Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

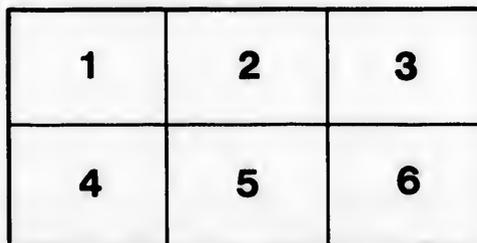

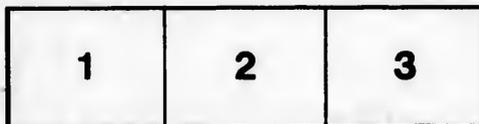

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contain the symbol → (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

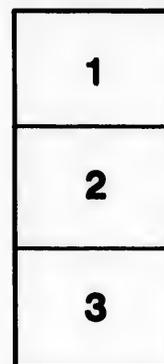

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

G E O R G E R.

GEORGE the Second, by the Grace of God, King of Great Britain, France, and Irela
Defender of the Faith, &c. To All to whom these Presents shall come, Greeting.

WHEREAS Our trusty and well-beloved *Thomas Woodward, Aaron Ward, Samuel Birt, Daniel Browne, Thomas Longman, Henry Whitridge, James Hodges, and Benjamin Dod*, Citizens and Booksellers in London, have, by their Petition, humbly represented unto Us, that they have been at very great Expence and Labour in procuring and purchasing Books in all Languages, and in having the same translated, and properly digested, for Improving and Continuing a most Useful and Comprehensive Work, intitled,

Navigantium atque Itinerantium Bibliotheca: Or, A Complete Collection of VOYAGES and TRAVELS.

Consisting of above Six hundred of the most authentic Writers, beginning with HACKLUIT, PURCHASS, &c. in English; RAMUSIO, ALAMANDINI, CARRERI, &c. in Italian; THEVENOT, RENAUDOT, LABAT, &c. in French; DE BRUYNE, GRYNÆUS, MAFFEUS, &c. in Latin; HERRERA, OVIEDO, COREAL, &c. in Spanish; and the VOYAGES under the Direction of the EAST-INDIA COMPANY in HOLLAND, in Dutch; Together with such other Histories, Voyages, Travels, or Discoveries, as are in General Esteem, whether published in English, Latin, French, Italian, Spanish, Portuguese, High and Low Dutch, or in any other European Language; Containing whatever has been observed Worthy of Notice in Europe, Asia, Africa, and America, in respect to the Extent and Situation of Empires, Kingdoms, Provinces, &c. Climate, Soil, and Produce, whether Animal, Vegetable, or Mineral, of each Country; Likewise the Religion, Manners, and Customs of the several Inhabitants, their Government, Arts and Sciences, publick Buildings, Mountains, Rivers, Harbours, &c. illustrated by proper Charts, Maps, and Cuts: To which is prefixed a Copious INTRODUCTION comprehending the Rise and Progress of the ART of NAVIGATION, and its successive Improvements, together with the Invention and Use of the LOADSTONE, and its Variation: Originally published in Two Volumes in Folio, by JOHN HARRIS, Doctor of the R. S. Now carefully Revised, with LARGE ADDITIONS, and Continued down to the Present Time; including particular Accounts of the Manufactures and Commerce of each Country: Which Work the Petitioners, with the utmost Submission, apprehend will be a Complete Body of VOYAGES and TRAVELS, tending to promote the Manufacture and Commerce of these Kingdoms, by shewing the vast Advantages of Trade and Navigation in general, and the Means of Improving and Extending our own in particular: And, being desirous of reaping the Fruits of their very great Expence and Labour, and of enjoying the full Profit and Benefit that may arise from Printing and Vending the said Work without any other Person interfering in their just Property, which they cannot prevent without Our Licence and Protection; the Petitioners have therefore most humbly prayed Us to grant them Our Royal Licence and Protection, for the sole Printing, Publishing, and Vending the said Work, in as ample Manner and Form as has been done in Cases of the like Nature: We, taking the Premises into our Princely Consideration, and being graciously inclined to encourage to all Works that may be of publick Use and Benefit, are pleased to condescend to their Request, and do by these Presents (as far as may be agreeable to the Statute in that Case made and provided) grant to the said *Thomas Woodward, Aaron Ward, Samuel Birt, Daniel Browne, Thomas Longman, Henry Whitridge, James Hodges, and Benjamin Dod*, their Heirs, Executors, Administrators, and Assigns, Our Royal Privilege and Licence, for the sole Printing, Publishing, and Vending the said Work, during the Term of Fourteen Years, to be computed from the Date hereof; strictly forbidding and prohibiting all Our Subjects within Our Kingdoms and Dominions to Reprint or Abridge the same, either in the like, or any other Volume or Volumes whatsoever; or to Import, Vend, Utter, or Distribute any Copy thereof reprinted beyond the Seas, during the aforesaid Term of Fourteen Years, without the Consent or Approbation of them the said *Thomas Woodward, Aaron Ward, Samuel Birt, Daniel Browne, Thomas Longman, Henry Whitridge, James Hodges, and Benjamin Dod*, their Heirs, Executors, Administrators, or Assigns: And by Writing under their Hands and Seals first had and obtained, as they will answer the contrary at their Peril: We the Commissioners and other Officers of Our Customs, the Master, Wardens, and Company of Stationers of London, and all other Officers and Ministers, whom it may concern, are to take notice, that strict Obedience be given to Our Pleasure herein signified.

Given at Our Court at *St. James's*, the
23d Day of *February* 1743-4, in the
Seventeenth Year of Our Reign.

By His Majesty's Command,

C A R T E R E T.

TO THE

MERCHANTS

OF

GREAT-BRITAIN.

AS the original Design of Dedications was either gratefully to acknowledge Assistance, or modestly to desire Protection, so both these Motives, GENTLEMEN, concur in leading me to this Address. If there be any Thing in the following Sheets, that is either New or Entertaining, Useful or Instructive, which, from the general Approbation the Work has met with, I have Reason to hope there is, I must confess it, in a great measure, due to the kind Communications I have received from Persons concerned in Trade; and as the main Point I have had in View, has been the setting the History and Advantages of Commerce in a true Light, I presume that I could not have inscribed this Performance to more proper Patrons. I have endeavoured likewise to avoid the Faults for which most modern Dedications are censured, which are a mean Attention to Interest, or the Vanity of placing great Names and high Titles in the Front of Books. It is true, I address myself to the richest Body of Men in this, or perhaps any other Nation, but without any farther Expectation than meriting their Favour and Acceptance. I have also chosen the greatest and most considerable Body of Men undignified with Titles; but with no other Ambition than that of procuring a good

D E D I C A T I O N.

Reception for my Book, by those who must be allowed to be the best and most proper Judges. Such, Gentlemen, are truly and sincerely my Inducements to this Application, which I have the greater Reason to flatter myself, will not be unsuccessful, because I am confident you will meet with nothing that is dictated by any other than a publick Spirit in the Volume which I present.

We are taught, that the Separation and Dispersion of Mankind over the Earth, was owing to the just Displeasure of their Creator upon their attempting to lay the Foundations of an universal Monarchy, which must have been destructive of their own Happiness. But Reason and Experience shew, that we owe that Connection, which, at present, reigns between Countries far remote from each other, and that kind Intercourse subsisting between different and distant Nations, to a Spirit of Commerce. Trade, by the Divine Favour, has effected what Ambition vainly endeavoured; and the Desire of carrying on mutual Traffick has overcome that Evil, which produced the Separation of Mankind; I mean the Confusion of Tongues. The Desire of reciprocally communicating the Fruits of various Soils and different Climates, is that Principle of Unity, which, agreeable to the Will of GOD, makes all the Inhabitants of the several Regions of the Globe, appear in these later Ages, what, in the earliest Times they were, but one People, and of one Language. Such are the wonderful, such the happy Effects of Commerce, considered in this general Light, and as conducive to the common Benefit of the human Species.

In particular Countries, Plantation was the Effect of Necessity; Men were forced to till the Ground, that they might eat, and to invent the Arts relating to Vesture and Building, that they might secure themselves against the Inclemency of the Weather. In this they acted but as other Animals do, and by a kind of natural Instinct: But when Necessities were thus attained, they had Time to exercise the Faculties of their Minds, and to look abroad for greater Conveniencies. This produced Trade, which is peculiar to our Species, and the primary Characteristick of rational Beings; by the Help of Trade, Conveniencies multiplied apace, and Men appeared in their proper Sphere, not as bare Inhabitants of the terraqueous Globe, but as the Sovereigns of Earth and Sea. Sovereigns not in Right of superior Force, for Strength would never have given them Dominion over other Creatures; but from superior Wisdom, which appeared in nothing more than in the Invention of Shipping, as might be demonstrated at large, if the Self-Evidence of the Fact did not supercede the Necessity of any Demonstration.

In Proportion as the Art of Navigation grew and was improved, the Commodities that were derived from it increased; the Labour of Mankind, was greatly diminished, and their Delights augmented; whatever was wanted in one Country, was easily, safely, and in the Quantities that were requisite, brought from another. Knowledge and useful Arts were continually improved, great Discoveries daily made, and those Works easily and fully accomplished in succeeding Times, of which the former had

D E D I C A T I O N.

despaired. By this Means Posterity was encouraged to undertake still greater Things; and the farther this Art was extended, still the greater and more Benefits accrued therefrom: So that such as distinguished themselves by their Talents for Politicks, soon perceived how necessary it was to encourage Navigation in all its Branches; and this Necessity established, sooner or later, almost under every Government, this Maxim, *That whoever was Master at Sea, must be Master at Land likewise.*

But, at present, we will meddle no farther with Naval Power, as designing only to shew, that it derives its Being from, and can never subsist otherwise than by Commerce. Yet it is not the Sea only that is indebted to Trade; on the contrary, there is nothing contributes so much to the thorough Cultivation of Countries, as appears plainly from ancient and modern Histories, which shew that it is capable of rendering the most barren Soil fruitful, and the most desert Places pleasant. The following Sheets explain this sufficiently, with respect to the ancient Republick of *Tyre*, to which, if Nature denied most Things, Traffick brought all; as also in regard to *Palmyra*, which, by its Trade, became a Paradise, though seated in a Wilderness. And the same Thing may be said of the Province of *Holland* at this Day. But, without travelling abroad, the Truth of this Observation may be sufficiently known from the amazing Alteration which our Application to Trade has made in our own Country, with respect to the Improvement and Value of Land in the last and present Century. This is a Thing so apparent, and so certain, that, as on the one Hand, it does the greatest Honour to the Mercantile Part of our People; on the other, it demonstrates the great Consequence of Trade to the whole Nation: So that there can be no Division of Interest in this Respect, that of Land and Trade being reciprocal, or rather the self-same Thing.

To Commerce we owe our Wealth; for though Labour may improve, though Arms may extend, yet Commerce only can enrich a Country. It is this that encourages People, not barely to labour for the Supply of their own Wants, but to have an Eye to those of other Nations, even such as are at the greatest Distance. It is this that establishes and extends Manufactures, and while it employs all Ranks of People, provides suitable Rewards for their several Employments. It is this, and this alone, that can excite and encourage universal Industry, by providing, that all who take Pains, shall reap Profit, and that what raises the Fortunes of Individuals, shall prove at the same Time, and in the same Degree, beneficial to Society; so that an Application to their private Interests, in their several honest Employments, has, at the same Time, all the Effects, and is, in reality, the truest Testimony of publick Spirit.

Hence arises another great Advantage, which is the equal and just Distribution of Property, a Thing that Legislators have attempted in vain, tho' by attempting it, they have sufficiently shewn, how material, and how requisite it is, under all Governments. But Commerce performs this effectually, and tho' it may sometimes raise particular Fortunes to an envied Point of Greatness, yet this Envy, which can

be

D E D I C A T I O N.

be said in no other case, is productive of good Consequences, for it heightens that Spirit of Industry, which can alone diffuse Wealth, and therefore we see, that a few very rich Merchants, in one Age, produces a Multitude of moderate Fortunes in the next. Thus the Evils created by Trade, are corrected by Trade, which, as it is the only natural Way of acquiring Riches, so whatever temporary Inconveniencies attend it, disappear of themselves, if we do not through Impatience interpose, but suffer Nature to take her Course.

We may easily conceive from hence, that as Riches and Commerce, so Commerce and Liberty are inseparable; for if the Property attained by the former, be not secured and preserved by the latter, Trade will quickly decay; as on the other Hand, such as have acquired Fortunes by long and hazardous Voyages Abroad, or by hard Labour in a constant Course of Industry at Home, will naturally have just Notions, and consequently set a true Value upon Freedom, which they will likewise be the more ready, and the more able to defend. So that on the Whole, we may safely affirm, that the greatest Differences between Nations, arise chiefly from the Degrees, and the Nature of their Commerce, and according as it is, either little or large, extended or confined; the People are Civilized or Rude, Rich or Poor, Powerful or Weak, Brave or Base, and finally, Free or Slaves: So from Reason we ought to judge, and so from Experience it appears.

The great End of Voyages and Travels is, to enquire into, and obtain Satisfaction as to these Particulars, and the principal Design of such Collections as this is, to represent them freely and fairly to the World: In doing this, I have used all the Care and Diligence that was in my Power, and have never let slip any Opportunity of recommending the Encouragement, Extension, and Protection of Trade, as the surest Means of making us a great, wealthy, powerful and happy People; of all these, GENTLEMEN, as I conceive, you must be the principal Instruments, I thought I had, in some Measure, a Right to expect your Patronage, of which, if you shall think this Work worthy, it will fully answer the Wishes, and gratify the Ambition of,

GENTLEMEN,

Your Obedient and Devoted

Shire-Lane, Decemb. 3, 1745.

Humble Servant,

The AUTHOR.

P R E F A C E.

THE peculiar Pleasure and Improvement that Books of Voyages and Travels afford, are sufficient Reasons why they are as much, if not more read than any one Branch of polite Literature: It may not therefore be amiss to inquire a little into the Sources of that Satisfaction and that Increase of Knowledge, which have so justly recommended Books of this sort to the universal Favour of Readers of every Taste.

The Mind of Man is so form'd, as scarce to admit of Amusement without Instruction; and though it may frequently happen, that the latter is imperceptibly conveyed, yet is this so far from being an Evil, that, in Truth, it is a very considerable Advantage. If we are delighted with the strange Things that are presented to us in Voyages and Travels, that Delight, when strictly examined, will be found to arise from learning what we knew not before; and, consequently, is a rational Pleasure. It is therefore a very happy Circumstance in this kind of Reading, that it charms us by a perpetual Variety, and keeps alive that Thirst of Inquiry, which we are apt to lose, when too closely confined to severer Studies.

An Instance will easily convey the Force of this Observation, and, at the same time, convince the Reader of the Truth of it. When we read in the Account of Countries, in the Neighbourhood of *Hudson's-Bay*, that numerous *Indian* Nations pass their Time in Hunting, and other Exercises, in spite of that Cold, the very Description of which chills us here; and that they are able, even in the most rigorous Seasons, to make greater Journeys, in a much shorter Space of Time, than we can do in a warmer Climate, and when our Roads are best; it appears wonderful, and, at the first Sight, almost incredible. But then our Curiosity being prompted to inquire more narrowly into their Customs, Dress, and Manner of Travelling, we come to be satisfied, not only that the Fact is so, but why it is so; and thence discover the Folly of that Opinion which so long prevailed, that these frozen Regions were the wide Wastes of Nature, and, from their very Situation, absolutely uninhabitable. Again, when we learn, that at *Peru* it seldom or never rains, this astonishes us; but when we are likewise informed, that, by the hanging of thick Clouds continually over the People's Heads, they are so effectually defended from the Heat of the Sun, that the Climate is more temperate in *New* than in *Old Spain*, we are at once satisfied as to the Falshood of the before-mentioned Opinion with respect to the Torrid Zone; and thus a modern Reader of Travels becomes, without Trouble or Fatigue, better acquainted with the true State of Things, and the real Condition of the Universe, and its Inhabitants, than the wisest of the antient Philosophers with all their Study and Thinking. But, will any Man say, that the Knowledge we thus acquire, is the less certain, or the less valuable, for the Ease with which it is obtained? Or will any Idolater of the Antients assert, that their Ignorance or Mistakes were at all lessened by the Pains they took to reason themselves into Notions which Experience shews us to be false? No; certainly, the Facility on one Side is an undoubted Advantage, and their Toil and Labour an additional Misfortune on the other.

We

P R E F A C E.

We must however allow, that some Degree of Reflection is necessary, to profit by this Kind of Reading, and that therefore the Benefits received by it, will be in Proportion to the Capacity and Attention of the Readers. But what of this? If a small Degree of Reflection will do much, if a moderate Attention will do all, and if a Method can be devised to excite such a Spirit of Reflection, and preserve such a constant Attention from every Reader; what kind of Literature deserves so great Encouragement? Yet there is nothing easier than to demonstrate this to the Satisfaction even of the most stubborn Critic. For, without affecting to play with Words, what Way so likely to convey universal Knowledge, as exhibiting a complete View of the Universe? In other Branches of Learning, we may arrive at the Knowledge of abstruser Things, but in none can we come at what is more useful. *Homer* opens his *Odyssey* with observing, that Travel had made *Ulysses* the wisest Man of his Age; and the great View of that excellent Writer is, to instil Wisdom pleasantly by a poetical Description of that Hero's Travels. Can there be any thing more satisfactory, with respect either to Reason or Authority, than this? Can any Man doubt, that the seeing different Countries, considering the several Humours, Customs and Conditions of various Nations, and comparing them with each other, and our own, is the readiest Way to Wisdom? Or can we suspect, that the Reputation of *Homer*, and his Poem, would have subsisted so many Ages, if it had been built upon a false Position?

This Kind of Knowledge, of all others, most opens and enlarges the Mind. Some Studies ingulph and swallow us up, so that we have no longer Attention for any thing else; and this is that learned Distemper which the World calls Pedantry. But the Reading of Voyages and Travels is not only free from this Disadvantage, since it contains a perpetual Variety of Subjects, but is in Truth the best Cure for Pedantry; since, if a Man can be once induced to entertain himself this way, he must necessarily see the Folly of pursuing any single Scheme of Science too far. The Utility therefore, as well as Pleasure of this Course of Reading, cannot be disputed. But there is another Objection that presses more closely; and it is this, that the pretending to grasp the whole Circle of Science in this Way, by perusing the Voyages and Travels into and through all the Countries in the Globe, is altogether as endless, though, perhaps, a less tedious Method of acquiring Knowledge, than any hitherto proposed. Yet I venture to affirm, that even this Objection may be likewise answered, and the Truth of the contrary Proposition made most evident; which is the second Part of the Task I undertook to perform.

This Humour of Despairing on the remote Prospect of Hardships, and supposing Difficulties at first Sight to be insurmountable, has often proved a Bar to great and generous Undertakings. If *Columbus* could have been discouraged by such a Prospect, or diverted from his Purpose by the Encounter of many Difficulties, he had never succeeded so far as he did in his Project of Sailing round the Globe. Or if his Example had frightened *Magellan* from contemplating his Reasons from the Consideration of his Fate, the Tour of the Globe might have been yet unmade. But since we see that these magnanimous Men were not only capable of forming such vast Designs, but also of carrying them into Execution, it ought surely to encourage us in our Labours of another Kind; because it must convince us, that, with like Steadiness and Application, something of the same Sort may be performed in this Way, if a right Method be taken.

In order to come at this Method, it is requisite to consider what we would avoid, and what we would obtain. As to the former, we can easily discern, that the running through a Multiplicity of Books, most of them incumbered with Matters foreign to our Purpose, and all of them, from their very Nature, subject to tedious Repetitions, is what we ought to be most afraid of. Every Writer of Voyages and Travels pursues a particular Plan, which, however agreeable to his Purpose, must be wide of ours; for while he aims, either at a copious Detail of his own Adventures, or at a general Display of his Learning and Discoveries, we desire to hear no more than what relates to the Point, illustrated by such Circumstances as may enable us to conceive it fully, and come at it with Pleasure; hence it appears, that a voluminous Collection of different Voyages and Travels, though the best in their Kind that can be met with, and digested in the best Order that can possibly be invented, will scarce answer this End; because the very Perusal of them will cost more Time than most People have to bestow; and the comparing, collecting, and digesting their Contents, would demand such a Degree of Labour and Circumspection, as very few Readers would be inclined to

P R E F A C E.

afford. To obviate therefore these Difficulties, a Way must be found to reduce the Bulk of such a Collection within reasonable Bounds; and, at the same time, due Care must be taken to preserve the Substance and Spirit, when the superfluous and unnecessary Parts of their Relations are thrown out of the way.

If this could be done, and a sufficient Number of the best Writers thus collected, and fitted for general Use, drawn into a Body in a natural and easy Order, so that what they deliver should follow in such a regular Progression as that every Relation might appear in its proper Place, adding new Light to what went before, and preparing us for what ought to come after; I think there is nothing hard in apprehending, that a Work, thus digested, would answer the great End proposed, and produce a System of this Sort of Literature as regular and useful, and, at the same time, as pleasant and entertaining, as could be expected.

This great *Library of Voyages and Travels*, as it was originally contrived, came pretty near the Method which I have laid down; but then, as it was published in Two Volumes, it was compiled likewise in Two Parts, so that the Scheme is actually repeated, and, like Dictionaries improved at different times, there is a kind of double Alphabet, which renders each of the Volumes a distinct Work from the other. This might be, and, I dare say, was necessary, under the Circumstances in which that Work was composed; but this Inconveniency is now avoided. As this Collection is intended for a complete Body of Voyages and Travels, the Two Volumes have been reduced into their natural Order, and all the Parts so disposed, as to bring them into their proper Places. It was, besides, highly requisite to revise them, both with regard to Matter and Style; and therefore they have not only been compared with the several larger Works, from which they were originally taken, all Omissions supplied, and Errors corrected, but the Proprietors having been at great Expence in procuring such Helps as either were not, or could not be had, when the first Edition was published, this is so far augmented and improved, as to become, in some measure, a new Work.

The Reader will here meet with a complete System of Relations, drawn up by Eye-witnesses of what they deliver, with a proper Account of the Credit due to each; the particular Merit of his Accounts, their Deficiencies, and the Means by which they have been supplied from others. He will likewise see how succeeding Times have improved the Discoveries of past Ages; how the Spirit of Industry, in searching after useful Truths, and extending Commerce, has fled from Place to Place, and now adorned one Nation, and then another. He will perceive, that what was judged absurd and impracticable in one Age, has nevertheless been attempted and perfected in the next; and he will likewise see, that some great and noble Undertakings, which were long ago proposed, and in Part fulfilled, have since fallen back into Obscurity; from whence, however, they may very probably be drawn, by the Virtue and Spirit either of the present Generation, or of Posterity. He will find whatever relates to useful Points clearly explained, and sufficiently insisted upon; and, at the same time, find enough preserved of the Fortunes and Adventures of particular Persons to satisfy his Curiosity, without carrying him too far out of the great Road after Matters of less Consequence.

By these means, it is hoped, that this Library will appear agreeable to his Expectation, and capable of answering every End he could have wish'd; but that it may do this the more effectually, and that he may never be at a Loss about its Application, it may be proper, besides the common Helps of Tables and Indices, to give a short Description of the Manner in which its several Parts are ranged, so as that he may have Recourse immediately to whatever he wants, and know where to bring in whatever Improvements his own future Reading and Experience may furnish. Besides, by recollecting what has been already laid down, and comparing it with what we are now going to propose, he may form a proper Judgment of the Nature and Value of this Library, and of the Pleasure and Profit that may be reaped from it, so as to be under no Doubt as to its Worth, or how far it comes up to what we have promised for it. All this, I say, he sees at one View, and is enabled to make as ready a Use of upwards of *Six hundred Volumes*, the Substance of which are included in these *Two*, as if he was only at the Pains of finding out and taking down the Author he desired to consult.

The

P R E F A C E.

The Method in which these Voyages and Travels are now digested, is so natural and easy, that it is impossible it should be either mistaken or forgot. In the first Place, we give an Account, in Order of Time, of the most remarkable Voyages that have been made round the Globe; which afford us an Opportunity of inserting a great Variety of useful and curious Observations. We then enter into a distinct Recital of the Voyages made by several *European Nations*, for discovering and settling the Commerce of the *East and West Indies*, without which the subsequent Accounts could not be easily or clearly understood. We pursue next the common Division of the Globe; and, beginning with the Voyages that have been made to *Spitzbergen* and *Groenland*, go on to a Recital of what has been observed by Travellers of the greatest Note, in all the Northern Parts of *Europe*, and so through the Middle, Southern, and Eastern Countries, to the Frontiers of *Asia*. This leads us to give an Account of that Part of the World, and of all the Voyages made to its Maritime Coasts, as well as the Travels of such as have had an Opportunity to pass through its Inland Provinces. The like Care we take with respect to *Africa*, and therein consider at large the Trade upon its several Coasts, and the Manner in which it was formerly, and is at present, branched out amongst several *European Nations*. Last of all, we pursue the same Method in adjusting the Voyages to and Travels throughout *America*, so as to give the Reader full Satisfaction as to the first Discovery, original Settlement, past and present Condition, Commerce and Importance of all the *Spanish, English, French, Portuguese, Dutch* and *Danish* Colonies in that Country, together with all that can be known with Certainty as to the *Indian Nations*, which inhabit those Parts of it that are hitherto unsubdued.

It will appear from hence, that the Design of this Undertaking is much more perfect in its kind than the Scheme of any Collection of Voyages hitherto offered to the Publick; for whereas They relate only to a few Countries, and are not disposed according to any regular Method, Ours will comprehend all, and in an Order which gives them a perfect Connection. If we had followed Chronology wholly, it would have intirely changed our Plan, and, instead of a Collection, it would have been a Chronicle of Voyages and Travels. If, on the other hand, we had paid no regard to Time, this would have created great Confusion, and rendered the Whole perplexed and unintelligible. But as Things now stand, all these Difficulties are avoided. We treat first of the Circum-Navigators, for this plain Reason, that as the Whole is greater than its Parts, so, among Travellers, those are certainly to be placed in the first Class, who have made the Investigation of the whole Globe their Aim, rather than the Discovery of particular Parts; and upon the same Principles we place the Discoverers of the *East and West Indies* next to the Circum-Navigators; because their Purpose was next in Point of Importance. These general Heads being fixed, all the component Parts follow in Order of Time, so that after perusing a whole Chapter, the Reader is possessed of the intire History of that Point, sees when it was first started, How, by Whom, and at what Time prosecuted, and in what Situation it stands at present.

I have now given the Reader all the Helps in my Power, towards the perfect understanding what is intended in the following Work; and from the Hope of his candid Reception of my Labours, I borrow that Degree of Confidence which is necessary to prosecute so arduous an Undertaking; and, provided I enjoy This, I shall think all my Care and Pains extremely well bestowed; since, to further useful Knowledge, is certainly a laudable Ambition.

INTRODUCTION.

HERE are very few Points as to which the wise Men of Antiquity, and the best Judges among the Moderns, are so clearly agreed as in the Advantages that result from Travel, and the Benefits that arise from seeing the World. It is very evident from ancient Writers, that the greatest and most celebrated Philosophers thought it requisite to visit distant Nations, in Search of Wisdom. The Design of one of those excellent Poems, composed by *Homer*, whose Reputation is, at once, the most extensive, and the best-founded of any Poet's, was to shew that useful and universal Science was best attained in this Way, of which he gives us an illustrious Example in the Character of *Ulysses*, who is the Hero of that Work. In later Times, travelling is become a Part of Education, or rather a Thing necessary to polish and perfect Education, by instructing those in Men who have already acquired as much as can be acquired from Books. But these Advantages are confined to a very few, by which I mean, such as have it in their Power, either to indulge their Inclinations in visiting foreign Countries, or who, moved by the Advices of their Friends, take this Method of improving their Talents, by adding Experience to what they have learned in Schools. But, as to the Bulk of Mankind, though they stand as much in Need of the Benefits drawn from Travel, as those who move in the sublimer Spheres of Life; yet, by their Circumstances, they are disabled from this Manner of accomplishing themselves, or of obtaining the Knowledge they want.

But, because thus precluded one Way, does it follow that they shall attempt it no other, or because they cannot travel themselves, must they derive no Advantage from the Travels of others? That would be a hard Thing indeed, since Men reap the Benefits of History, and thereby gain the Benefit of Experience from Ages far beyond those in which they live. If unconfined by Time, why should they be confined by Space; if we may improve from the Knowledge of what was done by Men before us, why may we not inform ourselves, by enquiring into what those Nations do who live far from us? One is as rational, and not at all more difficult than the other; and there is this Advantage attends travelling upon Paper, that we may go whither, and in what Company we please. This is a very singular and a very useful Circumstance; for, very frequently, even great Travellers do not see what they seek. Their Inclinations would carry them one Way, but, perhaps their Fortune and Condition in the World will carry them another; but this can never happen in Books. We may add to this another Consideration; that there are many Voyages, which however a Man may be inclined to make, yet, in his whole Life-Time, he may never meet with any Opportunity of making: I will instance only in two. The first is a Voyage round the World; of which, in the first Book of this Collection, we have given a complete and particular Account from whence it appears how few of those Voyages have been made in a long Course of Time: Yet, I presume to say, that there are none, either of so great Use, or so entertaining. It is from these Voyages, that the greatest Discoveries have been made, and, which is more, the Possibility disclosed of making still greater Discoveries that hitherto have been made, as the Reader will be convinced, by perusing that Part of this Collection. My second Instance is in Voyages to *Japan*, which is now out of the Power of almost any Man to make, who is not a Native of a particular Country; and even those make them with far less Advantage now than they did formerly.

But this is not the only Benefit that results from reading beyond actual Sailing or Travelling; for in the latter, we are bound to one particular Course, and confined to the Fruits of a single Excursion, whereas, by the Help of a Collection of Voyages, we reap all the Advantages that result from the Experience of different Men, who have lived in different Countries, and in different Ages. We can, in this Way, sail with *Columbus* and *Magellan*, with *Drake* and *Le Maire*, as well as with *Regers* or Admiral *Aspin*. In like Manner we can, in this Method, go to *Japan* with the *Portuguese*, and the *English*, as well as with the *Dutch*, and thereby derive to ourselves that Experience which was reaped in past Ages, and from which we are absolutely precluded in the present. To us, in this Way, it is the same Thing, whether good or ill Fortune attend the Voyages, since, to an intelligent Reader, as to an able Philosopher, it is much the same with respect to Instruction, whether

the Experiment succeeds or not. For Instance, Commodore *Roggewin's* Expedition turned to no Account, with Respect to the View upon which it was made; but as to us it is, to the full, as useful as if it had succeeded, and we are as much satisfied, that the Scheme upon which that Voyage was founded, is just, right, and agreeable to Truth, as if the Persons who made the Voyage, instead of losing their Ship, and returning Beggars, had brought home with them half the Treasure of the *Judies*.

The Accidents to which Men are liable, who undertake such Voyages, are so many, so unavoidable, and often of such a Nature as to deprive those who make them, of much of the Experience which they might otherwise have reaped from them: But we run no such Hazards in Books, and there is nothing necessary to render them as useful to us as possible, but a Resolution of attending to, and reflecting upon what we read. But some speculative Man may object, that these Arguments prove too much, and if such mighty Things may be done by reading, it is a weak and foolish Thing to travel any other Way than upon Paper. The Fallacy however of this Objection, will be easily perceived, if we reflect upon how many different Motives Men travel, besides that of bare Observation, which, generally speaking, falls in accidentally, and is rarely the Ground upon which Men make Voyages by Sea, or spend their Time in passing through different Countries: So that as Books have some Advantages, and those very considerable too, yet it does not follow from thence, that they have all the Advantages derived from visiting foreign Countries. There is a wide Difference between that Treasure which we lay up in our Mind, and the Wealth that passes into our Purse; and yet the general Word Profit may include both. But what demonstrates not the Fallacy only, but the Falshood of the Remark before-mentioned, as if the reading Voyages would extinguish the Desire of undertaking them is the Evidence of Experience, which is directly opposite thereto; for as the Inclinations of Boys who are born in maritime Towns, naturally leads them to Sea, so there is nothing excites Men more strongly to visit distant Countries than reading good Accounts of them; for it is a very natural, as well as a very just Conclusion, that if so much Pleasure results from the Perusal of Voyages and Travels, there must be still a greater in Travelling itself.

But thus much, indeed, is true, that there cannot be either an easier or a safer Cure for boundless Curiosity than this Sort of Reading, which from thence, instead of Study, is become an Amusement; from which another Objection has started up directly opposite to the former, and that is, the Danger of kindling a wild and ungovernable Humour in the Minds of young People, by putting such kind of Books into their Hands. This may be, and I doubt really is true of Voyages and Travels, read purely to kill Time and to divert, by the Strangeness of their Recitals. Yet one may ask, whether this Mischief be found in Books alone, and not in the Things themselves? Do not young People often make long Voyages without Thought, and travel many Years to no Purpose? But was this ever alledged as a just Reason why Folks should never go abroad at all; or, if not, why should it be a good Objection against reading? But, granting it were so, I will venture to say, that this, and every other Mischief, is guarded against by Collections of this Nature, in which Care is taken to inform and to instruct, as well as to entertain and amuse. It is the Advice of the great Lord *Bacon*, that young Men should never be sent into foreign Countries but under the Care of some able Tutor, who may be able to correct their Extravagancies, restrain their Impetuosity, and oblige them to make such Observations as would otherwise escape them; and all this, that at their Return, they may not be barely able to tell what they had seen, but shew, by their Behaviour, and their Conversation, how much they have improved by their foreign Excursions.

Now let us apply this Advice to reading. It is very possible for young People to spend a great deal of their Time that way to very little Purpose; and it was from a Foresight of this that Collections of Voyages were devised by grave and discreet Men, as the proper Remedy for this Evil. It was what *Ramusio* intended by his large and noble Collection, the most complete in its Kind, and for the Time in which it was made, that is extant in any Language. He undertook to draw into one Body the best and most useful Voyages and Travels, that before his Time had been published, and he has enriched them with such curious and useful Prefaces, Observations and Remarks, as has, in the Opinion of the best Judges, rendered them an invaluable Treasure. The same Plan was pursued by *M. Thevenot* in *French*, and in a much greater Extent by the Authors of some *Dutch* Collections, from all of which we have borrowed, and to whom we therefore readily own our Obligations.

To make these Reflections the clearer, it may not be amiss to observe, that we have in our own Language, as good and as bad Collections as ever were made; one Instance of each may suffice. *M. Hackluyt* was an able, ingenious, diligent, accurate, and useful Compiler, and his Collections are as valuable as any Thing in their Kind. On the other Hand *Purchas's* Pilgrims are a very voluminous, and for the most Part a very trifling and insignificant Collection: His Manner, for I cannot call it Method, is irregular and confused, his Judgment weak and pedantick, his Remarks often silly, and always little to the Purpose. This shews, how much depends upon the Care and Skill of the Collector, who, on the one Hand, is to provide what may entertain and please, and on the other is to be careful, that Knowledge and Instruction be conveyed together with Pleasure and Amusement.

But as in travelling it is requisite, that the Person who is to be improved, should not go absolutely raw out of his own Country, but should carry with him, or rather in him, a Tincture of the Sciences, that he may be the more capable of Improvement: So in reading of Voyages there are certain *Præcognita* which must be first understood, at least in a tolerable Degree, before the rest can be pursued with Pleasure or with Profit. But as the former, so these lie in a very narrow Compass, for the Science is often conveyed with great Difficulty; yet this hinders not that it may be conveyed in a short Time, and with great Ease, and this barely by ranging Truths that are necessary in their just and natural Order.

It has been a Thing usual in Books of this Nature, to take it for granted, that the Reader was as well skilled as the Writer in the Sciences requisite to be known, in order to the true Comprehension of the Work; we chuse, however, to avoid that Supposition, and to endeavour, within the Compass of this Introduction, to lay down all the Principles upon which the following Structure is raised; so that there shall be no Necessity of having recourse to any other Book, to come at the Meaning of this; but the Terms being sufficiently explained here, we shall be able to proceed, when we come to the Body of the Work, without any Danger of being misunderstood. We do not indeed intend here to lay down Systems of Geography, natural or civil History, or Politicks, but to explain each of those Sciences as is expedient for the Use we have made of them in the Composition of this Treatise. Cosmography is that Science which describes this Globe, and the rest of the solar System; Geography teaches the Knowledge of the whole Earth, as Hydrography does of the Water.

By Geography, we understand the particular Description of a Kingdom, Province or Country. Topography descends more minutely to describe smaller Places, Cities, Towns, Castles, &c. These are all originally Greek Words, which for their Significancy have been made free of all Languages, and their Meaning, when once well known, can never be forgot. By the first of them, we are taught to conceive, that the World, on which we live, is a terraqueous Sphere, or in plain English, a Ball of Earth and Water; through this Ball, if you suppose a Spindle to pass, it will be what the learned call the Axis of the Globe, and the Extremities of this Axis are its Poles, one of which is the arctic, or north Pole, and the other the antarctic, *i. e.* opposite to the north, or south Pole. The Equator is an imaginary Circle, passing round, or rather, over the Globe, at an equal Distance from each Pole, and consequently dividing the World into two equal Parts, whence it has its Name. It is likewise called the Equinoctial, because, when the Sun is in this Line, which is twice a Year, *viz.* in the Months of *March* and *September*, the Days and Nights are every where equal, and from the singular Utility of this imaginary Circle, it is stiled by Way of Eminence *the Line*.

The Zodiac is another imaginary Circle, which passes cross the Equator, and is distinguished, or divided into twelve Signs, six of which, *viz.* *Aries, Taurus, Gemini, Cancer, Leo, Virgo*, are on the North of the Equator, and therefore called northern Signs; the other six, *viz.* *Libra, Scorpio, Sagittarius, Capricorn, Aquarius, Pisces*, are on the South of the Equator, and are therefore called southern Signs. Within the middle of the Zodiac runs a Line called the Ecliptic, which is the Path of the Sun, and from thence we derive the Word Eclipse, or Failure of the Sun's Light to the Earth; and when the Earth intercepts the Sun there, the Moon is eclipsed, or fails of reflecting to us that Light which it receives from the Sun. The Obliquity, or Digression of this Circle from that of the Equator, occasions the Diversity of Seasons; for the northern Part of the World has its Midsummer when the Sun is in *Cancer*, and the southern Part enjoys the same Blessing, when the Sun is in *Capricorn*.

Hence it is, that two imaginary Circles are supposed parallel to the Equator, passing through the Point in which the Sun advances farthest North and South, and are stiled the Tropics of *Cancer* and *Capricorn*, from the Greek Word *Tropos*, which signifies Conversion, or turning back. The Meridian is another great Circle passing through both Poles, and over any given Place on the Globe and is called the Meridian, because, when the Sun reaches this Circle, it is Mid-day, or Noon, to all who live under it. The Horizon is a great Circle, which cuts the Meridian, and divides the Globe in half, *viz.* into an upper and lower Hemisphere, and it being the Line which terminates the Sight, the Sun is said to be set, when he sinks below it, and to rise, when he mounts above it.

As but one bras Meridian is represented on the Globe, tho' there are various, the Sun making Mid-day earlier or later to different Parts, as they lie more East or West, so there is represented but one Horizon, called the rational, or true one, tho' the sensible Horizon is various, as the Limits of the Sight vary at every Step. These Definitions, tho' they appear a little obscure at first, yet being twice or thrice read over, their Meaning will be sufficiently plain, or if the least Doubt remains, it will be absolutely taken away by the following Remarks, as to their Utility.

The principal Thing in Geography, is to have a perfect Knowledge of the Relation which any Empire, Kingdom, Province, District or City, hath to any other Place, or to the World in general: Now, it was impossible, that this Knowledge should ever be acquired, if some Method had not been found to mark every particular Point upon the Globe, so that it might be found without Difficulty or Uncertainty. This is performed by knowing the Latitude and the Longitude of Places, without a clear Comprehension, of which it is impossible for the Reader to conceive perfectly the Description of any Country, yet so it is, that among the numerous Books that have been written on the Science of Geography, there are very few that have made this Matter so clear, as that a Person of an ordinary Understanding might be able fully to embrace it. As it concerns, however, my Undertaking in the highest Degree, that there should be no Mistake in this Matter, I shall labour to make it so plain, with respect not only to finding the Latitude and Longitude on Maps, but to the conceiving the Use of it so clearly, as to be able from thence, to judge how all Parts of the World lie from their Latitude, and their Longitude being known, which is indeed the great Thing aimed at, and when once acquired, the bare reading of this Book with Attention, will render a Man a perfect Geographer, without farther Study or Pains.

We will begin with the Latitude of Places, and shew what is meant by that, and how far it is of Use in distinguishing any Place on the Globe. The Latitude of any City is its Distance from the Equator, which is reckoned on the Meridian, and as every Circle is supposed to be divided into 360°, so a fourth Part of the Meridian 90°, must be always included between the Equator and either of the Poles. Hence arises the Distinction between North Latitude and South Latitude, that is to say, the Number of Degrees counted on the Meridian from the Equator towards the arctic Pole, is stiled North Latitude, and thus *London* is said to lie 51° 32' North; as on the other Hand, the Number of De-

green counted on the Meridian towards the Antarctic, is filed South, and thus the City of *Lima*, which is the Capital of *Peru*, lies in $12^{\circ} 6'$ South.

It is easy to discern, that by knowing the Latitude of a Place, we know its Distance from both Poles, and from the Equator; but it is very evident, that knowing the Latitude of a Place, is very far from pointing out to us the Part of the Globe in which it lies, because, numberless Places lie at the same Distance from the Equator, or, which is the same Thing in other Words, lie under the same Degree of Latitude, it is requisite therefore, to have some other Mark, or Means of Distinction, and this is furnished by the Longitude, which is reckoned upon the Equator itself from a first Meridian.

Ptolemy, who was the first Geographer that made Use of this Manner of computing, laid down the first Meridian, as passing through the *Canary Islands*, and in order to keep as close to this as possible, *Louis XIII.* of *France*, by an Edict dated *April 25, 1634*, directed all the *French Geographers* to place their first Meridian in the Island of *Ferro*, the most western Island in the *Canaries*. According to this Computation, the City of *Paris* lies in the Longitude of $20^{\circ} 30'$, that is so far East from the first Meridian, and as the Latitude of this City is $48^{\circ} 45'$, the exact Situation thereof upon the Globe is fully and clearly determined. This Regulation of the first Meridian, was confined to *France* only, and has even there been long out of Date. The *Dutch Maps* generally place the first Meridian at the Pike of *Tenerif*. The *Arabians* fix theirs at the Straights of *Gibraltar*. The old *Spaniards* would needs have it at *Toledo*, because they said *Adam* was the first King of *Spain*, and the Sun at that Time of its Creation was placed in the Meridian of *Toledo*.

Here, in *England*, we generally reckon the first Meridian that of *London*, and instead of counting, as the old Method was, from the West to the East, we reckon both Ways: For Example, we say, that *Oxford* lies in the Longitude of $1^{\circ} 17'$ West from *London*, whereas the City of *Warsaw* in *Poland*, lies in the Longitude of $20^{\circ} 55'$ East from *London*. In like Manner, the *French Geographers* reckon their Longitude from *Paris*; for Instance, *Frezier* fixes the Longitude of *Lima* in *Peru* $79^{\circ} 45'$ West, by which he means, that the Difference of the Meridian of that City from the Meridian of *Paris* is so much. I hope by this Time, the Meaning of these Terms is so well fixed, that with respect to the Use made of them in this Work, the Reader can never be at a Loss, or in any Danger of falling into Mistakes about them.

There are, however, two Questions that have been moved with respect to Latitude and Longitude, which, for Satisfaction of the Reader, I shall examine. The first is, why, since the Circumference of the Globe is every Way equal, the Distance towards North and South, should be filed Latitude, or Breadth, whereas that from West to East is called Longitude, or Length? The Answer to this is, that in measuring the Latitude, we make use only of a Quadrant, or a Quarter of a Circle, so that the Latitude of a Place cannot exceed 90° , whereas in counting the Longitude, the old Geographers made use of a whole Circle, and the modern Geographers use the Semi-circle, so that one Place may lie in the Latitude of 180° East or West from the first Meridian. The other Question is, why we reckon the Latitude from the Equator towards the Pole? And the Answer to this is, because the middle Part of the Earth was first settled, and the Extremities of it, towards the north and south Poles, are not yet fully discovered, and it was most natural to reckon from the known to the unknown; or, because the Equator, and the Poles being two fixed Points, it was natural to measure from one to the other, and the Distance between them, being as we said, but a Quarter of a Circle, it was called Latitude, in Distinction to Longitude, which was at first measured round the Globe, afterwards round half of it only.

The different Temperature of the Air, and the different Length of Days, in the several Parts of the World, have occasioned the Distinctions of Zones and Climates, which are of very great Use. The Word *Zone*, if strictly taken, is no more than a Girdle, and the Reason that it is made Use of, is, because the several Zones are distinguished by Circles that pass round the Earth. Geographers reckon five, *viz.* the torrid Zone, the north temperate Zone, the south temperate Zone, the north frigid Zone, and the south frigid Zone. The torrid Zone is that Part of the terrestrial Globe which lies between the two Tropics; the north temperate Zone is that which lies between the Tropic of *Cancer* and the arctic Circle; the south temperate Zone lies between the Tropic of *Capricorn*, and the antarctic Circle; the north frigid Zone lies within the arctic Circle, and the south frigid Zone within the antarctic Circle.

The Ancients were of Opinion, that the torrid and frigid Zones were absolutely uninhabitable, the former on Account of its prodigious Heat, the latter, by Reason of their excessive Cold. But Experience has shewn, that they were mistaken, and with respect to the former, the Length of their Nights, the Freshness of their Dews, the Constancy and Regularity of the Winds, the Height of the Mountains, and the great Quantity of Vapours exhaled by the Sun, renders its Heat very supportable to its Inhabitants; on the other Hand, the Inclemency of the frigid Zone, is so far moderated by the Length of Time, that the Sun remains in their Horizon; that the Inhabitants are able to live very cheerfully, and to great Ages. It is true, that the Countries they inhabit, are far from producing the Necessaries of Life in such Abundance as in warmer and more temperate Climes; but then the People are more hardy, capable of greater Fatigue, and prefer that Liberty which they enjoy in an erratic Kind of Life, to all the Pleasures that are tasted in other Countries, and for this Reason they have a stronger Passion for the Places of their Nativity than any other Nations whatever.

The Ancients finding that this Division of the Surface of the Globe into five Zones, was too general; and, as they supposed several of these to be uninhabitable, that it was subject to many Inconveniences, they had Recourse to another Invention, the most useful indeed of any they introduced into this Science; and this was their distinguishing the World into Climates. A Climate may be defined a certain Space of the Globe, in which the longest Day exceeds, by half an Hour, the longest Day in the Climate behind it towards the Equator, and falls short, by half an Hour, of the longest

Day

Day in the Climate before it towards the Poles. In other Words, two Cities are said to lie in different Climates when the longest Day in the one exceeds the longest Day in the other by half an Hour. The old Geographers reckoned but seven Climates, from the Mistake they made in imagining only a small Part of the Earth to be inhabited; but the Moderns have corrected this Error, and carried the Distance of Climates to its utmost Perfection. They reckon twenty-four between the Equator and the Arctic Polar Circle, each of which encreases by half an Hour in the longest Day; and as the longest Day under the Line consists but of twelve Hours, so it is plain, that in the twenty-fourth Climate, or under the Polar Circle, the longest Day consists of twenty-four Hours; from-hence to the Pole they reckon but six, each of which differs in the Length of its longest Days a Month: So that under the Pole, if it was habitable, the Day and the Year would be the same thing, the former consisting of six Months, and the Night of as many.

By this Distinction into Climates, we have an Opportunity of looking round, and comparing the several Countries of a like Temperature at once. By it we are enabled to judge how far one Country is preferable to another in its Products and Commodities, how far the Culture of the Fruits of one Country may be pushed by Art in another, what Commodities may be expected in a new-discovered Land, and a Multitude of other curious Particulars that must immediately occur to every Man of tolerable Understanding. To further such Reflections, and to enable the Reader to possess himself at once of all the Advantages hinted at above, I shall lay down a Table of the twenty-four Northern Climates, which more immediately concern us; and when he has contemplated these with due Attention, I persuade myself he will discover many more useful Circumstances than I am able to mention. For when the human Mind is once put into the right Tract of Enquiry, a small Degree of Diligence and Penetration will conquer all Difficulties, and open a Path to such a Field of Knowledge, as cannot but attract a generous and inquisitive Spirit.

A TABLE of CLIMATES, from the Equator to the Polar Circle.

I. This commences at the Equator, and ends in the Latitude of $8^{\circ} 34'$: At its Extremity the Day is twelve Hours and an half. Within this Climate lie the *Moluccas*, the *Maldives*, *Malacca*, *Sumatra*, and other smaller Islands in the *East-Indies*.

II. Extends from from $8^{\circ} 41'$ to $16^{\circ} 43'$. The longest Day in this Climate consists of thirteen Hours. In it lie *Abissynia*, or *Ethiopia*, the Kingdoms of *Aden*, *Siam*, *Corromandel*, and the Island of *Ceylon*.

III. Reaches $16^{\circ} 43'$ to $24^{\circ} 11'$. The longest Day here is thirteen Hours and an half. Within this Climate are the Kingdoms of *Meccha*, *Arabia-Felix*, *Bengal*, *Mexico* in *North-America*, and *Tonquin*.

IV. Takes in from $24^{\circ} 11'$ to $30^{\circ} 47'$. The longest Day in this Climate is fourteen Hours. In it lies the famous Island of *Ormuz* in the *Persian Gulph*, *Agra* the Capital, and a great Part of the Dominions of the Great Mogul, *Fochu* in *China*, *Alexandria* in *Egypt*, and the *Canary-Islands*.

V. Extends from $30^{\circ} 47'$ to $36^{\circ} 30'$. The longest Day is fourteen Hours and an half: In which Climate lie the Territory of *Babylon*, *Tunis* in *Barbary*, *Nicosia* in the Isle of *Cyprus*, *Nankin* and *Pekin* in *China*, *Rhodes*, and *Ispahan*, with the Country adjoining in *Perfia*.

VI. Commences in $36^{\circ} 30'$, and reaches to $41^{\circ} 22'$. The longest Day here is fifteen Hours. In it lie *Lisbon*, and the best Part of the Kingdom of *Portugal*, *Palermo* in *Sicily*, *Madrid* in *Spain*, the best Part of *Greece*, *Asia-Minor*, the *Persian* Provinces on the *Caspian-Sea*, *Meched*, the intended Capital of that Empire by the *Shah Nadir*, Part of *India*, and *Great-Tartary*, *Corea*, and *Japon*. In *North-America*, a Part of *California*, the Kingdom of *New-Mexico*, the *French* Provinces of *Louisiana*, *Spanish Florida*, *Georgia*, Part of *South-Carolina*, the *Babama-Islands*, and the *Azores*.

VII. Reaches from $41^{\circ} 22'$ to $45^{\circ} 29'$. The longest Day fifteen Hours and a half. In its Bounds are comprehended *Biscay*, and all the Northern Provinces of *Spain*, the Southern Provinces of *France*, *Milan*, *Rome*, *Venice*, *Belgrade*, *Constantinople*, the *Black-Sea*, *Georgia*, the *Caspian*, the Sea of *Aral*, *Great-Tartary*, *Tangut*, *Land of Yedso*. In *North-America*, *Nova-Albion*, and the hitherto undiscovered Part of the Continent, the Sources of the *Mississippi*, the Lakes and Country of *Iriquois*, *Boston* in *New-England*, and *Port-Royal* in *Nova-Scotia*.

VIII. Extends from $45^{\circ} 29'$ to $49^{\circ} 1'$. The longest Day sixteen Hours, under which Climate lie *Paris* and the middle Provinces of *France*, *Vienna*, *Hungary*, *Crim-Tartary*, *Great-Tartary*, Part of the Land of *Yedso*, the Company's Land and other Discoveries by the *Dutch* in the *East-Indies*. In *North-America*, a vast unknown Continent, the *Upper-Lakes*, *Canada*, *Nova-Scotia*, and *Newfoundland*.

IX. Commences at $49^{\circ} 1'$, and ends at $51^{\circ} 58'$. The longest Day sixteen Hours and an half. In this Climate lie *London*, *Rouen*, *Amiens*, *Prague*, *Frankfort*, *Cracow*, the Southern Provinces of *Muscovy*, and both *Tartaries*. In *North-America*, Part of *Canada*, the *Streights of Bell-Isle*, and some of *Newfoundland*.

X. Beginning at $51^{\circ} 58'$, and reaching to $54^{\circ} 29'$. The longest Day seventeen Hours. In this Climate are contained *Dublin*, *Amsterdam*, *Lubeck*, *Dantzick*, *Warsaw*, Part of the *Russian* Territories, both *Tartaries*, and in *America*, Part of *New-France*.

XI. Extends from $54^{\circ} 29'$ to $56^{\circ} 37'$. The longest Day seventeen Hours and an half. In this Climate we find *Edinburgh*, *Copenhagen*, *Wilna* in *Lithuania*, *Smolensko* in *Russia*, and both *Tartaries*.

XII. Begins from $56^{\circ} 37'$, and reaches to $58^{\circ} 26'$. The longest Day here is eighteen Hours. In this Climate lie *Gottengurgb* in Sweden, *Riga* in Livonia, several Provinces in *Muscovy*, and both *Tartaries*.

XIII. Begins at $58^{\circ} 26'$, and extends to $59^{\circ} 59'$; The longest Day in it being eighteen Hours and an half. Within this Climate lie the City of *Stockholm*, the famous Part of *Revel* in Livonia, the Heart of the *Russia* Dominions in Europe and Asia, the Middle of *Great-Tartary*. In America Part of the River of *St. Lawrence*, *New South-Wales*, on the Coast of *Hudson's-Bay*, *Terra de Labrador*.

XIV. Commences at $59^{\circ} 59'$, and ends at $61^{\circ} 18'$. The longest Day under this Climate is nineteen Hours. Within it we find the *Orkney-Islands*, a great Part of *Norway*, *Sweden*, *Russia*, *Great-Tartary*, *Button's-Bay*, *Hudson's-Streights*, and some other Places in that Neighbourhood.

XV. Comprehends from $61^{\circ} 18'$ to $62^{\circ} 25'$; the longest Day being nineteen Hours and an half. In this Climate lie the City of *Bergen* in *Norway*, several Parts of *Finland*, and many Provinces of the *Muscovite* Empire in Europe and Asia, and the most Southern Parts of *Greenland*.

XVI. Begins at $62^{\circ} 25'$, and ends at $63^{\circ} 23'$. The longest Day is twenty Hours. The most remarkable Place in this Climate is *Perma-Welick*, a Town in *Muscovy*.

XVII. Commences at $69^{\circ} 23'$, and ends at $64^{\circ} 16'$. The longest Day is twenty Hours and an half. Under this Climate is Part of *Finland*, *Russia*, *Tartary*, particularly that of it to the N. W. discovered by the *Russians* in the Year 1726.

XVIII. Extends from $64^{\circ} 16'$ to $64^{\circ} 55'$. The longest Day is twenty-one Hours. In this Climate is the City of *Drontheim* in *Norway*.

XIX. Comprehends all between $64^{\circ} 55'$, and $65^{\circ} 25'$; the longest Day being twenty-one Hours and an half. The City of *Tobolski*, which is the Capital of *Siberia*, lies in this Climate.

XX. Begins at $65^{\circ} 25'$, and extends at $65^{\circ} 47'$. The longest Day is twenty-two Hours. In this Climate is the Town of *Vistum* in *Finland*.

XXI. Extends from $65^{\circ} 47'$ to $66^{\circ} 6'$. The longest Day is twenty-two Hours and an half. In this Climate lies the Part of *Torna* in *Botania*, so often mentioned by Mr. *Maupertuis*, in his Account of the Expedition of the *French* Academians, for determining the Length of a Degree under the arctic Circle.

XXII. Reaches from 66° to $66^{\circ} 20'$. The longest Day is twenty-three Hours. Within this Climate lies the Town of *Caienebourg* in *Muscovy*.

XXIII. Commences at $66^{\circ} 20'$, and extends to $66^{\circ} 28'$; the longest Day being twenty-three Hours and an half. Within this Climate lies the Town of *Skalbot* in the Island of *Iceland*.

XXIV. Comprehends from $66^{\circ} 28'$ to $66^{\circ} 31'$. The longest Day is twenty-four Hours. Within this Climate lies the Town of *Hola* in *Iceland*.

Here ends the Climate of Days, that is the twenty-four Climates, that are distinguished by the different Length of Days. Perhaps it may not be amiss to give a short and easy Rule for finding the Climate, in which any Place lies, without the Assistance either of Globes and Tables, and this may be done with so much Ease, that I think it impossible, either to mistake the Rule, or to meet with any Difficulty in making use of it. The Rule is this: Subtract 12 Hours from the longest Day, and double the Remainder, which will give the Climate the Place is in. For Example, the longest Day at *Paris* is 16 Hours; subtract 12 from thence, there remains 4, double the Remainder, and it shews the Climate wherein the City of *Paris* lies.

Besides the Climates distinguished by Days, there are yet six other northern Climates, which are distinguished by Months. And, as the Knowledge of these is of some Consequence, we shall likewise give a concise Account of them.

I. Commences at $66^{\circ} 31'$, and ends at $69^{\circ} 48'$. In this Climate, the longest Day consists of a compleat Month; in it lies the *Muscovite Lapland*.

II. Reaches from $69^{\circ} 48'$, to $73^{\circ} 37'$; the longest is of two Months, or sixty-two Days Continuance. In this Climate lies *Greenland*, which is a Country so excessive cold, that the Sea upon its Coasts is almost perpetually frozen.

III. Begins at $73^{\circ} 37'$, and extends to $78^{\circ} 30'$. In this Climate the Day is three Months compleat; in it lies *Zembla Australis*.

IV. Comprehends from $78^{\circ} 30'$ to $84^{\circ} 5'$. The longest Day in this Climate takes in four Months; in it lies *Zembla Borealis*.

V. Extends from $84^{\circ} 5'$, to the very Pole; the longest Day here consists of five Months, or one hundred fifty-five Days compleat. In this Climate lies *Spitzbergen*, which we call *Greenland*.

VI. Immediately, under the north Pole, where there is six Months Day, and six Months Night; but whether there be any Land, or whether, if there be Land, it is at all inhabited, remains, and probably will ever remain a Question. These Points of Geography have, as I observed before, something in them at first Sight, very dry and unpleasant; but by the frequent Perusal of them, or having often recourse to them, as they lie here in the Introduction, the Reader will soon enter into the full Extent of their Use, and apply them with Pleasure in the Perusal of the Work. I will not detain him with the Definitions of Continents, Islands, Capes, Promontories, Seas, Bays, &c. because these, I think, are generally understood, and where-ever I mention them, shall be rendered so plain, as not to need any Reference elsewhere.

Thus much may suffice upon this Subject, and tho' it lies in a narrow Compass, yet the Reader will find it not only useful, but every Way sufficient to explain the Terms of Art borrowed from that Science,

Science, and made use of in this Book. As to Navigation, Care has been taken to avoid as much as possible, making use of such Terms in that Art, as are not commonly understood, and rather than do this, and thereby introduce a Multitude of harsh Words, and difficult Phrases, we have chosen to express Things more at large, so as to render them perfectly plain, even to ordinary Understandings. We may say the same Thing with regard to natural History, wherein we have studied chiefly Periphrasis, and thereby the Information of the Reader, which we conceived would be more acceptable, than if from a vain Affectation of Learning, we had used Words familiar in the Schools, and no where else. It is proper, and even necessary to mention these Things, that what was purely the Effect of Choice, may not be attributed to any other Cause. It is one Thing to write expressly upon a particular Science, and another to mention occasionally Things that relate to that Science, and our Business in this Collection is, not only to convey all the Instruction we can, but likewise to convey it in the easiest and plainest Manner we may, as not affecting to be thought learned, but desiring to make Knowledge as familiar as possible.

With this View, we have insisted largely on the Policy of Countries, in order to shew, both the Nature of several Kinds of Government, and their Effects, more especially in the *East*, the Spirit of which seems hitherto but indifferently understood. We have also had Occasion to represent very fully the four ancient Empires, the Influence they had on the Manners of Mankind, which we have likewise shewn, is not yet wholly effaced. By pursuing this Method, we flatter ourselves, that many great Advantages have been gained, and that the Reader will perceive, that what he has perused in this Volume, will throw a prodigious Light on what follows in the next, more especially with regard to the fundamental Principles of true and lasting Dominion.

The Power attained either by Policy, or Arms, is but of short Continuance, in comparison of what is acquired by Trade. If we reflect on the Reason of the Thing, it will appear, that Commerce is founded on Industry, and cherished by Freedom. These are such solid Pillars, that whatever Superstructure is erected upon them, cannot easily be overthrown by Force, but must be ruined by Sap: This too we find justified by History and Experience. The ancient Kingdom of *Tyre* owed its extensive and lasting Power to its Commerce, and all the Accounts we have of the Progress of *Alexander's Army* agree in this, tho' hardly in any Thing else; that the Destruction of *Tyre* cost him more than the over-running the *Perſian Empire*, tho' the Territories of the former scarce entered into Comparison with the prodigious Dominions of the latter. *Carthage*, the most formidable Enemy of *Rome*, stood likewise indebted to Trade for that Strength which was so long reputed invincible, and which had always proved so, if the Virtues necessary to a State supported and ever subsisting by Commerce, had not been greatly impaired by that Luxury which her Riches induced before she was attacked by her formidable Enemy. The History of the middle Ages likewise shew the Republics of *Venice* and *Genoa* rising to an amazing Height, by the diligent Prosecution of foreign Trade, and Maritime Power, and sinking again into a low Condition, and that not so much by a superior Force of foreign Enemies, as by the Negligence of those Arts, and Diminution of those Virtues by which their Empire was attained.

According to the present System, Wealth is the Source of Power, and the Attainment of Wealth can only be brought about by a wise and happy Attention to Commerce. This it was that enabled the *United-Provinces*, not only to shake off the Dominion of *Spain*, but to raise themselves into the first Rank among the Powers of *Europe*. If we pursue this Thought a little farther, we shall find, that the peculiar Advantages which the little Province of *Holland* possesses in this respect, has rendered her in some Measure the Mistress of the other Six; and if we pry further into Things, we shall discover such a Degree of Wealth and Power in the City of *Amsterdam* alone, as might put her upon a Level with some Kingdoms. I shall but just mention the *Dutch East-India Company*, which, in a distant Part of the World, not only gives Laws to barbarous Nations, but has trampled upon those Powers that were terrible to the States at Home. It is indeed wonderful, that Truths so evident as these, should for a long Time escape, not only vulgar Observation, but the penetrating Eyes of the profoundest Politicians.

By Degrees, however, Experience has made almost all Nations sensible of the Importance of Trade, which is the Reason we see it pursued now with so much Ardour in every Corner of the *European World*. This being the Case, whoever would have a competent Knowledge of the Weight and Influence of any People, must be well acquainted with their Character and Circumstances in this respect; and yet this is a Point unaccountably neglected by almost all the Writers who have undertaken to set before their Readers the present State of Kingdoms and Commonwealths. They mention it, we must confess, but superficially; they throw it amongst a Groupe of inconsiderable Particulars, and if they just take Notice of a principal Port, or two, in any Country, they think they have done all that is requisite in regard to an Affair, the Knowledge of which, is of much more Importance than most of those on the copious Explication of which they value themselves.

As our Business lay in a great Measure with Authors that dealt not much in Reflection, we have, in the first Part of this Work, endeavoured to supply that Defect, in order to render it as systematical as possible, and in the succeeding Volume, we shall, for the same Reason, be more sparing on that Head, and leave Things more to the Reader's own Observation, taking Care, however, to supply them with proper Materials, for the ranging of which, in order to extract from this Collection a general History of Trade, a very few Rules may suffice, which, for that Reason, we shall here lay down, being thoroughly persuaded, that as they will be found both proper and useful in their Application, so they will be found even here both natural and agreeable.

The only Means, by which we can arrive at distinct and accurate Notices on this Head, is by following that plain and natural Method, which the Nature of Commerce in general points out. We

must first examine what the natural Commodities are of the Country, the Trade of which we consider, the Quantity, Value and Demand for these Commodities in other Parts, and the Manner in which they are disposed of by the Natives of the Country where they are found. This is the first Step in the History of Commerce. The next is the Enumeration of their Manufactures, whether they are of their own Commodities, or of those imported from abroad: And with regard to this Head we must attentively consider the Number of the People employed, the Nature of their Employments, and the Effects which their Industry produces to themselves and to the State. The third Head in this Enquiry should be the Sea-Ports in the Country under our Consideration, the natural and artificial Conveniences of each of them, and the particular Advantages and Disadvantages attending them, in point of Situation and otherwise.

These three Things thoroughly and fully understood, we may, with tolerable Certainty, judge of the Probability or Improbability of their becoming considerable by their Commerce in Naval Power, since a Nation blessed with these Conveniences will be able to conquer almost any Difficulties, and for a Nation deficient in these Respects, it will be in a Manner to no Purpose that she struggles, because whatever the Power or Policy of one Administration might gain her, must be lost by the new Turn of the next; since whatever is unnatural, or contrary to the Genius of a People, can never last long. The fourth Head will be the Number and Nature of their Shipping, and the Seamen employed on Board them: For the Wealth and Power of a Nation is much effected by various Circumstances attending these. For Instance, *Spain* and *Portugal* derive great Riches from Commerce: And yet, by their Management of that Commerce, are far from being considerable, either by the Number of their Shipping, or of their Seamen, which is owing to their ill Policy, and to that ridiculous Distinction, between the Wealth of the Prince and the Wealth of the People; a Distinction that can serve no other Purpose than keeping the one weak, and the other poor.

The last Point that merits Examination, is that of Colonies or Plantations; with regard to which, we are to enquire, not how many, or how powerful they are, so much as how they contribute to the Wealth and Grandeur of their Mother State. There is in this something so commendable in the *Dutch*, that I cannot forbear speaking of it. The common Phrase for *Holland*, in all their Colonies, is *Father-land*, which is an Expression so pathetic, so full of true Patriotism, and so expressive of filial Affection, that we may from thence discern the true Use of Colonies, which is to feed and support the Country from whence they are derived. In this Respect we excel the *Spaniards*, and the *Dutch* excel us: For there is a Conformity between the Interest of that State and of all her Plantations, which is discerned no where else, and which is the true Source of the mighty Power and immense Wealth of that flourishing Republick.

So much for the commercial Part of our Work; let us now turn to the History. The original Settlement and subsequent Changes that have happened to every Nation, are the Subject of their History. This must be tolerably well known to have an adequate Notion of their Concerns, but at the same Time, there is no sort of Occasion for entering too deeply into this, in order to an Acquaintance with their present Circumstances. There cannot, certainly, be either a more useful, or a more pleasant Study, than the general History of all Nations. But then this requires much Leisure, the Knowledge of many Languages and great Abilities; a great Statesman, an accomplished Scholar may, indeed must, apply himself to this sort of Study, in order to attain that Excellence, at which he aims. But the general Knowledge of the World, which is so requisite to every Man, who would make a tolerable Figure in it, does not require any such laborious Course of reading, but may be acquired, by affording a reasonable Attention to a few of the most remarkable Facts. In this Work therefore, without totally omitting the ancient History, we shall treat of it so concisely, as to connect it with, and yet leave sufficient Room for the Modern. The Spring of Action in one Age, seldom rises higher than the Transactions of that which went before it; and therefore it imports us more to be perfectly acquainted with what has fallen out within these last hundred Years, than with what was done many Centuries ago, tho' the Actions of those Times might be of greater Eclat than in these.

It was from a strict Attention to this, that we have taken so much Pains to enquire into, and set forth the State and Condition of the several trading Companies subsisting in *Europe*, the Nature of whose Commerce brings them within the Compass of this Part of our Work, as hoping thereby, not only to lay the Foundation of a competent Stock of Knowledge for the present, but to open to the industrious and intelligent Reader, a clear and easy Method of registering and preserving whatever shall occur of the like Nature in later Books. The same Care has been taken with regard to the Division of this Work in both Volumes, so as to render it not only as perfect as possible, by digesting therein whatever has been hitherto published of superior Value, and distinguished Worth, but also leaving the Road open to future Continuations, without any sort of Necessity of new modelling, or recomposing the whole; so that it is hoped, such as are possessed of this Work, need never find themselves obliged to purchase another Collection falling within the same Space of Time, but may be furnished with all they want, by proper Supplements, as future Discoveries are made, or new Books of Voyages and Travels are published, in our own, or in other Languages.

Another Advantage that will result from the plain and easy Method we have made use of, and which is fully described in the Preface, is, that as this Work will be perfect for the present, without any Supplement, so any Supplement that shall be made hereafter with Judgment, will likewise be perfect in its kind, and be a compleat Work in itself, and thereby totally remove an Inconveniency that has hitherto attended all Collections of this sort, from their not being properly digested. Thus we have compleated the first Part of this Introduction, which is intended to enable the Reader to understand all that is contained in the following Sheets, with respect to Discoveries and Descriptions of Countries, without having recourse to other Books for Instruction; it remains, that in the second Part, we shew

how future Discoveries may be made by a farther Improvement of those Helps, and those Instruments, which have rendered the modern Navigation so much superior, in Accuracy, as well as Extent to the Navigation of the Ancients.

