greatly for their Advantage to draw the Trade of *Persia*, *Arabia*, and at the same Time of *Egypt* and *Europe* by the *Red-Sea*, into their own Ports, these Merchants met every where with the kindest Usage they could wish. The idolatrous Princes, confirmed in their old Superstitions, were not at all scrupulous about Differences in Religion, but admitted all indifferently; so they readily allowed their Subjects to embrace *Mohammedism*, which they preferred to the rest, because of the Hopes these *Arabs* gave them of Protection from the Sultans, whose Power was known in the remotest Parts of the East. Even Princes themselves made Profession of *Mohammedism* in troublesome Times, that the *Moors* might join them; for, in latter Days, they were so multiplied, that they peopled whole Cities, or, at least a Part of the most considerable. Thus this Religion which has nothing very inconvenient in it, did, by little and little, obtain in many Parts; and at length received an Accession of Power, when some of its Professors being raised to the first Posts in the Courts of *Cambaya* and *Guzzarat*, invited a greater Number of those *Asiatic Turks* called *Ramis*, and even seized on some Posts, as *Malic Aziz*, who raised a considerable Settlement at *Dru*, from whence he a long Time infested the *Portuguese*.

By Trade and Religion, the *Arabs* got Footing in some Parts of *Malabar*; and by the same Means they came to be very considerable upon *Malacca*. They first went thither as Merchants, and some of them fixing their Abode, gained many of the Idolaters over to *Mohammedism*. From *Malacca* they sailed round to the *Moluccas*, and having prevailed on the Kings of *Tidore* and *Ternate*, together with several others to join with them in Religion, they reaped great Benefits from these Princes, whom the Concerns of Trade, and the Protection these *Moors* gave them room to hope, confirmed in *Mohammedism*. According to the *Portuguese* Writers, they had not been long settled in the *Moluccas*, before this Discovery of the *Indies*. Thus, in a very short Space of Time, and without the Assistance of any considerable maritime Force, the *Arabs* did more than the *Greeks* and *Romans* in the Course of so many Ages; and it is highly probable, they would have pushed Matters still farther on this Side, if they had not been hindered by the falling of the *Portuguese* into this Part of the World, which put an immediate Stop to their Progress.

They found, however, Means to make the most of their good Fortune, and to become the Carriers of *Europe* with respect to the Commerce of the East; and this too in such a manner, that they shut out all others from navigating those Seas, and thereby drew an immense Profit to themselves. For the *Indians* brought by Land to *Cabul* and some other Places, and by Sea to *Bassora* and *Siraf*, all the Commodities of the *Indies* and *China*. Furs were brought into *Syria* by the Provinces of *Aderbesjan*, by *Curdistan*, and other Parts more northerly; great Quantities of the same they also had from the *Barbary Coast*, and by the Way of the *Red-Sea*, from whence a Trade was carried on with them all over *Egypt*. From the same Places they had Gold-dust; Gold also they had from the Mines of *Sofala*, brought to them by the *Negrees*, who traded with *Egypt* by the Way of the *Desart*, or from Port to Port quite to the *Red-Sea*; from *Ceylon* and the *Indies*, they by their Trade with the *Chinese* and

Indian Merchants, had Silk, rich Stuffs, and many other Manufactures, Drugs and Spices.

With this Stock of Goods they drove a very considerable Commerce by the way of *Caberab*, or *Cairo*, with the *Venetians*, the *Genoese*, the *Catalans*, and the *Greeks*, which was easily done by reviving the old Mart of *Alexandria*; which Port, though it was far from recovering its former Magnificence, became once more famous in the World, by becoming what it formerly was, the Centre of Commerce between the Eastern Parts of the World and the West. This shews the great Consequence of a right Situation, and is a new Proof of the Wisdom and Penetration of *Alexander the Great*, who foresaw, that whatever became of his Empire, the new City which he erected, and which he honoured with his Name, would continue to make a considerable Figure, as long as Trade was capable of giving Credit to any Place. It is true, that the Revolutions which happened in the Government of *Egypt*, after it fell under the Dominion of the *Mohammedans*, and of which we have already given a succinct Account, frequently affected this City to a very great Degree; but still the Excellence of her Port, and the many Conveniencies that resulted from the Commerce carried on thereby to the Masters of *Egypt*, whoever they were, preserved her from total Destruction, though in the Hands of the most barbarous Nations; for the Desire of Wealth is so natural to Mankind, that it softens the most rugged Natures, and disposes them for the sake of Interest to a kind of counterfeit Humanity.

But it was the *Portuguese*, who by the Discovery of the Passage to the *Indies* by the *Cape of Good Hope*, that gave the last Blow to this Commerce, and finally extinguished the Glory of *Alexandria*; which, as we have shewn, depended upon their Sovereigns preserving the Monopoly of the *Indian Trade*.

It was for this Reason that the *Venetians* assisted privately the *Mohammedans* in their Endeavours to prevent the *Portuguese* from settling in the *Indies*; from whence we may discern, that Interest operates more strongly than Religion, Neighbourhood, or indeed any other Principle whatever. The *Portuguese* were *Christians*, *Europeans*, and good Allies to the State of *Venice*; the *Mohammedans* were none of these, but their Interest and Trade was the same; and whatever affected the Commerce of the one, must necessarily be detrimental to that of the other. In short, the Dispute was, whether the Possessors of *Egypt*, and the *Venetians*, should divide between them the Profits of the *Indian Commerce*, or whether it should remain intirely to the *Portuguese*; and there is no Reason to wonder, that when this was the Question, a State depending so much upon Commerce as that of *Venice* did, should set all Considerations aside in order to attend more closely to her Interest.

It is not, however, to be understood from hence, that the *Indian Commerce*, by the way of *Egypt*, is even at this Day entirely destroyed, or that the *Venetians* have no farther Concern therein; neither of which is, strictly speaking, true; but that this Commerce is nothing now to what it was, either with respect to the *Egyptians*, or the *Venetians*, is daily declining, and must decline more and more, the Passage by the *Red-Sea*, the Country of *Egypt*, and the Commerce of the Port of *Alexandria*, having now lost those distinguishing Advantages which for so many Ages they possessed, and which enabled them to recover as they did, after such intolerable Devastations as they were exposed to.

We may easily satisfy ourselves as to the Truth of this, by comparing the Revenues of *Egypt*, when in the Hands of the *Arabians*, with what they now produce, to the *Turk*: The former amounted to three hundred Millions of Crowns, and the People were not at all oppressed; the latter are fixed at three Millions, and the People are beggared by the railing that Sum. We may add to this, that formerly there were in *Egypt*, as *Diodorus Siculus* informs us, three thousand Cities, whereas now there are not above three hundred considerable Towns, and none of these can boast any thing of their ancient Splendor. It is now time for us to return to the *Greek Empire*, and to shew in as few Words as possible how it sunk into Ruin.

12. *Constantine* the Son of *Heracius* succeeded his Father; but in the fourth Month of his Reign he was poisoned by his Mother-in-law *Martina*, a Woman of great Parts,

Parts, and of bewitching Speech. She raised her own Son to the Throne; but the Government being in Confusion, and all things going to Wreck, the Senate cut out the Emperor's Tongue to prevent her deluding the People any more with her Eloquence; and cut off his Nose, lest he should gain the People's Affection by his Beauty. *Constantine*, the Grandchild of the old Emperor, was then raised to the Throne, and reigned twenty-seven Years; his Son *Constantine* succeeded him, under whom *Constantinople* was besieged by the *Saracens*; but they were obliged, however, to raise it, and he had afterwards great Success against them. His Son *Justinian* was still more fortunate, but withal so perfidious, that when he had made a Peace with them upon good Terms, he broke it when he thought it for his Advantage, which exposed him to Hatred abroad, and Contempt at home, so that he was deposed and banished; but was afterwards restored, by the Assistance of the *Bulgarians*, and behaved with great Cruelty, after he recovered his Dominions. He even invaded the Territories of that Prince, who had protected and restored him, by whom his Army was totally defeated; and now being grown odious to every body, his Subjects rebelled against him, and cut off his and his Sons Heads.

The two succeeding Emperors were deposed, and *Theodosius* abdicated the Empire of his own Accord; and then *Leo* the Third became Emperor, who was the Son of a Shoemaker, in whose Time the *Saracens* again blocked up the City of *Constantinople* for three Years, but were at last obliged to retire: He was succeeded *A. D.* 741, by his Son *Constantine Copronymus*, who was very successful against the *Saracens*, and held the Empire thirty-four Years, and then left the Throne to his Son *Leo IV.* who was likewise a great Prince, and defended his Dominions with equal Courage and Success. He ruled the Empire only five Years, and might have established both the Reputation of his Government, and the Succession of his Family, if it had not been for the over-bearing Temper of his Empress *Irene*, who after his Death first governed in Conjunction with her Son *Constantine Porphyrogenitus*, and afterwards murdering him and all the Royal Family, reigned for some time alone, till in *A. D.* 802, she was deposed, and shut up in a Monastery.

Charlemagne having now assumed the Title of Emperor of the West, it sunk the Reputation of the Greek Monarchs exceedingly; and the succeeding Emperors being most of them unfortunate, and many of them unworthy, there fell out nothing but Tyrannies, Rebellions, Depositions, Murders, and such-like Confusions, during the Space of between three and four hundred Years, till the Holy War broke out, when through the Madness of the Western Princes the Emperors of the East might, if they had managed prudently, have recovered their former Glory; but they behaved unsteadily, basely, and perfidiously, during the whole War; and besides, they were perpetually plagued with Rebellions and Revolutions, in which the *Latins*, for their own sakes, taking part, set up *Alexis Angelus*, whom the *Greeks* murdered; which threw all that Part of the World into the utmost Confusion, so that the Christian Princes, instead of prosecuting their Wars against the *Turks*, turned their Arms upon the *Greeks*, who in the midst of these Misfortunes could not agree amongst themselves, but divided their Empire into two under *Alexis Comnenus*, who made *Trebisond* a Town in *Natolia* on the *Euxine* Sea, his Capital; and *Theoderus Lascaris*, who made *Albanople* the Seat of his Government, while the *Latins* seized the greatest Part of the Empire, because the *Greeks* did not reimburse their Charge for restoring young *Alexis*. By this means the Greek Empire was divided into three Parts, and the *Latins* set up *Baldwin* Count of *Flanders* to be Emperor at *Constantinople*.

This great Event happened about the Year 1200, and the *Latin* Emperors, which were five in Number, remained possessed of *Constantinople* for sixty Years; and then it was recovered by the Greek Emperor *Michael Paleologus*, who, though a bad Prince, enlarged his Dominions, and defended himself bravely against all his Enemies; and after a Reign of twenty-three Years, left the Empire to his Son *Andronicus II.* who ruled it forty-five Years with various Fortune, till in his old Age his Grandson *Andronicus III.* by

the Assistance of the *Genoese*, dethroned him, and shut him up in a Monastery. It was under the Reign of this latter *Andronicus* that the *Turks* became very formidable, and threatened to compleat that Ruin which the *Saracens* had begun, to which they were encouraged by the loose Administration of this Emperor and his Successors.

John Cantacuzenus being left Guardian to *Andronicus's* two Sons, *John* and *Mannuel*, usurped the Throne in 1328. In the Beginning of his Reign he was chased from *Constantinople*, where the People had crowned *John* the Son of *Andronicus*, which occasioned a long War; *Cantacuzenus* made a League with the *Turks*, subdued *Lydia*, *Cappadocia*, and other Provinces, with the Help of the *Venetians*; but *John Paleologus*, by the Help of the *Genoese*, defeated him by Sea and Land; after which he retired to a Monastery on Mount *Albos*, with his Son *Matthæus*, whom he had associated into the Empire; and his Emperors retired to a Nunnery. During his Retirement he wrote the History of his own Reign in four Books, which is reckoned one of the finest Pieces written by any of the modern *Greeks*.

John VI. of the Family of *Paleologus*, succeeded in 1354. He was successful in his War against the *Bulgarians*, and afterwards made a League with the *Turks*; but was deposed by the Sultan *Amurat I.* who took several Places from him, and made *Adrianople* the Seat of the *Turkish* Empire in 1362. *Andronicus* Son to *John*, conspired against his Father, for which he was imprisoned, and had his Eyes put out; but making his Escape to *Amurat*, he by his Assistance, and that of the *Genoese*, dethroned his Father, and imprisoned him and his Uncle *Emanuel*, who making his Escape to *Bejazzet* the Sultan of the *Turks*, and offering to hold the Empire of him, dethroned his Nephew in the third Year of his Reign; yet afterwards the *Turks* broke with him, and besieged *Constantinople*, which obliged him to go about to the chief Courts of *Europe* for Relief. He stayed two Years at *Paris*, where, hearing that *Tamerlane* had defeated *Bejazzet* Emperor of the *Turks*, and obliged him to raise the Siege, he returned to *Constantinople*; but being still unsuccessful, he resigned the Empire to his Son *John*, and retired into a Monastery, where he died.

His Son *John VII.* succeeded in 418. During his Reign the *Turks* took *Thessalonia*, and became Masters of most of the *Greek* Empire, except *Constantinople*. This obliged *John* to have Recourse to the *Latins* for Assistance, and to wish for an Union of the *Greek* and *Latin* Churches. It was with this View that he came to *Ferrara*, where the Pope had summoned a Council; and there he had great Promises made him of Support against the *Turks*; and returning from thence to *Constantinople*, he died about six Years afterwards.

Constantine XV. succeeded his Brother in 1445. He had signalized himself in the War of *Peloponnesus*, and for his great Strength was furnished the *Dragon*. Pope *Nicolas V.* sent a Cardinal to renew the Agreement, wherein he succeeded, on promise of assisting him; but the *Latins* being slow in sending their Supplies, Sultan *Mahomet II.* ravaged *Greece*, besieged *Constantinople* by Sea and Land, and carried it after fifty-eight Days. The Emperor *Constantine* did all that was possible to defend the Place; but being neglected by the *Latins*, and not supplied with Money by the Citizens, the *Turks* prevailed, and himself, after taking Leave of his Officers, went to defend the Breach, where he was killed, fighting valiantly; and being known by his Armour, the *Turks* cut off his Head, and carried it on a Lance through the City. This happened on the 28th of *May* 1453. The *Turkish* Emperor destroyed afterwards all the Imperial Family, and having totally overturned the *Greek* Monarchy, established the Seat of the *Turkish* Empire at *Constantinople*, where it has ever since remained.

If we consider the extensive Dominions, the vast Power, and the wise Form of Government, originally established in this Eastern Empire; one cannot help wondering that it should be overturned, and extinguished in such a manner. But, on the other hand, if we reflect on the Luxury, Corruption, and tyrannical Abuse of Power, that so manifestly appeared in the Administration of almost all the Emperors after *Justinian*, and consider at the same time the malicious and seditious Disposition of their Subjects, we may be rather

inclined to wonder how, under such Circumstances, this Empire could subsist so long.

On the whole, there is no room to doubt, that the Ruin of the *Greek Power* was not owing so much to the Force of its barbarous Enemies, as to the Weakness of its Government, and the dissolute Manners of the People. The excellent Situation of its Provinces, and their happy Communication with the Capital of the Empire, rendered the *Greeks*, in times of Peace, incredibly rich, as appears from what the Historian *Zonaras* informs us, with respect to the Treasure of the Emperor *Basilus*, who reigned in the middle of the ninth Century; and who, besides vast Heaps of Silver, was possessed of two hundred thousand Talents in Gold, which at the lowest Estimation amounts to upwards of thirty-eight Millions of our Money.

As the Empire diminished, its Trade and Riches must sink of course; but even long after this, they were so considerable, that a Traveller, who will be hereafter mentioned, reports in the thirteenth Century, that the Customs and Excise of *Constantinople* amounted to twenty thousand Crowns a Day, at the very time that it was destroyed; and when the People refused to furnish the Emperor with Money to defend the City and themselves, they were so immensely rich, that the Fleet, which was laden with the Plunder, was scarce able to keep the Sea, the Ships being so overcharged with their Riches.

All this sufficiently shews what prodigious Wealth had accrued to them by their Commerce. To say the Truth, it was this Abundance that proved the Ruin of the *Greeks*; for what between the vast Riches that flowed in upon them from all Parts of the World, for to the very last their City was the Centre of the Trade of *Europe*, and the mighty Plenty they had of all sorts of Provisions and rich Wines in their own Neighbourhood; they grew so insolent and ungovernable, that the ill use of their Prosperity rendered the Preservation of it impossible.

The *Venetians* and the *Genoese* aggrandized themselves by the Fall of the *Greeks*, and preserved for a long time the Fragments of that Empire of which they made themselves Masters. By this means, likewise, the *Europeans* became better acquainted with the Eastern Nations, found it less Difficulty in visiting their Countries; so that by degrees a Desire of penetrating by Land into the most remote Part of the East, and which had scarce been thought on in former Ages, came to diffuse itself through all *Europe*; the Power of the *Turks* likewise excited great Jealousies in the Christian Princes, who were their Neighbours, and the Wars that these occasioned, afforded new Opportunities of looking into the State of these distant Countries, by those who remained long Prisoners amongst them, so that though at first Sight it may seem a Paradox, yet we may with Reason affirm, that the Ruin of the Eastern Empire by the *Mohammedans*, contributed not a little to the Establishment of that Empire which the several Nations of *Europe* now possess in the East.

This Observation is of greater Consequence than may at first Sight appear; for whoever looks into almost all the great Events that have fallen out in the several Ages of the World, will very plainly perceive that they have been brought about by the most unlikely Means. The sudden Rise of the *Saracen* Empire threatened all *Europe* with an Inundation of barbarous Tyranny; but the Humour of undertaking the Holy War, as it was called, for the Recovery of the City of *Jerusalem* from the Infidels, proved the most effectual Means of preventing that Misfortune, by occupying the *Mohammedans* in the Defence of the Countries which they had already acquired, at the same time that it excited such a martial Spirit in almost all the Nations of *Europe*, as rendered them capable of sustaining that Shock, by which otherwise they must have been overpowered.

One may carry this Reflection still farther, if we advert to that maritime Power which has been raised in *Europe*, by the Discovery of the *East* and *West-Indies*, and which has visibly set Bounds to the Ambition of all the *Mohammedan* Princes, who, notwithstanding the vast Dominions they possess, and the prodigious Armies they are able to raise, are, notwithstanding, very apprehensive of the Power of the Christians by Sea, who are indeed able to make them extremely uneasy upon any Quarrel, notwithstanding their

seeming Superiority. This sufficiently shews the Solidity of that Maxim, that whoever is Master at Sea, must be likewise Master on Land, or which is the same thing, have the Power of controuling such as esteem themselves Masters. These Remarks arise naturally from the Subject, and therefore claim the Attention of every Reader, especially in a Country like ours, which has always affected the Dominion of the Sea, and never can be deprived of it but by want of Attention.

13. We have now run through the History of the Commerce between the Western Parts of the World and the *East-Indies* from the earliest Accounts, and this without ever losing the Connection, or leaving the Subject untraced through any Period of Time. The Discussion of this Point has indeed taken up a great deal of Time, and of Room; but in return, it has furnished us with a great deal of useful Knowledge; for the Reader will easily perceive, that in pursuing this Topic, we have been led into a kind of Universal History of Commerce, a thing of far greater Consequence, and infinitely more instructive than the tacking together an incoherent Collection of Voyages, which, however, has been the Scheme of almost all former Writers, who perceiving their Error too late, have endeavoured to mend it by Prefaces, Dissertations, and Extracts from ancient Writers; whereas by pursuing a right Method, and being content to take the Pains of bringing what is scattered, through a Diversity of Authors, into its proper Order, we have furnished the Reader with the Means of understanding this Subject perfectly, and of being able to pronounce, with Certainty, how and by whom this advantageous Commerce was managed at any Time given.

We have indeed insisted somewhat largely on the History of the several Empires, which we were obliged to mention in the Course of this Work; but besides, that in doing this, we have relieved the Reader from the Fatigue of reading a dry Narration of Facts, unenlivened by Circumstances, it will be found that we have mentioned nothing that does not contribute to the better apprehending the principal Subject, and to the rendering the following Voyages and Travels perfectly intelligible, which never could have been done any other way. A particular Writer, who sits down to give the World an Account of what he has seen abroad in a certain Number of Years, never proposes, and indeed it cannot be expected, he should propose delivering a general History of the Countries and Kingdoms through which he passed; and yet without a competent Knowledge of these, his Accounts can never be thoroughly understood. But when we undertook to give not only a Series of the best and most authentick Pieces of this kind, but also to furnish the World with a History of the Discovery and Settlement of the *East-Indies*. It was requisite to provide against all these Inconveniencies, which induced us to be more copious in these Sections than otherwise we should have been, that the Reader may come prepared in such a manner for the Perusal of the rest of this Work, as not to be interrupted at every Turn with critical Remarks, which always distract and confound the Narrations with which they are intermixed.

It is with the same View, that after so large a Detail of the Progress of this Commerce in the Hands of its principal Possessors, we have added yet another Section to explain the several Routs, by which, when the principal Channel of this Trade was interrupted, it was still in some measure preserved and carried on.

This will be found extremely useful for two very important Purposes; for in the first place, it will explain the Means by which so many different Nations came one way or other to have a Share in the Commerce of the *Indies*, and by what Accidents they have been deprived of that Share; how far it is, and how far it is not, possible to retrieve the Methods of carrying on this Trade, which have been formerly in use, or to supply them by striking out new Routs. Secondly, in giving us great Light into the Means by which so many Strangers found their way into, and settled themselves in the *Indies*, as were met with there by the most ancient Travellers, whose Writings have reached our Times, and whose Accounts might have been suspected, if from the Knowledge of these Routs the Probability of all that they relate did not manifestly appear.

We may likewise add, that in the Description of these several Routs to and from the *Indies*, we shall have frequent Occasion to examine and compare the Industry of the Ancients and Moderns; from whence it will fully appear, that the latter owe their Superiority over the former, rather to their Discoveries in Sciences, and the lucky Improvement of Lights derived by various Accidents, than to any Elevation of genius or extraordinary Degree of Virtue or Application. It is true, we might have found means to have inferred many, or indeed, most of these Accounts in the foregoing Part of our Work; but then it would have led us into long and frequent Digressions, which would have obscured the principal Subjects of our several Sections, and

at the same time would have rendered the Account of these Routs much more perplexed; whereas by their following one another in a certain Order, the Reader will the more easily apprehend them, and by comparing of them with each other, will form a better Notion of their Conveniences and Inconveniencies, will enter more easily into the Circumstances attending the Rise, and bringing on the Disuse of them; and in a word, will, with Facility and Pleasure, conquer, in a short Space of Time, those Difficulties, which, if they had occurred to him in the Perusal of Voyages or Travels, would either have hindered his Progress, or have cost him much Time and Pains to have got over them.

SECTION XVII.

An Account of the several Passages to the Indies both by Sea and Land, that have been attempted, discovered, or practised by the Ancients.

1. Of the North-east and North-west Passages, and the Improbability of their being at all known to the Ancients, notwithstanding what some Authors have asserted on this Subject.
2. Of the Passage by Land from Russia to China, and the Probability of its being anciently practised.
3. Of the Rout by Samarcand and the Caspian Sea, and of Pompey's Project for securing the Commerce of the Indies by that Rout to the Romans.
4. Of the old Rout by Bogar, and of the Alterations that have happened since of some of the great Rivers in Tartary.
5. Of the Passage through the Country of the Arians, as described by Ammianus Marcellinus.
6. Of another Rout from the Indies, through the Country of the Saca or Saces, described by the same Author.
7. Of the Rout by Cabul, and of the great Caravans usually carried on that way between Persia and the Indies.
8. Of the great Rout by Candahar, how far it was known to the Ancients, and how much it has been improved since.
9. Of the Passage to the Indies, through the Country of the Sina or Thina, and of the Mistakes of the Ancients on that Subject.
10. Of some other Routs to the Indies, and particularly that by Palmyra.
11. Of the several Passages discovered or practised since the Mohammedans became Masters of Egypt.
12. Of the Commerce carried on by the Germans at Caffa in Crim Tartary.
13. Remarks and Observations tending to the farther Explanation of this Subject.

THE first Rout to the *Indies* which we shall mention is, that by the North-East, through those that are called the Straights of *Waygate*. A Passage often attempted for Reasons that will be hereafter shewn in their proper Place, but never hitherto performed; though, doubtless, of all others the shortest Passage to that Country, at least from this Part of the World. This Rout is supposed to lie through that which is generally called the *Icy-Sea*, steering North-East, along the Coasts of *Lapland*, *Muscovy*, and *Grand Tartary*, till you enter the *Indian Ocean* by the Straights of *Uries*, and so fall on the Coast of *Japan* and *China*. That the Ancients never had any Notion of such a Passage is very certain, because they were not at all acquainted with the Navigation of the northern Seas till the Time of *Augustus*; and even then, the utmost Limits of their Discoveries was the *Cimbrie Chersonese*, which is the Country now called *Futland*; and indeed, considering their maritime Skill, this was a very considerable Discovery. The Reason that we take Notice of this Passage, in the first place is, on Account of a matter of Fact which has never been disputed, and which some modern Writers consider as an infallible Proof, that such a Passage is not only possible, but practicable.

The Fact is this; About the Year before Christ 57, a small Vessel, having several *Indian* Merchants on board, was shipwreck'd on the Coast of *Germany*, and all the Persons who escap'd that Misfortune were entertained by the King of the *Suevi*, who presented them to *Mercurius Celer*, then the *Roman* Proconsul in *Gaul*. The Writers before-mentioned, are very positive that these *Indians* came from *Japan*, or the Land of *Jedso*, through the Straights of *Waygate*, and so into the northern Ocean, from whence they infer, that, with due Industry and Application, we might be able to discover a Passage the same Way.

But in answer to this it has been said, that these *Indians* might have fallen upon the Coast of *Germany* by another Way, which, like the former, hath never yet been prac-

tised, but differs from it in this, that it is beyond all Question practicable; and if ever it should be brought into use, might divert a great Part of the *Indian* Commerce from the southern and western Parts of *Europe* into those which lie most towards the North. This Passage then is thus laid down. These *Indians* are supposed to have embarked on the River *Oxus*, and so to have pass'd through the *Caspian-Sea*, thence up the River *Volga*, and so into the *Devinas*, which, falling into the *Baltic*, might well enough have brought them to the Coast on which they are supposed to have been shipwreck'd. It is however very improbable, that such a Thing should have happen'd, because it supposes these *Indians* to have been perfectly acquainted with the Navigation of Rivers, which it is much more likely they never learn'd, and it is very possible are unacquainted with so many of their Names to this very Day.

It is one Thing to describe a Passage to a distant Country, and to recommend it to be us'd, and quite another Thing to insist that such a Thing has been actually made; if therefore any Writer shall insist on the Possibility of carrying on a Commerce to *India*, by the Canal last mentioned, it ought to be granted him, that the Thing is feasible, and might turn much to the Advantage of the *Russian* Empire, especially at the Juncture, when it is almost entirely in the Power of the *Stab Nadir* to establish such a Commerce, as having possessed of the greatest Part of the Country between the *Caspian-Sea* and the Frontiers of *India*. But whoever would endeavour to persuade us that in those early Ages, when Geography was so little understood as then in the East or in the North, and Men were so timorous in navigating even known Seas, that the Inhabitants of the eastern *Indies* should attempt, not only to sail through the *Caspian-Sea*, for that is not so improbable; but to enter the *Volga*, and pretend to seek a Passage that Way into the *Baltick*, is to bid us lay aside common Sense and Experience, in order to take up with Improbabilities and Fictions.

* *Plin. Hist. Nat. lib. ii. cap. 67.* He there affirm, them possibly to be *Indians*, and to have pass'd from *India* thither.

But it may be said, you have already admitted the Fact. You own that it is not to be disputed, that these *Indians* were thrown upon the Coast of *Germany*, and presented by the King of the *Suevi* to the Proconsul of *Gaul*, why then should you deny their coming either of these Ways, when it does not appear there was any other Way for them to come, at least by Sea; and that they did come by Sea cannot be contested, because you admit they were shipwrecked? All this is true, but with Bishop *Huet*, and other learned Men, I very much doubt whether these People were *Indians*; because, it is very certain, the Ancients very frequently bestowed that Appellation upon very remote Nations, merely because they were very remote. It is therefore much more probable that these People who were thus cast on shore on the Coast of *Germany*, were *Norwegians*, or *Scythians*, which are the same People that we now stile *Lapländers*; or, it may be, they were *Icelanders*, if we so far credit the Northern Histories, as to suppose that Island was so early inhabited. This, I say, is infinitely more credible than that they were *Indian* strictly and properly speaking; and that this is more credible, appears from hence, that Accidents of the like Nature have happened in *Scotland*, and else where; that is to say, some of these People have been driven on shore in their little Fishing-boats; and when an Accident of this Sort happened in those early Times, before the northern Parts of the World were so well known as they are at present, it is no great Wonder that such People should be taken for *Indians*.

While we are upon this Subject, I cannot help hinting a Conjecture of my own, which is, that if they must needs be *Indians*, it is much more likely that they were *West-Indians*, and that they came into the *Baltick* through *Hudson's Bay*. Yet I do not lay this down as either certain or probable, but mention it only as a Thing more agreeable to modern Discoveries, than the former Notion of their coming from the *East-Indies*; but with regard to the Fact itself, I am firmly of Opinion that they were *Norwegians*, and that for these Reasons; there were many of them, and they were on board a kind of Bark or Vessel of some Burthen; whereas the *Finns* and *Lapländers* are not known to make use of any other than small Boats, which one Man can manage.

The same Reasons may be applied to another Fact of the same Nature, since it is affirmed, that under the Reign of the Emperor *Frederick Barbarossa*, A. D. 1160, certain *Indians* were again cast upon the Coast of *Germany*; but there is no more Proof that these were really *Indians* than the former; for, in both Cases, it is acknowledged, that they were a strange People, whose Language was not understood, which might be true if they were *Norwegians*, but most certainly is no kind of Evidence, that they came either from the *East* or from the *West-Indies*, or through the North-East or North-West Passage.

I must not however omit, that according to *Pliny*, they had some Suspicion that the first mentioned *Indians*, and the same has been hinted with respect to the last, came on the Coast of *Germany* by surrounding the Continent of *Africa*; that is to say, by the Rout of the *Cape of Good Hope*, which is however a Thing absolutely incredible, since it cannot be imagined, the *Indians* ever victualled their Ships for a Voyage of such a Length; neither is it to be believed, that if so much as one of their Vessels had reached *Europe*, and returned, we should have had some Account of this from them as well as of other Points of their History, which are well enough preserved in some Places. But it is Time to quit a Subject on which we can say little that is either useful or entertaining, and therefore we shall pass on to another Rout to the *Indies*.

2. This was by Land, from *Russia* to *China*, a Thing now commonly known, since the History of the Embassy sent by the Czar in the Year 1659, when his Minister passed to the North of the Kingdom of *Boutan*, and

through the Defarts of *Great Tartary*. There is no Reason to believe that there is any thing new in this Passage, or that it had not been as much frequented of old as in the present Times; for as we have heretofore shewn, it was in the most early Ages of the World, that the *Chinese* and *Indian* Empires were in their most flourishing Condition, and carried on the most extensive Commerce; whence I conceive it highly probable, that they made use of Caravans on this Side, in the same Manner as they do now; and it is not impossible that, by the Passage of these Caravans through the *Northern Indies*, the Ancients came to hear of the *Seres*, since it is very certain that the Country in which they placed them, is not very far distant from the Rout these Caravans must have taken.

That there must have been some Passage on the North, appears also from hence, that the Ancients were so fully persuaded that the *Indian* Ocean communicated with the *Caspian-Sea*, a Thing that could never have come into their Heads, if they had not been informed that there was some kind of Commerce carried on between the northern Parts of *Europe* and the *Indies*; and it is not easy to conceive how any Commerce of that Kind should be carried on, unless by the Rout which we have mentioned, which was always practicable, and which therefore there is no Improbability in supposing it was formerly practised. The only formidable Objection that can be made to this is, the Fierceness and Barbarity of the Nations inhabiting between *China* and *Russia*; and therefore this Objection deserves some Consideration.

In the first Place then, I observe, that the Ancients had no distinct Account of these People at all, and therefore whatever they have advanced, ought to make no Impression to the Disadvantage of these Nations. In the next Place, I must put the Reader in mind, that what they have told us of the *Seres*, does not appear to agree with the *Chinese* History; and though I am very far from asserting that we ought to give an implicit Credit to all that is advanced in that History, yet, I think there is nothing absurd, in supposing that the *Indians* or the *Chinese* might be as knowing and as industrious in Commerce, as we know with Certainty, the *Chaldeans* and the *Ismaelites* were, in Times much earlier than those in which we conceive this Commerce to have been in use.

Human Nature is every where the same, and it appears even from the Reports of the *Greek* Historians, that the *Indians*, from the earliest Accounts they had of them, were as civilized, and as well governed a People as any in the World, which certainly adds some Credit to the *Chinese* History; whether we believe that the *Indians* derived any Part of their Knowledge from the *Chinese*, or which is a Notion more probable in itself, and much better supported by Authority, that the *Chinese* were indebted for the best Part of their Improvements to the Lights they received from the *Indians*. The first Account we had of the *Tartars*, represented them as a Race of stupid and ignorant *Barbarians*; but their own Histories shew quite the contrary, and carry in them this intrinsic Evidence of their own Veracity, that they must have been such a People as their Histories represent them; because, had it been otherwise, those Histories could not have been written.

To speak my own Opinion freely and fairly, we are not too apt to treat People that have lived at a great Distance in point of Place; that is to say, we measure their Wisdom and Civility by their Remoteness from our own Country, and even our own Time, which is particularly hard upon the Eastern Nations, since both Reason and Experience teach us, that as they were first settled, their Governments first formed, and Laws first introduced among them, there is the highest Probability that Knowledge of every kind came earlier to Maturity amongst them than amongst other Nations, though afterwards their Countries might be over-run, their Governments subverted, and

¹ There have been several *Greenlanders*, in their little Boats, taken up on the Coasts of the *Orkneys* and *Catbells*.

² *Idem* ubi sup. 10. He too asserts these People were *Indians*.

³ It is very plain, that *Pliny* meant this Passage, for he labours in this Chapter to prove that the Continent of *Africa* had been often surrounded, and asserts in Proof of it, that the Wrecks of *Jonah's* Vessels had been found in the *Indian* Seas; which, tho it proves nothing as to the Matter of Fact, yet it shews clearly that the Ancients had a Notion that such a Passage was practicable.

⁴ We have considered this Subject at large in the fifth and sixth Sections.

⁵ The Reader will find this verified, in the genealogical History of the *Tartars*, written by a *Tartar* Prince, and of which we have a very good Translation in *English*.

in their Manners much altered by the Interruption of other Nations, yet were truly barbarous with respect to them; that is to say, differed widely from them in point of Laws and Customs, and establishing themselves by Force of Arms, disturbed that Order they found, and were a long Time before they established any regular Constitution in its Place.

3. We shall apprehend this Matter better, if we consider the next Rout to *China*, which was by *Samarcand*, the Capital of the Country, called *Transoxiana*; that is, the Country beyond the River *Oxus*. It was by this River, which runs at no great Distance from *Samarcand*, that a Trade was carried on to the North, by sailing down that River into the *Caspian-Sea*, and so to the Mouth of the *Volga*. *Bishop Hue* hath very justly observed, that, by this Rout, there was no great Difficulty in passing from *China* to *Spain*, without ever entering the Ocean. For, as he remarks, if after entering the *Volga*, and sailing up that River as high as the Country of the *Cassacks*, the Merchants and Merchandize went by Land no greater Journey than six *German Leagues*, they might then sail down the *Tanais*, and so into the *Black-Sea*; and passing the Straights of *Constantinople*, proceed by the Mediterranean to *Gibraltar*.

Strabo^a has pointed us out another Rout by the *Caspian-Sea*, still shorter than that of the *Volga*, which is by turning towards *Albania*, and so entering the River *Cyrus*, and sailing up as far as it is navigable; and then proceeding by Land directly to the *Black-Sea*. But tho', as he observes, this might be a shorter Way, yet certainly it was not so commodious, or at this Time so practicable; however the Account he has given of it, is a plain Indication, that all these Things had been very well considered by the Ancients.

But *Pliny*^b carries the Matter much farther; for he tells us on the Authority of *Varro*, that *Pompey the Great*, during the War that he carried on against *Mitridates*, had actually a Design of opening a Commerce this Way. He was, says he, informed, that it was but seven Days Journey from the Frontiers of *India* through the Country of the *Bactrians* to the River *Icarus*, which falls into the *Oxus*; so that the Merchandize of *India* might be this Way transported into the *Caspian-Sea*, and from thence carried up the River *Cyrus*, to within five Days Journey of *Phasis* in *Pontus*, which five Days Journey, might be very easily performed over Land^c. *Solinus*^d, indeed, speaks of the Vessels passing this Way, but that is a Mistake; he must have meant the Merchandize. It is impossible to mention this Rout to and from the *Indies*, without observing, that it was the nearest and most convenient that could be to *Constantinople*; and there seems to be no Reason to doubt, that it was made use of, especially when the Inhabitants of the *Pontus Euxinus*, or *Black-Sea*, were Subjects to the *Greek Emperors*, or in times of Peace; and by this means it might probably happen, that the Commerce of the *Indies* was preserved after the Eastern Provinces of the Empire were lost, because it was a long time after that before this Road was in any danger of being disturbed by the Excursions of the *Arabs*.

This would have become still an easier and better Method of carrying on this Trade; perhaps we should not err much in laying the easiest, and best of all, if the Project, which *Pliny* tells us, on no less Authority than that of the Emperor *Claudius*^e, was formed by *Seleucus Nicator*, had been carried into Execution, either by him, or by the *Greek Emperors*, who had a much better Opportunity of doing it, which was by cutting a Canal from the *Cimmerian Bosphorus* to the *Caspian-Sea*, which would have shortened the Passage extremely, and would besides have enabled the Merchants to have conveyed their Goods by Water all the Way.

The Scheme itself is truly great, and was originally that of *Alexander*, who, as we observed in the Account we gave of that great Conqueror's Designs, ordered the *Caspian-Sea*

to be perfectly surveyed, with this very View of finding some Communication with the *Pontus Euxinus*, that he might thereby open a Passage from the *Indies* to his hereditary Dominions of *Macedon*^f. One would imagine, that this might have been more in the Power of the Grand Signior; but as the *Turks* have no great Genius for Trade, we need not wonder that it has been hitherto neglected; but if ever the *Shah Nadir* should compass his Design of penetrating as far as the *Black-Sea*, there is good Reason to believe that he would revive this Project, as well on account of his known Attention to whatever regards Commerce, as because he would then be intirely Master of the Country through which this Trade must be carried on.

4. The City of *Begar* stands not far from *Samarcand*, and is much nearer to the River *Oxus*; it was formerly a Place of very great Trade, and is still resorted to by abundance of Merchants from *Cathay*, or *Great Tartary*, *China*, and the *Indies*, on this and on the other Side the *Ganges*; as also by the *Persians* and *Muscovites*, who there furnish themselves with all the rich Commodities of the East, so that it still passes for a very great Mart in that Part of the World^g.

Our Countryman *Anthony Jenkinson*, who was actually there in 1558, assures us, that in his Time the River *Oxus* did not fall into the *Caspian-Sea*, as of old, but emptied itself into another River called *Ardocke*, which, he says, runs towards the North; and after running a thousand Miles underground, rises again, and falls into the Lake of *Kitbay*. This is a Fact which he expressly affirms in one Place; but in another, he gives the following Account of the Matter. "On the 26th of November we departed from the Town of *Urgence*, and having travelled by the River *Oxus* one hundred Miles, we passed over another great River called *Ardocke*, where we paid a certain petty Custom. This River *Ardocke* is great, and very swift; and falling out of the aforesaid *Oxus*, it passes about a thousand Miles to the Northward, and then consumeth itself in the Ground; and passing under the same about five hundred Miles, issueth out again, and falleth into the Lake of *Kitbay*, as I have before declared^h."

He had forgot, it seems, what he had before declared; for there he says in so many Words, that it passes under the Ground above one thousand Miles; but, as what he relates in both Places, must be from Hearsay, it is the less to be regarded. As to what he records of his own Knowledge, it deserves Notice, because he has the Reputation of being an Author of great Fidelity. He assures us then, that all the Country thereabouts is watered by Canals drawn from the River *Oxus*, which, in his Judgment, is a great Detriment to that River; and the Cause that it does not fall into the *Caspian-Sea*, as it did in Times past. He adds, that in a short time all that Country is like to be destroyed, and to become a Wilderness for want of Water, when the River *Oxus* shall fail. He likewise gives us an Account of the City of *Begar*, as it was in his Time.

He says, that it is seated in a low Country, not far from the River *Oxus*, which is there navigable, and is surrounded with a high Wall of Earth; the City is divided into three Parts, two of which belong to the King, and the Inhabitants, and the third to the Foreign Merchants; all of the same Trade living in the same Place. This City is very large, and the Houses, for the most Part, of Earth; but there are also many of them, and all the Temples and publick Buildings of Stone, sumptuously built, and very richly gilt, especially their Bagniosⁱ, which, in the Opinion of this Writer, exceed any in the World. The King had a Tenth of all Wares that were sold; but what is more to our Purpose, he gives us a very copious Account of these Wares, and of the Trade carried on there in his Time.

There is, says he, yearly, a great Resort of Merchants from *Persia*, *Balk*, *Russia*, and in times past from *Cathay*, when there was a Passage; the *Indians* bring white Cottons for Turbants; but for Gold, Silver, Precious Stones, and Spices, they bring none; but all that sort of Trade is car-

he discourses largely on this Subject, and acquaints us with abundance of curious Particulars that relate to it; and which demonstrate the Ability of the Ancients, in contriving to secure the Monopoly of this Commerce to the *Indies*.

^j *Hacquet's Voyage*, Vol. II.

ried on by the *Portuguezs* on the Ocean. The *Indians* carry back with them wrought Silks, red Hides, Slaves, Horses, and other Things. The *Indians* he saw there came from the Country of *Bengal*, and beyond it; the *Persians* brought Woollen Cloth, Linnen Cloth, several sorts of Silks, and carried back red Hides, other *Russian* Commodities, and Slaves. As for the Cloth, he tells us, he found, upon Enquiry, they brought it from *Alleppo*. The *Russians* dealt in red Hides, Sheep-Skins, Woollen Cloth, Wooden-ware, Bridles, Saddles, and other such-like Goods, which they exchanged for Cotton and Silk Manufactures. He farther tells us, that the Caravans which came from *Cashy* in time of Peace, and when the Ways were open, brought Musk, Rhubarb, Sattins, Damasks, and other rich Commodities; but by reason of the Wars, there had been no Caravans in three Years; and when they did come, he tells us, their Journey took up nine Months. He left the City of *Bogar* on the 8th of *March* 1559, in a Caravan, consisting of six hundred Camels, and arrived on the 23d of *April* following on the Coast of the *Caspian-Sea*.

It is clear from what this Writer delivers, that the Accounts we have of the ancient Commerce in these Parts, and particularly by the Way of *Bogar*, is exactly agreeable to Truth; and there is no doubt, that the Splendor of this City, the fine Houses, Temples, and other publick Edifices, were owing to the Wealth which this Commerce produced; and it is no less plain, that in times of Peace, and when the *Persian* Empire, upon which the Kingdom of *Bogard* or *Bucharia* depends, is thoroughly settled, this Commerce may be revived to very great Advantage.

5. There is another Rout which could not differ much from that before descri'd, mentioned by *Ammianus Marcellinus*, which he says lay through the Country of the *Arians*, situated, with regard to the *Oxus*, between the North and the West; and which Rout likewise led to the *Caspian-Sea*. According to the Description he has given us, there was a River, called *Arias*, which ran through that Country, and which was navigable. He farther says, that the Navigation through this Country to the *Caspian-Sea*, did not exceed a hundred Leagues. According to all the ancient Maps, and even according to *Ptolemy's* Tables, there is no navigable River to be found in this Part of the Country, except the *Oxus*, into which there might run some little Rivulet from the Country of the *Arians*; and indeed *Strabo* mentions such a Rivulet by the Name of *Zariasse*. One might be tempted to think, from the Similitude of Names, that this River might be the same that *Jenkinson* mentions, and which he calls *Aradoche*; but that it is evident, from his Account, that even this River does not run into the *Caspian-Sea*; so that no Navigation could be carried on this Way in the Manner that *Ammianus Marcellinus* mentions. But we ought likewise to consider, that it is very clear from *Jenkinson's* Account, that the Rivers in this Country have suffered much Alteration since the Time that *Ammianus* wrote; and we must likewise consider, that he wrote entirely from the Information of others, and not from his own Knowledge; so that, very probably, he may be somewhat mistaken in this Matter, at least in some of the Circumstances. And this Fear, through the Country of the *Arians*, might be carried on by Land, and by the Help of Caravans, as *Jenkinson* assures us it was in his Time. After all, there does not seem to be any good Reason for distinguishing this from the former Passage, since, in all Likelihood, the *Indian* Commodities that were thus transported, were carried no farther than either *Bogar* or *Samarcand*, and passed from thence down to the *Caspian-Sea*.

6. We are indebted to the same ancient Author for the Account of another Road from the Country of the *Seres*, which lay through that of the *Sace*, a very fierce and barbarous People, as all the Writers of Antiquity agree that mention them. *Ptolemy*, in the Account he has left us in this Country, mentions two Rivers, the one called *Araxates*, and the other *Dymas*, which, he says, running near each other, sometimes over-flow the adjacent Country, and cause a great Tract of marshy and fenny Ground,

which from its lying near the River *Oxus*, is called the *Oxian* Marshes.

This Passage is very perplexed and obscure, and seems to give us an Idea of the *Oxus* very different from that which *Jenkinson* had of it when he travelled thither in the last Century. In order to reconcile these Differences, and to give as full and fair an Account as is possible of this River, which, upon the whole appears to have been the grand Canal in ancient Times of the Commerce of the East, we shall give such a Description of it as is to be met with in the best modern Accounts of these Parts.

The River *Oxus* is now called *Amu*. It rises in the high Mountains on the Frontiers of the *Lesser Bucharia*, which separate the Dominions of the Great Mogul from the Country of *Great Tartary*, in the Latitude, as near as can be discovered of 29° 30' N. This River passes thro' the Country of *Grand Bucharia*, running from East to West, and about forty Leagues from its Mouth divides itself into two Branches. That which runs to the left continues its Course westward, till it falls into the *Caspian-Sea*; in the Country of *Asharabat*, which belongs to the *Persian* Empire, in the Latitude of 38° 20' N. As for the Right-hand Branch, which formerly passed by the City of *Urgence*, it fell likewise into the *Caspian-Sea*, about twelve Leagues more to the North than the other Branch; but at present it has changed its Course, and running North-West, falls into another River called *Klozel*, not far from the little Town of *Tuk*. The old Channel, which passed by the City of *Urgence*, is absolutely dry, and all the Country thereabouts is become a Desert, as our old *English* Traveller fore-saw it would for want of Water.

This Account is taken from the Discoveries made in these Parts, by the order of the late Czar; and if it may be depended upon, as indeed I see no Reason why it should not, it frees us from all the Difficulties that arise from the former Description, and enables us to account for the wide Difference between the ancient and modern Relations of the Commerce in these Parts. As for the other Branch of the *Amu*, or *Oxus*, which continues its Course to the *Caspian-Sea*, it is still a large navigable River; the Country about it extremely fertile and pleasant, producing the largest and finest Melons in the World, and other excellent Fruits, which are carried not only into *Persia* and *India*, but also into *Russia*.

7. The next Rout, declining still a little to the South, is that of *Cabul*, or *Caboul*, which derives its Name from a City of the same Name, seated in the Latitude of 34° North, on the Frontiers of *Great Bucharia*, on the South-side of the Mountains, which divide the Territories of the Mogul from that Part of *Great Tartary*. This City of *Cabul*, is the Capital of a little Province, called from thence *Cabulistan*; it is one of the finest Cities in that Part of the World, large, rich, and very populous. As it is considered as the Key of the Great Mogul's Dominions, great Care is taken to keep its Fortifications in constant Repair, and a numerous Garrison is maintained for its Security. This City is very ancient, and has been always famous, as it still is, for being the great Mart or Centre of Commerce between *India*, *Persia*, and *Great Bucharia*.

The *Uzbek* *Tartars* drive there a great Trade in Slaves, as also in Horses, of which it is said, that not fewer than sixty thousand are sold there every Year. It stands on a little River which falls into the *Indus*, and thereby affords a short and speedy Passage for all the rich Commodities in the Country behind it, which, when brought to *Cabul*, are there exchanged for Slaves and Horses, and are conveyed from thence by Merchants of different Countries into other Parts of the World. The Neighbourhood of this City, is one of the pleasantest and most fertile Regions that can be imagined; the Climate temperate and wholesome, well watered, producing Fruits of all Kinds in equal Plenty and Perfection. The Inhabitants are most of them *Indian Pagans*, though the Officers of the Mogul and most of the Garrison are *Mohammedans*.

8. A little farther to the South, lies the greatest and most frequented Road to the *Indies*, by the City and Pro-

will be abundantly verified in the succeeding sections.

^e The Facts mentioned in this Paragraph

vince of *Candabar*, which has been for many Ages the Centre of Commerce between *Persia* and the *Indies*. The City of *Candabar* is seated in $33^{\circ} 10'$ N. and is by Nature one of the strongest Places in the East. There is great Reason to believe from the Comparison of our modern Maps with the old Tables of *Ptolemy*, that this City is either raised out of the Ruins, or built very near the Place where *Alexandria* stood, and is a new Proof of the Wisdom of *Alexander* the Great, in the Choice of a proper Situation for the Colonies he intended to have erected in this Part of the World. Some learned Men have thought that the modern, as well as the ancient Name of this Place, is derived from that of this great Conqueror, who is called in the East *Isander*; but there seems to be more Reason to believe that it derives its present Appellation from the *Candarians*, an ancient People that were formerly the Inhabitants of the adjacent Country.

This City and Province has been exposed to many Revolutions. It was long an independent Principality, preserved in that Condition, not so much by the Strength of the Place, and the Power of its Princes, though both were in past Times very great, as by its advantageous Situation on the Frontiers of the two great Empires of *Persia* and the *Indies*, which secured it a powerful Protector on one Side whenever it was attacked on the other. It has been since however, sometimes in the Hands of the Mogul, sometimes in those of the *Persian*, where it is now like to remain. It is not very large, but extremely well built and well peopled; and the Caravans from *Spahan* and *Agra* pass constantly through it, and even continue there for some Time for the Conveniency of Merchants of all Nations, who resort thither to exchange the Commodities of their own Countries for those of the East.

It is highly probable that this Commerce was in a very flourishing Condition, under the *Persian* Kings contemporary with the first Emperors of *Constantinople*, and that by the regular Returns of Caravans from the *Indies*, the *Persians* were furnished with vast Quantities of the Commodities of *India*, which they afterwards carried into their frontier Provinces, in order to dispose of them at the Fairs in which they traded with the *Greeks*. The Settlements of the *Europeans* in the *Indies* have certainly lessened this Commerce by *Candabar*, as well as all the inland Trade of those Parts. But, as we shall see hereafter, it is for all that very considerable, and must always continue so, from the natural Conveniency of the Place, which renders it the Staple of *Persian* as well as *Indian* Commodities.

9. There is yet another Rout more to the South than any of those we have mentioned, viz. through the Country of the *Sina*, or *Tbina*, whom we have mentioned before, and have shewn them to be the *Siamese*. We have this Account from the Author of that Periplus of the *Red-Sea*, which goes under the Name of *Arrian*, and a very dark Account it is, though not altogether unworthy of Notice. The City of *Tbina* lies, as he tells us, on the Sea-side in the southern Part of the Country, and from thence silk and cotton Manufactures are carried by Land through the Country of *Babria* to *Barygaza*, and from thence to *Limyrica* by the *Ganges*. There cannot be any thing wilder, or more absurd than this Story; for, according to *Ptolemy's* Tables, there is a Distance of 32° of Latitude, between the Country of *Babria* and *Barygaza*, and 25° of Longitude between *Limyrica* and the *Ganges*.

One need not, however, much wonder at these Mistakes, when, in the same Description, we find this Author placing this City of *Tbina* very near the Pole, which is so extravagant an Error, as plainly betrays his Want of Skill in Geography. He proceeds to inform us, that this City is excellently difficult of Access, so that few People go to it; and yet he talks of its Vicinity to *Pontus* and the *Caspian Sea*, which renders all he says absolutely unintelligible. He informs us farther, that there came annually to the Frontiers of the Country of the *Sina*, a People whom he calls *Sejajas*, and whom he describes as a Sort of Savages, of a low Stature, broad-faced, and with flat Noses,

between whom, and the *Sina*, a very considerable Commerce was carried on.

The very learned Bishop *Huet*, professes himself at a Loss to know what to make of these People. I must confess, that there cannot well be any thing more dark or confused than this Story; but, for my own part, I believe that the Text is corrupted, and that the Meaning of the Passage may possibly be this, that there was anciently a Trade carried on over land between the *Tartars*, for such I conceive these People to have been from his Description and the *Siamese*; but whether I am right in my Conjecture or not, I must leave the ingenious Reader to determine. This, however is certain, that if I have guessed right, it will make some Sense of this Passage, of which hitherto the best Commentators have been able to make no Sense at all.

There is another ancient Writer who mentions this City in the following Terms: There lies, says he, in that Part of *India*, which is beyond the *Ganges*, the *Golden Chersonese*, beyond which is the *Sinus Magnus*, then the Country of the *Sina*, whose Capital is called *Tbina*, which stands on the Frontiers of the Country known and unknown. That is, in plain English, this City of *Tbina* was the very last Place in the *Indies* of which the Ancients had any Knowledge.

Taking this therefore altogether, it amounts, I think, to this; that there was anciently a very great inland Commerce throughout the *Indies*, from the Countries that lay farthest to the North, to those which lay in the remotest Parts of the South and East: Which is very agreeable to what I have before laid down, that notwithstanding the Reports of their Barbarity, which arose wholly from their being unknown, the ancient *Indians* were much addicted to Commerce; which, by the Help of their Rivers and Caravans passing from River to River, they carried on in a manner the most extensive; of which, the *Alexandrians*, by their Commerce on the Sea Coast, came to have some Knowledge, and from their natural Prejudice, reported Things in this dark and confused manner.

10. We have now gone through most of the Routs to and from the *Indies*, which are mentioned in ancient Authors, excepting such as were performed both by Land and Sea; of which it will be necessary to say somewhat, tho' we shall not dwell long upon them, because we shall have Occasion to mention them in the subsequent Sections. After the Time of *Alexander*, there was always a very considerable Trade carried on, at least in Times of Peace, through *Persia* to the *Indies*, by the Help of regular Caravans, which there is great Reason to believe, went annually from the Banks of the *Tygris* to those of the *Indus*. But in Process of Time, a great Part of this Journey was saved, and the *Indian* Commodities being shipped at *Maziris*, *Barygaza* or at *Patala*, were carried by Sea through the *Persian* Gulph, and then up the River *Euphrates*, within in a very small Distance of *Palmyra*, to which City they seem to have been transported by Land; where they were laid up in most stately Magazines, till, as Occasion served, they were transported thence to *Antioch*, and so over all *Europe*.

We have already mentioned the Rise and Ruin of that famous City, and shall here only observe, that it is highly probable that the Commerce of this Place fell off by Degrees, and not all at once, as most Writers seem to imagine; for Want perhaps of the Histories of those Countries after the *Roman* Empire began to decline. It certainly required a long Course of Time to establish so large, so well-built and rich a City; and therefore it is by no means credible, that it should be deserted and abandoned all at once. There are, to say the Truth, some Passages in Oriental Histories, which would incline one to believe, that it was still a City of considerable Figure and Trade under the *Khaliffs*; and therefore, I think, it may be concluded, that its Total Destruction was owing to the Trade to the *Indies* taking another Course, especially after the Foundation of *Bagdad*; as also to the Wars, to which the adjacent Countries have been continually exposed for so many Years

myra, p. 33, 65.

last part; first between the *Arabs* and the *Tartars*, and since between the *Persians* and the *Turks*.*

Yet still the old Rout is, in some Measure, preserved by the Caravans that pass from *Persia* to *Aleppo*; which shews of how great Consequence it is, to have the Rout of an advantageous Commerce once laid down through any Country: For though, through the Alterations and Revolutions to which all Places are, in some measure, liable, it may be for some Time interrupted or disused, yet sooner or later it is again revived, tho' perhaps not exactly in the old manner, yet so near it, that the Inhabitants are seldom totally deprived of the Benefits resulting from it†.

It has been of late apprehended, that the present Monarch of *Persia*, *Kouli Khan*, has it in View to ruin this Commerce intirely, as prejudicial to his Subjects, or rather detrimental to his Plan of Power, which is to draw the Commerce Northward, and make himself sole Master of the Trade to the *Indies* through his Dominions: But there is good Reason to doubt, whether this be not a Scheme too large for him to execute in his Life-time; and whether his Successors may not be brought to alter it, and to put things again upon their old Foot: Yet thus much is certain, that if this Monarch and his Successors should ever compass this Design, and divert the whole Trade of their Dominions to the *Caspian-Sea*, it will have its Effects with Respect to *Aleppo* and the other Towns on that Coast, and that in the same Manner, and to as high a Degree, as the Discovery of the Passage to the *Indies* has had on the Port of *Alexandria* in *Egypt*.

11. As the *Arabian Empire* took Rise in the Peninsula of *Arabia*, so as soon as the Princes of that new Power had any Leisure to form a Scheme of Politicks, they began to frame a Design of attracting the *Indian Trade* from the Country of *Persia* where it then centered, as near as possible to the Place of their own Residence. It was with this View, that *Omar* the Second Khaliff, in the 15th Year of the Hegira, A. D. 636, caused the City of *Bassora*, or *Bassora*, to be built a little above the Entrance into the *Persian Gulph*.

There never was perhaps a City more happily erected, or which sooner came to answer the End for which it was erected than this. The Khaliffs did not indeed make it the Place of their Residence, and if they had, it is highly probable it would have been rather disadvantageous than serviceable to it. But they always sent thither a Person of Distinction as Governor, and made it the grand Port of their Dominions. It became by this Means, and by the Privileges allowed to all Merchants that settled there, exceedingly rich and very populous; and that too in a surprising short Space of Time.

It was for several Ages, a Place of the greatest Course, and of the greatest Trade in the known World. The richest Commodities in the East, but more especially Spices, Precious Stones, Drugs, Silk and Cotton Manufactures were brought hither, and dispersed from hence by Caravans, till such Times as the *Portuguese* became Masters of the City and Island of *Ormuz* on the Coast of *Persia*; which, for a long Time sunk the Commerce of *Bassora*. But after the *Shah Abbas*, with the Assistance of the *English*, made himself Master of that Island, and raised the famous Emporium of *Bander Abassi*, or *Gambroon*, on the opposite Coast of *Persia*, the Trade of *Bassora* began to revive, and has been ever since considered as beyond Comparison, the greatest Mart of this Part of the World; as ingrossing all the Trade of the *Persian Gulph*.

It was, as we have already shewn, originally in the Hands of the *Arabs*; the *Persians* became afterwards its Masters: But since the Year 1668 it has belonged to the *Turks*.

At the same Time that the Khaliffs secured to their Subjects all the Trade on this Side, by opening so convenient a Port as that of *Bassora*, they took no less Care of the *Arabian Gulph*, and of the Trade carried on thereby; for they directed a Canal to be cut from *Cairo* to *Suez*, which is still visible, though at present choked up with Sand; and partly by Shipping, partly by Caravans, esta-

blished such a Trade there, as very near equalled that carried on in the Days of the *Romans*. Thus the Reader sees that, for a long Tract of Time, the whole Trade of the *Indies* was in the Hands of the *Mohammedans*, and carried on by them with all the Caution and Success imaginable.

It is true, that this is now in a great measure in the Hands of the *Europeans*, who are established in all the Ports in this Part of the World, and carry on a prodigious Trade in their own Bottoms. But, notwithstanding this, perhaps we yet owe the Trade of the *Indies* more to the Weakness of the *Turkish Policy*, than to any other Cause whatever; for, notwithstanding our Superiority in Maritime Skill and Maritime Force, if the *Turks* were a People in any degree addicted to Trade, they might still drive a great Part of that to the *Indies* by the old Rout through the *Red-Sea*, in spite of all our Power and of all our Settlements.

This will appear clearly to the Reader, if he considers that *Surat* is so well situated, that it might be very easily made the Centre of all the Commerce of the *Indies*. From *Surat* to *Suez* is not above a Month or five Weeks Sail; and from *Suez* to *Cairo* is a Journey of no more than three Days; from *Cairo* to *Alexandria* Goods may be conveyed in the same Space of Time; and from *Alexandria* to *Marseilles* is a Voyage only of a Fortnight or three Weeks. So that taking this altogether, it appears far from being an Impossibility for a Person to go from *Marseilles* to *Surat* in the Space of two Months, or ten Weeks. It may indeed be objected, that the Voyage from *Suez* to *Surat*, and consequently that from *Surat* to *Suez*, depends on the *Monsoons*; but, notwithstanding this, if proper Magazines were erected at both Ports, and Fleets went regularly between them at Spring and Fall, an immense Quantity of *Indian Goods* might be this Way brought into *Europe* much fresher, and in much better Condition than they are at present*.

This is a Project the *French* have often had in their Heads; and if ever they should prevail with the *Ottoman* Port to concur with them in carrying it into Execution, there is no answering for its Consequences. It must be owned, that an Attempt of this sort might in the Beginning meet with many Obstacles; but if once the *Turks* tasted the Sweets of this Commerce, or were tempted by the Offer of a large Sum of Money to be paid annually at *Constantinople*, as an Equivalent for the Duties with which Goods coming this way into *Europe* might be charged, it is not easy to say how far this might operate; for how indolent and negligent soever they may be with regard to Trade and Navigation, yet there is no Nation in the World more avaricious than they, or more ready to do any thing to which they are prompted for Money.

12. The last Rout we shall mention, is one not very ancient, and which nevertheless is now, in a manner, absolutely forgot. The *Genoese* had it formerly in their Hands: And is no other than the Port of *Cassa*, in *Crim Tartary*. This Country was anciently called the *Cbersensius Taurica*; and this City is very often mentioned by old Writers under the Name of *Tbudofia*†. It was taken from the *Genoese*, who, while they possessed it, were Masters of the Trade of the *Black-Sea*, by *Mohammed* the Great, A. D. 1475. It was then in a very flourishing Condition, and was one of the best-built and richest Places of its Size in *Europe*.

It stands at the Foot of a small Hill upon the Sea-Shore, North and South, with long Walls stretching on both Sides down to the Sea; so that from the Port, which is very large, very safe and very commodious, it makes a very agreeable Appearance: There is a Castle on the South Side, in which the *Turkish* Bashaw resides, with his Garrison. The Number of Houses in the Place are about 4000; of which, 800 belong to Christians, the rest to *Turks* and *Tartars*, but the former are Masters here, and it is the only Place the Grand Seigneur has in *Tartary*.

After the *Genoese* were driven from hence, they carried on for a long time a very advantageous Trade with the Inhabitants, who, by the way of the *Caspian-Sea*, found means

* See the Article *Balbeck* in *Herbst's*.

† *Elmatic. Hist. Saracen*. p. 191.

* I take most of these Particulars from the Description of *Egypt*, compiled from the Papers of M. Muller, the *Freib* Confid.

† *Criber. Geograph. Antiq.* Vol. I p. 409.

means to enter into a considerable Trade in Spices, Drugs, Cotton, Silk, and other *Indian* Commodities. At last the *Turks* grew jealous of the Intercourse of the *Genoese* in these Parts, and absolutely excluded them, as well as all other Nations, from trading to, or even entering into the *Black-Sea*. Yet this did not immediately put an End to the Commerce between this Place and *Genoa*; for the *Tartars* preserved so strong a Sense of the Advantages derived from this Commerce, that for some time they prosecuted it in their own Vessels, and carried the Spices and other *Indian* Goods which they received by Caravans from *Afracan*, and which had been brought thither from the opposite Side of the *Caspian-Sea* to *Genoa*; but the *Turks*, equally jealous of this, as they had been of the former Correspondence, soon put an end to this Commerce likewise, and thereby secured themselves from the Fears of seeing a Christian Fleet in those Seas.

Yet *Caffa* still remains a Place of very great Trade, and the Staple of the *Black-Sea*, inasmuch that *Sir John Chardin** tells us, he saw in the space of forty Days no less than four hundred Ships sail in and out of this Port. The *Venetians*, in hopes perhaps of reviving, in some measure, the old Trade, procured, at a great Expence in the Year 1672, Leave from the *Port* to send annually a Cargo of their Manufactures on board a small Squadron of their own into the *Black-Sea*; but this Trade did not last long, for the *Jets* insinuated so many Dangers would arise from permitting this Commerce, that in a Year's time the Licence was retracted; and thus ended all Attempts for retrieving the Commerce of the *Indies* by this Rout. In process of time, however, it is not at all incredible that it may be restored; for since the *Russians* are Masters of *Azoff*, and have a considerable Number of trading Vessels in those Seas, it is not impossible that some such Revolution may happen, as will let the Navigation of the *Black-Sea* entirely open, and thereby restore to the *Europeans* in general, but more especially to the *Italian* States, a Commerce highly profitable in itself, and capable of great Improvements.

13. We have now entirely done with the ancient History of this Commerce, and shall add only a very few Observations on this, as on the former Sections, and those with no other view, than to convince the Reader of the Importance of this History, and to shew what an Effect it has had, and is ever like to have, in favour of those who are possessed of it.

Every one of the four great Empires, which, in past Ages, have had the supreme Dominion, and the History of which still makes so great a part of that Learning which is most valued, had each of them a large Share, and many of them the entire Monopoly of the Trade to the *Indies*.

The Accounts we have of the *Assyrian* Empire, are very short, as well as very obscure; and yet the Attempt made by *Semiramis* to conquer the *Indies*, is the most considerable Event of which, with respect to that Monarchy, we have any Account. The *Persians*, as we have shewn at large, owed a great part of their Wealth to this Commerce, as it was carried on by Land, while their constant Allies, the *Tyrrians*, derived from it much of their Maritime Power, which was almost all the *Persians* had to depend upon by Sea. The Prospect of ingrossing it was the principal Object which *Alexander the Great* had in View, which afterwards occupied the Thoughts of his principal Commanders, and which was, at length, in a great measure accomplished by the *Ptolemies* in *Egypt*. The *Romans* acquired it, together with the Dominions of those Princes, and held it as long as they retained any Power answerable to their ancient Reputation. The *Arabians* became Masters of it in consequence of their rapid Victories, and it has since proved the great Source of Maritime Power in the *West*.

This seems to be a very full and convincing Answer to the Objection that has been made, as if the Trade to the

Indies was in itself prejudicial to the *Europeans*. For how is it possible to conceive there can be any Trade in this, when we plainly see that Riches and Empire constantly attended it, and have been as constantly lost, together with this Trade. This too will the more strongly appear, when we reflect on the Rise and on the Decline of the *Italian* Republicks, which, as they owed their Fame and their Riches, the flourishing State of their Affairs at home, and their great Power by Sea, to the Share they had in this Commerce, so together with that they lost both, and have made a Figure since by Dirt chiefly on the Remains of that Wealth and Strength which that Commerce procured them.

It is a Point also extremely worthy of Notice, that all the Routs known to, and practised by, the Ancients, are still in some measure preserved; so that almost all the different Nations in *Europe*, have still, some Way or other, Views upon this Trade. In the North, *Sweden* and *Denmark* carry it on by Sea, with some Pains and Difficulty indeed, but, at the same time, with considerable Profit. The *Russians* have three Ways of coming at the *Indies*; the first is, by sailing North about from *Archangel* to *Japan*, which though never hitherto accomplished, they still believed practicable; and if ever that Rout should be brought into Practice, it will be by them; which however could not be done without changing, in a great measure, the Face of Affairs in *Europe*, since the Wealth of the *Indies*, joined to the Force of the *Muscovite* Empire, must raise such a Power in the North, as could not but produce extraordinary Consequences. The second is, by Caravans from *Moscow* to *China* directly; and the third, by the *Caspian-Sea*, joined to the Caravans that are continually passing through the *Greater* and *Lesser* *Bucaria*. Such of the *German* Hanse Towns as still preserve any Power by Sea, such as *Lubeck*, *Bremen*, and *Hamburg*, keep up a constant Correspondence with *Venice* and *Alexandria*. *Great-Britain*, *Holland*, and *France*, have Settlements in the *East-Indies*, and trade thither by the *Cape of Good-Hope*. The *Spaniards* supply their Empire in the *West-Indies* with the Commodities of the *East-Indies*, from the *Philippines*; but it does not appear that they bring much of the Merchandize of those Parts into *Europe*. The *Portuguese* have yet in their Hands the Remains of those vast Dominions which they once possessed, and consequently have still a Share in this Commerce. The *Venetians* drive yet a very considerable Trade at *Alexandria*, in Spices, Drugs, Perfumes, Cotton, and Silk Manufactures from the *Indies*.

It is easy to discern from this general Account of the past and present State of this important Commerce, that it still engrosses the Attention of all the Mercantile World, that Projects are continually forming to enlarge it in Countries where it is already settled, and to transfer it into those where at present it is not exercised: And how far any of these Projects are, or may be practicable, the Reader will best judge from what has been said down concerning the several Routs thither in this Section, which we shall conclude with this Remark, That the Oriental Nations have, generally speaking, adhered closely to their own Maxims, and have never once been tempted, by the many Visits made them by the different Nations of *Europe*, to sit out any Fleet, or even to send so much as a single Ship beyond the *Cape of Good-Hope*; though, with respect to their Commerce by Land, as the *Indian* Merchants formerly travelled to great Distances in Caravans, they do the same at present; for though Custom be every where a Law, yet among the Eastern Nations it remains most inviolate; and, as the Reader will observe from the subsequent Travels, what was practised Ages ago, is still the Usage in those Parts, or at least Variations have been introduced by Force, and cannot therefore be imputed to any degree to the Genius of the People.

68. *A very singular Story on the foregoing Subject.*
69. *Some farther Particulars as to the Customs of the Indians.*
70. *The Use of this Section with regard to the History of the Indies in the ninth Century.*
71. *Additional Remarks and Observations.*

THE most natural, easy, and certain Method of attaining a perfect Knowledge of the Discoveries made in the *East-Indies*, is an justification of reading the best Voyages and Travels into those Parts, in the Order of Time in which they were made; for by this means they illustrate each other, and have as a Kind of Commentaries, deliver the History of Places and Persons with the least possible Confusion, and show us at once the different State of the Countries mentioned in them in different Periods of Time, and the Advantages that

were made in perfecting the Knowledge of those Countries by such as undertook to go thither, and to report what they had seen and heard, for the Information of others and of Posterity. Of all the Travellers into these Parts of the World, whose Writings are still preserved, those which are contained in this Section, are beyond all doubt the most ancient, and in that respect, as well as in many others, extremely curious. To render these as clear and as intelligible as is possible to our Readers, we shall first give some Memoirs of that eminent *French* Critick

who translated and made them publick, and shall next give a Reason why out from the Materials he has afforded us, the Writers themselves, the Nature of their Works, the Circumstances which peculiarly recommend them, the Reasons which induce us to believe they are genuine, and the Language, in which on that account is due to them.

It was *Louis Renaudot* who delivered these venerable Fossils of Antiquity from the Obscurity in which they had been buried for Ages, and sent them abroad in the French Language, with some very valuable Notes and Diffusions of his own. He was a Person whose Family had been distinguished for their Learning through several Descents. His Grandfather *Theophrastus Renaudot*, established the French Gazette in the Year 1631, under the Patronage of Cardinal *Richieu*. His Father was first Physician to the Dauphin, Son to *Louis XIV.* This Gentleman added himself chiefly to the Study of Divinity and the Oriental Languages, which might have raised him to some eminent Station in the Church, if, from his great Modesty and unaffected Love of Privacy, he had not studiously declined it. He was very early taken notice of at Court, where the Politicness of his Manners recommended him as strongly to the principal Ministers, as the Severity of his Studies endeared him to most of the learned Men of his Time.

In the Year 1689, he was chosen a Member of the French Academy, and in 1691 became a Member of that of Inscriptions, and of the *Belles Lettres*. He accompanied Cardinal *Nosilles* to Rome in 1700, and was with him in the Conclave in which *Clement XI.* was raised to the Papal Throne, by whom the *Abbé Renaudot* was so much esteemed, that he kept him at Rome seven or eight Months after the Cardinal's Departure, and forced upon him a Benefice, which he had the Modesty to refuse, though his Circumstances were not such as made it unnecessary to him.

In his Return to France, the Grand Duke of Tuscany kept him a whole Month at Florence, where he had an Apartment in the Palace; and during his Stay there, was received into the famous Academy of *la Crusca*; after which the Grand Duke loaded him with Presents, and sent him to *Marseilles* in his own Vessels.

He published, after his Return to France, many learned Works, and particularly in the Year 1713, *The History of the Patriarchs of Alexandria, from St. Mark to the Close of the thirteenth Century*, with an Appendix, containing the History of the *Mohammedans* in Egypt, from their own Writers; which gained him great Reputation. In 1716 he published, in two Volumes in Quarto, *The History of the Oriental Liturgies*, which was also much esteemed. And in the Year 1718, he sent abroad these Voyages and Travels, which were likewise received with universal Applause. Besides these, he published many other learned Treatises; and having for many Years weakened his Constitution by an assiduous Application to his Studies, he died on the 11th of September 1720, of a severe Fit of the Cholick, in the 74th Year of his Age, with the Reputation of being one of the most learned Men, and one of the exactest Critics of his Time*.

2. As to the first of these Voyages, we know not by whom it was written, the Beginning of it being imperfect; but it appears clearly that it was written in the Year of the Hegira 237, A.D. 851. The latter, which is no more than a Commentary or Discourse upon the former, appears to have been the

Work of *Abu Zaid al-Hafiz of Siraf*, who penned it about the Year of the Hegira 304, A.D. 915. It appears therefore, that both of them are, at least, two Centuries older than any Accounts than had been published before. They were translated from an original Manuscript in the Library of the Count de *Seignelay*, the Age of which was ascertained by the Character in which it is written. But there is a plainer Proof of its being penned in the Year of the Hegira 619, A.D. 1171, because there are at the End of it, some Observations in the same Hand, relating to the Extent of the Walls and Fortifications of the City of *Damascus*, under the Reign of the famous Sultan *Noureddin*, and of other Cities under his Dominion; in which the Writer speaks of him as still living; and therefore, as that Monarch died the same Year, this Manuscript is clearly between five and six hundred Years old.

It is also very apparent, that there is nothing in either of these Works, that can create the least Suspicion, that they are later than these Dates speak them; but, on the contrary, all the Facts mentioned in them, which are capable of being examined and compared with other Histories, afford the clearest Testimonies of their being genuine and authentick. The great Value of these Relations arises from their giving us a large Account of *China*, above four hundred Years earlier than the Travels of *Marco Polo*, who, till these Accounts were published, was always esteemed the first Author we had on that Subject.

There are Abundance of very curious and remarkable Passages in both these Writers, that inform us of Customs and Events not mentioned any where else; and, though it be true, that some of these appear to be fabulous; yet it is no less true, that the greater Part of them are confirmed and justified by the best Writers in succeeding Ages. But without spending Time to little Purpose, in remarking on what will be obvious to the Reader himself in the Perusal of these Pieces, we shall proceed to the Relations themselves. Observing only, that the first of them begins abruptly on Account of there being a Page or two wanting in the Original Manuscript; which very probably contained the Name and Country of its Author, and the Occasion of his Voyage; the Loss of which there is great Reason to regret.

3. The third of the Seas we have to mention, is that of *Herkend*†. Between this Sea and that of *Delarous*, are many Islands, to the Number, as they say, of nineteen Hundred; which divide those two Seas from each other, and are governed by a Queen‡. Among these Islands they find Ambergreese in Lumps of extraordinary Bigness, as also in lesser Pieces, which resemble Plants torn up. This Amber is produced at the bottom of the Sea, as Plants upon Earth; and when the Sea is tempestuous, the Violence of the Waves tears it up from the bottom, and wafts it to the Shore in the Form of a Mushroom or Truffle. These Islands are full of that kind of Palm-tree which bears the Cocoa-nut, and are from one to four Leagues distant from each other, all inhabited. The Wealth of the Inhabitants consists in Shells, of which even the Queen's Treasury is full. They say there are no Workmen more expert than these Islanders, and that of the Fibres of the Cocoa-nut, they make Shirts all of 1 piece, as also Veils or Tunics. Of the same Tree they build Ships and Houses, and they are skilful in all other Workmanship. Their Shells they have from the Sea at such times when they rise up to the Surface, when the

* *Histoire de Louis le Grand des Evénemens*, Tom. V. p. 384.
returned from his Voyage, A. D. 1295.

† See *M. Renaudot's* Preface to these Relations.

‡ *Idem*

By the Sea of *Herkend*, in all probability, our Author means the Sea about the *Maldives*; which, according to the Eastern Geographers, divides that Part of the Indian Ocean from the Sea of *Delarous*, which is the Gulf called by the Ancients *Sinu Magnus*. The Eastern Writers frequently speak of the seven Seas, which seems to be rather a proverbial Phrase, than a geographical Definition. These Seas, without comprehending the Ocean, which they call *Bah Makri*, are the Sea of *China*, the Sea of *India*, the Sea of *Perfia*, the Sea of *Kilzuma* or the Red Sea, so called from a Town which is thought to be the *Chipsa* of the Ancients; the Sea of *Rum*, or of *Greece*, which is the *Mediterranean*; the Sea called by *Cassius*, and the Sea of *Parus*, or the *Pontus Euxinus*; but these are not all the Names they give them, for the Sea of *Indanby* (then called the *Green Sea*); that of *Perfia*, the Sea of *Babylon*, and other Names they have for particular Parts of these Seas.

It is no wonder that the *Arabs* had but a very imperfect Knowledge of these Islands, since we are not very well informed about them in this Day. The Reader may probably think that our Author has multiplied them, from the Number he speaks of; but the Truth is, that it is not diminishes them, but the most accurate Writers we have, assure us that there are twelve thousand of them; and this is said to be the Signification of their Name in the *Malabar* Tongue, viz. *Mali Deva*, i. e. a thousand Islands; that round Number being put for the true Number of them, as it will. We shall hereafter give the Reader a full Account of these Islands, and therefore shall insist no longer on them here.

The subsequent Accounts we have had of the *Maldives*, do not justify this Particular, if the Intent of the Author was to inform us that these Islands were always governed by a Woman. It might perhaps be so in his Time, where, by Accident, one Woman might have succeeded another. *Green Land* had Queen *Mary* here.

habitants throw Branches of the Cocoa-nut Tree into the Sea, and the Shells stick to them. They call them *Kapjeje* in their Language.

4. Beyond these Islands, in the Sea of *Herkend*, is *Serendib*, or *Ceylon*, the chief of all those Islands, which are called *Dobijat*. It is all compassed by the Sea, and on its Coast they fish for Pearl. In this Country there is a Mountain called *Rabun*, to the Top of which it is thought *Adam* ascended, and there left the Print of his Foot in a Rock, which is seventy Cubits in Length; and they say that *Adam*, at the same time, stood with his other Foot in the Sea. About this Mountain are Mines of Rubies, Opals, and Amethysts. This Island, which is of great Extent, has two Kings; and here are found Lignum, Aloes, Gold, precious Stones, and Pearls, which are fished for on the Coast; as also a kind of large Shells, which they use instead of Trumpets, and are much valued.

In the same Sea, towards the *Serendib*, there are other Isles, but not so many in Number, tho' of vast Extent, and unknown. One of these Islands, called *Rami*, is under several Princes, in which there is great Plenty of Gold. The Inhabitants here have Cocoa-nut Trees, which supply them with Food, and therewith also they paint their Bodies, and oil themselves.

The Custom of the Country is, that no one may marry till he has slain an Enemy in Battle, and brought off his Head. If he has killed two, he claims two Wives; and if he has slain fifty, he may marry fifty Wives. This Custom proceeds from the Number of Enemies which surround them; so that he amongst them who kills the greatest Number, is the most considered. These Islands of *Rami* abound with Elephants, Redwood, and Trees called *Chairzan*, and the Inhabitants eat human Flesh.

5. These Islands separate the Sea of *Herkend* for the Sea of *Shelabet*, and beyond them are others called *Njalahur*, which are pretty well peopled; both the Men and the Women there go naked, except that the Women conceal their private Parts with the Leaves of Trees. When Shipping is among these Islands, the Inhabitants come off in Embarkations, and bring with them Amber-greece and Cocoa-nuts, which they truck for Iron; for they want no Cloathing, being free from the Inconveniences either of Heat or Cold. Beyond these two Islands lies the Sea of *Andaman*: The People on this Coast eat human Flesh quite raw; their Complexion is black, their Hair frizzled, their Countenance and Eyes frightful, their Feet are very large, and almost a Cubit in Length, and they go quite naked. They have no sort of Barks or other Vessels; if they had, they would seize and devour all the Passengers they could lay hands on. When Ships have been kept back by contrary Winds, they are often in these Seas obliged to drop Anchor on this barbarous Coast for the sake of Water, when they have expended their Stock; and upon these Occasions they commonly eat some of their Men.

6. Beyond this there is a mountainous and yet inhabited Island, where it is said, there are Mines of Silver, but as it does not lie in the usual Track of Shipping, many have sought for it in vain, though remarkable for a very lofty Mountain, which is called *Kashenai*. It once happened, that a Ship sailing in this Latitude had Sight of the Mountain, and thaped her Course for it, and falling in with the Land, sent a Boat on Shore, with Hands to cut Wood: The Men kindled a Fire and saw Silver run from it, which plainly indicated there was a Mine of this Metal in that Place; they shipped therefore as much of the Earth, or

Ore as they thought fit; but as they were proceeding on their Voyage they met with such a Storm, that to lighten their Ship, they were under a Necessity of throwing all their Ore over board.

Since that Time the Mountain has been carefully sought, but it has never since been seen. To conclude, there are many such Islands in the Sea, more in Number than can be set down, some inaccessible by Seamen, and some unknown to them. In these Seas it often happens, that a whitish Cloud at once spreads over a Ship, and lets down a long thin Tongue or Spout, quite to the Surface of the Water, which then is turned round as by a Whirl-wind; and if a Vessel happens to be in the Way, she is immediately swallowed up thereby. But at length this Cloud mounts up again, and discharges itself in a prodigious Rain. It is not known whether the Water is sucked up by the Clouds, or how this comes to pass. All these Seas are subject to great Storms, which makes them boil up like Water over a Fire. Then it is that the Surf dashes Ships against the Islands, and breaks them to Pieces with unspeakable Violence; and then also is it that Fish of all Sizes are thrown dead ashore upon the Rocks. The Wind, which commonly blows upon the Sea of *Herkend*, is from another Quarter, viz. from the N. W. but this Sea is also subject to as violent Agitations as those just mentioned, and then Amber-greece is torn up from the Bottom, and particularly where it is very deep; and the deeper it is, the more valuable the Amber-greece.

It is likewise observed, with respect to this Sea, that when it is thus tossed by the tempestuous Winds, it sparkles like Fire, and that it is infested by a certain Kind of Fish called *Locham*, which frequently preys upon Men. This is probably no other than the Shark, which is common enough on all the Coasts of the *Indies*. Here there is a Part of the *Manila* port lock, wherein the Anchor treated of the Trade to *China*, as it stood in his Time, and of the Causes which had brought it into a declining Condition. He then proceeds thus:

7. Amongst others, the Fires that frequently happen at *Causu* are not the least. *Causu* is the Port of all the Ships of the *Arabs*, who trade in *China*, and there are there very frequent, because the Houses are built with nothing but Wood, or else with split Cane; besides, Ships are often lost in going and coming, or they are plundered, or obliged to make too long a Stay in Harbours, or to sell their Goods out of the Country subject to the *Arabs*, and there make up their Cargo. In short, Ships are under a Necessity of waiting a considerable Time in refitting, not to speak of any other Causes of Delay.

Soliman, the Merchant, relates, that at *Causu*, which is the principal Scale of Merchants, there is a *Mohammedan* appointed Judge over those of his Religion, by the Authority of the Emperor of *Cbina*; and that he is Judge of all the *Mohammedans* who resort to those Parts. Upon festival Days he performs the publick Service with the *Mohammedans*, and pronounces the Sermon or *Kotbat*, which he concludes in the usual Form, with Prayers for the Sultan of Moslems (or Muslemen). The Merchants of *Irak*, i. e. *Persia*, who trade hither, are no way dissatisfied with his Conduct or Administration in this Post, because his Decisions are just and equitable, and conformable to the *Koran*.

8. As for the Places whence Ships depart, and those they touch at, many Persons affirm, that the Navigation is performed in the following Order; most of the *Chinese* Ships take in their Cargo at *Siraff*, where also they ship

¹ This, as we have shewn elsewhere, is the *Tapechana* of the Ancients; and I think scarce any Island has been called by more Names than those, which have been bestowed on this; but whereas in the ancient Work of *Cosmas Indopleustes*, it is called *Sielandiba*, it is very easy to account for this, and to shew that it is only a *Greek* Termination given to the true Name; *f* or *b* is often put for *s*, and consequently *Sielandiba* is the same with *Sielandis*; that is, *Sielan Island*; whence the modern Name, as we usually write it, viz. the Island of *Ceylon*.

² In some of the *Arabian* Geographers, these are called the Islands of *Rami*; we shall give the Reader some Account of them in a subsequent Voyage.

³ It is most certain, that upon a strict Enquiry, most of these Stories of *Man-eaters* have been found to be Fables void of all Foundation; but it must be allowed, in regard to our Author's Account, that what he says has never yet been disproved; for the very latest Accounts we have of the *Indes*, give these People the same Character that he does.

⁴ As to this *Soliman* the Merchant, it is very probable, that some Account was given of him in the Page that is lost; but as to the *Mohammedan* Consul, it is a very extraordinary Fact, and deserves particular Notice, because it plainly shews, that the *Mohammedans* had for some Time carried on a regular and settled Trade to *China*, which is what from other Accounts we could never have suspected.

⁵ It is a very difficult Thing to distinguish, at this Distance of Time, the Rout laid down by our Author, chiefly by reason of the Changes of Names, of which we have particularly an Instance in this great Port of *Siraff*, not to be met with in any of our Maps, of which however we have some Mention made in other *Arabian* Writers, who say, that it lay sixty Leagues from *Sbiraz*, that it stood in the Gulph of *Persia*, and that when it received, the Trade thereof was transported to the Island of *Ormus*.

their Goods which come from *Basra*, or *Bassera*, *Oman*, and other Ports; and this they do because, in this Sea there are frequent Storms and shoal Water in many Places. From *Basra* to *Sraff* is an hundred and twenty Leagues; and when Ships have loaded at this last Place, they there water also; and from thence make sail for a Place called *Masfat*, which is in the Extremity of the Province of *Oman*, about two hundred Leagues from *Sraff*. On the East-coast of this Sea, between *Sraff* and *Masfat*, is a Place called *Nafis Bam al Safak*, and an Island called *Eln Kabewan*; and in this Sea are Rocks called *Oman*, and a narrow Streight called *Derhar*, between two Rocks, where Vessels do venture; but the *Chinese* Ships dare not. There are also two Rocks called *Kaffir* and *Heware*, which scarce appear above the Water's Edge; After they are clear of these Rocks they steer for a Place called *Sbita Oman*, and at *Masfat* take in Water, which is drawn out of Wells; and here also they are supplied with Cattle of the Province of *Oman*: From thence Ships take their Departure for the *Indies*, and first they touch at *Kaukammar*: And from *Masfat* to this Place it is a Month's Sail with a fair Wind.

This is a frontier Place, and the chief Arsenal in the Province of the same Name: And here the *Chinese* Ships put in and are in Safety; fresh Water is to be had here, and the *Chinese* pay a thousand Drains for Duties, but others pay only from one Dinar to ten Dinars. From *Masfat* to *Kaukammar* it is a Month's Sail; and then having watered at this Place, they begin to enter the Sea of *Herkend*, and having sailed through it, touch at a Place called *Lajabalus*, where the Inhabitants understand not the *Arabic*, or any other Language in use with Merchants. They wear no Cloaths, are white and weak in their Feet.

It is said their Women are not to be seen; and that the Men leaving the Island in Canoes, hollowed out of one Piece, go in Quest of them, and carry them Cocoa-nuts, Canes, Mousa, and Palm-wine. This Liquor is white, and if drank fresh, has the Taste of the Cocoa-nut, and sweet like Honey; if kept somewhat longer, it becomes as strong as wine; but if it is kept for several Days it turns to Vinegar. They give it in Exchange for Iron; and in like Manner they truck the little Quantity of Amber, which is thrown on their Coasts for Bits of Iron. The Bargain is driven by Motions of the Hand. But they are very quick, and are apt to carry off Iron from the Merchants, and leave them nothing in Return.

From hence Ships steer towards *Calabar*, the Name of a Kingdom, on the Coast to the Right-hand beyond the *Indies*. *Bar* signifies a Coast in the Language of the Country; and this depends on the Kingdom of *Zabage*. The Inhabitants are dressed in these Sorts of striped Garments, which the *Arabs* call *Fauta*; and they commonly wear but one at a time, which is equally observed by Persons of every Degree. At this Place they commonly take in Water, which is filled from Wells fed by Springs, and which they like better than what is drawn out of Cisterns, and *Tanks*. *Calabar* is about a Month's Voyage from a Place called *Kaukam*, which is almost upon the Skirts of the Sea of *Herkend*. In ten Days after this, Ships reach *Beyma*; from whence, in ten Days more, they come up with *Kadrage*.

It is to be observed, that in all the Islands and Peninsulas of the *Indies*, they find Water when they dig for it. In this last mentioned Place there is a very lofty Mountain, which is peopled by none but Slaves and Fugatives, from thence in ten Days they arrive at *Senef*. Here is fresh Water, and hence comes the Aromatic Wood we call *Indial Senfi*. Here is a King; the Inhabitants are

black, and wear two striped Garments. Having watered at this Place, it is ten Days Passage to *Sanderfulat*, an Island where is fresh Water; then they steer through the Sea of *Sanji*, and so to the Gates of *China*; for so they call certain Rocks and Shoals in that Sea, forming a narrow Streight, through which Ships pass. It requires a Month to sail from *Sanderfulat* to *China*; and it takes up eight whole Days to steer clear of these Rocks.

When a Ship has got through these Gates, she, with the Tide of Flood, goes into a fresh Water Gulph, and drops Anchor in the chief Port of *China*, which is that of *Canfu*; and here they have fresh Water both from Springs and Rivers, as they have also in most of the other Cities of *China*. The City is adorned with large Squares, and supplied with every thing necessary for Defence against an Enemy, and in most of the other Provinces there are Cities of Strength, fortified in the same Manner.

In this Port it ebbs and flows twice in twenty-four Hours; but with this difference, that whereas from *Senji* to the Island called *Bani Kalcauan*, it flows when the Moon is at full, and ebbs when the tides and when the Day from near *Bani Kalcauan* quite to the Coast of *China*, it is Ebb when the Moon rises, and when she is towards her Height it is Ebb; And so, on the contrary, when she sets a Flowing Water, and when she is quite hidden under the Horizon, the Tide falls.

They say, that in the Island of *Mulion*, which is between *Serendib* and *Cala*, on the Eastern Side of the *Indies*, there are Negroes quite naked, and that, when they meet with a Stranger, they hang him with his head downward, and slice him into Pieces, which they eat quite raw. These Negroes have no King, and feed upon Fish, Mousa, Cocoa-nuts and Sugar-Canes; they have Lakes and some Pools in the Country. They report also, that in some Parts of this Sea, there is a smallish kind of Fish, which lies upon the Water, and which they call the *Sa-Louut*; and that in another Part there is a Fish, which leaving the Sea, gets up to the Cocoa-nut Trees, and having drained them of their Juice, takes to the Sea again: To all which, they add, that in this Sea there is a sort of Fish like a Lobster, which petrifies as soon as taken out of its Element; they pulverize it, and it is good for several Diseases of the Eyes.

They say also, that near *Zabage* there is a Mountain, called the *Mountain of Fire*, which no one can approach; that in the Day-time it sends forth a thick Smoke, and in the Night it throws out Flames. At the Foot of this Mountain, there are two Springs of fresh Water, the one hot, and the other cold.

The *Chinese* are dressed in Silk both Winter and Summer, and this kind of Dress is common to the People of the Peasant. In Winter they wear Drawers of another Make, which fall down to their Feet: Other they put on two, three, four, five or more, if they are one over another, and are very careful to be covered quite down to their Feet, because of the Damps, which are very great, and of which they are very apprehensive. In Summer, they only wear a single Garment of Silk, or some such Dress, but have no Turbans.

Their common Food is Rice, which they often eat with a Broth, like what the *Arabs* make of Meat of Fish, which they pour upon the Rice. Their Kings eat White Bread, and all sorts of Animals, not excepting Swine, and some others. They have several sorts of Fruits, Apples, Lemons, Quinces, Moulars, Sugar-Canes, Citrus, Fig Graps, Cucumbers of two sorts, Trees which bear a Substance like Meal, Walnuts, Almonds, Hazels, Pistachios, Plumbs, Apricots, Servises and Cocoa-nuts.

* We shall have an Opportunity of explaining this strange Story, which is confirmed by *Mares Pals*, and *Nicola di Conti*, when we come to the Account of the Travels of the former, who asserts us, that there were two Islands, one entirely inhabited by Men, the other by Women, and that neither of them were Christians.

* It is very probable, or rather certain, from the Account given by our Author, that this must be the Port of *Carson*, and the Inhabitants of this Sea a Circumstance that strongly confirms it; and a Circumstance which flows, at the same Time, that the *Arabs* were not long acquainted with Matters as they are generally imagined.

* It must be allowed, that there are a Hundred of very odd Accounts in these Relations; but it must be owned, at the same Time, that there are very few of them which have been disproved. What follows about petrified Crabs or Lobsters, is a full Proof that the Port he speaks of is the *Carson*; for Father *Martini* tells us the same Thing, adding, that these Crabs are found only on that Part of the Coast of *China*, which is nearest to the Island of *Haman*, and that the *Portuguese* use the Powder of these petrified Crabs, as an abortifacient in Fevers. The Story of this is reported by Father *Martini*.

they have no Store of Palms, they have only a few about some private Houses.

Their Drink is a kind of Wine made of Rice; they have no other Wine in the Country, nor is there any brought to them: They know not what it is, nor do they drink of it. They have Vinegar also, and a kind of Comfit like what the *Arabs* call *Natef*, and some others.

They are not very nice in point of Cleanliness, and wash not with Water when they ease Nature, but only wipe themselves with Paper; they eat of dead Animals, and practise many other Things like the *Muslims*; and in truth, the Religion of the one and the other is much the same. The *Chinese* Women appear uncovered, and adorn their Heads with small Ivory Combs, of which they wear sometimes a Score together; the Men are covered with Caps of a particular Make. The Law they observe with regard to Thieves is to put them to Death as soon as they are caught.

Our Author seems here to interrupt his Narration, and to take occasion from what he has before reported (and which, in the main, is confirmed by later Writers) to compare the Customs of the *Indians* and *Chinese*, intermixing his Discourse also with other Matters.

13. The *Indians* and *Chinese* agree, that there are four great or principal Kings in the World; they all allow the King of the *Arabs* to be the first, and to be, beyond Dispute, the most Powerful of Kings, the most wealthy and the most excellent every way; because he is the Prince and Head of a great Religion, and because no other surpasses him.

The Emperor of *China* reckons himself next after the King of the *Arabs*, and after him the King of the *Greeks*, and lastly the *Balbara*, King of *Mobarni ul Ahoon*, or of those who have their Ears bored.

This *Balbara* is the most illustrious Prince in all the *Indies*; and all the other Kings there, though each is Master and independent in his Kingdom, acknowledge thus far his Pre-eminence. When he sends Embassadors to them they receive them with extraordinary Honours, because of the Respect they bear him. This King makes magnificent Presents after the Manner of the *Arabs*, and has Horses and Elephants in great Numbers, and great Treasures in Money. He has of those Pieces of Silver called *Uxartarian Drams*, which weigh half a Dram more than the *Arabian Dram*. They are coined with the Die of the Prince, and bear the Year of his Reign from the last of the Reign of his Predecessor.

They compute not their Years from the *Era of Mohammed*, as the *Arabs* do, but only by the Years of their Kings. Most of these Princes live a long Time, and many of them have reigned above fifty Years, and those of the Country believe, that the Length of their Lives and of their Reigns is granted them in Recompence for their Kindness to the *Arabs*. In truth, there are no Princes more heartily affectionate to the *Arabs*, and their Subjects profess the same Friendship for us.

Balbara's is not a proper Name, but an Appellative common to all these Kings, as was *Cosines* and some others. The Country under the Dominion of this Prince begins on the Coast of the Province called *Kambam*, and reaches by Land to the Confines of *China*. He is surrounded by the Dominions of many Kings, who are at War with him, and yet he never marches against them.

14. One of those Kings is the King of *Harez*, who has very numerous Forces, and is stronger in Horse than all other Princes of the *Indies*, but is an Enemy to the *Arabs*; though he at the same Time, contends their King to be the greatest of Kings, nor is there a Prince in the *Indies*, who has a greater Aversion to the *Mohammedan*

Faith. His Dominions are on a Promontory, where are much Riches, many Camels and other Cattle. The Inhabitants here traffick for Silver, which they watch for, and they say there are Mines of the same on the Continent. There is no Talk of Robbers in this Country, any more than in the rest of the *Indies*.

On one Side of this Kingdom lies that of *Tafek*, which is not of very great Extent. This King has the finest white Women in all the *Indies*; but he is awed by the Kings about him, his Army being but small. He has a great Affection for the *Arabs*, as well as the *Balbara*.

These Kingdoms border upon the Lands of a King called *Rami*, who is at War with the King of *Harez*, and with the *Balbara* also. This Prince is not much considered either for his Birth, or the Antiquity of his Kingdom; but his Forces are more numerous than those of the *Balbara*, and even than those of the Kings of *Harez* and *Tafek*. They say, that when he takes the Field, he appears at the Head of fifty thousand Elephants, and that he commonly marches in the Winter Season; because the Elephants, not being able to bear Thirst, he can move at no other Time. They add likewise, that in his Army, there are commonly from ten to fifteen thousand Tents. In this same Country they make Cotton Garments in such extraordinary Perfection, that no where else are the like to be seen: These Garments are for the most Part round, and wove to that Degree of Fineness, that they may be drawn through a Ring of a moderate Size. Shells are current in this Country, and serve for small Money, notwithstanding that they have Gold and Silver, Wood Axes, and Sable-skins, of which they make the Furniture for Saddles and Healings.

In this same Country is the famous *Karkandian*, that is, the (*Rhinoceros*, or) Unicorn, who has but one Horn upon his Forehead, and thereon a round Spot, with the Representation of a Man. The whole Horn is black, except the Spot in the Middle, which is white. The Unicorn is much smaller than the Elephant; from the Neck downwards he pretty much resembles the Buffalo, his Strength is very extraordinary, for he excels therein all other Creatures, his Hoof is not cloven, and from his Foot to his Shoulder is all of a Piece. The Elephant flies from the Unicorn, whose Lowing is like that of an Ox, with something of the Cry of the Camel; his Flesh is not forbidden, and we have eaten of it; there are great Numbers of this Creature in the Parts of this Kingdom, as also in all the other Provinces of the *Indies*; but the Horns of these are most esteemed; and upon them are generally seen the Figures of Men, Peacocks, Fishes, and other Resemblances. The *Chinese* adorn their Girdles with these sorts of Figures, so that some of their Girdles are worth two or three thousand Pieces of Gold in *China*, and sometimes more, the Price augmenting with the Beauty of the Figure: All the things we have here enumerated are to be purchased in the Kingdom of *Rami* for Shells, which are the current Money of the Country.

After this Kingdom there is another, which is an inland State distant from the Coast, and called *Ka'abbin*; the Inhabitants are white, and bore their Ears; they have Camels, and their Country is for the most part desert, and full of Mountains; farther upon the Coast there is a small Kingdom called *Hirrange*, which is very poor; but it has a Bay, where the Sea throws up great Quantities of Ambergreece; they have also Elephants Teeth, and Pepper; but the Inhabitants eat it green, because of the Smallness of the Quantity they gather. Beyond these Kingdoms here mentioned, there are others of Number unknown, and among the rest that of *Aliget*; the Inhabitants are white, and dress after the *Chinese* Mode; their Country is full of Mountains, with white Pops, and of very great Extent; here are very great

* It is very highly probable, that this *Balbara*, or Monarch of the Nation which have their Ears bored, which is plainly the *Indians*, was no other than the *Samosir*, or Emperor of *Calicut*, who, according to the Reports of the most ancient *Portuguese* Historians, was acknowledged as a kind of Emperor in the *Indies*, six hundred Years before they discovered the Passage to them by the Cape of *Good Hope*.

† This is another good Reason, why the Monarch here mentioned should be taken for the Emperor of *Calicut*, since he likewise was not called by his proper Name, but by such an Appellative as this; and it would obtain an Etymology of these Words, that could be depended upon, 'tis very likely that *Balbara* and *Samosir* would be found to mean the same Thing.

‡ We have already given to large an Account of the *Rhinoceros*, that we shall not trouble the Reader with any thing on that Subject here, but content ourselves with observing, that it is evident, this Writer makes the Unicorn and the *Rhinoceros* the same Creature, agreeable to what we have advanced else where.

Quantities of Musk, esteemed the most exquisite in the World. They have War with all the neighbouring Kingdoms.

The Kingdom of *Mabed** is beyond that of *Mujet*, therein are many Cities, and the Inhabitants have a great Resemblance to the *Chinese*, even more than those of *Mujet*; for they have Officers or Eunuchs, like those who govern the Cities amongst the *Chinese*; the Country of *Mabed* is bordering upon *China*, and is at Peace with the Emperor, but not subject to him. The *Mabed* sends every Year Embassadors and Presents to the Emperor of *China*, who on his part sends Embassadors and Presents to them. Their Country is of great Extent; and when the Embassadors of *Mabed* enter *China*, they are carefully watched, and never once allowed to survey the Country, for fear they should form Designs of conquering it, which would be no difficult Task for them, because of their great Numbers, and because they are divided from *China* only by Mountains and Rocks.

15. They say, that in the Kingdom of *China* there are above two hundred Cities, with Jurisdiction over others, and have each a Governor, and an Eunuch, or Lieutenant. *Cansu* is one of these Cities, being the Port for all Shipping, and presiding over twenty Towns. A Town is dignified with the Title of City, when it is allowed some of those great *Chinese* Trumpets, which are fashioned after this Manner: They are three or four Cubits in Length, and as much about as can be grasped with both Hands; but they grow narrower towards the End, which is fitted to the Mouth; on the Outside they are coloured with *Chinese* Ink, and may be heard a Mile off. Each City has four Gates, at each of which are five of these Trumpets, which the *Chinese* sound at certain Hours of the Day, and of the Night. There are also in each City ten Drums, which they beat at the same time; and this they do as a publick Token of their Obedience to the Emperor; as also to signify the Hour of the Day, and of the Night, to which End they have also Dials and Clocks with Weights.

They coin a great deal of Copper Money, like what the *Arabs* call *Falus*: They have Treasures like other Kings; but they only have this sort of small Money, which is current all over the Country; for though they have Gold, Silver, Pearls, Silk, and rich Stuffs in great abundance, they consider them only as Moveables and Merchandise, and the Copper-pieces are the only current Coin; from foreign Parts they have Ivory, Frankincense, Copper in Pigs, Tortoise-shells, and Unicorns Horns, which we have mentioned, and with which they adorn their Girdles. Of their own Stock, they have abundance of Beards of Burthen, Horses, Asses, and Dromedaries; but they have no Arabian Horses.

They have an excellent kind of Earth, wherewith they make a Ware of equal Fineness with Glass, and equally transparent. When Merchants arrive here, the *Chinese* seize on their Cargoes, and convey them to Ware-houses, where they remain six Months, and till the last Merchant-man be arrived, then they take three in Ten, or thirty per Cent. of each Commodity, and return the rest to the Merchant. If the Emperor hath a Mind for any particular Thing his Officers have a Right to take it, preferably to any other Persons whatsoever, paying for it to the utmost Value. They dispatch this Business immediately, and without the least Injustice; they commonly take Camphire, which they pay for after the rate of fifty *Fukages* per Man, and the *Fukage* is worth a thousand *Falus*, or Pieces of Copper. When it happens that the Emperor does not take Camphire, it sells for half as much again.

16. The *Chinese* do not bury their dead till the Day Twelve-month of their Decease. Till the Expiration of this Term, they keep them in Coffins; for having previously dried them with Quick-lime, that they may keep, they place them in some Part of their Houses. The Bodies of their Kings are embalmed with Aloes and Cam-

phire. They mourn for three whole Years; and whoever should not do so, would be chastised with the Bamboo, a Punishment both Men and Women are liable to; at the same time they are reproached, *What then, they are not concerned at the Death of thy Parent?*

They bury their Dead in deep Pits, much like those in use among the *Arabs*: Till this is done, they constantly set Victuals before the Corps; and as it is in the Evening that they thus exhibit Meat and Drink to their Dead, in the next Morning they find nothing left, they imagine that they have consumed all, and say; *The Deceased has eaten*. They cease not from bewailing their Dead, nor from setting Meat and Drink before them as long as they are kept in the House, insomuch that their Expences upon those Occasions, and in thus paying their last Duties to their departed Relations, are so exorbitant as often to ruin them, and consume their Wealth and Estates. Formerly they, with the dead Bodies of their Kings, or others of the Royal Blood, buried very rich Apparel, and these Sorts of Girdles which we have observed cost so much; but this Custom is now out of Date, because it has happened that the Bodies of some have been dug up by Thieves, for the Sake of what was buried with them.

The *Chinese*, poor and rich, great and small, learn to read and write; the Titles of their Kings or Governors, are varied according to the Dignity and Rank of the Cities under them. Those of the smaller Cities are called *Tufing*; and this Word signifies the Governor of a Town; those of the greater Cities, as *Cansu*, for Example, are styled *Difa*; and the Eunuch, or Lieutenant, is styled *Tukam*. These Eunuchs are selected from the Inhabitants of the Cities. There is also a supreme Judge, and him they call *Lahima-makwan*; other Names they have for other Officers, which we know not how properly to express.

17. A Man is not raised to the Dignity of a Prince, or Governor of a City, till he has attained his fortieth Year; for then, say they, he hath Experience. When one of these Princes, or Vice-Kings keeps his Court in a City, he is seated upon a Tribunal, and receives the Petitions or Complaints of the People. Behind this Tribunal there is an Officer called *Lieu*, who keeps standing, and according to the Order he receives from the Prince, in his Answer on the Petition, for they never answer otherwise than in Writing, or admit of any Applications, but what are committed to Paper. Before the Parties present their Petitions to the Prince, they get them examined by an Officer, who, if he discovers any Fault, sends them back again; for no Man may draw up these Writings which are to be presented to the Prince, except a Clerk versed in Business; and at the Bottom of each Writing they put, *Written by such a One, the Son of such a One*. And if, in this Case, there happen any Blunder or Mistake, the Clerk is hanged.

The Prince never fears himself on his Tribunal till he has eaten and drank, for fear he should be mistaken in some Thing; and each of these Princes or Governors has his Subsistence from the publick Treasury of the City he commands. The Emperor of *China*, who is above all these Princes or petty Kings, never appears in publick but once in ten Months, fancying, that if he shewed himself often to the People, they would lose the Veneration they have for him; for he holds it as a Maxim, that Principals cannot subsist but by Force, and that the People know not what Justice is; and that thus Constraint and Violence must be used to maintain amongst them the Majesty of Empire.

18. They have no Duty imposed upon their Lands, but are subject to a Poll-tax, which is levied upon Men only, and that, according to their Condition and Capacity. When any *Arabs*, or other Strangers, are in this Country, the *Chinese* tax them according to their Substance. When any Death makes Necessaries dear, then the King opens his Store-houses, and sells all Sorts of Provisions much

* It would be an endless thing to fatigue the Reader with Conjectures about these Countries, the Names of which are totally unknown to us; but that all we can say of them with Certainty, is, that they lie between Cape *Comoren* and *China*.

† The Account of the Conduct of the *Chinese* towards the Merchants, corresponds so well with, both with ancient and modern Relations, that it leaves no room for us to doubt, either of the Truth of them, or of it, and cannot but illustrate, and at the same time confirm in the Opinions of the Reader, many Things we have in our Observations on the foregoing Sections.

‡ The kind of Justice we here see in great *China*, is, that there can be nothing clearer than that this Account is both genuine and exact; for it is impossible to contrive a more an Arabian Account of the Age in which this Manuscript was wrote, should be Matter of these Facts, none of which are known in the present Age, at all.

cheaper than they are to be had at Market: And hence no Dearth is of any long Continuance among the *Chinese*. The Sums that are gathered from this Capitation-tax, are laid up in the publick Treasury; and I believe, that from this Tax fifty thousand Dinars are paid every Day into the Treasury of *Cansu* alone, although this City is not one of the largest in *China*.

The Emperor reserves likewise to himself, the Revenues which arise from the Salt-mines, and from a certain Herb which they drink with hot Water, and of which great Quantities are sold in all the Cities of *China*, to the Amount of great Sums; they call it *Pitba*, that is Tea, and it is a Shrub, more bushy than the *omegranate-tree*, and of a more pleasant Smell, but has a kind of Bitterness with it. Their Way is to boil Water, which they pour upon this Leaf; and this Drink cures all sorts of Diseases. Whatever Sums come into the Treasury, arise from the Pole-tax, the Duties upon Salt, and the Tax upon this Leaf*.

19. In each City there is a small Bell hung to the Wall above the Prince's or Governor's Head; and this Bell may be rung by a String, which reaches about three Miles, and crosses the High-way, to the End that People may get at it; when the String is pulled, the Bell strikes over the Governor's Head, and straight he commands that the Person who thus demands Justice, be brought before him; and accordingly the Complainant sets forth his Case in Person; and the same Practice is in use throughout all the other Provinces.

If a Man has a Mind to travel from one Place to another, he must take two Passes with him, the one from the Governor, the other from the Eunuch or Lieutenant. The Governor's Pass permits him to set out on his Journey, and takes Notice of the Name of the Traveller, and of those also of his Company, the Age and Family of the one and the other; for every Body in *China*, whether a Native, or an *Arab*, or any other Foreigner, is obliged to declare all he knows of himself, nor can he possibly be excused.

The Eunuch, or Lieutenant's Pass, specifies the Quantity of Goods or Money, which the Traveller and those with him, take along with them; and this is done for the Information of the frontier Places, where these two Passes are examined; for whenever a Traveller arrives at any of them, it is registered, That such a one, the Son of such a one, of such a Family, passed through this Place on such a Day, in such a Month, in such a Year, and in such Company; and by this Means they prevent any one from carrying of the Money or Effects of other Persons, or their being lost: So that if any thing has been carried off unjustly, or the Traveller dies on the Road, they immediately know what is become of the Thing, and they are either restored to the Claimant, or to his Heirs*.

20. The *Chinese* administer Justice with great Strictness in all their Tribunals. When any Person commences a Suit against another, he sets down his Claim in Writing, and the Defendant writes down his Defence, which he signs, and holds between his Fingers. These two Writings are delivered in together; and being examined, Sentence is delivered in Writing, and each Party has his Papers returned to him; but first they give back to the Defendant his Writing, that he may acknowledge it.

When one Party denies what the other affirms, he is ordered to return his Writing; and if the Defendant thinks he may do it safely, and accordingly delivers his Papers a second time, they also call for that of the Plaintiff, and then they fly to him who denies what the other affirms, Make it appear that your Antagonist has no Right to demand of you what is in Debate; but take Notice, if he makes out what you deny, you shall undergo twenty Strokes of the Bamboo upon the Backside, and pay a Fine

of twenty *Fakuges*, which make about two hundred *Dinars*. Now this Punishment is such, as the Criminal could not sur vive; it is so grievous, that no Person in all *China* may, of his own Authority, inflict it upon another, upon pain of Death, and Confiscation of his Goods; and so no body is ever so hardy as to expose himself to so certain a Danger; wherefore Justice is well admitted to every one. They require no Witnesses, nor do they put the Parties upon Oath.

21. When any Man becomes a Bankrupt in this Country, they throw him into Prison in the Governor's Palace, and he is immediately put upon the Declaration of his Effects. After he has been a Month in Prison, he is released by the Governor's Order, and Proclamation is made, That such a one, the Son of such a one, has consumed the Substance of such a one; and that if he has any Effects in the Hands of any Person, in any Shape whatsoever, it must be made known in the Term of a Month. In the mean time the Bankrupt is bambood on the Backside if Discovery is made of any Effects of his; and at the same time is upbraided with having been a Month in Prison eating and drinking, tho' he had wherewithal to satisfy his Creditors. He is chastised in the same manner, whether he makes any Declaration of his Effects or not. They reproach him, that he has made it his study to get by Fraud the Substance of private Persons into his Hands, and embezzle it; and that he ought not so to defraud those he had Dealings with, by stripping them of their Property. But after all, if they cannot discover him to have been guilty of any Fraud, and if it is proved to the Magistrate, that the Man has nothing in the World, the Creditors are called in, and receive a Part of their Debt out of the Treasury of the *Bagban*. This is the ordinary Title of the Emperors of *China*, and signifies the Son of Heaven; but we commonly pronounce it after a different Manner, and call him *Magban*. Then it is publicly forbidden to buy of, or sell to this Man, upon pain of Death, that he may not defraud any of his Creditors by concealing their Money. If Discovery be made that he hath any Sums in the Hands of another, and if the Person he intrusts makes no Declaration within the Time limited, he is bambood to death, and nothing is said to the Proprietor or Bankrupt. The Sums that they discover are divided among the Creditors, and the Debtor or Bankrupt must never more concern himself with Trade*.

22. The *Chinese* have a Stone which is ten Cubits high, erected in the publick Squares of their Cities, and on this Stone are engraved the Names of all Sorts of Medicines, with the exact Price of each; and when the Poor stand in need of any Relief from Physick, they go to the Treasury, where they receive the Price each Medicine is rated at. There is in *China* no Tax upon Land; they only levy so much *per* Head, according to the Wealth and Possessions of the Subject. When a Male Child is born, his Name is immediately enter'd in the King's Books; and when this Child has attained his eighteenth Year, he begins to pay for his Head; but they demand it not of the Man who has seen his eightieth Year; on the contrary, he receives a Gratification by way of Pension from the publick Treasury; and in doing this, the *Chinese* say, That they make this Provision for him in his old Days, in Acknowledgment for what they received of him when he was young.

23. There are Schools in every Town for teaching the poor Children to write and read, and the Masters are maintained at the publick Charge. The Women wear nothing on their Heads but their Hair, whereas the Men are covered. In *China* there is a certain Town called *Tayu*, which has a Castle advantageously seated on a Hill, and all the Fortresses in the Kingdom are called by the same Name. The *Chinese* are generally handsome, of

* It appears from hence, that the Custom of drinking Tea in *China*, is much more ancient than we have generally imagined it, for it must have prevailed long before our Traveller went into this Country, otherwise a Tax upon it would have been ineffectual. It may not be amiss, to observe here, that the Remarks of the Author are equally natural and judicious; for he infists chiefly on those Things in which the *Chinese* differed most from the *Europeans*, as that they did not circumcise, were not very exact in washing, and made no Conscience of eating Blood.

* The Reader will remember, that this was a settled Regulation among the ancient *Indians*, so that it is very probable, that the *Chinese* derived a Part of their Policy from the *Indians*.

* This is likewise confirmed by later Travellers; and though there seems to be a great Deal of Severity in it, yet it is well adapted to the Genius of the *Chinese*, who would not fail to become Bankrupts frequently, if they were allowed to trade afterwards; and perhaps the introducing this Law in other Countries, in case of a second or third Bankruptcy, might be found very effectual.

comely Structure, fair, and by no means addicd to Excesses of Wine; their Hair is blacker than the Hair of any other Nation in the World; and the *Chinese* Women wear it curl'd.

24. In the *Indies*, when a Man accuses another of a Crime punishable with Death, the Custom is to ask the Accus'd if he is willing to go through the Trial by Fire; and if he answers in the Affirmative, they put a Piece of Iron that is red-hot. This done, they bid him stretch both his Hand, and upon it they put seven Leaves of a certain Tree, and upon these Leaves they put the red-hot Iron, and in this Condition he walks backward and forward for some time, and then throws off the Iron. Immediately after this, they put his Hand into a Leathern Bag, which they seal with the Prince's Signet; and if at the End of three Days he appears, and declares he has suffer'd no Hurt, they order him to take out his Hand; when, if no Sign of Fire is visible, they declare him innocent, and deliver him from the Punishment which threaten'd him, and his Accuser is condemn'd to pay a *Man* of Gold as a Fine to the Prince.

Sometimes they boil Water in a Chaldron, till it is so hot that no one can touch it; then they throw an Iron Ring into it, and command the Person accus'd to thrust his Hand down, and bring up the Ring. I saw one who did this, and received no manner of Hurt. The Accuser is in this Case also to pay a *Man* of Gold.

25. When a King dies in this Island of *Serendib*, they lay his Body on an open Chariot, in such a manner, that his Head hangs backwards till it almost touches the Ground, and his Hair is upon the Earth; and this Chariot is followed by a Woman with a Broom in her Hand, therewith to sweep Dust on the Face of the Deceased, while she cries out with a loud Voice. O Man behold "your King, who was yesterday your Master, but now "the Empire he exercis'd over you is vanisht and gone; "he is reduced to the State you behold, having left the "World. A the Arbitrer of Death hath withdrawn his "Soul; Reckon therefore no more upon the uncertain "Hopes of Life."

This Proclamation, or some other like it, they continue for three Days, after which, the dead Body of the King is embalm'd with *Sandal* Wood, Camphire and Saffron, and is then burn'd, and the Ashes are scatter'd abroad to the Wind. It is a universal Custom all over the *Indies*, to burn the Bodies of the Dead. The Island of *Sarambo* is the last of the Islands of the *Indies*. When they burn a King, it is usual for his Wives to jump into the Fire, and to burn with him; but this they are not constrain'd to do, if they are not willing.

In the *Indies* there are Men, who profess to live in the Woods and Mountains, and to despise what other Men look upon as Wealth. These obtain from every thing but such wild Herbs and Fruits as spring in the Woods, and put an Iron Buckle upon their natural Parts, that they may not be able to have any Commerce with Women. Some of them are quite naked, or have only a Leopard's Skin thrown over them, and in this Pique, keep standing with their Faces towards the Sun. I formerly saw one in the *Indies* I have describ'd, and returning to the *Indies* about sixteen Years afterwards, I found him in the very same Attitude, and was astonish'd he had not lost his Eye-sight by the Heat of the Sun.

In all these Kingdoms, the Sovereign Power resides in the Royal Family, and never departs from it; and the next Heirs of this Family succeed each other. In like manner, there are Families of learned Men, of Physicians, and of all the Artificers concern'd in Architecture, and none of these are mix'd with a Family of a Profession

different from their own. The several States of the *Indies* are not subject to one King; but each Province has its own King. The *Balkara* is nevertheless in the *Indies* as King of Kings. The *Chinese* are fond of Gaming, and all Manner of Diversions; on the contrary, the *Indians* condemn them, and have no Pleasure in them. They drink no Wine, nor make any Use of Vinegar, because it is made of Wine; and yet they abstain not therefrom as a religious Duty, but for another Reason. They say, that if a King is given to Wine, he ought not to be deem'd a King; For, continue they, as there are frequent Wars with the neighbouring States, how should a Drunkard manage the Affairs of his Kingdom?

26. The Wars, in which they engage with neighbouring Princes, are not usually undertaken with a View to possess themselves of their Dominions; and I never heard of any but the People bordering upon the Pepper Country, that have seiz'd on the Possessions of their Neighbours after Victory. When a Prince makes himself Master of some other Principality, he confers the Government thereof upon some Person of the Royal Family of the conquered Country; and thus he keeps it in Subjection to himself, from a Perswasion that the Natives would never agree to be otherwise govern'd. When any one of the Princes or Governors of Cities within the Dominions of the Emperor of *China* is guilty of a Crime, he is put to Death, and eaten; and in general, it may be said, that the *Chinese* eat all those that are put to Death. When the *Indians* and *Chinese* are about to marry, the Parties come to an Agreement; then Presents are made, and at last, the Marriage is celebrated with the Sound of many sorts of Instruments and Drums. The Presents they send consist of Money, and in this every one does what he can afford.

27. If a Man in the *Indies* runs away with a Woman, and abuses her Body, they kill both him and the Woman, unless it be proved that she was forced; then the Man only is punish'd with Death: But if the Woman consents to the evil Deed, they are both punish'd with Death. Theft is always punish'd capitally, as well in the *Indies* as in *China*, whether the Theft be considerable or inconsiderable; and particularly in the *Indies*, where, if a Thief has stoln but the Value of a small Piece of Money, or a thing of greater Worth, they take a long, strong, and sharp Stake, which they apply to his Furniture, and thrust it through till it comes out at his Neck. The *Chinese* are addic'd to the abominable Vice of Smoak, and the filthy Practice of it they number among the most different things they perform in Honour of their Gods.

The *Chinese* Buildings are of Wood, with Stone, Plaster, Brick and Mortar. The *Chinese* and *Indians* are not satisfi'd with one Wife, but both Nations marry as many as they please. Rice is the common Food of the *Indians*, who eat no Wheat; whereas the *Chinese* eat of Rice and Wheat indifferently. Circumcision is not practis'd either by the *Indians* or *Chinese*. The *Chinese* worship Gods, pray to them, and fall down before them; and they have Books which explain the Articles of their Religion. The *Indians* suffer their Beards to grow, and I have seen some of them with a Beard three Cubits long; they wear Whiskers; but the *Chinese*, for the most part, have no Beard, and have all smooth. The *Indians*, upon the Death of a Relation, shave both Head and Face. When any Man in the *Indies* is cast into Prison, they all within neither Victuals nor Drink for seven Days together, and this with them answers the End of other Tortures exact from the Criminal a Confession of the Truth. The *Chinese* have Judg's besides the Governors, who decide in Causes between Subject and Subject, and the same they have in the *Indies*. Both in *China* and in the *Indies* there are Law

* The Manner of finding out the Truth by appealing to God in so extraordinary a Manner, was in use in most Countries. *Sophocles* mention'd as practis'd by the Ancients. The *Cretes* on the Coast of *Misambria*, if they are accus'd of any capital Crime, bid him to prove that innocent. The *Indians* of *Ceylon* decide their Differences by the same Manner. If a Man is accus'd of Theft, he and the Accuser are brought before the Judge; a Pint of Oil is tasted till it almost boils, and then the Party accus'd dips in three of his Fingers, which are immediately scalded, and spread in the sand. When it is appear'd he is accus'd, he suffer's Death; and if not, the same Sentence falls upon the Accuser. It is more probable, since this was once the common Law of our own Country, as the Reader will perceive by consulting any of our old Authors on the Word *Oath*.

* The Author of the *Asiatick* Geography, and none other of the Oriental Writers, have transcrib'd this Passage verbatim, from whence I perceive that they were acquainted with the World. The Reader may remark, that the Accounts given by the Ancients of the situation and Inhabitants of *Lapponia* agree perfectly well with this Account.

† This Sentence, among the *Indians*, is a punishment, which as they seem to be, or confirm'd by all the Travellers that have written of this Country, is not an error of omission, as I shall have no opportunity of showing in the subsequent Part of this Chapter.

pards and Wolves, but no Lions. Highway Robbers are punished with Death.

29. Both the *Chinese* and the *Indians* imagine the Idols they worship speak to them and give them answers. Neither the one nor the other kill their Meat by cutting the Throat, as the *Mohammedans*, but by beating them on the Mouth till they die. They wash not with Well-water; the *Chinese* wipe themselves with Paper, whereas the *Indians* wash every Day before they eat.

The *Indians* touch not their Wives while their Disease is upon them, but turn them out of their Houses, and avoid them; the *Chinese* behave in quite a contrary Manner. The *Indians* wash not only the Mouth, but the whole Body also before they eat, which the *Chinese* observe not. The Country of the *Indies* is larger in Extent than that of *China*, and exceeds it by one half; the Number of Kingdoms is greater in the *Indies* than in *China*, but *China* is the more populous of the two.

It is not usual to see Palm-trees either in the *Indies* or in *China*, but they have also other Sorts of Fruits and Trees, which we have not. The *Indians* have no Grapes, and the *Chinese* have not many, but both abound in other Fruits; though the Pomegranate thrives more plentifully in *India* than in *China*.

The *Chinese* have no Sciences, and their Religion and most of their Laws are derived from the *Indians*; nay, they are of Opinion that the *Indians* taught them the Worship of Idols, and consider them as a very religious Nation; both the one and the other believe the *Metempsychosis*; but they differ in many Points touching the Precepts of their Religion. Physick and Philosophy are cultivated among the *Indians*, and the *Chinese* have some Skill in Medicine; but it almost wholly consists in the Art of applying hot Irons or Cauterics. They have also some Smattering of Astronomy, but therein also the *Indians* surpass the *Chinese*. I know not that there is so much as one of either Nation that has embraced Mohammediism, or speaks *Arabic*. The *Indians* have but few Horses, and there are more in *China*; but the *Chinese* have no Elephants, and cannot endure to have them in their Country, for they abhor them. The *Indian* Dominions furnish a great Number of Soldiers, who are not paid by the King, but when they are rendezvoused for War, take the Field entirely at their own Expence, and are no Charge to the King; whereas the *Chinese* allow their Forces much the same Pay with the *Arabs*.

China is a pleasant and fruitful Country; most of the *Indian* Provinces have no Cities, whereas in *China* there are many in Number, great in Extent, and well fortified: The Climate of *China* is more whollome, and the Country itself is less fenny. The Air there is also much better, and there is scarce a blind Person to be seen, or any one subject to the Diseases of the Eyes; and the same Advantages are enjoyed by several Provinces of the *Indies*: The Rivers of the two Countries are large, and surpass our greatest Rivers; much Rain falls in both these Countries. In the *Indies* are many desert Tracks, but *China* is inhabited and peopled throughout its whole Extent. The *Chinese* are handsomer than the *Indians*, and come nearer to the *Arabs*, not only in Countenance but in Dress, in their Way of riding, in their Manners, and in their Ceremonies: They wear long Garments and Girdles, in form of Belts. The *Indians* wear two short Vests; and the Men, as well as the Women, wear golden Bracelets, adorned with precious Stones.

30. Beyond the Continent of *China*, there is a Country called *Tagazgaz*, from the Name of a Nation of the *Turks*, who there inhabit, and also the Country of *Kakban*, or *Tibet*, which is bordering on the Country of the *Turks*. The Islands of *Sila* are inhabited by white People, who send Presents to the Emperor of *China*, and who are persuaded, that if they did not send him Presents, the Rain of Heaven would not fall upon their

Country. None of our People have been there to inform us concerning them: They have white Falcons.

As we are now arrived to the End of this Work, it may not be amiss, to offer here some Remarks that may tend to enlighten the foregoing Discourse, and prepare us at the same time for that which is to come. We are informed that the Date of this Narration was of the *Hegira* 237, *A. D.* 851, which Circumstance, though preferred to us in the ensuing Discourse, was very probably contained in the first Leaf of this, which is wanting in the Manuscript. But though it was written then, yet it seems highly probable, that our Author's first Journey to the *Indies* was, at least, twenty Years before; because he observes, that he made a second Journey there sixteen Years afterwards; and we may very well allow four Years for the Time spent in the first Journey, and the Space that might intervene between his Return and his composing this Treatise. According to this Calculation, his first Voyage to the *Indies* was in the Year of the *Hegira* 217, *A. D.* 833, and his second *An. Heg.* 235, *A. D.* 849.

As to the Occasion of his Voyages, there is nothing occurs in this Account that can give us the least Light into it; however, it seems most probable, that he underwent these Fatigues on the score of Commerce; for it can hardly be supposed, that a Man would have made so long a Journey a second Time purely out of Curiosity, and to satisfy the Desire of being better acquainted with these People, which had been excited by his former Intercourse with them. There is not much to be observed with respect to the Form of this Treatise, or the Style in which it is written; and yet something there is worth mentioning with respect to each of them. We cannot, indeed, boast much of the Regularity of his Method; and yet it would be unjust to condemn it entirely, because, for want of having the Introduction to it, we cannot determine exactly what was his Plan, and consequently cannot say how far he came up to, or fell short of it; one Thing I think is manifest, which is, that the Scope of his Undertaking is a Comparison between the *Indians* and the *Chinese*; at least he falls into this immediately after he has described the usual Navigation from *Siraff* to *China*; and considered in this Light, his Treatise appears regular enough. As to his Style, it is extremely simple and plain, and has nothing of that swelling hyperbolic Eloquence which is generally observed in oriental Writers; upon which, I beg leave to remark, that with regard to the *Arabs*, as well as other Nations, this was a Vice that prevailed in later Times, after Poetry and Rhetorick had been more cultivated than they were in the first Ages of their Empire, which has been the Case in most other Nations.

One cannot possibly doubt, that this Piece was extremely well received when it first came abroad, and that it had maintained its Reputation for a considerable Space of Time, appears from the second Treatise, which we are about to give the Reader. It seems, that when the Affairs of *China* were better known, some Prince, or other Person of Distinction, desired the Author of the following Pages to look over that Discourse, and to inform him, how far the Facts contained therein, had been confirmed or contradicted, by succeeding Relations. What Time this happened, we cannot, with any Certainty say, from the Comparison of the two Pieces, or from the Lights given us by the learned and accurate Critick who published them. The Manuscript which the Abbé *Renaudot* made use of, was apparently older than the Year of the *Hegira* 569, which answers to the Year of Christ 1173; but the Discourse must certainly have been written long before that Time. In our Notes we have shewn that *Eben-Wabab* travelled into *China*, *A. H.* 285, *A. D.* 898; and the Author of this last Treatise informs us, that he had conversed with this Man after his Return, and had from him the Facts which he has inserted in his Discourse; so that the Book itself must have been two Centuries older

* Of this Doctrine we have already spoken in our Account of the Philosophy of the *Brachmans*; and in our Notes on the subsequent Treatise, we shall take Occasion to shew when it was first embraced in *China*, and with what Modifications it is still taught there.

We shall take another Opportunity of acquainting the Reader with the History of the ancient *Turks*, and shall only observe here, that the Nations here mentioned are to be considered as dwelling in their native Region, before they became famous by their Irruption into *Persia*, which is the Country every where meant in this and in the subsequent Treatise by the Name of *Irak*, and before they became *Mohammedans*; which is the more necessary, because from the present State of Things it is very natural to connect the Ideas which we have of the modern *Turks*, with their Accounts of their Ancestors.

than the Manuscript from which the Abbé *Renaudot* published it, and might probably be written 60 or 70 Years after the foregoing Treatise. These are all the Lights which, from an assiduous Study of these valuable Fragments of Antiquity, we have been able to give the Reader, and therefore we shall detain him no longer from the Piece itself, which in the Original bears the following Title.

The Discourse of Abu Zeid al Hafan of Siraf, concerning the Voyage to the Indies and China.

31. Having very carefully examined the Book I was directed to peruse, that I might confirm what the Author relates, when he agrees with what I have heard concerning the Affairs of the Sea, the Kingdoms on the Coast, and the State of the Countries; and that I might add upon this Head, what I have elsewhere collected concerning them, which is not to be found in this Book, I find it was written in the Year of the Hegira CCXXXVII. and that the Accounts the Author gives in regard to Things at Sea, were in his Time very true, and agreeable to what I have understood from Merchants, who from *Irak* sailed through those Seas. I find also, that all the Author writes is agreeable to Truth, excepting some few Passages.

Speaking of the Custom of setting Meat before the Dead, which he attributes to the *Chinese*, he says, when they have served up the Meat over Night, and find nothing in the Morning, they cry, The Deceased hath eaten. We had been told the same, and believed it, till we met with a Man of undoubted Credit, who being asked concerning this Custom, he answered, that the Fact was not so, and that this Notion was groundless, as well as what is vulgarly said of the idolatrous Nations, that they imagine their Idols speak to them.

He told us also, that since those Days the Affairs of *China* wear quite another Face; and since much is related to shew the Reason why the Voyages to *China* are interrupted, and how the Country has been ruined, many Customs abolished, and the Empire divided, I will here declare the Causes I know of this Revolution.

32. The great Troubles which have embroiled the Affairs of this Empire, which have put a Stop to the Justice and Righteousness there formerly practised, and which have in fine interrupted the ordinary Navigation from *Siraf* to *China*, flowed from this Source: An Officer who was considerable for his Employment, though not of the Royal Family, revolted sometime ago; this Man's Name was *Baibai*, and he began with committing Hostilities in the Country, marching his Armies into many Places, to the great Loss of the Inhabitants, till, winning a Party over to him by his Liberalities, he got together a Multitude of Vagabonds and abandoned People, whom he formed into a considerable Body of Troops.

His Army thus strengthened, and himself in a Condition to undertake any thing, he discovered his Design of subverting the Empire, and marched first to *Cansu*, one of the most noted Cities in *China*, and at that Time the Port for all the *Arabian* Merchants. This City stands upon a great River some Days Distance from the Entrance, so that the Water there is fresh. But the Citizens shutting their Gates against him, he resolved to besiege the Place, and the Siege lasted a great while. This was transacted in the Year of the Hegira CCLXIV. and of Christ 877.

* The Account here given by our Author, very plainly proves, that the Trade to *China* was considered in his Time as very ancient, and of great Consequence, in so much that whatever affected the Peace of that Country, was looked upon as a Thing of common Concern to all the Nations of the East. But till these Travels were published, who could have imagined this? Who would have suspected that the Affairs of *China* were so well known to the *Arabs*? And therefore when these Things are mutually weighed, who can doubt that we need Reason to advance it as a Thing highly probable, that long before this, the Empires of *China* and the *Indies* were in the most flourishing Condition, as well in point of foreign Commerce as of domestick Oeconomy.

† It is a very difficult thing to pretend to settle the Chronology of the *Chinese* Empire; and the very learned Editor of these Travels, confesses he is not able to give any satisfactory Account of this Revolution. It so falls out, however, that Father *de Haulte*, in his History of *China*, has published, has enabled us to set this Matter right, or at least very nearly right. He informs us, that in the Reign of the Emperor *Hi Tsou*, who was the eighteenth of the Dynasty of *Tang*, the Affairs of *China* fell into very great Disorder, from the heavy Taxes laid upon the People, and a great Famine, caused by the Inundation of Rivers, and infinite Numbers of Grains hoppers that destroyed their Harvests. While these were the Miseries, there happened several Revolts in the Province, which encouraged a certain Rebel, whose Name was *Huan Tsou*, to put himself at the Head of the Malecontents, and that with such Success, as to drive the Emperor from the Imperial City, of which he made himself Master; but afterwards defeated, and the Emperor restored. To be sure it is not our Author, and the Date of this Revolution, assigned by Father *de Haulte*, that there is about twenty Years Difference between the Time mentioned by our Author, and the Date of this Revolution, assigned by Father *de Haulte*. I shall not take upon me to decide where the Miscalculation lies; but I leave it to the Reader will be of the same Opinion with me, in concluding this to be the Revolution mentioned in the Text.

‡ All the Oriental Writers agree in giving a different Account of the Division of the Empire of *Decan* into the Great, from that which is given by the *Greeks*; and that this Notion of theirs was ancient, appears from what we are told by the Author of the *Lib. 1. de Ind. lib. 1. c. 1.*

At last he became Master of the City, and put all the Inhabitants to the Sword. There are Persons fully acquainted with the Affairs of *China*, who assure us, that besides the *Chinese* who were massacred upon this Occasion, there perished one hundred and twenty thousand *Mohammedans*, *Jews*, *Christians*, and *Parsees* who were there on account of Traffick. The Number of the Professors of these four Religions, who thus perished, is exactly known, because the *Chinese* are exceedingly nice in the Accounts they keep of them.

He also cut down the Mulberry-trees, and almost all the Trees of other Kinds: But we speak of the Mulberry in particular, because the *Chinese* cultivate it carefully, for the sake of its Leaf, on which their Silkworms subsist. This Devastation is the Cause why Silk has failed, and that the Trade which used to be driven therein through all the Countries under the *Arabs*, is quite at a stand. Having sacked and destroyed *Cansu*, he possessed himself of many other Cities, which he attacked one after another, the Emperor of *China* not having it in his Power to stop his Progress. He advanced then to the capital City, called *Cumdan*; and the Emperor left this, his royal Seat, making a precipitate Retreat to the City of *Namui*, on the Frontiers, towards the Province of *Tibet*.

The Rebel, pulled up by these great Successes, and perceiving himself Master of the Countries, fell upon the other Cities, which he demolished, having first slain most of the Inhabitants, with a View, in this general Butchery, to involve all the several Branches of the Royal Blood, that none might survive to dispute the Empire with him. We had the News of these Revolutions, and of the total Ruin of *China*, which still continues.

Thus were Affairs situated, and the Rebel stood unconquered by any Disadvantage that might abate his Authority.

33. At last the Emperor of *China* wrote to the King of *Tagazgaz* in *Turkestan*, with whom, besides the Name of his Dominions, he was, in some Degree, allied by Marriage; and, at the same time, sent an Embassy to him, to implore his Assistance for reducing this Rebel. Upon this, the King of *Tagazgaz* dispatched his Son, at the Head of a very numerous Army, to fight this Oppressor; and, after many Battles, and almost continual Skirmishes, he utterly defeated him. It was never known what became of the Rebel: Some believe he fell in Battle, while others thought he ended his Days in another Manner.

The Emperor of *China* returned then to *Cumdan*, and although he was extremely weakened, and much distressed because of the Embezzlement of his Treasures, and the Loss of his Captains and best Troops, and because of all the late Calamities, he nevertheless made himself Master of all the Provinces which had been conquered from him. However, he never laid Hands on the Goods of his Subjects, but satisfied himself with what was yet left in his Coffers, and the small Remainers of publick Money, his Condition indispensably obliged him to take up with what his Subjects would give him, and to require nothing from them but Obedience to his Mandates, forbearing to squeeze Money from them, because the King's Government had exhausted them already.

Thus *China* became almost like the Empire of *Alexander* after the Deceit and Death of *Darius*, when he divided the Provinces he took from the *Persians* amongst so many Chiefs, who erected themselves into so many Kings: for now each of these *Chinese* Princes joined with

A Chinese Prostitute, riding in Publick, with a Man going before, who makes known her Price.

A View of a large Street in one of y^e Trading Cities of China showing how their Signs are placed y^e Shops disposed.

some other to wage War against a third, without consulting the Emperor; and when the strongest had subdued the weakest, and was become Master of his Province, all was wasted and unmercifully plundered, and the Subjects of the vanquished Prince were unnaturally devoured, a Cruelty allowed by the Laws of their Religion, which even permit human Flesh to be exposed to Sale in the publick Markets.

There arose, as was natural from these Confusions, many unjust Dealings with the Merchants who traded thither, which having gathered the Force of a Precedent, there was no Grievance, no Treatment so bad, but they exercised upon the *Arabs*, and the Masters of Ships; they extorted from the Merchants what was uncustomary, they seized upon their Effects, and behaved towards them in a manner directly opposite to ancient Usages, and for these things has God punished them, by withdrawing his Blessing from them in every Respect; and particularly by causing the Navigation to be forsaken, and the Merchants to return in Crouds to *Siraf* and *Oman*; agreeable to the all-ruling Will of the Almighty Master, whose Name be blessed!

34. The Author in his Book notes some Customs and Laws of the *Chinese*, but mentions not the Punishments inflicted on married Persons, when convicted of Adultery; this Crime as well as Homicide and Theft is punished with Death, and they execute the Criminal in this Manner; they bind both the Hands together, and then force them backwards over the Head, till they rest upon the Neck; they then fasten the Right-Foot to the Right-Hand, and the Left-Foot to the Left-Hand, so that both Hands and Feet are strongly bound behind the Back; and thus bundled up, it is impossible for the Criminal to stir, nor wants he any Body to hold him. This Torture disjoins the Neck, makes the Joints start out of their Socket and dislocates the Thighs; in short, the Patient is in so miserable a Condition, that were he to continue therein but a few Hours, there would be no need of any thing else to make an End of him: But when they have bound him as we have said, they give him so many Strokes with a Bamboo, which they always use upon the like Occasions, and which alone were sufficient to kill the Criminal, and leave off when he is at the very last Gasps of Life, abandoning the Body to the People, who eat it.

35. There are Women in *China* who refuse to marry, and chule rather to live a dissolute Life of perpetual Debauchery. The Custom is for these Women to present themselves in full Audience before the commanding Officer of the Garrison in the City, and declare their Aversion to Marriage, and their Desire to enter into the State of publick Women; they then desire to be register'd in the usual Form amongst these Prostitutes, and the Form is this; they write down the Name of the Woman, her Family, the Number of her Jewels, the several Particulars of her Attire, and the Place of her Abode; thus she is admitted a publick Woman: After this, they put about her Neck a String, at which hangs a Copper Ring with the King's Signet, and deliver to her a Writing which certifies that she is received into the List of common Prostitutes, and entitles her to a yearly Pension of so many *Falus*, to be paid her out of the publick Treasury, and threatens with Death the Person who should take her to Wife. They every Year give publick Notice of what is to be observed with regard to those Women, and turn out those who have worn out their Charms. In the Evening these Women walk abroad in Dresses of different Colours, without any Veil, and prostitute themselves to all new Comers that love Debauchery; but the *Chinese* themselves send for them to their Houses, whence they depart not till the next Morning.

36. The *Chinese* coin no Money, besides the little Pieces of Copper, like those we call *Falus*, nor will they allow Gold or Silver to be coined into Specie, like the Dinars and Drams that are current with us; for, say they, if a Thief goes, with an evil Intent, into the House of an *Arab*, where is Gold and Silver Coin, he may carry off ten thousand Pieces of Gold, and almost as many Pieces of Silver, and not be much burdened therewith, and so be the Ruin of the Man who should suffer this Loss: Whereas, if a Thief has the same Design on the House of a *Chinese* Artificer, he cannot at most take away above ten thousand *Falus*, or Pieces of Copper, which do not make above ten Meticals or Dinars of Gold. These Pieces of Copper are alloy'd with something of a different kind, and are of the Size of a Dram, or Piece of Silver called *Bagli*; in the Middle they have a pretty large Hole to string them by: A thousand of them are worth a Metical of Gold, or a Dinar, and they string them by thousands, with a Knot between every hundred. All their Payments in general, are made with this Money, whether they buy or sell Lands, Furniture, Merchandize or any thing else. There are some of these Pieces at *Siraf* with *Chinese* Characters upon them.

I need say nothing as to the frequent Fires which happen in *China*, or the *Chinese* manner of Building. The City of *Canfu* is built in the manner he describes, that is, of Wood with Canes interwoven, just like our Works of Split-cane, they wash the whole over with a kind of Varnish, which they make of Hemp-feed, and this becomes as white as Milk; so that when the Walls are covered therewith they have a wonderful Gloss. They have no Stairs in their Houses, nor do they build with different Stories, but put every thing they have into Chests, which run upon Wheels, and which in Case of Fire, they can easily draw from Place to Place without any Hindrance from Stairs, and so save their things presently.

As for the inferior Officers in the Cities, they commonly have the Directions of the Customs and the Keys of the Treasury: Some of these have been taken on the Frontiers and castrated; others of them have been cut by their own Fathers, who have sent them as a Present to the Emperor. These Officers are at the Head of the principal Affairs of State, of the Emperor's private Affairs, and of his Treasures; and those particularly who are sent to *Canfu* are selected from this Body.

37. It is customary for them, as well as the Kings or Governors of all the Cities, to appear abroad from time to time, in solemn Procession; at such Times they are preceded by Men, who carry great Pieces of Wood like those the Christians of the *Levant* used instead of Bells: The Noise they make is heard a great Way, and as soon as it is heard no body stands in the Road of the Eunuch, or Prince: If a Man is at his Door, he goes into his House, and keeps his Door shut till the Prince or Eunuch of the City is gone by; so no Soul is to be seen in the Way; and this is enjoined, that they may be held in the greater Veneration, and to strike a Dread, that the People may not see them often, and that they may not grow so familiar as to speak to them.

The Eunuch, or Lieutenant, and the principal Officers, wear very magnificent Dresses of Silk, so fine that none of this Sort is brought into the Country subject to the *Arabs*, the *Chinese* keep it up at so high a Rate. One of the chief Merchants, whose Words cannot be called in question, relates, that he waited on an Eunuch, whom the Emperor had sent to *Canfu*, in order to purchase some things he wanted out of the Goods carried thither from the Country of the *Arabs*; and that upon his Breat he perceived a short Vest, which was under another silk Vest, and which seemed to be under two other Vests of the

related the Conquest of the *Persian* Empire by *Alexander* the Great, adds the following remarkable Words, *1 Maccab. i. 5, 6.* "And after these Things, he fell sick and perceived that he should die. Wherefore he called his Servants, such as were honourable, and had been brought up with him from his Youth, and parted his Kingdom among them, while he was yet alive."

* As barbarous as this Custom may appear, and as seemingly inconsistent as it may be with the Politeness of the *Chinese*, yet it is very certain, that our Authors are not the only Writers that have mentioned it, as will appear hereafter, when we come to give the Reader the Travels of the famous *Marco Polo*, who asserts the very same thing.

* This Account of their publick Women is confirmed by a great Number of Writers ancient and modern, so that there appears to be no Reason for calling the Truth of it in Question. In the History of the *Dutch* Embassy to the Emperor of *China*, there is a Print of one of their Ladies, as she is conducted through the City on an Ass, attended by a Person, who cries her Price, as he would do that of any other Commodity.

* All these Facts are attested by later Writers, so that notwithstanding they seem at first Sight very strange and improbable, yet it will be own'd, there is as good Evidence for them as for any other Facts in the several Relations we have had of the Customs and Manners of these People.

same kind; that the Eunuch observing him to look steadfastly upon his Breast, said, "I see you keep your Eyes fixed upon my Stomach, what may be the Meaning of it?" The Merchant immediately cried out, *I am surpris'd at the Beauty of that little Vest, which appears under your other Garments.* The Eunuch laughed, and held out his Shirt-sleeve to him; Count, says he, how many Vests I have above it: He did so, and counted five, one on another; and the Waistcoat, or short Vest was underneath. These Garments are wove with raw Silk, which has never been washed or full'd; and what is worn by the Princes or Governors, is still more rich, and more exquisitely wrought.

The Chinese surpass all Nations in all Arts, and particularly in Painting; and they perform such perfect Work as others can but faintly imitate. When an Artificer has finished a fine Piece, he carries it to the Prince's Palace to demand the Reward he thinks he deserves for the Beauty of his Performance; and the Custom is, for the Prince to order him to leave his Work at the Palace-gate, where it stands a whole Year; if, during that Time, no Person finds a Fault therein, the Artificer is rewarded, and admitted into the Body of Artists; but if the least Fault be found, it is rejected, and the Workman sent away empty.

It happened once, as the Story goes, that one of these Painters drew an Ear of Corn, with a Bird perched on it, upon a Piece of Silk; and his Performance was so admirable, that all who beheld it were astonish'd. This Piece stood expos'd to publick View, till one Day a crooked Fellow passing by the Palace, found fault with the Picture, and was immediately conducted to the Prince or Governor of the City, who at the same Time sent for the Painter. Then he asked this crooked Fellow, what Fault he had to find with this Piece; to which he answered, "Every body knows that a Bird never settles upon an Ear of Corn but it bends under him, whereas this Painter has represented his Ear bolt upright, though he has perched a Bird upon it; this is the Fault I have to find." The Objection was held just, and the Prince bestow'd no Reward upon the Artist. They pretend by this, and such other Means, to excite their Workmen to Perfection, by engaging them to be extremely nice and circumspect in what they undertake, and to apply their whole Genius to what is to go out of their Hands.

38. There was formerly a Man of the Tribe of *Karkish*, whose Name was *Ebn Wabab*, descended of *Hebar* the Son of *Al Aful*, and he dwelt at *Basra*; this Man left *Basra* when that City was sack'd, and came to *Siras*, where he saw a Ship ready to sail for *China*. The Humour took him to go on board of this Ship, and in her he went to *Clina*, where in the Sequel he had the Curiosity to travel to the Emperor's Court; and leaving *Cansu*, he reached *Candam*, after a Journey of two Months; he staid a long time at the Emperor's Court, and presented several Petitions, wherein he signified that he was of the Family of the Prophet of the *Arabs*. Having waited a considerable while, the Emperor at last ordered him to be lodged in a House appointed for him, and to be supplied with every Thing he wanted. This done, the Emperor wrote to the Governor of *Cansu*, commanding him carefully to inform himself among the Merchants concerning the Relation this Man pretended to bear to the Prophet of the *Arabs*; and the Governor, by his Answers, confirming the Truth of what he had said, touching his Extraction, the Emperor gave him Audience, and made him rich Presents, wherewith he returned to *Irack*.

This Man, when we saw him, was much advanced in Years, but had his Senses perfectly, and told us, that

when he had his Audience, the Emperor asked him many Questions about the *Arabs*, and particularly how they had destroyed the Kingdom of the *Persians*. *Ebn Wabab* made Answer, that they did it by the Assistance of God; and because the *Persians* were immerse'd in Idolatry, adoring the Stars, the Sun and Moon, instead of worshipping the true God.

To this the Emperor replied, that the *Arabs* had conquered the most illustrious Kingdom of the whole Earth, the best cultivated, the most opulent, the most pregnant of fine Wits, and of the most extensive Fame. Then said he, *What Account do the People in your Parts make of the other Kings of the Earth?* To which the Arab replied, that he knew them not. Then said the Emperor to the Interpreter, "Tell him we esteem but five Kings; that he whose Kingdom is of widest Extent, is the Master of *Irack*, for he is in the midst of the World, and surrounded by the Territories of other Kings; and we find he is called the King of Kings. After him we reckon our Emperor here present, and we find that he is styled the King of Mankind, for no King is invest'd with a more absolute Authority over his Subjects, nor is there a People under the Sun more dutiful and submissive to their Sovereign, than the People of this Country. We therefore, in this respect, are the Kings of the human Race; after us the King of the *Turks*, whose Kingdom borders upon us, and him we call the King of Lions. Next is the King of the Elephants, who is the King of the *Indies*, whom we also call the King of Wiltom, because he derives his Origin from the *Indians*. And last of all the King of *Greece*, whom we stile the King of Men; for upon the Face of the Earth, there are no Men of better Manners, nor of comlier Preference, than his Subjects. These, added he, are the most illustrious of all Kings, nor are others to compare with them."

Then said *Ebn Wabab*, he ordered the Interpreter to ask me, "If I knew my Master and my Lord, meaning the Prophet (*Mohammed*), and if I had seen him?" I made Answer, "How should I have seen him who is with God?" He replied, "That is not what I mean, I ask you, what sort of a Man he was in his Person?" I replied, that he was very handsome." Then he called for a great Box, and opening it, he took out another contained therein, which he set before him, and laid to the Interpreter, "shew him his Master and his Lord," and I saw in the Box, the Image of the Prophet, whereat I moved my Lips, praying to myself in Honour of their Memory.

The Emperor did not imagine I should know them again, and said to the Interpreter, "Ask him why he moves his Lips?" I answered, "I was praying in Memory of the Prophets;" *How do you know them*, said the Emperor? I replied, that I knew them by the Representation of their Histories; "there, said I, is *Noah* in the Ark, who was saved with those that were with him at the same Time," and I made the usual Salute to *Noah* and his Company. Then the Emperor laughed, and said, "Thou art not mistaken in the Name of *Noah*, and thou hast named him right; but as for the universal Deluge, it is what we know not. It is true, indeed, that a Flood covered Part of the Earth; but it reach'd not our Country, nor even the *Indies*." I made my Answer to this, and endeavour'd to remove his Objections the best I could; and then said again to him, "There is *Moses* with his Rod, and the Children of *Israel*." He agreed with me, as to the small Extent of their Country, and the Manner how the ancient Inhabitants were destroyed by *Moses*. I then said to him; "He there, is *Jesus*, upon an Ass, and here are his Apostles

* There is nothing very surprizing in this Account, for the very same Method had been in Use among the *Greeks* long before, and has been since practis'd in *Italy* and elsewhere; and without doubt, it is the true Method of coming at the just Knowledge of the Value of such Performances; and therefore something of this sort is annually practis'd at *Paris*.

† It seems a little strange, that the learned *Abbi Renaudot* did not endeavour to settle the Time when this Arabian Traveller went to *China*, especially when there is a Circumstance which seems to fix it, viz. the plundering of *Basra*, upon which it is said he took a Resolution of going to *Siras*. In order to supply this Defect, I have consulted *Abul-Pharajus*, who informs us, that A. H. 285, which answers to A. D. 898, there was one *Abul-Said*, who revolted against the Khalif, and ruin'd *Basra*, which occasioned the walking and fortifying that City, which cost fourteen thousand Pieces of Gold. The Khalif then reigning was *Al-Mokted*, in whose Time *Flemaicus* informs us, things were in great Confusion; and he likewise takes notice of this Rebellion. The Date agrees very well with the rest of this History, and particularly with the Account given by *Abul-Min* of the Reasons which induced him to quit his Country in his Conference with the Emperor of *Clina*.

"with him." He, said the Emperor, was not long upon Earth, seeing that all he did was transfused within the Space of somewhat better than thirty Months."

After this the *Ebn Wabab* saw the Histories of the other Prophets presented in the same Manner we have already declared; and he fancied that what was written in great Characters, under each Figure, might be the Names of the Prophets, the Countries whence they were, and the Subjects of their Prophecies. Then said the same *Ebn Wabab*, I saw the Image of *Mohammed* riding upon a Camel, and his Companions about him on their Camels, with Shoes of the Arabian Mode on their Feet, and leathern Girdles about their Loins. At this I wept, and the Emperor commanded the Interpreter to ask me, why I wept? I answered, There is our Prophet and our Lord, who is also my Cousin. He said I was right, and added, that he and his People, had subdued the finest of all Kingdoms; but that he had not the Satisfaction of enjoying his Conquests, though his Successors had.

I afterwards saw a great Number of other Prophets, some of them stretching forth their Right-hand, and with their three Fingers bent down between the Thumb and the Fore-finger, just like those who hold up the Hand to make oath; others were standing, and pointed to the Heavens with their Finger, and others were in different Postures. The Interpreter took them to be the Figures of their Prophets, and those of the *Indians*. The Emperor then asked me many Questions concerning the Khaliffs, their usual Dress, and concerning many Precepts and Injunctions of the *Mohammedan* Religion, and I answered him the best I could.

41. After this, he said, "What is your Opinion concerning the Age of the World?" I made Answer, that Opinions varied upon that head; that some were for six thousand Years, and others would not allow so many; and that others reckoned it at a still higher Rate; but that it was, at least, as old as I had said. At this the Emperor and his first Minister, who was near him, broke out to Laughter, and the Emperor made many Objections to what I had advanced. At last, said he, "What does your Prophet teach upon this Subject; does he say as you do?" My Memory failed me, and I assured him that he did.

Hereupon I observed I had displeas'd him, and his Displeasure appeared plainly in his Countenance. Then he ordered the Interpreter to speak to me in the following Terms. "Take heed of what you say, for Kings never speak but to be informed of the Truth of what they would know. What did you mean by giving the Emperor to understand, that there are among you various Opinions concerning the Age of the World? If so it be! you are also divided upon the Things your Prophet has said at the same Time that no Diversity of Opinions are to be admitted on what the Prophets have pronounced, all which must be revered as sure and infallible; take heed then how you talk at such a Rate any more!"

To this he subjoined many other Things, which, thro' Length of Time, have escaped my Remembrance. At last he asked me; "How is it that thou hast forsaken thy King, to whom thou art nearer, not only by the Place of thy abode, but by Blood also, than thou art to us?" In Return to which, I informed him of the Revolutions which had happened at *Bassora*, and how I came to *Siraf*, where I saw a Ship ready to sail for *China*; and that having heard of the Glory of his Empire, and its Abundance in all Necessaries, Curiosity excited me to a Desire of coming into his Country, that I might behold it with mine own

Eyes; that I should soon depart for my own Country, and the Kingdom of my Cousin, and that I would make a faithful Report of what I had seen of the Magnificence of the Empire of *China*, and the vast Extent of the Provinces it contains, and that I would make a grateful Acknowledgment of the kind Usage I there met with, which seem'd to please him very much. He then made me rich Presents, and ordered that I should be conducted to *Cansu* upon Post-horses. He wrote also to the Governor of the City, commanding him to treat me with much Honour, and to furnish me with the like Recommendations to the other Governors of the Provinces, that they might entertain me till the Time of my Departure. I was thus treated every where during my Stay, plentifully supplied with all Necessaries of Life, and honoured with many Presents till the Time of my Departure from *China*.

42. We asked *Ebn Wabab* many Questions concerning the City of *Cumdan*, where the Emperor keeps his Court; he told us that the City was very large and extremely populous, that it was divided into two Parts by a very long and very broad Street; that the Emperor, his chief Ministers, the Soldiery, the supreme Judge, the Eunuchs, and all belonging to the Imperial Household lived in that Part of the City which is on the Right-hand eastward, that the People had no manner of Communication with them; and that they were not admitted into the Places watered by Canals from different Rivers, the Borders of which were planted with Trees, and adorned with magnificent Palaces. The Part on the Left-hand westward, is inhabited by the ordinary People and the Merchants, where are also great Squares, and Markets for all the Necessaries of Life. At Break of Day, the Officers of the King's Household, with the inferior Servants, the Purveyors, and the Domesticicks of the Grandees of the Court, come some on Foot, others on Horseback, into that Division of the City, where are the publick Markets, and the Habitations of such as deal in all Sorts of Goods, where they buy whatever they want, and return not again to the same Place till their Occasions call them thither next Morning. It is by the same Traveller related, that this City has a very pleasant Situation in the Midst of a most fertile Soil, watered by several Rivers, hardly deficient in any thing except Palm-trees, which grow not there.

43. In our times Discovery has been made of a thing quite new and unknown to those who lived before us. No body imagined that the great Sea, which extends from the *Indies* to *China*, had any Communication with the Sea of *Syria*, nor could any one apprehend the Possibility of any such thing. Now behold what has come to pass in our Days, according to what we have heard. In the Sea of *Rum*, or the *Mediterranean*, they found the Wreck of an *Arabian* Ship, which had been shattered by Tempests for all her Men perishing, and the being dashed to Pieces by the Waves, the Remains of her were driven by Wind and Weather into the Sea of *Chozars*, and from thence to the Canal of the *Mediterranean* Sea, and at last were thrown on the Shore of *Syria*.

This renders it evident, that the Sea surrounds all the Country of *China* and *Sila*, or *Sila*, the uttermost Parts of *Turkestan*, and the Country of the *Chozars*; and that then it enters at the *Streight* till it washes the Shore of *Syria*. The Proof of this is deduced from the Constitution of the Ship we are speaking of; for none but the Ships of *Siraf* are so put together, that the Planks are not nailed or bolted, but joined together in an extraordinary manner, as if they were sewn. Whereas the Planking of all Ships of the *Mediterranean* Sea, and of the Coast of *Syria*, are nailed, and not joined together in that Way.

This plainly shews, that the *Chinise* were formerly well acquainted with the History of other Nations, and affords us good Grounds to believe that their Records must have been destroyed in some subsequent Revolution; for, otherwise, it is impossible to account for their Ignorance in Matters of this Nature in succeeding Times.

This is one of the most curious Passages in this Treatise, inasmuch as it plainly proves, that the *Arabians* had the same Notions in Geography with the *Greeks*, or, to speak with greater Propriety, had their Notions of Geography from them. Our Author, says plainly, that, according to his Judgment, the *Indian* Ocean washed the Coast of *Great Tartary*, and so fell into the *Caspian-Sea*, by which Passage, he supposes, that this Ship was driven from the *Indian-Sea* into the *Mediterranean*. The Conjecture was wrong; but there is still something in it very bold, and well imagined, and at the Bottom something of Truth too; for though it was impossible that this Ship should come into the *Mediterranean* in the Manner our Author imagines, yet it is not impossible but it might have come through the North-east Passage, agreeable to the first Part of his Supposition; and if by the Sea of *Chozars*, we understand that of *Mozcovy*, he would be quite right.

I very much doubt, whether the Construction of this Vessel, as our Author describes it, be sufficient Evidence of its coming from the *Indies*. It is very possible, that it might have been a Boat belonging to the Inhabitants of *Greenland*, or of some other Country bordering upon *Hudson's-Bay*; since, it is very certain, that there are such Vessels in these Parts, and it is not at all impossible that this might have come from thence. I do not pretend, however, absolutely to contradict him, but only to shew that the Argument he uses is not conclusive, though I think, at Things then stood, he had sufficient Grounds to believe it was conclusive.

We have also heard it reported, that Ambergrace has been found in the Sea of Syria, which seems hard to believe, and was unknown to former times. If this be as is said, it is impossible that Amber should have been thrown up in the Sea of Syria, but by the Sea of Aden, and of *Koizum*, which has Communication with the Seas where Amber is found: And because God has put a Separation between these Seas, if this Story be true, it must necessarily have been, that this Amber was driven first from the *Indian-Sea* into the others, and so from the one to the other, it at last came into the Sea of Syria^a.

44. We will now begin to speak of the Province of *Zapage*, which is opposite to *China*, and distant from thence a full Month's Sail by Sea, or less, if the Wind be fair. The King of this Country is styled *Mebrage*, and they say his Dominions are nine hundred Leagues in Circumference, and that this King is Master of many Islands which lie round about. Thus altogether this Kingdom is above a thousand Leagues in Extent; among those Islands there is one called *Serbezza*, which is said to be four hundred Leagues in Circuit; and another called *Rabimi*, which is eight hundred Leagues in Compass, and produces Redwood, Camphire, and many other Commodities. In this same Kingdom is the Island of *Caba*, which is the mid Passage between *China* and the Country of the *Arabs*.

This Island, they say, is fourcore Leagues in Circumference; and hither they bring all sorts of Merchandize, Wood-Aloes, of several sorts, Camphire, Sandal Wood, Ivory, the Wood called *Cabalu*, Ebony, Redwood, all sorts of Spice, and many other things too tedious to enumerate. At present the Commerce is carried on between this Island and that of *Oman*. The *Mebrage* is the Sovereign over all these Islands; and that in which he makes his Abode is extremely fertile, and so very populous, that the Towns almost crowd one upon another. A Person of great Probity relates, that when the Locks grow at their accustomed Hours, just as with us when at roost, upon Trees, they answer each other a hundred Leagues round, and more, because of the Proximity of the Villages which almost touch each other; and he adds, that no part of it is uninhabited, nor any of its Land uncultivated. Those who travel in this Country may stop at every Step, and find Shelter from the Beams of the Noon-day Sun; and if they are tired, they may repose themselves every Day at Noon, go which way they will.

45. Yet what follows from the Testimony of several Persons is, the most remarkable Particular we have heard concerning the Island of *Zapage*. There was formerly a King, or, as he is there called, *Mebrage*: His Palace is still to be seen on a River as broad as the *Tygris* at *Bagdad*, or at *Bassora*. The Sea intercepts the Course of its Waters, and drives them back again with the Flood; and during the Ebb, it streams out fresh Water a good way into the Sea. This River is let into a small Pond close to the King's Palace, and every Morning the Officer, who has Charge of his Household, brings an Ingot of Gold wrought in a particular manner, which is thrown into the Pond in the Presence of the King. The Tide rising, covers it with the rest, and quite conceals them from Sight. But low Water discovers them, and they appear plain by the Beams of the Sun. The King comes to view them as often as he repairs to an Apartment of State, which looks upon this Pond. This Custom is very scrupulously observed; and thus they every Day throw an Ingot of Gold into this Pond as long as the King lives, not touching them upon any Account, but regarding this as a sacred Treasure.

When the King dies, his Successor causes them all to be taken out, and not one of them is ever missing. They count them, and melt them down; and this done, the Sums arising out of this great Quantity of Gold are distributed to those of the Royal Household, Men, Women, and Children, to the superior and inferior Officers, each in pro-

portion to the Rank he bears; and the Surplus is given away to the poor and infirm. Then they reckon up the Number of Ingots, and what they weigh, and say such a *Mebrage* reigned for many Years; for he left so many Ingots of Gold in the Pond of the Kings, and they were distributed after his Death to the People. It is accounted a Felicity with them to have reigned a long while, and to have thus multiplied the Number of those Ingots given away at their Death.

46. Their ancient History relates, that one of the Kings of *Komar* would have waged War with him in this Island. This Country of *Komar* is the same from whence they bring the Wood-Aloes called *Hud al Komari*, nor is there any Kingdom more populous in proportion than that of *Komar*. The Inhabitants are all very courageous, and the boundless Commerce with Women, and the Use of Wine are forbidden among them; nor have they any Wine in their Country. This Kingdom was at Peace with that of *Zapage*, where reigned the *Mebrage*. They are divided from each other by a Passage of ten or twenty Days Sail, with a very easy Gale. They say, that in former Days there was a very young and high-spirited Prince in this Island of *Komar*. This King was one Day in his Palace, which looks upon a River much like the *Euphrates* at the Entrance, and but a Day's Journey from the Sea; his prime Ministers were with him, and in the Discourse they had together, notice was taken of the Kingdom of the *Mebrage*, and its Glory, how well it was peopled and cultivated, and the Crowd of Islands which depended thereupon.

Then said the King of *Komar* to his Minister, I am seized with a Desire which I earnestly wish to see accomplished. The Minister, who was a wife and a prudent Man, and no Stranger to the Levity of his Master, answered, My Lord, what is your Desire? I could wish, replied the King, to see in a Dish the Head of the *Mebrage* of *Zapage*. The Minister, well aware it was Jealousy that inspired him with this impetuous Fury, rejoined, My Lord, I wish you would not disturb your Mind with such Thoughts, since nothing ever fell out between these People and us, to furnish Matter of Complaint, they never offended us by Word or Deed, or ever did us the least Injury; besides, they are divided from us, and have no manner of Communication with our Country; nor do they discover any Inclination of making a Conquest of this Kingdom. No one therefore ought to hearken to such Discourse, or make a Word of Answer upon this Head. The King was enraged at this Reply, and said not a Word thereto; but without any Regard had to the good Advice of his first Minister, he opened the same thing to the principal Officers of State, and to such of his Courtiers as he thought proper.

47. This Matter being rumoured about, at length reached the Ears of the *Mebrage*. He, who then reigned, was a wife and an active Prince, of consummate Experience, and in the Flower of his Age. He called for his first Minister, and having acquainted him with what he had heard, said to him, it is by no means proper to publish the Behaviour of this giddy Prince, or to betray how little we esteem him, because of his Youth and slender Experience; nor is it expedient to divulge what he said against me; for such Speeches cannot but be prejudicial to the Dignity of a King. Having thus enjoined his Minister to conceal what had passed between them, he commanded him to prepare a thousand Ships of no extraordinary Size, and to equip them with all things necessary, Arms and Ammunition, and to man them with as many of his best Forces as they could transport. Then he gave out, that he would make a Voyage through the neighbouring Islands under his Dominion, to divert himself. He wrote also to all the necessary Princes of those Islands to acquaint them, that he designed them a Visit; and this being a publick Talk, each of those Kings prepared for the Reception of the *Mebrage*.

^a It is most evident from our Author's way of reasoning, that he had no Notion of any Passage by the *Cape of Good Hope*; for if he had, he would most certainly have taken this Opportunity of insinuating it. At the same time, however, I leave it to the Reader's Consideration, whether this vessel, supposing it to have been built in the *East Indies*, might not have come this way into the *Mediterranean*, more probably than by the *North Sea* Passage. It is likewise clear from what our Author has delivered, that the *Arabians* knew no more of *Zapage*, which they called *Saba*, than they learned from the *Chinise*, since by the Testimony of the oldest of our Authors, no *Arab* had yet set Foot there in the Year of the *Hegira* 130 A. D. 844.

When every Thing was in readines as he had ordered, he went on Board his Ships, and with a powerful Army sailed over to the Kingdom of *Komar*. The King and those belonging to his Court were effeminate Creatures, who all the Day long did nothing but view their Faces, and rub their Teeth with Mirrors and Toothpicks in their Hands, or if they moved, had them carried after them by Slaves. So the King of *Komar* discovered nothing of the *Mbrage's* Purpose, till he appeared in the Mouth of the River, on which stood the Palace of the King of *Komar*, and till he had landed his Troops, who immediately invested the Capital, and there took him. The King was taken in his Palace, and all that belonged to him fled without fighting.

Then the *Mbrage* caused Proclamation to be made, that he granted entire Security of Life and Effects to all the Inhabitants of the Country, and seating himself on the Throne of the King of *Komar* now a Captive, he ordered him to be brought into his Presence, together with his first Minister. Then addressing himself to the King of *Komar*, he said, Who was it filled your Head with a Project unequal to your Strength, and absolutely impossible for you to compass? What would you have done if you had gained your Point? This Prince who had nothing to say for himself, made no Answer. Then, continued the *Mbrage*, if you had enjoyed the Pleasure you wished, of seeing my Head in a Dish before you, you would have spoiled my Kingdom, and retained it alter you had committed all sorts of Violence. I will not so behave with Regard to you, but yet I will execute upon you what you wished concerning me, and then will I return into my Kingdom, without touching any Thing in your Dominions, and without carrying away ought of great Value or small, desirous only that you may be recorded an Example, for the Instruction of those who shall come after you, that none may exceed the Bounds of his Power, that each may be contented with his own, and that those you have disturbed may be restored to perfect Security.

This said, he ordered them to strike off his Head, and then turning to the Minister he said, You have done all a good Minister could do; I know you offered good Advice to your Master, and that he hearkened not unto you. Consider who may best succeed this Fool for the Good of the Kingdom, and set him immediately upon the Throne. This done, the *Mbrage* departed for his own Territories, and neither did he or any of his, lay Hands on the least Thing in the Kingdom of *Komar*. When he arrived in his own Kingdom, he sat down upon the Throne, and being in the Palace which looked upon the Pond before-mentioned, he caused the Head of the King of *Komar* to be put into a Basin and set before him, and calling in the Chiefs of his Kingdom, he acquainted them with all he had done, and with the Reasons which had induced him to the Expedition we have related, and they approved the Deed with Acclamations and Prayers for his Prosperity. Then he ordered the Head of the King of *Komar* to be washed and embalmed, and put it into a Coffin, and sent it back to the King of *Komar*, who had been elected in the Room of him he had put to Death; at the same Time writing a Letter to this new Prince in the following Terms: What inclined us to do what we did to your Predecessor, and your Lord, was, his known Malvolence towards us; and that we might set an Example to his Equals, we have been so happy as to treat him as he would have treated us. But we think it convenient to send his Head back to you, having had no Design of detaining it, or of arrogating any Glory to ourselves, from the Advantage we obtained over him. The News of this Action being re-

ported to the Kings of the *Indies* and of *China*, it added to the Respect they before had for the *Mbrage*, and from that Time it has been a Custom with the Kings of *Komar*, every Morning they rise to turn towards the Country of *Zapage*, to prostrate themselves on the Ground, and to make the most profound Inclinations in Honour of the *Mbrage*.

48. All the Kings of the *Indies* and of *China* believe the Metempsychosis or Transmigration of Souls, and make it an Article of their Religion. A Person of Credit relates, That one of these Princes being newly recovered of the Small-pox, and beholding himself in a Glass, was deeply troubled to see how sadly his Face was disfigured, and that turning himself towards one of the five Sons of his Brother, he said to him, sure it never happened to any Man as to me, to remain in his Body after such a Change! But this Body is only a Vessel puff'd up with Wind, and when the Soul leaves it, she passes instantly into another. Go mount you upon the Throne, for I am about to separate my Body from my Soul, until I return into another Body: At the same Time he called for a sharp and keen *Gangiar*, with which he commanded his Nephew to cut off his Head, which the other did, and he was afterwards burnt, as is the Custom of the Country. Our Author here quits his Subject somewhat abruptly, in order to return again to the Country of *China* and the Manners of its Inhabitants. The Reason of this is not at first Sight very evident, but if we consider that he follows the former Writer, we shall very easily discern that this was the true Cause of his making so sudden a Transition. What he had before said was in Consequence of the Facts delivered by the first Author in Regard to the *Indies*, and having discussed these it was natural for him to follow that Author in what he says of *China* and the *Chinese*, and indeed it must be allowed, that notwithstanding these small Interruptions, there are scarce any Books of Travels of so ancient a Date, written in a clearer or better Method than these.

49. The *Chinese* were wonderfully regular in all Things relating to Government, before the last Revolution destroyed and reduced them to the State they are in at present. There was a certain Merchant, a Native of *Chorasjan*, who coming into *Irak*, there dealt to a considerable Amount, and having bought up a Quantity of Goods went to *China*. This Man was extremely selfish and of incredible Avarice; it happened that the Emperor of *China* had sent one of his Eunuchs to *Cansu*, the City of all the *Arabian* Traders, there to purchase what he wanted, and was to be had on Board of the Ship that was arrived. This Eunuch was one of those who had the largest Share in his Master's good Opinion and Confidence, and was Keeper of his Treasure and of all that he esteemed precious.

A Dispute arose between this Eunuch and the before-mentioned Merchant, about some Pieces of Ivory and other Goods, and it ran so high that the Merchant refused to deal with him. But this Affair making a great Noise, the Eunuch pushed it so far, that he forced from him the Choice of his Goods, despising whatever the other could say to him. The Merchant withdrawing himself, went privately to *Candian* where the Emperor resides, and which is two Months Journey from *Cansu*, and being arrived he went to the String of the Bell mentioned in the former Book. The Custom was, that whoever pulled it was thereupon sent ten Days Journey from thence, into a kind of Banishment; it was ordered also that he should be committed to Prison, there to remain for two whole Months; which expired, the Vice-King or Governor of the Province released him, and said you have involved yourself in an

* This is a very pleasant Story, and well related: but with respect to the Country in which it happened, I think it very difficult to say any Thing with Certainty, and yet this does not at all lessen the Credibility of the Fact. It is not impossible however, that this History might relate to some of the Islands which are now called *Philippines*; or perhaps some of the Islands in the Straits of *Sonda*. I pretend to determine nothing in such doubtful Points, but leave the Reader to decide for himself, according to the Lights given him by the Author, who appears to have written with great Caution and Fidelity.

* This Doctrine of the Metempsychosis is generally held amongst the *Chinese*. Their Histories say, that one *Xekin*, or *Shokia*, an *Indian* Philosopher, who lived about a thousand Years before Christ, was the first that taught this Doctrine of Transmigration; and our Authors add, that the *Chinese* had it from the *Indians*. It overran *China* in the Year of Christ 67, and the Chiefs of this Sect have to this Day their Abode on or near the Mountain *Tsoan* in the Province of *Cheking*. This *Xekin*, according to the *Chinese* Tradition in *Navarrete*, has been born eight thousand Times over, the last Time in the Form of a white Elephant. It is he that was called *Faber* after his Apotheosis. The Sect of *Xekin*, as we are told by *Father Martini*, hold the Metempsychosis; but that a Soul is divided into two Branches, the one believing the exterior Metempsychosis, or that the Souls of Men pass after Death into other Bodies, and these worship Idols, and obtain from every Thing that has Life, while the other Sect has Faith in an interior Metempsychosis, which is the principal Foundation of their Morality, which consists in suppressing the Passions, which are as to many different Animals proceeding from Man; but neither the one nor the other expect Rewards or dread Punishments in the World to come.

Affair which may turn to your utter Ruin, and to the Loss of your Life if you speak not the real Truth; forasmuch as the Emperor hath appointed Ministers and Governors to distribute Justice to you and to all Strangers, nor is there any one of them that would not right you, if when you appear before the Emperor your Wrongs are not such as may entitle you to have recourse to him, it will most certainly cost you your Life, to the End that every Man who would presume to do as you have done, may be deterred from the same. Withdraw therefore immediately, and be gone about your Business. Now if the Party endeavoured to fly, he was chastised with fifty Strokes of the Bamboo, and was then sent back to the Country whence he came; but if he persisted in his Demand of Redress, he was admitted to an Audience of the Emperor.

The *Cheerassian* strenuously persisted in his Demand of Justice, and of Leave to be admitted to the Emperor, which was at Length granted him. The Interpreter asking him his Business, he related what had befallen him with the Emperor's Officer, and how he had forced from him a Part of his Effects. This Thing was soon divulged and noised about at *Cansu*: In the mean Time the Emperor commanded the Merchant to be cast into Prison, and that Care should be there taken that he wanted not for either Victuals or Drink.

At the same Time he ordered his Prime Minister to write to the Governor of *Cansu*, charging him to inform himself concerning the Complaints of this Merchant, and to examine into the Grounds thereof; at the same Time also three principal Officers received the same Order. These Officers are called of the Right, of the Left, and of the Middle, according to their Rank, have the Command of the Emperor's Forces under the Prime Minister. He trusts them with the Guard of his Person, and when he takes the Field for some military Enterprize, or on any other Account, each of them, according to his Rank, marches near him: These three Officers wrote each apart what they had upon the strictest Enquiry discovered of the Matter, and assured the Emperor that the Merchant's Complaint was just and well founded.

These first Informations were followed and confirmed by many more sent to the Emperor from divers Parts, and the Merchant was cited to appear. He no sooner arrived, than the Emperor seized on all his Effects, and deprived him of his Office as Treasurer, and then said to him, Death ought to be thy Doom for giving this Man who is come from *Cheerassan*, on the Frontiers of my Kingdom, Cause of Complaint against me. He hath been in the Country of the *Arabs*, whence he came into the Kingdoms of the *Indies*, and at last to my City, seeking his Advantage by Trade, and thou wouldst have had him return cross these Kingdoms, and have said to all the People in his Way, I have been abused in *China*, where they have stripped me of my Substance. I grant thee thy Lie in Consideration of thy former Services in the Rank thou heldst in my House, but I will confer on thee a Command among the Dead, forasmuch as thou hast not been able to acquit thyself of thy Duty in that thou heldst over the Living, and he ordered him to be sent to the Tombs of the Kings to have the Custody of them, and there to remain for ever his Life.

50. One Thing most worthy Admiration in *China* before the late Conjunctions, was the good Order they observed in the Administration of Justice, and the Majesty of their Tribunals; to fill them, they made Choice of such Men as were perfectly versed in their Laws, and such constantly were never at a Loss, when they were to pass Judgment, Men of Sincerity, zealous in the Cause of Justice upon every Occasion, not to be biased by what

the Great could offer to embroil a Dispute, so that Justice was always admittred to him who had Right on his Side.

In a World, they made Choice of upright Men, of Men who neither oppressed the Poor, or accepted Presents from the Rich. When they designed to promote any Man to the Office of Principal Judge, they previously sent him to all the chief Cities of the Empire, in each of which he staid a Month or two. During this Space it was his Business most minutely to enquire into the Affairs of the People, into all that passed in the City; and into the various Customs. He informed himself of all such as deserved to be believed upon their Testimony, and this Knowledge was of Use to him in the Sequel as Occasion required. After he had gone through all the Cities in the Manner aforesaid, and made a Stay of some Time in the most considerable of them, he repaired to the Imperial Court, where he was invested with the Dignity of Supreme Judge.

To him therefore the Emperor referred the Nomination of all the other Judges, and by him were they appointed, after he had acquainted the Emperor with those, who in his whole Dominions were most worthy of exercising Jurisdiction, each in his own City, or in others; for he knew who were commendable for their Understanding, and so no one was raised who possessed not adequate Endowments, or who bore not Testimony according to the Truth, when he was interrogated. The Emperor allows none of his Judges to write to him upon any Affair, when he is informed that he has done Injustice, and even deprives them of their Office. The supreme Judge causes Proclamation every Day to be made before his Gate by his Officers, and in his Name they cry out, If any Man hath been wronged by the Vice King, or Governor, who is not to be seen of the People, or by any one of his Relations, or Officers, or by any one of the Body of the People, I will do him ample Justice, so soon as the Offender is put into my Hands, and that I have Charge of him. This Proclamation is three repeated.

It is an ancient Custom with them never to degrade a Vice King, or Governor of a City, but by virtue of Letters issued out of the Council or Divan of Kings; and this is commonly executed for some flagrant Malversation, or when Judgment is suspended or delayed: But when the Governor avoids these two things, it is seldom he is disturbed with Letters of Revocation, which are never drawn up but on a legal Account. The Posts of Justice are conferred on none but Persons of Probity, and Lovers of Justice, and so good Order is maintained in the Kingdom.

51. The Province of *Cheerassan* is almost on the Borders of *China*. From *China* to *Segd*, it is of about two Months Journey through impracticable Defarts, and through a Country all covered with Sand, where no Water is to be found. It is not refreshed by any Rivers, nor is there any Habitation in this Province; and for this Reason it is that the *Cheerassians* can make no Irruptions into *China*. That Part of this Empire which lies furthest Westward, is the Province of *Meda*, which borders upon *Tibet*, so that on this Side the two Nations are at War with each other.

Among those of our Time who have travelled into *China*, we were acquainted with one, who told us, he had seen a Man that had a Vessel with Milk in it on his Back, and had travelled on Foot from *Samara*, and to *Caspia*, the Port for all Merchants from *Siraf*. He had by Land travelled thro' all the Cities of *China* one after another, which might easily do, because the Provinces of *China* and *Tartary* where the Creature that affords Milk is met with, are contiguous. The *Chinese* carry off as many of these Creatures as they can; and those of *Tibet*, on their Part, do the same.

1 This was a very extraordinary Act of Justice in the *Chinese* Emperor, and very agreeable to the Maxims of that Empire, in which they are not so particular Occasions, of doing Things of this Nature, especially where Strangers are concerned for two Reasons. The first is, that the same may be used and abused, and create an high Idea of the Equity of their Judgments, a Thing very agreeable to the natural Vanity of these People. The other, that it may have a good Effect at Home, and serve to make even the greatest and most powerful Persons in *China*, afraid of committing Faults in their respective Offices.

2 As to the Country of *Tibet*, it may not be amiss to say something of it here, because it will occur in the subsequent Part of this Work. It lies at this Day a Part only of the great Kingdom of *Tangra*, which, according to the best Accounts that I have met with, is thus situated. It lies the Empire of *Cheerassan* on the East. The Kingdom of *Ara*, or of *Brama*, on the South. The Dominions of the Great Mogul on the West, and those of the Emperor of *Great Kion* of the *Caucasia Tartary*, on the North. This Kingdom is divided into two Parts; that which lies to the North, is the Kingdom of *Tibet* properly so called; and the South Part is the Country of *Tibet*. Both taken together, make the Patrimony of that famous Patriarch Phouma, or Grand Lama, who is the Pope or Sovereign Pontiff of the *Tartary*; that are not *Mohammedans*; but whether they or he ought to be considered as the Pope, or Grand Lama is a Point that admits of much Dispute, and shall therefore be discussed in another Place.

But the Musk of *Tibet* is far preferable to that of *China* for two Reasons; first, in *Tibet* this Creature feeds on Aromatic Pastures, while in *China* he has nothing to furnish him but what is common; secondly, the Inhabitants of *Tibet* preserve their Bladders or Cods of Musk in the pure natural State, while the *Chinese* adulterate all that come into their Hands. They dip them also into the Sea, or else expose them to the Dew; and having kept them some time, they take off the outward Membrane, and then close them up; and this Musk passes in the Country of the *Arabs* for Musk of *Tibet*, because of its Excellence.

The most exquisite of all the sorts of Musk is what the Roebucks that yield it leave behind them when they rub themselves against the Rocks on the Mountains; for the Humour whence it is generated, falling down towards the Navel of the Creature, it there gathers into a Quantity of turbid Blood exactly like Biles, and such-like Tumours; when this Swelling is ripe, the Creature, sensible of a painful Itching, jerks out for Stones, and rubs himself against the same, till he opens his Sore, and the Contents run out. Now, as soon as this Matter falls from the Creature, it coagulates, the Wound closes, and the same kind of Humour gathers to a Head again as before.

In *Tibet* there are Men who make it their Business to collect this Musk, and are very ready in knowing it; and having found it, they carefully collect it, and put it up in Bladders, and it is carried to their Kings. This Musk is most exquisite, when it has ripened in the Bladder of the Creature which bears it. It surpasses all others in Goodness, just as Fruit is better when it is gathered ripe from the Tree, than when it is pulled green.

There is still another way of getting Musk; they insinuate the Creature in Toils, and shoot him with Arrows; but it often happens, that the Hunters cut the Tumours of the Creature before the Musk is elaborated; and in this Case it has at first an ill Scent, that prevails till the Matter is thickened, which sometimes does not happen in a great while; but so soon as it coagulates, it turns to Musk. This Musk is a Creature like our Roebuck, his Skin and Colour the same, with slender Legs, a slight Horn smooth, but somewhat bending withal; on each Side he has two small white Teeth, which are frait, and rise above his Muzzle, each half a Finger, or somewhat less in Length, and in their Firm not unlike the Teeth of the Elephant; and this is the Mark which distinguishes this Creature from other Roebucks.

53. The Emperors of *China* write to the Kings or Governors of Cities, to the Eunuchs, or Lieutenants, and their Letters are conveyed by Post-horses, with a cut Tail, copied almost like the Posts among the *Arabs*, in such Order as every body knows.

Besides what we have here related concerning the *Chinese* Customs, it is usual for the Princes, and even the People, to make Water standing. Persons of Dignity, as the Vice Kings, and the principal Officers, have gilded Canes a Cubit long, which are bored through; and these they use as often as they make Water, standing upright all the time, and by this means the Tube carries the Water to a good Distance from them. They are of Opinion, that all Pains in the Kidneys, the Stranguy, and even the Stone, are cured by making Water in a sitting Posture; and that the Reins cannot free themselves absolutely of these Humours, but by standing to evacuate; and that thus this Posture contributes exceedingly to the Preservation of Health. They suffer their Hair to grow, for the Men

will not round the Head of a Child when he comes into the World, as the *Arabs* do, for they say it causes a considerable Alteration in the Brain, and that their Senses are very sensibly impaired thereby. They suffer the Head then to be all covered with Hair, which they carefully comb.

As for their Marriages, they observe the Degrees of Consanguinity after this Manner: They are divided among themselves into Families and Tribes, like the *Arabs*, and some other Nations; and they know each other by the Difference of their Descents. No Man ever marries in his own Tribe, just as the Children of *Thummim* among the *Arabs* take not to Wife a Daughter of the same Race of *Thummim*; and a Man of one Family espouses not a Woman of the same. But for example, a Man of the Family of *Robayat*, marries into that of *Modzar*; and in like manner a *Modzar* marries with a *Robayat*; they are of Opinion, that such Alliances add to the Nobility of the Children, by increasing their Alliances, and rendering their Families more powerful.

Here our Author makes, as it were, another Break in his Work, in order to pass once more to the *Indians*, and their Customs. In speaking of the Method pursued by the first Author, we observed, that the main Design of his Work was, by comparing the Manners of the *Indians* with those of the *Chinese*, to render them both better known to, and more fully understood by his Countrymen. His Commentator therefore, with great Propriety, follows the same Track; and as he had consulted both Books and Travellers to illustrate what had been said of *China*, we shall find him as diligent in what regards *India*.

54. In the Kingdom of the *Balbara*, and in all the other Kingdoms of the *Indies*, there are certain Persons who burn themselves. This Custom proceeds from their Notion of a Metempsychosis or Transmigration, which they firmly believe as a Truth never to be disputed. There are Kings, who upon their Accession, observe the following Ceremony: They dress a great Quantity of Rice, and pour it upon Leaves of the Mousa in Sight of the King; then three or four hundred Persons come of their own Accord without the least Constraint on the Part of the King, and present themselves before him; after he has eaten some of this Rice, he gives a little of it to some of them as fast as they come up to him one after another, and they eat it in his Presence. By eating of this Rice, they all engage to burn themselves on the Day the King dies, or is slain; and they punctually fulfil their Promise, throwing themselves into the Fire from the first to the last, so that not one of them is left behind.

When a Man is determined to burn himself, he first goes to the King's Palace to ask Leave so to do, and having obtained it, he goes round the publick Squares of the City, and proceeding afterwards to the Place where the Pile is heaped up with dry Wood, while round about it stand many Persons who feed the Fire, so that it is very violent, and blazes prodigiously. At last the Person comes preceded by a Number of Instruments, and moves round the Place in the midst of his Friends and Relations; during which some put upon his Head a Garland of Straw, or dry Herbs, which they fill with burning Coals, whercon they pour Sanderac, which catches Fire as strongly as Naphtha; nevertheless, he continues the Procession, although the Crown of his Head be all on Fire, and the Stench of his burnt Fleth be smelt, not so much as changing Countenance in the least, or betraying the smallest Sense of Pain:

* We have formerly mentioned the Animal which produces Musk, the Manner in which it is prepared, and the Value of that rich Perfume. At present we shall only remark, that the best Writers, Ancient and Modern, agree perfectly with our Author in Opinion, that the richest and highest scented Musk is that of *Tibet*, or, as others call it, *Thungst*; and this because of the Aromatic Pastures in that Land, such as are so where else to be found. The true *Indian* Musk comes next in degree of Excellence, if so we may term it, with what was brought to *Cabal*, and the other trading Towns on the *Indies* by *Archeris*, who carried it first to *China* by Land, and disposed of it through out the East. That the *Chinese* Musk is worth less, not only because the *Chinese* adulterate it several ways, but also because what is produced naturally in that Kingdom is not comparable to what is in *Tibet*. All this is confirmed by the Testimony of the learned *Cabani* and *Father Martini*; *Teixera* says, the Musk that does not come from *China* is always the best; and that the reason is, because the *Chinese* cannot hold in their Hearts to let that or any thing else that passes through their Hands escape unadulterated. At present the Kingdom of *Thibet* is the principal Kingdome for Musk; and thence it is, that the *Indian* Merchants fetch the best sort of this Perfume, whether in the *Arab*, or out of it.

† This was a very odd Custom in other Parts of the World, as appears from what *Cesari* tells us of the *Ambachi* amongst the *Caals*. In the *Indies* the custom generally prevailed; for in the Island of *Ceylon* the King had always about him certain Noblemen, who filled themselves faithful to the King in this World, and in the next, and whose Custom it was to burn themselves when he died. *Barkaja* buries the same thing, and obliges to the same sort of *Indian* Soldiers, who always perished with their Chief. In the Kingdom of *Torgata*, when the King died, many of his Nobles chose to be buried with him. In a word, all the *Portuguese* Writers confirm this, and give us many Instances in support of it. The term they use of it in their Writings, to express this Act of devoting themselves in a such a manner to a Monarch, is *Fazer se queimar*.

At last he comes to the Pile, throws himself into it, and is soon reduced to Ashes*.

55. A certain Person, to whom we give intire Credit, says, he be held one of these *Indians* burn himself, and avers, that when he came near to the Pile, he drew out a Cangiar, and with it ripp'd down his Breast to the Rim of his Belly; and that this done, he with his left Hand pulled out a Flap of his Liver, and with the Cangiar cut a Piece of it, which he gave to one of his Brothers, talking all the time, and discovering an invincible Contempt of Death, and a wonderful Patience under his Torments, till at last he leaped into the Fire in his Passage to Hell.

56. The Person who affirmed this added, that in the Mountains of this Country there are *Indians*, who in Opinions and Manners differ but little from those we call *Kanians* and *Jelidians*, and who are addicted to all manner of Superstition and Vice; there is a great Emulation between these Mountaineers and the People on the Coast, the latter continually going up to the Mountains to dare the Inhabitants there to do as they do, and the Mountaineers on their Part as frequently coming down to the Coast with Defiances of the same Nature.

57. Among others, there once came down a Man on this Strand, and having gathered a Number of the Inhabitants of the Coast about him, who came as well out of Curiosity to see the Sight, as with Intent to imitate him, he told them to do what he was about to perform, or if they despaired of doing it, to acknowledge themselves overcome. He sat himself down then in a Place planted with Canes, and directed them to bend one of them down to the Ground. These Canes are like our Sugar Canes, bend like them, and have a very large Stem, when they are pulled down they lie along, but when let go they rise again with prodigious Violence. One of the largest of these he caused to be bowed down to his Height, and fastened his Hair strongly thereto, when taking in his Hand his Cangiar, which sparkled like Fire, he said to those about him, I am going to cut off my Head with this Cangiar. As soon as it is severed from my Body, let go the Cane, and when it flies up with my Head, I will laugh, and you shall hear me. The People of the Coast had not Courage enough to imitate him. The Person who related these Things to us did it without Emotion or Wonder; and in our times these Facts are very generally known, for this Part of the *Indies* is in the Neighbourhood of the Country of the *Arabs*, and we hear from thence every Day.

58. It is a customary Thing also for Men and Women of the *Indian* Blood, to desire those of their Family to throw them into the Fire, or drown them when they are grown old, or perceive themselves sink under the Weight of their Years, firmly believing that they are to return in other Bodies. They burn their dead. It has often Times happened in the Isle of *Sarandib*, where there is a Mine of precious Stones in a Mountain, a Pearl Fishery, and other rare and extraordinary Things, that an *Indian* would come into the Bazar, or Market-place, with his Kris, as they call a kind of Cangiar they wear, made after a very particular Manner, and seize on the most wealthy Merchant there present, and holding his Kris to his Throat, leading him by the Vest out of the City in the Midst of a Throng of People, while not a Soul of them dared attempt his Rescue; for if any Attempt of this kind was made, the *Indian* was sure to kill the Merchant, and make away with himself: When he had got him out of the City, he obliged him to redeem himself with a Sum of Money. This Outrage continuing, the Kings ordained that such *Indians* should be seized; but when they came to execute this Order, the *Indian* killed the Merchant first, and then himself: The same Misfortune befel many other Merchants; and after this Manner a Number both of *Arabs* and *In-*

dians perished: The Merchants therefore sought after other Means to secure themselves, and the *Indians* were no longer apprehended.

58. In the Mountain of *Sarandib* they find precious Stones of various Colours, red, green, and yellow, most of which are at certain Times forced out of Caverns and other Recesses by Rains and Torrents. In these Places the King has his Officers to keep an Eye over those who pick them up: Many Times also they are dug out of Mines in the same Manner as Metals; and they sometimes find precious Stones in the Ore, which must be broken to get at them.

The King of this Island makes Laws, which are the Fundamentals of the Religion and Government of the Country; here are Doctors and Assemblies of learned Men, like those of the *Hadithis* among the *Arabs*. The *Indians* repair to these Assemblies, and write down what they hear of the Lives of their Prophets, and the various Explications of their Laws. Here is a very great Idol of the finest Gold, but concerning the Weight thereof Travellers are not agreed. Here also are Temples, where great Sums of Money are expended in Incense.

In this same Island there is a very great Multitude of *Jews*, as well as of many other Sects, even *Tosars*, or *Manichees*, the King permitting the free Exercise of every Religion. At the End of this Island are Vallies of great Length and Breadth, which extend quite to the Sea. Here Travellers stay two Months and more in that called *Gao Sarandib*, allured by the Beauty of the Country, chequered with Groves and Plains, Water and Meads, and blessed with a wholesome Air. This Valley opens upon the Sea called *Harkand*, and is transcendantly pleasant. You there buy a Sheep for half a Dram, and for the same you purchase as much of their Drink as may suffice many Persons. This Drink is made of Palm-honey, boiled and prepared with *Tari* (*Todd*) or Juice which runs from the Tree.

59. Gaming is the usual Diversions of the Inhabitants here; they play at Draughts, and their other principal Pastime is fighting of Cocks, which are very large in this Country, and better provided with Spurs than Cocks commonly are; and, besides this, the *Indians* amuse them with Blades of Iron in the Form of Cangjars. Upon these Combats they bet Gold, Silver, Lands, Farms, which are won by the Owner of the Cock that beats. They play also at Draughts, and venture great Sums upon this Game, but with such Fury, that those who have not wherewithal, Debauchees and desperate People, often play away the Ends of their Fingers.

While they are at play, they have a Fire by them, and thereon a Pot of Walnut or Sassafras-oil (they have no Oil of Olives) and they place a little, but very sharp Hatchet between them; when one of them has won a Game, the other lays his Hand upon a Stone, and the Winner cuts off the End of the Loser's Finger with the Hatchet, and the Patient dips the injured Part into the boiling Oil to cauterise the Wound, and yet they cannot shake off this evil Habit of gaming; on the contrary, they sometimes persist in it so obstinately and so long, that before they part, they have all their Fingers mutilated. Some of them will take a Wick, and soaking it in Oil, apply it to some Member, let Fire to it, and let it burn, so that the Scent of the burnt Flesh is such by those who play with them, while the Parties themselves become not the least Sense of Pain.

There is much Debauchery in this Country, as well among the Women as among the Men, for they are held under no Restraint. It runs so high, that sometimes a foreign Merchant, just arrived from Sea, shall send for the Daughter of a King of the Country, and she shall come to him to the sitting Grounds, with her Father's

*There are many modern *Arabs* who attest every Circumstance mentioned in this Account; but it must be acknowledged, few besides Women burn themselves; and that the *Arabs*, who were wont to believe with so much Confidence on such Occasions, are now content to do in the same way as other Men; and even the Women, generally speaking, are far enough from that Spirit of Heroism for which they were so famous in former Ages. They burn themselves, indeed, with the dead Bodies of their Husbands, as in Times past, but not with so good a Will; nor would they do so, but that the Custom of their Country, and the Power their Relations have over them, oblige them to it.

It appears, that this Island, which is that of *Ceylon*, has been in all Ages famous for its immense Wealth and Riches. As to the Idol that our Author mentions, it is not impossible that the Priests of this Country might practise the same Art, which has been used at *Siam*, where they have a monstrous Idol of Clay and Bricks, very artificially gilt, which was for many Ages supposed to be pure Gold; though it must be allowed, that there are few Countries where such a golden Image might be looked for, with greater Probability, than in this Island, the People having been always famous for their Wealth and their Superstition.

Content and Privity; wherefore the *Mohammedan* Doctors of *Shraf* strictly warn young People not to go that Way.
60. In the *Indies* there are heavy Rains, which the People of the Country call *Jesara*; they last three whole Months during Summer, incessantly, Night and Day, and scarce does the Winter stop them. The *Indians*, to the best of their Abilities, prepare themselves against these Rains some Time before they fall; and no sooner do they come on, than they shut themselves up in their Houses, made of Wood and Cane, interwoven, and thatched with Leaves; they stir not out during all this Time, and no Soul is seen abroad, no, nor even the Artificers, who now do their Work at home; and during this Season, they are subject to several Sorts of Ulcers in the Soles of their Feet, caused by the Damps. The Rains are the Life of the *Indians*; were they to fail, they would be reduced to the utmost Want, for their Fields, sown with Rice, are watered only by Rains, and are rendered fruitful thereby; for if great Store of Water lie upon the Rice-grounds, they need no other Help either from Industry or Art; but when the Rains are plentifully poured down, the Rice flourishes abundantly, and even becomes much better in kind. It never rains in this Country in the Winter.

61. The *Indians* have devout Men, or Doctors, known by the Name of *Bramins*. They have Poets also, who compose Verses, stuffed with Flattery in Praise of their Kings. They have also Astrologers, Philosophers, Soothsayers, and Men who observe the Flight of Birds; and others who pretend to the Calculation of Nativities, particularly at *Kanage*, a great City in the Kingdom of *Guzerat*.

In the *Indies* there are certain Men called *Bicar*, who go all their Life-time naked, and suffer their Hair to grow till it hides their hinder Parts, and the rest of their Body. They suffer also their Nails to grow so that they become pointed, and sharp as Swords; nor do they ever cut them, but leave them to break and fall off as it happens; and this they observe as a religious Duty: Each of them has a String about his Neck, to which hangs an earthen Porringer, and when they are pressed by Hunger, they stop at the Door of some *Indian* House, and those within immediately, and with much Satisfaction, bring out Rice to them, believing there is great Merit in so doing, while they eat out of the Porringer and withdraw, never returning to make the same Request, if not urged thence by downright Want.

62. The *Indians* have many Laws, and religious Precepts, by which they imagine they please God; of such as these it is written in the *Koran*, *The Wicked are mighty in Pride*. One Part of their Devotion consists in building of *Kans*, or Inns upon the Highways, for the Accommodation of Travellers, where also they set up a sort of Pedlars, of whom the Passengers may purchase whatever they may happen to want.

They there also settle publick Women, such as are in the *Indies*, who expose themselves to Travellers; all which the *Indians* number among their meritorious Deeds. But they have besides these in the *Indies*, publick Women called *Women of the Idol*, the Origin of whose Institution is this; when a Woman has laid herself under a Vow, that she may have Children, if it happens that she brings forth a handiome Daughter, she carries the Child to the *Idol*, (so they call the *Idol* they worship) and there leaves her. When the Girl has attained a proper Age, she takes an Apartment in this publick Place, and spreads a Curtain before the Door, and waits the Arrival of Strangers, as well *Indians*, or Men of other Sects, to whom this Debauchery is made lawful; she prostitutes herself at a certain Rate, and delivers her Gains into the Hands of the *Idol's* Priest, to be by him disposed of for the Use and Support of the Temple. We praise the Almighty and Glorious God, who hath chosen us to be free of the Sins which defile the Man involved in Infidelity!

Not very far from *Amoy*, there is a famous *Idol* called *Makan*, whither they resort in Pilgrimage from the remotest Parts, even from Distances of several Months Journey: Some of the Pilgrims bring with them some of the Obedient Wood *Hud. el Camuni*, so called from the City of *Camron*; where they have an excellent Wood-Aloe, which they offer to this *Idol*, delivering it to the Priest of the Temple that he may burn it before his God. Some of this Wood is worth two Hundred *Dinars* the *Man*, and is commonly marked with a Seal to distinguish it from another Sort of the same Wood, but of less Value: It is usual for Merchants to buy it of the Idolatrous Priests.

63. There are likewise among the *Indians* certain Men, who make Profession of Piety, and whose Devotion consists in seeking after unknown Islands, or such as are newly discovered, there to plant Cocoa-nut-trees, and to sink Wells of Water for the Use of Ships that sail to those Parts. There are People at *Oman*, who cross over to the Islands that produce Cocoa-nuts, carrying with them Carpenter's Tools, and having filled as much Wood as they want, they let it dry, and then strip off the Leaves, and with the Bark of the Tree they spin a Yarn, wherewith they sew the Planks together, and to build a Ship; of the same Wood they cut and round away a Mast; of the Leaves they weave their Sails, and the Bark they work into Cordage: Having thus completed their Vessel, they load her with Cocoa-nuts, which they bring and sell at *Oman*. Thus it is, that from this Tree alone, so many Articles are derived, as suffice not only to build and rig out a Vessel, but to load her also when she is completed, and in a Time fit to Sail.

64. The Country of the *Zinges* or *Negroes*, is of vast Extent; they there commonly sow Millet which is the chief Food of the *Negroes*. Sugar Canes also they have, and other Sorts of Trees, but their Sugar is very black. These

* This is very agreeable to that Severity of Manners, for which the *Mohammedans* were remarkable in the early Ages; and it shews how careful they were to preserve the Morals of the younger Part of People uncorrupted. It was upon the same Principle that the *old Spartans* did not admit of any Commerce at all, as desiring rather to be known to Posterity by the Fame of their Virtues than of their Wealth; and being more assiduous to transmit to their Descendants Freedom, and the Power of maintaining it, than fine Palaces; and that Ability of living luxuriously, which ends sooner or later in absolute Poverty.

The Reader has been fully informed of the State of the *Peasants* among the ancient *Indians*, and of the Communities, formed by them for the promotion of Science, that there is no Need of insisting long upon this Settlement of the *Bramins*, which, without doubt, was a Remnant of some great University in the same Place. Some of the *Arabian* Geographers assure us, that this City of the *Kanage* lies between two Branches of the River *Indus*, in the Latitude of 27°, and in the Longitude of 131°. Other Eastern Writers inform us, that *Kanage* is also a Royal City, the King of which built the *Kanage*, according to the common Custom of the *Indian*. It is very difficult to say when or how, this Kingdom and University was ruined; but 'tis not very clear, that there is no such Establishment as in the Text is mentioned.

There are no other than the aforesaid *Bramins*, or *Indian* Pilgrims, or Penitents, mentioned by most Travellers, who relate very extraordinary Things with respect to the Austerity of their Manners, and the Severity of their Penances, as the Reader will see in the subsequent Part of this Work.

There are many Foundations of this sort in the *Indies*, as well as in *Turky*, *Peria*, and *Mexalissa*; not to mention the many Hospitals in the *Indies* for sick Animals. The most of these, that the Charity of the *Indians* of *Cebu*, consists in digging of Pits, or sinking of Wells, and in erecting a Number of small Receptacles on the Highways, for the Accommodation of Travellers.

The most famous Practice of old standing in the East *Herdutu* has a Story of this kind of the Women, who prostituted themselves in honour of *Makani*, who by the Analogy of the *Chaldees* must be *Taur*; and the Tents or Tabernacles of these Women were much like those described by our Author. In *Marco Polo* we read, that the People of the Province of *Cambaya*, did the same Thing, exposing their Women in honour of their *Idols*. *Tau* is a Species of a *Pagod* near *Cambaya*, whither most of the Courtizans of the *Indies* repair to make their Offerings, and adds, that old Women, who have scraped together a Sum of Money, buy young female Slaves, whom they train up to wanton Songs and Dances, and all the Attendants of their intemperate Calling; and that when the Girls have attained their eleventh or twelfth Year, their Mistress conducts them to this *Pagod*, under a Noon that it is a Happiness for them to be offered and delivered up to the *Idol*.

A third kind of Money is very oft mentioned, both in the former Treatise, and in this, it may not be omitted to say something of its Value: The *Dinars* of very fine Gold, and according to the Proposition which that Metal bears now to Silver, that Coin ought to be reckoned at about nine *Soldings*; from whence it follows, that nine of these Pieces of Copper Money, since a thousand of these Copper Pieces were equal only to one *Dinar*, from whence it follows, that nine of these Pieces of Copper Money, called by the *Arabs* *Falus*, were worth about One penny.

The *Pagod* is very singular, but the Facts contained therein are incontestably true: The Cocoa-tree furnishes every thing necessary for building and rigging such Ships as are used in the *Indies*, and for a Cargo of considerable Value when built. The Body of the Tree furnishes Plank, Mast,

There is another sort, which swims in great Lumps upon the Surface of the Sea, almost like the Body of an Ox, or a little less, and weigh a great deal. When a certain Fish of the Whale-kind, called *Tal*, sees these floating Lumps, he swallows the same, and is killed thereby: Then they see the Whale floating upon the Surface, and instantly the Men who are accustomed to this kind of Fishery, and know when these Whales have swallowed Amber, go out to him in their Boats, and darting him with Iron Harpoons, they tow him to Shore, where they split him down the Back and take out the Amber; what they find about the Belly of the Creature is commonly spoiled with the Wet, and contracts an unpleasant Scent.

You may buy the Bones of this Fish of the Druggists of *Bagdad* and *Bassora*. The Amber which has not been infected by the Ordure in the Belly of the Whale, is perfectly good: It is a usual Thing to make Stools of the *Vertebrae* of the Back Bone of this Whale, called *Tal*. They lay, that in a Village ten Leagues from *Siraf*, called *Tain*, there are old Houses nearly enough built, the Lintils of whose Doors are of the Rib of this Whale. I have heard a Person say, that formerly one was thrown upon the Coast not very far from *Siraf*, and that going to view him, he saw People getting upon the Back of this Creature with Ladders, and that the Fishermen exposed him to the Sun, sliced away his Flesh, and having digged a Pit, gathered up the Grease which was melted by the Sun, and that having drained off all the Oil, they sold it to the Masters of Ships. This Oil mixed up with another kind of Stuff, in use with Seamen, serves for calking of Ships to secure the Seams of the Planking, and to stop up Leaks. This Whale Oil is a valuable Commodity, and produces great Sums of Money.

67. Our Author proposing next to speak of Pearls, breaks out first, according to the Custom of the *Arabs*, into the following pious Soliloquy, which I would not omit, because it is a kind of Characteristick in their Manner of Writing, and may enable the Reader to account for such Apophthegms in other Pieces of this Nature. Let us before we speak of PEARLS and the Manner of their Formation, magnify the Great GOD, who in Wisdom has created all Things out of Earth, and so fashioned living Creatures, as that they produce their like. Wherefore for these Things which we know, and for many more which we know not, all Glory be unto the Almighty, and all Reverence paid unto his most holy and tremendous Name.

Pearls begin to be formed of a Substance at first somewhat like the Plant called *Anjedana*, being in Size the same, in Colour and Figure pretty much alike, small, thin, and tender, just like the Leaves of this Plant; at first it swims feebly on the Surface and sticks to the Sides of Ships under Water, where in Time it hardens, grows, and gets covered with a Shell. When these Oysters become heavy, they fall down to the Bottom of the Sea, where they subsist after a Manner to us unknown. They appear no other than a Piece of red Flesh, like the Tongue towards the Root, without Bones, Sinews, or Veins.

But there are various Opinions touching the Production of Pearls, for some say when it rains the Oysters rise up to the Surface, and that gaping, the Drops of Water they catch turn to Pearls. Others hold, they are generated in the Oysters themselves, which is most likely, and is confirmed by Experience; for most that are found in

Oysters are fixed, and move not. When they are loofe the Merchants call them Seed Pearl: God alone knoweth how this Matter is.

68. Now this is the most wonderful Thing we have heard concerning the Subsistence of Oysters. A certain *Arab* came formerly to *Bassora*, and brought with him a Pearl worth a great Sum of Money; he shewed it to a Druggist of his Acquaintance, and, ignorant of the Value thereof, asked him what he thought of it? The Merchant telling him it was a Pearl, the *Arab* asked him what he thought it might be worth, and he valued it at a hundred Pieces of Silver. The *Arab* much astonished at his Words, asked if any Person would be willing to give him what he had said it was worth: Upon which the Merchant counted him out a hundred Drams, and with this Money the *Arab* purchased Corn to carry back into his own Country. The Merchant on the other Hand brought the Pearl to *Bagdad*, and sold it at a very high Rate, which enabled him afterwards to deal very considerably. This same Merchant declared that he had examined the *Arab* touching the Origin of Pearls, and that he delivered himself to the following Effect: "I was going along, said he, by *Saman* in the District of *Babrein*, not very far distant from the Sea, and upon the Sand I saw a dead Fox, with something at his Muzzle that held him fast. I drew near and saw a white glittering Shell, in which I found the Pearl I took. Hence he gathered, that the Oyster was upon the Shore, driven thither by Tempest, which very often happens. The Fox passing by and leering at the Meat of the Oyster, as the Shell stood open, jumped thereon, and thrust in his Snout to seize the Fish, which in its Defence closing, locked him fast, as has been said; for it is a Property of theirs never to let go their Hold of any thing, except forcibly opened by an Iron Instrument at their Edges."

This is the Oyster that breeds Pearls, which it as carefully keeps as a Mother her Child. when therefore it was sensible of the Fox, it withdrew as to avoid an Enemy, and the Fox feeling himself squeezed, beat the Ground on each Hand till it was stilled and so died. The *Arab* found the Pearl, and God would have it that he should apply himself to the Merchant, a very happy Thing for him.

69. The Kings of the *Indies* wear Ear-rings of Stones set in precious Gold. They wear also Collars of great Price, adorned with precious Stones of different Colours, but especially Green and Red; yet Pearls are what they most esteem, and their Value surpasses that of all other Jewels; they at present hoard them up in their Treasures with their most precious Things. The Grandees of their Court, the great Officers and Captains wear the like Jewels in their Collars; they dress in a half Vest, and carry an Umbrella of Peacocks Feathers to shade them from the Sun, and are surrounded by those of their Train.

There are certain *Indians* who never eat two out of the same Dish or upon the same Table, and would esteem it a very great Sin if they should. When they come to *Siraff*, and are invited by any of the considerable Merchants who are in that City, they must though they are a hundred in Number, each have a separate Dish, and without the least Communication with the rest. The Kings and Persons of high Quality have fresh Tables made for them every Day, together with little Dishes and Plates wove of the *Cocoon* of a Leaf, in which they eat what is pre...

* The Abbé *Reaumur* in his Notes upon this Treatise, speaks very highly of this story, and seems to think it fabulous. There is however no sort of Cause for this Suspicion: Since this sort of Whale is very often found in the *W. I. Indian Seas*, and especially on the Coast of *Bermadar*, and vast Quantities of Ambergrace are taken out of its Guts. It is a very certain, that tho' the best of the *Perloner* is found in the *Indian Seas*; yet *Amberrigee* has been frequently found on the Shore even of our own Islands, as well as in some other Parts of *Europe*, and in *America* it is very common.

I must confess this Story seems to me by far the meanest Part of the whole Work, and all the Remarks upon Pearls are very low and trilling; but at the same Time it must be allowed, that we know very little more about them, than either the *Ancients* or the *Arabs*. What seems to be most probable is, that Pearls are not the natural Produce of any Oysters; by which I mean, that they are an irregular and accidental Production, occasioned by some Infirmity or Disease in the Fish. I am led to this Notion from two Reasons. The first is, that when Animal Substances begin to corrupt, they commonly stink, which perhaps may be the Effect of some intestine Motion; the other, that Pearl Oysters are not eatable, but tough, tasteless, and very unwholesome.

The Princes and the chief Inhabitants of these Countries, were by this Time better acquainted with the Nature and Value of all sorts of precious Stones than formerly they had been, and of these they had of all kinds from the Mines in the Island of *Ceylon*. It is remarkable that the *Arabs* have but one Word to signify coloured Stones, which is *Jacut*, or *Jacut*, which strictly speaking signifies a *Jacynth*; but to vary this, and to render it expressive of Rubies, Emeralds, and Sapphires, they add the Name of the Colour to the Stone. It will be proper to make two Remarks upon this Subject before we leave it: The first is, that our Author is perfectly in the right in his Observation, that Pearls are more esteemed in *India* than many other Parts of the World, and that they are more valued there in Proportion, than any other kind of Jewels. Our second Observation is, as to the carrying Emeralds thither from *Egypt*, which is a very plain Proof of the Truth of what we have often asserted, viz. that these Stones are not usually speaking Oriental, though they may, and indeed do very often come to us from the East.

the celebrated Doctor *Kempfer*, wherein he gives us a very entertaining Account of the Manner in which the Virtues of Tea were first discovered; neither is this at all foreign to my Subject, since it is an additional Proof of the Veracity of our Author, and clearly points out the Time when this Plant came first into Use among the *Chinese*, and, at the same time, fully refutes the Objection that had been raised from this Herb's not having a proper Character assigned it by the learned.

"This Herb, says he, which the *Japanese* call *Tijaa*, has as yet no Character assigned it by the *Literati*, but there are several in use, some expressing only the Sound of the Word, and others allusive to its Virtues. Among the latter, that is to be accounted, which gives it the Likeness of the Eye-lids of *Darma*, a holy Man, much famed among them. There is something very witty in this Allusion, and the Explanation of it deserves the greater Notice, because it very plainly points out the Time when this Herb first came into Use. Thus then the Story is told.

"This *Darma* was the third Son of an *Indian King*, whose Name was *Kojiraco*, and was the Head of a religious Order instituted by a famous *Indian Saint*, called *Sjaka*, who flourished in the Year before Christ 1028, and to whom this *Darma* was the twenty-eighth Successor in a regular Order. It fell out, that in A. D. 519, he was driven into *China*, where he applied himself entirely to the teaching of Mankind the Knowledge of God, and, as he called it, of the only true Religion, and the sole Means of acquiring Happiness. He was not content to enlighten the World only by his Doctrine, but studied to do it still more by his Example, striving by the Purity of his Life, the afflicting his Body, and the bringing all his Passions under perfect Subjection, to secure the Assistance of the Divine Grace. He eat nothing but the wild Herbs of the Field, and which is esteemed the very Perfection of Holiness in Man, spent his Nights without Sleep in the Contemplation of the Supreme Being; for he considered it as the highest Degree of Piety to forego Ease and Rest, that his Thoughts might be wholly employed in meditating upon God.

"It fell out, that after many Years watching, he was so overcome, as to fall fast asleep: His Vow thus violated, he was so afflicted when he awoke, that partly to expiate his Crime, and partly to secure himself from falling again into what he esteemed to great a Weakness, he cut off his Eye-lids, as the Instruments of his Offence, and threw them in a Fit of holy Zeal upon the Ground. The next Day coming to the Place where he had instituted this Punishment upon himself, he saw, with Amazement, a most wonderful Transformation, for he beheld each of his Eye-lids had taken Root, and had sprung up into the Shrub called TEA, which hitherto the World had never seen, or at least Mankind were unacquainted with its Virtues.

"By taking the Leaves of this Herb, but whether the chewing them, or prepared by Infusion, I cannot say, he found a wonderful Cheerfulness of Mind, and a Disposition perfectly suited to his divine Meditations. As he recommended the Use of this Herb to his Disciples, and as the Benefits derived therefrom were every where published, the Custom of drinking Tea grew quickly into Use among all sorts of People; and the

"mighty Virtues of this wonderful Herb became universally known and admired. Hence it is, that as hitherto no certain Character has been assigned for expressing the Herb Tea, and its Virtues, the Custom of distinguishing it by the Figure of *Darma's Eye-lids* has grown into Practice." So much says my Author for the Name of this Plant. The Story is plainly fabulous and extravagant; but like the Extravagancies of the East, full of Fire, and of that sort of enthusiastic Eloquence which conveys Ideas with such Force as prevents their Impressions from ever wearing out of the Mind.

We learn likewise from the first of our Travellers, that at the Time he visited their Country the *Chinese* were perfectly well versed in the Art of Pottery, and made a Kind of Porcelain, as fine, as beautiful, and almost as transparent as Glass. It is certain, that for many Ages after this we had very dark and confused Accounts of this Matter; and the Stories we are told in almost all the Accounts we have of *China* upon this Subject have apparently the Air of Fables, and look as if they were imposed upon their Authors by the *Chinese*, on purpose to conceal from them the Truth. It is a Point now universally agreed, that the Porcelain formerly made in this Country was infinitely better than what has come from thence of late Years; but the *Chinese* themselves carry this much farther, and maintain, that the old *China* we so much admire is very far inferior to what was made in these early Ages.

Doctor *Kempfer* tells us from the *Chinese* Historians, that this most excellent Porcelain was made in a certain Island not far from *Formosa*, or at least of the Earth found in that Island, which for the same Crimes in its Inhabitants, has long ago shared the Fate of *Sedon*, and lies now buried in the Sea. Yet it seems it is not sunk so deep, but that their Fishermen and Divers frequently bring up Vessels of this old Porcelain, which are sold at a most extravagant Price in *China* and *Japan*, on a Persuasion that they not only keep Tea better, but even heighten its Qualities, and restore its Flavour when lost by long keeping in other Vessels.

I do not pretend to make myself answerable for the Truth of these Facts, but I mention them only to shew, that in the Opinion of these People, who are undoubtedly the best Judges of their own Manufactures, the Porcelain made at the Time our Author speaks of was really superior in Quality to any that has been made since. But if it should be demanded, whether any Proof can be had of the Truth of this Fact, exclusive of what our Author delivers, I answer, there is. For in a Manuscript preserved in the *French King's* Library, the Credit of which cannot be doubted among the Articles of a noble Present sent *Nourredin* by *Saladin*, soon after he became Master of *Egypt*, mention is made of a Service of *China-Ware*, consisting of forty Pieces of several kinds. It is very true, that this Present was not sent till the Year of the *Hegira* 567, which answers to the Year of our Lord 1171, which is some Ages after the Time in which our Author wrote; but then it is to be considered, that this *China-Ware* had been long before brought to *Egypt*; and if it had not been much superior in Beauty to what was brought from the same Country, even at that Time, when the Trade to *Bassora* was in a flourishing Condition, it would not have been thought worthy the Acceptance of so great a Prince; and therefore when thoroughly considered, this Objection proves, at least in its necessary Consequences, a Confirmation of the Fact.

* *Amoenitat. Exotic. p. 608.* We shall have an Opportunity of inserting this learned Writer's Travels to *Japan*, in the second Volume of this Work; but the Passage here cited is from another Work of his, which is excellent in its Kind, notwithstanding what some such *French* Critics have insinuated to the contrary.

† *Utter Characters*, in his History of *Japan*, blames Do for *Kempfer* for inserting this Story, which he calls a ridiculous Fable; but I beg leave to say, that he had not well considered the Intention of the Parable, the Genius of the East in Nations or the Eastern Languages; for, if he had, he would probably have been of another Opinion. There is a wide Difference between Fables in Religion and Fables in Natural Philosophy, especially when they are known to be such, and introduced with no other View than to convey useful Knowledge in an easy, familiar and effectual Manner, all which were visibly consulted in the framing of this Story or Parable, which declares the Virtues of this Herb, by whom discovered, and when brought into Use.

‡ *Amoenitat. Exotic. p. 621.* Our learned Author tells us, that the *Japanese* Name of this fine Porcelain is *Misaki ubo*, and that the Island in which it was made was *Misaki no Seno*. He also tells us, that these Vessels are of different sizes, and consequently of different Prices; for, if he had, he would have told us twenty to one hundred *Tails*; but the largest and finest, which are generally bought for the Use of the Emperor of *Japan*, cost three, four, or five thousand *Tails* or *Tanels*, of which there are about three in a Pound Sterling. This is very moderate in comparison of what we are told by *Blouffier* in his Travels, p. 177, where he says, that the *Japanese* have Tea-pots that cost them between six and seven thousand *Tanels*. There seems to be two Mistakes in this; the first is a Tea vessel, which was not a Tea-pot, but a Tea-Canister; the second, as to the Sum, which was not Pounds, but *Tails*.

§ The Title of this *Manuscript* is *Mabisi*, which was probably the surname of its Author; but as to the particular Subject of the Book I can say nothing, the Passage I have mentioned from it being reported by the *Abbe Renaudot* in his Notice on our Author, p. 22.

I have dwelt the longer upon these Instances, and have taken the more Pains to support and confirm the Truth of them, because I am persuaded that an innate Credit is due to the Matters of Fact asserted by both of our Authors, and that consequently we may absolutely depend upon what they have delivered as to the State of *China*, and the *Indies*, within this Period of Time; that is to say, from *A. D.* 833, to 950, or thereabouts. This being clearly established, let us see what will follow from it. In the first place, it is most evident, that these Eastern Countries were in a very happy and flourishing Condition, were governed by their own Princes, and knew not, generally speaking, what it was to suffer by such sudden and violent Revolutions as have since happened in those Parts. It must, however, be at the same time observed, that though their State was far better than it is now, yet both our Authors agree that it was beginning to decline, that the Dignity of their Princes began to sink, the Severity of their Discipline to relax, and the Manners of their People to become much more corrupt than they had been.

In the next place, it is very evident, that in *China*, a Country still more remote than the *Indies*, the People were in this Period very well acquainted with the Condition of their Neighbours, to whom they must also have been tolerably well known; and yet within the Space of two hundred Years, the Face of Things were so entirely changed, that the *Chinese* lost almost all Knowledge of us in *Europe*, and we of them, as from the subsequent Part of this Chapter will clearly appear.

Lastly, we ought to conclude from the Consideration of these Facts from the State of things in *China* and the *Indies*, and especially from the Superiority of their Manufactures, that this Empire was in every respect in a much better Situation than in succeeding times; that is to say, was better governed, more populous, the Industry of the People better conducted, and their Foreign Commerce far more extensive than in the Ages immediately preceding the Discovery of the Passage thither from *Europe* by the *Cape of Good Hope*. The fixing all this firmly in the Reader's Mind, will contribute to his apprehending rightly all that follows, and will prevent his running into the opposite Vice of Incredulity, to avoid being thought credulous.

He will not be amazed when he hears of potent Princes that governed in the *Indies*, or in *China*, many hundred Years before we knew any thing with Certainty of those Countries; he will not be astonished at the Extent of their Territories, or what is reported of their prodigious Revenues; he will not be at a Loss to account for the different Condition of Places, when first visited by the *Europeans*, from that reported either by their own Histories, or Traditions. On the contrary, he will plainly perceive, by comparing the Facts laid down in the several Sections of this Work, that all this is not only probable, but certain; and that the Notions which some great Critics have advanced to the contrary, were not so much founded in greater Learning, or superior Abilities, as in strong Prejudices in favour of their own Countries, and in high Concepts of their own Abilities.

In Things of this Nature, all abstracted Reasoning ought to be laid aside, and we ought to draw our Conclusions from Facts only. If the *Indians* surpassed the Progress of the *African*, *Persian*, *Greek* and *Arabian* Empires, this is a strong, or to speak fairly, an invincible Argument to prove, that their Government was then in its full Vigour. If we see the *Indians* now for the most part a broken, dispersed, dejected, and despised People, preserving, however, still in their Manners and Customs, visible Marks of

that Policy ascribed to them by the *Greek* and *Roman*, as well as these *Arabian* Writers, we ought to conclude, that this Difference has been owing to mighty Revolutions in these Parts; after the History of which we must enquire, and not pretend to take up with the Assurances given us by fanciful Men, that these People were never in a better Condition.

I do not however pretend by this to establish by any means the Opinions entertained by some very great Men as to the Learning of the *Chinese* with regard to which our Travellers speak very freely, and I think there is Reason to believe very truly, affirming, that in regard to the Sciences the *Chinese* had very little Knowledge, that is, in Comparison of the *Arabs*, who at the time the last of our Authors wrote were very skillful in most Sciences; and though their famous Commander *Musa*, who conquered *Spain*, was the first that delivered it in the Form of a Maxim, yet it is very probable, that the *Arabs* had long before his Time those Sentiments of the Progress of Science which he so happily expressed. *Wikhom*, said he, descending from above, settled in the Heads of the Greeks, in the Hands of the Chinese, and on the Tongues of the Arabs. It plainly appears from hence, that what they most admired in *China* was the Industry of its Inhabitants, which was chiefly the Effect of their wise Government, derived to them, as is indeed every thing of Consequence they knew, seems to have been from the *Indies*. All therefore that from the Authority of our Authors I infer is, that the political State of *China* was at least as perfect anciently as it is at present in all its Branches; and not that they were better acquainted with Sciences than they are now.

71. The Reader, I persuade myself, is by this time of the same Opinion with myself as to the Value of these ancient Writers, and would be very well pleased to proceed with as good Guides during the rest of his Journey, which is, however, more than I can promise; but thus far I dare undertake, that he shall have as good Guides as are to be procured, and that the next Stage is the worst in the whole Road. There is, however, a Necessity of going through it; for it is with Learning, as it is in Travelling, there is no knowing of Things with Certainty by Reports. If we would be thoroughly satisfied, we must use our own Eyes; and to obtain a compleat View of the *Indies*, we must be content to read Voyages and Travels in their natural Order. It is plain from what these Authors tell us, that the *Indies* in their Time were not much altered from what they were in the Days of the *Greeks* and *Romans*; whereas when the *Portuguese* came thither, they were in quite another Condition; we must therefore learn how this came to pass. The thing is difficult indeed, but it must be done, for otherwise we have hitherto been doing nothing; and to leave a large Gap in our History in order to hurry on to modern Voyages, is to prefer Amusement to Instruction, which is certainly what neither I nor the Reader aims at; and therefore I flatter myself that he will be very well pleased with the Revival of the Voyages and Travels that follow, and which have never hitherto appeared in an *English* Dress at all suitable to their Merit.

Hacklart, our most ancient Collector, whose Pains can never be too much commended, gave such as came to his Hands in the best manner he could, and was therefore very commendable in that respect. *Parikas*, who followed him, complains, however, with Reason, that these ancient Writers were strangely disgraced, and therefore he thought it necessary to revise and republish them, for which also he deserves Praise; and there is no doubt he might have succeeded much better than he has done, if he had not ad-

¹ The Progress of Science from the *Indies* to *China*, and from thence to *Japan*, is very natural and agreeable to ancient History; but it does not follow from thence, that the *Indians* received their Learning from the *Egyptians*. It is far more probable, that they had it from the *Assyrians*, for Mankind spread originally from that Country, as *Meyer* informs us, and as all ancient History plainly proves. From *Chaldea* to the *Indies* the first Colonies might have easily proceeded by Land, whereas their own Writers allow, that the first Attempts by the *Egyptians* towards the Coast of *India* were by Fleets fitted out by the *Pedians*.

² We have very full Proof of the Truth of this Observation from what *Parikas* lays in his Pilgrims, Vol. III. p. 65. of *M. Pals*, where he has these Words: "I found this book translated by *Maria Hacklart* out of the *Latin*. But where the Blind lead the Blind, both fall. As here the corrupt *Latin* cost not but yield us a corrupted Truth in *English*. *Romans*, Secretary to the Decemvir he means the Council of Ten in *Venice*, hold a seat. Copy and published the time; whence you have the Work in a manner new, to renewed, that I have found the Proverb true, that it is better to pull down an old House, and to build it anew, than to repair it, as I also should have done had I known that which is the present Cause. *Latin* is *Latere* (that is, a sort of Linn) compared to *Romulus's* Gold, and he which hath the *Latin* hath but *Maria Pals's* Carcase, or set in much; but a few Bones, yes, sometimes Stone rather than Bones, things divers, averie, adverse, perverted in manner, dejected in manner, yes as *Belus*. I have seen some Authors maimed, but never any to mangled, and so mingled, to pretend, and so silent, as this vulgar *Latin* of *Maria Pals*: not to live himself as the three *Pois* were at their Return to *Venice*, where none knew them, as so the *Dukonie* ye shall find, &c."

lowed the Humour of the Age in which he wrote, and affected, as he has done, to give a quaint and fanciful Turn to all that he translated, instead of keeping close to his Authors. This was chiefly owing to a Notion that then prevailed, that there were many Improbabilities and Absurdities in their Writings; which, however, the Diligence of succeeding Times hath, in a great measure, discovered to have been a groundless and injurious Charge arising sometimes from their having very bad Copies of the Authors they used, at other Times from the Ignorance of those who undertook to translate them either in the Languages in which they were wrote, or as to the Subjects which were handled in them.

It deserves also to be considered, that the first Voyages into any remote Country must lie under great Disadvantages, because they report Things absolutely unknown before, and which, for that Reason, appear monstrous and incredible; whereas, in Process of Time, and after various Persons have visited the same Place, the Publick begins to grow familiar with their Relations; and having received repeated Testimonies as to the Truth of strange Facts, renounce the Prejudices that were conceived against them at the Beginning. It is for this Reason that many learned Men abroad, but particularly *Ramusio in Italy*, and *Bergeron in France*, have taken so much Pains to examine, correct, and set forth in a most perfect Manner, many of these old Writers; which after the Care they have taken about them, appear to so great Advantage, that they scarce seem to be the same that were known to us formerly in so wretched a Condition.

But if such Treatises are liable to a bad Reception at their first Appearance, their Credit increases with Posterity, and there is very good Reason for recurring to the first Voyages, as we do to the first Editions of Books to see how Things stood at the Beginning. Such Writers are, generally speaking, the most curious and the most exact, for being extremely struck with every thing they see and hear, they are more vigilant in their Searches, and more particular in their Relations, than those that follow them, such taking it for granted, that what is common in remote Countries has been already reported by others, and will not give themselves the Trouble of setting down any thing that is not marvelous or extraordinary. We ought not, likewise, to forget that such Travellers as are sent to visit distant Countries, or who go thither purely out of Curiosity, and from a Desire of seeing what others have not seen before, are much more likely to record exactly whatever they meet with, than such as go afterwards into these Countries purely on the Score of Trade; and on their Return, perhaps, are persuaded to oblige the World with an Account of what they have met with, compiled at a considerable Distance of Time, and consequently very liable to Mistakes and other Imperfections.

We may add to all this, that the first Sort of Authors are, generally speaking, Men of better Capacities, and more capable of setting forth their Discoveries than the latter; so that on the whole, if we mean to be thoroughly acquainted with Things, and with all the Circumstances relating to them, we shall read such original Writers with much greater Pleasure than those Collections which have appeared in later Times, and which are frequently no way comparable to them, either for the Importance of Facts, or the Accuracy with which they are related.

It fell out in the East, as it fell out before in the West; that is to say, the northern Nations poured in upon them as a Deluge, and bore down all before them. It was this Foundation of the *Tartars* which overturned, and, in a great measure, effaced the whole Policy of the East; so that in the thirteenth Century, the Empire established by the Great *Tartar* Monarch *Jenghiz-khan*, extended as far as *China* on the one Side, and into *Europe* on the other. His Successors augmented his Dominions, and that in such a Manner as to reach as far as the *Nile* one Way, and the *Danube* and *Vistula* on the other. Such an Extent of Dominion must appear to a considerate Reader, a more formidable Empire than any yet spoken of; and the short Space of Time in which it was raised, must render it still

more amazing: To say the Truth, all the great Monarchies in this Part of the World, large and powerful as they are, ought, strictly speaking, to be considered as Fragments only of this enormous Sovereignty, and as the Remains and Ruins of this prodigious Structure. All the *Tartar* Principalities in *Europe* and *Asia*, the noble Empire of *China*, with so much of *Tartary* as belongs to it, the wide Dominions of the Great *Mogul*, some of the Kingdoms established in the *Indian* Islands, the Kingdom of *Persia* as it stands at present, together with the best Part of the Grand *Seignor's* Territories, fall under this Description, and were once but so many Parts of the *Tartar* Empire, and we may from thence easily discern how much it imports us to have a competent Knowledge of the Rise, Progress, and Declension of this over-grown Power.

But that this, however expedient, however necessary, might not break in too much on the Series of our Voyages, I have taken Care to select a few out of the many ancient Travels that may answer both Ends; that is to say, may preserve the Chain of our Narrations, according to the natural Order of Time, and also fulfil what is requisite with respect to explaining the History of these People, so as to bring the whole into a reasonable Compass, without depriving the Reader of any thing that is necessary for his Information, or curtailing the Authors that are given him, so, as to put it out of his Power to judge of the Value of each, or to know what the Writer himself relates, and what has been inserted by his Editors.

The first of these shall be the earliest Traveller next to our *Arabs*; I mean the famous *Jewish* Writer *Benjamin of Tudela*, in the Kingdom of *Navarre*, who travelled through a great Part of *Europe*, *Asia*, and *Africa*, in the twelfth Century, in which we have not one Voyage besides; and though his chief Design, as plainly enough appears, was to aggrandize his own Nation, however dispersed over the Face of the Earth, and to keep up the Hopes of his Brethren, by representing them as a numerous, wealthy, and flourishing People, notwithstanding their Dispersion: Yet, in doing this, he has collected so many curious Circumstances with regard to the Eastern Nations, and interspersed his Travels with such a Variety of historical Passages to be met with no where else, that whatever Faults may be found with him, he will be always thought an Author worthy of Notice; though, to avoid Prolixity, we have inserted only so much of his Work in the next Section, as has relation to the Subject of which we are treating. It will from thence however, appear, that what is suggested by *Purchas*, the only Author that has attempted to publish him in our Language, as to the Impossibility of making his Treatise clear and intelligible, is not over-well founded, but that with due Care and diligent Attention, his Travels might be published entire, in such a Manner as to satisfy the most critical and inquisitive Reader.

The next of these ancient Travellers shall be *William Rubruquis*, a Monk sent by the *French* King *St. Lewis*, to the then *Khan* of the *Tartars*, whose History of his Journey through several Counties then in a Manner entirely, and even now, but very imperfectly known, is addressed to that Prince, and written with a Spirit of Humility and Modesty, and with such plain Evidence of their Author's Veracity, as very fully justifies the Esteem that has been always had of his Work. The third is *Marco Polo*, the *Venetian*, who travelled as well as *Rubruquis* in the thirteenth Century, whose Work has stood the Test of Time and the severest Criticks, and risen by slow Degrees, from the least into the highest Credit. There are indeed very few Books that have born so many Editions, or have had so much Pains taken about them; and indeed hardly any have deserved it better, since purged from the Errors that had crept into the old Copies, and into the several Translations made into different Languages, it appears to be as well disposed, as well written, as curious, as entertaining, and as correct a Performance as any of its kind: And yet to avoid the Trouble of comparing so many Copies and Translations, it has been wholly omitted in our modern Collections, though the perusing it is in a Manner abso-

The Quotation in the preceding Note from *Purchas*, will fully prove the Truth of this to the intelligent Reader.

lutely necessary, to the understanding the subsequent Voyages to the *East-Indies*.

The last of these old Writers taken into our Collection, shall be Sir *John Mandeville* our Countryman, who, notwithstanding all the Objections made to his Relation, deserves much better Usage than he has met with. This great Traveller flourished in the fourteenth Century, and spent no less than thirty-three Years in Travelling through the *Levant*, *Syria*, *Tartary*, *India*, *Catboy*, *Egypt*, *Ethiopia*, and other Countries. He composed the History of these Travels in *Latin*, *French*, and *English*, and yet we have never hitherto had his Work set in such a Light as might bear reading with Pleasure. I had almost said, and it would be no more than Truth with Patience, and at the same Time it has been respected and well esteemed Abroad. There are indeed Abundance of strange Stories and incredible Passages in his Work, which we do not pretend to justify or impose upon the Reader, but there are others worth knowing, and to be met with no where else.

The Trouble which necessarily attends freeing these Au-

thors from the Rubbish under which they have been buried, and recovering so much of their personal History as is requisite to give Light and Life, Spirit and Indulgence to their several Labours, has been not a little; but when one considers how pious an Act it is to vindicate the Memory of great Men deceased, who thought no Part too great for the Service of Posterity, and how ready the present Age is to encourage all Attempts of this kind, a Man goes through his Task with Pleasure. It is our Duty to live in Times more enlightened, in which all the Sciences are better understood than when those Authors lived and wrote; but the Contemplation of our Advantages ought to dispose us to a charitable Condescension, and a Disposition to excuse Infirmitates, not so properly as them as in the Ages in which they flourished, and from which therefore they could not be exempt, especially when we reflect, that to their Attempts we owe the Splendor that has succeeded, and that without the Struggles made by them we must have been in the same Region of Darkness still.

SECTION XIX.

The Travels of Rabbi Benjamin, the Son of Jonas of Tudela, through Europe, Asia, and Africa, from Spain to China, from the Year of our Lord 1160 to 1173.

From the Latin Versions of Benedict Arias Montanus, and Constantine l'Empereur, compared with other Translations into different Languages.

1. A succinct Account of Benjamin of Tudela, the several Editions and Translations of his Work, and the Reputation it has acquired.
2. The Objections that have been made to the Credit of our Author, and the true State of that Question.
3. The Manner in which we propose to give the Substance of these Travels to the Reader.
4. The Description of the City of Constantinople, the Court of the Greek Emperor, and other things remarkable there, in the Words of Benjamin of Tudela.
5. A succinct Account of his Travels from Constantinople to Badora, or Bassora.
6. His Journey from thence to the Frontiers of Persia, to the City of Aria; and his Account of the Tomb of the Prophet Daniel.
7. The History of the celebrated David El Roi, a Native of Aria, who set up for the Messiah, induced the Jews to revolt from the King of Persia; the Miracles said to be performed by him, and of his deplorable End.
8. The Rout from Aria, and the Mountains of Haphton to the Mountains of Nilbon, and the River Oxus, by Hamadan and Isfahan.
9. Description of the Mountains of Nilbon, or Nisbor, inhabited by the Tribes of Dan, Zebulon, Ather, and Nephthali. The History of the War between the Capseral Turks and the Persians, together with an Account of Rabbi Moses.
10. Return to Chuzestan, Description of the Island of Nekrokus, of the Pearl River, of several Countreys in the Indies, of the diabolical Practices of the Natives, and finally of the River Oxus, or the Sea of China.
11. Rout from Gingala into Ethiopia, and from thence to Grand Cairo.
12. A large Description of the City of Mitzraim, or Grand Cairo, the State of the Jews in that Country, of the overflowing of the Nile, of the famous Column for measuring the Rise of that River, the Fertility of the Country of Egypt, the Mouths of the River Nile, and the Situation of the ancient City of Memphis.
13. Account of many other Cities in Egypt, a large Description of Alexandria, and the principal Things there, with the State of its Commerce at the Time of our Author's being there.
14. A concise Account of his Return into Europe, and going back into his native Country of Spain.
15. Remarks and Observations on the foregoing Travels.

THERE are few Authors better known to the learned World than our *Benjamin*, called from the Place of his Birth *Benjamin of Tudela*, a very pleasant Town in Navarre, on the Confines of the Kingdoms of *Castile* and *Aragon*. The Jews, who boast very much of our Author's Work, inform us, that he was the Son of Rabbi *Jonas*, who was settled at *Tudela*; but they do not acquaint us with the Year in which our Author was born, of what Profession he was, or what induced him to travel. In short, all that at this Distance of Time can be discovered on the Subject, amounts to no more than this, that he began his Travels, *A. D.* 1160, and that he ended them in 1173, which was the very Year in which he died.

These Travels of his have been always in great Credit amongst his own Countrymen, who never cite them but with the greatest Applause; neither have there been wanting several very learned Christians, who have been of the same Opinion, to which probably it may be owing, that from *A. D.* 1444, when it was first printed at *Constan-*

tinople, we have had of this Book no less than sixteen different Editions, and some of them by the ablest Critics.

The first Version of it that appeared in *Latin* was in 1575, by *Benedict Arias Montanus*, a Man of great Learning, and high Reputation, who in his Preface paid great Compliments to the *Spanish* Nation on account of the Discoveries made by them in the most distant Parts of the World.

This, however, did not hinder *Constantine l'Empereur* from making another Translation in 1633, with the *Hebrew* Text in the Margin, and the Addition of very learned Notes; notwithstanding which, many great Critics have testified an earnest Desire to see another and still correcter Version, since to say the Truth, there are some apparent Errors in this as well as in the former Translation, occasioned, as I conceive, chiefly by the Mistakes that have been made by Transcribers in the Text, where we have many Names of Countries, Cities, and Princes, that never were heard of in any other Author, and therefore are without

Reason believed to have come by some such Mistake into this, the rather, because on comparing several Editions, some of these Errors have been detected and amended, which affords us room to hope that some time or other so judicious a Critick may arise, as will be able to correct them all, and give us this Author in his genuine Purity.

2. But, notwithstanding the great Reputation of our Author, some very considerable Writers, and those too extremely well versed in Hebrew Learning, have attacked this Work of his with much Vivacity. *M. Wagenfil* for instance, who wrote a very learned Defence of the Christian Religion against the Cavils and Aspersions of the *Jews*, is pleased to say of this Writer, that whenever he meets with any thing that makes for the Honour of his Nation, he is not only careful to report it in its full Extent, but even ventures sometimes to exceed the Truth.

The famous *Hottinger* deals as freely, or rather more so, with *Benjamin*; his Voyage, says he, is pulled up with Jewish Pride, and the sole Aim of it is to deceive and mislead the Ignorant into an Opinion, that obscure and unknown Places are full of the Glory of the *Jews*. He adds farther, that there are many Fables and Contradictions in the Book, and still more Stories that are reported upon very slender Grounds: Yet after all, he concludes, that our Author has many things in him that are not to be found elsewhere.

The very learned *Spanheim* gives the true Character of the Work in a few Words: It is, says he, pretty highly seasoned with Fables; but there are many good Things in it far all that. This is precisely the Case, the *Jews* and such as are fond Admirers of Rabinick Learning have cried it up much beyond its real Merit; and others again have, for a particular Reason, run it down beyond all Measure; nay, they have questioned whether our Author ever travelled at all, and would persuade us that he made this Book without stirring out of Spain; but they would have done well to have shewn us how he came by the Materials, which I think a much harder Talk than to answer all their Objections.

His Countrymen, it seems, frequently quote this Book of *Benjamin's*, to shew, that the *Jews* are not yet totally deprived of Power, but that there is still a kind of Sovereignty exercised by some of their Nation over their Brethren in certain Countries of the East, which being supposed to contradict the famous Prophecy relating to the coming of Christ, these Criticks will have to be a Fable. But if *Benjamin* had never wrote, the *Jews* would be able to prove the Truth of this in stronger Terms than it is asserted by him, and yet without overthrowing the Application of that Prophecy to *Jesus Christ*; and therefore this is no Reason to me for depreciating the Work at all. He has certainly exaggerated some Things, and mistaken many more. What then, we find in him many things curious and entertaining, which we can find no where else?

3. Our Author in his first Chapter gives us an Account of his Travels by Land from *Sarragossa* to *Marseilles*. In his second Chapter, he tells us that he embarked for *Genoa*, and proceeded from thence to *Rome*, of which he gives us a Description. He went from that City through the Kingdom of *Naples* to *Otranto*, and sailed from thence to the Island of *Corfu*, and then passed by Land through

Greece to *Constantinople*, and in his Passage traversed the Country of *Walachia*. This takes up his fourth Chapter, but as there is nothing very extraordinary in this Part of his Work, and as we have no Room to spare, I thought it better to omit these Chapters than to abridge them, because I must have given the Sense of the Author in my own Words, which would not have put it in the Reader's Power to form any Judgment of the Writer's Style or Manner of Writing. In his fifth Chapter he gives a long Account of the City of *Constantinople*, of the Court of the *Greek* Emperor, and of the State that Things were in at the Time of his being there, with many other curious Particulars, and therefore I have given this Chapter at large, accompanied with such explanatory Notes as were requisite, that I might afford the Reader a proper Specimen of this Performance, without trespassing too much on his Time or my own.

4. "From thence we travelled three Days Journey to *Abiro*, seated upon the Sea-Shore, and travelling five Days Journey more among the Mountains, one comes to *Constantinople*, an exceeding great City, and the Head of the Kingdom of *Jacumites*, or those called *Greeks*. This is the principal Seat of the Emperor *Emanuel*, whose whole Command twelve Kings obey; for every one whereof there are several Palaces at *Constantinople*, and they have also Fortresses and Governments, and unto these the whole Land is subject. The Principal and Chiefest is called *Asripus*, the second *Mega Domestickitz*, the third *Dominos*, the fourth *Makeducus*, the fifth *Iconomus Megli*, and the rest have Names like unto these. The Compass of the City of *Constantinople* containeth eighteen Miles, one half of it standeth upon the Sea, but the other half on the Continent, and it is seated upon two Arms of the Sea, into one of which the Sea flows out of *Russia*, but into the other from *Spain*, and it is frequented by many Traders from the Provinces and Countries of *Babylon*, *Sennar*, *Media*, *Persia*, and all the Kingdom of *Egypt* and Land of *Canaan*, and the Kingdoms of *Russia*, *Hungary*, and *Pskanki*, *Baria*, *Lombardy*, and *Spain*.

"The City itself is excessively populous, unto which Merchants resort out of all Countries, travelling thither both by Sea and Land. It hath none to compare with it in the World, except *Bagdat*, that mighty City of the *Israelites*. Here is the most famous Temple of *Sr. Sophia*, and the Patriarch of the *Grecians* dwelleth here, nor do they agree in Doctrine with the Pope of *Rome*. There are in it also as many Altars in Number as Days in the Year; but it hath an exceeding great Treasure almost beyond all Estimation, by the Offerings and Riches yearly brought from divers Countries, Islands, Castles, Forts, and Places, so that the Wealth of no Temple in the whole World can be compared with the Riches thereof; and in the Midd of the Temple there are Pillars of Gold and Silver, huge Candlesticks, Lanthorns, Lamps and other Ornaments of these precious Metals, more than any Man is able to reckon. Next adjoining to the Walls of the Temple, there is a Place built for the Emperor's Diversion, called *Hippodromus*, where yearly upon the Birth-day of *Jesus of Nazareth*, great Spectacles are publicly presented, and

* *N. l. ad Iipmanai Carmen Nizzachon in Tel. ign. Sat. pag. 374.* This Writer is inclined to censure our Author, for the Reasons I have afterwards assigned, that is, because he thinks what *Benjamin* has advanced derogatory from the famous Prophecy in the 49th Chapter of *Genesis*.

† *H. B. Eccl. Scd. XII p. 241.*

‡ *Ibid. ad H. B. Eccl. Part II. Secul. XII. Scd. XIV. p. 370.*

§ It appears evidently from the *Koran*, that there were Principalities of the *Jews* in *Arabia* at the Time that *Mohammed* set up for a Prophet, which is certainly as strong as any thing advanced by our Author, and is, notwithstanding, a Fact that cannot be disputed.

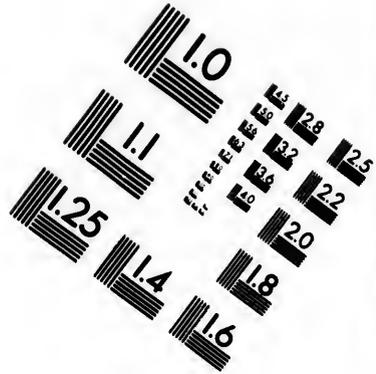

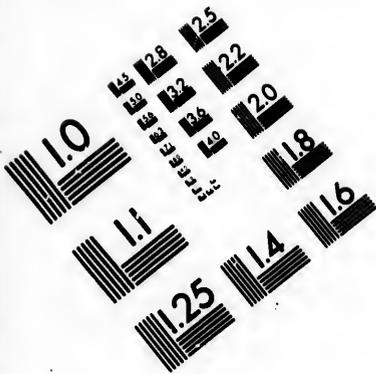

¶ The Manner and Style of this Voyage is a proper Specimen of all the Jewish Writers, who use exactly the same Terms in their Narrations; and by affecting to keep close to the Names of Nations and Cities mentioned in the Holy Scriptures, render their own Writings very perplexed and obscure.

‡ This Term is made Use of by the *Jews* to signify the *Greeks*, because they conceive them to be the Descendants of *Javan*: it is their Manner of Writing, and we must be contented with it. It is true we might have given all this a modern Dress, but then it would have been no longer the Travels of *Benjamin of Tudela*, which was what we promised.

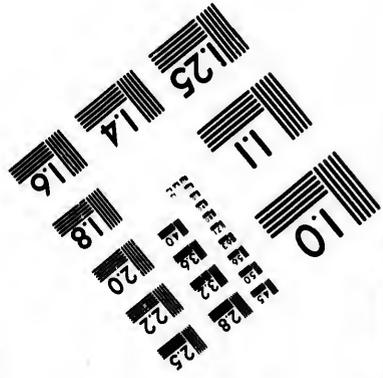

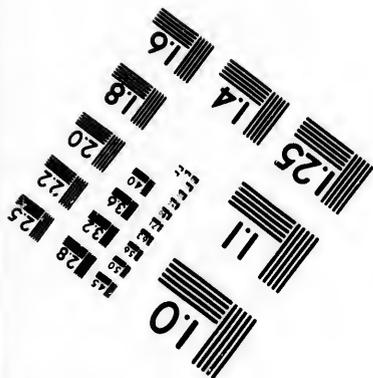

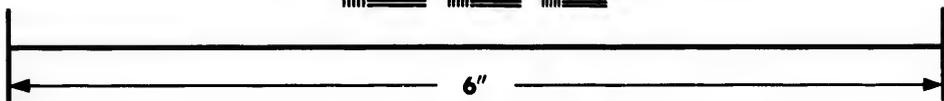

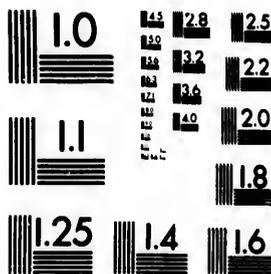

§ This Emperor *Emanuel* is *Manuel Comnenus*, who ascended the Imperial Throne A. D. 1143, and died in 1180. He was famous for his Treachery to the Christian Princes engaged in the Holy War, but it is very certain that the Time of his Reign agrees exactly with the Time of our Author's visiting the City of *Constantinople*.

¶ There cannot well be any thing more confused than this Passage of our Author is at first sight, and yet it is not impossible to make tolerable good Sense of it. *Benjamin* thought that as *Manuel* was an Emperor, his Ministers and Governors of Provinces ought to be considered as equal in State and Dignity to Kings. There is no Doubt great Difficulty in transcribing *Greek* Words by *Hebrew* Characters, especially where a Person is not fully Master of both Languages, which was certainly the Case of our Author, and perhaps the Errors of the Work have been heightened as well as multiplied by such as have copied it. *Asripus* in the Text very probably means *Præpositus*, or Prime Minister. *Mega Domestickitz*, is plainly the Corruption of *Megas Domestikos*, or Great Chamberlain. *Dominos* stands for *Dominus*. *Makeducus* is put for *makdos* σωξωξ, or Great Duke, and the last intended for *makdos* σωξωξ, or Lord High Steward.

“ there all Sorts of Men in all manner of Habits of the whole World, appear before the King and Queen. Lions also, and Bears, Leopards and wild Asses, are brought forth into the Place where these Spectacles are to be seen, that they may fight together, and Birds also alter the same manner: And my Opinion is that in no Country of the World such Princely Sports are to be seen.

“ But this King *Emanuel*, besides that Palace left him by his Ancestors, hath built him another upon the Sea Shore, which they call *Bilberna*, the Pillars and Walls whereof he hath overlaid with beaten Gold and Silver, whereon he hath engraven all the Wars made by him and his Ancestors; and he hath prepared a Throne there for himself of Gold and precious Stones, and hath adorned it with a golden Crown hanging on high by Gold Chains; the Composure whereof is equal with the Throne itself, so enrich'd with precious Stones and Pearls, that the Price whereof no Man is able to value; of so great a Lustre, that without the Assistance of Light they shine, and may be seen in the Night.

“ Moreover there are such valuable Things in the same Place, as were incredible if told; and Tributes yearly brought into that Palace, wherewith the Towers are filled with scarlet and purple Garments, and Gold; so that the like Example of building and Riches, can no where else be found in the World. And, it is affirmed, that the Revenue only of this City itself, gathered from the Markets, Haven, and Tribute of Merchants, amounted to Twenty Thousand Crowns a Day. Furthermore, the *Grecians* themselves, Inhabitants of the Country, are exceeding rich in Gold, and have abundance of precious Stones, and are dressed in most sumptuous Apparel, their Garments being made of Crimson intermingled with Gold, or embroidered with Needle-work, and are all carried upon Horses, as if they were the Children of Kings. The Country itself being very large, abounds with all Sorts of Fruits, and hath great Plenty of Corn, Flesh, and Wine; nor is there a finer Spot in the whole World to be found. They are also learned, and skilful in the Discipline of the *Grecians*; but giving themselves wholly to Pleasure, they eat and drink every one under his own Vine and under his own Fig-tree. Of all the Nations which they call *Barbarians*, they have Soldiers to fight with the *Sollan* King of the Children of *Thebarma*, who are commonly called *Turks*, because they themselves, through Idleness and Luxury, are become quite unfit for the Wars, and seem unto me more like Women than Men, through their excessive Love of Pleasure¹.

“ But no *Jews* dwell within the City, for they are excluded from thence by an Arm of the Sea of *Sophia*; they are not so much as permitted to come into the City but by Boats, and that for the sake of Commerce; and here are about two thousand *Jews Rabbanites*, besides five hundred *Karaites* on the other Side. There is a Wall to separate them from the *Rabbanites*, that are the Disciples of wise Men: And among whom *Israhon* the Great, and *R. Abdias*, and *Aaron Cuspus*, and *Jeseph Starginus*, and *Eliakim* the Governor, have the chief Authority. Amongst these some are Artificers of silken Garments; but there are many Merchants, and those too very rich. No *Jew*, is there permitted to be carried on Horse-back, except *Solomon* the *Egyptian*, the King's Physician, through whose Interest the *Jews* are comforted and eased in their Captivity, which they feel to be grievous; for all the *Jews* are very much hated by the *Grecians*, without making any Difference between the good and evil: But they are worst used

“ by the Tanners, who, while they dress their Skins, pour out the filthy Water into the Streets before their Doors. They are in general oppressed with a grievous Yoke, and are insulted and beaten in the Streets, enduring from every Hand abundance of Injuries. But among the *Jews* themselves, some are rich, as I have said, and good Men, and merciful, and observe the Commandments, who patiently endure the Misery of Captivity. The Place wherein they dwell is called *Pera*.²

5. Our Author continued his Journey from *Constantinople* to the City of *Tyre*, from thence to *Jerusalem*, and from thence through the *Holy Land*, of which he gives a very particular Description, to the City of *Damascus*; and from thence to *Balback*, which is in the Neighbourhood of the ancient *Palmyra*, which he calls by its old Name of *Tadmor*, and assures us, that there were in it, when he passed through, two thousand *Jews*. He gives us next a copious Account of the City of *Bagdat*, of the Court of the *Khaliff*, and of the Condition of the *Jews* in that City. Then he carries us into the Country of *Thema*, where he places a whole Nation of *Jews*, about which there have been great Disputes; and some would have us believe, that the whole is a Forgery. However that Matter be, as it in no way relates to my Subject, I did not think it requisite to trouble the Reader therewith, especially as there are Stories enough of the same kind in the rest of the Book. In his fifteenth Chapter, he acquaints us, that he proceeded to *Botzra* on the River *Tigris*, which is plaiily *Balsora*, or *Bassora*, a Place frequently mentioned in the preceding Part of this Work; and from thence he continued his Journey through *Persia*, as I shall acquaint the Reader in his own Words³.

6. The River *Samoura* is esteemed the Limits of the Kingdom of *Persia*, and near it stands a City of the same Name, wherein dwell fifteen hundred *Jews*. There is the Sepulchre of *Esfra* the Scribe and Priest, who died at this Place in his Return from *Jerusalem* to the Court of *Artaxerxes*. Our People have built before this Sepulchre a great Synagogue; and on the other Side the *Ismaelites*, i. e. the *Arabians*, or *Mohammedans*, have built a Mosque; so great is their Esteem for *Esfra*, and their Respect for the *Israelites*. It is on this Score also, that the *Ismaelites* resort hither to pray.

“ It is four Miles from hence to *Chuzesthan*, which is the same with *Elam*, that great City of old; but it is now in some measure ruined and uninhabited. At one End, but in the midst of Ruins, is *Susa*, a Castle, and formerly the Palace of *Ahasuerus*; some Remains of which are yet standing. There are here seven thousand *Jews* and fourteen Synagogues, before one of which stands the Tomb of *Daniel*. The River *Tigris* runs through the City, over which there is a Bridge. All the *Jews* that live on one Side are very rich, have Shops extremely well filled, and carry on a great Commerce. Those on the other Side the River are all poor, having neither Market, Shops, Gardens, nor Orchards. The Sense of their Condition threw them once into an Insurrection, from a Notion that all the Glory and Riches of those on the other Side the River, sprung from no other Cause than their having the Sepulchre of the Prophet *Daniel* on their Side.

“ They demanded therefore that his Tomb should be transferred to their Side; but the others vehemently opposing this, a War began, of which both Sides growing weary, it was agreed, that the Coffin of *Daniel* should remain one Year on one Side the River, and the next Year on the other. This Treaty was observed till such

¹ However sharp or severe this Character of the People at *Constantinople* may seem, yet it is beyond all question very just and well founded, fully supports what we have delivered upon this Subject in the sixteenth Section, and is at once a Mark of Veracity in these Travels, and of the Author's Capacity in judging of what he saw.

² Our Author's Travels, with the Remarks necessary to explain them, would, if delivered entire, take up a great many Sheets; and for this Reason it is, and that we may keep the Subject as much within Bound, as possible, that we take this Method of acquainting the Reader with the Contents of his Work.

³ Our Author is a little out here in his Geography, for the River *Tigris* does not come near this City; the River he means was anciently called *Eufros*, and in the modern Maps we find it called under the Name of *Coron*. It is, in all Probability, the same as before mentioned, which some Critics will have to be a River of our Author's making; but the Truth of the Matter is, that the River *Coron* takes its Rise near a Town called *Samosa*, from whence he might hear it called the River of *Samora*, and such an Error, considering the Times in which he lived, is not very considerable.

"time as *Sanigar Shab*, Son to the great *Shab* of *Persia*, who rules over forty-five Princes, cancelled it. He is called in *Arabic* Sultan *Pbars-Al-Chahir*, which is as much as to say, Great Emperor of *Persia*. His Empire extends from the Mouth of the River *Samorra* to the City of *Samarcand*, and to the River of *Gozan*, the Province of *Gibbor*, including the Cities of the *Medes*, the Mountains of *Haphten*, and so to the Province of *Tibbet*; in the Forests of which Country are found the Animals that produce Musk. His Empire is four Months and four Days Journey in Extent."

"When therefore this great Monarch *Sanigar* King of *Persia* came to *Elam*, and saw them transporting the Coffin of *Daniel* from one Side of the River to the other, with a great Croud of *Jews* and *Ismaelites* upon the Bridge, he demanded what they were doing, and the Reason of their doing it; and being informed of what has been before related, he decided the Point thus. It is by no means decent, said he, that the Remains of *Daniel* should be treated in this manner; measure therefore to a Place that is at an equal Distance from both Sides, and there let the Coffin of *Daniel* be suspended in a Glass Case, fastened to the Middle of the Bridge by Chains of Iron, and let there be a spacious Edifice built in the same Place in the Form of a Synagogue, open to all People, whether *Jews*, or of other Nations that incline to come thither to say their Prayers." As a still stronger Mark of his Esteem, that Emperor likewise forbade, by an express Edict, that any Man should take Fish out of the River for one Mile below, and another above, for the Reverence and Honour of *Daniel*."

From hence to *Robad-bar* are three Day's Journey, where dwell twenty thousand *Israelites*, among whom there are very many Disciples of the Wise-men, and also some of them very rich; but these live under the Power and Authority of a strange Prince. In two Day's Journey from thence you come to the River *Vantib*, where are four thousand *Jews*, or thereabouts; but four Day's Journey from the River lieth the Country *Molbat*, the Inhabitants whereof believe not the Doctrine of the *Ismaelites*, but they dwell in very strong Mountains, and they obey an Elder, whose Seat is in the Country *Alchessin*; and among these there are four Colleges of the *Israelites*, and they go forth to the Wars with them; nor are they subject to the Dominion of the King of *Persia*; but live in high Mountains, from whence descending, they invade the bordering Countries, and drive away Booties, and return again, fearing no Man; but the *Jews*, who dwell among them, are the Disciples of the wise Men, and obey the Head of the Captivity of *Babylon*.

You travel five Day's Journey from hence to *Omaria*, where are five-and-twenty thousand *Israelites*; and it is the Beginning of the Synagogues of the Inhabitants of the Mountains of *Haphten*, which are known to be more than an hundred in Number; and in these Places the Country of *Media* beginneth; and these are of the first Captivity carried away by King *Salmansar*; but they speak the *Chaldee* Language, and among them are the Disciples of the wise Men, and the chief City *Omaria*, pertaining to the Kingdom of *Persia*, within one Day's Journey; but they are under the Dominion of the King of *Persia*, to whom they

pay Tribute; and the Tribute appointed in all the Kingdoms of the *Ismaelites*, is for Males above fifteen Years old, one Golden Amir, which is in Value one *Spanish* Morabine Piece of Gold and an half, or half a Crown of our Money.

7. It is now twelve Years since a certain Man named *David Elroi* arose in the City of *Omaria*, who was the Disciple of *Chafsdai*, the Head of the Captivity, and of *Jacob* the honourable Head of the Assembly of *Levi*, in the Metropolitan City of *Bagdai*; he became very learned in the Law of *Moses*, and in the Books of Doctrine, and also in all Wisdom; in the Language of the *Ismaelites*, and in the Books of the Magicians and Inchanters; he therefore took it in his Head that he would raise Arms against the King of *Persia*, and gather together the *Jews* who dwelt in the Mountains of *Haphten* would war against the whole World, and go to *Jerusalem* and win it by Assault; and that he might persuade the *Jews* thereto, he shewed them lying and deceitful Signs, affirming that he was sent from God to *Jerusalem*, and to free them from the Yoke of the Nations, so that with many of the *Jews* he procured Credit unto himself, and was owned by them for their Messiah."

The King of *Persia* hearing the Report of this Insurrection, sent for him to talk with him, to whom he went without any Fear; and it being demanded whether he was the King of the *Jews*, he boldly answered, that he was; and he was thereupon apprehended and cast into the Goal, in which State Prisoners are kept all their Lives. This Prison is in the City *Dabasran*, nigh the great River *Gozan*. After three Days a Council of the Princes and Ministers being called by the King, in which they consulted as to this Insurrection of the *Jews*, *David* was present there, being escaped out of Prison, no Man knowing thereof. When the King saw him, he demanded, *Who hath brought thee hither, or delivered thee out of Prison?* "Mine own Wife," answered he, for I am not afraid of thee, or thy "Servants." Then the King cried out to those about him, *Seize him! lay Hands on him!* To whom the Princes and Servants answered, that his Voice was heard by all, but he was seen by none."

The King wondering at his Wisdom, was astonished. *David* then cried out aloud, *Lo, I take my Way*; and he began to go before, the King following him, and all the Nobility and their Servants followed the King. When they came to the Bank of the River, *David* spreading abroad his Handkerchief upon the Waters, passed over dry, and at that time was seen of all. They endeavoured to pursue and take him with little Boats, which they attempted in vain; and thence concluded, that no Inchanter in the World might be compared to him. As for *David*, he travelled that Day ten Day's Journey, coming to *Omaria*; through the Virtue of the ineffable Name⁴, he declared what had befallen unto him to their great Amazement.

But the King of the *Persians* sending Messengers unto *Bagdai*, informed the Great Khalif of the *Ismaelites* of this Matter, and requested that he would cause *David Elroi* to be restrained from such Enterprizes, by the Head of the Captivity, and the chief Rulers of the Assemblies, otherwise he threatened total Destruction to all the *Jews* living in the Kingdom of *Persia*. All the Synagogues of the Kingdom of *Persia* falling thereupon into great Fear of the

¹ This pompous Account of an Emperor commanding over forty-five Kings is very suitable to the Genius of a *Jewish* Traveller; but the Difficulty is to find out who he is of whom all this is said. We read in *Elmacinus* of a Prince of this Name, who was the Son of a King of *Persia*, and flourished about this Time; and therefore it is very probable, that this Decision is to be ascribed to him in the Life-time of his Father, though *Benjamin* seems to attribute it to the Shah, or Emperor himself.

² This Circumstance is not in itself very considerable; but in so large a Collection as this, it was necessary to have a Writer so much talked of as our Author, and the Reader cannot think his Time thrown away in acquiring by this Influence the Power of judging of such a Performance; for, as I observed before, the *Jewish* Authors all write alike.

³ This Story, as extravagant as it seems, is really a Matter of Fact, and as such is recorded by two *Jewish* Historians, viz. *R. Selomo Ben Virga*, *R. David Gaute*, who place it in *A. D.* 1135, which, as some Critics have observed, does not agree with the Date assigned by our Author, who says, it happened twelve Years before he was there. This, however, is no great Mistake, even if we should admit that it is our Author's Mistake, tho' for my part I should suppose it as easy for the other Writers to err in this particular. The whole, however, may perhaps be solved, by supposing that *Benjamin* copied the Account that he has given us from some History of this Impostor twelve Years after this Infurrection. However it be, the Thing is of no great Moment, any more than the Difference between the Name mentioned by our Author, and that of *David El David*, which is used in the other Histories.

⁴ There are some little Variations in the Manner in which these Facts are told by the other Historians; but they are of no great Consequence, and therefore I shall not trouble the Reader with them, neither should I have mentioned these Writers at all, but to convince the Reader, that this is not a Tale invented by *Benjamin*, as he might otherwise very readily imagine.

⁵ Both the *Latin* Translators have mislaid the Secret as to this Name, which the *Jews* call ineffable, because they are persuaded that the true Pronunciation of the Name of God is lost, or unknown; and they pretend, that whoever has the Secret of pronouncing it right, is able thereby to work Miracles. They likewise assert, that by this Means our Saviour wrought his; and though this be a very idle Conceit, yet it is worth the knowing, because it shows plainly, that the *Jews* do not pretend to deny the Matters of Fact, but are forced to have Recourse to this Evasion, in order to justify their Incredulity.

Matter, sent Letters therefore unto the Heads of the Captivity, and to the Heads of all the Assemblies in *Bogdat* to this Purpose: *Why should we die before your Eyes, as well we as all the Universities subject unto this Kingdom! Refrain this Man, we beseech you, lest innocent Blood be shed.* Therefore the Head of the Captivity, and the chief Rulers of the Assemblies, wrote Letters unto *David El Roi* to the following Effect: *We give you hereby to understand, that the Time of our Delivery is not yet come, and that our Signs, which ought to precede that Deliverance, are not yet seen, and a Man is not made strong through Pride; wherefore we enjoin you to abstain wholly from such Enterprizes and Attempts, otherwise ye shall be excommunicated, and cut off from all Israel.*

They also by Messengers advertized *Zacbai Hanassi*, who was in the Country of *Affur*, and *Joseph*, surnamed the *Ser*, *Burban Alpeleb* living there, that *David Elroi* might be restrained by Letters written from them, which was diligently pursued by them, but all in vain; for he would not forsake that wicked way, but persisted till a certain King of the *Tegarmim* called *Zinaldin*, subject to the King of *Persia*, sent ten thousand Pieces of Gold unto the Father-in-Law of *David Elroi*, and persuaded him to end these Troubles, by privately killing his Son-in-Law, which when he had undertaken to perform, he thrust *David* through with a Sword in his Bed as he slept; and this was the End of all his Subtily and Delusions*. But even when he was dead, the Anger of the King of *Persia* was not appeased towards those People of the Mountains, and other *Jews* subject to him, and settled in his Dominion; and therefore they desired once more Help from the Head of the Captivity, who going to the King himself, appeased him by mild and wise Speeches; and having presented him with one hundred Talents of Gold, he so mollified him, that there was ever afterwards great Quietness through the whole Country.