This leads us to speak more particularly of the Properties of the Magnet, or Load-stone, the Discovery of which, if we may believe the learned *Kircher*, was originally owing to the Sagacity of an *Englishman*, but which have most certainly been better explained, and thereby rendered more and more useful, by several of our industrious Countrymen. There have, indeed, been Attempts made to shew, that the Ancients were acquainted with that wonderful and singular Property of this Stone, which our learned Countryman *Dr. Gilbert*, calls, its Verticity, or Power of pointing to the North; and it has been likewise asserted, that it was commonly known in the *East*, before it came to be practis'd in these Parts of the World; both which Opinions, in the Body of this Work, we have shewn to be but indifferently founded. The first Treatise upon this Subject, of any great Consequence, was written by a Person who stiled himself *Petrus Peregrinus*, who, if *Kircher* be not mistaken, and *Sturmius* likewise, was no other than our learned Friar *Roger Bacon*; but be this as it will, it is in a Manner agreed, that this Property of the Magnet, was reduced to practice about the Year 1300, that is about six or eight Years after *Friar Bacon's* Death, by one *John Goia* of the Kingdom of *Naples*.

After this great and most useful Discovery was known to *Europe*, there were soon many inquisitive Heads, that employed their Thoughts about making further Enquiries into the Nature of this celebrated Stone; so that in some time its Variation, or Deflection from the true Meridian, was discovered by *Sebastian Cabot*. The Declination (as it was at first called, whereas now the Variation often passes by that Name) or rather, the Inclination of the Needle, was first discovered by our Countryman *Robert Norman*, which is a surprizing Property, whereby it always dips under the Horizon, when placed upon a Pin like a Compass, except in such Places as are just under the Equator, and there it keeps always parallel to the Horizon exactly; and he found the greatest Inclination at *London* to be $71^{\circ} 50'$. *Dr. Wallis* in the *Philosophical Transactions*, No. 276, thinks that the Discovery of this Dipping of the Needle is owing to *Mr. Blagrave*, or some other *Grækamite*; and he describes this Property to be a Direction of Altitude above the Horizon; so that if it be duly poised on an Horizontal Axis, it will point to a determinate Degree, of Altitude, or Elevation above the Horizon; and he says truly that of this Discovery, though made so long ago, there hath not yet been any considerable Use made.

The Variation of the Variation is another considerable and very surprizing Property of the Load-stone; that is, that the Magnetick Needle in its Horizontal Position, doth not always retain the same Variation or Declination from the true Meridian, in the same Place, and at all Times, but doth successively vary in its Declination or Variation from Time to Time. This was first discovered by *Mr. Gillibrand*, about the Year 1635; tho' *Sturmius* saith, that this was taken Notice of also by *Helvetius*, *Auzout*, *Petit*, *Volckamer* and others, much about the same Time: So that our *English* Nation has had a very considerable Share in the Discoveries which have been made about the Magnet, and its wonderful and useful Properties. To make this Matter the clearer, and to reduce the Facts necessary to be known, within a narrow Compass, we will present them to the Eye of the Reader in the Form of a Table.

The PROPERTIES and PHENOMENA of the Magnet or Load-stone, from the best Authors.

- I. That in every Magnet or Load-stone, there are two Poles, one pointing North, the other South; and if a Stone be cut, or broke into never so many Pieces, there are these two Poles in each Piece.
- II. That these Poles, in divers Parts of the Globe, are diversly inclined towards the Earth's Centre.
- III. That these Poles, though contrary one to another, do help mutually towards the Magnet's Attraction and Suspension of Iron.
- IV. If two Magnets are Spherical, one will turn or conform itself to the other, so as either of them would do to the Earth; and that after they have so conformed, or turned themselves, they endeavour to approach to join each other; but, if placed in a contrary Position, they avoid each other.
- V. If a Magnet be cut through the Axis, the Parts or Segment of the Stone, which before were joined, will now avoid and fly each other.
- VI. If the Magnet be cut by a Section perpendicular to its Axis, the two Points, which before were conjoined, will become contrary Poles, one in one, the other in the other Segments.
- VII. Iron receives Virtue from the Magnet by Application to it, or barely from an Approach near it, tho' it do not touch it; and Iron receives this Virtue variously, according to the Parts of the Stone it is made to touch, or approach to.
- VIII. If an oblong Piece of Iron be any how applied to the Stone, it receives a Virtue from it only as to its Length.
- IX. The Magnet loses none of its own Virtue by communicating any to Iron; and this Virtue it can communicate to Iron very speedily, though the longer the Iron touches or joins the Stone, the longer will its communicated Virtue hold, and a better Magnet will communicate more of it than one that is not so good.

X. That Steel receives Virtue from the Magnet sooner than Iron.

XI. A Needle touched by a Magnet will turn its Ends the same Way towards the Poles of the World as the Magnet will do.

XII. That neither Lead, Stone, nor Needles touched by it do conform their Poles exactly to those of the World, but have usually some Variation from them; and this Variation is different in different Places, and at different Times in the same Place.

XIII. That a Load-stone will take up much more Iron, when armed or capped, than it can alone; and that tho' the Iron-key, or Ring, be suspended by the Load-stone, yet the magnetical Particles do not hinder the Ring or Key, from turning round any Way either to the Right or Left.

XIV. That the Force of a Load-stone may be variously encreased or lessened, by the various Application of Iron, or another Load-stone to it.

XV. That a strong Magnet, at the least Distance from a lesser or a weaker, cannot draw to it a Piece of Iron adhering to such lesser or weaker Stone; but if it comes to touch it, it can draw it from the other; but a weaker Magnet, or even a little Piece of Iron, can draw away, or separate a Piece of Iron contiguous to a greater or a stronger Load-stone.

XVI. That in our North Parts of the World, the South-Pole of a Load-stone will raise up more Iron than the North-Pole.

XVII. That a Plate of Iron only, but no other Body interposed, can impede the Operation of the Load-stone, either as to its Attraction, or directive Quality. Mr. Boyle found it true by Glasses sealed hermetically; and Glass is a Body as impervious as most are to any Effluvia.

XVIII. That the Power, or Virtue of a Load-stone, may be impaired by lying long in a wrong Posture, as also by Rust, Wet, &c. and may be quite destroyed by Fire.

EXPERIMENTS on the Load-stone, by the Honourable Robert Boyle, Esq; in his own Words.

I. Mr. Boyle found that by heating a Magnet red-hot, it could be speedily deprived of its attractive Quality.

II. If a Load-stone be heated red-hot, and then cooled, either with its South-Pole to the North, in a horizontal Position, or with its South-Pole downwards in a perpendicular one, it will change its Polarity, the South-Pole becoming the Northern, and *vice versa*.

III. By applying the Poles of a very small Fragment of a Load-stone to the opposite vigorous ones of a good large Magnet, Mr. Boyle found he could speedily change the Poles of the Fragment, but he could not effect it in a Fragment that was considerably bigger, tho' he tried many Hours.

IV. He observed, that well-tempered and hardened Iron-Tools, when heated by Attraction, turning, filing, &c. they would, while warm, attract the Filings or Chips of Iron and Steel, but not when cold; yet, says Mr. Maxon. I remember once to have seen myself, and tried, that a Piece of a File, which was in the Hands of Mr. Farwell, the Spectacle-Maker, did retain such attractive Quality, that it would take up and keep suspended the Key of a Cabinet, or Escutore, and needed no Friction to excite this magnetical Virtue.

V. The Iron-bars of Windows, which have long stood in an erect Position, do grow permanently magnetical, the lower Ends of such Bars being the North-Poles, and the upper the Southern; for, according to the Laws of Magnetism, we find the lower Ends of such Bars will drive away the North-End of such a Needle, and will attract the Southern; which shews, that by a continual Passage of the subtle magnetical Particles through them, they are turned into a kind of Magnet themselves.

VI. If a Bar of Iron that hath not long stood in an erected Posture, be only held perpendicularly, its lower End will be the North-Pole, and attract the South-Point of a touched Needle; but then this Virtue is transient, and will shift as you invert the Bar; for the other End, when held lowermost, will presently become the North-Pole: Wherefore, in order to render the Quality of Verticity permanent in an Iron-bar, it must remain a long while in a proper Position: But the Fire will produce this Effect in a very short Time; for as it will immediately deprive a Load-stone of attractive Power, or change its Poles (as in Experiment 1, 2.) so it will as soon give a Verticity to a Bar of Iron, it being heated red-hot, and cooled in an erect Position directly North and South; nay, it hath been observed often, that even Tongs and Pokers, by being often heated, and then set to cool in a Position near to erect, have gained this magnetical Property. The Reason of which very different Effects of the Fire on a Magnet and on Iron Mr. Boyle, with his usual Modesty, suggests to be this, That the peculiar Texture of Constitution, by which a Magnet differs from common Iron, one being accurate and fine, the other rough is spoiled by the rude and violent Attacks of the Fire. But this mighty Agent, by working upon Iron, softens and opens the Pores of the Metal (which is harder than Iron-Oar;) so that it becomes capable of being pervaded by the magnetical Particles, and by that Means gains a vertical Quality.

VII. Mr. Boyle found, that, by heating of English Oker red-hot, and placing it to cool in a proper Posture, it plainly gained a magnetic Power.

VIII. The same Noble Gentleman found that an excellent Load-stone of his own, having lain almost a Year in an inconvenient Posture, had its Virtues so impaired, that he, at first, thought that somebody had spoiled it by Fire.

IX. If a Needle be well touched on a good Load-Stone, 'tis known it will, when duly poised, point North and South; but if it hath one contrary Touch on the same Stone, it will immediately be deprived of that Faculty; and by another Touch it will have its Poles quite changed; so that the End which before pointed North, shall now point Southward.

X. Dr. Power, and Mr. Boyle, both found that after a red-hot Iron had gained a Verticity by being well heated and cooled North and South; and then also hammered at the Ends, the Virtues would immediately be destroyed by two or three Blows of a strong Hammer sinartly given about the Middle of it.

XI. Mr. Boyle found, that by drawing the Back of a Knife, or long Piece of Steel-Wire, &c. over the Pole of a Load-stone leisurely once, or divers Times, beginning the Motion from the Equator,

tor, or Middle of the Stone towards the Pole, the Knife or Wire, will accordingly attract the End of a poised magnetical Needle: But if you take another Knife or Wire, and thrust it leisurely over the Pole towards the Equator, or Middle of the Equator, this Knife shall expel, or drive away the same End of the Needle, which the former Knife would attract, which Experiment makes it very probable, that the Operation of the Magnet depends on the Flux of some fine Particles, which go out at one Pole, then round about, and in again at the other.

XII. Because it is one of the universal Laws of Nature, that Action and Re-action are always equal: Therefore, it is plain, the Iron must attract the Magnet as much as that doth the Iron; and you may easily experiment it to be so in Fact, if you place a Magnet, or a Piece of Iron on a Cork, so as that it may swim freely in the Water, for then you will see that whichever you hold in your Hand will draw the other towards it.

This Table of Facts, and List of Experiments, have been very exactly transcribed, that the Reader might see as much as either Reason or Experience can teach concerning the wonderful Nature of this Stone, and the various Circumstances which attend the Exertion of that Faculty by which it becomes of such infinite Benefit and Advantage to Mankind. Without knowing these Circumstances, there would want many Grounds for enquiring into, and discovering, as perhaps there are still wanting, sufficient Grounds for fully explaining the Nature of Magnetism, that is to say, with such Clearness, as may satisfy the Understanding, and such Certainty, as may take away all Fear of Deception or Mistake in Practice. If this Doctrine of Magnetism was merely a Point of Natural Philosophy, it would be idle for me to spend so much Time about it; but as it is in Fact the great Secret which must sooner or later disclose the Perfection of that Science to which Books of this Nature belong, I mean the Knowledge of the entire Globe upon which we live, it becomes a most necessary Part of this Introduction, because the most valuable Voyages contain several Particulars relating to this Matter, which are in Danger of appearing either trivial or tedious, if their Use and Importance be not fully shewn.

The several Hypotheses that have been devised by speculative Men, in order to explain this Matter, have hitherto proved not only erroneous and unsatisfactory, but by being for a Time judged otherwise, have hindered such Enquiries as might have turned to the Benefit of Mankind; for, as Lord Bacon long ago observed, Ignorance is not near so great an Hindrance to Knowledge, as the Conceit of Knowledge: Thus for Instance, Kircher's Notion of magnetical Fibres in the Earth, might make a Man fancy he could account for the Verticity of the Load-stone. Again, Mr. Bond, a Countryman of our own, advanced something very plausible about the Variation; for he supposed there were two magnetical Poles, which terminated an Axis inclined to that of the Earth, from whence it would follow, that under the same Meridian, the Variation must be the same, and therefore as Experience shews the Conclusion false, it follows, that his Account of the Matter could not be true. Dr. Gilbert, our Countryman likewise, and whose Labours on this Subject can never be enough commended, guarded against this Error, by the Opinion which he advanced, which is indeed very curious, and very ingenious, but at the Bottom likewise unsatisfactory. He thought that the Earth itself being in all its Parts magnetical, and the Water not; the Needle, would consequently turn towards the Earth wherever it lay, as to the greater Quantity of magnetical Matter; but to mention one out of a Multitude of Instances that might be given, it is certain, that on the Coast of Brazil, the Needle turns quite the contrary Way, which is sufficient to destroy this Notion.

The famous M. Des Cartes invented another Scheme less liable to Contradiction, for he conjectured, that Iron and Load-stone, hid in the Bowels of the Earth, and the Bottom of the Sea, might be the Causes of the Variation of the Needle; but if this were true, how should the Variation of that Variation be accounted for? We know from Experience, that here at London, the Variation in one hundred Years has altered fifteen Degrees, and something more, for which none of these Notions account at all, and therefore the famous Dr. Halley took quite another Method, that is to say, he took the only right Method, by first collecting a large Table of Observations, and from thence endeavoured to raise a Theory.

By this Means he went much farther than any of his Predecessors, and his Scheme was this, that the Globe was a Magnet, having four magnetical Poles, two near each of the Poles of the Equator, and that the Needle was always governed by the nearest of these Poles. His Discourse upon this Subject was extremely well received, both at Home and Abroad, and perhaps, if it had satisfied its Author, it might have satisfied every body else; but the ingenious Gentleman who devised it, having a much greater regard to Truth than Fame, and to the general Advantage of Mankind, than his own particular Reputation, soon saw that his Scheme, tho' much better contrived, was at the Bottom as fallacious as the rest; for he considered, that no Magnet had any more than two Poles, whereas the Earth had visibly four, and perhaps more; and he likewise observed, that according to his former Notion, these Poles shifted their Place, which, according to the Laws of Nature, and the particular Structure of the Magnet, was improbable and absurd.

He farther observed, that this Variation was regular, and had a certain Period, tho' not hitherto perfectly discovered; for, here at London, in the Year 1580, it was observed to be $11^{\circ} 15'$ East. In 1657, there was no Variation at all. In 1672, he observed it himself $2^{\circ} 30'$ West; and in 1692, he observed it to be exactly 6° West; so that in one hundred and twelve Years, it had changed 17° . To this it may not be improper to add, that in fifty-three Years, which have since elapsed, it has varied 11° more to the West. At Paris, in 1550, the Needle varied 9° East. In 1666, there was no Variation at all, and since that, its Variation has increased to 14° West. The most southern Promontory of Africa was, by the Portuguese, about the Year 1600, called the Cape d'Agullas, or Cape Needles,

Needles, because there they found no sensible Variation; and yet, in 1691, a very curious Observation being made there, the Needle was found to vary 11° West. At the Island of *St. Helena*, in the Year 1600, the Variation was found 8° to the East, which gradually declined to the Year 1667, when Dr. *Hally* himself observed it there, and found the East Variation no more than $40'$; and in 1692, it varied 1° West.

Having thus given the Reader as clear and historical an Account of this Matter as we could, we shall next give him the same Gentleman's Reasonings thereupon in his own Words, because it is impossible to say any Thing better, or more agreeable to Truth, than what he has delivered upon the Subject, as there is very great Reason to doubt whether we shall soon see a more satisfactory Theory raised for the Service of Mankind, than that which this able and ingenious Person has given us. After therefore laying down at large these several Observations, and many more which we have omitted, as tending only to prove what we apprehend is sufficiently proved by the Observations already set down, and the subsequent Experience we have had of the same Thing; he proceeds thus:

" These Phenomena being well understood, and duly considered, sufficiently evince, that the whole magnetical System is by one, or perhaps more Motions, translated whither Eastwards or Westwards, I shall soon discuss, that this moving Thing is very great, as extending its Effects from Pole to Pole, and that the Motion thereof is not *per saltum*, but a gradual and regular Motion.

" Now, considering the Structure of our terraqueous Globe, it cannot be well supposed, that a very great Part thereof can move within it, without notably changing its Centre of Gravity, and the Equilibrium of its Parts, which would produce very wonderful Effects in changing the Axis of diurnal Rotation, and occasion strange Alterations in the Seas Surface, by Inundations and Recesses thereof, such as History never yet mentioned; besides, the solid Parts of the Earth are not to be granted permeable by any other than fluid Substances, of which we know none that are any Way magnetical; so that the only Way to render this Motion intelligible, and possible, is to suppose it to turn about the Centre of the Earth. And there is yet required, that this moving internal Substance be loose, and detached from the external Parts of the Earth wherein we live; for otherwise; were it fixed thereto, the whole must necessarily move together.

" So then, these external Parts of the Globe will be reckoned as the Shell, and the internal Nucleus, or inner Globe, included within ours with a fluid Medium between, which, having the common Centre and Axis of diurnal Rotation, may turn about with our Earth, each twenty-four Hours only, the outer Sphere having its turbinating Motion, some small Matter, either swifter or slower, than the internal Ball, and every Minute's Difference in Length of Time, and in many Repetitions, will become sensible; the internal Parts will by Degrees recede from the external, and not keeping Pace with one another, will appear gradually to move either Eastward or Westward, by the Difference of their Motions.

" Now, supposing such an internal Sphere to have such a Motion, we shall solve the two great Difficulties we encountered in my former Hypothesis; for if this external Shell of Earth be a Magnet, having its Poles at a Distance from the Poles of the diurnal Rotation, and if the internal Nucleus be likewise a Magnet, having its Poles in two other Places, distant also from the Axis, and these latter, by a gradual and slow Motion, change their Place in respect of the external, we may give a reasonable Account of the four magnetical Poles, I presume to have demonstrated before, as likewise the Changes of the Needles Variations, which till now have been unattempted.

" The Period of this Motion being wonderfully great, and there being hardly an hundred Years since these Variations have been duly observed, it will be very hard to bring this Hypothesis to a Calculus, especially, since tho' the Variation do decrease and increase regularly, in the same Place; yet in different Places, and at no great Distance, there are found such casual Changes thereof, as can no Ways be accounted for by a regular Hypothesis, as depending on the unequal and irregular Distribution of the magnetical Matter, within the Substance, within the external Shell, or Coat of the Earth, which Defect the Needle supplies from the Position it would acquire from the Effect of the general Magnetism of the whole. Of this, the Variations at *London* and *Paris*, give a notable Instance; for the Needle hath been constantly about $1^{\circ} 30'$ more Easterly a *Paris* than at *London*, tho' it be certain, that according to the general Effect, the Difference ought to be the contrary Way, notwithstanding which, the Variations in both Places do change alike.

" Hence, and from some other Things of the like Nature, I conclude, that the two Poles of the external Globe, are fixed in the Earth, and that if the Needle were wholly governed by them, the Variations thereof would be always the same, with some little Irregularities on the Account I but just above-mentioned; but the internal Sphere having such a gradual Translation of its Poles, does influence the Needle, and direct it variously, according to the Result of the attractive, or directive Power of each Pole, and consequently there must be a Period of the Revolution of this internal Ball, after which the Variation will return again as before; but if it should in future Ages be observed otherwise, we must then conclude, that there are more of these internal Spheres, and more magnetic Poles than four, which at present we have not a sufficient Number of Observations to determine, and particularly in that vast *Mare del Zur*, or *South-Sea*, which occupies so great a Part of the Surface of the Earth.

" If then two of the Poles be fixed, and two moveable, it remains to ascertain, which they are that keep their Place; and though I could wish we had Experience of another Century of Years to found our Conclusions upon, yet I think we may safely determine, that our *European Pole* (which in the precedent Discourse I supposed near the Lands-end of *England*, and about 7° therefrom) is, that, which is moveable of the two northern Poles, and that, which has chiefly influenced the Variation in these Parts of the World; for in *Hudson's Bay*, which is under the Direction of the *American Pole*, the Change is not observed to be near so fast as in those Parts of *Europe*, tho' the Pole be much farther removed

" As to the south Poles, I take the *Asian Pole*, which I place about the Meridian of the Island *Celebes*, to be fixed, and consequently the *American Pole* to move from the like Observations of the slow Decrease of the Variation on the Coast of *Java*, and near the Meridian of the *Asian Pole*; tho' I must confess to have no Account of the Effects of the other beyond *Magellan Straights*.

" If this be allowed me, it is plain, that the six Poles are the Poles of this external Shell or Cortex of the Earth, and the other two the Poles of the magnetical Nucleus, included and moveable within the other. It likewise follows, that this Motion is Westward, and by Consequence, that the aforesaid Nucleus has not precisely attained the same Degree of Velocity, with the exterior Parts in their diurnal Revolution, but so nearly equals it, that in three hundred sixty-five Revolves, the Difference is scarce sensible. This I conceive to arise from the Impulse whereby this diurnal Motion was impressed on the Earth, being given to the external Parts, and from thence, in Time, communicated to the internal, but not so as perfectly to equal the Velocity of the first Motion impressed on them, and still conveyed, by the superficial Parts of the Globe.

" As for the Quantity of this Motion, it is almost impossible to define it, both from the Nature of this kind of Observation, which cannot be accurately performed, as also from the small Time these Variations have been observed, and their Change discovered. It appears by all Circumstances, that this Period is of many Centuries of Years, and as far as may be collected from the Change of the Place where there was no Variation, by Reason of the Equilibrium of the two southern magnetical Poles, viz. from *Cape d'Angulbas*, to the Meridian of *St. Helena* (which is about 23° in ninety Years) and of the Place where the westerly Variation is in its Acme, or greatest Deflection, being about half as much, viz. from the Isle of *Diego Rios*, to the south-west Parts of *Madagascar*, we may with some Reason conjecture, that the *American Pole* has moved Westwards 46° , in that Time, and that the whole Period thereof is performed in seven hundred Years, or thereabouts; so that the nice Determination of this, and of several other Particulars in the magnetic System, is reserved for remote Posterity. All that we can hope to do, is, to leave behind us Observations that may be considered in, and to propose Hypotheses, which After-ages may examine, amend or reject. Only here I must take Leave to recommend to all Masters of Ships, and other Lovers of natural Truths, that they use their utmost Diligence to make, or procure to be made, Observations of these Variations in all Parts of the World, as well in the north, as south Latitude (after the laudable Custom of our *East-India* Commanders) and that they be pleased to communicate them to the *Royal Society*, in order to leave as complete a History, as may be, to those that are hereafter to compare all together, and to complete and perfect this abstruse Theory."

There has not hitherto appeared any Thing more curious, or more correct, upon this Subject, than the foregoing admirable Discourse of the late learned *Dr. Halley*, whose great Abilities, and indefatigable Diligence, have done the greatest Honour to this Nation, and fully supported that Reputation which we had before acquired, of having done more in respect to magnetical Discoveries, than any other Nation in *Europe*. His Theory indeed, is at once so sagacious, and so ingenious, and withal, is delivered with so great Modesty, such wise Precautions, and so laudable a regard to Truth, that one may justly affirm, it deserves much higher Respect, and a more attentive Consideration, than is usually due to Attempts of this Nature; and, if after longer Experience, and a more particular Knowledge of the Facts relating to the Variation in different Places, it shall appear capable of solving all the Difficulties, with which this Subject has been hitherto burthened, Posterity will, without doubt pay that due Veneration to the Memory of this Great Man, which his vast Abilities and singular Penetration have merited.

But supposing there should be such Deficiencies discovered in his second Theory, as this candid and ingenious Man himself discovered in his first; yet, before this can be done, we must have such Tables of Observations collected, as must enable us to form a better Theory, or, which is still of greater Value, enable us to come at the Thing itself; or, in other Words, we must be in a Condition to assign the true Period of Variation at any given Place: For, till this can be done, it will be simply impossible to say, whether *Dr. Halley's* Theory will account for these Appearances or not: And if once, whether by Experiment, or Theory, a Method be found to establish a certain Knowledge of the Period of Variation, the great End for which it is sought, will be attained, that is to say, the easiest Way of discovering the Longitude will be found.

As I look upon this to be the principal Advantage that would result from our having a perfect and certain Knowledge of the Variation of the Needle, it is on this Account that I have insisted upon it so largely, because this is the Thing which, of all others, we most want, towards completing the Science of Navigation, which, though greatly improved by the Moderns, and therefore much superior to the Navigation of the Ancients, yet, as we before observed, it is still deficient in many Points, and more particularly in this.

At the same Time that I mention this, I must take Notice of another Thing, which, at first Sight may seem to be a Paradox, but, at the same Time, is an indisputable Truth, and withal a Truth of the highest Importance. The Thing I mean is this, that the Defects of modern Navigation, though Disadvantageous to the Science, in respect to Practice, are, however, so far from being disadvantageous when considered in a speculative Light, that they are really and strictly so many Excellencies therein, when we compare the State of that Science now, to the State it was in amongst the Ancients; for it was their Misfortune to have so high an Opinion of their own Knowledge, as to charge upon Nature; or, to speak more like a Christian, upon the Conduct of Divine Providence, those Defects which were only in themselves. Thus, for Instance, they conceived, contrary to Truth, the greatest Part of the Globe to be uninhabitable; and from this Notion, pronounced those Discoveries impossible, which by the Industry of succeeding Ages have been made: Whereas with respect to

the Deficiencies confessed by the Moderns, they are really so many Points of Knowledge, as to which the Ancients had not the least Conception; and though we have not hitherto attained them, which is a Misfortune; yet we know what they are, and, in some measure, how they may be attained, which is a great Felicity.

As for Instance, we know the great Importance of discovering an easy and certain Method of finding the Longitude; and this in our own, and other Nations, has induced the Publication of great Rewards for the making of such Discovery. And if this Method were carried farther into Practice, and smaller Sums were offered for intermediate Discoveries, I do not at all doubt that much greater Things might, in a few Years, be attained, than were formerly reached in whole Ages.

There are, indeed, several Methods by which the Longitude may be discovered, besides this; and because it is impossible that the Reader should enter into the true Merit of such a Discovery as this would be of the Theory of magnetical Variations, without having a competent Notion of those Methods, I shall venture to discourse of them here, as I have done of other Things in an easy and familiar Way. The only Method the Romans had of settling the Distances of Places, and thereby framing Descriptions or Maps of Countries was, by actually measuring them; and by this Means that Map or Description of the World, which was depicted from *Agrippa's* Tables in the Reign of the Emperor *Augustus*, in a Portico erected for that Purpose, was made. It is generally believed, that the celebrated Itinerary ascribed to the Emperor *Antoninus*, was extracted from thence. A Work wonderfully exact and worthy of the greatest Commendation, considering the Time in which it was made. But *Ptolemy*, the Geographer, as we have before observed, was the first who introduced the Method of fixing the Distances by Longitudes and Latitudes, which has been since followed, as being both easier and more exact than the former. It is, however true, that there are many, and those very gross Mistakes in the Geography of *Ptolemy*; as, for Instance, he places the *Fortunate Islands* under the same Meridian, and yet gives them several Degrees of Longitude; and in point of Latitude, he is at least ten Degrees out in his Computation. He speaks of a City in *China*, lying in the Latitude of three Degrees South, whereas we now certainly know that the most Southern Part of *China* lies in twenty Degrees North-Latitude. He has also described the great Island of *Tapanobana*, that it is in a manner impossible to determine, at least with Certainty, whether it be *Ceylon*, *Sumatra*, or *Borneo*. Hence some very judicious Persons have doubted whether the introducing Astronomy has been of any Use to Geography, or whether on the contrary, it has not contributed to embarrass and perplex that Science, by which it is rendered much more uncertain than if the old plain geometrical Method had been still followed. But, in Answer to this, it may be very truly affirmed that the Errors of *Ptolemy* do not arise from his Use of astronomical Principles, but from his following bad Memoirs, and the great Inaccuracy of the Observations made in those Times for want of good Instruments.

The Moderns, who, without Question, have discovered much better Methods of making Observations, have, consequently, been able to correct these Errors, and establish a new Way of discovering the Longitude with Certainty, which is that of Eclipses. To set this Matter in a clear Light and in as few Words as possible, I shall have Recourse to an Example. As soon as it was certainly known that an Eclipse of the Sun or Moon was observed earlier at *Stockholm* than at *Paris*, it followed that *Stockholm* must lie East from *Paris*. When farther Observations had determined that an Eclipse was observed an Hour sooner at *Stockholm* than at *Paris*, it followed, from the same Principles, that *Stockholm* lay 15 Deg. East of *Paris*; so that, agreeable to the Edict of *Lewis XIII.* which fixed the first Meridian in the Island of *Ferro*, and consequently the City of *Stockholm* in the Longitude of 20 Deg. 30 Min. the true Longitude of the City of *Stockholm* was found by this Observation to be 35 Deg. 30 Min. To make this still plainer, let us take another Example. It has been found, that an Eclipse has been observed in the Island of *Caienne* three Hours and an half later than at *Paris*; from whence it is evident, that Island must lie 52 Deg. 30 Min. West from *Paris*, and that for this Reason: The Equinoctial being divided into 360 Deg. and making one Revolution in twenty-four Hours, there must consequently be fifteen Degrees allowed to an Hour, upon which this Calculation is grounded.

As this Method of ascertaining the Longitude of Places, by the Observation of the Eclipses of the Sun and Moon, contributed greatly to the Improvement of Geography; so this very Method has acquired much greater Perfection since we have fallen into a Way of Observing the Eclipses of the Satellites of *Jupiter*, which the most learned Persons have pronounced to be, of all others, the shortest, easiest, and most certain Method of fixing the Longitude. In order to this, there is nothing more requisite than to have Tables very exactly adjusted for these Eclipses to any given Place, and by observing several of these Eclipses carefully at any other Place, the Difference in point of Time, will shew exactly, when reduced to Degrees and Minutes, the Difference of Longitude between the two Places, or, in other Words, how far one is East or West from the other. I must not, however, dissent, there having been some Objections made to this Method notwithstanding the sentiments of so many great Mathematicians in its Favour, particularly by the celebrated *Riccioli*, in his reformed Geography, who declares, that he will never consent to this Method of fixing the Longitude by Eclipses, unless it shall appear, that it agrees exactly with the Differences; and by geometrical Methods, that is, by plain Measuring, which, tho' in small Distances, it may do, yet in greater, it has been known to fail. The Differences made from hence, appear at first sight, to clear, and to strong, that they seem to be conclusive, and to throw us back into that Degree of Uncertainty, from whence this Method promised to deliver us.

But, upon mature Consideration, we may, perhaps, suggest a Solution of this Difficulty, which may prove satisfactory, and thereby bring Things once more to Right. In order to this, I must take

Notice, that the Objection is founded in a Fact, and that Fact again, upon a Supposition, that the Earth is a perfect Sphere, which, however, some able Men have doubted, and assigned very probable Reasons for their Doubts. Sir *Iaac Newton* thought the Earth a flat Spheroid, and Mr. *Cassini* believed it to be a long Spheroid. It is plain enough, that if either of these great Men were in the Right, this would alter the Distances of Places, that have the same Longitude and Latitude, and consequently, take away the Grounds of this Objection; yet, instead of introducing any Certainty, would beget still greater Incertainties; for, it must be allowed, that if the latter of these Conjectures had been taken for Truth, while the former really was so, then in a Course of one hundred Degrees of Longitude, the most expert and cautious Seaman must have committed an Error of two Degrees, which shews the Importance of this Enquiry. His most Christian Majesty being informed perfectly as to this Matter, in the Days of Cardinal *Fleury*, when the Arts of Peace were his Care, resolved, that at his Expence, this Point should be put out of Dispute, by causing two Degrees to be measured, one at the Equator, and the other under the polar Circle, which has been accordingly done, and thereby the Truth of Sir *Iaac Newton's* Conjecture fully proved. Hence we have great Reason to expect, that the Figure of the Earth will very soon be perfectly known, and the different Lengths of Degrees digested into accurate Tables, so as to be shewn by bare Inspection, and then we have the greatest Room to hope, that as the foregoing Objection took rise from Facts falsely stated, it will, by the true true stating of Facts, be entirely taken away.

One Thing more we shall observe before we quit this Subject, and it is this, that the several Methods of finding the Longitude before-mentioned, depend upon astronomical Observations, and those too, very nice and exact, which at Sea it is very difficult, at any Time, and very often impracticable to make; whence arises the Necessity of finding out some other Way of discovering the Longitude, for which hitherto nothing has bid so fair as a perfect finding out the Variation of the magnetic Needle, which being adjusted to a Table of Longitudes, they would then reciprocally shew each other. This, however, we can never hope, till such Time as the Princes of *Europe*, laying aside their Jealousies and Animosities, unite in the generous and pious Design of promoting the common Advantage of all their Subjects, by encouraging the Study of those Sciences, which being perfectly understood, would open a Way to many concealed Branches of Commerce, which might make the Inhabitants of their respective Dominions as rich and happy as themselves could wish, whenever this true and laudable Ambition shall take Place of that false and feigned Ambition which now rules them, we may expect to see those great Events, and we may reasonably hope to see them first take Place, at least in Part, in that Nation, where this blessed Change, so agreeable to the Maxims of Reason, the Laws of Nature, and the Doctrines of the Christian Religion shall first appear.

We're not, however, to hope this until such Time as the Minds of Men are, in some measure, cured of certain Prejudices which prevail but too generally at present. For Instance, while it is possible for any Nation possessed of, or vested with the Power of improving Commerce and Maritime Force, to be induced to imagine that any Thing else is more worthy her Study and Regard: For with respect to extensive Commerce, we may safely venture to assert, it is the one Thing necessary in Politicks; and if we study and pursue this, all Things else will be added unto us. It is a ridiculous Thing for such a Nation to complain, that her Commodities lie upon her Hands, that her Manufactures decay, that Numbers of her People are idle, that Multitudes are poor, and that her Condition grows daily worse and worse. I say, such Complaints are ridiculous, because it is in her own Power to redress all these Evils, by minding her own Interest, and applying herself to that Thing which alone well minded, must certainly and absolutely cure them all: But the most ridiculous Complaint that can be made in a Trading Nation is, against Smuggling; for that plainly proves that she has minded her Business so little, that her Neighbours have got the Start of her, since it is impossible that foreign Commodities should be bought cheaper in one Country than another, unless the Laws of that other Country are so framed, as to oppress and discourage Trade.

The Remedy of all these Evils, is very soon found, and very easily applied, if once Mens Eyes are opened, and their Hearts enlarged; for if the Understanding be clear, and the Will right, a Nation, like a private Family, soon alters its Condition, and recovers, by a prudent Management, what was lost through want of Attention. The great Engine in both Cases is, Industry, and Industry rightly applied. By Industry, with respect to a Nation, we must mean Application to Trade, as in private Life, we mean Application to Business; for, both in publick, and in private Life, Men may be industrious, that is to say, may be active, eager and diligent, not only to no Purpose, but to bad Purposes; for Instance, the Gamester takes a much Pains to acquire Money, as the Tradesman, but with this Difference, that the more he labours, the worse he deserves, and the richer he grows, the greater his Infamy. Yet why is he infamous? Not surely because he seeks Wealth, but because he seeks it in a dishonest Way, in a Way, which though useful to himself, is destructive to his Neighbours, in a Way inconsistent with Society, and which truly renders him an Enemy to Mankind. But after all, is not Unity, or the Art of making Money beget Money, of the same Prejudice in Publick, as Gaming in private Life, and ought not the Maxims in Government which encourage the one, to be as universally condemned, as those that tolerate the other.

Let any Man, who considers the Consequences of both, speak what his Heart dictates, and he must say they ought; for if the bare Possession of Money, will produce Money; and if by watching the Necessities of the Publick, Men can grow as soon, and as certainly rich, as by applying themselves to Trade, it follows, that where-ever this happens, the Idle will eat the Bread of the Industrious, and those Men be at the Head of a Society, who are Enemies to Society, in Practice at least, if not in Principle. And now let me have Leave to ask, Wherein the Man who betters his private Fortune, without advancing the Stock of the Publick, is better than a Gamester?

But Examples are better understood, and move more than Precepts. Let us look Abroad then for one, since it might be inconvenient to look at Home. The State of *Genoa* was once a most rich and powerful Republick, possessing large foreign Dominions, and prodigious Wealth in her own Coffers; it was this, that enabled her Subjects to build and plant, so as to establish, in the most barren Part of *Italy*, a City, which is still deservedly stiled *Genoa* the Proud. But how did she acquire her Fleets, her Dominions, and her Riches? If we look into her History, we shall find, by the very same Method, that these Blessings were acquired, and may be acquired in other Countries, that is to say, by Industry and Trade. But is she now possessed of them? Alas! No; from being the greatest, she is of late become the most contemptible State in *Europe*. And how has this Change been wrought? By forgetting her true Interest, by suffering the Wealth her Trade had produced, to corrupt the Manners of her People, by running into Luxury and Idleness, by entering into endless Negotiations, and fruitless Alliances; and finally, by these two fatal Steps, dealing in Money instead of Goods, her Merchant; becoming Bankers, and preferring Funds and negotiable Debts to Manufactures and staple Commodities; by neglecting her natural naval Strength, and depending upon her Allies; by engaging in other Peoples Quarrels, and thereby waisting her own Strength, and by preferring the pernicious Arts of Politicks to the noble and generous Arts of Commerce: Such have been the Causes of her Fall; and may her Fall prove a Warning, not a Precedent!

I call the Arts of Commerce noble and generous, because they extend to all Mankind. If we draw Gold and Spices from warmer Climates, we carry them Things more valuable, because more useful. What is it that constitutes the Splendor and Luxury of *Mexico* and *Lima*, but the richest Commodities, and the finest Manufactures of *Europe*; and what renders opulent those Countries which furnish these Commodities and Manufactures, but the Silver of *Mexico*, and the Gold of *Peru*? Does not that Change in Point of Cultivation, Magnificence in Building, and great Increase in Shipping, which, within these two last Ages, has happened in the old World, arise from the Discovery of the new? Why then do we not pursue this Track? Why not prosecute new Discoveries, at least, why not enlarge our Commerce by the Invention of new Branches? The common Answer is, because the Thing is impossible. Idle, ridiculous, and impious Assertion! Have we not Wool; have we not Cloth; are there not naked Nations enough in the World, who would gladly be covered; and was there ever a Nation yet found, that wanted Cloaths, and at the same Time wanted wherewithal to pay for them.

The Negroes on the burning Coast of *Africa*, have Ivory and Gold; the Inhabitants of the frozen Coasts of *Hudson's Bay*, send us Furs and Skins. The very *Laplanders* pay for what they want, and consequently, the more Wants any People have, the more it concerns us to find them out; besides, is not this falling back to the Errors of the Antients? Did not they fancy the same Thing, and were not they mistaken? Should not this put us upon a different Conduct, surely it ought. We have Commodities, we have Manufactures, we have Shipping, we have Seamen, we have Merchants, what can we possibly want, if we have the Will to employ those as we ought? Methinks I hear some modern Sceptick cry, This is very fine, indeed; but where, which Way shall we search; would you have us Freight and Man our Ships, and then turn them a-drift, in Hopes that Chance may bring them to some new World? No, the following Sheets will shew, that the Means of Finding are very well known; that the Methods of extending Commerce are natural and easy, and which is more, in a Manner certain; so that there is no need of employing Chance, the very Skill we have, will do the Business. It may, indeed, be requisite to remove ill-judged Prohibitions, and to break down illegal Exclusions, illegal, because the Terms upon which they were granted, have not been complied with; these may be, and indeed will be requisite, and therefore they ought to be done.

We see in a Time of War, what Encouragement for Privateering has produced, and can any reasonable Man doubt, that in Time of Peace, like Encouragements would not produce as strong a Spirit of Discovery; most certainly they would. Let us maintain Trade, and there is, no doubt, that Trade will maintain us. Let our past Mistakes teach us to be wise, let our present Wants and Difficulties revive our antient Industry. Let the Perusal of this Collection excite our Hopes, and dispel our Fears, and then the present Age may become as much the Admiration, as it is now in Danger of becoming the Scorn of Posterity. We want not Capacity, we want not Power; but we want Will, and therefore we want Vigour; let us supply this Deficiency, and all will be well. In fine, let us deserve, and we shall certainly succeed; for that divine Maxim will be found true in worldly as well as spiritual Affairs, *If we search, we shall find; if we knock, it will be opened.*

TABLE of CONTENTS.

	Page		Page
SECT. XI.		SECT. XXI.	
An Account of the Religion, Government, Laws, Customs, and Manners of the <i>Indians</i> , as they are recorded in the Works of ancient Authors.	442	The curious and remarkable Voyages and Travels of <i>Marco Polo</i> , a Gentleman of <i>Venice</i> , who, in the middle of the thirteenth Century, passed through a great Part of <i>Asia</i> , all the Dominions of the <i>Tartars</i> , and returned Home by Sea, through the Islands of the <i>East-Indies</i> , taken chiefly from the accurate Edition of <i>Ramusio</i> , compared with an original Manuscript in his <i>Prussian Majesty's</i> Library, and with most of the Translations hitherto published.	593
SECT. XII.		SECT. XXII.	
The Learning, Discipline, Offices, Manner of Living, and Privileges of the <i>Brachmans</i> , including also an Account of their peculiar Doctrines in Theology and Divinity.	449	A succinct History of the Empire of the Great <i>Mogul</i> , from its Foundation by the Great <i>Tartar</i> Conqueror <i>Timur-Bec</i> , or <i>Tamerlane</i> , to the present Times, taken chiefly from the original Writers.	629
SECT. XIII.		SECT. XXIII.	
Of the Land-animals in the <i>East-Indies</i> , as described by ancient Authors, compared with modern Writers, and some Remarks upon both.	458	A compleat History of the Rise and Progress of the <i>Portuguese</i> Empire in the <i>East-Indies</i> , their Discoveries set forth in their natural Order, the Form of their Government in those Parts explained, the Cause of the Declension of their Power examined, and the present Posture of their Affairs in this Part of the World truly stated, collected chiefly from their own Writers.	662
SECT. XIV.		SECT. XXIV.	
An Account of the most remarkable Fish and Fowl in the <i>East-Indies</i> , as described by ancient and modern Authors, with proper Observations and Remarks.	479	The Voyage of <i>Francis Pirard de Laval</i> to the <i>East-Indies</i> . His Ship-wreck amongst the <i>Maldives</i> , and his copious Account of that <i>Archipelago</i> , translated from the Author's original Voyage, published by himself in <i>French</i> .	701
SECT. XV.		SECT. XXV.	
An Account of the Description left us by the Ancients of the <i>eastern</i> and <i>northern</i> Parts of the <i>Indies</i> , the Notions they had of their Riches, together with an Enquiry into the Reasons which hindered their extending their Discoveries on that Side.	493	The Expedition of Commodore <i>Beaulieu</i> to the <i>East-Indies</i> , containing a faithful and accurate Description of the Sea-Coasts, and Commerce, as also Abundance of curious Observations on the Manners of the People, the Nature of their Governments, and the Means of establishing Colonies among them, written by <i>M. Beaulieu</i> himself, and published by <i>M. Thevenot</i> , in his large Collection of Voyages.	717
SECT. XVI.		SECT. XXVI.	
A concise History of the Rise, Progress, and Decline of the <i>Constantinopolitan</i> Empire, together with the Commerce of its Subjects in the <i>East</i> . As also a brief Detail of the Rise of the <i>Arabian</i> Empire, the Recovery of the <i>Indian</i> Commerce in <i>Egypt</i> , and the reviving the Trade of <i>Alexandria</i> .	504	The Remarks and Observations made by <i>John Albert de Mandelstoe</i> , in his Passage from the Kingdom of <i>Persia</i> , through several Countries of the <i>Indies</i> , translated from the Original, written by himself.	749
SECT. XVII.		SECT.	
An Account of the several Passages to the <i>Indies</i> , both by Sea and Land, that have been attempted, discovered, or practised by the Ancients.	514		
SECT. XVIII.			
An Account of the Travels of two <i>Mobammedans</i> through <i>India</i> and <i>China</i> , in the ninth Century.	521		
SECT. XIX.			
The Travels of Rabbi <i>Benjamin</i> , the Son of <i>Jonas</i> of <i>Tudela</i> , through <i>Europe</i> , <i>Asia</i> and <i>Africa</i> , from <i>Spain</i> to <i>China</i> , from the Year of our Lord 1160, to 1173, from the <i>Latin</i> Versions of <i>Benedict Arias Montanus</i> , and <i>Constantine l'Empereur</i> , compared with other Translations, into different Languages.	546		
SECT. XX.			
The remarkable Travels of <i>William de Rubruquis</i> , a Monk, sent by <i>Louis IX.</i> King of <i>France</i> ,

SECT. XXVII.	
The remaining Voyages of <i>John Albot de Mandelstoe</i> through the <i>Indies</i> , including his Descriptions of Countries, historical Remarks upon several Nations, and his Observations on the Commerce of the <i>Portuguese, English</i> and <i>Dutch</i> , at that Time, translated from the Author's original Voyage, written by himself.	87;
SECT. XXVIII.	
A supplemental Account of the Commodities and Manufactures and Produce of the several Countries of the <i>Indies</i> , together with Remarks on the Nature and Value of that Trade in respect to <i>Europe</i> , from the Works of <i>John Baptist Tavernier</i> .	810
SECT. XXIX.	
An Account of the different Routs to all the great Cities and chief Ports in the <i>Indies</i> , the Manner in which the domestick Commerce of that Country is carried on, the State of its Manufactures, and other curious Particulars, taken from the Works of <i>M. Tavernier</i> .	825
SECT. XXX.	
The Conclusion of the Remarks and Observations of <i>M. J. Baptist Tavernier</i> , in his Travels through the <i>Indies</i> , together with his Account of the <i>Dutch</i> Settlements, and of his Voyage on Board a <i>Dutch</i> Ship, from <i>Batavia</i> to <i>Europe</i> , written by himself, soon after his Return.	842
SECT. XXXI.	
Observations and Remarks made during his Residence on the Island of <i>Chusan</i> , on the Coast of <i>China</i> , by <i>Dr. James Cunningham</i> , Physician to the <i>English</i> Factory at that Place, from his own Accounts.	
SECT. XXXII.	
A succinct Account of the Adventures of <i>Mr. William Adams</i> , an <i>Englishman</i> , who resided many Years in the Empire of <i>Japon</i> , and was the Person who induced both the <i>English</i> and the <i>Dutch</i> to trade thither, collected as well from his own Letters, as <i>Portuguese</i> and <i>Dutch</i> Writers.	856
SECT. XXXIII.	
An historical Account of the Intercourse between	
the Inhabitants of <i>Great Britain</i> and the People in the <i>East-Indies</i> , containing likewise a compleat History of the <i>East India</i> Company, from its Erection under <i>Queen Elizabeth</i> of glorious Memory, and of the several Alterations that have been made therein, down to the present Reign.	87;
SECT. XXXIV.	
A succinct History of the Rise, Progress and Establishment of the <i>Dutch East-India</i> Company, with a View of the immense Profits arising from that Commerce, and a Prospect of their Affairs, and the Manner in which they are conducted, as well at Home, as in their extensive Settlements Abroad, collected chiefly from their own Writers.	924
SECT. XXXV.	
The History of the <i>French East-India</i> Company, from its first Original, together with a clear and concise Account of the several Alterations it has undergone, and a full and plain Description of its present Circumstances, at Home and Abroad; interspersed with some curious Remarks on the Nature of the <i>French</i> Government, when the Powers thereof come to operate upon Trade, collected entirely from <i>French</i> Writers.	949
SECT. XXXVI.	
A succinct, but compleat History of the Rise, Progress and Suppression of the <i>Imperial</i> Company of the <i>Indies</i> , established at <i>Ostend</i> , by the late Emperor <i>Charles VI.</i> collected from private Memoirs, as well as publick Histories, and Acts of State.	965
SECT. XXXVII.	
The History of the <i>Danish</i> Commerce to the <i>East-Indies</i> , their Establishments there, the Decay of their old Company, and the Motives which induced them to set up a new one, interspersed with original Papers and Memoirs.	976
SECT. XXXVIII.	
A succinct History of the <i>Swedish East-India</i> Company; including an Extract of the Royal Charter.	980

VOYAGES and TRAVELS.

B O O K I.
An Account of the Circum-Navigations of the **GLOBE**, and of
the Discoveries of the *East and West Indies.*

C H A P. I.
The **HISTORY** of the **CIRCUM-NAVIGATORS.**

SECTION I.

1. *The perfect Knowledge of the Globe due to Modern Inquiries.* 2. *Reasons why the Navigation of the Antients was imperfect.* 3. *They knew not with Certainty the Figure of the Earth.* 4. *Understood Astronomy but indifferently.* 5. *And were ignorant of the Use of the Needle.* 6. *The Moderns have overcome all these Difficulties.* 7. *Many of them have surrounded the Globe.* 8. *Introduction to the History of these Circum-navigations.* 9. *Our Reasons for including that of Columbus in their Number.*

1.  HE accurate Knowledge of this Globe of Earth and Water in general, and of many of its Parts in particular, is owing to the superior Skill of the Moderns in Mathematical Sciences, and ought therefore to be considered as one of the noblest Trophies of the Force of human Understanding; I mean with respect to Reasoning right upon Principles once laid down, however those Principles might be discovered by Accident, or by Thought. I would not be understood to insinuate any thing to the Prejudice of those ancient Sages, who may with great Justice be stiled the Fathers of Science; but only assert a Truth which may be incontestably proved, that the Glory of discovering the terraqueous Globe, and bringing Navigation almost to Perfection, is due to the Moderns.

2. It is clear, that the Antients were under an absolute Incapacity of making great Discoveries by Sea for many Reasons, but particularly for these Three; First, That they had no just Notion of the Figure of the Earth; Secondly, They were very indifferent Astronomers, especially with regard to the practical Part of that Science; and, Thirdly, They were able to make no Voyages of Consequence for want of knowing the wonderful directive Property of the Loadstone.

3. With respect to the Figure of the Earth, almost every eminent Philosopher was of a different Opinion: *Thales* the Father of the *Greek* Philosophy believed, that it floated upon the Water like a Bowl; and *Alexander* would have it, that it resembled a Column or Stone Pillar; *Democritus*,

otherwise a very great Man, thought it hollow, like a Dish, and *Anaximenes* taught, that it was flat, like a Table, and sustained by the inferior Air. *Leucippus* described it as approaching nearest the Figure of a Drum. In succeeding Times, *Laërtius* and *Augustine* thought the Earth infinitely extended downwards, grounding this Notion upon the Scriptures, or rather seeking Assistance from them, in Support of their Opinion. It is most evident from this Diversity of Sentiments, that they could draw no just Conclusions, either as to the Parts of it that were then undiscovered, or of the Means of discovering them; in order to which, nothing was so necessary as having true Notions as to the Figure of the Earth, or at least such Notions as came near the Truth.

4. In regard to Astronomy, they were likewise much at a Loss. *Hipparchus* was the first who made a Catalogue of the fixed Stars, and he flourished about 150 Years before *Christ*. About 300 Years afterwards the famous *Ptolemy* corrected his Tables, and established a System which lasted many hundred Years, though there were great Errors in his Calculations; which were in part rectified by the famous *Tycho Brahe*, who flourished not much above 100 Years ago. I say nothing of later Discoveries, because they have been made by the Help of the Telescope, an Instrument as little known to *Tycho Brahe* as to *Hipparchus*; and yet the former has not been found to err much above Two Minutes, even by the best modern Astronomers, whereas *Hipparchus* often sailed half a Degree in Longitude and Latitude; and every body knows how far such Imperfections must affect that Science, when applied to Navigation.

5. But the great Imperfection of the ancient Navigation was the not being able to solve that necessary Problem, the finding in any Place the Four Cardinal Points, and such intermediate ones as were necessary; without doing which, it was simply impossible to sail far. Now the Ancients had no certain way to find the North and South Points at any time, and therefore durst not trust themselves into the wide Ocean, but coasted only along the Shores, that they might by some Signs know where they were. In the Day-time they were able to find the North and South, or a Meridian Line, by the Sun's Rising and Setting; and besides this they had three other Methods. 1. By the Stars at Night, particularly the Little Bear, and the Star in its Tail, called the Pole Star, which was much famed with Antiquity, and served to shew them the North, and thereby all the other Points; for, turning their Face to it, the East was on the Right, the West on the Left, and the South behind; and they had a Circle with the Points on it; and, bringing the North and South Point to the Meridian Line, the other Points were seen at once. Another Method they had was by knowing the Situation of the Shores, and of one Promontory from another; for when one Point was thus known, either from the Maps, or by Observation and Experience, they could in Sailing find the rest; but then they could not go far from the Shores, which directed them as to these Points; for they could not at all times see the Sun and Stars for that End. A third Method they used was by observing the Points they had run in; for knowing how they first directed the Ship, and how much they turned again their Course from that Point, they knew the other Points. From whence the Reason appears of their imperfect and dangerous Sailing; viz. their not knowing the Points in the wide Ocean, so as to tell how to steer. This third Method, by observing the Ship's Course, is of no Use when the Ship is turned to a great many Points by the Violence of the Winds and Waves. Such were their Methods of finding the Meridian Line, which were so imperfect, that they durst never trust themselves in the vast Ocean; and therefore it is no Wonder that they never knew *America*.

6. These Defects are all remedied, and many other Advantages gained, by the Application of that wonderful Property in the Loadstone, of turning its Poles nearly to the North and South. This enables the Mariner to steer boldly, and with Certainty, to quit the old Method of coasting, and to force a Passage to the most distant Parts of the Globe, by the shortest and speediest Way imaginable. By these Helps the Portuguese, in the Beginning of the Fifteenth Century, made prodigious Discoveries towards the East, and thereby gave a Beginning to that Series of Voyages and Travels, by which the World in general, and every considerable Portion of it in particular, have been sought out and described. From whence it plainly appears, that all Parts of the Globe are inhabited; that there is not that mighty Disproportion between the Quantities of Land and Water, which there was formerly supposed to be; and that the Products of the Torrid and Frigid Zones

are rather more rich and valuable than those of temperate Climates.

7. In speaking of the great Men by whom, and of the several Methods by which, these Discoveries have been made, it is but just to give the Circumnavigators the first Place; since the Aim of their Voyages was general, having relation to the Whole, and making us sensible, that as the new System was highly reasonable in Theory, so the Reasonings deduced from it were easily reduced to Practice. The Tour of the World seems to be one of the sublimest Enterprises within the Compass of human Ability; and, if it could have been achieved in former Ages, would have been celebrated in a manner worthy the Undertaking by the *Greek* and *Latin* Writers.

But, as it was not, it seems to require in a particular manner our Care and Attention, especially since we are furnished with abundance of authentic Relations, which fully enable us to shew how this great Design was first conceived; how far carried into Execution by the first Inventor; how it was afterwards prosecuted, and what additional Discoveries have been made by each succeeding Circumnavigator.

8. This seems to be the more requisite, because hitherto, notwithstanding the numerous Collections we have, there has never yet been any tolerable Account given of this Matter; nay, I think it may be safely affirmed, that there never was to much as an Endeavour made of this Kind, at least in that Extent in which we propose it. For our Intention is to give a succinct Account of all the Circumnavigations, of which sufficient Memoirs can be procured, from the very first Attempt down to the present Times, distinguishing the Causes, Consequences, and most interesting Circumstances in every Voyage, and pointing out the several Improvements in the natural Order of Time in which they occurred, taking notice also of what yet remains to be perform'd by such as the Industry, Success, and Fame of others may inspire with a generous Thirst of Emulation.

9. In order to this, we are next to speak of that illustrious *Genoise*, who first framed an Idea of the Possibility of the thing; and then formed for many just and powerful Arguments in Support of his Notion, as brought over to his Opinion the most able and learned Men of his Time, even before he had demonstrated by his first Attempt, that it was not possible only, but practicable; and this too in spite of the many Prejudices that were raised against it. In treating of his Project, and of the Pains it cost him before he could engage any of the Princes of *Christendom* to enable him to undertake the Execution of it, we shall insist more largely; because, though it is a Story that has been often told, yet are there many Circumstances relating to it, which have been hitherto so imperfectly represented, as to take much from the Merit of that great Man, whose Steadiness and Fidelity in performing, were not more admirable than his Wisdom and Penetration in contriving, so glorious an Action.

SECTION II.

The Voyages of DON CHRISTOPHER COLUMBUS.

1. The Family and Character of Columbus.
2. The Stories told to his Prejudice by the Spaniards.
3. Facts which refute these Calumnies, and prove his Project to be the Effect of Study rather than Information.
4. Rejected by the Genoese, and afterwards by the King of Portugal.
5. Proposed to, and accepted by, King Henry VII. of England, though too late.
6. Columbus solicits their Catholic Majesties.
7. The many Difficulties he met with before his Proposals were accepted.
8. He undertakes his First Voyage in the Autumn of 1492.
9. His Crew become mutinous, and oblige him to promise to return, if, in Three Days, they discover no Land.
10. His Arrival in one of the Islands called *Lucayas*.
11. Sails from thence to *Cuba*.
12. Returns to Spain; his Reception there, and subsequent Voyages.
13. The Causes of his Troubles.
14. His Fourth Voyage, Return, Usage, and Decase, May 20. 1506.
15. Remarks on his Conduct, and the remarkable Story of Columbus's Egg.
16. His original Design mistaken, or overlooked, until received and prosecuted by Ferdinand Magellan.

1. *Christophor Columbus*, or, as the Spaniards call him, *Colon*, was descended of an ancient Family in the Territory of the State of *Genoa*. But as to the Time when,

or the Place where he was born, they could not be exactly determined by his Son *Don Ferdinand*, who wrote his Life, and therefore it would be Time lost for us to inquire about

about them. setting down reckon the Fa for the Sea, and began bot when he was for their Skill Parts; where Coasts of a Gu racter of a I of competent in the Mather

2. His strict probably to the People, temp. Spaniards inde he did them, their Country with a View to fitted by the M to be a Point flatter myself, or mine ill bet one *Martin F. Tercera*, had hundred and F and there too by Man's Har out Iron, which Island. *Pedro* had likewise seen the like wrought in the great Canes, v Two Gallons upon; which t the West, and supposed, that brought them of the *Azores* west Winds I *Payal*, certain of *Flores*, with and quite a diff driven also by related, that b believed he saw had sued to the Licence to dis seen every Year had Forty Year there observed not far of, as riner told him which is sup *Velasco* had of and *Vincent D* Return from *Madeira*, for no Discovery t the greatest St That in the Y of the County of *Columbus*, in t from whence h his great Un many Years tr thence to *Mad* carried out to

Matter, viz. that
that this Method

about them. We shall content ourselves therefore with setting down only Certainties; among which we may reckon the Facts following; That he had an early Passion for the Sea, studied Navigation with the utmost Industry, and began both to trade, and make Charts for Sea Service, when he was very young. The Fame of the Portuguese, for their Skill in Maritime Affairs, brought him to those Parts; where he married, settled, and traded to the Coasts of Guiney. He had, throughout his Life, the Character of a Man sober, temperate, grave, and devout, of competent Learning in other respects, and very studious in the Mathematics.

2. His strict Application to these Sciences, joined very probably to the many Relations he had heard from Sea-faring People, temp.ed him to think of making Discoveries. The Spaniards indeed, who, notwithstanding the great Services he did them, envied his Reputation, because he was not their Countryman, have circulated abundance of Stories with a View to make the World believe, that he only profited by the Misfortunes of other Men; and, as this seems to be a Point that has never been thoroughly understood, I flatter myself, that the Reader will not think either his Pains or mine ill bestowed in clearing it up. They tell us, that one Martin Vincent, a Manner, who used the Azores or Terceiras, had told him, that he was once carried Four hundred and Fifty Leagues to the West of Cape St. Vincent, and there took up a Piece of Wood or Timber, wrought by Man's Hand, and that, as far as he could judge, without Iron, which he imagined had come from some Western Island. Pedro Correa, who had married his Wife's Sister, had likewise informed him, that at Puerto Santo he had seen the like Piece driven thither by the Western Winds, wrought in the same Fashion; and, besides, he had seen great Canes, which, in each Knot, might contain above Two Gallons of Water, which he also sent to him to look upon; which being unlikely to grow in the known Parts of the West, and having read of such growing in India, he supposed, that some long and violent Western Winds had brought them thither from thence. The Inhabitants also of the Azores had told him, that strong West and North-west Winds had brought by Sea, upon Graciosa and Fayal, certain Pine-trees; Two dead Men also on the Coast of Flores, with larger Faces than are usual in those Parts, and quite a different Look; and Two Canoes another time, driven also by the Wind. Antonio Lema, of Madeira, had related, that being carried in his Caravel far Westward, he believed he saw Three Islands: And another of that Island had sued to the King of Portugal, in the Year 1484. for Licence to discover certain Lands, which he swore he had seen every Year over-against the Azores. Diego Velazquez had Forty Years before been carried far into the West, and there observed the Seas and Winds such as if the Land was not far off, as he affirmed to Columbus: And another Mariner told him of Land he had seen far West from Ireland, which is supposed to be Newfoundland. Pedro de Velasco had observed the like in his going for Ireland; and Vincent Diaz, a Portugal Pilot, had fancied, in his Return from Guiney, he saw an Island in the Height of Madeira, for which also Search was afterwards made, but no Discovery followed. The Fact, however, upon which the greatest Stress is laid, remains yet untold, and is this; That in the Year 1484. one Alonso Sanchez, of Huclua, in the County of Niebla, died in the Hoofe of Christopher Columbus, in the Island of Terceira, and left him his Papers, from whence he acquired those Lights that directed him in his great Undertakings. This Alonso Sanchez had for many Years traded from Spain to the Canaries, and from thence to Madeira; in his last Voyage from whence he was carried out to Sea, and, after Nine-and-twenty Days Sail-

ing, arrived at a certain Island, supposed to be Hispaniola, where he landed, and took an Observation. He kept an exact Journal of all the Occurrences; and, after a tedious Voyage back, in which he lost Twelve out of Seventeen of his Men, he came to Terceira, where he and the other Five soon after died of mere Fatigue.

3. But that all this, or at least the far greatest Part of it, and particularly the last-mentioned Tale, is pure Invention, appears from hence; that Columbus had perfected his Scheme, and actually offered it to his Countrymen the Genese, in 1483. The Reasons he went upon were these: That the Figure of the Earth being spherical, it was highly probable, that the Continent on one Side was balanced by an equal Quantity of Earth on the other. That the Portuguese having already discovered, first Islands, and then a vast Tract of Country, by sailing East, it was highly likely, or rather in a manner certain, that, by sailing West, it was equally possible to reach other Islands, and the other Side of that Continent; that this would be a new Discovery, of equal Value with that which then made so great a Noise; and that there was the greater Certainty of it, since it had been observed in the Cape de Verde Islands, that the Winds blew for a certain Season from the West, which must be owing to a great Tract of Land on that Side. It is evident enough from these Reasons, that his Project was to sail round the World, and so the very best Writer on this Subject says it down; which is the Reason that we place him among the Circum-navigators: For though he did not himself surround the Globe, yet he was, for aught we know, the first who thought it practicable, who attempted it, and who pointed out the Way by which it was afterwards effected, as will be shewn in its proper Place.

4. The State of Genoa rejected his Proposal, as being beyond their Power, and likely to draw upon them the Resentment of several Princes. He next proposed his Scheme to the King of Portugal, John the Second, in whose Dominions he had resided for some Years: Commissioners were appointed to treat with him, who, when, by provoking with Objections, they had drawn out of him all they could, advised the King to fit out a Vessel, and to send it to try if the thing was practicable; whereby they meant to rob Columbus both of the Honour and Advantage resulting from the Discovery. The Design miscarried, through the want of Courage and Conduct in Persons employed; but Columbus, finding out the Trick, was exceedingly incensed, so that though the King of Portugal would have treated with him a second time, being himself a better Judge of such Projects than any other Prince of his Age, yet he declined it, and resolved to apply elsewhere.

5. This was in 1485. In the same Year, having fully instructed his Brother Bartholomew in his intended Project, he sent him into England, with Directions to apply himself to Henry VII. who was justly reputed one of the wisest Monarchs in Christendom, in hopes that he would embrace a Proposal manifestly tending to his Profit; and in the mean time he prepared himself to go into Spain, on the same Account. Bartholomew Columbus was so unfortunate as to fall into the Hands of Pirates, who stripped him of all he had. On his coming into England in this poor Condition, he fell ill of a Fever; and, when he recovered from that, he spent some time in making Maps, and selling them, before he put himself into such an Equipage as enabled him to address himself to the King. This however he did in 1488. was well received, and actually entered into Agreement with that Prince, in the Name, and on the Behalf, of his Brother, several Years before he closed with their Catholic Majesties, as his Son tells us in his Life. By virtue of this Agreement, it should seem that our Title to the new World is prior to that of Spain. This

* Herrera, Oviedo, Gomara, I di Barros, P. Martyr. — * The Royal Commentaries of Peru. Purchas's Pilgrims, Vol. IV. p. 1514. — * The Author here meant is Peter Martyr, who wrote at the very Time, and in a manner from Columbus's own Mouth. In his EXAMEN Epistle, addressing himself to Two of Columbus's Patrons, he uses these Words: "Attollite mentes, sapientissimi duo benefentes; audite novum inventum. Meminitis Colonom Ligurum intellisse in castris apud Reges, de percurrendo per oceanos. Antipode, novo Terrarum Hemisphaerio" "meminitis oportet. Qua de re vobiscum aliquando actum est. Nec sine vestro, ut arbitror, consilio rem hic aggressus est." This demonstrates the true Intention of this great Man, and evidently shews, that he did not derive his Notions from the hearsay Evidence of such Seamen as he conversed with, but from the Consideration of the Globe itself, and the Harmony observed throughout in what was perfectly known; from whence he rightly inferred, that the want of such Harmony in any Point of View, was an Argument, that the Whole was not entirely discovered; and that whatever was requisite to establish that Harmony, was most likely to be the Part concealed. — * There is another Account given of this Matter, viz. that Care was taken the Design should miscarry, in order to discredit Columbus, because it was not the Interest of the Portuguese that this Method of Discovery by the West should be pursued. — * Hackluit.

is arguing in their own way; and, if they plead the actual Discovery of the Islands in Bar to us, I shall hereafter shew, that we may plead the same thing with respect to the Continent against them. But the Business is now to prosecute, in few Words, the Story of Columbus.

6. On his going into Spain, he first conferred with one of the ablest Pilots in that Country, whose Name was *Martin Alonso Pinçon*, who readily apprehended the Force of his Arguments, and agreed to go with him, in case he could bring his Design to bear. He next addressed himself to a *Franciscan Friar*, *Juan Perez de Marcheno*, famous for his Skill in Cosmography, whom he likewise brought over to his Opinion, and to whose indefatigable Labours he was much indebted for all the Success he met with in the Prosecution of his Design. By this learned Monk he was recommended to the Two greatest Noblemen in Spain, *Don Henriquez de Guzman Duke of Medina Selenia*, and *Don Lewis de Cerda Duke of Medina Celi*, who might, if satisfied with his Proposals, have employed him on their own Accounts. But they were so distrustful of him as an Italian Projector, and one who had already treated with several Potentates on this Subject, that they would not consent to his Desires, or undertake the Expedition at their own Expence. Yet the Gravity of his Behaviour, the Strength of his Arguments, and the Uprightness of his private Life, induced them to shew him great Respect, and even to countenance his Application to their Catholic Majesties, *Don Ferdinand*, and *Queen Isabella*, who were then engaged in driving the *Moor*s out of Spain, and who, of all Princes, were most likely to encourage a noble and generous an Undertaking. His old Friend *Friar Juan Perez de Marcheno* assisted him also in this Application, and furnished him with Letters of Recommendation to the Queen's Confessor, *Friar Ferdinand of Talavera*, a Man of great Learning and Piety, and one who had the Ear of their Majesties to a great Degree; by whom he was very kindly received, and promised all the Assistance he could expect for the furthering him in his Applications; in which the Confessor kept his Word religiously, and never left soliciting on his Behalf, till he brought the Matter to bear.

7. It was in the Year 1486. that he began his Negotiations with their Catholic Majesties; which he did by presenting to them a Petition, setting forth the Nature of his Design, the Advantages that would flow from it, and the Reward he expected, in case he succeeded. The Singularity of the Project, joined to the plain Appearance of the Man, whose Circumstances were distressed, did not contribute to his meeting at first with so much Favour as he expected. However Columbus persisted in his Applications, and even procured some, who were near the Person of the King, to present him with a Discourse of his, in which his Project was more largely explained; which yet wrought no great Effect. There were however some grave and thinking People, who had a better Opinion of Columbus's Design; and amongst these was *Don Alphonso di Quintanilha* Auditor of the Revenue, who very kindly supplied his Necessities, entertained him constantly at his Table, and encouraged him still to remain about the Court, though he grew visibly uneasy at the Usage he received at being scornfully treated as a Foreigner, used with Contempt on the Score of his Poverty, and often upbraided with the Vanity of his Projects; which bore sometimes too hard upon him, that he twice resolved to quit a Court where he had been so ungratefully treated, intending, the first time, to have gone over to England, to see what Success his Brother *Bartholomew* had met with, and proposing, at last, to offer his Discovery to the Crown of France. But his Friend the Auditor, with great Difficulty, restrained him; and, having procured him Admission to *Pon Pedro di Gonzales di Mendoza* Cardinal Archbishop of Toledo, who relished his Discourses, his Affairs began to have a better Aspect: And *Queen Isabella* interceded heartily on his Behalf. Two Obstacles only remained to be overcome: The first was, the finding Money for defraying the Expences of this Expedition; which, though it amounted to no great Sum, yet were their Catholic Majesties Treasures so much exhausted, that some Writers say, the Queen offered to

pawn her Jewels to make up the Money. However this was soon removed; for *Don Lewis di St. Angelo*, an Officer in the Revenue, advanced the best Part of it. The other Obstacle was Columbus's Demands, which were thought very high, he insinuating to be Viceroy and Admiral of the Countries and Seas he should discover, and to have the Tenth of the clear Profits that should redound to their Majesties from his Labours; which at last he obtained, and the Articles of Agreement were signed at the little Town of *Santa Fe*, in the Kingdom of *Grenada*, on the 17th of April 1492.

8. These Preliminaries being thus adjusted, the necessary Preparations were made for his Voyage. In order to this, he had Three Vessels assigned him, the Admiral, called, before he had her, the *Gallega*, but by him named *Santa Maria*, a Carack, or Ship with a Deck. The Second was called the *Pinta*, commanded by Captain *Martin Alonso Pinçon*, his Brother *Francois Martinez Pinçon* being Master. The Third was named *Niña*, of which *Vicent Yanez Pinçon* was Captain and Master, who furnished one half of Columbus's Share of the Expence, which, by the Agreement, was to be a Fourth of the Whole. These Two were Caravels or Carvels, that is, Vessels without Decks; and all Three Ships carried about 120 Men: *Herrera* indeed says but Ninety, in which he not only disagrees with other Historians, who wrote from good Memoirs, but also from *Peter Martyr*, who wrote at the very Time the thing happened, and from his own Knowledge. All Things being ready by the latter End of July, Columbus repaired in Person to *Palos*, where he embarked on board the Admiral of his little Fleet, and, having a fair Wind, put to Sea on Friday the 3d of August 1492. The next Day the Rudder of the *Pinta* proved loose, which they fastened as well as they could with Cords, which however did not preserve it long; and this determined them to put into Port. Some of the Seamen would have interpreted this as an ill Omen; but Columbus told them, No Omen could be evil, where People went upon a good Design. He likewise took a great deal of Pains to instruct them in the Principles of Navigation, and to give them right Notions of the Undertaking in which they were embarked, in order to keep up their Spirits.

9. On the 11th they had Sight of the *Canaries*, where they stay'd till September the 6th, refreshing themselves at the little *Comera*; but went off then for fear of the *Portuguese*, who had manned out Three Caravels to take them. September the 7th they lost Sight of Land, and with it their Courage too, a great many of them taking their Leaves of this, and expecting to be soon in another World. Columbus comforted these Cowards as well as he could; and, to do it effectually, was oblig'd to cheat them in his Reckoning, making them believe they were not so far from Home, as indeed they were. On the 14th they took notice of the Variation of the Compass, which was the first time that Phenomenon had fallen under Observation. On Sunday the 16th they saw Gulls and Herbs floating on the Water, and some small Animals (Grasshoppers) alive among them; which made some of them believe they should see dry Land once more, and that quickly. The 19th and 20th these Prelages continued; besides which, they saw some Sea Fowl; all which, put together, considerably raised their Expectations. All this while the Wind favoured their Voyage; but on September the 22d it came cross at S. W. And now the *Spaniards* began heartily to repent them of their rash Attempt, in venturing so far from Home; and therefore expecting to become a Banquet to the Fishes in a very little time, they storm'd at their Admiral, upbraiding him that he had brought them thither, not sparing the very King and Queen themselves in their Passion, as Persons too easy and credulous; charging them with Indiscretion in listening to such wild Proposals, and sacrificing their Subjects, at the Motion of a *Genoise*, upon such trivial Occasions. As to Columbus, they told him plainly, That if he would not tack, and make homewards again, he should go overboard without more to do; for they were resolv'd to shift for themselves, and save their own Lives, if they could. The Admiral returned them good Words for bad, and answered their insolent Threatnings of the Ralible

with fair Promises of great Rewards, upon Condition of a little more Patience. And though he made shift to cheat them into a little good Humour, by crying out Land, on the 25th of September, yet that Calm was quickly succeeded by a more outrageous Storm than before: The Result of which was, that after some farther Trials Columbus was forced to promise to return, if they discovered no Land in Three Days time, this being the utmost Space that the mutinous Sailors would allow him.

10. The first of those Days he found, by the Sun-setting, that Land was near; upon which they contracted their Sails; and the very same Night they saw Light. About Two Hours after Midnight, *Rodrigo di Triana*, one of the Company, discovered Land: This was on *October* the 11th, *A. D.* 1492. which they found to be an Island of Fifteen Leagues Compass, and is one of the *Lucayas*, called by the Inhabitants *Gayebani*, or rather *Guanabani*; but by them *San Salvador*, being about 950 Leagues from the *Canaries*. Here they went ashore, and, having sung *Te Deum*, they took solemn Possession of the Place, in the Name of their Catholic Majesties, King *Ferdinand*, and Queen *Isabella*. The Natives thought them to be very strange People, and much more wondered at their Ships, which they believed to be great Animals. The *Spaniards* gave them Caps, Beads, and other Toys, which they paid themselves for in most valuable Things. These People were naked, of a middle Size, well-proportioned Bodies; their natural Complexion of an Olive, but painted with other Colours, according to their Fancies. They knew not the Use of Iron, nor the Make of Weapons, but innocently laid their Hands on the Edges of the *Spaniards* Swords. Their Isle abounded with Parrots, besides which they scarce saw any other Animals; they trucked for Cotton-yarn, and told the *Spaniards*, that the Gold they wore in Rings at their Nostrils, came from the South, where they would find a Prince whose Subjects were very rich therein.

11. On the 15th of *October* they went to another Island, Seven Leagues from thence, which they called *Sta. Maria de la Concepcion*. The 17th they went to *Ferdinanda*, the Women of which Place had only short Cotton Coats, from the Navel to the Mid-thigh, to cover their Nakedness. After this they came to another Isle, which they called *Isabella*; of which, as of all others, they took solemn Possession; and, in all these Places, carried it justly and honestly towards the Natives. They proceeded hence to *Cuba*, which the *Indians* told them, afforded Gold and Pearl, besides other rich Commodities. Two *Spaniards*, and as many *Indians*, were here sent to search the Country; and, lighting on an *Indian* Town of about Fifty Houses, they were well treated there, the *Spaniards* being honoured with Incense as they went along, as if they had been Deities; which the simple *Indians* indeed did almost believe, tho' Experience soon made them wiser. Here they saw Cotton grow of itself, with several Sorts of strange Birds and Trees: But the Commodity the *Spaniards* most minded, was the Gold which they saw the *Indians* wear in their Noses, about which they were curious to ask Questions. To which the *Indians* honestly answered, *Cubanacan*; that is, they had it out of the Midst of *Cuba*; that the *Spaniards* thinking, (because of that Term *can*) that they had talked of the Great Chan of *Catbay*. *Alonso Pinzon* left Columbus here, who quickly after went himself in quest of *Hispaniola*, which the Natives at that time called *Hayti*. They took here a Woman, a Native of the Island; and, treating her well, she became a serviceable Agent on their Behalf, with the rest of the Natives: So that, at last, there was a very good Correspondence established between the *Indians* and *Spaniards* there, the King of the Place inviting Columbus to come ashore. A Fort was built upon this Island, to maintain the *Spaniards* Pretensions and Authority, in which Thirty-eight Soldiers were left: And, after this Business done, Columbus made Provisions for a Voyage homeward, charging the *Spaniards* to carry it obligingly to the *Indians* and their King.

12. He sailed on *Wednesday* the 17th of *January*; and tho' he met with great Storms in his Passage, yet he arrived

on the 15th of *February* 1493. at the Island of *St. Mary*, one of the *Azores*, and soon after returned to *Spain*, where he was very kindly received by the King and Queen, who caused him to sit in their Presence, the highest Honour a Subject could receive in *Spain*. It is to be observed, that, on his Return from this first Voyage, Columbus himself was of Opinion, that the Countries he had discovered, were Islands on the other Side of the Continent to which the *Portuguese* traded; and this it was that determined him to bestow on these Islands the Name of the *West Indies*. To preserve the Memory of this Discovery in case he had been shipwrecked, he, in his Passage Home, wrote an exact Account of every thing, wrapt this Memorial in a Cerecloth, and put it into a Barrel, which he threw into the Sea. From the same Motive, after he came back to *Spain*, he drew a very exact Chart of his Discoveries, and left it with his Sons. The Success of this first Voyage engaged their Catholic Majesties to send him back in the Autumn of the same Year, with a Squadron of Eighteen Sail, very well equipped, with which he made farther Discoveries, which served to confirm him in his former Opinion, that he had really found a new Passage to the *Indies*. But in his third Voyage he gained some Knowledge of the Continent, and, hearing that there was a Sea on the other Side, he readily owned his Mistake, declaring, at the same time, it was his Opinion, that there was a Passage from these North Seas into those on the South, and from thence it might be very possible to sail to the *East Indies*. This was certainly the highest Proof that could be given of his Sagacity and Penetration, and fully justifies our placing him at the Head of the Circumnavigators; since it is evident from thence, that such a Passage round the Globe was the Thing he principally sought and intended. With good Reason, therefore, did the ingenious Mr. *Boyle* observe, that we are little less indebted to Columbus for the Discoveries made after his Death, than for those made by him while living, since they all followed from the Principles by him laid down, and were the Improvements of that Doctrine, which first, with great Prudence, he devised, and afterwards executed with wonderful Success*. We may likewise hint, that some of those Discoveries in the Art of Navigation, which are thought of much later Date, were not unknown to him, particularly the constant Motion of the Sea from East to West, of which he took notice in his first Voyage, and explained from thence the Difference between the Time spent in going out, and in returning Home.

13. There never was, perhaps, a Man better qualified for the great Designs he undertook, than *Christopher Columbus*; but the Gravity of his Behaviour, and the severe Discipline he maintained while it was in his Power, raised him Enemies amongst a mutinous, licentious Crew; and these Disputes occasioned Appeals from both Parties to *Spain*; whereupon one *Francis Bobadilla* was sent over to inquire into these Matters, and to do Justice, according to the Light in which Things should appear to him. This Man, to gratify a Bishop, who had taken some Pique to Columbus, caused the Admiral to be seized, together with his Brethren, put them in Irons, and sent them in that Condition into *Spain*.

14. They arrived at *Cadiz* the 25th of *November* 1500. and as soon as their Catholic Majesties were informed of the Treatment the Admiral had met with, they ordered him to be set at Liberty, expressing great Concern for his Sufferings, especially the Queen, who was his very sincere Friend; but it was a good while before he could procure a new Governor to be sent to *Hispaniola*, which at last, however, he did. When he had carried this Point, he solicited Leave to make a fourth Voyage for Discoveries, which, with much ado, he obtained. It was in this his last going into the *West Indies*, that he first saw the Continent, lying some time at Anchor at the *Bastimentos*. This was in 1502. Some farther Discoveries he made on the same Coast; but before he could thoroughly inform himself of the State of the Country, he was obliged to alter his Course, and steer for *Hispaniola*. Some time he remained there, but at length, new Disputes and Disorders

* This occurs in a Treatise of his, intitled, *Some Considerations touching experimental Essays in general*, wherein he has this remarkable Passage: "It is obvious how much Europe is beholden to Columbus for the Detection of many Countries in America, which were not discovered by him, nor perhaps till long after his Death, because he first informed us knowingly, that there were unknown Regions beyond that vast Ocean, which severs the old World from the new."

arising, he resolved to return back into *Spain*, in order to give their Majesties the best Account he could of those Parts, that this Discovery might be made as advantageous to them as possible. It was towards the latter End of the Year 1504. that he came, for the last time, into *Spain*, where the first News he met with, was that of the Death of Queen *Isabella*, which struck him to the Heart, inasmuch that his Health apparently declined thenceforward. He did not, however, fail to apply himself to the Court, where he met with very indifferent Usage; for though he was treated with great Respect, and had many fair Words given him, yet the Sense he had of the King's Coldness, and of the Ingratitude of the *Spanish* Courtiers, made such an Impression upon him, as, after a few Months Illness, broke his Heart; this happened on the 20th of *May* 1506. at *Valladolid*. As soon as the Court was informed of his Death, Orders were given for his being buried with the utmost Pomp and Splendor. But the Admiral himself had given some Directions concerning his Interment, which served to perpetuate the Memory of his ill Treatment; for he ordered the Irons which he had worn, to be put into his Coffin with him.

15. After his Death, that Spirit of Envy in a great measure ceased, which had pursued him while living, and which he had resisted with a generous Resolution. Of this there cannot be a nobler Instance, than in the famous Story of the Egg. After it was once perceived at Court, that the King was cold towards him, many of the Nobility affected to lessen his Merit, by insinuating that he was rather fortunate than wise, and that his Success was more owing to good Stars, than to good Councils; to which Notions the *Pinsons* contributed not a little, by giving out, that it was through their Skill and Perseverance that the Discovery was made. *Columbus* was one Day given to understand as much, when invited to a public Dinner at Court; and, after having patiently endured this sort of Raillery for a long time without a Word of Reply, he at last ordered an Egg to be brought him; and, shewing it to the Company, asked, If there was any body who would undertake to set it upright upon its lesser End? To which they unanimously answered, That it

was impossible; and that he could not do it himself: Upon this he gravely cracked the Shell, and, by striking it gently on the Table, enlarged the sharp End of the Egg, till it stood upright: They fell a laughing at this, crying out, that any body might have done as much: "I do not doubt it," replied he, and yet none of you thought of it; and thus it was that I discovered the *Indies*. I first conceived the Design of steering that Course, and now every miserable Pilot can find his Way thither as well as I. There are many Things that appear easy when once performed, which before were thought impracticable. You ought to reflect on the *Scot's* I sustained on the score of my Design, before I put it in Execution. It was then a Chimera, a Dream, a Delusion; and now it is what any body might have thought of, and put in Execution." The King, when he was told this Story, was extremely pleased, commended *Columbus* highly, and made no Difficulty of declaring, that he admired the Grandeur of that Spirit, which, at the same time, he endeavoured to bring down.

16. This singular Circumstance of the Egg brings us naturally to the Close of this Section, by inclining us to observe, that what happened to his Discoveries in his Lifetime, fell out with respect to the Improvement of them after his Decease: For whereas *Columbus* always pursued a settled Plan, and, in every one of his four Voyages, prosecuted his original Design of finding a Passage to the *Indies* by the West, the Particulars of which are constantly remarked by *Peter Martyr*, all those who succeeded him, and were employed by their Catholic Majesties to perfect his Discoveries, were led by no other Guide than their Avarice, and had no other Instructions that what they received from the Reports of the *Indians*, who, to be rid of them, were continually founding in their Ears the Riches of distant Countries; at last, however, a Gentleman of *Portugal*, who had studied as well as practised Navigation, resolved to prosecute what *Columbus* had begun, to resume his great Design of surrounding the Globe; and was so happy as to effect this at his first Voyage, though he did not live to reap the Reward of his Discovery.

SECTION III.

The Voyage of FERDINAND MAGLIANES, or MAGELLAN, from the South Seas to the East Indies.

1. *The Country and Character of Ferdinand Maglianes, or Magellan.* 2. *His Reasons for quitting the King of Portugal's Service.* 3. *His Proposals accepted by the Emperor Charles V. Manner of putting them in Execution.* 4. *Arrives on the Coast of Brazil, and is compelled to winter in Patagonia.* 5. *An Account of the Patagons, their Manners, &c.* 6. *Farther Account of them, and the manner in which Two of them were made Prisoners.* 7. *Called by the Admiral Patagons, which Name they retain.* 8. *Magellan sails from Port St. Julian, and discovers the Streights that bear his Name.* 9. *Description of the Ladrões, now called the Marian Islands, and their Inhabitants.* 10. *Account of the Island of Zamal, and its Inhabitants.* 11. *Discovery of the Island of Butuan, its Products and People.* 12. *Various Islands described.* 13. *They arrive at Zubut, and are kindly entertained.* 14. *Description of the Island of Mathan.* 15. *The unfortunate End of Ferdinand Magellan.* 16. *The Island of Chippit described.* 17. *An Account of the great Island of Borneo.* 18. *Their Arrival at Cimbubon, and that Island described.* 19. *Discover the Frauds of the Portuguese in relation to this Navigation.* 20. *Description of the Island of Tidore.* 21. *Their Arrival and Admission to trade at Gilolo.* 22. *Prosecute their Voyage to the Cape of Good Hope.* 23. *Arrive after many untoward Accidents at Seville.* 24. *The Reward of Sebastian Cano, who brought the Ship Home.* 25. *The Importance of the Discoveries made by this Expedition.* 26. *A Day lost in the passing round the Globe, and the Reason of it.* 27. *Many great Seamen attempt passing the Streights of Magellan without Success.*

1. FROM the Time of the Discoveries made under the Catholic King's Commissions, the Portuguese were excessively jealous of their Possessions in the *East Indies*, till at length the Pope interposed, and by a Bull, which had a decisive Authority among Princes of his own Communion, decreed all Countries discovered in the East to *Portugal*, and all such as were found in the West to *Spain*: Yet this rather smothered than extinguished the Flames of Contention, both Princes continuing to listen willingly to any such Proposition, as tended to aggrandize one at the other's Expence; and this begat another Mischief, which

was, that such enterprising Men as were not gratified at one Court, immediately thought of applying themselves to the other; which, whether a greater Inconvenience to these Princes, or Advantage to *Europe* in general, is not easy to be resolved. Amongst those who took this Method of raising their Fortunes, the most remarkable was the famous *Ferdinand Maglianes*, commonly called *Magellan*. He was a Gentleman of a good Family in *Portugal*, and, having, from his Youth, addicted himself to maritime Affairs, he acquired a very great Skill, both in the Theory and Practice of Navigation. He seemed, indeed, to be formed by Na-

ture for great Exploits, having all the Qualities requisite to compose a truly great Man; for, with a Courage which no Danger could affright, he possessed a Calmness of Temper, and a Sweetness of Disposition, which engaged such as conversed with him to esteem and love him. He was naturally eloquent, either in proving what he asserted, or in drawing others from their own Opinions. But, above all, he had a Steadiness of Soul, and a Degree of manly Resolution, which not only enabled him to vanquish the greatest Difficulties, but withal gave such an Air of Success to whatever he promised or undertook, as drew all who heard him to confide in him. These extraordinary Talents, as they would have distinguished him in any Station of Life, so they were remarkably useful in that, by which he acquired immortal Reputation^b.

2. *Don Ferdinand Magellan* had served with great Credit in the *Indies*, under the famous *Albuquerque*, and thought he merited some Recompence for those Services. The Great, however, differed from him in Opinion, and treated all his Applications, not with Coldness only, but with Contempt, which, to a Man of his Spirit, was intolerable. He therefore associated himself with Men of like Fortunes; that is to say, Men of Merit that were neglected, particularly one *Ruy Faleiro*, a great Astronomer, whom the *Portuguese*, out of Hatred, have represented as a Conjuror; and, in Conjunction with him, retired to the *Spanish* Court, and made Propositions, and new Discoveries, to Cardinal *Ximenes*. The *Portuguese* Embassador, who was a Man of Parts, employed all the Pains imaginable to defeat their Design. He solicited the Court to deliver them up as Fugitives; he got some Persons to inform the Ministry, that *Magellan* was a bold talkative Man, one ready to undertake any thing, but who wanted Capacity and Courage when it came to Performance. But underhand he caused Application to be made to *Magellan* himself, offering him Pardon, and great Rewards, if, desisting from his present Purpose, he would go back, and serve his own Prince. All this, however, signified very little; for these People expressed themselves to the *Spanish* Ministry, who were now very able Judges in these Matters, in such clear Terms, and with so much Probability as to the Discovery they proposed, that they were immediately received into Favour, made Knights of the Order of *St. James*, and had their own Terms granted them.

3. The Grounds they went upon were these: That the Position laid down by *Columbus*, of the Possibility of coming to the *East Indies* by sailing *West*, was certainly true, though he had not brought it to bear; and that such as derided that great Man's Notion, were not so well skilled in Navigation as he; that, without Question, it was very possible to sail from the *South Sea*, which was but just then heard of, to the *Molucca Islands*; and that it was very probable, a Passage might be found into those Seas, through the *Rio de la Plata*, or some other Opening upon that Coast; that, in case this could be done, *Spain* might reap the Profit of both *Indies*, since this Discovery being made from the *West*, would fall expressly under the Words of the Pope's Bull. In consequence of these Proposals it was agreed, that the Undertakers should have the Twentieth Part of the clear Profits; that the Government of any Islands they should discover, should belong to them and their Heirs for ever, with the Title of *Adelantados*; and that, farther, the Crown should furnish them with Five Ships, and Two hundred and Thirty-four Men, with Provision for Two Years. This Fleet of theirs consisted of the *Trinidad*, which was the Admiral, having on board *Stephen Gomez*, a *Portuguese* Pilot; the *Santa Vittoria*, commanded by *Don Lewis de Mendoza*; the *St. Antonio*, under *Don Juan de Carthagena*; the *St. Iago*, of which *Don Juan Serrano* was Commander; and the *Conception*, under *Don Gaspar de Quesada*. The Number of their Men, according to some Authors, was 237: But most Writers make them 250, among whom there were Thirty *Portuguese*, and upon these the Admiral chiefly depended. In point of Skill he greatly relied on *Don Juan de Serrano*, who left the King of *Portugal*'s Service in the same manner that *Magellan*

himself had done, after having served many Years in the *Indies*, and some Part of the Time in the *Moluccas*, of which they were now going in Search. Great Hopes were conceived of this Voyage, from the known Experience of the Commanders; But the Secret of it remained closely locked up in the Bosom of the Admiral, who declared no more to the rest, than that he was fitted out to discover new Countries, which, as it implied in the Opinion of his Companions; that they were going to fetch Home Gold, and other Riches, filled them with swelling Expectations, so that they left *Seville* with the most cheerful Courage.

4. They sailed from *Seville* the 10th of *August*, A. D. 1519. and *October* the 3d arrived between *Cape Verd*, and the Islands of that Name; they spent a great deal of Time about the Coast of *Guiney*, and by tedious Calms, which lasted Seventy Days, were so long labouring to cross the Line. But when they had done this, and the South Pole appeared above the Horizon, they held on their South Course, and came upon the Main of *Brazil*, about that Part of it which lies in 22 Degrees. They observed it to be all one continued Tract of Land, higher from the *Cape St. Augustin*, which is in this Part of the Country. They found good Store of Fruits, Sugar-canes, and divers Sorts of Animals, out of all which they had liberal Entertainment. Having made 2½ Degrees more of South Latitude, they fell in with a Country inhabited by a wild Sort of People: They were of a prodigious Stature, fierce, and barbarous, made a horrible roaring Noise, more like Bulls than human Creatures; and yet, with all that mighty Bulk, were so nimble and light of Foot, that none of the *Spaniards* or *Portuguese* could overtake them. Here was a fine River of fresh Water, that had Seven Islands in the Mouth of it, and was full Seventeen Leagues wide in that Part. The biggest of those Islands yielded them some Jewels, and they gave it the Name of *St. Mary*. They continued coasting along this Tract of Land towards the South Pole, and met with a Couple of Islands so full of Seals and Penguins, that, in an Hour's Space, they could have laden all the Five Ships. The Penguins are a black, heavy, unwieldy Fowl, extremely fat, covered over with a sort of Down instead of Fevers, and armed with a Bill like a Raven's; they maintain themselves altogether out of the Waters, eating nothing but Fish: Their next Advance was to 49½ Degrees South Latitude; here they were shut up by hard Weather, and forced to take up their Winter Quarters for no less than Five Months.

5. They passed their Time in this Place but very unpleasantly, and for a long time believed, that the Country was uninhabited: But at length they were undeceived as to this Point; for a Savage of the neighbouring Parts came up to give them a Visit; a brisk jolly Fellow, very merrily disposed, singing and dancing all the Way as he came: Being got to the Haven, he stood there, and threw Duct upon his Head; which they observing, sent some ashore to him, who making the like Signs of Peace, upon that Assurance he came along with them to the Ship, without any thing of Fear or Scruple. His Bulk and Stature was such, as would easily allow him the Character of a Giant; the Head of one of their middle-sized Men reached but to his Waist, and he was proportionably big: His Body was formidably painted all over, especially his Face; a Couple of Stags Horns drawn, one upon each Cheek, and great red Circles about his Eyes; his Colours were otherwise mostly yellow, only his Hair was white. For his Apparel he had the Skin of a Beast clumsily sewed together; but a Beast as strange as that was that wore it, every way unaccountable, neither Mule, Horse, nor Camel, but something of every one, the Ears of the first, the Tail of the second, and the Shape and Body of the last. 'Twas an intire Suit, all of one Piece from Head to Foot: As his Brest and Back were covered with it above, so his very Legs and Feet were wrapped up in the same beneath. The Arms that he brought with him were a stout Bow and Arrows; the String of the former was a Gut or Sinew of that monstrous Beast; and the latter, instead of Iron Heads, were tipped with sharp Stones. The Admiral made him eat and drink, and

^b The utmost Pains has been taken to give this Expedition in the clearest manner possible, by comparing all the different Relations of the *Portuguese* and *Spanish* Writers; but, after all our Care, we cannot but regret the Loss of the large History of it by *P. Martyr*, which was burnt in the Stack of *Rome* by the Countess de *Bourbon*.

he enjoyed himself very comfortably on Ship-board, till he happened to peep into a great Looking-glass, that was given him amongst other Trifles: This put him into a Fright, which he could not easily recover; so that, starting back with Violence, he tumbled a Couple of the Men, that stood by him, to the Ground. However, this Giant fared so well amongst them, (notwithstanding the Fright by the Looking-glass) that quickly after they had the Company of more; particularly one came, and made himself mighty familiar, carried it pleasantly, and with so much good Humour amongst them, that our Europeans were also pleased with his Company. He gave them a Sight of one of those Beasts whose Skins they wear; but we have, in this Account, nothing of any particular Description of it added, to justify or disprove the former Surmises about it.

6. The General was desirous of making some of these gigantic People Prisoners; and, in order to it, his Crew took the following Method: Their filled their Hands with Toys, and little Things that pleased them, and, in the mean time, put Iron Shackles upon their Legs, which they thought were very fine Play-things, as well as the rest, and were pleased with the jingling Sound of them, till they found how they were hampered and betrayed: But then they tell a bellowing like Bulls, and implored the Help of *Setebos* in that Extremity; they cried aloud for his Assistance, but he did not come to deliver them; and what Power it is they give that Name to, they best know. To desire his Help in Misery, implied some Notions conceived of his Goodness and Compassion; and 'tis not to be imagined, that they would thus crave Relief of an evil Spirit that used to vex and afflict them. It must be owned, that they report very strange Things of horrid Forms and Appearances frequently seen amongst these People; of horned Demons with long Shag Hair, throwing out Fire both before and behind; but these seem to be Dreams or Fables. This Account goes further as to the Inhabitants, and reports, that most of these People wear the same Sort of Apparel that the first appeared in, that is, the Skins of the fore-mentioned Beast: They go with their Hair short; yet that there is, they tie up with a Cotton Lace. They have no fixed Habitations, but certain moveable Cottages, which they carry from one Place to another, as their Fancy leads them; and the very same Materials which they use for the Defence of their Bodies, they use also for the Defence and Covering of these Cottages: What Flesh they eat, they bestow no Ceremony of dressing upon; but devour it fresh and raw as it comes to their Hands: Besides which, they have a certain sweet Root amongst them, called *Capar*, which is a considerable Part of their Food. They add also, that they are extremely jealous of their Women; but they don't tell us they saw any of them.

7. Amongst them the Practice of Physic is reduced into a very narrow Compass, and takes in no more than Vomiting and Phlebotomy: These Two Evacuations must answer all Varieties of Cases and Purposes; and, where this won't do, the Disease is incurable in that Land. Their way of Bleeding is to give a good Chop with some Edge-Tool or other in the Part that is affected, be it Leg, or Arm, or Face. But though 'tis odd to use a Chop-knife instead of a Lancet, for letting Blood, yet it is more so, to thrust an Arrow, a Foot and an half down the Throat, to procure a Vom. No doubt but this will prick the Fibre, and fit a Man reaching to some Purpose. These Folks are very strong: When they made the Attempt of taking some of them Prisoners, one alone very near tired the utmost Force of Nine of their Men that were employed to master him; and though they had him down, and bound his Hands tightly, yet he freed himself from his Bonds, and got loose, in spite of all their Endeavours to hold him. And, proportionable to their Strength, is that also of their Appetite: One of them eat up a whole Basket of Ship-Biscuit at a Meal, and drank a Bowl (they don't say how large) of Water at a Draught; but any thing of this kind is not so very strange, considering the large Carcases they have to maintain. One thing of them (which is something singular) is not to be omitted before we leave them; and that is, that, by reason of the vehement Cold, they truss themselves up to very close and tight, that the Genitals in the Men are not to be discovered,

lying hid intirely within their Bodies. The Admiral gave these People the Name of *Patagons*, and took notice of these few common Words: They call Bread, *Capar*; Water, *Oli*; Black, *Anel*; Red, *Cheibe*; Red Cloth, *Checcai*, *Setebos*, and *Cheleule*, are the Names of Two Beings they pay a religious Respect to; of which the former is the supreme, the latter an inferior one: But whether they are proper Names, or only their Terms for a higher and subordinate Power in general, is not certain.

8. The Port they stay'd in these Five Months was called Port *St. Julian*; of which, as of the whole adjoining Country, they took solemn Possession, and left a Cross erected in Token of it; because it was the Beginning of *October* by that time they got up to the *Cape de Verd* Islands, and they were detained so long by the Calms, that they made it *December*, before they crossed the Line. But the main Reason of their staying so long here, was a Conspiracy that broke out among their Crew, not only some of the common Men, but some of the Captains also, and particularly Captain *Mendoza*, upon whom the General chiefly depended. The General acted in this Affair with great Spirit and Courage; for, having subdued the Conspirators, he brought them to a Trial for plotting against his Life, hanged *Levas de Mendoza*, and some few, who were most guilty; and left Captain *Juan de Caribegena*, and some others, who were not quite so deep, amongst the *Patagons*. The Weather growing fine, and the Crew once more brought into Subjection, *Magellan* thought it high time to pursue his Course; and which accordingly he did, till he arrived in 51 Degrees 40 Minutes South Latitude. Here they found a convenient Port, and met with good Provisions of Fuel, Fish, and fresh Water; they lingered away at this Place Two Months more, and then came to 52 Degrees South Latitude, where they discovered the Entrance into the Straights. They found them about 110 Leagues in Length, and as for the Breadth very uncertain, in some Places very wide, in others not more than half a League over; the Land on both Sides high and uneven, and the Mountains covered with Snow. When they came to the End of it, they found an open Passage into the great Ocean. *Magellan* was surpris'd at the Sight, with a Joy that exceeded all common Bounds; for this was the happy thing he looked for, and now he was able to demonstrate his sailing round by the West. The Point of Land from whence he first saw this desirable Prospect, he called, in Memory of it, *Cape Desiderato*; but it seems it was not so desirable to all the rest of the Company; for here one of the Ships stole away, and sail'd homeward by herself. They entered the *Pacific Sea*, for so they called it, *November* the 28th, *A. D.* 1520, and in this wide Ocean they sail'd Three Months and Twenty Days, without Sight of Land. The Miseries they endured for want of Provision, a good Part of this Time, were such as are seldom heard of; the fresh Water they had on board stunk, and was very loathsome; all their Bread was gone, and nothing left to eat but Pieces of Skins, and Bits of Leather. Nature will make any Shift, though ever so hard, to bear herself out in a Distress, when 'tis possible to be done; and the poor Seamen here, rather than starve, fell very greedily to work upon those dry tough Pieces of Leather that were about the Ropes of the Ships. But it being impossible to eat them, till they were some way softened, and fitted for chewing, they laid them as steep in salt Water for some Days, and then made the best of them, as long as they lasted. But then again, what with this impure sort of Feeding, which was but scanty too, and the daily Impoverishment of their Spirits wanting better Recruits, their Number shortened apace: Some died outright, others fell into pining Sickne's, others had their Gums grew quite over their Teeth on every Side, by which means being totally unable to manage those tough Solids they were forced to feed upon, they were past all Help, and so miserably starved to Death. Their only Comfort, under all these diastel Circumstances, was a Constancy of fair and good Weather. The Winds blew them smoothly and gently along, and, while they were thus exposed, the Sea was calm and quiet too, and by this got the celebrated Name of *Pacific*. In all this Time they saw nothing but Two uninhabited Islands, that gave no Prospect of any Relief. The Needle of their Compass varied sometimes,

and, at others, moved so irregularly, that they were often forced to quicken it with a fresh Touch of the Load-stone. The South Pole they found to have no very remarkable Star near it, as the North has: There are Two Clusters of small Stars, and are separated from each other at a small Distance; between those are a Couple of Stars, not very large or bright, which discover themselves, by the Smallness of the Circle they describe, to be pretty near the Pole, at least the nearest of any that are discernible. At the Distance of 20 Degrees from the South Pole they saw an Island of exceeding Height, called *Cipangua*, and at 15 Degrees another as high, the Name of which is *Sumbdiu*. They sailed in one Gulph at least 4000 Leagues; and, having made, by their Reckoning, 120 Degrees Longitude from their first Departure, they found they drew towards the Equinoctial. When they had passed that Line, and were got to 13 Degrees North Latitude, they designed for the Cape, called by the old Geographers the Cape of *Coitigara*; but this they missed, going upon that old Account of the Latitude of it, which places it thereabouts; and came to understand afterwards, that it lies in 12 Degrees.

9. *March 6.* they fell in with a Cluster of Islands, being then in 12 Degrees North Latitude, and 146 Degrees Longitude from their first setting out: Here they went on Shore to breathe and refresh a little after all the Fatigues of their tedious Voyage through the South Sea. But the thievish People of those Islands would not let them be quiet. While they were reposeing themselves ashore, the other would be pilfering and stealing things out of the Ships, so that 'twas impossible for them to enjoy themselves in any measure, till they had taken some Course to deliver themselves from these Disturbers. They marched therefore with a small Party, pretty well armed, up into one of the Islands, burnt some of their Houses, and killed some of the Inhabitants; but this Correction, though it might awe them for the present, yet could not mend their Disposition; but they that were Thieves, would be Thieves still: For which Reason they resolved to make no longer Stay there, but find out some other Place where they might enjoy more Safety and Quiet. Amongst these People there is not the least shew of any Order or Form of Government, but every Man does what is agreeable to his own Humour and Inclination: Nay, considering how universally that thieving, cheating Disposition prevails, 'tis next to impossible there should be any thing of that kind; for the governing Part would never fail to transgress the Laws of Justice and common Honesty, as much as the rest; and the Inferiors would never bear to be curb'd and punished by those that they saw do the very same things, and set such an Example before their Eyes; so that the general Corruption of their Manners will necessarily keep them all upon a Level, and establish a perpetual Anarchy among them. The Men go entirely naked, not discovering any thing of that common Modesty which obtains amongst the most barbarous People, to bestow some Covering upon the obscene Parts: That Distinction indeed ceases here, all Parts being equally exposed to View. Their Hair is very black, both on their Heads and Beards; the former being generally very long, and reaching down to their Waists. They anoint themselves all over with the Oil of the Cocoa, but their natural Complexion is olive: They colour the Teeth black and red; and some of them wear a Bonnet, made of the Palm-tree, upon their Heads. The Women are much better favoured than the Men, and more modest too; they all wear Coverings made of the inner Bark of the Palm-tree; their Hair black, thick, and long, and ready to run upon the Ground: They commend them for very careful, industrious Housewives, spending their Time at a much better rate than the Men do; for, whilst these are pilfering abroad, the others are making Mats and Nets of the Palm-tree at home; but, of both Sides, the Work goes towards the Furnishing the House: These Houses are built of Timber, covered over with Boards, and large Fig-leaves, and divided into several Apartments: Their Beds are the Palm-mats, laid one upon another; and the Leaves of the same are instead of Sheets and Blankets: They have no Weapons but Clubs, and long

Poles, upon which they put Heads of Horn: Their Food are Coconas, Bananas, Figs, Sugar-canes, Fowl, and Flying-fish: Their Canoes are oddly contrived and patched up; yet will they sail with them at a very great rate: The Sails are made of broad Date-leaves sewed together; instead of a Rudder, they use a large Board, with a Staff at the Top; and may, when they will, make the Stem the Forecastle, or tie the Forecastle the Stem: They are always painted over, either black, or white, or red, some one Colour, and some another, as they like. These People are mightily taken with any little thing that is new, and agreeable to their Humour: When the Spaniards had wounded several of them with their Arrows, nay, pierced them almost through and through, these being strange Things to them, they would pull them out of their Wounds, and hold them in their Hands, staring at them till they dropt down dead; and, after all, though they had been so roughly handled, yet they would follow the Ships, as they were going away, to gaze at them, so that they had at one time 200 of their Canoes pressing about them, as near as they could, to behold those wonderful Contrivances.

10. *March 10.* they landed upon the Island of *Zamala*, which is 30 Leagues from the *Ladrones*; and the next Day they went ashore at *Humuna*, an Island not inhabited, yet well deserving to be so: Here they found Springs of delicate clear Water, abundance of Fruit-trees, Gold, and white Coral. The Admiral called it the Island of *Good Signs*. The Inhabitants of some of the neighbouring Islands came up to them not long after, a People of much Humanity, and good Disposition; very fair and friendly in their Carriage; and appeared to be mighty well pleased at their coming among them: They came laden with Presents of Fish, and the Wine made of the Cocoa-tree, and promised other Provisions in a little time. Since the Cocoa-wine is mentioned, it may not be amiss to shew the various Uses these People put that Fruit to; by which it will appear, how very serviceable a thing it is, and how many of the Conveniences of Life are furnished by it: The Cocoa is the Fruit of a certain Tree like a Date, and supplies them at once with Bread, Oil, and Vinegar, and with Physic too. The Wine is drank from the Tree itself, but all the rest are made from the Fruit; they cut off some Part of a Branch of the Tree, and fallen to the remaining Piece a good large Reed, into which drops a Liquor, like white Wine in Colour and Appearance, and of a Taste gratefully tart: A good Quantity of this, thus drawn forth, and put in a Vessel, is called their Cocoa-wine, without any farther Preparation. The Fruit, which is as big as a Man's Head, has Two Rinds; the outermost of which is green, Two Fingers thick, and full of Strings and Threads, and of these they make all the Cords they use about their Boats; under this Kind there is another, or rather a Shell, being considerably thick and hard; this, burnt and pulverized, is used as a Remedy for several Distempers: To it adheres the Kernel, which is white, and of the Thickness of a Finger; it has a pleasant Taste, almost like an Almond; and, when it is dried, they make it into Bread: In the Middle of this Kernel there is a Hollow, full of a pure limpid Water, and that of a very cordial and refreshing Nature: It will sometimes congeal, and lie like an Egg within the Shell. When they would make Oil, they leave the Fruit to steep in Water, till it putrefies; and then set it over the Fire, and boil it to an Oil; and the Vinegar is only the same Water, exposed for some time to the Sun, which turns it into a Vinegar, like that of white Wine. Lastly, if they mix the Kernel, together with the Water that is lodged in the Cavity of it, and then strain it through a Cloth, they make a good Milk of it. The Cocoa-trees resemble the common Date-trees in all but this, that they are not so rugged and knotty as they are. They will hold out very well 100 Years; and two of them will maintain a Family of Ten People with Wine very plentifully, provided they are used by turns, and each Tree, having been drawn Seven or Eight Days, be allowed as many to recover again, before any more be taken from it. With this Care such a Number of People may drink as much as they will, and the Trees bear them out. But to return to our Con-

¹ These Islands were called by *Magellan*, *Isas de los Ladrones*; and, in the *Latin Relations* of his Voyage, *Insulae Latronum*.

cerns between this People and them: According to their Promise, they came again with other Provisions, and enter'd into a farther Degree of Familiarity and friendly Correspondence with them; they invited the Admiral into their Barks, and were reciprocally invited aboard the Admiral's Ship, where a great Gun being discharged to entertain them, it put them into such Affright, that they were all ready to leap overboard; but good Words and Presents brought them to themselves again, and with much ado they were persuaded to keep out of the Water. The Name of their Island was *Zuluan*, of no very great Compass, but considerable for its Products: They had all manner of Spices in their Barks, Cinnamon, Cloves, Nutmegs, Ginger, and Mace, and several Things made of Gold, all which they carry'd up and down and sold for Merchandize: They were without Apparel, but yet dress'd at a more costly Rate than the *Europeans*, that had it: They had Earings of Gold in each Ear, and several Jewels, fastened, with Pieces of Gold, to their Arms; besides, they had Daggers, Knives, and Lances, that were all very richly ornamented with the same Metal: But though they had nothing of any Garment on, yet they had something of a Covering before, and that of a sort of Cloth very ingeniously made out of the Rind of a Tree that grows amongst them. The most considerable Men are distinguished from the common People by a Piece of silken Needle-work wrapped about their Heads. They are gross-bodied, broad and well-set, of an olive Colour; and this Hue they maintain by constant Unction of their Bodies with the Oil of Cocoa. They departed from this Isle *March* the 25th, *A. D.* 1521. and directed their Course between the West and South-west, sailing between the Isles *Cenalo*, *Hunwangban*, *Hibuffen*, and *Ahorian*.

11. *March* the 28th, they came to the Isle of *Bubuan*; the King of which, and the Prince his Son, gave them honourable Entertainment, presenting them with considerable Quantities of Gold and Spices. The Admiral, in Return, presented the King with Two Veils of Cloth, one red, and the other yellow, made after the *Turkish* Fashion; and some of his Courtiers with Knives, Glasses, and Beads of Crystal. The Admiral sent Two of his Company ashore along with him, of which *Antonia Pigafetta*, who wrote this Relation, was one. When they were landed, the King and his Attendants all lifted up their Hands to Heaven, and then towards the Two Christians, in which Ceremony these also followed them; and this Custom they observed in drinking too. His Majesty's Palace was like a Hay-loft covered with Palm and Fig-leaves, mounted so high upon great Timber-posts, that they were forced to use Ladders to get in. Though they are no Christians, yet, at their Meals, they always make the Sign of the Cross, sitting in the same manner with their Legs as *Taylor*s do. At Night, instead of Candles, they burn the Gum of a certain Tree wrapped up in Palm-leaves: The King and Prince, having entertained them in their several Palaces, and given them noble Presents, dismissed them, but not without new Admiration, and a firm Persuasion now rooted in their Minds, that they were above the Rank of common Mortals, having seen so many strange Things among them; and especially *Pigafetta's* writing, and reading what he had written, which were Mysteries they could not comprehend. In the Isle of *Bubuan*, as they sifted the Earth of a certain Mine, they found great Lumps of Gold, some as big as Nuts, others as large as Eggs; of which Metal were all the King's Vessels for his Table made. The King himself was a very comely Person, his Hair black and long, his Complexion olive, his Body perfumed with sweet Oils, of *Storax* and *Benjamin*, and painted with divers Colours; he had Rings of Gold in his Ears, and on every Finger Three; his Head was wrapped with a silken Veil, and a Piece of Cotton wrought with Silk, and Gold covered his Body to the Knees. He wore a long Dagger by his Side, with a Haft of Gold, and a Scabbard of fine carved Wood. His Country, it seems, is so rich, that one of his Subjects offered a Crown of massy Gold, with a Collar, for Six Threads of crystal Beads: But the Admiral would not permit such Bargains as these, that they might not appear to be too fond and covetous of their Gold. The People are of an active and sprightly Nature;

the Men quite naked, except a Covering of Paint; but the Women go clothed from the Waist downwards, and both wear golden Ear-rings: They are always chewing *Areca*, and lay, they cannot live without it; this is a Sort of Fruit like a Pear, cut in Quarters, and rolled up in the Leaves of a Tree called *Betel*, which are almost like Bay-leaves. As for religious Rites, they had, as far as they observed, no other in Use amongst them, but only to lift up their Faces, and Hands joined together, to Heaven, and call upon their God *Abba*. The Admiral caused a Banner, in which was the Portraiture of the Cross, and a Crown of Thorns with Nails, to be brought forth, and publicly revered by all his Men in the King's Presence, telling his Majesty, it should be set up in some high Mountain in his Country; not only for a Token of good Entertainment for Christians in that Place, but also for his own and Nation's Security and Defence; since, if they devoutly prayed to it, it would infallibly protect them from the Mischiefs of Lightning and Tempest, as well as from other Evils: This the poor Prince promised to do, knowing no better, and glad to be so defended from Thunderbolts.

12. At their Departure from hence, this King's Pilots brought them to the Isles of *Zeilon*, *Zubut*, *Messana*, *Calegban*, of which *Zubut* is the best, and has the best Trade. In *Messana* they found Dogs, Cats, Hogs, Hens, Goats, Rice, Ginger, Cocoa, Millet, Panic, Barley, Figs, Oranges, Wax, and Gold, in great Plenty: This Isle lies in 9° 40' of North Latitude, and 162° of Longitude from their first Meridian. They staid here Eight Days, and then, sailing to the N. W. passed by the Isles *Zeilon*, *Babol*, *Cangbu*, *Barbai*, and *Calegban*, in which last Isle there are Bats as big as Eagles, and that taste, when dress'd, like a Hen; there are also Stock-doves, Turtle-doves, Papijnays, and a certain Sort of Fowl like Hens, which have little Horns, and lay their Eggs a Cubit's Depth in the Sand, where the Sun's Heat hatches them. From *Messana* to *Calegban* is about 20 Leagues sailing to the West; and from *Calegban* to *Zubut* about 50 Leagues, to which they now directed their Course, having the Company of the King of *Messana*, who, out of pure Friendship, went along with them; the Admiral having by many Services secured his Affection.

13. *April* the 7th, about Noon, they entered the Port of *Zubut*; and, coming near the City, fired all the great Guns, which put the Place into a very great Consternation: But all this Apprehension of Danger from the Ships was quickly removed, by the coming of their Embassador to the Town, who assured the King, that it was customary with them to discharge their Cannon, whenever they came in to any great Ports; and that it was a Piece of Respect they always paid to the Governors of Towns: He told him, how mighty a Prince they were Servants to; and that their Design was to find out the *Moluccas*; that they only came to visit him by the Way, hearing of his Fame by the King of *Messana*; and desired him to furnish them with Victuals for the Commodities they had brought. The King bid them welcome; but told them, that it was a Custom there for all Ships that came to pay Tribute; and that he expected the like Acknowledgment from them. This the Embassador positively refused, telling him, that his Admiral was the Servant of so great a King, that as he had never yet, so he would not now begin to make that Acknowledgment to any Prince in the World; and withal, that if he would accept of Peace offered to him, well; if not, he should quickly have his Hands full of the War. A certain Moor, that stood by, told the King, that these were the *Portuguese* that had conquered *Calecut* and *Malacca*; and therefore advised him to have a care how he provoked them. Upon this Consideration, the King concluded to refer the Matter to this Council, and to give them an Answer the next Day, sending them in the mean while Wine and Victuals. The King of *Messana*, who was a very potent Prince, went next ashore, and acted very generously on their Behalf with the King of *Zubut*; the Effect of which was, that the King, instead of demanding, was now almost ready to pay Tribute himself; which they not at all insisting upon, but desiring only Liberty to trade, he cheerfully granted it, and offered to seal the

14. Not Inhabitants vering over great and being pierc as they ple the House. crifices to t they spread certain Pla

Covenant of Peace and Friendship with his Blood. After this, the King of *Messana*, the King of *Zubut*, and his Nephew, came on board the Admiral, brought him Presents, and confirmed the League. The Admiral persuaded them to embrace the Christian Faith, which they did, after some religious Conferences, with Pleasure, being all afterwards baptized. This Example of the great ones influenced the whole Island, so that Christianity was universally received there. When they came to the City, they found the King in his Palace, sitting upon a sort of fine Mat made of Date-leaves, having no Apparel but a Bombazine Cotton about his Waist: About his Head he had a Veil of Needle-work, and about his Neck a very costly Chain, as also stately Jewels in his Ears: He had before him several Porcelane Vessels, some with Eggs, and others full of Date-wine. The Prince entertained them likewise at his Palace; and, for their Diversion, made his Daughters sing and dance naked before them. One of the *Spaniards* dying, they desired Leave of the King to bury him in his Land: To which the King replied very graciously, That since he, and all his, were at the King their Master's Devotion, much more should a few Feet of his Ground be so, in affording a Burying-place to one of his Subjects. These People exercise Justice in their Dealings with one another, keeping to the Use of Weights and Measures. Their Houses are made of Timber, raised high upon Posts, so that they go up by Stairs to them. They talk of a certain Sort of Water-fowl in this Country, as big as a Crow, which they call *Lughan*, which the Whales sometimes swallow down alive, and have their Hearts eaten up by this Bird; by which means many of them are killed, and the Bird is afterwards found alive in the Carcase of the Whale: The Skin of this Fowl is black, but the Flesh good. The *Spaniards* had a very advantageous Bartering with those People, they giving them Ten Petos of Gold (a Ducat and half each) for Fourteen Pounds Weight of Iron, besides all sorts of Provisions for very Trifles. The baptizing of those Princes was performed with very great Solemnity, the Ordinance being all discharged; which the Admiral told the King beforehand, to prevent his being surpris'd. The King of *Zubut* was named *Charles*, and the Prince *Ferdinando*; the former of those Names being the Emperor's, and the latter his Brother's. The King of *Messana* was named *Jahn*, and the *Moorish* Courtier *Christophler*: Besides the Princes and great Men, there were Five hundred of inferior Rank baptized at the same time. All the Idols were broken, and the Crops set up in divers Places, which the Admiral engaged them to pray very devoutly before, Morning and Evening: The Queen was baptized too at the same time, with Forty of her Ladies, and her Daughter the Prince's Wife: She was young and handsome, her Body covered with a white Cloth, and her Head adorned with a sort of a triple Crown made of Date-leaves: After Mat was ended, the King and Court dined in the Admiral's ship, in Honour of whom all the great Ordinance were discharged. In Eight Days time most of the Island became Christians, except one Village of Idolaters, who would not obey the King's Command in this Matter: The *Spaniards* therefore burnt the Village, and erected a Cross upon the Ruins of it; and, to show the good and advantageous Effects of Christianity amongst the People that had embraced it, a very miraculous Cure was wrought upon the King of *Zubut*'s Brother, upon his receiving Baptism. The Admiral, it seems, pawned his Head for his immediate Recovery, if he would submit to this sacred Rite, and break all his Idols. And they who record these Transactions say, that the Admiral did save his Pawn, the Prince perfectly recovering of his Malady soon after he was thus initiated into the Christian Religion.

14. Not far from *Zubut* lies the Isle of *Matban*, the Inhabitants of which go quite naked, except a slight Covering over the Pudenda, at which Part all the Males, both great and small, hang certain Gold Rings, the Skin being pierced for that Purpose: They take as many Wives as they please, one of which only has the Government of the House. They use very odd Ceremonies in their Sacrifices to the Sun; they begin with ringing Bells, then they spread a Cloth upon the Ground, upon which are set certain Platters with Honey, Rice, and roast Fishes. The

Sacrifice they offer is an Hog, and the Managers of the Ceremony are Two old Women, who sing and dance about the Animal, and sound Trumpets made of Reeds. They mumble out certain Prayers to the Sun; and, after several antic and ridiculous Gestures, they pour a Cup of Wine upon the Hog: One of the venerable Priestesses strikes the fatal Blow with a Lance, and then puts a lighted Lamp into the Creature's Mouth, which continues burning all the Time of the Ceremony: The other dips the Reed Trumpet in the Blood, and with her Finger bestrikes her Husband's Forehead, and then the Foreheads of the rest of the Men who assist at the Sacrifice: When they have done, they disrobe themselves of their priestly Attire, and fall to eating the Honey, Rice, and Fish, in which only Women partake with them: As for the Flesh of the Hog, that is not to be touched, till the Two Priestesses have craved a Blessing on it. As for their Funerals, their Ceremonies are almost as extravagant as those of their Sacrifices: When a Man of Figure dies, all the chief Women go to his House, and carry Boughs with Pieces of Cotton in them, which they fasten about the Corps; they sit round it clothed in white Cotton, fanning themselves with Branches of Palm, the Room being incensed with Myrrh and Storax all the while: Then a Person comes, and cuts off the Hair of the Deceased by little and little; and, at the same time, his chief Wife lies upon his dead Body with her Face, Hands, and Feet to his, crying and lamenting while his Hair is cut off; but she changes her Funeral Notes into a merry Song when the other has done cutting: The Ceremony lasts Five Days, after which they inclose the Corpse in a Dormitory built of Wood, and made very fast on every side.

15. This Isle of *Matban* was governed by Two Kings; one of which refusing to pay Tribute to the King of *Spain*, the Admiral went out to reduce him. The *Indian* had between Six and Seven thousand Men furnished with Bows and Arrows, Darts and javalins, which Army the Admiral attacked with Sixty of his *Spaniards*, armed with Coats of Mail and Helmets. The Battle was for a long time doubtful: At last the Admiral's Heat and Courage carrying him too far amongst the Barbarians, he was there first wounded with a poisoned Arrow, and afterwards thrust into the Head with a Lance, which ended the Life and Actions of this noble Commander. About Eight or Nine of his Men were slain, and about Fifteen of the Enemy, besides many wounded. The *Spaniards* would very willingly have redeemed the Body of their Admiral, but the *Indians* would not consent to it upon any Terms. This, however, was but the Beginning of their Misfortunes; for the King, as he had embraced their Religion without understanding it, abandoned it upon this Change in their Circumstances; and made Peace with his Rival, notwithstanding one of the Articles insisted on was, that all the Strangers should be instantly put to Death. The barbarous Monarch was sensible enough, that by Force he should never be able to execute this infamous Article, and therefore he had recourse to Fraud. With this View, he invited all the *Spaniards*, that were on Shore, to a sumptuous Entertainment; and there, in the midst of their Feasting, he directed them to be most cruelly murdered, reserving only *Don Juan Serrano* alive, in order to have procured a Supply of Artillery and Ammunition by way of Ransom for him. With this Demand of his the *Spaniards* would willingly have complied, but found so much Prevarication and Treachery in his Management, and, at the same time, were so much intimidated by the Fate of their Companions, that they resolved to break off the Treaty, and put to Sea. The unfortunate *Serrano*, when he saw them about to weigh their Anchors, threw himself on his Knees; and, in the most moving Terms, begged of them not to leave him in the Hands of so base a People: But their Fears, or rather their Care for their own Preservation, made them deaf to his Intreaties, especially when, on a Muster, they found their whole Force consisted but of Eighty Men, that their Ships were in a miserable Condition, and that, in order to have a Probability of returning Home, it would be necessary to destroy One Ship, to make use of her Stores and Materials in repairing the other Two. What the Fate was of *Serrano*, after their Departure, is not known; but it is certain, the

Let's of him proved a very great Hindrance to the Voyage, since, next to the Admiral, he was the bravest Man, and the best Seaman, they had, one of the Professors of this Voyage, and who, if he had lived to return, would have animated the Imperial Court to future Expeditions.

16. A little before the Admiral's Death, they received News of the *Moluccas*, the discovering of which this Way, was the great End of their Voyage: So that now leaving *Matban*, they sailed to the Isle of *Babol*; and here they burnt the *Conception*, furnishing the other Two Ships with the Men and Ammunition of it. Directing their Course from hence to the South West, they came to the Isle *Paviloghon*, inhabited by *Blacks*: From hence they came to *Chippit*, which is a large Isle; and it is about 50 Leagues from *Zubut*, in 8 Degrees of North Latitude, and about 170 Degrees of Longitude from their first Stage. It abounds in Rice, Ginger, Goats, Hogs, Hens, &c. and the King of it gave them a friendly Reception. In Token of Peace he marked his Body, Face, and Tip of his Tongue, with Blood, which he drew out of his Left Arm; and the *Spaniards* followed him in that bloody Ceremony. Sailing from hence about 40 Leagues, between the West and South West, they came to *Cagbajan*, a very great Island, but not well inhabited: The People are *Moors*, fixiles from *Borneo*, rich in Gold, and, for their principal Weapons, use poisoned Arrows, which is practised also in most of the Islands. Steering West and North West 25 Leagues, brought them to *Puluan*, a very fruitful Island, lying in the 9° 20' of North Latitude, and 179° 20' of Longitude, from their first Departure: It yields much the same Products as *Chippit*, besides very large Figs, Battatos, Cocons, and Sugar-canes. The like Ceremonies also were here used in Token of Friendship between the King and the *Spaniards*, as were at *Chippit*: The People go naked, use poisoned Arrows, and are mighty Lovers of the Sport of Cock-fighting: They make a sort of Wine here of Rice, which is very intoxicating, but otherwise better than that of the Palm.

17. The famous Isle of *Borneo*, to which they came next, is a very large and rich Island: It lies in 5° 5' of North Latitude: the chief City contained no less than Twenty-five thousand Houses. The King was a *Moor*, a Prince of very great Power, kept a magnificent Court, and was always attended by a numerous Guard. He sent the Captains several Presents, and ordered a Couple of Elephants, trapped with Silk, to be led forth to bring the *Spaniards* Messengers and Presents to the Palace: He has Ten Secretaries of State, that write his Affairs in Barks of Trees: His Household is governed by Women, who are the Daughters of his chief Counters: His Subjects pay him their Reverence, by lifting up their Hands closed Three times over their Heads, then lifting up their Feet one after the other, and lastly kissing their Hands: They chew a great deal of the Betele in this Country, and drink a Rice-spirit called by them *Arac*. The Country affords Camphire, which is the Gum of the Tree *Capar*; also Cinnamon, Ginger, Myrobalans, Oranges, Lemons, Sugar, Cucumbers, Melons, plenty of Fowl and Beasts, and whatever can be expected in that Climate.

18. Leaving *Borneo*, they came to the Isle *Cintubon*, which lies in 8° 7' of North Latitude: Here they layed Forty Days calking their Ships, and taking in fresh Water and Fuel. In the Woods of this Isle they found a Tree, the Leaves of which, as soon as they fall on the Ground, move from Place to Place, as if they were alive. They resemble Mulberry-leaves, and on the Sides of them there are certain Fibres produced, that seem like little Eggs. If they are cut or broken, there is nothing like Blood comes forth; but, if they are touched, they suddenly spring away. *Digafeta*, from whom we take the Arcourt, tried this, keeping one of these Leaf-Animals in a Dish for Eight Days. The Isle abounds with Orcheses, wild Hogs, and Crocodiles. They took here a Fish, headed like a Swan, with Two Horns; its Body all one pure Bone, and touching like a Saddle on its Back. They sailed from hence by the West towards the South east for the *Moluccas*, and in their Way found the Sea full of Weeds and Herbs. This was near certain great

Mountains. This Course brought them to the Isles of *Solo Taglima*, which afforded very fine Pearl: From hence it was that the King of *Borneo* got a Couple of Pearls, as round, and very near as big, as a Hen's Egg.

19. They came next to harbour in the Isle *Sarangani*, reported to yield both Gold and Pearl; and here they pressed Two Pilots for their *Molucca* Voyage. They passed the Isles *Caana*, *Camida*, *Gabiao*, *Camuca*, *Cobalu*, *Chiai*, *Lapan*, and *Naza*; and came to a fair Island, called *Sanger*, in 3° 20' of North Latitude; which Isle had Four Kings. Having passed Five other Islands, they at last espied a small Cluster of Five Islands, which their Pilots said were the *Moluccas*. This was the 6th of *November*, and the 27th Month after their Departure from *Spain*. They tried the Depth of the Sea, with their Plumbet, about these Islands, and found it no less than 102 Yards, which shews, that the *Portuguese* designed none else should come thither but themselves, when they told the World, that those Seas were so shallow, that there was no sailing there, besides the other Dangers of Rocks and Shelves, and continual Darknes.

20. *November* 8. before Sun-rising, they entered the Port of *Tiridore*, which is one of the Chief of the *Moluccas*. The King was a *Moor*, but, notwithstanding the Prejudices of his Religion, so extremely fond of the *Spaniards*, and so much devoted to the Service of their Master, that he bid them come ashore into their own Country and Houses, called them his Brethren and Children; nay, in Compliment to them, changed the Name of his Kingdom from *Tiridore* into *Castile*. These *Moluccas* are Five in Number, *Ternate*, *Tiridore*, *Mutir*, *Maccbian*, and *Baccbian*; of all these *Ternate* is the chief, and the King of it was once Lord of all the rest. *Mutir* and *Maccbian* were then Commonwealths, but *Baccbian* a Monarchy. The Clove-trees here are very tall, and as big about as a Man; the Boughs large in the Middle, and sharp at the Top; the Leaves like those of Bay-trees, and the Bark of an olive Colour. The Cloves grow in large Clusters at the Tops of the Boughs; at first they are white, red when they come to Maturity, and grow black by after-drying; the Leaf, Bark, and Wood, being green, is as strong as the Clove itself: They gather them twice a Year, in *June* and *December*; and, if they don't take them in time, they grow very hard. Every Man has his own peculiar Trees, but they bestow but little Husbandry upon them. They have also in this Isle a sort of a Tree, the Bark of which, being steeped in Water, may be drawn out in small Fibres to the Fineness of Silk; and of this the Women make a sort of Aprons, which is all the Covering they make use of.

21. Near *Tiridore* lies the great Isle *Gilolo*, which is divided between *Moors* and *Heathens*: The Two Kings of the *Moors* have contributed themselves very liberally to the peopling of the Island, the one of them having 600, and the other 650 Children. The *Pagans* were more abtemious in these Matters, as well as less superstitious in other respects, than the *Moors*; yet they report of them, that they adore the first thing they see in the Morning. In this Isle there is a sort of a Reed growth as big as a Man's Leg, and full of a very limpid Water, which makes a wholesome Drink. *November* 12. a public Warehouse was appointed in the City for the Sale of their Merchandize: The Exchange at the following Rates; for Ten Yards of good red Cloth, they had one Bahar of Cloves, every Bahar being Four Canters, and Six Pounds, and every Canter 100 lb. Weight: For Fifteen Yards of a meaner Cloth, they had in *Cambie* one Bahar: For Thirty-five drinking Glasses, one Bahar: For Seventeen Cathyls of Quicksilver, one Bahar. They brought all sorts of Provisions daily to their Ships, and a sort of fresh Water, which springs out of the Mountains where the Cloves grow. It is hot when it comes out of the Spring, but very cold when it has stood awhile in some other Place. They received here a very singular Present for the King of *Spain* from the King of *Baccbian*, which was a Couple of dead Birds, about the Bigness of Turtles, with very little Heads and Legs, long Bills, Two or Three long Feathers, parti-coloured at their Sides, instead of Wings; their whole Bodies besides of one Colour,

* This Account is not only improbable, but incredible. Yet I have retained it, because, on the Credit of *Pigoffa*, it has been taken into several Treatises of Natural History.

and that near a Tawny; they never fly, but when the Wind blows to help them, the *Moors* fancy they come down from Paradise, and therefore call them the Birds of God. As for all the *Moluccas* in general, their Products are Cloves, Ginger, Rice, Sagu-bread, Goats, Sheep, Hens, Papijays, white and red Figs, Almonds, Pomegranates, Oranges, and Lemons, and a sort of Honey which is made by Flies less than Ants; besides Sugar-canes, Oil of Coconuts, Melons, Gourds, and a Fruit which they call *Camulical*, which is extremely cold. The Natives of these Islands were all *Heatbens*, the *Moors* having not had Footing there above Fifty Years before the *Spaniards* came. The Isle *Tiridore* is in about 27 Minutes North Latitude, and 170° Longitude, from their First Meridian, and about 9° 30' from the *Archipelago*, in which are the *Ladrones*, and run to the Quarters of South-west and N.N.E. *Ternate* is in Four Minutes of South Latitude; *Mutir* is directly under the Equinoctial; *Machian* is in Fifteen Minutes of South Latitude; and *Baccian* in One Minute; and this Isle is the biggest of all the *Moluccas*. When they departed from hence, they had the Kings of several Islands attending them in their Canoes. They were conducted by them to the Isle *Mare*, and there this Royal Company took their Leaves of them, not without great Sorrow. In this Isle they left a leaking Ship behind them, giving Orders, if it could be repaired, for its Return into *Spain*.

22. They directed their Course to the South-west from *Mare*, being now more in Number than Forty-six *Spaniards*, and Thirteen *Indians*. They passed the Isles of *Chaccuan*, *Lagoma*, *Sico*, *Gieghi*, *Capbi*, *Sulacho*, *Lumata*, *Tehetum*, *Baru*, *Ambon*, *Budia*, *Celaruri*, *Benaia*, *Ambalao*, *Bandon*, *Zerobua*, *Zolot*, *Moceamar*, *Gahan*, and *Mallua*, besides many others possessed by *Moors*, *Heatbens*, and *Canibals*. They raid at *Mallua* Fifteen Days, repairing their Ships. It lies in 8° of South Latitude, and 169° 40' Long. according to their Reckoning. There grows a vast deal of Pepper there, both long and round; the Leaves of the Tree like Mulberry-leaves, and climbing like Ivy. The People are perfect *Canibals*; the Men wear their Hair and Beards put up in Canes; and, for Weapons, use only Bows and Arrows. *January* the 25th, 1552. leaving *Mallua*, they arrived at *Tima*, which is Five Leagues distant between the South and South-west; here they found Ginger, the Wood of white Sanders, divers Fruits and Beasts, Gold, and plenty of all sorts of Provisions: The People of the *Moluccas*, *Java*, and *Lozen*, fetch their Sanders from this Island. It lies in 10° South Latitude, and 174° of Longitude. The Inhabitants are Idolaters, and have among them, which is also common to all the Isles of the *Archipelago*, the Distemper we call the *Feverish Disease*. Sailing a long Course from hence, between the West and North-west, they came to the Isle of *Eude*, which yields great Store of Cinnamon. In this Tract of Sea there is a long String of Islands lying in Order, behind one another, as far as the *Greater Java*, and the Cape of *Mallua*. About half a League from this *Greater Java*, lies *Java the Less*, which is full as big as the Isle of *Madeira*. *February* the 11th, falling from *Timor*, they got into the great Sea *Lantekitel*, and steered away between the West and South-west, leaving the North Coast on their Right Hand, taking care not to fall too near the Shore, lest the *Portuguese*, who were seated at *Malacca*, should chance to discover them; and, on this Account, they directed their Course without the Isle of *Sumatra*. And, that they might pass the Cape of *Good-Hope* more securely, they sailed about 42° toward the South Pole, waiting in those Parts Seven Weeks for the Wind. The Cape of *Good-Hope* they observed to be in 34° 15' of South Latitude, and 1600 Leagues from the Cape of *Malacca*.

23. But, having past all Dangers of the Cape, being smally pinched with Hunger and Sicknes, some of them were for putting in at *Mozambique* for a little Refreshment; but the major Part of the Company concluding, that the *Portuguese*, who were there, would prove but untoward Physicians for their Distempers, they resolved to sail homewards: This they did in a Course towards the South-west, for the Space of Two Months, without touching anywhere; in which time they lost Twenty one Men of their

Company, the Remainder being upon the Point of starving. They came in good time, under this Necessity, to *St. James*, which is one of the *Cape de Verde* Islands, and there they were forced to throw themselves upon the Mercy of the *Portuguese*; so that, venturing ashore, they opened their miserable Cafe to the *Portuguese*, who were so generous as to relieve them the first, and so barbarous as to detain them Prisoners the next time they came for Food. Those in the Ship, finding their Companions (Thirteen in Number) stopp'd by the *Portuguese*, and having no mind to bear them Company in Prison, made all the Haste they possibly could away; and, the Wind filling their Sails, they came *September 7.* into the Haven of *St. Lucar*, near *Seville*.

24. The Person who commanded this Vessel, which had the good Fortune to return, was one *John Sebastian Cano*, a Native of the Town of *Guetaria*, in *Biscay*, a Man of great Spirit, and equal Fortune, whose Success in this respect was very nobly rewarded by the Emperor *Charles* the Vth, who, to perpetuate the Memory of so glorious an Exploit, gave him for his Arms the Terrestrial Globe, with this Motto, *Primus me circumdedit*; that is, *Thou first surroundest me*. Some Critics have remarked, that, instead of *circumdedit*, it should have been *circumvixit*, or *circumnavigavit*; but this was a kind of Exactness unworthy of so great an Emperor. The new-discovered Streights were for awhile called the *Streights of Victoria*, from the Ship that returned; but they soon lost that Name to assume another, which seemed much better to become them, I mean that of their Discoverer *Magellan*; which they are always like to bear, and thereby perpetuate the Memory of that worthy Man, who, in point of Courage and Conduct, shewed himself every way equal to the great Task he undertook, and who, though he did not live to come home in the *Victoria*, ought to be considered as the sole Author of the Discoveries made in this Expedition, since the Course failed after his Death had nothing in it new, but was what the *Portuguese* had often done before.

25. By this remarkable Expedition, the Skill and Penetration of the great *Columbus*, who first formed an Idea of the Possibility of performing it, received new Lustre, and the World in general new Light. It was now no longer a Question to be disputed by Arguments, whether the World might be circum-navigated; this Voyage put it, as a Fact, out of Dispute. One of *Magellan's* Companions therefore, *Antonio Pigafetta*, a Native of *Vicenza*, in *Italy*, to whom we stand indebted for the best Account extant of the whole Voyage, had Reason to conclude his Relation thus: "These were Mariners, who surely merited an eternal Memory, more justly than the *Argonauts* of old, who sailed with *Jason*, in Search of the Golden Fleece, into the Region of *Colchis*, and entered the River *Phasis*, from the Sea of *Pontus*. The Ship too undoubtedly deserved far better to be placed among the Stars, than their Ship *Argo*, which, from *Greece*, discovered that great Sea: For this our wonderful Ship, taking her Departure from the Streights of *Gibraltar*, and sailing Southwards through the great Ocean towards the *Antarctic* Pole, and then turning West, followed that Course so long, that, passing round, she came into the East, and thence again into the West, not by sailing back, but proceeding constantly forward; so compassing about the Globe of the World, until she marvelously regained her native Country *Spain*, and the Port from which she departed, *Seville*."