8. From these Mountains before described, you travel ten Days Journey to *Hamadan*, the principal City of the Country of *Media*, in which City there are about fifty thousand *Jews*; and in that City over-against one of the Synagogues are the Sepulchres of *Mordecai* and *Ester*. *Dabreshan* is four Days Journey distant from hence, where four thousand *Jews* dwell, nigh unto the River *Gozan*; but from thence you travel seven Days Journey to *Spaban*, a very great City, the Capital of this Country, and twelve Miles in Compass, wherein there are about twelve thousand *Israelites*, over whom *Shallum* is appointed by the Head of the Captivity, as also over all the rest of the *Israelites* who dwell in the Cities of *Persia*. After four Days Journey you come to *Siaphaz**, the most ancient in this Country, called *Persis* of old, from whence the Name was given to the whole Province, in which there are almost ten thousand *Jews*.

From *Siaphaz*, in seven Days Journey you come to the City *Ginab*, seated nigh the River *Gozan*, to which there resort Merchants of all Nations and Languages, and where are about eight thousand *Jews*. The farthest City of this Kingdom is the famous *Samarand*; and five Days Journey from *Ginab*, where are fifty thousand *Israelites*, over whom *Obdias* ruleth; and among them are many wife and rich Men. In four Days Journey from hence you come to *Tibet*, a capital City of the Province of the same Name, in the Forests of which are the Animals found that produce Musk.

9. About twenty-eight Days Journey from thence lie the Mountains of *Nisbor*, which are situated near the River

Gozan; and some of the *Jews* that inhabit *Persia* affirm, that in the Cities of *Nisbor* dwell the four Tribes of *Israel*, carried away in the first Captivity by *Salmansar* the King of the *Assyrians*, viz. *Dan*, *Zebulon*, *Asher*, and *Neftalim*; it is written, *And he carried them away into Lebalah and Habor, the Mountains of Gozan, and the Mountains of Media*. Their Country is extended twenty Days Journey in Length, with many Cities and Castles inhabited, all mountainous, the River *Gozan* running on the one Side; but the Inhabitants are absolutely free, and are ruled by a certain Governor, whose Name was at this Time *Joseph Amratia*, a *Levite*, and among them are the Disciples of *Wise Men*: They sow and reap, and are at War with the Children of *Chus*, who dwell in the Desarts. They are in League with the *Copperall Turks*, Worshippers of the Winds, a People who lead their Lives in the Desarts; neither eat Bread nor drink Wine, but feed on the raw Flesh of Beasts, as well clean as unclean; and these either new killed, and yet trembling with Life-Blood, or dried in the Air, but unboiled. They devour also the Limbs torn from Beasts yet alive. They seem to want Noses; but instead thereof, they have two Holes in their Faces, through which they breathe. They are Friends to the *Israelites*†.

It happened about fifteen Years since, that invading the Country of *Persia* with a great Army, they vanquished the metropolitan City *Rei*; and having made a mighty Slaughter afterwards, utterly wasted it, and spoiled the Houses and Fields, and carried away a prodigious Plunder, returning through the Desarts, a Calamity which for many Ages was never felt in *Persia*. The King of *Persia*, vehemently enraged, said, In the Days of my Ancestors, no Army never came out of this Desert, therefore will I go in Pursuit of them and destroy them from the Earth. He assembled accordingly an Army for War, and seeking some Guide to whom the Places of that Nation were known, a certain Man offered himself, who affirmed, that he was of that Nation, and knew their Dwellings; but being asked what Provision was necessary for the Army, he answered Bread and Water for fifteen Days, which you must spend in passing through the Desarts. When they had marched these fifteen Days, the Army found themselves destitute of Subsistence for Men or Beasts, without seeing any thing of the Place whither they intended to go, or the least Signs of an inhabited Country. The Guide was asked for by the King, who said to him, you see how well you have kept your Word, tell us where are our Enemies that you assured us you could discover? The Guide said by way of Excuse, I have lost my Way; and the King thereupon losing all Patience, ordered him to be put to Death, commanding at the same time by Proclamation, that whoever had any Provisions in his Army, should bring them forth, and divide them with his Companions*.

They then eat up all that they had, even to the Beasts that carried their Baggage; and in this distressed Condition they prosecuted their March for thirteen Days more, till at last they arrived at the Mountains of *Nisbor*, inhabited by the *Jews*. The *Persians* encamped themselves among the Gardens and Orchards by the Side of Canals drawn from the River *Gozan*. As it was then the Season of ripe Fruits, they eat what they thought fit, and made free with all they found, no body coming out to oppose them: But at a Distance they discovered among the Mountains several Hamlets, and some Forts, that looked like Places of Strength. The King of *Persia* being informed of all this, sent two of his Servants to discover

* The Authors we have before cited, tell us the same Story as to the Death of this Impostor, but with a Circumstance that *Benjamin* has omitted, which is, that the *Jews* themselves were obliged to raise the Ten thousand Pieces of Gold that were given as a Bribe to the Father-in-Law of *David*, for killing him when he was asleep.

† All the Translators and Commentators on our Author, have been at a Loss to conceive what Place he could mean by this; and yet I think the Difficulty is not quite so great as they represent it; for to me it appears very plain, that this City was *Schizax*, which answers exactly his Description. As for Confusion in Names, I have already assigned the Cause of it, which was his expressing, in Hebrew Characters, Words that their Characters could not express, and in expressing which Words he was entirely governed by their Sound.

* This, without doubt, is a very odd Description of these People; and yet it is not very far wide of the Truth, for modern Travellers assure us, that the *Kalmuc Tartars* have Noses so flat that they are scarce to be distinguished but by the rising of the Nostrils; and as to their Manner, our Author is not much out of the Way. The City he speaks of as ruined by the People, was the great City of *Rei*, which makes such a Figure in all the Eastern Histories; the same that in the Book of *Tobit* is called *Rhages*, and of which we shall give an ample Account in the next Volume.

† This Expedition is among the Singularities which render these Travels valuable; for I do not know that there is any Account of it to be met with elsewhere; and our Author tells us very honestly how he came by it; neither do I think that the Dexterity with which his Countrymen the *Jews* made their Court to both Parties, is a Circumstance that in the Opinion of such as are acquainted with that Nation, will render it at all improbable.

what Nation it was that had settled in these Mountains, and directed them for this Purpose to pass the River either by Boats, if they found any, or if not, by swimming.

These Men had not proceeded far in their Journey before they met with a Bridge that was very well built, and had a good Barrier; and on the other Side of the Bridge they saw a very large City: They immediately called out, and the Town's People coming to the Gate, demanded who they were, and to whom they belonged; but as they understood not each others Language, they were forced to wait till an Interpreter was called, who understood the *Persian* Tongue; he having put the same Question, they answered, We are Servants to the King of *Persia*, and we come to know who you are, and who is your Lord. The Townsmen replied, We are *Jews*, and not subject to any King or Prince of the *Gentiles*, but we have a Prince of our own. The *Persians* then informed themselves as to the *Copberal Turks*, and the *Jews* told them, that they were their Allies, and that whoever were their Enemies, they must regard as Enemies to themselves. These two Men returning to the Camp, and having reported to the King what they had discovered, he was very much at a Loss how to proceed. The *Jews* on the next Day collected their Forces, and the Day following offered them Battle.

The King declined fighting, and addressed himself to the *Jewish* Chiefs in the following Words; I do not come to make War against you, but only against the *Copberal Turks* my Enemies: But if you proceed to commit Hostilities against me, I will revenge myself by putting to death all the *Jews* in my Kingdom; for I know, that as Things stand here, you will be too hard for me: But let me advise you to prefer Peace to War: Suffer me to proceed in my Expedition against the *Copberal Turks* my Enemies, and supply me and my Army, for ready Money, with what we want. The *Jews* having considered this Proposition among themselves, resolved, out of regard to their Brethren, to yield to the King of *Persia's* Proposal. The King therefore being admitted with all his Army into their Country, spent fifteen Days there, being honourably entertained among them.

But in the mean time, the *Jews* declared the whole Matter by Messenger and Letters unto their Confederates. The *Turks* thereupon gathering their Forces together, expected the Enemy at the Passage of the Mountains, and in a convenient Place for that Purpose, they attacked, and gave the *Persians* so mighty an Overthrow, that the King's Army being ruined, they compelled him to return into his own Country with a very small Number.

But it happened that a *Jew* of this Province, named *Moses*, being seduced by a certain *Persian* Horseman, followed the King of *Persia*, and when they came into *Persia*, he was made a Slave by the same Horseman. But when at a Time of publick Diversion, they exercised their Bows in the Presence of the King, this *Moses* appeared the most excellent Archer in *Persia*; he was thereupon examined by an Interpreter, and openly declared to the King the manner of his being seduced, and his Condition, whereon he was presently enfranchised, clothed with purple and silk Garments, and enriched with Royal Gifts; and was offered likewise, if he would embrace their Religion, great Riches, and the Government of the King's House; which, when he courtously denied to do, he was placed by the King with *R. Sballom*, the Prince of the Synagogue at *Spaban*, whose Daughter also he married by Consent of the Father. This very *Moses* it was, who told me all that I have related.

10. When I departed out of these Countries, I returned into *Couzesan*, through which the River *Tigris* runs, falling from thence into *Hodu*, or the *Indian-Sea*; and in it,

its Passage thither encompasses the Island *Nekrokis**, near the Mouth thereof, which Island is in Extent six Days Journey. There is in it only one Canal of fresh Water, and they drink no other than what is gathered from the Showers, which is the Reason that Land is neither sowed nor tilled; and yet it is very famous through the Commerce of the *Indians* and Islands seated in the *Indian-Sea*, and Merchants of the Country of *Sensar*, *Arabia the Happy*, and *Persia*, bringing thither all sorts of silk and purple Manufactures, Hemp, Cotton, Flax, and *Indian-Cloth*; Wheat, Barley, Millet, and Rice in great Plenty, which they barter and sell among themselves: But the *Indian* Merchants bring also exceeding great Plenty of Spices thither, and the Natives act as Factors and Interpreters; and by this they live: But in that Place there are not above five hundred *Jews*. Sailing thence with a prosperous Wind in ten Days, I was brought to *Katibpa*, where are five thousand *Jews*.

In these Places Pearls are found, made by the wonderful Artifice of Nature; for on the four and twentieth Day of the Month *Nisan*, a certain Dew falleth into the Waters, which being sucked in by the Oysters, they immediately sink to the Bottom of the Sea: Afterwards, about the Middle of the Month of *Tifsi*, Men descend to the Bottom of the Sea, and by the Help of Cords, these Men bringing up the Oysters in great Quantities from thence, open and take out of them the Pearls.

In seven Days Journey from thence I came to *Oulam*, which is the Entrance of their Kingdom, who worship the Sun, and are prone to the Study of Astrology, being the Children of *Cbus*. They are Men of a dark Complexion, sincere Tempers, and of very great Fidelity in all Respects. They have among them this Custom, that such as come to them from remote Countries, when received into the Haven, have their Names set down in Writing by three Secretaries, who carry their Lists to the King, and afterwards bring the Merchants themselves, whose Merchandise being received into his Protection, the King directs them to be landed, and left on the Shore, where they remain without any Watch to keep them. There is also a Magistrate, unto whom all Things that are lost, or casually removed, are constantly brought, and of him they are easily received by the Owner, so that certain Tokens be shewed whereby the lost Thing may be made known; and this strict Fidelity, and honest Dealing, is common through all the Kingdom.

In this Country, from *Easter* to the Beginning of the succeeding Year, the Sun shines with outrageous Heat; and therefore, from the third Hour of the Day until the Evening, all Men remain shut up in their Houses. But about that Time Lamps being lighted, and set in Order throughout all the Streets and Markets, they work and exercise their respective Arts and Callings all the Night; for, as I said, they cannot do it in the Day-time, by reason of the exceeding Heat. It is in this Country that Pepper grows upon Trees planted by the Inhabitants in the Fields belonging to every City, and their proper Gardens are particularly assigned and known. The Shrub itself is small, and brings forth a white Seed, which being gathered, is put into Basins steeped in hot Water, and is set forth in the Sun, that it may be dried and hardened, acquiring thereby a black Colour. Cinnamon and Ginger are likewise found there, as well as many other kind of Spices.

The Inhabitants of this Country do not bury their Dead, but having embalmed their Bodies with divers sorts of Drugs and Spices, they place them in Niches, and cover them with Nets set in order according to their several Families; but their Flesh drieth with the Bones, and when grown stiff, they seem as if they were alive, and every one knows their

* There is no Passage in the Travels of *Benjamin* more perplexed than this Description of the Island of *Nekrokis*, about which all his Commentators are divided in their Sentiments. That which hitherto has been thought most probable, is that he means the Island of *Ormus*, which, without doubt, was once a Place of great Trade, and was always destitute of Water. It is however more credible, that he means the City and Country of *Bassora*, because he places it at the Mouth of the River *Tigris*, makes it the Centre of the *Indian* Commerce, and mentions precisely the Commodities, of which that City was the Staple.

* This Description has also grieved many of the Commentators. The Word used in the *Hebrew* is *Ballia*; and from the Description there is no sort of doubt, that our Author meant Pearls. The account he has given of their Formation, how wild and extravagant soever it may appear, is however that which is embraced by the most learned of his Countrymen. Their Opinion, in few Words, is this; they hold, that at a certain Season of the Year, there is an oily, spirituous, and briny Substance, floats on the Surface of the Sea, which being swallowed by the Oysters, or rather sucked in, as our Author expresses it, turns afterwards to a Pearl. Thus far, without doubt, they have Truth on their Side, that such a Substance is sometimes seen floating on this and other Seas, the Drops of which, at first Sight, resemble liquid Pearl.

Ancestors from many Descents. But as to their Religion, or rather Superstition, they worship the Sun, and have many and great Altars built along the Coast about half a Mile without the City. Early in the Morning therefore they go in Crowds to pay their Devotion to the Sun, to whom upon all the Altars there are Spheres consecrated, made by Magic, resembling the Circle of the Sun; and when the Sun rises, those Orbs seem to be inflamed, and turn round with a great Noise. They have every one a Center in their Hands, as well Women as Men, and all together offer Incense to the Sun; such and so great is their Folly. But among these People the *Jews*, who are settled, at the most amount to a thousand Families in all; they are of as black a Colour as the Inhabitants themselves, yet are nevertheless good honest Men, and strict Observers of the Commandments of the Law of *Moses*; and are not altogether unskillful in the Books of Doctrine and Customs commonly called the *Talmud*.

From this Country in two and twenty Days I sailed into the Islands *Cinrag*, the Inhabitants of which worship the Fire, and are called *Dogbüm*, among whom twenty-three thousand *Jews* are settled. The *Dogbüm* have Priests in every Place to officiate in their Temples; and these Priests are the most skilful Sorcerers and Inchanters in the whole World. Before every Temple there is a large Pit, in which a mighty Fire is lighted every Day, which they call *Albua*, and they make their Children pass through his Fire to purge them, and also cast their Dead into the midst of this Fire to be there burned: Nay, there are some of the Nobility who solemnly devote themselves to be consumed in this Fire alive.

When a Man, who has taken this Resolution, declares such his intended Devotion to his Acquaintance and Kindred, they presently salute him in these Words: Blessed art thou, and it shall be well with thee. On the Day the Vow is to be performed, having first given an Entertainment, he is carried, if rich, on Horse-back; but if he be poor, he is brought on Foot, accompanied with a Multitude of his Friends and others unto the Brink of the Pit, from whence beginning his Career, he leaps into the Fire, at which all his Friends and Kindred rejoice exceedingly, and with all sorts of Music and Dancing, celebrate the Feast, until he be wholly consumed. But the strangest Part of the Story is to come; for three Days after two of the Chief Priests going into his House, command the whole Family to prepare for the Reception of their Father, who is coming to visit them the same Day, and declare to them what they are to do on this Occasion: They call to them certain Persons to be Witnesses out of the City, and bring something resembling the Deceased, of whom the Wife and Children demandeth how it fareth with him in the other World, to whom he answers, I came unto my Companions, by whom I am not received until I discharge my Duty to my Friends and Kindred. He then distributes his Goods to his Children, and orders all the Debts to be paid to his Creditors, and whatever is owing to him to be demanded, the Witnesses setting down in Writing all his Instructions, of whom, notwithstanding, he is not seen; and then saying he will go his way again, he vanisheth. By these Arts, (in which there is nothing but Juggling and Collusion) the Priests govern all.

* It appears from this Account, that these People were *Perkasi*, neither is there any thing in what he relates that is not very easily reconcilable to the Truth; for all Writers that pretend to give us any Account of the Religion of the ancient *Perkasi* agree, that they did not bury their Dead, but left them exposed to the Elements, from this Principle, that the living Man being a Compound of all the Elements, it was but reasonable, after he was dead, that each Element should recover its own.

* This is another *Jewish* Notion agreeable to their Ignorance in those Days, which made them ascribe every thing they did not perfectly understand to Witchcraft. As to these Spheres they were really very wonderful things, being in contrivance as to show the Rising and Setting of the Sun, and the Motions of the heavenly Bodies. They were made and kept by the Magi, who made use of them to Bribe the Vulgar with Astonishment, and to instruct their Disciples in the Science of Astronomy.

* This is pretty evident from the Manner in which *Benjamin* tells this Story, that he suspected the Priests imposed upon the People, as without doubt they did. The Witnesses were Persons in the Confidence, and the Terror of the Family was probably too great, and their Prejudice too strong, that with tolerable Management this Scene might be carried through, and little or nothing of the Fraud be discovered. Besides, whoever had attempted to disclose the Cheat, would have been considered as an impious Person, and a declared Enemy to the Religion of his Country. It would be so difficult Matter to shew from the Absurdities that have passed upon other Nations the Possibility of transacting an Imposture of this kind, as the intelligent Reader will easily conceive.

* Our Author has added a Story here concerning the Gryphons, so very ridiculous, and of such an Extent, that I could not prevail upon myself to insert it. It is plain enough from his Account, that he does not pretend to have travelled into *China*, but barely to relate what he had heard of it. The Extent of his Travels seems to have been Cape *Comorin*, or some of the Countries near it, from whence he took Shipping for the opposite Coast of *Africa*.

* There is no doubt to be made from what *Benjamin* relates, that he followed the old Opinion, according to which *Ethiopia* was looked upon as part of the *Indes*; and with regard to what he tells us of the *Jews* being settled in the Mountains there, it is fully justified both by the ancient and modern Accounts of that Country, as is also the following Circumstances in relation to the Passage of Caravans through the Deserts, and the Accidents to which they are sometimes subject in passing through them. He Rejoiceth to ascribe the Slavery of the Negroes to the Curse pronounced by *Nöé* on *Ham* and his Posterity, a very agreeable to the Divinity and Spirit of the *Jews*.

In the Space of forty Days one may travel from hence by Land to the Frontiers of *Tain*, that is, to the Borders of *China*, which is the very Extremity of the East. Some hold that this Country is washed by the *Nigaba*, or conglaciated Sea, which is liable to prodigious Storms, by which when Mariners are surprized, they are cast frequently into such Straghts, that not being able to get out, they are, after expending all their Provisions, miserably starved to Death.

At first Sight there is nothing in this Passage that will seem very extraordinary to the Reader, and yet after a little Reflection it will appear of considerable Use. This conglaciated Sea is no other than the icy or frozen Sea on the Coast of *Tartary* and *Russia* to the North of *China*, and through which the North-east Passage, so often sought to little Purpose, is supposed to lie. It appears clearly from hence, that before this Time some Attempts had been made on the Side, and that several Ships had been frozen, and their Crews perished; whence the Oriental Name of *Nigaba*, or conglaciated Sea, which *Benjamin* gives it. It must be confessed, that our Author has a very romantick Way of expressing even the plainest Facts; but at the same time we ought to consider, that this was not only the Vice of all the Writers of his Country, but of the Age in general in which he flourished, so that he is the more excusable; and at the same time the Reader will be so just as to remember, that we do not insert his Travels as the best, but as the only Travels we have in this Period of Time, which must acquit us in the Judgment of the Impartial from all Objections that might be otherwise made from the Contents of this Performance. But to proceed.

11. It is three Days Journey to *Gingala*, where there are about a thousand *Israelites*: From thence in seven Days you fall to *Genlan*, where there are none of our Countrymen. It is from thence twelve Days Journey to *Zahid*, where there are some few *Jews*. It is from thence eight Days Journey to the *Indies* on the opposite Coast (by which our Author means *Ethiopia*). In this Country there are very high Mountains inhabited by Multitudes of *Israelites*, who are not under the Yoke of the *Gentiles*, but have here great Cities, and strong Fortresses. They descend from thence in Parties into the flat Countries of *Abyssinia*, which are under the Dominion of the *Edomites*, (which is the Name the *Jews* bestow upon all *Christians*) when having acquired as much as they can by Plunder, they return with their Booty into the Mountains, where they are absolutely safe from all Pursuits. Many of these *Jews* travel on the score of Commerce into *Perse* and *Egypt*.

It is from thence to the Land of *Afsan* twenty Day's Journey through the Deserts of *Saba*, which lie on the River *Pisjion*, which comes from the Country of *Chai*; the Inhabitants of which are subject to a Prince, who is siled *Shah-Absch*, i. e. the King of *Abyssinia*. Part of the Inhabitants of this Country live like Beasts, they feed only on the Grass and Herbs that grow along the River-side, are quite naked, and as if their Miseries had deprived them of common Sense, they propagate their kind with their Sisters, and nearest Relations, without the least Shame or Scruple. The Climate of this Country is exceedingly hot. When the People of *Afsan* make their Expeditions into these Parts

for the sake of Plunder, and what they can carry away; they constantly take with them Bread, Rice, dried Raisins, and Figs. These they throw in large Quantities among the half-famished Blacks, whom, while they scramble for them like Dogs, they seize and carry away Prisoners, and sell them in Egypt, and other Countries. These are the Negroes, or Black Slaves, the Posterity of Ham. It is twelve Days Journey from *Affon* to *Chelvan*, in which there are about three hundred Jews.

From *Chelvan* they go in Caravans fifty Days Journey through the Desert called *Al Tschabra*, or *Zaara*, to the Province called *Zuila*, which is *Havalah*, in the Land of *Gana*, i. e. *Guinea*. In these Deserts there are vast Mountains of Sand, which being carried by the Force of violent Tempests, sometimes overwhelm whole Caravans, and bury under them all the Passengers. Such of the Merchants as escape this perilous Journey bring with them from that Country, Iron, Copper, Salt, and all sorts of Fruits and Pulse; and they likewise bring Gold and Precious Stones. This Country is part of the Land of *Chus*, and lies to the West of *Abyssinia*. It is thirteen Days Journey from *Chelvan* to the City of *Kous*, which is the first in the Land of *Egypt*; where there are settled about thirty thousand Jews. At the Distance of five Days Journey is *Pbium*, anciently called *Pitbon*. In the Neighbourhood of this City are still to be seen the Ruins of those ancient Structures that were built by our Ancestors during their Captivity in *Egypt*.

12. Four Days Journey from thence stands the great City of *Misraim*, or *Cairo*, situated on the Banks of the River *Nile*, in which there are settled about two thousand Jews, who have in this City two fair Synagogues, one belonging to the Jews of *Palestine* and *Syria*, the other to those of the Country of *Babylon*. These two Sorts of Jews differ only in the Division of the Law into Sections; for the *Babylonians* every Week read one Parasha after the Manner which is common throughout all *Spain*; and therefore once every Year they finish the Law: But the *Israelites* of *Syria* divide every Parasha into three Sections, or smaller Sections, and so they read over the Law only once in three Years; and both these after a solemn Manner twice in the Year join in their Prayers together, viz. upon the Day of the rejoicing of the Law, and on the festival Day of the Law given. Over all these *Nabimil* hath the Head Authority, being the greatest of the Nobility, and Chief of the Assembly, who rules all the Synagogues in *Egypt*, and appoints Masters and Elders.

He is also the Minister of the great King, who resides in the Palace of *Zoan*, (which is a City of *Egypt*, wherein *Ali* the Son of *Abitaleb* was once Commander of the *Faibul*) whose Subjects are stiled *Rebells* by the other *Arabs*, because they refuse Obedience to the *Abisidian* Khaliff, whose Seat is *Bagdat*. There is an irreconcilable Enmity between these Princes. This Monarch appears in publick twice in the Year, viz. at the Time of their Feast of *Easter*, and when the River *Nile* overflows.

The Royal City itself is encompassed and fortified with Walls, but *Misraim* is without Walls, surrounded by the River *Nile* on the one Side. This is a very large City, furnished with many Market-places and publick Buildings; and here are many rich Jews. The Country itself is never troubled with Rain, Ice, or Snow, but is often afflicted with outrageous Heat. It is watered by the *Nile*, which once every Year swelling in the Month *Elul* covers and overflows all the Land for fifteen Days Journey, the Waters continuing to rise in the Months of *Elul* and *Tisri*, and

making the Earth fruitful: And the Policy and Diligence of the old *Egyptians* was such, that in an Island which the River makes here, a Pillar was by them erected of fine Marble and excellent Workmanship, raised twelve Cubits above the Surface of the River. When therefore the Waters overflow and cover that Column, the Inhabitants are fully satisfied that the whole Extent of their Country for fifteen Days Journey is entirely overspread. If the Water rise but half the Height of the Pillar, they gather from thence that their Country is but half watered. There is a Man stands by the Pillar, and every Day at Noon proclaims in all Parts of the City the Height of the Water in this Form, *Be thankful to God, the River is risen so many Cubits*.

If the Water rises to the Top of the Column, it is a Sign that the Year will be fertile throughout all *Egypt*. At this Season whoever has any Land, hires Workmen to cut a Trench through his Ground, into which as the Water rises, the Fish are carried, and are left therein; when the River sinks then the Owners of the Lands take them out, and either spend them in their Families, or sell them to such as sail and export them. These Fish are exceedingly large and fat, and the very best People in the Country make use of the Oil drawn from them to burn in their Lamps. If it falls out, as it frequently does, that People eat too much of these Fish, they have nothing more to do than to drink largely of the Water of the *Nile*, which immediately removes that Inconvenience. It has been an old Question, and a great Diversity of Opinions there has been concerning the overflowing of the *Nile*, but the *Egyptians* suppose, that at the Time when this River overflows, heavy Rains fall in the higher Countries, that is in the Land of *Hababs*, which we call *Havila*; at the Time the River does not overflow, nothing is sown in *Egypt*, and hereupon Sterility and Famine follow.

But usually the Fields are sowed in the Month of *September*, the *Nile* being then retired into its Channel; but Barley is reaped in the Month of *February*, and Wheat the next Month after; and in the same Month Cherries are ripe, as are also Almonds and Cucumbers, Gourds, Peasecods and Beans, Lentils, &c. and divers kinds of Pot-Herbs, as Purslain, Asparagus and Lettice, Corianders, Succory, Coleworts and Grapes; but the Gardens and Orchards throughout *Egypt* are watered, and Trenches filled with the Waters of the River.

This great River after passing through the City *Misraim* or *Cairo*, is divided into four Heads, one whereof runneth by *Damiata*, sometime called *Captor*, nigh unto which it falleth into the Sea. The second runneth down into the City *Rasir*, not far from *Alexandria*, and thence dischargeth itself into the Sea. The third passeth by *Affon*, a very great City on the Borders of *Egypt*, nigh which Heads of the River many Cities, Castles and Towns are seated on either Side, and People may travel to them all either by Boat or Land. No Country in the whole World can be compared to this for the Multitude of Inhabitants, and all the Country of *Egypt* is plain, fruitful, and well stored with good Things. *Old Misraim* is two Leagues distant from the *New Misraim*, but it is wasted and desolate: Yet there are many Ruins of the Walls and Houses, and not a few Monuments there of the Treasures and Store-houses of *Joseph* yet to be seen. In the same Place there is an artificial Pillar built by Art Magic, like which there is none in all the Land. Without the Compass of the City stands a Synagogue, which bears the Name of *Moses* our Teacher, of ancient Date; to preserve the Ruins that yet remain, a certain

* There is not a Passage in all our Author's Work which has been more contested than this with regard to the Khaliff then reigning in *Egypt*; and some have gone so far as to produce it as a direct Proof of his never having travelled at all: But I cannot help saying, that though the Critics have a Right to amend what is amiss in the Copies of any Author which they publish, yet I cannot conceive they have any Authority fit of all to impede their own Sense upon a Passage, and then produce it to the Prejudice of the Author, whose Credit they would destroy. We shall then hereafter, that in the present Case, there is no Ground for such a Suggestion; but that what our Author has delivered may be well reconciled to the Current of History, without any Alteration whatever.

† In the subsequent Part of this Work, we shall have more than once Occasion to mention most of the Circumstances that our Author hath recorded, and to compare the Reports of later Travellers with his. The Reason of this Note is, to take Notice of a Particular which our Author has omitted, and which however the Reader may be glad to know. It is this, The *Nile* is of so great Consequence to the *Egyptians*, that they have always had a very superstitious Regard to it, insomuch that they fancied the rise and fall of this River, not only portended the Fertility or Scarceness of the succeeding Year, but likewise great Revolutions of State. It is certain that it did not overflow in the tenth Year of the Reign of *Cleopatra*, which might seem to predict the Conquest of that Country by the *Romans*, that soon after followed; but then the same Accident happened in the Time of *Trojan*, when nothing remarkable followed it. Besides, we read of no Scarcity in *Egypt* before the Conquest of it by the *Arabs*, or the Destruction of the *Khaliffs* of the Family of *Ali*, which was brought about by *Saladin*; so that this ought to be considered as an absurd and ridiculous Opinion, as most of these Notions are.

old Minister, a Disciple of the wise Men is there maintained, who from his Office is styled *Sebec Abounetzar*, or *The Father of the Watch*. The Ruins of *Old Misraim* take up a Space of about three Miles.

13. The Land of *Gessen* is no more than eight Leagues from hence, and therein stands *Boftr Salbis*, a great City, in which there are three thousand *Jews*. From hence you travel half a Day's Journey to *Ikaal Lein Al Samei*, which was anciently called *Rameses*, where now are only the Ruins of a City, in which many Works are seen built by our Fathers, and among these certain huge Edifices like Towers made of Brick. From thence you make one whole Day's Journey to *Al-Bog*, where are two hundred *Jews*; and from hence in half a Day's Journey you come to *Manzipba*, where are two hundred *Jews*, from which City *Ramira* is four Leagues distant, and in it there are seven hundred *Jews*, from whence it is five Days Journey to *Lambbala*, where are five hundred *Israelites*.

Two Days Journey more bring you to *Alexandria*, a City called after the Name of *Alexander the Macedonian*, at whose Command we read it was built and strongly fortified, and adorned with Walls admirably finished, Houses uniformly built, and stately Palaces: Without the City a great and beautiful Building is yet to be seen, which is reported to have been the College of *Aristotle*, the Master of *Alexander*, wherein there are almost twenty Schools, which were frequented in former Times by the learned Men of the whole World, who assembled there to learn the Philosophy of *Aristotle*; and his Academy had stately Portico's of Marble Pillars. The City itself is excellently built, as well from the Pavement of the Ground, as with Vaults and Arches under Ground, through the hidden Passages whereof Men may come into the Market-places and not be seen; of which some are a whole Mile in length, as from the Gate *Rofid* unto the Gate leading to the Sea, from which Gate a Way was made and paved unto the very Haven of the City of *Alexandria*, which is extended one Mile within the Sea.

In this Place a very high Tower was built, which the Inhabitants call *Hemgarah*, but the *Arabians* Magar *Alexandria*, that is, the *Pbaros* of *Alexandria*; on the Top of which Tower it is reported that *Alexander* set a curious Mirror, in which all warlike Ships sailing either out of *Græcia* or from the West unto *Egypt*, might be seen above the Space of five hundred Leagues off. This continued for a long Time after the Death of *Alexander*. It fell out however that a Ship coming hither under the Command of a certain *Greek* Captain, who had a great Knowledge in the Sciences, came and cast Anchor in that Port, and having made Presents to the King of Gold, Silver, and very rich Silks, he thereby obtained his Favour. While he lay in the Port, he took Abundance of Pains to ingratiate himself with the Officer, who had the Charge of this Watch-Tower and Mirror, and having frequently entertained him on Board his Ship, contracted with him at last such an Intimacy, that he was permitted to go into and stay in the Tower as long as he thought fit. One Day having feasted the Captain and his Men very magnificently, he dosed them at last so plentifully with strong Wine, that they all fell fast asleep. Having thus carried his Point, the Captain and his Crew first broke the Mirror to Pieces, and then weighed Anchor and sailed away in the Night.

Since that Time the *Edomites*, i. e. the Christians, have infested the Coasts of *Egypt* with their Ships of War and Privateers, and have deprived the Sovereigns of this Country of the two great Islands of *Crete* and *Cyprus*, which remain at this Day under the Power of the *Greeks*,

from whom the present Possessors of *Egypt* have not been able to recover them. This Watch-Tower is still used as a Beacon for the Service of such Ships as are bound to *Alexandria*; for they are able to discern it at the Distance of one hundred Miles by Day or Night, in Consequence of a vast Fire which is kept continually burning therein for that Purpose.

This Country enjoys a large Share of Trade, and is frequented by almost all Nations for the sake of Commerce. The Port of *Alexandria* swarms with Vessels from all Parts of *Idumea*, i. e. *Christendom*, viz. from *Valencia*, *Tuscany*, *Lombardy*, *Apulia*, *Mali* and *Sicily*, others come from the most Northern, and some Inland Parts of *Europe*, as from *Cracow*, *Cordova*, *Spain*, *Russia*, *Germany*, *Sweden*, *Denmark*, *England*, *Flanders*, *Artois*, *Normandy*, *France*, *Poitou*, *Angiers*, *Gascony*, *Aragon* and *Navarre*. There come also from the Western Empire of the *Israelites*, viz. from *Andaluzia*, *Algareve*, *Africa*, and even *Arabia*, besides what come by the *Indian* Ocean from *Havila* and *Abyssinia*, and the rest of *Ethiopia*, not omitting the *Greeks* and *Turks*. Thither are brought the richest Merchandizes of the *Indies*, and all sorts of Perfumes and Spices which are bought by Christian Merchants.

The City is extremely populous on account of its extensive Trade; and for the greater Conveniency in the carrying on their Dealings, every Nation has its Factory by itself. There is near the Sea-side a Marble Tomb, on which are engraved the Figures of all sorts of Birds and of Beasts, with an Inscription in Characters so old, that none now are able to read them; whence it is believed, with some Colour of Truth, that it belongs to an old King who governed that Country before the Deluge. The Length of this Sepulchre is fifteen, and the Breadth of it six Spans. To conclude, there is in *Alexandria* about three thousand *Jews*.

14. It is not necessary to give at large the Remainder of our *Jew's* Travels, and therefore I shall acquaint the Reader in few Words, That having made a Tour from *Damietta* in *Egypt* to *Mount Sinai*, he returned back to the first mentioned Place, and thence sailed to *Messina* in the Island of *Sicily*, from whence he went by Land to *Palermo*, and crossing the Sea to *Italy*, continued his Journey to *Rome* and *Lucca*.

He afterwards crossed the *Alps*, and passed through a great Part of *Germany*, from whence he takes occasion to mention what Multitudes of *Jews* were settled in the several great Cities of that extensive Empire. He insists at large on their Wealth, their Generosity, and above all, their Hospitality to their distressed Brethren, and gives us a very particular Detail of the Manner in which they receive them. He assures us, that at their Feasts they encourage each other to persist in hoping for the blessed Advent of their Messiah, when the Tribes of *Israel* shall be gathered together, and under his Conduct be led back into their own Land. Until this long expected Time shall come, the *Israelites*, he says, hold it their Duty to persevere in their Obedience to the Law of *Moses*, to lament with Tears the Destruction of *Jerusalem* and *Sion*, to beseech the Almighty to pity them in their Affliction, and to restore them in his appointed Time.

He asserts, that his Countrymen are not only settled in all the Provinces of the Empire, but also through all the Northern Countries to the very Extremity of *Russia*, which he describes as a Country so excessively cold in Winter, that the Inhabitants are not able to stir out of Doors. He tells us next, that the Kingdom of *France*, he says, is called by their Rabbins the Land of *Tzorpha*, is likewise

* Our Author had this Notion of the School of *Aristotle* from the *Mohammedans*, so that whether it be wrong or right, he is not answerable for it. But with regard to the Fact it is certain, that it was not *Alexander* but *Ptolemy* that erected this famous School, in which however it is as certain that the Philosophy of *Aristotle* was taught, and in which the most famous of his Commentators flourished.

† It must be confessed that this Fact is absolutely false, since as the Reader has been before informed, the *Pbaros* of *Alexandria* was built by *Ptolemy Philadelphus*, and not by *Alexander the Great*. As to this Mirror, it is mentioned by some other Writers as well as our *Perjanin*, but it is apparently a Fable, and a Fable ridiculous in all its Circumstances. It is however of Use sometimes to know such Fables, and therefore I have preserved it.

‡ It is very clear from hence as well as from a Multitude of other Circumstances, that our Author chiefly intended in this Work to celebrate his own Nation, to preserve an Account of the different Places in which they were settled, and to do all in his Power to keep up their Spirits under their Captivity, by putting them in Mind of the coming of the *Messiah*. I must confess, I consider this in a different Light from most of the Critics, for I do not conceive that a Man's loving his Countrymen ought to prejudice him in the Opinion of his Readers, and though it may possibly beget some Doubts as to the Fidelity of his Relations with regard to the *Jews*, yet I do not see how this can with Justice be extended to the other Parts of his Book.

full of the Disciples of the wise Men, that is, of the Jewish Doctors, who study the Law Day and Night, and are extremely kind and charitable to their distressed Brethren. He concludes with an earnest Prayer to God, to remember his Promise to the Children of Israel, and to return and assemble them from all Nations, through which in his Wrath he has dispersed them.

In the several Places he mentions, he reckons up in the whole 394687 Jews, from which, if we subtract 740 Caraites, 1000 Samaritans, and 2000 other Schismaticks, there will remain 390947, to which, if we add 350000 free Israelites, whom he found in the Kingdoms of *Tbema* and *Chubar*, they will swell the Account of the *Rabbanites* he met with in his Travels to 740947, which, when duly considered, will not, perhaps, appear very improbable. Thus we have brought to a Conclusion the Travels of *Benjamin de Tudela*, which had never appeared so fully as we have given them in the *English* Language.

15. We have in the Introduction to this Section given so large an Account of our Author, of his Performance, and the Reason of our inserting it, that we have not much to add here. That there may be, and indeed that there are many Mistakes in these Travels, is not to be denied, neither can we help confessing, that the Author was a very credulous Man, and far enough from deserving the high Character bestowed upon him by the Jews, who represent him as a Person skilled in all Sciences, and refer us to this Performance of his as a Proof of it. But granting that he did not merit these Praises, yet there is something surely due to him for the Lights he has communicated to the World. It is from him, as from an impartial Person, that we learn the true State of Affairs at *Constantinople* within the Compass of this Period, the immense Wealth and Luxury of its Inhabitants, and their extensive Commerce throughout the whole East.

His Travels from that City to *Baffora* shew plainly, that the Communication was open, since otherwise it would have been impossible for a private Traveller to have proceeded through the whole Kingdom of *Persia* in the Manner he did. Some Objections have been made to his Account of the Jews settled in the Mountains of *Nisber*, which from his Relation appear to have been upon the Borders of the Kingdom of *Tbilis*; yet if we reflect upon what our Arabian Travellers have told us of the Number of Jews settled in the Empire of *China* before this Time, and remember that the Emperor *Heraclius* had long before driven them out of all the *Greek* Empire, we shall see many Reasons to think this Account of his probable enough. It is true, that *R. Moses* and our Author may be suspected of magnifying these Settlements, and of making this Colony of Jews more considerable than it really was; but that we should regard the whole as a Fiction, I must confess I see no just Grounds. It is very likely, though *Benjamin* does not say it, that he received from the same Person what he relates of *China*, and of the icy Sea to the North of that Country, which shews there had been a considerable Commerce carried on that Way, though *Benjamin* could give but a dark Account of it.

We are indebted to him likewise for a Piece of History, which for any thing I know is not to be met with elsewhere, I mean the Settlement of the *Persians*, who were the old *Persians* or *Worshippers of Fire*, in several Islands of the *East-Indies*, of which we shall make some Use in another Place. The Account he has given us of *Ethiopia*, and of the Jewish Colonies in that Country, is so consistent with the ancient and modern History of that Empire, that there is not the least Reason to doubt the Truth of it, or of what he says as to the Passage of the Caravans through the Deserts. It is evident from thence, that there was by this Means a large Commerce carried on between this Country and *Egypt*, in Slaves, Gold, Ivory, and perhaps also in some

Indian Commodities; and it is likewise clear, that there was a great Trade between that Country and the opposite Coast of *Arabia*. If our Author had travelled as a Merchant, he might very possibly have given us many more curious Particulars on this Subject; but as he did not, we must be content with those he has delivered occasionally, and as they struck him in his Passage.

There are great Exceptions taken at his short Account of the Government of *Egypt*, when he was in it; and some of his Translators have inclined to give him up in this Particular, though without any great Reason. It is plain enough from the rest of his Work, that he did not set up for a great Politician, or pretend to describe the Constitutions of the States through which he passed, but only to mention in general what he understood of such Matters. It is also certain, that without changing his Words, we may give a clear and satisfactory Account of this Matter, which amounts to no more than this: That the then Masters of *Egypt*, though they were *Mohammedans*, were yet treated as Hereticks, or Rebels, on account of their disowning the Khaliff at *Bagdat*, and that on this Account there was an inveterate Hatred between the Subjects of the Khaliff of *Babylon*, and the *Mohammedans* in *Egypt*, as to which there can be no doubt at all.

The single Difficulty in this Case is our Author's calling the Commander of the Faithful in *Egypt* *Ali* the Son of *Abitalab*; from whence it is inferred, that he makes him the Monarch then reigning, which would have been a most notorious Absurdity. But the Truth of the Matter is, our Author says no such thing: He only mentions *Ali* the Son of *Abitalab* as having been once Commander of the Faithful in *Egypt*; and the Reason of his mentioning it is very plain, *viz.* in order to account for the Difference between the *Mohammedans* in *Asia* and *Egypt*, and the latter being stiled Rebels by the former on account of their taking the Part of this *Ali*.

But the greatest Difficulties that occur in our Author's Work, some of which, it must be owned, are not to be got over, arise from his using scriptural Names for the Countries and Places through which he passed; and these, according to the Notions of the Rabbins, for want of being thoroughly acquainted with which, it is impossible for any Translator to be perfectly sure as to his Meaning. But if we should be somewhat mistaken in the Names of the several Countries from which Ships came to *Alexandria*, yet we must be right in the main; and the Reader may rest satisfied from thence, that at the Time of our Author's being there, the Port of *Alexandria* was the Centre of Commerce between *Christendom* and the *Indies*. All the Fables that he relates about the magical Mirror there cannot prejudice the Truth; for though our Author might be, as to be sure he was, a very indifferent Historian, a bad Mathematician, and a credulous Writer, yet he could not be mistaken about Things he saw, or be induced to set down the Names of Nations never heard of at *Alexandria*. Besides, he is remarkably accurate in this Account; and the List he has given us is more methodical than any other Passage in his Book, which seems to have been owing to his making an Enquiry at *Alexandria*, as to the several Foreign Lodges or Factories established there.

On the whole, as these Travels plainly demonstrate that it was both possible and practicable for a Person to travel in the midst of the twelfth Century from *Spain* thro' *Italy* and *Greece* into the remote Parts of *Asia*, and to return from thence through *Ethiopia* and *Egypt* into *Europe*, it was requisite; that in a Collection of this kind, such a Performance should not be omitted; and if not omitted, it ought surely to appear in the best Dress we could possibly give it, which must be an Apology to the Reader for our having taken so much Pains therewith, and having dwelt upon it so long.

SECTION XX.

The remarkable Travels of William de Rubruquis a Monk, sent by Louis IX. King of France, commonly stiled St. Louis, Embassador into different Parts of the East, particularly into Tartary and China, A. D. 1253, containing abundance of curious Particulars relating to those Countries.

Written by the Embassador, and addressed to his Royal Master King Louis.

1. *A succinct Account of the Empire of the Tartars, and particularly of the Princes to whom our Author was sent.*
2. *The Character of Louis IX. of France, and a short History of his Expedition into Syria and Egypt.*
3. *The Occasion and Design of his Embassy, together with the Character of our Author.*
4. *His dedicatory Epistle to the King his Master.*
5. *An Account of his Journey to Constantinople.*
6. *His Arrival at Soldais, the first Town in Tartary.*
7. *An Account of the Habitations of the Tartars.*
8. *Of their Beds, Idols, and superstitious Ceremonies.*
9. *Of their Drinking and Merry-makings.*
10. *Of their Food and Manner of Eating.*
11. *Of a particular kind of Drink used by them, called Cosmos.*
12. *Of the Animals in their Country, their Rabbits, and their Manner of hunting.*
13. *Of the Manner in which the Men shave themselves, and of the Ornaments of their Women.*
14. *Of the Employments of the female Tartars; of their Way of Life, and of their Marriages.*
15. *The Manner of administering Justice among them, and of the Ceremonies used at their Funerals.*
16. *The Author resumes the Account of his Voyage, and acquaints us with the Ingratitude and Brutality of the Tartars.*
17. *Of the Court of Zagatay, and of their Adventures there.*
18. *Of the Alans, who came to visit them there at the Feast of Whitfuntide.*
19. *An Account of a Saracen who desired to be baptized, and of certain People that seem to be Lepers.*
20. *Of the great Hardships and Difficulties they went through in these Travels, and of the Burials of the Comanians.*
21. *Of the Country in which they found Sartach and his Subjects.*
22. *Of the Court of Sartach, and of its Splendor and Magnificence.*
23. *They are ordered to repair to Baatu, the Father of Sartach.*
24. *The Respect paid by Sartach, Mangu-Khan, and Ken-Khan, to Christians, and of the Rise and Progress of the Tartar Empire.*
25. *Of the Russians, Hungarians, Alans, and of the Caspian-Sea.*
26. *Of the Court of Baatu, and of their Reception there.*
27. *Their Journey from thence to the Court of Mangu-Khan.*
28. *Of the River Jagag, and of the Countries and People on that Side.*
29. *Of the Hunger, Thirst, and other Inconveniences by them sustained in this Journey.*
30. *Of the Death of Ban, and of the Germans settled in that Country.*
31. *Of the strange Mixture of Religions in this Country, viz. Nestorians, Mohammedans, and Idolaters.*
32. *Of their Temples, Idols, and of their Manner of worshipping their false Gods.*
33. *Of several Nations in those Parts; and of those whose Custom it is to devour their Parents.*
34. *Of what happened to them at Cailac in their Passage from thence to the Country of the Naymans.*
35. *A Description of that Country, with an Account of the Death of Ken-Khan the Princess, his Consort, and their eldest Son.*
36. *Their Arrival at the Court of Mangu-Khan.*
37. *An Account of their meeting there with one Sergius, a Nestorian Monk.*
38. *A Description of their Audience, and what happened thereat.*
39. *They meet with a Woman of Lorraine, and a Goldsmith of Paris settled in these Countries.*
40. *An Account of several other Christians they met with there.*
41. *Of a grand Feast given by Mangu-Khan, and of the Ceremonies of the Nestorians.*
42. *Of the Fast observed by those People, and of a grand Procession made to the Palace of the Khan.*
43. *An Account of a great Cure performed on a Lady by the Monk Sergius.*
44. *Description of the Country under the Dominion of the Khan, and of the Customs and Manners of his Subjects.*
45. *Of the second Fast of the Nestorians, which falls out in our Lent.*
46. *Of a noble Piece of Workmanship performed by the French Goldsmith, and of the Palace of the Khan at Caracaram.*
47. *Of several religious Ceremonies of the Nestorians.*
48. *Of the Sickness of the French Goldsmith, and of Jonas the Priest.*
49. *A Description of the City of Caracaram, and of Mangu-Khan's sending his Brethren to make War against several Nations.*
50. *How our Author was several Times examined, and of several Conferences and Disputes he had with the Idolaters.*
51. *Of our Author's being called before the Khan at Whitfontide, and of the Confession of Faith made by the Tartars.*
52. *Of the Sorcerers and Conjurers in this Country, and of the wicked Lives they lead.*
53. *The Letters written by the Khan to the King of France, by our Author, and the Resolution taken by his Companion to remain in Tartary.*
54. *Of our Author's Departure from Caracaram for the Court of Baatu, and from thence for the City of Saray.*
55. *Of the Road from Saray by the Mountains of Alania, of the Lesgies, Derbent, and other Places.*
56. *The Remainder of their Journey to the River Araxes, the City of Waxnam, the Country of Sahenna, and other Places.*
57. *Of their Passage over the Euphrates, the Castle of Samuth, the Author's Arrival at Cyprus, Antioch, and Tripoli.*
58. *His Letter from thence to the King his Master, and other Particulars.*
59. *Remarks and Observations upon this Section.*

IT seems to be a Problem hitherto undiscussed, how it came to pass, that for the Space of so many Ages, the Inhabitants of the northern Parts of the World lay so still and quiet, that History scarce gives us any Account of them; and then of a sudden burst out on all Sides, and over-run, as it were, the greatest Part of the known World. At first Sight it should seem from hence, that these northern Countries were first peopled; for otherwise it may appear difficult to account for their being so much more populous than any of the rest. A little

Attention however, will clear this Point, and shew us plainly, that instead of contradicting, it is the strongest Proof that can be of the World's being originally peopled from the Country of *Chaldea*. For, whoever considers what an immense Tract of Land lies to the North of that original Seat of Mankind, will easily discern the Reason why it required a longer Space to peopple it throughly than the rest of the World; and yet, at the same Time, if he reflects on the Accounts given us by ancient Authors, of the Manners of the *Syrians*, he will easily perceive that they

they retained the old Simplicity of living much longer than any other People, and were therefore celebrated by *Homer* and *Hippocrates*, as the justest and most innocent of Mankind. But, in Process of Time, even these vast Countries became over-peopled; and then being pressed by each other, these barbarous Nations, as they were stiled by the *Greeks* and *Romans*, broke out into an Inundation, and swept all before them.

At present our Concern is with those who broke out last; I mean the *Tartars*, who are generally said to have derived their Name from a River so called; but that is a Mistake. The original Name of this numerous Nation was *Turks*, which they derived from *Turk*, the eldest Son of *Japhet*. *Bux Alanza-Khan*, one of their ancient Princes, leaving his Domitions to his Sons, which were Twins, the one called *Tatar*, and the other *Mogul*; this gave Rise to the Distinction of those two Nations, which hath ever since prevailed.

The great Conqueror *Jenghiz-Khan*, who in our old Writers is generally called *Zengis*, united both under his Dominion. He was born, *A. D.* 1164, and was raised to the Command of his own small Tribe, at the Age of thirteen. He by Degrees first established his Power in his own Country, then attacked and conquered the northern Parts of *China*, but was never heard of in *Europe* till about the Year 1218, when he entered the *Great Bucharia*; he extended his Conquests afterwards over a great Part of *Asia*, and died in the Year 1227, at the Age of sixty-five, and after having held the Dignity of *Khan* twenty-five Years. His eldest Son *Zuzi* died six Months after him, and was succeeded by his eldest Son *Batu* or *Baata*, as our Author calls him, who had a great Part of *Tartary* for his Share. *Zagatai*, Son to *Jenghiz-Khan* had that Country which the Ancients call *Transoxiana*, which has been since called *Turkestan*, or the Country of the *Uzbeks*; but by the *Tartars* for this Day *Zagatai*, *Tuli*, another Son of this Conqueror, had for his Share *Chorassan*, *Persia*, and the *Indies*, and *Osiai*, all the rest with the Title of *Khan*. This Prince began his Reign in 1218, and died in 1241. So much as to the State of *Tartary*.

2. The Christian Princes had been very often put upon the Recovery of the *Holy-Land* by the Popes and *Louis IX.* King of *France*, called from thence *St. Louis*, took the *Crois*, and engaged himself by a Vow, to endeavour the Recovery of the City and Kingdom of *Jerusalem* from the *Infidels*. It was with this View that he embarked at *Marseilles*, *August* 23d, 1248, accompanied by his Queen and two Brothers. He sailed from thence to the Island of *Cyprus*, where he spent the Winter in preparing for the War. There he received Embassadors from the Khan of the *Tartars*, with an Account that he had embraced Christianity, and was disposed to attack the *Infidels* on one Side, while his Majesty carried on the War on the other. This was an Affair of very great Importance to the King of *France*, who treated the Embassadors with great Respect, and promised to send an Embassador, to conclude an Alliance with the Emperor their Master.

He was hindered however in the Prosecution of this Design, by the unlucky Accidents of the War; for having invaded *Egypt* at first with great Success, he was afterwards, in the Year 1250, taken Prisoner in the Battle of *Majjora*, and remained for a long time in the Hands of the *Infidels*, who treated him very ill, but at last let him at *Liberty*, upon his surrendering the City of *Damietta*, and paying them a Ransom of 400,000 *Livres*. This cruel Reverse of Fortune did not hinder the King from pursuing his Design: He passed immediately over into *Syria*, where he put the Affairs of the Christians into as good a Condition as it was possible, and would very probably have accomplished all that he proposed, if the Death of his Mother, whom he had left Regent of *France*, had not obliged him to return home, which he did in the Year 1254, and reigned very gloriously for many Years, and then undertook a second Expedition in the same Cause, of which we shall hereafter give some Account.

3. At present our Business is to observe, that while this Monarch was in *Syria*, and there concerted Measures for reducing the Power of the *Mohammedans*, he made Choice

of our Author *Friar William Rubruquis* for his Embassador to the Khan of the *Tartars*, and that for these three Reasons; first, because he had engaged himself, while in *Cyprus*, to send such an Embassy. Secondly, because the Assistance of so powerful a Prince, was a Matter of great Consequence to all *Christendom*. And, thirdly, that he might obtain a distinct and authentick Account of the Policy, Strength, and Interest of a Nation which, in the Space of fifty Years, had obtained an Empire of such an Extent as hitherto the World had never seen.

The Reasons which induced him to make Choice of our Author, were many; but we shall content ourselves with mentioning only a few. His Condition, as a religious Man, made him a fit Minister to a Prince lately converted to the Christian Faith: It dispensed likewise with his having any Train of Attendance with which such an Embassy could not be incumbered; and it put it more into his Power to enquire into all Things that his Master desired to know, than if he had gone with all that Pomp which is usually annexed to a publick Character. But, above all, he depended on the Abilities of the Man, who was looked upon as a Person of admirable Parts, and great Diligence, and whose unaffected Piety and Probity were not to be disputed. After his Return from this Embassy, he compiled this Account, which we now present to the Reader, and sent it to the King. It has been always esteemed the fullest and clearest, as well as the most faithful and exact Description of the *Tartars* that ever was published, and therefore we have given it entire, and in the Author's own Words, together with his Dedication, which follows.

4. To the most Excellent and most Christian Lord Louis, by the Grace of GOD, King of France; Brother William de Rubruquis, of the Order of Friars Minors, wishes Health, and that he may ever triumph in JESUS CHRIST.

"It is written in the Book of Ecclesiasticus, that the wise Man shall pass through Countries inhabited by foreign Nations, and that he shall have his Share in all Things Good and Evil: I have done all this, Sire, and God grant that I have done it as a wise Man, and not as a Fool; for many there are which do those Things which wise Men do, but not wisely, and much I fear that I am of that Number. However that Matter may be, you were pleased to command me, at the Time of my Departure, that I should write to you all I saw, and whatever I could discover among the *Tartars*. You were likewise pleased to add, that I should not be afraid of writing long Letters. I am now about to perform what your Majesty then gave me in Charge; yet notwithstanding great Fear and Apprehension that the Simplicities of my Thoughts, and the Homeliness of my Style, may seem unworthy of being addressed unto your Sovereign Majesty."

5. May it please you then, Sire, to understand, that departing from *Constantinople*, on the seventh of *May*, *A. D.* 1253, we entered into the Sea of *Pontus*, now the *Black-Sea*, which the *Bulgarians* call the *Great-Sea*, and which, as I was informed by Merchants who have long traded there, extends in Length from East to West one thousand Miles; and is, as it were, divided into two Parts. About the Middle there are two Provinces, the one on the South, which is called *Sinople*, from a Fortrefs and Port of the same Name, which belongs to the Sultan of the *Turks*: The other towards the North, which the western Christians call *Gazaria*, now *Crimea* or *Crim Tartary*; but the *Greeks* who dwell therein *Cassaria*, which I take to be the same as *Casaria*. In this Province there are two Promontories, or Capes, which run out into the Sea towards the South, and the Country of *Sinople*; the Distance may be about three hundred Miles between *Sinople* and *Cassaria*; so that these Points may be about seven hundred Miles from *Constantinople*, as well towards the South as towards the East, in which Quarter lies *Iberia*, which is a Province of the Country of *Georgia* or *Georgiana*.

We came then into the Country of *Gazaria*, which is in the Shape of a Triangle, having on the most Western Point a City called *Kerfova*, where *St. Clement* Bishop of *Anzra* suffered Martyrdom, and passing in View of this City we had Sight of an Island in which there is a Church said to have been built by Angels. In the Middle, which is also the most Southern Part, stands the City of *Soldaia*, which is directly over-against *Sinople*, to which all the Merchants coming from *Turky* resort in their Passage to Northern Countries, as do likewise such as come from *Russia* with Intent to go to *Turky*.

These last bring *Ermine* and other rich Furs; the former deal in Cotton, Cloth, Silks of all sorts and Spices. Towards the East Part of this Country stands a City called *Matriga*, at the Mouth of the River *Tanais*, or the great River *Don*, where it falls into the Sea of *Pontus*, being there about twelve Miles over. This River before it falls into the Sea, makes of itself a kind of Sea, which is near seven hundred Miles in extent, but so shallow, that no Ships of Burthen can sail therein. The Merchants of *Constantinople* however, when they arrive at the City of *Matriga*, send their Barks up the River *Tanais* to purchase dried Fish, such as Sturgeons, Theoses, Barbles, and many other sorts of Fish. The Province of *Gazaria* beforementioned, has the Sea on three Sides, viz. On the West, where stands the City of *Kerfova*; on the South, where lies the City of *Soldaia*, or *Cassa*, where we landed; and on the East, where is the City of *Matriga*, at the Mouth of the River *Tanais*.

Beyond this Country lies *Zicbia*, that is the Country about *Azoph*, which is not subject to the *Tartars*; to the East of which lies the Countries of the *Suevians* and *Iberians*, which likewise do not pay Obedience to the *Tartars*. Towards the South again stands the City of *Trebizond*, which belongs to its own Prince, whose Name is *Guido*, and he is defendend of the Race of the Emperors of *Constantinople*, but is for all that subject to the *Tartars*. The City of *Sinople* stands next belonging to the Sultan of *Turky*, who is at present their Vassal likewise.

Beyond his Dominion lies the Country of *Vastacius*, the Son of whose King is called *Astar*, after his Grandfather by the Mother's Side, and he is not under their Subjection. All the Country from the Mouth of the *Tanais* Westward as far as the *Danube*, is at present under their Dominion, and even beyond the *Danube* towards *Constantinople*, all *Walacbia*, which is also called the Country of *Affanus*, and the *Lesser Bulgaria*, as far as *Solinia*, pays Tribute to them: And besides this Tribute, they have of late Years imposed a new Burthen on the Inhabitants; for they exact from every Family an Axe and a considerable Quantity of Corn.

This Introduction of our Author's is in itself very clear, and by adding the modern Names of Places, it is hoped it will be perfectly intelligible to every Reader.

The Author intended it to explain the Situation and Condition of those Countries at the Time he wrote, which was the more necessary, because great Alterations had been occasioned by the repeated Irruptions of the *Tartars*. In regard therefore to the Situation of Commerce at this Time, as well as the perfect comprehending his Rout to the Camps of the *Tartar* Princes, this explanatory Discourse was very expedient; and as this Writer begins very methodically, so his whole Work is conducted with such Order and Eloquence, as is not usual in the Writers of those Times. His Style is agreeable to his Matter, plain and expressive, without any Flourishes, or the least Desire of heightening the Wonders which he relates: On the contrary, he every where endeavours to avoid heightening Things beyond Credit, and delivers himself with such visible Sincerity, as gives an intrinsic Value to his Work, that no Length of Time can ever take away. This in all Probability was in some Measure owing to his Attention to the Instructions given him by his Master, who was a Prince of great Abilities, had himself travelled into the East, and was consequently a better Judge of these Particulars than most other Princes, either of that or any other Age. It was for the same Reason probably, that our Author thought proper, as the Reader will see, to insert his Account of the *Tartars*, their Habitations, Cus-

oms, Manners, Laws, Government, and whatever else was necessary to give a just Idea of these People, before he proceeds to his Negotiations with them, which is a clear Proof that this Treatise was not composed in a Hurry, or written as Occasion offered while he was actually on his Travels, but after his return out of *Tartary*, when he had Time to recollect himself, to compare and digest the Notes he had taken during his Stay in that Country, and to bring every Thing into its proper Place. So that we have no Occasion to interrupt his Discourse with Remarks or Corrections, but are able to leave his Work as it stands to the Perusal of the ingenious Reader, who will find therein abundant Proofs of what we have here advanced.

6. We arrived, continues he, at *Soldaia* the twenty-sixth of *May*, and several Merchants of *Constantinople* who arrived before us, reported that Ambassadors were coming thither from the Holy Land, who were to travel to *Sariat*. I had however publicly given out on *Palm-Sunday*, in the Church of *sancta Sophia*, That I was not your Ambassador or the Ambassador of any other Prince, but that I travelled to those Princes to preach the Gospel to them according to the Rule of our Order; and being arrived, the said Merchants admonished me to be very cautious in what I spoke, because they having reported me to be an Ambassador, if I should say the contrary, I could not have free Passage granted unto me. Then I spoke to the Lieutenants of the Cities, because the Governors themselves were gone to pay Tribute unto *Baati*, and were not as yet returned. "We heard of your Lord *Sariat* in the Holy Land that he was become a Christian, of which the Christians were exceedingly glad, and especially the most Christian King of *France*, who is there now in Pilgrimage, and fighteth against the *Saracens* to redeem the Holy Places out of their Hands. I am determined therefore to go to *Sariat*, and to deliver unto him the Letters of my Lord the King of *France*, wherein he admonisheth him concerning the Welfare of all *Christendom*."

On this they received us with Joy, and gave us Entertainment in the Cathedral Church, the Bishop of which Church had been with *Sariat*, who told me many good Things concerning him, which afterwards I found untrue. They then gave us our Choice, whether we would have Carts and Oxen, or a Number of Horses to transport our Baggage, and the Merchants of *Constantinople* advised me not to take Carts of the Citizens of *Soldaia*, but to buy covered Carts of my own (such as the *Russians* carry their Skins in) and to put all our Baggage into them, because if I should use Horses, I must be constrained at every Gate to take down my Things and to lift them up; and beside that, I should ride a more gentle Pace in the Carts. Wherefore yielding unto their evil Council, I spent in travelling to *Sariat* two Months, which I could have done in one, if I had gone on Horse-back. I brought with me from *Constantinople* pleasant Fruits, *Muskatell* Wine, and delicate Biscuit Bread, to present unto the Governors of *Soldaia*, that I might obtain free Passage, because they look favourable upon no Man who comes with an empty Hand.

All these Things I packed in one of my Carts, and the Governors being absent when we came, I still carried them on, for they told me if I could bring them to *Sariat*, that they would be most acceptable unto him. We took our Journey therefore about the beginning of *June*, with four covered Carts of our own, and with two other which we borrowed of them, wherein we carried our Bedding to rest on in the Night, and they allowed us five Horses to ride upon, there being just five Persons in Company; I, *Friar Bartholomew* of *Cremona*, and *Gosin* the Bearer of these Presents, the Interpreter, and *Nicolas* my Servant, whom I bought at *Constantinople* with some of the Alms bestowed upon me. They allowed us besides two Men which drove our Carts, and looked after our Oxen and Horses. There are high Promontories on the Sea-shore, from *Kerfova* unto the Mouth of *Tanais*. Also there are forty Castles at *Kerfova* and *Soldaia*, in every one of which almost they use different Languages, amongst whom there were many *Gaibs* who spoke the *Dutch* Tongue.

d.

A TARTAR CAMP IN MOTION.

The Tartars have never any fixed or settled Habitations, but move up and down the vast Plains they possess, according to the different Seasons of the Year, travelling Northwards in the Summer, for the sake of fruitful Pasture, and in the Winter, towards the South, to avoid the extremity of the Cold Weather.

THE CEREMONY OF BLESSING THE HORSES.

The Tartars are for nothing more remarkable, than their extraordinary, & indeed extravagant Affection for their Horses, which induces them from their Principle of Indifference to all Religions, to procure this Blessing of their Horses, to be performed, by the Priests of all the Faiths amongst them.

Beyond these Mountains towards the North, there is a most beautiful Wood growing on a plain pleasant Country, full of Springs and Rivulets. Beyond the Wood, there is a mighty Plain five Days Journey, unto the very Extremity of the Province Northward; and there is a narrow Isthmus, a Neck of Land, having the Seas on the East and West Sides, which enter the Land so far, that there is a Canal made from one Sea unto the other. On this Plain before the *Tartars* the *Comanians* inhabited, who compelled the abovementioned Cities and Castles to pay Tribute unto them: But when the *Tartars* came upon them, the Multitude of *Comanians* fled all of them to the Sea-shore, being in such extrem Famine, that they which were alive were constrained to eat up those which were dead, and, as a Merchant reported to me who saw it with his own Eyes, living Men devoured and tore with their Teeth the raw Flesh of the Dead, as Dogs would gnaw Carrion.

Towards the Borders of the said Province there are a great many Lakes, upon the Banks whereof are Salt-Pits, the Water of which so soon as it entereth into the Lake becomes hard Salt like Ice; and out of these Salt-Pits *Baatu* and *Sartach* have great Revenues, for they repair thither out of all *Russia* for Salt, and for each Cart Load they give two Webs of Cotton, amounting to the Value of half an *Yperpera*. There come also many Ships for Salt, which pay Tribute every one according to their Burthen. The third Day after we were departed out of these Precincts of *Soldatia*, we found the *Tartars*, amongst whom being entered, methought I was come into a new World, whose Life and Manners I will describe unto your Highness as well as I can.

They have no settled Habitation, neither know they to Day where they shall lodge to Morrow. They have all *Sybia* to themselves, which stretcheth from the River *Danube*, to the utmost extent of the East. Each of their Captains, according to the Number of his People, knows the Bounds of his Pastures, and where he ought to feed his Cattle Winter and Summer, Spring and Autumn; for in the Winter they remove into warm Regions Southward, and in the Summer they go up into the cold Regions Northward. In Winter when Snow lies upon the Ground, they feed their Cattle in Pastures where there is no Water, because then they use Snow instead of Water. Their Houses in which they sleep, they raise upon a round Foundation of Wickers, artificially wrought and compacted together; the Roof consisting of Wickers also meeting above in one little Roundell, out of which there rises upwards a Neck like a Chimney, which they cover with white Felt, and often they lay Mortar or white Earth upon the Felt with the Powder of Bones, that it may shine and look white: Sometimes also they cover their Houses with black Felt. This Cupola of their House they adorn with Variety of Pictures.

Before the Door they hang a Felt curiously painted over, for they spend all their coloured Felt in painting Vines, Trees, Birds, and Beasts thereupon. These Houses they make so large, that they contain thirty Foot in Breadth; for measuring once the Breadth between the Wheel-ruts of one of their Carts or Wains, I found it to be twenty Feet over, and when the House was upon the Cart, it stretched over the Wheels on each Side five Feet at least. I told two and twenty Oxen in one Draught drawing an House upon a Cart, eleven in one Row according to the Breadth of the Cart, and eleven more on the other Side. The Axle-tree of the Cart was of an huge Bigness, like the Mast of a Ship, and a Fellow stood in the Door of the House upon the Forefall of the Cart driving the Oxen. They likewise make certain four square Baskets of slender Twigs as big as great Chests, and afterwards from one Side to another they frame an hollow Lid or Cover of such like Twigs, and make a Door in it before. Then they cover the said Chest or House with black Felt rubbed over with Tallow or Sheep's Milk, to keep the Rain from soaking through, which they likewise adorn with Painting or white Feathers. Into these Chests they put their whole Household Stuff, or Treasure, and bind them upon other Carts, which are drawn by Camels, that they may pass through Rivers, neither do they ever take down these Chests from their Carts. When they

take down their Dwelling-Houses, they turn the Doors always to the South, and next they place the Carts laden with the Chests here and there within a Stone's Cast of the House, in such that the House standeth between two Ranks of Carts, as it were between two Walls.

The Women make themselves most beautiful Carts, which I am not able to describe unto your Majesty but by Pictures only; I would willingly have painted all Things for you, had my Skill been great enough in that Art. A rich *Tartar* hath a hundred or two such Carts with Chests. *Baatu* hath sixteen Wives, every one of which hath one great House, besides other little Houses, which they place behind the great one, being as it were Chambers for their Women to dwell in, and to each of the Houses belong two hundred Carts. When they take their Houses off the Carts, the principal Wife placeth her Court on the West, and so all the rest in Order; so that the last Wife's House is on the East Frontier, and the Court of each Wife is distant from another about a Stone's Cast.

Hence it is, that the Court of a rich *Tartar* will appear like a very large Village, few Men being to be seen therein; one Woman will guide twenty or thirty Carts at once, for their Country is very flat, and they fasten the Carts with Camels or Oxen one behind another; a Wench sits in the foremost Cart driving the Oxen, and all the rest of themselves follow a like Pace: When they come to a Place which is a bad Passage, they loose them and guide them one by one, for they go a slow Pace, and not much faster than an Ox can walk.

8. When they have taken down their Houses from their Carts, and turned the Doors Southward, they place the Bed of the Master of the House at the North Part thereof; the Womens Place is always on the East, that is, on the left Hand of the Master of the House, when sitting upon his Bed with his Face to the South; but the Mens Place is to the West, that is, at the right Hand of their Master. Men, when they enter into the House, never hang their Quivers on the Womens Side. Over the Master's Head there is an Image made of Felt, which they call the Master's Brother, and another over the Head of the Mistress, which they call her Brother, fastened to the Wall, and a Bow between both of them. There is a little lean Idol, which is, as it were, the Guardian of the whole House. The Mistress of the House places at the Feet of her Bed, on the right Hand, the Skin of a Kid, stuffed with Wool, and near that a little Image, looking towards the Apartment of the Woman. Next the Door, on the Womens Side, there is another Image, with a Cow's Udder, which is the Guardian of the Women that milk the Cattle, for that is the constant Employment of their Women. On the other Side of the Door next the Men, is another Image, with the Udder of a Mare, for the Guardian of those who milk the Mares.

When they meet to make merry they sprinkle part of their Drink upon the Image which is over the Master's Head, and afterwards upon the other Images in their Order; then a Servant goes out of the House with a Cup full of Drink, sprinkling it thrice towards the South, and bowing his Knee every time; and this is done in Honour of the Fire. He performs the same Ceremony towards the East in Honour of the Air; and then to the West in Honour of the Water; and lastly, to the North in Behalf of the Dead. When the Master holds a Cup in his Hand to drink, before he tastes he pours a Part of it upon the Ground: If he drinks sitting on Horse-back, he pours out part upon the Neck or Mane of the Horse before he drinks. After the Servant has paid his Reverence to the four Quarters of the World, he returns to the House, and two other Servants stand ready with two Cups, and two Basons, to carry Drink to their Master and his Wife, who sit together upon a Bed. If he has more Wives than one, she with whom he slept the Night before, sits by his Side the next Day, and all his other Wives must that Day resort to her House to drink, and there the Court is for that Day; the Gifts also which are presented that Day are laid up in the Chests of that Wife. One Piece of Ceremony is constant in all Houses, viz. a Bench, on which stands a Vessel of Milk, or of other Drink, and Cups for drinking it.

9. They make in Winter an excellent Drink of Rice, and of Honey, strong, well-tasted, and high coloured, like Wine;

Wine; they have also Wine brought to them from other Countries. In the Summer Time they care not for any Drink but Cosmos. This Liquor stands always at the Entrance of the Door, and next to it a Fidler. I saw there no such Violins as ours; but many other musical Instruments, which are not used with us. When the Master of the House begins to drink, one of his Servants crieth out with a loud Voice, Ha! and the Musician plays upon his Fiddle.

When they make a solemn Feast, they all of them clap their Hands, and dance to the Noise of Musick, the Men before their Master, and the Women before their Mistress; and when the Master has drunk, then his Servants cry, Ha! as before, and the Fidler stops; then they drink all round both Men and Women, and sometimes they carouse, especially for a Victory, till they are drunk. When they invite a Man to drink, they pull him by the Ears to the Vessel, and so lug and draw him strongly to stretch out his Throat, clapping their Hands, and dancing before him.

When they would do Honour to any Person at their solemn Feasting and Rejoicing, one of the Company takes a full Cup, and two others stand, one on his right Hand, and the other on his left, and so they three come singing to the Man, who is to have the Cup presented him, still singing and dancing before him; and when he stretches his Hand to receive the Cup, they leap suddenly back, returning again as they did before; and so having deluded him three or four Times by drawing back the Cup, until he is eager and very desirous to drink, then they give him the Cup, singing and dancing, and stamping with their Feet, until he hath done drinking.

10. In respect to their Food, give me leave to inform your Highness, that without Difference or Distinction they eat all their Beasts that die of Age or Sickness; and amongst so many Drowes, there must some Cattle die in Summer. However, so long as their Cosmos, that is, their Mares Milk lasts, they care not much for any Food; and if they chance to have an Ox or an Horse die, they dry the Flesh, cutting it into thin Slices, and hanging it up against the Sun and the Wind, it is presently dried without Salt, and without ill Savour or Corruption. They make better Puddings of their Horses than of their Hogs, which they eat as soon as made, the rest of the Flesh they reserve till Winter. They make of their Ox Skins great Bags, which they dry in the Smoak; of the hinder Part of their Horse Hides they make very fine Sandals. They give fifty or an hundred Men the Flesh of one Ram to eat; for they mince it in a Bowl with Salt and Water, having no other Sauce, and then with the Point of a Knife, or little Fork, which resembles such as we use to take roasted Pears and Apples out of Wine; they reach unto every one of the Company a Morfel or two, according to the Number of Guests. The Master of the House, before the Ram's Flesh is distributed, first takes of it what he pleases; if he giveth unto any of the Company a particular Service, the Receiver thereof must eat it alone, and not impart unto any other, or if he is not able to eat it up all, he carries it with him, and delivers it to his Boy, if he be present, to keep it; if not, he puts it up into his Saptarget, that is to say, his Satchel, or Snapack, which they carry about with them for such Purposes, and wherein they lay up their Bones, when they have not time to pick them thoroughly, that they may scrape them at Leisure, and so nothing be lost.

11. Their common Drink Cosmos, which is Mares Milk, is prepared after this Manner; they fasten a long Line to two Posts, standing in the Ground, and to the same Line they tie the young Foals of those Mares which they intend to milk, then come the Mares to stand by the Foals, suffering themselves to be milked; and if any of them be rude, then one takes her Foal and puts it under her, letting it suck a little while, and presently carrying it away again, there comes another Man to milk the Mare. When they have got a good Quantity of this Milk together, while it is new, they pour it into a great Bag, and they beat the Bag with a Piece of Wood made for that Purpose, having a Knot at the lower End like a Man's Head, which is hollow within, and so soon as they beat it, it begins to boil like new Wine, and to be sour, and of a sharp Taste; and they beat it in that manner till Butter comes; then they

taste it, and being indifferently sharp, they drink it, for it bites ones Tongue like the Raspberry Wine. After a Man hath taken a Draught, it leaves a Taste behind it like that of Almond Milk, going down very pleasantly, and intoxicating weak Brains, for it is very heady and powerful.

As for their Caracosmos, that is to say, Black Cosmos, which is for great Lords to drink, they make it thus; first, they beat the Milk so long till the thickest Part thereof descend down to the Bottom like the Lees of White Wine, and that which is thin and pure remains above like Whey, or White Must, the Lees and Dregs being very white, are given to Servants, and will make them sleep exceedingly. That which is thin and clear their Masters drink; and indeed it is a wonderful sweet and wholesome Liquor. *Bazra* hath thirty Farms within a Days Journey of his abiding Place, every one of which serves him daily with Caracosmos of an hundred Mares Milk, and so all of them together every Day with the Milk of three thousand Mares, besides white Milk, which the rest of his Subjects bring: For, as the Husbandmen of *Syria* pay the third Part of their Fruits, and carry it unto the Courts of their Lords, so do they their Mares Milk every third Day.

Out of their Cows Milk they first churn Butter, boiling which Butter unto a perfect Decoction, they put it into Rams Skins, which they reserve for that Purpose; neither do they salt their Butter, and yet by this boiling it never putrifies, and they keep it for Winter; the Churn Milk, which remains of the Butter, they let alone till it be as four as possible; then they boil it, and in boiling it is turned all into Curds, which Curds they dry in the Sun, making them as hard as the Dross of Iron; and this kind of Food also they preserve in Satchels against Winter. In that Season when Milk fails them, they put the Curds beforementioned, which they call Gray-ut into a Bladder, and pouring hot Water upon them, they beat it till they have dissolved them, and it is thereby made exceeding sour; and this they drink instead of Milk, for it seems a Rule with them never to drink fair Water by itself.

12. The great Lords of this Nation have all of them Farms in the South Part of their Country, from whence their Tenants bring them Millet and Meal against Winter. The poorer sort provide themselves with such Necessaries, by the Exchange of Rams, and other Beast Skins. As for their Slaves, they are forced to be content with Water, and that thick and bad enough. The only sort of Animals from which I have known them abstain, are Mice and Rats. There is, however, a little Animal which they call Segur, which in the Winter Time lie and sleep twenty or thirty of them together in Caves for six Months, where the *Tartars* find them out, and esteem them excellent eating; and indeed they are very tender and fat. They have likewise great Plenty of a sort of Rabbits with long Tails, the outside Hair of which is black and white; other small Creatures they have, on which they freely feed. I saw no Deer there, and but a few Hares, but a great Number of Roes.

I saw wild Affes in great Abundance, which are like Mules: I saw also another kind of Beast called *Arack*, resembling, in its Body, a Ram with crooked Horns, and are of such Bigness, that I could scarce lift up a Pair of them with one Hand; and of these Horns they make drinking Cups. They have Falcons, and other Hawks in great Numbers, which they carry upon their right Hands, and they put always about their Falcon's Necks a String of Leather, which hangs down to the midst of their Gorges; by which String, when they cast them off the Fist at the Game with the left Hand, they bow the Heads and Breasts of the Hawks to prevent their being tossed up and down in the Wind, or their soaring too high. Being expert in this Art, they gain a great Part of their Provision by Hunting and Hawking. In regard to their Attire, it may please your Majesty to know, that out of *Cataya*, and other Regions of the East, out of *Persia* also, and other Countries to the South, are brought to them Manufactures of Silks, Cloth of Gold, and Cotton Cloth, which they wear in time of Summer; but out of *Russia*, *Mosell*, *Bulgaria*, *Hagaria*, and out of *Kesfi*, all which are Northern Regions, and full of Woods, and also out of many other Countries of the North, which are subject unto them, the Inhabitants bring

then many rich and costly Skins of divers sorts, such as I never saw, wherewith they are clothed in Winter, and against which Season they make themselves two Gowns, one with the Fur inward to their Skin, and another with the Fur outward, to defend them from Wind and Snow, which for the most part are made of Wolves Skins, or Foxes Skins.

When they sit in the House they have a finer Gown to wear: The poorer sort make their Gowns of Dogs or of Cats Skins. When they go to hunt wild Beasts they meet in a great Company, and surrounding the Place where they are sure to find Game, by little and little they approach on all Sides, till they have got all the wild Beasts into the midst in a Circle, and then they discharge their Arrows at them. They make themselves Breeches of Skins. The rich *Tartars* sometimes fur their Gowns with Silk Slag, which is exceeding soft, light, and warm: The poorer sort line their Cloaths with Cotton, or Cloth, which is made of the finest Wool they can pick out; and of the coarser Part of the Wool they make Felt to cover their Houses, and their Chests, and for their Bedding; also of the same Wool, being mixed with One-third Part of Horse-hair, they make all their Cordage. They make of this Felt likewise Covering for their Stools, and Caps to defend their Heads from the Weather; for all which they spend a great Quantity of their Wool.

13. The Men shave a four-square Spot upon the Crowns of their Heads, and from the two Corners, they shave, as it were, two Seams down to their Temples. They shave also their Temples, and the hinder Part of their Head, to the Nape of the Neck. They likewise shave the Fore-part down to their Foreheads, and upon their Foreheads they leave a Lock of Hair, reaching down to their Eyebrows; on the two hinder Corners of their Heads they have two Locks also, which they twine and brade into Knots, and so bind and knit them one under each Ear. The Garments of their Women differ not from the Mens, except that they are somewhat longer. But the Day after a Woman is married she shaves from the midst of her Head down to her Forehead, and wears a wide Garment like the Veil of a Nun; but larger and longer in all Parts than a Nun's Veil, being open before, and they girt them under the right Side. The *Tartars* differ from the *Turks*, because the *Turks* fasten their Garments to their Bodies on the left Side; but the *Tartars* always on the right Side.

They have always an Ornament for their Heads, which they call *Botta*, which is made of the Bark of a Tree, or of some such Substance as they can find, which by the Thickness and Roundness thereof, cannot be held but in both Hands together; and it hath a square sharp Spire rising from the Top thereof, being almost two Foot in Length, and shaped like a Pinacle. This *Botta* they cover all over with a Piece of rich Silk, and it is hollow within; and upon the midst of this same Spire they place a Bunch of Quills, or slender Canes, a Foot and a half long, or more, and the Bunch on the Top thereof they beautify with Peacocks Feathers; and round about they stick the Feathers of a Mallard's Tail, and adorn it with precious Stones. Also great Ladies wear this kind of Ornament upon their Heads, binding it strongly to a kind of Hat, or Coif, which hath a Hole in the Crown, fit for the Spire to come through; and under this Ornament they comb the Hair of their Heads, which they gather up round together, from the hinder Part thereof to the Crown, and so lap them up in a Knot or Bundle within the *Botta*, which afterwards they bind strongly under their Throats.

It is on this Account, that when a great Company of such Ladies ride together, and are seen at a Distance, they look like Soldiers with Helmets on their Heads, carrying their Lances upright, for the *Botta* appears like an Helmet with a Lance over it. All their Women sit on Horseback like Men, and they bind their Veils or Gowns about their Waists with a Sky-coloured or Silk Scarf, and with another Scarf they gird it about their Breasts; and they also bind a Piece of white Silk like a Muffler, or Mask, under their Eyes, reaching down to their Breasts. These Ladies are, generally speaking, exceeding fat; and the less their Noses, the handsomer they are esteemed. They daub over their Face with Grease too most frightfully, and they

never keep their Beds on account of their bringing forth Children.

14. As to the Employments of their Women, they drive Carts, lay their Houses upon Carts, and take them down again, milk Cattle, make Butter and Griat, dress Skins, and sew them, which they usually do with Thread made of Sinews; for they divide Sinews into slender Threads, and then twine them into one large one. They make Sandals and Socks, and other kind of Apparel; but they never wash any Cloaths, for they say that God is then angry, and that dreadful Thunder will ensue, if washed Garments be hung out to dry. Nay, they beat such as wash, and take their Garments from them. They are wonderfully afraid of Thunder; for in the Time of Thunder they force all Strangers out of their Houses, and then wrapping themselves in black Felt, lie hid therein till the Thunder be over. They never wash their Dishes, or Bowls; yet when the Flesh is boiled they wash their Platter, wherein it must be put, with scalding hot Broth out of the Pot, and then pour the Broth into the Pot again. They make Felt also, and cover the Houses therewith.

The Duties of the Men are to make Bows and Arrows, Stirrups, Bridles and Saddles, to build Houses and Carts, to keep Horses, to milk Mares, to churn Cosmos and Mares Milk, and to make Bags to put it in; they keep Camels also, and lay Burthens upon them. As for Sheep and Goats, they mind and milk them, both Men and Women. With Sheeps Milk thickened and salted they dress and tan their Hides. When they wash their Hands and their Heads they fill their Mouths full of Water, and spouting it into their Hands by little and little, they sprinkle their Hair, and wash their Heads therewith. As to their Marriages, your Highness is to understand, that no Man can have a Wife among them till he hath bought her; therefore sometimes their Maids are very stale before they are married, for their Parents always keep them till they can sell them. They abstain from the first and second Degrees of Consanguinity inviolably as we do; but they have no Regard to the Degrees of Affinity, for they will marry together, or by Succession, two Sisters, or their Widows never marry a second time, for this Reason, because they believe that all who have served them in this Life, shall do them Service also in the Life to come. Whereupon they are persuaded, that every Widow after Death shall return to her own Husband; and hence arises an abominable and filthy Custom amongst them, namely, that the Son marrieth sometimes all his Father's Wives, except his own Mother; for the Court, or House of the Father or Mother, falleth by Inheritance always to the youngest Son, whereupon he is to provide for all his Father's Wives, because they are part of his Inheritance, as well as his Father's Possessions; and then, if he will, he useth them for his own Wives, for he thinks it no Injury or Disparagement to himself, tho' they return unto his Father after Death. Therefore when any Man hath bargained with another for a Maid, the Father of the Maid makes him a Feast; in the mean time she flies away some of her Kinsfolks to hide herself. Then her Father lays to the Bridegroom, my Daughter is yours, take her wherefoever you can find her. Then he and his Friends seek her till they find her, and having found her, he takes her by Force, and carries her to his own House.

15. In regard to their Laws, or their Execution of Justice, your Majesty is to be advertised, that when two Men fight, no third Man dare intrude himself to part them: The Father dare not help his own Son; but he that happens to have the worst, must appeal to the Court of his Lord, and whoever else offereth him any Violence after Appeal, is put to death; but he must be taken presently without Delay. They punish no Man with Death, unless he be taken in the Commission of the Fact, or else confess the same: But being accused, they put him to extreme Torture to make him confess the Truth. They punish Murder with Death, and even Fornication with any other besides his own Women. By his own, I mean his Wife or his Maid-Servant; for every Man may use his Slave as he pleases. Heinous Theft also, or Felony, they punish with Death. For a light Theft, as for stealing of a Ram, the Criminal nor apprehended in the Fact, but otherwise de-

ted, is cruelly beaten; and if the Executioner lays on an hundred Strokes, he must have an hundred Rods, for such as are beaten upon Sentence given in Court. Frauds likewise of every kind they punish with Death. Sacrilegious Persons their Majesty shall be more fully informed hereafter) because they esteem such to be Witches. When a Man dies they lament and howl most pitifully over him, and the Mourners are free from paying any Tribute for one whole Year after: Also whoever is present in the House, where one of Man's Estate lies dead, he must not enter into the Court of *Mangu-Khan*, till one whole Year be expired. If it was a Child deceased, he must not enter into the Court till the next Month after. Near the Grave of the Party deceased, they always leave one Cottage. If any of their Nobles, being of the Stock of *Zingis*, their first Lord dies, the Place of his Burial is not known. About these Places where they inter their Nobles, there is a Family left to keep the Sepulchre: I could not learn that they used to hide Treasures in the Graves of their Dead.

The *Cemarians* build a stately Tomb over their Dead, and erect the Image of the dead Man thereupon, with his Face towards the East, holding a Drinking-cup in his Hand before his Navel. They erect also upon the Monument of rich Men Pyramids; and in some Places I saw high Towers made of Brick; in other Places Pyramids made of Stone, though there are no Stones to be found thereabouts. I saw one newly buried, in Honour of whom they hung up sixteen Horse-hides unto each Quarter of the World, four between certain high Posts; and they set beside his Grave *Cadmes* for him to drink, and Flesh to eat; and yet they said that he was baptized. We beheld other kind of Sepulchres also toward the East, viz. large Floors of Pavements, made of Stones, some round and some square, and then four long Stones pitched upright about the Pavement towards the four Corners of the World. When any Man is sick, he lieth in his Bed and causeth a Sign to be set up on his Houfe, to signify that there lies a sick Person, that no Man may enter into the House; for none are admitted there to sick Persons but a Servant only. When any one is sick in their great Courts, they appoint Watchmen to stand round about the Court, who will not suffer any Person to enter the Precincts thereof; for such is their Superstition, that they are afraid that evil Spirits or Witches should come together with the Parties that enter in.

16. On my Arrival among these barbarous People, I thought, as I before observed, that I was come into a new World, for they came flocking about us on Horse-back, after they had made us wait for them in the Shade under the Black Carts. The first Question they asked was, whether we had ever been with them heretofore or not: And on our answering that we had not, they began impudently to beg our Victuals from us: We gave them some of our Biscuit and Wine, which we had brought with us from the Town of *Seldaisia*; and having drank off one Flaggon of our Wine, they demanded another, telling us, that a Man does not go into the House with one Foot; we gave them no more however, excusing ourselves that we had but little. Then they asked us whence we came, and whither we were bound; I answered them in these Words; that we had heard concerning their Prince *Sariach*, that he was become a Christian, and that unto him our Determination was to travel, having your Majesty's Letters to deliver unto him. They were very inquisitive to know whether I came of mine own Accord, or whether I was sent. I answered, that no Man compelled me to come, neither had I come unless I had been willing; and that therefore I was come according to my own Will, and to the Will of my Superior. I took the utmost Care never to say that I was your Majesty's Ambassador. Then they asked what I had in my Carts, whether it were Gold, Silver, or rich Garments to carry to *Sariach*. I answered, that *Sariach* should see what we had brought when we were come unto him, that they had nothing to do to ask such Questions; but rather ought to conduct me unto their Captain, and that he, if he thought proper, should cause me to be directed to *Sariach*, if not, that I would return; for there was in the same Province one of *Baatu's*

Kinmen, called *Zagatai*, to whom the Emperor of *Constantinople* had written Letters to suffer me to pass through his Territories.

With this Answer of ours, they were satisfied, giving us Horses and Oxen, and two Men to conduct us. But before they would allow us those Necessaries, they made us wait a long while, begging our Bread for their Brats, wondering at all Things they saw about our Servants, as their Knives, Gloves, Purfes, and Points, and desiring to have them. I excused myself, saying, we had a long Way to travel, and that we could not deprive ourselves of Things necessary to finish so long a Journey. Then they said I was a nigardly Scoundrel. It is true, they took nothing by Force from me, but they will beg all they see very importunately; and if a Man bestows any thing upon them it is but lost, for they are thankless Wretches. They esteem themselves Lords, and think that nothing should be denied them by any Man: If a Man gives them nothing, and afterwards stands in Need of their Service, they will do nothing for him. They gave us of their Cow-milk to drink after the Butter was churned out of it, which was very sour, which they call *Apram*; so we departed from them: And indeed it seemed to me that we were escaped out of the Hands of Devils. The next Day we were introduced to their Captain. From the Time wherein we departed from *Seldaisia*, till we arrived at the Court of *Sariach*, which was the Space of two Months, we never lay in Houfe or Tent, but always under the Canopy of Heaven, and in the open Air, or under our Carts; neither saw we any Village, or heard of any Building where any Village had been; but the Graves of the *Cemarians* we saw in great abundance. The same Evening our Guide which had conducted us, gave us some Cosmos: After I had drank thereof, I sweated extremely, which was owing, I believe, to the Novelty of it, because I never drank of it before; notwithstanding I thought it was very pleasant and well tasted.

17. We met the Day following with the Carts of *Zagatai*, laden with Houlcs; and I really thought that a great City came to meet me. I wondered at the Multitude of Doves of Oxen, and Horses, and Doves of Sheep; I could see but a few Men that guided all these: Upon which I enquired how many Men he had under him, and they told me that he had not above five hundred in all, and that the one half of this Number were past, as they lay in another Lodging. Then the first which was our Guide, told me that I must present somewhat to *Zagatai*; and so he caused us to stay, going themselves before to give Notice of our coming. By this Time it was past Three, and they unladed their Houlcs near a River; and there came unto us his Interpreter, who being informed by us that we were never there before, demanded some of our Victuals, and we granted his Request. He also required of us some Garment, for a Reward, because he was to interpret our Message to his Master: We excused ourselves as well as we could. Then he asked us what we would present to his Lord, and we took a Flaggon of Wine, and filled a Basket with Biscuit, and a Silver with Apples, and other Fruits; but he was not contented therewith, because we brought him not some rich Garment.

We were, however, admitted into his Presence with Fear and Bashfulness. He sat upon his Bed holding a musical Instrument in his Hand, and his Wife sat by him, who, in my Opinion, had cut and pared her Nose between the Eyes, that she might seem to be more flat-nosed; for she had left herself no Nose at all in that Place, having anointed the very Scar with black Ointment, as she also did her Eye-brows; which Sight seemed to us most ugly. Then I repeated to him the same Words which I had spoken in other Places; for we were directed in this Circumstance by some that had been amongst the *Tartars*, that we should never vary in our Tale. I besought him that he would vouchsafe to accept this small Gift at our Hands, excusing myself that I was a Monk, and that it was against our Profession to possess Gold, Silver, or precious Garments, and therefore that I had not any such Thing to give him, unless he would receive some Part of our Victuals instead of a Blessing. He caused thereupon our

Present to be received, and immediately distributed the same amongst his Men, who were met together for that Purpose, to drink and make merry. I delivered also to him the Emperor of *Constantinople's* Letters, eight Days after the Feast of Ascension, and he sent them to *Saldala* to have them interpreted there; for they were written in Greek, and he had none about him that was skilled in the Greek Tongue.

He asked us if we would drink any *Cosmos*, that is to say Mare's Milk, for those that are Christians among them, as the *Russians*, *Grecians*, and *Alans*, who keep their own Law very strictly, will not drink thereof, for they account themselves no Christians after they have once drank of it, and their Priests reconcile them unto the Church as if they had renounced the Christian Faith. I answered, that we had as yet sufficient of our own to drink, and that when it failed us we must be constrained to drink such as should be given us: He enquired also what was contained in the Letters which your Majesty sent to *Sartaeb*. I answered, that they were sealed up, and that there was nothing contained in them but friendly Words. And he asked what Words we would deliver unto *Sartaeb*? I answered, the Words of Christian Faith. He asked again what those Words were? For he was very desirous to hear them. Then I expounded unto him as well as I could by my Interpreter, who was a very forry one, the Apostle's Creed, which after he had heard he shook his Head. Then he assigned us two Men to attend upon us, and our Horses and our Oxen, and he caused us to ride in his Company, till the Messenger he had sent for the Translation of the Emperor's Letters arrived; so we travelled in his Company till the Day after *Whitsunday*.

18. There came to us on *Whitsun-Eve*, some of the People called *Alans*, who are the Christians of the Greek Church, using Greek Books, and were Priests, but they are not Schismatics as the *Grecians* are, since without exception of Persons they honour all Christians; and they brought unto us boiled Flesh, requesting us to eat of their Meat, and to pray for one of their Company who was dead. I answered, because it was the Eve of so great a Feast, we would not eat any Flesh; and I expounded to them the Solemnity of the Feast, for they were ignorant of all Things relating to the Christian Religion, except the Name of Christ.

They and many other Christians, both *Russians* and *Hungarians*, demanded of us whether they might be saved or no, because they were constrained to drink *Cosmos*, and to eat the dead Carcasses of Things slain by the Infidels, which even the *Greeks* and *Russian* Priests also esteemed as Things strangled or offered to Idols, because they were ignorant of the Times of Fasting, neither could they have observed them if they had known them. I instructed them as well as I could, and strengthened them in the Faith; as for the Flesh which they had brought, we reserved it till the Feast-day, for there is nothing sold among the *Tartars* for Gold and Silver, but for Cloth and Garments, of which we had none. When our Servants offered them any of their Coin, called by them *Yperpera*, they rubbed it with their Fingers and put it to their Noses, to try by the Smell whether it were Copper or no. They did not allow for our Food any Subsistence but Cow's Milk only, which was very four: One Thing most necessary was greatly wanting to us, for the Water was so foul and muddy by reason of their Horses, that it was not fit to be drank; so that had it not been for some Biscuit, which by the Goodness of God was still left us, we had undoubtedly perished.

19. On the Feast of *Pentecost* there came to us a *Sammedan*, to whom, as he talked with us, we expounded the Christian Faith, who (being informed of God's Goodness to Mankind in the Incarnation of our Saviour Christ, the Resurrection of the Dead and the Judgment to come, and that Baptism was a washing away of Sins) said that he would be baptized; but when we prepared to baptize him, he suddenly mounted on Horsback, saying, that he would go Home and consult with his Wife: And the next Day he told us that he durst not receive Baptism, because then he should drink no more *Cosmos*; for the Christians of that Place affirm, that no true Christians ought to drink

it, and that without it he could not live in that Desert; from which Opinion I could not for my Life remove him. It is scarce credible, how many are restrained from becoming Christians from this Opinion, broached and confirmed among them by the *Russians*, of whom there are a great many settled here. The same Day *Zagatai* gave us one Man to conduct us to *Sartaeb*, and to guide us to the next Stage, which was five Days Journey for Oxen to travel. They gave us also a Goat for Victuals, and a great many Bladders of Cow's Milk, and but a little *Cosmos*, because they love it so much themselves; and so taking our Journey directly towards the North, I thought we had passed through one of Hell-Gates.

The Servants who conducted us began to play the bold Thieves, seeing us take little heed to ourselves; at length having lost much by their Thievery, Suffering taught us Wisdom. When we came to the Extremity of that Province, which is fortified with a Ditch from one Sea unto another, without which was their Place of Lodging, into which so soon as we had entered, it appeared to us as if all the Inhabitants were infected with Leprosy, for certain base Fellows were placed there to receive Tribute of such as took Salt out of the Salt-Pits. From that Place they told us we must travel fifteen Days Journey before we should find any other Place; with them we drank *Cosmos*, and gave to them a Basket full of Fruits and of Biscuit, and they gave unto us eight Oxen and one Goat to maintain us in such a Journey, and I know not how many Bladders of Milk; and so changing our Oxen we proceeded for ten Days, arriving then at another Stage, neither found we any Water all that Way, but only in some Ditches made in the Vallies and in two Rivers. From the Time also that we departed out of the Province of *Gassaria*, we travelled directly Eastward, having the Sea on the South-side of us, and a vast Desert on the North, which Desert in some Places reaches twenty Days Journey in Breadth, without Tree, Mountain, or so much as a Stone therein, and is a most excellent Pasture. Here the *Comanians*, which were called *Captbal*, were wont to feed their Cattle, and were the same the *German*s called *Walani*, and the Province itself *Walania*. But *Isclere* calleth all the Tract of Land stretching from the River of *Tanais* to the Lake of *Meotis*, and so far as the *Danube*, the Country of the *Alani*. And the same Country extends in Length from the *Danube* to *Tanais* (which divides *Asia* from *Europe*) for the Space of two Month's Journey, and it was all inhabited by the *Comanians*, called *Captbai*, and beyond *Tanais* as far as the River of *Edil* or *Volga*, the Space between which two Rivers is a long Journey to be travelled in ten Days. To the North of the same Province lieth *Russia*, which is full of Wood in all Places, and stretches from *Poland* and *Hungary* to the River of *Tanais*, and it likewise hath been waited by the *Tartars*, and is still waited by them.

20. The *Tartars* have more Esteem for the *Saracens* than the *Russians*, because the latter are Christians, and when they are able to give them no more, they drive them and their Children, like Flocks of Sheep, into the Wilderness, constraining them to keep their Cattle there. Beyond *Russia* lieth the Country of *Prussia*, which the *Teutonick* Knights of the Order of *St. Mary's* Hospital of *Jerusalem* have of late wholly subdued, and indeed they might easily win *Russia* if they would attempt it vigorously; for if the *Tartars* should once know that the great Priest, for that is the Name they give to the Pope, had caused the Ensign of the Cross to be displayed against them, they would fly into the Desarts. But to proceed;

We went towards the Eastward, seeing nothing but the Sky and the Earth, and sometimes the Sea on our right Hand, called the Sea of *Tanais*, and the Sepulchres of the *Comanians*, which appeared unto us two Leagues off, in which their Custom was to bury their Dead altogether. While we were travelling through the Desert it went reasonably well with us, but I cannot sufficiently express the Irksomeness of their Place of Abode, for our Guide would have us go to every Captain with a Present, for was an Expence our Circumstances would not bear, for we were eight Persons spending our own Provision, for the *Tartar* Servants would all of them eat of our Victuals.

The Flesh which they gave us was not sufficient for us, neither could we find any Thing to be bought for our Money: And as we sat under our Carts in the cool Shadow, on Account of the extreme Heat, they would importunately and shamefully intrude themselves into our Company, so that they would even tread upon us to see what we had; such Slovens they were, that they would lay their Tails in our Presence while they were yet talking with us: Many other Things they committed, which were most tedious and loathsome unto us.

But above all, it grieved me to the very Heart, that when I would have spoken what might tend to their Edification, my foolish Interpreter would say, you should not make me become a Preacher now; I tell you I cannot, I will not rehearse any such Words: And true it was which he said, for I perceived afterwards, when I began to have a little Knowledge in the Language, that when I spoke one Thing he would say quite another; that is, whatsoever came next to his wide's Tongue's End. Then seeing the Danger I might incur in speaking by such an Interpreter, I resolved rather to hold my Peace, and thus we travelled with great Fatigue from Place to Place, till a few Days before the Feast of *St. Mary Magdalen*, we arrived at the Banks of the mighty River *Tanais*, which divides *Asia* from *Europe*, even as the River *Nile* of *Egypt* separates *Asia* from *Africa*. At the Place where we arrived, *Baatu* and *Sartach* had caused Cottages to be built upon the Eastern Bank of the River, for a Company of *Russians* to dwell in, that they might transport Ambassadors and Merchants in Ferry-Boats over that Part of the River; where first they ferried us over, and then our Carts, putting one Wheel into one, and the other into the other Lighter, first binding both the Lighters together, and so they towed them over.

In this Place our Guide play'd the fool strangely, for he imagining that the *Russians* dwelling in the Cottage should have provided us Horses, sent home the Bealls we brought with us, in another Cart, that they might return to their own Masters. But when we demanded some Bealls of them, they answered, that they had a Privilege from *Baatu*, whereby they were bound to no other Service but to ferry Goers and Comers; and that they received great Sums from Merchants even for that. We stayed there by the River-side three Days. The first Day they gave us a great fresh Turbot: The second Day they bestowed Rye-Bread and a little Flesh upon us, which the Purveyor of the Village had taken up at every House for us: And the third Day dried Fish, which they have there in abundance. The River was as broad in that Place as the River *Sein* is at *Paris*; and before we came there, we passed over many fine Waters all full of Fish, and yet the barbarous and rude *Tartars* know not how to take them; neither do they make any Reckoning of any Fish, except it be so great that they may eat the Flesh of it as they do the Flesh of a Ram.

This River is the Limit of the East Part of *Russia*; it riseth out of the Fens of *Mæotis*, which Fens extend quite to the North-ocean. It runs southward, and forms a Sea of seven hundred Miles in Extent before it falls into the *Pontus Euxinus*, or the *Black-Sea*; and all the Rivers we passed over ran into the same. This River has also great store of Wood growing on the West Side thereof. The *Tartars* remove no farther towards the North: For about the first of *August*, they begin to return back to the South; and therefore there is another Cottage somewhat lower, where Passengers are ferried over in Winter-time. And in this Place we were driven to great Extremity, because we could get neither Horses nor Oxen for Money; at length, after I had declared unto them, that my coming was for the common Good of all Christians, they sent us Oxen and Men, but we ourselves were forced to travel on foot. At this Time they were reaping their Rye; as for Wheat, it grows not well in that Soil: They have Millet in great abundance.

The *Russian* Women dress their Heads like our Women: They embroider their Gowns on the Out-side, from their Feet unto the Knees, with party-coloured or grey Stuff. The *Russian* Men wear Caps like the *Dutchmen*; also they wear upon their Heads certain sharp and high-crowned Hats made of Felt, much like a Sugar loaf.

We travelled thence three Days together without finding any People; and when ourselves and our Oxen were exceeding weary and faint, not knowing how far it would be to any *Tartars*, on a sudden there came two Horses running towards us, which we caught with great Joy: Our Guide and our Interpreter mounted upon their Backs to see how far off they could discern any People; and upon the fourth Day of our Journey, having found some Inhabitants, we rejoiced like Seamen, who had escaped out of a dangerous Tempest, and had newly recovered the Haven. Then having taken fresh Horses and Oxen, we passed on from Stage to Stage, till at last, the second of *August*, we arrived at the Habitation of *Sartach*, the *Tartar* Prince.

21. All the Country lying beyond *Tanais* is a very beautiful and pleasant Region, abounding with Rivers and Woods. Towards the North Part thereof there are large Forests inhabited by two sorts of People, one of them is called *Movel*, being mere *Pagans*, and without Law; they have neither Towns nor Cities, but only Cottages in the Woods. Their Lord, and a great Part of themselves, were put to the Sword in *Germany*; whereupon they highly commend the brave Courage of the *Almians*, hoping as yet to be delivered out of the Bondage of the *Tartars* by their Means. If any Merchant come among them, he must provide Things necessary for him with whom he is first entertained all the time of his Abode among them. If any lieth with another Man's Wife, her Husband, unless he be an Eye-witness thereof, doth not regard it, for they are not jealous of their Wives. They have abundance of Hogs, and great Store of Honey and Wax, and various sorts of rich and costly Skins, and Plenty of Falcons.

The other People are called *Merdas*, which the *Lains* call *Mardai*, and they are *Mohammedans*. Beyond them is the River of *Etilia*, or *Volga*, which is the greatest River that ever I saw, and it issues from the North Part of *Bulgaria the Greater*; and so trending along Southward, discharges itself into a certain Lake, containing in Circuit the Space of four Months Travel, of which I shall speak hereafter. The two Rivers aforementioned, *Tanais* and *Etilia*, otherwise called *Volga* in the Northern Regions, thro' which we travelled, are not distant above ten Days Journey; but Southward they are divided a great Space one from another, for *Tanais* descendeth into the Sea of *Pontus*. *Etilia* maketh the foresaid Sea or Lake, with the Help of many other Rivers which fall into it out of *Perfia*, and we had to the South of us very high Mountains; upon the Side thereof towards the said Desert, the People called *Cargas*, and the *Alani* or *Aras* inhabit, who are as yet Christians, and make War against the *Tartars*. Beyond them, next unto the Sea or Lake of *Etilia*, there are certain *Mohammedans* called *Leggi*, who are in Subjection to the *Tartars*. Beyond this is *Porta-Ferrea*, or the Iron Gate, concerning the Situation of which your Majesty shall be further informed towards the End of this Treatise, for I travelled in my Return by the very Place between these two Rivers; in the Regions through which we passed the *Comanians* formerly inhabited before they were over-run by the *Tartars*.

22. We found *Sartach* lying within three Days Journey of the River *Etilia*, whose Court seemed to us to be very great, for he himself had six Wives, and his eldest Son also had three Wives, every one of which Women hath a great House, and each of them above two hundred Cars. Our Guide went unto a certain *Nestorian* named *Coiat*, who is a Man of great Authority in *Sartach* Court; he made us go a long way to one *Janna*, for so they call him who has the Office of entertaining Ambassadors. In the Evening *Coiat* commanded us to come unto him. Then our Guide began to enquire what we would present him with, and was exceedingly offended when he saw we had nothing ready to present. We stood before him, and he sat majestically, having Musick and Dancing in his Presence. Then I spoke unto him in the Words before recited, telling him for what Purpose I was come unto his Lord, and requesting so much Favour at his Hands as to bring our Letters unto the Sight of his Lord. I excused myself also, that I was a Monk, not having, nor receiving, nor using any Gold or Silver, or other precious thing, save our Books, and the Garments in which, as Priests, we served God; and this was the

Cause why I brought no Present to him, or to his Lord; for having abandoned my own Goods, it could not be expected I should become a Carrier for other Men. To all which he answered very courteously, that being a Monk, in so doing I did well, for so I should observe my Vow; neither stood he in need of ought we had, but rather was ready to bestow on us such things as we stood in need of; and having so said, he caused us to sit down, and to drink of his Milk, and presently after he requested us to say our Devotions for him, and we did so.

He enquired also who was the greatest Prince among the Franks, i. e. the Western Christians? and I said the Emperor, if he could enjoy his own Dominions in Quiet. No, replied he, but the King of France, for he had heard of your Highness by Lord Baldwin of Hainault. I found there also one of the Knights Templars, who had been in Cyprus, and had made Report of all things which he saw there. Then we returned to our Lodgings, and the next Morning we sent him a Flagon of Mulcadel Wine (which had kept very well in so long a Journey) and a Box full of Biscuit, which was most acceptable unto him, and he detained our Servants for that Evening, and they were well entertained at his Tents. The next Morning he commanded me to come to Court, and to bring the King's Letters, and my Vestments and Books with me, because his Lord was desirous to see them, which we did accordingly, lading one Cart with our Books and Vestments, and another with Biscuit, Wine, and Fruits; then he caused all our Books and Vestments to be spread abroad, and there stood round about us many Tartars, Christians, and Saracens, on Horseback; at the Sight of which he demanded, whether I would bestow all those things upon his Lord or no? Which saying made me tremble, and threw me into an excessive Fright. Disssembling our Grief as well as we could, we gave him the following Answer: Sir, Our humble Request is, that our Lord, your Master, would vouchsafe to accept our Bread, Wine, and Fruits, not as a Present, because it is too mean, but as a Benediction, lest we should come with an empty Hand before him, and he shall see the Letters of my Sovereign Lord the King, and by them he shall understand for what Cause we are come unto him, and then both ourselves and all that we have are at his Pleasure, but for our Vestments they are holy, and it is unlawful for any but Priests to touch them.

Then he commanded us to dress ourselves in the Garments, that we might go before his Lord, and we did so. Then putting on our most precious Ornaments, I took in my Arms a very fair Cushion, and the Bible which your Majesty gave me, and a most beautiful Plalter, which the Queen was pleased to bestow upon me, wherein there were very fine Pictures. My Associate took a Missal and a Cross, and the Clerk having put on his Surplice, took a Censor in his Hand, and so we came to the Presence of his Lord, and they lifted up the Felt hanging before his Door, that he might behold us.

Then they caused the Clerk and the Interpreter thrice to bow the Knee; but of us they required no such Submission, and they diligently admonished us to take care that in going in, and in coming out, we touched not the Threshold of the House, and requested us to sing a Benediction for him. At length we entered singing *Salve Regina*; and in the Entrance of the Door stood a Bench with Cosmos, and Drinking-cups thereon, and all his Wives were there assembled; also the Moguls, or, as they pronounce, *Mools*, or rich Tartars, thrust in, and pressed hard on us. Then *Coiat* carried to his Lord the Censor, with Incense, which he beheld very diligently, holding it in his Hand; afterwards he carried the Plalter unto him, which he looked earnestly upon, and his Wife also that sat by him; after that he carried the Bible; then *Sartaub* asked, if the Gospel were contained therein? Yes, said I, and all the Holy Scriptures besides.

He took the Cross also in his Hand, and asked, as to the Image, whether it were the Image of Christ or no? I said it was. The *Njhorians* and the *Armenians* never make the Figure of Christ upon their Crosses. Wherefore, either they learn not to think well of this Passion, or else they are ashamed of it. Then he caused them that stood about us to stand aside, that he might more fully behold our Ornaments.

NUM. XXXIX.

Afterwards I delivered unto him your Majesty's Letters, with the Translation thereof in the *Arabicke* and *Syriack* Languages, for I caused them to be translated at *Acon* into the Character and Dialect of both the said Tongues. There were certain *Armenian* Priests, who were versed in the *Turkish* and *Arabian* Languages, and the Knight before mentioned also of the Order of the Temple had Knowledge in the *Syriack*, *Turkish*, and *Arabian* Tongues. Then we departed, and put off our Vestments, and there came unto us some Secretaries of the Court, together with the *Coiat*, and caused our Letters to be interpreted, which Letters being heard, he caused our Bread, Wine, and Fruits, to be received; and he permitted us also to carry our Vestments and Books unto our own Lodging.

23. We had the next Morning betimes a Visit from a certain Priest, who was Brother to *Coiat*, requesting to have our Box of Chrism, because *Sartaub*, as he said, was desirous to see it, and so we gave it him. In the Evening *Coiat* sent for us, saying, my Lord, your King, wrote kind Words unto my Lord and Master *Sartaub*. There are, however, certain Matters of Difficulty in them, concerning which he dare not determine without the Advice of his Father, and therefore you must depart unto him, leaving behind you the two Carts which you brought hither yesterday with Vestments and Books in my Custody, because my Lord is desirous to take a more diligent View of them. I presently suspecting what Mischief might ensue from his Covetousness, made him Answer; Sir, We will not only leave those with you, but the two other Carts also, which we have in your Possession. You shall not, said he, leave those behind you; but for the two Carts first named, we will satisfy your Request: I said, that this could not conveniently be done, but we must leave all with him. Then he asked, whether we meant to remain in the Land? I answered, if you have read, and understand the Letters of my Lord the King, you know that we are so determined; then he replied, that he ought to be patient, and so we departed from him that Evening.

The next Morning he sent a *Nesorian* Priest for the Carts, and we caused all the four Carts to be delivered; then came the before-mentioned Brother of *Coiat* to meet us, and separated those things, which we had brought the Day before to the Court from the rest, *viz.* the Books and Vestments, and took them away with him. *Coiat* had, however, commanded, that we should carry these Vestments with us, which we wore in the Presence of *Sartaub*, that we might put them on before *Baatu*, if he should require it; but the Priest took them from us by Violence, using these Words: You brought them to *Sartaub*, and would you carry them to *Baatu*? And when I would have shewn him the Reason, he answered, Come, don't be too talkative, but go your way. Then I saw there was no Remedy but Patience, for we could have no Access unto *Sartaub* himself, neither was there any that would do us Justice. I was afraid also of the Interpreter, that he had spoken other things than I directed him; for his Will was good, that we should have given away all that we had. There was yet one Comfort left to me, for when I once perceived their covetous Intent, I conveyed from among our Books the Bible, and the Sentences, and other Books, which I valued most. I durst not, however, take away the Plalter of my sovereign Lady the Queen, because it was too well known, on account of the golden Pictures therein: So we returned with the two other Carts to our Lodging; then came he that was appointed to be our Guide to the Court of *Baatu*, bidding us provide for our Journey in all haste; to whom I said, that I would in no case have the Carts go with me, which he declared unto *Coiat*.

Then *Coiat* commanded that we should leave them, and our Servant with him, and we did as he directed, and so travelled directly Eastwards towards *Baatu*; the third Day we came to *Etilia*, or *Velga*, the Stream of which when I beheld I wondered from what Region of the North such huge and mighty Waters should descend. Before we were departed from *Sartaub*, *Coiat*, with many other Scribes of the Court, said unto us, Do not make Report that our Lord is a Christian, but a *Maal*, because the Name of a Christian seemeth to them to be the Name of some Nation; and so great is their Pride, that though they believe, perhaps,

some things concerning Christ, yet they will not be called Christians, being desirous that their own Name, that is to say, *Mogul Moal*, should be exalted above all other Names: Neither will they be called by the Name of *Tartars*, for the *Tartars* were another Nation, as I was informed by them.

24. At the Time that the *Franks* made themselves Masters of the City of *Antioch*, which was about the Year 1097, there reigned in these Northern Parts a Prince whose Name was *Kou-Khan*, or *Ken-Khan*. *Kou* or *Ken* was his proper Name, and *Khan* his Stile of Power or Dignity; for it is to be understood, that the Word *Khan* strictly taken, signifies a Diviner, a Man skilled in sublime Sciences, or one who can foretel future Events; and from thence it is transferred to their Princes, as if they held them to be endowed with all these great Qualities. The *Turks*, at the Time of that Siege, demanded Succours of *Kou-Khan* against the Christians, as coming themselves originally out of these Countries. This *Kou-Khan* was stiled likewise *Khan*, or Prince of *Cara-Catbay*, which is as much as to say, the *Black Catbay*: for *Cara* in their Language signifies black, and *Catbay* is the Name of a certain Country, which, however, is to be distinguished from that *Catbay* which lies farther towards the East, and is a maritime Country, of which I shall speak hereafter.

As for this *Cara-Catbay*, it lies behind certain Mountains, over which I passed, as also through a plain Country, in which dwelt formerly a certain great *Nestorian* Priest, who was the Sovereign of a Nation called *Naymans*, and who were all Christians of the *Nestorian* Sect. This *Kou-Khan* being dead, the *Nestorian* Priest before mentioned took upon him the Stile and Office of a King, and thence the *Nestorians* called him the King *Prestre Jobn*, i. e. *Jobn* the Priest, and published mighty things concerning him, and much beyond the Truth; for it is the Custom of the *Nestorians* coming from this Country to magnify every little thing into a great Matter, just as they spread a Report that *Sartaeb* was become a Christian, and that *Mangu-Khan*, and *Ken-Khan*, had also embraced our Religion only because they were indulgent to those of our Profession, tho' nothing is more certain than that none of them are Christians. So likewise there went abroad a great Report concerning this King and Priest *Jobn*; notwithstanding which, when I travelled through his Territories, there was no body that knew any thing of him, but a few *Nestorians*. In his Pastures or Territories dwelt *Ken-Khan*, at whose Court *Friar Andrew* was, and I myself passed by at my Return. This *Jobn* had a Brother who was powerful also, and a Shepherd like himself called *Unc*, and he inhabited beyond the Mountains of *Cara-Catbay*, distant from his Brother *Jobn* the Space of three Weeks Journey. He was Lord of a certain Village called *Cara-Carum*, having People also for his Subjects named *Prit*, or *Merkit*, who were Christians of the Sect of *Nestorius*; but their Lord abandoning the Worship of Christ, embraced Idolatry, retaining with him Priests of the said Idols, who all of them are Worshipers of Devils and are Sorcerers themselves.

Beyond his Pastures, about ten or fifteen Days Journey, are the Pastures of *Moal*, who were a poor and beggarly Nation, without Governor, and without Law, except their Soothsayings, and their Divinations, unto which detestable Studies all in those Parts apply their Minds. Near unto *Moal* were other poor People called *Tartars*. The aforesaid King *Jobn* died without Issue Male, his Brother *Unc* thereby was greatly enriched, and took himself the Stile of *Khan*, and his Cattle and Herds ranged to the Borders of *Moal*. About the same time there was one *Zingis* a Warrior among the People of *Moal*; this *Zingis* stole as many Cattle from the *Khan* as he could possibly, so that the Shepherds of *Unc* complained unto their Lord; upon which he raised an Army, and marched up into the Country of *Moal* to seek for *Zingis*: But *Zingis* fled amongst the *Tartars*, and hid himself among them; and *Unc* having taken some Spoils both from *Moal*, and also from the *Tartars*, returned home; then *Zingis* addressed himself to the *Tartars*, and to the People of *Moal*, "Behold, Brethren, said he, because we are destitute of a Governor and Captain, you see how our Neighbour oppresses us;" on which the *Tartars* and *Moals* appointed him to be their Captain.

Then having secretly gathered together an Army, he broke in suddenly upon *Unc*, and overcame him, and *Unc* fled into *Cathaya*. At the same Time his Daughter was taken, which *Zingis* married unto one of his Sons, by whom the conceived and brought forth the *Great Khan*, which now reigneth, called *Mangu-Khan*. Then *Zingis* sent the *Tartars* before him in all Places where he came; and thereupon was their Name published and spread abroad; for in all Places the People call out, *The Tartars come, the Tartars come*. Yet through continual Wars, they are now all of them in a manner consumed and brought to nought. Whereupon the *Moals* endeavour what they can to extinguish the Name of the *Tartars*, that they may exalt their own. The Country wherein they first inhabited, and where the Court of *Zingis-Khan* yet remaineth, is called *Manberul*. But because *Tartaria* is the Region out of which they have obtained their conquests, they esteem that the Seat of their Kingdom; and there also, for the most part, do they elect their *Great Khan*.

25. In respect to this *Sartaeb*, whether he believes in CHRIST or no, I know not; this I am sure of, that he will not be called a Christian: On the contrary, he seems to me to deride and scoff at Christians. His Country is in the Way of the *Cbristians*, viz. of the *Russians*, the *Welschians*, the *Bulgarians*, the *Soldaians*, the *Kirchii*, and the *Alans*, who all of them pass by him as they are going to the Court of his Father *Batu* to carry Gifts; and therefore he is more in Friendship with them. If the *Saracens* hower come and bring greater Gifts than they, they are dispatched sooner. He hath about him certain *Nestorian* Priests, who tell their Beads and sing their Devotions. There is also another under *Batu*, called *Berta*, who feeds his Cattle towards the Iron-gate or *Derben*, where lieth the Passage of all the *Saracens* which come out of *Persia* and out of *Turky*, to go unto *Batu*, and passing by they make him Presents, and he professeth himself to be a *Saracen*, and will not permit Swines Flesh to be eaten in his Dominions. At the Time of our Return, *Batu* commanded him to remove himself from that Place, and to inhabit upon the East Side of *Volga*, for he was not willing that the *Saracens* Embassadors should pass by the said *Berta*, because he saw it was not for his Profit.

For the Space of four Days, while we remained in the Court of *Sartaeb*, we had not any Victuals allowed us, except once a little *Cosmos*; and in our Journey between him and his Father, we travelled in great Fear; for certain *Russians*, *Hungarians*, and *Alans*, being Servants to the *Tartars* (of whom they have great Multitudes among them) assemble themselves twenty or thirty in a Company; and secretly in the Night conveying themselves from Home, they take Bows and Arrows with them, and whosoever they find in the Night Season, they put him to Death, hiding themselves in the Day-time; and having tired their Horses, they go in the Night to a Company of other Horses feeding in some Pasture, and change them for new, taking with them also one or two Horses besides, to eat them when they stand in Need. Our Guide therefore was much afraid, lest we should have met with such Companions.

In this Journey we had perished through Famine, had we not carried some of our Biscuit with us: At length we came to the vast River at *Etilia*, or the *Volga*, which is four Times greater than that River of *Sein*, and of a wonderful Depth, falling into that which of late they call the *Hircanian-Sea*, according to the Name of a certain Country in *Persia*, lying on the Shore thereof. *Ishore* calleth it however the *Caspian-Sea*, for it hath the *Caspian-Mountains* and the Land of *Persia* situate on the South Side thereof, and the Mountains of *Mafbet*; that is to say, of the People called *Ajassini*, towards the East, which Mountains are joined unto the *Caspian* Mountains; but on the North Side thereof, lieth the same Defart, wherein the *Tartars* now inhabit; in which heretofore there dwelt a Nation called *Changle*; and on that Side it receives the *Etilia*, which River rises in Summer-time like the River *Nile* in *Egypt*. On the West Part thereof it hath the Mountains of *Alan*, and *Leggi*, and *Derben*, or the Iron-gate, and the Mountains of *Georgia*. This

Sea therefore is encompassed on three Sides, with Mountains; but on the North Side hath a fine flat Country. Friar *Andrew*, in his Journey, travelled round about two Sides thereof, namely the South and the East Sides, and I myself about the other two; that is to say, the North Side, in going from *Baatu* to *Mangu-Khan*, and in returning likewise; and on the West Side, in coming home from *Baatu* into *Syria*. A Man may travel round about it in four Months; and it is not true which *Idore* reports, that this Sea is a Bay or Gulph coming out of the Ocean, for in no Part it communicates the Ocean, but is invironed on all Sides with the Land.

26. All the Regions extending from the West Shore of this Sea, where *Alexander's* Iron-gate, otherwise called the City of *Derbent*, is situate, and from the Mountains *Alan*, all along by the Fences of *Meotis*, unto which the River of *Tanis* falls, and so to the North Ocean was of old called *Albania*, of which Country *Idore* reporteth, that there are in it Dogs of such huge Stature, and so fierce, that they are able, in Fight, to match Bulls, and to master Lions, which is true, as I was assured by several, who told me, that towards the North Ocean they make their Dogs draw in Carts like Oxen, on account of their Bigness and Strength. On that Part of *Etulia* where we arrived, there is a new Station built, wherein they have placed *Tartars* and *Russians* together to ferry over and transport Messengers going and coming to and from the Court of *Baatu*, for *Baatu* keeps his Court upon the farther Side towards the East; neither ascendeth he in Summer-time more northward than the Place where we arrived, but was even then descending to the South. From *January* to *August*, he, and all other *Tartars* ascend by the Banks of Rivers towards cold and northerly Regions, and in *August* they begin to return back again.

We passed down the Stream therefore in a Bark from the above-mentioned Station unto his Court, from the same Place unto a Village of *Bulgaria the Greater*, standing towards the North; it is five Days Journey. I wonder how the Devil carried the Religion of *Mohammed* thither; for, from *Derbent*, which is upon the extreme Borders of *Persia*, it is above thirty Days Journey to pass over the Desert, and so ascend to the Bank of *Etulia* into the Country of *Bulgaria*, in all which Way there is no City, only certain Cottages near unto that Place where *Etulia* falleth into the Sea. These *Bulgarians* are more wicked *Mohammedans* than any other Nations whatever. When I beheld the Court of *Baatu*, I was astonished at the first Sight thereof, for his Houles or Tents are as though they had been some mighty City stretching out a great Way in Length, the People ranging up and down about it for the Space of some three or four Leagues; and even as the People of *Israel* knew every Man on what Side the Tabernacle to pitch his Tent, so every one of them knoweth very well toward which Side of the Court he ought to place his House when he takes it from off the Cart. The Court is called therefore in their Language *Horda*, which signifies the Midst, because the Governor, or chief Captain among them, dwells always in the Midst of his People, except only that directly towards the South no inferior Person places himself, because, towards that Region the Court-gates are set open; but to the Right-hand and the Left-hand they place themselves as far as they will, according to the Conveniency of Places, so that they erect not their Houles directly opposite against the Court. At our Arrival we were conducted to a *Mohammedan*, who provided no Victuals for us at all. The Day following, we were brought to the Court, and *Baatu* caused a large Tent to be erected, because his House or Tent could not contain so many Men and Women as were assembled. Our Guide admonished us not to speak till *Baatu* had given us Commandment so to do, and that then we should speak our Minds briefly.

Then *Baatu* demanded whether your Majesty had sent Embassadors unto him or no? I answered, that your Majesty had sent Messengers to *Ken-Khan*, and that you would not have sent Messengers or Letters to *Sartach*, had not your Highness been persuaded that they were become Christians, because you sent not unto them out of any Fear, but only for Congratulation and Courteously-fake, in

regard that you heard they were converted to Christianity. Then led he us unto his Pavilion, and we were charged not to touch the Cords of the Tent, about which they are as suspicious as about the Threshold of the House. There we stood in our Habits bare-footed, and bare-headed, and were a great and strange Spectacle in their Eyes. Indeed Friar *John Du Plano Carpini* had been there before my Coming; but because he was the Pope's Embassador, he changed his Habit, that he might not be contemned. Then we were brought into the Midst of the Tent, neither required they of us to do any Reverence, by bowing our Knees as they used to do of other Messengers; we stood therefore before him for the Space where in a Man might have rehearsed the Psalm *Miserere mei Deus*, and there was a great Silence kept by all.

Baatu himself sat upon a Seat long and broad, like a Bed gilt all over, with three Stairs to ascend, and one of his Ladies sat beside him. The Men there assembled sat down scattering, some on the Right-hand of the said Lady, and some on the Left. These Places on the one Side, which the Women filled not up (for there were only the Wives of *Baatu*) were supplied by the Men. Also at the very Entrance of the Tent stood a Bench furnished with Cosmos, and with stately Cups of Silver and Gold, richly set with precious Stones. *Baatu* beheld us earnestly, and we him, and he seemed to resemble in Personage Monsieur *John de Beaumont*, whose Soul resteth in Peace; for like him, he had a fresh ruddy Countenance.

At length, he commanded us to speak. Then our Guide gave us Direction that we should bow our Knees and speak; on which I bowed one Knee, then he signified that I should kneel upon both my Knees; I did so, being loth to contend about such Circumstances; and again he commanded me to speak. Then I thinking of a Prayer unto GOD, because I kneeled on both my Knees, began to pray in these Words; "Sir, we beseech the Lord, from whom all good Things do proceed, and who hath given you these earthly Benefits, that it would please him hereafter to make you Partaker of his heavenly Blessings, because the former, without these, are but vain and unprofitable: And, indeed, further be it known unto you of a certain, that you shall not obtain the Joys of Heaven, unless you become a Christian; for God saith, *Whosoever believeth and is baptized, shall be saved; but he that believeth not shall be condemned.*"

At this he modestly smiled, but the other *Moals* began to clap their Hands and to deride us, and my silly Interpreter, of whom especially I should have received Comfort in Time of Need, was himself abashed, and utterly out of Countenance. Then after Silence made, I said to him; "I came to your Son, because we heard that he was become a Christian, and I brought to him Letters on the Behalf of my Sovereign Lord the King of France, and your Son sent me hither unto you; the Cause of my coming therefore is best known unto yourself." Then he caused me to rise up, and he enquired your Majesty's Name, my Name, and the Name of my Associate and Interpreter, and caused them all to be put down in Writing. He demanded also (because he had been informed that you was departed out of your own Countries with an Army) against whom you waged War? I answered against the *Saracens*, who had defiled the House of GOD at *Jerusalem*. He asked also whether your Highness had ever before that Time sent any Embassador unto him or no? To you, Sir, said I, never.

Then he caused us to sit down, and gave us of his Milk to drink, which they account to be a great Favour, especially when any Man is admitted to drink Cosmos with him in his own House; and as I sat looking down on the Ground, he commanded me to lift up my Countenance, being desirous yet to take a more diligent View of us, or else perhaps for a kind of superstitious Observation; for they esteem it a Sign of ill Luck, or a Prognostication of Evil unto them, when any Man sits in their Presence holding down his Head as if he were sad, especially when he leans his Cheek or Chin upon his Hand. Then we departed, and immediately after came our Guide to us, and conducting us to our Lodging, said unto me; "Your Ma-
"ster

" After the King, requesteth that you may remain in this Kingdom, which Request *Baatu* cannot grant, without the Knowledge and Consent of *Mangu-Khan*; wherefore you and your Interpreter must, of Necessity, go to *Mangu-Khan*; but, nevertheless, your Associate and the other Men, shall return unto the Court of *Sartach*, and stay there for you till you come back." Then began my Interpreter to lament, esteeming himself but a dead Man; my Associate also protested he would sooner lose his Head than withdraw out of my Company: I myself said, that without my Associate I could not go, and that we stood in Need of two Servants at least, because if one should chance to fall sick we would not be without another.

Upon this, returning unto the Court, he told this to *Baatu*, and *Baatu* answered, let the two Priests and the Interpreter go together, but let the Clerk return to *Sartach*; and coming again unto us, he told us so; and when I would have spoken for the Clerk to have had him with us, he said, no more Words, for *Baatu* is resolved that so it shall be, and therefore I dare not go to the Court any more. *Gofet*, the Clerk, had the Remainder of the Alms-Money bestowed upon him, twenty-six *Yperperas*, and no more, ten whereof he kept for himself and the Lad, and sixteen he gave unto the Interpreter for us; and thus were we parted with Tears, he returning unto the Court of *Sartach*, and ourselves remaining still in the same Place.

27. On the Eve of the Feast of *Assumption* our Clerk arrived at the Court of *Sartach*, and the next Day after the *Noblerian* Priests were adorned with our Vestments, in the Presence of the said *Sartach*. Then we ourselves were conducted unto another Host, who was appointed to provide us House-room, Victuals, and Horses; but because we had not any thing to bestow upon him, he did all things untowardly for us: Then we rode on forward with *Baatu*, descending along by the Bank of *Etilia*, or *Volga*, for the Space of five Weeks together. Sometimes my Associate was so extremely hungry, that he would tell me in a manner weeping, that it tired with him as though he had never eaten any thing in all his Life before. There is a Fair or Market following the Court of *Baatu* at all times; but it was so far distant from us, that we could not have Recourse thereto, for we were constrained to walk on Foot for want of Horses. At length certain *Hungarians*, a sort of Clergymen, found us out, and one of them could as yet sing many Songs without Book, and was accounted of other *Hungarians* as a Priest, and was sent for unto the Funerals of his deceased Countrymen.

There was another of them also pretty well instructed in his Grammar, for he could understand the Meaning of any thing that we spoke, but could not answer us. These *Hungarians* were a great Help to us, giving us Cofins to drink, and sometimes Flesh to eat also, who when they requested to have some Books of us, and I had not any to give them (for indeed we had none except a Bible, and a Breviary) it grieved me exceedingly, and I said to them bring me some Ink and Paper, and I will write for you so long as we shall remain here; and they did so, and I copied out of them the Hours of the blessed Virgin, and the Office of the Dead. One Day there was a *Comonian* that accompanied us, that saluted us, saying *Salve Domine*; wondering thereat, and saluting him again, I demanded of him who had taught him that kind of Salutation? He said, that he was baptized in *Hungary* by our Friars, and that of them he learned it: He said moreover, that *Baatu* had enquired many things of him concerning us, and that he told him the State of our Order. Afterwards I saw *Baatu* riding with his Company, and all his Subjects that were Masters of Families riding with him, and in my Estimation there were more than five hundred Persons in all.

At length, about the End of *Holy-road*, there came a certain rich *Achal* unto us, whose Father was a Millanary, which is a great Office among them, and told us, I am the Man that must conduct you to *Mangu-Khan*, and we have thither a Journey of four Months to travel, and there is such extreme Cold in those Parts, that Stones and Trees burst at once: Therefore I wish you would advise with your Wives whether you be able to endure it or no? I answered, by God's Help I hope we shall be able to go thro'

that which other Men can endure. Then he said, if you cannot endure it, I will forsake you by the way, and I answered, it were not just Dealings for you so to do, for we go not thither upon any Business of our own, but by reason that we are sent thither by our Lord; wherefore since we are committed to your Charge, you ought in no wise to forsake us. Then he said, all shall be well. He caused us to shew him our Garments, and whatsoever he deemed to be less needful for us, he bid us leave behind in the Custody of our Host. On the Morrow they brought unto each of us a furred Gown made all of Ram's Skin, with the Wool still upon them, and Breeches of the same, Boots according to their Fashion, Shoes made of Felt, and Hoods also made of Skins after their Manner. The second Day after *Holy-road* we began to set forward on our Journey, having three Guides to direct us, and we rode continually Eastward till the Feast of *All-Saints* throughout all that Region, and beyond also, were the People *Changies* Inhabitants, who were descended from the *Romans*. On the North Side of us we had *Bulgaria the Greater*, and on the South the *Caspian Sea*.

28. When we had travelled twelve Days Journey from *Etilia* we found a mighty River called *Jagac*, which River issuing out of the North from the Land of *Pascatir*, or of the *Hungarians* which is all one, and they are all of them Shepherds, not having any Cities; and their Country bordereth upon *Bulgaria the Greater* on the West Frontier; from the North-East part of the Country there is no City at all. Out of the said Region of *Pascatir* proceeded the *Hunnes* of old, who afterwards were called *Hungarians*. Next unto it is *Bulgaria the Greater*. *Isidore* reporteth concerning the People of this Nation, that with swift Horses they traversed the impregnable Walls and Bounds of *Alexander*, which together with the Rocks of *Caucasus*, serve to restrain those barbarous and blood-thirsty People from invading the Regions of the South, inasmuch as they had Tribute paid unto them as far as *Egypt*, and that they wasted all Countries, even unto *France*. If so they were more mighty than the *Tartars* as yet are; and unto them the *Blacians* and the *Bulgarians*, and the *Vandals*, joined themselves; for out of *Bulgaria the Greater* came those *Engarians*. As for them who inhabited beyond *Danubius*, near unto *Constantinople*, and not far from *Pascatir*, are called *Lac*, which (having the Pronunciation) is all one with black, for the *Tartars* cannot pronounce the Letter *B*: From whom also descend the People which inhabit the Land of *Hajan*, for they are called *Lac* (both these and the other) in the Language of the *Russians*, the *Polonians*, and the *Belmenians*.