26. This remarkable Voyage took up Three Years and Thirty-seven Days; for they departed *August 10.* 1519. and returned *September 6.* 1522. One thing however was discovered in it by Experience, which Reason has taught to explain, though by Reason it could hardly have been found out; for, on their Arrival at the *Moluccas*, they found themselves a Day mistaken in their Reckoning, which was not owing to any Negligence in them, but to the Course they sailed; for it is now a Truth, justified by Practice, as well as agreeable to the Principles of Geography and Navigation, that such as sail East, till they come back to the Place they left, have seen the Sun rise, pass the Meridian, and set, once more than their Countrymen they left behind them; and consequently gain a Day; and that,

in like manner, such as sail Westward round the Globe, lose a Day; which alters their Account, both with respect to the Day of the Month, and of the Week. *Magellan's* Crew could not avoid taking notice of so strange a Circumstance, though they knew not how to account for it; and yet modern Geographers explain it very naturally, and very precisely: From whence it is evident, how much Practice is improved by Learning and Study; for this intirely depends upon the diurnal Circumvolution of the Sun, which may begin at any meridian Circle, and so go round till it comes back to the same Meridian. This being once conceived, the Whole becomes immediately plain; since such as sail Eastward, advance to a Meridian which the Sun reaches sooner than he did that they left, and therefore they begin to count their Day so much the sooner: For Example, if they sail Fifteen Degrees, they will begin the Day an Hour sooner, and this Anticipation still increases as they go Eastward; and, being once come to the opposite Meridian, their Day begins Twelve Hours sooner; and, having gone round, they begin the Day Twenty-four Hours sooner than in the Place they came to, where it is Mid-day to both, when the Sun is in the South. And so they that go West, will have the Sun later in their Meridian by a whole Hour, if they sail Fifteen Degrees to the West, which postpones the Day an Hour for every Fifteen Degrees, which comes to Twenty-four Hours in sailing round. Since we are upon this Subject, it may not be amiss to observe, that they may differ a whole Day in some Places very near each other: For Instance, let us

suppose a *Spanish* Ship to arrive at the *Philippine* Islands; and, at the same time, a *Portuguese* Ship at *Macao*, a Port of *China*, possessed by that Nation, and under the same Meridian as some of the *Philippine* Islands: It may so happen, that the *Portuguese* may keep *East*, while, with the *Spaniards*, it is still *West*. We may easily apprehend this, if we consider, that the *Portuguese*, sailing East; arrive a Day sooner at *Macao*, than the *Spaniards*, who came West, arrive at the *Philippines*; and thus, under the same Meridian, it is very possible they may differ a Day in their Reckoning.

27. Another Circumstance that served to heighten the Reputation of *Magellan*, was the Difficulty that other able Seamen met with in following his Course. The first that made that Attempt, were Two *Genoese* Ships in 1526. but without Effect. *Ferdinand Cortes*, the Conqueror of *New Spain*, sent Two Ships, and 400 Men, in 1528. to discover the Way to the *Moluccas* through the Streights, but without Success. *Sebastian Cabot* tried it also by Commission from *Don Emanuel* King of *Portugal*, but could not do it. *Americus Vesputius* was sent by the same Prince, but could neither find the Streights, nor the River of *La Plata*. *Simon Alcazar*, a *Spaniard*, attempted it likewise with several Ships, and 144 Men; but came back without performing it, his Men having mutinied. All these several Attempts, as well by the *Spaniards* as other Nations, were made before the Expedition of *Sir Francis Drake*: An Account of which is to be our next Subject.

SECTION IV.

The Voyage of Sir FRANCIS DRAKE round the Globe.

1. *The Family and Character of Sir Francis Drake.*
2. *His Two first Expeditions against the Spaniards, and Resolution to sail through the South Seas.*
3. *His Strength when he sailed, A. D. 1577. on this Expedition.*
4. *His Adventures in the Cape de Verd Islands.*
5. *Description of the Islands of St. Iago, and Del Fogo.*
6. *Their Arrival on the Coast of Brasil.*
7. *Trade with the Inhabitants of the Country at the Mouth of the River La Plata.*
8. *Continue their Voyage to the Streights of Magellan.*
9. *Misfortune at the Island of Mocha.*

11. *Other rich Prizes taken on that Coast.*
12. *A rich Spanish Vessel called the Cacafuego taken, and Guatulco plundered.*
13. *They sail Northward to the Coast of California.*
14. *Description of that Country, and its Inhabitants.*
15. *Their Course to the Moluccas, and Transactions there.*
16. *Description of several Islands.*
17. *Account of Java Major, and their long Run to Sierra Leona.*
18. *Departure from thence, and safe Arrival in England in Sept. 16. 1580.*
19. *Glamours raised against him on his Return.*
20. *Queen Elizabeth dies on board his Ship at Deptford, and confers on him the Honour of Knighthood.*
21. *Recapitulation of Things most observable in this Voyage of Sir Francis Drake.*
22. *A concise Account of his Actions to his Death.*
23. *The Consequences of his sailing round the Globe to Us, the Spaniards, and other Nations.*

IT has been observed of most of the Heroes of Antiquity, that they were of a dubious Descent; which gave an Opportunity of frequently fathering them upon their Gods: And in this, and well as in many other respects, *Sir Francis Drake* resembled these ancient Heroes. The learned *Camden* tells us, that he was the Son of a Clergyman, who, in the Time of *Queen Elizabeth*, became Vicar of *Upnere*, on the River *Medway*. But the industrious *John Stowe* says, that he was the eldest of Twelve Brethren, all Children of *Edmund Drake*, of *Tarvisstock*, in the County of *Devon*, Mariner; and that he was born in the Year 1540. The only way to reconcile these Accounts, both of which I believe are true, is to suppose that *Edmund Drake*, being a zealous Protestant, suffering much for his Religion in the Days of *Henry VIII.* and, having likewise a competent Share of Learning, was ordained Deacon in the Days of *Queen Elizabeth*, and settled at *Upnere*. As for our Hero, he received the Christian Name of *Francis*, from his Godfather *Francis* Earl of *Bedford*: But it does not appear, that he obtained any great Benefit from that Nobleman's Patronage in his Youth; for I find, that, as soon as he was able, he was sent to Sea, Ap-

prentice to the Master of a small Bark trading to *France* and *Zeland*; who, having a great Affection for the Lad, and being himself a Batchelor, when he came to die, left him his Bark. At the Age of Eighteen *Mr. Drake* was made Purser of a Ship, which went to the Bay of *Biscay*; and at Twenty he made a Voyage to the Coast of *Guinea*. In all these Voyages he distinguished himself by his extraordinary Courage, and by a Sagacity very unusual in Persons of his Age. His laudable Desire of Glory induced him to venture all that he had in the World in a Voyage to the *West Indies* in the Year 1565. but in this he had no Success. In 1567. he served under his Kinsman *Sir John Hawkins*, in the Bay of *Mexico*; but was still unfortunate, returning from thence rich in point of Fame, but, as to his Circumstances, in a manner undone. These Disappointments served only to heighten his Resentment; and therefore he made Two Voyages more into those Parts, the first in 1570. with Two Ships, the *Dragon* and *Swan*, the second in 1571. in the *Swan* alone, purely for the sake of Information, and that he might qualify himself for undertaking something of Importance in those Parts, which, by his Courage and Perseverance, he brought to bear.

¹ In his *Annals of Queen Elizabeth*, A. D. 1595. where he says, that he had these Particulars from *Sir Francis Drake's* own Mouth. —
² In his *History of England*, p. 527. where he says nothing of *Mr. Edmund Drake's* being Vicar of *Upnere*, and yet shows abundance of Care in collecting the Dates and Facts. — This Account has been compared with all hitherto published, particularly *Mr. Fletcher's*, who was Chaplain during the Voyage.

2. His Character being now sufficiently established; he found enow ready to venture Part of their Fortunes in a Voyage he proposed; for which, having made all Things ready, he sailed *May* the 24th, 1572. in the *Pasha of Plymouth*, which was of no greater Burden than Seventy Ton; having for his Consort the *Swan*, of Two hundred and fifty Ton, commanded by his Brother *John Drake*, with Seventy-three Men and Boys, and Provisions for a Year. Such was the Preparation he made for attacking the King of *Spain* in the *West Indies*, which he believed he had a Right to do, in order to make Reprisals for what he had suffered by his Subjects. In this Voyage he sacked the famous Town of *Nombre de Dios*, and soon after saw, from an high Tree, the *South Seas*; which sight inflamed him with a violent Desire of carrying an *English Ship* thither, an Attempt never made, perhaps never thought of, before that Time. In this Expedition he acquired immense Riches for his Owners, as well as himself; being a Man of such Generosity, that he scorned to take even those Advantages, which any other Man would have considered as his Right; of which we have a very remarkable Instance in his Behaviour, on a Present made him by a Captain or Prince of the *Free Indians* inhabiting the Isthmus of *Darien*, who, in Return for a Cutlafs presented him by Captain *Drake*, gave him Four large Wedges of Gold, which he threw into the common Stock: "My Owners, said he, gave me that Cutlafs; and it is but just they should have their Shares of its Produce." His Return to *England* was as fortunate as his foreign Expedition; for, in Twenty-three Days, he sailed from the Capes of *Florida*, to the Isles of *Scilly*; and, arriving at *Plymouth* on Sunday *August* the 9th, 1573. in Sermon-time, the News of Captain *Drake's* Return being carried into the Church, there remained few or no People with the Preacher, all running out to observe the Blessing of God upon the dangerous Adventures of the Captain, who had spent One Year, Two Months, and some odd Days, in this Voyage. The Wealth he had thus acquired, he generously spent in his Country's Service, equipping no less than Three Frigates at his own Expence, which he commanded in Person, and with which he contributed greatly to the Reduction of the rebellious *Irish*, under the Conduct of that worthy Nobleman *Walter Earl of Essex*. After his Death, he chose for his Patron Sir *Christopher Hatton*, at that time Vicechamberlain to the Queen, and afterwards Chancellor of *England*: By his Interest, notwithstanding great Opposition, Captain *Drake* obtained the Queen's Commission for that Voyage, which he had so long meditated.

3. He was no sooner thus provided, than his Friends contributed largely towards this glorious Expedition; and Captain *Drake*, on his Side, applied with equal Diligence to the getting every thing ready for accomplishing his Undertaking; and, with this View, equipped Five Ships, viz. the *Pelican*, called by him afterwards the *Hind*, Admiral, Burden an hundred Tons, *Francis Drake* Captain General; the *Elizabeth*, Vice-admiral, Eighty Tons, *John Winter* Captain; the *Marigold*, a Bark, of Thirty Tons, *John Thomas* Captain; the *Swan*, a Fly-boat, of Fifty Tons, Captain *John Chester*; and the *Christopher*, a Pinnace of Fifteen Tons, Captain *Thomas Moon*. These Ships he manned with One hundred and Sixty-four able Men, and furnished them with such plentiful Provision of all Things necessary, as so long and dangerous a Voyage seemed to require, withal stowing certain Pinnaces aboard in Pieces, to be set up as Occasion required; neither did he omit to make Provision also for Ornament and Delight, carrying for this Purpose with him expert Musicians, rich Furniture, all the Vessels for his Table, and many belonging to his Cook-room, being of Silver, with divers Utensils of all sorts of curious Workmanship, whereby the Civility and Magnificence of his native Country might, among all Nations, whither he should come, be the more admired. These are Circumstances which shew how much this Gentleman had the Honour of this Nation at Heart, and with what generous Principles he was endowed; for which, however, some Writers have not scrupled to tax him with Vanity; so easy a Thing it is, for Men of little Minds to blast the noblest Purposes by their own base Suggestions! All Things being thus adjusted, Captain *Drake* sailed out

of *Plymouth* Sound *November* the 5th, 1577: about Five in the Afternoon; but by a fearful Storm, wherein they sustained some Damage, he was forced to put back again; when, having, in few Days, supplied all Defects on the 13th of *December*, the same Year, with more favourable Winds, he once more hoisted his Sails; and put to Sea: He avoided, as much as he could, falling in too early with the Land; and, the Wind favouring his Design, they made none, till the 25th of the same Month they fell in with *Cape Cautin*, on the Coast of *Barbary*, and, on the 27th, came to the Isle of *Magadar*, lying One Mile Distance from the Main, between which and the Isle they found a very safe and convenient Harbour. Here the Admiral directed a Pinnace to be built, having brought, as we observed, the Hulks of Four ready framed from *England*. While they were upon this Work, some of the Inhabitants came to the Water-side, shewing Flags of Peace: Upon which the Admiral sent out his Boat to know their Minds: One of his Men stayed as a Pledge amongst them, and Two of their Company were brought a Shipboard. They told him by Signs, that the next Day they would furnish his Ships with good Provisions, which Civility he rewarded with Linen Cloth, Shoes, and a Javelin, Things very acceptable to them; and so they departed. The next Day they came as they had promised, and one of the Men, whose Name was *Fry*, leaping out of the Boat amongst them, thinking to have leaped into the Arms of Friends, made himself the Prisoner of those perfidious Wretches, who, threatening to stab him if he made any Resistance, presently mounted him a Horseback, and carried him up into their Country; from whence, however, after Examination, he was sent safely back into his own.

4. The Pinnace being finished, they set Sail *December* the 30th, and *January* the 17th they arrived at *Cape Blanco*, where they found a Ship at Anchor within the Cape, having only Two Mariners in her: The Ship they took, and carried her into the Harbour, where they stayed Four Days; in which time the Admiral mustered his Men ashore, to prepare them for Land as well as Sea Service. Here they took of the Fishermen such Necessaries as they wanted, and also one of their Barks of about Forty Ton, leaving behind them a little Bark of their own. They left this Harbour *January* the 22d, carrying along with them one of the *Portuguese* Caravels, which was bound to the Isles of *Cape de Verd* for Salt; the Master of the Caravel assured the Admiral, that in one of the *Cape de Verd* Islands, called *Moyo*, there was good Store of dried Cabritos, or Goats, which were every Year made ready for such Ships of the King's as called there. They came to this Place *January* the 27th; but the Inhabitants would drive no Trade with them, the King's Orders having positively forbid it: Yet the next Day they went to take a View of the Island, the Admiral sending out a Company of Men for that Purpose. They marched towards the chief Place of the Isle, and, having travelled through the Mountains for Three Days, they came thither before Day-break: They found that the Inhabitants were all run away, but, as for the Country, by the manuring, it appeared to be more fruitful, than the other Part of the Island. They rested themselves here awhile, and banqueted upon delicious Grapes, which were in their Prime even at that Season of the Year which is the Depth of Winter with us in *England*. This Island is stored with Goats, wild Hens, and Salt, which Nature makes ready to the Inhabitants Hands: It is brought together in great Quantities upon the Land by the flowing of the Sea, and the Heat of the Sun kerns it. The People have no more to do, but to gather it into Heaps, and sell it to their Neighbours, which they do, and reap great Profit from it. They found here also Cocoa-trees, which bear no Leaves nor Branches but at the Top; the Fruit grows in Clusters, and each Cocoa is as big as a Man's Head: Having satisfied themselves with these Fruits, they marched farther into the Island, and saw great Store of Cabritos; but they could take none of them, though, if they had pleased, they might have furnished themselves with some that were old, dead, and dried, which the People had laid out on purpose for them; but, not caring for the Refuse of the Island, they returned to their Ships, with an Account of what they had seen.

5. *January*

5. *January* the 21st, they went from hence, and sailed by the Isle *St. Iago*; in passing by which, the People discharged Three Pieces of Cannon at them, but without doing Mischief. The Island is fair and large, inhabited by *Portuguese*; but the Mountains are possessed by the *Niours*, who, to deliver themselves from Slavery, fled to these Places of Refuge, where they have fortified themselves. Before this Island they saw Two Ships under Sail, one of which they took, and found to be a good Prize, laden with Wines: The Admiral retained the Pilot, but discharged the Ship and the Men, giving them some Victuals, a Butt of Wine, and their wearing Cloaths. The same Night they came to the Island *Del Fogo*, or the *Burning Island*, which is inhabited by *Portuguese*: On the North Side there is a fort of Vulcano, that is continually belching out Smoak and Flame: On the South Side lies a very delightful Island, full of Trees ever green and flourishing, and refreshed with cooling Streams, that pour themselves out into the Sea. Here was no convenient Road for their Ships, the Sea being so deep, that there was no Possibility of fixing an Anchor thereabouts. Leaving these Islands, they drew towards the Line, being sometimes becalmed for a long time together, and, at others, beaten with Tempests. They had continually great Plenty of Fish, as Dolphins, Bonito's, and Flying-fishes, some of which dropt down into their Ships, and could not rise again, because their finny Wings wanted Moisture.

6. From the first Day of their Departure from the Islands of *Cape Verde*, they sailed 54 Days without Sight of Land; and the first which they saw was the Coast of *Brasil*, in 38° of South Latitude. *April* the 5th, the barbarous People on Shore, having discovered the Ships, began to use their accustomed Ceremonies, in order to raise a Storm to sink their Ships: For this Purpose they made great Fires, and offered some Sacrifices to the Devil; but at present, it seems, he was not able to serve them. *April* the 7th, they had Lightning, Rain, and Thunder; in which Storm they lost the Company of a little Bark, the *Christopher*; but the 11th they found her again; and the Place where all the Ships, that were dispersed in the Search of her, met together, the Admiral called *Cape Joy*, and here every Ship took in fresh Water. The Country hereabouts was fair and pleasant, the Air sweet and mild, the Soil rich and fruitful. The Inhabitants seemed to be only some Herds of wild Deer, no others being to be seen, though they discerned the Footsteps of some People in the Ground. Having weighed Anchor, and run a little farther, they found a small Harbour between a Rock and the Main, where the Rock breaking the Force of the Sea, the Ship rode very safely. Upon this Rock they killed several Seals, keeping them for Food, and found them wholesome, though not pleasant.

7. Their next Course being to 36° of South Latitude, they entered the great River of *Plate*, and came into between 53 and 54 Fathom of fresh Water; but, finding no good Harbour there, they put out to Sea again. Sailing on, they came to a good Bay; in which Bay were several pretty Islands, one of which was stock'd with Seals, and the others, for the most part, with Fowls, so that there was no want of any Provisions, or of good Water there. The Admiral being on Shore in one of those Islands, the People came dancing and leaping about him, and were very free to trade: But their Custom was not to take any thing from any other Person, unless first thrown down on the Ground. They were comely strong-bodied People, very swift of Foot, and of a brisk lively Constitution. The *Margold*, and the *Christophir*, (being sent to discover a convenient Harbour) returned with the happy News of such an one; in which they went with all their Ships. Here the Seals abounded to that degree, that they killed more than 200 in an Hour's Space. The Natives came boldly and confidently about them, while they were working on Shore; their Faces were painted, and their Apparel only a Covering of Beast-skins (with the Fur on) about their Waists, and something wreathed about their Heads. They had Bows an Ell long, but no more than Two Arrows apiece. They seemed to be not altogether destitute of martial Discipline, as appeared by the Method they ob-

served in ordering and ranging their Men; and they gave sufficient Proof of their Agility, by stealing the Admiral's Hat off from his very Head, which was a brave Prize among them, one taking the Hat, and another the gold Lace that was on it; neither of which could ever be got from them again. They were the Nation which *Magellan* called *Patagons*.

8. Having dispatched all Affairs in this Place, they sailed; and, *June* the 20th, they anchored in Port *St. Julian*, so called by *Magellan*. Here they saw the Gibbet on which *Magellan* had formerly executed some of his mutinous Company: And here also Admiral *Drake* executed one Captain *Doughby*, the most suspected Action of his Life. After which Execution, *August* the 17th, they left *St. Julian's* Port, and the 20th fell in with the Strait of *Magellan*, going into the *South Sea*. The 21st they entered the Strait, which they found to lie very intricate and crooked, with divers Turnings; by which means, shifting about so often, the Wind would sometimes be against them, which made their Sailing very troublesome, and not only so, but dangerous too, especially if any sudden Blasts of Wind came: For, though there be several good Harbours about, and fresh Water enough, yet the Sea is so deep, that there is no anchoring there, except in some very narrow River or Corner, or between the Rocks. There are vast Mountains, covered with Snow, that spread along the Land on both Sides the Straights; the Tops of which mount up in the Air to a prodigious Height, having Two or Three Regions of Clouds lying in Order below them. The Straights are extremely cold with Frost and Snow continually: Yet the Trees and Plants maintain a constant Verdure, and flourish notwithstanding the seeming Severity of the Weather. At the South and East Parts of the Strait there are various Islands, between which the Sea breaks into the Straights, as it does into the main Entrance: The Breadth of it is from one League, where it is the narrowest, to Two, Three, or Four Leagues, which is the widest; and the Tides rise high through the Whole.

9. *August* the 24th, they came to an Island in the Straights, where were Penguins, a sort of Fowls as big as Geese, that could not fly; and they were in such Multitudes, that they killed 3000 in less than one Day. *September* the 6th, they entered the *South Sea* at the Cape or Head Shore. And the 7th they were driven by a Storm back from that Entrance more than 200 Leagues Longitude, and 1° to the South of the Strait; from the Bay they were driven Southwards of the Straights, in 57° of South Latitude, where they anchored among the Islands, finding good fresh Water, and excellent Herbs. Not far from hence, they entered another Bay, where they found naked People, ranging from one Island to another in their Canoes, to seek Provisions. These traded with them for such Commodities as they had. Sailing Northward from hence, they found Three Islands, *October* the 3d, in one of which was such Plenty of Birds, as is hardly credible. *October* the 5th, they lost the Company of the Ship, in which was Mr. *Winter*. Being now come to the other Mouth of the Straights, they put away towards the Coast of *Chili*, which the general Maps place to the South-west, but they found afterwards to lie to the North-east and Easterly; so that those Coasts were either not fully discovered, or at least not faithfully described. They proceeded still in the same Course, till, upon the 29th of *November*, they came to the Isle of *Mocha*, where they cast Anchor, and the Admiral, with Ten Men, went ashore. The People that dwelt there, were such as the extreme Cruelty of the *Spaniards* had forced from their own Habitations to this Island, to preserve their Lives and Liberties. They carried themselves at first very civilly to the Admiral and his Men, bringing them Potatoes, and Two fat Sheep, promising also to bring them Water; for which they received some Presents. The next Day Two Men were sent ashore with Barrels for Water; and the Natives, having them at an Advantage, presently seized them, and knocked them on the Head. The Reason of this Outrage was, because they took them for *Spaniards*, whom they never spare when they fall into their Hands.

* The Reason of taking these Ships was, that at this Time Portugal was annexed to the Crown of Spain.

10. Continuing their Course for *Chili*, and drawing near the Coasts of it, they met an *Indian* in a Canoe, who, mistaking them for *Spaniards*, told them, that at *St. Iago* there was a great *Spanish* Ship laden for *Peru*. The Admiral rewarding him for his Intelligence, he very readily conducted them where the Ship lay at Anchor, which was *Port Val Parizo*, in $33^{\circ} 40'$ of South Latitude. All the Men they had in her were no more than Eight *Spaniards*, and Three *Negroes*; and they, supposing the *English* to have been Friends, welcomed them by Beat of Drum, and invited them to drink some *Chili* Wine with them. But they, resolving first to secure their Prize, and then drink, immediately boarded the Ship, and, driving all the *Spaniards* under Hatches, took Possession. One of the *Spaniards*, seeing how they were served, desperately leaped overboard, and swam to the Town of *St. Iago*, to give them Notice of the coming of the *English*; upon which, all the Inhabitants presently quitted the Town, and ran away, which they might quickly do, there not being above Nine Households in the whole Town. The Admiral and his Men entered, rifled the Town and the Chapel, taking out of it a silver Chalice, Two Cruets, and an Altar-cloth. They found in the Town also a good Cargo of *Chili* Wine, and Boards of Cedar-wood; all which they carried to their Ships. The General then having set all the Prisoners on shore, except one, whom he reserved for his Pilot, he left *St. Iago*, and directed his Course for *Lima*, the Capital of *Peru*.

11. As they were now at Sea, and had both Leisure and Opportunity to examine the Particulars of the Booty taken at *St. Iago*, they found 25,000 Pieces of pure Gold of *Baldivia*, which amounted to somewhat more than 37,000 *Spanish* Ducats: So, continuing their Course to *Lima*, they put into the Haven of *Cochimbo*, which lies in $29^{\circ} 30'$ S. L. Here the Admiral sent Fourteen Men ashore to fetch Water: But the *Spaniards* happening to spy this small Company, and being resolved, for the Glory of their Nation, to undertake Revenge upon so daring an Enemy, they, with an Army of 300 Horse, and 200 Foot, attacked these Fourteen *English*; and, after some Dispute, by the Help of their Guns, made a Slaughter of one of them, the other Thirteen coming back to the Ship. After this, the *English* going again on Shore to bury their dead Man, the *Spaniards* put out a Flag of Truce; but they, believing their Fidelity to be no greater than their Courage, did not care to trust them, and so went off. From hence they came to a Port called *Tarapaxa*, where, being landed, they found a *Spaniard* asleep upon the Shore with Eighteen Bars of Silver lying by him, which came to about 4000 *Spanish* Ducats: They did not think fit to disturb the *Spaniard's* Repose, but, taking the Silver, left him to take out his Nap. Not far from hence, going ashore for Water, they met a *Spaniard* and an *Indian* driving Eight *Peruvian* Sheep, laden with very fine Silver, every Sheep having Two Leather Bags (containing Fifty Pounds Weight each) on his Back. They delivered the poor Animals from their irksome Burdens, and lodged the Bags in their own Ships: After which, the *Indian* and *Spaniard* were permitted to drive on. They sailed hence to *Ariva*, which is in $8^{\circ} 30'$ of South Latitude; and, in this Port, found Three small Barks, which, being rifled, yielded them Fifty-seven Wedges of Silver, each weighing about Twenty Pounds: They took no Prisoners in the Barks; for the Men that belonged to them, fearing no Strangers coming thither, were all gone on Shore to make merry amongst themselves. They did not assault the Town, having not Strength enough for it: So, putting out to Sea again, they met with another little Bark laden with Linen Cloth, Part of which the Admiral took, and so let her go, disclaiming to hurt others, where he could do himself no good.

12. February the 13th they came to the Port of *Lima*, which lies in $11^{\circ} 50'$ South Latitude; and, having entered the Haven, found there Twelve Sail of Ships lying fast at Anchor, with all their Sails down, without Watch or Guard, their Masters being all drinking and carousing ashore: Examining the Contents of these Ships, they found a Chest full of Rials of Plate, great Store of Silks and Linen; all which Plate they carried to their own Ships, and Part of the Silks and Linen. The Admiral here had notice of

another very rich Ship, called the *Cacafuego*, which was gone towards *Paita*, which they pursuing thither, found her, before their Arrival, gone for *Panama*: But, however, though they missed their intended Prize, another (which they took in their Pursuit of her to *Panama*) paid them the Charge of their Voyage: For, besides the Ropes, and other Tackling for Ships, which they found in her, she yielded them Eighty Pounds Weight of Gold, together with a fine Crucifix of the same Metal, richly adorned with Emeralds; all which, with some of the Cordage, they seized: But, resolving still to proceed in the Pursuit of the *Cacafuego*, the Admiral, to encourage his Company, promised, that whoever first saw her, should have his Gold Chain for a Reward, which fell to the Share of Mr. *John Drake*, who first descried her about Three o' Clock. About Six o' Clock they came up with her, gave her Three Shots, struck down her Mizzen, and boarded her. They found her full as rich and valuable as she was reported to be, having aboard her Thirteen Chests full of Rials of Plate, Eighty Pounds Weight of Gold, a good Quantity of Jewels, and Twenty-six Ton of Silver Bars. The Place where this Prize was taken, was called Cape *San Francisco*, about 150 Leagues from *Panama*, and in 1° of North Latitude: Amongst other rich Pieces of Plate, which they found in this Ship, they met with a Couple of very large Silver Bowls gilt, which belonged to the Pilot of her: The Admiral, seeing these, told him, that he had Two fine Bowls, but he must needs have one of them; which the Pilot yielded to, not knowing how to help himself; and, to make it look less like Compulsion, he presented the other of them to the Admiral's Steward. The Pilot's Boy (when they went away) told the Admiral, that his Ship, and not theirs, should now be called the *Cacafuego*, since it had gotten all the rich Lading of the *Cacafuego* in it, and that theirs might be stiled the *Cacaplata*; which Jest of the Boy's made the Company very merry. After this, having intirely ransacked the *Cacafuego*, they cast her off; and, continuing their Course to the West, they met with a Ship laden with Linen Cloth, *China* Dishes, and Silks of the same Country; the Owner of it was a *Spaniard*, then on board, from whom the Admiral took a Falcon, wrought with massy Gold, with a great Emerald set in the Breast of it; besides this, chusing what he liked of the Wares aboard this Vessel, and seizing the Pilot for his own Service, he turned off the Ship. This Pilot brought them to the Haven of *Guatulco*, the Town adjacent to which had but (as he said) Seventeen *Spaniards* in it: Having, therefore, put to Shore, they marched directly to the Town, and so up to the public Hall of Justice, where they found a Court sitting, and a Judge ready to pass Sentence upon a Parcel of poor *Negroes*, that were accused of a Plot to fire the Town: But the Admiral's coming changed the Scene of Affairs at this Court; for he, being Judge himself, passed Sentence upon them all, both Judges and Criminals, to become his Prisoners; which Sentence was presently executed, and they all carried away to the Ships. Here he made the Chief Judge write to the Townsmen, to keep at a Distance, and not pretend to make any Resistance: So the Town being cleared, they ransacked it all over, finding no other valuable Plunder than about a Bushel of Rials of Plate; only one of their Company took a rich *Spaniard* flying out of the Town, who paid him for his Trouble in pursuing him, with a Gold Chain, and some Jewels. Here the Admiral setting ashore some *Spanish* Prisoners, and his old *Portuguese* Pilot, whom he took at the Island of Cape *de Verd*, departed hence for the Island *Canno*: While they lay here, a certain *Spanish* Ship, bound for the *Philippine* Islands, came in their Way, which they only lightened of a Part of the Burden of her Merchandize, and so discharged her.

13. The Admiral, now thinking he had, in some measure, revenged both the public Injuries of his Country, as well as his own private Wrongs, upon the *Spaniards*, began to deliberate upon his Return home: But which Way he should take, was the Question to be resolved: To return by the Streights of the *Southern Sea* (and as yet no other Passage had been discovered) he thought would be to throw himself into the Hands of the *Spaniards*, who

^p This, I must own, is a very coarse Forecastle Joke, turning on the Words *Cacafuego* and *Cacaplata*, that is, *Fortifire* and *Fortiflats*.

would probably there wait for him, with a far greater Strength than he could now cope with; for he had at this time but one Ship left, not strong, though it was a very rich one. All Things therefore considered, he resolved to go round to the *Moluccas*, and so follow the Course of the *Portuguese*, to get Home by the Cape of *Good Hope*: But, being becalmed, he found it necessary to sail more Northerly to get a good Wind; upon which Design they sailed at least 600 Leagues, which was all the Way they made from *April 16.* to *June 3.* *June 5.* being got into 43° of North Latitude, they found the Air excessive cold; and, the further they went, the Severity of the Weather was more intolerable: Upon which Score they made toward the Land, till they came into 38° North Latitude, under which Height of the Pole they found a very good Bay, and had a favourable Wind to enter the same. Accordingly here they had some Correspondence with the People of the Country, whose Houses lay all along upon the Water-side. They sent the Admiral a Present of Feathers, and Cawls of Net-work, who entertained them with so much Kindness and Liberality, that the poor People were infinitely pleas'd. Though the Country be cold, yet they to order the Matter in the framing their Houses, as to live out of Danger of starving; for they surround them with a deep Trench, upon the outmost Edge of which they raise up great Pieces of Timber, which close all together at the Top like the Spire of a Steeple; their Bed is the bare Ground, strewd with Rushes, and their Fire-place in the Middle, about which they all lie. The Men go naked, the Women wear a close Garment of Bulrushes, dress'd after the manner of Hemp, which, fastened about their Middles, hangs down to their Hips, and upon their Shoulders they have a Deer's Skin; but their very good Qualities make Amends for their ordinary Dress and Figure, being extremely dutiful to their Husbands. The Admiral had, quickly after, another Present from them, which was Feathers, and Bags of Tobacco; a considerable Body of them waiting upon him at the same time: They were all gathered together at the Top of an Hill, from whence their Speaker harangued the Admiral, who lay below in his Tent pitched at the Bottom of the Hill: When this was ended, they left their Weapons, and came down, throwing their own Presents, and, at the same time, civilly returning these which the Admiral had made them. All the while, the Women who remained above, possessed with a mad Fury, tore their Hair, and made dreadful Howlings, which is the common Music at their Sacrifices, something of which Nature was then solemnizing: But whilst these above were serving the Devil, the Men below were better employ'd, attending very diligently to Divine Service, then performed in the Admiral's Tent. These Circumstances, though trivial in themselves, are of Consequence in asserting our first Discovery of *California*.

14. The News of the *English* being there, having spread about in the Country, there came Two Ambassadors to the Admiral, to tell him, that the King was coming to wait upon him, and desired a Token of Peace to assure his safe Conduct. The Admiral having given this, the whole Train began to march towards them, and that in very good and graceful Order: In the Front came a very comely Person, bearing the Sceptre before the King, upon which hung Two Crowns, and Three Chains of a very great Length: The Crowns were made of Net-work; and artificially wrought with Feathers of many Colours, and the Chains were made of Bones. Next to the Sceptre-bearer came the King himself, a very comely proper Person, shewing an Air of Majesty in all his Deportment; he was surrounded by a Guard of tall martial-looking Men, who were all clad in Skins: Next to these came the common People, having (to make the finer Shew) painted their Faces, some white, some black, and some of other Colours, and all with their Arms full of Presents, even the very Children not excepted. The Admiral drew up all his Men in Line of Battle, and stood ready to receive them within his Fortifications: At some Distance from him, the whole Train made a Halt, and kept a profound Silence, at which Time the Sceptre-bearer made a Speech of half an Hour long: This being ended, the same Officer, of a Speech-maker, became a Dancing-master, and, at the same time, struck up a Song,

in both which he was followed by King, Lords, and common People, who came singing and dancing up to the Admiral's Tents. Being all set down there, (after some preliminary Compliments) the King made a solemn Offer of all his whole Kingdom, and its Dependences, to the Admiral, desiring him to take the Sovereignty upon him; and professing, that he himself would be his very loyal Subject: And, that this might not seem to be mere Compliment and Pretence, he did, by the Consent of his Nobles there present, take off the illustrious Crown of Feathers from his own Head, and fix it upon the Admiral's; and, at the same time, investing him with the other Ensigns of Royalty, did, as much as in him lay, make him King of the Country. The Admiral accepted of this new-offer'd Dignity, as her Majesty's Representative, in her Name, and for her Use; it being probable, that from this Donation, whether made in jest or in earnest, by these *Indians*, some real Advantages might hereafter redound to the *English* Nation and Interest in those Parts. The common People dispersed themselves up and down every-where amongst the Admiral's Tents, expressing an Admiration and Value for the *English*, to the Degree of Madness and Profaneness, coming before them with Sacrifices, which they pretended to offer with a profound Devotion to them, till they, by Force, kept them back, expressing their utmost Abhorrence of them; and directed them to the Supreme Maker and Preserver of all Things, whom alone they ought to honour with religious Worship. The Admiral and his People travelled to some Distance up in the Country, which they found to be extremely full of Deer, which were large and fat, and very often 1000 in a Herd. There was also such a vast Plenty of Rabbits, that the whole Country seem'd to be one intire great Warren; they were of the Bigness of a *Barbary* Coney, their Heads like those in our Parts, their Feet like a Mole's, and their Tail resembling that of a Rat; under the Chin of each Side is fastened a Bag, into which the Creature injects what Food it gets Abroad, and preserves it for a Time of Necessity. The Flesh of them is a valuable Dish among the Natives, and their Skins afford Robes for the King, and all the great Men. The Earth of the Country seem'd to promise very rich Veins of Gold and Silver, there being hardly any digging without throwing up some of the Ores of them. The Admiral called it *Nova Albion*, partly in Honour to his own Country, and partly from the Prospect of white Cliffs and Banks, which it yields to them that view it from the Sea. At his Departure hence, he set up a Monument with a large Plate, upon which were engraven her Majesty's Name, Picture, Arms, Title to the Country, the Time of their Arrival there, and the Admiral's own Name. In this Country the *Spaniards* had never set Footing, nor did they ever discover the Land by many Degrees to the Southward of this Place.

15. Sailing from hence, they lost Sight of Land till *October 13.* upon which Day in the Morning they fell in with certain Islands in 8° of North Latitude; from whence they met a great Number of Canoes coming laden with Cocoas, and other Fruit: These Canoes were hollowed within with a great deal of Art, and looked smooth and shining without like burnish'd Horn; the Prow and Stern both yielded inwards, Circlewise; on each Side of them lay out Two Pieces of Timber, about a Yard and an half long, more or less, as the Vessel was bigger or less; they were of a considerable Height, and, for Shew, set off in the Inside with white Shells: The People that were in them, had the lower Part of their Ears cut round, and stretched down a considerable Way upon their Cheeks, by the Weight of those Things they hang in them. They seem'd to design their Nails for Weapons, letting them grow a full Inch in Length. Their Teeth are as black as Pitch; and they have a way to preserve them, by eating of an Herb, with a sort of Powder, which they ever carry about with them for that Purpose. *October 18.* they came to several other Islands; some of which appear'd to be very populous, and continued their Course by the Islands of *Tagulada*, *Zelon*, and *Zewarra*; the first of which had good Store of Cinnamon, and the Inhabitants of all of them were Friends to the *Portuguese*. The Admiral, without making any Delay, steer'd the same Course still. *November*

the 14th, they fell in with the *Moluccas*, and, intending for *Tiridore*, as they coasted along the Island *Madyr*, which belongs to the King of *Ternate*, they met his Viceroy, who, seeing the Admiral's Ship, without Fear came aboard him. He advised the Admiral by no means to prosecute his Voyage to *Tiridore*, but to sail directly for *Ternate*, because his Master was a very great Enemy to the *Portuguese*, and would have nothing to do with them, if they were at all concerned with *Tiridore*, or that Nation, who were settled there. The Admiral, upon this, resolved upon *Ternate*; and early next Morning came to an Anchor before the Town: He sent a Messenger to the King with a Velvet Cloak, as a Present, and to assure him, that he came thither with no Design, but purely that of trading in his Country. The Viceroy also by this time had been with the King, and disposed him to entertain a very favourable Opinion of the *English*, which wrought so far, that the King returned a very civil and obliging Answer to the Admiral's Message, assuring him, that a friendly Correspondence with the *English* Nation was highly pleasing to him; that his whole Kingdom should lie open to them, and whatever it yielded should be at their Service; and, more than that, that he was ready to lay himself, and his Kingdom, at the Foot of so glorious a Princess, as was the Queen, whom they served, and to make her his Sovereign, as well as theirs: And, in Token of this, he sent the Admiral a Signet, carrying it, besides, with a very great Respect to the *English* Messenger, who went to Court, and had been received there with much Pomp and Ceremony. The King, having a mind to make the Admiral a Visit on Ship-board, sent beforehand Four large Canoes, filled with the most highly dignified Persons about him; they were all dressed in white Lawn, and had an exceeding large Umbrella of very fine perfumed Mats, (borne up with a Frame made of Reeds) spreading over their Heads, from one End of the Canoe to another; their Servants, clad in White, stood about them; and, without these, were Ranks of Soldiers placed: In Order, on both Sides their martial Men, were placed the Rowers, in certain well-contrived Galleries, which lay Three of a Side all along the Canoes, and were decently raised one above the other, each Gallery containing Eighty Rowers. These Canoes were furnished too with all warlike Provisions, and the Soldiers well accoutred, having all manner of Weapons, both offensive and defensive. Rowing near the Ship, they all paid their Reverences to the Admiral, in great Order, one after another; and told him, That the King had sent them to conduct him into a safer Road than that he was in at present. Soon after came the King himself, attended by Six grave ancient Persons: He seemed to be much pleased with the *English* Music, and much more with the *English* Generosity, which the Admiral expressed to the full in very large Presents made to him, and his Nobles. The King promised the next Day to come aboard again; and that same Night sent them in Store of Provisions, as Rice, Hens, Sugar, Cloves, a Sort of Fruit they call *Frigo* and *Sago*, which is a Meal they make out of the Tops of Trees, melting in the Mouth like Sugar, but tasting like a four Curd; but yet, when made up into Cakes, will keep so as to be very fit for eating at Ten Years End. The King came not aboard according to his Promise, but sent his Brother to excuse him, and withal to invite the Admiral ashore, and to be a Pledge for his safe Return: The Admiral declined going himself, but sent some Gentlemen of his Retinue, in Company of the King's Brother, and kept the Viceroy till their Return. They were received ashore by another Brother of the King's, and several of the Nobles, and conducted in great State to the Castle, where there was a Court of at least One thousand Persons, the principal of which was the Council, to the Number of Sixty, very grave Persons, and Four *Turkish* Envoys, in scarlet Robes and Turbants, who were there to negotiate in Matters of Trade between *Constantinople* and *Ternate*: The King came in, guarded by Twelve Lances, a glorious Canopy, embroidered with Gold, being carried over his Head. He had a loose Robe of Cloth of Gold hung about him, his Legs bare, but Shoes of Cordovan upon his Feet; he had Circlets of Gold wreathed up and down in his Hair, and a large Chain of the same Metal about his

Neck, and very fair Jewels upon his Fingers. A Page stood at the Right Hand of his Chair of State, blowing the cool Air upon him with a Fan Two Foot in Length, and One broad, curiously embroider'd and adorned with Sapphires, fastened to a Staff Three Foot long, by which the Page moved it. He kindly received the *English* Gentlemen, and, having heard their Message, sent one of his Council to conduct them back to their Ships. He is a potent Prince, and has Seventy Islands under him, besides *Ternate*, which is itself the best of all the *Moluccas*. His Religion, and that of his Country, is *Mahometanism*. They observe new Moons, and Fasts, as the Followers of *Mahomet* do; in which Fasts, though they mortify the Flesh by Day, yet they pamper it as much in the Night.

16. After this, the Admiral, having dispatched all his Affairs here, weighed Anchor, and put off from *Ternate*, sailing to a little Island Southward of the *Celebes*, where they staid Twenty-six Days. This Island is extremely woody; the Trees are of a large, high Growth, strait, and without Boughs, except at Top; and the Leaves something like our *English* Brooms. Here they observed a Sort of shining Flies, in great Multitudes, no bigger than the common Fly in *England*, which, skimming up and down in the Air, between the Trees and Bushes, made them appear as if they were burning. Here are Bats also as big as Hens, and a Sort of Land Cray-fish, which dig Holes in the Earth like Conies, and are so large, that one of them will plentifully dine Four Persons. Setting Sail from hence, they designed to have run for the *Moluccas*; but, having a bad Wind, and being amongst a Parcel of Islands, with much Difficulty they recovered the Mouth of *Celebes*; where, being not able, for contrary Winds, to continue a Western Course, they altered to the Southward again; which they found very hazardous, by reason of the Shoals that lie thick among the Islands. This they proved by a dangerous, and almost fatal Experiment, on Jan. 9. 1579. when they ran upon a Rock, in which they stuck fast from Eight at Night to Four in the Afternoon of the next Day. In this Distress, they lightened their Ship upon the Rocks of Three Ton of Cloves, Eight Pieces of Ordnance, and some Provisions; very quickly after which, the Wind chopping about from the Starboard to the Larboard of the Ship, they holsted Sail; and the happy Gale, at that Moment, entirely disengaged them from the Incumbrances of the Rock. February 18. they fell in with the fruitful Island *Baratene*, having, in the mean time, suffered much by Winds and Shoals. The People of it are of a comely Proportion in their Bodies, but of a far more beautiful Disposition of Mind, being very civil and courteous to Strangers, and punctually just in all their Dealings. The Men cover only their Heads, and the *Pudenda*; but the Women, from the Waist, down to the Foot: Besides which, they load their Arms with large heavy Bracelets, some of Bone, and others of Brails and Horn, weighing, the least of them, Two Ounces apiece; and of these they have on Eight or Ten at a time. Linen Cloth is a very good Commodity here; these People being fond of it, to make Girdles and Rolls for their Heads. The Island affords Gold, Silver, Copper, Sulphur, Nutmeg, Ginger, Long-pepper, Lemons, Cucumbers, Cocones, Frigo, Sago, &c. particularly a Sort of Fruit, in Bigness, Form, and Huffs, resembling a Bayberry, hard, but pleasantly tasted, and, when boiled, is soft, and of good easy Digestion; in short, (except *Ternate*) they met with no Place that yielded greater Plenty of all Comforts for human Life, than this Island did.

17. Leaving *Baratene*, they sailed for *Java Major*, where they met with a courteous and honourable Entertainment likewise: The Island is governed by Five Kings, who live in perfect good Understanding with each other. They had once Four of their Majesties on Ship-board at a time; and the Company of Two or Three of them very often. The *Javans* are a stout and warlike People, go well arm'd, with Swords, Targets, and Daggers, all of their own Manufacture, which is very curious, both as to the Fashion and Temper of the Metal. They wear *Turkish* Turbants on their Heads; the upper Part of their Body is naked; but, from the Waist downwards, they have a Pintado of Silk, trailing on the Ground, of that Colour which

which pleases them best. They manage their Women quite after another Rate than the *Moluccans* do; for these latter will hardly let a Stranger see them, whereas the former are so far from that Nicety, that they will very civilly offer a Traveller a Bedfellow. And, as they are thus civil and hospitable to Strangers, so they are pleasant and sociable among themselves; for, in every Village, they have a Public House, where they will meet, and bring their several Shares of Provisions, joining all their Forces together in one great Feast, for the keeping up good Fellowship amongst the King's Subjects. They have a way peculiar to themselves of boiling Rice; they put it into an earthen Pot, which is of a conical Figure, open at the greater End, and perforated all over. In the mean time, they provide another large earthen Pot full of boiling Water, into which they put this perforated Vessel, with the Rice, which swelling, and filling the Holes of the Pot, but a small Quantity of Water can enter. By this sort of boiling, the Rice is brought to a very firm Consistency, and, at last, is caked into a sort of Bread, of which, with Butter, Oil, Sugar, and Spices, they make several very pleasant Kinds of Food. The *French* Disease prevails among them in this Island; but, instead of fetching out the Poison by a Salvation, they do it by a sort of Perspiration through all the Pores of the Body, and that by sitting naked in the Sun for some Hours, whose scorching Rays open those Passages, and give free Vent to the noxious Particles to discharge themselves. The Admiral here had News of some great Ships that lay not far off; so, not knowing what they might prove, he would stay no longer. From hence they sailed for the Cape of *Good Hope*, which was the first Land they fell in withal, neither did they touch at any other till they came to *Sierra Leona*, upon the Coast of *Guinea*. They passed the Cape *June* 18. and, by the Pleasure of the Voyage that Way, found how much the *Portuguese* had abused the World in their false Representations of the Horrors and Dangers of it. *July* 22. they arrived at *Sierra Leona*, where they found great Store of Elephants, and Trees that had Oysters fastened to them, upon which they lived and multiplied, with which, and with the Lemons that grew there, they were much refreshed.

18. After Two Days Stay, which they spent in wooding, watering, and taking in Refreshments, they sailed from thence. *July* 25. they found themselves under the Tropic of *Cancer*, being then 50 Leagues off the nearest Land. On the 22d of the same Month, they were in the Height of the *Canaries*; but, being sufficiently stocked with all Necessaries, they made no Stay there, but continued their Voyage to *Plymouth*, where they arrived on *Monday* *September* 26. 1580. but, according to their Account, it was *Sunday*, the Cause of which different Computation we have before explained. In this Circum-navigating of the Globe he spent Two Years, Ten Months, and a few Days. The Report of his Return was very soon spread through the Kingdom; and, as that was an Age when Virtue might be said to be in Fashion, it made a great Noise, especially among such as affected to distinguish themselves either as the Patrons of Arms, or Arts, all of them striving to express their Sense of his Worth, by the Praises, and other Testimonies of Regard, which they paid to Captain *Drake*: And of the Epigrams, Songs, Poems, and such-like Performances, in Commendation of him and his Ship, several Collections were made, which extended his Fame still farther; though few or none of them can be truly said to approach in any Degree the Worth of their Subject, which might not perhaps be so much owing to the want of Genius in Poetry, as to the want of a competent Skill in other Sciences necessary to enable them to form proper Descriptions for the Illustration of their Poems; which has made me often wonder, that some modern Writer has not endeavoured to reach the Character of the *English Homer*, by displaying in Verse the Labours of Sir *Francis Drake*.

19. It was not, however, reasonable to expect, that so bold and brave an Action, attended likewise by such vast Applause, should pass altogether uncensured; and therefore we need not be surpris'd, that there were many who endeavoured to give a wrong Colour to this gallant Action. They gave out, that his surrounding the Globe served only to amuse

common Minds, and that the main Business of his Voyage was Plunder, of which, they said, he had acquired enough to exempt the Nation from Taxes for Seven Years: That, as there was no War proclaimed against *Spain*, it was a dangerous Thing to own such an Adventurer, since the Public might come to pay dear for the Prizes he had taken: That our Merchants had great Effects in *Spain*, and therefore Reason to doubt, that a Handle might be taken to seize our Merchants Goods to make good his Depredations. These Objections really weighed much with some People, and others thought fit to countenance them, though they did not believe them. The *Spanish* Embassador also attacked him by very warm Memorials, his Party styling him the Master Thief of the unknown World. The Friends and Patrons of Captain *Drake*, however, who found themselves wounded through his Sides, took abundance of Pains to vindicate his Conduct; alleging, on his Behalf, that he had the Queen's Commission to justify his making Reprials; that the more Wealth he had brought Home, the more the Nation was obliged to him; that the *Spaniards* had already done us very great Injuries, and therefore they had more Reason to fear us, than we them; that, in fine, if the King of *Spain* had a mind to seize our Merchants Effects, the Public would do well to receive this *Indian* Treasure by way of Equivalent; and that, if they did not, it would break the Spirit of that sort of Men, who were otherwise most like to break the Spirits of the *Spaniards*. Such were the Reasonings on both Sides, while the Thing remained in Suspense, as if *Queen Elizabeth* intended to hear every body's Sentiments, before she decided the Merits of so great a Cause.

20. Things remained for a considerable Time in this Situation, during which Captain *Drake*, no doubt, was extremely uneasy, as not knowing, whether, after all his Toils Abroad, he might not be declared a Pirate at Home. There is, however, Reason to believe, that the Queen delayed disclosing her Sentiments from Motives of true Policy, as inclining to see what Effects this Conduct of hers might have had upon the Court of *Spain*, which was certainly withheld from meddling, so far as was otherwise intended in her Affairs, by the Hopes of drawing so great a Treasure out of her Hands; and, to keep them in this Hope, she very artfully consented to part with some small Sums to *Mendoza* the *Spanish* Agent. At last, when Things were come to a Crisis, the Queen threw off the Veil at once; and Notice being given to Captain *Drake* of her Intention, she, on the 4th of *April* 1581. went on board his Ship at *Deptford*, where she was magnificently entertained; and, after Dinner, was graciously pleased to confer the Honour of Knighthood on Captain *Drake*; telling him, at the same time, that his Actions did him more Honour than his Title. There was a prodigious Croud attended her Majesty upon this Occasion, so that they broke down the Bridge laid from the Shore to the Ship, by that time she was got on board it; yet of 200 Persons, who by this Accident fell into the *Thames*, not one was either drowned or hurt, which her Majesty was pleased to attribute to the Fortune of Sir *Francis Drake*. After this public Approbation of the Sovereign, all Ranks of People redoubled their Congratulations; and Sir *Francis Drake* himself is said thenceforward to have given for his Device the *Terraqueous Globe*, with this Motto, *Tu primus circumdedisti me*, i. e. *Thou first encompassedst me*; but not excluding his former Motto, *Divino auxilio*, i. e. *By the Help of God*. Henceforward the Reputation of Sir *Francis Drake* was continually increasing, till he came to be considered as a kind of Oracle in Maritime Affairs, both by the Country and the Court.

21. I have dwelt the longer upon these Circumstances, not only because they have a near Relation to the Affair before us, and a still nearer to the Man, of whom we are writing, but also because I have found them scarce taken notice of by any of those who have undertaken to record his Exploits. I shall next point out some of the most remarkable Advantages that arose from his successful Execution of this noble Undertaking, that the Benefit of this kind of Reading may appear; and that whoever peruses this Work, may be satisfied we do not barely transcribe the Writings of Authors, who have gone before us in this Way, but are inclined to add our Endeavours, to render these Relations

lations not only more entertaining, but of greater Use. In the first Place it is worthy of Remark, that our Hero was so fortunate, as fully to achieve what others only attempted to perform. The great *Columbus*, who first pointed out the Way to others, lived not to become an Example himself. The famous *Ferdinand Magellan* went farther indeed, but had the Misfortune to be snatched away by a sudden Death, in the midst of his Discoveries, and of his Hopes. But *Drake* happily accomplished what he bravely attempted, and gave his Country the Honour of producing the first Commander who sailed round the Globe. We must not conceive, that this Honour is a mere empty Sound, serving only to gratify the Vanity of our Nation; for it is, on the contrary, a very solid Benefit, as will appear, if we consider, that a Reputation of this sort is of very great Consequence to a trading Nation. To be convinced of this, we need only look into the celebrated Collection of Voyages for the Establishment of the *East India* Company in *Holland*; where, speaking of *Oliver Van Noori's* Circumnavigation, it is said, that though the Profits of his Voyage were small, yet the Company were extremely well satisfied with the Event, because the *Dutch* could now boast, that a Subject of theirs had sailed round the World, as well as *Drake* and *Candish*. It is, indeed, much for the Reputation of *Sir Francis Drake*, that, even at his first setting out, he seems to have had the Honour of his Country as much at Heart, as his own Fame or Fortune, by providing every thing in his Ship which might strike the Eyes of Foreigners, and fill them with Admiration of the Country from whence he came. The same Spirit led him to proceed farther North in *America*, than the *Spaniards* themselves had done; that is, to the Height of 33° of North Latitude, beyond which we know nothing with Certainty even at this Day. The Description he has given us of the Country and People is very exact; and his taking Possession of it, and bestowing on it the Name of *Nova Albion*, was very prudent, and may some time or other turn much to our Account; since, if ever a Passage should be discovered by the North-west, the *Spaniards* can never dispute with us the Possession of this Country, which is probably the nearest to that Passage, even upon their own Principles; since they must allow us to have been the first Discoverers, and first Possessors; which gives us altogether as good a Right to that, as they have to any Part of their *Indies*. The same Generosity, and public Spirit, displayed itself in his Behaviour to these People, and to all the other Nations with whom he conversed; of which we have authentic Testimonies in the Letters sent by *Indian* Princes long after his Decease, speaking highly in the Praise of Captain *Drake*, and acknowledging, that they had conceived very respectful Sentiments of the *English* Nation, from the Usage they had met with from him. I must confess, I have always looked upon it as a great Misfortune, that he did not himself leave us an Account of his Voyages and Discoveries; because, from the Letters of his which are still preserved, it appears, that he was much more capable of recording his own Exploits, than any of those who have employed their Pens on that Subject: We should then have known, upon what Grounds he expected to have found a Passage back by the North; for, that he really did look for such a Passage, is certain; and the only Reason why he quitted the Coast of *California* to fail to the South-east, was, that he found the Weather grew extremely cold; and thought, therefore, that, in the Circumstances he was at that Time, it would be imprudent to pursue that Discovery any further in a Season so advanced. This surely was just and reasonable in him; but how it comes to pass, that, from that Time to this, no farther Attempts have been made, in a Way that gave so early such great Hopes, is very unaccountable. The *Spaniards* are certainly in the right, not to make, or at least not to publish, any Discoveries upon this Coast for many Reasons; but, undoubtedly, it ought to have been our Business to have pursued the Hints given us by *Sir Francis Drake*, and to have satisfied ourselves, whether there was, or was not, such a Passage as he expected to meet with. In his Course from *California* to the *Ladrones*, he made no Discoveries; unless we account it a Discovery, that he met with no Islands in those Seas: But that he made his Passage in Sixty-eight Days,

shews him to have been a very able Navigator, which also appears from many other Incidents in this long Voyage, which, however, he performed in much shorter time than the *Spaniards* who sailed with *Magellan*; for, whereas they were Sixteen Months in their Passage from *Tiridore* to *Seville*, he arrived at *Plymouth*, from the same Island in the *East Indies*, in Ten Months. On the Whole, therefore, we may truly affirm, that this Voyage round the World, by *Sir Francis Drake*, was, in all its Circumstances, perfectly well conducted; and that as he made the best Use possible of the Lights he received from others, so he left, by his Prudence and Discretion, a great and glorious Example to succeeding Times. Here, strictly speaking, we ought to conclude our Account of this illustrious Person; but, as the Reader may probably expect, and will certainly be well pleased, to find a concise Detail of his succeeding Actions, it may not be amiss to indulge his Curiosity, by finishing with the personal History of *Sir Francis Drake* this Relation of his Voyage round the World.

22. The War with *Spain* being still prosecuted by the Queen his Mistress, we find him, in 1585. General by Land and Sea, in an Expedition to the *West Indies*, in which he took the Cities of *St. Iago*, *St. Domingo*, and *Cartagena*, as also the Fort and Town of *St. Augustin*; and returned with great Glory, as well as great Advantage; the Profits of this Expedition amounting, all Charges defrayed, to 60,000*l.* of which 20,000*l.* was divided amongst the Seamen, and 40,000*l.* came clear into the Pockets of the Undertakers or Adventurers. In 1587. he had the Command of another Fleet, with which he sailed into the Bay of *Cadiz*, and from thence to the River of *Lisbon*, where he destroyed 10,000 Ton of *Spanish* Shipping, which had been drawn together for invading *England*. He likewise brought Home a very rich Prize, called the *St. Philip*, which, as the Writers in those Times say, was the first Carrack ever taken and brought into *England*. In 1588. he was, by the Queen's Commission, appointed Vice-admiral of the *English* Fleet, fitted out against the great *Spanish* Armada; in which Service he performed even more than was expected from his former Actions, taking, in the Beginning of the Fight, Two very large Men of War, the first commanded by the Vice-admiral *Oquendo*, the latter under the Command of *Don Pedro de Valdez*, who defended himself gallantly a long time, and surrendered at last on the Reputation of *Sir Francis Drake*, as appears by the Compliment paid him by *Don Pedro*, when he delivered him his Sword, which was to this Effect: That they were all resolved to have died fighting, if they had not fallen into his Hands, whose Felicity and Valour was so great, that *Mars* the God of War, and *Neptune* the God of the Sea, seemed to wait upon all his Enterprizes, and whose noble and generous Courage had been often experienced by his Foes. *Sir Francis*, to requite these *Spanish* Compliments with real *English* Kindness, set him at his own Table, and lodged him in his own Cabin, sending the rest of his Company to *Plymouth*. *Drake's* Soldiers were well recompensed with the Plunder of his Ship, wherein he found 55,000 Ducats in Gold, which they joyfully shared amongst them. He did, besides this, many great Things in that memorable Battle, and particularly distinguished himself by advising the Use of Fire-ships, though I dare not say, as some have done, that he invented them upon this Occasion. The next Year he was Admiral of a great Fleet sent to *Portugal*, in order to restore *Don Antonio* to his Kingdom; but this was a conjunct Expedition; and, it seems, even *Sir Francis Drake* had not Fortune enough for himself, and a General, so that it ended but indifferently: However, the *Spaniards* received great Damage, the Compliment of an Invasion was returned, and it was put entirely out of their Power to make, as they boasted they would, another Attempt of that Nature: In the Whole, therefore, *Sir Francis Drake* spoiled no less than Three *Spanish* Invasions. In 1595. he ventured on another conjunct Expedition to the *West Indies*, in which he performed great Things; but, aiming at still greater, and not meeting with his usual Success, the Thoughts of it broke his Heart in the Harbour of *Porto Bello*, January 28. 1595. where his Body, in a Leaden Coffin, was committed to the Sea, under a general Discharge of all the Cannon from the Fleet.

In his Person, he was but low of Stature, yet extremely well-made, his Complexion fresh and fair, his Eyes large and lively, his Hair of a light Brown, and his Countenance open and cheerful: He was naturally eloquent, expressing gracefully what he conceived clearly; very knowing, not only in his own Profession, but in all the Sciences relating to it; so that he was able to discharge every Office in a Ship, even that of a Surgeon; just to his Owners, kind to his Seamen, loyal to his Sovereign, and remarkably merciful to his Enemies. His many glorious Exploits justify his Title to extensive Fame, which, when we remember that he died at Fifty-five, will convince us, that he shewed the utmost Ardour in the Pursuit of Glory.

23. The Fame of this Voyage, the Wealth brought Home by Sir Francis Drake, and the Hopes of rivalling him in Credit and in Wealth, inspired Numbers of young People, of all Ranks and Conditions, with a Desire of trying their Fortunes at Sea, in such manner as their Abilities would permit. Men of Families and Estates fitted out Vessels at their own Expence, and filled them with their own Dependents; others, in a lower Situation of Life, chose to hazard their Persons, as little Officers, on board such Ships as these, or in some of the Queen's Men of War; and to such a Height at last this Spirit grew, that honest John Stowe, whose Industry was never surpassed, and whose Integrity was never called in question, tells us, of his own Knowledge, that, toward the latter End of the Reign of Queen Elizabeth, there were many Lads, from Eighteen Years old to Twenty, capable of taking the Charge of any Ship, and navigating her to most Ports in Europe, or the Indies. The Spaniards were so alarmed, not only by the Courage and Conduct of Sir Francis Drake, as an Admiral or Commander in chief, but by his Skill also as a Seaman, that they ordered no Draughts to be made, no Discourses to be written, of their Discoveries in America, for fear of their falling into his Hands. But what most surprised them, was his finding and passing, with so much Ease, the Streights of Magellan, which hitherto had been out of their Power; and therefore they immediately resolved to send and discover that Strait perfectly, by Ships from Peru. One Pedro Sarmiento, who was looked upon as the very best Seaman in the Spanish Service, was sent for this Purpose from Lima; and actually past from the South into the North Seas, and thence to Spain, where he informed the King, that it was very possible to plant a Colony in those Parts, and to fortify the Streights in such a manner, as to prevent any other Nation from passing them. This Project was so well relished by Philip the Second, and appeared to him to be a Matter of such Importance, that he resolved immediately to carry it into Ex-

ecution. With this View he fitted out a Fleet of Three-and-twenty Sail, with 3500 Men on board, under the Command of Don Diego Floris de Valdez; and appointed Pedro Sarmiento, with 500 Veterans, to settle in the Streights. This Fleet was extremely unfortunate; and it was between Two and Three Years, before Sarmiento, with his People, arrived in those Streights, and on the North Side near the Entrance, built a Town and Fort, called *Nombre de Jesus*, where he left 150 Men; but his great Settlement was Fifteen Leagues farther in the Latitude of 53° 18' in the narrowest Part of the Streights; and this he called *Ciudad del Rey Felipe*: It was a regular Square, well fortified with Four strong Bastions, properly furnished with Artillery; and, in all respects, one of the best contrived Settlements that was ever made by the Spaniards in America. Here Pedro Sarmiento left Four hundred Men, Thirty Women, and Provisions for Eight Months, and then returned into the North Seas. These Transactions happened in the Years 1584, 1585, and 1586. But, notwithstanding all this Care, the Project came to nothing. Don Pedro Sarmiento, after many fruitless Attempts to succour and relieve his Colony, was taken by an English Vessel, and sent Prisoner to London. The Spanish Garrison, having consumed all their Victuals, died most of them of Hunger, in their Houses in Philip's City; and Three-and-twenty only quitted it, and endeavoured to get to the Spanish Settlements by Land, but are supposed to have perished in the Attempt. It will not be amiss to observe, that Sarmiento fell into Discredit with his Master, for deceiving him as to the Breadth of the Streights, which he asserted were not above a Mile over; whereas the King had certain Information afterwards, that they were a League broad; and therefore his Fortifications would have proved ineffectual for the Purpose he intended. But, however this might be, it is certain, that if Sarmiento's Report had been true, and the City and Citadel of Philip could have commanded the Streights, it would have done little or no Service to the Spanish Cause, since another Passage into the South Seas was soon after discovered without going near those Streights. The Nature and Expence, however, of this Settlement, is an ample Testimony of the Sense the Spaniards had of Sir Francis Drake's bold Undertaking, and of the Consequences that must attend it. Their Fears, in this respect, were fully justified by the Event; for not only our Nation, but the French and Dutch, began to think of imitating his Example, and following Sir Francis Drake into the South Seas. The first Instance, however, of the Kind, was that of a Countryman of our own, whose Voyage, as next in Order of Time, we shall now proceed to consider.

SECTION V.

Sir THOMAS CANDISH or CAVENDISH's Voyage round the World.

1. *The Reason why Gentlemen of Family and Fortune undertook such Expeditions.*
2. *Mr. Candish's First Voyage to Virginia with Sir Richard Greenville, in his own Ship the Tyger, in 1585.*
3. *His Preparations, Strength, and setting out on this Voyage round the World.*
4. *Their Departure from the Cape de Verd Islands, and Arrival on the Coast of Brazil.*
5. *Agreement between Magellan's and Mr. Candish's Account of the Patagons.*
6. *Great Storms at the Mouth of the Magellanic Streights in January.*
7. *A most accurate Description of those Streights, and of King Philip's City.*
8. *The District of Arunco, very rich in Gold, but never conquered by the Spaniards.*
9. *They have a brisk Dispute with the Spaniards at the Bay of Quintero.*
10. *Arrival at Morro Moreno, and Entertainment by the Indians.*
11. *Take several rich Prizes on the Coast, and sack the Town of Paita.*
12. *They land on the Island of Puno; Description of it, and its Inhabitants; the English plunder it.*
13. *They secure an excellent Pilot, who gives them first Notice of the Acapulco Ship.*
14. *Upon this they continue cruising to the Northward.*
15. *Arrive on the Coast of California.*
16. *Discover, fight, and take the St. Anne, bound from Manila to Acapulco.*
17. *A Mutiny on dividing the Booty, which is soon composed.*
18. *Departure from California for the Ladrones.*
19. *They arrive among the Philippine Islands.*
20. *Description of the Island Capul, and its Inhabitants.*
21. *Accounts of other Islands, and Departure from the Philippines.*
22. *Description of the Islands of Java.*
23. *They double Cape Falto, and the Cape of Good Hope.*
24. *The Island of St. Helena described.*
25. *Departure from thence, and safe Arrival in England.*
26. *His Reception on his Return,*

and Letter to Lord Hunston. 27. Observations upon his Voyage. 28. Other Circumstances of his Life, and the Occasion of his undertaking a Second Voyage. 29. A concise Account of that Voyage, his unfortunate Attempt at the Magellanic Streights, and Death through Grief.

1. IT was the constant Policy of the Reign of Queen Elizabeth, to encourage, as much as possible, the Flame of public Spirit in the Bosoms of private Men, by shewing, upon all Occasions, the greatest Readiness to honour all those who did remarkable Service to their Country, though she was very sparing of any such Marks of her Favour upon other Occasions. By this wise Conduct, and by her frequent Discourses in Public, on the Glory resulting from an active Life, she excited many of the young Nobility, and Gentlemen of easy Fortunes, to hazard their Persons and Estates for the public Service; making the Want of Fame to be as much a real Necessity, as the Want of Wealth; uniting thereby the Rich, who desired Honour, and the Indigent, who sought a Living, in the very same Pursuits. Thus it was brought about, that, in her Reign, such Men were of most Use to their Country, as, under other Reigns, are scarce of any Use at all: For, when it was once discerned, that Merit only could recommend a Man at Court, those were most ready to expose themselves in generous Undertakings, whose Situation in the World would, at any other Time, have excused them from such Labours and Fatigues. Thus the Earls of Cumberland and Essex, Sir Richard Grenville, Sir Walter Raleigh, Sir Humphry Gilbert, Sir Robert Dudley, and many other Persons of like Rank, employed great Sums of Money, and exposed their Persons to the greatest Dangers, in equipping Squadrons against the Spaniards, making Discoveries in distant Parts of the World, planting Colonies, and such-like Undertakings, which were the Glory of those Times, and the Wonder of ours. Amongst these, no Man distinguished himself more, than the Gentleman of whom we are now to speak¹, whether we consider the Expence he was at, the Difficulties he went through, or the Success of his Exploits, all of which were due to that Greatness of Mind, and ardent Thirst of Reputation, which taught him to despise Danger, and to embrace Fatigues, at an Age, when other Men are not only fond of Pleasures, but think too, that the Season of their Lives is a sufficient Excuse for the Luxury in which they live.