The *Slavonians* spoke one Language with the *Fandals*, all which confederated with the *Hunnes*, and now, for the most part, they unite themselves to the *Tartars*, whom GOD hath raised up from the utmost Parts of the Earth, according to that which the Lord saith; *I will provoke them to Envy by a People which is no People, and by a foolish Nation will I anger them*. This Prophecy is fulfilled, according to the literal Sense thereof, upon all Nations, which observe not the Law of GOD. All this which I have written concerning the Land of *Pascatir*, was told me by certain Friars, who travelled thither before ever the *Tartars* came; and, from that Time, they were subdued unto their Neighbours the *Bulgarians*, being *Saracens* for which Reason many of them proved *Saracens* also.

Other Matters concerning these People may be known out of History; for it is manifest, that those Provinces beyond *Constantinople*, which are now called *Bulgaria*, *Valachia*, and *Slavonia*, were of old Provinces belonging to the *Greeks*; also *Hungary* was heretofore called *Pannonia*, and we were riding over the Land of *Changle* from the Feast of *Holy-road*, until the Feast of *All-Saints*, travelling almost every Day, according to my Account, as far as it is from *Paris* to *Orleans*, and sometimes farther, according as we were provided with Post-Horses; for some Days we had Change of Horses twice or thrice in a Day, sometimes we were two or three Days together, not finding any People, and then we were constrained not to ride so fast. Of twenty or thirty Horses we had always the worst, because we were Strangers, for every one took their Choice of the best Horses before us. They provided me always a strong Horse, and

I was corpulent and heavy; but whether he went a gentle Pace or no I durst not make any Question, neither durst I complain, although he trotted very hard; for every Man must here be contented with his Lot as it falls. We were often exceedingly troubled, because our Horses tired before we could come at any People, and then we were constrained to whip our Horses, and to lay our Garments on other Horses, and sometimes two of us to ride upon one Horse.

29. Of Hunger and Thirst, Cold and Weariness, there was no End, for they gave us no Flesh-meat, but in the Evening. In the Morning they used to give us a little Drink, or some boiled Millet; in the Evening they bestowed Flesh upon us, as a Shoulder and Breast of Ram's Mutton, and every Man a Quantity of Broth to drink. When we had sufficient of the Flesh Broth we were well refreshed, and it seemed to me most pleasant, and most nourishing Drink. Every Saturday I remained fasting until Night, without eating or drinking, and when Night came I was constrained, to my great Grief and Sorrow, to eat Flesh: Sometimes we were compelled to eat Flesh half foddren, or almost raw, for want of Fuel to boil it, especially when we lay in the Fields, or were benighted before we came to our Journey's End, because we then could not conveniently gather together the Dung of Horses and Oxen, for other Fuel we found but seldom, except, perhaps, a few Thorns in some Places. Upon the Banks of some Rivers there are Woods growing here and there, but they are very rare: In the Beginning our Guide highly disdained us, and it was tedious unto him to conduct such base Fellows. Afterwards, when he began to know us somewhat better, he directed us on our Way by the Courts of rich Moais, and we were requested to pray for them: Wherefore had I carried a good Interpreter with me, I should have had Opportunities to have done much good.

The beforementioned *Zingis*, who was the first great Khan or Emperor of the *Tartars*, had four Sons, of whom proceeded by natural Descent many Children, every one of which doth at this Day enjoy great Possessions, and they are daily multiplied and dispersed over that huge and vast Desert, which is in Dimensions like the Ocean. Our Guide therefore directed us, as we were going on our Journey, to many of their Habitations, and they marvelled exceedingly, that we would not receive either Gold or Silver, or precious and costly Garments at their Hands. They enquired also concerning the Great Pope, whether he was of so lasting an Age as they had heard; for there had gone a Report among them, that he was five hundred Years old. They enquired also after our Countries, whether there was abundance of Sheep, Oxen, and Horses, or no? Concerning the Ocean they could not conceive of it, because it was without Limits or Banks. Upon the Eve of the Feast of *All Saints* we altered our Course, which hitherto pointed East, because the People were now descended very much South, and we went on our Journey by certain Mountains directly Southward for the Space of eight Days together. In the Desert I saw many Asses, which they call *Colan*, being rather Mules; these did our Guides and his Companions chase very eagerly, though they did but lose their Labour, for the Beasts were too swift for them.

Upon the seventh Day there appeared to the South of us very high Mountains, and we entered into a Place, which was well watered, and fresh as a Garden, and found Land tilled and manured. The eighth Day after the Feast of *All Saints* we arrived at a Town of the *Saracens* named *Kenebar*, the Governor whereof met our Guide at the Town's End, with Ale and Cups; for it is their Custom at all Towns and Villages subject to them to meet the Messengers of *Baatu*, and *Mangu-Khan*, with Meat and Drink; at this Time of the Year they went upon the Ice in that Country, and before the Feast of Saint *Michael* they had Frost in the Desert. I enquired the Name of this Province, but being now in a strange Territory, they could not tell me the Name thereof, but only the Name of a small City in the same Province; and that there descended a great River down from the Mountains, which watered the whole Region, according as the Inhabitants would give it Passage, by making divers Channels and Slices, neither did the River discharge itself into any Sea, but was swallowed up by a Gulph into the Bowels of the Earth, and it caused many

Fens or Lakes: Also I saw many Vines, and drank of the Wine made from them.

30. The Day following we came unto another Cottage near the Mountains, and I enquired what Mountains they were, which I understood to be the Mountains of *Caucasus*, which are stretched forth and continued on both Sides to the Sea from the West unto the East; and on the West they are bordering to the *Caspian Sea*, into which the River *Volga* discharges its Streams. I enquired also of the City of *Talas*, wherein were certain *Germans*, Servants unto one *Buri*, of whom Friar *Andrew* makes mention, concerning whom also I enquired very diligently in the Courts of *Sartach* and *Baatu*. I could get no Intelligence of them, but only that their Lords and Master *Ban* was put to Death upon the Occasion following. This *Ban* was not settled in good and fertile Pastures; and upon a certain Day being drunk, he spoke thus to his Men, *Am not I of the Stock and Kindred of Zingis Khan as well as Baatu?* (for indeed he was very nearly related to *Baatu*) *Why then do I not pass and repass upon the Bank of Etilla, to feed my Cattle there as freely as Baatu himself doth?* which Speech of his was reported unto *Baatu*; whereupon *Baatu* wrote to his Servants to bring their Lord bound unto him, and they did so.

Then *Baatu* demanded of him whether he had spoken any such Words? and he confessed that he had. But because it is the Manner of the *Tartars* to pardon drunken Men, he excused himself by saying, *that he was drunk at the Time*. How durst you, said *Baatu*, once name me in thy Drunkenness? and having said this, he caused his Head to be chopped off.

Concerning the aforesaid *Germans*, I could not learn any thing till I was come to the Court of *Mangu-Khan*, and there I was informed that *Mangu-Khan* had removed them out of the Jurisdiction of *Baatu* for the Space of a Month's Journey from *Talas* Eastward to a certain Village called *Bolac*, where they are set to dig Gold, and to make Armour, so that I could neither go nor come by them. I passed very near the said City in going, that is, within three Days Journey; but I was ignorant that I did so, neither could I have turned out of my way, if I had known so much. From the aforesaid Cottage, we went directly Eastward by the Mountains, and from that time we travelled among the People of *Mangu-Khan*, who in all Places sang and danced before our Guide, because he was the Messenger of *Baatu*; for this Courtesy they do to each other, namely, the People of *Mangu-Khan* receiving the Messengers of *Baatu*, and so likewise the People of *Baatu* entertaining the People of *Mangu-Khan*, notwithstanding the People of *Baatu* are more surly, and shew not so much Courtesy to the Subjects of *Mangu-Khan*, as in their Turn they do to them.

A few Days after we entered upon those Mountains, where the *Cara-Cathayans* were wont to inhabit, and there we found a mighty River, in so much that we were constrained to embark ourselves, and to sail over it. Afterwards we came into a Valley, where I saw a Castle destroyed, the Walls whereof were only of Mud, and in that Place the Ground was tilled also; and there we found a certain Village named *Equius*, wherein were *Mohammedans* speaking the *Persian* Language; but they dwell a great way off *Persia*. The Day following, having passed over the great Mountains Southward, we entered into a most beautiful Plain, having high Mountains on our right Hand, and on the left Hand of us a certain Sea or Lake, fifteen Days Journey in Circuit. All the Plain is most commodiously watered by Trenches distilling from the said Mountains; all which fall into the Lake in Summer Time. We returned by the North Side of the Lake, and there were great Mountains on that Side also. Upon this Plain there used to be formerly many Villages; but for the most Part they were all wasted in regard of the fertile Pastures, that the *Tartars* might feed their Cattle there.

We found one great City there named *Cailac*, which was a Market, and great Numbers of Merchants frequented it. In this City we remained fifteen Days, staying for a certain Scribe or Secretary of *Baatu*, who ought to have accompanied our Guide for the dispatching of certain Affairs in the Court of *Mangu*. All this Country was wont to be

called *Organnum*, and the People thereof had their proper Language, and their peculiar kind of writing: But it was now inhabited by the People called *Contemans*. The *Nestorians* likewise in those Parts use the very same kind of Language and Writing: they are called *Organna*, because they were wont to be most skilful in playing upon Organs, as was reported unto me. Here did I first see Worthypers of Idols, concerning whom, let me observe to your Majesty, that there be many Sects of them in these Eastern Countries.

31. The first sort of these Idolaters are called *Jugures*, whose Country borders upon the Land of *Organnum*, within the said Mountains Eastward, and in all their Cities *Nestorians* inhabit, and they are dispersed likewise towards *Perfia* in the Cities of the *Saracens*. The Citizens of the aforesaid City of *Cailac* had three Idol Temples, and I entered into two of them, and beheld their foolish Superstitions. In the first I found a Man, having a Cross painted with Ink upon his Hand; whereupon I supposed him to be a Christian, for he answered like a Christian unto all Questions which I demanded of him; and I asked him, Why therefore have you not the Cross with the Image of *JESUS CHRIST* thereupon? and he answered, we have no such Custom.

I thereupon conjectured, that they were indeed Christians, but that for lack of Instruction they omitted the aforesaid Ceremony; for I saw there behind a certain Chest, which was unto them instead of an Altar, whereon they set Candles and Oblations, an Image having Wings like unto the Image of *St. Michael*, and other Images also, holding their Fingers as if they would bless some body. That Evening I could not find any thing else, for the *Saracens* only invite Men thither, but will not have them speak of their Religion, and therefore when I enquired of the *Saracens* concerning such Ceremonies, they were offended thereat.

On the next Day after was the New Moon, and the *Saracens* Feast of Passover, and changing my Inn or Lodging the same Day, I took my Abode near another Idol Temple; for the Citizens of the said City of *Cailac* courteously invite, and lovingly entertain, all Messengers, every Man of them according to his Ability and Station; and entering into the Temple, I found the Priests of the said Idols there, for always at the New Moons they set open their Temples, and the Priests adorn themselves, and offer up the Peoples Oblations of Bread and Fruits. First, therefore, I will describe to you those Rites and Ceremonies which are common unto all their Idol Temples, and then the Superstitions of the aforesaid *Jugures*, which are, as it were, a Sect distinguished from the rest. They all of them worship towards the North, clapping their Hands together, and prostrating themselves on their Knees on the Earth, holding also their Foreheads in their Hands: Whereupon the *Nestorians* in those Parts will in no case join their Hands together in the Time of Prayer, but they pray, displaying their Hands before their Breasts.

They extend their Temples in Length East and West, and on the North Side they build a Chamber in the Manner of a Vestry, for themselves to go into, or sometimes it is otherwise. If it be a Four-square Temple, in the midst of the Temple towards the North Side thereof, they take in one Chamber in that Place where the Choir should stand, and in the said Chamber they place a Chest long and broad like a Table, and behind the said Chest towards the South, stands their principal Idol, which I saw at *Caracorum*, and it was as big as the Idol of *Saint Christopher*; also a certain *Nestorian* Priest, which had been in *Caitay*, said, that in that Country there is an Idol of such Bigness, that it may be seen two Days Journey before a Man came at it; and so they place other Idols round about the principal Idol, being all of them finely gilt over with pure Gold, and upon the Chest, which is in a manner a Table, they set Candles and Oblations. The Doors of their Temple are always open towards the South, contrary to the Custom of *Saracens*: They have also great Bells like us, and that is the Cause, as I think, why the Christians of the East will in no case use great Bells, notwithstanding they are common among the *Russians* and *Grecians* of *Gasaria*.

32. All their Priests had their Heads and Beards shaven

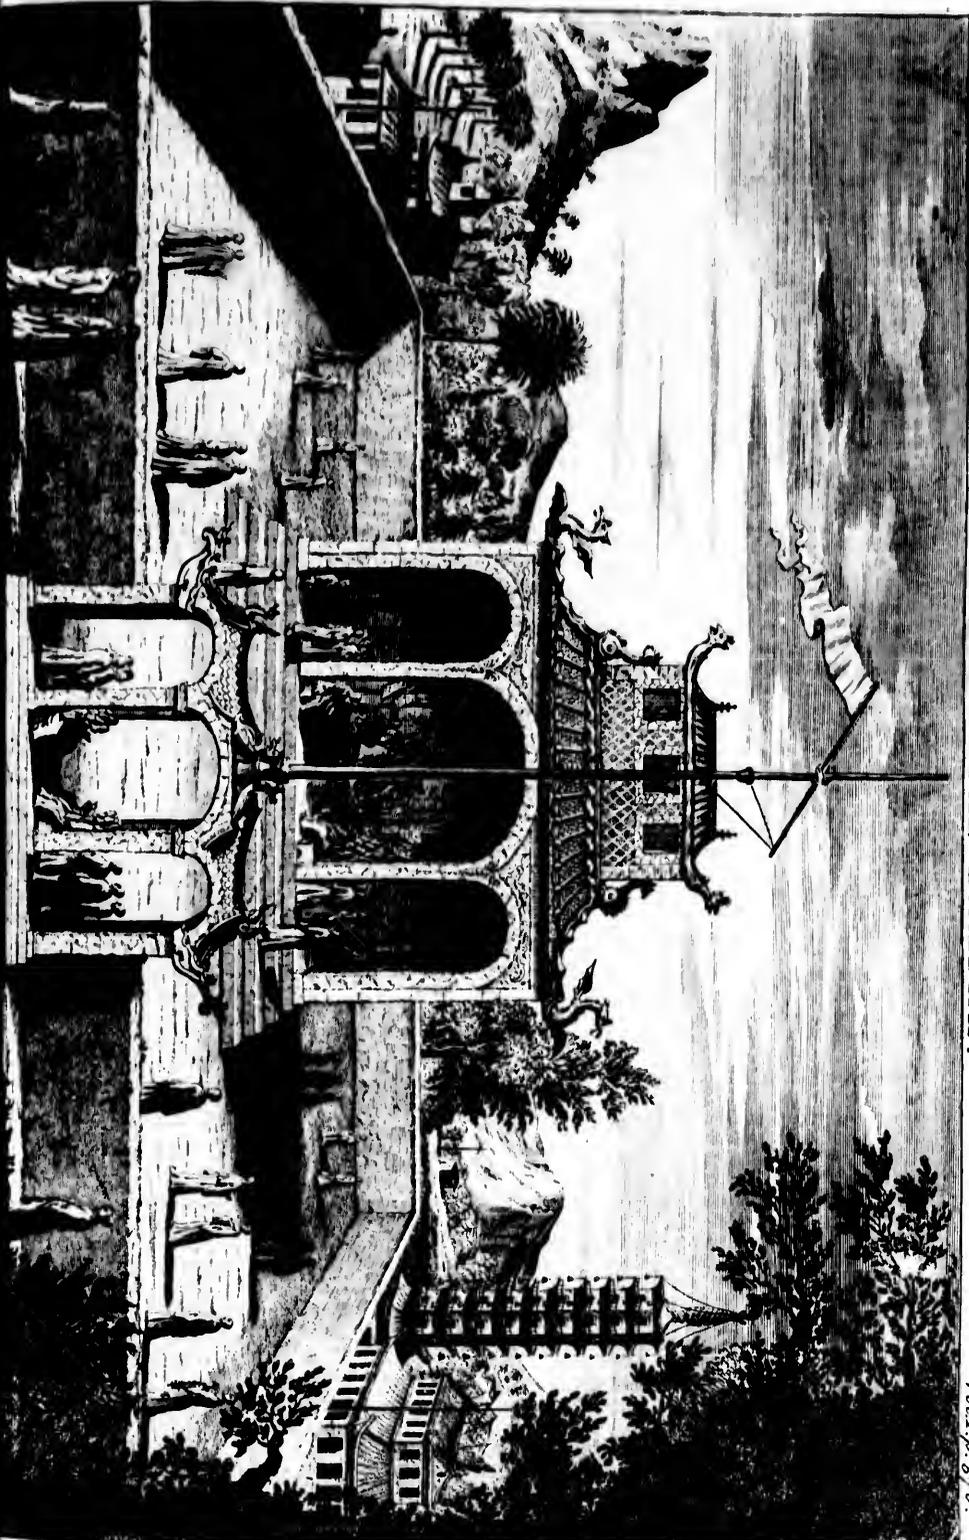

quite over, and they are clad in saffron-coloured Garments; and being once shaven, they lead an unmarried Life from that Time forward, and they live an hundred or two hundred of them together in one Cloister. Upon these Days, when they enter into their Temples, they place two long Forms therein, and so sitting upon the said Forms, like Singing-men in a Choir, one half of them directly over-against the other, they have certain Books in their Hand, which sometimes they lay down by them upon the Forms, and their Heads are bare so long as they remain in the Temple; and there they read softly to themselves, not uttering any Voice at all. On my coming in among them at the Time of their superstitious Devotions, and finding them all sitting mute in a manner, I attempted several Ways to provoke them unto Speech, and yet could not by any Means possibly. They have with them also, whithersoever they go, a certain String with an hundred or two hundred Nut-shells thereupon, much like to our Beads which we carry about with us; and they do always utter these Words, *Ou mam ballazi; God, thou knowest*, as one of them expounded it unto me. And so often do they expect a Reward at God's Hands as they pronounce these Words in Remembrance of God.

Round about their Temple they always make a fair Court like a Church-yard, which they environ with a good Wall, and upon the South Part thereof, they build a great Portico, wherein they sit and confer together: And upon the Top of the said Portico, they pitch a long Pole upright, exalting it if they can, above all the Buildings in the Town; and by the View of the same Pole, People may know that there stands a Temple of the Idols. These Rites and Ceremonies are common to all Idolaters in those Parts. Once I made a Visit to this Idol-temple, and found certain Priests sitting in the outward Portico, and those which I saw seemed, by their shaven Beards, as if they had been our Countrymen. They wore certain Ornaments upon their Heads like Mitres, made of Paper. The Priests of the *Jugures* above-mentioned, use those Ornaments where-ever they go. They go always in their saffron-coloured Jackets, which are very straight laced or buttoned, from the Bosom downwards, after the *French* Fashion; and they have a Cloak upon their Left-shoulder descending under their Right-arm, like a Deacon carrying the Collector's Box in time of *Lent*. Their Letters or Writings, the *Tartars* use as well as they. They begin to write at the Top of their Paper, drawing their Lines right down, and so they read and multiply their Lines from the Left-hand to the Right. They use certain little Papers and uncouth Characters in their magical Practices, and their Temples are full of such short Scrolls hanging round about them.

Mangu-Khan hath sent Letters unto your Majesty, written in the Language of the *Mosses* or *Tartars*; but in the Characters these *Jugures*, they burn the Dead, according to the ancient Custom, and lay up their Ashes on the Top of a Pyramid. After I had sat a while with these Priests, and entered into their Temple, and seen many of their Images both great and small, I demanded of them, *What they believed concerning God?* They answered, *We believe that there is only one God.* Whether do you believe that he is a Spirit or some bodily Substance? They said, *We believe that he is a Spirit.* Then said I, do you believe that God ever took Man's Nature upon him? They answered, *No.* Again, I said, since you believe that he is a Spirit, to what end do you make so many bodily Images to represent him, since also you believe that he was not made Man? Why do you rather represent him by the Image of a Man than of any other Creature? Then they answered, *We frame not these Images to represent God, but when any rich Man amongst us, or his Son, or his Wife, or any of his Friends die, he causeth the Image of the dead Person to be made, and to be placed here, and we, in Remembrance of him, do Reverence thereunto.* I replied then, Do you these Things only for Friendship and out of Flattery to Men? *No,* said they, but out of regard to their Memories.

Then they demanded of me, in Scorn and Disdain, where is God? To whom I answered, Where is your Soul? They said in our Bodies: Then said I, is it not in every Part of our Body, ruling and guiding the whole Body, and yet, notwithstanding, it is not perceived? *Yea*

A VIEW OF A PAGAN TEMPLE.

Vol. P. 570.

Even in God is every where, and rules all Things, and yet he is invisible, being Understanding and Wisdom itself. I was very desirous to have had some farther Conference with them, but on account that my Interpreter was weary and not able to express my Meaning, I was constrained to keep Silence. The *Moals*, or *Tartars*, are in this regard of their Sect, that is to say, they believe there is but one God, yet they make Images of Felt, in remembrance of their deceased Friends, covering them with five most rich and costly Garments, and putting them into one or two Carts, which Carts no Man dare touch; and these are in the Custody of their Soothsayers, who are their Priests, concerning whom I will give your Highness an Account more at large hereafter.

Their Soothsayers, or Diviners, always attend upon the Court of *Mangu*, and of other great Personages; as for the poorer, or meaner Sort, they have them not, except such only as are of the Kindred of *Zingis*; and when they are to remove, or take any Journey, the said Diviners go before them, as the cloudy Pillar went before the Children of *Israel*, and they appoint Ground where the Tents must be pitched; and, first of all, they take down their own Houses, and after them the whole Court does the like. Also on their festival Days, or new Moons, they take out these Images, and place them in order circle-wise within the House; then come the *Moals* or *Tartars* into the same House, bowing themselves before the Images, and worship them. It is not lawful for any Stranger to enter the House. And, on a certain Time, I myself would have gone in, but was very rudely turned out, and obliged to remove, so that I never after attempted to pry any further into this matter.

33. But it is my Opinion, that these *Jugures* who live among the Christians and *Saracens*, by frequent Disputes with them, have been brought to believe that there is but one God; and they dwell in certain Cities, which were brought into Subjection to *Zingis-Khan*; and he gave his Daughter in Marriage unto their King: Also the City of *Caracorum* itself, is in a manner within their Territories; and the whole Country of King, or Prebiter *John*, and of his Brother *Um*, lieth near to their Dominions, except that they inhabit in certain Pastures Northward, and the said *Jugures* between the Mountains towards the South.

The *Moals* received their Letters or Characters from them; and they are the *Tartars* principal Scribes, and all the *Nestorians* almost can read their Letters. Next unto them, between the aforesaid Mountains Eastwards, inhabiteth the Nation *Tangut*, who are most valiant People, and took *Zingis* in Battle; but after the Conclusion of a Peace he was set at Liberty by them, and afterwards subdued them. These People of *Tangut* have Oxen of great Strength, with Tails like Horses, and with long, sharp Hair upon the Backs and Bellies. Their Legs are larger than those of other Oxen, and they are exceeding fierce; these Oxen draw the Houses of the *Moals*, and their Horns are slender, long, straight, and very sharp-pointed, inasmuch that the Owners are obliged to cut off the Ends of them. A Cow will not suffer herself to be coupled to one of them, unless they whistle or sing unto her. They have also the Qualities of a Buffalo, for if they see a Person clothed in Red, they run upon him immediately to kill him.

Next to this Nation are the People of *Tibet*; Men, who had formerly a Custom to eat the Bodies of their deceased Parents, that they might make no other Sepulchre for them than their own Bowels. But of late they have let off this Custom, because thereby they became odious to all other Nations; notwithstanding which, at this Day, they make five Cups of the Skulls of their Parents, to this end, that when they drink out of them, they may, in the Mind of all their Jollities and Delights, call their dead Parents to Remembrance: This was told me by one that saw it. The said People of *Tibet* have vast Plenty of Gold in their Land; whosoever therefore wants Gold digs till he hath found some, and then taking so much thereof as will serve his Turn, he lays up the Remainder in the Earth, because, if he should put it into his Chest, or Storehouse, he is of Opinion that God would withhold from him all other Gold.

I saw some of these People, being very deformed Creatures. In *Tangut* I saw lusty, tall Men, but brown and swarthy in Colour. The *Jugures* are of a middle Stature, like *Frenchmen*. The Language of the *Jugures*, is the Original and Root of the *Turkish* and *Comanian* Languages. Next to *Tibet* are the People of *Langa* and *Solanga*, whose Embassadors I saw in the *Tartars* Court; and they brought ten great Carts with them, every one of which was drawn by six Oxen. They are little brown Men, like *Spaniards*. These People wear Jackets, like the upper Vestment of a Deacon, saving that the Sleeves are somewhat straighter, and they have Mitres upon their Heads like Bishops; but the Fore-part of their Mitre is not so hollow within as the hinder Part, neither is it sharp-pointed, nor cornered at the Top; but there hang down certain square Laps, compacted of a kind of Straw, which is made rough through extreme Heat, and is so trimmed, that it glittereth in the Sun-beams like a Glass, or an Helmet well burnished. On their Brows they have long Bands of the same Manufacture fastened to their Mitres, which hover in the Wind as if two long Horns grew out of their Heads; and when the Wind tosses them up and down too much, they tie them over the middle of their Mitre, from one Temple to another, and so they lie a-cross their Heads. Their principal Embassador to the *Tartars*'s Court, had a Table of Elephants Teeth about him, of a Cubit in Length, and a Handful in Breadth, very smooth, and whensoever he spoke to the Emperor himself, or to any other great Personage, he always looked on that Table as if he had found therein those Things which he spoke; neither did he cast his Eyes to the Right-hand or to the Left of those with whom he talked.

Beyond them, as I was certainly informed, there are other People called *Muc*, having Villages, but no one Man of them appropriates any Cattle to himself, notwithstanding there are many Flocks and Doves of Cattle in their Country, and nobody appointed to keep them; but when any of them want a Beast, he goes up upon a Hill, and there makes a Shout, and all the Cattle which are within hearing of the Noise, come flocking about him, and suffer themselves to be taken as if they were tame. And when any Messenger, or Stranger, cometh into their Country, they shut him up in an House, allowing him Things necessary, till his Business be dispatched; for if any Stranger should travel through that Country, the Cattle would fly away at the very Scent of him, and so become wild. Beyond *Muc* is the grand *Cathaya*, the Inhabitants of which, as I suppose, were of old called *Seres*, for from them are brought most excellent Stuffs and Silk; and this People are called *Seres* of a certain Town in the same Country. I was credibly informed, that in the said Country, there is a Town having Walls of Silver, and Bulwarks of Gold. There are many Provinces in that Land, the greater Part of which are not as yet subdued by the *Tartars*, and the Sea lieth between them and *India*. These *Cathayans* are Men of little Stature, speaking much through the Nose.

This is a general Remark, that all the People of the East have small Eyes. They are excellent Workmen in every Art, and their Physicians are well skill'd in the Virtue of Herbs, and judge very exactly of the Pulse, but know not any thing concerning Urine. Some of them I saw, for there are many at *Caracorum*, and they always bring up their Children in the same Trade of their Father, and therefore they pay so much Tribute; for they give the *Moals*, or *Moguls*, every Day, one thousand five hundred Cassino's, or Jalcots (Jalcot is a Piece of Silver weighing ten Marks) that is to say, every Day, fifty thousand Marks, besides Silks, and a certain Quantity of Victuals, and other Services which they do them. All these Nations are between the Mountains of *Caucasus*; on the North Side of those Mountains to the East Sea, on the South Part of *Scythia*, which the Shepherds of *Moal* inhabit, all are Tributary unto them, and all given to Idolatry, and report many Fables of a Multitude of Gods, and certain deified Men, and make a Pedigree of the Gods, as our Poets do.

The *Nestorians* are intermix'd with them as Strangers, so are the *Saracens* as far as *Cathay*. The *Nestorians* inhabit fifteen Cities of *Cathay*, and have a Bishop there in

a City called *Segin*; but if you proceed further, they are meer Idolaters: The Priests of the Idols of those Nations have all broad yellow Hoods. There are also among them certain Hermits, living in the Woods and Mountains, of an austere and strange Life. The *Nestorians* there know nothing, for they say their Service, and have Holy Books in the *Syrian* Tongue, which they know not; so that they sing, as our Monks do, who are ignorant of Grammar; and hence it cometh that they are wholly corrupted. They are great Ufurers and Drunkards, and some of them also who live amongst the *Tartars*, have many Wives in the same manner as the *Tartars* have.

When they enter into the Church, they wash their lower Parts, as the *Saracens* do; they eat no Flesh on *Friday*, and hold their Feasts on that Day, after the manner of the *Saracens*. The Bishops come seldom into the Countries, perhaps once in fifty Years; then they cause all their little Children to be made Priests, even in the Cradle, so that all their Men almost are Priests, and after this, they marry Wives, which is directly against the Decrees of the Fathers. They are also Bigamists, for their Priests themselves, when their Wife is dead, marry another. They are all *Simonists*, for they give no Holy Thing freely. They are very careful of their Wives and Children, wherefore they apply themselves to Gain, and not to the spreading of the Faith; whence it comes to pass, while some of them bring up the Nobilities Children of *Meal*, altho' they teach them the Gospel, and the Articles of the Faith, yet by their evil Life and Covetousness, they drive them further from Christianity, because the Life of the *Meals*, or *Moguls*, and *Tuimians*, who are down-right Idolaters, is more just and upright than theirs.

34. We departed from the City *Cailac* on Saint *Andrew's* Day, and within three Leagues found a Village of *Nestorians*. Entering into the Church, we sang *Salve Regina*, &c. with Joy, because it was long since we had seen a Church. Departing thence, in three Days we came to the Entrance of that Province, not far from the Sea beforementioned, which seemed to us as tempestuous as the Ocean, and therein we saw a great Island. My Companions drew near the Shore, and wet a linnen Cloth therein, to taste the Water, which was somewhat salt, but however might be drunk. There was a Valley over-against it, between the great Mountains South and East, and between the Hills was another salt Lake or Sea; and there ran a River through that Valley from the other Sea into this, and there came such a continual Wind through the Valley, that Men pass through the Road with great Danger, fearing the Wind should carry them into the Sea.

Therefore we left the Valley, and went towards the North, to the hilly Countries, cover'd with deep Snow, which then lay upon the Earth, so that upon Saint *Nicholas's* Day we began to hasten our Journey, and because we found no People but the *Jani*, or Men appointed from Day's Journey to Day's Journey, to conduct the Messengers; for in many Places in the hilly Countries, the Way is narrow, and there are but few Fields; so that between Day and Night we met with two *Jani*, and therefore of two Days Journey we made one, and travelled more by Night than by Day: It was extremely cold there, so that they lent us their Goat-Skins, turning the Hair outward. On the seventh of *December* in the Evening, we passed by a certain Place, between very terrible Rocks, and our Guide sent unto me, intreating me to pray to God, which I did. Then we sang with loud Voice, *Credo in Deum*, &c. and by the Grace of God, we passed through unhurt.

After that, they began to intreat me that I would write them Papers, and I told them I would teach them Words which they should carry in their Hearts, whereby their Souls and Bodies should be saved; but when I sought to teach them, I wanted an Interpreter, yet I wrote them the Creed and Lord's-Prayer, saying, "Here is written whatsoever a Man ought to believe concerning God; here also is that Prayer wherein we beg of God whatsover is needful for a Man; now therefore believe firmly what is written here, although you cannot understand it, and ask God to do that for you which is contained in this written Prayer, because with his own Mouth he taught it his Friend and I hope he will save you." I could

not do any thing else, because it was dangerous to speak by such an Interpreter, nay, almost impossible, because he was ignorant.

35. After this, we entred into the Country where the Court of *Ken Kban* was, which was formerly called the Country of *Naymans*, who were the peculiar Subjects of *Preghis*, that is, *Presbyter Jobn*, but I saw not that Court till my Return; yet here I shall briefly mention what befel his Son and Wives. *Kon Kban* being dead, *Baatu* desired that *Mangu* should be *Kban*, but I could not well understand in what inanner happened the Death of *Kban*. *Friar Andrew* said, that he died by a certain Medicine given him, and it was suspected that *Baatu* caused it to be administered: Yet I heard otherwise, for he summoned *Baatu* to come and do him Homage, and *Baatu* took his Journey with great Pomp and Splendor, but he and his Servants were much afraid, and he sent one of his Brothers before, called *Sticbin*, who, when he came to *Ken*, and ought to have presented him with his Cup, high Words arose between them, inso much that they flew one another. The Widow of *Sticbin* kept us a whole Day, that we might go to her House, and bleis her, or pray for her.

Kon being dead, *Mangu* was chosen by the Consent of *Baatu*, and was then chosen while *Friar Andrew* was there. *Kon* had among others a Brother called *Siremon*, who by the Counsel of *Kon's* Wife, and her Vassals, went with a great Train towards *Mangu*, as if he went to do him Homage, and yet in reality he purposed to kill him, and destroy his whole Court; and when he was near *Mangu*, and within one or two Days Journey, one of his Waggoners happened to break in the Way; while the Waggoner endeavoured to mend it, came one of the Servants of *Mangu* who helped him; he was so inquisitive of their Journey, that the Waggoner revealed unto him what *Siremon* purposed to do. Then turning out of the Way, as it he lightly regarded it, he went unto the Herd of Horses, and took the best Horse he could, and posting Night and Day, came speedily to the Court of *Mangu*, reporting what he had heard.

The Plot being thus discovered, *Mangu* quickly assembled all his Forces, caused four Lines of armed Men to compass his Court, that none might go in or out, and sent the rest against *Siremon*, who took him, and brought him to the Court, with all his Followers, who, when *Mangu* laid the Matter to his Charge, confessed it immediately. Then he and his eldest Son *Kon Kban* were slain, and three hundred of the Nobility of the *Tartars* with them. The noble Women also were sent for, who were all beaten with burning Firebrands, to make them confess, and having confessed, were put to Death. His youngest Son *Kin*, who was not capable of entering into the Conspiracy, was left alive, and his Father's Palace was left him with all belonging unto it, and we paid by it in our Return, nor durst my Guide turn in unto it, either going nor coming: For, the Lady of the Nations sat there in Heaven's, and there was none to comfort her.

36. We now went up again into the high Countries, steering always towards the North. At length, on Saint *Stephen's* Day, we entred into a great Plain, where there was not so much as a Mole-hill; and the next Day, on the Feast of Saint *John* the Evangelist, we came unto the Palace of that great Lord: But when we were near it, that is to say, within five Days Journey, our Host where we lay, would have directed us much about, so that we should have travelled more than fifteen Days; and this was the Reason, as I understood, that we might go by *Onon Kirule*, their proper Country where the Court of *Zingis Khan* is. Others said, that he did it for this Purpose, that he might make the Way longer, and might shew their Power the more, for so they are wont to deal with Men coming from Countries not subject to them; and our Guide obtained with great Difficulty, that we might go the right Way, for they held us debating this from the Morning till Three o'Clock.

By the Way also the Secretary told me, that it was contained in the Letters which *Baatu* sent to *Mangu Khan*, that we required an Army and Aid of *Sartach* against the *Saracens*. Then I began to wonder much, and to be greatly troubled, for I knew the Contents of the Letters, and

and that no mention of any Army was made therein, only you advised him to be a Friend to all Christians, and that he should exalt the Cross, and bear Enmity to all the Enemies of the Cross; and because also the Interpreters were *Armenians*, of the greater *Armenia*, who greatly hated the *Saracens*, lest perhaps they had interpreted any thing in evil Part, to make the *Saracens* more odious and hateful at their Pleasure. I therefore held my Peace, not speaking a Word for them, or against them; for I feared to gain say the Words of *Baatu*, lest I should incur some false Accusation, and without reasonable Cause.

We came therefore the Day after into the said Court. Our Guide had a great House appointed him, and we three a little Cottage, wherein we could scarce lay our Baggage, make our Beds, and have a little Fire. Many came to visit our Guide, and brought him drink made of Rice, in long strait-mouthed Bottles, in which I could discern no Difference from the best Wine, except that it had not the Scent of Wine. We were called soon after, and most strictly examined upon what Business we came; "I answered, that we having heard *Sartach* was a Christian, we came therefore unto him. The King our Master sent him a Packet by us, he sent us to *Baatu* his Father, and his Father sent us hither, he should have written the Cause." Whereupon they demanded, whether we would make Peace with them? I answered, "He had sent Letters unto *Sartach* as a Christian; and if he had known he were not a Christian, he would never have sent him Letters. That as to a Treaty of Peace, there was no Ground for it, since he has done you no wrong; if he had not done any, why should you war upon him or his People? He willingly (as a just Man) would reform himself and desire Peace. If ye without Cause will make War with him or his Nation, we hope that God (who is just) will help them." At this they wondered, always repeating, *why came ye not to make Peace*. For they are now so puffed-up with Pride, that they think the whole World should desire to make Peace with them; whereas, if I might be suffered, I would preach War against them to the utmost of my Power. But I would not plainly deliver the Cause of my Coming, lest I should speak any thing against that which *Baatu* commanded: I told them therefore the sole Cause of my coming thither was, because he sent me.

The Day following we were brought to the Court, and I thought I could go barefoot, as I did in our Country, and therefore I laid aside my Shoes; but such as come to the Court, alight far from the House, where the great *Khan* is, as it were a Bow-shot off, where the Horses remain, and a Boy to keep them. When we alighted there, and our Guide went with us to the House, a *Hungarian* Boy was present there, who knew our Order; and when the Men came about us, and stared at us as Monsters, especially because we were barefooted, and demanded whether we did not need our Feet, because they supposed we should be Cold have lost them; that *Hungarian* told them the Reason, shewing them the Rules and Practice of our Order. Then the chief Secretary, who was a *Nestorian*, and a Christian, by whose Council and advice almost all is done, came to us to see us, looked earnestly upon us, and called the *Hungarian*, of whom he asked many Questions. Then we were directed to return to our Lodging.

37. When we returned, at the End of the Court, towards the East, as far from the Court as a Cross-bow could shoot at twice, I saw a House, upon which there was a little Cross, at which I rejoiced much, supposing there was some Christian there, and I went in boldly, and found an Altar there, very well furnished; for there, in a golden Cloth, were the Images of *Christ*, the Blessed Virgin, and Saint *John Baptist*, and two Angels; the Lineaments of their Bodies and Garments distinguished with Pearl, and a great silver Cross with precious Stones in the Corners, and the Middle thereof, and many other Embroiderings, and a Lamp burning with Oil before the Altar, having eight Lights; and there sat an *Armenian* Monk, somewhat black and lean, clad with a rough hairy Coat to the Mid-leg having upon it a black Cloak of Bristles, furred with spotted Skins, girt with Iron under his Hair-cloth.

NUMB. 39.

Presently after we entred in; before we saluted the Monk, falling flat upon the Ground, we sang *Ave Regina Calorum*, &c. and he rising, prayed with us; then saluting him, we sat by him, having a little Fire before him in a Pan; therefore we told him the Cause of our coming, and he began to comfort us, saying, that we should boldly speak, because we were the Messengers of God, who is greater than all Men. Afterwards he told us of his Coming, saying, he came thither a Month before us, and that he was a Hermit of the Territories of *Jerusalem*, and that the Lord appeared unto him three Times, commanding him to go to the Prince of the *Tartars*; and when he deferred to go the third Time, God threatened him, and over-threw him upon the Ground, saying, he should die, unless he went; and that he told *Mangu-Khan*, that if he would become a Christian, the whole World should be obedient to him. Then I answered, "Brother, I will willingly persuade him to become a Christian; I will promise him also that the *French* and the Pope will much rejoice thereat, and account him a Brother and a Friend; but I will never promise that they shall become his Servants, and pay him Tribute, as these other Nations, because in so doing, I should speak against my Conscience." On which he held his Peace. We afterwards went together to our Lodging, which I found a cold Habitation.

We had eaten nothing that Day; so we boiled a little Flesh and Millet, of which we made Broth for our Suppers. Our Guide and his Companions were drunk at the Court, and little Care was had of us. At that Time the Messengers of *Vesface* were there, hard by us, which we knew not, and the Men of the Court made us rise in great Haste at the Dawning of the Day. I went barefoot with them a little way unto the House of the said Messengers, and they demanded of them whether they knew us. Then that *Grecian* Soldier calling our Order, and my Companion to remembrance, because he had seen him in the Court of *Vesface*, with *Friar Thomas*, our Minister, and all his Fellows, gave great Testimony of us. Then they demanded whether we had Peace or War with *Vesface*? We have, said I, neither War nor Peace; and they demanded how that might be? Because, said I, their Countries are far from each other, and meddle not together. Then the Ambassador of *Vesface* said, we had Peace, giving me a Caution; so I held my Tongue. That Morning my Toes Ends were frozen so, that I could no longer go barefoot; for in these Countries, the Cold is extrem sharp, and from the Time when it beginneth to freeze, it never ceases till *May*? Nay, in the Month of *May*, it froze every Morning, but in the Day-time it thawed, thro' the Heat of the Sun; but in Winter it never thaws, but the Ice continues with every Wind. And if there were any Wind there in Winter, as there is with us, nothing could live there; but it is always mild Weather till *April*, and then the Winds rise; and at that Time when we were there (about *Easter*) the Cold rising with the Wind, killed Multitudes of living Creatures.

In the Winter little Snow fell there; but about *Easter*, which was in the latter End of *April*, there fell so great a Snow, that all the Streets of *Caracorum* were full; so that they were forced to carry it out with their Carts. Then they first brought us (from the Court) Ram-skin Coats, and Breeches of the same, and Shoes, which my Companion and Interpreter received; but I thought I had no need of them, because I supposed my furr'd Garment, which I brought from *Baatu*, was sufficient for me. On the 5th of *January*, we were brought to the Court, and there came *Nestorian* Priests to me, whom I knew not to be Christians, demanding which Way we worshipped? I said, to the East; and this they demanded, because we had shaven our Beards, by the Advice of our Guide, that we might appear before the *Khan*, according to the Fashion of our Country, whereupon they thought we had been *Tuimians*, or Idolaters: They made us also expound out of the Bible. Then they demanded what Reverence we would pay to the *Khan*, whether after our own Fashion or theirs? To whom I made answer, "We are Priests dedicated to the Service of God; Noblemen in our Country will not suf-

“fer Priests to bow their Knees before them for the Honour of GOD: Nevertheless we will humble ourselves to all Men for the Lord's sake. We came from a far Country, if ye please we will first sing Praises unto GOD, who hath brought us safe hither from afar, and afterwards we will do whatsoever pleaseth this Lord, with this Exception, that he command us nothing which may be against the Worship and Honour of GOD.” Then they entering into the House, delivered what we had said; so their Lord was contented, and they set us before the Entrance of the House, lifting up the Felt which hung before the Gate, and because it was *Christmas* we began to sing, *A Solis ortus cardine*, &c.

38. When we had sung this Hymn, they searched our Bolsoms to see we had no Knives about us. They made our Interpreter ungird himself, and leave his Girdle and his Knife without, in the Custody of a Door-keeper. When we came in, there stood in the Entrance a Bench with Cosmos, by which they made our Interpreter stand, and caused us to sit upon a Form before the Ladies; the whole House was hung with Cloth of Gold, and on a Hearth, in the Middle of the House, there was a Fire made of Thorns and Wormwood Roots (which grow there very big) and Ox Dung. The *Khan* sat upon a Bed covered with a spotted Skin, or Fur, bright and shining like a Seal's Skin: He was a flat nosed Man, of a middle Stature, about the Age of five and forty, and a little pretty young Woman his Wife sat by him, and one of his Daughters, whose Name was *Cerina*, a hard-favoured young Woman, with other Children that were younger, sat next unto them upon a Bed; for that was the House of a certain Christian Lady he loved, by whom he had this Daughter, and he married the young Wife afterwards; yet the Daughter was Mistress of all that Court which was her Mother's.

Then he made them ask us what we would drink, whether Wine, or Caracina, that is, Drink made of Rice, or Caracofinus, that is, clear Cow's Milk, or Ball, that is, Mead made of Honey; for they use these four kinds of Liquor in the Winter? Then I answered, Sir, we are not Men who take Pleasure in Drink, what pleaseth you shall content us. Then he commanded Drink of Rice to be given us, clear and good as White-wine; whereof I tasted a little for Reverence of him, and our Interpreter, to our Misfortune, stood by the Butlers who gave him much Drink, so that he was quickly drunk; then the *Khan* caused Falcons and other Birds to be brought unto him, which he took upon his Fist, and looked upon them, and after a long time he commanded us to speak. We were then to bow the Knee; and he had his Interpreter, a certain *Nelorian*, whom I knew not to be a Christian; and we had our Interpreter, such a one as he was, who by this Time was drunk. Then I said, “We first give Thanks and Praise to GOD, who hath brought us from so remote Parts of the World to see *Mangu-Khan*, to whom GOD hath given so great Power upon Earth; and we beseech our Lord, by whose Command we live and die, that he would grant him a long and a prosperous Life,” (for this they desire, that Men pray for their Lives) then I told him, “Sir, We have heard of *Sartach*, that he was a Christian, and the Christians who heard it, but especially the *French* King, rejoiced; wherefore we come unto him, and our Lord and King hath sent him Letters by us, wherein were Words of Peace, and amongst other things he testified of us whose Servants we are, and entreated him to suffer us to abide in his Country; for it is our Office to teach Men to live according to the Law of GOD, and he sent us to *Baatu* his Father, and *Baatu* hath sent us hither unto you; you are they to whom GOD hath given great Dominions upon Earth, we therefore intreat your Highness to give us leave to continue in your Country to do the Service of GOD for you, your Wives, and Children. We have neither Gold, nor Silver, nor Precious Stones, to present unto you, but ourselves, whom we prefer to serve and pray unto GOD for you: At least give us leave to continue while the Cold be past. My Companion is so weak, that he cannot by any means travel on Horseback without Hazard of his Life;” for my Companion begged me and adjured me to crave leave to stay. Then he began to answer, Even as the Sun spreads

his Beams every where, so our Power and *Baata's* Shews itself every where, so that we have no need of your Silver and Gold.

Hitherto I understood my Interpreter, but further I could not perceive any perfect Sentence, whereby I easily found he was drunk, and *Mangu-Khan* himself was drunk too, at least I thought so; yet he was displeas'd that we came first to *Sartach*, before we came to him. Then seeing the Defect of my Interpreter, I held my Peace, this only excepted; I intreated his Highness not to be displeas'd for that which I spake of Gold and Silver, because I spake it, not that he had need of such things, or desired them, but because we would willingly honour him with spiritual things. Then he made us rise, and sit down again, and after some few Words, and paying our Duty to him, we went out, and his Secretaries, and that Interpreter of his (who had the bringing up of one of his Daughters) went with us. They began to be very inquisitive concerning the Kingdom of *France*, whether there were many Rams, Oxen, and Horses there, as if presently they should enter and take all? And oftentimes I was fane to bridle myself much in dissembling Anger and Indignation. I answered, however, there are many good things there which ye shall see if you happen to come thither. Then they appointed us one who should have Care of us, and we went to the Monk; and when we came out again ready to go to our Lodging, the Interpreter came to us, saying, *Mangu-Khan* hath Compassion on you, and gives you two Months Time to stay, then the extrem Cold will be past; and he offers to send you ten Days Journey, where is a good City called *Caracorum*; if you will go thither he will cause necessary Things to be given you, but if ye will stay here ye may have Necessaries; yet it will be a troublesome thing for you to follow the Court.

I said the Lord preserve *Mangu-Khan*, and grant him a good and long Life. We have found this Monk here, who we think to be a holy Man, and that by the good Pleasure of GOD he came unto these Parts; wherefore we would willingly stay with him, and we will pray together for the Life of *Khan*. Then he held his Peace, and departed, and we went to our House, which we found very cold, and without any Fuel, as yet fasting, though it was Night. Then he to whom we were recommended, provided us Fuel, and a little Meat. Our Guide was now to return to *Baatu*, who desired a Carpet of us, which we left in the Court of *Baatu*, which we gave him, and he peaceably departed; so kissing our right Hand, and confessing his Fault, if he suffered us to endure Hunger and Thirst upon the Way, we pardoned him, craving Pardon of him and his whole Family, if we had given them any evil Example.

39. A certain Woman of *Metz* in *Lorraine*, called *Patiba*, found us, who made us good Cheer, according to her Power, who belonged to the Court of that Lady who was a Christian, of whom I spoke before, who told us of her strange Poverty which she endured before she came to the Court; but now she was well to live, for she had a young Husband, a *Rutenian* (by whom she had three very fat Children) who was skillful in Building, which amongst them is an excellent Art. She told us farther, that at *Caracorum* there was a certain Goldsmith called *William*, born at *Paris*, whose Surname was *Bauebier*, and his Father's Name *Lerrence Bauebier*, and she believed he hath a Brother yet living upon the Great Bridge, called *Roger Bauebier*; and she told me that he had a certain young Man which he brought up, whom he accounted as his Son, who was an excellent Interpreter; but *Mangu-Khan* delivered to the aforesaid Goldsmith three hundred Jafots, that is, three thousand Marks and fifty Workmen, to make a Piece of Work, so that she feared he could not send his Son to me; for she heard some say in that Court, the Men which came from your Country are good Men, and *Mangu-Khan* would willingly speak unto them, but their Interpreter is good for nothing; therefore she was careful for an Interpreter.

Then I wrote unto the Goldsmith, certifying him of my coming hither, and requiting him, that if he could he would send me his Son, and he wrote me Answer, that he could not that Moon; but the next his Work should be perfected, and then he would send him unto me. We stayed

stayed therefore with other Embassadors, and it is otherwise with Embassadors in *Baatu's* Court than in the Court of *Mangu-Khan*; for in the Court of *Baatu* there is one *Jani* on the East Side, who receiveth all such as come from the West, and so of other Countries of the World; but in the Court of *Mangu* they are all together under one *Jani*, and they may see and visit one another. In *Baatu's* Court they know not one another, or whether a Man be a Messenger or no, because they know not one another's Lodging, nor see one another, but in the Court; and when one is called by Accident, another is not, for they go not to Court unless they be sent for. We found there a certain Christian in *Damascus*, who said he came in the Behalf of the Soldan of *Mons Regalis*, and of *Crax*, who desired to become Friend and Tributary to the *Tartars*.

40. The Year before I came thither there was a certain Clerk of *Acon*, or *Ptolemais* in *Syria*, who called himself *Raimund*, but his true Name was *Theodolus*, and he took his Journey from *Cyprus* with *Friar Andrew*, and went with him into *Persia*, and procured certain Instruments of *Americus* then in *Persia*, who remained after *Friar Andrew* returning, he went forward with his Instruments, and came to *Mangu-Khan*, and being demanded upon what Account he came, said, "That he was with a certain holy Bishop, to whom the Lord sent Letters from Heaven, written in Golden Characters, and commanded him to send them to the Emperor of the *Tartars*, because he should be Lord of the whole Earth, and that he should persuade Men to make Peace with him." Then *Mangu* said unto him, if thou hadst brought these Letters, which come from Heaven, and the Letters of thy Lord, thou hadst been welcome. He answered, that he brought Letters, but they were with other things of his on a wild and pampered Gelding, which escaping, fled from him through the Woods and Mountains, so that he had lost all.

Then *Mangu* demanded the Name of the Bishop; he said he was called *Odo* of *Damascus*, and informed him also of *Master William*, who was Clerk of the Lord Legat. The *Khan* demanded, in whose Kingdom it was? To whom he made Answer, that it was under a certain King of the *Franks*, called *Moles*; for he had heard of that that happened at *Majsera*, and he would have said, that they were of your Servants. He also told the *Khan*, that the *Saracens* were between the *Franks* and him, who hindered his way; but if the way had been open, he would have sent Embassadors, and willingly have made Peace with him. Then *Mangu-Khan* asked him, if he would bring his Messengers to that King, and that Bishop? He told him he would, and also to the Pope.

Then *Mangu* caused an exceeding strong Bow to be made, which two Men could scarce bend, and two Arrows of Silver, whose Heads were full of Holes, which sung, when they are shot, like a Whistle; and he chose a *Moal*, whom he should send with the said *Theodolus*, and to whom he said, "Thou shalt go to the King of the *Franks*, to whom this Man shall bring thee, and present him with these on my Behalf; and if he will have Peace with us, we will win the Country from the *Saracens*, even home to him, and will grant him the rest of the Country unto the West; if otherwise, bring back the Bow and Arrow unto us, and tell him we shoot far and strongly with such Bows." Then he caused *Theodolus* to go forth, whose Interpreter *Master William's* Son was, and in his Hearing, he said unto the *Moal*, "Thou shalt go with this Man, mark well the Ways, the Countries, and their Castles, Men and Mountains." For this Reason the young Man blamed *Theodolus*, saying, he had done ill in conducting the Messengers of the *Tartars* with him, for they went for no other Cause but to spy.

He answered, that he would set them on the Sea, that they should not know which Way to return. *Mangu* gave also unto *Moal* his golden Bull or Tablet, to wit, a Plate of Gold of an Hand Breadth and half a Cubit long, wherein his Orders are engraven: Who so carrieth that, may command what he will, and it is done without Delay. So then *Theodolus* came to *Vesfacius*, determining to pass over to the Pope, that he might deceive the Pope, as he had deceived *Mangu-Khan*. Then *Vesfacius* demanded of him, whether he had Letters to the Pope, because he was a

Messenger, and should conduct the Messengers of the *Tartars*; but not being able to shew the Letters, he took him and spoiled him of all that he had got, and cast him in Prison, and the *Moal* fell sick and died there.

But *Vesfacius* sent back the golden Tablet to *Mangu-Khan* by the Servants of the *Moal*, whom I met at *Affron* in the Entrance into *Turky*, who told me what had happened to *Theodolus*. Such Sharpers run through the World, whom the *Tartars* kill when they can take them. Now the Epiphany was at hand; and that *Armenian* Monk, *Sergius* by Name, told me that he should baptize *Mangu-Khan* upon that Holy Day. I entreated him to labour, by all means, that I might be present, that I might bear Witness that I saw it; and he promised me he would.

41. When this festival Day came, the Monk called me, not, but at six of the Clock I was sent for to Court, and I saw the Monk with the Priests returning from the Court with his Cross, and the Priests with the Censer, and the Gospel for that Day. *Mangu-Khan* made a Feast, and his Custom is, that on such Days as his Soothsayers appoint him, or the *Nestorian* Priests make Holy Days, he held his Court; and on these Days the Christians come first, with their Furniture, and pray for him and bless his Cup; then they departing, the *Saracen* Priests come and do the like: Next after them come the idolatrous Priests, and do the same. The Monk told me, that he only believes the Christians, yet will have all to pray for him; but in this he lied, for he believes none; yet all follow his Court as Flies do Honey. He giveth to all, and all Men think they are his Familiars, and all prophesy Prosperity to him. Then we sat before the Court a long Space, and they brought us Flesh to eat; to whom I made answer, that we would not eat there, but if they would provide us Meat, they should provide it for us at our House; to which they answered, Get Home to your House, you were invited here for nothing else but to eat: Therefore we returned to the Monk, who blushed at the Lie he had told me, and therefore would not speak a Word of the Matter; yet some of the *Nestorians* affirmed, that he was baptized; to whom I said, that I would never believe it, nor report it to others, seeing I saw it not.

We came at last to our old and empty House, where they provided us Bedding and Coverlids; they brought us also Fuel, and gave us three the Carcass of one little lean Ram, as Meat for six Days, and every Day a little Platterfull of Millet, and lent us a Caldron, and a Trivet to boil our Flesh, which being boiled, we boiled our Millet in the Broth of the Flesh. This was our Meat, and it had well sufficed us, if they had suffered us to eat in Peace; but there were so many starved Fellows, who were not provided with Meat, that as soon as they saw us dress ours, they thrust in upon us, and would eat with us. The Cold began then to prevail, and *Mangu-Khan* sent us three Fur-coats with the Hair outwards, which we thankfully received: They demanded also how we were provided with necessary Food; to whom I answered, that little Meat sufficed us, but we have not an House wherein to pray for *Mangu-Khan*; for our Cottage was so little, that we could scarce stand upright in it, nor open our Books for Smoak after the Fire was lighted. Of this they gave him an Account, and he sent to the Monk, to know if he would be pleased with our Company, who gladly answered that he would. From that Time we were provided with a better House, and we went down with the Monk before the Court, where none lodged but we and their Soothsayers; but they lodged nearer before the Palace of the greatest Lady, and we at the farthest End towards the East, before the Palace of the last Lady; and that was on the Thirtieth of *January*.

On the next Morning, all the *Nestorian* Priests came together before Day at the Chapel, and smote upon a Broad instead of ringing a Bell, and sang Matins solemnly, and put on their Ornaments, preparing the Censer and the Incense; and while they were waiting thus, behold, in the Morning the principal Wife *Cotata-Caten* by Name (*Caten* is of the same Import as Lady, and *Cotata* is her proper Name) came into the Chapel with many other Ladies, and with her eldest Son called *Baltu*, and other Children, and they cast themselves down upon the Earth, ducking

After the Manner of the *Nestorians*; and after this, they touched all the Images with their Right-hands, always kissing their Hands after they had touched; and after that they gave their Right-hands to all that stood by them in the Church, for this is the Custom of the *Nestorians* when they come into the Church; then the Priests sang many Things, giving the Lady Incense in her Hand, and she put it upon the Fire; then they perfumed her: After this, when the Day was clear, she began to put off the Ornament off her Head, which is called *Bacca*, and I saw her bare Head; then she commanded us to go forth, and as I went out I saw a Silver Basin brought, whether they baptized her or no I know not; but I know they celebrate not Mais in a Tent, but in a standing Church; and at the Feast of *Easter* I saw them baptize and consecrate a Fount with great Solemnity, which now they did not.

While we went into our House, *Mangu-Khan* himself came and went into the Church or Oratory, and a golden Bed was brought, on which he sat by his Queen, over-against the Altar; then we were sent for, who knew not then that *Mangu* was come, and the Door-keeper searched us, lest we should have Knives about us; but coming into the Oratory, having a Bible and a Breviary in my Bosom, I first bowed down to the Altar, and after to *Mangu-Khan*, and so passing by we stood between the Monk and the Altar; then they made us sing a Psalm after our Manner and chaunt it; but we sang *Veni Sancte Spiritus*, &c. and *Khan* caused our Books to be brought unto him, the Bible and the Breviary, and diligently enquired concerning the Images, what they signified; the *Nestorians* answered him at their Pleasure, because our Interpreter came not in with us; and when I was first before him, I had the Bible in my Bosom, which he commanded to be brought unto him, and he looked earnestly on it, then he departed, and his Lady remained there, and distributed Gifts to all the Christians there; she gave the Monk a Jaseot, and to the Arch-Deacon of the Priests another; she caused a Nassic to be spread before us, that is, a Piece of Cloth as broad as a Coverlid of a Bed, very large, and a Buckram, which, when I would not receive, they lent them to my Interpreter, who had them to himself. He brought the Nassic to *Cyprus*, which he sold for eighteen Sultanines of *Cyprus*, but it was much the worse for the Carriage. Then Drink was brought us, *viz.* Drink made of Rice and Red-wine, like a Wine of *Rockelle*, and *Colmos*; then the Lady holding the Cup full in her Hand, desired a Blessing upon her Knees, and all the Priests sang with a loud Voice, and she drank it up, and I and my Companion were obliged to sing.

Another Time, when all of them were almost drunk, there was brought the Carcass of one Ram, which was presently devoured, and after that great Fishes, which are like our Carp, without Salt or Bread, whereof I eat a little, so they passed the Day till the Evening; and when the Lady herself was drunk, she took her Chariot, the Priests singing, and went her Way. The next Sunday, which was the Twenty-third of *January*, the *Khan's* Son came (whose Mother was a Christian) and did the like, but not with so great Solemnity, for he gave no Gifts, but made the Priests drink, and gave them parched Millet to eat. Before the first Sunday in *Lent*, the *Nestorians* fast three Days, which they call the Fast of *Jonas*, when he preached to the *Ninevites*. And the *Armenians* fast five Days, which they call the Fast of *St. Lorkis*, who is the greatest Saint among them. The *Nestorians* begin their Fast on *Tuesday*, and end it on *Thursday*; so that on *Friday* they eat Flesh: And all that Time I saw the Chancellor, who is there called *Bulgai*, give them small Pieces of Flesh upon the *Friday*; and they blessed the Flesh with great Solemnity, as the Pascal Lamb is blessed, but he eat none with them; and this I learned of the *French* Goldsmith, who was his very familiar Friend.

The Monk sent to *Mangu* to fast that Week, which he did; so that on the *Easter* of the *Armenians* we went in Procession to the House of the *Mangu*, and the Monk and we too went in with the Priests before him; and while we went in, one of the Servants went out, carrying out the Shoulder Bones of Rams burnt as black as Coals. I wondered at this greatly, as not knowing what it should mean; but after I

had enquired, I understood, that the *Khan* never does any thing before he has consulted these Bones, which kind of Divination is thus performed: When the *Khan* undertakes any thing, or rather before he undertakes it, he causes three of these Bones to be brought to him unburnt, and holding them, he considers in his Mind the thing he consults about, and whether he shall do it or not, and then delivers the Bones to be burnt; and there are always two little Rooms by the House where he lies, where these Bones are burnt, which are diligently sought for every Day thro' all the *Leskar* or Camp of the *Tariars*. When they are burnt black, they bring them to him; then he looks upon them, whether the Bones, by the Heat of the Fire, be cleft Lengthways, for then he may do it; but if the Bones are cracked athwart, or round Pieces fly out of them, then he doth it not, for the Bones are always cleft in the Fire, or the thin Skin which covers the Bone; and if one be cleft downright, he proceeds in his Design be it what it will.

When therefore we went in before him, having a Caution to avoid touching the Threshold, the *Nestorian* Priests brought him Incense, and he put it upon the Censor, and they perfumed him, then they sang, blessing his Cup; after them the Monk pronounced his Blessings, and we blessed last: And when he saw us holding up the Bible towards our Breasts, he caused it to be brought to him that he might see it, which he earnestly looked upon; then after he had drunk, and the chief Priest had waited on his Cup, they gave the Priests Drink, but we went out; but my Companion staying last, when we were gone, turned his Face to the *Khan*, bowing himself to him, and then hastily following us, he stumbled at the Threshold of the House, while we went in Haste towards the House of *Baltu*, the *Khan's* eldest Son. They that observed the Threshold seized my Companion and made him stay, calling one, and commanding him to be carried to the *Bulgai*, who is the Chancellor, or Secretary of the Court, who judgeth those that are arraigned of Life and Death, but I knew it not; yet, when I looked back, and did not see him coming, I thought they kept him to give him some lighter Garments, for he was weak, and so laden with Felt-Garments that he could scarce go.

Then they called our Interpreter, and made him sit with him, but we went to the *Khan's* eldest Son's House, who had two Wives, and was lodged at the right Side of his Father's Court; who, as soon as he saw us coming, leaping from his Bed whereon he sat, cast himself upon the Earth, smiting his Forehead against the Ground, where kissing the Cross, and then arising, caused it to be laid upon a new Cloth, in an high Place by him, very honourably: He hath a Schoolmaster, a *Nestorian* Priest called *David*, a Drunkard, who instructs him. Then he made us sit, and gave the Priests Drink, and he also drank, receiving the Blessing from them; then we went to the Court of the second Lady, which was called *Cota*, who followed Idolaters, whom we found lying sick a-bed; then the Monk made her rise out of her Bed, and worship the Cross, bowing her Knees thrice, and bowing towards the Ground, he standing with the Cross at the West Side of the House, and she on the East; this being done, they charged Plates, and the Monk went with the Cross unto the East, and she unto the West, and he boldly commanded her, that she was so weak that she could scarce stand upon her Feet, that she should cast herself down thrice, and worship the Cross, towards the East, after the Manner of the Christians, which she did, and he taught her to make the Sign of the Cross upon her Forehead, after she laid down upon her Bed; and praying for her, we went into the third House, where a Christian Lady used to be, who being dead, a young Woman succeeded her, who, together with the Daughter of her Lord, joyfully received us; and all that whole House reverently worshipped the Cross, and he sat it upon a velvet Cloth, in an high Place, and the ordered Meat to be brought, which being set before the Priests, he caused it to be distributed to the Priests; but I and the Monk were very weary of the Meat and Drink, for the Meat being eaten, and much Drink drunk, we were to go to the young Lady *Cerina*, who lodged behind that great House, which was her Mother's, who, at the coming in of the Cross, cast herself down upon the Earth, and wor-

shipped it very devoutly, because she had been taught so to do, and she set it in a high Place, upon a Piece of Silk, and all those Cloths whereon the Cross was set, were given to the Monks.

A certain *Armenian* brought his Cross, who came with the Monk, as he said, from *Jerusalem*, and it was of Silver, weighing about some four Marks, and it had four precious Stones in the Corners, and one in the Middle. It had not the Image of our Saviour, and he had presented it to *Mangu-Khan*, and *Mangu* demanded of him what he desired? To whom he answered, that he was the Son of an *Armenian* Priest, whose Church the *Saracens* had destroyed, and craved his Help for the Building again that Church. Then he asked him for how much it might be built again? He answered, for two hundred Jascots, that is, for two thousand Marks; and he commanded Letters to be given him, to him, who received the Tribute in *Persia* and *Armenia* the Greater, that they should pay him the said Sum in Silver. This Cross the Monk carried with him every where, and the Priests seeing the Gain he made thereof, began to envy him. We were therefore in the House of the young Lady, and she gave the Priests much Drink; from hence we went up into the fourth House, which was the last, for he used not to come often unto that Lady, and her House was very old, and herself not over gracious; but after *Easter*, the *Khan* made her a new House, and new Chariots. She likewise, as well as the Second, knew little or nothing of Christianity, but followed Soothsayers and Idolaters; yet at our coming in, she worshipped the Cross as the Monk and the Priest taught her. There also the Priests drank again, and from this Place we returned to our Oratory, which was not far from thence, the Priests accompanying us with great Howling and Outcries in their Drunkenness, which is not considered there as blameable, either in Man or Woman. A little after, my Companion was brought home, and the Monk sharply rebuked him, because he touched the Threshold. The next Day *Bulgai* came (who was a Justice) and diligently enquired whether any had warned us to take Heed of touching the Threshold; and I answered, Sir, We had not our Interpreter with us, and if they did, how could we understand? Then he pardoned him, but would never after suffer him to come into any of the Houses of *Mangu-Khan*.

43. Sometime afterwards, it happened that the Lady *Cata* was sick, almost to Death, and the Divination by Lot of the Idolaters, did her no good at all; then *Mangu* sent unto the Monk, demanding of him what might be done for her, and the Monk indiscreetly answered, that if she were not cured, he should cut off his Head. Having made that Answer, the Monk called us, declaring the Matter unto us with Tears, intreating us to watch with him that Night in Prayer, which we did; and he had a certain Root, which is called *Rhubarb*, and he beat it almost to Powder, and put it in Water, with a little Crucifix which he had, whereon the Image of our Saviour was advanced, whereof he reported, that by it he knew whether the Sick would recover or die; for if they should escape, it stuck to the Breast of the Sick, as if it were gilded; if otherwise, it stuck not at all; and I still thought that *Rhubarb* had been some holy Relick, which he had brought from the Holy Land of *Jerusalem*. And he gave all sick Persons of that Water to drink, so that it could not be, but their Bowels should be griped with so bitter a Potion; which Alteration in their Bowels they accounted a Miracle. Then I told him, he should prepare some of that Holy Water which is made in the Church of *Rome*, which hath great Virtue to expel Devils, because I understood she was vexed of a Devil; and at his Request, we made him some Holy Water, and he mingled *Rhubarb*, and put his Crucifix all the Night long in a Priest, that the Order of Priesthood had great Power to expel Devils; and he said, it was very true, and yet he lied, because he had no Order, nor knew any one Letter; but was a Weaver, as I understood after, in his Country, when I returned.

The next Morning therefore, I and the Monk, and two *Nestorian* Priests, went unto the Lady, and she was in a little House, behind her greater House. When we came in, she sat in her Bed, and worshipped the Cross, and sat

it honourably by her, upon a Cloth of Silk, and drank of the Blessed Water with *Rhubarb*, and washed her Breast; and the Monk requested me to read a Gospel over her; so I read the Passion of our Lord according to *John*; at length she was cheered, and felt herself better, and she caused four Jascots to be brought, which she first laid at the Feet of the Cross, and after gave them to the Monk, and reached me one, which I would not receive; then the Monk stretched forth his Hand, took it, and gave each of the Priests one; so that at that Time she gave forty Marks. Then she caused Wine to be brought, and gave it the Priests to drink, and I was forced to drink thrice from her Hand, in Honour of the Trinity: She began also to teach me the Language, jesting with me, because I was silent, as not having any Interpreter.

The next Day again *Mangu-Khan*, hearing that we came that Way, made us come into him, because he understood, that the Lady was somewhat better; and we found him with a few Servants, taking a sort of Meat made of Pulse, for comforting the Head, and the burnt Shoulder-blades of a Ram lay before him, and he took the Cross in his Hand, but that he worshipped it, I saw not; he looked upon it indeed, and asked some Questions, but I know not what. Then the Monk craved Leave to carry the Cross aloft, upon a Lance, because I had spoken to the Monk before concerning this, and *Mangu* answered, carry it as you think best; then paying our Duty to him, we went unto the Lady, and we found her strong and cheerful, and she still drank of the Holy Water, and we read the Passion over her, and those miserable Priests never taught her the Faith, nor advised her to be baptized; but I sat there mute, not able to speak any thing, yet she still taught me the Language, the Priests found no fault with any kind of Sorcery; for there I saw four Swords half drawn out of the Sheath, one at the Head of the Lady's Bed, another at the Feet, and two other, on either Side of the Door one. I saw also there one silver Chalice of our Chalices, which very probably was taken out of some Church in *Hungary*, and it hung against the Walls full of Ashes, and upon those Ashes there was a black Stone, and concerning such things, the Priests never teach them that they are evil; nay, they themselves do teach such things. We visited her three Days, so that she was restored to perfect Health; after that, the Monk made a Banner full of Crosses, and got a Cane as long as a Lance, and we carried the Cross aloft.

I honoured him as my Bishop, because he could speak the Language, yet he did many things that did not please me; for he caused a Chair, which may be folded, to be made for him, such as Bishops used to have, and Gloves, and a Cap of Peacocks Feathers, and upon it a little Cross of Gold; I was well pleased with the Cross. He had scabbed Feet, which he endeavoured to palliate with Ointments, and was very presumptuous in Speech; the *Nestorians* also repeated certain Verses of the Psalter upon two Rods, which were joined together, being held by two Men. The Monk was present at such Things, and many other Vanities appeared in him, which displeased me; yet we joined ourselves to his Society for the Honour of the Cross, for we carried the Cross advanced through all the Tents singing, *Vexilla Regis prodeunt*, &c. Whereupon the *Mohammedans* were much dejected.

44. From the Time we came to the Court of *Mangu-Khan* he rode but two Journeys towards the South, and from that time he began to return towards the North, which was towards *Caracorum*; whereon I noted all the Way a thing of which *Mattheus Balkoyn* of *Hannonia* had spoken to me at *Constantinople*, that he had seen this only wonderful, that he always ascended in going, and never descended; for all Rivers came from the East to the West, either directly or indirectly, bending towards the South, or the North, and I enquired of the Priests which came from *Cathaya*, who testified the same. From the Place where I found *Mangu-Khan* to *Cathaya* were twenty Days Journey, going towards the South and East to *Oman Kerule*, which is the proper Country of *Moall*, where the Court of *Zingis* is, were ten Days Journey right East; and in those Parts of the East there was no City, yet there were People which are called *Su-Moall*, that is to say, *Moall* of the Waters,

for *Su* is Water. These People live upon Fish and Hunting, having neither Flocks nor Herds. Towards the North likewise there is no City, but a poor People feeding Cattle, who are called *Kerkis*; the *Orangin* are also there, who bind smooth filed Bones under their Feet, and thrust themselves forward upon the congealed Snow and Ice with such Swiftnes, that they take Birds and Beasts; and many other poor People there are on the North-side, so far as they may spread themselves for the Cold; and they join on the West with the Country of *Pascatir*, which is *Hungary the Greater*, whereof I have spoken before. The Bound or Summit of the North Corner is not known, for the Extremity of the Cold; for in that Place there are continual Mountains of Snow.

I was inquisitive of the Monsters, or monstrous Men, whereof *Isidorus* and *Solinus* make report; they told me they never saw any such, and I therefore doubt whether it be true or no. All these Nations are poor, yet they must serve in some Trade, for it was the Commandment of *Zingis*, that none should be free from Service, till he were so old, that he could labour no longer by any means. Once I remember a certain Priest of *Catbaya* sat with me clothed in a red coloured Cloth, and I demanded of him whence he had such a Colour, and he told me, that in the East Parts of *Catbaya* there were high craggy Rocks, wherein certain Creatures dwell, having in all Parts the Shape of Men; but that they bow not the Knees, but leap instead of walking, which are not above one Cubit long, and their whole Body is covered with Hair, who have their Abode in Caves, which no Man can come unto, and they who hunt them, go to them, and carry strong Drink with them, and make Pits in the Rocks like Wells, which they fill with that strong Drink; for *Catbaya* hitherto has had no Wine, tho' now they begin to plant Vineyards; but the strong Liquor beforementioned is made of Rice. The Hunters hide themselves, and then these Creatures come out of their Holes and taste the Drink, and cry, *Chin-Chin*; on this they come together in great Multitudes, and drink till they are made drunk, so that they sleep there. Then the Hunters come and bind them Hand and Feet, while they are sleeping, and afterwards open the Veins in their Neck, and draw forth three or four Drops of Blood from every one, and let them go free, and that Blood, as he told me, is the most precious Purple.

He told us also as a Truth, (which, however, I do not believe, that there is a Province beyond *Catbaya*, into which, at whatever Age a Man enters, he continueth in the same Age wherein he entered. *Catbaya* is on the Ocean, and the Goldsmith so often mentioned, told me, that there arrived Messengers from a certain People which are called *Tants* and *Mangs*, who inhabit Islands, the Sea of which is frozen in the Winter, so that the *Tartars* may invade them, who offered two thousand Tuemen or Jalcots yearly, so they would let them live in Peace. Tuemen is a Piece of Money containing ten Marks. The common Money of *Cataya* is Paper made like Pasteboard, the Breadth and Length of an Hand, upon which they imprint Lines like the Seal of *Mongu*; they write with a Pencil, like that with which Painters paint, and in one Figure they make many Letters comprehending one Word. The People of *Tibet* write as we do, and they have Characters very like ours. They of *Tangut* write from the right Hand to the left, as the *Archebans* do, and multiply the Lines ascending upwards; the *Jugues*, as I said before, from above to the Bottom of the Line. The common Money of the *Rutenians* are little spotted and griled Skins. When we came with the Monk, he charitably admonished us to abstain from Flesh, and that our Servants should eat Flesh with his Servants; but he would promise us Meal, and Oil, or Butter, which we did, though it much grieved my Companion by reason of his Weakness; wherefore our Food was Millet and Butter, or Paste boiled in Water, with Butter, or sour Milk, and unleavened Bread baked on Ox-dung, or Horse-dung.

45. When our *Quinquagesima* came, which is the Lent Time of all the People of the East, the great Lady *Cata*, with all her Company, fasted that Week, who came every Day to our Oratory, and gave Meat to the Priests, and other Christians, of whom a great Multitude flocked thither the first Week to hear their Duty, and she gave me and

my Companion each a Coat and Breeches of grey Samin, furred with coarse Hair, because my Companion complained much of the Weight of his Skins, which I received for his sake, excusing myself nevertheless, that I would not wear such Cloaths; I gave to my Interpreter what belonged to me. Then the Porters of the Court seeing that such a Multitude came daily to the Church, which was within the Bounds of the Keepers of the Court; they sent one of their Attendants to the Monk, to let him know, that they would not have such a Multitude come within the Precincts of the Court; to this the Monk roughly answered, that he would know whether they commanded this from *Mangu-Khan*, and he added certain Speeches, as if he would accuse them to *Mangu-Khan*; but they preventing him, accused him before *Mangu*, that he was too full of Words, and that he gathered together too great a Multitude to hear him speak.

Afterwards being called to the Court, we came in before the *Khan* himself, who having the burnt Shoulder-blade of a Ram in his Hand, looked upon it, as it were, reading it, began to reprove the Monk severely, telling him, that seeing he was a holy Man, he should pray unto God, and asked why he spoke so much with Men? but I stood behind with my Head bare. Then the *Khan* said to him, Why dost thou not put off thy Cap when thou comest before me, as that *Frank* doeth; and commanded me to be called nearer: Then the Monk became much abased, put off his Cap contrary to the Custom of the *Greeks* and *Armenians*, and when *Khan* himself had spoken sharply to him, we went out; the Monk then delivered me the Cross to bear to the Oratory, because he could not carry it for Shame. After a few Days he was reconciled to him, promising that he would go to the Pope, and that he would bring all the Nations of the West to his Obedience. Whereupon he returning to the Oratory, after that Conference had with the *Khan*, began to enquire of me touching the Pope, if I believed he would see him, if he came unto him in the Behalf of *Mangu*; and if he would furnish him with Horses unto *Saint James* in *Galicia*. He demanded also of your Majesty, if I thought you would send your Son unto *Mangu*? Then I counselled him, that he should take heed that he did not promise Falshood to *Mangu*, because the last Error would be worse than the first, and that God needeth not our Lies, or that we should speak deceitfully for him.

At that time there arose a certain Question between the Monk and a Priest, a learned Man, whose Father was an Archdeacon, and the other Priests accounted him an Archdeacon. For the Monk said, that Man was created before Paradise, and that the Scripture said so; then was I called to be an Arbitrator of the Question, but I being ignorant that they contended about this, answered, that Paradise was made upon *Tuesday*, when the other Trees were made, and that Man was made the sixth Day. Then the Monk began to say, did not the Devil bring Earth the first Day from the four Parts of the World, and making Clay, made the Body of Man therewith, and God inspired his Soul? Then hearing this Heresy of the Monk, and that he so publicly and shamefully recited it, I reprov'd him sharply, saying, he should put his Finger upon his Mouth, because he knew not the Scriptures, and that he should take heed what he said; and he began to scorn me, because I was ignorant of the Language.

I departed therefore from him, going to our House; it fell out afterwards, that he and the Priests went in Procession to the Court without calling me, because the Monk would no longer speak to me as he was wont; when therefore they came before *Mangu*, he earnestly demanded where I was, and why I came not with them? The Priests being afraid, excused themselves, but, returning, they told me the Words of *Mangu*, and murmured at the Monk. After this, the Monk was reconciled to me, and I to him, intreating him, that he would help me with his Language, and I would help him in the Holy Scriptures: For a Brother that is holpen of a Brother, is as a strong City. After the first Week of Fasting, the Lady called to come unto the Oratory, and to give Meat and Drink, which we were wont to have; for the Monk suffered it not to be brought, saying, that Mutton-fat, or Suet, was put in the Sauce; and she gave no Oil, but very seldom; so

that we had nothing but brown Bread and Paste, boiled in Water, tho' we had no Water but of dissolved Snow, or Ice, which was exceeding bad. My Companion began to be much grieved, so I acquainted David, the Schoolmaster of the Khan's eldest Son, with our Necessity, who made Report thereof to the Khan, and he commanded to give us Wine, Flower, and Oil.

Neither the *Nestorians* or *Armenians* eat Fish by any means in *Lent*; but the Monk had a Chest by him under the Altar, with Almonds and Raisins, and dried Prunes, and many other Fruits, which he eat all the Day, whenever he was alone. We eat once a Day, and that in great Affliction; for as soon as they knew that *Mangu* had given us Wine, most impudently they came in upon us like Dogs, both the *Nestorian* Priests, who were drunk all the Day in the Court, and the *Meals* also, and the Servants of the Monk. The Monk also, when any came unto him to whom he would give Drink, he sent to us for Wine; so that the Wine caused us more Trouble than Comfort, because we could not deny it without Offence. If we gave, we wanted ourselves; nor durst we, that being spent, desire any more from the Court.

46. About the Middle of *Lent* the *French* Goldsmith's Son came, bringing with him a Silver Cross made after the *French* Fashion, having the Image of *Christ* all of Silver fastened upon it at the Top, which the Monks and Priests seeing, put it away. This Cross he was to present in the Behalf of his Master to *Bulgai*, who was the chief Secretary of the Court, which when I heard I was offended. The same young Man also declared to *Mangu-Khan*, that the Work, which he had commanded to be made, was finished, which Work I described unto you. *Mangu* hath at *Caracorum* a great Court hard by the Walls of the City, enclosed with a Brick Wall, as the Priors of Monks are enclosed with us. In that Court there is a great Palace, wherein he held his Feasts twice a Year, once in *Easter*, when he passeth that Way, and once in Summer, when he returneth; but the latter is the greater, because then all the Nobles meet together at his Court, and then he gives unto them Garments, and shews all his Magnificence. There are many other Houses there as large as our Farms, wherein his Victuals and Treasures are stored. In the Entrance of that great Place, because it was indecent to have Flaggons going about, as in a Tavern; *William* the Goldsmith made him a great Silver Tree, at the Root whereof were four Silver Lions, having one Pipe fending forth pure Cow's Milk; and the four Pipes were conveyed within the Tree unto the Top thereof, whose Top spread back again downward, and upon every one of them was a Golden Serpent, whose Tails twine about the Tree; and one of these Pipes run with Wine; another with *Caracosmos*, that is, clarified Whey; another with Ball, that is, Drink made of Honey; another with Drink made of Rice, called *Teracina*; and every Drink had a Vessel prepared of Silver at the Foot of the Tree to receive it. Between these four Pipes, at the Top he made an Angel holding a Trumpet; and under the Tree he made an hollow Vault, wherein a Man might be hid, and a Pipe ascending up the Heart of the Tree unto the Angel. He first made Bellows, but they gave not Wind enough. Without the Palace there is a Chamber, wherein the Liquors were laid, and there were Servants ready to pour it out when they heard the Angel sounding the Trumpet; and the Boughs of the Tree are of Silver, and so are the Leaves and Pears that are on it; when therefore they want Drink, the Butler commands the Angel to sound the Trumpet, he who is hid in the Vault, hearing, blows the Pipe strongly, which ascending to the Angel, he sets his Trumpet to his Mouth, and the Trumpet soundeth very shrill; then the Servants hearing, which are in the Chamber, pour Liquor into the proper Pipe, and the Pipes pour it from above, and they are received below into Vessels prepared for that Purpose. Then the Butlers draw them, and carry them through the Palace to Men and Women.

The Palace is like a Church, having the middle Isle and the two Sides beyond two Rows of Pillars, and three Gats on the South; before the middle Gate stands the Tree, and the *Khan* himself sits in the North Front on an high Place, that he may be seen of all; and there are two

Flights of Steps ascending to him; by one he that carries the Cup goes unto him, and by the other he comes down. The Space which is in the Middle, between the Tree and the Steps by which they ascend, is void; for there stands he that waits on his Cup, and the Messengers which bring Presents, the *Khan* sitting there above like a God. On the right Side, towards the West, are the Men, on the left Women; for the Palace stretched out in Length from North to South: on the Right-side are Places full of Seats, on which his Sons and Brethren sit; on the Left-side are the like, where his Wives and Daughters sit, one Woman only sits above by him, but not so high as he. When therefore he had heard that the Work was finished, he commanded the chief Workman to set it up in its Place and make it fit.

About *Passion Sunday*, he went before with his small Houles, leaving his greater Houles behind, and the Monk and we followed him; and he sent us another Bottle of Wine. The *Khan*, in his March, passed between the hilly Countries, where there was great Wind, and extreme cold, and there fell a great Snow; whereupon he sent about Midnight to the Monk and us, entreating us to pray unto God, that he would mitigate the Wind and Cold, because all the Beasts which were in the Train were in Jeopardy; especially because all that Time they were with Young, and ready to bring forth. Then the Monk sent him Incense, requiring him to put it upon the Coals, and offer it to God, which whether he did, I know not; but the Tempest ceased, which had continued two Days.

On *Palm-Sunday* we were near *Caracorum*, in the Dawning of the Day, we blessed the Willow-boughs, whereon, as yet, there appeared no Budd; and about Nine we entered the City, carrying the Cross aloft, with the Banner, passing through the Middle of the Street of the *Saracens*, where the Market and Fair are, to the Church, and the *Nestorians* met us in Procession; and entering into the Church, we found them prepared to celebrate the Mass; which being celebrated, they all communicated; and they asked we whether I would communicate? I answered, that I had drank before, and the Sacrament should not be received but fasting. Mass being said, it was Evening, and Master *William* the Goldsmith, brought us with Joy to his Inn to sup with him. He had a Wife who was the Daughter of *Mohammeden* Parents, though born in *Hungary* herself, who could speak *French*, and the Language of *Comania*. We found also there one other Man, called *Bassilius*, the Son of an *Englishman*, born in *Hungary*, who also was skilful in the same Languages. Supper being ended, they brought us to our Cottage, which the *Tartars* had appointed in a certain Plat of Ground near the Church, with the Oratory of the Monk.

On the next Morning the *Khan* himself entered into his Palace, and the Monk, and I, and the Priests, went to him; they suffered not my Companion to go, because he stumbled on the Threshold. I much deliberated with myself what I should do, whether I should go or no; and, fearing Offence, if I should depart from other Christians, and because it pleased him, and fearing lest that God might be hindered, which I hoped to obtain, I chose rather to go, though I saw their Actions full of Idolatry and Sorcery; nor did I any other Thing there but pray for the whole Church with a loud Voice, and also for the *Khan* himself, that GOD would direct him to the Way of eternal Salvation. We therefore went into the Court, which was very neat, for in the Summer Rivers are conveyed into every Place, whereby it is watered. After this we entered into the Palace full of Men and Women, and stood before the *Khan*, having the aforelaid Tree at our Backs, which, with the Vessels thereof, took up a great Part of the Palace. The Priests brought two little Loaves and Fruit in an earthen Dish, which they presented unto him, blessing them, and the Butler brought them to him, sitting above on a very high Place, and he presently began to eat one of the Loaves, and sent the other to his Son and a younger Brother of his, who was brought up by a *Nestorian*, and knew the Gospel, who also sent for my Bible that he might see it. After the Priests, the Monk said his Prayer, and I after the Monk; then he promised that the next Day he would come unto the Church, which is great
enough

enough and fair, and all the Ceiling above was covered with Silk wrought with Gold: The next Day he departed, desiring the Priests to excuse him, that he durst not come to the Church, because he understood the Dead were carried thither: But we and the Monk remained at *Caracurum* and the other Priests of the Court, that we might celebrate *Easter* there.

47. The Feast of *Easter* was now drawing near, and we had not our Vestments; and I likewise considered the Manner how the *Nestorians* made the Sacramental Bread, and was much troubled what I should do, whether I should receive the Sacrament from them, or should celebrate in their Vestments and Chalice, and upon their Altar, or should altogether abstain from the Sacrament. There was a great Multitude of *Christians*; *Hungarians*, *Alans*, *Rustemians*, *Georgians*, and *Armenians*, all which had not seen the Sacrament since they were taken Prisoners, because the *Nestorians* would not admit them into their Church, unless they were baptized by them, as they said; yet they made no mention of that to us, and they offered their Sacrament freely to us, and made me stand in the Door of the Choir, that I might see their Manner of Consecration. On the Vigil of *Easter* I stood by the Fount, that I might see their Manner of baptizing. They say they have of the Ointment wherewith *Mary Magdalene* anointed the Feet of our *Lord*; and they pour in as much as they think fit of that Oil, with which they knead their Bread; for all the People of the East put fat in their Bread instead of Leaven, which Fat is Butter, or Suet out of a Sheep's Tail, or Oil.

They say also, they have of the Flour of which the Bread was made, which the *Lord* consecrated, and always add as much fresh as the Quantity of the Flour they lay aside; and they have a Chamber, hard by their Choir, and an Oven, where they bake the Bread, which they next consecrate with great Reverence. They therefore make one Loaf of an Hand's-breadth, with the before-mentioned Oil, which they first break into twelve Pieces, according to the Number of the Apostles, and after divide thole Pieces according to the Multitude of the People, and the Priests give the Body of *CHRIST* to every one in his Hand; and then every one taketh it out of the Palm of his Hand with Reverence, and stretcheth his Hand to the Top of his Head. The *Christians* I mentioned before, and the Monks, very earnestly entreated us, for God's Sake, that we would celebrate. Then I made them be confessed by an Interpreter as I could, reckoning the ten Commandments, and the seven deadly Sins, and other Things, for which every Man ought to be penitent and confessed; all of them publickly excused themselves, concerning Theft, saying, that without Theft they could not live, because their Masters provided them neither Food nor Rayment. Then considering that they had taken away their Persons and their Substance without just Cause, I said unto them, that they might lawfully take Necessaries of the Goods of their Masters, and I was ready to maintain it to the Face of *Mangu-Khan*.

Some of them also were Soldiers, who excused themselves, that they must go to the Wars, or else they should be slain: I forbid them to go against the *Christians*, and that they should not hurt them, and that they should rather suffer themselves to be slain, for so they should become Martyrs. And I said, that if any would accuse me of this Doctrine before *Mangu-Khan*, I would be ready to preach the same in his hearings; for the *Nestorians* themselves of the Court were present when I taught this, of whom I was suspicious they might report ill of us. Then Master *William* the Goldsmith, caused an Iron to be made for us to make Hosts; and he had certain Vestments which he had made for himself, for he had some Knowledge in Learning, and officiated as a Clerk. He caused the Image of the Blessed Virgin *Mary* to be graven after the *French* Fashion, and engraved the History of the Gospel very fair; and made a silver Box to lay up the Body of *CHRIST*, and the Relicks in certain little Holes curiously wrought in the Side of the Box.

He made also a certain Oratory upon a Chariot, very fairly painted with Scripture Histories; I therefore took his Vestments and blessed them; and we made Hosts after

our manner very fair: And the *Nestorians* assigned me their Fount for Baptism. And their Patriarch sent them from *Baldac* a square Hide like a portable Altar, made with Chrism, which they use instead of consecrated Stone; therefore I celebrated on the Day of the *Lord's* Supper, in their silver Chalice and Dish, which were very great Vessels. I did the like also on *Easter-day*, and we communicated the People with the Blessing of God, as I hope, but they baptized in the Vigil of *Easter* more than three-score Persons very orderly. There was great Joy for this generally among all *Christians*.

48. After this, it happened that Master *William* the Goldsmith was grievously sick, and when he was upon recovery, the Monk visiting him, gave him *Rhubarb* to drink, so that he had almost killed him. Then visiting him when I found him so ill, I asked him what he had eat or drank? And he told me the Monk had given him the Potion, and he drunk two little Dishes full, thinking it had been Holy Water. Then I went to the Monk, and said to him, either go as an Apostle, doing Miracles indeed by Virtue of Prayer and the Holy Ghost, or as a Physician, according to the Art of Medicine; you give a strong Potion of Physick to drink to Men not prepared, as if it were an innocent Thing; for which you will incur a foul Scandal, if it come to the Knowledge of Men. From that Time he began to fear and to be weary of him.

It happened at that Time, that the Priest too was sick, who was as it were the Archdeacon of the rest, and his Friends sent for a certain *Sorcerer*, who was a Soothsayer, who said unto them, a certain lean Man, who neither eateth or drinketh, nor sleeps in a Bed, is angry with him; if he can obtain his Blessing, he may recover; then they understood it was the Monk, and about Midnight, the Priest's Wife, his Sister, and his Son came, intreating that he would come and bless him; they also raised us up to interceed with the Monk, who answered us upon this Occasion, Let him alone, because he, with three others, who likewise took evil Courses, consulted to go to the Court, to procure *Mangu-Khan*, that I and you, should be expelled from these Parts; for there arose a Contention among them, because *Mangu* and his Wives sent four *Jas-cots*, and Pieces of Silk, upon *Easter* Eve, to the Monk and Priests, to distribute among them, and the Monk had kept unto himself one *Jas-cot* for his Part, and of the other three one was counterfeit, for it was Copper. The Priests thought therefore that the Monk had kept too great a Share to himself, whence (it might be) that they had some Words among themselves, which were reported to the Monk.

When Day came, I went to the Priest, who had extreme Pain in his Side, and spit Blood, whence I thought it was an Impoistume; then I advised him, that if he had any-thing that was another's to restore it; he said he had nothing. I spoke unto him also of the Sacrament of Extream Unction; who answered, we have no such Custom, neither do our Priests know how to do it; I intreat you, that you would do it for me, as you know best. I advised him also, concerning Confession, which they frequent not; and he spake a little in the Ear of a certain Priest, one of his Companions. After this, he grew better, and intreated me to go for the Monk, so I went, but the Monk would not come at first; but when he heard he was somewhat better, he went with his Cross, and I also went, and carried the Body of *Christ*, which I had reserved upon *Easter* Day, at the Intreaty of Master *William*; then the Monk began to kick him with his Feet, and he most humbly embraced his Feet; then I said unto him, it is the Custom of the Church of *Rome*, that the Sick should receive the Body of *Christ*, as it is the best Provision for their Journey, and a Defence against all the Decays of the Enemy; turning next to the sick Man, I said, Behold the Body of *Christ*, which I consecrated on *Easter* Day, you must be confessed, and desired it. Then said he, with a great Faith, I desire it with all my Heart, which when I had offered to him, he with great Affection, said, I believe that this is my Creator, and my Saviour, who gave me Life, and will restore it again unto me after Death in the general Resurrection; and so took the Body of *Christ* (from my Hand) made after the Manner of the

Church of Rome; the Monk then stayed with him and gave him, in my Absence, I know not what Potions.

The next Day he began to have the Pangs of Death upon him; then taking their Oil which they said was Holy, I anointed him according to the manner of the Church of Rome, as they entreated me. I had none of our Oil, because the Priests of *Sartaab* kept it all. When we should have sung a Dirge, and I would have been present at his End, the Monk sent to me, bidding me depart, because, if I were present, I could not come into the House of *Mangu-Khan* for one whole Year; which, when I had told his Friends, they said it was true, and desired me to depart, lest I might be hindered in that Good which I might promote. As soon as he was dead, the Monk said unto me, Never mind it, I have killed him with my Prayers; this Man only was learned, and opposed himself against us, the rest know nothing: Henceforth *Mangu-Khan* himself, and they all will couch at our Feet. Then he declared unto me the before-mentioned Answer of the Soothsayer; which, not believing it, I enquired of the Priests who were Friends of the Deceased, whether it were true or no, who said it was; but whether he was pre-instructed or not, that they knew not.

Afterwards I found that the Monk called the Soothsayer and his Wife into his Chapel, and caused Dutt to be fitted for him to divine to him, for he had a certain *Rutian* Deacon who divined to him; which, when I understood, I was amazed at his Foolishness, and said to him, Brother, a Man full of the Holy Ghost, which teacheth all Things, should not demand Answers or Counsels from Soothsayers, seeing all such Things are forbidden, and they are excommunicated who follow such Things. Then he began to excuse himself, that it was not true that he fought after such Things; but I would not depart from him, because I was placed there by the Commandment of the *Khan* himself, nor could I remove without his special Command.

49. As to the City of *Caracorum*, your Highness may be pleased to know this; that, excluding the Palace of the *Khan* himself, it is not so good as the Castle of *St. Dennis*, and the Monastery of *St. Dennis* is worth ten Times that Palace, and more too. There are two Streets there, one of the *Saracens* or *Mohammedans*, where the Fairs are kept, and many Merchants resort thither, by reason of the Court which is always near, and for the Number of Embassadors. There is another of the *Cathaians*, who are all Artificers. Without those Streets there are great Palaces, which are the Courts of the Secretaries; there are three twelve kinds of Idolaters of divers Nations, two Mosques, where the Law of *Mohammed* is proclaimed, and one Church of the Christians at the End of the Town. The Town is inclosed with a Mud-wall, and hath four Gates; on the East Part Millet and other Grain is sold, which, as yet, is seldom brought thither; on the West Sheep and Goats, on the South Oxen and Waggons are sold; and on the North Horses.

Following the Court, we came thither on the Sunday before the *Ascension*; the next Day after we were called before *Bulgai*, who is their Justice and chief Secretary, both the Monk and all his Family, and we and all the Messengers and Strangers likewise who frequented the House of the Monk, and we were called before *Bulgai* severally, first the Monk, and after us, and they began diligently to enquire whence we were, and for what Purpose we came, and what our Errand was? and this Enquiry was made because it was told *Mangu-Khan*, that four hundred Assassines or secret Murderers, were gone forth in divers Habits to kill him. About that Time the *Khan's* Lady was restored to Health, and she sent for the Monk, and he not willing to go, answered, she hath sent for Idolaters about her, let them cure her if they can, I will go no more.

Upon *Ascension* Eve, we were in all the House of *Mangu-Khan*: And I saw as often as he was to drink, they cast Cosmos to their Idols of Felt; then I said to the Monk, What Fellowship hath Christ with Belial? What Part hath our Cross with those Idols? *Mangu-Khan* hath eight Brethren, three by the Mother, and five by the Father. One of them, of his Mother's Side, he sent into the Country of *Assafines*, who are called by them *Muliber*,

and he commanded him to kill them all. Another went to *Perse*, and is now entered therein to go, as is thought, into *Turky*, from thence to send Armies to *Baldack* and *Pasfiacus*. One of the others he sent into *Cathai* against some that rebelled: His youngest Brother of the same Venter, he kept himself, whose Name was *Arabucba*, who holds his Mother's Court, who was a Christian, whose Servant Master *William* is; for one of the Brothers on the Father's Side took him in a certain City called *Argade*, where there was a *Norman* Bishop, of *Belleme* near *Rome*, with a Nephew of the Bishop's, whom I saw there at *Caracorum*, and he gave Master *William* to *Mangu's* Mother, because she was desirous to have him. But when she was dead, Master *William* came back again to *Arabucba*, with all Things else pertaining to the Court of his Mother; and from him he came to the Knowledge of *Mangu-Khan*, who on finishing of the aforesaid Work, gave unto Master *William* one hundred Jaseots, that is, a thousand Marks.

On the Eve of the *Ascension*, *Mangu-Khan* said, he would go to his Mother's Court and visit her, and the Monk said he would go with him, and gave his Blessing to his Mother, with which *Khan* was well contented. In the Evening of the Day of the *Ascension*, the aforesaid Lady was very ill, and the Chief of the Soothsayers sent to the Monk, commanding him that the Table should not be smitten. On the Morrow, when the whole Court removed, the Court of the Lady remained still, and when we came to the Place where the Court should stay, the Monk was commanded to depart farther from the Court than he was wont, which he did; then *Arabucba* met his Brother the *Khan*: So the Monk and we, seeing that he was to pass by us, met him with the Cross; and he calling us to mind, because sometimes he had been at our Oratory, stretching forth his Hand made a Cross unto us like a Bishop; then the Monk taking Horse followed him, bearing certain Fruits; but he alighted before his Brother's Court, waiting while he came from hunting: The Monk alighted there also, and offered him the Fruit, which he received; and hard by him sat two *Saracens* of the Nobility of the Court of *Khan*; but *Arabucba* understanding of the Contention between the Christians and the *Saracens*, enquired of the Monk if he knew these *Saracens*, and he answered, I know they are Dogs, why have you them so near you? But they replied, why, say they, do you Wrong to us, when we do none to you? To whom the Monk said, I speak the Truth, and ye and your *Mohammed*, are vile Dogs: Then they began to blaspheme Christ, but *Arabucba* forbid them, saying, speak not so blasphemously, for we know that the MESSIAH is GOD. That very Hour there arose a great Wind over all the Street, and after a while, there came a Rumour that the Lady was dead.

The next Morning the *Khan* returned towards the Court another Way; for this is a Rule amongst them, that they never return the same Way they come. While the Court remained here, none dare pass that Way (neither Horse-man nor Foot-man) where the Court stayed, so long as any Shew of the Fire made there remaineth. That Day certain *Saracens* kept Company with the Monk, upon the Way, provoking him, and disputing with him, and when he could not defend himself with Argument, and they made light of him, he would have lashed them with the Whip which he held in his Hand, and he went so far that his Words were reported at the Court, and we were commanded to depart to the same Place with other Messengers, and not to abide before the Court as we were wont. I hitherto always hoped the King of *Armenia* would come. There came some about *Easter* from *Bolac*, where those *Germans* are, for whose Sake chiefly I went thither, who told me, that the *Dutch* Priest should come to Court; therefore I moved no Questions to *Mangu* concerning our Stay or Departure; for at the Beginning, he gave us Leave to tarry two Months, and now five Months were past. This was done about the End of *May*, and we had continued there all *February*, *March*, *April*, and *May*; but hearing no News of the King or the said Priest, and fearing lest we should return in the Winter, the Sharpness of which we had experienced, I caused it to be demanded of *Mangu-Khan*, what his Pleasure was concerning us, because we

would stay there, if so he pleased, or if we must return, it were easier for us to return in Summer, than in the Winter.

He presently sent to me, commanding that I should not go far off, because his Pleasure was to speak with me the next Day: To which I answered, if he would speak with me, he should send for Master *William's* Son, for my Interpreter was not sufficient, and he that brought this Message to me was a *Saracen*, who had been a Messenger to *Fatharius*, and blinded with Rewards, counselled *Vassacius* to send Embassadors to *Mangu-Khan*, and the mean while the Time passed, for *Vassacius* thought he would presently enter their Country, so he sent, and after he knew them, he little regarded them, nor made a Peace with them; neither did they yet enter his Country, nor will they be able so long as they dare defend themselves; nor did they ever take any Country by Force, but by Deceit; and because Men make Peace with them, under Colour of that Peace they circumvent them, and overthrow them. Then he began to be very inquisitive of the Pope, and of the King of the *Franks*, and of the Way to go to them; but the Monks hearing this, advised me secretly not to answer him, because he would procure that an Embassador should be sent. I therefore held my Peace, not willing to answer him; and he spake to me I know not what injurious Words, for which the *Nestorian* Priests would have accused him, so that he had either been slain or beaten, but I would not agree to it.

So the very next Day they brought me to the Court, and the chief Secretaries of the Court came to me, one of them *Mool*, who waiteth upon the *Khan's* Cup, and the rest *Saracens*, enquiring on the Behalf of the *Khan*, wherefore I came? Then I told him in the very lame Words I did before, how I came to *Sartaeb*, and from *Sartaeb* to *Baatu*, and how *Baatu* sent me thither. Whereupon I said unto him, I have nothing to speak on the Behalf of any Man, unless I should speak the Words of God unto him, if he would hear them, for the *Khan* should best know what *Baatu* hath written unto him. They stuck upon this, demanding what Words of God I would speak unto him; thinking I would prophesy unto him some prosperous thing as many use to do.

To whom I answered, if ye will that I speak the Words of God unto him, get me an Interpreter, who said we have sent for him, yet speak by this Interpreter as you may, we shall understand you well, and they urged me much to speak. Then I said, "This is the Word of God. To whom more is committed more is required at his Hands. Another also, to whom more is forgiven, he ought to love more. Out of these true Words of God; I said to the *Mangu* himself, that God hath given him much: For the Power and Riches which he hath, the Idols of the *Tunians* hath not given him, but the Omnipotent God, who hath made Heaven and Earth, in whose Hands all Kingdoms are, and he translateth them from Nation to Nation for the Sins of Men, wherefore if he love him, it shall go well with him; if otherwise, let him know that God will require all these things at his Hands, even to the uttermost Farthing." Then said one of the *Saracens*, Is there any Man that loveth not God? I answered, "God saith, if any Man love me, he will keep my Commandments; therefore he that keepeth not the Commandments of God, loveth not God." Then said he, have ye been in Heaven, that ye might know the Commandments of God? "No, said I, but he hath given them from Heaven to holy Men, and at the last himself descended from Heaven, teaching us, and we have these things in the Scriptures, and we see by the Works of Men whether they keep them or no."

Whereupon he replied, Will ye then say that *Mangu-Khan* keeps not the Commandments of God, to whom I said your Interpreter will come as ye say? Then before *Mangu-Khan*, if it please him, I will recite the Commandments of God, and he shall be his own Judge, whether he keep them or not; so they departed and told him, that I said he was an Idolater, or a *Tunian*, and kept not the Commandments of God. The next Day he sent his Secretaries unto me, saying, our Lord sends us unto you, saying, ye are here Christian *Saracens*, and *Tunians*, and every of you saith his Law is better, and his Books are true:

Wherefore he would that ye all come together, and make Comparison that every one write his Words, that he may know the Truth. Then I said, "Blessed be God, that hath put this in the Heart of *Khan*; but our Scriptures saith, the Servant of God must not be contentious, but meek unto all. Wherefore I am ready without Strife and Contention to render an Account of the Faith and Hope of Christians to every one that shall require it." Then they wrote my Words, and brought them unto him.

Then the *Nestorians* were commanded to provide themselves, and write what they would speak, and the *Saracens* likewise, and the *Tunians* also. On the next Morning he sent the Secretaries again, saying, *Mangu-Khan* would know wherefore ye came to these Parts? To whom I said, he may know by the Letters of *Baatu*; to this they answered, *Baatu's* Letters are lost, and he hath forgotten what *Baatu* hath wrote to him. Wherefore he would know of you.

At this somewhat emboldened, I said, "The Duty of Office of our Religion is to preach the Gospel unto all. Whereupon when I heard of the Fame of the People of *Mool*, I had a Desire to come unto them, and while I was thus minded we heard of *Sartaeb*, that he was a Christian, then I directed my Journey unto him, and my Sovereign Lord the King of the *Franks* sent him Letters containing good Words, and other Words besides which testify us unto him what Men we are, when he made Request that he would suffer us to remain with the People of *Mool*, then he sent us to *Baatu*, and *Baatu* to *Mangu-Khan*; whereupon we intreated, and yet intreat him to suffer us to stay." They wrote all, and made Relation thereof unto him. On the Morrow he sent to me again, saying, the *Khan* knows well enough that ye have no Message unto him, but ye came to pray for him as many other Priests do; but he demandeth whether ever any of your Embassadors were with him, or ours with you. Then I declared all unto them concerning *David* and *Friar Andrew*, so they putting all in Writing, reported the same to him.

Then he sent again unto me, saying, our Lord *Khan* saith ye have staid long here; his Pleasure is, that ye return unto your own Country, and he further demands, whether ye would conduct his Embassadors with you? To whom I made answer, that I durst not carry his Embassadors beyond his own Country, because there is a warlike Nation between us and you, and the Sea and Mountains, and I am a poor Monk, and therefore dare not take upon me to be his Guide; so they having set down all in Writing, returned, and reported it to the *Khan*. When *Whiston-Eve* came the *Nestorians* wrote Chronicles from the Creation of the World to the Passion of *Christ*, and passing over the Passion, they spake of the Resurrection of the Dead, and of the Ascension and of the coming of Judgment, wherein many things were to be reprehended, which I told them; and we likewise wrote the Symbol or Creed, *Credo unum Deum*. Then I demanded of them how they would proceed? They said they would first dispute with the *Saracens*; I showed them this was not the proper Method, for the *Saracens* in this agree with us, that they affirm there is but one God, and therefore you may have them to help you against the *Tunians*, so they were contented. Then I asked them, if they knew how Idolatry had its first Original in the World, and they could not tell? I told them, and they said you shall clear these things to them, and then let us speak, for it is hard to speak by an Interpreter; to whom I said, if you how you can behave yourselves against them, I will take the *Tunian's* Part, and you the Christians.

Suppose I am of that Sect that say there is no God, prove ye there is a God; for there is a Sect there which saith, that every Virtue, in what thing soever, is the God thereof, and that otherwise there is no God. Then the *Nestorians* knew not how to prove any thing, but only that which their Writing declareth: I said they believe not the Scriptures, if ye shew one, they will shew another. Then I directed them to let me first talk with them, because if I should be overcome, they might still have Liberty of Speech, whereas if they should be overcome, I should have no hearing: They agreed unto it.

We therefore gathered together at our Oratory, and *Mangu-Khan* sent three Writers to be Judges, one *Christian*, one *Saracen*, and one *Tuinian*, and it was first proclaimed, "This is the Commandment of *Mangu-Khan*, and none dare say that the Commandment of God is otherwise." He commandeth that none speak contentiously or injurious Words to another, or make any Tumult, whereby this Business may be hindered, upon Pain of his Head." Then all were silent, and there was a great Assembly there, for every Party invited the wisest of their Nation, and many others came flocking thither. Then the *Christians* set me in the Middle of them, willing the *Tuinians* to speak with me. Then they began to murmur against *Mangu-Khan*, because never any *Khan* attempted thus to search into their Secrets. Then they opposed one to me, who came from *Catboya*, having his Interpreter, and I had Master *William's* Son. And he first said to me, Friend, if thou be brought to a *Nomian*, who must seek a wiser than yourself? But I held my Peace.

Then he demanded whereof I would dispute, either how the World was made, or what becomes of the Souls after Death? To whom I answered, "Friend, this should not be the beginning of our Speech. All things are of God, and he is the Fountain and Head of all, and therefore we ought to speak first of God, of whom ye think otherwise than ye ought to do, and *Mangu* desires to know who believes better?" Then the Arbitrators allowed this to be reasonable, they would willingly have begun with the following Questions; because they hold them for the strongest, for they are all of the Heresy of the *Manichees*, believing two Principles, the one bad, and the other good; and concerning Souls they all think they pass from Body to Body, inasmuch that one of the wisest of the *Nestorian* Priests demanded of me concerning the Souls of brute Beasts, whether they could fly to any Place where they should not be compelled to labour after Death? For Confirmation also thereof, as the Goldsmith told me a certain Child was brought from *Catboya*, with by the Size of his Body appeared to be three Years old, yet was capable of any Reason, who affirmed of himself, that he had been three times in several Bodies, and knew Letters, and how to write.

I said to the aforesaid *Tuinian*, We firmly believe with the Heart, and confess with the Mouth, that there is a God, and there is but one God, and one in perfect Unity, what believe you? He said, Fools say there is but one God, but wise Men say there are many. Are not there great Lords in your Country, and here is a greater Lord, *Mangu-Khan*? So it is of the Gods, because in divers Countries there are divers. To whom I said, you make a bad Comparison of Men with God; for so every mighty Man in his own Country may be called a God. And when I would have dissolved the Similitude, he prevented me, enquiring what Manner of God is yours, whereof you speak? that he is but one. I answered, "Our God, beside whom there is no other, is Omnipotent, and therefore needeth not the Help of another. Nay, all we have need of his Help, it is not so with Men; no Man can do all things, and therefore there must be many Lords in the Earth, because no one can support all. Again, he knows all things, therefore he needs not a Counsellor: Nay, all Wisdom is from him; moreover he is perfectly good, and needeth not our Good. Nay, in him we live, move, and have our Being: Such is our God, and therefore you must not hold that there is any other." It is not so, said he. Nay, there is one highest in the Heavens, whose Generation we know not yet, and ten are under him, and under them there is one inferior, and in the Earth there are infinite. Then he would have added other Fables: So I asked him of that highest God, whether he thought him Omnipotent? or of any other God? and fearing to answer, he demanded, if your God be such as you say, why made he the hail of things evil? It is false, said I, who maketh any Evil is no God, and all things whatsoever are good. At this Word all the *Tuinians* marvelled, and set it down in Writing, as false, or impossible. Then he began to ask, Whence therefore cometh Evil? You ask amiss, said I; for first you should demand what Evil is before you ask whence it is. But to return unto the first Question, whether do you believe that any God is omnipotent? and after I will

answer you to whatsoever you demand. Then he sat a long time and would not answer, inasmuch that the Writers on the Behalf of the *Khan* were forced to command him to answer. At length he answered, that no God was Omnipotent. Then all the *Saracens* break out into a great Laughter. Silence being made, I said therefore none of your Gods can save you in all Dangers, because such a Chance may happen wherein he hath no Power. Again, no Man can serve two Masters. How then can you serve so many Lords in Heaven and in Earth? The Auditory decreed him to answer, but he held his Peace.

Then when I was about to alledge Reasons to prove the Truth of the Divine Essence, and the Trinity, in every Man's Hearing, the *Nestorians* of the Country said, that it was enough, because they meant to speak, so I gave them place; and when they would have disputed with the *Saracens*, they answered, we grant that your Law is true, and whatsoever is in the Gospel is Truth, wherefore we will not dispute with you in any thing, and they confessed, that they beg at the Hands of God in their Prayers, that they may die the Death of the *Christians*. There was there a certain old Priest of the Sect of *Jugares*, who confess One God, yet they make Idols, with whom they talk'd much, shewing all till the Coming of Christ to Judgment, declaring the Trinity to him, and the *Saracens* by Similitudes; all of them hearkened without any Contradiction, yet none of them said, I believe, and will become a *Christian*: The Conference ended, the *Nestorians* and *Saracens* sang together with a loud Voice, the *Tuinians* holding their Peace, and after that, they all drank most plentifully.

51. On *Whitsunday*, *Mangu-Khan* called me before him, and the *Tuinian*, with whom I disputed; and before I went in, Master *William's* Son, my Interpreter, said to me, that we must return to our Country, and that I should speak nothing against it, because he understood it for a thing determined. When I came before him, I kneel'd, and the *Tuinian* by me, with his Interpreter. Then he said unto me, tell me the Truth, whether you said, when I sent my Writers unto you, that I was a *Tuinian*? Then I answered, My Lord, I said not so; but if it please Your Highness, I will tell you the Words I spoke; then I recited what I had spoken, and he answered, I thought well you said not so, for it was a Word which you should not speak, but your Interpreter hath ill interpreted it. So he reached forth his Staff towards me whereon he leaned, saying, fear not. I smiling, said toly, if I had feared, I had not come hither; then he demanded of the Interpreter what I said? So he repeated my Words unto him: Afterwards he began to confess his Faith unto me.

"We, *Moalians*, said he, believe that there is but One God, through whom we live and die, and we have an upright Heart towards him;" then said I, God grant you this, for without this Gift it cannot be, and he demanded what I said, so the Interpreter told him; then he added further, that God who hath given to the Hand diverse Fingers, so he hath given many Ways to Men: God hath given the Scriptures to you, and the *Christians* keep them not; ye find it not in the Scriptures, that one of you shall dispraise another: Do you find it, said he? No, said I; but I signified unto you from the Beginning, that I would not contend with any; I speak it not, said he, touching you. In like manner ye find it not that for Money a Man ought to decline from Justice. No, Sir, said I, and truly neither came I into these Parts to get Money, nay, I refused that which was given me; and there was a Scribe present there, who gave Testimony that I had refused a Jafot, and certain Pieces of Silk. I speak it not, said he, for that, God hath given you the Scriptures, and ye keep them not; but he hath given us Soothsayers, and we do that which they bid us, and we live in Peace. He drank four times, as I think, before he disclosed these things; and while I hearkened attentively, whether he would confess any thing else concerning this Faith, he began to speak of my Return, saying, you have staid a long time here, my Pleasure is therefore that you return: You said, you durst not carry my Ambassadors with you, will you carry my Messenger, or my Letters? And from that time I could neither have Place nor Time to shew him the Catholic Faith,

Faith; for a Man cannot speak before him, save what he pleaseth, unless he were an Ambassador, but an Ambassador may speak what he will, and they always demand, whether he have any thing else to say.

But he suffered me to speak no more; but I must hear him, and answer as to Interrogatories. Then I answered, that if he would make me understand his Words, and that they were set down in Writing, I would willingly carry them to my Power. Then he asked me, if I would have Gold or Silver, or costly Garments? I answered, we receive no such things; but we have not wherewith to bear our Expenses, and without your Help, we cannot get out of your Country. Then said he, I will provide you all Necessaries throughout my Country, will you have any thing more? I answered, it sufficeth me. Then he demanded how far will you be brought? I said let our Pass bring me to the *Armenian* Country; if I were there, it were enough. He answered, I will cause you to be conveyed thither, and after look to yourself; and he added, there are two Eyes in one Head, and though they be two, yet there is one Object to both; and whither the one directeth the Sight, the other doth: You came from *Babru*, and therefore you must return by him. When he had thus said, I craved Leave to speak; speak on, said he; then said I, "Sir, we are not Men of War; we desire that they have Dominion of the World, who would most justly govern it according to the Will of God; our Office is to teach Men to live according to the Will of God; for this Purpose came we into these Parts, and would willingly have remained here, if it had pleased you; but seeing it is your Pleasure that we return, it must be so; I will return, and carry your Letters according to my Power, as ye have commanded. I would request your Magnificence, that when I have carried your Letters, it may be lawful for me to return to you, with your good liking, chiefly because you have poor Servants of yours at *Balac*, who are of our Language, and they want a Priest to teach them and their Children their Law, and I would willingly stay with them." To this he answered, Know you whether your Lords would send you back to me? I answered, "Sir, I know not the Purpose of my Lords; but I have Licence from them to go whither I will, where it is needful to preach the Word of God; and it seems to me, as if it were very necessary in those Parts: Whereupon, whether they send Ambassadors or no, if it please you, I will return." Then he held his Peace, and sat a long Space, as it were in a Muse; and my Interpreter desired me to speak no more, and I carefully expected what he would answer.

At length, he said, you have a long Way to go, make yourself strong with Food, that you may come lusty into your Country, and he caused them to give me Drink; then I departed from his Presence, and returned not again. If I had been endowed with Power to do Wonders, as *Moses* did, peradventure he had humbled himself.

52. The Soothsayers therefore, as he confessed, are their Priests, and whatsoever they command to be done, is performed without Delay; whose Office I shall describe unto you, as I could learn of Master *William*, and others, who reported unto me things like to be true. They are many, and they have always one Head, or chief Priest, who always places his House before the great House of *Mangu-Khan*, within a Stone's Cast; under his Study are the Chariots which bear their Idols, the others are behind the Court, in Places appointed for them, and they who have any Confidence in that Art, come unto them from divers Parts of the World. Some of them are skillful in Astronomy, and especially the Chief of them, and they foretel to them the Eclipses of the Sun and Moon. And when they are to come to pass; all the People prepare their Food, so that they need not go out of the Door of their House; and when there is an Eclipse, they play upon their Timbrels and Organs, and make a great Noise, and set up loud Shouts. When the Eclipse is past, they give themselves to Feasting and Drinking, and make great Cheer. They foretel fortunate and unlucky Days for all Businesses; therefore they never levy an Army, or undertake War, without their Direction; and they had long since returned into *Hungary*, but that their Soothsayers will not

suffer them: They make all things that are sent to the Court, pass between Fires, and have a due Portion of them.

They also purgify the household Stuff of the Dead, drawing them between these Fires; for when any one dieth, all things whatsoever which appertain to him, are separated, and not mingled with other things of the Court, till all be purged by the Fire; so did I see it done to the Court of the Lady who died while we were there; whereupon there was a double Reason why Friar *Andrew* and his Fellows should go between the Fires, both because they brought Presents, and also for that they belonged to him who was dead, to wit, *Khon-Khan*; no such thing was required of me, because I brought nothing. If any living Creature, or any thing else, fall to the Ground while they thus make them pass between the Fires, that is theirs; they also on the ninth Day of the Moon of *May*, gather together all white Mares of the Herd and consecrate them. The Christian Priests also must come together with their Censors; then they call new Cosmos upon the Ground, and make a great Feast that Day, because then they think they drink Cosmos first, as it is the Fashion, in some Places with us, as for Wine, on the Feast of Saint *Bartholomew*, or *Silas*; and for Fruits, on the Feast of *St. James* and *Christopher*.

They also are invited when any Child is born, to foretel his Destiny. They are sent for also when any is sick, to use their Charms, and they tell whether it be a natural Infirmary, or by Sorcery; in regard to which, that good Woman of *Meiz* I mentioned before, told me a wonderful thing. On a certain time, very costly Furs were presented, which were laid down at the Court of her Lady, who was a Christian, as I said before, and the Soothsayers drew them through between the Fires, and took more of them than was their Due, and a certain Woman under whose Custody the Treasure of her Lady was, accused them thereof unto her Lady, whereupon the Lady herself reproved them. It fell out after this, that this Lady herself began to be sick, and to suffer certain sudden Pains in divers Parts of her Body; the Soothsayers were called, and they sitting far off, commanded one of those Maidens to put her Hand upon the Place where the Grief was, and if she found any thing, she should snatch it away; then she arising, did so, and she found a Piece of Felt in her Hand, or of some other thing: Then they commanded her to put it upon the Ground, which being laid down, it began to creep, as if it had been some living Creature; then they put it into the Water, and it was turned as it were into a Horse-leech; and they said some Witch hath hurt you thus with her Sorceries, and they accused her that had accused them of the Furs, who was brought without the Tent into the Fields, and received the Battinado seven Days together there, and was afterwards tormented with other Punishments, to make her confess; and in the mean time her Lady died, which she understanding, said unto them, I know my Lady is dead, kill me, that I may go after her, for I never did her hurt; and when she confessed nothing, *Mangu-Khan* commanded she should live.

Then the Sorcerers accused the Lady's Daughter's Nurse, of whom I spake before, who was a Christian, and her Husband was the chief among all the *Nestorian* Priests; so she was brought to Punishment, with a Maid of hers, to make her confess, and the Maid confessed, that her Mistress sent her to speak with a certain Horse to demand Answers. The Woman also herself confessed something she did, to be beloved by her Lady, that she might do her Good; but she did nothing that might hurt her. She was demanded also whether her Husband were pious to it; she excused him, for that he had burnt the Characts and Letters which she had made. Then she was put to Death, and *Mangu-Khan* sent the Priest her Husband to the Bishop, who was in *Cathaya*, to be judged, altho' he was not found culpable.

In the mean time it fell out, that the principal Wife of *Mangu-Khan* brought forth a Son, and the Soothsayers were called to foretel the Destiny of the Child, who all prophesied Prosperity, and said, he should live long, and be a great Lord. After a few Days it happened that the Child died; then the Mother enraged, called the Soothsayers, saying, you said my Son should live, and he is dead. Then they said, Madam, behold, we see that So-

ceres; the Nurse of *Chrinia*, who the other Day was put to Death, she hath killed your Son, and behold we see she carries him away. Now there remained one Son and a Daughter of that Woman, grown to full Age, in the Tents; and the Lady sent presently for them in a Rage, and caused the young Man to be slain by a Man, and the Maid by a Woman, in Revenge of her Son, whom the Soothsayers affirmed to be killed by their Mother. Not long after, *Mangu-Khan* dreamed of these Children, and demanded in the Morning what was become of them? His Servant was afraid to tell him, and he being troubled, the more demanded where they were, because they had appeared to him in a Vision by Night, then they told him; after which he, presently sending for his Wife, demanded whence she learned that a Woman should give Sentence of Death, without the Privy of her Husband? And he caused her to be shut up seven Days, commanding to give her no Meat, but the Man (who slew the young Man) he caused to be beheaded, and the Head to be hung about the Woman's Neck, who had killed the Maid, and ordered her to be cudgelled with burning Firebrands, through all the Tents, and after to be put to Death: He had also put his Wife to Death, but for the Children he had by her, and he went out of his Court, and returned not till after one Moon.

The Sorcerers also trouble the Air with their Charms, and when the Cold is so great naturally, that they cannot apply any Remedy, than they search out some in the Camp, whom they accuse, that the Cold comes through their Means, fo they are put to Death without Inquiry or Delay. A little before I departed from thence, one of the Concubines was sick, and languished long, and they mumbled their Charms over a certain *German* Slave of hers, who slept three Days, who, when she came to herself, they demanded what she had seen, and she had seen many Persons, of all which she judged they should shortly die; and because she saw not her Mistress there, they judged she should not die of that Sickness. I saw the Maid, while her Head was yet aching, by reason of that Sleep. Some of them also call upon Devils, and gather them together (who will have Answers from the Devil) in the Night, unto their House; and they put boiled Flesh in the Midst, and that *Khan* who invoceth, beginneth to say his Charms, and having a Timbrel, smites it strongly against the Ground; at length he begins to rave, and causeth himself to be bound; then the Devil comes in the Dark, and gives him Flesh to eat, and makes him Answer. Once at such a time, (as Master *William* told me,) a certain *Hungarian* hid himself with them, and the Devil being upon the House, cried, that he could not come in, because a certain Christian was with them; he hearing this, fled with Hast, because they began to search for him. These things, and many other they do, which are too long for me to repeat.

53. After the Feast of Pentecost, they began to prepare their Letters, which they intend to send unto your Majesty; in the mean time, the *Khan* returned to *Caracorum*, and held a great Feast about the fifteenth of *June*, and he desired that all the Ambassadors should be present. The last Day he sent for us, but I went to Church to baptize three Children of a certain poor *German*, who we found there. Master *William* was chief Butler at that Feast, because he made the Tree which poured the Drink, and all the Poor and Rich sung and danced, and clapped their Hands before the *Khan*. Then he began to make an Oration unto them, saying, "I have sent my Brethren far off, and have sent them into Danger, into foreign Nations, now it shall appear what you will do, when I shall send you, that our Commonwealth may be enlarged." Every Day, in those four Days, he changed Garments, which he gave them, all of one Colour, every Day, from the Shoes to the Ornament of the Head. At that time I saw the Ambassador of the *Khans* of *Bagdad*, who caused himself to be carried upon a Horse-litter, between two Mules, to the Court, of whom some said that he made Peace with them, on Condition that they should give him ten thousand Horses for his Army; others said, that *Mangu* declared he would not make Peace with them, unless they would destroy all their Ammunition; and the Embassa-

dor answered, when you will pluck off your Horse's-hoofs, we will destroy our Ammunition.

I saw also there the Embassadors of a *Soldan* of *India*, who brought with him eight Leopards, and ten Harehounds, taught to sit upon the Horse's Buttocks, as Leopards do. When I enquired of *India*, which Way it lay from that Place, they shewed me towards the West, and these Embassadors travelled with me almost three Weeks together, always Westward. I saw also the Ambassador of the *Soldan* of *Turky*, who brought him rich Presents; and he answered, as I heard, he needed neither Gold nor Silver, but Men, wherefore he required of him an Army. On the Feast of *St. John*, he held a great Feast, and I caused one hundred and five Carts, and ninety Horses to be numbered, all laden with Cows-milk; and on the Feasts of the Apostles *St. Peter* and *St. Paul*, in like manner. At length, the Letters being dispatched which he sent to you, they called me and interpreted them, the Substance whereof I wrote, as I could understand them by my Interpreter, which is this; "The Commandment of the Eternal GOD is this: There is but one Eternal GOD in Heaven, upon Earth let there be but one Lord, *Zengis-Khan* Son of GOD and *Mangu-Tingij*, that is to say, the Sound of Iron. This is the Word which is spoken to you; whatsoever *Moals* we are, whatsoever *Namans*, whatsoever *Markets*, whatsoever *Musjulen*, wherefoever Ears may hear, wherefoever Horses may go, cause it to be heard and understood; that such as have heard my Commandment, and would not believe it, and would levy an Army against us; shall be as having Eyes and not seeing; and when they would hold any thing they shall be without Hands; and when they would walk they shall be without Feet. This is the Commandment of the Eternal GOD, by the Virtue of the Eternal GOD, by the great Monarch of the *Moals*, the Commandment of *Mangu-Khan* is given to the *French* King, King *Lodowick*, and all other Lords and Priests, and to the great World of the *Franks*, that they understand my Words, and the Commandment of the Eternal GOD, made to *Zengis-Khan*; neither but from *Zengis-Khan*, ever came this Commandment unto you. A certain Man called *David* came unto you as an Ambassador of the *Moals*, he was a Liar; and with him you sent your Ambassador to *Khen-Khan*. After *Khen-Khan* was dead, your Ambassador came to his Court; *Charnis*, his Wife, sent you Cloth, called *Nassick*. But to know Matters appertaining to War and Peace, and to settle the great World in Quiet, and to see to do good, that wicked Woman, more vile than a Dog, how could she know how to do it? Those two Monks which came from you unto *Sari es*, *Sar-tach* sent them to *Baatu*; but *Baatu*, because *Mangu-Khan* is the greatest over the World of the *Moals*, sent them unto us. But now, that the great World, and the Priests, and the Monks, might live in Peace and enjoy their Goods, that the Commandment of GOD might be heard among you, we would have sent our Embassadors of *Moal* with your Priests; but they answered, that betwixt us and you there was a warlike Nation; and many bad Men and troublesome Ways, so as they were afraid they could not bring our Embassadors safe unto you. But if we would deliver unto them our Letters, containing our Commandments to their King *Lodowick*, they would carry them. For this Cause we sent not our Embassadors with them; but we have sent the Commandment of the Eternal GOD by your said Priests. It is the Commandment of the Eternal GOD which we have given you to understand; and when you shall hear and believe it, if you will, obey us; send your Embassadors unto us, so shall we be satisfied whether you will have Peace with us or War. When by the Power of the Eternal GOD, the whole World shall be in Unity, Joy, and Peace, from the rising of the Sun unto the going down of the same, then shall it appear what we will do. But if ye shall see and hear the Commandment of the Eternal GOD, and will not hearken to it, or believe it, saying, our Country is far off, our Hills are strong, our Sea is great; and in this Confidence shall lead an Army against us to know what

" we can do ; he that made that which was hard easy, and that which was far off near, the Eternal GOD himself knows that alone." And as they called us your Embassadors in the Letters, I said unto them, call us not Embassadors, for I said to the *Khan* that we were not the Embassadors of the King *Louis* : Then they went unto him and told him ; but when they returned, they said unto me, that he held it much for our good, and that he commanded them to write as I should direct them : Then I told them they should leave out the Name of Embassadors, and call us Monks and Priests. In the mean time, while those Things were doing, my Companion hearing that we must return by the Wilderness to *Baatu*, and that a Man of *Moal* should be our Guide, he ran, without my Knowledge to *Bulgai*, the chief Scribe, signifying to him by Signs, that he should die if he went that Way ; and when the Day came wherein we should have our Pass, viz. a Formight after the Feast of *St. John*, when we were called to the Court, the Scribe said unto my Companion, *Mangu's* Pleasure is, that your Companion return by *Baatu* ; and you say you are sick, and it appeareth so : *Mangu* therefore grants, if you will go with your Companion go, but let it be your own Fault, because, it is possible, you may remain with some *Jani* that will not provide for you, and it will be a Hindrance to your Companion ; but if you will stay here, we will provide Necessaries for you, till some Embassadors come, with whom you may return more easily, and by a Way where there are Villages.

The Friar answered, GOD grant the *Khan* a prosperous Life, I will stay : Then I said to my Companions, Brother, be advised what you do, I will not leave you. You leave not me, said he, but I leave you, because, if I go with you, I see the Death of my Body and Soul, because I have no Patience under intolerable Labour. Then they brought us three Garments, or Coats, and said unto us, ye will not receive Gold or Silver, and yet ye have stayed long here, and prayed for the *Khan* ; he entreats you, that, at the least, every one of you will receive a single Garment, that ye depart not empty from him. Then we were forced to receive them for Reverence of him, for they account it a very evil Thing when their Gifts are contemned. First he caused us to be asked what we would have ? and we always answered the same thing ; so that the Christians insulted over the Idolaters, who seek nothing but Gifts ; and they answered that we were Fools, because, if he would give them his whole Court, they would willingly take it, and would do wisely too ; receiving therefore the Garments, they entreated us to make our Prayers for the *Khan*, which we did, and afterwards we went to *Caracorum*.

But it happened, while we were with the Monks, far from the Court with other Embassadors, that the Monk caused the Table to be struck so hard, that *Mangu-Khan* heard it, and demanded what it was ; then they told him. Upon which he asked why he was removed so far from the Court ; they told him, because it was troublesome to bring him Horses and Oxen every Day to the Court ; and said further, that it were better that he should stay at *Caracorum*. Then the *Khan* sent unto him, saying, if he would go to *Caracorum*, and stay there near about the Church, he would give him all Things necessary : But the Monk answered, I came from the Holy Land of *Jerusalem* hither by the Command of GOD, and left that City, wherein are a thousand better Churches than that of *Caracorum* ; if he please that I stay here and pray for him as GOD commanded me, I will stay, if not I will return to the Place from whence I came. So that every Evening Oxen were brought him yoked to the Carts, and in the Morning he was brought to the Place where he used to be before the Court ; and a little before we departed thence, a certain *Nestorian* came, who seemed to be a wife Man : *Bulgai* the chief Secretary, placed him before the Court, to whom the *Khan* sent his Children that he should bless them.

54. We came therefore to *Caracorum*, and while we were in *Master William* the Goldsmith's House, my Guide came to me and brought me ten Jacots, five of which he left in *Master William's* Hands, commanding him to spend

them on the Behalf of the *Khan*, for the Friar's Use while he remained there ; he also left the other five in the Hands of my Interpreter, commanding him to spend them in the Way, for my Subsistence ; for *Master William* had given them such Instructions without our Knowledge. I presently changed one into small Money, and distributed it to the poor Christians which were there, for all their Eyes were fixed upon us. We spent another in buying things necessary for us, as Garments and other things, which we wanted. With the third my Interpreter himself bought some things, by which he gained somewhat. We spent the rest, because after we came into *Persia* sufficient Necessaries were no where given us, nor yet among the *Sartars*, amongst whom we seldom found any thing to be sold.

Master William, Your Majesty's Citizen and Subject, sends you a certain Girdle set with a precious Stone, which they used to wear against Thunder and Lightning, and most humbly salutes you, always commending you to God in his Prayers. We baptized there in all six Souls. When we departed from each other, it was with Tears, my Companion remaining with *Master William*, and I returning with my Interpreter, my Guide, and one Servant, who had Directions to take one Mutton in four Days for us four. We came therefore in two Months and ten Days from *Caracorum* to *Baatu*, and never saw a Town, nor so much as the Appearance of any House, but Graves, except one Village, wherein we did not so much as eat Bread, nor did we ever rest in these two Months and ten Days, save one Day, because we could not get Horses. We returned for the most part by the same kind of People, and yet through other Countries, for we went in the Winter, and returned in the Summer, and by the higher Parts of the North, except that fifteen Days Journey we were obliged to go, and return by a certain River between the Mountains, where there is no Lodging but by the River Side. We went two Days, and sometimes three, without taking any other Food but Cosimos. Once we were in great Danger, not being able to find any People, our Provision failing us, and our Horses tired.