2. Thomas Candish, of Trimley, or Tremley, in the County of Suffolk, Esquire, was a Gentleman of an honourable Family, and large Estate, which, lying in the Neighbourhood of Ipswich, a Place then of very great Trade, gave him an early Inclination to the Sea; which, as soon as he arrived at Age, he gratified, by converting Part of his Lands into Money, and equipping a stout Bark, called the *Tyger*, of the Burden of 120 Tons, in which he accompanied Sir Richard Grenville, in his Voyage to Virginia in 1585, in which he went through many Dangers and Difficulties, without any Profit; but, at last, returned safe to Falmouth, on the 6th of October in the same Year; which, however, did not discourage him from undertaking still greater and more hazardous Expeditions: For, having in this Voyage seen a great Part of the Spanish West Indies, and conversed with some who had sailed with Sir Francis Drake through the South Seas, and round by the East Indies, he began to be very desirous of undertaking a like Voyage, as well for repairing the Loss he had sustained by this Expedition, as to emulate that great and fortunate Officer, who was by this Time raised to the highest Honours of his Profession. As soon, therefore, as he returned home, he applied himself to the Preparations expedient for the accomplishing his Design; and either sold or mortgaged his Estate, to make up the Sum necessary for building and equipping Two such Ships as were requisite for the Voyage; and, though such kind of Matters usually take up a good deal of Time, yet so eager, and so impatient, was Mr. Candish, that, in the Space of a Month, his Carpenters were at work upon the largest Ship, and, in Six Months more, his little Squadron was intirely finished, and completely furnished with all Things necessary.

3. The largest Ship was called the *Desire*, of the Burden of 140 Tons; the lesser was named the *Content*, of about 60 Tons; to these he added a Bark of about 40 Tons, called the *Hugh Gallant*, all supplied at his own Expence, with Two Years Provision, and manned with an Hundred and Twenty-six Officers and Sailors; some of which had served under Sir Francis Drake, but most of them Men of Experience; and with whom, for their better Encouragement, he entered into a fair Agreement with respect to the Proportion in which all Prizes should be divided amongst them. He was likewise very careful in providing Sea Charts, Draughts, Maps, and such Accounts as could be obtained of Voyages already made into those Parts which he intended to visit. He likewise procured, by the Favour of his Patron the Lord Hunston, then Lord Chamberlain, a Commission from Queen Elizabeth: And thus, completely Master of all that he wanted, he set out from London, July 10. 1586. for Harwich, where he embarked on board the *Desire*, and sailed for Plymouth, where he arrived the Eighth of July, and continued there waiting for some of his Company till the 21st, when he hoisted Sail for his intended Voyage. On the 25th of the same Month died one Mr. Hope, of a Wound he received in a Duel he fought during their Stay at Plymouth. The next Day they fell in with Eight Ships from Biscay, well mann'd, one of which attacked the Admiral; but Mr. Candish gave her so warm a Reception, that she was glad to sheer off; and the rest, deterred by her Example, continued their Course, and gave him no Disturbance; and the Admiral did not continue the Chace, because it grew dark, and he was afraid to lose his Consorts. On August 5. they fell in with the Island of *Forteventura*, where they met with nothing remarkable, sailing thence to Cape Blanco, and so to the Coast of Guiney, with which Navigation Mr. Brewer, who was on board the Admiral, was very well acquainted. Here the Men began to complain much of the Scurvy, and therefore the Officers resolved to put some of them on Shore for their Recovery, as soon as an Opportunity offered with Safety. August 23. they made *Sierra Leona*; and, the 25th, fell in with the South Side of it, where they had Five Fathom Water at the lowest; and, for about Fourteen Leagues at the South-west, all the Way running into the Harbour, they had from Eight to Sixteen Fathom. Here they spoiled a Town of the Negroes, who killed one of their Men with a poisoned Arrow. September 3. some of them went up with the Boat Four Miles within the Harbour, where they caught plenty of Fish, and, going on Shore, they got some Lemons, seeing some Buffaloes too as they were returning. The 6th, they went out of the Harbour of *Sierra Leona*, and staid one Tide, Three Leagues from the Point of the Harbour's Mouth, the Tide there flowing at South-west.

4. The Seventh they departed from one of the Isles of *Cape Verd*, which is Ten Leagues from the Point of *Sierra Leona*; and the same Day they anchored Two Miles off the Island, and, landing, found only Plantanes upon it. The Eighth, one of the Boats went out, and found. At the East End was a Town, to which the Negroes resort sometimes, as by their Provisions left there appeared. There is no fresh Water on all the South Side, at least that they could find; but, on the North, there is in Three or Four Places. The whole Island is a perfect Wood, except a few small Spots, where some Houfes stand; and these are encompassed round with Plantane-trees, the Fruit of which is excellent Food. The Place is subject to Storms of Rain and Thunder in this Month of September. They left this Island on the 10th; and, on the last of October, sailing West South-west, about Twenty-four Leagues from Cape Frio in Brazil, they fell in with a great Mountain, which had a high round Top, standing aloft like a little Town. November 1. they went in between the Island St.

¹ *Hackluit, Purchasi, Manfon, Camden, Stowe, &c.* — See *Stowe, Manfon, and The Heroes of the Reign of Elizabeth*, a MS. formerly belonging to Mr. Le Neve.

Sebastian and the main Land, where, carrying their Things on Shore, and erecting a Forge, they built a Pinnacle, and repaired whatsoever was out of Order; which Work detained them till the 23d. Upon the 26th, they fell in upon the Coast of *America*, in $47^{\circ} 20'$ North Latitude, from which Place they ran along the Shore, till they came into 48° , finding it a very steep Beach all along.

5. *November 27.* they came to an Harbour, into which the Admiral first entered, calling it, on that Account (from the Name of his Ship) *Port Desire*. Near this Harbour there are an Island or Two, very full of Seals, and another as well stock'd with grey Gulls. The Harbour itself is very convenient for trimming and graving of Ships, because of the considerable Ebbing and Flowing of the Water there. Here the Savages wounded Two of their Company with their Arrows, which are made of Canes headed with Flints. A wild and rude sort of Creatures they were; and, as it seem'd, of a gigantic Race, the Measure of one of their Feet being Eighteen Inches in Length: When any of them dies, he is buried in a Grave of Stone upon the Cliffs by the Sea Side, all his Darts being fastened about his Tomb, and his Treasures of Shells laid under his Head. This Description agrees very well with that of *Magellan's*; though some Pains has been taken to represent that as fabulous; perhaps, for want of understanding it. He left this Country the Name of *Patagonia*, and gave the Inhabitants that of *Patagens*; by which he meant to signify, that they were Five Cubits, or Seven Feet and an half high; which, if we consider, that the *Portuguese* are not commonly very tall themselves, we need not wonder that they stied them Giants. As to this Circumstance of the Footstep, if we take the usual Proportions of human Bodies, in which the Foot is between a Fifth and Sixth of the whole Body, then the Account given us here by *Mr. Cavendish*, agrees very exactly with that of *Magellan*; and, as will be shewn hereafter, is not falsified by any of our subsequent Travellers.

6. *December 28.* they left *Port Desire*, and anchored near an Island Three Leagues to the Southward, and kept along the Coast South-west and by South. The 20th they came to a Rock, (much like the Eddy-stone at *Plymouth*) lying about Five Leagues from the Land, and in $48^{\circ} 30'$ South Latitude; and, sounding, they had Eight Fathom rocky Ground within a Mile of it. They kept on coasting South South-west, and found great Store of Seals all along the Coast. *January 2.* they fell in with a great white Cape in 52° , and had Seven Fathom Water within a League of the Shore. The 3d, they fell in with another great Cape in $52^{\circ} 45'$, from which Cape there runs a long Beach, about a League to the Southward, and reaches to the Opening of the *Magellanic* Strait: Under this Cape they anchored, and lost their Anchor in a very great Storm, which rag'd violently for Three Days together.

7. *January 6.* they put into the Straights, which they found in some Places Five or Six Leagues wide, and in other Places considerably more narrow. The 7th, between the Mouth of the Straights and the narrowest Part of it, they took a *Spaniard*, who was left there with Twenty-three of the same Nation; and these were all remaining of Four hundred, left Three Years before in these Straights. The same Day they pass'd the narrowest Part of those Straights, where the *Spaniards* shew'd them the Hull of a small Bark, supposed to be one left by *Sir Francis Drake*. The Mouth of the Straights is in 52° South Latitude, and 'tis from thence to the narrowest Pass Fourteen Leagues, and the Course is West by North; also from this narrowest Pass to *Penguin Island* is 10 Leagues, and the Course is West South-west, and a little to the Southward. Here in *Penguin Island* they anchored the 8th Day, and killed and salted great Store of *Penguins*. *January 9.* they left this Island, and sail'd South South-west *Ciudad del Rey Felipe*, or *King Philip's City*: built by the *Spaniards*: It had Four Forts, (or Bastions rather) and each Fort had one cast Piece in it, which were all buried, and the Carriages left standing in their Places: They dug for these Pieces, and recovered them all. The City had several Churches in it, and seem'd to be very well contriv'd, especially as to its Situation, which was in the most happy Place in all the Straights, for

the Conveniencies of Wood and Water. But miserable was the Life which this forlorn Remnant of *Spaniards* had lived there for the Space of Two Years, having hardly any thing but a few Shell-fish to support Nature withal, except they had the good Luck to take a Deer, at any time, that came down from the Mountains to drink. Their Design in coming to this Town, was to fortify these Straights, so that all other Nations, besides themselves, should be debarred of a Passage into the South Sea: But, besides the Badness of the Climate, the Barrenness of the Soil, and the Inclemency of the Weather, the *Indians*, their most implacable Enemies, broke in upon them by frequent and furious Expeditions; and by these means they were reduced to the last Extremities, all their Stores brought out of *Spain* being spent, and no more to be gotten abroad, the Country either not affording it, or the *Indians* falling upon them, and hunting the *Spaniards*, while they hunted a few Deer for the Preservation of their Lives: At last they died like so many Dogs, in their Houles, in great Numbers; and the Stench of the putrefying Carcasses infecting those that survived, they were forced to quit the Town with one Consent, and go rambling upon the Sea Coasts, living upon Leaves and Roots, and Sea Herbs, or what Animals they at any time happily caught. They determin'd to march on to the River of *Plate*, and were, in this their miserable Progress, met by the *English*, as was before observ'd. The Admiral nam'd this Place (for the Scarcity of all Necessaries here) *Port Famine*: It lies in 53° South Latitude. The 14th, they left this Place, and ran 5 Leagues South-west to *Cape Forward*, which Cape is the Southernmost Part of the Straights, and lies in the Latitude 54° . From this Cape, sailing West by North Five Leagues more, they put into a Bay, which they call'd *Mussel Cove*, from the Store of Mussels found there. The 21st, they left that Place, and sail'd North-west and by West, 10 Leagues to a fair sandy Bay which the Admiral call'd *Elizabeth Bay*. The 22d, they departed from *Elizabeth Bay*, and, about 2 Leagues off, found a good River, in which the Admiral towed up the Boat for the Space of Three Miles: There was a pleasant champagne Country that lay about the River; but, except this, all near the Straights was craggy and mountainous, inhabited by a strong, well-made, but a very brutish sort of Savages, who, it was said, had eat up many a *Spaniard*, and would fain have made a Meal upon *English* Flesh too, but that they fail'd of bringing them into their Trap: The Admiral, finding the Plot they had laid to betray him, made his Men salute them with their Harquebusses, which did Execution upon several: So, leaving that River, they sail'd to *St. Jerome's* Chanel, which was 2 Leagues off. From this Chanel they sail'd Westward about 3 or 4 Leagues, to a Cape which lies on the North of it; from which Cape, to the Mouth of the Straights, the Course runs North-west, and North-west by West; and the Distance from thence, to the Entrance into the South Sea, is about 34 Leagues; so that the Length of the whole Straights is 90 Leagues. 'Tis farther observable, that the Entrance of the Straights into the South Sea is in near the same Latitude with the Passage out of the North Sea into the Straights, which is $52^{\circ} 40'$ South Latitude; and here between the fore-mentioned Cape and the Mouth of the Straights, they were forced to lie in Harbour till *Febr. 23.* the Reason of which Confinement was, the stormy Winds, and excessive Rains that pour'd down with such Fury from the Mountains, that they were brought into extreme Danger thereby, being no less distressed for want of Food, than by the Badness of the Weather, which hardly permitted them to land, and range the Country for a Supply. As they lay here in the Straights, they observ'd (which had also been discovered by the *Spaniards* before) that there were Harbours on both Sides the Shore, at every Mile or Two Miles Distance, tolerably convenient, at least for small Ships.

8. *February 24.* they entered the South Sea, observing on the South Side of the Entrance a very high Cape, with a low Point adjoining to it; and on the North Four or Five Islands, lying Six Leagues off the Main, with much broken and sunk Ground about them. *March 1.* they had a great Storm at Night, in which they lost the Company of the

Hugh Gallant, being then in 49° South Latitude, and 45 Leagues from the Land. The Storm continued Three or Four Days, and the *Hugh Gallant*, having sprung a Leak, and beaten by the Storm, in Seas far from all Help, was ready every Moment to sink to the Bottom: However, she made a Shift to hold out, by the great Labour and Pains of her Crew; and, on the 15th in the Morning, she came in between the Isle *Saint Mary* and the Main, where she met the Admiral and the *Centens*, which Two Ships had, during the Storm, secured themselves Two Days at the Isle of *Nocha*, in 38° South Latitude. At this Place some of the Company, well armed, went ashore, where the *Indians* met them, and gave them a warm Reception with their Bows and Arrows. These *Indians* were of the District of *Aranca*, which, being a Country rich as Gold, and consequently very tempting to the avaricious *Spaniards*, had been divers times invaded by them, but to no Purpose, the Inhabitants having always so briskly defended themselves, that their Enemies (though better provided than they) could never boast of being their Conquerors; and these desperate Men, mistaking the *English* for *Spaniards*, gave them that Entertainment which they always used to give the other. After the Skirmish they weighed Anchor, and ran under the West Side of *St. Mary* Island, where they had good Riding in Six Fathom Water. The Island itself lies in 37° 30' South Latitude, and abounds in Hogs, Hens, and divers sorts of Fruits: The *Indians* that live here are in such absolute Slavery to the *Spaniards*, that they dare not so much as kill a Fowl or a Swine for themselves. And though the *Spaniards* have made them Disciples, yet they use them more like Dogs, than Men or Christians. The 16th, the Admiral went ashore with Seventy or Eighty Men well armed; they were met and welcomed by Two *Indians* of Quality, who conducted them to a Place, where was a Chapel built by the *Spaniards*, round about which were several Storehouses, furnished with good Wheat and Barley, as clean and fair as any in *England*. They provided themselves out of the Stores with sufficient Quantities of Corn, and laid in, besides, good Store of Hogs, Hens, Potatoes, dried Dogfish and Maiz, which is *Guiney* Wheat: The Admiral invited the Two principal *Indians* aboard to an Entertainment; and the Wine having opened their Eyes to see clearly, that the Admiral and his Men were no *Spaniards*, (as they hitherto supposed them to be) they began to be very free with them, and to talk largely of the Gold Mines, telling them, that, if they would go across the Country to *Aranca*, they might get as much Gold as they cared for; but the Admiral, not perfectly understanding the Information, it being given partly by Signs, which were obscure, prosecuted not that Adventure, but went on with his Voyage.

9. The 18th in the Morning, they left this Place, and sailed all that Day North North-east, about 10 Leagues. The 19th, they ran in with the Land at East North-east, and anchored under an Island called the *Conception*. The 30th, they came into the Bay of *Quintero*, in 33° 50' South Latitude; and the last Day of that Month, a Company of Fifty or Sixty Men, well furnished, marched up into the Country Seven or Eight Miles: In their March, they saw vast Herds of wild Cattle, with Horses, Dogs, Hares and Conies, Partridge, and other Fowl; many fine Rivers, well stocked with all sorts of wild Fowl; but, having travelled as far as they could for the Mountains, and without any remarkable Adventure, after refreshing themselves awhile upon the Banks of a pleasant River, they returned in good Order to their Ships at Night: Yet was there a Party of 200 Horse abroad that Day to have taken them, and that upon the Information of the *Spaniards* that had escaped from them the Day before; but these valiant Soldiers, though they saw them, durst not make any Attack, but kept at a Distance, and so let them go off without any Disturbance. But the next Day, *April* 5. they were a little bolder; for some of the *English* being ashore, and very hard at work filling Water, the *Spaniards* (who had watched the Opportunity, and were then very eager to fight, when they saw their Enemies very busy) poured down Two hundred Horse from the Hills upon them, making a shift to kill some few of them, and take a small

NUMB. III.

Number of them Prisoners: But the glorious Victory or the *Spaniards* had a sudden Period set to it, by the coming of Fifteen *English* more, who soon changed the Fortune of the Day, not only rescuing their own Company, but killing Twenty-four of the *Spaniards* upon the Spot, and driving the rest up the Mountains again. After this, they rid in the Road, and watered there, in Spite of the *Spaniards*, till the 5th Instant, when they left this Bay of *Quintero*, putting in at a small Island, about a League from the Bay, which is full of Penguins and other Fowl: They provided themselves with what Store they wanted, and so sailed away North and North by West, in order to prosecute their Voyage.

10. The 15th, they came to *Moro Moreno*, which lies in 23° 30' South Latitude, under the Tropic of *Capricorn*, and has an excellent Harbour, which is made so by an Island, which gives a Ship Entrance at either End of it. Here the Admiral went ashore with Thirty Men, and was met by the *Indians*, who brought fresh Water and Wood on their Backs: They are a simple sort of People, and live after a wild and savage manner, and in very great Awe and Dread of the *Spaniards*; they brought the Admiral and his Company to their Houses, which lay about Two Miles from the Harbour; these were composed only of a few Rafters laid across, supported by Two or Three Forks stuck in the Ground, with Boughs spread over them: Their Beds were the Skins of wild Beasts, laid upon the Floor; and their Food little else but raw stinking Fish. When any of them die, they bury them with all the Goods and Arms that belong to them, as Bows and Arrows, and their very Canoes: These Canoes of theirs are very artificially made, being formed of Two Skins like Bladders, which are blown full at one End with Quills: A Couple of these, being made fast together with the Sinews of some wild Beast, and then put into the Water, swell and puff up at that rate, that they are as firm and tight as can be. They make nothing of venturing to Sea in these Boats, and lading them with great Quantities of Fish, Part of which goes for Tribute to the *Spaniards*, and Part is kept to stink for their own eating.

11. *May* 3. they came into a Bay, where are Three little Towns, *Paracca*, *Climba*, and *Pisca*, which latter Place lies in 13° 20' South Latitude; they landed here, and took some Provisions of Wine and Bread, Hens and Figs, out of some of the Houses; but they could not get ashore at the best of the Towns, the Sea ran so extremely high. They made themselves Masters of Two rich Ships by this time, laden with Sugar, Melasses, Maiz, *Cordovan* Skins, *Montego de Porco*, Packs of Pintadoes, *Indian* Coats, Marmalade Hens, &c. One of them, which had the best Lading, would have yielded 20,000 *l.* had there been Opportunity to have made a Sale: And of all this, they took as much as they could conveniently bestow in their Ships, burning the rest with the Vessels, and setting all the People in them ashore. The 26th, they came into the Road of *Pasta*, which lies in 5° 4' South Latitude; the Town itself is well built, very neat and clean in all Parts of it, and contains about 200 Houses. The Admiral landed here with Sixty or Seventy Men, had a Skirmish with the Inhabitants, the Issue of which was, that the *English* beat them quite out of the Town, and forced them up the Hills, from whence they played with their small Shot upon them; but would not venture a fair Battle out of their mountainous Refuges. When the *English* had possessed themselves of the Town, they marched after the Enemy up the Hills; and, after some Dispute, obliging them to retire still further, till it came to a thorough and complete Rout, they seized all their Baggage, which they had brought with them out of the Town, and lodged there for Security up and down in the Mountains. Here was plenty of all sorts of Household-stuff, Storehouses full of all sorts of Wares, and 25 *lb.* Weight of Silver in Pieces of Eight. They set the Town on Fire, and burnt it to the Ground; and also the Value of 5 or 6000 *l.* in Goods, together with a Bark lying in the Road; and so, leaving the *Spaniards* the Blaze of their flaming Houses and Goods, to light them down from the Mountains at Night, they went hence, and directed their Course to *Puna*.

II

12. *May*

12. May 25 they arrived at the Isle *Puna*, which lies in 19° South Latitude; in the Harbour whereof they found a large Ship of 250 Ton, riding at Anchor with all her Furniture, which they sunk, and so went ashore. The Lord of this Isle is called the *Cafique of Puna*; he was an *Indian* born, but, having married a *Spanish* Woman, and being resolved to be of his Wife's Religion, he made his Subjects follow his Example. He had a sumptuous and well-contracted Palace near the Sea-side, with curious Gardens adjoining to it, and fair Prospects, both to the Water, and up into the Country. He kept all the *Indians* of the Island in continual Drudgery, their Work being to make Cables, such Plenty of which are made by those labouring *Indians*, that the South Sea is mostly furnished from hence. The Island is near as big as the *Ile of Wight*, and has a great Share of the Blessings of Nature; for, though it does not yield Mines of Gold and Silver, yet it affords those Things that are far more necessary for human Life: There is excellent Pasture-land here, and Variety of useful Animals to be maintained by it, as Horses, Oxen, Sheep, Goats, that are very tame, and yield abundance of Milk, besides very good Fowl, Pigeons, Turkeys, and Ducks, of a large Size. The *Cafique* had Orchards that yield most Sorts of useful Fruits, as Oranges, Lemons, Figs, Pomgranates, Pomponies, Melons, Cucumbers, Radishes, &c. with divers Sorts of odoriferous Plants, as Rosemary, Thyme, &c. one of them fell round with Trees that bear the Bombain Cotton, the Tops of which grow full of Pods, out of which the Cotton itself rises. In the Cotton lies a Seed, of the Bigness of a Pea, and in every Pod there are Seven or Eight of these Seeds, which, if the Cotton be not gathered when 'tis ripe, take root, and produce a new Plant. May 29. the Admiral went to a little Island close by *Puna*, into which the *Cafique* had conveyed all the valuable Furniture of his Palace, and other Moveables, necessary both for House and Ship. These Stores being all discovered, they took or plunder'd what they thought fit out of them, and conveyed it into their Ships. They burnt the Church also, which stood hard by the *Cafique's* Palace, and brought away the Five Bells that were in it. June 2. 100 *Spaniards* assaulted them, killing and taking Prisoners Twelve of the *English*, and losing Forty-six of their own, in that Encounter. The same Day, going ashore again, with Seventy Men, they met with a Party of 100 *Spaniards*, armed with Muskets, and 200 *Indians*, with Bows and Arrows; and, having intirely put them to Flight, they made Havock of their Fields and Orchards, and burnt Four great Ships upon the Stocks, as also the Town itself, which they left a mere Heap of Rubbish. This Town had no less than 300 Houses in it; besides which, there were Two or Three Towns in *Puna*, that contained 200 Houses each, so that it was the very best settled Island on all this Coast.

13. June 5. they weigh'd out of the Road of *Puna*, and sail'd to *Rio Dolce*, where they watered; and, the 12th, pass'd the Equinoctial, continuing a Northerly Course all the rest of the Month. July 1. they had Sight of *Nueva Espanna*, being Four Leagues distant from the Land, and in 10° North Latitude. The 9th Instant they took a new Ship of 120 Ton, in which was one *Michael Sancius*, a *Provençal*, and Native of *Marselles*, a very skilful Coaster in the South Seas, whom the Admiral took for his Pilot; and, to give them the first Hint of the great Ship *Anna Maria*, when they took afterwards coming from the *Philippine* Islands; they took, all the Men, the Sails, the Ropes, &c. out of this Ship of *Sancius's*, and then set her on Fire. The 10th they took a Bark that was going to give the Alarm all along the Coast of the Arrival of the *English*, but all the Men were gone out of her. The 26th they came to an Anchor in the River *Cepalita*; and the same Night, with Thirty Men in the Pinnace, rowed to *Ayatitico*, Two Leagues from the River; and in 15° 40' North Latitude, they made a Defcent upon them, and burnt both the Town and Custom-house, which was a large and fair Building. Here were laid up 600 Bags of Anise, (for the Dying of Cloth) and 400 of Cacao, every Bag

of the former being worth Forty, and of the latter Ten Crowns. These Cacao serve amongst them both for Meat and Money. They are like Almonds, though not altogether so pleasant; they afford both Food and Drink, and pass in Trade instead of ready Money, 150 of them being in Value equal to a Rial of Plate.

14. The 28th, they set Sail from *Cepalita*, the Sea running so high there, that they could not fill Water; and reached *Ayatitico* the same Night. The next Day the Admiral went ashore, with Thirty Men, marching Two Miles into the Woods, where they took a *Mestizo* belonging to the Custom-house of that Town, and a considerable Parcel of Stuffs with him, and carried both the Master and the Goods away to their Ships. August 24. the Admiral and Thirty Men went in the Pinnace to the Haven *Puerto de Natividad*, which lies 19° North Latitude, where *Sancius* had informed them would be a Prize; but, before they came thither, he was gone Twelve Leagues farther to fish for Pearls. However, here they took a *Mulatto*, that was sent to give Notice of the *English* all along the Coast of *Nueva Gallia*, together with all his Letters; and burnt the Town, and Two Ships of 200 Ton that were then building there, and so returned to their Ships. The 26th, they came into the Bay of *St. Iago*, where they watered at a good River, that yielded them great Store of Fish, and some Quantity of Pearls: This Bay is in 19° 18' North Latitude. September 2. they left *St. Iago*, and the 3d Day came into the Bay of *Malacca*, lying a League to the Westward of Port *Natividad*, and a very good Place for Ships to ride in. The same Day the Admiral, with about Thirty Men, went ashore to an *Indian* Town called *Acatlan*, which lies Two Leagues from the Road. It consisted of Twenty or Thirty Houses, and a Church, which they demolished, and went aboard again that Night. The 4th, they left the Bay of *Malacca*, and sail'd along the Coast. The 8th, they came to the Road of *Chacalla*, which is Eighteen Leagues from the Cape *De los Corrientes*, having met with fair Winds, and fine Weather.

15. The 9th in the Morning, the Admiral sent out Forty Men, (with *Sancius* for a Guide) who, marching Two Leagues through the Woods, and desert Places, lighted of Two or Three Families, some of which were *Indians*, others *Spaniards*, and one *Portuguese*, all which they brought to their Ships. The Admiral made the Women fetch Plantanes, Lemons, Oranges, and other Fruits; and, for a Reward, set all their Husbands free again, except one *Sembrano*, a *Spanish* Carpenter, and *Diego*, the *Portuguese*, whom he retained. The 12th, they arrived at the Island *St. Andrew*, a very woody Place, and yielding vast Store of Fowl and Seals, and a sort of Serpents, (or Lizards rather) called *Iguanas*, which have Four Feet, and a sharp long Tail, but are very good Meat. Leaving *St. Andrew's* Island, they came the 24th into the Road of *Massatlan*, which lies under the Tropic of Capricorn. This River is large within, but much barred. There is great Store of fresh Fish in that Bay, and good Fruits up in the Country. The 27th, they departed from *Massatlan*, and came to an Island, which is a League to the Northward of *Massatlan*, where they heeled their Ships, and new-built their Pinnace, and found a little Island a Quarter of a League from it, on which are Seals. They found upon this Island where they heeled their Pinnace, fresh Water, by digging Two or Three Feet deep in the Sand, where no Water, or Sign of Water, was before to be perceived; otherwise they must have gone back Twenty or Thirty Leagues to water. But God raised one *Flores*, a *Spaniard*, who was a Prisoner with them, to make a Motion to dig in the Sands: Their General, having had Experience once before of the like, commanded to put this Motion in Practice; and, in digging Three Feet deep, they found very good and fresh Water. So they watered their Ships, and might have filled 1000 Tons more, if they would. In this Island they stay'd till the 9th of *October*, and then sail'd for Cape *St. Lucas*, which is on the West Side of the Point of *California*, with which they fell in on the 14th of the same Month, observ-

* It had been more advisable to have treated these People well. These wanton Acts of Cruelty have been the Ruin of all our Expeditions into the South Seas. * That is, when made into Chocolate. It is right to leave such Descriptions, because they are Proofs of a Writer's Iniquity and Sincerity.

ing, that it had very much the same Appearance with the *Needles* at the *Ile of Wight*, which had been before taken notice of by *Sir Francis Drake's* People, and has been confirmed by all who have sailed thither since. Within this Cape there is a very large Bay, called by the *Spaniards Aguada Segura*; into which Bay there falls a fine fresh-water River, and on the Banks of it there are commonly a great Number of *Indians*, who inhabit there during the Summer Season. Into this Bay they came, watered in the River, and remained there till the 4th of *November*, the Winds continuing all that time to hang Westerly. They waited here for the *Acapulco* Ship.

16. *November* 4. the *Defire* and the *Content* went beating up and down upon the Headland of *California*, which lies in $23^{\circ} 24'$ North Latitude; upon which Day, in the Morning, one of the Admiral's Company, going up the Top-mast, spied a Sail bearing in from the Sea with the Cape; which he presently signified to the Company, with the joyful Exclamation of, *A Sail, a Sail!* The Admiral, having put all Things in Readiness, set forward in the Pursuit of her; and, having chased her Three or Four Hours, in the Afternoon came up with her, and saluted her with a Broad-side, and a Volley of small Shot. They found her to be the *St. Anne*, belonging to the King of *Spain*, the Admiral of all the South Seas, and of 700 Ton Burden. Having boarded her, they found all Things in a good Posture of Defence; the Sails were laid close upon the Poop, the Mid-ship, and the Forecastle. All the Men stood close under Fights, which the Captain had raised, provided with Targets, Javelins, Swords, and great Stones, which they threw into the *English* Ship, and at them that had boarded theirs, forcing them to retire with the Loss of Two Men, and Four or Five wounded. But the Admiral, making a fresh Attack with his great and small Shot, raked them through and through, killing and wounding great Numbers, as the Ship was full of Men; yet they stood very tightly to their Business. But the next Broadside reduced them to the last Extremity, boring such wide Holes for the Water to pour in, that they saw they must either yield or sink. Whereupon, hanging out a Flag of Truce, they desired the Admiral to save their Lives, and they would yield their Ship, with all the rich Cargo, into his Hands. This he granted, but commanded them presently to strike their Sails, to hoist out their Boat, and come aboard; which was accordingly done by the Captain, the Pilot, and one of the chief Merchants. They told the Admiral what they had aboard, which appeared to be worth fighting for, since there were 122,000 *Pezoes* of Gold, rich Silks, Sattins, Damasks, Musk, with divers other Sorts of Merchandize, and all manner of Provisions, almost as acceptable as their Riches.

17. This Prize thus gloriously obtained, on *November* the 6th, they put into the Harbour *Puerto Seguro*, where all the *Spaniards*, both Men and Women, to the Number of 150, were set ashore, the Admiral having chosen a very fruitful Spot for them to live upon; and, besides, gave them good Store of Wine and Victuals, with the Sails of their Ship, and some Planks, to build them little Houses in the Country. The Owners thus disposed of, the next thing was to share the Booty they had brought; and here this ungrateful Work of Distribution quickly involved the Admiral in the ill Circumstances of a Mutiny, every Man having a sharp Appetite to the Gold; but no Man ever thinking he had enough. This Feud and Avarice appeared most violently in the *Content*. But all was quickly and quietly compromised by the candid Behaviour and Generosity of the Admiral. *November* 17. being her Majesty's Coronation-day, they discharged all their Ordnance and small Shot in both their Ships, and at Night continued the Celebration of the Festival with Fireworks. The Admiral reserved of the Prisoners in the *Spanish* Ship, Two *Japanese* Boys, and Three that were Natives of the *Ile of Manilla*, a *Portuguese* that had been in *China* and *Japan*, and a *Spanish* Pilot of perfect Knowledge in all the Parts between *Acapulco* and *Nueva Espanna*, to the *Islands of Ladronez*. This *Acapulco* is the Haven from whence they set out for the *Philippines*, as the *Islands Ladronez* are their slated Places of Refreshment.

18. *November* 19. the Admiral, having discharged the

Captain of the *St. Anne* with a noble Reward, and sufficient Provision for his Defence against the *Indians*, fired the Ship itself, having to the Quantity of 500 Tons of Goods in her, and saw her burnt quite down to the Water's Edge. And now this great Business being happily accomplished, which they had so long attended upon, they set Sail very cheerfully for *England*. But they had the Misfortune to lose the *Content*, their Vice-admiral. She staid some little time behind them in the Road; and they, expecting she would overtake them, went on before, but never had her Company again. However, pursuing their own Voyage, they directed their Course to the *Islands Ladronez*, which are distant from this Haven of *Aguada Segura*, near 1800 Leagues. And this took them up about Forty-five Days, viz. from *November* 19. to *January* 3. Upon this Day, early in the Morning, they had Sight of one of the *Islands Ladronez*, called *Guam*, which lies in $13^{\circ} 40'$ North Latitude; and, sailing with a gentle Gale before the Wind, came up within Two Leagues of the *Island*: Here they saw Sixty or Seventy Canoes full of Savages, that brought Cocons, Plantanes, Potatoes, and fresh Fish, in exchange for some of their Commodities. They gave them some Pieces of old Iron, which they hung upon small Cords and Fishing-lines, and so let it vere to the Canoes; and, by the same Method, they got back to their own Ship what the Savages offered in Exchange. After the Traffick was ended, they came crouding with their Canoes about the Ship, and thrust in so close, some of them, that the Ship broke Two of their Canoes, though the Savages themselves were none of them drowned, the Water being almost as natural to them, as to the Fishes that live there: And so they continued following the Ship, and would not leave the Company of it, till the *Harquebusses* were discharged at them, though 'tis ten to one if they killed any of them; for, they are so very nimble, that they drop immediately into the Water, and dive beyond the Reach of all Danger, upon the least Warning in the World. They were very large Men, extraordinary fat, of a tawny Colour, and wear their Hair mighty long for the most part; though some have it tied up in Knots upon the Crown, like the wooden Images that stand at the Head of their Canoes. These Canoes were very artificially made, considering that no edged Tool was used about them; they are about Seven or Eight Yards in Length, and half a Yard in Breadth, and their Heads and Sterns were both alike: They are made with Rafts of Canes and Reeds on the Starboard Side, and have both Masts and Sails; which latter are made of Sedges, and that either square or triangular. They have this excellent Property, that they will sail as well against as before the Wind.

19. *January* 14. by Break of Day, they fell in with a Head-land of the *Philippine* *Islands*, called *Caba del Spirito Santo*. The *Island* itself is large, high in the Middle, and depressed to the East and West Parts, and running a great way into the Sea Westward: It lies in 30° North Latitude, and it is distant from *Guam* 110 Leagues, and about Sixty from *Manilla*, which is the chief of the *Philippines*. It is a woody *Island*, and its Inhabitants are mostly Heathens. They spent Eleven Days sailing to this Place from *Guam*, having some foul Weather, and scarce bearing any Sail at all for Two or Three Nights. *Manilla* is inhabited by *Spaniards*, who live there to the Number of Six or Seven hundred Persons. It is an unwall'd Town, and of no great Strength, though it has vast Riches in Gold, and several good Commodities; it has a constant yearly Correspondence with *Acapulco*, in *Nueva Espanna*, besides Twenty or Thirty Ships from *China*, and the Trade of the *Sangueloes*, which is very profitable. These *Sangueloes* are *Chinese* Merchants, very sharp and sensible Men in all Matters of Trade and Merchandize, extremely ingenious in mechanical Contrivances, and the most expert Embroiderers in Silk and Sattin that are in the whole World; they work any Form of Beast, or Fowl, or Fish, in Gold, Silver, or Silk, with all the just Proportion and Colour in every Part, and giving it all the Life and Beauty that an excellent Painter can do, or Nature herself bestows on the living Original: And 'tis plain, that these Men must bring a very gainful Trade to *Manilla*, since they made no more of Gold than they did; for, as they brought great

Quantities

Quantities of that precious Metal along with them, so they exchanged it there Weight for Weight for Silver.

20. The same 14th Day in the Evening, they entered the Streights, between the Island *Lucon*, and the Island of *Cambaia*. The 15th, they fell in with the Island of *Capul*, passing a very narrow Strait between that Island and another, in which the Tide was considerably great, and a Ledge of Rocks lay on one Side them off the Point of *Capul*, but they passed without Danger. Within the Point was a fair Bay, and a good Harbour, in Four Fathom Water, within a Cable's Length of the Shore. About Ten in the Morning they came to Anchor, and presently a Canoe rowed up to them, in which was one of the Seven chief *Casiques* of the Island; they passed for *Spaniards* with these People, who, according to their usual Way of trading with them, came and brought their *Cocoas* and *Potatoe-roots* to the *English* in like manner. They gave them a Yard of Linen Cloth for Four *Cocoas*, and as much for about a Quart of *Potatoes*, which, in that Island, are very sweet and excellent Meat, either roasted or boiled. The *Casique* that came aboard them had his Skin streaked, and painted full of very strange Devices all over his Body; they kept him with them, and desired him to send some of his *Indian* Servants, that managed his Canoe, to go and fetch his other Six Brother *Casiques* to the Ship too. The *Casiques* very quickly came according to their Request, and with them a large Train of the People of the Island, who brought vast Numbers of Hogs and Hens, and a whole Market of *Cocoas* and *Potatoes*; and now the *English* had nothing else to do for all that Day but to deal with these People, who sold to them just as they did to the *Spaniards*, viz. Eight Rials of Plate for a Hog, and One for a Hen. Here a just Execution was performed upon a *Spanish* Pilot taken in the great *St. Anne*, who had plotted to betray them into the Hands of the *Spaniards*, for which he was hanged. They lay about this Island of *Capul* for about Nine Days, being all the while well furnished with fresh Victuals, good Water, and Wood. The People of the Island are all *Pagans*, and are said both to worship and converse with the Devil; they go almost naked, and are of a tawny Complexion. The Men wear a square Piece of Linen, woven out of Plantane-leaves, about their Waists, and another coming down their Backs, and so under the Twists, which is fastened to their Girdles. The Rite of Circumcision is in Practice here amongst them; besides which, the Males undergo another Operation, which is far from being common, and hardly practised any-where else, except in *Pegu*. They make a Perforation quite through the Glans of the Penis with a Nail of Tin split in the lower End, and riveted, which they order so as to rake out, and put in again, as they have Occasion. They invented this for a Prevention of a certain unnatural Crime, which the Men of the Island were it seems horribly addicted to; and it was done at the humble Petition of the Women, who laid the Case before the Magistrates, and obtained this Remedy. On the 23d, the Admiral summoned all the *Casiques* of this Island, and of One hundred more, (which had paid him Tribute) to appear before him; and here he discovered himself and his Company to them, telling them, that they were *English*, and the greatest Enemies the *Spaniards* had in the World. At the same time he generously gave them back in Money the Value of all the Tribute he had received, and which was paid by them in Hogs, *Cocoas*, *Potatoes*, and the like. This unexpected Favour of the Admiral surprised the whole Assembly of *Casiques*; they admired his Bounty and Generosity, and engaged to assist him with all the Forces of their respective Dominions, whenever he would begin a War with the *Spaniards* in those Parts; and so, no less pleased with finding them to be *English*, than with the Kindness they had received from them, having rowed about the Ship awhile with their Canoes to give them for a Diversion, they took Leave, the Admiral giving them a Gun at their Departure.

21. June 24. they set Sail, and ran along the Coast of *Manilla*, steering North-west between that Island and the Island *Maibat*; and, in the Islands thereabouts, they perceived the *Spaniards* to keep a strict Watch, making great Fires, and discharging their Pieces all Night long, having

taken the Alarm of their coming. The Island *Panama* is a plain level Country in many Places, affording very fair and fruitful Trees for the making Ship-masts, and, besides, several Mines of very fine Gold, which are in Custody of the *Indians*. To the Southward of it lies the Island of *Negros*, a very large Island, almost as big as *England*, and in 9° North Latitude. It appeared to be the most Part of it low Land, and very fruitful; the People are neither Slaves to the *Spaniards*, nor any other Nation, but their own intire Masters. June 29. at Six in the Morning, they set Sail, passing through the Strait between *Panama* and *Negro* Island, when, having made about Sixteen Leagues, they found a fair Opening in the Strait, tending South-west and by South; about this Time their Boat, which they had sent out before them in the Morning, came up to them again, in which the Admiral sent a *Spanish* Prisoner ashore, with a Message to his Captain, who commanded a Ship that lay at *Panama* the Night before. The Message was to this Effect: That he should be sure to provide good Store of Gold, against the Admiral came that Way again; for he intended to make him a Visit at *Manilla*, which, being a long Voyage, would deserve good Entertainment; and farther, that he had certainly come now and weigh'd some of his golden Bags in an *English* Pair of Scales, but that he wanted a bigger Boat to land his Men upon the Island. February 8. they saw in the Morning the Island *Batechina*, which lies near *Gilolo*, and is in 1° North Latitude. The 14th, they fell in with Eleven or Twelve small Islands, flat and low, and almost quite sunk into the Sea; they lie near the *Marscat*, and are in 3° 10' South Latitude.

22. March 1. having passed the Streights of *Java* Major and *Minor*, they anchored under the South-west Parts of *Java* Major, where they saw some People fishing in a Bay under the Island; the Admiral sent out the Boat to them, in which was a Negro, that could speak the *Moresio* Tongue, which is much used in *Java*; but they, being frighten'd at the coming of the Boat, got ashore, and run away into the Woods; yet one of them came to the Sea Side, when the Negro called, and directed them to find fresh Water, and carried a Message from the Admiral to the King, certifying him, that he was come thither to traffick for Victuals, or any valuable Commodities that his Island afforded. March 12. there came Nine or Ten of the King's Canoes, as full laden with all Sorts of Provisions, as they could swim. They brought them Oxen, Hogs, Hens, Geese, Eggs, Sugar, *Cocoas*, Plantanes, Oranges, Lemons, Wine, and Aqua Vitæ. Two *Portuguese* that came to see them, and to inquire about their King *Antonio*, then in *England*, gave them a large Account of the Manners and Customs of these People. The King of that Part of the Island was a Man of whom his Subjects stood in exceeding Awe, and who exerted so absolute a Power over them, and all they had, that no Man dared so much as make a Bargain without his Leave; and, if any did presume to do it, he paid for it with his Blood. This Prince had One hundred Wives, (as his Son had Fifty) who may possibly be very happy as long as he lives, but cannot be so any longer; for, he being dead, the Body burnt, and the Royal Ashes laid up in an Urn, within Five Days after this, the Tragedy of his Wives begins and ends; they all of them go to an appointed Place, where, when they are come, the favourite Wife throws a Ball out of her Hand, which, where it rests, marks out the Place of their Death: Being come thither, they turn their Faces to the East, and, with their Daggers, stab themselves to the Heart, and, taking out Handfuls of their own Blood, besmear their Bodies with it, and thus they die. This barbarous Sacrifice of themselves to the Ghost of their dead Husbands are the Queens of *Java* obliged to make, by the Custom of their Country. The Men of this Island are very good Soldiers, hardy, valiant, and desperate, to the last Degree; they stick at nothing that their King commands them to do, be it attended with ever so great or certain Danger: Should he bid them plunge a Dagger into their Breasts, or leap off from a Precipice, or into a Den of wild Beasts, they immediately do it; because the Anger of their King is as certain Death as the Point of the Sword, or the Teeth of wild Beasts. They are of a tawny

tawny Colour, naked; but they wear a small Parcel. Affected the same, and receive whenever they are sent, the Pieces of the same. 16. they fall all the rest of the day, traversing the Africa, making the Star Bearing and

23. May 23. they bore the Cape of Good Hope, where they stood the Wind 10° North and 10° thick and high. Land again short of the Cape. This Cape is right over from each of the Great Cape of Cape False Hope, observed, and, at the Hammocks into the Sea, this Cape of Charts 2000 fathoms, they found up just Nine

24. June or Eight Leagues they could not all Night; they stood in the Harbour Water, in a Island, Two This Island is between the Coast of between 15 and 18 Here they had a fair Calm and a Cross hung with purple Virgin, and the pleafant; so that it appeared; there is and Pomgran Eye with Blood Trees are very curious V Boughs, and is a sweet cry itself into many the fever: Tree: There den; for what taken care to itself affords are many Turkeys too as big as ours white; they Goats; they

rawny Complexion, like the rest of the *Indians*, and go naked; but their Women are of something a better Hue, and shew more Modesty than the Men in the Use of Apparel. After this Relation of the *Portuguese*, having contented the *Javans* for the Victuals they had brought them, and received a Promise from them of good Entertainment whenever they came again, they took their Leaves of them, the Admiral making them a Present of Three great Pieces of Ordnance at parting. The next Day, viz *March* 16. they sailed away for the Cape of *Good Hope*, and spent all the rest of *March*, and the whole Month of *April*, in traversing the vast Ocean between *Java* and the Main of *Africa*, making many Observations as to the Appearance of the Stars, the Weather, the Winds and Tides, the Bearing and Position of Lands.

23. *May* 11. one of the Company spied Land, bearing North and North by West, and about Noon they saw some that bore West of them, which they believed to be the Cape of *Good Hope*, they being then about Forty or Fifty Leagues from it: But, by reason they had a scanty Wind, they stood off to the South-east till Midnight, and then the Wind coming fair, they hawl'd along Westward. The 12th and 13th Days they were becalmed, and the Sky was thick and hazy; but the 14th it cleared up, and they saw Land again, which proved to be Cape *Falso*, which is short of the Cape of *Good Hope* Forty or Fifty Leagues. This Cape *Falso* is very easy to be known; for there lie right over it Three very high Hills, but a little Distance from each other, the highest of which is the middlemost, and the Ground is much lower by the Sea Side; besides, the Cape of *Good Hope* bears West and by South from this Cape *Falso*. *May* 16. they discovered the Cape of *Good Hope*, observing the Head-land to be considerably high, and, at the Westerly Point, a little off the Main, Two Hammocks appearing, and Three others lying further off into the Sea, yet Low-land between them towards the Sea. This Cape of *Good Hope* is made in the *Portuguese* Sea Charts 2000 Leagues from *Java*, but, by their Reckoning, they found it to be 1850 Leagues, which took them up just Nine Weeks in their Run.

24. *June* 8. by Break of Day they came within Seven or Eight Leagues of the Island of *St. Helena*, which they had just a Glimpse of; but, having little or no Wind, they could not reach it that Day, but stood off and on all Night; the next Day having a pretty good Wind, they stood in with the Shore, (the Boat being sent before to the Harbour) and came to an Anchor in Twelve Fathom Water, in a good Bay, under the North-west Side of the Island, Two or Three Cubles Length from the Shore. This Island lies in the main Sea, as it were in the Midst between the main Land of *Africa*, and that of *Brazil* and the Coast of *Guiney*. It lies in 15° 48' South Latitude, and between 5 and 600 Leagues from the Cape of *Good Hope*. Here they went ashore, and entered the Church, which had a fair Causey leading to it; a Frame with Two Bowls, and a Cross of Free-stone adjoining to it; within, it was hung with painted Cloths, having an Altar, with the blessed Virgin, and the Story of the Crucifixion, pictured in a Table: The Valley where the Church stands is extremely pleasant, so full of fine Fruit-trees, and excellent Plants, that it appears like some very fair and well cultivated Garden; there are long Rows of Lemon, Orange, Citron, and Pomgranate, Date and Fig-trees, that present the Eye with Blossoms, green Fruit and ripe all at once. The Trees are very nicely trimmed, and distinguished by several curious Walks, which have the Protection of their Boughs, and by them are made cool and shady. There is a sweet crystal Spring rising at a Distance, that diffuses itself into many pretty Rivulets, all thro' the Valley, watering the several Parts of it, and refreshing every Plant and Tree: There is hardly any empty Space in this great Garden; for what Places Nature has left unoccupied, Art has taken care to fill up to some Advantage. The Island itself affords great Store of Partridges and Pheasants, which are much larger and fatter than ours; there are Turkeys too both black and white, with red Heads about as big as ours, and their Eggs much the same, only quite white: There is also great Plenty of Cabritos, or wild Goats; they are as big as an Ass, have a Horse's Mane,

and a Beard that reaches down to the very Ground: They go sometimes together in a Herd, that reaches a full Mile in Length. Here are also vast Herds of wild Swine, that keep chiefly upon the Mountains, as the Cabritos do; they are fat, and so very wild, that a Man can never come at them, except they be asleep, or rolling themselves upon their mry Beds.

25. *June* 20. having taken in all Necessaries here, they set Sail for *England*, and hawled away North-west and by West. 'Tis to be observed, that the Wind is commonly off the Shore at *St. Helena*. On *Friday August* 23. they sailed East and East by South, for the Northernmost of the *Azores*. The 29th, at Four after Midnight, they fell in Sight of the Island *Flores* and *Corvo*, lying in 39° 30' North Latitude, and so sailed away North-east. *September* 3. they met with a *Flemish* Vessel, that came from *Lisbon*, and told them the joyful News of the total Defeat of the *Spanish Armada*. *September* 9. having had the Winds Farewell in a most violent Storm, that carried away most Part of their Sails, they arrived at the long desired Haven of *Plymouth*. As there never had been any Voyage of this Consequence attended with such an uninterrupted Series of Success, as appeared plainly from the Difference of Time in which it was performed, *Magellan's* Voyage having taken up Three Years and a Month, *Sir Francis Drake* upwards of Two Years and Ten Months, and this less than Two Years and Two Months, we need not wonder, that a young Gentleman like Mr. *Candish*, whose Soul was intirely possessed with an Appetite for Glory, should adventure upon some extraordinary Methods of displaying his good Fortune. Some Accounts, indeed, tell us, that he went so far, as to bring his Ship into the Harbour of *Plymouth* under a Suit of Silken Sails, which, if true, I conceive may be thus accounted for. We are told by Mr. *Candish*, in his own Relation, that, just before his Arrival, he met with a violent Storm, which tore all his Sails to Pieces; in which Distress, he might very probably make use of some of those he had taken in the South Seas, or in the *East Indies*, but most probably of the former, which being made of what is called *Silk Grass*, having a very strong Gloss, and a most beautiful Colour, might easily deceive the Eyes of the Vulgar, and pass upon them for Sails of Silk. This, however, is certain, that though he might be vain and expensive in such Matters, yet all came fairly out of his own Pocket; and those who went abroad with him, from a Prospect of raising their Fortunes, had not the least Reason to complain, since he came to a fair and full Distribution of the Value of the Prizes, which gained him universal Credit and Esteem; of which we shall quickly afford the Reader a remarkable and very convincing Instance.

26. To shew, however, his Duty and Diligence, as well as to discharge respectfully the Obligations he was under to his Patron, he wrote, the very same Day that he arrived at *Plymouth*, to the Lord *Hunston*, then Lord Chamberlain, Queen *Elizabeth's* near Relation, and great Favourite; which Letter, equally remarkable both for Style and Matter, the Reader will probably be well pleased to see, especially as it is very concise, and yet contains some Particulars not to be found elsewhere.

To the Right Honourable the Lord Hunston, &c.

Right Honourable,

AS your Favour heretofore hath been most greatly extended towards me, so I humbly desire a Continuance thereof; and though there be no means in me to deserve the same, yet the uttermost of my Services shall not be wanting, whatsoever it shall please your Honour to dispose thereof. I am humbly to desire your Honour to make known unto her Majesty the Desire I have had to do her Majesty Service in the Performance of this Voyage; and, as it hath pleased God to give her the Victory over Part of her Enemies, so I trust, ere long, to see her overthrow them all: For the Places of their Wealth, whereby they have maintained and made their Wars, are now perfectly discovered; and if it please her Majesty, with a very small Power, she may take the Spoil of them all. It hath pleased the Almighty to

“ suffer me to circumpass all the whole Globe of the
 “ World, entering in at the Streight of *Magellan*, and
 “ returning by the *Cape de Buena Esperanza*. In which
 “ Voyage, I have either discovered, or brought certain
 “ Intelligence of, all the rich Places of the World, that
 “ ever were known or discovered by any Christian. I
 “ navigated along the Coast of *Chili*, *Peru*, and *Nueva*
 “ *Espanna*, where I made great Spoils; I burnt and sunk
 “ Nineteen Sail of Ships, small and great: All the Vil-
 “ lages and Towns that ever I landed at I burnt and spoiled;
 “ and, had I not been discovered upon the Coast, I had
 “ taken great Quantity of Treasure. The Matter of most
 “ Profit unto me, was a great Ship of the King’s, which
 “ I took at *California*, which Ship came from the *Philip-
 “ pines*, being one of the richest for Merchandize that ever
 “ pass’d those Seas, as the King’s Register, Accounts, and
 “ Merchants did shew; for it did amount in Value to ***
 “ in *Mexico* to be sold; which Goods (for that my Ships
 “ were not able to contain the least Part of them) I was
 “ enforced to set on Fire. From the *Cape of California*,
 “ being the uppermost Part of all *Nueva Espanna*, I na-
 “ vigated to the Islands of *Philippines*, had upon the Coast
 “ of *China*, of which Country I have brought such Intel-
 “ ligence, as hath not been heard of in these Parts: The
 “ Statelines and Riches of which Country I fear to make
 “ Report of, lest I should not be credited; for, if I had
 “ not known sufficiently the incomparable Wealth of that
 “ Country, I should have been as incredulous thereof, as
 “ others will be, that have not had the like Experience.
 “ I sailed along the Islands of *Maluccas*, where, among
 “ some of the Heathen People, I was well intreated, where
 “ our Countrymen may have Trade as freely as the *Portu-
 “ gals* if they will themselves. From thence I pass’d by
 “ the *Cape of Buena Esperanza*, and found out, by the Way
 “ homeward, the Island of *St. Helena*, where the *Portugals*
 “ used to relieve their *Leaves*; and from that Island God
 “ hath suffered me to return into *England*: All which Ser-
 “ vices, with myself, I humbly prostrate at her Majesty’s
 “ Feet, desiring the Almighty long to continue her Reign
 “ among us; for, at this Day, she is the most famous
 “ and victorious Prince that liveth in the World. Thus,
 “ humbly desiring Pardon for my Tedioufness, I leave
 “ your Lordship to the Tuition of the Almighty.

Your Honour’s most Humble to command,

Plymouth, this 6th of
 September 1588.

THOMAS CANDISH.

27. There were many Circumstances in this Voyage, besides the wonderful Felicity of it, that deserve to be considered: As, for Instance, the passing a second time into the South Seas, not only after it was known, that the *Spaniards* were exceedingly alarmed by the former Passage of *Sir Francis Drake*, but also that they had received Succours from *Spain*, and had actually fortified themselves strongly in the South Seas. The nice Search he made into, and the exact Description he has given us of the Streights of *Magellan*, are very noble Proofs of his Skill and Industry, and of his Desire, that Posterity might reap the Benefit of his Labours. The Attack of the *Acapulco* Ship, considering the small Force that Captain *Candish* had with him, was a noble Instance of true *English* Bravery, which was justly rewarded by the Queen with the Honour of Knighthood. His Account of the *Philippines*, and his Descriptions of several Islands in the *East Indies*, are very clear and curious, and at that time must have been very useful, but particularly his Map and Description of *China*, which gave great Lights at that time of Day. We may add to all this, the Care he took in the Instruction of his Seamen, many of whom afterwards distinguished themselves, by navigating other Vessels in the same stupendous Course, and thereby filling all the known World with the Fame and Reputation of *English* Seamen. It is not, therefore, at all surprising, that we find the best Judges, both in our own and other Nations, bestowing very high Praises upon this worthy Gentleman, who shewed, in the whole Conduct of his Voyage, the Courage and Discretion of a great Commander, with all the Skill and Diligence of an able Staman, of both which

he has left us the strong & Testimonies in his accurate Accounts of his Expeditions.

28. The Wealth he brought from so successful a Voyage, must have been very considerable. One of our ancient Writers says, it was sufficient to have purchased a fair Earldom, which is a general Expression, the Meaning of which cannot be determined with any Certainty; But whatever the Sum was, which he acquired with so much Hazard, and with so great Honour, it is certain, that he did not make so prudent a Use of his good Fortune as might have been expected; for in the Space of Three Years time the best Part of it was spent, and the rest of it he determined to lay out in a Second Expedition. We need the less wonder at this, if we consider what the Writers of those Times tell us with respect to his great Generosity, and the prodigious Expence he was at in procuring and maintaining such People as he thought might be useful to him in his naval Expeditions, upon which his Mind was continually bent. Such Things require the Revenues of a Prince; and, as he looked upon this Voyage round the World as an Introduction only to his future Undertakings, we may easily conceive, that what the World took for Extravagance, might appear to him in the Light only of necessary Disbursements, which, instead of lessening or running out, he proposed should have laid the Foundations of a more extensive Fortune. Neither was this, when all Circumstances are considered, a rather improbable Expectation; since there were many Examples in that Reign of very great Wealth obtained by this very Method by which he hoped to increase his Estate: Besides, it very clearly appears by his Will, that he did not die in Debt, but left behind him very considerable Effects, notwithstanding all the Expences to which he was put, and the many Misfortunes he encountered in his Second Expedition to the South Seas. Add to all this, that, from the happy Success of his former Voyage, and the superior Strength with which he undertook the next, he had very good Reason to believe, that the Profits of this Enterprize would have fully compensated the Charges to which it put him, and have enabled him to have spent the Remainder of his Days in Quiet, in case he had returned to his native Country as happily as he did before. But without spending more Time in such kind of Reflections, which, however, are not unnecessary, considering the Character and Reputation of the Person they concern, let us now proceed to an Account of that unfortunate Voyage, which shall be the more concise, because we shall have an Opportunity of entering into many Particulars of it in another Place, where we shall give the Reader a large Account of the curious Travels, and surprising Adventures, of Mr. *Anthony Knivet*, who was the Companion of *Sir Thomas Candish* in most of his Misfortunes, and who left the World a very copious and distinct Account of that memorable Voyage.

29. The Ships which he fitted out at his own Expence for this Voyage, were the Gallion *Leicester*, which was Admiral, the *Roebuck*, Vice-admiral, the *Desire*, the *Dainty*, and the *Black Pinnace*; with which Squadron he sailed from *Plymouth*, August 6. 1591. On November 29. they fell in with the Coast of *Brazil*, where they took the Town of *Santos*, and burnt that of *St. Vincent*; and then continued their Voyage for the Streights of *Magellan*, meeting thenceforward with nothing but Storms, Disappointments, and Misfortunes, various Accounts of which are still preserved; but the most copious is that of Mr. *Candish* himself, addressed to *Sir Tristram Gorges*, whom he made sole Executor of his last Will; wherein he affirms, the Misfortune happened thus: “ The running away of “ the Villain *Davies* (says he) was the Death of me, and “ Decay of the whole Action, and his only Treachery in “ running from me, the utter Ruin of all.” He complains also of Mutinies; and that, by South-west and West South-west Winds, he was driven from Shore Four hundred Leagues, and from 50° to 40°: That he was taken with Winter and Storms in the Streights, and such Frosts and Snows in *Me*, as he never saw the like; so that, in Seven or Eight Days, Forty died, and Seventy sickened. *Davies* in the *Desire*, and his Pinnace, left him in the Latitude of 47°; the *Roebuck* kept with him to Thir-

ty-six; Captain *Barber*, transgressing his Directions, was slain with Five-and-twenty Men on Land, and the Boat lost; and, soon after, Twenty-five others followed the like Fortunes; Ten others by the Cowardice of the Master of the *Reebuck*, forsaken at *Spirito Santo*, which stole away with Six Months Victuals for an hundred and Twenty Persons, they being but Forty-six. At *Sebastians* happened another Mutiny by Treachery of an *Irisbanan* (where Mr. *Kniver*, and other sick Persons, were set on Shore); Intending again for the *Streights*, he was beaten up and down those tempestuous Seas, and came within Two Leagues of *St. Helena*, but could not attain it; and, in his last Epistle, professed he had rather have put himself on an Island, if he could have found one, which the Charts place in 8°, than return; and was scarce able to hold a Pen when he wrote this. Soon after the writing of this Letter, he died of mere Grief. The *Black Pinnace* was lost, but the *Desire* arrived July 11. 1593. at *Beer-boven* in *Ireland*, after having suffered incredibly. The Admiral's own Ship also returned, but what became of the *Reebuck* I cannot find. It is very certain, that the Misfortune of this Voyage was, in some measure, prejudicial to the *English* Trade; for, upon the Return of Mr. *Candish's* Ships, abundance of able Seamen were turned abroad in the World to get their Livings as they could; and the Ruin of Mr. *Candish* having thrown a Damp on these sort of Undertakings here, those Seamen went into other Countries; and, as Knowledge is a portable Commodity, made the best Market of it they could in *Holland* and elsewhere. Amongst the rest, one Mr. *Melish*, who had been a Favourite with Mr. *Candish*, and had been his Companion in all his Voyages, offered his Service to the *Dutch East India* Company, which was then in its Infancy; and his Proposals being accepted, he was employed as Pilot in the Expe-

dition, of which I am next to speak. I have dwelt the longer upon these Points, from a Principle which, I hope, will not expose me to Censure, I mean a Jealousy for the Honour of the *British* Nation. I would not, however, have any of my Readers suspect, that this Principle will ever carry me too far, or betray me into Prejudices against Foreigners; I shall always endeavour to do them Justice, without doing Injustice to ourselves; for in this I am clear, that, with respect to the Undertakings of single Persons, we have excelled all Nations. *Columbus* had the Support of their Catholic Majesties; *Magellan* was fitted out by the Emperor *Charles V.* and both were encouraged with a Prospect of great Rewards; whereas *Sir Francis Drake*, and *Sir Thomas Candish*, undertook their Expeditions at their own Expence, and on their own Risques. What they performed, the Reader has seen. With regard to collective Bodies, or trading Companies, I must as freely acknowledge, that the *Dutch* seem to me to have had the Advantage of all Nations, not only in respect to the Wisdom shewn in their Undertakings, but also in their Steadiness and laudable Concern for the public Interest in the Pursuit of them; but that they were more early, or more fortunate, than we, in their Discoveries, I absolutely deny; they were so far from being our Masters in that Point, that in reality we were theirs; and this, I think, is a Matter of too great Consequence not to be fully insisted on. I will, therefore, freely own, that the bare Amusement, or even the Instruction, of my Readers, is not all I aim at: What I farther propose, is attempting to restore that glorious Spirit, which formerly distinguished our Nation, and which I am firmly persuaded, if set in its proper Light, may be some time or other revived; and then I do not doubt, but some future Writer may record the Actions of as great Heroes as *Drake* and *Candish*.

SECTION VI.

The Voyage of OLIVER VAN NOORT (the first attempted by the Dutch) round the World.

1. The Rise of the Dutch Company which formed the Design Oliver van Noort was sent to execute.
2. The Nature of this Project, and the Preparations for it.
3. Their Departure from Holland for the South Seas, September 13. 1598.
4. Arrive on the Coast of Brazil, after meeting with many Misfortunes.
5. Enter the *Streights* of *Magellan* in a sickly Condition.
6. Account of the Savages inhabiting those *Streights*.
7. Meet with Captain de *Weert*, who sailed in the Fleet fitted out by *Verhagen*.
8. Inclemency of the Weather in those Parts.
9. Enter into the South Seas, and cruise on the Coasts of *Chilli*.
10. Account of the Indians on this Coast, and their Rebellion against the Spaniards.
11. Continue cruising on the Coasts of *Chilli* and *Peru*, where they miss a vast Booty in Gold.
12. Their Course for the East Indies, and Arrival at the *Ladrones*.
13. Their Arrival at the *Philippines*.
14. Engage the Spaniards off *Manila*, and, after an obstinate Dispute, sink their Admiral.
15. Arrive in the Port of *Borneo*, and trade with the Inhabitants.
16. The Danger of sailing in those Seas without having an experienced Pilot.
17. Their safe Arrival in *Holland*, August 26. 1601.
18. Remarks on this Voyage, and the Accounts we have of it.
19. The Reason of adding the Voyage of Captain de *Weert*.

THE Inhabitants of those Countries, which are now stiled the *United Provinces*, found themselves, after their Separation from the *Spanish* Monarchy, extremely at a Loss how to supply the necessary Expences, which so long and vigorous a War, as the Struggle for their Liberties occasioned, constantly required. This gave them the more Uneasiness, because their Enemy *Philip II.* carried on the War against them, rather by the Length of his Pursue, than by the Force of his Arms; and yet these Riches were derived from a Commerce prohibited to the People of this Country, even if they had submitted themselves again to the Yoke of *Spain*. The Sense therefore of these Difficulties, joined to the mighty Advantages that might be certainly reaped by overcoming them, induced the Government and People of *Holland* to prosecute Trade in general, and all Attempts to establish a Commerce with either the *East* or *West* Indies in particular, with the greatest Vigour. Among other Inducements to this Course, the Progress made by their Neighbours the *English*, did not a little encourage them; for they saw, that even private Persons, and with a small Force, were able to

disquiet the *Spaniards* exceedingly, at the same time that they acquired great Riches to themselves. Another Cause of their attempting such Expeditions, I mean of interfering with the *Spaniards* and *Portuguese*, was their failing in their first Scheme of finding another Passage to the *East Indies* than that with which those Nations were acquainted, I mean by the North-east, which they often endeavoured with great Hazard and Expence, though without Success. Their first Voyages to the *East Indies*, proving more fortunate than even themselves expected, tempted them to proceed still farther, and to aim at distressing their Enemies likewise in the South Seas, which hitherto none but the *English* had done. We are not to imagine, however, from hence, that the distressed States of *Holland* were already become so powerful at Sea, as to act offensively against the Catholic King; for that was not at all the Case: But, what they had in View was, granting such Power and Authority to any of their Subjects, who were inclined to venture upon Expeditions of this Nature at their own Risque and Expence, as might enable them to conciliate their private Advantage, and the public Good, by sitting out

out Squadrons for these distant and hazardous Voyages: A Policy, which, however it might spring from Necessity, they conducted with such Wisdom and Address, that the King of Spain soon found himself more distressed by the Armaments of the Dutch Merchants, than by all the Forces employed by the States of Holland. A plain Proof, that the shortest Way to render any Government powerful, is to interest the People in general in its Support; for this raises by degrees such a Spirit, and that Spirit produces such unthought-of Consequences, as no Art or Force are able to oppose. After this Introduction, we come naturally to speak of that Company of Merchants, at whose Expence the Expedition was undertaken, which is to be the Subject of our present Discourse.

2. About the Beginning of the Year 1598. some very eminent Merchants of the Low Countries, among whom the principal were Peter van Beveren, Hugo Gerritz, and John Bennick, formed a Design of sending some stout Ships through the Straights of Magellan to cruise in the South Seas upon the Spaniards, to which they were chiefly instigated by the Reports of many English Seamen, who had served under Drake, Candish, Hawkins, and other enterprising Officers, in those Parts. The End of this Expedition was the common one of cruising on the Spanish Coasts, and obliging the Enemy of Peace to bear the Expence of those Wars in which he obliged other People to engage against their Wills; as also to gain Experience; and, if it should be found practicable, to continue their Voyage to the Philippines, and so by the Cape of Good Hope, round the World. As the Success of this important Project depended, in a great measure, on the Capacity of the General, for so in those Days the Dutch, and indeed most other Nations, called the Commander in chief, either by Land or Sea, they took care to provide themselves with a Person of established Character, as well in point of Conduct as Courage, whose Name was Oliver van Noort, a Native of Utrecht, in the Flower of his Age, and who had a strong Passion for Glory. To this Man they communicated their Scheme, which he readily embraced; and their Terms being speedily settled, they proceeded to equip Two stout Vessels, the one called the *Maurice*, the other the *Henry Frederic*, and Two Yachts, called the *Concord*, and the *Hope*, manned by 248 Persons of all Ranks: Of this little Fleet Oliver van Noort, in the *Maurice*, was Admiral; James Claasz, of Ulpenda, was Captain of the *Henry Frederic*, and had the Title of Vice-admiral; Captain Peter van Lint had the Command of the *Concord*; and John Huidecoope, of the *Hope*. These were all Men of Experience, capable of maintaining their Authority upon all Occasions, and who were themselves interested in the Success of the Voyage; a Precaution then, and ever since, taken by the Dutch in such Cases, to prevent their Expeditions suffering from the private Views, or want of Heartiness, in their Officers; which is often the Case among other Nations, and for which this Method of theirs perhaps is the only Cure.

3. When all Things were in Readiness, and the Crews of their respective Vessels absolutely complete, the Proprietors presented a Petition to the Board of Admiralty at Rotterdam; upon which, all Parties concerned were summoned thither; and, on the 28th of June 1598. the Rules and Regulations for their Government in this Expedition, which had been drawn up for them by the Company, and then revised and approved by the Stadtholder Prince Maurice, and the Board, were publicly read to them, and every Man sworn to their Observance. These kind of sailing Orders the Dutch call *Artykelbriefs*, and never suffer them to take place till they have received this kind of Sanction from the State; and then they become the Laws of the Voyage, which whoever breaks, must suffer the Penalties mentioned in them. This is another Circumstance worthy of Remark, and a very great Proof of the Attention paid by that Republic to the Commerce of their Subjects, as well as a Check upon others, who might attempt to abuse their Authority. On the 13th of September 1598. the *Maurice* and the *Concord* sailed out of the Port of Goeree; and the *Henry Frederic*, and the *Hope*, having joined them from Amsterdams, they continued their Voyage together for Plymouth, where their English Pilot Mr. Mellish, who had

been the Companion of Sir Thomas Candish's Fortunes, was to take in his Apparel, and other Necessaries. On the 21st, they sailed from Plymouth, the Wind blowing a fresh Gale at North-east. The next Morning, when they were out of the Chanel, they perceived that the Vice-admiral's Shallop was missing with Six Men, which gave them a good deal of Concern, inasmuch that they had some Thoughts of returning to Plymouth; but an English Privateer, coming up with them, soon cured them of their Pain, by assuring them, that these Six Men were lewd, good-for-nothing Fellows, who embarked for the Sake of what they could get, and had taken this Opportunity to run away with the Boat: Upon which it was resolved, not to trouble themselves any further about them. Some Jealousies, however, at that Time, sprung up, as to the Capacity and Conduct of their Vice-admiral, which were quickly increased by his losing his other Shallop, which he had in Tow with a Man in her, and which, notwithstanding all the Care that they could take, was actually lost; which Piece of Carelessness occasioned much Murmuring and Discontent amongst the Seamen, which the Vice-admiral daily increased by his haughty Behaviour, and by his Contempt for Advice, which, however, no Man wanted more than he.