When I had travelled twenty Days, I heard that the King of *Armenia* had passed by. In the End of *August* I met with *Sartach*, who went to *Mangu-Khan* with Flocks and Herds, and with his Wives and Children, yet the Bulk of his Families remained between *Tanais* and *Estilia*. Next my Duty to him, saying, I would willingly stay in his Country, but *Mangu-Khan* would have me return and carry his Letters. He answered, that I must perform the Will of *Mangu-Khan*. Then I asked *Coiax* for the Children ? He answered, they were in the Court of *Baatu*, carefully provided for. I also asked him for our Cloaths and Books again ? He answered, did ye not bring them to *Sartach* ? I said I brought them unto *Sartach*, but I did not give them to him as you know ; and I put him in mind what Answer I made when he demanded whether I would give them to *Sartach* ? Then he answered, you say Truth, and none can resist Truth. I left your Goods with my Father, who remaineth near *Sarai*, which is a new Town *Russia* hath made upon *Estilia* on the East Shore ; but our Priests have some of the Vestments. If any thing please you, said I, keep it, so my Books be restored.

Then he told me he would report my Words to *Sartach*. I must have Letters, said, I to your Father, to restore me all. But he was ready to be gone, and said unto me, the Train of the Ladies followeth us near at Hand, ye shall alight there, and I will send you *Sartach's* Answer by this Man. I was very careful he should not deceive me, yet I dare not contend with him : Late in the Evening the Man came unto me, and brought two Coats with him, which I thought had been all of Silk, and he said unto me, behold two Garments, the one *Sartach* hath sent unto you, and the other, if so it please you, you shall present to the King on his Behalf ; to whom I answered, I wear no such Garments, I will present them both to my King in honour of your Lord. Then said he, do with them what you please ; now it pleased me to send them both unto you, and I freed them to you by the Bearer of these Presents. He delivered me Letters also to the Father of *Coiax* to restore me all which appertained unto me, because he had no need of any thing which was mine, so we came to the Court of *Baatu*.

the same Day I departed thence a Year before, viz. the second Day after the Exaltation of the blessed Crofs, and I found our young Men in Health, yet much afflicted with Poverty, as *Goffei* told me, and if the King of *Armenia* had not comforted them, and recommended them to *Sartaeb*, they had perished, for they thought I had been dead. The *Tartars* also demanded of them, if they could keep Oxen, or milk Mares, for if I had not returned, they had been brought into Servitude by those People.

Alter this *Baatu* ordered me to come to him, and made the Letters which *Mangu-Khan* sends unto you to be interpreted unto me; for so *Mangu* wrote unto him, that if it pleased him to add any thing, or leave out, or change, he should do it. Then said he, ye shall carry these Letters, and cause them to be understood. He demanded also what Way I would go, whether by Sea or Land? I said, the Sea was froze, because it was Winter, and I must go by Land, for I thought you had been still in *Syria*, so I directed my Journey towards *Persia*, for if I had thought you had passed into *France*, I would have gone into *Hungary*; for I should sooner have come into *France*, and by a more easy Way than tho' *Syria*; then we travelled a Month with him before we could obtain a Guide; at length they appointed me a certain *Jugure*, who understanding I would give him nothing, and that I would go forthwith into *Armenia*, caused Letters to be made to conduct me to the Soldan of *Turky*, hoping he should receive Gifts of the Soldan, and that he should gain more that Way; then we took our Journey speedily fifteen Days before the Feast of *All Saints* towards *Sarai*, going directly Southward, descending near to *Etilia*, which is there divided into three Arms, every one whereof is almost twice as big as the Branch of the River of *Nile* at *Damieta*.

It divides afterwards into four lesser Arms, so that we passed the River in seven Places by Boats. Upon the middle Branch is the Village called *Sumerkant*, without a Wall; but when the River overflows, it is compassed with Water. The *Tartars* were eight Years about it before they could take it, and the *Alani* and the *Saracens* were nine. There we found one *German* with his Wife, a very good Man, with whom *Goffei* stayed in the Winter; for *Sartaeb* sent him thither to ease his Court. About these Parts was *Baatu* on the one Side of the River, and *Sartaeb* on the other about *Cerjismaj*, and they go no farther down; and when it happens that all the River is frozen, they pass over. Here is great Store of Grass, and there among the Caves, Thieves hide themselves till the Ice melt. *Coiac's* Father receiving *Sartaeb's* Letters, restored my Vestments unto me, except my Albs, and an Almic trimmed with fine Silk, a Stole, a Girdle, and a Tualia, adorned with Golden Embroidery, and a Surplice. He restored also to me all the Silver Plate, except the Censor, and the little Box where the Christm was, all which the Priest which was with *Sartaeb* had. He returned my Books, except our Lady's Plaster, which he kept with my Leave, because I could not deny it him; for he said *Sartaeb* took much Delight in it. He also requested me, that if it happened that I return unto those Parts again, I would bring them a Man that knew how to make Parchment, for he had built a great Church by the Command of *Sartaeb* upon the West Side of the River, as he said, and a new Town; yet I knew that *Sartaeb* meant no such Matter. *Sarai* and the Palace of *Baatu* are upon the East Side of the River, and the Valley through which the Arms of the River are spread abroad containeth more than seven Leagues in Breadth. There is great Store of Fish there, a Bible also in Verse, and a certain Book in the *Arabian* Language worth thirty Sultalines, and many other things I never recovered.

55. After our Departure from him on the Feast of *All Saints*, going towards the South until the Feast of *Saint Martin*, we came to the Mountains of the *Alani*, between *Baatu* and *Sarai*. In fifteen Days, we found no People but one of his Sons, who went before him with Falcons and his Falconers, who were many, at one little Village; from the Feast of *All Saints* for five Days we met not with so much as a Man, and we were in great Danger by reason of Thirst, one whole Day and a Night, finding no Water, till about Three of the Clock the next Day. The *Alani* in some Mountains yet hold out, so that of ten of the Subjects

of *Sartaeb* two must come and guard the narrow Passages of the Hills, lest they come forth of the Mountains, and carry away the Cattle in the Plain. Between the *Alani* and *Porta Ferrea*, which is two Days Journey from thence, where the Plain of the *Alani* beginneth, between the *Caspian* Sea and the Mountains, there are certain *Saracens*, called *Lejzi*, inhabiting the Mountains, who likewise are free; so that those *Tartars* who dwell at the Foot of the Mountains of the *Alani* were obliged to give us twenty Men to bring us beyond the Iron Gate, or *Porta Ferrea*; and I was glad, because I hoped to see them armed, for I could never see their Armour, tho' I had been very desirous of seeing it; and when we came to this dangerous Passage of the whole twenty, there were but two who had Harberions, and I demanded of whom they had them? They said, they had them of the *Alani*, who are able Workmen in such things, and excellent Smiths. I think they have small Store of Armour, but Quivers and Bows, and Leather Jackets; I saw them presented with Iron Plates, and Iron Skull-caps out of *Persia*, and saw two also who presented themselves to *Mangu*, armed with Coats made of Hogs-skins, bent inward, of rough Leather, which were very clumsy and unwieldy.

Before we came to *Porta Ferrea*, we found one Castle of the *Alans*, which was *Mangu Khan's*, for he had subdued that Country. There we first found Vineyards and drunk Wine; the Day following we came to *Porta Ferrea*, or the Iron-Gate, which *Alexander* the *Macedonian* King made, and it is a City whose East End is upon the Sea Shore: And there is a little Plain between the Sea and the Mountains, through which the City extends in Length to the Top of the Mountain, which bordereth upon it on the West, so that there is no Way above for the Ruggedness of the Mountains, nor below for the Sea, but immediately through the middle of the City, where there is an Iron-Gate, from whence the City hath its Name. This City is more than a Mile long, and on the Top of a Hill is a strong Castle; and it is as much in Breadth as a Stone's Cast. It hath very strong Walls, without Trenches and Turrets, of large polished Stones. But the *Tartars* have destroyed the Tops of the Turrets and the Bulwarks of the Walls, laying the Turrets even with the Wall. Below that City, the Country was formerly like a Paradise. Two Day's Journey from hence we found another City called *Samaron*, wherein there were many Jews, and when we passed it we saw Walls descending from the Mountains to the Sea; and leaving the Way by the Sea by those Walls, because it turns towards the East, we went up into the high Countries towards the South.

The next Day we passed through a certain Valley, wherein the Foundations of Walls appeared from one Mountain to another, and there was no Way through the Tops of the Mountains. These were in times past the Inclosures, or Walls erected by *Alexander* for restraining the fierce Nations, the Shepherds of the Wilderness, that they could not invade the inhabited Countries and Cities. There are also other Walls and Inclosures where Jews are. The next Day we came to ascertain great City called *Samatb*, and after this we entered into a great Plain called *Maan*, thro' which the River *Cur* or *Cyrus* runs, from which the *Curgi* or *Curdi* have their Names, whom we call *Georgians*; and it runneth through the Middle of *Tesslis*, which is the Metropolis of the *Curgines*, and comes directly from the West, running to the East into the *Caspian* Sea, and in it are excellent Salmon. In that Plain we found *Tartars* again. Also by that Plain runs the River *Araxes*, which cometh from the *Greater Armenia*, from betwixt the South and West, from which it is called the Land of *Ararat*. Whereupon in the Book of the *Kings* it is said of the Sons of *Senacherib*, that having slain their Father, they fled into the Land of the *Armenians*. And in *Isaiab* it is said, that they fled into the Land of *Ararat*. To the West then of that most beautiful Plain is *Curgia*. In that Plain the *Crofinni* were settled formerly. And there is a great City in the Entrance of the Mountains called *Ganges*, which was their Metropolis, stopping the *Georgians*, that they could not come down into the Plain. Then we came to the Bridge of Boats, which was fastened together with a great Iron Chain, stretched forth cross the River, wherein *Cur* and the *Araxes* met together, but the *Cur* loseth its Name there.

56. We proceeded thence, till travelling up the *Araxes*, of which it is said, *Pontem indignatus Araxis*; *Araxes*, distains a Bridge, leaving *Persia* and the *Caspian Mountains* on the left Hand towards the South, having on the right Hand *Curgia* and the Great Sea towards the West. Going all the Way Southward, we passed through the Meadows of *Bacbu*, who is General of that Army which is there within the River *Araxes*; he has likewise made the *Curgi*, and *Turks*, and *Persians*, subject to him. There is likewise another Governor in *Persia* at *Tauris* over the Tribute called *Argon*, both which *Mangu-Khan* hath called Home to give Place to his Brother, who is going into those Countries. The Country which I have described to you is not properly *Persia*, but was sometimes called *Hyrcania*. I was in *Bacbu's* House, and he gave us Wine to drink, and he himself drank *Cosmos*, which I would willingly have drank if he had given it me; yet it was the best new Wine, but *Cosmos* is more wholesome for a half starved Man as I was. We went up therefore by the River *Araxes* from the Eve of *St. Clement* until the second Sunday in *Lent*, till we came to the Head of the River, and beyond the Mountains where it riseth there is a good City called *Arserum*, which belongs to the *Soldan* of *Turky*, and near thereabouts *Euphrates* rises towards the North, at the Foot of the Mountains of *Curgia*, to whose Spring I had gone, but the Snow was so great that no Man could go out of the common Path, and on the other Side of the Mountains of *Caucasus* towards the South riseth the *Tygris*.

When we departed from *Bacbu* my Guide went to *Tauris* to speak with *Argon*, carrying my Interpreter with him; but *Bacbu* caused me to be brought to a certain City called *Naxuan*, which heretofore was the Head or Capital of a great Kingdom, and the greatest and fairest City in those Parts, but the *Tartars* have made it a Wilderness; and there were anciently eight hundred Churches of the *Armenians* there; now there are but two little ones, for the *Saracens* have destroyed them; in one of which I held the Feast of *Christmas* as I could with our Clerk, and the next Day following the Priest of the Church died, to whose Burial came a certain Bishop with twelve Monks from the high Countries, for all the Bishops of the *Armenians* are Monks, and of the *Greeks* likewise for the most Part. The Bishop told me that there was a Church near this Place where *St. Bartholomew*, and likewise *St. Judas Thaddeus* were martyred, but there was no Way open for Snow. He told me also that they had two Prophets, the first or chief *Metobodius* the Martyr, who was of their Country, and plainly prophesied of the *Ismaelites*, which Prophecy is fulfilled in the *Saracens*. The other Prophet is called *Aacraon*, who when he died, prophesied of a Nation of Archers that should come from the North, saying, "That they should conquer all the Countries of the East, and should spare the Kingdoms of the East, to assist them in obtaining the Kingdoms of the West; and they shall possess the Countries from North to South, and shall come to *Constantinople*, and shall take the Gate of *Constantinople*, and one of them who shall be called a wife Man, shall enter the City, and seeing the Churches and Rites of the *Franks*, shall cause himself to be baptized, and shall counsel the *Franks* how they may kill the Emperor of the *Tartars*, and there they shall be confounded. Hearing this, the *Franks* which shall be in the Middle of the Land, *viz.* at *Jerusalem*, shall set upon the *Tartars* who shall border upon them, and with the Help of our Nation, that is, the *Armenians*, shall pursue them; so that the *French* King shall place his Royal Throne at *Taurinum* in *Persia*, and then all the East Countries and all the unbelieving Nations shall be converted to the Faith of Christ; and there shall be so great Peace in the World, that the Living shall say to the Dead, We be unto you Wretches! that lived not until these Times." And I read this Prophecy brought to *Constantinople* by the *Armenians* which remain there, but I made light of it. Yet when I spake with the Bishop, calling it to Mind, I regarded it somewhat the more. But throughout all *Armenia* they as firmly believe this Prophecy as they do the Gospel.

He said to us also, even as the Souls in *Limbo* expect

the Coming of Christ for their Delivery, so do we look for your Coming, that we may be freed from this Slavery wherein we have so long lived. Near the City *Naxuan* there are Mountains on which they say the Ark of *Noah* rested; and there are two, one greater than the other, and *Araxes* running at the Foot of them; and there is a little Town there called *Comantium*, which is in their Language Eight, for they say it was so called of the eight *Perions* which came forth of the Ark and built it. Many have attempted to climb the great Hills and could not, and the Bishop told me that a certain Monk being very much troubled thereat, an Angel appeared to him and brought him a Piece of the Wood of the Ark, bidding him to trouble himself no more. That Piece of Wood they had in their Church as he told me, neither is the Hill so high in Appearance but the Men might well get up it. A certain old Man gave me however this worthy Reason why no one should climb it. They call that Mountain *Mafus*, and as this Word is of the *Feminine* Gender in their Tongue, no Man, said he, must climb up *Mafus*, because it is the Mother of the World.

In the City of *Naxuan*, Friar *Bernard* a *Catalan*, of the Order of the Preaching Friars, found me, who lives in *Georgia*, with a certain Friar of the Sepulchre, who possesseth great Lands there, and he had learned somewhat of the *Tartar* Language; he formerly went with a certain *Hungarian* Friar, who returned with me to *Tessis*, with one Servant; but Friar *Bernard* remained at *Tauris*, with a certain Lay Friar, whose Language he understood not. We went out of the City of *Naxuan*, about the *Epiphany*, for we had stayed long there, by reason of the Snow; we came therefore in four Days to the Country of *Saxenja*, a *Curdish* Prince, heretofore mighty, but now Tributary to the *Tartars*, who destroy'd all his Ammunition, whose Father *Zastarius* possessed himself of the Country of *Armenians*, having delivered them from the Hands of the *Saracens*, and there are many fair Villages of true Christians, having Churches like the *Franks*; and every *Armenian* hath in his House, in an honourable Place, a wooden Hand, holding a Cross, and sets a burning Lamp before it; and that which we do with holy Water, sprinkling it to drive away wicked Spirits, they do with Frankincense; for every Evening they burn Frankincense, carrying it through all the Corners of the House, to rid them of all kind of Enemies. I eat with *Sabenjs*, and he did me great Reverence, both he and his Wife, and his Son *Zachary*, a very comely and wise young Man, who demanded of me, whether if he should come to you, you would entertain him; for he is so uneasy under the Dominion of the *Tartars*, that tho' he hath a Plenty of all things, he had rather travel into a strange Country, than endure their violent Exactions. They said further, that they were true Sons of the Church of *Rome*, and if the Pope would lend them any Aid, they would bring all the bordering Nations unto the Subjection of the Church of *Rome*.

From that Town of his, in fifteen Days, we entered the Country of the *Soldan* of *Turky*. On the first Sunday in *Lent*, and the first Castle we found, is called *Marsogon*; all in the Castle were Christians, *Armenians*, *Carginus* and *Greeks*: The *Saracens* only have the Dominion. There the Captain of the Castle said, he had received Commandment, that no Victuals should be given to any *Franks*, or to the Ambassador of the King of *Armenia*, or of *Vitacius*; so that from the Place where we were the first Sunday in *Lent*, quite to *Cyprus*, whither I came, eight Days before the Feast of Saint *John* the Baptist, we were forced to buy our own Provision. He who was my Guide, procured me Horses, and took Money for the Victuals, and put it in his Purse. When he came into the Fields, seeing a Flock, away he went, and without more to do, took one Sheep, and gave it to his Family to eat, and wondered I would not take part of his Robbery. In the Purification, I was in a certain City called *Aym*, which was *Sabenjs's*, whose Situation is strong; and there are an hundred *Armenian* Churches, and two Mosques of the *Saracens*: The *Tartars* place an Officer there.

At this Place five Preaching Friars met me, whereof four came from *Provence* in *France*, and the fifth joined himself to them in *Syria*. They had but one sick Boy,

who could speak the *Turkish* Language, and a little *French*; and they had the *Pope's* Letters to *Sartach*, and to *Mangu-Khan*, and to *Buri*, such as your Highness gave me Letters of Request, that they would suffer them to continue in their Country, and preach the Word of God, &c. But when I told them what I had seen, and how they sent me back again, they directed their Journey to *Tiflis*, where there are Friars of their Order, to consult what they should do; I answered them, they might well pass by those Letters, if they would; but they should be well assured, to endure much Labour, and render an Account of their coming; for seeing they had no other Message but the Office of Preaching, they would care but little for them, and chiefly because they had no Interpreter: What they did after, I know not, and cannot therefore report.

58. On the second Sunday in Lent we came to the Head of *Araxes*, and passing beyond the Top of the Mountain, we came to *Euphrates*, by which we descended eight Days going to the West to a certain Castle called *Camath*; where *Euphrates* bends to the South towards *Halapia*. But we passing the River went through very high, mountainous Countries, and through the deepest Snow to the West. There was so great an Earthquake there that Year, that in one City called *Arsengan*, ten thousand Persons, according to their Register, perished, beside poor Men, of whom there was no Notice taken. Riding three Days together, we saw the gaping of the Earth, as it was cleft by the Earthquake, and the Heaps of Earth that came from the Mountains, and filled the Vallies; so that if but a little more of the Earth had been moved, that which *Isaiab* speaketh had been literally fulfilled, *Every Valley shall be filled, and every Mountain and little Hill shall be bumbled*. We passed through the Valley where the *Soldan* of *Turky* was vanquished by the *Tartars*. It were too long to write how he was overcome; but a certain Servant of my Guide's who was with the *Tartars* said, that the *Tartars* were not above ten thousand in the whole; and a certain *Curd* of the *Soldans*, said that there were two hundred thousand with the *Soldan*, all Horse-men. In that Plain where the Battle was, there broke out a great Lake at the Time of the Earthquake; and it came into my Mind, that all the Earth opened her Mouth to receive yet more Blood of the *Saracens*. We were in *Sebosta* a Town of the *Lesser Armenia* in *Easter* Week; here we visited the Tombs of forty Martyrs; there the Church of *St. Blaise* standeth, but I could not go thither, because it was above in the Castle.

On the succeeding Sunday, we came to *Cesaria* of *Capadocia*, where there is a Church of *St. Basil the Great*. About fifteen Days after, we came to *Iconium*, making small Journeys, and resting in many Places, because we could not readily procure Horses, and my Guide did this on purpose, taking upon him to solicit his own Business three Days in every Town, at which I was much dissatisfied, but durst not speak, because he might have sold or slain me and our Servants, and there was none to hinder it. I found many *Franks* at *Iconium*, and a certain Merchant called *Nicolas de Sancto Syrio*, who with a Companion of his, a *Venetian*, called *Bonifac de Malandino*, carried all the Allum out of *Turky*, so that the *Soldan* could not sell any but to those two; and they made it so dear, that what was worth but fifteen *Bizantines*, is now sold for forty. My Guide presented me to *Soldan*; the *Soldan* said he would willingly cause me to be conveyed to the Sea of *Armenia*, or *Cilicia*, though the above-mentioned Merchant, knowing that the *Saracens* made little account of me, and that I was much burthened with the Company of my Guide, caused me to be conveyed to *Curruina*, a Port belonging to the King of *Armenia*. I came thither before the *Ascension*, and stayed till the Day after *Pentecost*; then I heard that *Embassadors* came from the King to his Father; then I went speedily to the King's Father, to demand whether he had heard any News from his Son, and I found him set with all his Sons, one excepted, called *Barum Ufn*, who resided in a certain Castle, and he received News from his Son that he was returned, and that *Mangu-Khan* had much eased his Tribute, and had given him a Privilege that no *Embassador* should

come into his County; whereupon the old Man himself, with all his Sons, made a Banquet, and he caused me to be conveyed to the Sea, to the Haven called *Aijax*; and thence I passed over into *Cyprus*, and at *Nicosia* I found our Provincial, who the same Day carried me with him to *Antiochia*, which is in a very weak State. We were there on the Feast of *St. Peter and Paul*, and from thence we came to *Tripolis*, where our Chapter was held on the Assumption of the Blessed Virgin.

59. Our Provincial being determined that I should have my Residence in our Convent at *Acon*, would not suffer me to come to you; but commanding me to write unto you what I would by the Bearer of these Presents; and not daring to resist contrary to my Obedience, I did; according to my Power, and Understanding, craving Pardon of your Clemency, for my Superfluties, or Wants, or for any thing that shall be indiscreetly or foolishly spoken, as for a Man of little Understanding, not accustomed to write long Histories. The Peace of God which passeth all Understanding preserve your Heart and fortify your Mind. I would willingly see your Highness, and certain spiritual Friends, which I have in your Kingdom. Wherefore if it should not be contrary to your Majesty's liking, I would beseech you to write to our Provincial, that he would let me come unto you and return shortly again into the Holy Land. Concerning *Turky*, your Majesty shall understand, that the tenth Man there is not a *Mobammedan*, nay, they are all *Armenians* and *Greeks*, and Children rule over them; for the *Soldan*, who was conquered by the *Tartars*, had a lawful Wife of *Iberia*, by whom he had one feeble Son, concerning whom he charged that he should be the *Soldan*. He had another of a *Greek* Concubine, whom he committed to a certain great Admiral. The third he had by a *Turk*, to whom many *Turks* and *Turcomans* being gathered together, they purposed to have slain all the Sons of the Christians. They had determined also, as I understood, that after they had got the Victory, they would destroy all the Churches, and kill as many as would not become *Mobammedans*; but he was overcome in Battle, and many of his Men slain. He recruited his Army however, a second Time, and then was taken, and is still in Prison. *Paccster* the Son of the *Greek* Concubine, procured soon after that he might be *Soldan*, because the other was weak whom they sent to the *Tartars*; whereupon his Kindred on the Mother's Side, such as the *Iberians* and the *Curds*, were angry; so that, at present, a Child ruleth in *Turky*, having no Treasure, few Soldiers, and many Enemies. The Son of *Vestarius* is weak, and at war with the Son of *Assau*, who likewise was a Child, and worn out with the Servitude of the *Tartars*. If therefore an Army of the Church should come to the Holy Land, it were a very easy Thing to subdue all these Countries, or to pass through them.

The King of *Hungary* hath not above thirty thousand Soldiers. From *Cologne* to *Constantinople*, are not above three-score Days Journey by Waggon; from *Constantinople* are not so many Days Journey to the Country of the King of *Armenia*. In old Time, valiant Men passed through those Countries and prospered; yet they had most valiant Opponents, whom God hath now destroyed out of the Earth, and we need not be in Danger of the Sea, or the Mercy of Sailors; and the Price which we should give for Freight were sufficient for Expences by Land. I speak it confidently, if our Countrymen would go as the Kings of the *Tartars* go, and be contented with such Victuals, they might win the whole World. It seemeth not expedient, as I think, that any Friar should go to the *Tartars* any more, as I did, or as the Preaching Friars do; but if our Lord the Pope would send a Bishop in an honourable manner and answer their Follies, about which they have thrice writ to the *Franks*, once to *Pope Innocent* the Fourth, of sacred Memory, and twice to your Majesty, once by *David*, who deceived you, and now by me, he might speak unto them what he would; and also cause them to put these Things in Writing, for they hear whatsoever an *Embassador* will speak, and always demand if he will say any more, but he must have a good Interpreter; nay, many Interpreters, and be at large Expences.

60. Such is the Relation of the Monk *Rubruquis*, who had the best Opportunity that any Man had to that Time, of looking into the Affairs of the *Tartars*, of examining their Force, of enquiring into the Form of their Government, and making himself perfectly acquainted with their Manners and Customs, of which he has given so large, so curious, and so accurate an Account. Before we proceed to our Remarks thereon, it may not be amiss to clear up a few Difficulties that occur in this Relation, and which, for want of being clearly resolved, may occasion some Doubts in the Mind of our inquisitive Reader; and this is the more necessary, because hitherto nothing of this kind has been done, at least in our Language; but the Relation has been left naked and unsupported to the Censure of the Peruser, without the least Notice taken of those Facts that must necessarily embarrass him, and in a great Measure affect the Credit of the Author. I am very sensible, that many of my Readers may be of Opinion, that I might spare myself some part of the Trouble I take in illustrating those old Writers; but I beg leave to observe once for all, that it is not either for their Interest or mine, that I should do so. If I had not been thoroughly satisfied that these Travels were the best in their kind, I should not have inserted them; but with respect to the World, this is not enough; for though I have it in my Power to give them what seems to me most proper for such a Collection, yet I owe it to them, and to myself, to make it as evident as it is possible, that I discharge this Trust as I ought, and that I give them nothing which is not truly worthy of their Perusal; and this can no otherwise be done, than by obviating every Difficulty that may possibly incline them to differ from me in Sentiment, and therefore I hope this will justify me in the Pains I am still to take with regard to this Author, who, as he was a Writer of great Candour and Sincerity, so he has mentioned many Particulars, which, tho' they were well known in his Time, and more especially to the Prince, to whom this Work was addressed, yet are so imperfectly known to us, that without a strict Search into the Histories of those Times, it is not easy to conceive, how they can be reconciled to the rest of his Narration.

We will state these plainly, and then the Truth of my Observation will be manifest. In the first Place, it seems extraordinary that the King of *France* should be so much deceived with respect to the Embassy that was sent him from the *Tartars*, which occasioned the whole of this Transaction; but with respect to this, it appears clearly from the Historians that have written the Reign of Saint *Louis*, that these Ambassadors came from a *Tartar* Prince called *Ercalibay*, and brought with them Letters which are still extant, and which positively assert, that it was the Design of the *Khan*, to co-operate with the Christians, in order to reduce the Power of the *Mohammedans*. At the Head of this Embassy was one *David*, who is named in the Letters as one to whom the King of *France* might give more Credit, to which his Majesty might be more inclined, because he had in his Company *Friar Andrew de Lentumal*, whom the Pope had formerly sent into *Tartary*, and who assured the King, that he had known *David* there in a Post of Distinction. This Ambassador it was, that positively asserted, that the *Khan* was become a Christian, and that there was no Difficulty in procuring a close Alliance between him and the Christians. Upon this, the King first sent *Friar Andrew* with a considerable Number of Persons in his Train, back with the *Tartar* Ambassadors, in the beginning of the Year 1251; but as to the Success of this Negotiation, we have no Account. There is another thing a little dark in our Author's Account, and that is with respect to his Character; for tho' it appears plainly, that he was sent by the King his Master with Letters to *Sartach*, yet he frequently tells us, that he did not affect to be thought an Ambassador, but desired rather to be considered as a Monk, who visited *Tartary* from his Zeal for the Christian Religion.

His Reason for acting thus, was to preserve the Honour of the King, from suffering thro' any ill Treatment that he might meet with, to which he was induced by many Reasons, but particularly by these two. In the first place, he was perfectly satisfied, that what had been reported as

to the Conversion of *Sartach*, was false; and next, because he was aware the *Tartars* were informed, that the King his Master had been beat in *Egypt*, and taken Prisoner there by the Infidels; whence he concluded, that he should not meet with a very good Reception. He therefore takes great Care to inform the King, that whatever Usage he received, could reflect no Dishonour upon his Majesty, because of the Precaution he had taken to assume no higher Character than that of a Monk, who came to preach the Christian Religion to the *Tartars*. But the Readers may very probably wonder why the *Tartar* Prince *Ercalibay*, should take such a Step as this, in order to mislead so great a Monarch, and yet, if he adverts to the Account our Author has given of the Genius and Dispositions of the *Tartars*, he will easily perceive, that this was a Stroke of their Policy, and no very bad one. They had a Mind to be perfectly acquainted with a Design of the *Franks* their Forces, and the Manner in which they intended to carry on the War against the *Saracens*; nor could they fall upon a Way more proper than this for accomplishing their Ends. The Character afforded, by our Author, to the *Tartars*, is justified by all Writers, both ancient and modern; for their Policy with respect to foreign Countries, consists entirely in Cunning and Subtily; for not having the Advantages that other Nations have of free Commerce and constant Intercourse with the Inhabitants of distant Countries, they supply themselves with Intelligence by such Artifices as these. Some petty *Tartar* Prince takes upon him to send Ministers to foreign Courts, whose Business it is, under Colour of a Negotiation, to get the best Accounts they can of the Regions in which they reside, in order to serve their Countrymen whenever Occasion offers as Harbingers or Guides; and as they depend on these Arts in Time of Peace, so they place all their Confidence in War, in the Quickness of their Motion, and in that Rapidity with which they over-run even great Countries, before the Inhabitants have Time to take proper Measures for their Defence.

It was for these Reasons, and to save the Honour of the King his Master, that our Author denied that any Embassadors had been sent to *Mangu-Khan*, for he considered *Friar Andrew* as sent only to the Prince, who wrote to the King his Master, and not to the great Khan, of whom it does not appear that the *French* had any just Ideas, all they were derived to them by this Relation. We may add to all this, that our Author was something diffident as to the Character which *David* assumed, by his giving us to understand, that in those Days there were a certain bad sort of People, who in these remote Parts of the World, made a Practice of giving themselves out for the Ministers of Princes they scarce knew, and made a Livelihood by such strange Exploits. He likewise seems to be fully satisfied, that the Eastern Christians in general were Men of great Vivacity, and so fertile in their Imaginations, that every thing they saw or heard appeared to them in the Light of a Wonder, and as such they reported it wherever they came, to serve their own Purposes.

Upon these Principles he grounds the political Part of his Work, in which he seems to labour with all his Force to establish these two Maxims. The first, that it was not either safe or honourable to aim at making Alliances with the *Tartars*, who were in his Sentiments a fierce intractable sort of People, very proud of their extraordinary Successes, and who understood all Applications made to them, as proceeding from Fear. The second, that their Power was nothing near so great as it had been represented, so that there was far less Danger like to accrue from the regarding them as Enemies, than from treating with them as Friends, into which Notion he was led by observing, that their Discipline was not exact, that they were utterly unacquainted with the regular Art of War, and not very capable of carrying it on against such as stood upon their Guard, and were prepared to meet them in the Field with well-disciplined Armies. That which seems to be the least defensible Part of his Work, is his strong Attachment to the Pope, and his high Notions of his Power, both of which, however, are in some measure excusable, considering the Age in which he lived, and the Conduct of the Popes in those times, who took upon them to excommunicate and

dispose the greatest Princes in Christendom, as the Case then was with the Emperor, or to send them into the most distant Parts of the World, under Pretences of Religion, as appears from the Expeditions undertaken by his Master King Louis, which were as unfortunate in their Event, as ill founded in their Principles.

But it is now Time to add a few Observations with respect to the Usefulness of this Work, as it stands in this Collection, and to shew how far the Travels of Rubruquis contributed to make the Western Parts of the World acquainted with the Passages into the East, as well as with what was doing there, and the Force of the several Monarchs that were in Possession of those Countries at the Time he visited them.

61. The Travels of Rubruquis are equally astonishing in whatever Light they are considered. Take them with respect to Length, and they extend to upwards of five thousand Miles one Way, and to near six thousand another. I mean from Constantinople in his going out, and to Acon or Ptolemais in his Return, which is such a Space of Ground as it will not be easy to find any Man that has traversed, and left us so distinct an Account of what he has seen. But if Travels are not so considerable from their Length as from the Nature of the Countries that are travelled through, then here again is a new Proof of the Value of this Performance, since it is certain no European, except John Carpin, ever travelled so far before, neither have we any Accounts of Travels of the same kind since, that, only excepted, which follows in the next Section, and from which we have received here in Europe the first certain Accounts of China, and the first Notice we had of there being in the World such a Country as Japan. We shall apprehend this Matter better, if we take a short View of the Countries through which our Monk passed by the Names they are known to us at present. It is plain, that from Constantinople he sailed cross the Black-Sea to the Port of Caffa; from thence he travelled by Land all the rest of the Way, that is to say, first through Crim Tartary, then crossing the great Rivers, Tanais and Volga, he came into the Country of Bolgar, and to the Camp of Baatu, thence through the vast Country of the Calmucks, and so North-Eastward to the Court of Mangy-Khan, which, according to his Description, must have lain in the Latitude of fifty Degrees North, or somewhat more, and considerably higher than what is now called the Chinese Tartary. In his Return he passed thro' all the vast Desarts of Great Tartary, though the Country of the Moguls, and so by the Head of the Caspian Sea, and then along the West Side of it through the Countries of Georgia, Armenia, Curdistan, Diarbek, and so into Syria; all which Countries then were, and most of them are still, in the Hands of the Tartars, of whom he has given us such an Account as is not only very consistent with itself, and carries therein the strongest Marks of Veracity, but is very agreeable also to the best Accounts we have since received of those Countries.

As our Author was not acquainted with the Language of the Tartars, and did not remain long enough amongst them to acquire it in that Degree of Perfection which was necessary to read and to understand their Histories, we need not at all wonder at some small Errors that have escaped him in Points of no great Consequence. As for Instance, in what he tells us of Zingis-Khan, who he makes a Frier, as other Writers have done a Blacksmith, I shall not trouble the Reader with Remarks on the right spelling of this Word Zingis, which I have already given them as it ought to be spelt, and have since conformed to our Author's Manner of writing it, that the Reader might find less Difficulty in comparing this with other Books of the same kind. I say, I shall not insist on such Trifles, but shall content myself with observing, that Zingis, however spelt, is an Adjective, and signifies properly the glittering or shining of Steel; whence sprung the Notion, that this Prince was originally of some Trade in which Iron or Steel was employed, because all the Tartars represented him as a Man, who from low Beginnings had raised himself to universal Empire, and aspersed him at the same Time from the Consideration of his having deprived them of their Freedom and Independency; but among the Tartars themselves, this Appellation was taken in an honourable Sense,

Zingis signifying with them illustrious, and Zingis-Khan signifies literally, the most illustrious Monarch.

As to the Religion of this Prince, it was undoubtedly that of his Country, concerning which we have a great deal in Rubruquis agreeable to what he saw and heard, but not so clearly expressed, as that we should be able to say precisely what is the Faith of the Tartars. Our Author is certainly in the Wrong as to Presbyter John, of whom such a Noise has been made in the World, and about whom so little can still be said with any Certainty. What led him into the Mistake was this; Tujan was the Khan of the Naimans, defeated and killed by Zingis-Khan, and it was from the Likeness of his Name to John, that our Author took it for granted he was that John the Priest so well known to the World. But after all, the Presbyter John is still in being, and is no other than the grand Lama, or Supreme Pontiff of the Tartars, who resides, as we have before observed, in the Kingdom of Tangut, and is in the Opinion of the whole Tartar Nation, immortal. The Truth of the Matter is, that he is an Ecclesiastical Prince, whose Fame and Credit is very extensive, tho' his Power be very restrained. He resides in a Monastery surrounded by his Monks, who, whenever he dies, supply his Place from among themselves, and keep this Secret so religiously, that all the Tartars are as firmly persuaded that their grand Lama lives for ever, as that the Sun always shines. This serves to explain another Circumstance, that at first Sight might seem very idle and ridiculous to the Reader, I mean the Question put to Rubruquis, whether the Pope was not four or five hundred Years old. It is very plain from hence, that they considered the Pope as the grand Lama of the West, and having heard the Romish Priests insist much on the Perpetuity of the Church, they referred all this to the Person of the Pope, and supposed this spiritual Monarch to be immortal like their own.

If I durst avow my own Sentiments plainly, I should say, that there is no better Evidence of the Idolatry of the Tartars, than of the Papists; and this without intending any high Reflection on the Members of the Romish Church, for both have Images or Idols, both seem to worship them, and yet both when charged with it absolutely deny the Fact. Our Author plainly owns, that Mangy-Khan told him expressly he worshipped but one God, and that the Tartar Priests, whom he charges very freely with Idolatry, disowned it themselves, and affirmed that they reverence their Images only, and did not worship them. But after all, it plainly appears, that they kept the Secret of their Religion so well, that our Author never so much as heard of the Grand Lama, and consequently could know nothing at all of the Grounds of their Religion, which, to deal plainly with the Reader, remains full as great a Mystery to this Day.

It is a Point that the Tartars will never be brought to explain in any manner whatever; and after all the Pains that I have been able to take in order to obtain some sort of Certainty on this Head, I am able to say no more of it than this, that what Doctrines the Lamas or Priests teach publicly, are restrained to these three Points: I. That there is one God the Fountain of Being, the Creator of all things, the Ruler of all things, and the sole Object of Divine Worship. II. That all Men in general are his Creatures, and therefore ought to consider each other as Brethren descended from one common Parent, and alike entitled to all the Blessings he bestows, and that therefore it is great Impiety to abuse those Blessings, or to injure each other. III. That inasmuch as the common Reason of Mankind hath taught them to establish Property, it is necessary that it should be preserved, and that it is therefore the Duty of every Man to be content with his own, and to be just to his Neighbours. This Religion these Priests not only teach, but practise with irreproachable Exactness; and therefore Rubruquis very fairly owns, that the Regularity of their Manners hindered the Progress of the Christian Religion, not because the Doctrines of the latter were at all inferior in Sanctity to those of the former, but because in point of Purity of Manners the Nestorians and other Christians were very deficient.

After setting this Subject in the best Light we are able, the Reader will not find it at all difficult to apprehend a

what extremely puzzled, not only our Author, but all who have wrote of the Affairs of the *Tartars*, and it is this; that they are absolutely indifferent as to other Religions, entertaining all with equal Respect, whether *Christians*, *Mohammedans*, or *Jews*, which proceeds from their finding the fundamental Principles of their own Religion taught by them all, and practised by none that come amongst them better than by themselves, or by their Priests.

We find in *Rubruquis*, some mention made of a Nation called *Albassin*, of whom it will be requisite to give the Reader some Account; they are the same that are mentioned by our ancient Historians, under the several Names of *Hassians*, *Assians*, *Assassins*, *Assanites*, and *Chassians*, and were in Truth as old a Sort of People as ever existed: They possessed a Tract of Country which contained twelve Castles and Villages in the Neighbourhood of *Tyre*, were a mix'd Race of Men, and for a long time made no Profession of any Religion, but practised a loose Kind of *Mohammedism*, and were Tributaries, first to the Knights Templars, and then to the Christian Earls of *Tripoly*. In the eleventh Century, they would have declared themselves Christians, if they might have been released from that Tribute; but this was refused, and they grew thenceforward the most bitter Enemies the Christians had.

These People were governed by a Prince stiled by our old Historians, the old Man of the Mountain, who finding himself surrounded by States much more powerful than his own, devised a new and strange Way of making himself equally dreadful to his Neighbours and to Strangers. He gave out, that he only was the true Vicar of *Mohammed*, and that he had the Keys of Paradise in his Hands: To support which Notion, he caused a fine Garden to be laid out, in a Valley, near his Palace, adorned in every respect, so as to resemble the Paradise of that Prophet; he likewise provided a sort of Opiate, and whenever he saw a young Man of a daring and resolute Temper, he sent for him, and promised him the perpetual Enjoyment of all sensual Delights, if he would execute boldly whatever he commanded; and by way of earnest, having given him the Opiate to drink, caused him to be carried while asleep into his Garden, where, when he awoke, he found every thing he could wish for, and many beautiful Women to attend him; when he had remained there a certain time, the Opiate was again administered, and he was conveyed back when asleep, to the Palace, where the old Man of the Mountain promised him, that provided he fulfilled all his Commands during Life, he should dwell after Death perpetually in that Garden.

By this Artifice, he established an Order of Men ready to venture on whatever he commanded, and when any Prince made War upon him, he dispatched three or four of these young Villains to his Court, or Camp, with Instructions to murder him, which they never failed to perform. It was by their Hands that *Louis* of *Bavaria* was killed in the Year 1231, and in 1251, he dispatched four of them with the like Commission to the Court of *Louis IX.* but suddenly altering his Mind, he dispatched four more with counter Orders, who made such haste, that they arrived at the *French* Court before the former, and discovering themselves to King *Louis*, remained always near his Person, to preserve him from their Companions, whom they likewise discovered at their Arrival, and for this Service, the *French* Monarch sent them back to their Master, loaded with Presents. By this Means the old Man of the Mountain became terrible, even to the most powerful Monarchs; and from the Practice of his desperate Bravos, we have the Word *Assassins*, and the Phrase of *Assassination*, for Murders of this Nature. This Practice was continued to the Time of which an Author speaks, a little after which, the whole Nation was extirpated by the *Tartars*.

These are all the Facts mentioned in his Writings, that seem to stand in Need of Explanation, unless we except what he has delivered concerning the Witchcraft and Sorceries of the *Tartars*. As to these, we can only say, that they are still much addicted to such Superstitions, and are thereby exposed, as he has shewn us, to many Impositions, and abundance of Mischiefs that attend them. But in one Particular he is mistaken, which is in confounding the *Sorcerers* with the *Lamas*, or *Tartar* Priests, whereas they are quite different Persons. What he relates of the Divination by the Blade-bones, is confirmed by all other Travellers, and is a Sort of Folly practised by the *Laplanders* and other northern Nations. A Folly ridiculous and absurd indeed, but not more so than the other Arts of Divination, which have prevailed in politer Countries, and which are not perhaps wholly extinguished at this Day. What he says in relation to the sprinkling of Ashes on the Floor, relates to another superstitious Custom of the same kind, which gave Birth to that kind of Fortune-telling called *Geomancy*, which was transferred to *Europe*; and about which several Treatises have been written, and one particularly in our own Tongue, not many Years ago, which I mention to shew not only the Probability of what *Rubruquis* has related, but likewise to demonstrate, that the giving into such foolish Practices is not peculiar to such Nations as we esteem barbarous; though I shall readily allow, that it is a Mark of Stupidity and Barbarity where-ever it appears.

We have no certain Account how this Relation of *Rubruquis* was received by the King his Master, but in all Probability it was very agreeable to him, since, though that Prince, after his Return to *France*, took all imaginable Pains to set the Affairs of his Kingdom in Order, and to reform the Abuses that had crept into it during his Absence: Yet he still retained a strong Desire of repairing also the Disgrace he had sustained in his former Expedition, by renewing the War against the Infidels, which determined him to make another Expedition against them, and this, notwithstanding all the Opposition that could be made to it, he undertook in the Spring of the Year 1270. He transported on this Occasion a numerous Army into *Africa*, resolving to begin the Operations of the War with reducing the Kingdom and City of *Tunis*, to which he laid Siege. But before he had made any great Progress towards taking the Place, the Plague broke out in his Army, and the King being infected therewith, died on the Twenty-fifth of *August* the same Year.

The best *French* Historians, as well as those of other Nations, condemn these Kinds of Expeditions, as idle and romantick; and yet it cannot be denied, that if this Spirit of making War against the Infidels had not been raised at that Time, it is more than probable, that the *Mohammedans* would have over-run the best Part of *Europe*; whereas in consequence of this Spirit, they were driven out of *Portugal* and *Spain*, to which I must here Leave to add, that the Travels of *Rubruquis*, and others into different Parts of the East, first inspired that Passion for Discoveries, which has since produced such mighty Effects. Before that Time, we knew little or nothing in this Part of the World of the Situation of distant Countries; and those who affected to be thought great Wits, laboured to discredit whatever was delivered in Relations of this Kind, which prevailed in some Places; and if it had prevailed in all, we had been, at this Day, as ignorant, as poor, and as much Slaves as our Ancestors were before that Spirit of Commerce arose, that has not only discovered both the *Indies*, but has taught Men of Courage, that the whole World is their Country; and that he who improves useful Knowledge, if not properly encouraged at home, will be a welcome Guest where-ever he goes.

A MAP OF THE EASTERN PART OF AFRICA
 M. MARCO POLO'S TRAVELS IN THE 13th CENTURY
 WITH A DESCRIPTION OF THE EAST INDIES
 AND THE ISLANDS OF THE SOUTH SEA

SECTION XXI.

The curious and remarkable Voyages and Travels of Marco Polo, a Gentleman of Venice, who in the Middle of the XIIIth Century, passed through a great Part of Asia, all the Dominions of the Tartars, and returned home by Sea through the Islands of the East-Indies.

Taken chiefly from the accurate Edition of *Ramusio*, compared with an original Manuscript in his Prussian Majesty's Library, and with most of the Translations hitherto published.

1. A succinct Introduction to this Work.
2. An Account of the Author from *Ramusio*, and other Writers.
3. The several Editions and principal Translations that have been published of these Travels.
4. An Account of the Objections that have been raised against them.
5. The Characters given of this Performance by several eminent Critics.
6. The Author's introductory Account, containing an Abridgment of his Travels to the Time of his Return to Venice.
7. A Description of Armenia the Lesser, of the Country of the Turks, of Armenia the Greater, of the Province of Zorzania, the Kingdom of Mosul, of the City of Baldach, or Bagdat, of the City of Tauris, with an Account of a remarkable Earthquake.
8. Of the Country of Persia, the City of Jaldi, the City of Cermam, of the Town of Camandu, and of the Country where Rbuharb grows.
9. Of several other Countries, and the principal Curiosities in them.
10. The History of the Assassins, and of the Manner in which their Prince was killed, together with the Description of many other Countries.
11. Of the City of Samarcand, the Town of Lop, and of the great Desert in its Neighbourhood, with other remarkable Passages.
12. Of the Province of Camul, and several other Counties to the City of Ezina, and another great Desert.
13. Of the City of Caracaram, and of the Tartars, with a compleat History of that Nation, and of their Monarchs.
14. Of the vast Countries to the Northward of Tartary, and many other curious Particulars.
15. Of the great Power of Cublai Khan, of his Government, Family, Dominions, &c.
16. Of his Palace in the City of Cambalu, a particular Description of that City, and other remarkable Observations.
17. Of the Magnificence of the Court of the Grand Khan, and of the Manners and Customs of his Subjects.
18. A copious Account of the Countries between the Place of his Residence, and the Country of Thibet.
19. A large Description of the last mentioned Province, and of many others, with an Account of the Observations made by the Author in his Progress through them.
20. Of the Province of Mangi, and of the Manner in which it was reduced under the Power of the Tartars, together with an Account of the Provinces and Cities, afterwards reduced under their Dominion.
21. Of the noble City of Quinsai, and of the vast Revenues drawn from thence by the Emperor of the Tartars.
22. Of the Island of Zingari, and of the Attempts made by the Tartars to conquer it, and their Misfortune in them.
23. A large Account of various Countries, Provinces, Cities and Islands in the East-Indies.
24. Of the great Island of Ceylon, of the Kingdom of Malabar, and the State of other Countries visited by the Author.
25. Of the Kingdom of Murfilii, the Diamond Mines there, and other Countries adjacent.
26. Of the Island of Madagascar, the Country of Ethiopia, and other Parts of Africa.
27. Of the Province of Aden, and of several Countries reputed to be inaccessible.
28. Many obscure Passages in this Performance explained.
29. Remarks and Observations.

IT is with ancient Writers, as with ancient Coins, such as will not be at sufficient Pains to examine them, not only despite them, but also such as admire them. Thus none are more governed by Prejudice than those who declaim against it, and none greater Bigots than such as are attached to their own Opinions, from a Notion that they think freely. Yet this Zeal for Freedom of Thought ought to be amended rather than discouraged, as being in itself commendable, though sometimes dangerous, by being misapplied. It may, and to say the Truth, to many it does seem a tedious and disagreeable Labour to look so far back as the first Springs and Dawnings of Knowledge, yet, however they may colour this with Pretences to refined Taste, it is in fact no better than an Excuse for Idleness, and a Dislike to the taking that Pains which is requisite to succeed in such Enquiries.

The Travels of *Marco Polo* are indeed very old, and are come into our Hands with considerable Defects, but they are very valuable for all that, and very well worthy of our Attention. He was the *Columbus* of the *East-Indies*, the first that gave a certain and distinct Account of the Sea beyond *China*, and of the free Passage thereby through all the Islands of the *East-Indies*, back into those Countries that were very well known. It is true, that a great Part of what he related, though delivered with much Solemnity, and confirmed by the strongest Asseverations, was much called in Question, and thought in some measure beyond all Belief. But subsequent Discoveries have banished this Incredulity, and what were once esteemed Fables have been

since found true Relations; and the Discourses of *Marco Polo*, that were rejected by the supercilious Wits of his own time have been raked out of the Dust of old Libraries, decyphered in a manner from the barbarous *Latin* of monkish Translators, and brought into the Form we now have them by the indefatigable Pains of the learned *Ramusio*.

A Man whose Countenance alone might be sufficient to give Credit to this, or any other Work, though from the Notes we have added, it will appear that there are intrinsic Marks of its Value in the Performance itself: Yet we owe to *Ramusio* the being able to discover these, and therefore to him we willingly ascribe all the Glory that results from the Vindication of this curious Piece, and the Honour of its illustrious Author. To the same excellent Person is due the Account we have received of several Particulars relating to the personal History of *Marco Polo* and his Family, of which in as few Words as possible we shall give the Reader a Relation; which, though not absolutely necessary, to the understanding the Book, will be found useful and entertaining.

2. Signior *Nicolo Polo*, the Father of our Author, and his Brother Signior *Maffio*, began their Travels from *Constantinople* in the Year 1250, and having proceeded to the Court of the Grand Khan of *Tartary*, resided there for many Years, and returned, as the Reader will see, to *Venice*, about the Year 1269, where they found the Wife of Signior *Nicolo* deceased, and her Son, of whom she was big at the Time of their Departure, a well accomplished Youth, of nineteen Years of Age. Him they carried back with them to the Court of the Khan, and after having spent

twenty-six Years more without any News being heard of them by their Friends at *Venice*, returned safely thither in the Year 1295. On their Arrival at their own House in *St. John Chrystoff's* Street, they found themselves in a strange Situation, being not only worn entirely out of the Memory of their Family and Acquaintance, but having lost in a manner the very Tokens of their Country, being become *Tartars* in their Speech as well as their Habit, and therefore under a Necessity of taking some extraordinary Steps to recover the Respect and Reverence due to them, by convincing the World that they were really noble *Venetians*, and the individual Persons who had been so long lost to their Country and Friends.

It was with this View that they gave a magnificent Entertainment to their Relations, at which they all three came forth in rich Suits of Crimson-satin, of which, when the Guests were seated, they stripped themselves, and gave them to the Servants; appearing next in Crimson-damask, these also they put off at the last Service, and bestowed likewise on the Servants, being then dressed in Crimson-velvet. When Dinner was over, and all who waited withdrawn, *Marco Polo* brought out their Coats of *Tartarian* Cloth or Felt, and out of their Foldings produced an incredible Quantity of rich Jewels, among which there were some well known to those present, and which indubitably proved these Strangers of the *Polo* Family. Signior *Musio Polo* became a worthy Magistrate of *Venice*, and lived and died in Peace.

As for our Author Signior *Marco*, a few Months after his Return, the *Genoise* Admiral *Lampa Doria* coming with a Fleet of seventy Gallies to the Island of *Corzola*, they fitted out from *Venice*, under the Command of *Andrea Dandolo*, a great naval Force, in which he had the Command of a Galley, and was so unlucky as to be taken Prisoner and carried to *Genoa*, where he remained in spite of all the Offers that were made for his Ransom several Years; so that his Father despairing of his Return, and desirous that his own Offspring might inherit his Riches, married a second Time, and had three Children. In the Time of this Imprisonment all the young Nobility of *Genoa* resorted to our *Marco* to hear the Recital of his Voyages and Adventures, which gave them so great Satisfaction, that one of them prevailed upon him to send for his Notes from *Venice*; and when thus assisted, wrote from his own Mouth the following History in *Latin*; from whence it was translated into *Italian*; and this *Italian* was again translated into *Latin*, and abridged; whence grew that prodigious Corruption so justly complained of in the first printed Copies. This Work of *Marco's* was supported by the Testimony of his Father, and by that of his Uncle on his Death-bed. At last *Marco* himself obtained his Liberty, returned to *Venice*, married, and had two Daughters, *Moretta* and *Fautina*, but had no male Issue. He died as he lived, beloved and admired by all who knew or conversed with him; for with the Advantages of Birth and Fortune he was humble, and made no other Use of his great Interest in the State than to do good.

3. We have already shewn, that this Work was originally written in *Latin*, and if not by the Author's Hand, at least from his Mouth; but after the *Italian* Version that was made of it, the Copies of the *Latin* Manuscript became extremely rare, inasmuch that the *Italian* Translation was taken for the Original. One *Francis Pepin* a Monk, translated it into *Latin*, and abridged it at the Command of his Superiors; and it is a Copy of this Manuscript that is in the Library of the King of *Prussia*. It was printed at *Hessl* by the Care of the celebrated *Kennelius*, and afterwards in other Places. It was from one of these Copies that it was translated by *Hakluis*, of which *Purchas* so heavily, and, at the same Time, so justly complains. *Ramusio* took a great deal of Pains, as well in restoring the Sense and the Text of our Author, as in justifying his Character, and supporting the Credit of his Work by his learned Discourses. He was assisted therein by a Copy of the original *Latin* Manuscript, which was lent him by his Friend Signior *Chesi*, without which it had been impossible for him to have brought it into so good Order as we now see it.

There has been, besides the Translations already mentioned, at least two in the *German* Language. It was

printed in *Portuguese* at *Lisbon* in 1502, and it has been several Times translated into *Dutch*. I have been the more particular in the Account of these Additions and Translations, because they differ very much from each other; so that the only Way to come at a complete View of the Author, is by collecting and comparing these; a Work of infinite Pains and Labour, in which however we have the Assistance of *Andrew Muller* a learned *German* Critick, and of *Peter Bergeron* a *Frenchman*, who, next to *Ramusio*, was, of all others, the most capable of such an Undertaking, and has succeeded in it the best.

There was, however, one Thing wanting, which was the justifying the Dates, verifying the Facts, and explaining the obscure Names of Places which occur in these Travels; and this we have done, to the best of our Ability, in this Translation, so that the Reader may be satisfied that he has the Work of this ancient Writer as entire, and in as good Condition as it was in our Power to give it him.

4. There have been abundance of Objections raised against the Credit and Authority of this Writer, many of which, as they were founded on the Errors of Transcribers and Translators, are taken away by restoring our Author's genuine Sense; and therefore we need not mention them particularly; but there are others which deserve more Regard. It is said, that our Author mentioned some Countries and many Places that were never heard of before or since. A shrewd Objection this, inasmuch as it seems to represent all the Pains that has been taken about his Writings, as entirely thrown away. In answer to this, we must observe, that he wrote according to the Lights he received, and those Lights were chiefly from the *Tartars*; whence it might very well happen that the Names of Places mentioned by him should appear strange and uncouth in this Part of the World. But it so happens, that we have since received such Helps as enable us to get pretty well clear of this Difficulty; for though we have retained in the Text the Names used by our Author, yet we have afforded, from the Assistance given us by oriental Writers, such Explanations as remove, in every respect, these geographical Obscurities, so as to leave no sort of Doubt either as to the Capacity, or the Veracity of *Marco Polo*.

Another Charge against him is, that he does not agree with other Writers, or rather that other Writers do not agree with him; but when examined to the Bottom, this Charge will not be found to have any great Weight, as having chiefly arisen from the Mistakes made as to the true Sense of what this Writer delivered; so that very often, what was imputed as Ignorance to him, was, in fact, no more than Temerity in those who pretended to find fault with them. The last, and indeed the greatest Objection is, that he has related many Things that are absurd, some that are incredible, and not a few that are impossible. Against this Charge we cannot pretend to vindicate him, though much may be said to excuse him. The Facts he tells us of his own Knowledge, are surprisingly verified by authentick and indisputable Evidence; and grant that he might be imposed upon in what he gives us on the Authority of others, we must be content, the rather because it is our Happiness to live in an Age when Men are less liable to be cheated and misled; therefore this ought to make us the more ready to bear with Failings in one who wanted this Advantage, who lived in a Time of Darkness and Obscurity, when Credulity passed for Faith, and when consequently Errors of this sort were rather a Man's Misfortune than his Fault.

5. In spite however of all these Charges, there have been some great Men in all Ages, who have done Justice to our Author's Merit. Among these we may reckon the famous *Vossius*, in his Account of the *Latin* Historians, the great Geographer *Sebastian Munster*, the learned Naturalist *Conrad Gesner*, the accurate Historian *Lessclavius*, the celebrated *Jospeh Scaliger*, and many others. The learned *German* Critick, *William Schickard*, in his History of the Kings of *Persia*, gives our Author this Character; " *Marco Polo*, the *Venetian*, says he, is a very good Writer, and those Things which he reports, and were heretofore thought incredible, are now verified " daily by later Discoveries." But of all who have undertaken the Cause of our Author, none has done it with greater Capacity, with more Good-will, or better Success
 thing

than Father *Martini*, to whom we owe the best Description of *China*, and who was consequently a better Judge than any other of the Merit or Demerit of this Work. He assures us, that there is not the least Reason to doubt the Truth of our Author's Relations on Account of the Obscurity of the Names of Places; for, says he, he wrote them after the *Tartar* Pronunciation, whereas later Writers study to imitate as well as they are able the Pronunciation of the *Chinese*.

I will add to these but one Testimony more, which is that of an Author, very able to have detected him, if he had caught him in Untruths, and who was far enough from being tender of Mens Reputations if he thought them to blame. The Author I mean is *Abanagus Kircher*, who in his Account of *China*, confesses, that none of the old Authors have more fully, or more accurately described the remotest Countries of the East, than *Marco Polo* has done; yet he readily admits, that there are many things in him so very dark, that they may be in a manner still inexplicable; but then with great good Sense and Candour, he attributes this to the Author's want of Skill in Geography and Astronomy; and if we consider how young he was, when his Father carried him into *Tartary*, and how little Opportunity he had of acquiring that sort of Knowledge that was most necessary for preventing those Mistakes, we may easily concur in Opinion with so many eminent and learned Writers, that in Consideration of the many curious and useful Passages in his Writings, these Blemishes, especially as they were in a manner unavoidable, may very well be forgiven. After having thus cleared the Way, we will no longer detain the Reader from the Perusal of these Travels, which their Author has thus dispell'd. He first gives a succinct Account of his Father's and Uncle's Peregrinations, and then of his own; after which, he enters into a more particular Description of the Countries and Places thro' which they pass'd, and relates also such remarkable things as he was informed of in the Course of his Voyages.

6. At the Time that *Baldwin* was Emperor of *Constantinople*, in the Year of our Lord 1250, two Gentlemen of the most illustrious Family of *Paolo* or *Polo*, at *Venice*, embark'd on board a Vessel freighted with various kinds of Merchandize, on their own Account; and having travers'd the *Mediterranean*, and the *Bosphorus*, they came with a fair Wind, and the Blessing of God, to *Constantinople*. There they continued for some Time, to repose themselves, and then crossing the *Pontus Euxinus*, arriv'd at a certain Port call'd *Soldadia*, from whence they went to the Court of a great *Tartar* Prince call'd *Barba*, to whom they shew'd the fine Jewels they had brought, and presented him with some of the most valuable. That Monarch was far from being ungrateful; he kindly accepted their Presents, and in return, gave them others of greater Value. They remain'd a full Year at his Court, and then dispos'd all things for their Return to *Venice*. But before they had an Opportunity of departing, there broke out a War between this Prince *Barba* and another *Tartar* King, whose Name was *Alan*; and this Dispute being decided by a Battle, the Army of *Barba* was defeated. This unlucky Accident exceedingly embarrass'd the *Venitians*, who knew not what Measures to take, or how to get safely back into their own Country. At length, however, they took a Resolution of escaping, as well as they could, out of the Country where they were, and by several By-roads escap'd to a City call'd *Guibacam*, seated on the River *Tygris*. They continued their Journey from hence, thro' a great Desert, where there were neither Inhabitants nor Villages, till at last they arriv'd at *Bochara*, a considerable City in the Confines of *Persia*. It was at the Time of their Arrival, the Residence of a Prince call'd *Barach*, in whose Court, meeting with a good Reception, and not knowing how otherwise to dispose of themselves, they remained three Years. At that Time, a certain Person of Distinction was sent Ambassador from the said Prince *Alan* to the great *Khan*, who is the superior Monarch of all the *Tartars*, residing in the remotest Countries of the Earth, betwixt the North-East and the East, call'd *Cublai*; *Khan* who coming to *Bochara*, and finding there these two Brethren, who were now

well versed in the *Tartarian* Language, he rejoiced exceedingly, and persuaded these Men to go with him to the great Emperor of the *Tartars*, knowing that he should gratify him in this, and that they also should be entertained with great Honour, and rewarded with large Gifts, especially seeing, through the Conference had with them, he perceived their pleasing Behaviour. These Men therefore, considering that they could not easily return home without Danger, consulting together, agreed to go with the said Embassador, and accompany him to the Emperor of the *Tartars*, having certain other Christians in their Company, whom they brought with them from *Venice*, and departing towards the North-East and the North, were a whole Year in going to the said Court of the said King.

The Cause of their long Time spent in this Journey, was the Snows and Waters being much increased, so that they were forced in their Travel to stay the waiting of the Snow, and decreasing of the Floods. Being therefore brought before the Presence of the great *Khan*, they were most courteously received by him. He questioned them concerning many things; as of the Countries of the West, the Roman Emperor, and other Kings and Princes, how they carried themselves in Government, and in warlike Affairs; how Peace, Justice and Concord, continued among them; also what Manner of Life and Customs were observed among the *Latins*, and especially of the Pope, of the Christians, of the Church, and of the Religion of the Christian Faith; and *M. Nicholo*, and *M. Missio*, as wife Men, told him the Truth, always speaking well to him, and orderly, in the *Tartarian* Tongue; inasmuch that he often commanded they should be brought to his Presence, and they were very acceptable in his Sight; having well understood the Affairs of the *Latins*, and resting satisfied with their Answers.

The great *Khan* intending to send them his Embassadors to the Pope, first consulted with his great Lords, and then calling to him the two Brethren, desired them to go to the Pope of the *Romans*, with one of his Barons call'd *Chegatal*, to pray him to send an hundred Men learned in the Christian Religion unto him, who might shew his wife Men, that the Faith of the Christians was to be preferred before all other Sects, and was the only Way of Salvation, and that the Gods of the *Tartars* were Devils, and that they, and others, the People of the East, were deceived in the Worship of their Gods. He gave them also in Charge, to bring in their return from *Jerusalem*, of the Oil of the Lamp which burneth before the Sepulchre of our Lord Jesus Christ, towards whom he had great Devotion, and held him to be the true God; they therefore yielding due Reverence to the great *Khan*, promised that they would faithfully execute the Charge committed unto them, and present the Letters which they received from him, written in the *Tartarian* Tongue, according to his Command unto the Bishop of *Rome*.

He, according to the Custom of the Kingdom, commanded a golden Tablet to be given them, engraven and signed with the King's Mark, carrying which with them, throughout his whole Empire, instead of a Passport, they might be every where safely conveyed through dangerous Places, by the Governors of Provinces and Cities, and receive their Expences from them; and lastly, how long soever they would stay in any Place, whatsoever they needed, for them or theirs, should be furnished them. Taking their Leave therefore of the Emperor, they took their Journey, carrying the Letters and golden Tablet with them; and when they had rid twenty Days Journey, the Lord who was associated with them, began to fall grievously sick; whereupon consulting, and leaving him there they prosecuted their intended Journey, being every where courteously received, by reason of the Emperor's Tablet, yet in many Places they were compelled to stay, occasioned by the over-flowing of the Rivers, so that they spent three Years before they came unto the Port of the Country of the *Armenians*, named *Giazza*; from *Giazza* they went to *Acre*, about the Year of our Lord 1209, in the Month of *April*.

But having entred into the City of *Acre*, they heard that Pope *Clement* the Fourth was lately dead, and that no other was substituted in his Place, for which they were not

not a little grieved. At that Time there was a certain Legate of the apostolic See at *Acre*, viz. Master *Tibaldo Visconti di Piacenza*, to whom they declared all they had in Commission from the great *Khan*, and he advised them to expect the Creation of a new Pope: In the mean Space therefore departing to *Venice* to visit their Friends, Master *Nicolo* found that his Wife was dead, whom at his Departure he had left with Child, but had left a Son named *Marco*, who was now nineteen Years of Age. This is that *Marco* who composed this Book, who will manifest therein all those things that he hath seen. The Election of the Pope of *Rome* was deferred two Years. They fearing the Discontent of the Emperor of the *Tartars*, who expected their Return, went back again to *Acre*, to the Legate, carrying with them *Marco* aforesaid, and having gone to *Jerusalem*, and fetched the Oil with the Legate's Letters, testifying their Fidelity to the Great *Khan*, and that a Pope was not yet chosen, they went again towards *Giazza*.

In the mean Time, Messengers came from the Cardinals to the Legate, declaring to him that he was chosen Pope, and he called himself *Gregory*. Hearing this, he presently sent Messengers to call back the *Venetians*, and admonishing them not to depart, prepared other Letters for them, which they should present to the Great *Khan* of the *Tartars*, with whom he also joined two preaching Friars, Men famous for their honest Conversation and Learning. The one was called Friar *Nicolo Davicenza*, the other Friar *Guilmo de Tripoli*: To these he gave Letters and Privileges, and Authority to ordain Priests and Bishops, and of Absolution in all Cases, as if himself were present, with Presents also of great Value, to present the great *Khan*, together with his Benediction. They came to *Giazza*, a Sea-Port in *Armenia*, and because *Bentiacbas* and the Sultan of *Babylon*, leading a great Army, then invaded the *Armenians*, the two Friars above-mentioned began to be afraid of themselves, and delivering the Letters and Presents to Seigniors *Nicolo*, *Maffo*, and *Marco*, desiring to avoid the Danger of the Ways and Peril of Wars, remained with the Master of the Temple, and returned with him.

But the three *Venetians* exposing themselves to all Danger, with many Labours, and much Difficulty, travelled many Days always towards the North-East and North, till they, after three Years and a half, came to the Emperor of the *Tartars*'s great City of *Clemenifu*; for in the Winter Time their Journey had often long Hindrances by reason of the Snow, and extreme Cold, with Inundations of Waters. However, King *Cublai* hearing of their coming, though they were yet very far off, sent Messengers forty Days Journey to meet them, who should conduct them, and furnish all Necessaries for their Journey. Going therefore to the King's Court, and being brought to his Presence, they fell down before him on their Faces, yielding the accustomed Reverence, of whom being courteously received, they were ordered to rise, and he commanded them to declare how they passed the many Dangers of the Ways, and what they had treated with the Bishop of *Rome*; then they related it distinctly and at large, and gave the Emperor the Pope's Letters and Presents, which they brought; at which the *Khan* wonderfully rejoicing, commended their faithful Care. The Oil also brought from the Lord's Sepulchre, and offered unto him, he reverently received, commanded it should be honourably preserved, and asking of *Marco*, who he was? Master *Nicolo* answered, that he was his Majesty's Servant, and his Son; he entertained him with a friendly Countenance, and taught him to write among other his honourable Courtiers; whereupon he was much esteemed of all the Court, and in a little Space learned the Customs of all the *Tartars*, and four different Languages, being able to write and read them all.

The Great *Khan*, to make his Wisdom more apparent, committed an Ambassage unto him to be performed in a City called *Caracban*, unto which he could scarcely travel in six Months Space; but he carrying himself wisely in all things, discharged what he had in Commission with the Commendation and Favour of the Prince, and knowing the Emperor would be delighted with Novelties in the Places which he passed through, he diligently searched the Cu-

stoms and Manners of Men, and the Conditions of the Countries, making a Memorial of all that he knew and saw to divert the Great *Khan*; and in six and twenty Years, which he continued one of his Court, he was so acceptable to him, that he was continually sent through all his Realms and Seigniories for the Affairs of the Great *Khan*, and sometimes for his own, but by the *Khan*'s Order; and this is the true Reason that the said Master *Marco* learned and saw so many Particulars relating to the East, which follow in order in these Memoirs; but these *Venetians* having stayed in that Court many Years, and grown very rich in Jewels of great Value, were inspired with Desire to visit their Country, fearing, that if the *Khan* (now old) should die, they should not be able to return. One Day Master *Nicolo*, seeing the *Khan* merry, craved License to depart in the Name of all the three; whereat he was moved, and asked, why they would put themselves on so dangerous a Journey, and if they wanted Riches; he would give them twice as much as they had, and out of pure Affection would not permit their Departure.

Yet not long after it happened, that a King of the *Indians*, named *Argen*, sent three of his Counsellors unto the Court of the Great *Cublai*, whose Names were *Ulai*, *Apufca*, and *Coza*, to treat with him, that he would deliver him a Wife; for his Wife, named *Balgona*, being lately dead, begged this Favour of the King at the Point of Death, and left in her Will, that he should not marry a Wife of another Family than her own, which was of *Catby*. King *Cublai* therefore yielding to his Request, caused to be sought out for them a fair young Maiden of seventeen Years of Age, named *Cogalin*, descended of the former Queen's Family, to be the Wife of *Argen*. Those Embassadors departing, rode eight Months the same Way they came, but found bloody Wars among the *Tartars*, that they were constrained to return, and acquaint the great *Khan* with their Proceedings. In the mean time Master *Marco* had returned from those Parts of *India*, where he had been employed with certain Ships, and declared to the *Khan* the Singularities of the Places, and the Security of those Seas, which reaching the Ears of the Embassadors, they conferred with the *Venetians*, and agreed, that they with the Queen should go to the Great *Khan*, and desire Leave to return by Sea, and to have the three *Latins*, Men skilled in Sea Affairs, with them, to the Country of King *Argen*. The Great *Khan* was much displeas'd with their Request, yet upon their Petition granted it, and caused *Nicolo*, *Maffo*, and *Marco* to come into his Presence, and after much Demonstration of his Love would have them promise to return to him after they had spent some time in *Chullenbon*, and in their own Houle; and he caused to be given them a Tablet of Gold, in which was written his Command for their Liberty and Security through all his Dominions, and that Expences should be given them and theirs, and a Guide or Convoy for safe Passage, ordering also that they should be his Embassadors to the Pope, the King of *France* and *Spain*, and other Christian Princes.

He caused fourteen Ships to be prepared, each having four Masts, and able to bear nine Sails in sailing, the Form of which is too long to be here related; four or five of them had from two hundred and fifty to two hundred and sixty Mariners in each of them. In these Ships the Embassadors, the Queen, with *Nicolo*, *Maffo*, and *Marco*, set sail, having first taken Leave of the Great *Khan*, who gave them many Robies, and other Precious Stones, and their Expences for two Years. After three Months they came unto a certain Island called *Java*, and from thence sailing through the *Indian* Sea, after eighteen Months they came into the Country of King *Argen*: Six hundred Men of the Marines, and others, and but one of the Women died in the Journey; but only *Coza* of the three Embassadors survived. When they came to the Country of King *Argen*, they found that he was dead, and that one *Chiacato* governed the Kingdom for his Son, who was under Age; they went to acquaint him with their Business, who answered, that they should give her to *Casan* the King's Son, then in the Parts of *Arbor Secca*, in the Confines of *Pesha*, with sixty thousand Persons for the Guard of certain Passages against the Enemy. Having done so, *Nicolo*, *Maffo*, and *Marco* returned to *Chiacato*, and staid there nine Months.

After this, taking Leave, *Chiacato* gave them four Tables of Gold, each a Cubit long, and five Fingers broad, of the Weight of three or four Marks, in which were written, that in the Power of the eternal God the Name of the Great Khan should be honoured and praised many Years, and every one who should not obey should be put to Death, and his Goods confiscated. In them were further contained, that these three Embassadors should be honoured, and Service done them in all Lands and Countries as to his own Person, and that Horses, Convoys, Expences and Necessaries, should be given them; all which was so duly put in Execution, that sometimes they had two hundred Horses for their Safe-guard. In this their Travel, they heard that the Great Khan was dead, which took from them all Desire of returning thither.

They rode till they came to *Trebizond*, and from thence to *Constantinople*, and after to *Negropont*, and at last came with great Riches safe to *Venice*, A. D. 1295.

Here ends the Historical Introduction of our Author, which shews us how he came to be qualified for writing the following Description of the remotest Countries in the East. The Reader will naturally observe, that our Author wrote under very particular Circumstances, as having no other Knowledge than what he acquired amongst the *Tartars*, and therefore though the harsh and uncouth Names that occur in the subsequent Relation of his Travels may both disgrace and perplex them, yet they very plainly prove the Sincerity and Authority of our Author's Writings, since taking Things as he has stated them, it was simply impossible that he should have written them any otherwise than as they stand; for it was his hard Lot to travel with the *Tartars*, and to pen the History of his Travels in a Prison, so that their Imperfections ought not to be ascribed to the Man, but to his Circumstances.

7. There are two *Armenia's*, the *Greater* and the *Less*. In the *Lesser Armenia* the King resides, in a City called *Sebastia*, and in all his Country is observed Justice and good Government. The Kingdom itself hath many Cities, Fortresses, and Castles; the Soil also is fertile, and the Country abounds with every thing necessary, nor is there any want of Game, or Wild-Fowl; the Air indeed is not very good. The Gentlemen of *Armenia*, in times past, were stout Men, and good Soldiers, but are become now effeminate and nice, give themselves up to Drunkenness and Riot. There is a certain City in this Kingdom seated near the Sea, which is called *Giazza*, having an excellent Haven, whither Merchants resort from divers Countries, and even from *Venice* and *Genoa*, on account of several sorts of Merchandize brought thither, especially Spices of sundry kinds, and abundance of other valuable Goods brought thither out of the East Countries; for this Place is, as it were, the settled Mart of all the East.

In *Turcomania* are three sorts of Nations, viz. the *Turcomans*, or *Turkmen*, who observe the Law of *Mohammed*: they are Men illiterate, rude, and savage, inhabiting the Mountains, and inaccessible Places, where they can find Pastures; for they live only by their Cattle. There are good Horses in this Country, which are called *Turkish* Horses: Mules are also in that Country of great Estimation. The other Nations are *Grecians* and *Armenians*, who possess the Cities and Towns, and bestow their Labour on Merchandize and Arts. They make the best Carpets in the World, and they have many Cities, the chief whereof are *Cagno*, or *Isonium*, *Cesarea*, and *Sebastia*, where St. *Ruff* suffered Martyrdom for Christ, and they acknowledged one of the Khans, Kings of the *Tartars* for their Lord.

Armenia the Greater, which is a very large Province tributary to the *Tartars*, and hath many Cities and Towns, the chief City whereof is called *Arzugia*, and the best Buckram in the World is made there, most wholesome hot Waters also spring there for the washing and curing of Mens Bodies, and the other more famous Cities next to the

Metropolis are *Argiron* and *Dorziz*. In the Summer Time many *Tartars* resort there, with their Flocks and Herds drawn thither by the Fatness of their Pastures; and again in the Winter depart for a certain Time by reason of the abundance of Snow. The Ark of *Noah* remained in the Mountains of this *Armenia*.

This Country hath the Province of *Mosull* and *Meridin* bordering on the East; but on the North is *Zorzania*, in the Confines of which a Pountain is found, from which a Liquor like Oil flows, and though unprofitable for the seasoning of Meat, yet is very fit for the supplying of Lamps, and to anoint other things; and this natural Oil flows constantly, and that in Plenty enough to lade Camels. In *Zorzania* is a King called *David Melic*, or King *David*; one Part of the Province is subject unto him, the other pays Tribute to a Khan of the *Tartars*; the Woods there are of Box-trees. The Country extends to the two Seas, *Marmaggiore*, or the *Euxine*, and that of *Baccu*, or the *Caspian*, which containeth in Circuit 2800 Miles, and is like a Lake, having no Communication with other Seas. In it are many Islands, Cities, and Castles, some of which are inhabited by those that fled from the *Tartars* out of *Persia*.

The People of *Zorzania* are Christians, observing the same Rites with other Christians. They keep their Hair short like the Western Clergy; the Inhabitants have many Cities, and their Country abounds with Silk, of which they make very fine Manufactures. *Moxul* is a Province in which there are many sorts of People, some called *Arabi*, are *Mohammedans*, others are *Christians*, some *Nestorians*, others *Jacobites*, and others *Armenians*; and they have a Patriarch called *Jacolet*, who ordains Archbishops, Bishops, and Abbots, and sends them through all Parts of *India*, and to *Cairo* and *Baldach*, or *Bagdat*, and where-ever *Christians* dwell, as is done by the Pope of *Rome*; and all the Stuffs of Gold and Silk called *Muslins* are wrought in *Moxul*.

But in the Mountains of this Kingdom dwell the People called *Curdi*, of whom some are *Nestorians*, others *Jacobites*, and some Followers of *Mohammed*; they are wicked Men, and rob Merchants. Near to them is another Province called *Mus*, or *Meridin*, wherein grows great Quantities of Cotton, whereof they make Buckrams, and other Works; they are subject to the *Tartars*. *Baldach*, or *Bagdat*, is a great City, in which resided the Great Khaliff, that is, the Pope of all the *Saracens*; a River runs through it, from whence to the Sea is accounted seventeen Days Journey. They sail by a City called *Chifi*; but before they reach the Sea they come to *Balsora*, about which grow the best Dates in the World. In *Baldach*, or *Bagdat*, are many Manufactures of Gold and Silk. There are wrought Damasks and Velvets, with Figures of various Creatures: All the Pearls in Christendom come from thence. In that City is an University, where is studied the Law of *Mohammed*, Physick, Astronomy, and Geomancy. It is the chief City in those Parts.

When the *Tartars* began to extend their Conquests, there were four Brethren, the eldest of which, *Mangu*, reigned in *Sedia*. These purposing to subdue the World, went one to the East, another to the North, to the South a third, which was *Ulan*, and the other to the West. In the Year of our Lord 1250, *Ulan* having a great Army of one hundred thousand Horse, besides Foot, used Policy, and having hid a great Part of his Men, brought, by pretending Flight, the Khaliff into his Ambuscade, and took him and the City, in which he found infinite Store of Treasure, inasmuch that he was amazed. He sent for the Khaliff and reproved him, that in that War he had not provided himself with Soldiers for Defence, and commanded that he should be enclosed in that Tower where his Treasure was without other Sustainance.

This seemed a just Judgment from our Lord *Jesus Christ* on him; for in the Year 1225, seeking to convert the *Christians* to the *Mohammedan* Religion, and taking Advantage from that Place of the Gospel, *That he which*

* There is nothing obscure in this Description of *Armenia the Less*, and I added this Note only to put the Reader in Mind, that our Author shews that a great Part of the Trade from *Europe* to the *Indies* was carried on this Way by the *Penitians* and *Genoese*.

† *Zorzania* is indeed a Name not to be met with in any other Author; but the Account given us by *Marco* is so clear and exact, that there can be no doubt about it.

‡ There is nothing gives so much Credit to our Author's Relation as these historical Facts, which are capable of being verified by other Authors. The Prince he mentions was *Halaku-Khan*, who was Brother to *Mangu-Khan*; he entered these Countries A. D. 1255, with an Army of *Tartars*, and in 1278, put an end to the Empire of the *Abassidian* Khaliffs, by taking *Bagdat*, as our Author relates it.

baib Faith, as the Grain of Mustard-seed, shall be able to remove Mountains. He summoned all the Christians, Nestorians, and Jacobites, and propounded to them in ten Days to remove a certain Mountain, or turn Mobammedans, or be slain, as not having one Man amongst them which had the least Faith. They therefore continued eight Days in Prayer; after which a certain Shoemaker, in consequence of a Revelation made to a certain Bishop, was fixed upon to perform it. This Shoemaker once tempted to Lust by Sight of a young Woman, in putting on her Shoe, zealously had fulfilled that of the Gospel, and literally had put out his right Eye. He now on the Day appointed with other Christians followed the Cross, and lifting his Hands to Heaven prayed to God to have Mercy on his People, and then with a loud Voice commanded the Mountain in the Name of the Holy Trinity to remove, which presently, with great Terror to the Khaliff and all his People, was effected, and that Day is since kept holy by fasting also on the Evening before it.

8. *Tauris* is a great City in the Province of *Hircania*, and is a most populous Place. The Inhabitants live by the Exercise of Arts and Merchandize, they make Stuffs of Gold and Silk; foreign Merchants residing there make very great Gain, but the Inhabitants are generally poor. They are a mixed People of *Nestorians*, *Armenians*, *Jacobites*, *Georgians*, *Persians*, and *Mobammedans*: These last are perfidious and treacherous, thinking all well gotten which they steal from Men of other Religions; and this Wickedness of the *Saracens* had converted many *Tartars* thereto. If the Christians kill them in their Robbery, they are reputed Martyrs. From *Tauris* into *Persia* are twelve Days Journey. In the Confiners is the Monastery of *Saint Barafam*, the Monks whereof are like *Carnelites*; they make Girdles which they lay on the Altar, and give to their Friends, who devoutly esteem them. *Persia* containeth eight Kingdoms, whereof the first is called *Cassian*, the second *Curdistan*, the third *Lor*, the fourth *Suffian*, the fifth *Spahan*, the sixth *Sbiras*, the seventh *Soucara*, the eighth *Timotbaum*, which is near *Arboresecco* towards the North. They have fine Horses here, whence they are sold into *India*; there are also very excellent Asses sold dearer than the Horses, because they eat little, carry much, and travel far. They have Camels, but not so swift. These are necessary in those Countries, which sometimes for a long way yield no Grass.

The People in those Countries are very wicked, covetous, Thieves and Murderers, professing the Faith of *Mobammed*. Merchants are every where slain by those Thieves, unless they travel in Caravans. There are excellent Artificers in the Cities, who make wonderful things in Gold, Silk, and Embroidery. The Countries abound with Silkworms, Wheat, Barley, Millet, and other kinds of Corn, and Plenty of Wine and Fruits; and though their Law forbid Wine, yet they have a Glose to correct or corrupt the Text, that if they boil it, then it changeth the Taste, and therefore the Name also of Wine, and may be drunk. *Isdi* is a great City in the Confiners of *Persia*, where there is great Trade; it hath also many Manufactures in Silk. *Chiaman* is a Kingdom in the Confiners of *Persia*, to the East, subject to the *Tartars*. In Veins of the Mountains Stones are found commonly called *Turquoises* and other Jewels. There also are made all sorts of Arms and Ammunition for War, and by the Women excellent Needleworks in Silks, with all sorts of Creatures very admirably wrought therein. There are the best Falcons in the World, very swift of Flight, red breasted, and under the Train less than those of other Countries. Proceeding further, you go through a great Plain, and having ended eight Days Journey, you come to a certain Descent. In the Plain are many Cattles and Towns, but in that steep Descent are many Trees, and those fruitful, but no Habitation, except a few Shepherds. This Country in Winter Time is intolerable cold. After this you come into a large open Plain, where a certain City is seated which is called *Cumande*, heretofore

large and populous, but now destroyed by the *Tartars*, and the Country is called *Roobarle*. There grow *Pomegranats*, *Quinces*, *Peaches*, and other Fruits, which grow not in our cold Countries. It hath also very great Oxen, and all white, thin haired, with thick, short, blunt Horns, with a Camel's Bunch on the Back, accustomed to bear great Burthen; and when the Pack-Saddles are set upon the Bunch, they bow the Knee like Camels, and having received the Burthen, rise again, being so taught. The Sheep of that Country are as big as Asses, having so long and broad Tales, that they weigh thirty Pounds Weight. They are very fair, and fat, and good Meat.

Moreover, in the Plain of this Country are many Cities and Towns, with high Walls of Earth to defend them from the *Carraons*, that is, *Mossizos*, that is, a mixed sort of People between *Indian* Women and *Tartars*. Ten thousand of which are commanded by one *Negodar* the Nephew of *Zagatbai*, who formerly ruled in *Turkistan*. This *Negodar*, hearing of the *Malabars* subject to *Soldan*, without his Uncle's Knowledge, went and took *Dely* with other Cities, and erected a new Signiory, and mixing with the *Indian* Women, raised these *Carraons*, which go up and down to rob and spoil in *Roobarle*, and other Countries. The Plain whereof I now speak is five Days Journey, extended towards the South; but at the End thereof the Way beginneth by little and little to descend for twenty Miles together, and the Road itself is very bad, and not without Danger, by reason of Thieves. At length you come to very good Plains, which extend themselves two Days Journey in Length, and the Place itself is called *Ormus*.

That Country abounds with Rivers and Palm-Trees; there is also Plenty of divers Fowls, especially *Poppin-Jays*, which are not like ours. From hence you come unto the Ocean, wherein an Island is seated called *Ormus*, to which many Merchants resort, bringing Spices, Pearls, precious Stones, Cloth of Gold and Silver, Elephants Teeth, and all other precious Things from *India*. That City is a great Mart, having Cities and Cattles under it, and is Head of the Kingdom of *Cbermain*. The King is called *Ruchined Ben Achomach*, who yields Obedience to the King of *Cbermain*. He makes himself Heir, if any Merchant dies there. In Summer, by the reason of the Heat, they betake themselves to their Summer-Houses, built to the Waters; and from Nine o'Clock Noon, there blows a Wind with such extrem Heat from the Sands, that it swallowes a Man's Breath, and stifeth him, which makes them lie in the Water. The King of *Cbermain* sent an Army of sixteen hundred Horses, and five thousand Foot, against the Lord of *Ormus*, for not paying his Tribute, which were all surprized, and killed with that Wind. The Inhabitants of the Place eat no Bread made of Corn or Flesh, but feed upon Dates, salt Fish and Onions. They have not very stout Ships, for they do not fasten them with iron Nails, by reason the Wood is brittle, and would cleave; but with woollen Pins, with certain Shells made of the Threads of *Indian* Nuts. These Shells are dressed after the Manner of Leather, out of which Threads are cut, of which Threads exceeding strong Cords are made, which are able to endure the Force and Violence of the Waters, and are not easily corrupted thereby. These Ships have one Mast, one Sail, one Beam, and are covered but with one Deck. They are not calked with Pitch, but with the Oil and Fat of Fishes, and when they cross the Sea to *India*, carrying Horses and other Freight with them, they lose many Ships, because that Sea is very tempestuous, and the Ships are not strengthened with Iron. The Inhabitants of that Country are black, and have embraced the Law of *Mobammed*. It is the Custom of this Country, when any Matter of a Family dies, that the Wife left behind him, should mourn for him four Years, once a Day. They have Women which profess the Practice of Mourning, and are therefore hired to mourn daily for their Dead. Returning from *Ormus* to

* In the several Copies of this Work, there are great Variations in the Names of these eight Parts, into which the Kingdom of *Persia* is divided. but as it is very apparent that they are Corruptions only of the Cities, and Provinces of that Kingdom, it is not necessary to trouble the Reader with a long Explanation of them.

* It is evident from this Account, that our Author extends the Name of *Ormus* to the Coast opposite to the Island so called, and as to the other Country he speaks of, it is plainly the Province of *Kerman*.

Cbermain, is a fertile Plain, but the Bread made there cannot be eaten, but by such as are accustom'd thereto, it is so bitter by reason of the Water put therein: Here are excellent hot Baths, which cure many Diseases.

9. From *Cbermain*, in three Days riding, you come to a Defart, which extends to *Cobinbam*, seven Days Journey from thence. In the first three Days, you have no Water save a few Ponds, and those salt and bitter, of a green Colour in shew, as if it were the Juice of Herbs; and whoever tasteth but a little thereof, cannot escape a Loose-ness; the like also happeneth if any taste the Salt, made of the Water: It is therefore necessary, that Travellers carry some Water with them, if they would escape the Inconvenience of Thirst; the Beasts also which are compelled to drink that Water, escape not without scouring: In the fourth Day they find a fresh River under-ground, the three last Days are as the first. *Cobinbam* is a great City, inhabited by *Mohammedans*, where great Looking-glasses of Steel are made. Tutia, or Tutty also, which cureth the Eyes and Spodio, and that after this Manner. That Country hath Mines, out of which they dig Earth, which they boil, casting it into a Furnace, an iron Grate receiving the ascending Vapour from above, in which the conglutinated and clammy Vapour becometh Tutia, but the grosser Matter remaining in the Fire, is called Spodio. Leaving the City *Cobinbam*, you meet with another Defart, eight Days Journey in Length, and grievously barren; it hath not either Trees or Fruits, or Water, except what is very bitter, so that the very Beasts refuse to drink it, except they mix Meal therewith, and Travellers carry Water with them.

But having pass'd over this Defart, you come to the Kingdom of *Timocbaim*, in the North Confines of *Persia*, where are many Cities and strong Castles. There is a great Plain, in which a great Tree grows, called the Tree of the Sun, which the Christians call the dry Tree. This Tree is very thick, and hath Leaves which on the one Side are white, and on the other Side green. It produceth prickly husky Shells, like those of Chestnuts, but nothing in them. The Wood is solid and strong, in Colour yellow, like Box. There is no Tree within one hundred Miles, except on one side, on which are Trees, within ten Miles. In this Place the Inhabitants say, that *Alexander* the Great fought with *Darius*. The Cities are plentifully furnished with good things; the Air is temperate, the People are handsome, but especially Women, the most beautiful in my Judgment in the World.

10. Mulehet, in the *Saracen* Language, is as much as to say, a Place of Hereticks, and of this Place they call the Men Mulehettici, that is, Hereticks in their Law, as with us Patarines. As I have spoken of the Country, the Prince of it, who is called the old Man of the Mountain, shall be next spoken of, concerning whom *Marco* heard much from many. His Name was *Aoadine*, and he was a *Mohammedan*. He had, in a lovely Valley, betwixt two Mountains, which were very high and inaccessible, caus'd a pleasant Garden to be laid out, furnished with the best Trees and Fruits he could find, adorned with diverse Palaces and Houses of Pleasure, beautified with gilded Bowers, Pictures and Tapestries of Silk. Through this Place, by Pipes, to different Parts of these Palaces, run Wine, Milk, Honey and clear Water; in them he had plac'd beautiful Damfels, skillful in Songs and Instruments of Musick and Dancing, and to make Sports and Delights unto Men whatsoever they could imagine. They were also richly dress'd in Gold and Silk, and were seen continually sporting in the Garden and Palaces. He made this Palace, because *Mohammed* had promised such a sensual Paradise to his devout Followers. No Man could enter it, for at the Mouth of the Valley was a strong Castle, and the Entrance was by a secret Passage. *Aoadine* had certain Youths, from twelve to twenty Years of Age, such as seem'd of a bold and dauntless Disposition, whom he

instructed daily as to the Delights in *Mohammed's* Paradise, and how he could bring Men thither, and when he thought proper, he caus'd a certain Drink to be given to ten or twelve of them, which cast them into a dead Sleep, and then he caus'd them to be carried into several Chambers of the said Palaces, where they saw things as aforesaid; as soon as they awak'd, each of them having those Damfels to supply them with Meats and excellent Wines, and yield all Varieties of Pleasures to them; insomuch that the Fools thought themselves in Paradise indeed.

When they had enjoy'd these Pleasures four or five Days, they were cast into a Sleep, and carried forth again, after which he caus'd them to be brought into his Presence, and question'd them where they had been? Who answer'd, by your Grace, in Paradise, and recounted before all what hath been before-mentioned. Then the old Man answer'd, this is the Commandment of our Prophet, that whosoever defends his Lord, he allows him to enter Paradise, and if thou wilt be obedient to me, thou shalt have this Grace; and having thus animat'd them, he was thought happy whom the old Man would command, though it cost him his Life; so that other Lords, and his Enemies, were slain by these Assassins, who expos'd themselves to all Dangers, and contemn'd their Lives. Hereupon he was esteem'd a Tyrant, feared in all those Parts, and had two Vicars, one in the Parts of *Damascus*, and another in *Curdistan*, which observ'd the same Order with young Men. He us'd also to rob all which pass'd that Way. *Ulan*, in the Year 1262, sent and besieged his Castle, which, after three Years Siege they took, slew him, and undermin'd his Paradise, not being able for want of Provisions to hold out longer.

Departing from the aforesaid Place, you come unto a Country pleasant enough, diversified by Hills, Plains, and excellent Pasture, in which are Fruits in great Plenty, the Soil being very fruitful: This continues six Days, and then you enter a Defart of forty or fifty Miles, without Water; after this you come to the City *Sapurgan*, where Plenty of Provisions are found, but especially Melons, the best in the World, sweet like Honey. Passing from hence we came to a certain City called *Batach*, which formerly was large and famous, having sumptuous marble Palaces, but now overthrow'n by the *Tartars*.

In this City they report, that *Alexander* took the Daughter of King *Darius* to Wife. To this City on the East and North-East continue the Confines of *Persia*; but if you go from hence and proceed between the East and the North-East, you cannot find any Habitation for two Days Journey, because the Inhabitants of the Place having endured many great Grievances by Thieves, are compelled to fly unto the Mountains, to Places of more Safety. Many Rivers are found there, and much Game. Lions also are found there; and because Travellers find no Food in that Journey, they carry as much Victuals with them as is necessary for two Days. The two Days Journey ended, we met with a Castle called *Tbaican*, where is great Plenty of Corn, and very pleasant Fields; the Mountains also on the South are high, some of which are of white and hard Salt; and the Inhabitants for thirty Days Journey about fetch it from thence, being the best in the World, and so hard that they must break it with Iron Instruments, so much that the whole World might have a sufficient Quantity of Salt from thence. The other Mountains have Store of Almonds and Pistaches.

Going between the East and North-East from hence, the Country is fruitful; but the Inhabitants are Murderers, perfidious *Mohammedans*, and Drunkards. Their Wine is boiled and truly excellent. They go bare-headed, save that the Men bind up their Heads with a certain String of ten Handfuls long, but they make Cloathing of the Skins of the wild Beasts, such as Breaches and Shoes, and use no other Garments. After three Days Journey is the City *Seaffon*, seated in a Plain, and there are many

¹ It is necessary to observe, that those People inhabited several mountainous Countries in the East, and had much the same Customs in all the Countries where they were settled. At the Close of the former Section, I gave some Account of this Nation, and shall only add here, that their Prince was called the old Man of the Mountains, because they generally made choice of the oldest Man amongst them for their Chief, who had his Residence on a Mountain, the highest and best fortified in the Country. They pretended to be the Descendants of the Royal Family of *Araxes*, and from thence affect'd to be call'd *Assacians*, from whence came the Word *Assassins*. The last of their Princes was call'd *Aoadine*, and he and his Subjects were entirely destroy'd by the before-mention'd *Kalata-Khan*.

Castles in the Mountains round about it: A certain great River also flows through the Middle thereof. There are many Porcupines in that Country, which they hunt with Dogs, and they contracting themselves with great Fury, cast their prickly Quills at Men and Dogs, and wound them. That Nation hath a particular Language, and the Shepherds abide in the Mountains, having made Caves for their Habitations. You go hence three Days Journey without meeting any Inhabitants, to the Province of *Balaxiam*, which is inhabited by *Mobammedans*, who have a peculiar Language. Their Kings, who succeed each other hereditarily, are reported to have derived their Descent from *Alexander the Great*, and from the Daughter of *Darius*, and are called *Dulcarlen*, that is to say, *Alexandrians*. There are found the Ballaffas, and other precious Stones, of great Value.

No Man, on pain of Death, dare either dig such Stones, or carry them out of the Country, but with the Licence and Consent of the King; for all those Stones are the King's, and he only sends them to whom he pleases, either as Presents, or in Payment of Tribute: He exchanges also many for Gold and Silver; and this he doth lest the Stone, whereof there is so much Plenty, should become too common and cheap. Other Mountains also in this Province yield Stones, called *Lapis Lazuli*, whereof the best Azure is made, the like is not found in the World. These Mines also yield Silver, Brafs, and Lead. The Country itself is very cold: There are many Horses, and those excellent large, strong, and swift, which have so hard and tough Hoofs, that they need no Iron-shoes, although they run through Rocks. It is said, that not many Years ago, there were Horses of the Race of *Alexander's Bucephalus* which had the same forehead Mark as he had, in the Possession only of the King's Uncle, who was killed for refusing the King to have of them; whereupon his Widow, in spite, destroyed the whole Race. There are also excellent Falcons. The Soil of this Country bears excellent Wheat and Barley without Husks, and Oil made of Nuts, and Mustard, which is like Flax-seed, but more savory than other Oil. There are straight Passages and difficult Places. The Men are good Archers and Huntsmen, clothed in Beasts Skins. The Hills are steep and high, large Plains, fine Rivers; and if any have an Ague, by living two or three Days on the Hills he recovers, which *Marco* experienced himself after a Year's Sickness. The Women, in the Skirts of their Garments put sixty or eighty Yards of Cotton; the burlier a Woman looks she is in their Eyes the handsomer.

The Province of *Bajicia* is ten Days Journey towards the South from the Country of *Balaxiam*, and the Country itself is very hot, which is the Reason the People are brown. They have a Language of their own, and wear gold and silver Ear-rings, with Pearls and other Stones, artificially wrought in them; they eat Fish and Rice, and are Idolaters, crafty and cruel. The Province of *Chefmur* is seven Days Journey distant from *Bajicia*, the Inhabitants whereof have all their own Language, and are Idolaters, beyond all others, cunning Inchanters, forcing their Idols to speak and darkening the Day. From hence you may go to the *Indian-Sea*. The Men and Women are brown, not wholly black, the Heat somewhat tempered. Their Food is Flesh and Rice, yet are they exceeding lean: There are many Cities and Towns in this Country; their King is tributary to none. There are certain Hermits in this Province who in Monasteries and Cells worship Idols, honouring their Gods with great Abstinence of Meat and Drink, and observe great Chastity, are very cautious not to offend their Idols, and live long; of these are many reputed Saints, and the People shew them great Reverence. The Men of this Province kill no living Creature, and shed no Blood; and if they eat Flesh it is necessary that the *Saracens*, who live amongst them, kill the Creature. Coral is here sold dearer than any where. We will leave the Way to *India* now, and return to *Balaxiam*, and direct our Way towards *Catbay*, betwixt the East and North-East. Beyond *Balaxiam* is a certain River whereon stand many Castles and Villages belonging to the King of *Balaxiam's* Brother; and after three Days Journey is the Province *Vachan*, having in Length and Breadth three Days Jour-

ney, the Inhabitants whereof have a peculiar Language, and worship *Mobammed*. They are however stout Warriors and good Hunters, for the Country abounds with wild Beasts.

If you depart thence betwixt the North-East and the East, you must ascend for three whole Days together, until you come to an exceeding high Mountain, than which there is said to be none higher in the World. There also between two Mountains is a great Lake, and through a Plain runs a very fine River, near which are excellent Pastures, so that in them a lean Horse or an Ox may be fat in ten Days. There is also Plenty of wild Beasts, especially exceeding great wild Sheep, having Horns some of them six Spans long, of which they make divers kinds of Vessels. The Plain contains twelve Days Journey in Length, and is called *Pamer*; nor is there any Habitation there, and Travellers must carry Victuals with them: No Bird also appears there, by reason of the Cold; and it is reported, that if Fire be kindled there it is not so bright nor so effectual to boil any thing as in other Places. From hence the Way leadeth forty Days Journey further between the East and the North-East, through the Mountains, Hills, and Vallies, in which many Rivers are found, but no Village or Herbs, and the Country itself is called *Palow*, and some Huts and Cottages of Men are seen on the Top of those high Mountains; but such as are savage and wicked Idolaters, who live by hunting, and are clothed by the Skins of the Beasts they kill. After this you come to the Province of *Casckar*, which is tributary to the Great Khan, and the People are *Mobammedans*. In it are Vines, pleasant Gardens, fruitful Trees, Cotton, Flax, and Hemp, and a fertile Soil. The Inhabitants have a particular Language, and are Merchants and Artificers, so covetous that they eat that which is bad, and drink worse. Some *Nesforian* Christians are found there, who also have their Churches. The Country extends itself five Days Journey.

11. *Samarcond* is a great and famous City in that Country, where are lovely Gardens, and a fertile Plain. It is subject to the Nephew of the Great Khan; in it the Christians dwell with the *Saracens*, whence little Agreement is betwixt them. It is reported, that on this Account a Miracle happened; the Brother of Great Khan, named *Zagatai*, who governed that Country about an hundred Years ago, being persuaded to become a Christian, the Christians, through his Favour, built a Church in Honour of *St. John Baptist*, with such Cuning that the whole Roof thereof was supported by one Pillar in the midst, under which was set a square Stone, which, by favour of their Lord, was taken from a Building of the *Saracens*. *Zagatai's* Son succeeded after his Death in the Kingdom, but not in the Faith, from whom the *Saracens* obtained that the Christians should be compelled to restore that Stone, and when they offered a sufficient Price, the *Saracens* refused to receive any other Composition than the Stone; whereupon the Pillar lifted up itself, that the *Saracens* might take away their Stone, and so continued.

Departing again from this City, you come into the Province *Cbaraban*, about five Days Journey in Length. This Province hath Plenty of Provisions, being subject to the Dominion of the Nephew of the Great Khan. The Inhabitants worship *Mobammed*, yet among them certain *Nesforian* Christians dwell. They are great Artificers, and have most of them swelled Legs, and a great Wen or Bunch in their Throat, by reason of the Waters which they drink. The Province *Cotam* follows between the East and the North-East. It is subject to the Dominion of the Nephew of the Great Khan, and hath many Cities and Towns. The chief City thereof is called *Cotam*. The Province extends eight Days Journey in Length. There is no Want there of any Thing needful to the Maintenance of Life. It hath Plenty of Cotton, Flax, Hemp, Corn and Wine; but the People are not warlike, yet good Artificers in various Manufactures and Merchandize. They acknowledge *Mobammed* for their Prophet.

Proceeding farther through the same Country, you come to the Province *Peim*, extending four Days Journey in Length; it is subject to the Great Khan, and hath

many Cities and Castles; the chief City thereof is called *Piem*, near which runs a River wherein precious Stones are found, such as *Jaspers* and *Chalcedons*. The Inhabitants of the Country follow the Law of *Mohammed*, and are Artificers and Merchants. There is a Custom in this Province, that when any married Man goeth into another Place and returneth not home in twenty Days, it becomes lawful for the Wife to marry another Husband; and the Men also, whensoever the Women go away for the same time, do the like. All those Provinces, *viz. Casiba, Cotem, Piem*, to the City of *Lop*, are in the Bounds of *Turkestan*.

Ciajian is subject to the *Tartars*; the Name of the Province and chief City is the same: It hath many Cities and Castles; many precious Stones are found there in the Rivers, especially *Jaspers* and *Chalcedons*, which Merchants carry quite to *Ouchach* to sell and make great Gain. From *Piem* to this Province, and quite through it also is sandy Soil, with many bad Waters and few good. When an Army passes through this Province, all the Inhabitants thereof, with their Wives, Children, Cattle, and all their Household-stuff, fly two Days Journey into the Sands, where they know that good Waters are, and stay there, and carry their Corn thither also to hide it in the Sands, after Harvest, from the like Fears. The Wind doth so delace their Steps in the Sand, that their Enemies cannot find their Way. Departing from this Province, you are to travel five Days Journey through the Sands, where no other Water almost than that which is bitter is any where to be found, until you come to the City called *Lop*, which is a great City, from whence is the Entrance of a great Defart, called also the *Wilderness of Lop*, seated between the East and the North-East. The Inhabitants are *Mohammedans*, subject to the Great Khan.

In the City of *Lop*, Merchants who desire to pass over the Defart, cause all Necessaries to be provided for them; and when Victuals begin to fail in the Defart, they kill their Asses and Camels, and eat them. They make it mostly their Choice to use Camels, because they are sustained with little Meat, and bear great Burthens. They must provide Victuals for a Month to cross it only, for to go thro' its Lengthways would require a Year's Time. They go through the Sands and barren Mountains, and daily find Water; yet it is sometimes so little that it will hardly suffice fifty or an hundred Men with their Beasts; and in three or four Places the Water is salt and bitter. The rest of the Road, for eight and twenty Days, is very good. In it there are not either Beasts or Birds; they say, that there dwell many Spirits in this Wilderness, which cause great and marvellous Illusions to Travellers, and make them perish; for if any stay behind and cannot fee his Company, he shall be called by his Name, and so going out of the Way is lost. In the Night they hear as it were the Noise of a Company, which, talking to be theirs, they perish likewise. Concerts of musical Instruments are sometimes heard in the Air; likewise Drums and Noises of Armies. They go therefore close together, hang Bells on their Beasts Necks, and set Marks, if any stay.

Having passed over the Defart: you come into the City *Sachion*, betwixt the East and North-East, subject to the Great Khan, in the Province of *Tangut*, where, amongst the Worshippers of *Mohammed*, a few *Nestorian* Christians are found; many Idolaters are also there, who have their proper Language. The Inhabitants of this City live not by Merchandize, but on the Fruits of the Earth. The City hath many Monasteries consecrated to divers Idols, in which many Sacrifices are offered with great Reverence: And when a Son is born to a Man, he presently commendeth him to some Idol, and in honour thereof nourisheth a Sheep that Year in his House, which he presenteth before it, together with his Son, the next Festival Day of that Idol, with many Ceremonies, and great Reverence. Afterwards the Flesh of the Sheep is boiled, and left to long before the Idol till their Prayers are finished, which they make for the Conservation of their Son, and

the Idol hath, as they suppose, sucked the Savour of the Meat; after which, all his Kindred being gathered together, eat the Flesh at home with great Devotion and Joy, but religiously keep the Bones in certain Vessels. The Priests have the Feet, Head, Inwards, Skin, and some Part of the Flesh, for their Share.

In celebrating the Funerals of such as were Men in Esteem, the dead Bodies are buried after this Manner; the Kindred send for the Astrologers, and tell them what Year, Month, Day and Hour he who died was born, who, having considered the Constellation, assigns the Day when he is to be buried; so that when the Planet suits not, they preserve the dead Body sometimes seven Days, and sometimes six Months, preparing a Chest for it at home, and joining the Sides together with such Art, that no poisonous Smells issue forth. They also embalm the Body itself with Spices, and cover the Chest, fairly painted with embroidered Cloth; and every Day that the dead Corps is kept at home, at the Hour of Dinner a Table is spread near the Chest, Wine and Meat set thereon for the Space in which one might eat a Meal's Meat, supposing that the Soul of the Dead feedeth on the Savour thereof. The Astrologers sometimes forbid to carry it out of the chief Gate, pretending some disastrous Star, and cause them to carry it out another Way, and sometimes break the Wall which is opposite to that Place, which the Planet makes more lucky; for otherwise the Spirits departed would be offended, and hurt those of the House; and if any such Evil happen, they ascribe it to the Dead thus wronged. When the Body is carried through the City to be buried without, wooden Cottages are erected in the Way, with a Porch covered with Silk, in which they place the Body, and set before it Bread, Flesh, and delicate Meats, supposing the Spirit to be refreshed therewith, which is held to be constantly present at the burying of the Body; and when they come to the Place where the Body is to be buried, they diligently and curiously paint upon Papers made of the Bark of Trees the Images of Men and Women, Horses, Camels, Money and Garments, all the Instruments of the City founding, which are burned together with the dead Body; for they say, that dead Men shall have so many Men-servants, and Maid-servants, Cattle, and Money in another Life, as Pictures were burned with him, and shall perpetually live in that Honour and Riches.

12. The Province of *Camul* lieth in the wide Country of *Tangut*, subject to the Great Khan, having many Cities and Towns; the chief City is called *Camul*. This Province is bounded by two Defarts, *viz. the Great Defart*, of which we have spoken before, and another, that is less, of three Days Journey. It abounds with all things for the convenient Support of Life. The Inhabitants are Idolaters, have a peculiar Language, and seem to be born for no other Purpose but to apply themselves to sporting, singing, dancing, writing and reading, after their Fashion, playing on Instruments, and giving themselves unto Pleasure. When any Traveller passing by goes into any Man's House for Entertainment, the Master of the Family receives him with great Joy, and commands his Wife, and all the Family, that as long as he will abide with them, they obey him in all things. In the mean time he departs, and returns not so long as the Guest remains at his House; and during all this Space the Stranger lies with the Wife, Daughter, and the rest, as with his own Wives. The Women of the Country are beautiful, and ready to obey all these Commandments of their Husbands, who are so besotted with this Folly, that they think it a glorious thing for them, and believe it so acceptable to their Idols, that, through their Favour thus obtained, they prosper, and enjoy Plenty of all things. *Mangu-Khan* having heard of this Folly, commanded them not to observe this detestable Custom any longer, and accordingly they forbore it for about three Years, and then not seeing their wonted Fertility, and troubled with some domestic Crosses, they sent Embassadors to

* This Defart mentioned by our Author, still retains the same Name in the most modern Maps. His Description of this and other Wildernesses are very exact; and the Hardships he mentions in passing through them are not at all exaggerated. It is for this Reason that it is so extremely difficult to pass from any Part of the Dominions of the Great Mogul to *China*, without taking a prodigious Compass to avoid these Defarts. It is not above forty Years ago since a certain Rajah who had incurred the Mogul's Displeasure, attempted, with a Train of thirty Followers, to pass through these Defarts, in which they all perished by Hunger. A Third, except the Nobleman himself and four of his Attendants, who reached the Province of *Ubergi*, where he and one of his Men died of the Fatigue a few Days after.

the Khan, and earnestly entreated that he would revoke so grievous an Edict, and not abolish that ancient Custom which they had received from their Ancestors. The Khan answered, Since you desire your Reproach and Shame, let it be granted you, go and do herein after your Wont. The Messengers returning with this Answer, brought great Joy to all the People; and this Custom is observed by the whole Nation to this Day.

After the Province of *Camul*, a Traveller entered the Province of *Chinbinatalas*, which on the North is bounded by the Desert, and is sixteen Days Journey in Length, subject to the Great Khan. It hath large Cities, and many Castles; the People are divided into three Sects; some few acknowledge Christ, and these are *Nestorians*; others worship *Mohammed*; and the third sort adore Idols. In this Province there is a Mountain, wherein are Mines of Steel, and Antianicum, and also, as was reported, Salamanders of the Wool of which Cloth was made, which if cast into the Fire, cannot be burned; but that Cloth is in reality made of Stone, in this manner, as one of my Companions, a *Turk*, named *Curisar*, a Man indued with singular Industry, informed me, who had the Charge of the Minerals in that Province. A certain Mineral is found in that Mountain, which yields Thread not unlike to Wool, and these being dried in the Sun, are bruised in a brazen Mortar, and afterwards washed, and whatsoever earthy Substance sticks to them, is taken away. Lastly, these Threads so cleaned, are spun like other Wool, and woven into Cloth, and when they would whiten those Cloths, they cast them into the Fire for an Hour, and then take them out unburnt whiter than Snow, after the same manner they cleanse them when they have taken any Spots; for no other washing is used to them, besides the Fire. But with regard to the Salamander, or the Serpent, which is reported to live in the Fire, I could find nothing of such a Creature in the East Countries. They say there is a certain Napkin at *Rome* woven of Salamander-Wool, wherein the Handkerchief of the Lord is kept wrapped up, which a certain King of the *Tartars* sent to the Bishop of *Rome*.*

After you are past this Province, you travel on betwixt the East and North-East, ten Days Journey, in which few Habitations or Things remarkable are found, and then you come to the Province *Succir*, in which are many Villages and Towns; the chief City is called *Succir*. In this Province, among many Idolaters, a few Christians are found; they are subject to the Great Khan. They do not addict themselves to Merchandize, but live on the Fruits of the Earth. The best *Rhubarb* is found in this Province in great Quantities, which is carried thence by Merchants to divers Parts of the World. Strangers dare not go to the Mountains where it grows, by reason of venomous Herbs, which if their Beasts should eat them, would lose their Hoofs; but those of that Country know and avoid them.

The general Name of this Province, and of the two following, is *Tangut*: *Campion* is a great City, the Principal in the Country of *Tangut*. In it are Christians, which have three great and fair Churches, *Mohammedans* and Idolaters. The Idolaters have many Monasteries, where they worship their Idols. Those Idols are made either of Stone, Wood, or Clay, some of which are inlaid with Gold, and very artificially wrought. Some are so great, that they contain ten Paces in Length, fastened to the Earth, as if they lay upright, near which little Idols are placed, which seem to give Reverence to the greater, and both are much worshipped. The religious Men seem to live more honestly than other Idolaters, abstaining from Whoredom, and other base things; yet Wantonness is not held there any grievous Sin, for they say, if a Woman lies to a Man, he may use her without Sin, but not if he lies first to her. They reckon the whole Compa of the Year by Moons. In the Moons they observe in some five, in others four or three Days, wherein they kill no Beast, or Bird, nor eat Flesh. The Laymen marry twenty or thirty Wives, or as many as they

are able to maintain; yet the first is accounted more worthy, and more legitimate. The Husband receives so Dowry from the Wife, but he himself assigns sufficient Dowry in Cattle, Servants, or Money, according to his Ability. If the Wife becomes hateful to the Husband, it is lawful for him to divorce her from him when he pleases. They take for Wives, without Scruple, their Kinswomen, or Mothers-in-Law. Our Author, together with his Father and Uncle, remained a Year in this City for the Dispatch of certain Affairs. From the City *Campion* you proceed twelve Days Journey to the City *Esina*, bordering on a sandy Desert towards the North, being still in the Province or Kingdom of *Tangut*. Many Camels are there, and many other Beasts and Animals of several kinds. The Inhabitants are Idolaters, living on the Fruits of the Earth, neglecting Merchandize, or manual Labour, other than Husbandry. All the Provinces and Cities aforesaid, *Serbion*, *Camul*, *Chinbinatalas*, *Succair*, *Campion*, and *Esina*, are comprehended in *Tangut*.

13. Having passed over the aforesaid Desert, you come unto the City *Caracoran*, or *Caracorum*, a large Place, which is in *Compa* three Miles, strongly fortified with Earth, for Stone they have none. Near it is a great Castle, and in it the Governor's fair Palace. This was a Place, near which in old Times the *Tartars* assembled themselves, and here therefore we will declare how they began to reign. They dwell in the North Parts, viz. in *Curza* and *Barya*, where are many vast Plains, without Cities and Towns, but abounding in Pastures, Rivers, and Lakes. They had not a Prince of their Nation, but paid Tribute to a certain great King, named, as I have heard in their Language, *Umcan*, which, in some Mens Opinion, in our Language signifieth *Prebyter*, or *Priest John*. To him the *Tartars* gave yearly the Tenth of all their Beasts. In Process of Time the *Tartars* so increased in Multitudes, that *Umcan* was afraid of them, and thought to disperse them into several Parts of the World, and therefore when any of them rebelled, he sent three or four hundred *Tartars* into those Parts, to diminish their Power, and the like he did on other Occasions, deputing some of their Nobility for that Purpose. They seeing their Ruin intended, and loth to be separated one from another, went from the Places where they dwell to the Desert towards the North, where they might be safe, and denied *Umcan* their accustomed Tribute.

It happened, that about the Year *A.D.* 1162, the *Tartars* having continued for some time in those Parts, chose a King among themselves, a wife and valiant Man, named *Zingis-Khan*; he began to reign with such Justice, that he was beloved and feared of all as a God rather than a Prince, inasmuch that his Fame brought all the *Tartars* in all Parts to his Subjection, and he seeing himself Lord over so many valiant Men, determined to leave these Deserts, and commanding them to provide Bows and other Weapons, began to subdue Cities and Provinces, in which Conquests he placed such just Governors, that the People were not displeased. The chief of them he carried along with him bestowed on them Provisions and Gifts. Seeing therefore that he was advanced to so great Glory and Power, he sent Embassadors politely to *Umcan*, to entreat that he would bestow his Daughter upon him to be his Wife, which he taking in very evil Part, answered with Indignation, and rejecting the Embassadors of *Zingis*, said, "Doth my Servant demand my Daughter? Get ye out of my Sight, and tell your Master, if he ever make such Demand again, I will make him die a miserable Death."

But King *Zingis* levying a great Army, marched boldly and encamped in a certain great Plain named *Tanduc*, sending unto the King, and signifying unto him, that he should defend himself; but he commanding a mighty Army, defended to the Plains, and pitched his Tent within ten Miles of the Camp of the *Tartars*. Then *Zingis* commanded his Astrologers to shew him what Event and Success the Battle should have. They cutting a Road

* It appears from hence, that our Author was not quite so credulous as some other Writers, who have told us very strange Stories of the Salamander: But notwithstanding what is asserted of that Creature's living in the Fire, is equally false and fabulous; yet as it is a fable generally known in all Parts of the World, we need not wonder that in the East, where the People are so fond of figurative Expressions, they should bestow the Name of Salamander's Wool on a Cloth capable of resisting the Fire. This is plainly the same kind of Manufacture with what the *Greeks* called *serpico*, of which there are small Quantities still found in several Countries, and of late Years, particularly in the Island of *Argier*, as I have been informed by a very curious and intelligent Gentleman, who has made several Experiments of it.

lengthwise, in two Parts, stuck the Pieces by themselves into the Ground, and wrote upon the one *Zingis*, and the other *Uman*, and said to the Kings, In the nican Space while we read, it shall come to pass, by the Idol's Power, that these two Parts of the Reed shall fight together, and whose Part shall fall on the other, the King shall obtain Victory in the Battle. The Multitude therefore running together to behold that Spectacle, the Astrologers began to mumble their Prayers, and read their Incantments, when presently the Parts of the Reed being moved, (taught together, until the Part of *Zingis* ascended upon the Part of *Uman*, which being seen by the *Tartars*, allured of the future Victory, they were encouraged to the Battle, and *Uman* being slain, the Victory and Kingdom, and *Uman's* Daughter remained to *Zingis*.

Zingis reigned six Years after this, in which he conquered many Provinces; and lastly, when he endeavoured to win a certain Castle called *Tbaigin*, and came somewhat too near, being shot in the Knee by an Arrow, he died, and was buried in the Mountain *Altai*. The first King of the *Tartars* was called *Zingis*, the second *Khan-Khan*, the third *Bahyn-Khan*, the fourth *Efu-Khan*, the fifth *Mangu-Khan*, the sixth *Kublai-Khan*, whose Power is greater than all his Predecessors, having inherited theirs, and adding by Conquest in a manner the rest of the World; for he lived near sixty Years in his Government. The Name *Khan* signifieth Emperor. All the Great *Khans* and Princes of the Blood of *Zingis*, are carried to the Mountain of *Altai* to be buried, wherefoever they die, altho' one hundred Days Journey from it; and they which carry the Corps to the Burial, kill all those that they meet in the Way, saying, go and serve our Lord the King in another Life; they kill also the best Horses. When the Body of the Great *Khan-Mangu*, the Predecessor of *Khan-Kublai* was brought unto the Mountain *Altai* to be buried, the Soldiers accompanying the Funeral, are reported to have slain above ten thousand Men upon the aforesaid Occasion¹.

The *Tartarian* Women are most faithful to their Husbands. Adultery is the greatest Shame amongst them, yet it is accounted lawful and honest that every one may marry as many Wives as he is able to maintain, altho' the first be looked upon as principal and more honourable than the rest. These live together in one Houfe, without one ill Word, in admirable Concord, make their Merchandizes, buy and sell, and procure all things necessary to their Husbands and Household, the Men meddling with nothing but their Hunting, Hawking, and things pertaining to Arms. They have the best Falcons in the World, and also Dogs; they live only on Flesh and Milk, and what they take in Hunting. They eat Horses, Camels, Dogs, if fat, and drink Mares Milk, called *Cosmos*, so managed, that it is like white Wine. If the Father dies, the Son may have all his Wives, except his own Mother and Sisters; for the Brother being dead, it is lawful for the Brother who remaineth alive, to marry the Widow of his deceased Brother. The Husbands receive no Dowry of the Wives, but they themselves assign Dowry to the Wives and their Mothers. Through the Multitude of their Wives, the *Tartars* have many Children, nor is this Multitude of Wives very burthen-some, seeing they gain much through their Labour; besides, they are very careful for the Government of the Family, and Preparation of their Food, and with no less Care execute the other Duties of the Houfe; but the Men apply themselves wholly to Hunting, Fowling, and the Exercise of Arms.

The *Tartars* feed many Herds of Oxen, Flocks of Sheep, and other Beasts and Cattle, and remain with them in Places of Pasture, in the Summer Time, in the Mountains, and colder Places, where they find Pasture and

Wood; but in the Winter, they remove to the hotter Countries, where they find Pasture for their Cattle, marching forwards two or three Months together. Their Houfes are covered with Sticks and Felts, and are commonly round, which they carry with them in Carts, or Waggon, with four Wheels; for they can fold and extend them, set them up and take them down, and they turn, wherefoever they go, the Door of these moveable Houfes always to the South. They have also neat Carts of two Wheels, covered with Felt to close, that the Rain cannot pierce thro' them, drawn by Oxen and Camels, wherein they carry their Wives, Children, and necessary household Stuff with them, and defend them from the Injury of foul Weather and Rain.

The *Tartars*, if they be rich, are clothed in Sables, Ermins, and Cloth of Gold, and all their Furniture is costly. Their Arms are Bows, Swords, Pole-axes, and some Lances; but they can best use their Bows, to which they are used from their Childhood: They are hardy, active, brave, but somewhat cruel, will continue two Days and Nights on Horseback armed, exceeding patient and obedient to their Lords; their Cattle also are strong and hardy. The Law and Faith of the *Tartars* is this, they say, that there is one Great God, Supreme in Heaven, of whom with daily Incense they desire good Understanding and Health. They have another which they call *Natigay*, which is a little Image covered with Felt, or some other thing, which every one hath in his Houfe. To this God they make a Wife and Children, placing the Wife's Image at the Left-hand, and the Representations of the Children before his Face. This they call the God of earthly things, which keeps their Children and their Beasts, and Corn, and give it great Reverence. Before they eat themselves, they anoint the Mouths of the Images with the Fat of the fowden Flesh, and they call the Broth out of Doors, in Honour of other Spirits, saying, that now their God with his Family, has had their Part, and after they eat and drink at Pleasure.

If the Son of a *Tartar* die before he has been married, and the Daughter of another die also unmarried, the Parents of the deceased meet together, and celebrate a Marriage between the Dead, and making a Draught in Writing of that Contract, they paint Men and Women for Servants, Horses, and other Creatures with Cloaths of all Sorts, and Monies in Paper, and burn them together with the Contract, by the Smoak whereof they say, that all these things are carried to their Children in another World, where they are married, and the Fathers and Mothers conceive, they are joined together in such a Bond of Affinity, as if these Marriages had been celebrated while the married Couple were still living.

When the *Tartars* go to War, their Prince conducts about a hundred thousand Horse, appointing Heads over Tens, Hundreds, Thousands, and ten Thousands, by which Subordination, Commands are easily maintained; every Hundred is called a *Tuc*, every Ten a *Toman*: When they begin their March, they send out Men every Way as Scouts, that no Enemy assault them unprovided. If of Horses and Mares, every Man has about eighteen. They carry also their felt-houfes, under which they shelter themselves in times of Rain. When the e falls out some important Employment, they will ride ten Days together without Victuals dry or boiled, and live on the Blood of their Horses, cutting a Vein, and sucking it. They have Milk dried like Pate, which they make by boiling the Milk, and skimming the Cream, which swims on the Top, into another Vessel, and make Butter; afterwards they set the Milk in the Sun, and dry it, and when they go into the Army, carry with them about ten Pounds thereof, and every Morning a Man takes about half a Pound, and puts it in a

¹ Our Author has been charg'd with many Mistakes in this List of the Princes who succeeded *Zingis-Khan*, but he has been charg'd by those who knew much less of the Matter than he did; and therefore to set this Matter right, we will give a short Account of that Succession, from the authentick Work of *Aoulcasi-Bayador Khan*. Two Years after the Death of *Zingis-Khan*, the *Tartar* Princes, in Compliance with the Emperor's Will, would have exalted *Ugudai-Khan* to that Dignity, which he absolutely refused, because he had an Uncle and two elder Brothers living. His Dispute lasted forty Days, when at a great Council his elder and younger Brother rose up and said, You have heard our Father's Will, your Modesty shall not render you guilty of Impiety, we will execute his Will, if you will not; and for taking him, one by one Army, and the other by the other, they forced him into the Imperial Chair against his Consent, A. D. 1230. This Prince died suddenly in 1235. He was succeeded by his Son *Ajak-Khan*, whom our Author calls *Khan-Khan*, who died in the Year 1247, and was succeeded by *Mangu Khan*, who held the Empire to the Year 1257, when he was succeeded by *Kublai-Khan*, the same with whom our Author liv'd, and whom he calls *Kublai Khan*. He reign'd in all thirty-five Years, and died in the Year 1297, which agrees very well with *Marco Polo's* Relation.

Flask, or leather Bottle, with as much Water as he pleases, which while he rides, mixes together, and this is his Dinner.

When they encounter with their Enemies, they ride here and there shooting, and sometimes make a Shew of Flight, shooting as they fly; and finding the Enemy broken, rejoice their Forces, and pursue the Victory, having their Horses so at Command, as with a Sign to turn any Way. But now the *Tartars* are mixed and confounded, and so are their Fashions. They punish Malefactors after this Manner; If any steal a Thing of small Value, and is not to be deprived of Life, he is seven Times beaten with a Cudgel, or seventeen, or seven and twenty, or thirty and seven, or forty-seven, giving the Strokes according to the Measure and Quality of the Offence, and that unto an hundred: Some die through these Strokes. But if any have stolen an Horse, or other Thing, for the which he deserves to die, he is cut asunder with a Sword in the Middle; but if he will redeem his Life he may, by restoring the Theft nine-fold. Such as have Horses, Oxen, or Camels, brand them with their Marks, and feed them to feed in the Pastures without a Keeper. Leaving the City of *Caracorum* and the Mountain *Altai*, we come unto the champion Country of *Bargu*, which extends itself northwards about sixty Days Journey in Length. The Inhabitants of these Places are called *Medites*, and they are subject to the Great Khan, and in Manners like the *Tartars*; they are a Sort of savage Men, and eat the Flesh of Beasts which they take by hunting, especially Stags, of which they have Plenty, and they make them so tame that they can ride them; they have no Corn or Wine. In the Summer they chiefly practise hunting of wild Beasts and Fowls, on the Flesh whereof they may live in the Winter; for in Winter Fowls, as well as other living Things fly from thence on account of the Extremity of the Cold.

14. After forty Days Journey you come to the Ocean, near which is a Mountain, where Storks and fine Falcons breed, which are carried thence unto the Court of the Great Khan. Here we must return unto the City *Campion*; if therefore you proceed farther five Days Journey from the City *Campion* towards the East, you come to the Kingdom of *Erginul*, in the Province of *Tangut*, subject to the Great Khan. In this Kingdom are many Idolaters; there are some *Nestorian* Christians and *Turks*; as also many Cities and Castles, of which *Erginul* is chief. From hence, if you proceed farther to the South-East, you may go to the Parts of *Catbay*. Going South-East towards *Catbay*, there is a certain famous City named *Cinggy*, the Name also of the Province, tributary unto the Great Khan contained in *Tangut*; the People are some Christians, some *Mohammedans*, and others Idolaters. There are also found wild Oxen, very near as big as Elephants, very fair, having white and black Hair, short in other Parts, and on the Shoulder three Palms long, fine, white, and in many Respects beyond Silk, of which Hair our Author brought some to *Venice* as a rare Thing. Many also of these Oxen are tamed, and made to couple with tame Kine, and the Breed of them are fitter for Business than any other Creatures, bear great Burthens, are yoked to the Plough, and do twice as much Service as others.

The best Musk in the World is found in this Province, and is taken from a Beast of the Bigness of a Goat, having Hair like a Stag, Feet and Tail like a Gazell, but without Horns. It hath four Teeth, two above and two beneath, of the Length of three Fingers, as white as Ivory, and is a very beautiful Creature. When the Moon is at full, near the Navel, under the Belly, there grows to this Beast an Impostume or Bladder, full of Blood, and at the Full Moon they go to hunt them, and take away that Swelling, which is dried in the Sun, and is the best Musk; the Flesh also is good to eat: Master *Marco* brought to *Venice* the Head and Feet of this Beast dried. The Men live by

Merchandise and Arts, and have abundance of Corn. They are Idolaters, of a fat Body and little Nose, black Hair, having no Beard but four Hairs on their Chin. The Women are wonderfully fair, and when the Men desire to marry Wives, they rather make Choice of the Beautiful than the Noble or Rich. It often happens from hence, that a great Nobleman marries a poor Wife, if beautiful, assigning a Dowry to her Mother. This Province extends itself five and twenty Days Journey in Length, and is very fertile; in it are exceeding large Pheasants, having Trains eight or ten Handfuls long; many other Kinds of Birds are also found there, which have very beautiful Feathers of various excellent Colours.

After eight Days Journey further East, you meet with the Province *Egrigaia*, in the which are many Cities and Castles; all but this lies still in *Tangut*. The principal City is called *Calacia*, the Inhabitants thereof are Idolaters; there are three Churches of *Nestorian* Christians, who are subject to the Great Khan. In this City Cables are made, woven of white Wool, and the Hair of Camels, than which there are scarce any better in the World. East from this Province of *Egrigaia*, lies that of *Tandach*, in which are many Cities and Castles, and here *Presbyter John* resides, who now pays Tribute to the Great Khan. The King of that Nation is called *George*, and is a Priest and a Christian, and most of the People are Christians. All the Great Khans, after his Death (who was slain in Battle by *Zingis*) give their Daughters to those Kings to Wife. This King *George* holds not all that the Priest *John* before held, and is the Fourth of that Family. There is a Nation there called *Argons*, more fighty Men, and fitter for Merchandize than the rest, descended of Idolaters and *Mohammedans*. There are also two Regions, where they dwell, which in those Parts are called *Og* and *Magog*; but they which dwell there call them *Ung* and *Mongul*; in *Ug* are *Gog*, and in *Mongul* the *Tartars*. Riding East seven Days towards *Catbay* are many Cities peopled with Idolaters, *Mohammedans*, and *Nestorians*. There is one City called *Sindicin*, where very excellent Arms are made of divers sorts fit for Armies. In the Mountains of this Province are great Mines of Silver, and much Game, and the Country of the Mountains is called *Idisa*.

Three Days Journey from the City last mentioned stands another City *Jangamur*, that is, *The White Lake*, where there is a Palace, in which the Great Khan delights, because there are many Lakes and Rivers, many Swans, and in the Plains, Cranes, Pheasants, Partridges, and other Fowls. There are five sorts of Cranes there, some have black Wings like Crows, others are white, and bright, having their Feathers full of Eyes like Peacocks, but of a Golden Colour, the Neck black and white, very beautiful; a third sort for Bigness not unlike ours; a fourth little, and very fair, intermingled with red and blue Colours; the fifth of a grizzle, or grey Colour, having red and black Heads, and these are very large; and near to this City lies a Valley, where are many Cottages, in which a great Number of Partridges are maintained, which are kept against the King's coming to lodge there for some Time. Three Days Journey North-Eastward, is the City *Ciandu*, which the Great Khan *Cublay* now reigning built, erecting therein a marvellous Palace of Marble, and other Stones, which extends to the Wall on the one Side, and the middle of the City on the other. He included sixteen Miles, within the Circuit of the Wall on that Side, where the Palace joins the City Wall, into which none can enter but by the Palace. In this Inclosure or Park are pleasant Meadows, Springs, Rivers, red and fallow Deer, Fawns carried thither for the Hawks, of which are mewed there about two hundred *Ger-Falcons*, which he goes once a Week to see, and he often useth one Leopard or more sitting on Horses, with which he hunts the Stag and Deer, and having taken the best, gives it to the *Ger-Falcons*, and in beholding this

^a This Account of the Musk Animal is very exact, and contains nothing in It liable to Exception, which shews that where our Author relates Things of his own Knowledge, and which fall within the Compass of his Understanding, he may very well be relied on.

^b There is the same Mistake here, as in the Relation of *Rubragus*. The People in *Europ* were extremely desirous of learning some News of this Christian Monarch, as they would needs have him to be; and therefore when our Author heard that this Prince was a *Nestorian*, he took it for granted that he must be *Presbyter John*; but as we have already set that Matter in a clear Light, we shall not trouble the Reader any farther with it at present.

Spectacle, he takes much Delight. In the midst of a fair Wood, he hath built a Royal Houfe on Pillars gilded and varnished, on every one of which is a Dragon all gilt, which winds his Tail about the Pillar, with his Head bearing up the Roof, as also with his Wings displayed on both Sides; the Cover also is of Reeds gilt and varnished, so that the Rain can do it no Injury, the Reeds being three Handfuls thick, and ten Yards long, split from Knot to Knot; the House itself also may be pulled in Pieces, and taken down like a Tent, and erected again; for it is sustained, when it is set up, with two hundred silken Cords. The Great Khan useth to dwell there three Months in the Year, viz. *June, July, and August*. On the twenty eighth Day of *August* he departeth to make a solemn Sacrifice. He hath an Herd of white Horses, and white Mares, about ten thousand, of the Milk whereof none may drink, except he be of the Imperial Race of *Zingis-Khan*, and except one Family called *Boriat*, who had this granted by *Zingis* for their Valour; and these Beasts, as they go up and down feeding, are much revered, nor dare any go before them, or hinder them in their Way.

The Astrologers or Sorcerers tell the Khan, that on the twentieth of the Moon of *August*, he shall disperse that Milk here and there for the Honour of all Spirits, and his Idols, that they may be careful Preservers of all things which he possesseth. There are two sorts of Idolaters called *Chebet* and *Chepna*, which in the midst of Storms ascend the Palace, and suffer no Rain to fall thereon, which they make the People believe comes to pass by their Sanctity, and therefore they go slovenly and negligent of their Persons, never washing nor combing themselves. They also have a horrible Custom to dress and eat such as are condemned to Death, but not those which die naturally. They are called also *Bachsi*, which is the Name of their Order, as Friars, Predicants, or Minors with us; they seem by Magic to do what they list. When the Great Khan in his Hall sits at his Table, it is raised eighty Yards high, and in the midst of the Hall, a good Distance from the Table, is a great Cupboard of Plate, from whence these Sorcerers cause Wine or Milk to fill the Goblets, without any Hard touching them; this they do in the Presence of any Man, whenever their Lord commands it. These *Bachsi* also, when they have a mind to make Feasts to their Idols, go to the Khan, and address him thus, "Sir, You are to know that if our Idols be "not honoured with Sacrifices, they will bring Plagues on "Corn and Beasts, and therefore we intreat you to give us the "Flesh of so many Sheep, with black Heads, and so many "Pounds of Incense, and Lignum Aloes, that we may "make them due Sacrifice and Honour." This they speak not to him themselves, but by certain Lords deputed to that Office, who speak to the Khan, and obtain it. On the Feast-day they sacrifice these Beasts, and sprinkle the Broth before the Idols.