4. On the 4th of October they met a small Fleet of Dutch, English, and French, which were coming from Barbary, and gave them an Account of the horrible Pestilence raging there, which had swept away 250,000 Persons in a very short Space. On the 6th, they came between Teneriff and the great Canary. November 3. they had Sight of the Coasts of Guiney. December 4. they came off Cape Palma, which lies in 3° 30' North Latitude. The 10th, they had Sight of Princes Island, which lies 1° of North Latitude. They sent their Boats before to make some Discovery of the Isle, where, having entered with a Flag of Truce, they were met by a Negro, bearing the like Sign of Peace. They demanded only a Supply of Provisions, which was granted in very fair and friendly Terms; but, while they were settling this Point, a Party that lay in Ambuscade surpris'd them in a Moment, and cut off several of them, amongst which was the brave English Pilot Captain Mellish. The Portuguese pursued them to their Boats, which they very briskly attacked, killing the Admiral's Brother, and were very near taking all the rest Prisoners. In Revenge of this Outrage, it was concluded in a Council of War, to attack the Castle; which Experiment being tried, and found too hazardous, they took their Revenge in burning all their Sugar-houses. And so, having provided themselves with fresh Water, they set Sail on the 17th. The 25th they reached Cape Gomahoo, where the Wind generally blows from the Land at Night, and from the Sea in the Day. Here they found Two Dutch Ships, which informed them of the Misfortune of Captain Slerbagen, who was lost, with most Part of his Company, upon Prince's Island, as they had like to have been; as also of the Voyage of Peter Verbagen, who had entered the River of Congo, and, putting in at this Place, had here buried Thirty-eight of his Company, and was gone some time before for Annobon. January 1. 1589. they passed the Island Annobon, which they found in 2° South Latitude; and the 28th of the same Month they had the Sun in their Zenith. The 5th they reached Cape St. Thomas, (upon the Coast of Brasil) which lies 22° South Latitude. The 6th, they passed the Fair Cape, and in the Evening Cape Frio. On the 9th, they came to Rio Janeiro. After some Loss of Time, and Company too, by the Treacheries of their grand Enemy the Portuguese, they went to St. Sebastian, where the Comforts of a good Harbour, fresh Water, and plenty of Wood, attended them; but no Fruits were to be had at that Season.

5. March 14. a dreadful Storm surpris'd them, the Fury of which parted the Vice-admiral, and the *Hope*, from the rest of the Fleet; but they had the good Luck to meet them again on the 17th. And now the Scurvy increased amongst them, which, together with the Approach of Winter, made them resolve to put in at St. Helena; but, missing that, they concluded upon the Ascension, or some other Island, that was capable of giving them a tolerable Entertainment. But hard Fortune brought them to a very

barren and desolate Island in 20° 30' South Latitude, where they had nothing but a few Fowl, (called *Malle Mewen*) which they knocked down with their Clubs. Having therefore quickly had enough of this barren Place, they put off to Sea again; and the First of *June*, thinking to have reached the *Ascension*, they found themselves on the Continent of *Brazil*; but the *Portuguese* not suffering them to land there, they sailed to the Isle of *St. Clara*, which lies in 21° 15' South Latitude; it is about a Mile in Compass, and as much distant from the Continent. The Island afforded them little else but Herbs. But what it denied them in Food, it paid in Physic, yielding a sort of four Plums, which in Fifteen Days cured all their Sick. *June* the 16th, they sailed for Port *Desire*, in 47° 40' South Latitude, which (after much bad Weather) they reached *September* 20. They furnished themselves with Store of Fish and Penguins in an Island that lies Three Miles to the South of this Place. Of the latter sort of Creatures they took 50,000 (which were as big as Geese) with a vast Quantity of their Eggs, that proved good and refreshing Meat to their sick Company. They went up the River *October* the 5th, and, going on Shore, found Beasts in the Country like Stags and Buffaloes, with a Multitude of Ostriches, some of whose Nests they lighted on, in which were Nineteen Eggs. The 20th, the Admiral went ashore to observe the Country, leaving Orders with them that guarded the Boats, not to stir a Foot from their Charge; but they, having a mind, it seems, to see the Country too, took a small Ramble, and fell into an Ambuscade of Savages, who killed Three of them, and wounded the Fourth. These Savages were very tall portly Men, painted, and armed with short Bows and Arrows, which latter were headed with Stone.

6. The 29th, they sailed from hence; and, *November* the 24th, they made Cape *Virgins*, where the Land is low and plain, and, by its Whiteness, yields a Prospect like *England*. They made many Attempts to have entered the Straights, and were as often frustrated, being beaten back by Tempests of Wind, Rain, Hail, and Snow. They lost their Anchors, broke their Cables; Sickness and Contention (worse than any Disease) were added to all the rest of their Calamities; and all these retarded their Progress so far, that it was very near Fifteen Months (from the Commencement of the Voyage) before they could make their Way into the Straights. They observed the Land to lie South-west from the Cape *Virgins*, and the Mouth of the Straights to be about Fourteen Miles Distance from it, and half a Mile in Breadth. *November* 25, they saw some Men upon Two Islands that lay near the Cape *Nassau*, who bid Defiance to the *Hollanders*, and shook their Weapons at them; but they landing, notwithstanding this Defiance, pursued the Savages to a Cave, which they stubbornly defended to the last Man, dying every one of them upon the Spot. The *Dutch*, being got in, found their Wives and Children in that dark Receptacle; and the Mothers, who expected nothing but present Death to themselves and their Infants, covered the little ones with their own Bodies, resolving to receive the first Stab themselves. But the *Dutch* did them no more Injury than the taking of Four Boys and Two Girls of their Number from them, which they brought on Ship-board. One of the Boys, having learnt to speak *Dutch*, gave them this Intelligence; That the greater of these Two Islands was called *Castemne*, and the Tribe that inhabited it *Enoo*; that the less Island was called *Talcke*; and that both were well stor'd with Penguins, whose Flesh was their Food, and the Skins their Clothing; and, as for Habitations, they had none but these Caves: That the adjoining Continent abounded with Ostriches, which also served for Food: That they were distinguished into Tribes, which had their several distinct Residences; the *Kemenetes*, that dwelt in *Kaefay*; the *Kemuckin*, in *Karamay*; the *Karaiks*, in *Morina*; all which People were of the common Size, but broader breasted, and painted all over; the Men tying the Pudenda up with a String, and the Women covering those Parts with a Penguin's Skin; the former wearing long Hair, and the latter shaven; but both Sorts naked, except a Cloak of Penguin-skins, reaching to the Waists: That there was also a Fourth Tribe of them, called *Tirimenen*, that dwelt

NUMB. 3.

in *Cah*; and these were of a gigantic Stature, being Ten or Twelve Feet high, and continually at War with the other Tribes.

7. The 28th, they passed over to the Continent, and saw some Whales at a Distance, having Sight too of a very pleasant River, about which are very delicate Trees, and Store of Parrots; Upon the score of this pleasant Prospect, they called this *Summer Bay*. The 29th, they set Sail for Port *Pamine*; here the Land tends so far to the South, that the Islands of *Pantagos*, and *Terra del Fuogo*, seem afar off to meet together. They found no remaining Tokens here of the late famous *Phillip's* City, but a Heap of Stones, to shew, that once there had been a Building. The *Magellanic* Straights are in Breadth here about Four Miles; the Hills on both Sides of which are vastly high and deep, and all the Year long covered with Snow. Here, at Port *Pamine*, they cut down Wood to make them a Boat, and found the Bark of the Trees to be hot, and, in Taste, biting like Pepper. Having no good Watering here, they left this Place, (doubting, indeed, whether it were Port *Pamine* or no) and, after Two Miles past, found a good River. This was *December* 7 the First. The next Day they doubled Cape *Froward*, with some Danger, by reason of unsafe Anchorage, and contrary Winds; so passing Four Miles farther into a large Bay, they anchored there. Here was a Plant like *Sneeze-wort*, good against the Scurvy; and another, which caused Madness, making some that tasted it almost distracted for a time. Here they had a Sight of *Sebastian de Weert's* Ship, who was one of *Verhagen's* Company, with which another of the same Fleet had been driven back out of the South Sea. He told them he had spent above Five Months in the Straights, and had but Thirty-eight left out of One hundred and Ten Men, and, not being able to endure the Storms of the South Sea, was forced to put in there, while the rest of the Fleet held on their Course.

8. *January* 2, 1600, they set out again, directing their Course to *Maurice* Bay, which they observed to extend very far Eastward, and to receive several Rivers into it; in the Mouths of which were vast Quantities of Ice, that seemed never to melt all the Year round: For though this was near the Midsummer Season in that Southern Climate, yet the Ice was so thick, that at Ten Fathom Sounding they could not reach the Bottom of it. The Land also seemed to be an Heap of broken Islands, which the Height of the Mountains made appear like one firm and continued Piece. Here they had the Distresses of Hunger, and continual Rains, and the Loss of Two of their Company, who were killed by the Savages as they were picking Mussels, which were their chief Sustainance. Having weathered out many Storms which endangered them in *Menisse* Bay, and some Encounters too with the Savages, they set Sail on the 17th, and were driven by a Storm into *Goose* or *Penguin* Bay, Three Miles distant, and receiving the Name from the Multitude of that Sort of Fowl found there; of which they observed, that they could both dive and swim very well, but not fly at all. Here the Vice-admiral, for divers Crimes, was condemned by a Council of War to be turned ashore, there to hunt for himself amongst the wild Beasts, and wilder Inhabitants of the Country; which was executed accordingly.

9. *February* the 1st, they entered another Bay, which they called *Popish* Bay, and in which they run many Hazards. On the 27th, they saw at a Distance a huge Mountain of Ice in *Penguin* Bay; but the next Day, viz. the last of *February*, they bid adieu to all those dismal Prospects, and passed Cape *Desire* into the South Sea. Their Company was now 147, but quickly lessened by the Loss of the Ship of the Vice-admiral, whom they dropt. *March* the 12th, expecting her in vain, they sailed to the Island *La Mocha*, which is about Six Miles from the Continent, and lies in 38° South Latitude. It is remarkable for an high Mountain in the Middle of it, that cleaves at Top to make Way for a Course of Waters into the Valley underneath it. Here they barter'd Knives and Hatchets for Sheep, Hens, Maize, Bartulas, and other Fruit. They went to see the Town, which consisted of about Fifty Houses of Straw, where they were entertained with a four sort of Drink called *Cici*, which is made of Maiz steeped in Water,

K

and

and is the chiefe Liquor used at their Feasts. Polygamy is much practis'd amongst them, and they buy as many Wives as they can keep; so that a Man that has a good many Daughters, may chance to get an Estate by them, especially if they prove handsome. If one Man kill another, the Kindred of the murdered Person are his Judges and Executioners; for they have no Laws, nor public Magistrates, to keep up any Form of Justice amongst them; but yet a Man may possibly buy off his Punishment too, by making a Drinking-bout of Cici. They make their Clothes of the Wool of a very large sort of Sheep, which Creatures they also use to carry Burdens. They would not sell any of these, though they did of another Sort, not much differing from the common. *St. Mary's* Island lies Eighteen Miles from hence in 37° 15' South Latitude. Here they met with a *Spanish* Ship that was carrying Lard and Meal to *Aranco* and *Conception*, which they chased and took. The Pilot of this Ship told them, they could not get back to *St. Mary's* Island because of the South Winds, and that there were Two Men of War waiting for their coming in *Arica*: Upon which Information, they concluded to sail to *Val Paraiso*, and, by that means, quite lost their Vice-admiral, which might have otherwise come up to them at last. Besides, they concluded, that the mis'd the Island *St. Mary*, upon the wrong placing it in *Plancius's* Map, as high as 38°, when indeed it lies in 37° 15'. And this Error they themselves had fallen into, had not Captain *Melissé* set them right by his Observations. And it farther confirmed them in their Resolutions not to sail back to *St. Mary's* Island, to hear of the Misfortune of *Simon de Cordes* there, who was in a friendly manner invited ashore, and then butchered by the *Indians*, together with Twenty-three of his Men, the treacherous *Spaniards* endeavouring to get his Two Ships into their Hands, and sending Intelligence to *Lima*, and all the Country about, of the Arrival of the *Dutch*, and the Names of their Captains and Commanders. For these Reasons, they bent their Course to *Val Paraiso*, where they took Two Ships, and killed some *Indians*, but the *Spaniards* were all gone. This *Val Paraiso* lies in 33° South Latitude; and, up in the Country, about Eighteen Miles distant, lies *St. Iago*, a Town that affords good Store of red Wine and Sheep, which they kill only for the Stew, with which alone they lade many Vessels. Here they received Letters from the Captain of the *Flying Hart*, one of *Verbagen's* Company, who was treacherously taken by the *Spaniards*; which hard Fate, he informed them, he had avoided, he had not been misguid'd by the wrong placing of *St. Mary's* Island in the Map.

10. At *St. Iago* they intercepted some Letters, which gave an Account of the Wars between the *Indians* and *Spaniards* in *Chili*: The former, being, it seems, in Rebellion, had sack'd the Town of *Baldovina*, putting vast Numbers of the *Spaniards* to the Sword, and carrying off many Troops of Captives: They burnt the Houses and Churches, and bruck off the Heads of the Popish Images, crying, Down go the Gods of the *Spaniards*. They cram'd their Mouths with Gold, and bid them fastify themselves with that, for the Sake of which their Votaries had made so many barbarous Massacres amongst them. Besides all this, they laid close Siege to the City *Imperiale*, and almost starv'd the *Spanish* Garrison there. The valiant *Indians* that undertook this Action were about 5000, of which 3000 were Horse, 100 Shot, and 70 Corslets, all which Furniture were *Spanish* Plunder. They so mortally hate the *Spaniards*, that they rip up the Breasts of all they overcome, to have the Pleasure of tearing out their Hearts with their Teeth; and it adds very much to the Taste of their Liquor, to drink it out of a Cup made of a *Spaniard's* Skull. They are for the most part very stout and skilful Soldiers, and commit all their military Affairs to the Management of one supreme General, whose Orders they continually obey: But their Method of Election to this Honour is something odd; for he that carried a Timber Log on his Shoulders the longest, and with the least Degree of Weariness, was saluted General by the Army; several in this Trial bore it for Four, Five, Six Hours; but, at last, one carried it Twenty-four Hours outright, and was General at this time. All this Country of *Chili*, from

St. Iago to *Baldovina*, is one of the most fertile and delightful Spots in the World: There are all sorts of Cattle and Fruits, Gold Mines in abundance, an Air sweet and wholesome to that Degree, that it is itself Life and Medicine, and excludes the Use of all other Physic.

11. April 1. they entered the Bay *La Guafio*, and left it the Seventh following. The 11th, they came into a great Bay, called *Mero Garib*; Ten Miles from which is *Morro Moreno*, from which the Shore runs to *Arica*; and all this Tract, up to *St. Francis's* Hill, is very much subject to South Winds, though in the adjoining Sea they are very variable and uncertain. The 20th, the Air was all darkened with an *Arenal*, which is a Cloud of Dust rais'd so thick, that a Man cannot see a Stone's Cast from him; they are brought off from the adjacent Shores, and are very common in those Parts. The 25th, they were within View of the famous City of *Lima*, and now they came to understand the Value of the Treasure which the Malice of the *Spaniards* had robbed them of, and which otherwise they had found in those Ships they took at *St. Iago*. This Discovery was thus made: *Nicolas Peterson*, who was Captain of the Prize, acquainted the Admiral, that a Negro he had on board, whose Name was *Emanuel*, had inform'd him, that there was a great Quantity of Gold on board the Ship, to the Amount, as he believed, of Three Tons, with which he was the better acquainted, because himself had helped to carry a great Part of it on board. The Admiral, upon this Information, examin'd his *Spanish* Pilot very closely, who at first refused to own any thing; but another Negro, whose Name was *Sebastian*, having admitted the Fact, and acquainted them with some farther Circumstances, the *Spanish* Pilot at last owned, that they had on board Fifty-two Chests, containing each Four Arches of Gold, and, besides this, 500 Bars of the same Metal, weighing from Eight to Ten and Twelve Pounds apiece; all which, together with whatever private Stock any of the Ship's Company had, the Captain caus'd to be thrown over-board the Night he was first chaf'd, amounting in the Whole to about 10,200 lb. Weight of Gold, and, from its Fineness, worth about 2,000,000 of Pieces of Eight. The Admiral, upon this, order'd the Ship to be search'd, and then the Prisoners, but to very little Purpose; for, except a single Pound Weight of Gold dust, tied up in a little Bag, in the *Spanish* Pilot's Breeches, there was not a Grain to be found. The Prisoners owned, that all this Gold was brought from the Island of *St. Mary*, where the Mines were discover'd about Three Years before; and that there were not, on that Island, above Three or Four *Spaniards*, and about 200 *Indians* armed only with Bows and Arrows.

12. September 5. they had Sight of the *Ladrones*; and, the 16th, came to *Guana*, which is one of them; an Island Twenty Miles in Extent, and yielding Fish, Coconuts, Bananas, Sugar-canes, which the *Indians* brought in a great Number of Canoes up to their Ships. Sometimes they met with Two hundred of these Canoes, with Four or Five Men apiece, which would come all hollowing together, *Hiero, Hiero*, that is, Iron, Iron, and with very Eagerness run their Canoes upon the Ships, and overturn them, Goods and all. They were very sly, subtle sort of People, honest with good looking to; but otherwise they would sell a Man a Basket of Coconuts, with a little Rice a Top, for a Basket of Rice, and whip a Sword out of the Scabbard, and so skip into the Water, and away to the Bottom, whither a Man must go after them, if he mean to have Satisfaction: And the Women were as good at these Rogueries as the Men; they would steal as impudently, and dive as well to hide it.

13. The 17th, they sail'd for the *Philippines*; on the 20th, they met with Ice, yet were then in 3° North Latitude: On October 10. they came to *Bayla* Bay, a very fertile Land; at which Place, by pretending that they were *Spaniards*, they got Store of all necessary Provisions for their Ships. The *Spaniards*, who are Lords here, make the *Indians* pay Ten single Riials a Head for every one above Twenty Years old. These poor Creatures are naturally naked, and mark their Skins with Figures so deeply impressed, that they never wear out. Being discover'd, but after having obtained their Ends, they sail'd for the

putting int

Streight of *Manilla*; all the Tract approaching to which, they observed, was waste, barren, and rocky. Here a sudden Gust of Wind from the South-east carried away their Masts and Sails; and treated them with more Fury, than any thing they had before met with. The 23d, some of them went ashore, and eat *Palmitos*, and drank good Store of Water, after which they were seized with the bloody Flux. The 24th, they entered the Streight itself, and sailed by the Island in the Midst; and, in the Evening, passed the Island *Capul*, Seven Miles within the Streight, near which they found Whirlpools, as far as they could discover, bottomless. They now crowded Sail for *Manilla*, which is Eighty Miles from *Capul*, wanting both Wind to carry, and good Maps and a Pilot to direct them.

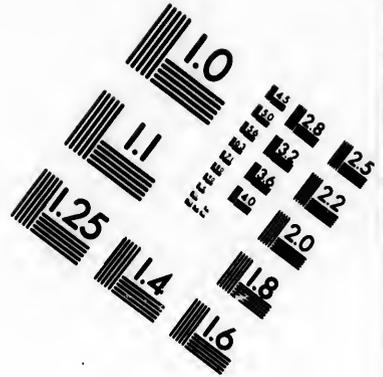

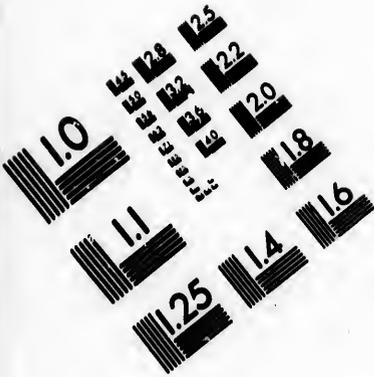

14. November 7. they took a Junk of *China*, laden with Provision for *Manilla*: The Master of this Vessel gave them this Intelligence; that there were then at *Manilla* Two great Ships, that came every Year from *New Spain* thither, and a *Dutch* Ship also, that was bought at *Malacca*; that the Town was walled about, and there were Two Forts to secure the Ships that ride there: That there was a vast Trade from *China* thither, no less than 400 Ships coming every Year from *Chincheo*, with Silk and other valuable Things, between *Easter* and *December*; and particularly, that Two Ships were shortly expected from *Japan*, laden with Iron, and other Metals, and Provisions. The 12th, they took Two Barks laden with Hens and Hogs, which were the *Spanish* Tribute, but became Meat for the *Dutch*, as it happened, who sent them a few Linen Bolts in the room of it. They pulled the Islands *Bankingle* and *Mindore*, right against which is the Isle *Lou-bon*, at Two Miles Distance; and, between them both, is another smaller Island, by which there is a safe Passage for Ships. The Island *Jasson* is bigger than *England* and *Scotland*, and has a Cluster of smaller Islands about it: It is more benighted to Trade, than to the Happiness of its own Soil, for the Riches it enjoys. Lying at Anchor in 15° North Latitude, in Expectation of these *Japan* Ships, December 1. they took one of them: She was of Fifty Ton Burden, and had spent Twenty-five Days in the Voyage. The Form of her was something strange; her Fore-part being like a Chimney, and her Furniture very agreeable to her Shape; the Sails being made of Reeds, the Anchors of Wood, and the Cables of Straw. The *Japanese* aboard her were all bald, except one Tuft of Hair left behind; and this is the Mode of that Country. The 9th, they took Two Barks, one laden with *Cocoa-wine* and *Aqua Vitæ*, and the other with Hens and Rice. The 14th, they met with the *Spanish* Ships returning Home from *Manilla*, upon which Meeting commenced a very smart Engagement: The *Dutch*, being overpowered by Multitudes, were reduced to very bad Circumstances, their Admiral being boarded once by the *Spaniards*, and almost got intirely into their Possession. She was just upon the Point of yielding herself to the *Spanish* Admiral, (who had pressed her very hard almost all the Day) when her own Admiral, seeing all was lost without a very resolute Push, threatened to blow up Ship, Men and all, if they did not beat the *Spaniards* off again, and fight at a better Rate: The *Dutch*, at this, hurried on with Rage, Fear, and Despair of preserving themselves any other Way, fought to so good Purpose, that, in a little time, they cleared their own Ship, boarded the *Spanish* Admiral, and at last sunk her. This Action cost them no more than Five Lives, and Twenty-six more endangered by Wounds, the whole Company left being now but Thirty-five. But of the *Spaniards* there were several Hundreds that perished, partly in the Fight, and partly drowned and knocked on the Head after the Fight was over. The greatest Loss the *Dutch* had was that of their Pinnace, which encountered the *Spanish* Vice-admiral, and was taken by her; which was no strange Thing, considering she had but Twenty-five Men to fight against Five hundred *Spaniards* and *Indians*.

15. From hence they set Sail for *Borneo*, the chief Town of the Isle of that Name, which is 180 Miles from *Manilla*, and lies in 5° North Latitude, as *Manilla* does in about 14° 40'; and, in their Way to it, passed by *Bolutan*, an Island 180 Miles long. The 26th, they came to *Borneo*, putting into a great Bay, Three Miles in Compass, where

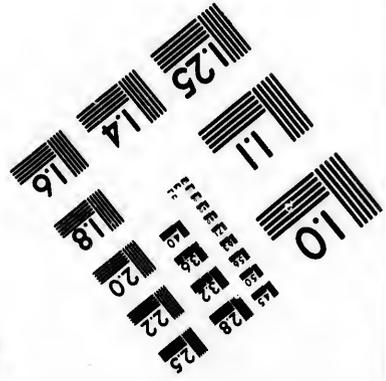

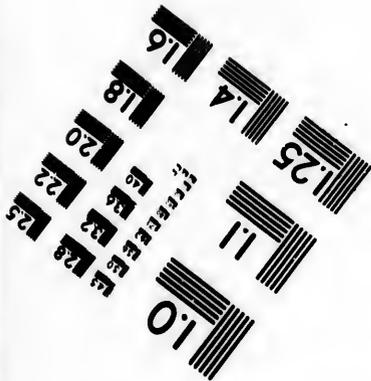

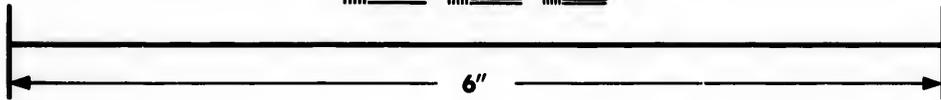

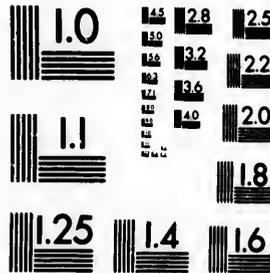

there was good Anchoring, as also good Fishing in a neighbour River, and the Fishermen very ready to barter their Fish for Linen Cloth. The Admiral, by a Messenger, craved Leave of the King to trade there; but he, suspecting them to be *Spaniards*, would come to no Terms with them, till his Officers had searched, and found the contrary; so they traded here for Pepper with the *Patamens*, a Sort of People of a *Chinese* Original. The *Borneans* and they were fond of *China* Linen; but that, which came out of *Holland*, was a mere Drug. In the mean time the *Borneans* laid a Plot to surprize their Ship; and, to effect it, January the 1st 1601, they came up to them with an Hundred Prows, and, pretending to bring Presents from the King, would have boarded them; but the *Dutch*, finding what those Presents were, desired them to keep from their Vessel, or they should be obliged to make them do so with their Shot; which Resolution of theirs the *Borneans* seeing, desisted from the Attempt. *Borneo* is the greatest Island in the *East Indies*. The capital City, bearing the same Name, contains 3000 Houses; but stands in a dirty, marshy Soil; so that they may go in their Prows from one House to another. The Inhabitants all go armed from the Nobleman to the Fisherman; and the very Women have so much of the Soldier in their Composition, that, if they receive any Affront, they presently revenge themselves with Dagger or Javelin upon him that gives it. This a *Dutch* Man had like to have proved to his Cost; for, having some Way disgusted one of these *Bornean* Viragoes, he set upon him with a Javelin, and had dispatched him, if he had not been prevented by main Force. They are *Mahometans* in point of Religion, and so very superstitious therein, that they'll sooner die than taste any thing that comes from a Swine; neither will they keep any of those Creatures about them. The better Sort of them have a Covering of Linen from the Waist downwards, and a Cotton Turbant on their Heads; but the common People go all naked. They chew a great deal of Beetle and *Aracca* in this Island, which is also a mighty Fashion in many other Parts. The *Dutch*, seeing little Hope of profitable Trade here, sailed for *Bantam*, not extremely well pleased either with the Country, or its Inhabitants.

16. January the 4th in the Night, Four *Borneans* came to the Ship, with a Design to have cut their Cables, and so to have brought the Ship aground; but, being discovered, and pelted with Shot, they marched off, leaving their Prow behind them; which the *Dutch* took instead of their own Boat lost at *Manilla*. The next Day they met with a Junk from *Japan*, bound for *Manilla*, which informed them of a great *Dutch* Ship forced by Tempests into *Japan*, all the Company of which, by Famine and Sickness, were dead, to Fourteen; that they came first to *Bongo* in 14° 40' North Latitude, and afterwards, by the King's Order, removed to *Atonza* in 36° 30'; that they were there in a safe Harbour, and had Liberty to trade, and build a new Ship; which done, they might dispose of themselves as they pleased. By this Account, they doubted not but this Ship was *Verbagen's* Admiral; so, dismissing the *Japanese* Vessel, they went on, and passed the Line a Third time, sailing in no little Fear and Danger for want of a Pilot, and good Charts. The 16th, they took a Junk of *Jor*, and in her a skillful Pilot, who came in good Time to save them from Shipwreck, which otherwise, in all Likelihood, had been their Fate in those Seas; for now they had but one Anchor left, and the Cable of that almost worn out; and, besides, had so many Shoals and Islands about them on every Side, that it was an easy Matter for a Ship, a Stranger there, to have miscarried. Some of these Islands were *Binta* and *Crinfata*, which yield Diamonds, that are sold at *Malacca*. The 28th, they came to *Jortan* upon the Isle of *Java*, where they had News of *Dutch* Ships at *Bantam*. The City consists of about 1000 Timber Houses. The King commands a considerable Part of that End of the Island, and had lately conquered *Balambuan*, a little Island, that lies just by the South-east of *Jortan*. They are said to be *Mahometans* in the Country thereabouts, tho' the Pagods in Use still seem to argue some Kind of Mixture of the old *Indian* Superstition with that of *Mahomet*; or at least a Toleration of it in the Whole amongst the common People. Their chief Priest is an old Man of 120,

who has a good round Family of Wives; and the old Man lives on nothing but the Milk, which he sucks from his Wives Breasts. Sailing hence, they saw a great Portuguese Ship of 600 Ton stuck on the Shoals. She was going to Amboina, on a Design of ingrossing all that Trade to herself, and was thus stopped by the Way; at least, this was the Account the Portuguese gave of her, tho' the General suspected, that she actually put to Sea in order to cruise for them; and therefore they were the less concerned for her Misfortune, and the less careful in assisting her Crew, consisting originally of 6 or 700 Men, of which many were still on board her, and in Danger of perishing.

17. February the 5th they passed the Straights between *Balambou* and *Baty*; and, leaving *Javo* North-east from them, on the 11th they found themselves in 13° South Latitude, and then directed their Course to the Cape of Good Hope. On the 18th they had the Sun vertical at Noon, being then in 11° 20', and here a Calm began that lasted Eleven Days. *Marsb* the 11th they came into 24° 45'; and the 24th into 28° 10'. April the 1st they made 30° 50'; and the 19th (having been considerably retarded between cross Winds and Calms) they were forced to lessen their Measures of Water; but the 24th at Night they saw a Light like Fire about Four Miles to the North-west, Land now being near; whereas they reckoned themselves 200 Miles from the Cape, and not being aware of their Approach to any other. The 25th they were in 34° 35'; and now the Calms gave them Liberty to mend their Sails. At Night they saw another Fire, and the next Morning Land, bearing North-easterly. The 27th they came into 34° 40'; and within Six or Seven Miles of the Land. May the 2d, they made 35° 15'; and the next Morning saw, between the East and North, something like the End of an Island, about Six Miles off, by which they fancied themselves near the Cape. And then they directed their Course to *St. Helena*, where they arrived the 25th, and refreshed themselves with good Water, Fish, and some Flesh; but no Cabritos, nor Fowl, (which are both hard to be taken) nor Oranges, could they meet with here. They left this Island the 30th, and June the 14th passed the Line the Fourth Time. The 16th they met with Six Dutch Ships bound for the East Indies, *James Heemskirk* Admiral. These had fought Thirteen Spanish Ships near the Salt Islands; and had lost both their Pinnace and Vice-admiral, the former taken by the Spaniards, and the latter gone from them; but they hoped secure. July the 8th they came into 27° North Latitude, and met with Store of the Weed *Saragossa* floating in the Water. The 13th they were in 32° 30', and then had Fifteen Days Calm, and a very weedy Sea. The 22d they were driven to a very short Allowance of Bread, and that worst-eaten too, their Stock being almost spent. August the 1st they made 40° North Latitude, and left the Island *Flores*, which comes about Forty-five Miles to Westward. The 18th Three Ships of *Embden* met them, and exchanged Bread and Flesh for Rice and Pepper with them, and wishal shewed them, that they were not so near *England* as their Master had told them, who had promised to make the *Lizard* the next Day. On the 26th of August, about Noon, they arrived safely before the City of *Rotterdam*, where they were received with the utmost Joy, as

having performed so perilous a Voyage as cost them near Three Years Time.

18. The Company, at whose Expence General *van Noort* had been fitted out, were extremely well pleased with his Conduct through the whole Affair, tho' attended with no great Success to them; for his Returns were far short of what had accrued from former Expeditions; but the Glory of sharing with the Spaniards, Portuguese, and English, the Honour of making new Discoveries, and even of surrounding the Globe, made the Dutch better pleased with General *van Noort*, than with any of their Navigators: Yet it is apparent, that he met with greater Difficulties, and performed his Voyage more slowly, than our English Captains had done, tho' assisted by many Lights, which they wanted, as well as much better furnished at his first setting out. One thing is extremely remarkable, which is the rigorous Discipline observed throughout the Voyage, and which was felt not only by inferior Seamen, for such Faults as detain the Meanness of their Temper might prompt, or the Sharpness of their Miseries excuse, but by the Second Person in the Fleet, and who, in case any Accident had befallen the General, would have become the First of course. This Act of Justice was performed with much Solemnity and Circumspection: He was proceeded against for Breach of the Articles established and sworn to before they proceeded on the Voyage, had Time allowed him for his Defence; and, on a fair Hearing, was condemned to be deserted in the Straights of *Magellan*, having only a small Quantity of Provisions put on Shore with him; so that he was quickly destroyed by Hunger, or fell a Victim to the Rage of the Savages, who were implacable Enemies to Foreigners. The Dread of such a Punishment keeps those within due Bounds, whose Errors are most fatal in such Voyages. For want of a Power of this Nature, many great Undertakings have been overthrown, a Competition between Commanders being naturally attended with Factions in the Fleet; and then the Gratification of private Ends is constantly preferred to the Good of the Whole.

19. We meet, in this Voyage, with an Account of Captain *de Weert's* being found in the *Magellanic* Straights, and of his being left there by General *van Noort*, because he found it impracticable to stay for him. In the original Account of this Voyage, we meet with frequent References to that of *de Weert's*, who was one of the best Seamen in *Holland*, and lived to distinguish himself by many more successful Expeditions. It has been found necessary therefore by all who have attempted Collections of this Sort, to add this Voyage of *de Weert*, tho' he was no Circumnavigator, to that of *van Noort*, and, I think, with good Reason: First, because it is certain, that Captain *de Weert* was fitted out with an Intent, that he should have gone by the Straights of *Magellan* to the Indies; and next, because it is very difficult to find so good a Description of those famous Straights, as he has given us. From these Motives, I have been led to the Pursuit of the same Method; and I persuade myself, the Reader will be as well pleased to see the Firmness of an able Commander struggling with a long Series of Misfortunes, as with the Felicity of other Captains, who have achieved, with less Difficulty, what, with equal Courage and Conduct, was attempted by him.

SECTION VII.

The remarkable Voyage of Captain SEBALD DE WEERT to the South Seas, and the Straights of Magellan, intended as a Supplement to the former Section.

1. The Occasion of this Voyage, and the Departure of the Five Ships from Holland June the 27th 1598.
2. Their Arrival at the Island of Brava.
3. Their Disputes with the Portuguese Inhabitants of that Island.
4. The Death of their Admiral, and his Supercargo.
5. The Regulations that ensued upon these Accidents.
6. Shape their Course for the Island of Annobon.
7. They proceed to the Coast of Guiney, where their Vice-admiral falls sick.
8. They land, and are well received by a Negro King; but afterwards differ with him, and obtain Refreshments by Force.
9. Their Arrival at the Island of Annobon, and the infirm State of their Men.
10. The Difficulties they met with there, and Disputes with the Portuguese.
11. Proceed to the Coast of Brasil, and from thence for the Straights of Magellan.
12. The Difficulties they met with there, and a Description of the Coast.
13. Their Disputes with the Savages.

1. **T**HE Inhabitants of the United Provinces being very desirous of promoting, to the utmost of their Power, such Discoveries as might prove beneficial to their Navigation and Commerce, the City of Rotterdam procured Leave from the States to fit out Five stout Ships for the Streights of Magellan. Of these the largest was called *The Hope*, of 500 Tons, which had 130 Men on board, *James Mabu*, the Admiral of this little Fleet, being aboard of her. The Second Ship, named *The Love*, (or *Charity*) of 300 Tons, had on board 110 Men, *Simon de Cordes* Vice-admiral Commander. The Third, called *The Faith*, of 320 Tons, with 100 Men, was commanded by *Gerard Van Beuningen*. The Fourth was named *The Fidelity*, of 220 Tons, with 86 Seamen, *Jurian Bockbolt* Captain. The Fifth was a Yacht called *The Merry Messenger*, of 150 Tons, and manned with 112 Men, under the Command of Captain *Sebald de Weert*. These Five Ships were well provided with all manner of Provisions and Ammunition, with Cannon, Money, Merchandize, and all Necessaries whatever for a long Voyage. The Pilot, upon whom they chiefly depended, was one *William Adams an Englishman*, a Person of great Experience, and of whom we shall have Occasion to say much in another Place; and they had, besides him, Three *Englishmen* more on board the Admiral. June the 27th 1598. the Fleet sailed out of the Chanel of *Goeree*; but, the Wind being contrary, they were forced to lie at Anchor in the *Dovons* upon the *English Coast* till the 15th of July. Then, the Wind being fair, they sailed again; and, having consumed Part of their Provisions, the Commanders were so provident, as to take in more, for fear of Want. On the 19th of July they were on the Coast of *Barbary*; and, towards the latter End of *August*, they arrived in the Harbour of *St. Iago*, which is one of the *Cape de Verd* Islands, where they remained till the 10th of September, notwithstanding the Country was very unwholsome, and their Pilots, particularly *Mr. Adams*, remonstrated strongly against their continuing there; which so much offended their Officers, Yonder of Authority, it seems, than Safety, that they resolved never more to call their Pilots to Council; which seems to have been the Source of all their subsequent Misfortunes, and of that restless Spirit of Mutiny and Discontent, which possessed the Seamen on board their Fleet.

2. The 11th in the Afternoon, they were off the Island of *Brava*, which is desert; but, the Bottom being rocky, they could not fasten the Anchors; so that they tacked all Night, till the next Morning, coasting along, they found some fresh Water; but it was very hard to be got, because the Bottom was not good. However, the Sloops of *Beuningen* and *Bockbolt* landed with empty Casks, and filled them with Water, and returned safe on board, tho' it was in the Night, and the Ships were under Sail the mean time. Captain *de Weert*, embarking in the Admiral's Sloop, went into a little sandy Bay, where he landed; and, roaming about to find some fresh Water, he saw some *Portuguese* and *Negroes* coming to him. He spoke to them at a Distance, because they would not approach him, and desired them to shew him where there was fresh Water, and to sell him some Fruit, if they had any. They told him, that the *French* and *English* Ships used to come and fetch some fresh Water near that Place; but they were always under Sail. As to the Refreshments, they had none; but they might find enough in the Island *del Fusgo*; and that, if they had any, they durst not sell them without the Governor's Leave, who resided upon the Mountain. After that they retired. Captain *de Weert*, having viewed several

Places, found at last Four or Five little ruined Houses. The Door of one of them being shut up with Stones, he broke it open, and found it full of *Turkey Wheat*. He staid himself in the House, with Three of his Men, to keep it; and sent the Sloop on board, to give notice of it to the General, fearing the *Portuguese* would come in the Night to take it away; but, by good Luck, the small Ship belonging to the Bishop of *St. Thomas*, taken by the *Dutch* in *Praya*, being arrived in the Bay, and lying at Anchor, *de Weert* transported all the Wheat thither. They were all Night doing it, because there were but Eight of them to carry it; and, having no Sacks, they made use of their Breeches. They also took in the same Place Two great Tortoises, which had above 600 Eggs in their Bellies, and made many good Meals of them. The *Portuguese* and the *Negroes*, having Notice that same Night, that the *Dutch* were carrying away their Corn, came down the Mountain, and made a heavy Noise; but *de Weert*, who had but Two Fusils, fired on them, and made them retire.

3. When the Wheat was on board the Ship, the Captain and his Men went to rest themselves. The next Day, *de Weert* landing again, the *Portuguese* came down to speak with him. They complained, that he had taken their Corn without Reason; that they had no Victuals, and were reduced to the Danger of starving with Hunger. The Captain told them, That he was very well informed, that this Wheat lay there near the Road, to be transported to *St. Iago*; that he could not believe, that, living upon the Mountain, they would keep their Provisions near the Shore; however, he was ready to pay for it dearer than they could sell it at *St. Iago*, provided they would shew him fresh Water; that they might easily excuse themselves to the Governor, and say, the *Dutch* had taken their Corn by Force, and so might keep the Money to themselves. The *Portuguese*, seeming to like these Reasons, promised the Captain to shew him a Place of fresh Water on the other Side of the Island, whither they would go, and make a Signal with Fire; but they were not as good as their Words. *De Weert*, coming on board again, found the Admiral very sick, and the Council assembled; and that his Opinion was, not to stay any longer. He also resigned his Command to the Vice-admiral, and desired the whole Fleet to obey him, ordering, that his Ship should bear the Flag in the Day, and have the Light hung out in the Night. The Vice-admiral, having taken Advice of the Captains, was informed of the Quantity of Water that was in each Ship; and it was ordered, that those, that had the most, should give to the others; and that the Proportions of Victuals should be lessened: But, because they could not get fresh Water in Three or Four Months Time, without a long Stay, the Seamen had Orders to gather the Rain-water, and be good Hulbands of it. The Proportions of Wine were also abated, and, because the greatest Part of the Admiral's Ship's Crew were sick, they resolved that each Ship should take in Two or Three of them, and exchange them for the same Number of sound Men.

4. September 15. the Fleet sailed South-east with a North-east Wind. The 22. the Admiral fired a Gun, and put up the Stern-flag, as a Signal for the Captains to come on board his Ship. There they found their Admiral very sick of a Burning Fever, and out of Hopes of Recovery. His Supercargo *Daniel Resteau* was also very sick; and both of them died the next Night.

5. The Loss of the Admiral was lamented by the whole Fleet. He was of a mild and sweet Temper, honest, careful, diligent, and very kind to the Seamen. He was put

* This has been always esteemed one of the best written, and most curious, of all the *Dutch Voyages*; but what has been hitherto published from it in our Collections, has been miserably imperfect: We therefore give it at large.

into a Coffin half-full of Stones, and thrown into the Sea, with the usual Ceremonies. The Council being assembled, they opened the Letters of the Directors, and other Parties concerned, which were ordered to be opened in such a Cafe; and found, that the Vice-admiral was to succeed the Admiral, if he should die; therefore he was acknowledged Admiral, and *Beuningen* Vice-admiral; *Sebald de Weert* was made Captain of *Beuningen's* Ship, and *Dirk Gernitz* *China* Captain of the Yacht.

6. On the 28th, the new General, being on board his old Ship, gave the Signal to come to him, where all the Officers took the Oaths, and the Captains their Posts. The 29th, the General went on board the Admiral, and each Captain on board their new Ships. Such an Alteration did not please the Seamen, who were very well satisfied with their old Officers. After that, the Ships sailed South-east by South, and South-west, till *October 4.* at which Time they run West South-west; and, the 6th, they stood East South-east. The same Day the *Fidelity* made a Signal to call the Captains on board her; but, the Wind being too strong, the Vice-admiral only went to visit him. The Scurvy raged so much amongst the Seamen, and especially on board the Admiral, that most of his Men were sick of it. This obliged the General to appoint a particular Day of Prayer in each Ship, to implore God's Mercy, and a happy Voyage. They were then in $1^{\circ} 45'$ South Latitude. At length the Scurvy increased so much, that the Admiral had not Men enough to work his Ship. The other Ships were almost in the same Condition; therefore the Council resolved to stand in to some Island, in order to get fresh Provisions. Accordingly they steered towards the Island of *Amobon*, or *Nobon*, where they thought to find fresh Meat and Oranges. About Night, the Admiral, who sailed before, fired a Gun, to let them know he saw the Land, tho', according to the Opinion of all the Pilots, they ought to have been 100 Leagues off it. As soon as the Gun was heard, the Ships discovered Land, and anchored upon the Coast of *Manicongo*, in 3° South Latitude. There they lost the little Ship belonging to *St. Thomas*, with Eleven found Men, who were seen no more. Some thought they had deserted; others believed they run aground, and were drowned: But they heard afterwards, that, having sailed a long while in those Seas, they arrived at the Cape of *Lopes Goufalves*, where they quitted their Ship, and went on board the Ship of *Baltazar Moucheron*, who was bound for *America*.

7. *November 4.* in the Morning, the Captains went on board the Admiral, and the Vice-admiral was commanded to land with his Sloop and Canoe to view the Country, and see whether he could find a good Road for the Ships: Approaching the Shore, he found the Sea breaking with such Violence, that the Sloop had much ado to go over the Waves, and rowed along the Shore all Night without discovering any thing but Trees. The next Day he returned on board the Admiral; and, after he had given an Account of what he had seen, they resolved to steer for Cape *Lopes Goufalves*, situate in 30° South Latitude. They had anchored in a very bad Bottom, where the Ships were driven from their Anchors, and one of the Flukes of the Anchor of the *Faith* was broken. The 6th, at the Break of Day, they sailed again, coasting along, and casting Anchor every Night. On the 9th, they arrived on the Coast of *Guney*, where they saw some Negroes, and spoke to them: The *Dutch* gave them small Glass Wares; but, seeing too many Men, and being afraid, they ran away in the Night. The General, having found a convenient Place for the Sick, sent them thither, and each Captain had his own Quarter. Captain *Bockholt* commanded the little Camp, and he had, besides the sick, some found Men to defend it. The next Day, the Admiral sent the Vice-admiral to wait on the King of that Country with some Presents, in order to procure Provisions: But he came back the 12th, and brought nothing but a Hen, and a few Plantanes or Bananas; so that they were forced to be contented with a few Herbs they found in the Fields, as Cresses, Sea Parsley, some Apples without any manner of Taste, and such-like Victuals; they had indeed Plenty of Fish, and more than they could eat. The 20th, the Vice-admiral fell sick of a Burning Fever, that every body despaired of his Life; however, after a long Illness, he recovered.

8. On the 23d, *Dirk Erriuson's* Sloop came into the Road, the Pilot of which was a *Frenchman*, and had lived a long while with the Negroes, and in the Service of their King; so that he could speak a little of their Language. He promised the *Dutch* to obtain of the King all the Provisions they wanted; upon which, the General sent Captain *de Weert*, with Two Sloops along with him, to speak to the King. His Majesty, having Notice of the designed Visit, put himself in the finest Dress and Equipage he could to receive him: *De Weert*, being introduced to the King, found him, with his Attendants about him, sitting upon a Stool a Foot high, like a Shoemaker's Stool, and a Sheep's-skin under his Feet; he had a purple Cloth Coat, embroidered with false Gold without Lining, which looked like a Pilot's Watch-coat; he had no Shirt, no Shoes, no Stockings, but a kind of a Cowl or Cap upon his Head, which was yellow, red, and blue: He had his Face powdered all over with Ashes to appear whiter; but one might for all that see, that he was black. For a royal Ornament, he had about his Neck a Glass Bead Necklace; his Gentlemen sat round about him, their Skins were all over painted with Red, and their Heads covered with the Feathers of Cocks. By the King's Seat was another little Stool, covered with a Mat for the *Dutch* Captain, who, having saluted him after the Fashion of the Country, sat down by him. He told him, by his Interpreter, the Occasion of his coming thither; and complained, that the Inhabitants, without any Pretence or Reason, had left their Habitations, and run away: That the *Dutch* were their Friends, and only came into his Country to trade fairly with them, inasmuch that they might safely return to their own Dwellings again: That the *Dutch* offered to make an Alliance with them, and with the King, whom they would visit often; that they would bring all Things the Inhabitants wanted, and desired them to let them have the necessary Provisions and Refreshments, such as Fruit, Fowls, Sheep, and other Cattle, offering to give to the Natives in Exchange any of the Merchandize they had on board their Ships. The King, having heard, with great Attention, Captain *de Weert's* Speech, told him, That the *Dutch* were very welcome into his Country, and that he would order they should be supplied with all Necessaries they wanted. Then he brought *de Weert* into his Palace, which was more like a Cow-stall: There the King gave him a Kid, and a few Bananas, for small Pieces of Linen Cloth and Iron. While they were preparing something to eat, the Captain's Five Trumpeters and Musicians sounded and played finely: The King was mightily pleased at that; but *de Weert*, who was hungry, would have been better pleased to have had some Victuals. After a long while, the King's Wives brought, in a wooden Dish, some Bananas roasted, and dried or smoked Fish, or rather Pieces of a Sea-horse, of which the King eat but soberly, and the Captain hardly tasted them, being not as yet used to such Victual. Then they presented him Palm-tree Wine, a sort of Drink that is very unpleasant to those that are not used to it. The King intreated *de Weert* several times to eat; the Dish being taken away, they served nothing else. The Captain was the more surpris'd at so slender a Feast, because he saw the King strong, and in better Health than those who live in Plenty of all Things, and eat the best of Victuals. *De Weert*, who was very hungry, told the King he would treat him with some of the Provisions he had brought with him: So the *Dutch* laid a Napkin, and served up a Piece of Bread, with smoked Beef, Cheese, and a Bottle of Sack. The King liked their Victuals so well, that he eat heartily, and drank so much, that he was obliged to go to sleep. In the mean while, the Captain took a Walk about the Town, which had not about 200 Houses in it. About Evening, not seeing the King, he thought to have returned on board his Sloop with his Men, in order to stay there all Night; but he saw a great Number of Negroes, armed with Bows and Arrows, who had possessed themselves of the Avenues, and would not let them go. The Captain, who had no Arms but his Sword, was extremely surpris'd, and asked them what was the Matter: They told him, it was because one of his Men had committed some Disorder in a House: *De Weert* then desired them to shew him the Man, and he would pu-

nish him. But it was only a Pretence; the true Meaning was, they were afraid the *Dutch* would come in the Night, and take away the King, and his Retinue. The *Dutch* Captain went back into the Palace; but they told him, the King was not there: Upon which, fearing the Negroes had an ill Design, he resolv'd to force his Way to his Sloop. The Noise awakened the King, who came out of his Palace naked, and quarrell'd with them, but they did not seem much concerned at his Anger. *De Weert* told him the Occasion of their Dispute: The King desired him to stay with him, on Condition that his Men, or Part of them, should have the Liberty to go on board their Sloop. So he staid in the Town with Eight of his Men. The Negroes, thinking themselves not safe enough, would not permit *de Weert* to be with the King; therefore they conducted him into another House, and kept a Watch all Night about him. The next Morning, the Captain going out of the House to wait on the King, an old Woman came to him, and look'd him in the Face: She had a Box in her Hands, covered with loose Leather, which was fasten'd to it like the Leather of a Pair of Bellows, and, turning Three times round about him, muttered some Words, and beat at the same time the extended Leather with her Hand, which occasion'd the flying of some Ashes out of the Box upon the Captain's Cloths; nobody knew what she meant by it, or what she intended to do; but *de Weert* and the Negroes laugh'd at her. At last the Negroes brought some Bananas, Two Goats, and Four Pullets, to exchange with the *Dutch*: The Captain took them, and, seeing he could expect nothing else from such a People, took his Leave of the King, and went on board again: But, while he was in the Town, some of his Men went into the Woods, and killed a wild Boar, Two Buffs, and some Birds, which were distributed to the Sick.

9. The General went ashore every Day to visit these poor Men Morning and Evening, taking an extraordinary Care of them, and supplying them with all Necessaries. December 4. a Ship named the *More*, arriv'd in the Road from the *Ilba del Principe*, and the next Day the Yatch of *Laurence Christian* came into the same Road from the same Island. Some of the Sick recover'd, but many that were well fell sick, because the Air was very unwholsome; therefore the Generals, having lost Sixteen of his Men, who died there, resolv'd to quit the Country. December 8. the whole Crew came on board, and the same Day Captain *de Weert* fell sick of a Fever, which kept him Two Months a-bed. The 9th, the Fleet sail'd towards the Island of *Anobon*, with a Design to land in it, because the Sicknefs continued and increased among them. On the 26th, in the Afternoon, they arriv'd under that Island: The Admiral having detach'd Two Sloops with Captain *Dirrick* to go on Shore, the *Portuguese* and the Negroes oppos'd them: But *Dirrick* telling them they were come as Friends, and only to buy Refreshments, they promis'd to supply them; but it being too late to go and speak to the Governor, they desired the *Dutch* to stay till the next Day, and then they would certainly furnish them with Provisions.

10. On the 17th, in the Morning, they sent Two Sloops ashore; but they found a great many Men arm'd with Fusils, who told them, that, if they came near the Shore, they would look upon them as Enemies. The General, having Advice of it, arm'd all the Sloops, and sent them ashore under the Command of Captain *Backholt*, and the Sergeant major; the Sloops made to the Shore in Order, Two on the Left Hand, and the rest on the Right: But the *Portuguese*, and the *Blacks*, who had carried away every thing out of their Huts in the Night, set them all on Fire, and, abandoning their Fort, retir'd into the Mountains. The Shore being free, the Admiral order'd, that all the Sick should land: The Seamen, who long'd to eat some Fruit, went about the Island to get some Bananas and Oranges, which are plentiful there: But the *Portuguese*, who spied them, kill'd some of them: And the 19th of the same Month they murder'd one, whom they expos'd in the Highway to insult the *Dutch*. The General, to prevent such Accidents, forb'd any Seaman to go alone and disarm'd to seek for Fruit without Leave: But his Command being not obey'd, to the great Prejudice of those

that slighted his Order, he caus'd a Gibbet to be set up, to fright those who should be so bold, for the future, as to disobey him. Then he sent a Party of his Men, well arm'd, who brought into their little Camp Twenty-seven Head of Cattle, which Prize was more agreeable to them, than if they had taken some of their Enemies Prisoners; however, they were so careless, they lost the best Part of their Booty. The 24th, the Admiral detach'd another Party of 150 Men, with Orders to advance into the Country, and to the Mountain, where they found the *Portuguese* intrenched, who fell upon them, and put them in Disorder: However, the *Dutch*, losing no Courage, continu'd their March up the Mountain, and found Two Passages; upon which they divid'd in Two Companies, who got up to the Mountain by each of these Ways, with much Fatigue: Being advanced pretty nigh, the *Portuguese* shot at them, and threw down many Stones; Captain *de Weert's* Ensign, who led them, was kill'd with a Musquet-shot, and many more were wounded: But the *Dutch*, not discourag'd, got up the Mountain, put the Enemies to Flight, and took the Fort, where they found a Ton of Biscuit hid under Grass, Two *Dutch* Cheeses, and some Earthen Pots full of Spanish Wine. They burnt the Two Houses that were near the Fort, which were full of Cotton; and, after this Expedition, return'd to their own Camp.

11. The Air of the Island of *Anobon* being worse than that of *Guiney*, the Diseases among the Seamen increased every Day; therefore January 2. 1599, they resolv'd to put to Sea; but, before their Departure, they buried their Dead, and burnt the Huts, and the Church. The next Day they sail'd for the Streight of *Magellan*, with a Design to stop no-where else. The 22d, they pass'd the Shelves and Rocks of *Brasil*, call'd by the *Portuguese* *Ab-colbas*. March 9, one of the Vice-admiral's Seamen, who had several times broken open the Cook's Cupboard, and stolen Bread, was, by Council, condemn'd to be hang'd on the Bowspit Mast. About that Time the Sick began to be better, and they got so good Stomachs, that their Share was not sufficient. The 12th, the Fleet being near the *Rio de Plata*, the Sea appear'd as red as Blood: They drew up some of the Water, and found Abundance of small red Worms in it, which leaped out of it like Fleas; some are of Opinion, that these Worms come out of the Whale's Belly in certain Seasons of the Year. Eight Days after, an *English* Seaman died strangely on board the *Fidelity*: He was eating very heartily, when, on a sudden, he fell down upon his Back, rolling his Eyes, foaming and speechless, and expired in that Condition. Two Days after, a young Man of *Ulrecht* fell sick of the same Distemper, and was like a Madman, biting, fighting, and scratching every body: He was carried into his Cabin, where he was Three Days and Three Nights without eating: The fourth Day he began to mutter some Words, and devour'd a Biscuit they gave him, but at last he died miserably; for he was so senseless, that he could not clean himself, or void his Excrements in a regular Way: and it being then very cold, the Moisture that was about him freez'd, and benumbed his Flesh, insomuch that they were forced to cut off his Legs.

12. April 6, the Ships got into the Streight; about Evening they cast Anchor under the least of the Two Islands of *Penguins*, Fourteen Leagues off the Mouth of the Streight; there they saw great Quantities of those Birds call'd Plungeons, because they dive into the Water to catch Fish: They kill'd Thirteen or Fourteen with Sticks, and could have kill'd enow for the whole Fleet, but that they would not lose Time, nor the Opportunity of the fair Wind. The 9th, they put to Sea again, and the next Day the General sent Fifty Men ashore, to see whether they could find any Inhabitants and Cattle; but, having walk'd about Three Leagues along the Sea Side, they found nothing. On the 13th, they arriv'd in a fine Bay, One-and-twenty Leagues off the Mouth of the Streight, call'd by the *English*, *Mussel Bay*, because of the great Quantities of Mussels found there. In that Place they provided themselves with fresh Water and Wood, which are there very plentiful. The 17th, they sail'd between Two rocky Coasts, and lay to cloak, and to high, that they thought

they should never get through. The Mountains were covered with Snow. The 18th, they cast Anchor in a Bay to the Northward in 54° Latitude, called the *Great Bay*: In the Middle of it are Three small Islands, the least of which lies to the Eastward; the Ground in that Bay is very good, and of a fine Sand. In these Places there grow a great Quantity of Trees, (Pimento) resembling Bay-trees, only they are a little higher, and the Bark is much bitterer, having as strong a Taste as Pepper. Here they saw abundance of Mussels, some of them were a Span long, and, when they were boiled, the Flesh of Three of them weigh'd a Pound. The Wind being contrary, the Ships lay at Anchor till the 23d of *August*, without taking the Sails off the Yards, that the Ships might be ready to set Sail. In the mean while they suffered much by the cold Weather; they lost above 100 Men, and, amongst others, Captain *Backbolt*, who was succeeded by *Baltazar de Cordes*: Besides, the Storms were so frequent and violent, that the Ships could not lie at Anchor, and the Seamen were forced to be continually at work to keep them right: They were likewise obliged to go ashore in the Rain, Snow, and Hail, to get in some fresh Water, Wood, Mussels, and such other Provisions as they could find, which fatigued them extremely. The Scarcity of Victuals was so great, and the Climate so sharp, that they were almost starved with Hunger and Cold, the rough Climate rendering their Appetites so keen, that they were almost insatiable, and eat Roots and other Things raw, without staying to have them dressed. The greatest Part of the Seamen wanted Watch-coats, and other Cloathing, to support the Fatigue of the Watch, and the daily Work; for they had made no Provision of them, thinking to go into an hot Country, where they should have no need of them. To redress this Grievance, the General distributed to every one Pieces of Cloth; and all the Captains were ordered to be present, with a Cane in their Hands, when their Seamen eat their Meals, because many of them would sell their Share of Victuals at a great Rate, and, upon that Score, chose rather to be without it, and fill their Stomachs with raw Mussels, and green Herbs, which occasioned Dropsies, and reduced them at last to a languishing and dying Condition. But the Officers were so careful, and so exact, in distributing the Proportion of Victuals, that the 22d of *April* Two Seamen of the Yacht were condemned to Death for having stoln some Oil in the Hold of the same Yacht; however, there was but one of them hanged, and the other was whipt.

13. *May* 7. the Vice-admiral was detached with Two Sloops into an Island over-against the *Green Bay*, to catch some Sea-dogs. He found Seven Canoes, or small Boats, with Savages on board, that were Ten or Eleven Foot high, as well as he could observe, of a reddish Colour, and with long Hair. As soon as these Natives saw the Sloops, they ran ashore, and threw so many Stones at the *Dutch*, that they durst not come near the Shore; when they saw that the *Dutch* durst not approach, they got into their Boats, and rowed with great Outcries towards the Sloops. The Vice-admiral let them advance within a Musquet-shot, and then commanded his Men to make a general Discharge; they killed Four or Five of them, which so frightened the rest, that they run ashore again; then they pull'd up, with their Hands, some Trees, which afar off appeared to be a Span thick; but the Vice-admiral chose to let them alone, and to return on board. The 26th of the same Month, some Seamen went ashore to look for Mussels, Roots, Herbs, and such Victuals as they could find. Being separated one from another, a Company of Savages fell on a sudden upon them, killed Three, and wounded Two. They tore in Pieces the first Three, and were going to do the like to the wounded Two, if Captain *de Cordes* had not come to their Relief. These Savages were all naked, except one, who had a Sea-dog Skin about his Shoulders. They had wooden Javelins, which they threw with great Strength and Dexterity; the Point was like a Cramp-iron, tied to the Arrow with Sea-dogs Guts, and would run so far into the Flesh, that it was almost impossible to get it out. While the Fleet was in that Island, the General ordered the Sloop to be put upon the Stocks to be altered

into a Pinnace: She was named the *Possilion*, and the Second Pilot of the Admiral was Master of her: Captain *de Weert*, having no more Provisions for Broth, and being obliged to give Biscuit to make some, landed *July* 17. to catch Sea-dogs; while he was ashore, so great a Storm arose from the North-west, that he was obliged to stay Two Days and Two Nights without being able to come on board his Ship again, and could catch nothing.

14. *August* 2. the General ordered all the Officers and Seamen to Land; and, though the Snow was pretty thick upon the Shore, he would have the Minister to say Prayers, and make a Sermon, to thank God Almighty, that he had preferred them in so dangerous a Voyage, and to beg his Assistance for the Time to come. The great Sufferings they had endured in that Bay, then called the *Green Bay*, and the Loss of 120 Men who died there, made them name it the Bay of *de Cordes*, because *de Cordes* was their Admiral, when they were afflicted with these Accidents: And, in effect, they went through the greatest Hardships in the World; for, besides Hunger and Cold, they were exposed to the Injuries of the Air, Winds, Rain, Snow, and Hail, till the 23d of *August*: Then they set Sail with a North-east Wind; but the next Day the Weather was so calm, that they were obliged to put into a great Bay lying Southward. To perpetuate the Memory of so dangerous and extraordinary a Voyage into a Streight, into which no other Nation had yet ventured to sail with so great and so many Ships, the General erected an Order of Knighthood, and made the Six chief Officers Knights of it. They obliged themselves by an Oath, never to do or consent to any thing against their Honour and Reputation, whatever Dangers or Extremities they should be exposed to, not excepting Death itself; or to do any thing prejudicial to the Interest of their own Country, or to the Voyage they had already begun. They also solemnly promised, they would freely expose their Lives against all the Enemies of their Nation, and to use all their Endeavours to prosper the *Dutch* Arms, and conquer the *Spanish* Dominions, from whence the King of *Spain* got so much Gold and Silver to make War against them in the *Low Countries*, and oppress them. This Ceremony was performed ashore upon the Easterly Coast of the Streight, as well as the Place and the Occasion would permit it, and the Order was named the Order of the *Lion set free*: They also erected a Table upon a high Pillar, on which the Names of the Knights were written, and the Bay was called *The Bay of Knights*.

15. The 28th, they sailed out of that Bay, and put into another little one a League off. There they were becalmed again. Then the Admiral commanded *de Weert* to go ashore with his Sloop, to remove the Table that was set up in the Bay of *Knights*, and transport it to a more convenient Place. But as he thought to double the Point of the Bay, he saw above Eighty Savages sitting upon the Ground, who had near them Eight or Nine Canoes, or little Boats; as soon as they saw the Sloop, they made a dismal Noise, and Signs to invite the Seamen ashore. But the Captain, who had but a small Complement of Men, returned on board the Ship. The Savages, seeing him go to his Ship, ran as fast as they could across the Woods along the Shore, hallowing still, and making Signs to the *Dutch* to come ashore. The General, being informed of this Adventure, sent immediately Three Sloops, well armed, to the Shore, but they found nobody: Yet they saw the Marks of the Inhabitants; for they had taken out of the Ground the Corpse of the *Dutchmen* who had been buried there, and had barbarously disfigured them: And the Table, which Captain *de Weert* went to remove, was broken by the same Savages.

16. *September* 3. early in the Night, the Ships got out of the Streight of *Magellan*, and sailed into the South Sea with a fair Wind. The 5th and 6th, they sailed fill with a North-east Wind to the West North-west, and kept all Six together, reckoning the *Possilion* one, till the 7th of the same Month, at which time they had fine Weather: But it did not last long; for the Sea, which, in those Parts, is often stormy, began to swell and rise so high, that the Vice-admiral was forced to lie by, and hale his Sloop

on board; Captain *de* was before Yacht, that him to furl *Fidelity*, that his Courf, that the Fog Vice-admiral his Sails; in they could together. but these T Admiral gave Two Yacht after they di Joy. on board, and the *Fidelity* was obliged to do the same: Captain *de Weert* was sailing close after the Admiral, who was before, when an Accident happened in the great Yacht, that had the Wind of the *Fidelity*, which obliged him to furl his Sails, and lie by with the Yacht, and the *Fidelity*, that had lost her Sloop. The Admiral continued his Course, thinking the other Ships failed after him, and that the Fog hindered the Watch from seeing them; but the Vice-admiral, who followed them, was also obliged to furl his Sails; immediately after, the Fog was so thick, that they could not see one another, though they kept close together. September 8. the Two Yachts lost their Ships, but these Three kept together till the next Day; then the Admiral gave the Signal to sail with all the Sails, thinking Two Yachts were gone before. Two or Three Hours after they discovered them, and staid for them, with great Joy. When they were joined again, *Dircks Gerisfa* sent the Pinnace, or the *Postilion*, to the Admiral, to desire him to send him his Carpenters; but he could not, because they were sick: However, those of Captain *de Weert* and *de Cordes* went, which proved a great Damage to their Ships, viz. the *Faith*, and the *Fidelity*; for they never saw their Carpenters again, the Wind shifting on a sudden: Then the Sea began to be so stormy, that the Yacht was forced to furl her Sails again, as well as the Vice-admiral also, who was ahead of the *Faith*; and the *Fidelity* did the like: But in the Night the Yacht, and the Vice-admiral, put up their Sails again, without making any Signal that was seen by the Two other Ships, who continued to lie by, being persuaded that the Vice-admiral, and the Yacht, did the same. But, when the Day came on, the Captains of the Two first Ships were extremely troubled, at not seeing the Two other Ships: *De Weert* was very much concerned to have no Master with him, and but Two old Pilots, with a few Seamen, who were sick and weak through the Cold and Dampness of the Weather, though they had a good Fire Night and Day.

17. On the 16th, the North-east Wind was so violent, that the Two Ships were every Moment in Danger of sinking. The Gallery of the *Faith* cracked above an Inch, and the Waves of the Sea beat so much upon the *Fidelity*, that the Seamen were in Water above the Knees. The other Ship was in no less Danger; for she had sprung a Leak, and so full of Water, that they were obliged to pump Night and Day, and could hardly preserve her. At last, after an exact Search, they found the Leak, and stopp'd it. These Two Ships were Twenty-four Hours in this deplorable Condition in the South Sea, spooning all the while, and going without Sails; besides that the Seamen were discontented, and grumbled, though each of them had Two Ounces of dry Fish a Day, and a reasonable Share of Biscuit. But they were so hungry, that this was not sufficient. They used to fill their Bellies with Mussels in the Streight, and could not brook the want of them, so that the Captains had much ado to pacify them. The 26th in the Night, they fell in with the Coast upon the North Side of the Streight by a Mistake; for they thought they were Twenty Leagues off the Land. In the Morning, the Crew of the *Faith*, discovering the Land, were in great Danger; for the Wind driving the Ship towards the Coast, they saw Two Rocks just before them, which they could not avoid, but by doubling them. The *Fidelity*, that was a great Way before, and now lay by, had not been so exposed; for, having discovered the Rocks in time, she failed on the other Side. They were Three Leagues off the Streight when they saw the Land, and the Westerly Wind blowing so hard, that they could not bear off, the Two Captains resolved to get into the Streight again, to find a good Road, and stay for a fair Wind. Then they did not doubt, but they might overtake the other Ships, which could not be far gone, seeing they had agreed together, that, in case of any Accident, they should stay Two Months in the Island of *Santa Maria* one for another. About Evening they arrived in the Southerly Point of the Mouth of the Streight, and were driven by the Currents Six or Seven Leagues off into the Streight, where they anchored in a very good Road, and had pretty fair Weather till the last of September: Then the furious Gulls of South-westerly Winds forced them to drop

NUMB. IV.

Three Anchors. The Summer approaching, they were in Hopes of fairer Weather; but, for the Two Months time they staid there, they had scarce a fair Day to dry their Sails. They called that Bay the *Bay of Trouble*, because they endured therein for Twenty Days the greatest Trouble and Danger imaginable, being obliged continually to go ashore to fetch some sorry Nourishment, such as a few Birds, and some Mussels and Snails, that they found in the Rocks.

18. October 18. the Two Ships, not being able to subsist any longer in that Bay, failed again a League farther into the Streight, where they found a better Bay than the last, and cast Anchor upon the Coast. The 22d, they were in Danger of perishing by a violent Storm; but, about the Break of Day, a Calm succeeded. The constant Work of the Seamen was to go ashore to get some Victuals, when it was low Water, and to fetch in some Wood and fresh Water, when the Tide came in; so that they had no time to dry themselves, though they had a good Fire Night and Day: In a Word, during the whole Nine Months they spent in that Streight, they had scarce an Opportunity to take the Sails off the Yards to dry them, so frequent were the Returns of Rain and Storms. In so deplorable a Condition they waited for better Weather; but, in the mean time, were exposed to Wet, Cold, high Winds, and such other Inconveniences, which kept them continually at Work. But, after all, they did better by falling into the Main, which was smooth, and where nothing was to be feared but Winds; whereas, if they had anchored in any Place, they would have been exposed to the Surges and violent Waves of the Sea, and the Anchors could not preserve them from imminent Danger. The chief Cause of the Seamen's murmuring was, that some of them gave out, that there would not be Biscuit enough for their Return into *Holland*, if they continued here longer. The Captain, having Notice of it, went into the Bread-room, and came out of it with a cheerful Countenance; and told the Seamen, that there were Biscuit and Provisions enough for Eight Months, though, in Fact, there were not Provisions for above Four Months. But the Captain was resolved to stay rather a whole Year for the fair Weather, than to go; and, in case the Weather should continue as bad as it was, he designed rather to sail to the *East Indies* to look for the Fleet. At length, after they had staid in the Streight till the 2d of December, the Wind turned North-east, and immediately they weighed Anchor. But, being got ready to sail, they could not get off into the Main, because of the Whirlwinds rising between the Hills and the Bottom of the Bay. The *Faith* was driven so near the Land, that one could step to the Shore from the Gallery, so that they were in great Danger, and would have certainly been lost, if the Wind had continued strong. The next Day the Storm was quite over, and, at Ebb-water, the Two Ships got out of the Bay, which they called the *Close Bay*: But they went out inauspiciously; for, after that, they never cast Anchor together, and that very Day they anchored Three Leagues farther under the Wind than they had done before, and at a League off one from another.

19. The 8th, they endured a more violent Storm than ever; the Wind was so strong, that the Waves were sometimes higher than the Masts; and the Storm lasted Two Days. On the 10th, the Wind sinking, Captain *de Weert* went into his Sloop, in order to board the *Fidelity*; but, having doubled the Point, he saw no Ship, or any Signs of a Shipwreck; so he went back, full of Sorrow. The next Day, he rowed towards a Gulph, where he saw a Mast near a low Point. Then his Sorrow gave place to Joy; for he went on board the *Fidelity*, and told them what Apprehensions he had been under. He was obliged to leave his little Boat, to help to hale the Anchors and the Cables, which the *Fidelity* had lost. Then he took his Leave, in order to return to his own Ship; but he little imagined, that it was the last Farewell, and that he should never see Captain *de Cordes* again. The frequent Storms, and other Inconveniences, having discouraged the Seamen, who were out of Hopes of ever returning into *Holland*, and who thought they should starve for want of Provisions, Captain *de Weert*, the next Day, which was *Sunday*, invited them

M all,

all, but those that were sick, to a great Dinner of Geese, Ducks, and other Birds, that they had killed. While they were merry at Dinner, the Captain exhorted them to have Patience; and represented, that God Almighty never forsakes those, who put their Trust in him. He also thanked them for their Fidelity, and the Services and Hardships they had run thro' till now. This Speech proved very effectual; for the Seamen took Courage again, and rowed towards the Westerly Part of the Bay, to go ashore, and fetch some Victuals. As soon as they had doubled the Point, they saw Three Canoes, with Savages on board them; who, perceiving the Sloop, went immediately ashore, and scrambled up to the Tops of the Mountains, like Monkeys. The Dutch went on board the Canoes, and found only a few young Plungeons, wooden Grapples, wild Beasts Skins, and other little Things of no Value, which they left in the Boats. Then they went ashore, to see whether the Savages had hid any thing. They saw, on the Foot of the Mountain, a Woman, with Two Children, who did what she could to run away; but she was taken, with both her Children, and carried on board, without shewing any Concern at all. She was of a middle Size, with a big Belly, of a reddish Colour; her Countenance was very fierce, and her Head was shaved, according to the Fashion of that Country: But the Men have long Hair, and never cut it. For Ornament, she had Snails Shells hanging about her Neck, and a Sea-dog's Skin about her Shoulders, tied under her Throat with Gut-strings. The rest of her Body was naked, her Breasts hanging down like Cows Udders. Her Mouth was wide, her Legs crooked, and her Heels very long. She would eat no boiled or roasted Meat, and therefore they gave her some of the Birds they caught in the Canoes; which she took, and, having plucked the long Feathers, she opened them with Mussel-shells, cutting them first behind the Right Wing, and then above the Stomach. After that she drew the Guts out, and, having laid the Liver a little upon the Fire, eat it almost raw. She cleaned the Gizzard, and eat it quite raw, as well as the rest of the Bird. Her Children eat after the same manner; one was a Girl about Four Years old, and the other a Boy Six Months old, who had the greatest Part of his Teeth, and could go alone. She looked very grave and serious, while she was eating, tho' the Seamen burst out with laughing. After her Meal, she sat down upon her Heels, like an Ape; and, when she slept, she was all in a Heap, holding the young Infant between her Arms, with his Mouth to her Breast. They kept her Two Days on board; but, the 14th, the Weather being fair, the Captain sent her ashore again, and gave her a Gown, a Cap, and Glass-beads for a Necklace and Bracelets. He also presented her with a little Looking-glass, a Knife, a Nail, an Awl, and other Toys of small Value, with which she was extremely pleased. They also clothed the Boy with a green Gown, and trimmed him finely with Glass-beeds of all Colours; but they carried the Girl to *Amsterdam*, where she died. The Mother was very much concerned at the keeping of her Girl: However, she went into the Sloop, without any Resistance, or any Noise to have the Girl again. They carried her ashore a League Westward off the Ship, to the Place she pointed at. There the Seamen found Fire, and some Arms and Utensils; which made them believe, that the Savages ran away at the Sight of the Sloop. When they were come on board again, so violent a Storm arose on a sudden, that they were all frightened out of their Wits. The Surges of the Sea rose higher than the Masts, and tossed the Ship with such Force, that it was a Miracle she was not overturned, and split in Pieces. However, by the Grace of God, she got out of that Bay, which they called the *Unfortunate Bay*. The next Day about Evening, they cast Anchor in the Chanel; but they were surprised to see the Anchor without a Buoy; but the Weather was so violent, that they durst not venture to put one to it. This Accident obliged the Seamen to sail before the Wind into the Bay of *Cordes*, situated in the Middle of the Streight, and about Fourteen or Fifteen Leagues off the Place where they were, because they knew that Bay had a good Bottom for Anchorage. With this View they coasted along Southward, that they might be seen by the *Fidelity*. When they got into the Mouth of the Bay, they fired a Gun, to give Notice to

the Captain, that they were come; and they imagined he had also fired another Gun, as a Signal of his hearing them. Upon this, the *Faith* continued her Course, thinking the other Ship followed her. Altho' they carried only a Fore-sail, the Strength of the Wind drove them so fast, that they were forced to fasten the Sloop to the Ship with Two great Haulers or Cables, to make their Course slower; but the rolling Waves broke the Two great Cables, and they never saw the Sloop again.

20. This was a great Loss; for the Seamen, having no Sloop, could not go ashore to get any Provisions. The next Day, *December 16*, they discovered a Sloop to the Westward, making towards them. Some of them thought it was Captain *de Cordes's* Sloop; others imagined it the Sloop of a Ship belonging to the Fleet, that was come into the Streight, or an *English* Sloop; but others guessed better, thinking it was *Oliver de Noort's* Sloop going to meet the *Faith*, which he had seen from behind a Point Three Leagues off that Place where he lay at Anchor. This unexpected Meeting was Matter of great Joy to the Seamen, who were in Hopes, that the General was well. The Captain received with a great deal of Respect the Sloop's Crew, who were all vigorous, and in perfect Health, and who, amongst other things, told him, that they had carched above 2000 Birds in the great Island of *Penguin*. These Words made the other Seamen Teeth water, and every one wished himself in that Island. Many of them were bold enough to tell the Captain, that they must go thither, where they might as well stay for the fair Wind, as in any other Place; and that it was but One League out of the Way: But the Captain declared to them, that he would not depart from the General. The next Day, the General himself came to visit the Captain; and, the Day following, the whole Fleet joined him. The 2d, the Wind turning to the South-west, all the Ships set Sail. Having failed Two or Three Hours, *de Weert* desired the General to lend him his Sloop, and Three or Four of his Men, to go before, and tell Captain *de Cordes* to get himself ready to sail with the Fleet. The General freely gave him his Sloop; and *de Weert*, rowing along a small Island, about which he had failed before, perceived Two Fires; and, because he never saw any Savages in the Island, he thought some of Captain *de Cordes's* Seamen were there: Therefore he went ashore; but met with nobody, and went on board again, and joined the Fleet. His Ship was now become very foul, and could not follow the other Ships; and, for that Reason, when she was off the Bay of *the Knights* at Ebb-water, she was forced to sail back into the old Place. The next Day, she was exposed to the same Accident within a Cannon-shot of the other Ships, and that because she was to pass through a very narrow Chanel, into which ran Two Currents, one from the East, and the other from the West of the Streight, which, meeting together, made a rising Surge, that the Ship could not matter. *December 24*, they tried again to double the Point, behind which the Fleet lay at Anchor; but they could not do it; for, when the Tide came in, it drove them into the same Place again. The Captain, seeing it impossible to double the Point with that Wind, resolved to stay till it changed, lest he should fatigue his Men too much: But the General, tho' the Wind was contrary, failed away, to look for a more convenient Road. Then *de Weert* lost Sight of the Fleet, tho' he was not far off, because he anchored behind a rising Ground. *De Weert*, departing to join the Fleet again, and seeing he could not subsist without a Sloop, or a little Boat, ordered, that the Pieces of a large old Sloop, which were in the Hold of the Ship, should be taken out, in order to build another that very Day, which was *Christmas Day*; but, the next Day, the Wind being North, he put off the Work, in Hopes of getting into the little Bay, which was a League farther than the Bay of *the Knights*, and in which he might build the Sloop with more Conveniency and Safety; but the Violence of the Wind forced him back again into the Bay of *de Cordes*, Five Leagues off, where, the 26th and 27th of the same Month, they endured so great a Storm, that the Seamen began to murmur again, particularly because they had been a Fortnight without eating Mussels, and had had nothing but a small Proportion of biscuit and Oil to subsist on. The Captain, seeing them so insolent, called them all together

In his Cabin, gave them good Words, and desired their Advice as to what was best to be done in this difficult Conjunction. Some were of Opinion, they should go to *Rio de Plata* with the Sloop only, and leave the Ship, telling the *Portuguese* they were forced to it, because the *English* gave her Chace; others were for sailing into *St. Helena*, to take in fresh Provisions; but they did not consider, that it was impossible to get to that Island by the West. *John Outgetz* the Pilot said, they could not do better than to go upon the Coast of *Guiney*, or upon the Gold Coast, where he was known, having made Five Voyages into that Country. These different Opinions did not please the Captain; and therefore he told them, he could resolve upon nothing without Captain *de Cordes's* Consent. In the mean time, he ordered that the Sloop should be built; and *January 1. 1600.* he went on board his new Sloop, and steered her himself ashore for the better caulking of her.

21. In the Afternoon, having doubled the Southerly Point, he discovered the Two Sloops of General *Oliver van Noort*; who, being put back to the Bay of *Knights*, and come to see whether the *Faith* was still in the Bay of *de Cordes*, brought a Piece of Ice Three or Four Foot thick, and said, he had seen many much thicker, though it was in the Middle of Summer, and the Savages were all naked. The next Day the General returned back, and promised to send his Sloop in Quest of the *Fidelity*. The Captain sent his Sloop also with his Ensign, and one of his Pilots, for the same Purpose; and, as they were going by the Fleet, he charged them with a Letter for the General, to desire him to send him Biscuit for Two Months. The Sloop came back *January 5.* with the General's Answer, that he did not know whether he had Biscuit enough for the Fleet, nor how long he should be at Sea; and therefore he could not spare any. This Answer afflicted Captain *de Weert* the more, that he had no Hopes of meeting again with Captain *de Cordes*; therefore he resolved to return into the Island of *Penguins*, and make a large Provision of them, that he might be able to follow the Fleet, in case the Wind was fair. Before he sailed away, he writ a Letter to Captain *de Cordes*, which he left in the Foot of a Tree, upon which the General had writ the Date of his Fleet passing by that Place; and nailed a Board to the Tree, with these Words written upon it, *Look into the Foot of the Tree.*

22. *January 11. 1600.* the Ship sailed towards the Island of *Penguins*, and the 12th they anchored under the least Island; immediately the Captain landed with Thirty-eight healthy Men, leaving the Pilots and the other Seamen on board: Coming near the Shore, they saw prodigious Quantities of Birds; and, leaving only Three Seamen on board the Sloop, went to kill as many Fowl as they could. In the mean while, the Wind grew so high, and the Sea so stormy, that the Sloop was driven up the Shore, and was so full of Water before the Seamen could get into her, and cast so far upon the Rocks, that all the Seamen could not heave out the Water, or hale her to Shore; in fine, she was so much tossed by the Surges of the Sea, that they expected every Minute to see her split in Pieces: In such an Extremity the Seamen had no Hopes of saving their Lives; for they could by no means return on board their Ship again: They had no Carpenters, no Tools, no Provisions, and no Wood; that Island producing none: They were all over wet, and starved with Cold; for every one went into the Water to the Shoulders to draw the Sloop: In fine, at low Water, the Sloop being aground, they found an Ax, and other Tools, with Nails, which gave them some Hopes of returning on board their Ship again; but, it being impossible to draw the Sloop ashore before Night, they were forced to be quiet till the next Day: So they passed the Night in the open Air, and made Fires with some of the broken Planks of the Sloop, and eat a few Birds half-roasted, without Bread, and with so little Water, that they could not quench their Thirst: As soon as Day-light was come, every one went to work so cheerfully, that one Side of the Sloop, which was the most damaged, was quite refitted before Night: The next Day the other Side was also refitted, and Four Men laved the Water out of her with Pails; then they laded her with 450 Penguins, and, about Evening, they went on board the Ship, after they had been Three Days ashore. While they were

catching the Penguins, they had found, in one of their Holes, a Savage Woman, who had hid herself there all the while the Seamen remained on the Island. When General *Oliver* landed in that Island, the Savages killed Two of his Men; upon which he destroyed them all but this Woman, who was then wounded, and shewed her Wounds to the Sloop's Crew. Her Face was painted; she had about her Body a kind of a Cloak, made of the Skins of Beasts and Fowls, neatly sewed together, which reached down to her Knees. Her privy Parts were also covered with a Skin; so that the Savages on the North Side of the Streight are more modest and sociable than those that inhabit the South of it. This Woman was tall and well proportioned, and her Hair was cut short; but the Men wear it prodigious long, as they saw by the Corpse of one of these that had been killed, who had fine Feathers on his Head, and about his Body. They make use of Bows and Arrows, at the End of which a hard Flint is inlaid very neatly: The Captain gave a Knife to that Woman, who, in Acknowledgment, told him, he would find a greater Abundance of Birds in the biggest of the Two Islands; so they left her where she was, though she wished to be transported to the Continent. They went to this Island, in order to get greater Numbers of these Birds, of which, in this Place, it may not be amiss to enter into a more full Description. The Penguin does not receive its Name from its Famels, as the Author of the *Dutch Voyage* believed; and, to favour his Opinion, calls these Birds *Pinguins*, in order to make the Derivation from the *Latin* Word *Pinguedo*, Fatness, more apparent: Neither is the Conjecture of the Editor of the *French Voyage*, grounded on a Mistake of Sir *Thomas Candlish's* Sense, any better; for he supposes, that they were called *Penguins* by the *English*, because of their white Heads. The Truth of the Matter is, they were so called by the Savages; and because *Penguin* in the *British* (vulgarly called *Welsh*) signifies white Head, and these Birds have white Heads, it has been argued from hence, that these Savages are descended from a Colony of *Britons*, supposed to be settled in *America* by *Madoc*, Prince of *North Wales*, about the Year 1170. I do not mean by this Remark to establish the Truth of that History, but barely to clear up the Meaning of the Word, and to shew how reasonable it is, in different Voyages, to preserve the different Orthographies of their Authors, because, in many Cases, they may be of much greater Use than is commonly imagined. But to return now to the Birds, which gave Occasion to this Digression: The old ones weigh from Twelve to Sixteen Pounds, and the young ones from Eight to Twelve; they are black upon the Back, and white under the Belly; some have about their Neck a white Ring, so that they are almost half-white half-black; their Skin is much like that of the Sea-dog's, and as thick as the Skin of a wild Boar; their Bill is as long as the Bill of a Raven, but not so crooked; their Neck is short and thick, and the Body as long as a Goose, but not so big: Instead of Wings, they have Two Fins hanging down, and covered with Feathers, with which they swim with great Strength: They seldom come ashore but when they brood, and then they nestle Three or Four together in a Hole; they have black Feet, like those of a Goose, but not so broad; they walk upright, with their Fins hanging down like a Man's Arm, so that, afar off, they look like Pygmies: They live upon nothing but Fish, and, for all that, they have not the rank Relish of Fish, but are extraordinary well tasted: They make their Holes in the Downs as deep as Rabbit-boreungs, and the Ground about it is so full of them, that you can hardly walk along without falling into those Holes up to the Knees. *January 5.* the Ship reached the great Island of *Penguin*, a League off the small one: There they found so great Quantities of them, that they might have furnished 25 Ships with them; for they took above 900 in Two Hours time. The next Day, while they were busy in salting them, a great Storm rose from the North-west, which carried the Ship out of Sight of the Island, and so great a Way off, that the Captain was quite out of Hopes of making the Island again. Then he reduced the Proportion of Biscuit to a Quarter of a Pound to each Man a Day: However, the 17th of the same Month in the

Afternoon

Afternoon they made the Island again: But, when they were going to land, the Storm rose again with such Violence, that they resolved to weigh Anchor, and get out of the Streight; but the Sea was so rough, that they could not do it: They were afraid, that the Capitan would fly; at last the Ship's Anchor slipped; and, to save the Ship, they cut the Cable, and so they continued under Sail, not without great Sorrow for having lost their Anchor, because they had but one more left.

23. This sad Accident obliged the Captain to depart the Streight without Delay: Accordingly, *January 21. 1600.* he sailed out of the Mouth of the Chanel with a South-west Wind, chopping sometimes to East North-east, after having spent Nine Months in those Seas in a dangerous and dismal Condition. In the Afternoon, having got into the Main, they left the Sloop to drive into the Sea, because the stormy Weather had made her unfit for Service. The 24th in the Morning, they found Three small Islands to the Windward, which are not marked in the Map; they named these the *Sehaldine* Islands: They are Sixty Leagues off the Continent, in $50^{\circ} 40'$. There was plenty of Penguins in those Islands, but they could catch none, because they had neither Sloop nor Boat. *February 1.* a Seaman, born at *Brusfelles*, named *Nicolas Bick*, was condemned to be hanged, for having stolen out of the Hold a Bottle of Wine, and a Bag of Rice: Upon the Point of his Execution, the Seamen interceded for him, and got his Pardon, on Condition that no Seaman, for the future, should beg any body's Life that should be guilty of such a Crime. On the 3d about Evening, the same *Nicolas Bick* was accused of having made himself drunk, so that consequently he must have stolen the Wine; and was convicted of stealing not only Wine, but Victuals also, more than he wanted for his Necessity; for which he was hanged, and his Body thrown into the Sea with the Rope about his Neck.

24. *March 15.* the Ship passed the Equinoctial Line; they began that very Day to distribute no more Wine, because they had but one Pipe left, which they kept for the Sick. The 28th, they saw the Cape of *Monte* upon the Coast of *Guinea*; but the Captain was very angry with the Pilots, because they had steered another Course than he designed: The Seamen, on their Side, were also discontented with the Captain, who, having no Sloop nor Boat, and but one Anchor, would not land; but, being fatished he had Biscuit enough for Four Months, at a Quarter of a Pound

a Day each Man, and Two Ounces of Rice, he caused them to tack about, and stand to the Sea. *April 1.* in the Night, they discovered some Fire, and thought at first 'twas a Ship; but, in the Day-light, they saw the Fire on Shore, and that they had run very near the Coast, being driven by the Currents. At that time their Penguins were all gone, so that, if God's Providence had not been exerted for them, they would have been forced to have been contented with a small Proportion of Biscuit and Rice; but, during Five Weeks that they steered along the Coast, without advancing much farther because of the calm Weather, they found Plenty of all sorts of Fish, both great and small. The Captain, being uncertain how long he should stay in that Place, and fearing that the want of Provisions would force him at last to land, ordered a small Boat to be built; which was finished, in Twelve Days time, by the Direction of *Ouzgerfs*, the Pilot, who had formerly practised the Trade of a Ship-carpenter: But they had no need of her; for, the 24th of the same Month, the Wind being fair, the Ship sailed towards the *Apores* Islands.

25. *May 3.* they celebrated a public Thanksgiving-day; and, the 21st, they passed the Tropic of *Cancer*, catching every-where so great a Quantity of Fish, that they had enough both for salting and drying: But, when they were off the *Apores*, they found no more Fish; but were forced to eat those they had salted; and that new Food caused many Distempers amongst the Seamen, and especially the Scurvy: They were parched within, and so thirsty, that they could never quench their Thirst; and their Bodies were all over covered with red Spots like a Leprosy. The 7th, the Captain was informed, that some of the Seamen had stolen some Biscuit; but he durst not punish those that were guilty of it, because they were vigorous and healthy, and nothing could be done without them. *July 6.* the Ship got into the *English* Chanel; the Captain landed at *Dover* to buy an Anchor, and a Cable; but, finding none, he sailed the same Evening. On the 13th, while he lay at the Mouth of the *Maele* waiting for the Tide, with a Pilot on board, the Wind became contrary on a sudden, and forced him to go into the Chanel of *Goeree*, where a Seaman died, being the Sixty-ninth that died in the whole Voyage; the other Thirty-six who were alive, gave Thanks to Almighty God, who had preserved them from so many Dangers, and brought them safe Home.

SECTION VIII.

The Voyage of GEORGE SPILBERGEN, in Quality of Admiral of Six Dutch Ships, round the World.

1. *The Occasion of the Voyage, and the Departure of the Fleet August 8. 1614.*
2. *Their Arrival on the Coast of Brasil.*
3. *Treacherously attacked, and a great many of their Men massacred by the Portuguese.*
4. *They take several Portuguese Prisoners, but could not procure the Discharge of their own Men in Exchange.*
5. *They pass through the Streights of Magellan into the South Seas.*
6. *They meet with the Spanish Fleet on the Coast of Chili.*
7. *A warm Engagement ensues, in which the Spanish Admiral, Vice-admiral, and another great Ship, were sunk.*
8. *They continue cruising upon that Coast.*
9. *The Account they received of the State at that Time of Peru and Chili.*
10. *They continue their Voyage to Acapulco.*
11. *Continue their Course from thence for the East Indies, and arrive at the Islands of Ladrones.*
12. *Proceed in their Voyage for the Moluccas.*
13. *Arrive safely at the Dutch Settlement at the Island of Machian.*
14. *Return from thence into Holland, and enter the Maele, July 1. 1617.*
15. *Remarks upon the Voyage.*

1. **T**HE Directors of the *Dutch East India* Company, having still very much at Heart the making an effectual Voyage through the Streights of *Magellan* to the *East Indies*, they, in the Spring of the Year 1614. granted a Commission for this Purpose to *George Spilbergen*, or *Spilbergen*, a Man of established Reputation for his Knowledge in maritime Affairs; and ordered Six Ships to be equipped for that Service, viz. the *Great Sun*, the *Full Moon*, the *Huntinan*, a Yacht called the *Sea Mew*, all Four from *Amsterdam*, the *Aeolus* of *Zeland*, and the *Morning Star* of *Rotterdam*. They were all equipped in the best manner possible, and the Admiral had, in a great

measure, the Choice of his own Officers, which, in long Voyages, is a Thing of the utmost Consequence, in order to prevent unnecessary Disputes. The Ships were ready a little after *Midsummer*; but the Admiral having declared his Opinion, that they should, in case they failed then, arrive at an improper Season in the Streights of *Magellan*, the Directors thought proper to postpone the Voyage till the Month of *August*; and, on the 8th, the Fleet sailed out of the *Texel*, with a strong Gale at South-east.

2. They continued their Voyage without any other remarkable Accident, than enduring several Storms and Tempests, till *October 3.* when they found themselves in the

Height

Height of *M. Comaris*, and *Brous* and *P. Verde* Islands, and even in $14^{\circ} 30'$. On a Day of the Danger of the Sea, and in their Voyage, the Continent of *Brous* with many F into the Clo Trees, but t 19th, the Co cluded, that been sent be the Mouth o in the Openi Evening the therefore the the 20th in *Ilas Grandis*, with Trees, they anchored half a Leagu ing, in whi caught many On the 23d, they found T on a Rock. for the Sick, Admiral app diers for thei of the *Port* Distace.

Height of *Madira*. On the 10th, they lost Sight of the *Comarles*, and, on the 23d, they had Sight of the Islands *Brous* and *Pogo*. They observed, in passing the Cape de *Vorde* Islands, that they were wrong placed in the Maps, and even in such as were in the highest Esteem in those Days, as standing in them in 17°, whereas they ought to be in 14° 30'. On December 9. 1614. the Admiral appointed a Day of Thanksgiving, for their having happily passed the Danger of Shoals of *Abrolhos*, which run very far into the Sea, and have been very fatal to the *Portuguese* Ships in their Voyages. On the 12th, they discovered the Continent of *Brasil*; the Coast appearing high at a Distance, with many Hills, having very sharp-pointed Tops rising into the Clouds, others broader and well covered with Trees, but the Land close to the Sea was all flat. On the 19th, the Coast appeared very high, and the Pilots concluded, that it must be Cape *Fris*, but the *Sea Mew* having been sent before to discover, reported, that they were at the Mouth of *Rio Janeiro*, which has Three little Islands in the Opening; and this gave them Hopes, that before Evening they should have Sight of the *Ilas Grandes*, and therefore the *Sea Mew* had Orders to lead as before. On the 20th in the Morning, they anchored in the Road of *Ilas Grandes*, between Two large fine Islands, covered with Trees, in Thirteen Fathom Water. On the 21st, they anchored at another Island, at the Distance of about half a League, where they diverted themselves with Fishing, in which they had good Success; and here they caught many Crocodiles, each of the Length of a Man. On the 23d, they anchored behind another Isle, where they found Two little Huts, and a Heap of Mens Bones on a Rock. The next Day they set up Tents on Shore for the Sick, which were all landed that Night, and the Admiral appointed Three distinct Corps de *Garde* of Soldiers for their Security, as being in continual Apprehension of the *Portuguese*, who, they knew, were at no great Distance.

3. The Admiral, on the 28th, hoisted a white Flag as a Signal for holding a Council; in which it was resolved, that the *Huntsman* should escort the Shallops that were to go to take in Water at a River about Two Leagues off. The Admiral gave express Directions to the Captain of the *Huntsman* to anchor as close to the Shore as possible: But, when he was out of Sight of the Fleet, he anchored as he thought proper, which was at such a Distance from the Land, that it was in a manner out of Cannon-shot. On the 29th, the Admiral's Shallop and Canoe went to take in Water, and a Body of Seamen were landed upon the Island to cut Wood: About Noon they brought as much as their Vessels would hold on board, and in Two or Three Hours went back to fetch more. In the Evening they would have come on board again, but their Vessels were aground, and they were obliged to stay for the Flood. They passed their Time but very indifferently all Night under a Hut erected by the Crew of the Yacht; and they reported, when they came on board in the Morning, that they had heard a confused Number of Voices, and a great Trampling of People, in the Woods. On the 30th, the Shallops of the *Moon*, the *Morning Star*, and the *Huntsman*, were sent to the Watering-place with Nine or Ten Soldiers under the Command of *Francis du Chesne*, Lieutenant to Captain *Rowland Phillips*, whose Company was on board the Admiral; as for the Seamen, they went unarmed, contrary to express Orders, and notwithstanding what their Companions had told them, of their hearing a great Number of People in the Wood. They had not been gone long from the Fleet, before several Cannon-shot were fired from the *Huntsman*; upon which the Admiral immediately ordered out Three Shallops, full of Soldiers and Seamen, well armed, to see what was the Matter. These no sooner came on board, than they were informed, that Five Canoes, full of *Portuguese* and *Mestizo's*, well armed, had attacked the Three Shallops, and murdered every Man there was in them. The *Dutch* armed Shallops went in Pursuit, and soon came within Sight of them, and were not a little surpris'd, that the Men did not row very hard to get out of their Way. On their doubling a rocky Cape, they soon found the Reason; for there they saw Two stout Frigates riding at Anchor, to

which the Boats retired for Shelter, and the *Dutch* Shallops were forced to return to their Admiral with a dismal Account of what had befallen their Companions.

4. January 1. 1615. a Conspiracy of certain mutinous Persons, who were inclined to run away with the Ship, was found out; for which, Two were executed, being hanged up at the Yard-arm, and shot through with Six Musquets, and were afterwards buried on Shore, the Preacher having all the Night before laboured to fit them for a more happy Life; others were put in Irons, and distributed to different Ships. Before their Departure they called a Council, and therein gave Orders, that, if any Ship lost the rest, they should set up a Mark in *de Cordes Haven*, or some other usual Landing-place; and likewise fixed how long they should stay for each other, directing them after to sail on to *La Mocha*. They agreed to remove thence, for want of fit Provision for their Sick, to the Isle of *St. Vincent*: There the *Portuguese* delayed and shuffled with them, trifling away Time. On the 26th, they took a Bark with Eighteen *Portuguese*, whom they denied to exchange for fewer *Hollanders*, although they offered also many fair Manuscripts, Pictures, Plate, and other Things, taken in the Prize pertaining to the Jesuits. They found also, that Intelligence of their Coning had been given by some Traitors of their own Countrymen out of *Holland*. And, in the Beginning of *February*, they departed, freeing Four of their captive *Portuguese*, and detaining the rest; for one of which, also, another *Portugal* had offered himself, with several small Presents, pretending himself a Batchelor, and the other, his Kinsman, to have a Wife and Children; but was not accepted. They burned the Prize, and some Buildings belonging to the *Portuguese*, and furnished themselves plentifully with Oranges and Pomocitrons. March the 7th, a cruel Storm distressed them in 52° 6', which continued several Days, and separated them: And, on the 21st, a worse Tempest happened amongst some mutinous Persons; and some of them (to still that Tempest) were cast into the Sea. It was the 28th before they entered the Streight, whence the Wind and Tide forced them out again. The Winds being contrary, some desired to winter in Port *Desire*; others, to hold their Course to the Cape of *Good Hope*, which was utterly impracticable.

5. April 2. they re-enter'd, and anchored, because of Shoals, one of which they founded the next Day a Quarter of a League, and found but Three Fathom Water. They saw here a Man of gigantic Stature climbing the Hills, to take a View of them. This was the Land called *del Pogo*, or *Fris*, which is the South of the Streight. The 7th, they went ashore, found no Men, but Two Ostriches, and a great River of fresh Water, with Store of Shrubs and sweet Blackberries. On the South Sides they found pleasant Woods, full of Parrots, in 54° the Mountains full of Snow. They called one Place *Pepper Haven*, the Bark of a Tree there biting like Pepper. On the 16th, they conferr'd, and entered into Commerce, with the Savages, and gave them Sack, and certain Knives, for Pearls joined together: But some of the Company going on *May-day* ashore to take some Birds, they were surpris'd by the Savages, and Two of them slain. On the 6th, they passed into the South Sea, not without Terror, both from the Want that Day of Anchorage, and afterwards the dangerous Shoals and Islands between the Northern and Southern Shores, at the Mouth of the Streights opening into the Sea. They were welcomed into this *Pacific* Ocean by a terrible Storm, which they feared would have split them on the *Sorlings* (so for Likeness of those Isles to ours they called the Islands in that Sea a little without the Streights). These Streights are dangerous for high Islands, Shoals, and Want of Anchorage: Also tedious Storms attended their Ingress and Egress. On the 21st, they had Sight of *Cbili* and *La Mocha*: This Island is low and broad to the North, full of Rocks to the South. On the 26th, they sent out Boats to try if it was possible to traffick with the People. The Governor and his Son dined with the Admiral, and seemed glad to see such Ships, and so well provided with Artillery and Ammunition against the *Spaniards*; as likewise did all the Inhabitants of *Cbili*, at Sight of their mustering of their Soldiers. They exchanged Hatchets, Coral, and the like, for great Plenty of Sheep, of which

they had Two for one Hatcher, with great Courtesy: But they brought all to the Boat, nor would suffer any to go to their Houses, because of their Jealousy of their Wives, which exceeds even that of the *Spaniards*. One of those Sheep was of the Kind resembling a Camel, their Legs and Neck very long, Hair-mouthed, and Bunch-backed, which they use for Carriage and Culture, as Asses. They had many Hens, and other Fowls. On the 27th, they set Sail; and, the 28th, came near the Shore, not far from the Island of *St. Mary*, broken and rocky. On the 29th, they came into Harbour, where a *Spaniard* came on board them, having a Person, by way of Pledge, left for him on Shore: But, inviting them to Dinner on Shore, one of the Boats discovered a Body of Soldiers marching to that Place where they should have dined; whereupon they returned aboard with the *Spaniard*, whom they made Prisoner. The next Morning they went ashore with Three Ensigns: The *Spaniards*, at the Sight of them, set their Church on Fire, and fled. In the Skirmish, Two *Hollanders* were wounded, and Four *Spaniards* slain. Their Houses, built of Reed, yielded a good Flame. They found many Hens, and took 500 Sheep, with other Spoil. Here they had Intelligence of Three Ships which had departed thence in April to seek these *Dutch* Ships, manned with a Thousand *Spaniards*, the Admiral carrying Forty Brass Pieces of Cannon, the rest proportionable. Hereupon the *Dutch* were determined to seek them in the Isle of *Conception*, and after that in *Valpariso*, and then on the Coast of *Arica*. The *Spaniards* also reported much of the like Preparation making in *Lima*. Having *Dutch* Gunners, they enacted certain Orders of military Discipline, how each Ship, and each Person, should conduct himself in the Fight, if they encountered the Enemy, and resolved to die rather than yield.

6. June the 1st, they sailed thence, and passed not far from *Auroca*, a Town with 500 *Spaniards* in Garrison, which are continually disquieted by the Inhabitants of *Chili*. On the 3d, they approached the Isle *Quimquirina*, near the Continent, and behind it came up to the Town of *Conception*; wherein, besides many *Indians*, were 200 *Spaniards*. On the 12th, they entered the safe and commodious Road of *Valpariso*. There was a *Spanish* Ship, to which the Mariners set Fire, and fled. On the 13th at Noon, they were in $32^{\circ} 15'$, and in the Afternoon came to the fair and secure Harbour of *Quintera*. They went ashore, and saw many wild Horses, which fled. Here they watered, and took many Fish; and for Wood, and other Things, found the Place very commodious. Every-where, on approaching the Coast, they found the People aware of them, which caused *Spanish* Preparations for unwelcome Entertainments, so that no Matter of Weight was effected. July the 2d, they came to *Arica*, in $12^{\circ} 40'$, whither the Silver is brought from *Potosi*, and carried thence to *Panama*; but finding no Ships there at that time, they departed. On the 10th, they had a Calm, yet rainy Day, not without Wonder to them, because the *Spanish* Prisoner had reported a perpetual Fairness of Weather in those Parts. On the 16th, they took a small Ship, with a small Quantity of Treasure, most of which was embezzled by the Mariners: They afterwards took out the Commodities, and sunk her. They had Sight of Fight Sail, which, as soon as he discerned them, the *Spanish* Master of the former Ship said were the Royal Fleet come out to seek the *Hollanders*, against the Opinion of the Council of *Peru*, which would rather had them stay: But *Roderigo de Mendoza*, the Viceroy's Kinsman and Admiral, conceited of himself, said, *That Two of his Ships would take all England, and much more those Hens of Holland, after so long a Voyage, which had spent and wasted them: Nay, he was sure they would yield to him at the very first Sight.* Whereupon the Viceroy gave him Leave to go and bring them bound unto him; and the Admiral *Mendoza* swore, he would never return till they were taken or slain. Thus he departed out of the Road of *Calao* on the 11th of July. The *Jesu Maria*, Admiral, carried Twenty-four Brass Pieces, 460 Men, of all Sorts, and had cost the King 158000 Ducats. The Vice-admiral, *St. Anne*, 300 Men, the Captain *Alvares de Piger*, which had taken an *English* Ship in the South Sea before; this Ship had stood the King in 150000 Ducats,

and was the fairest that ever was seen in the *Indies*. The *Carmelite*, of Eight Brass Pieces of Cannon, 200 Soldiers and Mariners, besides the Commanders, and their Retinue. The *St. James*, of equal Force. The *Nesary* had 150 Men, and Four Brass Ordnance. The *St. Francis* had no Ordnance, but Seventy Musketeers, and Twenty Mariners. The *St. Andrew* had Eighty Musketeers, and Twenty-five Mariners. The Eighth was sent after the rest, uncertain with what Furniture.

7. July 17, they came near each other in the Evening; and his own Vice-admiral sent Word to the *Spanish* Admiral, that, if he pleased, he might forbear to fight that Night, and begin the Attack next Morning. But *Roderigo de Mendoza* could not be so patient, but, about Ten of the Clock, set upon the *Great Sun*, in which the *Dutch* Admiral himself was; and they immediately exchanged mutual Broadsides. The *St. Francis*, being next, attacked the Admiral; but was forced to steer off. She fell then on the Yacht, and by her was sent to the Bottom. At that Instant the Yacht was warmly attacked by the *Spanish* Admiral, and had soon followed to triumph over the *Francis*, her new Conquest, in the Chanel's Bottom, had not her Admiral succoured her with a Boatful of Men, and caused the Vice-admiral to do the like. The Admiral's Boat, being mistaken, was, by a Piece of Cannon discharged from the *Huntfman*, sunk, one Man alone escaping. The next Morning, Five Ships sent Word to the Admiral, that they would do their best to escape; but the *Dutch* Admiral and Vice-admiral set upon the *Spanish* Admiral and Vice-admiral, and an obstinate Engagement ensued. The *Aolus*, another *Holland* Ship, came in also. The Two *Spanish* Ships were fastened together, and gave greater Advantage. At last they forsook the Vice-admiral, and leaped into the Admiral, not finding therein above Fifty Persons alive, as, by their Confessions, after appeared. Mean while the Seamen hung out a white Flag of Peace, which was very often plucked in by the Gentlemen and Officers, chusing rather to die than yield. The *Dutch* pressing them, the Vice-admiral's Men returned again, and renewed the Fight, and the *Dutch* Vice-admiral was in great Danger, the *Spaniards* leaping into her out of their Admiral; but were repelled or slain; and the *Spanish* Admiral, not being further able to maintain the Fight, fled, and, by Benefit of Night, escaped the Pursuit of the *Dutch* Admiral; but her Safety was of short Continuance; for her Leaks were so many and great, that she went to visit the *St. Francis*, as also did another of them called the *St. Mary*. The *Dutch* Vice-admiral and *Aolus* bestirred them so very briskly, that the *Spanish* Vice-admiral, past Hope of escaping, set up a white Flag, and yielded. The *Dutch* Vice-admiral sent Two Boats to bring the Commander aboard; but he refused, saying, he would stay that Night, except the Vice-admiral himself would fetch him, or send some Captain to remain in Pledge; and rather desired Death than Disgrace. One of the *Aolus's* Men, in this Time, had taken away the Flag, and the Boats departed, Ten or Twelve staying on board, contrary to Command, that they might be first in the Spoil. They did, together with the *Dutch*, what they could do in the Night to preserve the Ship from sinking; but, seeing their Labour vain, they lighted many Lights, and, with horrible Clamours, cried for Help; but it was too late, and they sunk together, in the *Hollanders* Sight. The next Morning, they sent out Four Boats, which found Thirty swimming on the Boards, crying for Mercy; which, to some of the chief, they shewed, leaving the rest to the Mercy of the Sea, tho' some of the *Dutch*, against Command, in this Distress, murdered several of the *Spaniards*. Their Commander the Vice-admiral perished before of his Wounds. Forty *Dutchmen* were wounded, and Sixteen slain, in those Three Ships. In the rest Eighteen were wounded, and Twenty-four slain. The same Day, they sailed for *Calao de Lima*; but were becalmed. The 20th, they passed by the Island, and saw, in the Haven, Fourteen Ships in Motion near the Shore; but could not come nigh for the Shoals, and therefore went to the Road of *Calao de Lima*, to seek for the *Spanish* Admiral, which afterwards they learned, at *Peysta*, was sunk. From the Shore the *Spaniards* fired their great Ordnance, one of which carried a Bullet of Thirty-six Pound, and had almost sunk the *Huntfman*. They also saw on shore a great Army, in which

which the Viceroy himself was in Person, with Eight Troops of Horse, and 4000 Foot. They agreed to return out of the Reach of their Shot, and cast Anchor at the Mouth of the Haven, where they staid till the 25th, with Intent to take some of their Ships; but in vain, because they were better Sailors. On the 26th, they took a little Bark laden with Salt, and Eighty Vessels of Syrup; The Men all fled. They ordered, that, if they met with the Fleet of *Panama*, in regard they were in the Enemy's Country, where they could not repair their Losses, and were also bound to the *Manillas*, they should act cautiously, and avoid being separated, which had much endangered them in the last Fight; and, if any *Spanish* Ship should yield, the Master and chief Officers should not leave their own Ships, but cause the Enemy to come in Boats aboard them, lest Confusion, as lately through Greediness of Spoil, should happen. The 27th, they set Sail. The 28th, they came to the Road of *Guarme* in 10° beyond the Line, a pleasant Place, with a large Port. Near unto it is a Lake of standing Water. They went on shore; but found the People all fled, who had left little Pillage, except some Hens, Oranges, Hops, and Meal; which they took.

8. August 3. they dismissed some of their *Spanish* Prisoners. They passed between the Isle *Loubes*, (so called from Fish of that Name) and the Continent. The 8th, they cast Anchor near to *Peyta*. The 9th, they set 300 Men ashore, who, after a few Skirmishes, returned aboard, the City being too strongly defended. They took an *Indian* Ship of strange Sails, with Six lusty *Indians*, which had been Two Months a fishing, and had many delicate Fishes dried, which they distributed through the Fleet. The 10th, the *Aeolus*, *Morning-Star* and *Hunifman*, battered the Town with their Ordnance, and sent a greater Number of them on shore, who found the City forsaken, and the People, with their Goods, fled to the Mountains. They sent Five of their *Indians* on shore, to get Fruits, and to learn more Certainty of the *Spanish* Admiral; who brought Word of her being swallowed by the Waves, only Six escaping. The *Indians* also brought the Letters of Captain *Gasper Gal-dron* to *Paula* the Commandant's Wife of *Peyta*, who had fled to the Town of *St. Michael*, Twelve Leagues from Shore. She sent the *Hollanders*, in Commiseration of the Captives, many Citrons, with other Provisions. This Woman, for Beauty, Wisdom, and Virtue, was of singular Reputation in all those Parts. *Peyta*, towards the Sea, is strong, and, in a manner, impregnable. There were in it Two Churches, One Monastery, and many good Buildings, an excellent Haven, to which all the Ships of *Panama* resorted. Then their Cargoes paid by Land to *Lima*, because of the perpetual Rage of both Elements, the Wind and Water, in that Place. They took in the Island *Loubes* Two Fowls of enormous Size, in the Beak, Wings and Talons not unlike the Eagle; their Necks somewhat like a Sheep; their Heads combed as a Cock; they were Two Ells in Height, and Three in Breadth, when their Wings were displayed.

9. The learned *Pedro de Madriga* of *Lima* said, that *Peru*, *Chili*, and *Terra Firma*, were commanded by Don *John de Mendoza*, Marquis des *Montes Claros*, the Viceroy, which Office the King conferreth for Six or Eight Years, with a yearly Allowance of 40,000 Ducats, with an Addition of 1000 Pesos, for extraordinary Expences on the Feasts of *Christmas*, *Epiphany*, *St. Spirito*, and *Easter*, each of Twelve Rials and a half, because, at those Times, he is to entertain all the Counsellors of the Audience; 2000 Pesos also yearly, when he furnishes the Silver Fleet. The Viceroy is served with great Pomp in this Place, never stirring abroad without his Guard; and, if he goes into the Country, hath 100 Lances and 50 Muskets attending. There are Courts or Audiences in *Panama*, *Quito*, *Charlas*, *Lima*, one also in *Chili*. In them are the King's Counsellors, to whom both Civil and Criminal Causes are committed; but with Appeal in Civil Cases to the *Oyders* (certain Commissioners), and in Criminal to the *Alcalds*. These all go in one Habit, and are allowed 3000 Pesos annual Pension. The Viceroy resideth in the City of Kings, or *Los Reyes*, called also *Lima*, situated in a pleasant Valley, extended a Mile and half in Length, in Breadth Three-quarters, having above 100,000 Inhabitants, besides Merchants of other Places. It hath Four Market-places. There are 3000 *Indian* Arti-

ficers dwelling in the *Cercado*. Here resideth the Archbishop *Baribolmew Lobo Guaroro*, who hath 60,000 Pesos of Revenue. The Cathedral hath Twenty-four Prebends, one Archdeacon, besides Schoolmasters and other Priests. There are Four principal Rectors, to each of whom are assigned 15,000 Pesos. Besides this Church of *St. John the Evangelist*, are Four other; One of *St. Marcellus*, with Two Pastors, and 1000 Pesos Revenue; the Second of *St. Sebastian*; the Third of *St. Ann*, with like Stipend; the Fourth is an Hospital of Orphans, with 500 Pesos. Monasteries there are of *St. Francis*, *St. Dominic*, and of *St. Augustin*, and of our Lady de *las Mercedes*, each of which hath Two Cloisters of their own Order, that of *St. Francis* Three; viz. One of bare foot Friars of our Lady *Guadalupe*. They have here Two Colleges of Jesuits, which the *Spaniards* call *Theatines*, both there and in *Europe*. In each chief Monastery are 250 Religious. There are Five Monasteries of Nuns, called of the *Incarnation*, *Conception*, *Trinity*, *St. Joseph*, and *St. Clare*. Our Lady also hath her Churches by the Titles of *Monserrat*, and *del Prado*, and *de Loreto*. They have Four Hospitals for the Poor; of *St. Andrew*, in which are 400 Sick; of *St. Anna* for the *Indians*; of *St. Peter* for the Ecclesiastics; of *Charity* for Women; another of *Sto. Spirito* for Sailors; and one of *St. Lazarus* for inveterate Diseases. There are 600 Priests, and 1000 Students. Allowance is given to Twenty-four in the King's College by his Majesty; to as many in *St. Torine's* by the Archbishop. There are also 200 Doctors in the Universities, of all Faculties. The Professors receive of the King 1000 Pesos Pension. The Two Professors of Civil Law have each 600 Pesos. There are 400 Masters of Art. Every Year they chuse a new Rector or Chancellor. In this City and Suburbs are above 20,000 Slaves. There are more Women than Men. The *Indians* are free, as well as the *Spaniards*, saving, that they pay every Six Months Two Pesos, a Hen, a Tanega of Eight Rials, and a Piece of Cloth or Cotton. They are bound to serve the King yearly in the Mines or Husbandry certain Days, beginning in *May*, and continuing their Service severally till *November*. Those of *Arica* bring to *Potosi* Beasts, Wheat, Meal, Mays, *Axcicoca*, an Herb which they perpetually chew. They use for Carriages a certain Camel-fashioned Sheep. By this City the River runneth close to the Walls, which, by Showers, sometimes so swells, that it hath carried away the Stone Bridge of Nine Arches. Here is the King's Contraction-house, and his Treasury, the Court also of Inquisition, with Two Inquisitors, each of which also has 3000 Pesos Pension, and a Prison peculiar. The Two Notaries have 4000 Pesos apiece. Here is the Court or Office of the *Crusado*, or the Popes Bulls, with Officers, and like Stipends. This City is Two Leagues from the Sea, hath Eight Companies of Foot, and as many Troops of Horse, in *Garison*. The next Port is called *Calao*, in which are some 800 Inhabitants. From the City to *Potosi* are all *Spanish* Merchandize conveyed. *Potosi* is called *La Valla Imperial*, comprehending a great Mountain, in which are Silver Mines. Into them is a horrible Descent of 400 Steps into the Veins, which exercise about 20,000 *Indians* digging, and 100 more in carrying, grinding, and other Works of that Kind. This Place is so cold, that nothing grows within Four Leagues, but an Herb called *Yelo*. Their Provision is all brought from *Arica*. A Pound of Bread is there worth Two Rials. The Haven of *Arica* is 180 *Spanish* Leagues from thence; but there are many Villages well inhabited by the Way. Not far hence is *Cuquisaca*, the Bishop whereof hath 30,000 Ducats Revenue. There are the like Monasteries to those at *Lima*; but not so full of Monks. At *Potosi* there are said to be 1500 Sharpers, who live by their Wits. Seventy Miles from thence is another Silver Mine, called *Eruco*. Near *Lima* is *Chococa*, another Mine, cold as *Potosi*, where dwell 5000 *Spaniards*. *Cusco* is like to *Lima*, hath 6000 *Spanish* Inhabitants, a Bishop, and Monks, and Two Colleges, with some 600 Students. *Arequipa* hath also a Bishop, 2000 *Spaniards*, and a Corrigidor. The Capital of *Chili* is *St. Jago*, where there is a Gold Mine. *Cochimbo* hath Store of Brats. *Baldivia* is rich in Gold. In the Year 1599, the Natives of the Country killed the *Spaniards*, and made their Wives Prisoners, 800 in Number, whom they offered to exchange

exchange, if they might have for each a Pair of Shoes, a Bridle, a Sword, and a Pair of Stirrups; but the King forbid Armour to be carried to them. They poured molten Gold into the Governor's Mouth, made a Cup of his Skull, and Pipes of his Shank-bones, in Memory of their Victory. *Auroca* hath near it a Fort, with a *Spanish* Garison; but very poor. *Conception* is mentioned before. It hath 400 Soldiers to keep it, with some Ordnance.

10. Let us now, with our *Hollanders*, put to Sea, which they did *August* 21. but easily perceived the next Day the Strength of the Currents to be such, that, without a fair and stiff Gale, they prevailed little or nothing. On the 23d, they anchored before *Rio de Tumba*; for the Bar and Tide forbid them Entrance. They agreed to return to the Isle of *Coques* in 5° Southerly, to refresh themselves; but Storms, Rains, and Thunders, so distressed them to *September* 13. that they could not find the Island; and in the mean time they grew very sickly. On the 20th, they had Sight of Land in *Nova Hispania*. They had 13° 30', and the Weather became again very tempestuous. *October* 1. after much bad Weather at Sea, they had Sight of pleasant Land; but the Sea wrought so, that they could not have safe Landing, and so beat off and on till the 11th, that they entered the Haven of *Acapulco* within Shot of the Castle; and, hanging out a Flag of Peace, Two *Spaniards* came on board, and they agreed to exchange Prisoners for Sheep, Fruits, and Provision; which was accordingly performed. On the 15th, *Melchior Hernando* came aboard, to take a View of the Fleet, which had vanquished the King's. He was Nephew to the Viceroy of *New Spain*, and was kindly entertained by the Admiral. The Castle here was well defended with Seventy Brass Guns, having had Intelligence of their coming Eight Months before. The 18th, they set Sail again; but, being becalmed, they did nothing of Moment, except the taking a Bark bound for Pearl-fishing; which they manned, and took into the Attendants of their own Fleet.

11. *November* 1. they anchored before Port *Salagues* in 19° North Latitude. Here they heard of a River, that yielded Variety of good Fish, and Meadows well stocked with Cattle, together with Citrons, and other Fruits, all which Conveniences they wanted; but the Company they sent, fearing a Surprize by the *Spaniards*, returned as they went, after a smart Engagement with the Enemy. On the 11th, they sailed for Port *Nativity*, where they furnished themselves with Necessaries, and from whence they parted on the 20th. The 26th, they had 20° 26' North Latitude; and there they concluded upon the nearest Course to the Islands of *Ladrones*. *December* 3. to their no little Wonder, they saw Two Islands at a great Distance in the Sea, and, the next Day, a mighty Rock in 19°, and Fifty Leagues from the Continent. The 6th, they saw a new Island, with Five Hills, that appeared like so many distinct Islands. The new Year came on with Distempers, that proved fatal to many of their Company. *January* 3. 1616. they had Sight of the *Ladrones*, and the next Day they landed there. They set Sail for the *Manillas* the 26th, where they happily anchored *February* 9. Here the *Indians* refused to trade with them, because, they said, the *Dutch* were Enemies to the *Spaniards*; for which very Reason, some others would freely have transferred all the Trade and Riches of the Country to them. But, in *Capul*, to which they came on the 11th, the People were of a better Temper, giving them fat Hogs and Hens for very Trifles. This profitable Trade they left the 19th, passing from thence through the Streights towards the *Manilla* Port or Bay. The *Indians* of *Capul* wear long Coats like Shirts, and are noted for the extraordinary Respect they pay to all Clergymen, before whom they will prostrate themselves on the Ground, and take it for a mighty Honour to be admitted to kiss their Hands.

12. The 19th they anchored before the Island *Luconia*, the principal of the *Manillas*, and in which is the City *Manilla* itself. Here was a curious Fabric, artificially erected upon the Tops of Trees, that looked like a Palace at a Distance, but what sort of Creatures were the Inhabitants there, they could not imagine. The 28th, they passed by the high and flaming Hill *Albaca*. The 24th, they saw the other End of the Strait, but the Calm would

not allow them to pass it. The 28th, they anchored before the Island *Mirabelles*, remarkable for its Two Rocks, that lift their Tops to a vast Height in the Air. Behind these the City of *Manilla* lies, and from hence they watch the coming of Ships from *China* to pilot them safe to the City, because of the great Danger of the Passage. *March* 5. they took several Barks, that were dispatched to gather in the Tribute paid to the City of *Manilla* from the adjoining Places. They had now Intelligence of a Fleet of Twelve Ships, and Four Gallies, manned with 2000 *Spaniards*, besides *Indians*, *Chinese*, and *Japanese*, all which were sent to the *Moluccas* to drive out the *Dutch*, and reduce those Islands to the Obedience of the King of *Spain*: Upon this News they discharged all their Prisoners, and resolved to go after them. The 11th, they got in amongst so many Islands, that they hardly knew how to deliver themselves again, but their *Spanish* Pilot brought them out safe the next Day. The 14th, they rid at Anchor all Night before the Island *Paney*, by reason of the Shoals. The 18th, they sailed close by the Island of *Mindanao*; but, in the Evening, put off further into the Sea, because of dangerous Shelves thereabouts. The 19th, they came close by the Shore again, and bought Provisions of the Islanders at a very cheap Rate. The 20th, they reached Cape *de Cudera*, the *Spaniards* Watering-place, in their Way to the *Moluccas*. Till the 23d they sailed no farther than just as the Tide forced them along, having a perfect Calm; but between *Mindanao* and *Tazama*, a contrary Tide met and stoppt them. The People here professed a great Enmity to the *Spaniards*, and offered the *Dutch* the Assistance of Fifty of their Ships in that Quarrel. The 27th, they passed the Island *Sanguin*, and the 29th came to *Ternate*, in which the *Dutch* possessed the Town *Macia*, where these unlooked-for Countrymen of theirs were made very welcome by them. The Strait of *Bouton* they observed to be full of Shoals, without which the Water is deep: On the East there is good fresh Water, and Two Leagues to the West lies a very rocky Shore. *April* 8. *Cornelius de Vicaneze* went for *Banda*, and the Soldiers landed there after a very long and tedious Life a Ship-board.

13. On *May* 2. they sailed with Six Ships for *Macbian*, in order to prevent the *Portuguese* from lading Cloves. The Wind proving very fair, they soon arrived under Fort *Maurice*, which the Admiral immediately visited, as he afterwards did the Forts *Taffisor* and *Tabillala*, and so on, till he came to the Fort of *Nabaca*. On the 12th, they received Intelligence from Mr. *Castleton*, who commanded Four *English* Ships, that the *Dutch* General, *John Dirksion Lam*, had sailed from the Island of *Banda*, in the Spring of the Year, with Twelve Men of War, well manned, and a Body of Soldiers on board; with which Force he landed, *April* 10. on the Island of *Pulo Wai*, the richest of all the Islands in those Parts, of which he made himself Master with great Ease, and that the Inhabitants of the adjacent Islands, being summoned, submitted themselves immediately, and entered into a Treaty with him highly advantageous to the Company, inasmuch as it secured to them the sole Trade in the best Nutmegs in the *Indies*. On the 16th, the Governor of *Tidore* went to *Malaya*. On the 18th, the *Dutch* Admiral delivered Seven *Dutch* Seamen out of the Prisons and Gallies of the *Spaniards*, where they had been confined no less than Four Years. The Prisoners exchanged for these were a Monk, a *Spanish* Pilot, Two *Spaniards* taken in the South Seas, and One that they brought from the *Manillas*. A few Days after, another *Dutchman* joined them, whose Name was *Peter de Vicere*, he had been Prisoner among the *Spaniards* several Years, at first on board the Gallies; but, being an excellent Goldsmith, and having married a *Spanish* Wife, they gave him Leave to come on Shore, and work at his Trade, allowing him, at last, so much Liberty, that he found means to escape, bringing his Wife away with him. This Man was of very great Use; for, having an excellent Understanding, being perfectly acquainted with the *Spanish* Trade, and knowing exactly the Nature and Value of all the Commodities in the *Indies*, he gave the *Dutch* Governors better Intelligence, than it was possible for them to have obtained any other Way. They returned afterwards to *Macbian*, and proceeded thence to *Malaya*, whence they went upon

a Cruize. On May 30. they sailed for that Purpose, but were soon after recalled, and found, on their Return, Twelve large Dutch Ships from Amboina, in the Road of Malaya; and, as they were then a very formidable Fleet, it was debated whether they should attack Tidore, or any other of the Enemy's Settlements in those Parts; but it was debated only, and, their Chiefs differing, there was nothing put in Execution. These Debates shewing the Necessity of having a Commander in chief, the Council General of the Indies, June 19. proceeded to the Election of a Governor and General; and the next Day Laurence de Real was installed in that Command. Soon after Admiral Spilbergen received this Governor's Orders and Commission to sail with the Two Ships, viz. the *Amsterdam* and *Zeland*, to the Island of Java, and City of Bantam, with Instructions to settle the Trade there, on such Terms, and in such manner, as he should think fit. On June 27. they put into Japara for a Supply of Provisions, and then proceeded to Jacatra (now Batavia) where they arrived September 7. and where they found it necessary to careen their Ships, and provide them with double Sheatings, which, notwithstanding they did with great Caution, on account of the near Neighbourhood of Don Juan de Sylva, who was expected to sail from Malacca, in order to cruize upon the Dutch. They were, however, very soon set at Liberty from these Apprehensions, by certain Intelligence, that came the last of that Month, of his dying suddenly, not without Suspicion of Poison, at Malacca; and that, in consequence of this Accident, his Fleet, which was before much weakened, was returned to the *Manillas* without performing any thing; so that Four Years Trouble and Expence, which the Spaniards had been at in order to equip it, were all thrown away, which exceedingly lessened their Reputation and Influence in the Indies; as will always be the Case of maritime Powers, when they suffer their Affairs to sink in this manner, by attending more to the amassing of Wealth, than the Support of Government. While they were thus employed at Jacatra, they had the Satisfaction of perceiving the mighty Increase of the Dutch Trade; for, in that small Space of Time, there arrived no less than Four Ships from the Maluccas, laden with the richest Spices, and Four more from Holland, with very rich Cargoes; and, what in those Countries was of much greater Consequence, well manned, with several hundred Soldiers on board for the Supply of their Garrisons. There came in there also a very rich Ship from Japan, having on board a large Quantity of Rials of Plate, uncoined Silver, and other valuable Goods taken out of a Portuguese Prize, in its Passage to Macao. On the 20th, arrived there a Vessel, called the *Concord of Horn*, commanded by *Jaques le Maire*, which had passed round by the Straights of *Magellan*, and by that Route was arrived in the East Indies. But as it was known, that he did not make this Voyage on Account of the East India Company, or so much as by their Participation, the President, *John Peterfon Coen*, caused his Ship and Cargo to be confiscated, and his Crew distributed amongst the Ships in the Company's Service. I cannot help observing here, how very soon exclusive Corporations begin to exercise Acts of Severity. This East India Company had not been founded above Fourteen Years, and yet they already took upon them to break the Spirits, and cramp the Trade, of their Countrymen: And, to shew this Spirit in its full Extent, I shall translate literally the very next Sentence in this Voyage, giving a very injurious Account of this Expedition of *Jaques le Maire*, with whose Merit the Reader will be quickly better acquainted, on purpose to possess the whole Dutch Nation with a Notion, that Encouragement was only due to the East India Company. "In the Course of their long Voyage, says the Author of Admiral Spilbergen's Expedition, these People discovered no new Countries, no new Nations, with whom we might trade. "They only pretended to have discovered a new Passage, different from that through which Ships had hitherto sailed; but there was little Appearance of this, since, according to their own Account, they had spent Fifteen Months and Three Days in their Passage from the Straights to the Island of Ternate, though they had fair Winds all the Way, and notwithstanding the vast Advantage a single Ship has over a Fleet, where the quickest

NUMB. 4.

"Sailor must stay for the slowest. These pretended Makers of Discoveries, therefore, who boasted of having found out a new Streight, were very much surpris'd to hear, that Admiral Spilbergen had waited so long at Ternate, and arriv'd so much sooner, than they, notwithstanding his Fleet was compos'd of such large Ships, and had been so much and so often retarded, had fought so many times, had been put back, stop'd, and traffick'd in so many Parts, and yet came out but bare Eight Months before them, and spent only a Year and Seven Months in all their Expeditions, to the Time of their Arrival in the Moluccas." There is a great Mixture of Vanity and Injustice in this Account; for though, without Question, great Commendation is due to Admiral Spilbergen, and his Voyage ought to be regarded as one of the most successful, all Things considered, that ever was undertaken by the Dutch, or any other Nation, yet there is less Reason sure for his undervaluing the Labours of another, or pretending to call in question a Fact that was so well attested, and which has been verified by future Experience, especially when the Man was under Misfortunes, which, as we shall presently see, had such an Effect upon him as to break his Heart.

14. The Admiral on December 14. 1616. hoisted Sail at Bantam, in order to proceed for Holland with the Two Ships under his Command, of which the *Amsterdam* was of the Burden of Fourteen hundred, and the *Zeland* of Twelve hundred Ton. On the 22d of the same Month died *Jaques le Maire*, a Man justly renowned for his great Skill in the Art of Navigation, and for his excellent Temper, as well as unblemish'd Character. On January 1. 1617. the *Amsterdam* lost Sight of the *Zeland*. On the 24th, they anchored at the Island of *St. Maurice*. On March 6. they doubled the Cape; on the 30th, they arriv'd at *St. Helena*, where they found the *Zeland*, which had anchored there some Days before. On April 6. both Ships put to Sea; on the 24th of the same Month, they pass'd the Line; and on July 1. 1617. they arriv'd safely in Holland, having been out near Two Years and Eleven Months. Their Return was extremely grateful to the Company, the Directors of which bestow'd the highest Commendations on the Admiral, who had indeed behaved with the utmost Prudence, and so conducted this Voyage, as that it contributed alike to the Advantage of the Company, his own Reputation, and the Glory of his Country. Multitudes of People resorted to see him, and his Ships; an Extract of his Voyage was immediately made public, and the Dutch East India Company may be said to have dated their Grandeur, in respect both to Reputation, and Power, from the Day of his Return: The former, in some measure, result'd from his very Act of surrounding the Globe; and the latter took Rise from their Conquests in the Moluccas, in which he not only assisted, but likewise brought Home the first Account.

15. It is observable, that this great Commander took the utmost Pains, not only to have an exact Account of his own Voyage drawn up, but to examine closely into what Discoveries had been made by others. On his Return to Holland, he justify'd the Report of *Magellan*, with respect to the gigantic People that inhabit the Straights, and known to the World by his Name. Admiral Spilbergen said, that they had gone ashore in their Voyage, and had examined several Graves of those People that inhabit them; and always found their Bodies of the ordinary Size, or rather below it; and that the Savages they saw, from time to time, in their Canoes, were likewise of the ordinary Size; but that they had one Day observ'd a Man on the Shore, who first climb'd one Hill, then another, to look at the Fleet; and came at last to the Sea-side for the same Purpose; so that he was seen by every body, and they unanimously concluded him taller than *Magellan* speaks of; which confirms the Account given to *Olivier van Noort*, and *Sebald de Weert*, by the Boy they took from the Savages, viz. that there are but Two Tribes of these Giants, and that the rest of the Savages are of the common Size. He likewise reported, that on the South Side of the Streight he had observ'd an open Passage into the South Sea; but, as his Instructions directed him to pass through the Straights of *Magellan*, he would not risque the Prosecution of this Discovery.

Discovery. Indeed some *Spanish* Writers have mentioned the same Thing, and all agree, that, by this new Passage, a Ship might come much sooner into the South Seas, than by that of *Magellan*. They place it, as well as he, about the Latitude of 54° ; and if the Reader is desirous of knowing the true Reason, why Admiral *Spilbergen* neglected this new Passage, which might have been attended with some Advantages, I believe it will not be difficult to assign it. The exclusive Privilege which the *Dutch East India* Company had so lately obtained, and of which they were so jealous, expressly mentioned the Strait of *Magellan*, and the Passage that Way to the *East Indies*; and therefore, if the Admiral had made a Discovery of another Strait, a Doubt might have arisen, whether this Passage fell within the Description of their Charter; and therefore his Masters might very possibly have thought the whole Merit of his Voyage cancelled by his making such a Discovery public. I must, for my own Part, confess, that I very much doubt whether we should have heard a Word of it, if *le Maire's* Voyage had not been soon after published, which made the concealing of it a Point of little Importance. To shew, however, that both he and the *Spanish* Writers were perfectly in the right as to Matter of Fact; and that the new Passage of *St. Barbara*, so much boasted of by the *French*, and said to be discovered by them in the Year 1713, is this very Passage; I shall cite a few Lines from Mr. *Frezier's* Voyage into the South Sea, in which we have the whole Story at large. I must first observe, that the *St. Barbara* was only a Tartan, commanded by one *Marcant*, and went from *France* on a trading Voyage into the South Seas; and now let our Author speak for himself. "On April 15. 1713, about Six in the Morning, says he, they sailed from *Elizabeth* Bay, steering South-west and South-west by South, they took the common Chanel for that of the River *Masfacre*, and were standing to South-west on an Island, which they took for the *Dauphins*: Assisted by the Currents, which favoured them, and a good Gale at North-east, they ran along that Island; and, an Hour after they had passed it, they found themselves in a large Chanel, where, on the South Side, they saw no other Land, but a Number of small Islands among Breakers. Then perceiving they had missed their Way, they fought for Anchorage, to gain Time to send the Boat to discover where they were; they found a little Bay, where they anchored in Fourteen Fathom Water; the Bottom grey Sand, and white Gravel. The next Day, being May 26. they made ready at Seven in the Morning, and after making some Trips to get out of the Bay, which is open to the East South-east, they stood South and South by West, and South South-west, and at Noon were got in from between the Lands. They took an Observation with very fair Weather, and found $54^{\circ} 34'$ Latitude. This Observation was confirmed by that they took the next Day in Sight of a small Island, which bore East from them: According to the Globe, they found $54^{\circ} 29'$. That little Island was to the Southward of a great one, the South-east Point whereof was called *Black Cape*, because it is of that Colour. The little Island here spoken of, is a Rock shaped like a Tower of an extraordinary Height; close by which there is a smaller, much of the same Shape; by which it appears, that it would be impossible to miss that Chanel, if it were sought after by its Latitude, upon such singular Land-marks. The Ship's Crew say, that there is a good Bottom, and that great Ships may pass there without any Danger, the same being about Two Leagues broad. This Strait is perhaps the same as that of *Jeloucte*, which *Monfieur de Lisle* has laid down in his last Map of *Cbili*: But as the *English* Memoirs, which he has been pleased to shew me, seem to place it South of *Cape Freuart*, it may be supposed, that they are Two different Straights. Perhaps also it

"is the same through which the Squadron of *Monfieur de Genes* passed out in the Year 1696." The Latitude in which both these Passages are said to lie, shew them very plainly to be the same, and demonstrate, to every sensible Reader, the Danger of granting too extensive Powers to exclusive Companies. One thing more I shall remark on the History of this Expedition, and then proceed. The Defeat of the *Spanish* Armada in the *West Indies*, by this Squadron of *Dutch* Adventurers, is the clearest Proof of the great Superiority the free Spirit of a Republic will always have over the most refined Politics of an arbitrary Court. No Prince knew better than the King of *Spain*, the Consequence of his *American* Plantations, or had the Support of them more at Heart than he: And yet we see in how short a time the Subjects of the State of *Holland*, who, but very lately, were in a manner Slaves to the Crown of *Spain*, were able, on their own private Accounts, and without any other View than the Benefits that were to flow from the Courage and Conduct of their Commanders, to fit out Squadrons capable of proceeding, in an hostile Manner, to the *West Indies*, and of giving Battle to the greatest Strength, that, upon fair Notice of their Arrival in those Seas, the Officers of the Crown of *Spain* could draw together. This, when attentively considered, will appear to be a most surprizing thing; inasmuch as that it makes it evident, there is nothing requisite to raise a maritime Power in any Country but Freedom, a wise and honest Administration of Government, and the People's having a moral Certainty, that they shall enjoy undisturbed what by their Labours they acquire. This encourages them to exert their utmost Force in such Armaments, to bear Disappointments with Patience, to repair them with Diligence, and to persevere, with unshaken Steadiness, in the Prosecution of what appears to be their own Interest, at the same time that it is acknowledged by the State to be the public Interest also. We may likewise learn from hence, how very soon a Maritime Power is raised, and how suddenly naval Force declines, when the Spirit, necessary to support it, begins once to decay. At the End of the Sixteenth Century, the *Dutch* had scarce learned the Way to the *West Indies*, and were obliged to have recourse to their *English* Neighbours for Pilots skilful enough to navigate their Ships; but, in the Space of Twenty Years, we see the same People sending thither powerful Squadrons, aiming not at Plunder, but at Conquest, defying and defeating that Maritime Power which had acquired such mighty Reputation by the Discovery, and such a prodigious Strength by the Possession, of both *Indies*. But Reputation will vanish, and Power must necessarily decline, when Men grow wanton with Wealth, and employ the Gifts of Providence for other Purposes than they were designed. As the *Spaniards* and *Portuguese* lost their Virtue, and slackened their Industry, converting the Rewards of it to the Maintenance of an empty Magnificence, and effeminate Luxury, priding themselves in being absolute Masters of other Nations; instead of being active and free, they sunk alike in Credit and Dominion; that Poverty and Distress, for which they condemned the *Dutch*, proving the immediate Causes of their own Destruction, by the means of those whom they so much despised. These are Reflections which naturally arise from the reading such Relations, and happy are the People who make such Reflections in time. Luxury and Corruption are equally fatal to all; and, whenever we see them prevail, especially in a Nation which owes its Safety, Prosperity, and Grandeur, to Maritime Power, we may, without pretending to the Gift of Prophecy, venture to foretel, that such a Nation is not far from being undone. But it is time to quit Reflections, however just, to pursue the Thread of our History, which leads us to another Subject.