They have great Monasteries, some of the Bigness of a City, in several of which are about two thousand Monks, who serve an Idol, sequestered from the Laity, as appears by their Shaving and Garments; for they shave their Heads and Beards, and wear a religious Garment. These, in the Solemnities of their Idols, sing with solemn Songs, and Lights; some of them may marry. There are some who observe strict Abstinence, called *Sesfen*, leading an austere Life; for they eat nothing but Meal mingled with Water, till all the Flour be gone, and eat the Bran without any Savour. These worship the Fire, and the Men of other Rules say, that these, which are so austere, are Hereticks against their Law, because they worship not Idols as they do; and there are great Differences between them, and these marry not at all. They shave their Head and Beard, wear black hempen Garments, or of a bright yellow. They

sleep on thick Mats, and live the severest Life in the World.

15. In this Book I purpose to write all the great and marvellous Acts of the present *Khan* called *Cublai-Khan*, which is, if expressed in our Tongue, Lord of Lords, the greatest Prince in People, Cities, and Treasures, that ever was in the World, he being descended from the Progeny of *Zingis*, the first Prince of the *Tartars*, the sixth Emperor of that Country, beginning to reign in the Year of our Lord 1256, being *twenty-seven Years* old, and ruling the People with great Wisdom and Gravity. He is a valiant Man, exercised in Arms, strong of Body, and of a lofty Mind, for the Performance of Matters before he attained to the Dignity of the Empire, which by his Wisdom he did, against the Will of his Brethren. He often shewed himself a valiant Soldier in the Wars, and carried himself like a wiser and bolder Captain than ever the *Tartars* had; yet since he swayed the Kingdom, he went but once into the Field, and sends his Sons and other Captains on Expeditions.

In the Year of our Lord 1286, his Uncle, whose Name was *Naiam*, being thirty Years of Age, and having the Command of many People and Countries, so that he was able easily to bring together four hundred thousand Horse, being puffed-up through youthful Vanity, would no longer be subject, but would needs take away the Kingdom from his Lord *Cublai*, and sent to another great Lord named *Caidu*, Lord of the Parts toward great *Turky*, who was Nephew of the Emperor *Cublai*, yet hated him, who yielding to his Motion for Rebellion, promised to come in Person with an hundred thousand Horse.

Both of them began to gather Forces, which could not be done so secretly, but *Cublai* heard of it, and presently took order to set Guards on the Ways, that no Intelligence might pass, and then assembled all the Forces, within ten Days Journey of *Cambalu*, with great Speed, so that in twenty Days were gathered together three hundred and sixty thousand Horse, and one hundred thousand Foot, a great Part of them Falconers, and Men of his Household; with these he made Haste Day and Night towards *Naiam's* Country, where, at the End of twenty-five Days he arrived, altogether unlooked for, and rested his Men two Days; then he called his Astrologers, and caused them, before all the Army, to divine who should have Victory; a thing they use to encourage their Men, and they promised it to *Cublai*. One Morning whilst *Naiam* was sleeping negligently in his Tent, having not so much as sent out any Scouts to gain Intelligence, *Cublai* made shew of his Army upon a Hill, himself sat in a certain Castle of Wood, full of Archers and Cross-bow Men, born by four Elephants, on the Top whereof was the royal Standard, with the Images of the Sun and Moon. He divided his Army into three Bodies, of which he sent that on the Right-hand, and the other on the Left against *Naiam's* Army. To every ten thousand Horse were assigned five hundred Foot, with Lances, taught to leap up behind the Horsemen, if any Occasion of Flight happened, and suddenly, on Advantage, to light and kill the Enemies Horses with their Lances: *Caidu* was not yet come.

The Battles joined, and made a cruel Fight, which continued from Morning till Noon, and then was *Naiam* taken and brought before *Cublai*, who commanded that he should be sewed betwixt two Carpets, which should be tosd up and down, till the Breath was out of his Body, that so the Imperial Blood might not be exposed to the Sun or to the Air. The Remainder of his People swore Obedience to *Cublai*, which were four Nations, *Ciazza*, *Carli*, *Barfcol* and *Sitingui*. *Naiam* was secretly baptized, and by Profession a Christian, but no Follower of the Works of Faith, yet he signed his principal Ensign with the

* The Year of this Emperor's Age, at the Time of his Accession, is put in a different Character, because none of the MSS. have it at all, and it is also omitted in several of the printed Editions; we cannot therefore fairly charge the Author with the Mistake in it, which consists of ten Years, that Prince at the Time of his Accession being thirty-seven Years old, or rather in the thirty-eighth Year of his Age. There seems also to be an Error in the Year of his Reign, but that is easily corrected, since, as that Prince was rais'd to the Imperial Dignity in the Month of *January* *March*, who reckons according to the *Tartar* Year, places it in 1256, whereas we compute from the beginning of the Month of *January*, make it 1257. The genealogical History of the *Tartars* informs us of the breaking-out of a civil War upon the Election of the Emperor, tho' it gives us somewhat a different Account of the Conclusion of it, in which our Author might be easily mistaken, since he owns what he delivers was from *Heardley*. However, the Exactness as to Dates is truly wonderful, since in the Compsuls of one hundred Years after these Travels were published, we had no authentic History of the *Tartars* in *Europe*, and consequently neither *Marco Polo*, nor his Editors, could have any Opportunity of correcting their Accounts, so as to make them correspond with the genealogical History before-mention'd. This Remark is an invincible Proof of our Author's Veracity, and of the Value of his Work.

Sign of the Cross, having with him infinite Numbers of Christians, who were all slain.

The *Jews* and *Saracens* that were in the Army of *Cublai*, began to upbraid the Christians with this Disaster of the Cross, who complain'd of it to *Cublai*; he sharply reprov'd the *Jews* and *Saracens* for this Behaviour, and then turning to the Christians, he said, "Surely, your God and his Cross, would not give any Aid to *Naïam*, but be not you therefore ashamed, because God being good and just, ought not to defend Injustice, or Iniquity." *Naïam* was a Traitor to his Lord, and contrary to all Equity, rais'd Rebellion, and sought the Help of your God in his mischievous Purpose; but he, as a good and upright God, would not favour his Designa."

He returned after this with great Triumph to *Cambalu*, and staid there till *Easter*. On that Day he called the Christians before him, and kissed their Gospels, and made his Barons do the same. He does the like on the great Feasts of the *Saracens*, *Jews* and *Heathens*, that *Segomamber-Khan*, the God of the Idols, *Mohammed*, *Moses*, or whosoever is greatest in Heaven, might help him; yet he made best shew of liking to the Christian Faith, but pretended, the Ignorance of the *Nestorian* Priests, and the mighty Acts of the Sorcerers, hindered his professing it.

For the better rewarding his Soldiers, he kept twelve Barons or Counsellors, who gave him Notice of each Captain's Merit; and accordingly he rais'd them from the Command of one hundred to a thousand, and from one thousand to ten thousand, and so on, giving them Vessels of Plate and Tablets. The Captain of one hundred hath a Tablet of Silver; and the Captain of a thousand, of Gold or Silver gilded; the Captain of ten thousand has a Tablet of Gold, and a Lyon's Head on it. The Weight of the Tablets differ also according to the Dignity. On the said Tablet is written a Command in this Manner: "By the Strength and Power of the Great God, and by the Grace which he hath given to our Empire, the Name of Khan be blessed, and let them all die, and be destroyed, which will not obey him." All Officers who have these Tablets have Privileges in writing of all things, which they are to do and demand; and the Generals, when they ride in publick, have a Cloth born over their Heads, and when they sit, it is on a Chair of Silver. Their Tablet is of three hundred Sagi, which is equal to fifty Ounces of Gold, with the Images of the Sun and Moon, such as have a Tablet, with a Ger-Falcon thereon, may take with them for their Guard the whole Army of a great Commander. *Cublai* is a comely, handsome Man, of middle Stature, of a very fresh Complexion, black and bright Eyes, well-fashioned Nose, and all the Lineaments of his Body consisting of due Proportion. He has four Wives, who are esteemed lawful, and the first-born of them is to succeed him in the Kingdom, and every one of them is called *Empress*, and holdeth a peculiar Court, and that in a magnificent Palace, having about three hundred Women to attend her, and many Eunuchs Servants, and at least ten thousand Persons in their Families.

The Grand Khan hath also many Concubines. There is likewise a Nation of fair People among the *Tartars* called *Virguts*, where every second Year he sends Embassadors to make Search for the fairest young Women for him; who returning, bring him four or five hundred more or less, as they see Cause. There are Examiners appointed to take a View of all their Beauties, examining Eyes, Nose, Mouth, &c. apart, and set a Price on them at sixteen, seventeen, eighteen, nineteen, twenty, or more Carats, and they bring those of that rate, which their Commission appoints; these he causes to be received by other Examiners, and of so many perhaps chuses thirty for his Chamber of the chief, which he puts to some of his Barons Wives to see if they snore not in their Sleep, if in Smell or Behaviour they be not offensive; those which are approved are by Fives divided, each fifth Part waiting three Days and Nights in his Chamber by course, the other in the next Lodgings pre-

paring whatsoever these command them. The less good are put to Cookery, and other Offices, and sometimes the Khan bestows them on Gentlemen, with great Portion. The Men of that Country esteem it a Grace and Credit to have Daughters worthy his liking; and think themselves born under an ill Planet, if they are not kept when free to Court.

Cublai had two-and-twenty Sons by his four legitimate Wives, and the First-born of his first Wife was called *Zingis*, who would have succeeded him in the Empire, if he had not died before his Father. He left a Son named *Timur*, a valiant Man, wise, and experienced in Arms, who is to succeed his Grandfather in the Empire, instead of his deceased Father; but by his Concubines he hath five-and-twenty Sons, all which are daily exercised in Feats of Arms, and are great Lords; seven of his Sons by his Wives are Kings of great Provinces, and maintain their States with great Reputation.

16. Three Months of the Year, that is, *December*, *January*, and *February*, *Cublai* resides ordinarily in *Cambalu*, which is at the North-East Border of *Catbay*; and there, on the South Part by the new City, is seated a great Palace; first there is a great Wall, each Square being eight Miles, with a deep Ditch environing, and a Gate in the middle of each; after which is the Space of a Mile in Circuit, where Soldiers stand; after this is another Court of six Miles square, with three Gates on the South-square, and three on the North; that which is in the middle, being in both the greater, and kept shut, except when the Khan passeth that Way; the other is always open to others; in each Corner of this Wall, and in the middle is a fair Palace, eight in all very large, in which are kept the Khan's Ammunitions, and Furniture of all Sorts; for Horses in one, in another Bows and Shooting-Articles; in a third, Cassises, Cuirasses, and Leather Armour; and so in the rest.

Within this Circuit is another Wall like the former, very thick and ten Paces high, all the Battlements white, the Walls square, each Square a Mile in Length, with six Gates as the former, and eight Palaces also very large, wherein are the Khan's Provisions; between these two last Walls are also many fair Trees and Meadows, in which are Deer with other Game, and Store of Grails, the Paths being raised two Cubits to spare it. No Dirt or Puddles of Water, being therein. Within this last Wall is the Palace of the Great Khan, the greatest that hath been seen, extending to the Wall on the North and South, and open where the Barons and Soldiers pass. It hath no Ceiling but a very high Roof; the Foundation of the Pavement ten Palms high, with a Wall of Marble round about it two Paces wide, as it were a Walk. At the End of the Wall without, is a Tower Turret with Pillars. In the Walls of the Halls and Chambers, are carved Dragons, Soldiers, Birds, Beasts of divers kinds, Histories of Wars gilded; the Roof is so made, that nothing is seen but Gold and Imagery; in every square of the Palace is a great Hall, capable of holding a Multitude of People; the Chambers are disposed the best that may be devised: The Roof is red, green, azure, and of all Colours. Behind the Palace are great Rooms and private Store-houses for his Treasure and Jewels, for his Wives, and other private Purposes.

Over-against the said Palace of the Khan, is another for *Zingis* his Son, whose Court was in all Things like his Father's. Near this Palace towards the North, is a Mount made by Hand, a Mile in Compass, one Hundred Paces high, adorn'd with Trees, that are always green; unto this Mountain the King commands all the Trees to be brought from remote Parts, lading Elephants with them, for they are taken up with the Roots, and are transplanted in this Mountain; and because this Mountain is always green, it is called the *Green Mountain*: And where the Earth of the Mount was taken away, are two Lakes answering each other, with a small River supplying them with stored Fish, and so grated, that the Fish cannot get out.

* There have been large Dissertations written upon this Description of our Author, and great Disputes about the City here described; some will have it one Place, some another, because it is a *Tartar* Appellation; and modern Writers speak of this City by another Name. We have not either Time or Room to wade in this Controversy; and therefore we shall cut it short. *Marco Polo* wrote by the Ear chiefly, and therefore set down *Cambalu* for *Khanbaliq*, i. e. the Imperial City; and it is allow'd, that *Khanbaliq*, is the City of *Peking*, the present Metropolis of *China*, in which we shall hereafter have Occasion to speak at large in another Place; and shall therein take an Opportunity of justifying the Accounts given us in the Text by *Marco Polo*.

The City of *Cambala* in the Province of *Calbay*, seated on a great River was famous, and the Royal Seat in ancient Times; and this Name *Cambala* signifies the City of the Lord or Prince. This City the Great Khan removed to the other Side of the River where the Palaces are, for he understood by the Astrologers, that it would rebel against the Empire. This new-built City is called *Taidu*, and he commanded all the *Calbayans* to go out of the Old City into the New; which contains in Compass four and twenty Miles, every Side of the Square containing six Miles. It hath Walls of Earth ten Paces thick at the Bottom, and at the Top but three, as growing by little and little thinner. The Battlements are white, every Square of the Wall hath three principal Gates which are twelve in all, having sumptuous Palaces built over them. There are also certain Pavilions in the Angles of the Walls where the Arms of the Garrison, which are one Thousand at each Gate, are kept. The Buildings are squared, and the Streets laid very strait by Line throughout this City; so that from one Gate a free Prospect opens through the City to the opposite Gate; having very stately Houses built on both Sides like Palaces, with Gardens and Courts, divided according to the Heads of Families: In the midst of the City is a certain noble Building, wherein hangeth a very great Bell; after the tolling whereof in the Night, no Man must go out of his House until the Beginning of the Day following, except it be for some extraordinary Cause, as for a Woman in Travail, and then they are compelled to carry Lights with them.

Without the City of *Cambala*, are twelve large Suburbs three or four Miles long, adjoining to each of the twelve Gates, more inhabiting in the Suburbs than in the City; here Merchants and Strangers live, each Nation having several Store-houses, or Burfes, in which they lodge. No dead Corps of any Man is burned within this City, but the Bodies of Idolaters are burned without the Suburbs, where the dead Bodies of other Sects are buried, and because an huge Multitude of *Saracens* inhabit there; they have above twenty-five thousand Harlots in the Suburbs and in the City; and these have a chief Captain appointed over every hundred and thousand, and one General, whose Office is, that when Embassadors come, or such as have Business with the Khan, whose Charges he delays, then this Captain giveth every Embassador, and every Man of his Family, a Change of Women every Night at Free-cost, for this is their Tribute. The Guards, every Night, carry such to Prison whom they find walking late; and if they be found guilty, they are beaten with Cudgels, for the *Bachfi* tell them, that it is not good to shed Man's Blood; but many die of these Beatings. The Great Khan hath in his Court twelve thousand Horse-men, which they call *Cassian*, faithful Soldiers of their Lord, who guard his Person, more for State than Fear; and four Captains have the Charge of these, whereof every one commandeth three thousand. When one Captain, with three thousand Soldiers within the Palace, hath guarded the King for three Days and Nights, another Captain, with his Soldiers, succeeds; and so, throughout the Year, this Course of watching by Turns is observed.

When on account of any festival Day, he keeps a solemn Court, his Table, which is higher than the rest of the Tables, is set at the North Part of the Hall, his Face is to the South, having the first Queen on his Left-hand, that is, his principal Wife; and his Sons and Nephews, and those of the Royal Blood, on his Right; yet their Table is in a lower Place, so that they scarce touch the King's Feet with their Heads, the Seat of the eldest being higher than the rest; the Princes sit in a lower Place than that; their Wives also observe the like Order: First, the Khan's Sons Wives and his Kinsmen sit lower on the Left-hand, and after those, of the Lords, and of every Captain and Nobelman, each in their Degree

and Order; and the Emperor himself, while he sits at his Table, may cast his Eyes upon all that feast with him in that Hall. There are not Tables for them all to sit; but the greatest Part of the Soldiers and Barons eat on Carpets. At all the Doors stand two gigantick Fellows with Cudgels, to see that none touch the Threshold, which, if he does, they take his Garment away, which he must redeem by receiving so many Blows as shall be appointed, or else lose them. They who serve the King, and those sitting at the Table, all of them cover their Mouths with Silk, lest their breathing, should by any means touch the King's Meat or Drink; And when he hath a mind to drink, the Damsel who giveth it goes back three Paces and kneels down, and then the Barons and all the People kneel, and the Musicians found their Instruments. There is no Cause, since I would avoid Prolixity, why I should write any thing concerning the Meats which are brought to the Table, how dainty and delicate they are, and with what Magnificence and Pomp they are served in.

All the *Tartars* observe this Custom to celebrate the Birth-day of their Lord most honourably. The Birth-day of *Cublai* is kept the twenty-eighth of *September*, and this Day he accounteth more solemn than any in the whole Year, except the first of *February*, on which they begin the Year. The King therefore, on his Birth-day, is clothed in a most precious Garment of Gold, and about two thousand Barons and Soldiers are clothed in the same Colour of Gold, though of Silk Stuff, and a Girdle wrought in Gold and Silver, which is given them, with a Pair of Shoes. Some wear Pearls and Garments of great Price, who are next to the Khan; and these Garments are not worn but on thirteen solemn Feasts, according to the thirteen Moons of the Year, all are then clothed like Kings. This Custom is also observed by the *Tartars*, that on the Birth-day of Great Khan, all the Kings, Princes, and Nobles, who are subject to his Dominions, should send Presents unto him, as to their Emperor; and they who desire to gain any Place of Dignity or Office of him, offer their Petitions unto twelve Barons appointed for that Purpose; and what they decree is all one as if the Emperor himself had answered them. All People also of what Faith or Sect soever, whether *Christians* or *Jews*, *Saracens*, or *Tartars*, and *Pagans*, are bound solemnly to call upon their Gods, for the Life, Safety, and Prosperity of the Great Khan.

On the first of *February*, which is the Beginning of the *Tartar* Year, the Great Khan, and all the *Tartars*, wherefoever they are, celebrate a very solemn Feast, and all, as well Men as Women, desire to be clothed in white Garments as a Token of good Luck; therefore, that Fortune may favour them all the Year, they wear white at the Beginning thereof. The Rulers of Cities, and Governors of Provinces, mindful of their Duty, send unto their Emperor this Day Presents of Gold and Silver, Pearls and precious Stones, many white Cloths, and other white Things, and many Horses of a white Colour. The rest of the *Tartars*, at the Beginning of the Year, send white Presents one to another. It is the Custom of those who bring Presents, if they can, of each, to present nine Times nine, as if they send Horses to present nine Nines, that is eighty one; and so of Gold, of Cloths, and other Things; that sometimes he hath, by this Reckoning, one hundred thousand Horses. Also, at this happy Season, all the Elephants which the Emperor hath, (five thousand in Number) are brought unto the Court, covered with Tapistry, in the Similitudes of divers Beasts and Fowls being portrayed therein, carrying upon their Shoulders two Chests full of gold and silver Vessels; many Camels are also brought, covered with fine silken Cloths, which bring other Things necessary for the Court.

* This Method of posting Guards and relieving them, was extremely ancient in the East, as appears from the Accounts given us by the *Greek* Writers of the Oeconomy in this respect of the *Persian* Emperors; and it is still practised by almost all the *Tartar* Princes, and particularly by the Great Mogul, as we shall have Occasion to shew in the second Volume.

* This Account agrees exactly with what is related from Authors of good Credit in Dr. *Hughes*'s most learned Treatise of the Religion of the ancient *Persians*, with respect to the Ceremonies observed on the Birth-day of the Emperor, and at the Beginning of the new Year. Indeed the Conformity is so great, that one might be tempted to believe there is a nearer Relation between the *Tartars* and the ancient *Persians*, than is commonly imagin'd; and I must confess, that I cannot, for my own part, help thinking that the Religion of the *Tartars* is very nearly the same with that of the old *Persians*; that is to say, I apprehend the Lamas of the one correspond with the Magi among the others.

On this Day, in the Morning, all the King's Captains, Barons, Schieters, Physicians, Astrologers, and Governors of Provinces, and Armies, and other Officers of the Empire, assemble in the great Hall before the King, and they who happen to have no Place there, for the Multitude stand in another Place, where they may see them, all being placed in their Order and Degree. One riseth, who is amongst their Clergy as a Prelate, and crieth with a loud Voice, *Bow down and adore*, and presently all do Reverence, bending down their Foreheads to the Earth; then he saith, *God preserve our Lord with long Life and Joy*; and all answer, *God grant*; then he saith, *God increase and advance his Empire, and preserve his Subjects in Peace, Concord, and Prosperity*; and all answer, *God grant*; and this they do four Times, then the Adoration being finished, the same Prelate goes to an Altar, richly adorned, on which is a red Table, whereon is written the Name of the Khan; and taking a Censer, and putting Spices therein, they perfume the Table and the Altar with great Reverence, in Honour of the Great Khan, and so return to their Places; after which are offered the Gifts of which we have spoken; and then the Tables are prepared, and a most solemn Dinner held, eating and drinking with great Joy with their Wives, in manner before described. And lastly, a tame Lion is brought to the King, which, lying at his Feet like a gentle Whelp, acknowledgeth and caresses his Lord.

In those three Months in which we said before, the Emperor resides in the City of *Cambalu*, viz. in *December*, *January*, and *February*, all the Hunters which the Emperor hath in all his Provinces round about the Province of *Cashy*, apply themselves to hunting, and bring all the larger wild Beasts, such as Stags, Bears, Roe-bucks, Wild Boars and Deer, to their Governors; who if they be distant from the Emperor's Court less than thirty Days Journey, send such Beasts as are taken, by Waggon or Ships, to the Emperor; having first bowelled them: But such as are forty Days distant from his Court, send only the Skins which are necessary for making of Armour. He hath many Leopards and Wolves for Hunting, and many Lions also greater than those which are in *Babylon*, in the Hair whereof certain little Beams appear of divers Colours, viz. white, black and red, and they are bred to catch Bears, Boars, Stags, Roe-bucks, wild Asses, and wild Oxen, and it is marvellous to see the Lion's Ferociness and Dexterity in this Sort of Hunting; two Lions are commonly carried in one Waggon when they go to hunt, and with them a Dog, with which they are tamed; and they carry them in this Fashion because of their Fury and Unruliness; and they must carry them contrary to the Wind, for else the Beasts would scent them and flee. He hath also many tame Eagles which are so taught, that they take Hares, Roe-bucks, Deer and Foxes; among which, some of them fear not to seize upon Wolves, and vex them so grievously, that without Labour and Danger they may be taken by them.

The Great Kan hath in his Court two which are Brethren, one called *Beyan*, the other *Ahngan*; called in the *Tartar* Language *Chirio*, that is, Masters of the Game; each of them hath the Command of ten thousand Men: They which are under one of them, are clothed in Red; the others in Sky Colour; when they hunt, these keep diverse Sorts of Dogs, to the Number of five thousand Mastiffs and others. In Hunting they go with their People one on the Right-hand, and the other on the Left; and the King and they take up so great a Length of the Plain, that from one End to the other is a Day's Journey, so that no Beast can escape them; and it is great Pleasure when the Khan goes in the midst to see the Dogs follow Hares, Bears, and all other wild Beasts. These Brethren are bound by Covenant from the Beginning of *October* to the End of *March*, to bring to the Court one Thousand Head of Beasts and Birds, besides Quails and Fishes, the best they can, in such Proportion.

* It may not be amiss to remind the Reader, that this Passage of our Author confirms what we have before met with in the Accounts of the *Arabian* Travels, and in the Relation of the Monk *Rubruquis*. It is also very clear from the whole of this Account, that the Notions generally received of the Barbarity, Stupidity, and Want of Genius among the *Tartars*, are not extremely well founded, but are rather to be ranked among those Prejudices which are the Effects of speaking or thinking without just Motives, or, in plain English, are the Effects of Ignorance.

17. The Month of *March* coming in, the Great Khan departeth from the City of *Cambalu*, and proceedeth Northward towards the Ocean, distant thence two Days Journey, bringing with him about ten thousand Falconers, who have Falcons, Hawks, Ger-Falcons, and other kind of Fowls of Prey, fit for Hawking. These Falcons discipline themselves by an hundred or two hundred in a Company, and the Birds that are taken for the most part are brought unto the King, who by reason of his Court, sitteth in a wooden House, which two Elephants carry covered with the Skins of Lions, and within hung with Cloth of Gold, having with him for his Recreation twelve choice Hawks, and twelve Courtiers; many Noblemen and Soldiers ride by, who guard the King's Person, who when they see Phœnicians, or Cranes, or other Birds flying in the Air, speak to the Falconers, who are near the King, and they signify the same unto the King, and uncover the King's House, and let their Falcons and Hawks fly, and the King sitting on his Bed beholds the Pastime of the Birds. Other ten thousand Men go also with the King, who in that Hawking run hither and thither by two and two, and mark whether the Falcons and Hawks fly that are cast from the Fall, that if need be they may help them, and these in the *Tartar* Language are called *Tasgal*, that is to say, Watchmen, or Marksmen, being skilful in a certain kind of Whistle, wherewith they call in the Hawks that are flown; nor is it needful that the Falconer, who let the Hawks fly, should follow them, seeing these of whom I now speak are busily employed in taking up the Hawks, and are careful, that by no means they are hurt or lost; and every flying Hawk carrieth a little Table of Silver on her Foot, figured with the Mark of her Master, or Falconer, that if she be lost, she may be restored to her Owner.

But if the Mark cannot be known, the Hawk is delivered to a certain Baron, who for this Cause is called *Balangazi*, to whom are brought all lost things (otherwise the Finder would be punished as a Thief) and to him Losers resort to enquire of things lost. He hath a most eminent Place noted by his Ensign, that in so great an Assembly of People he may always be known. While they are thus busied in Sporting and Hawking, they come into a certain great Plain called *Corzarmolin*, where the Tents of the King, and all the Courtiers are prepared, about ten thousand in Number.

The first is the Khan's Pavilion, under which ten thousand Soldiers stand, besides Barons and Noblemen, with the Door to the South, sustained by three Pillars, wrought with curious and excellent carved Work, and covered with the Skins of Lions, and other wild Beasts, which keep out Rain; but within the Walls of the Pavilion are covered with most costly Skins of Ermines and Sables, although in those Countries these Skins are accounted most precious, so that sometimes Skins worth two thousand Sultanas of Gold are scarce sufficient for one Pair of Vests. The *Tartars* call the Sable the *Queen of Furs*; the Cords wherewith these Pavilions are supported are of Silk. There are also other Pavilions erected, wherein the Wives, Sons and Concubines of the King remain. Further also the Falcons, Hawks, Ger-Falcons, and other Birds, which serve for Hawking, have their Tents; for there is so great a Multitude of Tents, that to them that come thither, it seems at a Distance, as if a famous City was built there.

The King remains all *March* in that Plain, and takes innumerable Beasts, and infinite Multitudes of Fowl; for no Man may at this time hunt in all the Provinces of that Kingdom, at the least within five Days Journey one Way, ten another, and fifteen a third Way, of the Khan's Court, nor keep an Hunting Dog, or an Hawk, from the Beginning of *March* until the Month of *October*. No Man is permitted to use any Device or Engine whatsoever to take Stags, Deer, Roe-bucks, or Hares, lest he should hinder their Breed; and hence it is, that there is such Plenty of Game. It is incredible what Multitudes of People, Men-

chants, and Merchandises of all sorts are seen in *Cambalu*. The Money of the Great Khan is not made of Gold, or Silver, or other Metal; but they take the middle Bark from the Mulberry-tree, and this they make firm, and cut into divers round Pieces, great and little, and imprint the King's Mark thereon; of this Paper-Money therefore the Emperor causeth an huge Mass to be made in the City of *Cambalu*, which sufficeth for the whole Empire, and no Man under Pain of Death may coin any other, or spend any other Money, or refuse it in all his Kingdoms and Countries, nor any coming from another Kingdom dare spend any other Money in the Empire of the Great Khan. Hence it follows, that Merchants often coming from remote Countries unto the City of *Cambalu*, bring with them Gold, Silver, Pearl, and Precious Stones, and receive the King's Money for them; and because this Money is not received in their Country, they change it again, in the Empire of the Great Khan, for Merchandize, which they carry away with them. He also payeth Stipends to his Officers, and Army, in the abovementioned Money. And lastly, whatever thing he needs in his Court, he buyeth with this Money. Wherefore there is not a King to be found in the World, who exceedeth him in Treasure, not expended on the Mint, as elsewhere.

The Great Khan hath twelve Barons, as is said, before which are the Council of War, who dispose of martial Affairs, and the exalting or disgracing of Captains and Soldiers. Their Office is called *Tbai*, that is, the High Court, because they have none above them but the Khan. Other twelve Barons are appointed Counsellors for the four-and-thirty Provinces, which have a fair Palace in *Cambalu*, in which is for every Province a Judge, and many Notaries. These have Power to chuse Governors of the said Provinces, and present their Names to the Khan, who confirms them. These also have the Charge of the Treasure to collect and dispense the same; their Office is called *Singb*, that is, the second Court, subject to none but the Khan, yet reputed less noble than the former, that being a military Establishment.

There are many publick Roads from the City of *Cambalu*, which conduct to the neighbouring Provinces, and in every one of them, at the End of five and twenty, or thirty Miles, are Lodgings or Inns built called *Lambs*, that is, Post-houses, with large and fair Courts, Chambers furnished with Beds, and other Provisions, every way fit to entertain great Men, nay, even to lodge a King. The Provisions are laid in from the Country adjacent; there are about four hundred Horses, which are in Readiness for Messengers and Embassadors, who there leave their tired Horses, and take fresh; and in mountainous Places, where are no Villages, he sends People to inhabit, about ten thousand at a Place, where these Lambs or Post-Houses are built, and they cultivating the Ground for their Provisions. These excellent Regulations continue unto the utmost Limits of the Empire, so that in the publick Way, throughout the whole Empire, about ten thousand of the King's Inns are found; and the Number of the Horses appointed for the Service of the Messengers in these Inns, are more than two hundred thousand, a thing almost incredible, hence it is that in a little while, with Change of Men and Horse, Intelligence comes without Stop to the Court; and if any wonder how so many Men and Beasts should be provided for, he must consider, that the *Moors* and *Gentiles* have many Women, and by them abundance of Children, some having thirty Sons, which follow them, armed; and for Victuals, they sow three kinds of Seeds, Rice, Panike, and Millet, which yield an hundred Fold. They make no Bread, but boil these with Milk, or Flesh. Wheat will not so increase with them, nor suffer they any Ground, which will bear, to lie untill'd; and the Cattle continually increase, so that each of them carries with him six, eight, or more Horses into the Field, for his own Person. The Horses are employed by Turns, so that of the four hundred, two hundred are in the Stables ready, the other two hundred at Grass, each a Month at a Time. Their Cities also

that are adjoining to Rivers or Lakes are appointed to have Ferry-boats in Readiness for the Posts, and Cities on the Borders of Deserts are directed to have Horses and Provisions, for the Use of such as pass through those Deserts; but have a reasonable Allowance for this Service of the Khan. In Cases of great Consequence, the Post rides with a Ger-Falcon Table, and is equipped so, that he will ride two hundred Miles in a Day, or two hundred and fifty sometimes; also they ride all Night, Foot-Posts running by them with Lights, if the Moon does not shine.

They found a Horn, that the fresh Horses may be brought forth for them to mount presently, and having their Bellies and Heads girdled, they run as fast as the Horse can go; and those which are able to endure this excessive riding, are on that Account in great Reputation among them, who admire nothing so much as Horsemanship. There are also between these Inns other Habitations, three or four Miles distant one from another, in which there are a few Houses, where Foot-Posts live, having each of them his Girdle hung full of still sounding Bells. These keep themselves always ready, and as often as the Khan's Letters are sent to them, convey them speedily to the Posts at the next Village, who, hearing the Sound of the Foot-Post coming, when at a Distance, expect him, and receive his Letters, presently carry them to the next Watch; and so the Letters passing through several Hands, are conveyed, without Delay, to the Place whither they ought to come: And it often happens, that the King by this learns News, or receives new Fruits from a Place, ten Days Journey Distance in two Days. As for instance, Fruits growing at *Cambalu*, in the Morning, by the next Day at Night are at *Xandu*; but all the beforementioned Posts are free from all Tribute, and receive a great Remuneration from their Labours from the King's Rent-gatherers besides. Some also are appointed to examine the Posts Monthly, and to punish their Faults, if they are fairly convicted.

He sends yearly to the divers Provinces of his Empire, to enquire whether any Prejudice be done to the Corn, by Tempets, Locusts, Worms, or any other Means; and when he hath Notice given him, that any Province or City hath sustained any Damage, he remits his Tribute to that People for that Year, and sends Grain for Victual and for Seed out of his own Granaries; for in a time of great Plenty the King buys abundance of Corn, and keeps it with great Care by his Officers, three or four Years in Granaries, that when there happens to be a Scarcity of Corn in one Country, that Defect may be supplied out of the King's Store-houses in another. He selleth his Grain for a fourth Part of the common Price, and always provides, that his Store-houses are kept fully supplied. Likewise when any Murrain lights among Cattle, he sends them other Cattle, which he has for Teeths in other Provinces; and if a Thunderbolt has stricken any Beast of any Herd or Flock, he receives no Tribute from it for three Years, let the Herd be ever so great; neither will he receive any Custom of a Thunder-stricken Sheep, as thinking God is angry with them that are so stricken.

Likewise that Travellers may discern all Places able to bear Trees, he hath caused Trees to be planted, at a convenient Distance one from another, near the principal Roads, and in the sandy and desert Places he hath caused Stones and Pillars to be erected for that Purpose, and Officers are appointed to look to these things. He plants Trees the rather because his Astrologers tell him, that planting Trees lengthens the Life of Man. They make excellent Drink in the Province of *Catbay*, of Rice, and divers Spices, which in the Taste thereof excels the Flavour even of Wine; and they who drink more greedily thereof than is fit, or the Nature of the Drinker can bear, become sooner intoxicated than if they had drank Wine.

Through the whole Province of *Catbay*, certain black Stones are dug out of the Mountains, which put into the Fire, burn like Wood, and being kindled, preserve a long Time, and if they be kindled in the Evening, they keep Fire all the Night; and many use those Stones,

* The Reader will easily discern, that what our Author speaks of here with so much Wonder, is, in truth, nothing more than a Coal Mine, which might appear very strange to him, who very probably had never seen or heard of any such thing; but some of the Millionaires seem to be inexcusable, who have dressed up this Matter with such pompous Expressions, as might induce unwary Readers to believe, that the *Chinese* dug Fire out of the Earth, and that they laid it up in Cellars or Vaults; whereas after all, there is nothing stranger in their digging and keeping Coals there, than what we see practis'd every Day in our own Country, and very probably, if we were to examine other Wonders that are told us, as closely and severely as they deserve, we might be able to discover that they were rather rendered marvellous by the Ignorance of Relators, than by any thing supernatural in themselves.

because that though they have plenty of Wood, yet is there such frequent use of Stones and Laths, that the Wood would not serve.

It is not amiss, having spoken of his Provision abroad, to mention his Care for the Poor of *Cambalu*. When he hears of any honourable Family decayed by Misfortune, or of any which cannot work, and have no Subsistence, he gives to such Families the whole Year's Expences, each Head of such Families going to the Officer for that Purpose, and shewing their Bill of Allowance, receive Provisions accordingly. There is a Place set apart for those Officers; they are provided also of Garments for Winter and for Summer. The *Khan* having the Tenths of all Wool, Silk and Hemp, which he causes to be made into Cloaths, in a House for that Purpose appointed; for all Trades are bound one Day in the Week to work for him. He provides also Apparel for his Armies, and in every City causes Cloth to be made of his Tythe Wool. You must understand, that the *Tartars*, according to their ancient Customs, bestowed no Alms, but rather upbraided those that were in Necessity, as hated of God; but the Idolaters, especially those *Bachis*, have propounded it as a good Work acceptable unto God, and have taught him to be thus bountiful; so that in his Court, Bread is never denied to any who ask it, and there is no Day in which is not given away twenty thousand Crowns in Rice, Millet and Panike; whence he is esteemed as a God by his Subjects.

There are in *Cambalu*, Christians, *Saracens* and *Catayans*, about five thousand Astrologers and Diviners, which the Great *Khan* provideth yearly in Food and Raiment, as he doth those Poor above-said. These have an Astrolable, in which are marked the Signs of the Planets, the Hours and Points of all the Year. Herein all those Astrologers, each Religion apart, view the Course of the Year according to every Moon, observing the Disposition of the Weather, referring always to God to do more or less after his own Pleasure. They write also upon certain Squares they call *Tarumi*, the things which are to come that Year, which they sell to those that will buy them, and such as speak most Truth are most honoured. If any intend any great Work, or to go a far Journey, and will know the Event before-hand, he has recourse to these Astrologers, to see it with their Eyes in the Heavens, which they pretend to do, comparing the present Constellation with that of his Birth, which they demand of him; so foretelling him the Good or Evil. The *Tartars* reckon the Computation of their Years by Twelves, the first signified by a Lion, the second by an Ox, the third by a Dragon, the fourth by a Dog, and so through the whole Twelve; so that if it be demanded of a Man when he was born, he will answer, such a Point of such an Hour of such a Day, in the Year Lion. This their Fathers exactly set down in a Book, and when the Twelve is compleat, they go over the same again.

Of their Religion, we have said, that they are Idolaters, and for their Gods, have a Table set aloft in the Wall of their Chamber, on which is written a Name representing the High God of Heaven, and there every Day with a Censer of Incense, they adore it in this Manner; they lift up their Hands aloft, and strike their Teeth thrice, praying it to give them a good Understanding, and Health, and desire thereof nothing else. Besides, on the Ground they have another Statue called *Natigai*; the God of earthly things, with his Wife and Children, whom likewise they worship with Incense, striking or gnashing the Teeth, and lifting up their Hands, and desire thereof Temperature of the Air, Fruits of the Earth, Children, and the like. They hold the Soul to be immortal, and that when a Man dies, it enters into another Body, better or worse, according to the Merits of the former Life; as of a poor Man to become a Gentleman, and after, a Prince or Lord, and so higher, till it be absorbed in God; and if it

have ill deserved, to be a poorer Man, after a Dog, always descending to the lowest Rank of *Bafenefs*. They have a comely Speech, salute cheerfully, and honestly, have a graceful Carriage, and feed cleanly. They bear great Reverence to their Parents, and if any be undutiful, or regardless of their Necessity, there is a publick Tribunal assigned for this Particular to punish ungrateful or disobedient Children: Prisoners are released at three Years end, and marked in the Check, that they may be known for Malefactors.

The Barons and People which go to the Grand *Khan*, observe these Rights, first, within half a Mile of the Place where the *Khan* is, all is still and quiet, without Noise or any loud Speech; that every Baron carries continually a little Vessel to spit in, after which he covers it, none daring to spit in the Hall: They have furr Bulkins of white Leather, which they put on when they enter the Hall, putting off the furrer, and giving them to the Servants, left they should foul the Carpets.

18. Ten Miles off *Cambalu* is a certain great River named *Pulsangan*, emptying itself into the Ocean, by which many Ships with much Merchandise ascend; and in that Place there is a very fair Bridge, all of serpentine Stone, curiously wrought, containing three hundred Paces in Length, and eight in Breadth, so broad that ten Men may ride a-breast; on each Side, it is secured with a Wall of Marble, and Pillars set in a Row, and in the Height of this Ascent is a great and high Pillar, at the Feet whereof is a great Lion, and on the Top another, and so quite through the Bridge: One Pace and a half Distance are Pillars with Lions on the Top, and a fair Wall with wrought marble Work betwixt, to keep Men from falling. Having passed over the River and Bridge, and proceeding thirty Miles westward (in which Palaces are continually seen, with Vineyards and fertile Fields) you come to the City *Gouza*, both fair and great, having many Monasteries of Idols. Cloth of Gold and Silk are made there, and the purest and finest Cambricks or Lawns; and many common Inns for Strangers or Travellers are found in that City. The Citizens are Artificers and Merchants, A Mile without this City the Way parteth, one leading West, the other South-East; that to the West leadeth through the Province of *Catbey*, but the other towards the Country of *Mangi*, from the City of *Gozza* to the Kingdom of *Tainfu*.

You ride ten Days through *Catbey*, always finding many fair Cities, well furnished with Vineyards, and tilled Fields, from whence Wine is carried to *Catbey*, where there is none: There are many Mulberry-trees for Silkworms, the People civil, and Cities very numerous and populous. *Tainfu* is the Name of the Kingdom, and of the chief City, which is great and fair, hath much Trade, with Store of Ammunition fit for the *Khan's* Armies. The Wine about this City serveth the whole Province. Seven Days further westward, is a pleasant Country, beautified with many Castles and Cities, in which also there is great Trade in different Merchandize carried on. After which you come to a City very great, named *Pianfu*, in which there is vast abundance of Silk and much Trade. Westward from *Pianfu*, stands a very pleasant Castle, named *Thaigin*, anciently built by a King called *Dor*; in it is a spacious Palace, wherein is a fine Hall, in which are painted all the famous Kings which have reigned there, and it is a fair Spectacle. Of this King *Dor*, they say, he was potent, and was attended only by young Dancks, of which he had many in his Court. These also, when he had a Mind to take his Pleasure, carried him in a small light Chariot through the Castle, which was so furnished by Art and Nature, that the Governor thereof fear'd none, no not *Uman* his Lord, against whom he rebelled.

But seven Men professing Fidelity and Service to *Dor*, took him at a Disadvantage in hunting, and brought him

* The *Tartarian* Cycle was a very good Contrivance, and as such, has been not only preserv'd amongst them, but spread itself also into other Countries; we shall hereafter have Occasion to explain it more at large; at present it shall suffice to observe, that something of the same kind was anciently used in the northern Nations of *Europe*, and is still practis'd among the Savages in some Parts of *America*.

† It must be acknowledged, that the Description here given by our Author is a little dark and perplex'd, and that, at the same time, it is not only Matter to settle the Places he mentions; but, on the other hand, it must be considered, that this is the first Account that was received here in Europe of the great Country of *Cheoa*, and that this Account was written by a Man little, if at all acquainted with the Scenes, and who arriv'd at nothing more than transcribing from his Note book, the Names of Places and Provinces, these Distances from each other, with such other Circumstances relating to them as at so great a Distance of Time he was able to recollect.

Prisoner to Presbyter *John*, or *Umcan*, who put him on vile Cloaths, and appointed him to keep his Cattle, and set over him a strong Guard, till two Years were ended; after which he commanded him to be brought before him, and being dressed in princely Apparel, he giving him his Pardon, after a sharp Admonition, sent him well attended to the Repossession of his Kingdom. About twenty Miles beyond the Castle *Tbaigin* is the River *Caramaran*, which, by reason of the exceeding Breadth and Depth thereof, hath no Bridge over it in all the Space from thence, till it floweth to the Ocean. On the Shore thereof are many Cities and Castles built, wherein great Trade is carried on. This Country abounds with Ginger, Silk, and Fowl, especially Pheasants, so that three of them are bought for a Venetian Groat. There grow Reeds in vast Plenty, so thick that some are a Foot, and others a Foot and a half in Compass, which are applied to many Uses. Passing this River, after two Days Journey, is the famous City called *Carianfu*, where many Cloths of Gold and Silk are made. Here grows Ginger, Galingale, Spike, and many Spices. The People are Idolaters.

Proceeding seven Days Journey westward, many Cities and Towns, lovely Fields and Gardens are found, and every where Mulberries for Silk-worms. As for the People, they are mostly Idolaters; but there are also *Christians*, *Turks*, *Nobrians*, and some *Saracens*. There is a vast Abundance here of wild Beasts and Fowl. If you proceed seven Days Journey farther, you shall come to a certain great City, named *Quanzanfu*, which is the chief City of the Kingdom, in which have reigned many famous Kings; and, at this Day, the Son of the Great Khan, called *Mangalu*, hath the Command thereof. That Country yields great Plenty of Silk, Cloth of Gold, and all other Things necessary for furnishing an Army, and for the Preservation of Man's Life. The Inhabitants worship Idols, and there are some *Christians*, *Turks*, and *Saracens*. Five Miles without this City, standeth the Palace of *Mangalu*, seated in a Plain, where are many Springs, Rivulets, and Places of Game. There is a high Wall encompassing a Park of five Miles, where are all Sorts of wild Beasts and Fowls. In the Midst is an excellent Palace, having many Halls and Chambers, great and fair, all painted with Gold and Azure, and numberless Statues adorning it. The King, with his Courtiers, delights himself in hunting the wild Beasts, and taking of Fowl, and following his Father's Example in Justice and Equity, is much beloved of his People.

Proceeding three Days Journey westward from the said Palace, through a very beautiful Plain, where many Cities and Castles are, which abound with silk Merchandize and Manufactures, you come to a Country, where in the Mountains and Valleys are frequent Habitations, and many Villages of the Province of *Chunbian*. The Inhabitants, as to Religion, are Idolaters; and as to Employment, Husbandmen. Also in that Country they hunt Lions, Bears, Stags, Roe-bucks, Deer, and Wolves. The Plain is two Days Journey over, and the Country is about twenty Days Journey westward, well inhabited, being finely diversified into Mountains, Valleys, and Woods. After these twenty Days, towards the West, there lies a Province called *Akbaluc Mangi*, that is, the *White City*, of the Borders of *Mangi*, which is well peopled. This Province, for two Days Journey, hath a Plain, in which are an infinite Number of Villages: Beyond these lie Mountains, Valleys, and Woods, all well inhabited. It hath Plenty of wild Beasts, and of those Creatures that yield Musk. In this Province Ginger grows in great Plenty, as also Corn, and Rice.

After twenty Days Journey through those Hills, is a Plain, and a Province in the Confines of *Mangi*, named *Sindufu*. The chief City, hath the same Name, and is very great, and exceeding rich, being twenty Miles in Circuit. It hath had many rich and mighty Kings; but an old King dying, left three Sons Successors in the Kingdom, who divided the City into three Parts, compassing every Part with their proper Walls; all which, notwithstanding, were contained within the former Wall; but the Great Khan subjected nevertheless that City and Kingdom. Tho' this City run many Rivers, and many Places round about, some half a Mile over, some two hundred Paces,

very deep; on them are many Bridges of Stone, very fair, eight Paces broad, set on both Sides with Marble Pillars, which bear up a Timber Frame that covers the Bridge, each Bridge having Streets and Shops thereupon. When the Rivers have passed through the City, they become one great River, called *Quian*, which runs one hundred Days Journey hence to the Ocean. Near these Rivers are many Cities and Castles, and on them innumerable Ships for Merchandize. Proceeding four Days Journey farther, thro' a very fine Plain, many Cities, Castles, and Villages are found, in which five Launs extend in beautiful Order. There are also many wild Beasts there. Beyond the Plain, which we have now mentioned, is the wide Province of *Thebet*, which the Great Khan vanquished and wasted; for in it lie many Cities destroyed, and Castles overthrown, by the Space of twenty Days Journey; and because it is become a Wilderness, wanting Inhabitants, wild Beasts and Lions are there increased excessively, and it is requisite therefore that Travellers carry Victuals with them. Very large Cane grows in this Country, ten Paces in Length, and three Palms in Thickness, and as much from Knot to Knot. When Travellers therefore will rest at Night secure from Beasts, they take great Bundles of the greener Reeds, and putting Fire under, kindle them, which make such a Crackling, and so great a Noise, that it may be heard two Miles off; which terrible Sound the wild Beasts hearing, flee away, but it has sometimes happened, that Horses and other Beasts, which Merchants use for their Journey, hearing this Noise, and Crackling, have grown also much afraid, and betaking themselves to Flight, have escaped from their Masters; and therefore wise Travellers binding their Feet together, detain them in their proper Places.

19. Their twenty Days Journey ended, having passed over the Province of *Thebet*, we met with Cities, and many Villages, in which, through the Blindness of Idolatry, a wicked Custom is used; for no Man there marieth a Wife that is a Virgin; whereupon, when Travellers and Strangers, coming from other Places, pass through this Country, and pitch their Pavilions, the Women of that Place having marriageable Daughters, bring them unto Strangers, desiring them to take them, and enjoy their Company as long as they remain there. Thus the handsomest are chosen, and the rest return home sorrowful, and when they depart, they are not suffered to carry any away with them, but faithfully restore them to their Parents. The Maiden also requireth some Toy, or small Present, of him who hath deslowered her, which she may shew, as an Argument and Proof of her Condition; and she that hath been loved and abused of most Men, and shall have many such Favours and Toys to shew to her Wooers, is accounted more noble, and may on that Account be advantageously married; and when the world appear most honourably dressed, she hangs all her Lover's Favours about her Neck, and the more acceptable she was to many, so much the more Honour she receives from her Countrymen. But when they are once married, they are no more suffered to converse with strange Men, and the Men of this Country are very cautious never to offend one another in this Matter. They are Idolaters, and cruel, thinking it no Sin if they rob, and exercise Theft. They live by Hunting and the Fruits of the Earth: Many Beasts also are found with them, yielding Musk, called in this Country *Gadderi*. They have a Language of their own, and have no Money, not so much as the Paper-Money of the Khan, but use Corals for Money, and are clothed with the Skin of Beasts, or coarse Hemp. This Country belongs to the Province of *Thebet*, for *Thebet* is a very large Province, and has been some time divided into eight Kingdoms, having many Cities and Towns, with Mountains, Lakes and Rivers, where Gold is found. The Women wear Coral about their Necks, and hang it about the Necks of their Idols, as a precious thing. In this Country there are very large Dogs, as big as Asses, which take wild Beasts, especially wild Oxen, called *Boyamini*.

There are in this Province many sorts of Spices, which are never brought into these Parts. This *Thebet* is (as all the former Provinces) subject to the Khan. On the West of the Province of *Thebet* bordereth the Province of *Caindu*, which was formerly governed by her own Kings, now by the

the Governors of the Khan, by the West, you must not understand, that the Countries are in the West; but that we, departing from those Parts, which are betwixt the East and North-east, came hither Westward, and therefore reckon them Westward. The People are Idolaters, have many Cities, the chief called by the Name of the Province, *Caindu*, built on the Frontiers of the Province. There is a large Salt Lake, in which are abundance of Pearls, white, but not round, so many, that in point of Price they would become little Worth, if they were suffered to be carried away at Mens Pleasures. It is therefore provided, upon Pain of Death, that none should presume to fish for Pearl in this Lake, without the Licence of the Great Khan. There is also a Mountain, in which is found a Mine of Turquoise Stones, the digging of which is restrained by the like Licence. Many Gadders are also in this Province, which yield Musk. That Lake also, which breeds Pearl in such Plenty, abounds with Fish, and the whole Country is full of wild Beasts, that is to say, of Lions, Bears, Stags, Deer, Ounces, Roe-bucks, and divers kinds of Birds. Cloves are found there in great Plenty, which are gathered from small Trees, which have Boughs and Leaves like the Bay-tree, but somewhat longer, and stiffer, white Flowers, and brittle, as are the Cloves, and when they are ripe, they are black and dusky. Ginger, Cinamon, and several other Spices, grow there in great Plenty, which are not brought into our Countries. Wine, however, though plentiful with us, groweth not in it, but instead thereof, they make a most excellent Drink, of Corn, Rice, and divers Spices.

The Inhabitants of this Country worship Idols, to which they are so devoted, that they think they deserve their Favour, if they prostitute their Wives, Sisters and Daughters, to be abused by Travellers; for when any Stranger cometh amongst them, every Master of a House seeketh to give him Entertainment, and leaving the Females and House to the Strangers, will not return until they depart, which he doth for the Glory of his Idols, hoping they will be more gracious to him. Certain Sprigs of Gold are their Money, using Weights, and according to the Weight of the Sprig, is the Value of the Money, and this Money is their larger sort of Money without Stamp. They have also a lesser, which they make after this manner. They boil Salt in a Caldron for about an Hour, and of this, being congealed, they make little Lumps like Two-penny Loaves, which being solid, is signed with the Prince's Stamp, and they make vast Profit thereof in Places remote from Cities, which have Store of Musk, and Gold, and want Chapmen. These barter their Gold for Salt, to use with their Meats.

Leaving this Province, they proceed fifteen Days Journey further, and in that Space meet with Cattles, and many Villages, whose Inhabitants have the same Customs that the Province of *Caindu* hath, and at length they come unto a River called *Brius*, by which the Province of *Caindu* is bounded. In this River Gold is found in great Plenty, which they call *Di Patola*, washed in Vessels to cleanse it from the Sand and Earth. On the Banks thereof Cinamon grows in great Abundance. This River falls directly into the Ocean. Having passed over the River *Brius*, they come Westward to the Province *Carazan*, which contains seven Kingdoms. It is subject to the Great Khan, whose Son, named *Sentemur*, is made Vice-King of that Kingdom, and is a young Prince, rich, wife, and just.

The Inhabitants thereof are Idolaters; you ride five Days Journey through it, and find it all well peopled: They live on their Beasts and Fruits. The Country breeds excellent Horses, and it hath a peculiar and difficult Language. Having finished these five Days Journey, you come to the chief City called *Jaci*, which is both great and famous, hath in it many Merchants and Artificers, and many sorts of People, Idolaters, *Christians*, *Nestorians*, and *Saracens*; but the greatest Part of the Inhabitants are Idolaters. It hath Corn and Rice, notwithstanding which they eat no Bread of Corn, because it is not wholesome, but they make Bread of Rice; they make Drink also of it, and several Spices, which is very pleasant; they use white Porcelaine instead of Money, and for Ornaments, Shells which are found at Sea. Much Salt is made in this City of the Water of Salt Wells, from whence the Vice-King hath great

Profit. The Men of this Country care not if any Man come to their Wives, so they give their Consent. There is also a Lake there very full of Fish, containing an hundred Miles in Compass. These Men eat raw Fish of Hens, Beef, Mutton, and Buffaloes, but prepared after this Manner: They first cut it into small Pieces, and after season it with excellent Spices; but the poorer sort shred it, and lay it in Garlic Sauce, and eat it as we do boiled Meat. Departing from the City of *Jaci*, having travelled ten Days Journey Westward, we came to the Province called, as the chief City, *Carazan*, which *Cogain*, Son of *Cublai*, governeth. The Rivers there yield great Quantities of washed Gold, and also that which is solid, and on the Mountains they find Gold in the Vein, and they give one Pound of Gold for six of Silver. They spend Porcelaine for Money brought thither from *India*.

The Inhabitants are Idolaters; very great Serpents are bred in this Country, some of which are ten Paces in Length, and in Thickness ten Spans. They have two little Feet before near the Head, with three Talons or Claws like Lions, and the Eyes bigger than a Loaf, shining very bright. They have their Mouths and Jaws for very wide, that they are able to swallow a Man, great and sharp Teeth; nor is there any Man, or other living Creature, which can behold these Serpents without Terror. There are also some less, of eight, or six, some of five Paces long, which are taken after this Manner: In the Day-time they use to lie hid, by reason of the Heat, in Holes, out of which they go by Night to seek their Prey, and devour whatsoever they get, Lions, Wolves, as well as other Beasts, and then go to seek Water, leaving such a Track thro' their Weight in the Sands, as if a Piece of Timber had been drawn there; whereupon the Hunters follow under the Sands great Iron Spikes, in their usual Traces, whereby they are wounded and slain. The Crows presently proclaim the Serpent's Fate, and by their Cries, invite the Hunters, which come and flea him, taking out his Gall, which is used for divers Medicines, amongst other things, for the biting of mad Dogs, a Penny-weight given in Wine, and for Women in Travel, for Carbuncles, and other Distempers, and they sell the Fitch dear, as being exceeding delicate.

There are stout Horses bred in this Province, which by their Merchants are carried into *India*. They commonly take one Bone out of the Tail, lest he should bend his Tail hither and thither, and esteem it more comely, that it hang downright. They use long Sturpps as the *French*, which the *Tartars* and other Nations, for their Shooting, use short, because when they shoot they rise up. They use Targets and Armour in the Wars, made of the Plates of Buffaloes; they have Lancets and Cross-bows, and poison all their Arrows. Some of them, who are Villains, are said to carry Poison about them continually, that if they be taken they may suddenly swallow it, and to dying at once, prevent Torture; for which Cause the great Lords have Dogs Dung ready, which they force them to swallow, and that makes them vomit the Poison. Before the Great Khan subjected them, they used when any Stranger, which seemed of good Presence and Parts, lodged with them, to kill him by Night, supposing that those good Parts of that Man would abide afterwards in that House; and this silly Notion has proved the Death of many.

Travelling forwards from the Province of *Carazan*, after five Days Journey Westward, is the Province of *Carandun*, which also is subject to the Great Khan: The chief City thereof is called *Voiciam*, the Inhabitants thereof use Porcelaine, and weighed Pieces of Gold instead of Money; but in that Country, and many other lying round about, Silver Mines are not found, and they give an ounce of Gold for five Ounces of Silver, and according to this Exchange, great Gain is made. The Men and Women in that Country cover their Teeth with thin Plates of Gold, which they do fit to them, that the Teeth themselves seem, as they were set in those Plates. The Men about their Arms and Legs make Lalls, pricking the Places with Needles, and putting therein a black indelible Tincture; and these Lalls or Marks are esteemed with them as a Mark of great Gallantry. They give their Minds to nothing but Riding, Hunting, Hawking, and the Exercise of Arms, leaving the Household

Cares to the Women, who are assisted therein by Slaves, which they buy, or take in War. When a Woman is once delivered, she forsakes the Bed, washes the Child, and dresses it, and then the Husband lizeth down, and keeps the Child with him forty Days, not suffering it to depart; is visited all that time by Friends and Neighbours, to cheer and comfort him. The Woman looks to the House, and carries the Husband his Broths to the Bed, and gives Suck to the Child by him. Their Wine is made of Rice and Spice; their ordinary Food is Rice, and raw Flesh, dressed as before mentioned. In this Province there are no other Idols, save that every Family adoreth the oldest Man in the House, of whom they say, call themselves, and all they have; they dwell for the most part in wild and mountainous Places, but Foreigners come not to those Mountains, because the Air would kill them, being in Summer very corrupt.

They have no Letters, but make their Contracts and Obligations by Tallies of Wood, one half whereof one keepeth, and the other the other, which being afterwards paid, the Tally is destroyed. There are no Physicians in this Province, nor in *Caindu*, *Vociam*, and *Caraiam*; but when any is sick, they call the Magicians, or Idol Priests together, and the sick Person declares his Disease unto them; then the Magicians dance, and sound certain Instruments, and bellow forth Songs, in Honour of their Gods, till at length the Devil entereth into one of them, skipping and playing in the Dance. Then leaving the Dance, they consult with him that is possessed, for what Cause that Disease happened unto him, and what is to be done for his Recovery. The Devil answereth by him, because he hath done this or that, or because he hath offended this or that God, therefore he fell into this Disease. Then the Magicians intreat that God to pardon him this Offence, promising, that if the Sick Person recovers, he shall offer a Sacrifice of his own Blood; but if the Devil, or the Priest, think the Patient to be sick of such a Disease that he cannot be freed from the same, he useth to answer; This Man hath so grievously offended that God, that he cannot by any Sacrifices be appeased; but if he think he shall recover, he commandeth to offer so many Rams, having black Heads, and to prepare so many Magicians with their Wives, by them to offer Sacrifices, and that God may then be appeased towards him; which being heard, his Kinsmen quickly cause those things to be done which the Devil commanded. They kill Rams, and sprinkle their Blood in the Air, and the Magicians assembled, light great Candles, and perfume the whole House with Incense, making great Smoke of Lignum Aloes, and sprinkle the Broth of the Flesh in the Air, with the Potion made of Spices; all which being duly performed, they skip about again, and dance in Honour of that Idol, which is supposed to have been favourable to the Sick, singing and making a horrible Noise with their Voices. These things being performed, they ask the possessed again, whether the Idol be pleased? And if he answer no, they presently prepare themselves to fulfil any other Command of his; but if he answer that he is satisfied, they sit down at the Table, and eat the Flesh offered to the Idol with great Joy, and drink the Liquors, and Dinner being ended, and the Magicians paid, every one returns to his own Home; and when the Sick hath thus escaped the Disease, thro' the Providence of God, and hath been restored to Health, they attribute it to the Idol, to whom they sacrificed; but if he die, then they say, the Idol was defrauded, and that some of the Sacrificers tasted thereof first: This is not done to all, but by the richer, the Devil, or his Priests, in his Name, imposing on their Blindness.

The Great Khan, *A. D.* 1272, sent an Army into the Kingdom of *Vociam* and *Gurazau*, to reduce it, his Forces

being to the Number of twelve thousand veteran Troops, under the Conduct of a *Neshorian*, an experienced Officer. As soon as the King of *Mien* and King of *Bengala* heard of their coming, assembling their Forces, they joined Horse and Foot together about three score Thousand, and about a thousand Elephants bearing Castles, and in every Castle twelve or sixteen armed Men were placed; with this Army the King of *Mien* marched speedily towards the City of *Vociam*, where the Army of the *Tartars* lay encamped. *Neshardin*, however, marched forth with invincible Courage to fight the Enemy, and drawing near them, encamped near a certain great Wood, knowing that the Elephants with their Towers on their Backs were not able to enter into the Wood. Then the King of *Mien* seeing this, resolved to meet them; but the *Tartarian* Horse perceiving the Elephants which were placed in the Front of the Battle, were terrified, so that they could not by any Means be brought to charge the Elephants; the *Tartars* therefore were compelled to alight from their Horses, and tying them to the Trees, they came to fight on Foot against those Beasts, and very wisely shot a Multitude of Arrows against the Elephants, which not able to endure the Wounds received by the Arrows, betook themselves to flight, and went all to the next Wood, brake their Castles, and overthrew the armed Men sitting in them; which the *Tartars* seeing, run to their Horses, and getting upon them, furiously fell upon the King's Army with great Violence, and many of either Army fell. At length the King of *Mien* being put to Flight, left the Victory to the *Tartars*, who hastened to the Wood, and taking many Captives, used their Help to seize two hundred of these Elephants, and ever since the Great Khan hath used Elephants in his Army, to which before he was not accustomed: Hereupon also he vanquished the Countries of the King of *Mien* and *Bengala*, and subjected them to his Empire.

Departing from the Province of *Caraiam*, there is a great Desert, which continueth two Days and a half, nor is there any Habitation there, but a very large Plain, in which three Days in the Week Multitudes meet together for Trading. Many descend from the great Mountains of that Country, bringing Gold with them to change for Silver, that is, giving an Ounce of Gold for five Ounces of Silver, and therefore many Merchants from foreign Nations come thither, who bring Silver and carry Gold away, and bring thither Merchandize to sell to these People; for to those high Mountains in which they who gather Gold in that Country dwell, no Stranger can come, because the Way is intricate and unpassable. When you are past that Plain, going toward the South, *Mein* bordereth upon *India*, and the Distance is about fifteen Days Journey, through Places uninhabited, and woody, in which innumerable Elephants, Unicorns, and other wild Beasts wander.

After that fifteen Days Journey, you come to *Mein*, a great and noble City, the Head of the Kingdom, and subject to the Great Khan. The Inhabitants thereof have a peculiar Language, and are idolaters. In this City there was a King, who being ready to die, commanded that near to his Sepulchre there should be erected two Towers, in the Form of Pyramids, one at the Head, the other at the Feet, both of Marble, of the Height of ten Fathom. On the Top was placed a round Ball, he caused one to be covered all over with Gold, a Finger thick, and the other with Silver; and upon the Top, round about the Balls, many little gold and silver Bells were hanged, which at the blowing of the Wind, gave a certain shrill and pleasant Sound. The Monument, or Sepulchre, was also covered with Plates, partly of Gold, partly of Silver. He commanded this to be made in Honour of his Soul, and that

¹ The great Conquests made by the *Tartars* in the East, have so overturned all Monuments of Antiquity among the Nations they have subdued, that it were not for these Travels of *Marco Polo*, we should be at a Loss for any of the Particulars relating to them. The *Chinese* Historians indeed, very fully confirm the Truth of what he has delivered, but in general Terms only; so that they add nothing circumstantial, or capable of giving us a clearer or more distinct Idea of what he has laid down, in respect to which it is sufficient for us to observe, that most of the Facts he mentions either happened at the Time when he was actually present in the Court of the Great Khan, or a very little before it; so that he could not but be well informed as to the Truth of what he asserts. Strange indeed to us, who live at so great a Distance from these Countries, and are so little acquainted with the Manners of their Inhabitants, but at the same Time very agreeable to the best Accounts that have been afforded us of these Countries by modern Travellers, and more especially by the Missionaries, who have been at great Pains to collect and reduce into Order such Passages as they have met with in *Chinese* and other Oriental Writers.

his Memory should never die among Men. And when the Great Khan undertook to subdue this City, he sent a valiant Captain, and the greatest Part of his Army were Cavalry, of which the better Part of his Troops consists; these winning the City, would not demolish that Monument without the Khan's Knowledge; who hearing that the deceased had erected it for the Honour of his Soul, would not suffer it to be injured; for the Manner of the *Tartars* is not to violate things which belong to the Dead. In this Province are many Elephants, wild Oxen, great and fair Stags, and Deer, and other wild Beasts of divers Kinds.

The Province *Bengala* bordereth upon *India* towards the South, which the Great Khan subdued when *Marco Polo* lived in this Country. This Country has its own proper King and Language, the Inhabitants whereof are all Idolaters; they have Masters which keep Schools, and teach Idolatries and Enchantments, a thing common to all the great Men of that Country. They eat Flesh, Rice, and Milk; they have Cotton in great Plenty, and by the Manufacture thereof, much Trade is there carried on. They abound also with Spike, Galingal, Ginger, Sugar, and diverse other Spices; huge Oxen also are there, comparable unto Elephants in Height, but not in Bulk. Many Eunuchs are made in this Province, which are afterwards sold to Merchants. This Province continueth thirty Days Journey, in the End whereof, going Eastward, is the Province of *Cangigu*, which is a Country having also its proper King and peculiar Language, the Inhabitants whereof worship Idols, and are tributary to the Great Khan; their King hath about three hundred Wives; much Gold is found in this Province, and many Spices, but they cannot easily be transported, because that Country is far distant from the Sea: There are also many Elephants in it, and much Game. The Inhabitants live on Milk, Flesh, and Rice; they have no Wine, but they make very good Drink of Rice and Spices. As well the Men as the Women use to embroider their Faces, Necks, Hands, Bellies, and Legs, making the Images of Lions, Dragons and Birds, and so firmly imprint them, that they cannot easily be put out, and the more such Images any one has upon his Body, so much he is esteemed the finer and the more gallant. And there are also in this Country Professors of this foolish Art of Flesh-Embroidery, which use no other Trade but this needlework and dying of Fools-Skins.

Anu lies to the East of that Province, and is subject to the Great Khan, whose Inhabitants worship Idols, and have to themselves a peculiar Language. They abound with Herds of Cattle, and have Plenty of Victuals, and many Horses, and these excellent, which Merchants carry for Sale into *India*. They have also many Buffaloes and Oxen, because there are delicate Pastures there. As well Men as Women wear Bracelets of Gold and Silver, of great Value, on their Arms, as also the like on their Legs; but those of the Women are most valuable: From *Anu* to *Cangigu* are above five and twenty Days Journey. The Province of *Tholoman*, is still eight Days Journey farther distant to the East from *Anu*, subject to the Great Khan, having a peculiar Language, and worshipping Idols. The Men and Women in this Country are tall, well shaped, and of a brown Complexion. The Country is very well inhabited, having many and strong Castles and Cities. The Men are practised in Arms, and accustomed to War; they burn the Bodies of their Dead, and inclosing the Relicks of their Bones in a Chest, hide them in the Caves of the Mountains, that they cannot be touched either of Man or Beast. Gold is found in great Plenty there, and instead of Money, they use Porcelaine brought from *India*, as also in *Cangigu* and *Anu*. From the Province of *Tholoman*, the high Road leads towards the East, by a River, on the Bank of which are many Cities and Castles, and at the End of twelve Days you come to the great City *Cintiqui*. The Country is subject to the Great Khan, and the Inhabitants therefore addicted to Idolatry. Excellent Cloths are made in this Country, of the Bark of Trees, with which they are clothed in the Summer. Many Lions are there, so that for fear of them, none dare sleep without Doors by Night; the Vessels which sail up and down the

River, for fear of these Lions, are not fastned to the Bank. There are great Dogs in the same Country, so hardy and strong, that they fear not to attack the Lion; and it often happeneth, that two Dogs, and one Archer, kill a Lion: For the Dogs, set on by the Man, give the Onset, and the Lion's Nature is presently to take Shelter from some Tree, that the Dogs may not come behind him, neither will his great Heart suffer him to run from the Dogs, lest he should seem afraid; but he holds his stately Pace, the Man mean while shooting, and the Dogs fastening on his hinder Parts; but with such Agility, that when the Lion turns on them, they are gone; and then this magnanimous Beast holds on his Way again, to seek a Tree for Succour, till what with Bitings and Arrows, he sometimes comes short, and with Expence of Blood, dieth by the Way. This Country abounds with Silk, which by Merchants is carried to diverse Provinces by the River; they live therefore chiefly by their Merchandize: Their Money is Paper; and they are Valiant in Arms.

At the End of ten Days is the City of *Sidijsia*, and twenty Days from thence is *Gingui*, and four Days thence is *Palansu*, towards the South, and is in *Catboy*, returning by the other Side of the Province. The People are Idolaters, and burn their Dead; there are also certain Christians which have a Church, are all under the Khan, and use Paper Money. They make Cloths of Gold and Silk, and Lawns, very fine. By this City, which has many Cities under it, runs a great River, which carries Store of Merchandize to *Cambalu*, made by many Channels to pass thither; but we will leave this Place, and proceeding three Days Journey, speak of *Ciangu*, a great City towards the South, of the Province of *Catboy*, subject to the Khan. The Inhabitants are Idolaters, and burn their Dead. Their Money is the (Mulberry) Paper-Coin of the Khan. In this City, and the Territories that depend upon it, they make large Quantities of Salt, for that Earth abounds therewith, and out of it they get Salt after this Manner; they heap up the Earth in the Manner of an Hill, and pour Water upon it, which draws the Saltiness of the Earth into it, and then runs into certain Conduits, and is boiled in Pans, till it be congealed to Salt, fair and white, to the great Gain of the People, and of the Great Khan, being carried into other Countries to sell. There are large Peaches, high flavoured, which weigh two Pounds a-piece. Five Days Journey beyond the City *Ciangu*, in *Catboy*, Southward, standeth another City named *Ciangli*, in which Road are many Cities and Castles, subject to the Khan, through the midst of which runs a great River, very convenient for Shipping laden with Merchandize.

Six Days Journey hence to the South, is the noble Kingdom and great City of *Tudisfu*, which had formerly its proper King, before it was subdued by the Great Khan, *A. D.* 1272, and hath eleven royal Cities famous for Tillage under the Jurisdiction thereof. It is very pleasantly seated for Gardens and Fruits, rich in Silks; their Khan sent to be Governor thereof one of his Barons named *Le-causer*, with eight thousand Horse, who rebelled against this Lord, but was reduced and slain, by an Army of one hundred thousand Horse, under two other Barons, sent against him, and the Country reduced to Obedience. Seven Days off towards the South, is the famous City named *Singumatu*, to which on the South a great River runs, which being divided by the Inhabitants of the Place into two Rivers, flows one Branch to the East towards *Catboy*, and the other to the West toward *Mangi*; by these Rivers innumerable Vessels, and incredible for their Size and Wealth, bring Necessaries to both Provinces. If you proceed sixteen Days Journey towards the South from *Singumatu*, you will meet with Cities and Towns where prodigious Trading is exercised. The Inhabitants of these Countries are Idolaters, subject to the Great Khan. After that, sixteen Days, you come unto a great River named *Caramoran*, which is said to take its rise in the Kingdom of *Unan*, or *Prethyer Jobn*, in the North. It is very deep, and carries Ships of great Burthen; it is also well stock'd with Fish, within one Day's Journey of the Sea. There are in this River fifteen thousand Sail, each of which carries fifteen Horses, and twenty Men, besides Victuals and Manners. This is the Khan's Fleet, Left

kept there in Readiness to carry an Army to any of the Islands, if they should rebel, or to any remote Region. Near the Bank of the River, where these Ships are kept, is *Coiganzu*, and over-against it *Quanzu*, one a great City, the other a small one. After you are past that River, you enter into the noble Kingdom of *Mangi*; but you must not think that we have handled in Order the whole Province of *Cathay*, having not spoken of the twentieth Part; for *Marco Polo* passing by the said Province, hath only described the Cities in his Way, leaving those on both Hands, and those betwixt these, to prevent Tedioufness, and to avoid writing from hear-say.

20. The Province of *Mangi* is the richest and most famous that is founded in the East; and in *An. Dom.* 1269, was governed by a certain King, called *Fanfur*, who was richer and mightier than any which had reigned there in an hundred Years, but a Man peaceable and charitable, so beloved of his Subjects, that thereby, and by the Strength of the Country, he seemed invincible. It was from a Persuasion of this that the King, as well as the People, lost the Use and Exercise of War and Arms. All the City was encompassed with Ditches full of Water. He held in Pay no Horfes, because he feared Nobody; and, in Process of Time, the King, betaking himself to Pleasure more than was fit, employed his whole Time in Delights. He maintained about a thousand Concubines, with whom he passed his Time in Pleasure. He maintained Justice, and preserved Peace; no Man durst offend his Neighbour and disturb the Peace, for fear of severe and impartial Punishment; so that Artificers would often leave their Shops full of Wares open by Night, and yet none would presume to go into them. Travellers and Strangers safely walked Day and Night through that whole Kingdom, fearing no Man. The King himself also was merciful towards the Poor, and did not overlook them that were oppressed with Necessity, or punished with Penury. Besides, every Year he took up twenty thousand young Infants, cast off by their Mothers, who, through Poverty, were not able to keep them, which he brought up, and put them, when they were grown up, to some Trade, marrying the young Men with the Maids, which he had in like manner so educated.

Cublai-Khan was of a different Disposition from *Fanfur*, and delighted only in Wars and Conquests; and to make himself great, he levied an Army, of Horfe and Foot, and made one, named *Clinfan-Baian*, i. e. an hundred Eyes, General thereof, he therefore coming with his Army and a Fleet to the Province of *Mangi*, first summoned the City *Coiganzu* to yield Obedience to his Emperor, who refused the same; he departed without any Assault given to the City, and required the same of the second City, which, likewise refusing, he marched forwards to the third and fourth, and received the like Answer of them all; but he assaulted the next with great Courage, and vanquished the same by Force, and slew every Creature of what Sex or Age soever therein, which so frighted and terrified the rest, that they all presently yielded. The Great Khan sent out another great Army after the former, with both which Armies he marched against the chief City *Quinsai*, where the King of *Mangi* resided, who being mightily terrified, as never having seen any War, fled with his Wealth on board the Ships he had prepared, to certain impregnable Islands in the Ocean, where he afterwards died, committing the Custody of the City of *Quinsai* to his Wife, bidding her to defend it as well as she could; for being a Woman, she need not fear Death, if she was taken.

It is to be observed, that King *Fanfur* had been told by his Diviners, that his Kingdom would never be taken from him but by one which had an hundred Eyes, which the Queen knew, and therefore was still in Hopes not to lose the City however streightened, thinking it impossible for one Man to have an hundred Eyes; but one Day she heard

the Commander of the *Tartars* was called *Baian Clinfan*, that is to say, an hundred Eyes, and was much terrified; wherefore, calling for the Commander of the *Tartar* Army, thinking him to be the Man which the Astrologers spoke of, she delivered the City unto him, which, being heard, the Citizens and Inhabitants of the whole Province yielded to the Obedience of the Great Khan. The Queen was sent unto the Court of the Great Khan, and was most honourably received by him, and maintained like a Queen. And now we will speak of the Cities in the Country of *Mangi*. *Coiganzu* is a very fair and rich City, situate towards the South-East and East, in the Entrance of the Province of *Mangi*, where are always great Numbers of Ships, being seated on the River *Carama*, and a great Quantity of Merchandize is carried thither; Salt is also made there in Abundance. Proceeding from *Coiganzu*, you ride towards the South-East one Day's Journey on a Stone Causeway, on both Sides whereof are great Fences, with deep Waters, through which they may pass with proper Vessels; neither is there any Entrance into *Mangi* but by Shipping, excepting this Causeway.

At the End of that Day's Journey is a City called *Paughin*, large and fair; the People make Stuffs of Gold and Silk, are Merchants, and Idolaters. The Paper-Money of the Great Khan is received throughout the whole Country. It is plentiful in all Necessaries of Life. To the City *Gaim* is from *Paughin* one Day's Journey South-East; and this is also a famous City. The Country thereabouts abounding with Fish, Beasts, and Fowl, especially Pheasants, are found in exceeding great Plenty, as large as Peacocks, of which you may have three for a *Venetian* Groat. Proceeding farther from hence one Day's Journey, you come through a well manured, moist fruitful and well peopled Country, to the City *Tingui*, which, tho' it be not over large, yet hath in it exceeding great Plenty of Victuals. They are Merchants, and have a vast Resort of Ships: There is Plenty of Beasts and Fowls. It is seated to the South-East, and on the Left-hand towards the East, three Days Journey off the Ocean, and in the Country between, are very many Salt-pits, and they make great Quantities of Salt. After this is *Cingui*, a great City, whence the Country is furnished with Salt, whereof the Khan makes immense Profit, almost beyond Belief: They are Idolaters, and have Paper-Money. From *Cingui*, riding towards the South-East, you meet with the noble City *Jangui*, under the Government whereof are other Cities, seven-and-twenty in Number; and in that City resides one of the twelve Barons, which are Governors of Provinces, chosen by the Great Khan; they are Idolaters, and live on Merchandize. They make Arms and Harnes for War, and Master *Marco* had the sole Government thereof, by Commission, from the Great Khan, three Years together, instead of one of these Barons. *Naughin* is a Province to the West, one of the greatest and noblest of *Mangi*; a Place of great Merchandize; they are Idolaters, have none but Paper-Money, have vast Quantities of Beasts and Fowl, wild and tame. They make Cloths of Gold and Silk, and are rich Merchants, and the Country is very advantageous to the Khan, especially by Customs of Merchandize; there is likewise great Plenty of Corn.

Stanfu is a noble and great City in the Province of *Mangi*, and hath twelve rich and great Cities under her Jurisdiction. They make great Quantities of Silks, and Cloths of Gold, have Plenty of Game, Fowl, and all Things pertaining to a City of Note; so strong that it was three Years besieged, and could not be vanquished by the Army of the *Tartars*, when the Province of *Mangi* was subdued, for it is encompassed on every Side with Lakes, that there was no way to it but on the North; so that Ships came and went, continually bringing Plenty of Victuals, which not a little afflicted the Great Khan. The two Brethren, Master *Nicolo*, and Master *Maffio*, then in his Court, hear;

* The Chinese Histories agree exactly, as to the Character of this Prince, with what we find delivered concerning him by our Author; but they differ widely with respect to the Name; since, according to them, he was called *Tou*, and from the Name of his Family *Ting*. He was the sixteenth Emperor of the nineteenth Dynasty, and succeeded to the Throne in the Year 1264. It was to his Indolence, Debauchery, and excessive Love of Pleasure, that the Chinese attribute the Destruction of their Country, and the total Conquest of it by the *Tartars*. This March died in the Midst of his Misfortunes, and left three young Children under the Tutelage of the Empress their Mother. These Historians give us a great Character of the *Tartar* General, mentioned by our Author; but then they give him quite another Name, viz. *Pa-Tou*; but what the Signification of that is, I cannot inform the Reader. He is said to have commanded an Army of two hundred thousand Men, with the same Ease as if it had been only a small Body of Troops, and to have shewn to great Modesty in the Midst of his Conquests, as never once to have valued himself on the many and great Services he rendered to his Master.

ing thereof, went to him, and offered him their Service, to devise certain Engines, after the Manner of the West, able to shoot a Stone of three hundred Weight, thereby to kill Men and ruin Houses. The Khan appointed Carpenters, which were Nestorian Christians, who made three of these Engines in a short Space, which were proved before him, and by Ships sent to his Army. Planting them therefore against the City *Sianfu*, they began to cast great Stones into the City; and the first, falling upon a certain House, broke the most part of it with the Violence thereof, which the besieged Inhabitants seeing, were very much astonished, and yielded themselves, and became subject to the Great Khan, on the same Conditions with the rest of *Mangi*, to the great Repute of the two Venetian Brethren, the one the Author's Father, and the other his Uncle.

From the City of *Sianfu* to a certain City called *Singui*, are accounted fifteen Miles South-eastward, which, altho' it is not very large, yet has a prodigious Number of Ships, being seated upon the greatest River in the World, called *Quian*, the Breadth of which in some Places is ten Miles, in others eight, and in many six; but the Length thereof extendeth above an hundred Days Journey from the Source of it to the Sea. Innumerable other Rivers flow into it, which run through divers Regions, and are navigable; and these make it so great, that incredible Quantities of Merchandize are brought by this River. There are also many other Cities, in Number about two hundred, which participate of the Advantages of this River, for it runs through the Bounds of sixteen Provinces. The greatest Commodity is Salt, wherewith all the Cities which communicate by these Waters are supplied. Master *Marco* saw at one time at *Singui* five thousand Vessels, and yet other Cities on the River have more; all these Ships are covered, and have but one Mast, and one Sail, and usually carry four thousand, and so upwards, some of them twelve thousand *Venetian Cantari*; neither do they use Cordage of Hemp, except for the Mast and Sail, but have Canes fifteen Paces long, which they split into thin Parts from one End to the other, and binding the cut Parts together, and wreathing them, make very long Ropes, so that some of them contain three hundred Fathom in Length; and those Ropes are as strong as Hemp, and serve for Hales and Cables to draw their Ships up and down the River, each Vessel having ten or twelve Horses for that Purpose.

On that River, in many Places, are rocky Hillocks, on which are built Monasteries to their Idols, and all the way are Vallies and Places inhabited. *Cayngui* is a little City upon the same River South-eastward, where every Year is brought Plenty of Corn and Rice, carried for the most part to *Cambala*; for they pass thither by Lakes and Rivers, and by one large Canal, which the Khan caused to be made for a Passage from one River to another, and from *Mangi* to *Cambala*, without going to Sea; which Work is beautiful and wonderful for the Sight and Length, and more for the Profit which accrues thereby to the Cities. He hath made also great Causeways to go on Land by these Waters commodiously. In the midst of the said River is an Island, or Rock, on which is erected a great Temple and Monastery, in which are two hundred idolatrous Monks. *Cingbianfu* is a City of *Mangi*, rich in Merchandize, plentiful of Game, having all kind of wild Beasts and Fowl, and of Victual. In it are two Churches of Nestorian Christians, built A. D. 1274, when the Great Khan sent a Governor thither, *Marjacobus*, a Nestorian, who built them. From the City *Cingbianfu*, in three Days Journey South-eastward, you find many

Cities and Castles, all Idolaters, and at last come to *Tingui*, a great and fair City, abounding with all kind of Provisions.

When *Baian Chinsun*, General of the Army of the Tartars, conquered the Province of *Mangi*, he sent many Christians called *Alani*, against the City, which was double walled; into the Inner they retired, into the other the *Alans* entered, and found there abundance of Wine, wherof, after a bad Journey, they began to drink so largely, that they were all drunk, and the Citizens in their Sleep, suddenly falling upon them, slew them all, not one escaping; but *Baian* hearing this, sent another great Army against those Citizens, which in a short Space of Time vanquishing the City, in Revenge, put them all to the Sword, leaving none alive. The great and excellent City *Singui* contains in Circuit twenty Miles: Multitudes of People are in it, it hath many rich Merchants, and industrious Artificers, and it hath also very many Physicians and Magicians, and wise Men, or Philosophers. In the Mountains of this City, Rhubarb and Ginger grow in great Plenty. This City hath sixteen Cities under the Jurisdiction thereof, in each of which much Trade is carried on, and many curious Arts are exercised, many sorts of Silk are made there. The Word *Singui* signifies the City of the Earth: Also they have another City which they call *Quinfa*, that is to say, the City of Heaven. From *Singui*, at the Distance of one Day's Journey, is *Vagiu*, where is also abundance of Silk, and able Artificers, with many other Merchants, as there are in general in all the Cities in this Country.

21. In a Journey of three Days, you find Cities, Castles, and Villages, well peopled, and rich. The People are Idolaters, under the Dominion of the Great Khan. At the End of these Days you come to *Quinfa*, i. e. the City of Heaven, which for the Excellency thereof hath that Name; for in the World there is not the like, or a Place, in which are found so many Pleasures, that a Man would think he were in Paradise. In this City our Author *Marco Polo* hath often been, and considered the same with great Diligence, observing the whole State thereof, setting down the same in his Memorials, as here from them shall be declared briefly. This City, by common Report, is an hundred Miles in Circuit. The Streets and Lanes are very long, and very wide; there are Market-places exceeding large; on the one Side a clear Lake of fresh Water, on the other a great River, which enters in many Places, and carries away all the Filth of the City, and so runneth into that Lake, thence continuing its Course into the Ocean. This Course of Water causeth a good Air, and commodious Passage both by Land, and by those Canals. There may go both Carts and Barks to carry Necessaries; and the Report is, that there are twelve thousand Bridges, great and small, and those on the chief Channels are so high, that a Ship without her Masts may pass under, and at the same time Chariots and Horses pass over it. On the other Side the City is a large Canal forty Miles long, which encloseth it on that Side, large and full of Water, from the River, made by the ancient Kings of that Province, both to recede the Overflowing of the Water, and besides that to fortify the City, the Earth which was taken out being laid within as a Bank or Hill encompassing it.

There are ten great Market-places, besides others in the great Streets, which are square, half a Mile in each Square, and from the Great Entrance is a principal Street, forty Paces wide, running right from one End of the City to the other, with many Bridges crossing it, and every four Miles

* This happened the Year before the Death of the Emperor *Tou-Tsing*, and in about four Years more all his Children, who succeeded one after the other to the Empire, perished. The first was taken Prisoner by the Tartars, and sent by them into their own Country, where he died in Captivity. The second was driven to *Canton*, where he died of a Consumption, at the Age of eleven Years. The third, whose Name was *Li-Feng*, having lost all his Country, was obliged to take Refuge on Board the Fleet, which was pursued, and forced to an Engagement by that of the Tartars. When the Chinese Lord, who had the Care of the Emperor's Prison, found his vessel surrounded, he took the young Prince in his Arms, and jumped with him into the Sea. The Emperor's seeing the last of his Sons thus unhappily destroyed, followed his Fate, and threw himself also into the Sea. The whole Squadron of the Chinese Fleet forced a Passage through that of the Tartars, but was afterwards destroyed by a Tempest, so that not a single Man escaped of the whole Navy; and the Chinese Writers say, that there perished in the whole a hundred thousand Men. The Loss of this Battle put an End to the Chinese Empire, and left the Tartars totally Masters of the whole Country.

* This Description of the City of *Sianfu* has occasioned many Reflections upon our Author, as if writing of Countries at so great a Distance, he took the Liberty of imposing on his Readers the Fictions of his Imaginations for the Facts which he had seen. Under this Imputation he for a long time laboured, especially with such as were desirous of maintaining the Reputation of sagacious and penetrating People; but by Degrees after the Discovery of our Author has got the better of all such Intimations, and the Relations given by the Portuguese, and other Europeans, who went thither after the Discovery of the Passage by the Cape of Good Hope, have put it out of doubt that he did not invent any Part of his Relation, but represented things such as they appeared to him, though certainly with fewer Circumstances, and less Accuracy than succeeding Travellers, who had more Time to examine, and greater Capacities for discerning what they saw.

is found such a Market-Place; two Miles, as is said, in Compais. There is also one large Canal, which runs against the said Street behind the Market-places, on the next Bank whereof is erected great Store-houses of Stone, where the Merchants from *India*, and other Parts, lay up their Merchandize, being at Hand, and commodious for the Market-places. In each of these Market-places the People meet three Days in a Week, to the Number of between forty and fifty thousand, who bring thither all things that can be desired for Man's Life, Beasts, Game, and Fowls, that Lake yielding such Advantages for bringing them up, that for a *Venetian* Groat you may have two Geese, and four Ducks for the same. Then follow the Butcher-rows, of Veal, Beef, Kid, and Lamb, which the great and rich Men eat; for the Poor eat all the Offal, and unclean Meats, without Respect. There are all sorts of Herbs and Fruits continually, and amongst the rest huge Pears, weighing ten Pounds apiece, white within like Paste, and very fragrant. Peaches yellow and white, very delicate. Grapes grow not there, but are brought from other Places dried; very good Wine also, but it is not esteemed in those Parts as with us, that of Rice and Spices contenting them. Every Day from the Ocean is brought up the River, which is the Space of five and twenty Miles, great Quantities of Fish, besides that of the Lake, so much that a Man would think would never be bought, and yet in a few Hours all is gone. All these Market-places are encompassed with high Houses, and underneath are Shops for Artificers, and all sorts of Merchandize, as Spice, Jewels, Pearls, and in some only Rice-Wine. Many Streets answer one to another in the said Market-places; in some of them are many cold Baths, accommodated with Attendants of both Sexes, a thing to which from Children they use themselves. There are Chambers also in the same Baths, with hot Waters for Strangers, which are not accustomed to the cold Waters; they wash every Day, neither do they eat before they have washed.

In other Streets are mercenary Prostitutes, in such Numbers, that I dare not report it, and not only near the Market-places, where they have their Places appointed, but through all the City; they stand pompously adorned with rich Perfumes, many Servants, and their Houses finely furnished. These are very skilful in making Sports and Daliances, and contriving Pleasures for ravishing Men out of themselves. In other Streets are the Physicians, the Astrologers, they which teach to read and write, and infinite other Trades. At each End of every Market-place is a Palace, where Lords and Governors are appointed by the King to determine Difficulties which happen betwixt Merchants and others, as also to look to the Guards on the Bridges, punishing such as are negligent. Along the principal Street on both Sides are great Palaces with Gardens, and near them Houses of Artificers, and such Multitudes of People constantly going to and fro, that a Man would wonder whence such Multitudes could be provided with Victuals; and Master *Marco* learned of an Officer of the Custom-house in *Quinsai*, that by a very accurate Computation, it appeared, the daily Expence of Pepper in *Quinsai* was three and forty Soma, and every Soma is two hundred and twenty-three Pounds. Hence may be guessed the Quantity of Victuals, Fleth, Wine, and Spices, were there spent. The Inhabitants are Idolaters, use none but Paper-Money, are of a very fair Complexion, apparelled for the most part in Silk, which grows in all that Territory abundantly, besides that which is brought from other Places. There are twelve principal Companies or Corporations, each of which have one thousand Shops, and in each Shop or Standing are ten, fifteen, or twenty Men at Work, and in some forty under one Master.

The rich Tradefmen do not work with their Hands, but stand in their Shops, well, or rather pompously dressed, especially their Wives, with Jewels invaluable. And altho' their old Kings ordained, that the Child should be of the Father's Trade, yet the Rich are permitted not to work at it, but to keep Shop, and Men working in the same Trade. Their Houses are well built, and very richly furnished with Pictures and other Ornaments of immense Price. The Natives are peaceable, know not how to manage Arms, nor keep them in their Houses, neither is there Strife and

Debate amongst them. They exercise their Trades with great Sincerity. They live in such Amity, that one Street seems as one House, without Jealousy among their Wives, which they hold in great Respect, and it would be reputed a great Dishgrace to speak a dishonest Word to a married Woman. They entertain foreign Merchants kindly, both in their Houses, and with best Advice for their Affairs; but they are not overfond of the Soldiers, and Guards of the Grand Khan, because by them deprived of their natural Lords and Kings. About the Lake are very fair Buildings, and great Palaces of the principal Men, and Temples of their Idols, with Monasteries of many Monks. In the midst of the Lake are two Islands, upon each of which is a Palace; with incredible Numbers of Rooms, whither they resort upon Occasion of Marriages, or other Feasts, where Provisions of Vellels, Linnen, and other things are maintained in common, for such Purposes, one Hundred sometimes accommodated at once, in several Rooms. In the Lake also are Boats and Barges for Pleasure, adorned with fair Seats and Tables, and other Provisions for a Banquet, covered above, and flat, upon which Men stand with Poles to push the Boat on, the Lake being but shallow: Within they are painted, without are Windows to open and shut at Pleasure; nor can any thing in the World seem more pleasant than in this Lake, to have such various Objects, the City so fully presenting itself to the Eye, with so many Temples, Monasteries, Palaces, Gardens, with high Trees, and on the Water Barges and People; for their Custom is to work one Part of the Day, and to spend some Part in this Diversion with their Friends, or with Women on the Lake, or else in Chariots, riding through the City, which is also another of the *Quinsai* Pleasures; for all the Streets are paved with Stone, as also are all the Highways, in the Province of *Mangi*, only for the Foot, Potts are left on the Side a Space unpaved: The principal Street of *Quinsai* is paved ten Paces on each Hand, and in the midst it is full of Gravel, with Passages for the Water, which keep it always clean.

In this Street are innumerable long close Chariots, accommodated with Cloths and Cushions of Silk for six Persons, who divert themselves in the Street, or go to the Gardens, and there pass the Time in Bowers, fine Walks, &c. which are kept for that Purpose, and return at Night in the same Chariots. When a Child is born, the Father sets down the exact Point of Time, and with that Note goes to the Astrologer, to consult of his future Fortunes; of these Astrologers are a great Number in every Market-Place. Their People will not celebrate a Marriage without such Consultation. When one dies that is of Note, the Kindred cloath themselves in Canvas, and so both Men and Women accompany him to the Burying-Place, playing on Instruments, and singing all the Way Prayers to their Idols, and being come to that Place, cast into the Fire many Papers of Cotton, whereon are painted Slaves, Horses, Camels, Stuffs of Gold, and Silk, and Monies, which they think he shall really possess in another World, and make a grand Concert of Musick in Conceit of the Joy wherewith the Idols there receive his Soul, where he beginneth, as they fancy, to live anew. In every Street are Towers of Stone, to which, when in Danger of Fire, they use to carry their Gods, their Timber-Houses being very subject to such Casualties. The Khan hath ordered, that on the most of the Bridges, Day and Night, there stands under a Covert, ten Soldiers, five by Day, and five by Night, and in every Guard-Room is a Tabernacle of Wood, with a great Balon, whereby they know the Hours of the Day and Night, which at every Hour's end the Warders strike, to signify what Hour, One, Two, &c. beginning at the Sun-rising; and then again, at the beginning of the Night. They walk up and down, and if any have a Light or Fire after the appointed Time, they cause him to answer it before the Justices, or Governors aforesaid, or if any walk later.

If any be not able to work, they carry him to some Hospital, of which are exceeding many, founded by the old Kings, with great Revenues, through the City: When they are well again, they are compelled to work. If a Fire happen, these from diverse Places come to and quench it, and to carry the Goods to the Islands, or those Towers; for

for in the Night none of the Citizens dare go out, but those who are in Danger. The Khan always keeps here a Body of his best and most faithful Soldiery, as being the best and richest Place in the World. Within a Mile of each other, are built Ramparts of Wood, where the same Precautions are used for like Purposes. When the Khan had reduced all *Mangi* to his Obedience, he divided it, being before but one Kingdom, into nine Parts, and set them a Vice-King over each, who there administers Justice. Every Year they give Account to the Khan's Officers of the Revenues, and other Accidents, and every third Year are charged, as all other Officers are. One of these Deputy Kings is resident at *Quinsay*, who is Governor of above one hundred and forty Cities, all rich and great: Nor let this be esteemed a Wonder, seeing in *Mangi* there are twelve thousand Cities, all inhabited by rich and industrious People, in one of which the Khan maintaineth a Garrison, proportionable to the Greatness and Occasions, one thousand, ten, or twenty thousand, not all *Tartars*, but *Cathayans*; for the *Tartars* are Horsemen, and keep in such Places as may be fit to exercise their Horses. Into *Catbay* he sends those of *Mangi*, and *Cathayans* hither, such as are fit for Arms, of which he makes choice every third Year, and sends them for four or five Years together, into Places twenty Days Journey from their own Country, and then suffers them to return Home, a fresh Body succeeding; and most Part of the Khan's Revenues are this Way expended, and if any City rebel, he suddenly from the next Garrison composes an Army to reduce or destroy them. The City of *Quinsay* hath in constant Garrison thirty thousand Soldiers, and that which hath least, hath one thousand regular Troops, Horse and Foot in Garrison.

I come next to speak of the Palace of King *Fanfur*. His Predecessors caused to be enclosed a Place of ten Miles Circuit, with high Walls, and divided it into three Parts. That in the midst was entered by one Gate on the one Side, and on the other were great and large Galleries, the Roof sustained by Pillars, painted and wrought in pure Gold, and fine Azure. These were smaller at the Entry, and the further the greater, the fairest at the End; the Roof richly adorned with Gold, and on the Walls were painted the Stories of the former Kings, done very elegantly. Every Year, on certain Idol Holidays, *Fanfur* keeps his Court, and seats his principal Lords, the great Merchants, and rich Artificers of *Quinsay*. Ten thousand are at a Time under these Terraces. This feasting endured ten or twelve Days with incredible Magnificence, every Guest endeavouring to present himself in greatest Pomp. Behind this marble Building was a Wall, which divided the Palace, in which were, as it were a Cloister with Pillars, sustaining the Terrace round about the Cloister, wherein were Chambers for the King and Queen, curiously wrought. From this Cloister was an Entrance into a Gallery six Paces wide, extending in Length to the Lake, all covered. On each Side of this Gallery were ten Courts, answering to each other like Cloisters, each Court having fifty Chambers, with their Gardens, and in them one thousand Concubines abode, which the King kept for his Service, who sometimes with the Queen, sometimes with them, went in his Royal Barge, on the Lake, for Recreation, or to visit his Idol Temples. The other two Parts of the Seraglio were divided into Groves, Lakes and Gardens, planted with Trees; in which were inclosed all Sorts of Beasts, Roe-Bucks, Stags, Hares, Conies, and there the King diverted himself with his Damfels in Charriots, or on Horseback, no Man entering there. There the Ladies hunted with his Dogs, and when weary, they went into those Groves, which answered one another over

the Lakes, and there leaving their Garments, came forth naked, and fell to swimming in the King's Presence. Sometimes he would eat a Banquet in those Groves, being served by those Damfels, without once thinking of Arms, which sweet Meat cost him the four Stuce ye have heard. All this was told me by a rich old Merchant of *Quinsay*, while I was there, one who had been familiar with King *Fanfur*, and knew all his Life, and had seen that Palace flourishing, into which he would needs bring me.

The Viceroy now resides there, and the first Galleries remain as they were, but the Damfels Chambers are ruined. The Walls also which encompassed the Woods and Gardens, are fallen to the Ground, the Beasts and Trees being gone, and all the other Ornaments destroyed. Twenty-five Miles from *Quinsay* is the Ocean, between the East and North-East, near which is a City called *Gampo*, an excellent Port, where arrive the Indian Ships with Merchandize. While *Marco Polo* was in *Quinsay*, Account being given to the grand Khan of the Revenues, and the Number of Inhabitants, he hath seen that there have been enrolled one hundred sixty Toman of Fires, reckoning for a Fire the Family dwelling in one House; every Toman contains ten thousand, which makes sixteen hundred thousand Families, of all which there is but one Church of Christians, and those *Nestorians*. Every Houholder is bound to have written over his Door the Names of his whole Houhold, Males and Females; also the Number of Horses, the Names added or blotted out as the Family increaseth or decreaseth; and this is observed in all the Cities of *Mangi* and *Catbay*. Those also that keep Inns write in a Book the Names of their Guests, and the Day and Hour of their Departure, which Books they send daily to the Lords, or Magistrates, who preside at the Market-Places. In *Mangi*, the Poor which are not able to bring up their Children, sell them to the Rich. The Revenue which accrue to the Khan from *Quinsay*, and the other Cities pertaining thereto, being the Ninth Part of the Kingdom of *Mangi*, are first of Salt, every Year, eight Tomans of Gold, every Toman is eighty thousand *Sazzi* of Gold, and every *Sazzi* is more than one Florn of Gold, which will amount to six Millions and four hundred thousand Ducats. The Cause is, that that Province being nigh the Sea, there are many Lakes, where the Water in Summer is coagulated into Salt, wherewith five other Kingdoms in that Country are served. There is plenty of Sugar growing, which pay, as likewise all Spices do, three Parts, and a third in the Hundred: The like of Rice, Wine. Also those twelve Companies; which we said had twelve thousand Shops, and the Merchants which bring Goods hither, or carry any hence by Sea, pay the same Price. They which come from remote Countries and Regions, as for Example, from the *Indies*, pay Ten per Cent. Likewise all things there breeding, as Brails, and growing out of the Earth, and Silk, pay Tithes to the King, and the Computation being made in the Presence of *Master Marco*, besides Salt before-mentioned, yearly amounts to two hundred and ten Tomans, which will be sixteen million eight hundred thousand Ducats in Gold.

A Day's Journey from *Quinsay* to the South-East, are, all the Way, Houses, Villages, fair Gardens, and Plenty of Victuals; at the End whereof is *Yapinsu*, a fine City, in the Jurisdiction of *Quinsay*. Three Days thence, South-East, is *Uyuiu*, and two Days farther you may find in that Way, finding Cattle, Cities, and well cultivated Places, in such a Neighbourhood that they seem to Travellers all one City, and are all in the Jurisdiction of *Quinsay*; there are great Canes fifteen Paces long and four Palms thick. Two Days Journey farther is the City *Congui*, fair and large; and travelling farther South-East, are

^b The *Tartars* visibly depended upon a military Force for the Preservation of their Empire in *China*, which whether it was an Effect of their own Policy, or a Part of the *Chinese* System of Government, which they adopted, is uncertain; but it is most probable that it was the latter. However it was fit enough for answering the End, for the *Tartar* Forces becoming a meer standing Army, and having nothing to do but to make a large Troop of the Profession, the Soul of which is an active State; they soon degenerated, and became as soft and effeminate as the *Chinese*, while the latter, humbled by the *Tartar* Conquest, impow'rd by ensuring the Burthen of such a numerous Army, and above all, taught the Value of Liberty by the Loss of it, began to form Designs for bringing about a new Revolution, which at last they were so lucky as to effect.

^c These Particulars might very well appear (as indeed they did) absolutely incredible, at a Time when there was not so much as an Idea of a well-peopled, and regularly settled Country beyond the Limits of *Perfu*, received among the *Europeans*. As the *Chinese* were amazed, and knew not what to think of our Manners, when we came first amongst them, so the best News of such an Empire as *China*, so extensive, so well peopled, so admirably governed, and in so flourishing a Condition, must needs furnish us not a little. According to the latest Accounts of this Empire, it revenues amount to fifty Millions Sterling annually.

Places full of People and Trades; and in this Part of *Mangi* are no Sheep, but Beavers, Buffaloes, Goats, and Swine in great Plenty. At the End of four Days Journey farther is the City *Zengian*, built on a Hill in the Midst of a River, which, dividing into two Branches, encompasses it, and then runs one to the South-East, the other to the North-West. This City is in the Jurisdiction of *Quinsai*, and its Inhabitants are Merchants, also and Idolaters; this Country abounds with all Sorts of Game. Three Days Journey from thence, through a most pleasant Country, exceeding well inhabited, stands *Gieza*, a great City, which is the last of the *Quinsai* Kingdom; after which you enter into another Kingdom of *Mangi*, called *Concha*; the principal City thereof is *Fugiu*, by which you travel six Days Journey South-East, through Hills and Dales, always finding Places inhabited, and Plenty of Game, of Beasts, and Fowl; they are Idolaters, Merchants subject to the Khan. There are stout Lions: and here grow Ginger, and Galingale in great Plenty, with other Sorts of Spices; eight Pounds of Ginger are sold for a Venetian Groat. There is an Herb, whose Fruit hath the Effect, and gives the Colour and Smell of Saffron, but is not Saffron, which is used in their Meats. They commonly eat Man's Flesh, if the Persons die not of Sickness, as better tasted than others. When they go into the Field, they shave to the Ears, and paint their Faces with Azure; they serve on Foot, except the Captain, who rides, and uses a Sword and Lance; they are very cruel, and when they kill an Enemy presently drink his Blood, and afterwards eat his Flesh.

After six Days Journey is *Quinsai*, a great City with three Bridges, each eight Paces broad, and above an hundred long: The Women fair and delicately shap'd. They have abundance of Silk and Cotton, are great Merchants, have Plenty of Ginger and Galingale. I was told, but saw them not, that they have Hens without Feathers, hairy like Cats, which yet lay Eggs, and are good to eat. Here are many Lions, which make the Way very dangerous. After three Days Journey, you arrive in a populous Country, inhabited by Idolaters, who make abundance of silk Manufactures, the chief City is *Unguem*, where is great Plenty of Sugar, sent thence to *Cambalu*, which they knew not how to make good till they became subject to the Khan, in whose Court were *Bablonians*, which taught them to refine it with Ashes of certain Trees, they only boiling it before into a black Paste. Fifteen Miles farther lies *Cangiu*, still in the Realm of *Concha*, and here the Khan keeps an Army in Readiness for a Guard of the Country. Through this City passes a River a Mile broad, fairly built on both Sides, and abounding with Ships carrying Sugar, and other Lading. This River disembogues from hence five Days Journey South-East at *Zaitum*, a Seaport, from which the rich Ships of *India* come to this pleasant City, as is all the Country betwixt, in which are Trees and Shrubs of Camphire. *Zaitum* is a famous Port, where all the Ships arrive with Merchandise, thence dispersed through all *India*. There is here such a Quantity of Pepper, that what comes by *Alexandria* to the West is little to it, and, as it were, one of a hundred. The Concourse of Merchants is incredible, it being one of the most commodious Ports in the World, exceeding profitable to the Khan, who receives Custom at the rate of ten in the Hundred of all Merchandise. They pay so much for Hire of Ships also, that there is not above one half of their Merchandise remaining entire to themselves, and yet that Moiety yields vast Profit to them. The Citizens are idolatrous, given to Pleasure; in it are many Artificers in embroidered and Arras Work. The River is great, very wide, and swift, and one Arm of it runs to *Quinsai*, at the parting of which is *Tringui* situated, where *Porcelane* Dishes are made. I was told of a certain Earth, which they call up in Hills, and so let lie exposed to all Weathers for thirty or forty Years without stirring; after which, refining by Time, they make Dishes, paint them, and then put them in the Furnace. You may there have eight Dishes for one Venetian Groat. In this Kingdom of *Concha*, the

Khan has as great a Revenue almost as that of the Kingdom of *Quinsai*. In these two Master *Marco* was, and in none of the other nine Kingdoms of *Mangi*, in all which one Language is used, with Variety of Dialect, and but one Sort of Writing; and therefore we will speak no more of them, but in the next Book discourse of *India* the Greater, the Middle, and the Less, in which he was both in the Service of the Khan, and also in his Return with the Queen to *Argon*.

22. We will now enter into the Affairs of *India*, and begin with their Ships, which are made of Firr, with one Deck, on which are twenty Cabins, more or less, according to the Bigness of the Ships, each for one Merchant. They have a good Rudder, and four Masts with four Sails, and some two Masts, which they either raise or take down at Pleasure. Some greater Ships have thirteen Divisions on the Inside, made with Boards inclosed, so that if by a Blow of a whale, or Touch of a Rock, Water gets in, it can go no farther than that Division, and the Leak being found, is soon stopp'd. They are double, that is, have two Courses of Boards, one within the other, and are well calked with Oakum, and nailed with Iron, but not pitched, for they have no Pitch, but anointed with an Oil of a certain Tree mixed with Lime and Hemp, beaten small, which binds faster than Pitch or Lime. The greater Ships have three hundred Mariners, the others two hundred, or one hundred and fifty, as they are in Bigness and in Burthen, from five to six thousand Bags of Pepper; and they were wont to be larger than now they are, the Sea having broken into Parts and Islands, that the Defect of Water in some Places, causeth them to build less. They use also Oars in their Ships, four Men to one Oar; and the greater Ships have with them two or three less Ships, able to carry a thousand Bags of Pepper, having sixty Mariners, or upwards, on board; which small Ships serve sometimes to tow the greater. They have also with them ten small Boats for Fishing and other Services, fastened to the Sides of the larger Ships, and let down when they please to use them. They sheath their Ships also after a Year's Usage, so that then they have three Courses of Boards, and they proceed in this Manner sometimes till there be six Courses, after which they break them up. Having spoken of the Ships, we will speak of *India*, and first, of certain Islands.

Zipangu, i. e. *Japan*, is an Island on the East, one thousand five hundred Miles distant from the Shores of *Mangi*, very great, the People of white Complexion, of gentle Behaviour, in Religion Idolaters, and have a King of their own. They have Gold in great Plenty, for few Merchants come thither, and the King permits no Exportation of it; and they which have carried on Commerce there, speak of the King's House covered with Gold, as Churches here with Lead, gilded Windows, Floors of Gold. There are also many Pearls. Once the Fame of these Riches made *Cublai-Khan* to send to conquer it, two of his Barons with a great Fleet of Ships, one named *Abuca*, and the other *Vensunfin*, who going from *Zaitum* and *Quinsai*, arrived there, but falling out between themselves, could take but one City, and there beheaded all they took, except eight Persons, which, by an enchanted precious Stone, inclosed in the Right-arm between the Skin and Flesh, could not be wounded with Iron; whereupon, with wooden Clubs, at the Command of the two Barons, they were slain. It happened one Day, that a northern Wind blew hard, which was dangerous to the Ships riding there, so that some were lost, some put out farther to Sea, and others, with the two Leaders and a few principal Persons, returned home. Out of many broken Ships some escaped by Boards and swimming to an Island not inhabited, four Miles off *Zipangu*, and were about thirty thousand, without Provisions or Arms, against whom the *Zipanguaners*, after the Tempest was calmed, set out a Fleet of Ships, and an Army. Their coming on Land to seek the wrecked *Tartars* without Order, gave Occasion to the *Tartars* to wheel about, the Island being high in the Midst, and to get unseen to their Ships,

* This Account of the Ships used in the Trade of the *East-Indies*, agrees exactly with the modern Relations; and though, without doubt, they fall very far short of our Ships for many Purposes; yet for some, and the Nature of those Seas considered, they may be, and very probably are, more convenient.

which were left unmanned, with the Streamers displayed, and in them they sailed to the chief City of *Zipangu*, where they were admitted without Suspicion, and found few others but Women. The King of *Zipangu* besieged them six Months, and they having no Relief, yielded themselves, and their Lives were saved. This happened *A. D.* 1264*.

The Khan, for the ill Conduct of his two Commanders, cut off the Head of one, and sent the other to a desert Island called *Zerga*, where he caused Offenders to die, by sewing them, their Hands, bound in a new fleece Hide of a Buffalo, which drying, shrinketh so, as it puts them to vast Tortures, which lead to a miserable Death. The Idols in this and the adjoining Islands are made with Heads of Kine, Swine, Dogs, and in other Fashions more monstrous, as with Faces on their Shoulders, with four, ten, or even an hundred Hands; and to these they ascribe most Power, and do most Reverence, and say, that so they learned of their Progenitors. They sometimes eat their Enemies which they take, with great Joy, and for great Dainties; at least so it is reported of them. The Sea, in which this Island lies, is called the Sea of *Cin*, or *Cbin*, that is, the Sea against *Mangi*, and in the Language of that Island *Mangi* is called *Cbin*, or *Cbinu*, which Sea is so large, that the Mariners and expert Pilots, who frequent it, say, that there are seven thousand four hundred and forty Islands therein, the most part of them inhabited, that there grows no Tree which yields not a good Smell, and that there grows many Spices of divers kinds, especially Lignum Aloes, and Pepper, black and white. The Ships of *Zaitum* are a Year in their Voyage, for they go in Winter, and return in Summer, having Winds of two sorts, which keep their Seasons, and this Country is far from *India*; but I will leave them, for I never was there, nor are they subject to the Khan, and return to *Zaitum*; from hence sailing South-westward one thousand five hundred Miles, passing a Gulph called *Cbeinan*, which continues two Months sailing to the Northward, still confining on the South-east of *Mangi*, and elsewhere with *Ania* and *Toloman*, and other Provinces before named. Within it are infinite Islands all in a manner inhabited: In them is found abundance of Gold, and they trade one with another.

22. This Gulph seems like another World; and after one thousand and five hundred Miles, sailing across this Gulph, is the County *Ziambur*, rich and great, having a King and a Language of their own, Idolaters, and paying Tribute to the Grand Khan of twenty Elephants, and Lignum Aloes in great Quantities yearly. *A. D.* 1268, the Khan hearing of the Riches of this Island, sent thither *Sagatu* with an Army to invade it. *Acambate* the King thereof was old, and made his Composition by paying the Tribute, which has been mentioned. There are many Woods of black Ebony there, which are of infinite Value. Sailing thence betwixt the South and South-east one thousand five hundred Miles is *Java*, at present supposed by Mariners the greatest Island in the World, being above three thousand Miles in Circuit, under a King who payeth Tribute to none, the Khan not offering to subject it, because of the Length and Danger of the Voyage. The Merchants of *Zaitum* and *Mangi* fetch thence abundance of Gold and Spices. South and South-westward six hundred Miles from *Java*, are two Islands, one *Sendur*, which is the greater, the other *Cendur*, less, both desolate.

Fifty Miles South-east from them is a Province, or firm Land, very rich and great, named *Lachar*, the People Idolaters, having a Language of their own, as well as a King. There grows Brasil Wood in great Plenty, much Gold, Elephants, wild Beasts, and Fowl, a Fruit called *Bercias*, large as Lemons, very good; the Place is mountainous and savage, and the King permits not any to come thither, lest they should know his Country, and attempt to conquer it. There are abundance of Porcelain Shells for Money transported to other Places. Five hundred Miles Southward from *Lachar* is the Isle *Pentan*, a savage Place, which produceth in all the Woods sweet Trees; sixty Miles in the way, the Sea is in many Places but four Fathom, after

which sailing to the South-east thirty Miles further, is the Island and Kingdom of *Malaur*, which hath a peculiar King and Language to itself, and here a great Trade is carried on in Spices from *Pentan*. One hundred Miles South-east is *Java the Less*, in Compa about two thousand Miles, and hath in it eight Kingdoms, and the People many Languages; they are Idolaters, have abundance of Treasure, Spices, Ebony, and Brasil, and are so far to the South, that the North Star cannot there be seen. Master *Mars* was in six of those Kingdoms, of which he gives the following Account, leaving the other two which he saw not.

One of these eight Kingdoms is *Felab*, where the Idolaters, by frequent Trade with *Saraccens*, are converted to the Law of *Mohammed*. In the Cities the Mountaineers are very beastly, eating Man's Flesh, and all kinds of impure Food, and worship all Day what they first see in the Morning: Next to that is *Bajma*, which hath a Language by itself; they live without Law like Beasts, and sometimes send Hawks to the Khan, who lays claim to all the Island. For savage Beasts they have wild Elephants, and Unicorns much less than Elephants, like the Buffalo in Hair; their Feet are like Elephant's Feet, they have one Horn in the middle of the Forehead, and hurt none therewith, but with the Tongue and Knee; for on their Tongue are certain long Prickles, and sharp, and when they hurt any, they trample on him, and press him down with their Knees, and then tear him to Pieces with their Tongue. The Head is like a wild Boar's, which he carries downwards to the Ground. They love to stand in the Mire, and are filthy Beasts, and not such Unicorns are said to be in our Parts, which suffer themselves to be taken by Maids, but quite contrary. They have many Apes, and of several kinds; they have Goshawks black as Ravens, great, and good for Prey. There are certain small Apes, in their Faces like Men, which they put in Boxes, and preserve with Spices, and sell them to Merchants, who carry them through the World, showing them for Pigmies, or little Men.

Samare is the next Kingdom, where Master *Mars* had five Months against his Will, forced by ill Weather. There none of the Stars of *Charles Wain* are seen. He once went on Shore with two thousand People, and there fortified for those five Months, for fear of those brutish Men-eaters, and traded mean while with them for Victuals. They have excellent Fish, Wine of the Date-Tree, very wholesome for Phthick, Dropsy, Diseases of the Spleen; some white, some red, and *Indian Nuts* as big as a Man's Head, the middle whereof is full of a pleasant Liquor better than Wine; they eat on all sorts of Flesh without any Difference. *Dragoian* is another of these Kingdoms claimed by the Khan, having a King, and Language of their own. I was told of an abominable Custom, that when one is sick, they send to enquire of the Sorcerers, whether he shall escape? If the Devils answer No, the Kindred send for some, whose Office it is to strangle the sick Party; after which they eat him in Pieces, and the Kindred eat him with great Jollity, even to the Marrow of the Bones; for, say they, if any Substance of him should remain, Worms would breed thereof, which would want Food, and so die, to the great Torture of the Soul of the Deceased. The Bones they afterwards take and carry into some Caves in the Hills, that no Beast may touch them. If they take any Stranger they eat him in the same manner.

Lambrai is the fifth Kingdom of *Java*, in which is great Plenty of Brasil, of the Seeds whereof Master *Mars* brought to *Venice*, and sowed them, but in vain, the Soil being too cold. They have Unicorns in great abundance, and Choice of Beasts and Fowls. *Fanfur*, the sixth Kingdom, hath the best Camphire, which is sold Weight for Weight with Gold. In that Province they make Meal out of great and long Trees, as thick as two Men can fathom; whence paring off the thin Bark and Wood about three Fingers thick, the Pith within is Meal, which they put in Water, and stir it very well, the lightest Dross swimming, and the finest settling to the Bottom, and then the Water being cast away, they make Paste, of which Master *Mars* brought some to *Venice*, tasting not much unlike Barley-Bread. The

* This Attempt made by the *Tartars* to conquer *Japan*, is a very curious Circumstance, and of great Consequence to the History of the Country, because mentioned by no other Author, which is the Reason that Father *Martini* refers us hither on that Head, in his most accurate Work on the Empire of *China*.

Wood of this Tree thrown into the Water sinks like Iron, of which they make Lancets, but short, for if long, they would be too heavy to bear. These they sharpen, and burn at the Tops, with which so prepared, they will pierce thro' Armour sooner than if they were made of Iron. About one hundred and fifty Miles from *Lambri*, sailing Northwards, are two Islands, one called *Nocurau*, in which the Inhabitants live like Beasts, go all naked, both Men and Women, and worship Idols, have excellent Trees, Cloves, Sanders white and red, *Indian Nuts*, *Brasil*, and other Spices; the other *Angaman*, savage as the former, and where I was told they had Dogs Heads and Teeth.

24. Sailing hence one thousand Miles to the West, and a little to the North-west, is *Zelan*, two thousand and four hundred Miles in Circuit, and anciently three thousand and six hundred Miles, as is seen in the Maps of the Mariners of those Places; but the North Winds have made a great Part of it Sea. It is the finest Island in the World; the King is called *Sanderiaz*. The Men and Women are Idolaters, go naked, save that they cover their Privities with a Cloth, have no Corn, but Rice and Oil of *Sesamino*, Milk, Flesh, Wine of Trees, abundance of *Brasil*, the best Rubies in the World, Saphires, Topazes, Amethysts, and other Gems: The King is said to have the very finest Ruby that was ever seen, as long as ones Hand, and as big as a Man's Arm, without Spot, shining like a Fire, not to be bought for Money. *Cublai-Khan* sent and offered the Value of a City for it; but the King answered, he would not give it for the Treasure of the World, nor part with it, because it had been his Ancestors. The Men are unfit for Soldiers, and hire others when they have Occasion. From *Zelan*, sailing sixty Miles to the West, lies the great Province of *Malabar*, which is not an Island, but firm Continent, called *India the Greater*, the richest Province in the World: There are in it four Kings, the chief of which is *Sinder Candi*, in whose Kingdom they fish for Pearls, viz. betwixt *Malabar* and *Zeilan*, in a Bay where the Sea is not above ten or twelve Fathom; in which Divers descend, and in Bags or Nets tied to their Bodies, bring up the Oysters, in which are the Pearls: And because there are some great Fish which kill the Fishermen, they hire certain Bramins to charm them, and the have the twentieth, the King the tenth. These Oysters are found through the whole Month of *April*, and till the Middle of *May*, and not at any time else. In *September* they find them in a Place above three hundred Miles off, and till the mid of *October*. The Khan goes as naked as the rest, save that he wears some honourable Ensigns, as a Collar of precious Stones about his Neck, and a Thread of Silk to his Breast, with one hundred and four fair Pearls strung thereon to count his Prayers by, of which he must daily lay so many to his Idols. A fort of Bracelets he weareth on three Places on his Arms, and likewise on his Legs, on his Fingers, and on his Toes. The Prayers which he says are *Pacauca*, *Pacauca*, *Pacauca*, one hundred and four times. This King hath one thousand Concubines, and if any please him, he takes her as once he did from his Brother, whence Wars had followed; but the Mother threatening to cut off her Breasts, which had nourished them, if they proceeded, the Quarrel was composed. He hath many Horsemen for his Guard, which always accompany him, who when the King dies, throw themselves voluntarily into the Fire, when he is burned, to do him Service in the next World.

This Prince and his Brethren, the Kings of *Malabar*, buy their Horses from *Ormus*, and other Parts, the Country breeds none; and if it sometimes falls out that it does, yet are they there bred ill-favour'd and naught. Condemned Persons will offer themselves to die in Honour of such an Idol, which is performed with twelve Knives, and twelve Wounds in divers Parts of the Body, at every Blow, saying, *I kill myself in Honour of that Idol*; and the last he thrusts in his Heart, and is then burned by his Kindred. The Wives also cast themselves into the Fire with their Husbands, disrepute following those who refuse it. They worship Idols, and most of them adore Cows, and would not eat so holy Flesh as Beef, for all the World. There are some called *Gani*, who eat such Oxen as die of themselves, but may not kill them, and dawb over their Mouths with Ox-dung. These *Gani* are of the Posterity

of those which slew *St. Thomas*, and cannot enter the Place where his Body is. They sit on Carpets on the Ground in this Kingdom: They have no Corn but Rice; are not a martial People, kill no Beasts, but when they will eat any get the *Saracens* to do it, or other People; wait twice a-day, Morning and Evening, both Men and Women, and will not otherwise eat, which they who observe not are accounted Heretics. They touch not their Meat with their Left-hand, but use that Hand only to wipe, and for other unclean Uses. They drink each in his own Pot; and will not touch another Man's Pot; nor suffer their own to touch their Mouth, but hold it over, and pour it in. To Strangers who have no Pot they pour drink into his Hands, and oblige him to drink with them. Justice is severely administered for Crimes, and a Creditor may in some Cases encompass his Debtor with a Circle, which he dares not pass till he hath paid the Debt, or given Security; if he does, he is to be put to Death; and *Master Marco* once saw the King himself on Horse-back thus encircled by a Merchant, whom he had long delayed and put off, neither would the King go out of the Circle which the Merchant had drawn, till he had satisfied him, the People applauding the King's Justice. They are very scrupulous of drinking Wine made of the Grape, and they which do it are not thought worthy, or honest Men, or admitted to be Witnesses, a Thing denied also to him who sails by Sea, for they say such Men are desperate. They think Leachery no Sin. It is very hot, and they have no Rain but in *June*, *July*, and *August*; without which refreshing of the Air they could not live. They have many Physiognomers and Soothsayers, which observe Beasts and Birds, and have an unlucky Hour every Day in the Week, called *Cboiach*, as on *Monday*, betwixt two and three, on *Tuesday* the third Hour, and on *Wednesday* the ninth, &c. through all the Year, set down in their Books. They curiously observe Nativities. At thirteen Years old, they put their Boys to get their own Livings, who run up and down to buy and sell, having a small Stock given them to begin, and in Pearl Season they buy a few Pearls, and sell them again to the Merchants, which cannot well endure the Sun, for little Gain; what they get they bring to their Mothers to dress for them, for they may not eat at their Fathers Cost. They have Idols, male and female, to whom they offer their Daughters, who when the Monks or Priests appoint, sing and dance to the Idols, and very often set Victuals before them, saying that they eat, leaving it the Space of a Meal, singing all the while, and then they fall to eating in earnest; after which they return home. The Cause of these Sacrifices is the household Quarrels betwixt the God and Godefs, which, if they should appease, they should lose their Blessing. The great Men have Litters, made of large Canes, which they fasten artificially to some upper Place to prevent Tarantulas biting, and also Fleas and other Vermin, and for fresh Air.

The Place of *St. Thomas's* Sepulchre is a small City, not much frequented by Merchants, but very much by Christians and *Saracens* for Devotion. The *Saracens* hold him a great Prophet, and call him *Ananias*, that is, a holy Man. The Christians take of the Earth where he was slain, which is red, and carry it with them with great reverence, and give it, mix'd with Water, to the Sick. *A. D. 1288*, a great Prince, having more Rice than Room to lay it in, made bold with *St. Thomas's* Church, in the Room where Pilgrims were received; but by a Vision of *St. Thomas* in the Night, was so terrified that he quickly left the Place. The Inhabitants are black, not so born, but became so by often anointing themselves with Jessamine Oil, to obtain that Beauty. They paint the Devil white, and their Idols black. The Cow-worshippers carry with them to Battle, some of the Hair of a wild Ox, as a Preservation against Dangers, and therefore such Hairs are sold at a high Price.

25. *Murfil*, or *Monfil*, is northward from *Malabar* five hundred Miles; the Inhabitants are Idolaters. They have Diamonds in their Hills, which they search for after great Rains. Westward from *St. Thomas* is *Lac*, whence the *Bramins* have their Original, who are the honestest Merchants in the World, and will not lye for any thing,

and faithfully keep any thing committed to their Custody, or as Brokers sell or barter Merchandize for others. They are known by a Cotton-thread, which they wear over the Shoulders, tied under the Arm crossing the Breast. They have but one Wife, are great Astrologers, of great Abstinence, and long Life; observe their own Shadow in the Sun, when they are to buy, and thence conjecture according to the Rules of their Art. They constantly chew a certain Herb, which makes their Teeth good, and helps Digestion. There are some religious among them, called *Tangui*, who go altogether naked, live austerly, worship Cows, of which they have little brass Images on their Forehead, and of the Ox Bone's Ashes make an Ointment, wherewith they anoint their Bodies in divers Places with great Reverence. They neither kill or eat any live Creature, nor Herb green, or Root before it is dried, esteeming every Thing to have a Soul. They use no Dishes, but lay their Victuals on dry Leaves of Apples of Paradise. They ease themselves in the Sands, and then disperse it hither and thither, lest it should breed Worms, which must die for want of Food. Some of them live to one hundred and fifty Years, and their Bodies, after Death, are burned.

In *Zeilan* I had forgot to mention a high Mountain, which none can ascend but by Iron Chains, as I was told, in the Top whereof the *Saracens* say is *Adam's* Sepulchre; the Idolaters say it is the Body of *Segomon Barsban*, the first Idol Founder, Son to the King of that Island, who betook himself to a solitary Life on the Top of this Hill, from whence no Pleasures nor Persuasions could draw him, his Father made an Image after his Death to represent him, all of Gold, adorned with Garments, and commanded all the Islanders to worship it: And hence, as they say, began Idolatry. Hither they come from remote Places in Pilgrimage, and there his fore Teeth, and a Dish of his are revered, and as holy Relicks solemnly shewed. The *Saracens*, say they, are of *Adam*, which Report caused the Khan, *A. D.* 1281, to send Embassadors thither, who obtained two Teeth and a Dish, and some of his Hairs, by Grant, from the King of *Zeilan*, which he caused to be received by the whole People of *Cambala* without the City, and brought to his Presence with great Honour.

Cal is a great City, governed by *Aber*, one of the four Brethren, who is very rich, also very kind to Merchants; he hath three hundred Concubines. All the People have a Custom to be continually chewing in their Mouths a Leaf called *Tembul*, with Spices and Lime. *Coulam* is five hundred Miles South-west from *Malabar*, they are Idolaters. There are also Christians and *Jews*, who have a Speech by themselves. They have Pepper, Brasil, Indico, Lions all black, Parrots of divers Sorts, all white as Snow, others azure, others red, and some small Peacocks and Peahens, very different from ours, and larger, as are their Fruits; they are lecherous, and marry their Sisters and near Kindred: There are many Astrologers and Physicians. In *Camari* are Apes so large, that they seem to be Men: And here we had a Sight of the North-star. *Delai* hath a King, and the Inhabitants have their own Language: The People are Idolaters, and have Plenty of Spices; the Ships of *Mangi* come thither. *Malabar* is a Kingdom in the West, in which, and in *Guzerat*, are many Pirates, who sometimes put to Sea with above an hundred Sail, and rob Merchants. They bring with them their Wives and Children, and there remain all Summer. In *Guzerat* is abundance of Cotton, the Trees six Fathoms high, and last twenty Years; the Cotton of these Trees is not fit to spin, after they are above twelve Years old, but for Quilts: There are many Rhinoceros's. In *Canbau* is Store of Frankincense. It is a great City, where is great Trade for Horses. In *Cambasia* is much Indico, Buckram, and Cotton. *Semenab* is a Kingdom of a peculiar Language, they are Idolaters, Merchants, and a good People. *Rejatoran* is a great Kingdom of Idolaters and *Saracens*. The last Province of the *Greater India*, towards the North-west is five hundred Miles, near which are said to be two Islands, one of Men and the other of Women, those coming to these, and there stay in *March*, *April*, and *May*. The Women keep their Sons till twelve Years, and then send them to their Fathers. It seems the Air of that

Country admits no other Course: They are Christian, and have their Bishop, subject to the Bishop of *Socotora*; they are good Fishermen, and have Store of Amber. *Socotora* hath an Archbishop, not subject to the Pope, but to one *Zalulia*, who resides at *Balalack*, who chooleth him. The *Socotorans* are Enchanters, as great as any in the World, though excommunicated therefore by their Prelate, and raise Winds to bring back such Ships as have wronged them, till they obtain Satisfaction.

26. A thousand Miles thence Southward, is *Moggher*, one of the greatest and richest Isles in the World, three thousand Miles in Circuit, inhabited by *Saracens*, governed by four old Men; the People live by Merchandize, and sell vast Quantities of Elephants Teeth. The Currents in these Parts are of exceeding Force. They report strange Stories of Fowls, called *Rooks*, like an Eagle, but of incomparable Bigness. *Zensibar* also is said to be of great Length, &c. There are Elephants, Goats, and Sheep, very unlike to ours; the Men and Women very deformed. I have heard Mariners and skilful Pilots of those Parts report, and have seen in their Writings, which have compassed the Sea of *India*, that there are in it twelve thousand and seven hundred Islands uninhabited and desert. In *India Major*, which is from *Malabar* to *Chymacoran*, are thirteen Kingdoms.

India Minor is from *Ziambi* to *Musfil*, in which are eight Kingdoms, besides many Islands. The second, or middle *India*, is called *Abassia*, the chief King a Christian. There are six other Kings, three Christians, and three *Saracens*, subject to him; there are also Jews. St. *Thomas* having preached in *Nubia*, came to *Abassia*, and there did the like, and went afterwards to *Malabar*. They are very valiant Soldiers, always in Arms against the Souldan of *Aden*, and the People of *Nubia*. I heard that *A. D.* 1288, the Great Emperor of the *Abissins* would have visited *Jerusalem*, but being dissuaded by reason of the *Saracen* Kingdoms in the Way, he sent a Bishop of holy Life to perform his Devotions, who in his Return was taken by the Souldan of *Aden*, and circumcised by Force; wherupon the *Abissine* Monarch raised an Army, circumcised the Souldan, with two other *Mohammedan* Kings, took and spoiled *Aden*. *Abassia* is rich in Gold, *Egypt* is subject to *Aden*, forty Miles distant South-East, where is plenty of white Frankincense, very good, which drops from small Trees by Invention of the Bark, a rich Merchandize, &c. Some in that Country, for want of Corn, make Biskuit of Fish, of which they have great Plenty: They also feed their Beasts with Fish. They take them in *March*, *April*, and *May*.

27. After having spoken of the Provinces on the Coast, I will now return to some Provinces more to the North, where many *Tartars* dwell, which have a King called *Caia*, of the Race of *Zingis-Khan*, but subject to none. These observe the Customs of their Ancestors, dwell not in Cities, Castles, or Fortresses, but dwell with their King in the Fields, Plains, Valles and Forests, and are esteemed true *Tartars*. They have no sort of Corn, but live on Flesh and Milk, in great Peace. They have multitudes of Horses, Kine, Sheep, and other Beasts. There are found great white Bears, twenty Palms long, black Bees, very large, wild Asses, and little Beasts called *Kondas*, which bear the Sable-Furs, and Vanarcolium, and those which are called *Pbaraabb's* Rats, which the *Tartars* are skilful in taking. The great Lakes which are frozen, except in a few Months in the Year, are the Cause, that in the Summer it is scarce to be travelled for Mire, and therefore the Merchants in going to buy their Furs, for fourteen Days Journey through the Desert, have let up for each Day a House of Wood, where they barter with the Inhabitants, and in Winter they use Sledges without Wheels, and plain on the Bottom, rising with a Semicircle at the Top, or End, which are drawn on the Ice, by Beasts like great Dogs, by Couples, the Sledge-Man only with his Merchant and Furs sitting therein.

At the Extremity of the Region of these *Tartars*, is a Country reaching to the farthest North, called the obscure Land, because the most Part of the Winter Months the Sun appears not, and the Air is thick and darkish, as sometimes in the Morning with us. The Men there are pale

and squat, have no Prince, and live like Beasts. The *Tartars* often rob them of their Cattle in those dark Months, and lest they should lose their Way, they ride on Mares which have Colts sucking, which they leave with a Guard at the Entrance of that Country, where the Light beginneth to fail, and when they have taken their Prey, give Reins to the Mares, which halten to their Colts. In their long continued Summer, they take many of the finest Furs (one Occasion of the *Tartars* going to rob them) of which I have heard some are brought into *Russia*. *Russia* is a great Country near that Northern Darknes. The People are *Greek* Christians, the Men and Women fair, and pay Tribute to the King of the *Tartars* of the West, on whom they border. On the East there is plenty of Furs, Wax, and Mines of Silver; it reaches, as I was told, to the Ocean Sea, in which are Islands that abound in Ger-Falcons and Falcons.

28. We are now arrived at the Close of this Author's Writings, and therefore are the more capable of judging of the Particulars they contain, which was the Reason that I left some Points to be considered here, which I should otherwise have thrown under the Head of Objections. Some critical Readers have affected to doubt, whether our Author, or rather his Performance, deserves Credit, from the Account that is given of the Manner in which it was wrote, and from the different Stories that we have told of the Original. We have already accounted for the Mistakes that have been made on this Head, and shall here only take Notice, that *Francis Pipin*, of the Order of Preachers, who made a *Latin* Translation of our Author's Work, tells us in his Preface, that from the Report of his Domesticks, he was satisfied that *Marco Polo* was a Man of great Prudence, remarkably honest, and one who had the fairest Character that could be. It is not very easy to conceive, that such a Man should expose that Credit which he had been at so much Pains to establish, by sending into the World an indigested Heap of Fictions and Romances. But the same Person informs us farther, that Signior *Nicolo Polo*, the Father of our Author, was the most esteemed, and best beloved Man of his Time, and that he constantly reported the very same Facts, during his whole Life, which his Son published in his Works; and as for his Uncle Signior *Maffia*, who enjoyed some of the principal Offices in the Government at *Venice*, and distinguished himself by his Wisdom and Integrity, when he was upon his Death-Bed, he took particular Care to assure his Confessor, that he had reviewed his Nephew's Work, and that he was fully satisfied, that there was nothing in it that was not strictly true, and this he gave him Leave to declare for the Satisfaction of the World. Here then are three credible Witnesses to the same Facts, and therefore, according to all the Laws of Evidence, they ought to be looked upon as thoroughly established.

We must however distinguish between such Facts as our Author reports from his own Knowledge, and those which are grounded only on hear-say and Information. We may accuse an Author of Credulity or Imprudence, who inserts strange and improbable things in his Writings, but we cannot with Justice charge him with Infidelity or Falshood on that Head, and we ought also to make some Allowance for the Genius of the Time in which he wrote, because it cannot be presumed, that even the wisest and most prudent Man can be totally free from the Errors of the Age in which he flourished: It may not be amiss to give a few Instances with regard to our Author.

In the twenty-fifth Chapter, there is an Account of Diamond Mines, in the Kingdom of *Murshli*, where we have omitted a Passage that is to be met with in most of the Editions of our Author, because it is reported on the Credit of the Inhabitants, and we were willing to examine it by itself, that the Reader might perceive we had no Intention to impose upon him those Inprobabilities which had been imposed upon our Author himself. After having told us, that Diamonds are found there at the Bottom of the rocky Mountains, after the rainy Season is over, he proceeds thus: "They also in the Summer-Time ascend these Mountains, though with great Difficulty, because of the Vehemence of the Heat, and find abundance of those precious Stones among the Gravel. In this they

"are likewise much exposed to Danger from the vast Number of Serpents of enormous Size, which shelter themselves in the Holes and Caverns of these Rocks, where, nevertheless, they find Diamonds in the greatest Abundance. Among other Methods of obtaining them, they make use of this: There are abundance of white Eagles that rest in the upper Part of those Rocks, for the sake of feeding on the Serpents, and in the deep Valleys and Precipices, where Men are afraid to venture themselves, they throw Pieces of raw Meat, which the Eagles perceiving, immediately stoop and seize it, with all the little Stones and Gravel that adhere to these moist Pieces of Meat. Such as search for Diamonds watch the Eagles Nests, and when they leave them, pick up such little Stones, and search likewise for Diamonds among the Eagles Dung. The Kings and Great Men in this Country keep the fairest and finest of these Stones to themselves, and suffer the Merchants to sell the rest.

The famous *Julius Cæsar Scaliger* was extremely offended with this Relation, which he treats with the utmost Contempt, and seems to wonder at the Assurance of a Writer that expects Stories of this kind should gain Credit: Yet, after all, I do not see that there is any great Harm in our Author's relating this Tale, however improbable it may seem, since without doubt he received it from the Inhabitants, and what Motives they had to tell him such a Story, is not very difficult to guess. The native *Indians*, in all the Revolutions that have happened in the Countries where they live, have preserved this Trade in their own Hands, and by Fables of one sort or other kept Strangers from attempting to interfere with them. Our Author was very probably the first *European* that was ever at the Diamond Mines, and therefore we have the less Reason to be surprized at his being imposed upon, in an Affair of which he could not be a competent Judge.

But to make the Reader some Amends for so imperfect a Relation of the manner in which this valuable Trade is carried on, I shall take this Opportunity of inserting the best Account of the Matter that I believe has been hitherto given by one who was an Eye-witness of it in the Year 1680, and that too in the very Country known to our Author by the Name of the Kingdom of *Murshli*. "The Diamonds are so scattered and dispersed in the Earth, and lie so thin, that in the most plentiful Mines it is rare to find one in digging, or till they have prepared the Stuff, and searched purposely for them: They are also frequently enclosed in Clods; and some of those of *Makouillee's* and the new Mines in the Kingdom of *Golconda* have the Earth so fixed about them, that till they grind them on a rough Stone with Sand, they cannot move it sufficiently to discover they are transparent, or were it not for their Shapes, to know them from other Stones. At the first opening of the Mine, the unskillful Labourers sometimes, to try what they have found, lay them on a great Stone, and striking on them with another, to their costly Experience discover they have broken a Diamond. One I know who had an excellent Stone of eight Mangellans, that is, thirty-two Grains, served so by ignorant Miners he employed. Near the Place where they dig they raise a Wall, with such rugged Stones as they find at hand, whereof all the Mines afford Plenty, of about two Foot high, and six Foot over, flooring it well with the same; for the laying of which they have no other Mortar than the Earth tempered with Water. To strengthen and make it tight, they throw up a Bank against the Side of it, in one Part whereof they leave a small Vent about two Inches from the Bottom, by which it empties itself into a little Pit made in the Earth to receive small Stones, if by chance any should run through. The Vent being stopp'd, they fill the Cistern they have made with Water, soaking therein as much of the Earth they dig out of the Mine as it can conveniently receive at a time, breaking the Clods, picking out the great Stones, and stirring it with Shovels till the Water is all muddy, the gravelly Stuff falling to the Bottom; then they open the Vent, letting out the foul Water, and supply it with clean, till all the earthy Substance be washed away, and none but a gravelly one remains at the Bottom. Thus they continue washing till about Ten of the Clock before Noon, when they

“ they take the gravelly Stuff they have washed, and spread
 “ it on a Place made plain and smooth for that Purpose
 “ near the Cistern, which being so dried by the Heat of the
 “ Sun at that Time of the Day, they very curiously look
 “ it over, that the smallest Bit of a Stone can hardly escape
 “ them. They never examine the Stuff they have washed,
 “ but between the Hours of Ten and Three, lest any Cloud,
 “ by interposing, intercept the brisk Beams of the Sun,
 “ which they hold very necessary to assist them in their
 “ Search, the Diamonds constantly reflecting them when
 “ they shine on them, rendering themselves thereby the
 “ more conspicuous.

“ Some of the expertest Labourers are employed in
 “ searching, he that lets them at work usually sitting by,
 “ and over-looking; but it is hardly possible, especially
 “ where many are employed, to watch them so narrowly,
 “ but that they may steal part of what they find, as many
 “ times some of them do, and selling it privately, convert
 “ it to their own Use. If they find a large Stone, they carry
 “ it not presently to their Employer, but keep on looking,
 “ having an Eye on him, till they observe he takes notice
 “ of it, when with the Turn of their Hand, they give him
 “ a Glimpse of it, but deliver it not till they have done
 “ Work, and then very privately, it being the general En-
 “ deavour to conceal what they find, lest it should come
 “ to the Knowledge of the Governor of the Place, and he
 “ requires a Share, which in the Kingdom of *Colconda* is
 “ usually practised, without any Respect to the Agreement
 “ made with them. The Miners, those that employ
 “ them, and the Merchants that buy the Stones of them,
 “ are usually Pagans, not a Muselman, that ever I heard
 “ of, followed the Employment. These Labourers, and
 “ their Employers, are *Tellinga's*, commonly Natives of,
 “ or near the Place. The Merchants are the *Banians* of
 “ *Gazzarat*, who for some Generations have forsaken their
 “ own Country to take up this Trade in which they have
 “ had such Success, that 'tis now solely engrossed by them,
 “ who, corresponding with their Countrymen in *Suxat*,
 “ *Goa*, *Goconda*, *Vijapore*, *Agra*, and *Dila*, and other
 “ Places in *India*, furnish them all with Diamonds.

“ The Governors of the Mines are also Idolaters. In
 “ the King of *Colconda's* Dominions a *Telenga Brammee*
 “ rents most of them, whose Agreement with the Adven-
 “ turer is, that all the Stones found under a *Pagoda* Weight
 “ are to be their own; all that Weight and above is to be
 “ his, for the King's Use. But although this Agreement
 “ be signed and sealed, he minds not at all the Perform-
 “ ance thereof, but endeavours to engross all the Profit
 “ to himself, by tyrannically squeezing both Merchants and
 “ Miners, who he not only taxes very high, but main-
 “ taineth Spies among them of their own People. On the
 “ least Suspicion that they have been any ways fortunate,
 “ he immediately makes a Demand on them, and raises
 “ their Tax, etc on a false Pretence, they have found a
 “ great Stone, drubs them till they surrender what they
 “ have, to redeem their Bodies from Torture.

“ Besides, the Excise is so high on all sorts of Provisions,
 “ Beets and Tobacco, which with them are esteemed
 “ Necessaries, that the Price of all Things is doubled; by
 “ which Course there is hardly a Man to be found worth
 “ five hundred Pounds amongst them, most of them deal-
 “ ing by Monies taken up at Interest of Usurers, who re-
 “ side there purposely to furnish them, who with the Go-
 “ vernor eat up their Gains, so that one would wonder
 “ any of them should stay, and not break themselves to
 “ Places where they might have better Usage, as there are
 “ many in other Governments, and some few that have
 “ the Sense to remove; but many their Debts, others
 “ Hopes of a great Hit, detains. Both Merchant and
 “ Miner go generally naked, only a poor Cloth about their
 “ Middle, and their Sash on their Heads; they dare not
 “ wear a Coat, lest the Governor should say they have
 “ stolen much, and are rich, and so enlarge his Demands
 “ on them. The wife, when they find a great Stone, con-
 “ ceal it till they have an Opportunity, and then with
 “ Wife and Children run all away into the *Vijapore* Coun-
 “ try, where they are secure. The Government in the
 “ *Vijapore* Country is by a certain Agreement observed,
 “ That a certain, and no less Importation on Provisions;

“ the Merchants go handsomely clad, among whom are
 “ several Persons of considerable Estates, which they are
 “ permitted to enjoy peaceably, by reason wherof these
 “ Mines are much more populous, and better employed
 “ than those of *Colconda*.”

It is for the same Reason, that I have omitted another
 improbable Story of a Bird called a *Ruc*, of such a mon-
 strous Size, as to be able to carry an Elephant into the Air,
 which Absurdities our Author was probably induced to
 believe, by the strange Things he daily saw in these Parts
 of the World, and of which the People in *Europe* had
 not so much as the least Idea. These Omissions I thought
 requisite for keeping the Work within Bounds, as hav-
 ing no Inclination to try the Patience of my Readers,
 by inserting any more of these old Travels than seem ab-
 solutely necessary for connecting the several Parts of this
 Discourse, and shewing how, in what Manner, and by
 whom those great Discoveries were made, which enabled
 the different Nations in *Europe* to carry on so great a Trade
 as they do to all Parts of the *East-Indies*. This, without
 doubt, was originally owing to this Work of *Marco Polo*,
 who, though no Geographer or Seaman himself, yet left
 such clear and evident Proofs of the Possibility of reaching
 the most distant Parts of *Asia* by Sea, that his Work was
 more esteemed in *Portugal*, where the first Spirit of Dis-
 covery appeared, than in *Italy* itself. It remains, in this
 Place, to give a short Account of the Names by which he
 has distinguished the Countries he visited, and particularly
 to answer the great Objection raised against his Work,
 from his not making any Mention of the famous Wall in
China for keeping out the *Tartars*, which shall be done
 in as few Words as possible.

Our Author following exactly the Sentiments of the
Tartars, distinguishes all this great Country into two Parts,
viz. Cathay and *Mangi*, about which many Doubts have
 been raised, and many Disputes set on Foot without any
 just Grounds, since it is very plain, that under the Deno-
 mination of *Cathay*, *Marco Polo* comprehends the six
 northern Provinces of *China*; and under that of *Mangi*
 the nine Southern Provinces, which are separated from the
 former by the great River *Kiang*; and when we come
 hereafter to treat of the present State of the Empire of
China, we shall take Occasion to shew, that this Distin-
 ction of his agrees very well with the best Accounts of that
 Empire. This will be the more intelligible to the Reader,
 when he is informed, that the *Tartars* still preserve their
 very Forms of Speech, that is to say, give the Name of
Cathay to the Northern Parts, and that of *Mangi* to the
 Southern Provinces of *China*. As to the latter, it is a
 Name of Contempt, for *Mangi*, in the *Tartar* Tongue, im-
 plies *Barbarians*, and so they esteemed the *Chinese* to be
 from the Brutality of their Manners, and from their a-
 travagant Haughtiness and Pride, and especially from that
 intolerable Hatred and Contempt with which they treated
 the *Tartars* themselves. The plain Reason why our Au-
 thor did not mention the famous Wall in *China*, was, be-
 cause he entered it by the Southern Provinces; and as he
 confines himself to the Places he saw, or to such as were
 in their Neighbourhood, and prosecutes his Description
 from the Western Parts of *China* to the Sea, it was im-
 possible he should take Notice of it; so that when we
 consider this Matter attentively, it is very plain, that this
 Circumstance, instead of lessening the Credit of *Marco*
Polo, ought, in Truth, to strengthen it very much, since
 it is a convincing Proof of the Truth of what he has
 asserted in relation to his own Travels, and his Descriptions
 of the Countries through which he passed; and evidently
 shews, he did not amuse himself with Accounts of Coun-
 tries and Provinces of which he could say nothing but
 from Report, to which, if he had listened, his Relation
 must have been much more obscure and perplexed than
 we find it at present. But it is now Time to proceed to
 the Conclusion of this Section, by shewing the Advan-
 tages that may be obtained by the Perusal of *Marco Polo's*
 Travels, in order to the thorough Understanding of our
 Subject. And this we shall perform as concisely as possible,
 and in such a Manner as may disengage us from the Necessi-
 ty of looking into any more of these old Writers for the
 future.

29. As the Inhabitants of Europe received the first distant Accounts of the vast Country of China from our industrious *Venitians*, so from them likewise they had the clearest and best Account of the Revolutions that had happened in that Empire by the Power of the *Tartars*; a Thing of such Consequence to the right Understanding what subsequent Travellers have related, that I will be bold to say all the Difficulties and Discouragements that have been thrown in our Way, and have so long hindered our making a right Use of the many Collections of Travels already published, have arisen in part from a Humour that for some Time prevailed, of treating *Marco Polo's* Relation as a Romance, and partly through the Mistakes made by those, who for Want of having sufficient Lights, and the Materials that were requisite, undertook to explain the History of the Irruptions of the *Tartars* into *China*, and endeavoured to make the Dates and Facts mentioned in these Travels, fall in with their Accounts, accusing, at every turn, the Author of Errors and Faults, of which themselves only were guilty. To remedy these Disorders, and to make the Way plainer for the future, we shall, without running into a long Discussion of what other Writers have advanced, observe, that there have been three distinct Conquests of *China* made by the *Tartars*, of each of which we shall give a clear and distinct Account in very few Words. The first of these was by the Eastern *Tartars*, who, before the Time of *Zingis-Khan*, made themselves Masters of the Northern Provinces of *China*, and fixed the Seat of their Empire at *Khanbalick*, *Cambalu*, or *Pekin*; and this, as I conceive, gave Rise to what is called the Empire of *Catbay*; concerning which, all our ancient Writers in general deliver themselves with so much Confusion, sometimes representing *Catbay* as a Part of *Tartary*, sometimes again comprehending under that Name the whole Empire of *China*; and at others, distinguishing it from both. But from this Distinction, it clearly appears, that though the ancient Empire of *Catbay* was situated in *China*, yet it was an Empire raised by the *Tartars*; and that from want of attending to this, so many Mistakes have been introduced.

The Prince who governed *Catbay* in the Time of *Zingis-Khan* was *Altan-Khan*, against whom that great Conqueror made his first Attempt, in the Year 1206, and that with such Success as to oblige this Monarch, after various Deceits, to shut himself up in the City of *Cambalu*, and to sue for a Peace, which, with much Difficulty, he obtained; for the Confirmation of which he gave his Daughter in Marriage to *Zingis-Khan*. This Peace was but of very short Continuance; for *Altan-Khan*, having a Jealousy that some of his Nobility held Intelligence with his Enemy, he put many of them to death; and finding the northern Parts of his Dominions in a manner wasted and depopulated by the late Invasion, he retired to the City of *Nankin*, which his Father had fortified with three Walls, the last of which was forty Leagues in Circuit, and left his Son in Possession of *Khanbalick* and of the adjacent Countries. The rest of the Nobility, enraged at the Instances of Severity before-mentioned, and at the same time doubting their own Safety, had immediate Recourse to *Zingis-Khan*, and drew him a second Time into *Catbay*, where he made himself Master of the Imperial City of *Cambalu*; the News of which Accident affected *Altan-Khan* to such a Degree, that he poisoned himself. This happened about the Year 1210; and thus the *Tartars* became Masters of the northern Parts of *China*. They continued their Conquests under the Reign of the Successors of *Zingis-Khan*, till the Emperor, who reigned when our Author was in these Parts, *viz.* *Coplai-Khan*, who in the Year 1278, completed the Conquest of *Mangi*, or the southern Parts of *China*.

The Bounds of *Zingis-Khan's* Conquests on this Side, was the River *Hoang*; but his Successors annexed all the Country between that River and the River of *Kiang*. All the rest were subdued by *Coplai-Khan*, and his General *Pe Yen*. This was the second Conquest made by the *Tartars*, who not only destroyed the Empire formerly established by their Countrymen in *Catbay*, but also that of the native *Chinese*, which had subsisted for so many Ages. This short Recapitulation sets this Affair in its true Light,

and not only explains what *Marco Polo* has told us, and reconciles his Accounts with those of later Authors, but also connects his Relation with that of *Rubruquis*, and even those of the *Arabian Travellers*; so that taking the whole together, we have a clear and satisfactory View of the Affairs of *China*, to that which I call the second Conquest by the *Tartars*; but as the Affairs of this Country were entirely changed again before the Arrival of the *Portuguese* by the Way of the *Cape of Good Hope*, I think it will be for the Reader's Ease and Advantage to have this History conducted to its Close before we enter upon the Discoveries and Conquests of the *Portuguese*; because otherwise, when we come to speak of the *Chinese* as again in the Possession of their Country, and again driven out and conquered by the *Tartars*, it must necessarily introduce infinite Confusion. It is from the *Chinese* Writers that we have the Reigns of the *Tartar Emperors* who succeeded *Coplai-Khan*, and of whom there is very little mention made in the Histories of the *Tartars*.

The *Chinese*, as I before observed, called this new Imperial Family *Tien*, and bestowed the Name of *Cbi-Tjou* upon *Copli-Klan*, of whom their Histories speak with the utmost Reverence, and whom they celebrate, for his having opened the great Canal mentioned by our Author, and which has been ever since justly considered as one of the Wonders of *China*. It is three hundred Leagues in Length, and nine thousand Imperial Barks are constantly employed thereon, in transporting the Tributes of the southern Provinces to *Cambalu* or *Pekin*, and in other Services. These Writers place the Death of this Emperor somewhat lower than the *Tartar* Historians; for the former say, that he lived to the Age of fourscore, and died A. D. 1295, whereas the latter place that Event in 1292. He was succeeded in the Empire by his Grandson, whom our Author calls *Timur*; but in the *Chinese* Chronicles he is styled *Tching-Sjong*; and as his Grandfather excelled in Power, so he distinguished himself by his Clemency and the Love of his Subjects. After him reigned seven other Princes of his Family, all of whom were no less illustrious on the score of their personal Virtues, than glorious from their possessing to large an Empire: And it is very remarkable, that the *Chinese* History renders so great Justice to this foreign Race of Princes, as to stile the Period in which they ruled over *China*, the *wise Administration*. The last of them was *Chun-ti*, a Prince of great natural Endowments, but who unfortunately gave himself up to Priests and Women, leaving the Management of the Affairs of the Empire entirely to his Prime Minister. The *Tartar* Soldiers, through so long a Peace, had lost their original Discipline, and were become slothful and effeminate, which so raised the Courage of the *Chinese*, that they began to shew a Disposition to revolt; and one *Tchou*, an obscure Person, who had been no better than a Footman, having put himself at the Head of a Body of Malcontents, reduced many of the great Cities in the Empire; and became, by Degrees, so powerful, that he twice defeated the Imperial Army, and at last forced the *Tartars* to abandon *China*, after they had been possessed of it ninety-nine Years. This Revolution happened in 1370; and *Tchou* having by his Success in this War raised himself to the Imperial Throne, assumed the Name of *Tai Tjou*, and fixed his Imperial Residence in the City of *Nankin*. And thus it was that the *Chinese*, having expelled their Conquerors, recovered the Dominion of their own Country.

As for the Emperor *Chun-ti*, he retired with his *Tartar* Subjects northwards, and died of Grief and Vexation about two Years after this Revolution happened. The *Tartars* that were thus expelled, having a strong Tincture of the *Chinese* Customs, did not join with the rest of the *Moguls*, but settled themselves in the Country of *Iconon*, and were, from this Time forward, stiled the *Nieuchen Moguls*, or *Moguls of the East*, to distinguish them from the other *Moguls*, who were called *Moguls of the West*.

This desert Country they cultivated with the utmost Care, built therein several considerable Cities, and practised that Industry which they had learned by conversing so long with the *Chinese*; yet, in some Respects, they still retained a Tincture of their ancient Manners; for, instead

of remaining firm and united, which seemed to be the only Means left for recovering again the Dominions they had lost, they split themselves into several little Principalities, under so many Khans; who, though their Territories were not very wide, maintained nevertheless their Independency. Among the most considerable of those Cities which they erected, were *Kirin*, *Ula*, and *Kinkrista*, all three of them seated on the West Bank of the River *Sangoro*, which falls into the great River *Amur* about twelve Days Journey above its Mouth. The City of *Kirin* is distant from the Province of *Leaton* about three hundred and sixty Miles. The City of *Ula* is in Latitude $44^{\circ} 20'$ N. and was considered as the Capital of the *Nichuchan Moguls*. The Khan of *Ula* however was far from being a considerable Prince, had no sort of Superiority over the rest of the Khans of the Eastern *Tartars*, was without Allies or Resources beyond the Power of his own Subjects; and yet, as we shall shew hereafter, it was this Khan *Ula*, that had the Courage to undertake, and the good Fortune to accomplish the third Conquest of *China*: But at present we will leave the *Tartars* cultivating their Delays, and return to the new-founded Empire of *Tchou*, and his Descendants.

The Dynasty, founded by this Prince, was called *Ming*, and the Emperor, who, as I have said before, assumed the Name of *Tai Tjou*, reigned thirty-one Years with great Glory, and left the Empire to his Grandson, who perished in a Civil War, and was succeeded by his Uncle, who, having been formerly King of *Peking*, transferred the Seat of the Empire thither. The sixth Emperor of this Family was *Ting Tjong*, under whose Reign the *Tartars* made new Incursions into *China*; to oppose them, the Emperor marched at the Head of a great Army, and pursuing them considerably beyond the famous Wall, they suddenly faced-about, attacked, and defeated the *Chinese*, making the Emperor Prisoner. His Son, who was but two Years old, was advanced to the Empire, and the Brother of the captive Emperor, whose Name was *King Ti*, declared Protector, which Promotion gave him an Opportunity of seizing the Empire. The *Tartars*, some Time after, released *Ting Tjong*, who chose however to lead a private Life, and leave his Brother in Possession of the Empire, which he enjoyed to his Death; and then the old Emperor was again seated on the Throne.

The eleventh Emperor of this Race was *Cbi Tjong*, who had the good Fortune to defeat the *Tartars* in several Battles; and it was under his Reign that the famous *Francis Xavier* preached the Christian Religion in the East, where he died in 1552. The Emperor *Cbi Tjong* reigned forty-five Years, in the latter Part of which the Government began to decline very sensibly, as it continued to do under all his Successors, down to *Hoai Tjong*, who was the sixteenth and last Emperor of the Family of *Ming*. It was under his Reign that *Zungt-by*, who was Khan of *Ula*, formed the Design of making himself Master of *China*, notwithstanding that all the Force he was able to raise did not exceed fifteen thousand Horse. He began with entering into private Intrigues with some of the *Chinese* Mandarins, who were exiled into the Province of *Leaton*, by whose Assistance, he soon became Master of a great Part of that Province. The Emperor sent against him an Army more than sufficient to have forced him back into his own Country; but he had so much Address, as to prevent the principal Officers of this Army from doing their Duty; so that by Degrees, he mastered all the rest of that Province, and at last took Possession of its Capital.

While this Scene was transacted in the East, and the whole Force of the *Chinese* Empire employed there to fo

little Purpose, new Troubles arose in the Western Provinces, where several Bands of Thieves and Highwaymen committed the most extravagant Outrages; and, at last, under the Command of one *Lycoungz*, an obscure and infamous Fellow, plundered several Cities, and even whole Provinces, which encreasing the Number of their Forces, the Rebel had at last sufficient Power to attempt the Subversion of the Empire. It was with this View that he marched directly to *Pekin*, where in three Days he became Master of the Place, and the Emperor finding himself abandoned, hanged himself on a Tree in his Garden. *Lycoungz* immediately took the Title of Emperor, and endeavoured, by all the Methods he could devise, to bring over to his Interest *Ou-san-guei*, who was General of the Army sent against the *Tartars*, and the only Person capable of disputing with him the Possession of *China*. That General however rejected all his Offers with Contempt, which obliged *Lycoungz* to take the Field once again, and to march against him with his numerous Army: *Ou-san-guei*, who saw that it was simply impossible for him to think of making head at once against the Usurper and the *Tartars*, resolved to make Terms with the fiercer Enemy of the two, and thereupon invited *Zungt-by* to come to his Assistance.

This was precisely what the *Tartar* Prince desired, and therefore he made no Difficulty of complying with his Demand. He left five thousand of his own Troops in the Province of *Leaton*, and then marched with ten thousand *Tartars*, and twenty thousand of the Inhabitants of our Country to the Relief of the *Chinese* General, who received him with great Joy. They marched together directly towards the Usurper, and when they were upon the Point of giving him Battle, *Zungt-by* observed, in a Conference he had with the *Chinese* General, that, as the best Part of the Forces of the Empire, and especially those of the southern and western Provinces were extremely afraid of the *Tartars*, it would be very expedient for him to cut the Tails of his Horses after their Manner; by which Means the Army of the Usurper would take them all for *Tartars*. *Ou-san-guei* following the Advice of the Khan, it had so good an Effect, that the Rebels were totally defeated, and *Lycoungz* obliged to fly with the Remainder of his Army towards *Pekin*. The victorious Allies continued their Pursuit without the least Intermision; and on their drawing near the City, the *Chinese* General made Proclamation, that all such as did not take part with the Usurper, should trim their Horses after the Manner of the *Tartars*, that they might the more easily distinguish them on all Occasions. This Stratagem had as great an Effect as a second Victory: Such Multitudes declared themselves against the Usurper, that finding it absolutely impossible to maintain his Ground, he first plundered the Imperial City, and then retired with his Army loaded with Booty. When the Allies were in Possession of *Pekin*, it was agreed that *Zungt-by*, with his Forces, should remain terror of the Security of the Place, and that *Ou-san-guei*, with his Army, should pursue the Usurper till such Times as it could be put to the War.

The same Arts, or rather the same Virtues by which the *Tartar* Prince had gained the Affections of the People of *Leaton*, produced the like Consequences amongst the Inhabitants of *Pekin*; and, as on the one hand, they were weary of living without the Support and Protection of a Governor, so they flattered themselves on the other, with enjoying all imaginable Happiness under a Prince of so much Humanity and so great Abilities as *Zungt-by*, and therefore, almost of their own Accord, they declared him Emperor in the Absence of the *Chinese* General, who had himself Views upon the Throne, in which he had very

* At present all the Eastern *Tartary* is subject to the *Chinese* Emperors, and is divided into two Parts; the first contains what may be called the secondary Dominions of the Family now reigning in *China*. It is divided into three Governments, and the Inhabitants are distinguished by the Name of *Mandchoux*. The Capital of this Country is called by the Inhabitants themselves *Mong-tan*, but by the *Chinese* *Chen Yang*, which, at this Day, is a well peopled, and well fortified City, where there is a Sovereign Tribunal for deciding all Affairs that relate to the Dominions of *Tartary*. The latter Part of this Country is still under the Dominion of its own Princes, who have the Title of Khans, which they receive from, and are Vassals to the Emperor of *China*. The Inhabitants are called simply *Mongols*, or *Mongoux*, and the Country passes also under the same Denomination.

* As it is not my Intention to give the Reader here a History of *China*, but barely to mention such Facts as may be necessary to explain what has been related before, and may occur in succeeding Voyages, I did not think myself obliged to mention all the Emperors of this Family, and therefore have touched only on the Reigns of such as might best answer my Purpose.

* These Facts are somewhat differently related by different Historians; but I have given them the Reader from the Collections of a Person who has taken great Pains to make himself Master of the *Chinese* History, which he may probably be prevailed upon to publish, when he thinks it expedient enough to bear the Inspection of the Critics.

probably succeeded, if he had not been thus out-witted by the *Tartar Zung-bi*, who foreseeing how different a thing it might prove for him to maintain himself in Possession of so great an Empire, with such a handful of Forces, was no sooner seated on the Imperial Throne, than he instantly dispatched Advice of his good Fortune to the Khans of *East Tartary*, who were Princes of his own Family, inviting them to come, and share with him in so rich a Conquest. This was certainly a good Expedient for securing himself against the Fickleness, or Infidelity of the *Chinese*; but at the same Time, it visibly exposed the new Emperor to the Danger of being undone by his Auxiliaries; for the Khans of the *Tartars*, who on the first Summons hastened to his Assistance, had certainly in View, the dividing the *Chinese* Empire amongst them; but *Zung-bi* was a Prince of such Wisdom and Penetration, that he immediately discovered the Danger to which he stood exposed, and provided against it, with a Sagacity equal to his Penetration. He divided these Corps of *Tartars* as soon as they entered his Dominions, sent for several of their Princes to *Pekin*, and in a short Time so separated them from each other, that they became absolutely his Subjects, and were unable to act otherwise than was conducive to his Service. In the Conquest and Settlement of *China*, this *Tartar* Prince shewed all the Courage and Capacity of *Julius*, all the Policy and Conduct of *Augustus Cæsar*, by which he thoroughly accomplished the third Conquest of *China* by the *Tartars*, which happened in one thousand six hundred forty and four, after the *Chinese* had preferred their Freedom for two hundred sixty-six Years^a.

This new Race of *Tartar* Princes, which still continue to reign in *China*, for the twenty-second Dynasty of their Monarchs, which is distinguished by the Name of *Ying*; it is however very remarkable, that *Zung-bi* is not accounted the first of those Emperors, because he died almost as soon as he was seated on his Throne, and before he was entirely possessed of *China*, leaving the Empire to his Son *Chun-Tchi*, who was then no more than six Years old, and to whom his dying Father assigned his Brother *Ana-Van* for his Guardian. So early a Minority, one would have imagined, must have been fatal to the new raised Empire; but *Ana-Van*, during the Non-Age of his Nephew, conducted all things with so much Wisdom and Fidelity, that when the young Emperor came to take the Reins of Government into his own Hands, he found himself in as full Possession of his Dominions, as if they had descended to him from a long Line of Ancestors. The Emperor *Chun-Tchi* was himself a Person of extraordinary Abilities, early and assiduous amongst his Soldiers, wife and prudent in his Councils, and so refined a Politician, that under Colour of executing the Laws with Exactness, he took off all the great Men in *China* that were capable of giving him either Jealousy or Disturbance; so that after a Reign of seventeen Years, he left the Empire perfectly settled to his Son, who was but eight Years old.

The Name of this Prince was *Cang-bi*, he was raised to the Throne in the Year 1662, and, during his Minority, the Empire was governed by four great Ministers, who executed their Offices with the greatest Wisdom and Integrity, so that this second Minority proved not in the least dangerous to the Empire. It is true, that the famous *Chinese* General *Ousanguai*, took the Advantage of it, and endeavoured to shake off the Yoke of the *Tartars*, of whom with equal Wit and Wisdom, he said, that he had called in Lions to assist him in hunting Dogs. He had some Success at the Beginning, and might probably have secured at least some Part of the Empire for himself and his Posterity, if he had not been very old at the Time of his Revolt, and died not long after, which gave the Emperor's Ministers an Opportunity of taking such Mea-

sures, as put it out of the Power of the *Chinese* to rebel for the future. *Cang-bi* fell nothing short, either of his Father or his Grandfather, so that it may be reckoned an extraordinary Felicity, in this Family, that for three Generations, there were as great Princes of it as perhaps of any other in the World. This Emperor was extremely careful with regard to two Points, the encouraging and distinguishing his *Tartar* Subjects, and behaving with the utmost Justice and Moderation towards the *Chinese*.

In the Beginning of his Reign indeed, he committed some necessary Acts of Severity, but when he found that he had by this Means absolutely broken the mutinous Spirit of the People of *China*, he changed his Conduct entirely, and applied himself wholly to the putting every thing in the best Order possible, for the Benefit of all his Subjects. It was with this View, that he obliged the Viceroys and other Governors of Provinces, to administer Justice with Impartiality and Mildness, taking from them the Power of punishing Capitally, and obliging them to send all such Sentences to the supreme Tribunal of the Empire. In order to take away all Distinctions, and to render his *Tartar* and *Chinese* Subjects but one People, he established this Regulation; he obliged the *Tartars* to wear the *Chinese* Habit, and obliged the *Chinese* to cut their Hair, after the Mode of the *Tartars*, and this upon Pain of Death. It may seem strange, but it is nevertheless true, that many refused to comply with this Order, and chose rather to part with their Lives than their Hair, and that many more abandoned their native Country, to fly into Places where they might wear their Hair as long as they were wont. But the Emperor's Edict had notwithstanding the desired Effect, that is to say, freed him from such mutinous Spirits as might have disturbed the Tranquillity of his Reign.

The most important Employments, and the most honourable Offices in the Government, he gave only to the *Tartars*; but then he made a Law, by which the Children of *Tartars* by *Chinese* Women, or of *Chinese* by *Tartarian* Women, who were bred up in the Customs, and were taught to speak the Language of the *Tartars*, were declared capable of the highest Offices in the Empire. He was not more careful of the Domestick than of the Foreign Affairs of his Empire, which almost all his Predecessors had neglected to a great Degree; for he not only reduced all the Eastern *Tartars* intirely under his Obedience, but made two Journeys into that Country, where he admitted all Ranks of People freely to his Presence, and thereby gained the Love of the *Moguls* in the highest Degree. As for the *Tartars* of the West, he forced them to have recourse to his Protection, and not only drove the *Calmuks* from his Frontiers, but entering their Country also in his Turn, took from them the Provinces of *Chamill* and *Tarfan*, which serve as an excellent Barrier on that Side for the *Chinese* Empire^b.

In his Person, and in his Manners, he had nothing of the *Tartar*, and was so perfectly acquainted with every Government in *Europe*, that he discoursed of them in a manner that surpris'd even the *Europeans* themselves. The late Czar *Peter the First*, sent M. *d'Isnacloff* with the Character of his Embassador to the *Chinese* Court, whom the Emperor not only received with all imaginable Politeness, but at the first Audience presented his Excellency, a Nobleman who accompanied him, and his Secretary, each with a Gold Cup full of Mead, by which they plainly perceived that he was informed of the Czar's Customs, who when he had a mind to distinguish any Foreigner, was wont to present him with a Glass of Wine with his own Hand. This Emperor *Cang-bi* reigned with great Glory sixty-one Years, and died on the 20th of Dec. 1722. He left behind him seventeen Sons, the fourth of which he declared his Successor, who at his Accession to the Imperial Dignity,

^a The *Chinese* Historians themselves agree, that this Race of Emperors were far inferior to the *Tartars*, as giving themselves up too much to a sort of Studies that were by no Means suitable to their Dignities. Some of them were carried away by a vain Desire of finding the Water of Life; that is a Kind of Liqueur, by drinking of which a Man might become immortal; but with so little Success, that the Emperor *Chi-Ting* died immediately after he had drank of this pretended Water of Life, at the Age of Fifty eight. Others were possessed with a violent Desire of finding the Philosopher's Stone, which induc'd them to spend too much of their Time in chimerical Experiments. The Fate of these Monarchs sufficiently shew, that the Art of Government is the only Science worthy of the Attention of Princes.

^b This Prince took care to secure the Moguls of the East from the ambitious Designs of the *Russians*, and for that Purpose made a very wife and honourable Treaty with the Czar *Peter the First*, for settling the Limits of their respective Empires, in Consequence of which the Town and Forts of *Aloungkoy* was demolished.

assumed the Name of *Yong Tebing*, i. e. Peace undisturbed. This Prince, who is said to inherit the Virtues as well as Dominions of his Ancestors, was in quiet Possession of the Empire in the Year 1735, since which we have not had any certain, or at least very important Accounts from *China*.

By this Deduction of the *Chinese* History we learn a Multitude of things necessary for the understanding such of the subsequent Voyages as mention that Country, which was the Reason that I insisted upon it so long; and we likewise discover the Usefulness of this sort of Knowledge, with respect to the Voyages that have gone before. We see that the *Chinese*, with whom our *Arabian* Travellers conversed, were quite another sort of People than those that now inhabit *China*; for they were a pure and unmixed Nation, whereas the modern *Chinese* are in a great measure incorporated with the *Tartars*; from whence it is easy to discern, that great Alterations must have happened in their Manners, especially if we consider the Character that *Rohanquis* gives the *Tartars*, which comes much nearer that of the modern *Chinese* than any thing we meet with in the *Arabian* Writers. It appears likewise from the Comparison of the Facts related by the *Arabians* with those mentioned by *Marco Polo* of the People of *Mangi*, that both these Writers must have reported Things with great Fidelity, since they agree in a Multitude of Particulars. The Conquest of the Northern Part of *China* by the *Tartars*, though not expressly mentioned, yet is plainly alluded to by the second *Arab* Writer; and as to the entire Conquest of *China* by the same Nation, we owe the full Account of it to *Marco Polo*; for, without the Assistance of his Relations, it would have been a thing very difficult, if not impossible, to have discovered, that *Chi-Tsou* was the same with *Coplai-Khan*, or *Cublai-Khan*, Emperor of the *Tartars*, who before he became Master of their Country, was called by the *Chinese* *Ho-si-lie*.

We likewise learn from this succinct View of the *Chinese* History, that the *Tartars*, who now possess *China*, are the very same Nation that formerly possessed it, contrary to what some very learned Men asserted, and which was generally believed half an Age ago. We likewise see, that the reigning Family in *China* are direct Descendants of *Cublai-Khan*, and consequently of *Zingis-Khan*, that famous Conqueror, whose Empire, as we have elsewhere shewn, was the most extensive that has been hitherto known in the World. These Things are of very great Consequence, if we read Voyages for the sake of improving and enlarging our Knowledge, and not merely for the sake of Amusement, which, however, is rather increased than lessened, by attending to these Circumstances. We can easily apprehend, after a little Reflection, that in the Time of our *Arabian* Travellers, and even in that of *Marco Polo*, the *Chinese* Empire must have been in a much better Condition, and its Trade much more flourishing than when it was first visited by the *Portuguese*, *English* and *Dutch*. Before that Time it had not been exposed to those cruel Ravages that ensued first on the breaking out of their Civil Wars, and next from the last Conquest by the *Tartars*. Besides, we can at any time have Recourse to this short History, when we are at a Loss as to the Facts mentioned in subsequent Voyages, and by comparing the Times in which they happened with the Dates that are therein set down, obtain an easy Solution of Doubts that perhaps we could never otherwise have got over.

It is from the Consideration of these Advantages, and that as far as in my Power lies, I might remove all Obstacles whatsoever to the perfect understanding of this Subject, that I have determined to give the Reader in the next Section a concise History of the other *Tartar* Empire in the *Indies*, I mean that of the Great Mogul, who was likewise a Descendant from the same Family with the great Con-

queror I have so often mentioned. By pursuing this Method, which I have brought into the narrowest Compass possible, the Reader will gain such a previous Knowledge of a great Number of Facts as never to be at a Loss in perusing any of the Voyages to the *East-Indies*, either in this, or in any other Collection, which, without such an Introduction, it would have been absolutely impracticable for him to have understood, and that for many Reasons, of which I will take the Liberty to mention only a few. In the first place then, every Voyage brings us not only into a new Country, but, if I may so speak, introduces us into a new Company, with the Character of which, if we have not some previous Acquaintance, it is impossible for us to be at our Ease, whereas if we know in general who and what they are, we enter immediately into the true Sense of the Relation, and hear all that is told us with Pleasure. In the next place, it often happens, that either from the Fear of appearing tedious, or from some other Motive, the Writers of Voyages give us only short Hints as to the Government of the Countries through which they pass, or the Characters of Princes that reign in them, which would be utterly unintelligible to such as never heard of them before, and yet may be sufficient for the Information of those who have a general Notion of the Posture of things in that Country at the Time mentioned by the Author. Lastly, we are by this means enabled to rectify the Mistakes of such Writers, to distinguish between the Truth and Falshood of what they relate, and to form a clear and certain Judgment of the Merit of their Performances.

It may possibly be objected, that for the same Reasons which have been offered in Support of these two Histories of the *Chinese* and of the *Indian* Empires, we might be obliged to write the History of all the other Princes that have reigned in the *Upper Asia*, which Objection, however, is not at all founded in Fact, since in the first place the Histories of all the little Princes in *India* are very far from being so necessary as those of the capital Empires; and in the next, how necessary soever we might think them, it is impossible for us to write any such Histories, because the necessary Materials for them are not to be found. When therefore this Matter is seriously considered, it appears to be a new Argument in favour of our Design; for since there have been but two great Empires in this Part of the World, of which any just and regular Account can be given, and to which all Books of Voyages and Travels through the *East-Indies* must necessarily refer, it would seem very absurd and unreasonable, after all the Pains we have taken in the darker Ages of this History, to desire that Period of it, which is at once the most useful, and will appear by far the most agreeable to a modern Reader, as there is not in the Compass of Universal History any Branch so full of extraordinary Events, or in which there occur more surprizing Turns and Revolutions than in that which we are about to give.

Add to all this, that however deficient the rest of the Oriental Histories may be, we have abundant Materials for this, and those too as excellent in their kind as can be desired; for besides the particular Relations afforded us by several Writers of Credit, who were actually on the Spot when those Events happened which they record, we have very great Lights given us by such of the Oriental Writers as have undertaken to explain the several Expeditions of the *Tartars*, and especially those of the famous *Timur-lan*, known to us by the Name of *Tamerlane*, whose Conquests, though less extensive, have, notwithstanding, made a greater Figure in our general Histories than those of his glorious Predecessor *Zingis-Khan*. Besides all which, we have the singular Advantage of having a great Part of this History taken from the very Records of that Empire which it concerns, by the Industry of Mr. *Mamouchi*, who was lucky

* The Change of Names is a very clear Proof that no sort of Blame ought to be on *Marco Polo* for writing Places after a different Orthography than what is commonly used; and we have this Advantage from it, that we learn the *Tartar* Appellation, and have thereby an Opportunity of comparing them with the *Chinese*. I cannot help remarking upon this Occasion, that in all probability, *Ho-si-lie* is no more than the *Tartar* Name of *Kiplai* (as so in that Language it is written) expressed in *Chinese* Characters; but for the Name given him after he attained the Empire of *Chi-Tsou*, it may be considered the first of his Race, for *Chi* signifies the beginning, and *Tsou* a kind of Violet coloured Plum, or Feather worn in the Imperial Diadem.

* This Mr. *Mamouchi* was a *Portuguese* by Birth, but he wrote his History of *Indostan* in the *Portuguese* Language, which was then, and is still common in the East. We owe the Publication of it to the famous Jesuit Father *Carron*, who dedicated his *French* Translation to the Duke of *Burgundy*, the Father of the present *Louis XV.* In his Preface to that Work, he promises some farther Memoirs by the same Hand, but I cannot find that they were ever published, which is the more wonderful, considering the great Reputation that the first Part of the Work acquired. As Father *Carron* is now dead, it is very possible those Papers may fall into other Hands, and yet see the Light.

Years in that Country, in the Quality of Physician to its Emperors, and had thereby an Opportunity of having free Recourse to those Records, which for the Benefit of Poste-

riety, as well as his own Information, he transcribed, and from which in a great Measure we have taken the Facts that are contained in the following Section.

SECTION XXII.

A succinct History of the Empire of the Great Mogul, from its Foundation by the Great Tartar Conqueror Timur-Bec, or Tamerlane, to the present Times.

Taken chiefly from the Oriental Writers.

1. *The History of Timur-Bec, or Tamerlane, from his first Appearance in the World, to his being declar'd Khan of the Tartars.*
2. *His Conquests in the Indies, and subsequent Victories, to the Time of his Death.*
3. *The History of Miracha the Son of Tamerlane, and his Successor in Part of his Dominions.*
4. *The Reign of Abouchaid the Grandson of Tamerlane.*
5. *The History of Sheik-Omar, the Seat of whose Empire was at Samercand.*
6. *The Life and Reign of Babar, the first of these Monarchs who assum'd the Title of Grand Mogul.*
7. *An Account of the great Revolution which happen'd under Homayum, his Restoration to the Empire of the Indies, and his Death.*
8. *The Reign of Akebar, and the Accessions made by him to the Dominion of the Moguls.*
9. *The Reign of Iehan-Guire, and of the Troubles that happen'd therein.*
10. *The History of Shah-Jehan, and of the Princes his Sons, to the Time of his Decease.*
11. *A succinct Account of the Reign of Aurengzebe, and of the several Accessions made by him to the Indian Empire.*
12. *Of the Disputes that happen'd after his Decease among the Princes his Sons.*
13. *Of the Reign of Badour-Shah, and of the War carried on by him against his Brethren.*
14. *Of the Troubles that have happen'd since in that Empire.*
15. *The History continued to the Expedition of the Shah-Nadir, or Koulikan, with an authentick Account of its most remarkable Particulars.*

THE Empire of the Tartars subsisted for near two hundred Years, under the Administration of the direct Descendants of its illustrious Founder *Zingis-Khan*, when a new Conqueror was born of the same Race; for *Timur-Bec*, or, as he is usually call'd by us *Tamerlane*, was descended in a direct Line from *Cabul*, who was the Great-Grandfather of *Zingis*. His Family, tho' not powerful, was very illustrious, since, tho' he was the Vassal or Subject of *Adill-Khan*, yet he was by Birth, Prince or Chieftan of the Tribe of *Burlas*. The visible Declension of the Power of *Adill-Khan*, gave him some Hopes of shaking off his Dominion. The Weakness of four Princes had so loosened the Foundation of their Throne, that this *Adill-Khan* had little more left him than the Shadow of supreme Authority. Whole Tribes of the *Mongals* or *Moguls*, withdrew themselves entirely from his Obedience, and set up particular Princes of their own; the rest, who still acknowledged his Sovereignty, pretended to assign the Measure of their Submission, and to fix the Bounds of that Duty they were content to pay. As for *Tamerlane*, his Design was to throw off the Yoke entirely, but wanting sufficient Strength for so bold an Undertaking, he confederated with *Hussien*, who had exactly the same way of thinking; and when they had join'd their Forces together, they declared War against *Adill-Khan*, attack'd and defeated his Army, and having taken him Prisoner, tied him Hand and Foot, and threw him into a Torrent, where he was drowned. *Tamerlane*, to give the best Colour possible to so foul a Fact, rais'd *Cabul*, who was a direct Descendant from the famous *Zagatai-Khan*, to the Throne, from whom in two Descents it came to the Possession of *Mobammed* his Grandson. But he who was now powerful enough to bestow Crowns, had so much of Ambition, as to desire the Power that attended them in his own Hands, tho' for certain Purposes he suffer'd the Title to remain elsewhere. Under the Name of *Mobammed-Khan*, he made War on the rest of the Princes of the Family of *Zingis*, and by his repeated Victories became so famous, that he was quickly considered as the first, or principal Khan of the Tartars. This provoked the Jealousy of *Hussien*, who had been his first Companion in Arms, so that of a Friend and Ally, he first became a secret Rival, and very soon an open Enemy. Their Armies met in the Plains of *Balk*, where a bloody Battle ensued, in which *Hussien* was defeated and killed, and *Tamerlane* then saw himself at the Head of the whole Power of the Tartars, without a Competitor, and therefore having sum-

moned all the Princes of the Blood of *Zagatai* to *Samar-cand*, there, by a sort of Election, assumed the Title of Khan, which hitherto he had not done, put on the Imperial Crown of Gold, and the Girdle, which was also an Ensign of that Dignity, received the Homage of all who were present, and very rich Presents upon that Occasion. It is from this Election and Coronation, that the Reign of this great Prince is usually dated, because tho' he had the Power long before, yet his Title was never till now acknowledged, or himself known to the World, as supreme Khan of the Tartars, which Title he ever after bore.

2. This great Event fell out in the Year of the *Hegira* 781, in the Year of our Lord 1379, and in the thirty-fourth Year of the Age of *Timur*. He was no sooner seated on the Throne of *Zingis-Khan*, than he began to form a Design of uniting under his Dominion, all the Countries that had formerly paid Obedience to that Conqueror, with which View he instantly attack'd the Princes of *Chorasjan*, *Sigistan*, and *Kandabar*, whom he reduced in a short Space of Time, and thereby opened a fair Road into the *Indies*. It was in the Year of the *Hegira* 800, and *A. D.* 1409, that he undertook the Conquest of that extensive Empire, at the Entrance of which, he found Abundance of little Clans of Thieves, that by the Help of the strong Holds which they had erected, maintained a kind of tyrannical Power over the adjacent Country. These he first of all rooted out, and at the same Time destroyed without Mercy a Multitude of Guebres, or Worshipers of Fire, that had settled themselves on the Confines of *Indostan*, when driven out of their native Country of *Persia*. He next besieged the famous Fortrefs of *Uldugin*, which had hitherto been considered as impregnable; but as this was not a Talk that required so great an Army as that under his Command, he employ'd a Part of it in reducing the adjacent Country, then under the Dominion of Sultan *Mobammed*, who finding himself in such imminent Danger, invited all the neighbouring Princes to join him, in order to defend themselves against a common Enemy, who made no Scruple of declaring that he meant to dispossess them of all their Dominions, in order to annex them to his own. This Application had the desired Effect; *Rajah Rana*, and the rest of those little Princes took care to assemble their Forces, and at the Time appointed, joined Sultan *Mobammed*, who immediately march'd to give the Invader Battle. The Forces of the *Indian* Princes surpassed in Number by very far the Army of the Tartars, but the Conduct of *Timur*, who had spent

spent almost his whole Life in Arms, proved more than a Balance to their Numbers. He made choice of a small Plain out of which there was a narrow Passage, between two high Mountains, for the Field of Battle, in which he drew up about a third Part of his Army; the rest he drew up in two Bodies, which he posted behind those Mountains, and as soon as the *Indian* Army advanced, his Horse, that were drawn up in the Plain, as if struck with a sudden Panick, fled thro' the narrow Pass, and were followed by the *Indians*, who thought that the very Sight of their Army had defeated their Enemies; but they soon found their Mistake, for they no sooner entered the great Plain behind the Mountains, than the two Bodies of Horse attacked them in Flank and Rear with the utmost Fury. This Engagement proved decisive, and *Timur*, by this single Victory, became Master of the *Indies*; that is to say, he put *Tartar* Garrisons into most of the Fortresses, left a considerable Army at *Deby*, the Capital of the Country, and having received the Homage of most of the *Rajahs*, or petty Princes, returned in Triumph to *Samarcand*, which he made choice of for the Capital of his Empire, laden with the Spoil of the *Indies*. He had not been long returned, before he had Advice, that *Achmet*, whom some Years before he had driven from *Bagdat*, was come back thither. This News soon drew him into the Field again, and his Enemy retired at his Approach. This War was succeeded by another of much greater Consequence, and to which he chiefly owes his Fame in this Part of the World. *Bajazet*, Emperor of the *Turks*, one of the greatest Monarchs of that Age, and withal, one of the bravest and best Captains, gave him some Cause of Provocation. *Timur* march'd against him with his victorious Army, and not only defeated and dispossessed him of his Dominions, but made him Prisoner also, and afterwards put him to Death. On his Return, after this Victory, to *Samarcand*, he formed a new Design of reducing *China*, out of which, at this Juncture, the *Tartars* were expelled. He marched for this Purpose with a most puissant Army, and being encamped at *Otrar*, was there seized by a Dilemper which put an End to his Conquests, and his Life, in the thirty-seventh Year of his Reign, and in the sixty-sixth of his Age, in the Year of the *Hegira* 807, and *A. D.* 1605.

3. The great Empire of *Timur-Bec*, or *Tamerlane*, sunk almost as soon as it rose. He divided his Dominions amongst his Children, and, according to his Will, the Eastern Part of *Persia*, together with *Cabulistan* and *Indof-tan*, fell to the Share of *Miracha*, his third Son. He was a Prince of considerable Courage, and did not want Capacity; but, during his Father's Life-time, had been extremely unfortunate, inasmuch, that he was once in Danger of losing that Share of the Empire, which had been assigned him. At the Time of that Monarch's Decease, *Miracha* did not find himself strong enough to establish himself absolutely in the *Indies*, he therefore made choice of the City of *Herat*, in the Province of *Chorassan*, for its Capital, which was indeed very conveniently seated for that Purpose, as being almost in the Centre of his Dominions. He marched from thence annually, at the Head of a considerable Army, into *Cabulistan* and *Indof-tan*, in order to levy the Tribute which his Father had imposed, and which the *Indian Rajahs* rather chole to pay, than to run the Hazard of a War.

The King of *Casjar* was the only Prince that refused to acknowledge him as his Sovereign, or to pay him any Tribute. Against him therefore *Miracha* made a long and cruel War, in which however he was at first very unsuccessful, his Forces being absolutely defeated, and himself taken Prisoner by the *Indian* Prince. That Monarch, by a Stroke of extraordinary Generosity, took no other Advantage of his Victory, than to engage *Miracha* to quit all claim to Tribute, and thereupon restored him to

Liberty. This Treaty however was but indifferently kept, for when the *Tartar* Prince had recruited his Army, he, without Scruple, renewed the War, in which he was so fortunate, as to defeat his Enemy, and make the King of *Casjar* Prisoner in his turn. He did not however behave as Gratitude, or even as Humanity required; but barbarously ordered the Eyes of that Prince to be put out, over-run his Dominions, and kept himself, during his whole Life, a Prisoner.

This base Action, however, drew upon him that Punishment which it so well deserved. His *Tartar* Soldiers exercised before him every Day, and hearing a Discourse amongst them, of the great Dexterity of the King of *Casjar*, notwithstanding he was blind, he thought fit to enquire into it, and being told, that this Prince shot with the greatest Truth to any Corner where he heard the least Noise, he resolved to make the Experiment, concerning in himself, that the thing was absolutely impossible. When the Question came to be decided, the captive King declared, that he would not discharge an Arrow at the Command of any other Person than the Emperor. He accordingly gave the Word, which scarce had escaped his Lips, before the *Rajah* let fly a poisoned Arrow, which struck him through the Body; at the Sight of which, his Guards cut the unfortunate *Indian* Prince to Pieces.

Such was then the End of *Miracha*, after he had reigned forty-six Years. He is justly esteemed the first of the *Mogul* Emperors; for tho' the Country was conquered by his Father, yet it made only a Province of his Dominions, whereas it was, strictly speaking, the Main of this Monarch's Possessions, as well as his peculiar Share of his Father's Empire, and as such was transmitted by him to his Posterity.

4. He was succeeded in his Throne by his Son *Aboubaid*, or *Abusyd*, in the Year of the *Hegira* 855, *A. D.* 1451. But this Prince neither resembled his Father or his Grandfather, for he was lazy and luxurious to the last Degree, and withal excessively cruel, which irritated the *Rajahs* to such a Degree, that they resolved to depose him, and to set his younger Brother on the Throne, which they accordingly did, but had very soon Reason to repent of the Exchange. *Aboubaid*, on losing his Crown, took the Habit of a *Faquir*, and in it travelled through the *Indies*. His Subjects soon found him out, though he took all imaginable Pains to conceal himself, and they no sooner discovered him, than as they had forced him to resign the royal Robes for the Habit of a Monk, they now with like Passion obliged him to a contrary Exchange. He no sooner appeared, than he saw his Brother totally abandoned, by which he was peaceably restored to his Dignity; but that he might be safe from future Affronts, he ordered his Brother's Head to be struck off, as the Punishment of his Tyranny, as he pretended; but in reality, to prevent a second Ulurpation.

His Government was now precisely the reverse of what it had been before, for he studied nothing but the Art of pleasing his People; and tho' he did not, and perhaps could not, change his Temper, yet he dissembled it so well, that with respect to his Subjects, his Hypocrisy had the same good Consequences as if he had acted from real Virtue. His Deposition however was not the last Misfortune of his Life, for while he was engaged in War against the Khan of *Samarcand*, one of the young Princesses in his Seraglio, set up a new Prince, whose Name was *Erans*, who bid fair for depriving *Aboubaid* of his Dominions; but at last he was defeated, and on the first News of this, the Princess, who had raised him to the Throne, first murdered the Son she had by him, at the Breast, and then destroyed herself, by a Dose of Poison, which for that Purpose she had concealed in her Locket. *Aboubaid* returning in Triumph to *Herat*, reigned for some Time with

* This City of *Herat* is situated in the southern Part of the Province of *Chorassan*, in the Lat. of 34°. It is now the finest, and most beautiful City in those Parts, since the *Uzbek Tartars* destroyed *Meshed*; and the Inhabitants are very rich, chiefly through the Trade they carry on with the Subjects of the Great *Mogul*. It is in this City that the finest Carpets in *Persia* are made, and the finest Brocades also; but the greatest Advantage it enjoys, is being a convenient Stage, in the direct Road from *Spahan* to *Candahar*; so that the Magazines of this City are not better supplied with various Manufactures, than with the choicest and most valuable Merchandise of the *Indies*.

† This is an *Arab* Word, and signifies the same thing with the *Turkish* Word *Derwish*, that is, a mendicant Monk, one who has made a Vow of Poverty, and travels through the Country without Food, Raiment or Shelter, but what is afforded him out of Charity. They are generally esteemed sacred in *Mohammedan* Countries, and every body is willing to contribute whatever Necessaries they want.

great Success and Glory; but the Violence of his Temper, joined to a high Opinion of his good Fortune, drew him into another War, which cost him both his Crown and his Life.

He had always a strong Inclination to pass for the great Dispenser of Justice amongst his Neighbours, and therefore taking Offence at the Proceedings of *Usum Cassan*, a very potent Monarch of the Family of *Zingis-Khan*, who had deprived one of his Relations of his Dominions, he declared War against him, notwithstanding all the Pains that Prince could take to terminate the Difference between them by a Negotiation. *Usum Cassan*, though much inferior in Power, was much better versed in the Art of War; and by ruining his Country, and keeping his Forces always encamped in Places that were inaccessible, he so weakened the Forces of the *Tartar*, that, at last, he found himself obliged to retreat, in order to save the Remains of a numerous Army, worn out with perpetual Fatigue. But he was not able to conduct them, as he endeavoured, into his own Dominions, but was defeated and taken Prisoner by the Sons of *Usum Cassan*, who immediately conducted him to the Presence of their Father, who received him at first with great Humanity, but being provoked at the insolent Speeches of *Abouchaid*, who reproached him with not daring to meet him in the Field, at last ordered his Head to be struck off, and put out the Eyes of his three eldest Sons, who were taken with him.

Such was the Fate of this insolent and vain-glorious Monarch, equally unfortunate in the Beginning, and in the Close of his Reign, but in neither more so than he deserved. The Chronicles of the Mogul Empire, take Notice, that he left a bad Example to his Successors in these two Points, first, in putting to Death his Brother, and next in his Ingratitude to his most faithful Servants; Circumstances very dishonourable for his Memory, and which shew how unworthy he was of so great an Empire, that in the Course of twenty-eight Years, which he sat upon the Throne, could leave nothing but the Shame of his Vices to make him remembered by Posterity. There have some Doubts arisen about the Succession of this Prince, because, in the great Seal of the Mogul, on which the Names of 'I the Emperors are engraved, there is one *Mirza-Mohammed* mentioned, whom some therefore would have the Son of *Mirarba*, and the Father of *Abouchaid*. The first may be true, but not the latter, since it is probable, that this *Mirza-Mohammed* was his Brother, whom he put to death.

5. *Scheik-Omar*, the fifth Son of *Abouchaid*, succeeded his Father in the Year of the *Hegira* 874, A. D. 1469, and was of a quite contrary Disposition: He is recorded to have been a very pious *Mohammedan*, and to have made the Study of the Khoran the Business of his Life, which is the more extraordinary, since his Great-grandfather *Timur* had a Religion of his own, which was a Sort of Deism. His Grandfather had very little Religion, and his Father none at all, though he made some Pretences to *Mohammedism*. The Reign of *Omar* was a continued Peace; he never sought to trouble his Neighbours, was contented with his own Dominions, where he ruled his Subjects with Justice and Moderation, and was neither disturbed by Plots at home, or Wars abroad. The only Thing remarkable in the Reign of this Monarch, is the Manner in which he amused himself, for it must appear somewhat singular, that a Prince, who seriously delighted in Peace, should invent a new kind of War for his Diversion.

At the End of his Garden, he had a high Terrace, at each Extremity of which was built a Pidgeon-house; thither the Emperor daily resorted, and as he fed his Pidgeons with his own Hand, they stocked about him as soon as he appeared. He had taught these Creatures to live in a perpetual State of Enmity; so that as soon as the Emperor lifted up a white Sattin Standard, the Pidgeons

of one House attacked those of the other, and they with great Resolution defended themselves, and often killed out and drove away the Invaders. It one Day happened that the Emperor, deeply engaged in this Sport, flourishing his Standard in the Air, and having his Eyes fixed on his Pidgeons, fell against the wooden Balustrade of his Terrace, which, being rotten, gave way, so that by his Fall he broke his Skull, of which unlucky Accident he died in two Days after, having reigned happily for himself and for his Neighbours twenty-four Years.

6. He was succeeded in the Throne by his Son *Babar*, in the Year of the *Hegira* 899, A. D. 1493. This Prince had scarce taken Possession of the Government before he found himself engaged in a War, for which he was every way indifferently provided. The Prince of the *Ubeck Tartars* at that Time was *Schaibac-Khan*, who remembering that his Father had been deprived of *Samarkand* by *Abouchaid*, the Grandfather of *Omar*, he determined to lay hold of the Opportunity that offered of recovering his Dominions, knowing that the *Moguls* were much softened by their Inactivity, during so long a Peace. He made a right Judgment in this Matter; for, on his Approach, *Babar* found it impossible to make head against him, and therefore retired from Place to Place, till at last he took Shelter in *Cabulistan*, the Governor of which remained faithful to him, and soon assembled an Army capable of recovering what he had lost to the *Ubecks*.

Babar, had hitherto appeared of as peaceable a Disposition as his Father; but now, whether stung with Repentment, or roused by Despair, he shewed as great Courage as any of his Ancestors, and seemed impatient to invade that Country, which he had so lately abandoned. The Governor of *Cabulistan* however was of quite a different Sentiment, and having shewn his Master that it was infinitely more easy to make himself absolutely Lord of *Indostan* than to recover the Countries he had lost, he brought *Babar* over to his Opinion. In order however to proceed with the greater Security and Success, the Emperor proposed making a Journey through *India*, under the Disguise of *Giogis*, or *Indian Pilgrims*, that they might the better judge of the Strength and Condition of those whom they meant to conquer.

They executed this Resolution almost as soon as they had formed it; and having travelled undiscovered from one Extremity of *India* to the other, they found it inhabited by four Nations. The first were the native *Indians*, who still kept up the Form of the ancient Constitution, though the Spirit of it was in a manner lost: Their Kings shutting themselves up in their Seraglios, thought of nothing but their Pleasures, and left the great Affairs of Government to their Ministers, who were often as indolent as themselves, and left them in their Turn to their Domesticks. The *Bramins* had exchanged the elevated Philosophy of their Ancestors for a Life of Superstition, which amused the Vulgar with a false Religion, and seemed to justify the Men of Sense, in having little or none at all. Their Soldiers kept their Horses, took their Pay, and appeared at their stated Times in Review; but as for Service they knew it not in Practice, and the very Idea of it gave them Disquiet. The common People were sunk in Luxury and Sloth, mistaking the Power of doing Evil for Liberty, and placing all Happiness in the Pursuit of their vicious Appetites, without Danger of Restraint, or Fear of Reproach.

The second Sort of People were the *Pattans*, a Race of *Mohammedans*, who from the opposite Coast of *Arabia* had passed over thither, and having first settled on the South-side of the River, erected there a Town, which still bears the Name of *Muslipatan*; from whence extending themselves still farther and farther, they at last became Masters of the Kingdom of *Debly*, of which they were possessed when *Tamerlane* made his Irruption into the *Indies*.

* That Vice, which of all others has most stained the Glory of the Mogul Race, is Ingratitude; the first Imputation of which was derived from the Conduct of this *Abouchaid*. When he was obliged to fly, in order to save his Life, after the Loss of his Crown, two only of his Courtiers remained faithful, and shared with him all his Misfortunes. After he was restored, these two worthy Men expected some Share in his Favour, but *Abouchaid* told them plainly he was more obliged to them than it was in his Power to repay, and therefore he hated to see them; neither was he contented to banish them from his Court, but ordered their Names to be struck out of the Roll of his Servants. Hence the Ingratitude of *Abouchaid* is, to this very Day, a Proverb through the East.

† This is a frontier Province between *Persia* and the *Indies*, and has belonged sometimes to one, and sometimes to the other of these Empires, and is thought of so great Consequence to the East, that it is a common Saying, he who is not Master of *Cabulistan*, is not Master of the *Indies*.

The *Perfians* were the third Sort of People; and these were no other than the Remains of the ancient *Perfians*, who were, and are certainly the most innocent People in the World, and perhaps the most pious. As the principal Part of their Religion consists in worshipping the Almighty Author of all things, under the Symbol of Fire, the *Mohammedans*, without taking any Pains to enquire into their principles, concluded them Idolaters; and when they conquered *Perfia*, forced them to abjure their Religion or to quit their Country. They chose the latter, and this brought Multitudes of them into the *Indies*, where, by a laborious Industry, they procured a bare Subsistence, exposed continually to the Insults of the other Nations, without any thing to sustain them under the Weight of so many and so great Misfortunes, save the Testimony of a good Conscience in this Life, and the Hopes of a Reward in that to come. The fourth Sort of People were his own Subjects the *Moguls*, placed there in Garrisons by his Ancestors, and employed in levying the Tributes imposed by them upon the *Rajabs*.

When *Babar* and his faithful Companion, had examined all Things with the utmost Diligence and Attention, they returned to *Cabulistan*, and began to prepare for the Execution of their Project. They had observed, that the Prince of the *Pottans*, who was in Possession of the Kingdom of *Dehly*, was the most powerful of any of the *Rajabs* in the Country of *Indaglan*, and therefore they resolved to begin with reducing him. *Babar*, having put himself at the Head of a numerous Army, summoned this Monarch, whose Name was *Amcoisa*, to lay aside the Style and Title of a Sovereign, in a Country which belonged to the *Moguls* by Right of Conquest. *Amcoisa* answered, that a King, though tributary, was still a King, and that since they disputed his Title, he was determined to pay no more Tribute to one driven out of his Dominions, and who, by his Conduct, seemed unworthy of Respect. *Babar* having received this Answer, prosecuted his March towards *Dehly*, and met with *Amcoisa*, at the Head of an Army much greater than his own; but as the *Indians* were Soldiers only in Shew, so they were broke and defeated by the first Attack. Their King perished like a brave Man in the midst of his Enemies; the Remains of his Army took Shelter in the Mountains of *Teebet*. *Babar* remaining Master of the Country, made Choice of *Dehly* for his Capital, which has continued to be the ordinary Residence of his Successors ever since*.

The first Care of this Prince, after his Establishment in the *Indies*, was to frame a Body of Laws, or rather to establish a few fundamental Maxims for the Government and Security of his Empire, that his Successors might not be exposed to such Accidents as he had met with, or be obliged, at every turn, to set their whole Dominions on the Hazard of a Battle. The Foundation on which this Structure was raised, was the sole and absolute Right of the Grand Mogul, for so *Babar* was first called to all the Country he had acquired by Conquest; and this was so clearly understood, as that it secured all Property to him, and made even the greatest of his Subjects Tenants at will, or Tenants for Life at the very utmost. As by this Means the whole Lands in his Dominions were vested in the Mogul, and all the great Men in the Kingdom made dependant upon his Pleasure; so by another Principle, the Bulk of the People were put as much into his Power, since no written Laws were allowed, but the Judgment of the Emperor established what was right and wrong in his Dominions. In his Capital he gave Judgment himself in all Causes that came before him; in other Cities there were Officers who decided all Things in his Name, and whose Decrees were liable to be reviewed by the Mogul himself.

These Constitutions were devised by the Governor of *Cabulistan*, who, as he had fixed the Emperor upon the Throne by his Fidelity, now secured him thereon by his Wisdom. The Effects of these Settlements very soon ap-

peared by the Change that was perceived in the Face of Affairs; for the *Tartars*, who had been the old Subjects of *Babar* and his Ancestors, swarmed to him now from all Quarters, as did also the *Perfians* and other *Mohammedans*, with whom the Court and the Army were filled, and upon whom all Places of Trust and Profit were bestowed. The great Officers, and in short all who had Preferences, civil or military, were stiled *Omrabs*, and the old *Indian* Princes retained their ancient Appellation of *Rajabs*. We shall meet with these Words very often, and therefore it may not be amiss to fix the Sense of them effectually. The *Omrab* is the mere Creature of his Prince, and tho' he often enjoys large Tracts of Land by his Favour, as well as considerable Appointments, yet he enjoys both but for Life, and can leave nothing to his Children, all being resumed by the Mogul at his Decease, who is the Heir-General of every Man in his Service. The *Rajabs* are hereditary Princes in their own Dominions, which they hold indeed of the Mogul, but by certain Tenures, with which, if they comply, he has no farther Demands upon them. It often happens that these *Rajabs* live at Court, and are honoured with Employments, in right of which they become *Omrabs*; but at their Decease the Mogul resumes all that they possess in his Dominions, and nothing but the Principality descends to their Children.

After all the Obligations that *Babar* owed to the Governor of *Cabulistan*, he became as ungrateful to him as his Grandfather had been to the Companions of his Misfortunes, and treated him in such a Manner, that he, for his own Security, turned *Esqair*, and in that Disguise sheltered himself in some distant Part of the *Indies*. After he left the Court, all Things ran to Confusion, and it plainly appeared, that none was able to govern the Empire, according to its present Constitution, but him who had framed it. It was some Time before the Emperor discerned this, but at length he found it out, repented of his Ingratitude, and would very willingly have recalled his Minister to Court, if he had known where to have found him. His Endeavours for some Time were fruitless, but at last he bethought himself of an Expedient, which was as successful as it was singular; he published an Edict, by which he ordered every Market-Town in his Dominions, to send its *Bazar*, or Market-Place up to *Dehly*, or to return a sufficient Reason for not doing it. His Motive to this, was, that he believed he should be able to distinguish, amongst these Returns, the Place where his Minister had taken Shelter. When he came to look them over, he laid his Finger on the following Answer from a Town at a great Distance from his Residence. The Inhabitants declared, that they were ready, and willing, to obey his Imperial Decree, but that their *Bazar* did not know the Way to *Dehly*, and therefore, if his Majesty would be pleased to send one of the *Bazars* of his Capital to conduct it, theirs should immediately set out. *Babar* directed the Deputies that brought him this Return, to send him instantly to Court, the Man by whose Advice they made it, which accordingly they did, and it proved as he expected, his old faithful Servant the Governor of *Cabulistan*, whom he restored to his former Post, and to his Favour, both which he enjoyed as long as he lived. The rest of this Emperor's Reign affords us nothing remarkable, inasmuch as he spent it in profound Peace, and having lived to a good old Age, deceased in the Year of the *Hegira* 937, A. D. 1230, after reigning five Years at *Samarcand*, three in *Cabulistan*, and thirty in the *Indies*.

7. He was succeeded in his Dominions by his Son *Hamayum*, or *Amayum*, who very soon experienced how difficult a Thing it is for the Successor of a Conqueror to preserve his Dominions. He had the Assistance of his Father's old Counsellor, but, like a young Man, he did not put that Confidence in him that he deserved; but, contrary to his Advice, and in spite of all his Remonstrances, promoted to the highest Employments the Person in the World most capable of doing him Mischief.

* The Name of this City is sometimes called *Delli*, and the Reader will meet with a large Description of it hereafter. It is very ancient, and made a Part of the Kingdom of *Porus*; and it was in the Neighbourhood of this Place, that the great Battle was fought, which put *Alexander* in Possession of his Dominions. There is said to be still remaining in this City a Column erected in Memory of that Event, with an Inscription almost worn out in Character, and in a Language now altogether unknown. The *Rajab Rana*, who was defeated by *Jamshid*, is reported by all the Oriental Writers to have been a direct Descendant from King *Porus*.

The Thing happened thus: A young *Pattan* Lord, named *Cbira*, who had been bred up with *Amayum* in his Father's Court, became his principal Favourite, and was advanced to the greatest Posts in the Government. Such a Confidence did this Prince place in him, that he made him his Generalissimo and Commander of the Guards about his Person. But *Cbira*, on whom Ambition, or a pretended Love to his Country, had a much greater Influence than all the Favours bestowed on him by *Amayum*, meditated how he might depose his indulgent Master, and restore the *Pattans* to their ancient Sovereignty. This great Minister first discovered his Ambition, it is said, by changing his Name from *Cbira*, which signifies a young Lion, to that of *Chircha*, which signifies the Royal or Imperial Lion. And being Commander of all the *Persian*, *Tartar*, and *Mogul* Troops, among whom he had rendered himself very popular, by his obliging Behaviour; and his own People the *Pattans*, as well as the *Indian Rajabs*, being glad of an Opportunity of throwing off the Mogul Yoke, all Things seemed to conspire to raise him to the Throne.

Amayum however being apprised of this universal Disaffection to his Person, occasioned by his Favourite, assembled a small Body of *Tartars* and *Persians*, with whom he gave Battle to *Cbira*; but their Numbers being very unequal, *Amayum* was soon compelled to leave the Field, and fled to the Shah of *Persia* for Protection, after he had reigned in *Dehly* about eleven Years, almost in continual Trouble and Confusion. The Inhabitants of the East are extremely addicted to Augury, or observing the Flight of Birds, from whence the few Courtiers who attended *Amayum* in his Retreat, predicted his Return to his Empire; for, it fell out one Day, when the Weather was hot, and he was weary with Travel, that Prince lay down to rest, when an Eagle, followed by her young ones, hovered for a considerable Time over his Head, and thereby shaded him from the Sun-beams. When he awaked, his Attendants complimented him on the Omen, which served to keep up his Spirits; for it is observed, by all the Writers of his History, that he bore his Misfortunes with great Dignity, and appeared as much a Monarch in his Exile, as he had ever done upon his Throne. The *Persian* Prince received him with all imaginable Kindness and Respect, assigned him a Palace in his Capital, with a competent Revenue, and left nothing untried that might contribute to lessen his Sense of his Disaster, which had so good an Effect, that the *Indian* Monarch forgot his Cares, and passed his Time as comfortably as it is possible for one Prince to do in the Dominions of another.

In the mean time however, *Chircha* employed all his Thoughts in providing for the Welfare of that Nation, who had, in some measure, called him to the Throne. He was a Man of great Parts, and of a benevolent Nature; he saw that the only Means to make his People happy was to enlarge and facilitate their Trade; and therefore to this he applied his Attention and his Power. He erected, at proper Distances in all the great Roads throughout his Dominions, Caravaneras, or publick Inns, where Merchants might find all Conveniencies, and proper Persons to attend them at a very moderate Expence, and where Foot-passengers might be entertained at the publick Expence. His Example had such an Effect on the richest of his Subjects, that they began to imitate him in the like Foundations, which proved of infinite Advantage to the Publick; and has therefore been practised ever since. The founding such Receptracles for Strangers and Travellers, being accounted the highest Point of Charity in that and other Eastern Countries to this Day. Another Regulation with the same View did equal Honour to the Administration of this Prince, and contributed no less to-

wards making him the Darling of his Subjects. There was, before his Time, no kind of Certainty in the Weights or Measures of this Country, but all Things were in a manner bought and sold by hand, which was attended with many Inconveniencies. This Evil he remedied by a Law, which forbid the selling any thing but by Weight and Measure, and appointed the Standards of both to be kept in the great Towns throughout his Dominions. The Reign of this Prince was but short, and he died without Issue, for otherwise he had, in all Probability, put an End to the Mogul Empire in the *Indies*. He was a very martial, as well as a very wise and prudent Prince in Time of Peace, and had a particular Turn for the Art of Engineering, which, by an Accident, proved fatal to him; for, having a Cannon of an unusual Size sent him from *Bengal*, he would needs make Trial of it himself, and the Piece bursting, he was killed by the Breach of it that struck him on the Head, when he had enjoyed the Empire about nine Years.

All Things upon his Death fell into Confusion; every one of the petty Princes had either Views for himself or for some greater Prince, to whom he was attached; and, in the Midst of his Distraction, the Government remained without a Head, and every *Rajab* acted as an independent Prince in his own Dominions. While Things were in this Situation, a certain *Faqir*, whose Name was *Cbadula*, went privately to the Court of *Persia*, and informed *Amayum* how Matters stood, assuring him that if he could procure but any Appearance of Force, he might be able to recover his Throne. He applied himself upon this to the Shah of *Persia* his Protector, and offered, if he would assist him, to pay him an annual Tribute, and, as a Compensation for the Expence he must necessarily be at in furnishing him with an Army, he proposed to make a Cession of the Principality of *Kandabar*. These Terms were immediately accepted, and with a considerable Body of Foot, and twelve thousand *Persian* Horse, he began his March towards the Frontiers of the *Indies*. The King of *Persia*, at his taking Leave of him, gave him a short Piece of Advice, which contributed no less to the Preservation of his Dominions, than the Army with which he furnished him, did to the regaining them. His Advice was to keep up continual Enmity between the *Pattans* and the *Rajapouts*, or *Indian* Soldiery, by which Means each of them would be weakened, and both of them kept within the Bounds of their Obedience.

On his entering the Confines of *India*, he found the whole Country open except only the Fortrefs of *Labor*, in which a *Pattan* Lord was Governor, and had under his Command a numerous Garrison, every way well provided. Of this Place however he soon became Master by the following Stratagem. An hundred young *Persians*, wholly devoted to his Service, disguised themselves in the Habits of Pilgrims just returned from *Mecca*; of these a Part got into the Fortrefs before it was dark, and the rest presented themselves at the Gates just as the Day was shut in, entreating Admittance for that Night only. The Governor looking upon it as an Act of Religion, admitted them: But in the midst of the Night, when the Garrison, weary with Fatigue, were buried in Sleep, the pretended Pilgrims fell upon the Governor and those who were about him, and having massacred them without Mercy, delivered the Fortrefs to *Amayum*, who, by this Means, entered *Labor* without the least Resistance. He marched on from thence with the utmost Diligence toward *Dehly*. A single Battle fought at the Distance of three Leagues from that City determined the Dispute, and put him once more in Possession of the Dominions of his Ancestors. *Amayum*, upon his Restoration, shewed his Gratitude to the *Faqir Cbadula*, who first brought him the News of *Cbira's*

¹ This, probably, might be, in some Measure, owing to the personal Behaviour of *Amayum*, who astonished the *Persian* Monarch by his Presence of Mind at his first Interview, which happened to be in a Summer-House, where there was but one *Sopha*, and that too small for them to sit on together. The *Indian* Prince saw this with Indignation, but recollecting himself after he had paid his Compliments to the *Shah*, who was standing, he desired him to be seated; and as soon as he had placed himself on the *Sopha*, *Amayum* fate down by him on his Quiver, which, after the *Tartar* Custom, he had hanging at his Back, which Act of Spirit pleased the *Shah* extremely.

² There is one Circumstance of this Prince's Reign which ought not to be passed over. When he took Possession of the Palace of *Amayum*, he treated his Empress with extraordinary Respect; and being informed that she was with Child, ordered her to be sent to *Persia* to her Husband; but *Amayum*, seized with a Fit of Jealousy, refused to see her; of which the informed *Chircha* by Letter. Upon this he wrote to *Amayum*, assuring him that he had never so much as seen the Empress; and to confirm the Truth of this Fact, he swore it upon the *Khoran*; on which the Emperor received her with great Tenderness and Affection; and the Son, with which she was then big, succeeded him in the Empire.

Death, by granting him an Estate in Lands, to be enjoyed by him and his Posterity for ever; and this is the only *Mohammedan* Family in *India*, it is said, who can claim the Property of any Lands at this Day. His Descendants also take Place of all others, and his Tomb has great Honours paid to it; but his Gratitude seems to have been exhausted, by the returns made to this worthy Man, since in regard to the Shah, to whom he owed all things, he neither shewed Kindness, or Justice, since he never paid him so much as one Year's Tribute, nor yielded to him the Principality he promised. Yet he remembered his Advice, and followed it very exactly, by which Means he took away from future Malecontents all Power of giving him Disturbance, and left it as a Maxim to his Posterity, who have practised it with great Success, and to this has been chiefly owing the Preservation of the Dominions he left them.

Amayum was in the Flower of his Age when he recovered his Dominions, but whether it was that a settled Melancholy had grown upon him, while under his Misfortunes, or that he had a Mind to shew, that in the Possession of the highest Blessings, he had still the common Fate of Mankind in his Eye, or that he was led thereto by a Custom common among the *Mohammedan* Princes of his Age; so it was, that as soon as his Government was settled, he began to build himself a Tomb, upon which he bestowed incredible Expence. He likewise settled a large Revenue for the Maintenance of a certain Number of Mollas, or Doctors of the *Mohammedan* Law, to reside constantly there, and to spend their Time in praying for his Soul, and reading the *Khoran*, near the Tomb where his Body was to be laid. When this Edifice was in good Forwardness, *Amayum* went one Day to see it, and having a Carpenter's Rod in his Hand, walked upon the Battlements, and gave the Workmen some Directions, when, either through Weariness, or that he might look about him with greater Ease, he clapp'd the Rod down, and leaned upon it, which being but slender, broke, and the Roof being sloping, the Emperor rolled forwards, and fell from thence to the Ground; by which Accident he was killed upon the Spot, and found his Death and his Tomb together, in the Year of the *Hegira* 966, and *A. D.* 1552. The latter was finished by his Successor with the utmost Magnificence, and adorned with a Dome, which is so richly gilt, that it dazzles the Eyes of the Spectator by its Splendor. It stands a little Way without the Gates of *Dehly*, at the End of a fine Bridge, composed of twelve Arches, and is esteemed one of the noblest Monuments in the Empire of *Indostan*. This Monarch survived his Restoration two Years, nine Months and fourteen Days, and reigned from his first Accession twenty-two Years.

8. *Amayum* was succeeded by his Son *Akebar*, or *Akbar*, then but thirteenth, whom all our Historians agree wanted no Accomplishments to adorn a Throne. He had, they tell us, a most penetrating Judgment, an extensive Knowledge, an intrepid Soul, and at the same Time was generous, tender, and compassionate. He soon perceived that the *Moguls* and *Tartars* bore no Proportion with the *Pattans* and *Indians* under his Government, and therefore inviting the neighbouring *Uzbeks* and *Persians* to serve under him, he preferred them to the principal Posts, and gave them Wives, that they might in Time be a Balance for that Part of his Subjects whom Nature and Interest inclined to be disaffected to his Government. And the greater Part of these who are called *Moguls*, at this Day, are a Mixture of white People of several Nations, professing the *Mohammedan* Religion; but it being found, that in a short Time they lose their Complexion, and de-

generate into Softness, like the original Natives of the Country, new Supplies of *Persians* and *Tartars* are encouraged to transplant themselves, and these usually fill the greatest Posts in the Government. This Prince also, to strengthen himself against the *Pattans*, whom he dreaded most, took several Bodies of *Rajpoots*, or *Rajpoots*, into his Service. These are the bravest People amongst the native *Indians*, who make Arms their Profession, and are Pagans by Religion; and to endear them the more, it is said, he took the Daughters of the principal *Rajas* among the Number of his Wives, and suffered the *Rajas* to match with the *Mogul* Princesses; tho' I must confess this Part of the History is a little difficult to give Credit to, because no People in the World are so scrupulous of mixing with those of a different Religion, or even with a different Sect, or Employment, as the Generality of the *Pagans* of *India* are; tho' there are some Sects, on the other Hand, that admit of very great Liberties.

To proceed, *Akebar* having taken all prudent Measures to render his Government secure at home, began to think of extending his Dominions towards the Sea-Coasts, that he might come in for a Share of the Trade and Riches that the maritime Places possessed; and the first Enterprize of this Nature that he undertook, was against the Kingdom of *Guzarat*, which extends from the River *Tapis*, upon which the Town of *Surat* stands, to the Mouth of the River *Indus*. This Part of *India*, at that Time, enjoyed a most flourishing Trade; the *Portuguese* in Particular, who had established several Colonies in this Part of the Country, imported immense Treasures every Year from *Europe*, in Exchange for the Manufactory of *India*. The Prince who then reigned in *Guzarat*, was Sultan *Babadar*, a *Mohammedan*. This Sultan *Babdar* had maintained a long War with the *Portuguese*, who daily encroached upon his Territories, and lately made themselves Masters of *Diu*, a Town which lies upon an Arm of the Sea, almost opposite to *Surat*; but both the Sultan *Babdar*, and the *Portuguese*, being alarmed at the Approach of the *Mogul*, united their Forces against him.

It was with some Difficulty, it is said, that *Akebar* prevailed on his Troops to march against the *Portuguese*. They had been represented at *Dehly* as something more than mortal, and those vast floating Machines armed with Artillery, with which they had heard they fought upon the Water, they were apprehensive might be made use of, or at least something of the like Nature upon the Land. They dreaded the Encounter therefore to such a Degree, that they were upon the Point of turning their Backs, and quitting the Enterprize, till *Akebar*, who had fully informed himself of the Numbers, and Strength of the Enemy, and their manner of engaging, convinced his Troops how much inferior this little *Guzarat* Prince, and the *Portuguese*, were to the Forces he brought with him, and putting himself at the Head of his Troop, in one brisk Charge, he routed both the *Guzarats* and *Portuguese*. Sultan *Babdar* fled, but his Children were taken Prisoners, and put to Death by the Conqueror, and the whole Kingdom immediately submitted to his Power, except those Towns the *Portuguese* were possessed of, which being fortified after the modern Way, bid Defiance to his Forces, as indeed, a very slight Fortification will at this Day. Their Elephants, which are their greatest Strength, are of very little use in a Siege, because a Battery of great Guns would soon lay them in Heaps, if they could be suppos'd so intrepid, as not to be disorder'd by the very Fire, or even the Report of a Cannon.

Akebar finding *Guzarat* so easy a Conquest, sent his Arms towards *Decan*, which lies to the Southward of it.

^a The intelligent Reader will easily perceive the Reason why this Empire has been more subject to Revolutions than any other, the *Moguls* having no Subjects that he can depend on but *Tartars* and Strangers, the native *Indians* remaining still as distinct a Nation as ever, and shewing the *Mohammedans* as heartily as the *Mohammedans* themselves; so that this Government still remains what it was at the Beginning, that is to say, Military, the Sword giving Law, and being the true source of Power. This Observation will be found of great use to the understanding the subsequent Part of this History.

^b It is a pretty difficult thing to fix the Manner of Writing this Word, which in all Probability is very incorrectly expressed by the *Europeans*. Most of our English Authors write it, *Rajpoot*, or *Pajpoot*, they are properly the War Tribe of the ancient *Indians*, and we find them very frequently distinguished by the Name of *Queries*. The Arms they use, are commonly Swords, Pikes and Bucklers; but when they appear with a *Pagane* Chief, it is a certain Sign that they have made a Vow either to conquer or die. On these Occasions, it is common enough for them to resign their Courage, by taking Opium, which inspires 'em with a sort of military Fury, that differs not much from Madness. There is one thing remarkable in their Discipline, which is, that before they engage, they embrace each other, as if they were on the Point of departing on a long Journey, animating thereby their Readiness to rush into another State.

This was divided into several little Sovereignities. *Muslapha*, a *Mohammedan* Prince, possessed that Part of the Country wherein the Towns of *Brampour* and *Acer* are situated, whose Subjects gave him the Title of *Melch*, or King, *Amanadagar*, and the Territory belonging to it, was subject to the Queen of *Cande*, and *Ambar* commanded the District of *Doltabad*. These Princes, tho' at other Times Enemies, united their Forces against *Akebar*, and gave him Battle, but were defeated by him with very little Loss. The Reduction of the Fortresses which these Princes possessed, prove a Work of greater Labour; for now every one being to defend what was their own, exerted their utmost Force, and their utmost Capacity.

The Fortres of *Acer* was the first that he attack'd, an irregular Fortification, and which could have made no Defence against an *European* Army, but a Place of great Strength in the *Indies*, and very well provided with Artillery, some of which, it is said, were cast by the *Indians* themselves, before the *Portuguese* visited their Coasts. King *Muslapha* was there in Person, with a very numerous Garrison, composed entirely of his best Troops. The Defence he made, was worthy of his Reputation for Conduct, and for Courage, and the Army of the *Mogul* was so ruined by the Fatigue of this Siege, that the Emperor himself had Thoughts of raising it, when he was informed by some Deserters, that the Garrison began to want Water, which encouraged him to remain before the Place. King *Muslapha* perceiving the Cisterns dry, and knowing the Rainy-season to be at a Distance, resolved to retire privately out of the Fortres, in order to throw himself into *Brampour*, and there defend himself and the rest of his Dominions.

It was with this Design, that in the middle of the Night, he quitted *Acer* in Disguise, and before he had proceeded far, he was seized by the Advance Guards of the *Mogul* Army, who carried him immediately to the Emperor's Tent. When he came into the Presence of *Akebar*, that Monarch asked him who he was, and where he was going? To which, with great Spirit, he answered, that he was King *Muslapha*, and that knowing him to be a wise and generous Prince, he came out to ask his Advice, since they had now no Water left, and he could not bring himself, after living so long as a King, to become the Subject of another. *Akebar* bid him go back to the Place, and be satisfied, that if Heaven intended to deliver him, he would meet with a Supply of Water by some unexpected Means. *Muslapha* took his Advice, and returned to his Fortres. It was then about the middle of *May*, and as the rainy Season does not usually commence till the middle of *June*, he had not much Reason to expect what nevertheless fell out the Night following, in which it rained so plentifully, that his Cisterns were all full by the next Morning. *Akebar*, astonished at this Accident, left a sufficient Body of Troops to block up *Acer*, and marched with the rest of his Forces to besiege *Brampour*, which, tho' a Place of considerable Strength, and well provided with every thing, did not hold out long, and *Muslapha* seeing the best Part of his Dominions lost, resolved to make the best Terms he could for himself, in Consideration of the Surrender of *Acer*. The *Mogul* granted him as good Conditions as he could reasonably expect, and *Muslapha* entering into his Service, had the same Respect paid him as the other Rajahs.

After the Reduction of *Acer*, the *Mogul* prepared next for the Siege of *Amanadagar*, which the Princess of *Cande* defending with great Courage, kept him two Months before the Place. At length, despairing to hold out, she caused all her Treasure to be melted into Bullets, and, interbed with the bitterest Curfes against her Enemies, shot them into the neighbouring Woods, to prevent his possessing it. Some of these gold and silver Bullets *Manouchi* assures us, were found in his Time, and he read the Inscriptions on them with abundance of Delight, and one particularly of Gold, he lays, weighed eight Pounds at least. *Ambar* hearing the great Distress that this Princess was in, resolved to make an Effort for her Deliverance, and at the same Time to keep the War out of his own Country. The Design was generous in itself, and well enough contrived, and on the Review of his Forces, it

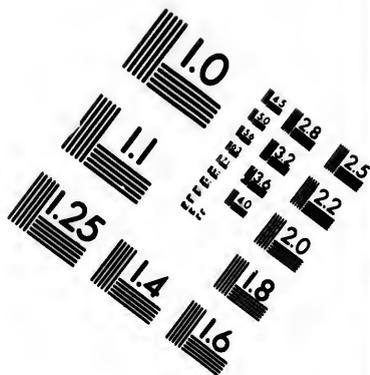

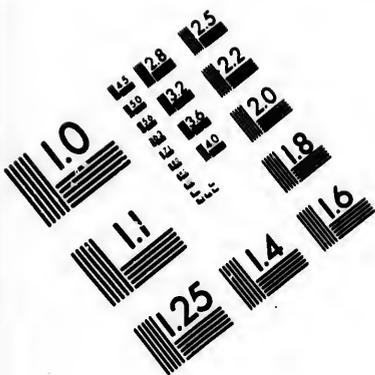

seemed not altogether impossible to have executed it; for this *Indian* Prince, by compelling all his Subjects to take Arms, had drawn together near fifty thousand Men. *Akebar* however attacked him suddenly on his March, defeated him without the Loss of a Man, and his own People being discontented with his Conduct, murdered the unfortunate *Ambar* in his Flight. The Princess of *Cande* seeing now no Hopes left, yielded her City, and herself, to the victorious *Mogul*, who not only treated her with all the Respect due to her Quality, but soon after received her into the Number of his Wives, and she remained for many Years his principal Favourite. *Akebar* was now Master of best part of the South Coast of *Indostan*, and almost all the Rajahs of that Country readily yielded him Obedience.

It was at this Time, that from a Motive hitherto concealed, he took Occasion to destroy the vast and beautiful City of *Dehli*, the ancient Residence of the *Pattan* Kings, and the Capital of *Indostan*. He built a Mosque, and a Palace at *Piscipour*, and the Rajahs building also many Palaces near them, it soon became a very considerable City; but the Lustre of this Place lasted not long, since the Emperor himself perceiving that the Air was unwholesome, removed from thence, and returned into the Neighbourhood of *Dehli*, where, out of the Ruins of the old City, he erected a new one on the Banks of the River *Jemma*; but even the Splendor of this new City could not please him long, and therefore proceeding farther on the River, he fixed on the little Town of *Agra*, for the Seat of his Empire. It is seated on a large Plain, and the River *Jemma* making an Elbow therein, the City lies round it in the Form of an Half-moon. At one End he erected a noble Palace, round which the Omrahs and Rajahs built theirs; so that in a very short Space of Time, from an inconsiderable Hamlet, it grew to be a large City, of nine *Italian* Miles in Circumference, and having no fewer than 660,000 settled Inhabitants, exclusive of Strangers.

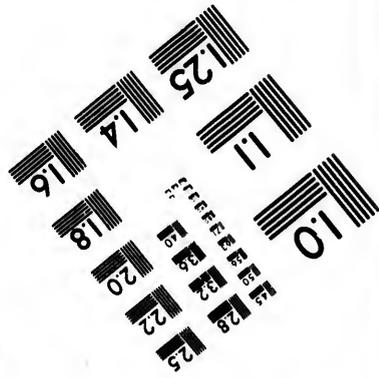

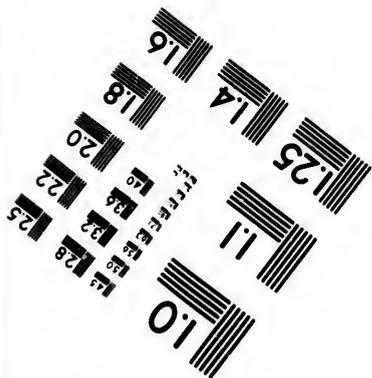

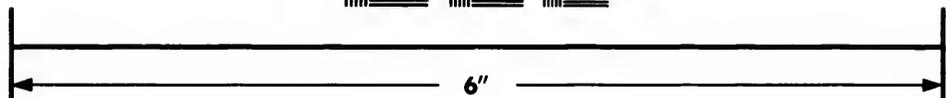

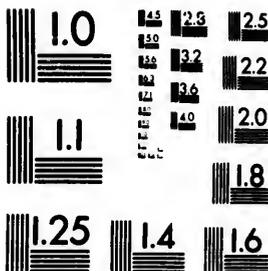

The Palace of the Emperor, which serves for a kind of Citadel to *Agra*, is one of the finest Structures in the World. The Walls of it, which are about thirty-five Foot high, are of a fine red Stone, little inferior in Hardness and Beauty to Marble, and it is built in such a Manner, that the joining of the Stones does not in the least appear. It is adorned with rich and beautiful Balconies, on every Story; and between the Palace and the River, there is a kind of Parade, where the Emperor sees his Guard reviewed, and the Battles of his Elephants. On the other Side the River, stands another City, as long as *Agra*, and not much inferior to it in Bigness. This is entirely inhabited by *Indians*, or, as they are now called, *Banians*, who are either Merchants, or Artificers; so that this City is no less remarkable for its Commerce, than the other for being the Imperial Residence of the Grand *Mogul*, and being the Capital of the *Indies*. When this great Work was accomplished, it plainly appeared, that this Emperor intended it for a Monument of his Glory to latest Posterity, by his bestowing upon it the Name of *Akebarabad*, i. e. the City of *Akebar*; but after his Decease, this new Name was laid aside, and the old one revived; so that this Capital of the *Indian* Empire is still known by the Name of *Agra*.

His Attention to the raising of this new City, did not extinguish that Thirst of Empire, which had appeared in the first Years of his Reign. On the contrary, having heard of an *Indian* Rajah, who was equally celebrated for his Wisdom and Courage, and who was besides illustrious on the score of his Descent from the famous *Porus*, and whose Dominions lay but twelve Days Journey from his Capital, he immediately formed a Design of reducing them, the rather because they lay between his hereditary Dominions, and his new Conquests. This Rajah took the Name of *Rana*, which seems to have been common to all his Family, according to the ancient Custom of the *Indies*. He was a Prince worthy of the Blood of *Porus*, and who, if he had been well seconded, might have restored the Liberty of his Country. As it was, he made a noble Attempt, which will be ever remembered in the Chronicles of that Country.

He was soon obliged to quit the Field, and to shut himself up in the Fortrefs of *Chitor*, seated on the Top of an high Mountain, and surrounded by a River. The Siege of this Place cost the Mogul two Years, though at the Head of the most numerous and best furnished Army that had ever been seen in that Country, and was endangered by the foulest Piece of Treachery that perhaps was ever committed. *Akebar* pretended to raise the Siege, and desired of *Rana* to have the Liberty only of entering the Place with fifty Attendants, which was granted him by the honest *Indian* without the least Suspicion; but after he had been very kindly entertained, and conducted to the Gates of the Fortrefs by the *Rajab* himself, he threw over his Neck a Chain of Pearl, strung upon Mohair for that Purpose, and pulled him without the Place, where a Body of the Mogul's Troops made him Prisoner. He afterwards made his Escape, and the Mogul having renewed the Siege, he was killed on the Walls, and so the Place was forced to capitulate, and thereby all the Dominions of that once powerful *Rajab* were annexed to the Empire of *Akebar*, and proved a very considerable Acquisition.

The Conclusion of this War could not but be very agreeable to the Emperor, who found his troops sufficiently harassed by a War of such Continuance, and in which at the Beginning so many *Indian* Princes were engaged, who, notwithstanding, retired into their respective Territories as soon as they saw *Chitor* invested; whereas if they had kept the Field, and harassed the Army of the Mogul, it is highly probable they might have preserved the City of *Chitor*, and the Country of *Rajab Rana*, from being thus swallowed up by him, who meant to bring them all under his Subjection. But whether it proceeds from Religion, Humour, or Custom, certain it is, that the *Banians* have an established Principle amongst them, that defensive Wars against Foreigners are only lawful, and that they ought not to march out of their own Dominions, in order even to attack an Enemy that has often attempted their Destruction. This weak Notion has always given the Moguls great Advantages over them, and particularly this politick, as well as enterprizing Prince, who, when he had torn from them a Part of their Dominions, suddenly laid down his Arms, and thereby put an End to the War, till another favourable Opportunity offered.

Akebar therefore, after he had subdued this Province, employed himself for some time in cultivating the Arts of Peace, in enlarging the City of *Agra*, and beautifying his Palaces; and among other great Works, he planted the Road from *Agra* to *Laber*, and made it one continued Walk of shady Trees, though it be not less than four hundred and fifty *English* Miles from one City to the other. This still remains as a Monument of this Emperor's Grandeur, and is an inconceivable Refreshment to Travellers in so hot a Climate. He was a great Admirer of all robust Exercises, and took a Pleasure in the most hazardous Uses thereof, breaking unruly Horses, and managing the War-Elephants when they fought; an Employment so very dangerous, that the Wives of those who are obliged to do it by their Office, tear off their Cloaths, and the Pendants from their Ears, when their Husbands are thus exposed. Nay, it is reported of him, that in the War he had with the Peasants of the Country, the most obstinate he ever engaged in, when some of them had shut themselves up in a Town, and the Conductors of the Elephants were ordered to break open the Gates; upon their expressing some Reluctance to hazard themselves in so desperate an Undertaking, the Emperor commanded one of them to dismount, and cloathed in a common Soldier's Coat, mounted the Elephant himself, and managed him with that Dexterity, that he forced open the Gate in the midst of a Shower of Arrows which the besieged poured upon him, and had the good Fortune to come off unhurt. This War with the Peasants, which begun in *Akebar's* Reign, lasted a considerable time; for being acquainted with all the Defiles and inaccessible Parts of the Forests, it was found exceed-

ing difficult to drive them from their Haunts, and the Government is so severe upon this sort of People to this Day, that if a Peasant be found in Arms, he loses his Head. Nothing is more common than to see the Heads of these Wretches hanging on the Road Sides in *terrorem*.

While *Akebar* was engaged in this War with the Peasants, his eldest Son *Jehan Guire* broke out in Rebellion against him, but his Party was soon defeated, and the Prince made a Prisoner. However, such was his Father's Tenderness towards him, that he did not keep him long confined; but, to deter him from such Practices for the future, upon his Enlargement, he made the Prince follow him into a Forest, where he shewed him the Heads of the principal Conspirators hanging upon the Branches of the Trees. The Prince being taught, by so tragical a Prospect, the Danger that attended such Enterprizes, or moved by a Sense of the Emperor's Indulgence to him, ever after continued unshaken in his Loyalty and Duty to his Father. This Insurrection was no sooner suppressed, but the *Pactans*, who had been driven up into the Mountains by *Amaym*, began to make Incursions into the open Country, and threatened to assume their ancient Sovereignty in that Kingdom of *Deby*. Against these *Akebar* sent an Army of eighty-thousand Men, who entered the *Pattan* Country, but were all cut in Pieces, or perished in the Defarts.

This Misfortune obliged the Emperor to lay aside all Thoughts of subduing these People, at least for the present, and perceiving that the chief Cause of his Misfortune was, that his Artillery had not been so well played as it might have been, he resolved to take some *Europeans* into his Service, and with this View he sent for some *English* Gunners from on Board their Ships that came to trade upon his Coasts; and of one of these Gunners we have a very whimsical Story, which, as it has nothing in it improbable, I will venture, for the Reader's Amusement, to relate. This Man was particularly skilful in his Profession, but withal had a great Affection for his Bottle, and found himself much at a Loss in a *Mobammadan* Country, where Wine was prohibited. He at last contrived a very singular Method for procuring in this respect a Dispensation for himself. The Emperor being desirous to see a Proof of his Dexterity, ordered a large Carpet to be hung up at a reasonable Distance, and directed him to fire at it, which the Fellow did, but pointed his Gun in such a manner, that the Shot flew extremely wide. The Emperor called him, and gave him a pretty brisk Reproof, telling him, that it was a Shame for a Man to take upon him that Office, who knew so little of the Matter. The Gunner answered with great Humility, that since he had been debarred the Use of Wine, his Eyes were grown dim, but that if his Majesty would order him a churruping Cup, he durst engage to hit a smaller Mark. *Akebar* immediately commanded that they should give him a Quart, of which the Gunner made but one Draught, and then applying himself to the Task he had undertaken, he performed it with universal Applause. The Emperor upon this ordered it to be entered in the Annals of his Reign, *That Wine is as natural to Europeans, as Water to Fish, and that to deprive them of it, was to rob them of the greatest Comfort of their Lives.*

It was from this Accident that a Law was made, giving Leave to such Foreigners as settled in the Empire to cultivate Vineyards, which they have since done with great Success and Profit. He from this Time forward had a great Kindness for the *Europeans*, and took all imaginable Pains to engage them, as well as all other Strangers, to settle in his Dominions, that they might enlarge the Trade, and perfect the Manufactures of his Subjects. By this means his Empire became every Day more and more flourishing, and the Inhabitants of it more and more industrious; yet with all these great Properties, and notwithstanding he was certainly one of the ablest Politicians in the East, *Akebar* had something very extravagant, which discovered itself particularly in his Notions about Religion. His own good Sense, assisted by the Lights he received

^h The Siege of *Chitor* is almost as famous among the modern *Indians*, as the Siege of *Troy* among the ancient *Greeks*; and an infinite Number of fabulous Stories have been thrust into this History. Thus it is said to have had its Beginning from the Character which *Akebar* had received of the beautiful *Padmajy*, the Wife of *Rana*, and the most lovely Woman in the *Indies*. All these Embellishments I thought requisite to leave out, that we might keep the more within Bounds, and report as near as possible nothing but Matters of Fact to the Reader.

from the Portuguese Missionaries, brought him to discern many Absurdities in the *Mohammedan* Religion, to which he had never been much addicted; but instead of becoming a Christian, as the Portuguese Priests expected¹, he framed a strange Project of introducing a new Religion, which very plainly shewed that he considered it only as a political Institution, and as a useful Engine of Government. He was sensible of the great Inconveniences that arose from his Subjects, being of different Faiths, and therefore he was willing to introduce a System that might reconcile them all, and at the same time place him at the Head of Ecclesiastical, as well as Civil Affairs. This Scheme of his he published at *Labor*, and at first it was tolerably well received, at least among his Courtiers, who were ready enough to embrace any thing that might please their Master. In this new Religion he studied to comprehend the principal Doctrines and most remarkable Rites of all the rest. Baptism he borrowed from the Christians, Circumcision from the *Mohammedans*, a profound Reverence for the Sun from the *Persees*, and with these he mingled somewhat of the Morality, and even of the Theological Notions of the *Dramins*, assuming, in consequence of this Invention, the Title of *Shah Geladin*, that is, the supreme Pontiff of the sovereign Law.

But in the midst of his Politicks there were certain Circumstances attended these Proceedings, which he had not foreseen, and that was the disgusting all such of his Subjects as were really Men of Principles, and sincerely attached to the Faiths which they professed. The *Mohammedans*, who are, generally speaking, Bigots, were provoked to the highest Degree by what they call his Apostacy. The *Indians* were by no means pleased, and the *Persees* remained obstinately fixed to their old Religion, which they thought was grievously profaned by this new Regulation; and thus, instead of pleasing all, he pleased none but such Men of corrupt Intentions as were knit to be relied or depended on. The First-fruits of his new Religion was a dangerous Revolt begun in the following Manner: *Mustapha*, one of the Decan Princes, whom he had formerly subdued, and who, as has been before observed, had lived peaceably in the Mogul's Court for a considerable Time, about this Time retired from thence, and found means to repossess himself of his Country, where many *Mohammedans*, disgusted at the Sights the Emperor had put upon their Religion, went over to him. The Prince *Pilari*, the Emperor's beloved Son, to whom he had given the Name of *Morad*, was sent with a gallant Army to suppress this Insurrection; he engaged the *Rojab* in the Province of *Cambaya*, being considerably superior to the Enemy in Numbers, but *Mustapha*, who was an experienced Captain, and perfectly acquainted with the Country, gained an intire Victory over the Emperor's Forces, and the Body of young *Morad* was found in the Field of Battle among the slain. This Stroke of Fortune, it is said, pierced *Akbar* to the Heart, and he was so sensible of the Anger of Heaven, that he never after worshipped the Sun, nor suffered, as in Consequence of his Scheme he had done, Divine Honours to be paid to his own Person.

The Emperor soon after returned from *Cachemire*, by the Way of *Labor*, and marched Southward till he arrived at *Agra*, where mighty Preparations were made against *Mustapha*. In the mean while the Emperor grew extremely thoughtful, abandoning all sorts of Diversions but Hunting, which he followed chiefly for the Opportunity of retiring alone into the Forest, and unfrequented Places. In one of these Excursions, sitting by himself under a shady Tree, it is said he observed a certain kind of Caterpillars creeping near him, which he killed with the Point of one of his Arrows, and shooting an Antelope soon after with the same Arrow, the Beast expired in an Instant, tho' the Wound was not in a mortal Part; whereupon the Empe-

ror commanded the Antelope to be opened, the Flesh of which appeared black and corrupted, and the Dogs died that eat of it, by which *Akbar* discovered how very subtil the Poison extracted from this Insect was, and caused a Quantity of Pills to be made up with it, which he compelled some disaffected Lords to take in his Presence, and thereby dispatched them out of his Way². He practised the same Conduct towards all whom he esteemed Friends to *Mustapha*, whom he found to have abundance of Creatures in his Court, and promised himself, by this Contrivance, a safe and happy Reign for the future.

But it so fell out, that this very Art turned upon himself, and shortened his Days in the same manner that it had done those of his Enemies. The Person to whom he confided the Secret of mixing these Pills, had Orders to supply the Emperor's Box from Time to Time with a certain Quantity of them. In this Box there were three Partitions, in one of which he kept his Betel, which, according to the Custom of his Country, he chewed in the same manner as in *Europe* People chew Tobacco; in the second he had some cordial Pills to help Digestion, and in the third were those Poison Pills. It happened one Day, that either through Hurry or Inadvertency, he mistook the Pills in the third Partition for those in the second, and by this means poisoned himself. The Venom operated slowly, but surely, notwithstanding all the Assistance he received from his own Physicians, and from the Portuguese, so that he ended his Days in great Pain and Misery, after he had reigned fifty-three, and lived sixty-six Years. His Corps was interred in a very fine Tomb of his own Building, and he left behind him the Character of one of the bravest, wisest, and most fortunate Princes of the Age in which he lived, and seemed to have merited in the Course of his Reign, the Title he assumed at the Beginning of it, *Akbar* in the Language of his Country signifying inimitable.

9. *Shah-Selim*, i. e. the peaceable King, succeeded his Father *Akbar* on the 21st of October in the Year of the *Hegira* 1014, and in that of our Lord 1605. On his ascending the Throne, he assumed, as the Custom is in the East, a new Name or Title, and called himself *Nour'odin Mohammed Jebanguir*, i. e. the Light of Religion, Mohammed Conqueror of the World. Almost all the European Authors call him *Jehan Guire*, and therefore that we may not seem to affect Singularity in Matters of no great Importance, we shall call him so likewise, that the Reader may apply what is here delivered the more readily to what he may read of this Prince in other Authors. As to the Character of this Monarch, we are obliged to speak of it more largely than hitherto we have done of any of these Princes, because the History of his Reign depends in a great measure thereupon. He fell very far short of his Father in Abilities, and at the same time exceeded him very much in his Vices. He loved eating and drinking more than became a King, and the chief Reason why he inclined rather to the Christian than to the *Mohammedan* Religion was, because the former did not restrain him in Meats or Drinks as the latter did. He was very brave in his Person, though he did not affect War so much as some of his Predecessors; but whenever his Affairs forced him to take the Field, he shewed himself as capable of conducting his Armies as any of them. He was naturally fond of the *Franks* or *Europeans*, because he found them more inclined to that manner of Life, which he liked best, than the *Mohammedans*, whom he treated with great Harshness and Severity; for he particularly affected Feasting at the Season of the Year, when by the Precepts of their Law they were bound to fast; and if at such times they refused to eat and drink as freely as he would have them, he threatened to throw them out of the Window of his Dining-room, under which two fierce Lions were constantly chained. One would imagine

¹ There are abundance of strange Stories related of the Conferences between this Monarch and these Missionaries, which, as I cannot believe, I will not relate, but content myself with observing, that in this Court, as well as in most others, the Suppleness of the Clergy did more Harm to Religion than their Preaching could do good. The Truth of the Matter seems to be, that they had one thing in View, and the Emperor another, so that they were continually at Cross-purposes, they studying by Artifices unworthy of the Christian Religion to convert him, and he labouring all he could to pick out of them such things as might be of most Use to him, in which he succeeded much better than they.

² There seems to be something contradictory in this Account of the Poison which *Akbar* discovered, since it is said to have operated so suddenly on the Beast, and so slowly in Men; but if we consider the Facts attentively, we shall very soon be convinced, that they are very consistent. In the first place the Poison in one instance was unmix'd, and in the other compounded, which must necessarily make a great Alteration in the manner of its working; and in the next the Poison was very differently applied; for with respect to the Antelope, it was thrown immediately into the Blood and Joints, whereas when administered to Men, it pass'd first through all the Operations of the Stomach, which, though they could not entirely destroy, must, however, much weaken its Force.

from hence, that he was obstinate and cruel, and yet it is certain that no Prince was more under the Influence either of Women, or of Ministers, than he, as will very clearly appear from the subsequent Part of this History.

It has been already observed, that he took up Arms against his Father, and this Crime drew after it the Punishment it deserved; for as the old Emperor *Akebar*, while his Son was under Disgrace with him upon this Account, often threatened to deprive him of the Succession, and to leave the Crown to his eldest Son Sultan *Khosro*, or, as it is commonly wrote, *Cofrou*, so from the very Beginning of his Reign, that young Prince at least secretly disputed his Right to the Crown, conceiving himself the lawful Emperor, and his Father no better than an Usurper; which Notion, whether well or ill founded, was the Source of those Troubles and Disturbances in the Government, which lasted for near an hundred Years. Yet it does not appear, that the Emperor shewed any great Jealousy or Dislike to this Son, before such time as his Behaviour made it absolutely necessary for him to treat him with Severity; and in all probability, the Reason that Sultan *Cofrou* had to many Friends in his Father's Court, and was able to give him so much Disturbance, proceeded from his own ill Management, and especially from his applying himself too little to Affairs of State, and giving up too much of his Time to his Pleasures. Another great Error in the Conduct of *Jehan Guire*, was his shewing a great Contempt for his Father's Memory, and altering almost every thing that he had done; whereas Sultan *Cofrou*, on the other hand, studied in every thing to follow the Footsteps of his Grandfather, to support the Dignity of his Character, to maintain his Interest with the great *Omrabs* and *Rajabs* at Court, and wishal, to gain the Affections of the People. It is easy to discern from what has been said, that how peaceable soever this Monarch's Temper might be, his Reign could not but be liable to Troubles and Distractions, as we shall see it was.

This Emperor removed the Imperial Seat from *Agra* to *Lahor*, which lies four or five hundred Miles to the North in a more temperate Climate, and the fine Walk of Trees from one City to the other, which was begun by *Akebar*, was finished by this Prince; he made also large Additions to the City of *Lahor*, and built him an elegant convenient Palace, but not near so magnificent as that of *Agra*. Here it was that the Emperor engaged in an Amour, which occasioned him infinite Troubles during the Remainder of his Reign; and though the Beginning of the Story have the Air of a Romance, yet as to the Substance of it, there is very little Reason to entertain a Doubt, the Distractions in the Royal Family, and the Wars that succeeded amongst the Princes of the Blood, sufficiently attest the Truth of the principal Facts. His Majesty it seems was walking on his Terras, under which runs a fine River, when he saw a Barge rowing under him, wherein was a Lady of surprizing Beauty sitting under a Canopy. The Emperor let the Barge pass by, but sent immediately to enquire after her Name, and where her Residence was. The Messengers informed him that the Lady's Name was *Nour Mahal*, and that she was married to an Officer who commanded five hundred Men in his Majesty's Service; whereupon the Emperor ordered rich Presents to be made her, and that she should be acquainted how much he was smitten with her Beauty; but the Lady vowed inviolable Fidelity to her Husband, and would not hear any Proposals to his Dishonour. His Majesty, not being able to prevail with her to alter her Resolution, wrote to her Husband to attend a certain General, and at the same time sent to the General to put him to Death as soon as he saw him, which was executed accordingly, but not so secretly but *Nour Mahal* heard of it, and would not be put off with Accounts the Emperor ordered to be divulged, that he was killed by Accident.

When his Majesty therefore renewed his Addresses, and acquainted her there was now no Difficulty in the Way, and that he desired no more than the nicest Virtue might comply with, to take her among the Number of his Wives, she broke out into the bitterest Invectives, and reproached him with his Treachery and Cruelty. But the Time of her Widowhood being expired, and having had Leisure to vent her Grief, and reflect on the advantageous Offers which were made her, his Majesty found her more complying; and upon Condition that she should be the first Queen, that her Brother should be Prime Minister, and her Relations presented to the highest Posts, she was contented to yield to the Embraces of her Husband's Murderer. The Emperor solemnized his Marriage on the Arrival of the new Queen in his Palace, by a Festival, which lasted eight Days; and instead of the Name of *Nour Mahal*, which she had before, he gave her that of *Nour Jehan*, or *the Light of the World*.

But, notwithstanding one of the greatest Emperors of the East was captivated with her Charms, and the Empire was, for some Time, governed by her Arts, her Parentage was but mean; and when she came from *Purja*, the Place of her Birth, with her first Husband, he was no more than a Camel-Driver, though he afterwards advanced his Fortune in the Mogul's Service, and became a Commander of five hundred Men, as was observed before. Within the Compass of the first Year after her Admission into the Haram, or Seraglio, she dispatched five of the Ladies there, who were most in the Emperor's Favour, by Poison. And such was her Influence over the Emperor himself, that she engaged him to forbear drinking, at least, beyond the Bounds of Moderation, allowing him no more than nine Glasses at a Sitting. She had no Children by the Emperor, and but one Daughter by her former Husband; and the great Object therefore of her Policy was, to marry this Daughter to one of the Emperor's Sons, and then advance him to the Throne. *Jehan Guire* had four Sons by several Wives, the eldest was born in the Life of his Grandfather *Akebar*, and was stiled Sultan *Cofrou*; the second Sultan *Parvis*; the third Sultan *Chorrom*; and the fourth Sultan *Sbebriar*. It was to Sultan *Cofrou* that *Nour Jehan* intended to have married her Daughter, but this Prince, it seems, was prejudiced against her already, on account of the Influence she had over his Father; and another Obstacle was, his having married a Daughter of one of the great *Rajabs*, of whom he was passionately fond, whereupon he slighted the Proposal. The Sultaneis offered her Daughter to *Sbebriar*, the youngest Son, Sultan *Chorrom* being already married to her Niece, the Daughter of *Ajapp Khou*. His Brother *Sbebriar* was pleased with the Match, as the most likely Means to advance him to the Throne after the Death of his Father. And the Marriage was no sooner celebrated, but the three elder Brothers were appointed to distant Governments. Sultan *Chorrom* was sent to *Decan*, Sultan *Parvis* to *Bengal*, and Sultan *Cofrou*, the eldest, was designed for *Guzerat*.

But, instead of going to that Command, he assembled a Body of Troops to secure his Succession to the Crown, which he apprehended to be his Right, even at this instant, for he was bred up in a Belief that his Grandfather *Akebar* had appointed him his immediate Successor; and though he was content his Father should enjoy the Crown before him, he could not bear to see his youngest Brother the Favourite at Court, and with his Mother-in-law the Sultaneis, taking such Steps as must infallibly exclude him. If this did not justify it, at least it excused his Conduct, and brought many to side with him; but there were others who were not caught, even with this plausible Pretence, and, amongst them, the very best Friend the young Prince had in the World.

* In the Text I have followed the usual Way of Spelling, because by that this Lady is well known to us from *Mr. Dryden's* Play of the Great Mogul; but her Name more accurately expressed was *Nour-Mahal*, which signifies the Light of the Haram, or Seraglio; and therein consists the Complement of the Emperor's changing her Name to *Nour Jehan*, in which there is a double Entendre, since it signified at once the Light of the Emperor, and the Light of the World. She was not only the handsomest Woman in the *Indies*, but a great Wit also, and had a fine Vein in Poetry. In a word, she was the most accomplished of her Sex, and if she had not had too many of their Vices, would have made a very shining Figure in History. There are complete Memoirs of her amorous and political Intrigues under the Title of *Maciv Jehanguiry*.

† The proper Name of this Son of the Emperor was Sultan *Khourm*, i. e. the Prince of Joy. He was born in the Year 1592, and was the Son of an Indian Princess, the Daughter of *Rajah Gulesing*; and though he was the third Son of the Emperor, yet succeeded his Father, and his Family, are still possessed of the Throne of *Indjan*.

This was *Mohammed-Khan*, his Father's Prime Minister, who had always supported him even at the Hazard of his Interest. The Empress, who hated that Minister for many Reasons, and especially, because he was the only Rival that her Brother *Afaph-Khan* had in the Emperor's Favour, placed Things in such a Light to her insatuated Husband, that at last he gave his Consent that this great Man, who had deserved alike well of himself and of his Subjects, should be murdered. The Scheme laid for this Purpose, had as much in it of female Management as of Malice. A Company of *Indians*, who were posted in a Hall through which he was to go to the Emperor's Apartment, had Orders to stab him in his Passage. Had this Commission been given to one resolute Man, the Thing had probably been done; but these People behaved in so cowardly a Manner, that they discovered the Design without executing it, and *Mohammed*, who had much personal Bravery, forced his Passage into the Emperor's Apartment, where, finding him surrounded by Officers, upon whom he could depend, he seized upon his Person, forced him to mount his Elephant, and then seating himself by him under the same Canopy, with a Dagger drawn in his Hand, he sent the Emper's Word by one of her own Spies, that the Life of *Jehan Guire* should answer for it, if any Attempt was made to hinder his Passage. In this Manner he conducted the Emperor to his own Palace, where he was very safely guarded; for *Mohammed* was not only General and Commander in chief of the Army, but had it entirely at his Devotion; so that notwithstanding this surprising Accident, there was not the least Stir amongst the Soldiers, nor any Attempt made to rescue the Emperor out of his Hands. While he had him thus in his Custody, he obliged him to continue sober, and represented to him, in very plain Terms, the bad State of his Affairs, and the bad Consequences that must necessarily attend the Intrigues of the Sultana. In the mean time, he directed every thing as he was wont to do, in the Emperor's Name; levied Troops, and made open Preparations for War. The young Prince, who was all this Time in the Field, collected also a numerous Body of Men, the best Part of whom however were *Indians*; for having married a Wife of that Nation, and having always studied to oblige the *Rajaes*, his chief Interest lay among those People, who promised themselves great Things whenever he came to the Crown.

But all their Hopes were dashed by *Mohammed*, who released the Emperor, defeated *Cofrou*, and sent him and his Family Prisoners to the Citadel of *Gualtier*. While the Prince remained in this Captivity, *Nour Jehan* made him an Offer not only of his Liberty, but to assure his Succession to the Crown, if he would marry her Daughter, whom she promised to divorce from his younger Brother *Sbebriar*, as being an unactive Prince, and never likely to maintain himself upon the Throne, if he should be placed upon it. But such was Sultan *Cofrou's* Contempt, or Prejudice to *Nour Jehan's* Family, or, as others say, such was his Passion for one of his Wives, that he refused to comply with her, even in those wretched Circumstances. *Afaph Cham*, Brother to the Sultana, also encouraged the unfortunate *Cofrou* to persist in his Resolution, having an Interest to manage distinct from that of his Sister's; for Sultan *Cborrom*, the third Son of the Emperor, as has been observed, had married his Daughter; and if Sultan *Cofrou* and *Nour Jehan* should be reconciled, his Son-in-law could never hope to succeed. But, to make all sure, lest Sultan *Cofrou*, induced by the Hardships he suffered, or the Hopes of a Crown, might, at length, be prevailed on to comply with the Sultana, he procured the Emperor to send for Sultan *Cborrom* to Court, where they agreed together to cause Sultan *Cofrou* to be privately murdered in Prison. It was first attempted by Poison, but the Prince suspected the Design, and would eat nothing but what was dressed by his beloved Wife; whereupon they resolved to take the shortest Way, and ordered the Captain of the Fortrefs to strangle him, which was executed without the Emperor's Knowledge.

However, a Fact of this Nature could not be transacted so privately, but it was at last discovered; and though the Murderers were Persons of that Consequence, that the Emperor could not punish it in the Manner it deserved; yet he, from thenceforward, determined to make his Grandson *Bolagui*, the Son of Sultan *Cofrou*, his Successor; who appeared to be a Prince of great Expectations, and then about seventeen Years of Age. This Prince therefore was brought to Court; and treated as the presumptive Heir of the Crown, while Sultan *Cborrom* was commanded to retire to his Government of *Decan*. Here he spent his Time in making Alliances with the neighbouring *Rajabs*; and by Presents and Offers of Preferment, brought over most of the best Officers in the Empire to his Party; while the old Emperor spent his Days in the Amusements of the Seraglio, or over a Bottle, with his Friends; for either the Sultana's now indulged him in it, or she had not that Influence over him, as when her Charms were in their Bloom.

It was while Things remained in this Situation, that *Jehan Guire* enjoyed the pleasantest Part of his Reign. He spent the hot Summer Months in the little Kingdom of *Cachemire*, which all the Eastern Writers represent as incomparably the finest Country in the World. It is the most Northern Part of the Dominions of the Great Mogul, and is, strictly speaking, no more than a Valley, surrounded by high Mountains. The Air is temperate and wholesome, the Country rich and fruitful, and the People valiant in War, laborious and industrious in Time of Peace. It was in this beautiful Region that the Emperor indulged himself in all the Pleasures of a rural Life. His Palace was elegant and agreeable, but, at the same time, rather convenient than magnificent; his Gardens large, but irregular, and remarkable, rather for their Resemblance to a Forest, than for the Decorations that are derived from Art. The Empress, that she might seem to comply with the Humour of so kind a Husband, condescended to share in those rural Delights; and particularly diverted herself with feeding tame Fish in her Canals, some of which were many Years afterwards known by Fillets of Gold which she caused to be put round them. In the winter Season, when the rainy Weather makes it very uncomfortable living in the *Indies*, *Jehan Guire* contrived a singular Method of amusing himself at *Agra*, or *Labor*. He caused a kind of Fair to be kept in the Galleries of his Palace, where the *Omrabs* and *Rajabs* kept Shops, and attended them with their Wives and Daughters. The Emperor and the Royal Family were their only Customers, and amused themselves in going from Shop to Shop, cheapening Goods and haggling for them as if they were in earnest concerned about laying out their Money.

But these kinds of Pleasures were frequently interrupted by untoward Accidents in the Imperial Family, and sometimes too by Causes of another Nature. The wife and potent Shah *Abbas* was, at that Time, Monarch of *Persia*, and a formidable Neighbour to the Mogul. He revived the Pretensions which his Predecessors had on the Principality of *Kbandabar*; and one Summer, when *Jehan Guire* was diverting himself in the Kingdom of *Cachemire*, the Schah sent an Embassador to demand the Restitution of that City and Country, agreeable to the Promise made by his Grandfather *Amayum*. The Emperor sent Orders immediately to the Viceroy of *Multan*, which is the nearest Province to *Kbandabar*, to assemble, with the utmost Expedition, an Army for its Relief; but being informed that the Thing was impossible, he sent Instructions to the Governor of the Fortrefs of *Kbandabar*, which is the strongest Place in the *Indies*, to set a good Face upon the matter, and to deliver up the City and Castle, as soon as the *Persian* Army appeared. The Governor, however, could not believe his Eyes, and being a better Subject than a Statesman, was unable to comprehend that any Reasons could be strong enough to induce the Emperor to part with a Place of so great Strength, and so much Importance; he therefore defended it very bravely for six Months, and did not even surrender it then, till the Breach was

* This Diversion has been much used by his Successors, but especially by his Grandson; though it has always given great Offence to the *Omrabs* and *Rajabs*, because it obliges them to expose their Wives and Concubines, which tho' done only to the Imperial Family, is not born by them but with infinite Uncleaness, and the rather, because this has sometimes occasioned the carrying their Wives into the Imperial Haram.

practicable; and Shah *Abbas* on the very Point of making a general Storm. The Conduct of this Officer was very serviceable to the Emperor, though not agreeable to his Orders, for it gave *Mohammed-Khan* an Opportunity of drawing together such a Force as put a Stop to the Progress of the *Perfian* Arms, and prevented Shah *Abbas* from prosecuting the Design he had formed of making an Inruption into *Indostan*.

This Misfortune was quickly followed by a greater; the Emperor had given Orders for transporting the Treasures of the Empire from *Agra* to *Laher*, and *Asaph-Khan* was directed to see this performed, of which he immediately gave Notice to his Son-in-law, Sultan *Chorrom*, and advised him to march with an Army and seize them on the Road; and he accordingly put himself at the Head of sixty thousand Men for that Purpose. The Design, however, was prevented by the Fidelity of the Officer, who had the Custody of those Treasures, and who absolutely refused to deliver them to *Asaph-Khan*, though he produced the Emperor's Order. Sultan *Chorrom* not meeting with them upon the Road, proceeded to *Agra*; and though he was not able to take the Citadel, plundered the City, and then returned into his own Province of *Devan*, with an immense Booty. The Emperor, incensed at this outrageous Act of Disloyalty, assembled all his Forces, and marched in Person against this unnatural Son. The Armies met in the Neighbourhood of the City of *Dehly*, where an obstinate Engagement ensued, in which, however, the Emperor was at last victorious, and Sultan *Chorrom* was obliged to retire into the Mountains. The young Sultan *Bolaqui* was sent by his Grandfather to lay Siege to the City of *Amadobat*, which was the Capital of his rebellious Son's Province. This he performed with all the Zeal, and all the Expedition that could be expected, made himself Master of the Place in a few Days after he appeared before it, seized all the Treasures that were laid up therein, broke to Pieces the Throne of Gold the Sultan had erected there, and distributed the Diamonds with which it was adorned, amongst his Officers. This Victory had, in all Probability, put an End to the War, if one of the Emperor's Generals, whose Name was *Abdul-Khan*, had not gone over to the Party of Sultan *Chorrom*, which gave him fresh Hopes, and enabled him, once more, to take the Field, though with a small Army, with which he retired behind the River *Nerbada*, and fixed his head Quarters at *Brampour*. While he was in this Post, and endeavouring to recruit his Forces, very high Disputes arose between his old Minister *Kanna*, and his new Favourite *Abdul-Khan*, which, by Degrees, grew to such a Height that the former deserted his Interest, and made his Peace with the Emperor. To do this the more effectually, he informed Sultan *Parvis* and *Mohammed-Khan* of the distressed Situation of Sultan *Chorrom's* Affairs, advising them to pass the River immediately, and secure his Person. But *Abdul-Khan*, suspecting that he would give this Advice, advised his Master to retire into the Dominions of *Amber Malec*, an *Indian* Prince, who was his Friend; by which he escaped his total Ruin: And, on the other hand, *Mohammed-Khan* believing that *Kanna* had deceived him, treated them but very indifferently. By this Time however the Empress began to apprehend that *Mohammed-Khan* intended to put Sultan *Parvis* the Throne, in which she was confirmed by the great Victory gained over the Sultan *Chorrom* at *Alabassen*, one of the most famous Battles that was ever fought in the *Indies*; she therefore determined to ruin that great Minister, in the Opinion of a Master who owed his Life and Crown to his Fidelity.

It was with this View that she sent for the Traitor *Kanna* to Court, whose Eloquence, assisted by the Influence of the Sultana, drew over the old Emperor to their pernicious Opinion, and induced him to send an Order to *Mohammed-Khan* to come to Court immediately, without any Attendance. He was too wise a Man not to discern upon what Motives

this Order was founded, and therefore made no great Haste to obey it; but he was much more perplexed, when he discovered that Sultan *Parvis* was not at all displeas'd at his Disgrace, but rather look'd upon it as a Piece of good Fortune, which left him an Army entirely at his Disposal. *Mohammed-Khan* then saw that Loyalty and Probity were Virtues quite unnecessary to Ministers under an absolute Government, and that in the Situation he stood, it was necessary to practise the same bold Measure which he had once before taken with so much Success. He had Information, that the Court was removing from *Agra* to *Cahul*, and that the Bulk of the Army generally moved at some Distance before it. He assembled therefore with great Secrecy and Diligence, by the Assistance of some old Officers devoted to his Service, five thousand *Rahpouts*, of determined Courage, with whom he watched the Emperor's Motions, and understanding, that the Army had pass'd the River *Nilab*, in the Grey of the Morning, he invest'd the Camp of *Jehanguire* before Sun-rise, and almost without Bloodshed, secur'd him, the Empress, Sultan *Bolaqui*, Sultan *Sheriar*, and his two mortal Enemies, *Asaph-Khan* and *Kanna*, which was, perhaps, one of the boldest Actions ever performed in the *Indies*.

The Use this Minister made of it was surprizingly generous; he told the Emperor, as soon as he saw him, that he did not come to make him a Prisoner, but to set him at full Liberty, and leave it in his Power to place whom he pleas'd on the Throne after his Decease. As for the two Princes, he sent them Prisoners to the Citadel of *Agra*, and after having detain'd the Ministers, his Enemies, for some Time in Custody, he set them at Liberty, having first sworn *Kanna* on the *Khoran*, not to bear Arms against him, which Oath he kept in a very ministerial Manner; for the Empress having by her Intrigues recall'd the Emperor's Army, he put himself at the Head of it, with a View to have deprived of Liberty and Life that great Man from whom he had just received both; but *Mohammed* had timely Notice of the Design, and made his Escape. He soon after saw himself in worse Circumstances than ever; for the Troops at *Agra* set the two Princes at Liberty, Sultan *Chorrom* took the Field with a fresh Army, and Sultan *Parvis*, who was just reconcil'd to him, died of a Disease. His Affairs appear'd now so desperate, that his Son deserted him, and took Part with the Court. In this Distress, the old Man perform'd nothing but his Loyalty, and his Spirits, retiring, for the sake of immediate Safety, to *Rajah Rama*, a powerful *Indian* Prince, and yet so simple, and so bad a Politician, that he receiv'd his old Friend cover'd with Misfortunes, and in all Appearance without Resource, with as much Affection as when the first Man in the Empire, and at the Head of its Armies and Councils. The first thing *Mohammed* thought of in his Retreat, was his restoring the publick Peace, and securing the Quiet of his Master as long as he liv'd, which was all the Revenge he took for the repeated Injuries he had received.

It was with this View, that he wrote to Sultan *Chorrom*, and offer'd him his Service, not to act against his Father, but to secure the Crown to him after his Decease. That Prince had married the Daughter, and was entirely under the Influence of *Asaph*, the avowed Enemy of *Mohammed*, to whom he reveal'd the Proposition made him, and ask'd his Advice: He conjur'd his Son to accept the Offer; you cannot, said he, have a better General, or a more faithful Servant. Thus, in an Instant, the whole Face of Affairs was again chang'd; *Mohammed* reconcil'd the Emperor to his Son, pacifi'd all the Troubles of the Empire, and put it in the Power of *Jehanguire* to spend the Remainder of his Days in Peace. That Monarch was now grown old and infirm, and therefore desir'd to enjoy his Ease in the pleasant and wholesome Country of *Cachemire*, whither he retir'd, but had not continu'd there long, before he found himself troubled with an Asthma. The Impatience natural to Age and Sickness, made him

* There are many Circumstances of this Prince's private Life that very well deserve to be recorded, if we were not press'd both in point of Time and Room; and these are known with the greater Certainty, because he wrote himself a Treatise, entitul'd, *Fahast Jehanguire*, or, the Commentaries of *Jehanguire*, for the first thirteen Years of his Reign, viz. from the 21st of *October* 1605 to 1618. In these are contain'd Abundance of very curious and pleasant Stories; for he was wont to disguise himself in an Evening, in order to go and drink with the Tradesmen of *Agra*; at the common Punch-House; and kept a very exact Account of his Adventures.

long once more to change the Place of his Residence, and accordingly he set out for *Labor*, and in his Way thither died at *Bimber* on the 27th of *October*, in the Year of the *Hegira* 1038, *A. D.* 1627, having reigned twenty-two Years and six Days, and lived sixty-eight Years, one Month and twenty-nine Days.

He was much regretted by his Subjects, over whom he reigned with much Justice, and with whom he lived in a manner so familiar, that they loved him as a Father and a Friend, as much as they respected him as a Prince. He was far from wanting great Qualities, or good ones; the easiness of his Temper was his greatest Fault.

The Death of the Emperor revived the Commotions in the Empire, and raised them much higher than ever, as the Time was now come, when the Possession of the Crown was the only thing that could give any of the Princes a secure Title to his Life. There were immediately three Parties formed, and in the Space of a very few Days, two Emperors proclaimed. The first of these was *Shebriar*, the deceased Monarch's youngest Son by a Concubine, then twenty-two Years of Age, whose Dominions never extended farther than the Palace, and who owed the Shadow of Empire that attended him for a little while, to the Influence of *Nour-Jehan*, whose Daughter, by her first Husband, he had espoused. Sultan *Bolaqui*, the Grandson of the late Emperor, and the true Heir of the Crown, was proclaimed by the Army, and soon after acknowledged by the City of *Agra*, by which Means the Empress and her Son-in-law fell into his Hands; he imprisoned them both, and to secure himself more effectually, put out the Eyes of the latter; so that his Empire ended almost as soon as it began, and indeed, he was in every respect so weak a Prince, that his Mother-in-law had no great Hopes of him, notwithstanding all the Arts she had practised in his Favour. The Contest seemed now in a Manner over, and Sultan *Bolaqui* thought himself so secure of the Empire, that he took little or no Pains to ingratiate himself with the principal Omrahs, or to procure the Affections of the People, which are always a Monarch's firmest Support. *Asaph* and *Mohammed*, notwithstanding, had their Eyes upon Sultan *Chorrom*, but the Treasure and Forces of the Empire being in the Power of *Bolaqui*, they did not yet think it a proper Time to declare themselves.

Bolaqui resolving to found his Uncle's Intentions, sent to demand a Tribute, and Honour, for the Kingdom of *Deean*, and the other Dominions he held of the Empire. The Omrah, who was dispatched to Sultan *Chorrom* on this Occasion, was acquainted, that he was in so ill a State of Health, that he could not possibly transact any Business; the Omrah still persisted to see him, which, with some Difficulty, he was at length permitted to do, and found the Sultan in a very weak, languishing Condition, as he apprehended, and vomiting Blood in such Quantities, that he did not think it possible he could live many Days. The Omrah thereupon immediately dispatched a Courier to *Agra* with the News, which he knew would be very acceptable to the Court. But this Illness it seems was all counterfeit, and the Blood he seemed to vomit, was only the Blood of a Kid he held in his Mouth: However, the Design was still carried on, Sultan *Chorrom* disappeared on a sudden, and it was not only given out, that he was dead, but his whole Court went into Mourning for him.

The crafty *Mohammed* also prevailed with the Omrah who came from *Bolaqui*, to write to his Master, to obtain Leave for the burying the Sultan in the royal Sepulchre at *Agra*, which was readily granted; and upon the return of the Courier, a pompous funeral Procession begun, agreeable to the Quality of so great a Prince. *Mohammed-Khan*, at the Head of a thousand Officers of the deceased, attended the Hearle, and Sultan *Chorrom* himself followed in Disguise. Several Bodies of the *Rajpoots*, or *Rashtpout*, Allies of Sultan *Chorrom*, fell in with the Pro-

cession, upon the Road, under Pretence of paying their last Duties to the deceased. *Asaph Khan*, who had not declared himself, but remained of *Bolaqui's* Council in *Agra*; treacherously advised the young Emperor to meet his Uncle's Corps, as they drew near *Agra*, who thereupon marched out with an ordinary Guard, and such an Equipage as was suitable to the Occasion. He was surprized to see so numerous a Body of Troops attending the Hearle; and suspecting he was betray'd, turned short on a sudden; and made his Escape; never attempting to recover *Agra*; and, indeed, he did not stop till he found himself in the *Persian* Dominions. He looked upon the Inflection to be universal, and very well knew, that the Consequence of falling into his Enemies Hands, was Death, or the Loss of his Eyes at least. This Transaction shews, that the Statesmen of the East are as able, and as refined Politicians as the *Italians* themselves, and within a Trifle as wicked too. But let that pass, and let us see how the Affairs were conducted after this Flight of the second Emperor, who reigned only a few Months.

10. Sultan *Chorrom* having thrown off his Disguise, mounted the Carriage which was supposed to contain his Body, and which when stripped of its funeral Ornaments, appeared to be a triumphal Car, in which he entered the City of *Agra* in Splendor, where he was received with the loud Acclamations of the People, who began to be afraid of the bloody Disposition shewn in so short a Space by his immediate Predecessor. The first thing he did, was to enquire for *Shebriar*; and the rest of the Princes of the Blood, and being informed, that they were all kept Prisoners in one of the Apartments of the Palace, he instantly gave Orders that the Gates of it should be walled up, and there left a Brother and three Nephews to perish for want of Sustenance. This Piece of Cruelty was the more extraordinary, because he had but the Moment before, and out of the very next Apartment, delivered his own three Sons, who being at Court with their Aunt the Empress, *Nour-Jehan*, had been imprisoned ever since the old Emperor's Death. Whether this Act of Severity displeased the old Minister *Mohammed-Khan*, or whether he was grown so weary of Courts, as to wish he might breath his last in a better Air, is uncertain; but so it was, that as soon as this great Revolution was over, he demanded Leave to retire, which was with some Difficulty granted him, and he passed the Remainder of his Days in an honourable Retreat in Peace and Quiet.

The Subjects of this Empire had now all the Reason in the World to hope for an happy Administration; the Prince was in the Flower of his Age, drawing towards his thirty-sixth Year, one who had shewn a martial Disposition, great Intrepidity, and a Soul not to be broken by the Frowns of Fortune. He assumed with the Imperial Diadem, a new Name, and caused himself to be called thenceforward; *Shababo'din Mohammed Shab Jehan*, i. e. *The bright Star, Mohammed King of the World*; but our European Historians generally call him by the last Part of this long Name, viz. *Shah Jehan*, and therefore it is by that we shall mention him in the ensuing Account of his Reign. The Dominions he possessed were larger in Extent, and produced much greater Revenues than many of his Predecessors had enjoyed; for all the vast Extent of Countries between the Principality of *Kandabar* to the River *Indus*; owned him for their Monarch; neither was it barely an Acknowledgment of his Superiority, but they were content likewise to pay him large Tributes, the Quantities of which, as well as the Title thereto, was now, through Length of Time, effectually established.

Yet he had still some Difficulties to struggle with, notwithstanding this fair outside of his Circumstances. The *Rajahs*, however submissive they might be, were little to be depended on, tho' Subjects they were Princes, and had Dominions of their own, no way despicable either for their Size or their Situation. In order to understand this Matter clearly, it is necessary to observe, that all the flat

¹ It was not for a long Time known where this Prince took Shelter, and some of the Memoirs of these Times say, that it was *Mohammed-Khan* who privately gave him a Hint to make his Escape, that he might have no Hand in shedding the Blood of any of his Master's Family.

² The Day on which he mounted the Throne, was the first of *February* 1628, so that the Confusions, after his Death, lasted very little more than three Months. It was believed, that after the Death of *Shebriar*, the old Empress *Nour-Jehan*, was not displeas'd to see him mount the Throne, as he had married her Niece, and was thereby Son-in-law to *Asaph-Khan* her Brother.

Country within the Bounds before-mentioned, was entirely and absolutely under the Dominion of the Great Mogul. But in the Heart of these Territories, were many little Principalities well bounded by Forests and Mountains, so that the native Inhabitants, though no great Soldiers, were very able to defend themselves against a Prince who was obliged to trust a mercenary Army, composed of different Nations, and whose natural Subjects the Moguls, were in a manner worn out.

In the next Place, Difference in Religion was another Cause of Distraction and Disquiet. The established Faith was *Mohammedism*, yet the Rajahs, and the greatest Part of the People, were of the old *Indian Religion*, and there were besides, a large Mixture of Christians and *Parsees*. The Difficulties that this created were so many, and so intolerable, that the two last Emperors were inclined to have invented a new Religion, which might have reconciled the Minds of all their Subjects; but in this, as indeed it was no great wonder, they failed; but what administered the greatest Cause of Disturbance was, the Custom introduced in the Court of the Mogul, of sending the young Princes of the Empire to govern several Provinces of it, which gave them a Habit of commanding, so that it was difficult, if not impossible, to teach them to obey, even a Parent, as well as a Prince, and yet this was a Custom, that it was not either easy, or safe to break through; for on the one Hand it was a thing very unnatural for a Father to make his Sons Prisoners in his own Palace, and on the other, it was no less difficult to prevent their forming Factions, if they were allowed such Liberties as were suitable to their Birth.

The Emperor knew this by Experience in the Reign of his Father, and had consequently much Reason to fear the like under his own Reign, having four Princes grown up to Mens Estate, and all very capable of pretending to the Crown. The eldest of these, Sultan *Dara Shikowah*, that is, in Pomp like *Darius*, the second Sultan *Sujab*, that is, full of Valour, who was a Year younger than *Dara*, the third Sultan *Aurangzeb*, or as we usually write it, *Aurangzeb*, that is, the Ornament of the Throne; his fourth Son was Sultan *Morad Buksh*, that is, the Fulfiller of Desires; he had likewise three Daughters by his Sultanas, whose Names it will be necessary to mention, because, contrary to the usual Custom, they had a great Influence over their Father, and by that Means a considerable Share in the Administration. The eldest of these, and indeed of all his Children, was *Jehan Ara Begum*, that is, the Ornament of the World; she was her Father's greatest Favourite, and entirely in the Interest of her Brother, Sultan *Dara*. The next was *Roshnai*, or *Roxana Begum*, that is, the Princess of enlightened Mind. This Lady had great Parts, and wonderful Address, which she employed to favour the Designs of her Brother *Aurangzeb*. The third was *Suria Bann Begum*; that is, the shining, or, bright Princess, of an easy and gentle Temper, who diverted herself with innocent Amusements, and had little or no Share in those Intrigues, which occasioned so many Disturbances in the Empire. He had besides several other Princes and Princesses by his Concubines, the Names of which, as they are not necessary to our Purpose, we shall omit.

In regard to his Neighbours, this Emperor had not much to fear. The Kingdom of *Perfia* was at that Time governed by a weak and very inactive Prince, not capable of giving him any Uneasiness or Disturbance. The *Tartars* were much altered from what they were, and besides, their Strength was so much exhausted, that he had nothing to apprehend from them. The *Indian Nations* in the South of his Territories were, generally speaking, peaceable and pusillanimous People. The *Portuguese* were the only Nation with whom he was like to have any

Quarrel, and that not from any Disturbance they gave him or his Subjects, but from a natural Aversion he had to them, which arose from different Motives. He had solicited their Assistance when he was in Arms against his Father, and was not only refused it, but reproached for having desired it against his Parent and his Prince, a Thing he could not either forget or forgive. His Emperors also was a bitter Enemy of the *Portuguese*, on the score of their Religion. She was the Niece of the old Emperor, and the Daughter of *Asaph-Khan*; her Name was *Tagee Mohl*, that is, the Crown of the Seraglio, a Woman of a violent Spirit, and yet of so much Art, that she entirely gained the Affection of her Husband, and is said to have put him upon this War.

When it was once resolved on, he sent his General *Coffam-Khan* with a Body of Forces, in order to make himself Master of *Oughli*, a Place near the Mouth of the River *Ganges*, where the *Portuguese* had a Garrison of six or seven hundred Men, who were all taken Prisoners, because it so happened, that the Place was invested, at that Season of the Year, when the Waters of the *Ganges* were so low that they were not able to make use of Boats; for, otherwise they might have escaped very easily. They were most of them conducted to *Agra*, where they were treated with great Severity; many of them obliged to turn *Mohammedans*, while some chose rather to suffer Death, and thereby obtained the Reputation of Martyrs. Some Priests and Jesuits that were taken here had, after a Time, their Liberty given them, and were suffered to return to the *Portuguese Colonies*. It was very happy for them that the Emperors *Tagee Mohl* was dead before the War ended; for, otherwise they had, undoubtedly, all suffered. She was regretted by none but the Emperor himself, who, in a great measure, owed his Crown to her Arts, and to her Interest.

He built, to perpetuate her Memory, a noble Tomb, at the Expence of about sixty Lacks of Rupes, or 750,000 Pounds Sterling. After the Close of this War, and of her Death, *Shah Jehan* changed his Manner of living entirely, and gave no farther Signs of a martial Disposition. His Father had been particularly fond of Labor, as his Grandfather had been of *Agra*. This Prince chose rather the City of *Delhy* for his Habitation; and not far from it he erected a very fine Castle for his own Residence, built at a vast Expence, and adorned it with two very magnificent Gardens, laid out by a *Venetian*, who was extremely skillful in his Profession. He was so delighted with this Place, and with the Improvements he had made, that he affected to call it *Shahjehanabad*, i. e. the Dwelling-place of *Shah Jehan*. The enlarging and beautifying, the laying out and peopling this City, employed him for several Years, and, by Degrees, gave him such a Turn for building, planting, and such like Pleasures, that he spent his whole Time in them and in the Delights of his Seraglio, for he was excessively addicted to Women, and that in a Manner scarce known to any of his Predecessors; for not content with a vast Number of Ladies, and those the most beautiful the East could afford in his own Seraglio, he fell to debauching the Wives of his principal *Omrabs*, particularly those of *Jasfer-Khan* and *Kalil-Khan*, which were attended with fatal Consequences.

By degrees, he formed his Pleasures into a kind of System, and every sort of Diverſion had its proper Season, and the Measure of its Expence settled. In this voluptuous Manner of living he spent upwards of twenty Years, and then the Heat of his Passions abating, and the Vigour of his Constitution being worn out, he grew, from being the most expensive and profuse, the narrowest and most miserly Prince in the World. To gratify this unkingly Thirst of Money, he altered the whole Course of his Proceedings; and having caused two large Vaults or

¹ It will be necessary to set down here the Age of these Princes and Princesses, to which the Reader may have recourse, for the better understanding what is said of them. It may not be amiss to observe, that there were all the Sons and Daughters of the Sultana mentioned in the Text, whose Name was originally *Ajumanad Bann Begum*; that is, the most noble Princess. *Jehan Ara Begum* was born in the Year 1614, Sultan *Dara* in 1615, Sultan *Sujab* 1616, *Roshnai Begum* in 1617, Sultan *Aurangzeb* in 1618, *Suria Bann Begum* in 1622, and Sultan *Morad* in 1624.

² I follow, in the Text, the Observations made by other Historians, as to the Vanity of these Princes, in giving their own Names to the Cities they erected; but, I must, for my own part, observe, that I think the Fact is, in itself, a little doubtful; and I am rather inclined to think, that it is the People themselves that give these Names to the Cities, in order to distinguish which were the Capitals of the Empire under the Reign of particular Monarchs; and I am confirmed in this, by observing that these Names are still in use, at least in all the Court-Writings.

Cellars to be made under his Palace, in one of which he kept his Gold, and in the other his Silver, cast into such large Ingots, as could not be easily removed or imbezeld; and one great Pleasure of his Life was to visit these Receptacles of his Riches, and delight his Eyes with gazing upon them. This single Vice of Covetousness absorbed and swallowed up all the rest of his Desires, insomuch that though in the first Years of his Reign he had particularly pliqued himself upon doing strict Justice to his Subjects, yet now he gave them up to be plundered by all the Governors of Provinces, and other great Omrabs; and when he found they were grown excessively rich by such Practices, he turned the Edge of his Resentment suddenly upon them; and, under a Colour of punishing their Oppressions, put them to death, and seized their Effects.

His three Sons he sent to govern the most distant Provinces of his Empire, and kept only the eldest Sultan *Dara*, to share with him the Cares of Government, and to be the nearer that Throne which he was one Day to possess. Sultan *Sujab* was made Viceroy of *Bengal*; his youngest Son *Morad*, was established in *Guzerat*; and *Orangebe* was Viceroy of *Decan*; all of them were obliged to pay their Tribute exactly, and for their Subsistence in a manner that became their Rank, were compelled to have Recourse to the same unjust Measures which other Governors practised. It was this, and the earnest Desire of obtaining Possession of the Diamond-Mines, that put the last-mentioned Prince upon attacking the King of *Golconda*, a very unjust War in itself, but so remarkable for the Issue of it, and for the Consequences attending it, that it is necessary we should enter into a more particular Account of it. It took Rise therefore in the following Manner; *Mirza Mula*, a Person who came into *India* in the Service of a Merchant, entering afterwards into that of the Mogul, was advanced, by degrees, to the most considerable Commands in the Army; but, finding himself slighted by Sultan *Dara*, he went over to the King of *Golconda*, who gave him a Post in the Treasury, and the Direction of the Trade of his Country; in which Employment *Mirza Mula* having amassed together considerable Sums, he endeavoured to distinguish himself at Court by a magnificent Equipage, and the Curiosities he purchased and presented to his Majesty and the Royal Family; and amongst the rest the King's Mother, the Dowager Queen, who was so smitten with the Gallantry of the *Persian*, that she denied him no Favours; which the King having an Intimation of, without taking any farther Notice of her Majesty's irregular Passion, sent *Mirza Mula* out of the Way, to the Government of *Carnate*, in which were the famous Diamond-Mines. Here he took Care to lay by the most curious Stones for his own Use; and one among the rest he happened on, so large and fine, that it was not to be matched in the *Indies*, either for its Size or Lustre, which he afterwards presented to *Aurengzebe*. *Mirza Mula* was not contented with what he found in the Mines, but he forced the People under his Power to bring in their Gold and Jewels, under Pretence of the Needs of the Government. He plundered the very Temples, and pulled off the precious Stones with which the Images were adorned; of which the King of *Golconda* being informed, determined to call *Mirza Mula* to a severe Account for his Rapine and Extortions; but the good old Queen let her Favourite know the Dangers that threatened him: Whereupon *Mirza Mula* immediately dispatched a Courier to *Aurengzebe*, whose Government lay contiguous to *Golconda*, to let him know, that if he would march with his Army into that Kingdom, he would join him with a Body of Troops from *Carnate*, and that his Interest was so considerable in the Palace itself, that he might depend upon an easy Conquest; and to convince him of the Advantage of the Enterprize, made him a Present of the large Diamond above-mentioned.

This was the most agreeable Message that *Aurengzebe* could have received; for he did not doubt, that if he was

once possessed of the Riches of *Golconda*, he should bid fair for the Empire of *Indostan*; he marched therefore, without Delay, and joined the treacherous *Mirza Mula* with his Army. The King of *Golconda* hereupon retired, in the utmost Consternation, from his Capital of *Bagnagur*, and shut himself up in the Fortrefs of *Golconda*, which stands about three Miles from it. The Confederates plundered *Bagnagur*, and afterwards invested the Fortrefs, of which *Aurengzebe* sent Advice to the Emperor. Sultan *Dara* was alarmed at the Progress of *Aurengzebe's* Arms, and represented to the Shah *Jehan*, that if his Brother was once Master of the Diamond-Mines, his next Attempt would be infallibly against the Crown; whereupon Orders were immediately dispatched to *Aurengzebe* to desist from the Enterprize, and retire to his Government of *Decan*. As Things were not yet ripe for the Execution of his great Design, *Aurengzebe* obeyed the Orders of the Court, and concluded a Treaty with the King of *Golconda*; the principal Articles whereof were, that the Mogul should be reimbursed his Charges in the War; that the King's Daughter should be given in Marriage to the Prince *Mobammed*, *Aurengzebe's* eldest Son, who should succeed to the Crown of *Golconda*, after the Demise of his Majesty, and that *Mirza Mula* and his Family should be at Liberty to retire, with their Effects, out of the Kingdom. Thus was *Golconda* delivered from the Danger that threatened it at this Time. But *Aurengzebe* had such a Taste of the Riches that Country afforded, that he fully determined to make it a Province of the Empire, if ever he succeeded to the Crown.

Aurengzebe, finding his Friend *Mirza* wanted neither Courage nor Conduct, and that he had a confirmed Aversion to his Brother, the Sultan *Dara*, and above all, that he was Villain enough to execute whatever he should command, without Remorse, looked upon him as a proper Instrument to promote the ambitious Designs he had in View; he took him therefore into his most intimate Confidence, and made him General of the Forces against the Kingdom of *Vishapour*, while he himself spent his Time in amusing the People with extraordinary Shews of Devotion, most exact Justice, and uncommon Benevolence to the Poor, which rendered him exceeding popular. In the mean time the Emperor Shah *Jehan* was taken dangerously ill, and it was reported in *Delhy*, and even in the remotest Provinces of the Empire, that he was dead; whereupon the three youngest Sultans, his Sons, began to make Preparations in their respective Provinces to push for the Empire. Sultan *Sujab*, or *Chulia*, Viceroy of *Bengal*, was the first that appeared in Arms, directing his March toward *Delhy* with an Army of forty thousand Horse. When he first set forward, it is said, he laid his Hand on his Cymeter, crying out, "Now for a Throne, or for a Grave." He gave out, upon the March, that Sultan *Dara* had poisoned the Emperor, and that he was going to revenge his Father's Death: But Shah *Jehan* recovering from his Indisposition, wrote his Son Word with his own Hand, that he was now perfectly in Health, and that his Brother *Dara* had not contributed to his late Illness, and therefore he would do well to return to his Government of *Bengal*, and repair the Oversight his Excess of Zeal had induced him to commit, by a more exact Obedience for the future. But Sultan *Sujab* receiving other Letters from his Friends at the same Time, assuring him that it was not likely that his Father should recover, and that his Fortune depended on his appearing immediately before *Delhy*, the Sultan thought fit to continue his March. Shah *Jehan* thereupon removed his Court to *Agra*, being a Place of much greater Strength. *Dara* followed his Father's Court; but detached his Son *Soliman Chact*, and with him *Rajab Jasing*, and *Dhil-Khan*, two experienced Generals, and a gallant Army, to oppose Sultan *Sujan*, whose Forces, in all respects, were easily defeated, and the Sultan himself, with some Difficulty, escaped to *Bengal*, where he endeavoured to recruit his Army.

* The Kingdom of *Golconda* is a maritime Country, on the East-Coast of the Peninsula of *India*, on this Side the *Ganges*. *Aurengzebe* would never be easy, after he had obtained this large Diamond, till he was likewise possessed of the Country, which, as we shall see hereafter, he annexed, notwithstanding this Peace, to the Mogul Empire, under the Name of the Province of *Hydrabad*, which is only another Name for the Capital of this Countrey, called in the Text by its old Name *Bagnagur*; and that this Country was very well worth acquiring, appears from the annual Revenue which it produces to the Great Mogul, of 3,711,000 Pounds.

The Confusions in the Empire did not end here. The two younger Sons of the Emperor were also in Arms, in order to dispute the Possession of the Empire with Sultan *Dara*. And now it was that the profound Dissimulation of *Aurengzebe* paved the Way for his mounting the Imperial Throne, while he pretended to assist the Ambition of his youngest Brother. The old Pretence was that of Religion: Sultan *Dara*, he said, was an Infidel, Sultan *Tujab* a Heretick, and therefore the Crown ought to be secured to Sultan *Morad*; for, as to himself, the utmost of his Desire was to spend the Remainder of his Days near the Tomb of *Mohammed* in Acts of Mortification and Devotion. But to shew, that as such a Saint as he was, he understood the Affairs of this World as well as any of them; he assembled a very numerous Army, composed of veteran Troops that had been employed in his former Wars, extremely well provided with every thing necessary, with which he joined his Brother *Morad*, and his Troops, not far from *Deby*. The first Step he took was, to persuade that Prince to assume the Title of Emperor, in which Quality he received and obeyed his Orders, which, however, were such as himself dictated in his Council. As soon as Sultan *Dara* was informed that the two Brothers had joined their Forces, he sent a Trumpet with a Letter from the Emperor, his Father, to each of them, assuring them that he was in perfect Health, and commanding them to retire and disband their Troops, on pain of being treated as Rebels. This surprised Sultan *Morad* exceedingly, and he would willingly have atoned for his first Offence, by yielding the Emperor, his Father, immediate Obedience: But *Aurengzebe* prevented his Return to his Duty, by suggesting that Obedience now came too late; that though the Emperor might be satisfied Sultan *Dara* would be revenged, and that to separate their Armies now, would be doing his Business, and giving themselves up to Destruction. These Arguments soon got the better of Sultan *Morad*'s Loyalty, especially when it was farther insinuated to him that his Father was now superannuated, and that Sultan *Dara* only made use of his Name. *Morad* conceiving with himself that it was better for him to impose Law upon his Brethren, than be obliged to receive it from them, determined to proceed, and to acquire, if possible, by Arms, a Crown, to which he was not entitled either by the Laws of Nature, or the Custom of his Country.

But as we are now to enter on that War which has made so great a Noise in *Europe*, as well as the *Indies*, it will be necessary to say something of the Characters of these Princes; and the rather, because some of them have been much misrepresented, and, in *Europe*, generally misunderstood. Sultan *Dara* was always happy in the Enjoyment of his Father's Favour, in consequence of which he received an Education truly Royal; he enjoyed, from Nature, a very graceful Person, and a strong Constitution; his Parts were not only solid, but bright and sparkling, so that before he reached the Flower of his Age, he was Master, not only of all the Sciences which are usually taught in the Universities, but most of the Languages likewise that are spoken in *Europe*. His superior Knowledge, and the great Quickness of his Wit, joined to a philosophical Virtue, were the Sources of his Ruin. He was, beyond Comparison, the greatest Prince that ever drew Breath in the *Indies*, and the most unfortunate; the wisest Man of the Age in which he lived, yet unaccountably weak in his Conduct; one of the best Men that ever was bred up in a Court; and withal, the worst qualified to live in one. These Paradoxes shall be in few Words explained. His Wisdom drew upon him the Hatred of such as affected to be thought wise; his Quickness and Penetration rendered him less capable of being advised by such as were most able: He had spent much of his Time in Books, knew the Duties of every Profession, and expected that Men of every Profession should discharge

those Duties. He had no sort of Craft, and despised it too much; he was so truly virtuous, that he knew too little of bad Designs to guard against them; and he was so open and sincere, that he never suspected any Man of Dissimulation. He had a great Respect for the Missionaries, and they, in return, had taken a great deal of Pains to persuade the World that he was a Christian in his Heart; and that the Knowledge of this was one great Cause of his Misfortunes, which, however, is so far from being true, that I venture to affirm, they flowed from quite a different Fountain. He had, indeed, studied Religion more than became a Prince, and left behind him a Testimony of it, which plainly proves the Truth of what I have asserted; and yet not one of the Missionaries have mentioned it, for Reasons that I cannot assign. In short, he revived the old Scheme of his Ancestors, and had a Mind to become the Legislator, as well as the Monarch of the *Indies*. It was with this View that he composed a large and learned Work, to prove that the Principles of the old *Indian* Religion were the same with those of Mohammedism; and, in Support of this, he collected, with great Labour, all that was worth collecting from the Works of the ancient *Brahmins*, and compared these with the principal Passages of the *Khoran*, to demonstrate that these Religions were not so far from each other as those who professed them imagined, and that there wanted nothing but a little Temper and good Sense to bring them to a good Understanding. This armed the Bigots against him, as the Steadiness of his Conduct, and his Contempt for the Arts of a Court, ruined him, with those who placed their Hopes and their Credit in being well versed in them.

Sultan *Sujab* was the very reverse of his Brother, except that he had a fine Person, a happy Constitution, and great Parts, for he was a finished Courtier, understood the Art of Iniquity perfectly, and practised it with such Success, that *Jacobsing*, upon whom his Brother *Dara* had chiefly depended, was privately his Creature, and betrayed the Master, to whose Favour he owed all Things. This Prince had Spies in every Part of the Court, knew every thing that was done there, and the Sentiments of all who composed it. He held likewise private Intelligence with the principal *Rajabs* throughout the Empire, had a private Correspondence with the King of *Persia*; and that he might not want a religious Party to espouse his Interest, he declared for the Sect of *Ah*, which is the established Faith of the *Persians*.

The Character of *Aurengzebe*, tho' directly opposite to those of his Brethren, was very probably formed upon theirs. He had strong Sense, much Application, and a deep Reach of Thought; the greatest Hypocrite, and the most profound Dissembler in the World. Humble in Appearance, in reality excessively ambitious; covetous in the highest Degree, and yet affecting to despise Money; devout in Shew, without the least Tincture of Faith or Goodness in his Heart. He saw that his Brethren had courted Men of other Religions, and therefore he placed all his Hopes in the bigotted *Mohammedans*, whom he knew to be a powerful Party, and most capable of serving him in the Way that he desired to be served. He knew very well, that if he could not attain the Throne by his Cunning, he was not likely to preserve his Life, and therefore he spent his whole Time, and applied all his Thoughts in meditating how to acquire the Imperial Diadem, and in hindering the rest of the World from perceiving his Design, which he believed, and which Experience shewed to be the surest Method of effecting it.

Morad, the youngest of *Shah Jehan*'s Sons, was an honest generous Prince, one who professed *Mohammedanism* from his Heart, and was really as much a Believer as any of the Clergy could wish him. He loved Hunting, and other Exercises of that Kind, and was much given to Women. In all other respects he was a very amiable and worthy Prince, and if he appeared from some Parts

* The Title of this singular Treatise is, *Mijnshil Babris*, that is, the Junction of the two Seas. These sort of Titles are, and always have been, much esteemed in the East, as having in them a something of Allegory; and, at the same time, something sententious and very expressive. I cannot but inform the Reader, that these Letters are derived from Mr. *Jacob Frazer*, who has not only given us the Titles and Characters of abundance of Oriental Princes, hitherto absolutely unknown in this Part of the World, but has likewise brought with him the Books themselves, which are, indeed, an invaluable Treasure, inasmuch as they afford the Means of filling up that vast *Chasm*, which has been so long left in *Universal History*, for the Arabian and other Eastern Countries.

of his Conduct in a different Light, it was owing to the Influence that *Aurengzebe* acquired over him, and in which he acted against his own Sentiments. Let us now return to Matters of Fact, and discuss them in as few Words as possible. All the Hopes of *Aurengzebe* lay in making his Brethren destroy each other. His Schemes were in some Measure accomplished with respect to Sultan *Jahab*, and from his Intelligence, he knew very well, that Sultan *Dara* was not an equal Match. The Forces they had in the Field against him, and this gave him as much Disquiet in one Sense, as it did Pleasure in another; for, as he saw very clearly, that his Brother's Safety and Interest depended upon taking him off, so notwithstanding the Difference of their Characters, he was afraid his Brother might see it himself, or at least be shewn it by some who were about him, which made him more intent upon his Destruction, towards whom he professed both Duty and Affection, than on that of his elder Brother against whom he was in Arms: Yet he covered his Uncertainty with a Shew of great Tranquillity, and prevented any Suspicion, that might have risen from his Retardment, by attributing it to a Spirit of Religion; so that while he was plotting the most detestable Villanies, the far greater Part of the Camp believed him entirely taken up with religious Meditations. He employed the vast Treasures he had laid up by the most unjustifiable Means, in Practices not so wicked; and by that Means had constant Advice of whatever passed in all the Courts; so that if his Hypocrisy had ever been detected, he would have had leisure sufficient to have secured a Retreat, and at the same Time, his Officers and his Troops were so devoted to him, that he had not the least Reason to doubt their defending him to the last Man: Such were the Circumstances on this Side.

Dara was not idle in the mean Time, but ordered his Generals *Jacobsing* and *Cassim-Khan*, to take a Post upon the River *Ugin*, which might have been maintained against all the Forces of the two Brothers. But *Cassim-Khan*, one of those whom *Dara* had formerly disoblinded, being in the Interest of *Aurengzebe*, withdrew upon the Approach of his Army, and left the Rajah *Jacobsing* to fight it out by himself; whereupon the two Brothers gained an easy Victory, making themselves Masters of all the Enemies Artillery and Baggage, and so did the Partisans of *Aurengzebe* manage this Matter, that all the Glory of the Victory was ascribed to him, which gave a great Disgust to the Ministers and Generals of *Morad's* Army, knowing that their Master's Troops had born all the Burthen of the Day, while *Aurengzebe* seemed to reserve his own Forces for another Occasion. They began now to be convinced of the ambitious Designs of the Dissembler, and had, it is said, without their Master's Knowledge, formed a Design to cut him off next Time he came to *Morad's* Quarters, which *Aurengzebe*, who had his Spies in every Place, had some Intelligence of, and came no more to his Brother's Tent as usual, but sent his Son *Mahammed* to pay his Compliments, without discovering that he was apprized of the Conspiracy against him. While the two Brothers continued their March, the Malecontents at Court came over to them every Day, and many of those who staid behind, remained there for an Opportunity of giving Intelligence to the Enemy. Shah *Jehan* finding himself betrayed on every Side, and reflecting on his former Conduct, 'tis said, in respect to the Omrahs, thought this universal Defection might proceed from a particular Prejudice to his own Person; he made a Cession therefore of the Crown, and devolved all his Authority on his Son *Dara*, who thereupon raised a prodigious Army, and marched to meet the Enemy upon the 14th of May, 1656.

To see this mighty Army, says the Historian, extend itself on the vast Plains of *Agra*, would have inclined any one to believe, that *Dara* must have commanded Victory

wherever he went; but *Dara's* haughty Carriage, it seems, had raised him as many Enemies as the Vices of Shah *Jehan* the Father, inasmuch that there was hardly a considerable Officer in the Army, but had his particular Prejudices. *Dara* continued his March for four Days, till he came to the River *Chambal*, where he entrenched himself, and determined to wait the Motions of the two Brothers; for here his Army could be supplied with all Manner of Provisions from *Agra*, and the Enemy, he knew, could not possibly subsist long in that barren Country, which lay to the Southward, especially at this Season of the Year, when the Heats are intolerable. *Aurengzebe* observing the Disposition of the Imperial Army, and that all the Avenues to *Dara's* Camp were fortified with Entrenchments and Batteries of Cannon, concluded it was impossible to face the Enemy in that Post. On the other Hand, he was sensible, that the least Delay was their infallible Ruin. *Dara* would be joined in a little Time by his victorious Son, who was returning from the Pursuit of Sultan *Jahab*, and their own Troops would be disheartened, and dispersed, if their first Heat was a little cooled, as is usual in all Insurrections, where Rebels meet with unforeseen Difficulties. In this Distress, the Rajah *Campet*, a confirmed Enemy to the Court, offered the two Brothers a Passage through his Country, which lay about thirty Miles higher up the River, where it was probable they would meet with no Opposition; for the Rajah's Territories being woody and mountainous, and the Rajah himself a General in the Imperial Army, *Dara* looked upon himself as secure on that Side, when, to his Surprize, Intelligence was brought him, that a Body of the Enemy had actually passed the River, and was preparing to attack his Rear. *Dara* immediately dispatched the treacherous *Casim-Khan* to oppose them, but he having a Correspondence with *Aurengzebe*, suffered his whole Army to pass the River, and form themselves in Order of Battle, without giving them any Disturbance; so that now both Armies came to a Battle on equal Terms, which was fought with very great Bravery on that Side, where *Dara* himself commanded; but the other Generals not doing their Duty, and some of them with their whole Bodies going over to the Enemy, the two Brothers, at Length, obtained an entire Victory. *Dara* retired with a small Body of Troops, which remained faithful to him, to *Agra*, where he staid but a few Hours to refresh himself, and continued his March to *Dehly*; but the Governor having heard of the Loss of the Battle, refused him Admittance, whereupon he was compelled to retire to *Lahor*.

The two Brothers, with their victorious Army, advanced to the Gates of *Agra*, and invested the Place, which was betrayed to them in a few Days, and the old Emperor *Shah Jehan* made Prisoner. The two Brothers possessed themselves of his prodigious Treasures, which they found sufficient to reward their Adherents, and support their Usurpation; and having refreshed their Troops, and put the Government into such Hands as they could depend on, they left a Garrison in *Agra*, and continued their March towards *Dehly*, *Morad* being treated by *Aurengzebe*, and the whole Army, as their Emperor. They were encamped in the fertile Plains of *Matura*, where stands a noble Mosque or Temple erected by some of the Mogul Emperors, which *Aurengzebe* proposed as a proper Place for the Inauguration of his Brother; whereupon great Preparations were made to perform the Solemnity on the 15th of June 1656. The Evening before *Aurengzebe* sent a most dutiful Message to his Brother, importing, that he was extremely sorry that a sudden Illness, with which he was seized, would not allow him to wait upon his Imperial Majesty, in order to concert with him and his Astrologers the lucky Hour for his Coronation; but that if he would have the Goodness and Condescension to accept of a small Collation at his

* We have many very authentic Relations of the Transactions in these Wars, but particularly two, the first by M. *Bonier*, and the second by M. *Alexandre*, who were both upon the Spot, and both Attendants on the unfortunate Sultan *Dara*. I have, however, chiefly followed the latter, for several Reasons; first, Because he made the Library of the Mogul his Study, and procured the Materials from which his Memoirs were composed, at a great Expence. Secondly, Because he wrote at Leisure, and after he had taken Time to enquire into, and examine the Facts which he recorded, and so was the less likely to be deceived by common Reports. Thirdly, Because he was an Italian, had a Head well tuned for Foreigners, and appears to have been much better versed in Affairs of State, and in the Practices of the Court, than the other Historian, tho' he was a very able, and famous, as well as entertaining Writer.

Quarters, all things might be regulated there, so as to prevent any Delay in a Matter of so great Importance. Some of the principal Confidants of Sultan *Morad* could not very well digest this Message, but fancied there was something concealed under it which might be prejudicial to their Master, and therefore they advised him to return a very civil Answer to this Complement, but by all means to decline the Visit. There were, however, others, who were secretly in his Brother's Interest, who persuaded him to go, and as Sultan *Morad* was a Prince of a very open and generous Disposition, he listened to their Advice, and went with his ordinary Guard, and a few of his principal Courtiers, at the Time appointed, to his Brother's Tent, where he was received with such high Marks of Respect, and with so much seeming Affection, that he laid aside all Suspicion, and according to his usual Custom, drank freely of several sorts of excellent Wine, which were provided for him; but as for the pious *Aurangzeb*, he, for a Principle of Confidence, could not taste a Drop of that prohibited Liquor, and therefore drank Water only. At last Sultan *Morad*, having got his full Dose, fell fast asleep, and was, by his Brother's Command, immediately removed into another Tent, attended only by his faithful Eunuch, who could not by any means be persuaded to leave him.

In the mean time the Officers and Courtiers of *Morad*, were entertained in another Tent by Persons of equal Rank with themselves, who were known to have strong Heads, and could bear drinking. The Guards all the time attended round the Tent, and all the Musick of the Camp playing, as if the Brothers had spent the Night together in Feasting. *Aurangzeb* early in the Morning went with six of his Guards into the Tent, where Sultan *Morad* and his Eunuch were still fast asleep, and having caused them to be bound before they were well awake, he ordered them to be put in two close Litters, and sent away privately, one to the Citadel of *Dehly*, and the other to that of *Agra*. When all was over, he directed a Message, in his Brother's Name, to such as were to assist at the approaching Coronation, importing, that the solemn Procession to the Mosque was to be made from the Tent of *Aurangzeb* at a certain Hour, and therefore they were to be ready by that Time in the Temple. When the Hour fixed for the Coronation came, the greatest Part of both Armies were drawn up in perfect Order, under Colour of preventing Disturbances without Arms. On a sudden they were surrounded by several choice Squadrons of Horse from the Army of *Aurangzeb*, who, as soon as the Procession began to move, made the first Declaration of the Change by brandishing their Swords, and crying out, *MAY THE EMPEROR AURENGZEBE LIVE FOR EVER*. The rest of the Army were exceedingly astonished at first, but they were soon forced to join in the Cry, from an Apprehension, that these Troops might trample them down, and put them to Death, if they discovered the least Signs of Disobedience. As soon as they joined in the Acclamations, *Aurangzeb* himself appeared, sat down for a Moment on the Throne prepared for his Brother, and having invested himself with the Ensigns of the Imperial Dignity, presently withdrew, the whole Army shewing the greatest Joy at his Accession, which is a Proof, that in arbitrary Governments there is no such thing as Loyalty; for Slaves reverence Power, and not Right, which ought to render Princes as careful of their Subjects Privileges as of their own Prerogatives, because both stand upon the same Foundation.

In the midst of all this Success, *Aurangzeb* ran a great Hazard of being dethroned, or at least of losing the War revived from a Quarter which, with all his Cunning, he never suspected. He had sent his eldest Son Sultan *Mohammed* to *Agra* to execute his Orders with respect to *Shah Jehan*, which he performed very punctually, since as soon as he entered the Presence of his Grandfather, he told him in very few Words, that he was grown old, and incapable of managing the Empire, and ought therefore to leave it to him, who in such a Conjunction was well able to sustain it;

but at the same time informed him, that his Father intended no Hurt to his Person, but was content to allow him a Palace, his Seraglio, and such Amusements as might content an old Man. The Eunuchs and the Women set up a loud Ouncry at this barbarous Message; but *Shah Jehan* bore it calmly, and with great Patience. He did still more, for he gave the strongest Proof of the Fallhood of this Pretence, and of his Capacity for governing at a Time when his rebellious Children treated him as a Doctard. He retired as Sultan *Mohammed* commanded, and as soon as he was fixed in his new Apartment, he sent to desire another Visit from his Grandson, whom, as soon as he saw coming at a Distance, he threw himself on his Knees. The young Man coming to lift him up, he addressed him in these Words: "Since it is so, since I must be dethroned by my own Children, I submit to my Fate; but be you courageous enough to snatch the Crown of the *Indies* from him, who is most unworthy to wear it. The City of *Agra* is yours, you have in it a powerful Army devoted to your Service; revenge then my Wrongs, and secure yourself from the Cruelty of a Parent who will never thew Affection to his Son, after treating a Father as he has done me." Sultan *Mohammed* was struck with this Discourie; but as he knew that all the Officers under his Command were entirely devoted to *Aurangzeb*, he durst not pursue his Grandfather's Advice, which, however, made such an Impression on him, that he never forgot it, or obeyed his Father afterwards but with Reluctance.

The People however, more susceptible of Pity than of Duty, could not help murmuring at the harsh Treatment of so great a Monarch. *Aurangzeb* was no sooner informed of it, than he caused a Letter to be written in his Father's Hand, addressed to Sultan *Dara*, in which he directed him to march with what Forces he could gather, towards *Agra*, promising him to engage *Aurangzeb* to make him a Visit, and cause him to be murdered in his Apartment. The forged Letter had its Effect upon the Mob, who immediately pronounced the Usage of the old Emperor to be what he deserved, and admired the Wisdom and Humanity of *Aurangzeb*. That artful Prince, having thus settled all Things behind him, and having, out of the Treasures of his Father, rewarded, even beyond their Hopes, all who had hitherto assisted him in his Enterprizes, found himself at Leisure to pursue Sultan *Dara*, who had again drawn a formidable Army together in the Neighbourhood of *Lahor*. That Prince was now happy in a faithful and able General, whose Name was *Dau-Khan*. *Aurangzeb* attempting to corrupt him, failed for the first Time; upon which he caused a Letter to be forged in the Hand of *Dau-Khan*, importing a Design to betray his Master, and committed the Matter so, that it fell into the Hands of Sultan *Dara*, who, having suffered so much through ill-placed Confidence before, became now unreasonably suspicious. On the Sight therefore of this Letter, he dismissed his faithful General; upon which the rest of his Officers, and soon after his whole Army abandoned him, and he was forced to fly into the Province of *Guzerat*, from whence he proposed retiring into *Perfia*.

Aurangzeb took this Opportunity of turning his Forces against his other Brother Sultan *Sujab*, who being informed of his March northwards, began immediately to move with his Army towards *Agra*. But *Aurangzeb* returning with a surprising Celerity, prevented that Capital from falling into his Hands. However, Sultan *Sujab* had posted his Troops so advantageously that he was not to be forced in his Camp, and kept a Communication open with several Towns, from whence he was well supplied with Provisions, while his Enemies wanted all Necessaries, and even Water, which they were forced to bring to their Camp upon the Backs of Camels from the *Gangers*, which lay at twenty Miles Distance. In this Distress *Aurangzeb* ordered it to be given out, that he would decamp the next

* It is still the Custom in most Eastern Countries, but especially in *China*, *Perfia*, and the *Indies*, to consult Astrologers upon all great Events, and to be guided by them in the Choice of lucky Hours. *Shah Jehan* was strangely addicted to these superstitious, and became thereby the Duke of these Fortunes tellers to the last Degree. They once persuaded him to leave his Capital, upon pretence, that the ensuing Month would be fatal to the chief Person in *Dehly*. He left the chief Justice to preside in his Absence, and the Astrologers took care to poison him before his Return, by which they verified their Prediction, and kept the people ever after in the most slavish Dependence upon them.

Morning, and accordingly the Tents were struck, and the Troops actually in Motion; which Sultan *Sujab* observing, prepared to fall upon their Rear. The Troops of *Aurengzebe* were ordered to give Way upon the first Attack, until they had drawn the Advance-guards of Sultan *Sujab* some Distance from their Camp, and then to make a Stand, which Orders were punctually executed; and Sultan *Sujab* observing his Men were over-powered, detached still other Troops to support them; and the Enemy doing the like on the other Side, it came at length to a general Battle. The Generals, mounted on their respective Elephants, advanced with the Bodies under their immediate Commands to engage each other, and the Battle was fought with great Obstinacy, till *Aurengzebe* artfully drew his Enemy into a Field, where he had ordered Pits to be made the Night before, and covered over with Turf, so that they lay unperceived. Here the brave Sultan *Sujab* was advancing to engage his Brother, and personally deside the Fortune of the Day, when his Elephant stouced into one of these Pits prepared for him, from whence the Sultan found it impossible to disengage himself suddenly; whereupon the Army, not seeing their General, imagined he was killed, and thought of nothing but making their Retreat. Sultan *Sujab* afterwards mounted a Horse that was brought him, and endeavoured to rally his flying Troops, but it was too late; the Rout was total, a panick Fear had seized his Forces, and they could never be brought to make a Stand again; and *Sujab*, with great Difficulty, made his Escape into the Province of *Bengal*. Here he recruited his shattered Army, and, having posted himself in an advantageous Camp, waited the Approach of the Enemy, when he understood that *Mohammed*, the eldest Son of *Aurengzebe*, was in some Disgrace, and secretly invited him to come over to his Party, which Negotiation was so well managed, that he did not only desert his Father's Court himself, but brought over with him several of his best Officers. Upon this, *Aurengzebe* had Recourse to his old Practice of forging Letters, by which he drew Sultan *Sujab* to believe that *Mohammed* had deserted by his Orders, who thereupon treated the young Prince in such a manner that he was glad to reconcile himself to his Father, who fed him with fair Promises till he had him in his Power, and then, in a little time, sent him Prisoner to the Castle of *Gallier*.

Sultan *Dara*, having drawn another Army together, marched, with great Diligence, towards the City of *Amadabat*; but when he was within a few Miles of it, the Governour, who had been corrupted by *Aurengzebe*, shut the Gates of it against him; upon which, the Army he had assembled, seeing him thus betrayed, abandoned him, in order to provide the best they could for their own Safety. The Sultan, now entirely despairing of his Affairs, determined to fly for Refuge to *Perfia*; to which he was the rather induced, because, *Givon Khan* had the Command of a Fort upon the Frontiers, who was his Friend, and might favour his Retreat. This Man had received the highest Favours from the Sultan, and particularly, once he saved his Life, when the Emperor *Shah Jehan* had commanded him to be trod to Death by Elephants for some Misdemeanour he had committed. This Traitor received the Sultan with the greatest Professions of Gratitude, but immediately gave Intelligence to the General who commanded the Forces of *Aurengzebe* on that Side, that he had *Dara* in his Power, and would deliver him up. The Sultan suspected the Treachery, and was meditating how he might make his Escape from thence, when a Detachment of *Aurengzebe's* Forces surrounded the Palace, and carried *Dara* Prisoner with them to *Bakar*, which was besieged by his Brother's Troops, being the only Fortrefs which still held out for *Dara*, they compelled the unfor-

tunate Sultan to send Orders to the Governour to surrender the Fortrefs, who obeyed, on condition he might be at Liberty to retire into the Kingdom of *Cachemire*. When the captive Prince was brought to *Dahly*, he was set in an open Chair on the Back of an Elephant, with his Feet chained, and his youngest Children about him, which moved the Compassion of the People. His Brother *Aurengzebe* would not see his Face, but ordered him to be secured in a Castle without the Town; and, having assembled a Council of the principal *Omrah's*, he proposed it as a matter indifferent to him whether it were most advisable to condemn *Dara* to perpetual Imprisonment, or deprive him of his Life; by which Means he did not doubt but he should discover which of them were in *Dara's* Interest, determining with himself not to spare one of them. But these great Lords were all so wise as to save their own Lives by voting away their Master's, except one, who had been his declared Enemy, which, 'tis said, gave *Aurengzebe* such an Opinion of the Man, that he afterwards took him into the Number of his Friends. After long waiting the fatal Stroke, Sultan *Dara* met with it from the Hand of a common Executioner, who, with great Brutality, threw him on the Ground, and afterwards cut off his Head. Some of the Missionaries have reported he died a Christian, but, as they do not produce any Evidence in support of it, we can scarce credit the Fact barely on their Assertion.

The personal Hatred of *Aurengzebe* to his Brother, 'tis reported, was such, that he ordered *Dara's* Head to be brought him, and viewed it with great Satisfaction, and insulting over it, said, "Behold the Remains of a weak Man, who would have wrested a Crown from me he was not able to sustain." He afterwards ordered the Head to be carried to his Father *Shah Jehan*, and his Sister *Ishan Ara Begum*, who were imprisoned in the Castle of *Agra*; at which melancholy Spectacle the old Emperor fell into a Swoon, but it did not break his Heart, as his pious Son *Aurengzebe* expected; nor was the Sight a less Affliction to the Sister, who had always espoused the Interest of Sultan *Dara*, and whom he had promised to marry, 'tis said, if ever he possessed the Throne. Sultan *Sujab*, the second Son of *Shah Jehan*, still remained in *Bengal*; but, upon the Approach of *Aurengzebe's* Army, finding himself in no Condition to oppose so great a Force, he proposed to retire to the Kingdom of *Arracan*, which lies to the South-East of *Bengal*, but separated from it by impassable Mountains and Forrests. The *Portuguese*, who were then possessed of *Chatigan*, a Port near the Mouth of the River *Ganges*, took upon them to transport the Sultan, with his Treasure, and Family thither; but, it is said, they sunk the Vessel in which the Money and Jewels were, and afterwards converted them to their own Use. However that be, Sultan *Sujab* arrived safe at *Arracan*, though it might have been as happy for him if he had perished at Sea with his Treasure; for he had not been long in the Court of *Arracan*, before there happened some Misunderstanding between him and the Prince he fled to for Refuge; and not only himself, but his Wives and Children were all cut to Pieces in the Year 1658. Thus miserably died the second Son of *Shah Jehan*, who first began the Rebellion against his Father.

Sultan *Chacu*, eldest Son of *Dara*, a Prince of great Expectation, still remained secure from his Uncle's Cruelty in the Territories of the Rajah *Sirmager*, whom neither Threats nor Promises could move to deliver him up. But *Aurengzebe* so insinuated himself into the Favour of *Sirmager's* Son, that he prevailed with him to betray Sultan *Chacu* into his Hands; to which end, a Hunting-Match was appointed, and Intelligence given in what Part of the Country they would hunt; whereupon an At-

* There are some Writers, who tell us, that he did not send his Son, Sultan *Mohammed*, immediately to this Prison, but kept him some Time under a Guard; but when he had taken the eldest Son of Sultan *Dara*, he sent them both thither, on the 14th of *January*, 1661, and kept them there many Years, till, at last, *Mohammed* died of a natural Death, as most Writers say, but, as some would insinuate, by Poison, which, however, is improbable; because, with equal Provocation from another of his Sons, this Emperor contented himself with a long Imprisonment, and set him at Liberty before his Death.

† This Execution was performed in the Night, on the 28th of *August*, 1659. We are told, that a little before his Death, this Prince was asked, by *Aurengzebe's* Orders, what he would have done with him in case he had obtained the Victory. As he is a Rebel, and a Murderer, answered Sultan *Dara*, he best knows what he deserves; which Answer occasioned his Death. It is highly probable, that *Aurengzebe* invented this Story, and caused it to be inserted in the Chronicles of the Mogul Empire, in order to execute this Cruelty. At least this is certain, that he cuffed the History of his Father's Reign to be penned in such a Manner as might give the fairest Colour possible to the foul Actions of which he had been guilty. And as he was a Person of prodigious Abilities, it is very easy to conceive that, by his Assistance, a very plausible Account might be drawn up.

which lie to the Eastward of *Bengal*. Emir *Jemla* being a Man of ambitious Spirit, joyfully accepted the Command, proposing to extend his Conquests as far as *China*; or, however, being at the Head of so powerful an Army, hoped to be in a Condition to give Laws to his Sovereign. The General met with great Success in the Beginning of his Enterprize. The Rajah of *Jicham* was defeated, his Capital *Cbandara* plundered, and that Prince forced to retire into the Mountains; but the rainy Season coming on sooner than was expected, the Country was immediately overflowed. The Army of Emir *Jemla* found it very difficult to subsist in their new Conquest, and not less difficult to retreat; however, Emir *Jemla* did at length find Means to return into *Bengal*, of which Province he was Governor, proposing the next Year to compleat his Conquest of the Kingdom of *Acbam*; but his Army having contracted the Bloody-Flux in that wet Season, were most of them swept away, and among the rest, Emir *Jemla*, to the great Satisfaction of *Aurengzebe*, who hardly looked upon himself to be Emperor while he lived. As this Officer was a Man of a very enterprizing Genius, his Master took the properest Method to be rid of him, by feeding his Vanity, and seeming to expect from his Zeal, Activity and Abilities, the Conquest even of the Empire of *China*, though he was sensible, that the Countries which lay between him and that Kingdom, were impassable for great Armies, and therefore when Emir *Jemla* was dead, he made no farther Attempts on that Side; but, to encourage others to serve him, he gave *Mobammed*, the Son of Emir *Jemla*, all his Father's Estate, which by the Laws of the Empire devolved to the Crown.

The next considerable Expedition in this Reign, was against the Pirates, who infested the Bay of *Bengal*, and had fortified themselves at *Chatagan*, and other Places, on the Mouths of the *Ganges*, and in the Kingdom of *Ara-can*, which lies contiguous to *Bengal*. These Pirates consisted of *Europeans*, or *Franks*, of all Nations, but chiefly of *Portuguese*, who frequently made Slaves of the Mogul Subjects, burnt and plundered the frontier Towns, and rendered both the Seas and the Shores very unsafe. Against these, *Aurengzebe* sent another of his Generals, who suppressed the Pirates, and brought that Part of *India* under as peaceable and regular a Government, as any other Part of the Empire. About the Beginning of the Year 1666, there happened some Strife in the Empire, occasioned by the Ambition of some of his own Children, but coloured with the fair Pretences of Zeal for the Constitution of the Empire, and Pity for its lawful Monarch, the unfortunate Shah *Jehan*, which, however, had no other Consequence, than making the innocent old Man a Victim to the Terror of his cruel and unnatural Son, who, to spare himself any farther Trouble, and to take away all such Pretences for the future, ordered the old Emperor to be poisoned at the Age of Seventy-four.

This, however, did not make him the easier, or dispose his Sons to greater Obedience. Of these, excluding Sultan *Mobammed*, who lived and died in Prison; he had four, viz. *Mobammed Manzum*, that is, the *Illustrious*, was excessively ambitious, and began very early to form Designs against his Father's Life; once he was very near carrying his Point; he caused a Pit to be dug very deep, in the Place where his Father's Tent was to be pitched, which was so well covered, that *Aurengzebe* very narrowly miss'd being buried in it, for which Sultan *Mobammed* was for many Years confined in a Dungeon, where he enjoyed not so much as a Ray of Day-light. Shah *Azem*, i. e. the *Glorious*, had likewise engaged in Plots of the same Nature, which proving unsuccessful, and he fearing they might come to be detected, fled to the King of *Vishapur*, where he remain'd till the Edge of his Father's

Repentment was worn off. But the greatest Hazard the Emperor ever ran, was from the Ambition of Sultan *Akbar*, whom he trusted with a great Army, in order to reduce one of the Rajahs, who had rebelled; but the first News that the Emperor heard, was, that his Son had joined the Rebel, and that they were marching toward him with seventy-thousand Horse, and a proportionable Number of Foot. The Troops which *Aurengzebe* had about him, were in no Capacity of disputing with such a Force, and therefore he had recourse to his old Artifice; that is to say, he sent a Letter to the Prince, which he contriv'd the Rajah should intercept, wherein he commended his Son's Conduct, in drawing the Army of the Idolaters to that Place, assuring him, he would advance the next Day to such a Post, where, having the Rajah's Forces between them, they might charge them on all Sides, and that it was not possible any of them should escape. The Eunuch, by whom this Letter was sent, being brought Prisoner to the Camp by the Rajah's Out-guards, and the Letter read among the Officers of the *Raspoors*, occasioned a terrible Contention in the Rajah's Army, and notwithstanding Sultan *Akbar* swore on the Alcoran it was a Contrivance of his Father's, he found it impossible to remove those Jealousies the Letter had created, which gave the Mogul Time to reinforce his Troops. The Rajah was afterwards defeated, and *Akbar* fled with a Body of four-thousand Horse to another *Pagan* Prince; but being closely pursued by his Father's Troops, was forced to fly to the *Portuguese* at *Goa* for Protection, who transported him to *Persia*, where he was very kindly entertained by the Shah, and afterwards, it is said, married his Daughter; nor could the Mogul, either by Threats or Promises, ever procure him to be delivered up. *Aurengzebe*, however, fell upon the Rajah *Seva*, who had assisted *Akbar* in his Rebellion, and having taken several of his Towns, besieged him in his capital City of *Gingy*, but they held out a Siege of many Years, nor was it taken while *Seva* lived, tho' the Mogul, in the mean Time, subdued both the Kingdoms of *Vishapur* and *Golconda*. The youngest of his Sons was Sultan *Kambuksh*, who had as much Ambition as any of the rest, but he knew better how to conceal it, and therefore never took up Arms against him, but laboured all he could to gain his good Graces by Flattery.

In this Manner the Emperor spent many Years of his Life, without losing any Part of his Authority, which was in great Measure owing to his florid Health, and his retaining the free and perfect Use of his Senses. In order to preserve them, he led a Life as regular as that of a religious Person, restrained by a certain Rule, and kept his Passions under such Restraint, that he was never known to shew any Sign of an Alteration in his Temper; so that there was no guessing, either from his Countenance, the Tone of his Voice, or from his Gestures, at what passed within. He loved Regularity extremely, and observed it himself with such Strictness, that every body about him knew his Duty, and knew when it was to be performed; and all who had any Petitions to present, or Complaints to make, knew when they might have Admission. To gain Time for going through such a Variety of Business, and that one thing might not interfere with another; this was the Emperor's constant Course of Life. Early in the Morning, before Break of Day, he bathed, and spent some Hours in his Devotions; then having eaten a little Rice, or Sweetmeats, shut himself up with his Secretaries, and before Noon, he gave publick Audience to his Subjects. After which he prayed again, and then went to Dinner, his Table being furnished only with Rice, Herbs, Fruits or Sweetmeats; for neither Flesh, or Fish; or any strong Liquors, were ever brought before him. In the Afternoon he gave Audience again, which being over,

* Authors differ very much in regard to this Fact; for some positively assert, that he compelled his Father to drink Poison; and others, that Shah *Jehan* died of old Age and those Infirmities, which he had brought upon himself by his Vices. One thing is certain, that his being a Ligot to the *Mohammedan* Religion, exposed *Aurengzebe* to the Hatred and Calumnies of the Missionaries. They very well knew, that the general Character of this Prince, would make any thing they said of him believed; and in the Confidence of this, it is very possible, they may have charged him with Crimes of which he was never guilty.

The Behaviour of these Princes plainly shew, how much Example goes beyond Precept; for most certainly there never was a Father more careful of his Childrens Education than *Aurengzebe*. He did not suffer his Sons, according to the general Custom of the East, to remain till they were grown Men, in the Haram or Women's Apartment, but took Care that they should not only be instructed in the Sciences, but also made acquainted with the World, and for this Reason called them to Council, and employed them in his Armies, tho' for his own Safety he very seldom trusted them with independent Commands. In short, he was a very bad Man, with very great Abilities.

he prayed a third and fourth Time. The Remainder of the Day, till two Hours after it was dark, he spent in the private Concerns of his Family, then he supped, and slept afterwards only two Hours; after which, it is said, he read the *Alcoran*, and prayed almost all the remaining Part of the Night. And here we have a remarkable Instance of what vast Advantage an abstemious regular Course of Life is towards the procuring Health and long Life, and rendering a Prince fit for the most important and intricate Affairs; for this Emperor, notwithstanding he was an unwearied Hearer of Causes, and constantly directed the Affairs of so vast an Empire, and conquered several large Kingdoms, lived without contracting any Distemper, and neither his Judgment, or Memory, were at all impaired when he was near Ninety Years of Age. This Regularity was not at all the Effect either of Decay in his Constitution, or of Repentance on account of past Liberties. He was altogether as temperate in the Vigour of his Age as in the Decline of it, and from the same Principles of Wisdom, Moderation and Prudence; for it is related of him, that even in his Youth, having singled out a young Lady in the *Haram* to lie with him one Night, and she had dressed and prepared herself to receive her Royal Lover, the King coming into the Apartments at the appointed Time, instead of going to Bed, fell to reading, and between his Books and his Devotions, passed the whole Night without ever taking Notice of the expecting Lady. He gratified, however, his Appetites, when they were very strong, from the very same Motives that induced him to restrain them, that is to say, that they might not disturb or distract his Reason.

He conducted his Conquests in the same manner, contenting himself for many Years with the Tributes of two neighbouring Kingdoms; but at length finding it necessary to employ his Troops, and keep his Army in Action, he in the Years 1685 and 1686, deprived the Kings of *Vishapour* and *Golconda*, even of that Shadow of Sovereignty which till then he had left them; and bringing them Prisoners to his Camp, annexed their Kingdoms as Provinces to his Empire, and appointed Viceroy to govern them, in which State they have continued ever since. These Conquests gave *Aurangzeb* the Sovereignty of most of the other petty States in the South of the Peninsula, as far as Cape *Comerin*, for these were subject or tributary to one or other of those Kings before the Great Mogul subdued them. There are indeed some Rajahs or Pagan Princes in the Mountains, who still govern their own People; but these seldom think fit to attack the Mogul, and are very well satisfied if he will let them remain at Quiet in their little Principalities. Some of them also are his Allies, and assisted him in the Conquest of *Vishapour* and *Golconda*, and these are suffered to retain their ancient Jurisdiction. However, it may properly enough be said, that the Empire of the Great Mogul has no other Boundaries than the Ocean towards the South, for the Sea-Coasts are generally in his Power, nor is there any Rajah now left able to meet him in the Field, though some few of them may skulk in inaccessible Mountains, and boast to this Day that they have not submitted to his Arms.

It was in reducing these Kingdoms, and making fresh Accessions to the Empire, that this great Monarch spent his Time, and spent it in a Camp, and in the Field. He thought that every Palace, every Castle, had the Air of a Prison, and therefore he seldom entered one, but when his Affairs would allow him so much rest; he was content to stay sometimes a considerable Space in the same Camp, as particularly in that near *Galgula*; after the Defeat of his Son Sultan *Akbar*, he remained no less than four Years. His Magnificence appeared, however, as great in this military Life, as if, like his Ancestors, he had founded Cities, and erected Palaces; for when he decamped at any time no less than one hundred and twenty Elephants, one thousand and four hundred Camels, and four hundred Carts, were employed in carrying the Royal Tents, Baggage and Fur-

niture, and these were always sent away the Night before, the Emperor and every Omrah in the Army had a double Suit of Tents and Field Equipage; so that when they came to their Ground the Camp was always ready pitched, and Provisions of all kind to be had as soon as the March was over. It was by these extraordinary Precautions, and by a strict Adherence to these Maxims; which from a steady Attention to the Situation of things in that Country, he at first laid down, that for so many Years he governed with so great Ease so vast an Empire, and left it not only entire, but very much extended to his Children. In one thing only his Fortune failed him, which was in the War against *Seva-Rajah*, commonly called by our Writers of Travels and Voyages *Seva-gi*, of whom we have hitherto had so dark an Account, that it may not be amiss to take this Opportunity of setting it at once in a clear Light. This *Seva* was originally in the Service of the King of *Vishapour*, and would have persuaded him to have united with other Princes his Neighbours, when *Aurangzeb* first attacked their Countries before he ascended the Throne of the Moguls: But that Prince would neither listen to his Advice, nor believe that it was given with any other View than to put himself at the Head of an Army, with which he might attempt things to his Prejudice. This unjust Suspicion had a very bad Effect, for it put the Rajah *Seva* upon fixing a Part of his Master's Dominions, which with some of the adjacent Countries were confirmed to him by *Aurangzeb*; but when that Prince had deposed his Father, and was established in the Empire, he was for depriving Rajah *Seva* of what he had before given him, in order to annex those Countries to his Dominions, which was the first Cause of the War; for this Rajah *Seva* was as great a General, and a much better Man, than the Emperor himself; and by his Behaviour plainly proved, that if the rest of the Indian Princes had been Men of like Courage and Spirit, their Kingdoms had never become Provinces of the Mogul Empire. In order to accomplish this Design, and remove so formidable a Prince out of his Neighbourhood, *Aurangzeb* commanded his Uncle *Chajla-Khan*, with a numerous Army, to march against him; upon which Rajah *Seva* retired to his Mountains, where he bid Defiance to the whole Forces of the Mogul, and was very near surprising *Chajla-Khan* one Night in his Tent, having killed his Son, and wounded the General himself; and in short, he so harassed the Mogul's Troops, that *Chajla-Khan* was glad to quit the Enterprize, and return to his Government of *Aurangabad*.

Rajah *Seva* soon after formed a Project of surprising *Surat*, a Port of the greatest Trade in the Mogul's Dominions. To cover his Design, he marched with the greatest Part of his Troops the direct contrary way, and while *Aurangzeb's* Forces were preparing to oppose him he, disguised in the Habit of a Faquir, travelled to *Surat* on Foot, in order to view the Avenues to that City, and finding it a Place not capable of making any great Defence, at his Return to the Camp, he took with him no more than four thousand Men, with whom he marched with the utmost Secrecy and Expedition, inso much that the Governor had no Notice of his Approach, till he came within Sight of the Town, and then thought fit to retire into the Castle, with the Garrison; and the Effects of the greatest Value. The Inhabitants also forsook their Houses, and fled into the Country, so that the Rajah had the plundering one of the richest Towns in the World four Days together, without any manner of Opposition, except what he met with from the *English* and *Dutch* Factories, who having time to erect a Battery or two of great Guns before their Houses, saved all their Effects; nor was he prepared to attack the Castles, and therefore thought fit to march off with the Plunder he had got, which was computed to amount in Gold, Silver, and Jewels, only to the Value of three Millions Sterling at least; for in the House of one *Borjan*, Merchant, it is said, he found twenty-two Pound Weight of strong Pearl, besides a great Quantity of others unperced.

This

The Courage and Constancy of this Indian General is very much magnified by most of our Writers, on the Credit of the Relations received from such as then resided in the *India*, and particularly at *Surat*, when the thing happened. But there are two Remarks that are necessary, in order to set the Account in a true Light. The first is, that he had formed in his Mind a Project of becoming at once a Prince able to defend himself against his old Master, and against the Mogul. It was a bold Resolution, but at the same time it was necessary. If he had not a Fund sufficient for an Army equal to that of the Mogul, his Force signified nothing, and from being a Prince, he must soon have sunk into a Highway man. The Plunder of *Surat* he added would be sufficient to arm several Parties; so that considered in this Light, this appears a very different Project from what it does in most of our

This Enterprize of *Seva's* was undertaken in *January* 1664, and though *Aurengzebe* was piqued to the Heart to see a little Pagan Prince contemn his Power, and plunder his best Towns at Pleasure, he was not then, it seems, in a Condition to call him to an Account, and therefore thought fit to stifle his Resentment; nay, he extolled the surprizing of *Surat* as one of the greatest Actions that ever was performed, and insinuated to the Rajahs, who attended the Court, that he was ambitious of seeing so great a Hero, desiring they would use their utmost Art to invite him into his Service, and gave them his Word he would protect him from all Violence. *Seva* hereupon ventured himself and his Son in the Mogul's Camp, where they were received at first with all imaginable Careless; but after some Months, observing a more than ordinary Coldness in the Mogul's Behaviour to him, and having some Intimation that there was a Design to dispatch him, he made his Escape, with his Son, into *Vijapur*, where he and his Descendants maintained long Wars with *Aurengzebe*. That Monarch indeed out-lived him, but was never able to reduce all his Country; and during the Confusions that happened after his Death, the Posterity of this *Indian* Prince grew stronger, and more powerful every Day, and partly by erecting Forts in convenient Places, partly by their Civilities to such as trade with them, have established a Power, that it will not be easy to subdue. According to the very latest Accounts we have from the *Indies*, the present *Sebou-Rajah*, who keeps his Court at *Settara* in *Deccan*, is a Descendant of this *Seva Rajah*. He is a Prince of the *Moharattas* or *Ganims*, who have of late Years acquired a surprizing Power, making great Inroads into the Mogul's Territories, and levying a Tribute from several Provinces. They have lately taken the Island of *Salfet*, the Castle and Town of *Bachaim*, with other Places from the *Portuguese*; and have above two hundred thousand Horse in the Northern, Southern, and inland Provinces.

But, to return to *Aurengzebe*, of whom we have not much more to say. As soon as he began to feel the Effects of Age, and that his Strength was on the decay, he resolved to set his eldest Son, Sultan *Mohammed Mauzum*, at Liberty, and bestowed upon him the Province of *Indoostan*. He gave his second Son, *Azem*, the Government of *Deccan*, and the Provinces depending upon it. To his youngest Son he gave the new-conquered Provinces, and shewed himself extremely solicitous about his Preservation. A little before his Death, he was reduced very low by a dangerous Disease, which put all his Sons in Motion, and shewed him plainly, that they regarded much more the Example he had left them in his Conduct, than the wife and peaceable Lessons he had taught them. He quieted however these Disturbances; for, his eldest Son, in Obedience to his Command, retired into his Province, but Sultan *Azem* continued to advance, yet with a small Body of Troops however; and as if he came to visit his Father, and to enquire after his Health, which the old Emperor took very kindly, embraced him, and kept him with him as long as he lived, which was not above a few Months, for he was now in a manner worn out; and yet his Senes remained vigorous to the last.

He was then incamped in the Neighbourhood of *Ahmednagar*, in the Province of *Dowlatabad*, where he expired on the Twenty-first of *February*, 1707, having reigned forty-eight Years, and lived eighty-nine. We are told, by many Historians, that he lived to upwards of

a hundred; which is a Mistake; but we must not say the same as to such Eastern Authors, as report that he was upwards of Ninety, for they reckon by lunar Years; according to which, he also reigned above fifty Years. It does not appear that he intended any of his Children should succeed him in the Whole of his Empire, not out of any Want of Affection, or through Envy of their Glory, but because he judged it for their mutual Interest, to keep that Division which had been made by him in his Life-time; yet he fore-saw that this would never take Place, and therefore contented himself with proposing it as a Thing reasonable and proper, but without any express Command, which he knew would be to no Purpose. Some of the old Captains that were about him, were desirous that he should have declared his eldest Son Sultan *Mohammed Mauzum*, his Successor, which, at first, he declined; and when urged further, he could not help telling them plainly, I have done for him what I can, I have made him King of *Indoostan*; if he will have any thing more, he must ask it of Almighty God, in whose Power it is. As his Will is a very singular Piece, and may be of peculiar Use, not only to the History of the Mogul Empire, but in explaining the Character of its Author, I thought it might not be amiss to insert it here; especially as it is as short as it is curious.

A Translation of AURENGZEBE'S Last Will.

"I CAME with empty Hands into the World, and with empty Hands I quit it. Whoever of my fortunate Children shall chance to rule the Empire, let him not molest *Mohammed Kambukh*, should he rest contented with the two new *Soubahs*. There cannot be a better Vizir than *Emir al Omrah*. Let all the King's Servants be true and faithful to *Mohammed Azem Skah*. Whoever shall chance to have the Empire, let him not turn out, or molest those born or bred up in my House. If the Division, I formerly made, proves agreeable to my Children, it will prevent a great deal of Confusion and Blood-shed.

"There are too imperial Seats, *Agra* and *Dehly*: Whoever settles in *Agra*, may have the Province thereof, *Deccan*, *Mulwa*, and *Guzerat*; and who resides at *Dehly*, may have *Cabul*, and the other Provinces. I came naked into the World, and naked I go out of it. Let no Ensigns, or Royal Pomp, accompany my Funeral. Let *Hamid o' din Khan*, who is faithful and trusty, convey my Corps to the Place of *Shah Zen al din*, and make a Tomb for it in the same Manner as is done for *Dervishes*. Let not my fortunate Children give themselves any Concern about a Monument.

"There is, in my private Treasury, Fifty-seven thousand, three hundred, and eighty-two Rupees, (which) make Seven thousand one hundred and seventy-two Pounds fifteen Shillings of our Money. Let a thousand Rupees (which make One hundred and twenty-five Pounds of our Money) be distributed among the Poor at my Funeral."

It is very remarkable, that this Monarch persisted, to the last, in maintaining his Character of a devout *Mohammedan*, and despised, after Death, all those Honours which had been paid to his Predecessors, as much as he did the Pomp and Magnificence, and the luxurious Pleasures

Religion; for they make *Rajah Seva* an able Partizan, whereas in truth he acted the Partizan only as an under Character, that was necessary to make him a Prince. When his Coeffers were again exhausted, he had Recourse a second time to the same Expedient, and, which is very extraordinary, he demanded the Sum he wanted, and sent the Citizens of *Surat* Word of the Day and Hour when he would come to receive it, and performed it again with as much Facility as at first. The second Remark is, that the *Indian* Rajahs going always to Court with a great Number of Attendants, he sent his Troops in small Bodies, so that they were not suspected of being in his Service, till they were actually in the Place, and then it was too late to think of Defence; for having taken their several Posts, the People could not stir in any Quarter of *Surat*, without the immediate Danger of having their Throats cut. This takes off the Improbability of the Thing, which otherwise would be so great, that we could hardly credit it.

"The Title of *Emir al Omrah*, rendered literally, is the Prince of Princes; for *Omrah* is the Plural of *Emir*, but rendered significantly, and with due regard to the Idiom of Languages, signifies *Prime Minister*. This great Officer, in the Court of the Mogul, has many more Titles agreeable to the Pomp of the Eastern Language. He is, for Example, styled; The Security of Fortune and Trust worthy of the Empire; Chief of the Onurabs of raised Rank; chosen among the Khans of the High Court; Manager of the Empire, and of its Riches; Director of its Fortune and Grandeur; Master of the Sword and Pen; Exalter of the Standard and Ensign; Vizir of true Judgment; Prop of the Empire; Supreme Manager of its Affairs; The Victorious General; The Grateful Friend, and Patron for all Vnairs.

"*Zen al din* signifies literally, The Ornament of Religion, and *Shah*, which signifies King, is a Title frequently given to *Dervishes*. This *Zen al din* was a remarkable *Santon*, who kept his Cell near that City, and was buried there, which being reckoned a sanctified Place, *Aurengzebe* in his Will, directed that he should be interred there. As this Prince was very zealous, or, at least pretended to be so, for Mohammedism, those of that Religion make a great Merit of visiting his Tomb, especially on the 28th of the Month *Zeeleeb*, which was the Day he died on.

of their Palaces while living. He thought, it seems, that Power and Pleasure were incompatible, and that the former ought to be preferred to the latter: How far he was in the right I pretend not to determine; but, most evident it is, that he took the right Method to obtain what he chose, and to keep it when obtained. His Government, with respect to his Subjects in general, was exact without Severity; for, though he improved the Revenues of the Empire, and took care that the Governors of the respective Provinces should pay into the Imperial Treasury the Tributes levied upon the People, yet he also took care that there should be none of that Extortion or Oppression which had been practised under the Reign of his Father, but allowed all his Officers competent Salaries, and punished them severely, if they were guilty of any Exactions.

He kept up, in the several Provinces of his Empire, an Army of regular Troops, amounting, in Horse and Foot, to upwards of Nine hundred thousand, who were regularly paid and well disciplined, so that his Sons were in Want of Soldiers, when they came, after his Death, to dispute the Succession. In his Father's Time, the Empire consisted of twenty-three Provinces, the Revenues of which amounted to Twenty-seven Millions and a half of our Money; but, in the latter End of his Father's Time, the three Provinces of *Balkh*, *Kandabar*, and *Bidduckshan* were lost, which produced a Revenue of Six hundred thousand Pounds; and yet, at his Decease, he left his Dominions in a better Condition than he found them, as will appear from the following succinct Table of Provinces, and their Revenues, which may be depended upon, and which will be of great Use in understanding the subsequent Part of this Work, as well as other Books which treat of the Mogul Empire.

12. The great Emperor, *Aurengzebe*, had no sooner breathed his last, than his Sons were immediately in Motion, in order, each of them, to force his Passage to the Throne at the Head of an Army. His second Son being on the Spot, had some Advantage; he assumed immediately all the Emblems of the Imperial Dignity, took the Title of *Mohammed Azem Sháh*, i. e. *The glorious, or, illustrious Monarch*; and, at the same Time, by the Advice of his Ministers, posted Guards on the Frontiers of the Province, to prevent any Correspondence between his elder Brother and the Grandees of the Court. He made great

Presents to the principal Ministers and Officers in the Army, and much greater Promises, in which he certainly acted very wisely. But, being naturally of a haughty Temper, he could not help shewing it in the Letters that he wrote to the Rajahs, in which he disclaimed their Assistance, but threatened, at the same time, to punish, with the utmost Severity, such as should presume to take the Field against him.

His elder Brother, *Mohammed Mauzum*, or, as he is commonly stiled, by our *European* Writers (from the Title he afterwards assumed) *Sháh Alum*, i. e. *King of the World*, was then in *Cabulistan*, the most distant Part of the Empire; but he soon raised Forces sufficient to put him in a Condition to make good his Claim to the Empire; and that Kindness and Alacrity with which he received every Body, did him as much Service as his Arm. He wrote several Letters to such Governors of Provinces as he supposed least in his Interest, imposing his great Regard for their Persons, and his Desire that they would remain neuter till the Empire was established on a settled Foundation, and make Use of their Troops to protect the People in their respective Governments, from the Miseries incident to a Civil War. This Advice they took very kindly, and followed it very exactly. When *Sháh Alum* had advanced as far as *Delly*, that Capital, without any Scruple, opened her Gates to him, and he there seated himself on the Throne of his Grandfather *Sháh Jehan*.

He marched from thence towards *Agra*, and on the Banks of the River *Chun*, both Armies met. That of *Sháh Alum* consisted of 150,000 Horse, and 178,000 Foot, exclusive of the Auxiliaries furnished by the Rajahs and *Shah Azem*, had very near the same Force. The Battle was fought in the Middle of the Month of *June*, with great Obstinacy on both Sides, and lasted for near three Days; but, at length, Fortune declared in Favour of the elder Brother, and *Sháh Azem* lost the Field, the Crown and his Life together. Some Writers tell us, that when he found himself surrounded, and heard one of his Brother's Sons calling out to take him alive, he was so transported with Rage and Despair, that he killed himself with his own poniard, to avoid falling into the Hands of his Enemies, of whom he is said to have slain twenty before he fell. This single Battle put an End to the Dispute, and the Conqueror entering *Agra* in Triumph, ascended the Throne of his Father, and was immediately owned for their Emperor, by such of his Brother's Ministers and Generals as escaped from the Defeat.

13. Sultan *Mohammed Mauzum*, or *Sháh Alum*, assumed, on his mounting the Throne at *Agra*, the Title of *Kutub o' din Babadr Sháh*, i. e. *The Axis of Religion, the most valiant Monarch*; thence he is called by our Writers simply *Badr Sháh*. He declared *Mohammed Khan* his Prime Minister, and *Zulfekar Khan* his High Treasurer: So that under this Reign those Offices were distinct, though under many of the Mogul Emperors they had been enjoyed by the same Person. As soon as every thing was settled, he formed a Design of attacking his surviving Brother, upon what Provocation is not very clear; but, if what some Writers relate of this Monarch be true, he was not the most tenacious Man in the World of his Word.

After that great Battle, which gave him the Empire, he is reported to have been so over-joyed, that he offered the Rajahs, who had assisted him, whatever Proofs of Gratitude they could possibly desire, and gave them his Consent freely, to consider what they would ask. After consulting among themselves, they desired him to grant them the free Exercise of their Religion, with leave to rebuild their Pagods, or Temples, to exempt them from the Capitation of Poll-Tax, which *Aurengzebe* had imposed upon them, to admit them to Offices and Employments; and that with respect to Customs and Tolls, and generally in all other Points, they might be treated in the same Manner as *Mohammedans*, which Privileges were all granted them by *Babadr Sháh*, but they did not enjoy them long.

* This has been always a common Practice in the Mogul Empire, where, without Victory, no Cause is good, and with it none is ever questioned, but every Man submits to the Conqueror, and acknowledges him for his lawful Sovereign to Day, with whom Yesterday it would have been Treason to have had the least Correspondence.

His Sons and Ministers represented to him with so much Earnestness, that he would thereby deprive himself of his principal Revenues, that his Finances were exhausted, that he had Occasion for Money to maintain the War against his Brother, that he would make the Rajahs and Idolaters too powerful, and that they might turn their Arms against him: To which they added for many other Reasons, that they obliged him to revoke all the Grants he had made to the Rajahs. Those Princes resenting the Violation of his Word, took Arms, not to make War upon him with their joint Forces, but to plunder and ravage the Country, as they do still without any Opposition, about their own Territories, which are situated in the Mountains. In the mean time, *Babadr Sháh*, who could not then remedy it, because of the War he was engaged in, advanced into the Dominions of his Brother, with an Army of fifty thousand Horse, and thirty thousand Foot.

Khambukh, who was in the Neighbourhood of *Hyderabad*, where he drew together the greatest Force he was able, which, however, was far from being such as might enable him to take the Field. All that he could do was to secure himself behind some good Retrenchments; with a Handful of Troops he made a very glorious Defence, till, at last, over-powered by Numbers, his Army was defeated and himself mortally wounded, and taken Prisoner; in which Condition, however, he continued for one Day, and then expired. Thus the whole Dominions of *Aurangzeb* were united under the Power of the eldest of his surviving Sons, of whose Reign no farther Particulars are recorded, except that he extinguished some religious Disputes at *Lahor*, which, otherwise, were like to have excited a Rebellion. He enjoyed the Empire only six Years, and then died in a good old Age, universally regretted by his Subjects.

14. This Monarch no sooner expired, than a Civil War was again kindled in the Empire, for *Jebandar Shab*, *Jehan Shab*, and *Rasseib al Shan*, Sons to *Babadr Shab*, having joined against their Brother *Azim al Shan*, defeated and killed him. His Treasure falling into the Hands of *Zulficar Khan*, who was in *Jebandar Shab's* Interest, they marched against the other two Brothers, *Jehan Shab* and *Rasseib al Shan*, and having overcome them, put them to Death. Their Deaths secured the Empire to *Jebandar Shab*, and *Zulficar Khan* became his Vizir. He was a weak Prince, and so foolishly fond of one of his Wives, called *Lai Koor*, who was of an obscure, mean Parentage, and a Singer by Profession, that he endeavoured to fill the Places of the greatest Trust and Honours in the Empire with her base Relations, which so disgusted *Seyd Abdallab Khan*, and *Seyd Hossan Khan*, two Brothers of great Authority in the Empire, and who had a Body of choice Troops, that they resolved to place *Mobammed Furrukhsir* on the Throne.

This Prince, notwithstanding he had but little Treasure, got Numbers to join him. At first, he defeated *Eaz o' din*, *Jebandar Shab's* Son, and afterwards *Jebandar Shab* himself was defeated near *Agra*, and was obliged to fly, tho' he had near 100000 Horse and Foot.

Mobammed Furrukhsir, Son to *Azim al Shan*, being settled on the Throne, *Seyd Abdallab Khan* was made Vizir, with the Title of *Koteb al Muluck*, and *Jarba Vasa*, that is, Faithful Friend, and *Hossan Ali Khan* made *Mir Bukhsir*, or Pay-maister-General, with the Title of *Emir al Omra*. The Emperor was only so in Name, for these two had the absolute Management of every thing; *Furrukhsir*, at last, with the Advice, and at the Instigation of *Kbandoran* and *Mir Jumla*, began to contrive Means to cut off the two Brothers. They, on the other Hand, were intent on nothing so much as enriching themselves. They turned out *Mizam al Mulluck* from his Government of *Decan*, and *Hossan Ali Khan* went thither himself. At last, the two Brothers finding the Emperor jealous of their Power, resolved to remove him, and put a more passive Prince in his stead. Having got *Ajeet Sang*, the

Maba Rajab, and the Emperor's Father-in-law, to join them, they confined him, and shortly after they blinded him, by drawing a red-hot Wire over his Eyes; and on the 6th of February, 1719, offering him a thousand In-dignities and Insults, put him to Death, after a Reign of seven Years. It was in this Emperor's Reign, that the *English East-India Company* obtained a Firmán; exempting them from paying any Duties in his Dominions.

The *Seyds*, after having thus traiterously and treacherously destroyed *Furrukhsir*, took *Rasseib al Darjat*, Son to *Rasseib al Shan* out of the Castle of *Selingur*, where the Royal Family are confined, and placed him on the Throne. He had not reigned above three Months before they murdered him; and sending for his Brother *Rasseib al Dowlat*; placed him on the Throne, who, in a few Days afterwards died a natural Death, and was succeeded by the present Emperor. *Nasr o' din Mobammed Shab*, Son to *Jehan Shab*, who, being raised to that Dignity by the *Seyds*, *Hossan Ali Khan*, and *Abdalla Khan*, they kept the Power so much in their own Hands, that he had nothing except the Name of Emperor, which made him eagerly wish for an Opportunity of making himself independent, and revenging the Death of his Uncle's Son.

Mobammed Shab, in October, 1720, marched, with a numerous Army, from *Agra* towards *Decan*, accompanied by *Hossan Ali Khan*, and several Omrahs. When they came to halt, after the first Day's March, the Emperor called a Divan, from which, after a short Stay, he withdrew. As soon as he was gone, *Kbandoran*, and several others of the principal Omrahs, who were best affected to the Royal Family, drew their Swords, and falling upon *Hossan Ali Khan*, killed him, and two or three of his Friends. When this was over, the Emperor thought no more of his first Expedition, but marched back with his Army to *Dehly*, in order to cut off *Seyd Abdellab Khan*, the other Brother, who was in that Capital, with a great Force, and, who, hearing of his Brother's Murder, had taken out Sultan *Ibrahim*, Son to *Rasseib Shan*, and proclaimed him Emperor, gathering together what Treasure he could, and having broke to Pieces the famous Throne of *Shab Jehan*, which cost eleven Millions of our Money, in order to raise wherewithal to pay his Soldiers. By the Help of this extraordinary Supply, he was very soon in a Condition to look his Enemies in the Face; and, accordingly, marched with fifty thousand Horse to give the Emperor Battle.

It was on the second of November, 1720, that those Armies came to a general Engagement, and, after an obstinate and bloody Battle, *Abdallab Khan's* Forces were defeated, and himself desperately wounded, and taken Prisoner. The young Sultan, whom he had brought with him to countenance his Rebellion, being taken, had no other Punishment inflicted on him, but being sent back to his old Quarters the Castle of *Selingur*.

Upon this Victory, the Emperor made great Rejoicings, and appointed *Mobammed Amin Khan* Vizir, and returned to *Dehly*. *Abdallab Khan* being brought before him, the Emperor said to him, "Traitor, see what thou hast done!" To which he answered, "I took you out of Prison, and gave you an Empire. My Brother being murdered by your Order, as I was at the Head of an Army, Self-preservation directed me to make Use of it; Providence decreed you the Victory, use it as you think proper, by treating this Clay as your Resentment or Interest may prompt you." Then the Emperor said to him, "What Harim had *Furrukhsir* done to you?" To which he answered; "He grew jealous of mine and my Brother's Power; and, as it was inconsistent with our Interest to resign it into his Hands, we thought it dangerous to lose any time in removing him. Had Providence permitted us to have been so prudent hitherto, we should not have come to this tragical End; but when Fate destines one to Ruin, it begins by blinding the Eyes of his Understanding." Then the Emperor

¹ We have not, since this Emperor's Reign, had any distinct Account in Europe, of what has pass'd in this Empire, and therefore the Reader must be content with a very summary Relation of those Matters here; and indeed these Reigns themselves are so short, that, except their Beginnings and Endings, they contain little or nothing worthy of Notice.

² This Firmán, or Imperial Decree, is dated on the 4th of the Month *Safer*, in the fifth Year of the Emperor *Mobammed Furrukhsir's* Reign, that is, on the 6th of January, 1716-17. It was solicited by Mr. *John Surman*, and an *Armenian Merchant*, on the Behalf of the *East-India Company*, to whom it is a Thing of great Consequence, and, at the same time highly honourable for the *English Nation*.

ordered him to be confined, and four Servants allowed to attend him, and said, "As for the young Sultan, he is not to blame; should he be punished, it would distract his poor Mother, let him remain with her."

In Consequence of the great Services rendered him upon this Occasion, the Emperor preferred all who had been active, either in killing *Hoffan*, or in the War that followed against *Abdallab*. *Kbandoran* was made High Treasurer, with the Title of *Emir al Omra*, and *Sirbullind Khan*, of whom we shall have Occasion to speak at large hereafter, was sent for from *Cabul*, and appointed one of the Vizirs. It was upon this singular Revolution, that the Mother of the Emperor *Mohammed Furruckfir*, demanded that *Abdallab Khan* should be delivered up to her as the Murderer of her Son; but the Emperor refused to comply with her Demand, telling her that his Brother had already suffered for that Offence, and therefore he would not sacrifice two Lives to expiate the Loss of one. But this was not all, for he treated his Prisoner not only with Humanity, but with most surprising Kindness, in Gratitude, as it may be presumed, for the Respect formerly shewn him; for he ordered that *Abdallab Khan* should lodge in the Palace of *Afif al Dowlat*, have a Pension of three thousand Rupees monthly, thirty household Servants, seventy menial ones, with Provisions of all kind from the Royal Kitchen, five Women to amuse him, and proper Guards over him. He did not live long to enjoy this generous Allowance, dying a few Months afterwards of his Wounds. Five and forty Women, most of them, his Wives and Concubines, and some of them his near Relations, burnt themselves in one Room the Night after he died.

One cannot but observe here, how strangely even the wildest and worst-founded Customs spread, and that too against all the Principles of Religion, Reason, and common sense. In ancient Times, none but the Wives of *Bramins*, or *Indian* Priests, had the Privileges of burning themselves with their deceased Husbands; but since the Government fell into the Hands of the *Rajaputs*, 'tis customary, when any of their Princes die, for one or more of their Wives to be burnt with him. There is no Compulsion to this Sacrifice as some People groundlessly imagine, it is entirely of their own Accord, and often they are dissuaded from it; sometimes, indeed, when a vain-glorious Passion prevails over natural Affection, the Widow's Relations would gladly have her burn herself, as it raises the Character of her Family, by making it remarkable for virtuous and loving Women; yet, according to their Religion, it is more meritorious to behave chastely and decently in their Widowhood until Death, than burning, because one is but a short Pain, and the other a State of Trial. The Moguls have endeavoured to discourage this Custom as much as possible; but since Money is omnipotent in that Country, as well as in many others, a small Bribe generally purchases the Consent of the Governor or commanding Officer. Lately the *Seyd* and *Pattan* Families, in several Parts of *India*, have thro' their excessive Pride got into this Custom, and as it is strictly forbidden by their Religion (which is the *Mohammedan*) they do it privately, by setting an Apartment on Fire about their Ears.

In the Year 1721-2, the Emperor wrote to *Nizam al Muluck*, then at *Decan*, desiring his Presence at Court, and that he would appoint him Vizir; but, if he declined it, he should nominate whomsoever he should judge to be the most deserving: To which he answered, "I am a *Derweish*, and not ambitious of so high a Station; I was contented with the Province of *Malwa*, when the *Seyds* intending to distress me, I was obliged to take Arms. By the Divine Assistance I baffled their Designs, and secured myself. At last your Majesty, by their Instigations, set out against me with a mighty Army. Here the Almighty protected me likewise. In the Beginning, one of the Brothers was killed, and as you knew

me to be a faithful Servant, you laid aside the Expedition, and returned to *Dehly*, where, being settled to the Satisfaction of all People, you have now condescended to distinguish me, the meanest of your Slaves, with this extraordinary Mark of your Favour, which I only decline, as knowing myself unequal thereto, and that there are many about your Court, more capable and desirous of such an Employment than I."

But though he refused to come to Court, he still continued in Possession of the Government of *Decan*; and though he acknowledged himself a Subject, yet he made no Remittances to Court, but appropriated the Revenues to the maintaining of an Army, which he said, was to keep in Awe the *Mabarattas*, or *Ganims*, the *Sabou* Rajahs, Subjects in *Decan*, whom notwithstanding he permitted to plunder and lay waste several of the Emperor's Provinces. They imposed a Tribute of one Quarter-part of the Revenues which they call *Chot*, in many Places, and some Parts they have taken entirely to themselves. He well knew, that with the *Mabarattas* Assilances, he could defy any Attempts that could be made against him from Court. The Character of this Man is truly singular, and deserves to be both writte: and read with Circumspection; he had not only great Power, but a very comprehensive Genius, and was not so much distinguished by his Situation in the World, as by his great Merit and wonderful Capacity; but the Reader is to observe, that *Decan* is to *Dehly* or *Agra*, what the most distant Part of *Wales* or *Scotland* is to *London*, and such as pass'd the best Part of their Time there, are not the fittest to be made Dancing-Masters when they come to Court. Our Governor had a good Head, but spoke it seems in a Country Tone, could execute the Functions of a Statesman or a General, but would perhaps have made a bad Figure, if obliged to open a Ball. In Compliment to his Power, he was with much ado forced up to Court, when the Emperor's Affairs were in a very declining Way, and he was preferred to the first Place in the Government. All this, however, was meer Shew; for behind his Back, the Courtiers made a Jest of him, and could scarce forbear affronting him to his Face. He acted at first as became a Man of Honour; he took an Opportunity to lay before the Emperor a true State of his Affairs, and the Necessity of his making a thorough Change in his Administration, if he meant to enjoy the Fortune, as well as the Throne of *Aurangzeb*.

The Emperor told his Favourites of this, who made a Jest of this Statesman's old fashioned Notions, and redoubled their Impertinences, as to his clownish Behaviour, which piqued him at last to that Degree, as to make him resolve upon sacrificing such a Nest of Fools and Knaves, without considering that his Sovereign must be sacrificed with them. He first proposed his Scheme to the Vizir, their Families being allied; but he rejected it on this honest Principle, that the Publick ought not to be given up to gratify private Prejudices. *Nizam al Muluck*, however, found enough to join with him in his Scheme, for a wanton Court will never fail of raising a Multitude of Malecontents, and such is the Nature of Men, that the far greater Part of them employ their Reason only to gratify their Resentments. Such therefore as fell in with the Schemes of this disgusted Statesman, resolved to call in *Nadir Shab*, so well known in *Europe* by the Name of *Tamas Kouli-Khan*, in order to ruin the Court, or in plain English, to rid themselves of a weak and corrupt Ministry, as vain and insolent in their Abuse of Power, as they were incapable of managing it for the Honour of their Prince, or the Benefit of his Subjects. Thus this great Empire was betrayed, and exposed to numberless Michiefs, purely to gratify the Resentments of a few, who, to revenge their own Wrongs, cared not what they brought upon their Country.

It must be allowed, however, that they chose a fit Time, and a fit Person, for executing their wicked Par-

^a I shall take this Opportunity of observing, that the same People mentioned in ancient Writers by the Name of *Pattans*, are now called *Aghas*, and all the Northern Parts of *India*, but more especially such as are mountainous, are inhabited by Tribes of these People. They are not originally *Indians*, but are descended from the *Mohammedans*; that began to establish themselves in these Countries from *Ashia* and *Egypt*. They are a bold, brave, hardy, patient, and active People; and it was they that, under the Command of *Murza*, or, as we commonly, tho' very corruptly, call him *Mirza*, and his Son, made themselves in a manner Masters of *Perfia*, out of which they were driven in the Beginning of his Glory by *Ismael Kouli Khan*, to whom, however, they gave a great deal of Trouble afterwards in the Province of *Kandahar*.

pose, which they accomplish'd to the utmost. *Nadir Shab*, having fully established himself, and settled his Affairs in *Persia*, he left his Son *Reza Kuli Miza* to command there, and set out with his Army towards *Kandahar*. *Hoffein-Khan*, the Governor thereof, having laid up great Stores of Provisions and Ammunition, held out for eighteen Months; at last being reduced to Straits, he fallied out with his Men, most of whom died bravely fighting. *Hoffein-Khan* and his Son being taken Prisoners, the *Persians* entered the Castle, and took Possession thereof. While *Nadir Shab* was busy in securing and fortifying *Kandahar*, and bringing over to him the *Zemidars** of those Parts, Letters came from *Nizam al Muluck*, and *Saadit-Khan*, inviting him to march towards *Indostan*. In answer to which, he objected the Difficulties of getting thro' the Desiles, passing the great Rivers, and the many Encounters he must expect to have with the *Afgbans*, and the warlike Nations of those Parts. The Opposition he must expect from *Nadir-Khan*, *Soubabdar* of *Cabul*, and *Zekaria-Khan*, Ruler of *Labor*; and last of all, his Fate to depend on his Success against a powerful Imperial Army. They soon satisfied him how unnecessary his Fears were, and that before he crossed the *Attack*, he should have a Proof how able they were, and how much inclined to facilitate his Passage. Being encouraged by those Representations, he set out with an Army of 125,000 Horse, *Kuzzelebofs*, *Georgians*, *Turks*, *Khorasanians*, *Balkhis*, &c. all inured to Fatigues and Hardships; they were well provided for this Expedition, and greatly encouraged thereto by the Hopes he gave them of not only enriching themselves, but of bringing Wealth and Glory to their impoverished Country, by the Plunder of *India*. In the mean Time, *Nizam al Muluck* and *Saadit-Khan* used all their Endeavours secretly to promote his Interest, and wrote to *Sherzib-Khan*, Governor of the Castle of *Cabul*, and *Maar-Khan*, *Soubabdar* of that Province, as also to *Zekaria-Khan*, Ruler of the Province of *Labor*, to this Purport: "*Nadir Shab*, being thoroughly informed of the State of Affairs in *India*, and that his Imperial Majesty and favourite Courtiers employ their Time in Wine and Women, has come to a Resolution to strike a Blow at this Empire. You well know, that none of the great Ones here are fit to take the Field, much less to resist a Man who is conducted by Fortune. As this is the Case, you can have little Hopes of Assistance from hence; the best you can do, will be to behave discreetly and save yourselves." These Letters cooled them pretty much, and had the desired Effect with *Nadir-Khan* and *Zekaria-Khan*. *Nadir Shab* having subdued *Ghorbund* and *Gloznawi*, and garrisoned them with his own People, came to *Cabul* and besieged it. *Nain-Khan* had left it, and marched to *Peishor*, but *Sherzib-Khan* defended both the City and Castle for six Weeks, with the utmost Bravery, and wrote repeatedly to *Nadir-Khan*, and to Court, for Assistance; but none coming, both City and Castle were at last taken by Storm, and he and his Son were put to Death.

Nadir Shab found Treasure, Jewels, Arms, &c. to a great Value, which, since the Great Mogul *Babar's* Time, had been shut up in Vaults. When the taking of *Cabul* was known at Court, the Emperor gave Orders to get his Troops in Readiness, and provide all things necessary for taking the Field. As *Rajah Jessing* was more attached to *Khandoran* than to any of the other Omrahs, he repeatedly wrote to him to this Purport: "*Nadir Shab's* coming is a concerted thing, you must be watchful over the Mogul Omrahs, who seem to be united in order to compass some treacherous Design *Nadir-Khan* and *Sherzib-Khan* are gone; one has sacrificed his Life to his Interest, and the other has fled to *Peishor*. If *Zekaria-Khan*, Ruler of *Labor*, makes any Opposition, it will give the Empe-

ror's Army Time to advance pretty far, in order to check this Invader; as for us *Rajapouts*, we are ready to join the Royal Ensigns." *Khandoran* knowing him to be well affected, represented this to the Emperor, and told him, it would be very imprudent in him to leave the Capital, and take the Field; however, it was at last agreed, that the Army should march to *Labor*, that the Emperor should accompany it so far, and that from thence it should proceed towards *Cabul*, under the Command of *Nizam al Muluck*, and the other two Omrahs; for which Purpose the *Peishkbana* was ordered out to the Gardens of *Sbalimar*; but after it was sent thither, to every body's Surprise, *Khandoran* came back to the Palace, and delayed the March, whereas *Nizam* seemed to be for hastening it all in his Power.

The Emperor's Servants, as they knew *Khandoran* to be attached to their Master, contrived all the Impediments they could think of; so that *Nadir Shab* had not only Time to secure *Cabul*, but was far advanced in his March to *Peishor*, where the *Afgbans* and Mountaineers very much incommoded him, and kept him in Play for seven Weeks; in which Time he had a great many Men wounded and killed, seeing there was no way for forcing the Passes without much Blood-shed, and that the *Afgbans* had fortified themselves on the Tops of the Hills, he sent them Officers of Accommodation, to which they came into the more readily, as the *Soubabdars* had sent no Assistance, and that they had been four or five Years without receiving any of their usual Allowance from Court. Upon *Nadir Shab's* paying them a certain Sum of Money, they not only let him pass unmolested, but several of them lifted in his Army; the other *Afgbans* hearing of this, followed their Example; so leaving the main Army behind, with ten thousand chosen Horse, *Kuzzelebofs*, in seven Days he got to *Peishor*. *Nadir Khan*, who with seven thousand Horse had encamped without the City, not imagining he could get through the Passes so soon, upon hearing of his Approach with so large a Body of Horse, was greatly perplexed, several of his Auxiliaries left him, and few besides the King's Men stood by him, who, after a brave Resistance, were defeated, and *Nadir-Khan* taken Prisoner. Some *Afgbans*, who waiting the Event, were posted on the Hills, seeing *Nadir Shab* prevail, came and offered him their Service; after this Victory he entered *Peishor*, and took Possession thereof.

When the News of this Defeat came to the Court, *Nizam al Muluck*, *Khandoran*, *Zanmir & din Khan*, and the other Omrahs, according to the King's Orders, on the second of *January* 1738-9, marched out with a numerous Army, a large Train of Artillery, and other Necessaries, in order to oppose this Conqueror, and halted at the Gardens of *Sbalimar*. *Nizam*, who was the Contriver of this Storm, endeavoured all he could to prepossess the Minds of the Soldiers with a Terror of *Nadir-Shab's* Forces, and how vain it was to resist him, and at the same time amused them, to divert their going too far forward; but the King issued out Orders, that *Nizam*, and the other Omrahs, should advance with all Expedition, himself intending to follow soon after them. *Nizam al Muluck*, and the rest, according to these Orders, marched on, and encamped in the Plains of *Karnal*, which is fifty-five Cois distant from *Dehli*. The Emperor also set out the 18th of *January* 1738-9, and on the 4th of *February* joined them. *Nadir Shab* having thrown a good Garrison into *Peishor*, passed the River *Attak*, and marched on directly towards *Labor*, the Governor of which had fortified the Place with great Diligence, and seemed disposed to defend it to the last Extremity; but as he was in the Secret of Affairs, upon the Approach of the *Persian* Army, he abandoned the Town, and retired into the Castle, which he held out no more than three Days.

* It will be necessary to explain this Word, and in order to make the Reader perfectly comprehend it, we must observe, That *Dar* signifies as Possessor, that is to say, one who holds, or enjoys any thing. *Zemin* signifies Land, and *Zemidar* is one who possesses Land, that is, a *Rajah*, or little *Indian* Prince, who pays some Acknowledgment to the Emperor, but who is notwithstanding the free Lord of his Inheritance. In the same Manner the Word *Manjubdar* is compounded from *Manjub*, a Post or Office, and consequently he who possesses it is a *Manjubdar*. If, instead of a Salary, he has Lands assigned him, those Lands are called *Jaguir*, and from thence the Officer is styled *Jaguidar*. The *Zemidar* and *Jaguidar* both possess Lands, but by very different Titles; for the former is a Freeholder, and the latter a Tenant at Will, by the Grant of the Emperor. This Minister was sincerely attached to his Master, but had a very odd Scheme of Politicks, for he thought that the most precarious Peace was preferable to War, and therefore he was always for Negotiations and Expedients, rather than having Recourse to Arms; by which he sunk his Master's Credit, and, as we shall see hereafter, drew on his own Ruin and Death.

It was natural to expect, that *Mohammed Shab* should some way or other be acquainted with the Motives that had induced this Invasion of his Dominions, and accordingly *Nadir Shab* wrote him a Letter, dated in the middle of *August*, in which he tells him, that he came out of pure Friendship, having heard that a Landful of barbarous People had presumed to harra's several of the Provinces of his Empire, and to lay his Subjects under Contribution, which were things unworthy of so great a Monarch to bear, and from which he was come with an Army to rescue and relieve him. The Emperor, however, took up Arms, and seem'd determin'd to meet him in the Field; but the Disputes and Heart-burnings among his Ministers continued. As for *Kbandoran*, he was sincerely in his Interest, though mistaken in his Politicks; and now he saw that the Empire was to be saved by fighting, he did his utmost towards carrying on the War; but the Misfortune was, that the Emperor confid'd most in *Nizam al Muluck*, as indeed he was the best Officer in his Service; but it cannot be suppos'd, that he, who had been the Author of the War, and had drawn *Nadir Shab* into his Master's Dominions, should be forward to oppose him; yet he march'd with the rest, and on the fourteenth of *February* an Engagement ensu'd, wherein the Mogul's Army was defeated, and *Kbandoran* mortally wounded. This Action, however, was far from being decisive, though the Mogul lost several of his best Officers, and a great many Men. On the Side of *Nadir Shab*, seven principal Officers, and two thousand five hundred Men were killed, and about five thousand wounded. The Mogul's Troops, on their Return into their Camp, fell into great Confusion, and plunder'd the Tents of such Officers as were either killed, or taken Prisoners, which oblig'd the Emperor to go in Person to that Part of the Camp where the Forces, under the Command of *Nizam al Muluck* were post'd, in order to put things into a better Condition, by reducing the Soldiers to their Duty. It was with the same View, that the Emperor, with that Officer the Vizir, and other Omrahs, went without the Mourtchas or Retrenchments, and drew up their Men in a Line of Battle, with a Design to put a stop to the Enemy's advancing any farther; but had not the Night come on, these Precautions would have stood them in little stead, and that Day would have put an End to the whole Affair. About an Hour after Sun-set the Emperor return'd back to his Tent; several of those who escap'd out of the Field, as also those who attend'd the Baggage and Carriages, fled towards *Debli*, a great many of whom were plunder'd and killed by the way. The Camp in some Places was very thin of Men, inasmuch, that when at Midnight the Emperor sent for *Nizam al Muluck*, the Space from his Mourtcha to the Emperor's Tent, which is about three Quarters of a Cos, was found intirely empty. *Nizam al Muluck*, *Sirbulind-Khan*, *Kummir ô din Khan*, and all the other Omrahs that were left, staid with the Emperor in deep Consultation until near the Morning, when each return'd to his own Quarters.

On the 16th, finding the Camp thin, and being apprehensive of the *Kirzlebaj's* attacking them, they contract'd the Circuit thereof, and their Mourtchas into the Compass requisite to contain the Number of Troops they had left, which was the Space between the Emperor's Tent and *Nizam's* Mourtcha, and there they stood under Arms the whole Day, every Minute expecting the Enemy's Approach. Towards the Evening a small Tent was pitch'd for the Emperor, and all the Troops were dispos'd of to their respective Posts, where they continu'd under Arms the whole Night, and their Horses saddl'd, without either Hay or Corn. The next Day was pass'd in great Fear and Apprehension, for the Emperor saw plainly his Soldiers were very much dispirited, and his Ministers and Generals in a manner at their Wits End, so that they were as little fit to ad-

vise him, as he was to act without their Advice. On the 17th of *February*, *Nizam al Muluck*, with *Azim Allah Khan*, and several Horsemen, went out and pitch'd a small Tent betwixt the two Camps, to which *Nadir Shab's* *Zamanli al Dowlat*, or Vizir *Kajum Beg-Khan* came, and from thence conduct'd him to his Master, who embrac'd him sitting, and made him stand honourably close by himself; he gave him a Cup of Sherbet, and made him eat at the Vizir's House; after which it was agreed, that *Mohammed Shab* should come and stay with *Nadir Shab*. This Conference lasted about six Hours, and was immediately followed by two very remarkable Events; the first was a kind of Cessation of Arms, which was so much the more necessary, that the Emperor might be under no Apprehensions, and that he might be the better able to bring his Troops into good Order, who hitherto had been in a great deal of Confusion; the next was, that *Nizam al Muluck* was declar'd High Treasurer, and *Emir al Omrah*, that is, prime Minister, so that with respect to him, the End of the War was intirely accomplished. All the Ministers who oppos'd him were driven from Court, and he was not only vested with the Title, but was in Fact at the Head of the Emperor's Councils, and had the whole Power of the Empire in his Hands.

It is from this Time therefore, that we are to date his real Concern for the Peace of his Country, which having first accomplish'd, his own Views he now labour'd to promote. About this Time *Kbandoran*, his old Antagonist, di'd of the Wounds he had receiv'd in the Battle, and was buried with more Privacy than seem'd consistent with the great Offices he had held, and the high Favour in which he had stood with his Master. It is not easy to conceive what Arguments *Mohammed Shab* was prevail'd upon to quit his own Camp, and trust himself in that of his Enemy; but it seems he was now intirely guided by his new Minister, who very probably told him, that in his present Circumstances he hazard'd little by taking that step, since it was in the Power of the *Persian* Monarch to force him to accept what Terms he pleas'd, and that therefore it was better to do with good Grace a thing he might otherwise be compell'd to do, whether he would or not. But, however it was, this is certain, that on the 19th of *February*, in the Morning, the Emperor sitting in a Royal Litter, with a Canopy over it, followed by a lead Horse, and a Drum, and attend'd only by a few of his faithful Servants, and an Escort of about two hundred Horse, march'd out of the Camp, and when he had gone a good way by a Sign, he forb'd the Horsemen to accompany him any farther; then with his Eunuchs, and the above-said Omrahs, each of whom had not above two or three Servants to attend him, he went on to *Nadir Shab's* Camp.

When he had advanced about half way, one of *Nadir Shab's* Ministers came to meet him, and paid him the usual Honours. He likewise assur'd him, that his Master wait'd for him with much Impatience, that due Care would be taken to make this Interview as easy and as agreeable to him as possible, and that he had no Reason to apprehend any Danger, or the least Failure in point of Decorum or Complaisance. All this was certainly requisite to keep up the Spirits of a Monarch in such a Situation, and under to many Difficulties. He continu'd his March therefore, and as he drew near *Nadir Shab's* Tent, he receiv'd another and more welcome Message; for there *Nesr Allah Mirza*, *Nadir Shab's* Son, who came in a Royal Litter, having alighted, paid his Respects, according to the Form of his Country. The Emperor ordering his own Litter to be set down, embrac'd *Nesr Allah Mirza*; after which they both march'd on until they came as far as the Train of Ordnance: Here all the Attendants were oblig'd to stay behind, only the Emperor with two or three Eunuchs, and the Omrahs above-mention'd, were allow'd to pass. When they came

* We are indebted for this very exact and no less curious Account of this extraordinary Transaction, to Mr. *Jamés Frazer*, whom I have before-ment ion'd, and I have insert'd it here, in order to render this History of the Mogul Empire as complete as possible. The Reader will perceive, that at this Juncture there was a kind of Suspension of the Emperor's Power, and all was at the Mercy of a Stranger. It may seem strange, that *Nadir Shab* should let slip this Opportunity of making himself Master of *Indostan*; but when it is consider'd, that the Power of the *Persian* was chiefly owing to the Weakness and ill Conduct of *Mohammed's* Subjects, it will appear great Wisdom and consummate Policy in the Conqueror, to act as he did: For, if he had cut off the Mogul Emperor, his Subjects might have become desperate, and *Nadir Shab's* Army was so small, and so far advanced thro' the Country, that he might have been rais'd in his Retreat, if he had not acted as he did.

to the Door of the Royal Tent, and the Emperor was alighted, *Nadir Shab* came forth to receive him; having embraced him, he seated him close by himself on the same *Muinidd*. After the accustomary Forms of Salutation, and the Enquiry after each others Health were over, *Nadir Shab* addressed him thus: "It is strange that you should be so unconcerned, and regardless of your own Affairs, that notwithstanding I wrote you several Letters, sent an Ambassador, and testified a Friendship for you, your Ministers should not think proper to send me a satisfactory Answer, and by reason of your want of Command and Discipline over your own People, one of my Ambassadors, contrary to all Laws, has been killed in your Dominions. Even when I entered your Empire, you seemed under no Concern about your Affairs, nor so much as sent to ask who I was, or what was my Design. When I advanced as far as *Labor*, none of your People came with a Message or Salutation, nay, not with an Answer to my Salutation to you. Afterwards, when your Omrahs were awakened out of their Lethargy and Indolence, they prevented all Means of a Reconciliation, and coming tumultuously with an Intent to stop my farther Progress, they brought themselves into one general Snare, without having the Fore-sight to leave any behind, who, upon an Emergency, could make Head and retrieve their Affairs. Besides this, you have foolishly cooped yourselves up in your *Murchas*, as not considering, that if your Enemy was stronger, you could not remain within those Barri-cades, without either Water or Grain; and if he was weaker, it was both unnecessary and disgraceful, to suffer yourselves to be besieged by him. Besides, if you thought lightly of him, and imagined him a rash inconsiderate Man, without exposing your own Person and Reputation to much, you ought to have detached a faithful and experienced Officer, who, in a little Time, might have found Means to distress and cut him off; but if you dreaded his Experience and Conduct, you had still the less Reason (after provoking him thus far) to venture your all at one Blow. Even when you had thus entangled yourself, I sent you Offers of an Accommodation, but you was so puffed up with your own childish Conceits, and foolish Resolutions, that you would not give ear to any honourable Overtures, or consult your own Interest, until at last, by the Assistance of the Creator of the World, and the Strength of the Arms of the victorious Warriors, you have seen what has happened. Moreover, your Predecessors were wont to take *Jesab*, or Poll-Tax from the Infidels, and you in your Reign have given it to them; having for these twenty Years suffered the Empire to be over-run by them; but as hitherto the Race of *Timur* have not injured, or misbehaved towards the *Seff* Family, and the People of *Persia*. I shall not take the Empire from you, only as your Indolence and Pride have obliged me to march so far, and that I have been put to an extraordinary Expence, and my Men, on account of the long Marches, are much fatigued, and in want of Necessaries, I must go to *Dehly*, and there continue some Days, until the Army is refreshed, and the *Peishcuhs* that *Nizam al Muluck* has agreed to, is made good to me: After that, I shall leave you to look after your own Affairs." *Mobammed-Shab* gave no Answer during the whole Speech, but continued in a fixed Silence, which testified a good deal of Confusion and Shame.

There were only three of his Ministers present at this Conference, and the Emperor having remained some Hours in *Nadir Shab's* Quarters, returned in the Evening to his own Camp. He continued there three or four Days, without well knowing what Issue things would come to. On the 23d, *Nizam* was sent for to the *Persian*

Camp, where he was kept, and about Eight the same Night, the Vizir received a Firman from *Nadir Shab*, to this Import; "Kunnir & din *Khan Vizir*, Know, that To-morrow, *Mobammed-Shab*, *Sirbullind-Khan*, *Mobammed-Khan Bunguys*, and *Azim Allah-Khan*, shall come into the Presence; therefore look well to your People, that they be not dispersed, or straggle abroad; when you have secured that Point, come you hither also." When the Emperor was apprized of this, he sent for *Sirbullind-Khan*, and all the other Omrahs, with whom he held Council until Midnight. At last the Emperor declared, that Affairs were now gone beyond his Power, and that he must do one of these three things; To-morrow to march out and make one desperate Push, to determine his Fortune at once, or put an End to all things and Misery by a Dose of Poison, or else submit peaceably to what Terms might be imposed. The Emperor's Inclination, though he did not then declare it, was for the last of these. On the 24th, *Sirbullind-Khan*, *Mobammed-Khan*, &c. were ready, each with his own Men, that in case the Emperor should make a Push, they might not be unprepared, and if on submitting, he should go to *Nadir*, and bid them come, they should follow his Fate. At Night arrived a Note from *Nadir Shab*, to this Effect; "*Sirbullind-Khan*, be of good Cheer, perfectly composed, get yourself hither, before *Mobammed-Shab* sets out."

On the 25th, *Sirbullind-Khan* having obtained Leave, marched towards *Nadir-Shab's* Camp, and according to an Order, leaving his Men and Baggage on the Right-hand thereof, he with *Khan*, *Zad-Khan*, three Horsemen, and four or five Servants, entered the Camp, and pitched a small Tent for himself, near the *Bargab*, close by *Saadit-Khan's* Quarters. About 9 o'Clock that Morning, *Mobammed-Shab*, according to an Order, being seated in a royal Litter, with a Canopy and Umbrella, set out for *Nadir-Shab's* Camp, attended only by *Emir-Khan*, *Ishak-Khan*, and some Eunuchs. On his Arrival, he alighted at a Tent which had been pitched the Day before, by *Nadir-Shab's* Order, for that Purpose, in the Front of the Camp, where he was allowed to have as many of his Domesticicks of all Sorts as were necessary, and 1000 *Kuzzlebofs* Horsemen were detached as Guards round him. About Eight o'Clock in the Evening, *Mobammed* being called, went to wait on *Nadir-Shab*. After three Hours stay, he returned to the Camp, and there was an Order, that none of the Omrahs should be allowed to go to see him. In this uncomfortable Situation he passed all that Afternoon, and the succeeding Night. The next Day, all the Ordnance, and the Emperor's Baggage, were seized for the Use of the Conqueror, who selected out of the former two hundred Pieces of Cannon, and sent them away; after which, out of the Treasure he had taken, he rewarded his Army with three Months Pay by way of Gratuity, and took Care that it should be distributed to every Man in the same Proportion as his Pay.

On the 1st of *March*, *Nadir-Shab* began to move towards the City of *Dehly*, having *Mobammed-Shab* in his Hands, guarded by ten thousand Horse. On the 8th of the same Month, the Emperor entered the Castle of that Capital, under a Guard of four thousand Horse, before it was light, and the same Morning *Nadir-Shab* also made his Publick Entry into the City, at the Head of 20,000 Horse, and proceeding thro' it to the Castle, was there received by *Mobammed-Shab*, who entertained him at Breakfast. They spent the whole Day together, and *Nadir-Shab* did not retire till towards Evening, behaving all the Time towards him with much Civility and seeming Affection. The *Shab* likewise, at his Request, issued out a Proclamation, forbidding, on very severe Penalties, any of his Soldiers from insulting the Inhabitants, at the same Time strictly enjoining the proper Officers to see this Proclamation duly executed, and to spare no Severities re-

¹ The *Muinidd* is a Part of the *Droan*, which is raised higher than the rest, and is large enough for two or three People to sit upon. It is covered with a fine Carpet, and over that there lies a Quilt of fine Linnen.

² This was a thing constantly practised by the *Persian* Conqueror, on his becoming Master of any great City. He did the same thing after the taking of *Kandahar*, where he found immense Riches, and he did much more, when he became Master of the whole Wealth of this Empire, as we shall see hereafter. It was by these Acts of Generosity, that he kept his Army so perfectly attached to him; from the Consideration, that in serving him, they served themselves, and that he was not more their Monarch than their Benefactor.

quisite for that Purpose in punishing the Offenders; which Proclamation had such an Effect, that very exact Discipline was maintained, and none of the Mogul's People suffered any Injury.

On the 10th, an Order was sent to open the Magazines in the Corn-Market, and to see that Commodity sold at a reasonable Rate, which was absolutely necessary, as things were then circumstanced. A Mob, however, was raised upon this Occasion, and those who would not fight for their Country, took up Arms rather than part with their Corn at a fair Price. In short, the *Persian* Officers were kill'd, as also a good Number of their Men, and in a few Hours Time the whole City was in Confusion. About Eight the next Morning, *Nadir-Shah* mounted on Horseback, in order to quell the Tumult, and in his Passage through the Streets, seeing Abundance of his own Soldiers dead Bodies lying about, he was extremely provoked, yet he moderated his Passion so much, as to give very just and favourable Orders, though at the same Time he detached a strong Body of Horse and Foot to reduce the People that were in Arms to Reason. There were some very dirty Circumstances in this Affair, which it is necessary should be explained. Some of the Mogul's Ministers had promised *Nadir-Shah* a Present of a Crore of *Rupces*, that is, a Million and a Quarter of our Money, on his coming to *Deby*, which however they did not raise, but privately excited this Tumult, by giving out, that *Nadir-Shah* was killed in his Quarters, and other such like Stories, calculated for the Understanding of a Mob, and keeping up their Fury. The Troops that were detached to reduce them, had strict Orders not to proceed to Extremities, till fair Means were found ineffectual, and even then, they were ordered to be very careful in distinguishing between the Innocent and the Guilty, by firing on none but those that were in Arms, and suffering such as remained quiet in their Houses to reside there undisturbed. But as Mobs are apt to mistake Mildness for Fear, and gentle Persuasions for a Dread of their Force, so the People of *Deby*, instead of dispersing, assembled in Crowds upon their Terrasses, and from thence they furiously began to throw Stones, and either from one of these Terrasses, or a Window thereof, a Musket was designedly shot at *Nadir-Shah*, which missing him, killed one of his Officers who stood next him. This made him give way to his Passion, and to order a general Slaughter to be commenced from that very Place; the Soldiers in an Instant getting upon the Walls and Terrasses, began to plunder and kill.

This bloody Scene extended from the *Sarafa Ardai*, which is before the Castle, to the old *Eidgab*, which is three *Coss* Distance, on one Side as far as *Jitli* Tomb, and on the other as far as the Tobacco *Mandavi*, and *Poul Metai*, the whole Streets of the *Bazar*, and the Alleys and Wards on all Sides the *Khanums Bazar*, and round about the *Jamib Misjidd*, and the Cotton and Jewellers *Bazars*, were all plundered; several Places were set on Fire, and whomsoever they found in the Wards and Houses, Streets, Alleys and Shops, great and small, Men and Women, they put to the Sword, even the brute Creatures did not escape their Fury; several Women were made Prisoners. *Louf Ali Khan*, the Officer who was appointed to slaughter and plunder, towards the Square of *Saad Allah Khan*, and *Deby* Gate, when he came as far as *Sirbulind Khan's* House, he, in a great Surprize and Flight, came out to meet the said Officer, and representing to him, that the People of that Quarter were not to blame, he made him desist, and stop his Men, on promising they should pay a Sum of Money; but in other Places the Slaughter, Plundering and Burning went on, in a most barbarous Manner. *Nadir-Shah*, after he had given the Orders, returned back to the Castle. About Two o'Clock *Mohammed-Shah*, and *Nizam al Mulk*

waited on him, who having made great Intercession for the City, the Soldiers were ordered to desist, and it was proclaimed by Beat of Drum, that none of the Inhabitants should be any longer molested. The Slaughter continued from Eight in the Morning till Three in the Afternoon; above 400 *Kuzzlebs* were killed, and of the Citizens, great and small, 120,000 were slaughtered, others computed them 150,000; what Treasure and Effects were plundered, some *Nadir-Shah* had, and a great deal was destroyed by the Fire.

In several of the *Hindu's* Houses, where one of a Family survived, he used to pile thirty or forty Carcasses a-top of one another, and burn them, and so they did in the Streets; notwithstanding which, there still remained so many, that for a considerable Time there was no such thing as passing any of the narrow Lanes. When the Slaughter began, those who raised the Commotion disappeared in an Instant, and left the innocent Shopkeepers, *Bazari*, and many honest Families, to be butchered by the enraged *Kuzzlebs*. Several, jealous of their Honour, not only killed their Women, but laid violent Hands upon themselves. One of these unfortunate Wretches in particular, when the Soldiers came near his House, burned about twenty Women of his Family, and was in Expectation of their entering every Minute, and killing him; by Chance they missed that House, but he was so incensed, that finding himself disappointed, he went out, and bringing some of them back, shewed them the Way to his own House, telling them, there was a good deal of Money and Effects therein. After they had plundered the House, they went their Way without killing him, which so enraged him, that he dispatched himself. There were great Numbers of People, especially Women and Children, burnt in their Houses. The very next Day, the Prisoners, and especially the Women, were, by *Nadir-Shah's* Order, conducted back to their own Houses, to the Number of fifty thousand. About ten thousand Women, in the midst of the Confusion, had thrown themselves into Wells, of whom there were many taken out alive, two or three Days after.

On the Thirteenth, *Nadir-Shah* having an Account that a Detachment of his Troops that had been sent to seize the Cannon at the *Serai* of *Reub Allah Khan*, had been cut off by the People, a strong Body was sent thither to punish that Offence, which they did by cutting to Pieces five or six thousand of them, and bringing in three hundred of the principal Persons Prisoners, who had their Heads struck off. The same Day Proclamation was made that every Man should retire to his House and Employment, without Fear of the Soldiers. Two Days after, as the great Number of dead Bodies that lay about the Castle, and in the *Bazars*, and other Places, caused a very offensive Stench, they pressed most of the People they met with in the Streets, and employed them in removing the Bodies; some, by tying Cords to the Feet, they dragged without the City; some they threw into the River, and those whom they imagined to be *Hindus*, they piled forty or fifty of their Bodies a-top of each other and burnt them, with the Timber of the demolished Buildings.

On the Sixteenth, a *Firman*, to exempt the Dominions of *Persia* from Taxes for three Years, was drawn up, and dispatched by a *Choppar*, at the same time the Arrears formerly due to the Soldiers, as also one Year's Pay beforehand, and six Month's Pay as a Gratuity, was given to all his People, even his Servants, and those who trafficked for Necessaries in the Camp. On the Seventeenth, *Nadir-Shah* sent for *Sirbulind Khan*, and told him, that he apprehended his Pretensions of old Age and Infirmary, were calculated purely to retard the raising of the Money, and therefore he would advise him, for his own sake, to be more expeditious, because it was a Thing that would

¹ In order to understand this Word, it is necessary to observe, that *Hindu*, strictly taken, signifies a swarthy, dark-coloured Person, and was therefore given to the original Inhabitants of the Country, round about *Deby*, from whence it received, in Procents of Time, the Name of *Hindian*, or as we commonly write it, *Indian*; that is, the Country of the *Hindu's*, and many have believed, that from thence the *Europeans* derived the Name of *India*, which, however, seems more probably to have been taken from the River *Indus*. As for the Natives of this Empire, they are still distinguished by their old Name of *Hindus*, because of that Mixture of Nations which now inhabit their Country, such as *Moguls*, *Pastors*, *Parsees*, &c. They are a very numerous, industrious and industrious, but exceedingly contemned and despised by the *Moguls* in general.

admit of no Delay. On the next Day, which was the Eighteenth, *Sirbullind Khan* went likewise to the Dirbar, where were present *Nizam al Muluck*, and *Kummir o' din Khan*, and he stayed there until Noon. *Thamas Khan* and *Mustapha Khan*, pressing them concerning the Money, *Sirbullind Khan* told *Nizam al Muluck* as follows; "I have, a long time ago, foreseen this Disgrace, and frequently represented to the Emperor, that before Things were past Remedy, he ought to take some Measure, and not through too much Security reckon any Accident unworthy his Care and Prevention. I desired him to employ some experienced and faithful Person, and to give him full Power, that with a Sum of Money, and other valuable Things, as a Pishcush, he might make up Matters, prevent the impending Calamity, and live, as formerly with the Shah, in an amicable Manner. Every Body imagined I couched some Designs and Self-Views under this Advice. They themselves would contrive no Expedient, nor would they rely on the Contrivance of another, until, at last, Affairs are come to this calamitous and disgraceful Issue." To this *Nizam al Muluck* made no Answer. Then *Thamas Khan* addressing himself to *Kummir o' din Khan*, repeated to him the Substance of what *Nadir Shah* at first meeting reproached *Mohammed Shah* with. Afterwards he told him, "What is past shall not be remembered. Now my Shah wants the Money, use all Means you can to raise it, and bring not yourselves into any further Disgrace by being dilatory." *Sirbullind Khan* answered, "undoubtedly we will raise it wherever it is to be found." *Thamas Khan* asked him, if he had not Money himself, *Sirbullind Khan* said to him, "If I had had Money, I would have sent it to you to *Khandabar*, and prevented you from having the Trouble of coming hither."

In short, by what passed at this Meeting, it was known that *Nadir Shah*, after this Victory, and having established his Power, had demanded of *Nizam al Muluck* twenty Crore of Rupees, or twenty-five Millions Sterling, (exclusive of the Jewels, Gold-Plate set with precious Stones, and other fine Goods, seized of the King's and other Omrahs) to be collected in the best Manner he could, out of the King's Treasury, his own Effects, and all the other Omrahs, wealthy People, and Inhabitants. Such a Sum was not to be raised out of the King's Treasury or the Omrahs Effects; for, in the King's, all the Gold and Silver Coins did not exceed three Crore: But, in the inward Vaults, (which had been shut up and sealed for many Years, no body knowing by whom they were sealed, or what they contained) there was found of Gold and Silver a much larger Amount than the Money in the Treasury. *Nizam al Muluck* contributed, a Pishcush of one Crore and a half in Jewels, Treasures, and Goods; as did also *Kummir o' din Khan* to the same Amount. *Saadit Khan* had formerly agreed to pay one Crore of Rupees, and made good thirty Lacks thereof, which was all that had escaped being plundered; he promised to send for the Remainder from his Soubah. *Sirbullind Khan*, on account of his Poverty, was excused from any Share; and three Crore of Rupees were appointed to be levied on some of *Manjubdars*, *Multesiddys*, Officers, and the rich Inhabitants, each in Proportion to his Circumstances. Formerly *Saadit Khan* was ordered to collect this Money. After his Death, and the Slaughter and Plunder of the City, this Business was recommended to the Care of *Sirbullind Khan* and the other Omrahs, which *Thamas Khan*, at his Meeting, pressed them about. Accordingly it was now agreed, that *Nizam Khan*, *Chuchl Keisbois*, *Vakel of the Sabbadars of Bengal*, *Seta Ram*, and all the *Manjubdars* and Officers of the *Chabouras*, &c. should meet at *Sirbullind Khan's* House, and make an End of this Affair. All Officers,

Inhabitants, &c. who were suspected to be rich, were ordered to give in a List of what Money and Effects they were Masters of, to be laid before the Shah, that what he liked he might take, and what he forgave them they might keep; and whoever pleaded Poverty, such Person should declare the same by a Writing under their Hand and Seal, that in case it should be afterwards proved that he had given in a false Account, he might be punished. That Day the People before-mentioned came to *Sirbullind Khan's* House; and having staid until the Evening, and enrolled some Names, returned to their own Houses.

This Affair was prosecuted for several Days following with the utmost Diligence; during which time also they were busy in preparing Illuminations on the Banks of the River, and Fire-works for the Wedding of *Nadir Shah's* Son, who was to be married to the Daughter of *Jeslen Bukhs*, Son of *Kam Bukhs*. On the Night of the Twenty-seventh of *March*, the Marriage was consummated; *Mohammed Shah* made the young Prince a Present of Jewels to the Value of 50,000 Rupees, and; in ready Money, 50,000 more. Some Days after the Marriage, *Nadir Shah* sent them Jewels to the Value of five Lack of Rupees, or 62,500 Pounds*.

The Council for ascertaining the Pishcush or Present, was continually held in the Castle, near the Divan of Justice, at which assisted *Thamas Khan*, *Mustapha Khan*, and *Mohammed Shah's* Omrahs, until the Eighth of *April* at Noon; and, during that Time, every Body was present at the said Place, from Sun-rise to Sun-set. All the *Vakeels* and Agents of the *Manjubdars*, and other Officers, gave constant Attendance; and, at Night, each returned to his own House without having a Centry or Guard over them. In those Days, and also afterwards, several People finding Affairs go hard with them, left their Effects and Families behind, and made their Escape out of the City in the best Manner they could, being glad, at any rate, to save their Lives. Several of *Mohammed Shah's* Omrahs were obliged to stay the whole Day in the Castle in a mean Manner, and perpetual Fear, with but one Horse and a few Servants to attend them, and at Night they returned to their own Houses. The whole of this Month was passed by, the Subjects of *Mohammed Shah* in a very melancholy Manner; for, notwithstanding they raised prodigious Sums, yet new Demands were still made and exacted from them in so rigorous a manner, that they frequently chose Death, as a milder Punishment than those to which they were exposed: As, for Instance, the Agent of the Province of *Bengal*, was ordered to send for seven Crore of Rupees from thence, which is almost nine Millions of our Money. He, to demonstrate the Impossibility of complying with this Order, answered, that such a Sum of Money would fill a Line of Waggon, reaching from *Bengal* to *Dahly*. For this Freedom he was to ill treated, that, in Repentment, he went home, murdered his Family, and then himself; and it would appear a Thing incredible, if we were to mention a few only of the many Examples of this sort that happened.