SECTION IX.

The remarkable Voyage of WILLIAM CORNELISON SCHOV TEN, of Horn, and J A Q U E S LE MAIRE, round the World, by a new Passage into the South Seas.

1. *The Rise, Progress, and true Design, of this Undertaking.* 2. *The strange Reports spread concerning it in Holland, and the Reasons which make it probable, that it was grounded upon Intelligence from England.*
3. *The Unity and Horn sail from the Texel, June 24. 1615.* 4. *Their Arrival on the English Coast, where they take in a Gunner and Carpenter.* 5. *Proceed, without any remarkable Accident, to the Coast of Africa.* 6. *Land at Sierra Leona for Refreshments.* 7. *They careen their Ships on King's Island, where by Accident the Horn is burnt.* 8. *They continue their Voyage cheerfully in the Unity, and have a Sight of the Sebaldine Islands.* 9. *Discover the new Streights, and call the East Shore States Land, and the West Maurice Land.* 10. *They discover Barneveldt's Islands, and pass round Cape Horn.*
11. *Description of the Islands of Juan Fernandez, and Dog Island.* 12. *An Account of the Island Without Ground, and of its Inhabitants.* 13. *Description of Water Island, and Fly Island.* 14. *They make Prize of a strange Bark, with a great many Indians on board it.* 15. *Account of Coco Island, and Traitors Island, inhabited by Negroes.* 16. *An Account of Hope Island, and its Inhabitants.*
17. *Discovery of Horn Island, and a large Account of the Manners of the People.* 18. *Description of Green Island, and St. John's Island.* 19. *Arrive on the Coast of a Continent, which they take to be New Guiney.* 20. *Discovery and Description of Vulcan's Island.* 21. *A large Account of farther Discoveries.* 22. *They pass the Line a Second time, and leave the Coast of New Guiney.* 23. *Arrive safely in the East Indies.* 24. *Anchor in the Port of Jacatra, in the Island of Java.* 25. *Their Ship seized by their own East India Company, and their Effects confiscated.* 26. *Their Arrival in Holland, July 1. 1617.* 27. *Observations on this Voyage, and the Discoveries made therein.*

1. **T**HE States General of the United Provinces having granted to the East India Company an exclusive Charter, prohibiting thereby all their Subjects, except the said Company, from carrying on any Trade to the Eastward beyond the Cape of Good Hope, or Westward through the Streights of Magellan, in any Countries either known or unknown, under very high Penalties, this Prohibition gave very great Distaste to many rich Merchants, who were desirous of fitting out Ships, and making Discoveries, at their own Costs, and could not help thinking it a little hard, that the Government should thus, against the Laws of Nature, bar those Passages which Providence had left free. Amongst the Number of these Merchants, there was one of Amsterdam, who then resided at Egmont, very rich, well acquainted with Business, and who had an earnest Desire to employ a Part of that Wealth, which he had acquired by Trade, in acquiring Fame as a Discoverer. With this View he applied himself to William Cornelison Schovten, of Horn, a Man in easy Circumstances, and who was deservedly famous for his great Skill in maritime Affairs, and for his perfect Knowledge in the Trade to the Indies, having been thrice there himself, in the different Characters of Master, Pilot, and Supercargo, or, as the Phrase in those Days was, of Merchant. The great Question proposed by Mr. le Maire to this intelligent Man was, Whether he did not think it possible to find another Passage into the South Seas than by the Streights of Magellan; and whether, if this was possible, it was not highly likely, that the Countries to the South of that Passage might afford as rich Commodities as either the East or West Indies? Mr. Schovten answered, That there was great Reason to believe such a Passage might be found, and still stronger Reasons to confirm what he conjectured as to the Riches of these Southern Countries. After many Conversations upon this Subject, they came at last to a Resolution of attempting such a Discovery, from a full Persuasion, that the States General could not intend, by their exclusive Charter to the East India Company, to preclude their Subjects from discovering Countries on the South by a new Route, distinct from either of those mentioned in that Charter. In consequence of this Agreement, it was stipulated, that le Maire, and his Friends, should advance one Moiety towards the necessary Expence of the Voyage, and Schovten, and his Friends, the other. In pursuance of this Scheme, Isaac le Maire advanced his Part of the Money; and Cornelison Schovten, with the Assistance of the following Persons, viz. Peter Clementson, Burgenmaster of Horn; John Janfon Molenwerf, one of the Schepen or Aldermen of the same Place; Joku Clementson Kuis, Senator of the said

Town; and Cornelius Segetson, a Merchant of Horn; laid down the rest. It is certain, that so many People of Substance would never have embarked in such a Project, if they had so much as suspected, that the East India Company had a Right to confiscate their Vessels and Effects whenever they had it in their Power: And we shall hereafter see, that the States General themselves were of the same Opinion in a Case that has happened in our own Times, founded not only on the same Reasons, but on the very Discoveries that were made in this Voyage. As soon therefore as these Matters were adjusted, which was in the Spring of the Year 1615. the Company engaged in this Undertaking began to apply themselves to the carrying it into Execution, propoling to equip for that Purpose a larger and a less Vessel, to sail from Horn at the proper Season of the Year. And that all Parties might be thoroughly satisfied, it was determined, that William Cornelison Schovten, on Account of his Age and Experience, should have the Command of the larger Ship, with the sole Direction of the Voyage; and that Jaques le Maire, the eldest Son of Isaac le Maire, should be the first Supercargo. The Company were so eager in the Prosecution of their Design, and so attentive to whatever might be necessary to promote it, that in the Space of Two Months all Things were ready, and a sufficient Number of Men engaged for navigating both Ships. But, as Secrecy was absolutely necessary, the Seamen were article'd in general Terms to go wherever their Masters and Supercargoes should require; and, in Consideration of so unusual a Condition, their Wages were advanced considerably; which was a Circumstance of such Consequence, and there were in those Days so many adventurous Spirits, that they did not find it at all difficult to make up their intended Complement; which gave them an Opportunity of chusing none but experienced Mariners, on whose Skill and Fidelity they could depend, a Circumstance of the utmost Consequence in a Voyage of this Nature, where the Tempers of Men were sure to be thoroughly tried.

2. These extraordinary Preparations, but, above all, the mighty Secrecy that was observed, caused a great Noise, not only at Amsterdam, but all over Holland, where People reasoned on the Intention of this Voyage, according to the several Degrees of their Capacity and Experience, some fancying they were bound to one Place, some to another; but the common People thought they hit upon their proper Title, in calling them the Gold-finders; whereas the Merchants, who were better versed in such Matters, called them, with greater Propriety, the South Company, and indeed that was their true Designation; for the real Design of Isaac le Maire was to discover those Southern Regions,

to which few People had hitherto travelled even in Imagination, and which, by an unaccountable Indolence, remain, in a great measure, undiscovered to this Day. To speak the Truth, this was the Age of Discoveries, one Man's Success whetting the Wit of another, and perhaps this very Undertaking might spring from some Accounts that *Isaac le Maire*, who was the first Author of the Voyage, might have had from *England*. I do not say this, from a childish Fondness for our own Country, from any Prejudice against the *Dutch*, or Desire of robbing Foreigners of their due Praise; but I speak of what was then suspected, and I shall give the Reader my Reasons for it. I intimated, in speaking of *Sir Francis Drake's* Voyages, that it would have been happy for us, and for Posterity, if he had written an Account of them himself. *Sir Richard Hawkins*, who knew him well, tells us, that it was the Opinion of *Sir Francis*, that what was generally called the South Shore of the Straights of *Magellan*, was, in reality, no more than a Cluster of Islands, or broken Land. Nay, he goes farther, and affirms, that he heard *Sir Francis Drake* say, that, having passed the Straights, a Storm took him at North-west, and afterwards veered about to the South-west, continuing many Days with such Violence, that his Ship could carry no Sail: When the Storm was over, and he had an Opportunity of taking an Observation, he found himself in 50° of Longitude; from whence he justly conjectured, that he had been blown quite round the Straights; for, as we have observed more than once, both the Entrances of the Straights of *Magellan* are in the same Latitude, which is about 52° 50'. *Sir Francis Drake* was so strongly persuaded of this, that, finding it difficult to double the Southernmost Island, he anchored under the Lee of it; and, going ashore with a Compass, he found the South Point of the Island, over which, laying himself flat upon his Breast, he hung for a Minute or Two; and then, returning on board his Ship, told his Seamen, that he had been farther South than any Man had ever been before. It is very probable, that some of those who envied *Sir Francis*, made light of these Particulars when he first related them, and treated them as Travellers Stories are often treated; but *Sir Richard Hawkins*, who had been in those Straights, and was a very judicious Man, as a great Navigator, kept these Sayings in his Mind; and, after he had compared what *Sir Francis* said with the Appearance of those Straights, he readily concurred with him in Opinion. Yet, supposing this to be the Case, there was no less Merit in *le Maire's* Project, than there would have been without it, since it required great Sagacity to distinguish a true Report, in a Case of this Nature, from a flying Tale; and besides, *Sir Francis Drake* never advanced any thing with regard to a Southern Continent, that was intently guessed at by the Contriver of this Voyage, from the Laws of Nature, and a just Consideration of the Harmony, which is, in other respects, observed in the Distribution of Land and Water. In the Beginning of the Month of *May 1615*, the South Company drew their Men together; and, on the 16th of that Month, they were mustered before the Magistrates of *Horn*, took their Leave of their Friends and Relations, and prepared to embark on board their Ships.

3. The biggest of these Vessels was called *The Unity*, of the Burden of 260 Tons, carrying Nineteen Pieces of Cannon, and Twelve Swivels. She had on board likewise a Pinnace to sail, and another to row, a Launch for landing of Men, and a small Boat, with all other Necessaries whatever for so long a Voyage; and of this Vessel *William Cornelijson Schouten* was Master and Pilot, and *Jaques le Maire* Supercargo. The lesser Ship was called *The Horn*, of the Burden of 110 Tons, carrying Eight Cannon, and Four Swivels, *John Cornelijson Schouten* Master, and *Aris Clavifon* Supercargo. The Crew of the former consisted of Sixty-five Men, and the latter of Twenty-two only. The *Unity* sailed *May 25*. for the *Texel*, whete the *Horn* likewise arrived *June 3*. following, that being judged the properest Season of the Year for them to proceed on their Voyage. On *June 14*. they sailed out of the *Texel*, and, passing in Sight of *Dunbirk*, between *Dover* and *Calais*, anchored on the 17th in the *Downs*, when *William Cornelijson Schouten* went on shore at *Dover*, in order to get fresh Water, and

to hire an *English* Gunner; which accordingly he did, and that Day sent him on board. They sailed again in the Evening, and met with several large *Dutch* Ships laden with Salt. In the Night between the 21st and 22d, they were grievously ruffled by a Storm; which obliged them to put into the Isle of *Wight* for Shelter, where Captain *Schouten* endeavoured, if possible, to have hired a Carpenter, but without Success, which obliged them to sail on the 25th for *Plymouth*, where he arrived on the 27th, and there hired a Carpenter of *Maydenlick*. This shews the great Esteem that the *English* Artificers were then in; for it cannot be presumed, that Persons of such Knowledge in Maritime Affairs, as *Schouten* and *le Maire*, would have neglected hiring such necessary Officers as Gunners and Carpenters in *Holland*, if they had not believed it for their Interest to have *Englishmen* in those Stations; which strongly confirms what *John Stowe* tells us in his History, that, towards the latter End of the Reign of *Queen Elizabeth*, there were vast Numbers of Ship-carpenters here, who were esteemed the best Workmen in *Europe*, and were withal accomplished Seamen likewise; which is also taken notice of by *Sir Richard Hawkins*, in his Observations.

4. On *July 28*. they sailed from *Plymouth* with a North North-east Wind, and very fair Weather. On the 29th, Captain *Schouten* made a Signal for all Officers to come on board; when it was resolved in a Council, to settle the Rate of their Sea Allowance in such a manner, as that the Men might have no Reason to complain, and their Officers be in no Apprehensions, of their wanting Provisions during the Course of so long a Voyage. The Rate they fixed in the following Portions; viz. a Can of Beer a Man every Day, Four Pounds of Biscuit, half a Pound of Butter, and as much sweet Suet, for the Week, together with Five large *Dutch* Cheeses, that were to serve them the whole Voyage. This was exclusive of Flesh or Fish: And we may, from hence, form some Notion of the Frugality the *Dutch* vitualled with in those Days, and from which they have deviated very little ever since. They likewise made the necessary Orders for the due Regulation of the Voyage, directing, that, in case of landing Men, one of the Masters should always command; that, in Ports where they went to trade, the Supercargo should go on shore, and have the sole Direction of the Commerce; that, on board, every Officer should be strict in the Execution of his Duty; but without putting unnecessary Hardships on the Men, or interfering with other Officers in their Commands; that none of the Officers should hold any Conversation with the Seamen, in relation to the Design of the Voage, which being solely in the Breast of the First Captain and Supercargo, Conjectures must be fruitless, and might be dangerous; that any Embezzlement of Provisions, Stores, or Merchandize, should be severely punished; and, in case of their being reduced to short Allowance, then Offences of this Nature to be punished with Death; that the Two Supercargoes should keep clear and distinct Journals of all Proceedings, for the Use of the Company, that it might plainly appear, how far every Man had done his Duty, and to what Degree the End of the Voyage had been answered. All these Rules were very exactly observed, and particularly the last; so that, from these Journals kept by the Supercargoes, this Account has been taken. On *July 8*. being in the Latitude of 39° 25', their Carpenter's Mate died. On the 9th and 10th, with a North North-east Wind, and a stiff Gale, they stood on their Course, without putting in to *Porto Santo*, or *Madeira*, of which they had Sight on the 11th. The Reason was, that, having, as they conceived, Victuals sufficient for the Voyage, they determined not to lose Time, by going needlessly on shore, especially since hitherto their Men were vigorous, and in good Health; which Resolution was founded on an Observation made by Captain *Schouten*, that many Voyages had been lost, by lingering in Port without any urgent Cause, when the Winds and Seasons were fair, and their Course might have been prosecuted without Delay. On the 12th, they had Sight of many of the Natives of those Islands in their Boats, following them at the Distance of about Two Leagues, with Goats, Fowls, Fruits, and other Refreshments, which they usually carried on board Ships, that appear in Sight; but the *Dutchmen*, in pursuance of the Regulations they had established, did not slack

Sail, but continued their Course; and the same Conduct they very steadily pursued through their whole Voyage.

5. On July 13. they sailed between the Island *Teneriff* and the grand *Canary*, with a stiff North North-east Wind, and a swift Current. About the 15th, the same Wind and Current following them still, they passed the Tropic of *Cancer*. The 20th in the Morning, they fell in with the North Side of *Cape Verd*. At Sun-rising the Cape lay West by South from them; so that the North North-east Wind would not suffer them to get beyond it; but kept them there at Anchor all that Night. The 25th, the *Moorish* Alcalid came on board them, with whom they agreed at the Price of Eight States of Iron for a Supply of fresh Water. They left the *Cape August* 1. and the 21st of the same Month they saw the high Land of *Sierra Leona*, and also the Island of *Madrabomba*, which lies on the South Point of the high Land of *Sierra Leona*, and North from the Shallows of *St. Ann's* Island. This Land of *Sierra Leona* is the highest of all, that lies between *Cape Verd* and the Coast of *Guiney*; so that the Point is very easy to be known. Here they would have landed, running up to the Point over the Baixos or Shallows of *St. Ann's* at Ten, Nine, Eight, Seven and Five Fathom Water, it being still deeper to the North, but shallower to the East; so that, in the Evening, they anchored with a High-water at Four Fathom and a half soit Ground, and at Night at Three Fathom and a half. The 22d, *William Schooten*, in the *Horn*, led the Way off the Shallows, steering North North-east, with a North-west Wind; by which Course they were intirely disengaged from the Baixos, and got into Thirteen Fathom Water. From hence they went to the Islands of *Madrabomba*, which are very high, and lie all Three on a Row South-west and North-east, half a League from *Sierra Leona* to the Seaward. Here they had shallow Water at Four and Five Fathom, and soft muddy Ground. They anchored a League from the Island, which appeared to be very full of Bogs and Marshes, and all over waste like a Wilderness, scarce fit to entertain any other Inhabitants than wild Beasts, and indeed not seeming to have any other. Going ashore the 23d, they found a River there, the Mouth of which was so stopped up with Sands, and Cliffs of Rocks, that no Ship could get into it; yet, within, the Water was sufficiently deep, and the Breadth such too, as to give a Ship free Scope to turn and wind herself about, as she should have Occasion. Here they saw Tortoises, Crocodiles, Monkeys, wild Oxen, and a Sort of Birds, which made a Noise, barking like Dogs. They met with no Fruit but Lemons, some few Trees of which they found, after a tedious Search. The 29th about Noon, they got above the Islands of *Madrabomba* Westward, along to the North Parr of the high Land, till they had Twelve and Fifteen Fathom Water, and, in the Evening, got about the Point.

6. On the 30th, being assisted both by the Wind and Current, they arrived before the Village, that looks upon the Road of *Sierra Leona*, where they anchored at Eight Fathom Water, a little from the Shore, in a very sandy Bottom. The Village consisted of about Eight or Nine poor Houfes, covered with Straw; the Moors that dwell there, were willing to come aboard, only demanding Pledges to be left ashore, to secure their safe Return; because a *French* Ship, that came thither before, had perfidiously carried off Two of them: So *Abis Clawson* the Merchant went ashore, and staid there amongst them, driving a small Trade with them for Lemons and Bananas, which they exchanged for Glass-beads; and in the mean time they came on board, bringing an Interpreter with them, who spoke all sorts of Languages. Here they had a good Opportunity of furnishing themselves with fresh Water, which pouring down in great Quantities from a very high Hill, they had nothing to do but to place their Barrels under the Fall of the Water to receive it. There were also vast Woods of Lemon-trees here, which made Lemons so cheap to them, that, for a few Beads and Knives, they might have had 10,000. September 1. they drove away before the Stream, and anchored that Evening at the Mouth of the Sea, before a small River. Here they took an Antelope in the Woods, with Lemons and Palmitos; and had good Success in their Fishing. The 3d, the Master brought in a great Shoal of Fish, that were of the Shape of a Shoemaker's Knife, and as many Lemons as came

NUMB. 4.

to 150 for every Man's Share. The 4th, they sailed from *Sierra Leona* early in the Morning, *October* 5. they made 4° 27' South Latitude; and, the same Day at Noon, they were strangely surpris'd with a very violent Stroke given to one of their Ships in the lower Part of it. No Adversary appeared, no Rock was in the Way to be encountered with; but, while this amused them, the Sea all about them began to change its Colour, and looked as if some great Fountain of Blood had been opened into it; this sudden Alteration of the Water being no less surpris'ing to them, than the Striking of the Ship; but the Cause both of the one and the other they were equally ignorant of, till they came to *Port Desire*, and there set the Ship upon the Strand, to make her clean; for then they found a large Horn, both in Form and Magnitude resembling an Elephant's Tooth, sticking fast in the Bottom of the Ship. A very firm and solid Body it was, and seem'd to be equally so all over, there being nothing of a Cavity, or a light and spongy Matter in the Midst of it, but all over as dense and compact a Substance, as that in the exterior Parts. It had pierced through Three very stout Planks of the Ship, and razed one of the Ribs of her; so that it stuck at least half a Foot deep in the Planks; and there was about as much that appeared without the great Hole up to the Place where it was broken off. And now the Riddle was completely solv'd, this Horn being the Spoil of some Sea Monster, that had thus rudely assaulted the Ship with that piercing Weapon; and, after the Thrust, not being able to draw it out again, had there broke it; which was attended with such a plentiful Effusion of Blood, as had discoloured the Sea to that Degree. Having now sail'd so far, that none in the Ships, but the Master, knew where they were, or whither they intended, upon the 25th, they discovered their Designs to the rest of the Company, of going to find out a new Southern Passage into the great *Pacific* Sea. This they had kept very close to themselves before, but now thought it Time to reveal the Scheme, there being no Danger of defeating it, and the Company appear'd to be very well pleas'd with it, hoping to light on some golden Country or other, to make them Amends for all their Trouble and Danger. The 26th, they made 6° 25' South Latitude, sailing the rest of that Month mostly Southward, till they had made 10° 30'. *November* 1. they had the Sun North of them at Noon. The 3d in the Afternoon, they had Sight of *Martin Vads* Island, called *Ascension*, under 20°; and here they observ'd the Compass to vary to the North-east Twelve Degrees. The 21st, they came under 38° 25', and had a deep Water, whose Bottom they could not reach with their Lead. Here the Variation of the Compass was Seventeen Degrees to the North-east. *December* 6. they had a Prospect of Land, not very high, but flat and white; and, quickly alter, fell in with the North Side of *Port Desire*, and, that Night, anchored within One League and an half from the Shore, in Ten Fathom Water with an Ebb, that ran Southward as strongly as the Sea runs between *Flushing* Heads.

7. The 7th, keeping a South Course, at Noon they came before the Haven of *Port Desire*, which lies under 47° 40'. At the Entry of it they had very high Water; neither did any of those Cliffs appear, which *van Noort* had described, and which he left Northward in sailing into the Haven. If there were any, they were all under Water; but the Cliffs lay open and visible enough towards the South Point, which therefore might be those, which *Noort* intend'd. Upon this they went on, sailing so far Southward, as to miss the right Channel. They came into a crooked Bay, where, at High-water, they had but Four Fathom and an half, and at Low but Fourteen Feet; by which means the *Unity* lay with her Stern fast aground, and, if a brisk Gale from the North-east had blown, the mutt infallibly have been lost; but, the Wind blowing West from the Land, she recover'd again. Here they found Plenty of Eggs amongst the Cliffs; and the Bay afforded them Mussels, and Smelts of Sixteen Inches in Length, and therefore they call'd it *Smelts-bay*. Their Shallop went to the *Penguin* Islands, and came back with 150 Penguins, and Two Sea Lions. The 8th before Noon, they sail'd out of the *Smelts-bay*, and anchored juss before *Port Desire*. The Shallop was employ'd before-hand to sound the Depth of the Chan-

P

nel,

nel; which proving to be Twelve or Thirteen Fathom, they boldly entered, having a North-east Wind to carry them along: But, after a little more than a League's Sailing, the Wind began to veer about, and they anchored at Twenty Fathom; but, the Bottom they were upon being only slippery Stones, and the Wind now blowing hard at North-west, their Anchors could not preserve them from driving away with that rough Wind upon the Southern Shore; so both these Ships were like to be wrecked together. The *Unity* lay with her Side upon the Cliffs; but still kept the Water, and, by the Fall of the Sea, was gradually sidden down lower and lower into it; but the *Horn* stuck, so as that her Keel was above a Fathom out of Water, and a Man might have walked dry under it at Low Water. She was, for some time, obliged to the North-west Wind, that, by blowing hard upon her Side, kept her from falling over; but, that Support being gone, with the Wind that gave it, she sunk down upon that Side at least Three Feet lower than the Keel: Upon which Sight they gave her over for lost; and yet the succeeding Flood, which came on with still Weather, set her upright again; and both she and her Companion got clear of that Danger. The 9th, they went farther into the River, and came to *King's Island*, which they found full of black Sea-mews, and almost covered over with their Eggs. A Man, without straining to reach, might have taken between Fifty and Sixty Nests with his Hand, each of which have Three or Four Eggs apiece; so that they were quickly furnished with some Thousands of them. The 11th, the Boat went in Search of good Water lower down the River, on the South Side; but found it all of a brackish unpleasant Taste. They saw Ostriches here, and a Sort of Beasts like Harts, with wonderful long Necks, and extremely wild. Upon the high Hills, they found great Heaps of Stones, under which some monstrous Carcasses had been buried. There were Bones of Ten and Eleven Feet long. In all Probability they were (if of rational Creatures) some Bones of the Giants of that Country. No Water was to be found here for several Days together; so that, tho' they had Plenty of good Fish and Fowl, they could meet with no Drink to wash it down. On the 17th, they laid the *Unity* dry upon *King's Island*, in order to clean her; which they performed very successfully. On the 18th, they likewise haled the *Horn* on shore for the same Purpose, and placed her about 200 Yards from the other Ship. On the 19th, a very dreadful Accident happened; for, while they were busy cleaning both Ships, in order to which it was necessary to light a Fire of dry Reeds under the *Horn*, it so fell out, that the Flame got into the Ship, and set it on Fire; and, as they were Fifty Feet from the Waterside, they were forced to stand still, and see her burn, without being able to do any thing towards extinguishing it. On the 20th, at High-water, they launched the *Unity*, and the next Day carried on board her all the Wood, Iron-work, Anchors, and Pieces of Cannon, and whatever else they were able to save out of the *Horn*. On the 25th, some of the Sailors found certain Holes full of fresh Water, which was white and thick, but well tasted, a great Quantity of which they carried on board in small Casks upon their Shoulders. They met here with great Numbers of Sea Lions; the young ones they eat, and found them pretty good Food. The Sea Lion is a Creature as big as a small Horie; their Heads resemble Lions exactly; on their Necks they have long Manes of a tough strong Hair; but this is to be understood of the He-lions only: For the She-lion is without Hair, and not above half as big as the Male. They are a bold fierce Animal, not to be destroyed but by Musket-shot.

8. *January* 17. they sailed out of Port *Despre*; but, having a Calm, they anchored before the Haven, till the Rising of the Wind invited them to pursue their Voyage. The 18th, being in 51°, they saw the *Sebaldin* Islands; which they observed to lie in that Position and Distance from the Strait, that *de Weert* had determined. The 20th, being then in 53°, they observed the great Current, that runs South-west; and now they reckoned about Twenty Leagues Southward from the *Magellanic* Straights. The 23d, they had an uncertain shifting Wind, and the Water appeared white, as if they had been within the Land. They held their Course South by West, and the same Day saw Land,

bearing West and West South-west from them, and quickly after to the South. Then attempting, by an East South-east Course, to get beyond the Land, the hard North Wind, that blew then, constrained them to take in their Top-sails. The 24th in the Forenoon, they saw Land a Starboard, about a League's Distance, stretching out East and South, with very high Hills, all covered with Ice; and then other Land bearing East from it, high and ragged as the former. They guessed, the Lands they had in these Two Prospects lay about Eight Leagues asunder, and that there might be a good Passage between them, because of a pretty brisk Current, that ran Southward along by them. About Noon, they made 54° 46', and then began to make towards the afore-mentioned Opening; but the succeeding Calm prevented it. Here they saw an incredible Number of Penguins, and such huge Shoals of Whales, that they were forced to proceed with a great deal of Caution, for fear they should run their Ship upon them.

9. The 25th in the Forenoon, they got up close by the East Land, which, upon the North Side, reaches East South-east as far as the Eye can follow it. This they called *States Land*; and to that, which lay West, they gave the Name of *Maurice Land*. They observed there were good Roads and sandy Bays, good Store of Fish, Penguins, and Porpoises, and some Sorts of Fowl; but the Land adjacent seemed quite bare of Trees and Woods. They had a North Wind at their Entrance into this Passage, and directed their Course South South-west; so that, going pretty briskly on, at Noon they made 55° 36', and then held a South-west Course, having a good stiff Gale to blow them forwards. The Land, upon the South Side of the Passage, at the West End of *Maurice Land*, appeared to run West South-west, and South-west, as far as they could see it, and all very craggy uneven Ground. In the Evening, having a South-west Wind, they steered Southward, meeting with mighty Waves, that came rolling along before the Wind; and the Depth of the Water to the Leeward from them, which appeared by some very evident Signs, gave them a full Assurance, that the great *South Sea* was now before them, into which they had almost made their Way by a Passage of their own Discovery. The Sea-mews thereabouts were larger than Swans, and their Wings, when extended to the full Length, spread about the Compass of a Fathom. They would come and very tamely sit down upon the Ship, and suffer themselves to be taken by Hand, without any Endeavours to fly away. The 26th, they made 57°, and were there ruffled by a brisk Storm out of the West and South-west. The Water was also very high, and blue. They still held all this Day their Course to the Southward, but chang'd it at Night for a North-west one; in which Quarter they discovered very high Land. The 27th, they were under 56° 51', the Weather very cold, with Hail and Rain, the Wind West and West by South. They went a Southern Course, and then crossed Northward, with their Main-sails. The 28th, they hoisted up their Top-sails, and had great Billows out of the West, with a West and then a North-east Wind, and therewith held their Course South, and then West and West by South, which brought them under 56° 48'.

10. The 29th, they had a North-east Wind, and held their Course South-west, which gave them the Prospect of Two Islands, beset round with Cliffs, and lying West South-west from them; they got up to them at Noon, but could not sail above them, and therefore held their Course to the North. They gave them the Name of *Barnesvelt's Islands*, and found their Latitude to be 57° South. Taking a North-west Course from hence in the Evening, they saw Land again, lying North-west and North North-west from them; this was the high hilly Land, covered with Snow, that lay Southward from the *Magellanic* Straights, ending in a sharp Point, which they called Cape *Horn*, and lying in 57° 48'. They held their Course now Westward, in which Course they found a strong Current that ran that Way too, yet had the Wind in the North, and great Billows rolling out of the West upon them. The 30th, the Billows and the Current still ran as before; and now they gathered a full Assurance from hence, that the Way was open into the South Sea; this Day made the Latitude of 57° 34'. The 31st, they sailed West, with the

the Wind turning to the *Horn*, Josif lows work Bluecns of South Sea. west, they North-west to the South there 12° N a hard West South; and very uncer North-east westerly Current, but w

11. The Straights, I secure of the to good F times round sage had a Straights, I been done t the Straights all the Time about the So of bad Wea rents, all w tedious in th and the Ho with the aux off the Sent ing Dangers titude, havin ward. the Wind in the North, and made 58°; but the Wind turning to the West and West South-west, they passed Cape Horn, losing all Sight of Land, and still meeting the Billows working out of the West, which, together with the Blueness of the Water, made them quickly expect the main South Sea. February 1, a Storm blowing out of the South-west, they failed with their main Sails North-west and West North-west. The 2d, with a westerly Wind they failed to the Southward, and made 57° 58', the Variation being there 12° Northward. The 3d, they made 59° 25', with a hard West Wind, but saw no Signs of any Land to the South; and the next Day 56° 43', turning to and fro with very uncertain South-west Winds, and finding 11° of North-east Variation. The 5th, by reason of a strong westerly Current, and a hollow Water, they could bear no Sail, but were forced to drive with the Wind.

11. The 12th, they plainly discerned the *Magellanic* Straights, lying East of them; and therefore, now being secure of their happy new Discovery, they rendered Thanks to good Fortune in a Cup of Wine, which went Three times round the Company. And now this new-found Passage had a Name given it, which was that of *Maire's Straights*, though that Honour (in Justice) ought to have been done to *William Schovten*, by whose happy Conduct the Straights were discovered. And 'tis observable, that all the Time of their Sailing through these Straights, and about the Southern new-found Land, they had a settled Course of bad Weather, a thick and foggy Air, and strong Currents, all which, put together, made their Sailing very tedious in these Straights. But the Joy of this Discovery, and the Hopes of a farther Improvement of it, together with the auxiliary Comforts of the Bottle, helped to carry off the Sense of all that tedious Voyage, and the mortifying Dangers of it. The 27th, they made 40° South Latitude, having fair Weather, and held their Course Northward. The 28th, they determined for the Island of *John Fernando*, to give their sick and weary Company a due Refreshment; and that Day they made 35° 53'. In the Evening they made but small Sail, fearing to fall upon the Land, which, effectually to avoid, they failed North-east. March 1, they saw the Islands of *Fernando* before them, to the North North-east, and about Noon got up to them under 33° 48'. Both these Islands lie very high; the smallest, to the Westward, is a very barren and rocky Place, but greater to the East; though it be full of Hills, yet is well shaded with Trees and fruitful. The Island affords Plenty of Hogs and Goats, and all the Coast about it such excellent Fishing, that the *Spaniards* think it worth their while to come thither, from whence they transport vast Quantities of Fish to *Peru*. The Road lies on the East Point of this Island, and they shaped their Course, not as they should, to the Eastern, but to the Western Side of it, by which means they were reduced to the Inconvenience of not being able to get near enough the Land to anchor. This made them dispatch their Boat to sound the Depth, which gave them an Account of Thirty and Forty Fathom sandy Ground, close by the Land, which lessened still to Three Fathom, very proper to anchor in. They spoke, too, of a very lovely Valley, full of Trees and Thickets, refreshed with Streams of Water running down from the Hills, and Variety of Animals feeding on those pleasant Places, all which they saw in this greater Island. They brought good Store of Fish along with them, most of them Lobsters and Crabs, and reported, that they saw a great many Sea-wolves. The Two next Days, successively, they repeated their Attempt to come up and anchor close by the Land; but were still frustrated, whatever Endeavours they used to accomplish it. But still their Men followed the Fishing Trade, which they managed so successfully, that they took almost Two Ton of Fish only with Hooks, in the small time that some of the Company went to fetch Water; finding the Island thus inaccessible, they determined to pursue their Voyage. The 11th, they passed the Tropic of *Capricorn* the Second time, holding their Course North-west. Here they had the general East and East South-east Wind, and held their Course North North-west to the 15th Day; and, when they made 18°, then they changed their Course, and failed West. April 3, they made 15° 12', and had then no Variation of the

Compass, but a considerable Variation of the Temper of their Bodies from a good State of Health, by reason of the Flux, which had seized the best part of their Company. They saw a little low Island, 3 Leagues Distance, which they got up to at Noon; here they heaved the Lead, but could find no Bottom, and therefore put out their Shallop; the Men that went ashore found nothing for Refreshment, but some Herbs that tasted like Scurvy-grass; but gave an Account of a very silent sort of Dogs they had seen there, that would neither bark nor snarl, nor make any Noise at all; for this Reason they called it *Dog Island*: It lies in 15° 12', and they judged 925 Leagues distant from the Coast of *Peru*. The Ground is so low, that, at High-water, it seems for the most part to be overflowed, and has nothing round about it but a sort of Ditch, beset with Trees, between which the salt Water breaks in in several Places.

12. The 14th, they failed West and West by North; and the same Afternoon, they saw a large but low Island, reaching North-east and South-west a considerable Way: At Sun-set, being about a League from it, an *Indian* Canoe advanced to meet them; the Men naked, with long black Hair, and their Bodies of a reddish Colour; they made Signs to the *Dutch* to come ashore, and called to them in their Language; and though they answered them in their own, the *Spanish*, *Moluccan*, and *Javan* Tongues, yet the *Indians* understood them not; so that both Sides were in the Dark as to each others Mind: When they got up to the Island, and founded, they found no Bottom, neither was there any Change of Water, tho' they were within a Musket-shot of the Shore: Here the *Indians* and they had another unintelligible Conference; but they would not be persuaded to come on board the Ship, by any Signs the *Dutch* could make to invite them to it; neither would the *Dutch* go ashore to them, though still they kept talking and pointing to one another, while neither Side understood what was spoke by the other. Leaving these People, therefore, to those that could understand them, they failed away South South-west, to get above the Land; and, having made that Night Ten Leagues in a South South-west Course, the 15th in the Morning, they failed close along by the Shore, on which stood several of those naked People calling to them (as they guessed) to land; presently after, one of their Canoes came towards the Ship, but would not come near it, yet ventured to the Shallop, where the *Dutch* and these *Indians* fell to their Conferences again. The *Dutch* gave them Beads, and Knives, and several Things that pleased them, which Kindness emboldened them at last to come a little nearer the Ship; but still they would not go aboard her, but got back into the Shallop; neither had they any great Reason to be fond of their Company there, for they are a Parcel of light-fingered Fellows, and have much the same Degree of Conscience and Honesty as the People of the *Ladrones*: They love Iron, as the Inhabitants of those Islands do, and they love to steal it like them. The very Nails in the Cabin-windows, and the Bolts upon the Doors, could not keep their Places for them, but they would have them off: This they found to be true, by one of them who had cunningly slipped into the Ship, and pulled out all the Window-nails, which, for Security's Sake, he had stuck into his Hair: Nay, they are so very impudent, that whatever they lay Hands on is their own, if the Owner does not recover his Right by Force. When the *Dutch* gave them some Wine, they drank the Liquor, and kept the Cup; so, when they threw out a Rope to bring them to the Ship, they would neither use the Rope, nor return it; and their Qualities are not more odd than the Figure they make; for, besides that they are all naked, (except the Pudenda, which is covered with a small Mat) their Skin is all over pictured with Snakes and Dragons, and such-like Reptiles, which are very significant Emblems of their own subtle and mischievous Nature. The *Dutch*, having a mind to try if any thing were to be done with them, or to be gotten in the Island, sent their Shallop, with Eight Musketeers, Six Soldiers, besides other of the Ship's Company: They were no sooner landed, but Thirty of those People rushed out of a Wood upon them, and with great Clubs and Slings, and long Saves, they would have seized the Shallop,

Shallop, and taken away the Soldiers Arms; but the Muskets being let fly amongst them, kept them from Robbery at that time. This Island they called the *Isle without Ground*, because they could not anchor there. It is not broad, but something long, and full of Trees, which they guessed to be Cocos and Palmitos. It is a white sandy Ground, and lies in 15° South Latitude, and about 100 Leagues from *Dag Island*. Seeing nothing to be done here, they set Sail, and held their Course West to Seaward; here having but a slight Water, and no Billows, as the Day before out of the South, they guessed that Southward there was more Land.

13. The 16th, they came to another Island that lay Northward, and was about 15 Leagues distant from the other: This appeared to be all drowned Land, though, on the Sides, well set with Trees; and here also they found no Bottom for anchoring. It yielded them nothing for Food but a few Herbs, like those in *Dag Island*, with some Crabs, and other Shell-fish, which were well-tasted Meat: But it afforded them some good fresh Water, which they found in a Pit not far from the Shore. The Pottage, made of the Herbs they gathered here, proved very serviceable to those of their Company that were troubled with the Flux. They called this Island *Water Island*, because it supplied them with Water. They left it presently, and sailed Westward, making that Day 14° 46' South Latitude. The 18th, they came to another Island, lying to the South-west, about 20 Leagues distant from the last, and stretching out North-west and South-east a considerable Way. The Boat, being dispatched to sound the Depth, brought Word, that they had found a Bottom by a Point of Land, from whence they came to a gentle Stream of Water, at Twenty-five and at Forty Fathom, about a Musket-shot from the Land: This News of Water made them send their empty Cask in the Boat, in hope to have it well filled; but after they had taken a great deal of Pains to land, and had been a good while beating up-and-down in the Wood to find some Spring or other to supply them, the Sight of a wild Man frightened them away, and put an End to their Inquiry after Water for that time: And quickly after they were got into their Boat, there came Five or Six more of those Savages, and shewed themselves upon the Shore; but, seeing they were gone off, presently retired into the Woods. But though they got clear of these more formidable Adversaries, yet there were others very troublesome that stuck very close to them, of which they brought many Millions along with them out of the Woods. These were a sort of black Flies, of which there were such prodigious Swarms thereabouts, that they came Home covered over with them from Head to Foot; their Hands and Faces to beset, that there was no seeing what Complexion they were of; their Cloaths intirely hidden by the Multitudes of those Animals crawling upon them, which did themselves compose another sort of Apparel; besides, their very Boat and Oars were all over in the same Dress as themselves; so that, when they came back, the Plague of Flies began to rage in the Ship, and every Man was busy to defend his Face and Eyes as well as he could: 'Twas the best Part of the Day's Work to be slapping the Flies away; and 'twas hard for a Man to open his Mouth, either to speak or to eat, without taking in a Mouthful of these Vermin at the same time. This dreadful Persecution lasted about Three or Four Days, in which time the Flaps did such Execution, that their Suffering was pretty well at an End, and few of the Flies left alive to torment them. They called this Island, for this Reason, *Fly Island*, and, by the Help of a good Gale of Wind, left it as fast as they could.

14. The 23d, they were under 15° 4', and there again had great Billows out of the South, which continued also the next Day: Here they concluded, that the *Terra Australis*, which they sought for, lay yet 250 Leagues further. The 25th, the hollow Billows out of the South still continued, such as are commonly in the *Spanish Seas* out of the North-west. May the 30, they sailed Westward, and made at Noon 15° 3'; and that Day they saw several great Dorradoes, which were the first they had seen in the South Sea. The 9th, they made 15° 20', and guessed they were 1510 Leagues from the Coast of *Peru*: The

same Day they perceived a Bark coming towards them, which they went to meet, and gave her a Gun or Two, to make her strike; but those that were in her, either not understanding the Language of the Guns, or refusing to do what they commanded, the *Dutch* sent out their Shallop, with Ten Musketeers, to take her; upon which she endeavoured to make her Escape, but the Shallop intercepted her; some of her Men, in a very great Fear, threw themselves overboard, and disposed of their Goods the same Way that they did their Bodies. When they had boarded her, those that were left made no manner of Resistance, but quietly resigned themselves to the Disposal of the Conquerors, who used them very kindly, dressed those that were wounded, and saving the Lives of some that had leaped over-board, and entertaining all of them in their Ship. There were, besides the Men, Eight Women, and several Children; so that the whole Number amounted to about Twenty-three. They were a cleanly neat sort of People, of a reddish Colour, quite naked, except the obscene Parts, which were covered. The Men had long curled black Hair, and the Women short, like the Men in *Holland*. The Bark they were in was of a very peculiar Figure and Structure; it consisted of Two Canoes fastened together, in the Midst of each of which were laid Two broad Planks of red Wood to keep out the Water, and several others went cross from one Canoe to the other, which were made very fast and close above, and hung a good way over on both Sides. At the End of one of the Canoes, on the Starboard-side, there stood a Mast with a Fork in the End of it, where the Yard lay; the Sail was made of Mats; and the Ropes of such Stuff as the Fig-frails in *Spain* consist of. They had no Compass nor Chart, nor any Furniture for the Seas, but only a few Fishing-hooks, the upper Part of which was Stone, and the other black Bone, Tortoise-shell, or Mother of Pearl: They had no need to lade their Vessel with fresh Water, for they satisfied themselves with the Liquor of a few Cocos; and when that was spent, they had recourse to the great Ocean for Supply, themselves, and their smallest Children, drinking the Salt Water very heartily. The *Dutch* sent them all back to their Vessel again, where the Women welcomed their Husbands with joyful Embraces, and thus happily freed, they sailed away to the South-east: But to return to our Discoverers.

15. The 10th, they held a West and South-west Course, and that Day saw very high Land on their Larboard, lying South-east by South, about Eight Leagues off; but, though they had a good Gale, they could not reach it that Day. The 11th, they came up with a very high Island; and, about Two Leagues Southward, with another much lower, and the same Day sailed over a Bank of Fourteen Fathom deep, and a stony Bottom, lying about Two Leagues from the Land, which, being past, they could find no more Ground. About this Time, another of the same kind of Barks came up to them, which had (as they generally have) a loose Canoe in her, to put out upon Occasion. She sailed at that Rate, that few *Dutch* Ships could out-strip her; her Men steered behind with Two Oars, in each Canoe one; and, when they had a mind to tack, they rowed before: But all these Vessels wind themselves, by only pulling the Oars out of the Water, and letting them go. Sending their Shallop to sound by one of the Islands, they were informed, that there was Ground, though shelvy, at 12, 14, and 15 Fathom, about a Cannon-shot from the Land; so they resolved to anchor there. The Negroes, indeed, by Signs, directed them to go to the other Island, and sailed thither before them; but they anchored at the End of the former Island at Twenty-five Fathom sandy Ground, a Cannon-shot from the Land. This Island lies in 16° 10': It is one intire Mountain, and looks like one of the *Moluccas*; 'tis all covered over with Cocco-trees, for which Reason they called it *Coco Island*. The other Island is much lower than this, but longer, lying East and West: Being at Anchor, there came Three Ships, and Nine or Ten Canoes, which had Three or Four Men in each, about them; some of which had put out white Flags, in Token of Peace, as they did the like. The Canoes were that before, and sharp behind, hewed out of the whole Piece

of red Wood came near to the Water, Cocos and and Beads, a small String for 180 Cocos aboard, that they sent to more convey just got out Canoes, filled great Clubs, Men; they, at by the Sa done so little one of them making Spoil Distance a lusty well-pre naked, their Hair; some others platter 12th, they Bananas, U was a great to the Ship, them before they jumped holding Bun up the Side such Swarms Staves: The Cocos, which being Eight very much of it with crep of it them crep of those Sa Present, cha quickly after Fashion, at a little Way aloud, and a way of bids them with I and surpris Honour tha bowing the over them, caisons. M. B.

of red Wood, and sailed exceeding swiftly. When they came near the *Dutch* Ship, they leaped some of them into the Water, and swam to it, having their Hands full of Cocones and Ubes-roots, which they barter'd for Nails and Beads, giving Four or Five Cocones for a Nail, or a small String of Beads, so that the *Dutch* traded that Day for 180 Cocones; and this Trade bringing so many of them aboard, that they knew not how to stir in their Ship, they sent their Shallop to the other Island, to see for a more convenient Place to lie in; but the Shallop, being just got out, was presently beset by a vast Number of Canoes, filled with a mad Sort of People, armed with great Clubs, that forthwith boarded her, and attacked the Men; they, firing their Musquets upon them, were laugh'd at by the Savages, in that, with so much Noise, they had done so little Harm; but, at the next Discharge, when one of them was shot through the Breast, they had done making Sport with the Musquets, and learned to keep their Distance a little better for the Time to come. They were lusty well-proportioned Men, and excellent Swimmers; but naked, thievish, and very fantastical in dressing of their Hair; some wore it short, others long, some curled, and others platted and folded up in several Fashions. The 12th, they came in their Canoes again, laden with Cocones, Bananas, Ubes-roots, Hogs, and fresh Water; there was a great Contention among them who should get first to the Ship, and those that were behind being shut out by them before, since they could not leap over their Heads, they jumped into the Water, and swam under the Canoes, holding Bunches of Cocones in their Mouths, and climbed up the Side of the Ship like so many Rats, and that in such Swarms, that they were forced to keep them off with Staves: The *Dutch* bartered with them that Day for 1200 Cocones, which made Twelve to every Man's Share, they being Eighty-five in Number. The Negroes wondered very much at the Strength of the *Dutch* Ship, and some of them crept down under it, and knocked at the Bottom of it with Stones, to try how strong it was. The King of those Savages sent a black Hog to the Ship for a Present, charging the Messenger to take no Reward; and quickly after he came himself, in a large Ship of their Fashion, attended with Thirty-five Canoes: When he was a little Way from the Ship, he began to call and cry out aloud, and all his Company did the like, this being their way of bidding Strangers welcome. The *Dutch* received them with Drums and Trumpets, which mightily pleas'd and surpris'd them; and they, to testify their Sense of Honour that was done them, us'd all their Ceremonies of bowing their Heads, and clapping their Hands together over them, which they are accustomed to upon such Occasions. The King, out of his Ship, sent them a Matien for a Present; which Kindness they requited with the Gift of an old Hatchet, rusty Nails, Glass Beads, and a Piece of Linen Cloth, Things which his Majesty was highly pleas'd with, and made many a fine Bow for. He was not to be known from his Subjects by any Ensign of Dignity, but the Reverence they shew'd him; for, as they were all naked, so he had no other Apparel but that which Nature gave him: He would not be persuad'd to come on board, though the Prince his Son did, and was well entertained there. The 13th at Noon, the Ship was surrounded with a whole Armada of Ships and Canoes, the King being there himself in Person; and in the Twenty-three Ships, and Forty-five Canoes, that compos'd the Fleet, no less than Seven or Eight hundred Men. They pretended at first to come only upon Design of Trade, and told them by Signs, that they were their very good Friends, and would fain have them sail to the other Island, where they should find much better Accommodation in all respects: But, notwithstanding all their fair Pretences, they suspected some Mischief was hatching by these Barbarians: Neither were their Suspicious unjust; for they quickly began to cast themselves all round the Ship, and inclos'd it on every Side; and then, with a great Outcry upon the Alarm of a Gun, they gave the Assault: The King's Ship was the foremost in the Action, and rush'd in with such a Force at the *Dutch* Ship, that the Heads of the Two Canoes before it were dash'd to Pieces with the Violence of the Shock; the rest came on as well as they could, and

N E M B. V.

shower'd in great Stones upon them: But the *Dutch* threw in such Quantities of Ball amongst them out of their Musquets, and Three great Guns loaded with Musquet-shot and Nails, that all those in the Canoes, that lay within Reach, were glad to leave them, and seek their Refuge in the Water. Being thus put to Rout, they dispers'd themselves, and shifted for their Lives as well as they could. These treacherous People were the Inhabitants of the lower of those Two Islands, which therefore they call'd *Traitors Island*.

16. They sail'd from hence the same Day, and held their Course West and West by South; and the 14th, came to another Island, about Thirty Leagues distant from the former. They call'd this *Hope Island*, because they hop'd here to meet with some Refreshment. But, finding no Ground at the Island, they sent out their Shallop to sound along the Shore, which returned with the News of a stony Bottom at Forty Fathom Water, about a Musquet-shot from the Shore, sometimes Twenty and Thirty Fathom, and at a little Distance again no Bottom at all. The *Indians* came hither with Ten or Twelve Canoes to barter; they brought a small Parcel of Flying-fish, for which they had Beads in Exchange; and whatsoever the one gave, or the other received, was convey'd on both Sides by a Rope let down by the Stern of the Ship. But these *Indians* went from this Trade presently to another which was worse, *viz.* robbing the Shallop, which they found employ'd in sounding at some Distance from the Ship: They offer'd to board her, and drag her away; but they in the Shallop, with their Guns, Pikes, and Cutlasses, gave them such an Entertainment, that, having seen Two of their Company killed, they were glad to hurry away as fast as they could; and, while these were beaten and maul'd upon the Water, their Friends stood and cried for them ashore. This Island was full of black Cliffs, that were green on the Top, was well stocked with Cocoa-trees, and several Sorts of Herbs. There were several Houses along the Sea-side, and a great Village close by the Strand. There was no convenient Anchoring here, it being extremely rough near the Island; for which Reason they left it, and sail'd away South-west, intending to pursue the Discovery of a Southern Continent.

17. The 18th, they were under 16° 5', where they had very uncertain West Winds; and now they began to consult about the further prosecuting of their Voyage. *William Schovteen* the Master told them, that they were now at least 1600 Leagues Eastward from the Coast of *Peru*; and, as they had not yet discovered any Part of the South Land, so neither was there any Likelihood of doing it; that they had sail'd much farther Westward than they first intended; and that, going on that Course which they had hitherto pursued, they should certainly fall Southward upon *New Guiney*, where, if they found no Passage, they must unavoidably be lost; since it would be impossible to go back Eastward again, by reason of the Easterly Winds, that blew continually. Upon these and other Accounts, he propos'd it, as the best way, to alter their present Course, and sail Northward, so as to fall Northward upon *New Guiney*. This Proposal, backed with so many good Reasons, was embrac'd by all the Company, so that they immediately determin'd to hold a North North-west Course. The 19th their Course Northward, they had Two Islands at Noon about Eight Leagues distant from them, lying North-east by East, and that seem'd to be a Cannon-shot distant from each other. Upon this they steer'd North-east, intending to sail about the Land, having fair Weather, but a small Gale, to bring them along. The 20th, they continued still labouring to get to Land. The 21st, being about a League from the Land, they were visit'd by Two Canoes, to whom though they gave no manner of Provocation, yet they were rudely insulted by some of them, who began to halloo, and threaten to dart their wooden Aslagayes at them; but, upon the Discharge of the Guns from the Ship, these bold Hectors began to scamper, and that in no little Haste and Confusion, leaving behind them Two of their Company dead, and a Shirt which they had stolen out of the Ship, and had no Stomach to carry away with them. The 22d, there came more of them to the Ship, but upon very friendly and peaceable

Q

peaceable Terms, bringing Cocoa, Ubes-roots, and roasted Hogs, which they bartered for Knives, Beads, and Nails. These People were all as expert in the Arts of Swimming and Diving, as those in *Traitors Island*, and as well versed in Cheating and Stealing too, which they never failed to do, if an Opportunity were given them. Their Houses stood all along the Strand, which were covered with Leaves at the Top, and had a sort of Penthouse of the same, to carry off the Water; they were Ten or Twelve Feet high, and Twenty-five in Compass. They were furnished with nothing but a Bed of dry Herbs, an Angling-rod or two, and a great Club. These were all the Ornaments even of the Palace, and the King himself had no more. The *Dutch* found here good Conveniences for Watering. The 24th, they sent Three of the principal Men of the Ship to establish a Friendship with the *Indians*, and to be as Hostages amongst them, having in their room Six *Indians* of Quality on board, whom they made very welcome there, and the *Dutch* ashore had very great Respect paid them by the King: He made them a Present of Four Hogs, and, if any of his People came but near the *Dutch* Boat to disturb them while they were fetching Water, he would drive them away himself, or order some of his Men to do it: His Subjects all stood in very great Awe of him, and were fearful of having any of their Crimes made known to him; for one of them having stolen a Curlass, and Complaint being made to one of the King's Officers, the Thief was punished, and soundly drubbed for the Wrong he had done, and, besides, forced to make Restitution; and, more than that, the Officer signified, that he came off very well too; for, if the King had known it, he would certainly have had his Head off. These People were extremely frightened at the Noise of the Guns, and, upon any Discharge, would fly like so many Madmen: Yet the King having a Desire to hear one of the great Guns let off, and being set under his Canopy, with some of his Courtiers about him, in great Order, upon the going off of the Gun, he leaped out of his Seat, and set up a Run into the Woods, with all his Courtiers after him, and no Persuasions of the *Dutch* could possibly stop them. The 25th and 26th, they went ashore again to barter for Hogs, but could get none, the *Indians* being reduced to some Streights themselves, having nothing but Coconas, Bananas, Ubes-roots, and a few Hogs, left. Yet the King continued his wonted Respect and Kindness to them, and he, and his Lieutenant, pulled off their Crowns from their own Heads, and set them upon the Heads of Two of the Company. These Crowns were made of white, red, and green Feathers, which their Parrots and Doves supply them with; the Doves are white upon the Back, and black every-where else, except the Breast, and every one of the King's Council has one of these sitting by him upon a Stick. The 27th and 28th, they got all their Water on board, at which time the Master and the Merchant went ashore with the Trumpets, which proved a very diverting Music to the King. Here he told them of his Wars with them of the other Island, and shewed them several of the Caves and Thickets where they used to place their Ambuscades, and lay lurking for Advantages against each other: They plainly found, that he was fearful they had some Design upon his Country; for, to draw them from thence, he would fain have engaged them in a War with the King of the other Island; nay, he offered to hire them to be gone, telling them, that, if they would go in Two Days, he would give them Ten Hogs, and a good Parcel of Coconas: Yet, notwithstanding his Suspicions, he made them a Visit on Ship-board, praying when he entered the Ship, and praying in every Cabin he came into, as also he always did when any of the *Dutch* came ashore to him. His Men carried it with a mighty deal of Submission to them, kissing their Feet, and laying them cross their Necks, with all the Tokens of Awe and Fear that they could express. The 30th was made a Day of Solemnity, by the coming of the King of the other Island to visit the King of this: He came with a Train of 300 of his naked *Indians*, that had Bunches of green Herbs stuck about their Middles, of which they prepare their Drink; and, that he might be sure to be welcome, he brought Sixteen Hogs along with him. When these Two Princes were

within Sight of each other, they began to bow and scrape, and mutter out certain Prayers to themselves. When they met, they both fell down with their Faces flat upon the Ground, and, after several very strange Gestures used, they got up on their Legs, and walked away to the Seats provided for them, where, after they had chopt out some more of their Prayers, and bowed very reverently to each other again, with much ado they set down again under the King's Canopy: And now, to make the strange King the more welcome, a Messenger was dispatched to the *Dutch* Ship, to get their Drums and Trumpets ashore; so the Trumpets sounded, and a March was beat, to the very great Entertainment of the Two Kings: After this they prepared for a solemn Banquet; and, in order to it, began to make ready their Liquor, which they did in this slovenly Manner: There came into the Presence a Company of Fellows, with a good Quantity of Cana, (which is the Herb of which they make their Drink) each of which having crammed in a Mouthful of it, they began to chew together; having chewed it awhile, they put it out of their Mouths into a large wooden Trough, and poured Water upon it, and fell to stirring and squeezing of it, and, having pressed out all the Goodness, they presented it in Cups to the Two Kings: They were so civil likewise as to offer the *Dutch* some of it, who were ready to vomit at the Sight of the Preparation. As for the Eating-part of the Entertainment, it consisted of Ubes-roots roasted, and Hogs dressed after a very nice Manner. They had ripped up the Bellies, and taken out the Intraills, and then, putting hot Stones into their Bellies, and singeing off the outside Hair, without any farther Dressing or Cleaning, they were fit for the King's Table. They presented Two of these Hogs to the *Dutch*, with all the Form and Ceremony which they use to their Kings, laying them first upon their Heads, and then kneeling, with much Humility, left them at their Feet. They gave them, besides, Eleven more alive, for which they received a Present of Knives, old Nails, and Beads, as pleasing to them as far better Things. These People were of a dark-yellow Colour, strong and well-proportioned Bodies, so tall and big, that the largest amongst the *Dutch* would have been matched by the least of them. They wore their Hair, some curled, some frizzled, some tied up in Knots, some had it standing bolt upright, their Heads like Hogs-bristles, a Quarter of an Ell high. The King, and some of his Courtiers, had long Locks hanging down below their Hips, bound up with a Knot or two; but the Women were all cropped close, and, besides, very ugly Figures, being short and ill-shaped, and their Breasts hanging down to their Bellies like Satchels. Both Sexes were naked all the *Pudenda*. They seemed to be a People wholly void both of Devotion, and all worldly Care and Prudence, living just as the other Animals do, upon what the Earth produces, without the Solicitations of Art and Industry: They neither sow nor reap, buy nor sell, nor do any thing for a Livelihood, but leave all to the Care of Nature, which if it fails at any time, they must starve: And they have as little regard to the Laws of Decency and Modesty, as to those of civil Prudence and Policy; for they will make use of their Wives openly in the greatest Assembly, nay, and before the King too, as much as they reverence him. This Island they called *Horn Island*, from the Name of the Town from whence they came; and the Bay where they anchored, *Unity Bay*, after the Name of the Ship; the Bay lies upon the South Side of the Land in a Dock under 14° 16'.

18. June 1. they sailed from hence, visiting no Land till the 21st, when they made towards a very low Island, that lay South South-west and West from them, and in 40° 47'. Near it were several Sands, that stretched North-west from off the Land, as also Three or Four smaller Islands, very full of Trees. Here a Canoe came up to them, of the same old Fashion with those before described, and the People in it much of the same Sort, only blacker, and armed with Bows and Arrows, which were the first they had seen amongst the *Indians* of the *South Sea*. They told them by Signs, that there was more Land, and good Conveniences for a Ship, to be had Westward, where their King dwelt; upon which Information they held a Western Courie again. The 22d, they sailed West, and West by North, under

4° 45'; and one close to and reaching but they le they saw T from them them Two them the Oc cliffy, and sent itself West by N Baptist's D this time, they thought it by Noon choring, he be discover People affa greatly terr very black different from all that Nig lurking abo discovered they would Provisions cries. 4° 45' and that Day saw at least Twelve or Thirteen Islands, one close by another, lying West South-west from them, and reaching South-east and North-west about half a League; but they left them a Larboard. The 24th, the Wind South, they saw Three low Islands a Larboard, lying South-west from them, the One very small, the other Two each of them Two Miles long, all very full of Trees. They called them the *Green Islands*. The Shore about was ragged and clifly, and allowed no Anchoring. Another Island presented itself, with Seven or Eight Hovels upon it, lying West by North; which they sailed by the 25th, *St. John Baptist's Day*, and therefore called it *St. John's Island*. At this time, they saw very high Land to the South-west, which they thought to be the Point of *New Guiney*. They reached it by Noon, and, sailing along by it, and finding no Anchoring, sent the Shallop to sound; but no Bottom could be discovered. Here Two or Three Canoes of barbarous People assaulted the Shallop with their Slings; but the Guns greatly terrified, and quickly dispersed them. They were very black, intirely naked, and spake a Language quite different from the other. They kept Fires upon their Coast all that Night; and some of them, in their Canoes, came lurking about the Ship; and tho' the *Dutch*, when they discovered them, did all they could to oblige them, yet they would understand none of the Signs they made for Provisions; but answered all with horrible Noises and Outcries. They anchored this Night at Forty-five Fathom, uneven Ground, in a Bay. About the Point of the Land, the Country was high and green, and afforded a pleasant Prospect, and lay (as they guessed) 1840 Leagues distant from *Peru*. The 26th in the Morning, there came Three Canoes up to the Ship, quite full of these Barbarians, and they as well armed, after their Manner, with Clubs, wooden Swords, and Slings. The *Dutch* treated them kindly, and gave them several Toys to procure their Favour, or at least Peace and Freedom from any Disturbance by them; but these Savages were not to be conquered by Kindness, nor taught good Manners by any thing but the great Guns; for presently they assaulted the Ship with all their Force, and continued it obstinately, till the Cannon-shot had gone through Ten or Twelve of them. Then they began to fly to their old Refuge the Water, to dive and swim for their Lives; but the Shallop, pursuing them, knocked some on the Head, took Three Prisoners, and Four of their Canoes; which made Firing for the Ship. And now they could understand Signs, and procure Hogs and Bananas for those that were Prisoners to ransom themselves; but, before, they did not know what the *Dutch* meant by their Signs: And, tho' the *Dutch* were so generous as to give One wounded Man his Liberty, yet they were so wise too as to fet another in a better Condition at Ten Hogs Ransom; which undoubtedly was the full Value of him. This Island afforded a Sort of Birds, that were all red; and North of it lay another Island, of which they made no other Discovery, than only its Position to this. They concluded these People to be *Papoo's*, because of their short Hair, and particular Diet of Beetle mixed with Chalk.

19. The 28th in the Evening, they set Sail from hence; and the next Day held a North-west and North-west by North Course, with a shifting Wind till Noon, and then a Calm. They had the Point of the Island in View till Evening, tho' they sailed along by the Land, which was full of Bays and Turnings, and reached North-west and North-west by West; and, the same Day, they saw Three high Islands more, that lay Northward from the greater One Five or Six Miles, being then in 3° 20'. The 30th in the Morning, several Canoes of the black *Indians* came up to them, and, boarding the Ship by Permission, broke Staves over the *Dutch*, in Sign of Peace. Their Canoes were finer than the others, and themselves appeared more civil and modest, covering the *Pudenda*; which the others did not. They rubbed their Hair over with Chalk, affecting to have their black Locks powdered. They pretended to be so poor, that they came to beg, and not to bring any thing to the Ship; yet those Four Islands, from whence those *Indians* came, afforded good Store of Cocoas. *June 1.* in the Morning, they anchored between an Island Two Miles long and the firm Land of *New Guiney*; and quickly were surrounded with Twenty-five armed Canoes of the same Peo-

ple, who, the Day before, in Token of Peace, had broken their Staves over their Heads, and now came intending to break them upon them. The *Indians* were not tedious in their Ceremonies before they entered upon the Work they came about: Two of them fixed themselves upon Two Anchors that then hung out of the Ship, and, with their Girdles, began to tug the Ship, thinking to draw her ashore. The rest lay about the Sides of her, and gave a brisk Onset with their Slings, and other Weapons; but the everlasting Plague of these Savages, the great Guns, shattered Men and Canoes at that Rate, that they were forced to retire, with the Loss of Twelve or Thirteen killed, and a far greater Number wounded. After this Fight, they sailed peaceably along the Coast, having a good Gale, and holding a West North-west and North-west by West Course. The 2d, they were in 3° 12', and saw low Land a Larboard, and right before them a low Island. They sailed gently West North-west, with a slight Current of the Water East North-east. The 3d, they saw high Land, bearing West about Fourteen Leagues from the other Island, and in 2° 41'. The 4th, as they were passing by the Four Islands afore-mentioned, they had a sudden Prospect of Twenty-three others, great and small, high and low; most of which they left a Starboard, and only Two or Three a Larboard. They were some of them a League, some a Cannon-shot distant from each other, and lay in 2° 30', little more or less. The 6th, with very variable, and some stormy Weather, they had in the Morning a very high Hill before them, bearing South-west; and this they thought to be the Hill *Geemenoff* in *Banda*; but a nearer Approach discovered Three Hills more like it, that lie to the North about Six or Seven Leagues Distance; and this Sight determined that Hill to be that of *Banda*. Behind it lay a large Tract of Land East and West, reaching East South-east, of a very great Extent, and very uneven.

20. The 7th in the Morning, they sailed towards those mighty Hills they had in Prospect the Day before, and found some of them to be *Vulcanos*; for which Reason they named the Island *Vulcan's Island*, there being so good a Representation of his burning Forge. The Island was well inhabited, and full of Cocoas; but there was no Conveniency of anchoring there. The People were naked, and extremely fearful of the *Dutch*; and their Language so very different from all thereabouts, that none of the Blacks they had with them could understand them. There appeared more Islands to the North and North-west; but they held their Course to a very low one, that lay North-west by West from them; which they reached that Evening. The Water here they observed to be of divers Colours, green, white, and yellow; which probably was the Effect of the Mixture of some Rivers, because it was far sweeter than the Sea-water, and was full of Leaves and Boughs of Trees, some of which had Birds and Crabs fastened upon them. The 8th, they held a West South-west and West North-west Course, having on their Starboard an high Island, and another something lower on their Larboard. They reached the Land in the Afternoon the same Day, and anchored at Seventy Fathom, in a good sandy Bottom, about a Cannon-shot from the Shore. This Island was in 3° 40', and seemed to be an unhealthy Place, and yielded nothing considerable, except a little Ginger. It was inhabited by *Papoo's*, whose ridiculous Fancies, in the Matter of Dress, superadded to their own natural Deformity, made them appear little short of Monsters in human Nature. There were hardly any of them but what had something odd and strange, either as to Bigness or Position of their Limbs; but then the Strings of Hogs Teeth hung about their Necks, and their perforated Noises, with Rings fastened in them, together with short frizzled Hair, and very bad Faces, all put together, would have offended an Eye not extremely curious. Neither was the Beauty of the Houses much greater than that of the Inhabitants, being all mounted upon Stakes Eight or Nine Feet from the Ground. The 9th before Noon, they anchored in a more convenient Bay, at Twenty-six Fathom, in a sandy Bottom mixed with Clay. There were Two Villages of the *Indians* near the Shore, from whence some of their Canoes brought Hogs and Cocoas; but held up both at so dear Rates, that there was no bartering with them. And now, though they had sailed so long by this new Land, yet they were

were unable to resolve themselves, whether it was *New Guinea*, or no. Their Charts did neither agree one with another, nor the Land they had in Prospect, which, for the most part, run North-west by West, sometimes more West-erly, and sometimes again more Northerly; yet, for all this Scruple, (which they could not remove) they still held a West North-west Course along by the Coast, with a quiet, tho' dull sort of Weather; and so, by the Help of the Stream, that set them about the West as it does all along that Coast, they made $2^{\circ} 58'$ the 12th at Noon.

21. The 13th and 14th, they kept sailing by the Coast, having sometimes very high, and at others very low Land in Sight of them. The 15th, pursuing the same Course, they reached Two low Islands, about half a League from the main Land, about $2^{\circ} 54'$ South Latitude. Here they had good Anchoring from Five and Six to Forty Fathom; and, seeing the Country well stored with Coconos, the Boat and Shallop, well provided for an Attack, were dispatched, with Orders to land, and get some; but the *Indians*, it seems, had observed them, and accordingly prepared for their Entertainment when they landed; and they gave them, perhaps, the warmest Reception with their Bows and Slings, that ever they met with, wounding at least Sixteen of them, and forcing them, notwithstanding their Musquets, to retire. The 16th in the Morning, they sailed in between both the Islands, and anchored at Nine Fathom, in a very good Place. The same Day, they landed upon the lesser Island, burnt some of the *Indians* Houses, and brought off as many Coconos as made Three to every Man's Share. The barbarous People became more gentle and good-natured upon this Treatment; for the 17th they came to make their Peace with Offerings of Coconos and Bananas, Ginger, and yellow Roots used for Saffron. They agreed to trust the *Dutch* so far as to come aboard their Ship, where the Quarrel was perfectly made up; and the Hearts of the *Indians*, won by a few Nails and Beads, which they gave them, were intirely theirs. The 18th, they continued bartering for Coconos, Bananas, Cassave, and Papade: Of the Two former they got as much as came to Fifty Nuts and Two Bunches of Bananas a Man; of the Two latter not so much. This Papade and Cassave are also *East India* Commodities, and the latter particularly is admirably good in the *West Indies*, and far beyond that, which they met with here. The People made all their Bread of it, and baked it into large round Cakes for that Purpose. They called the Name of their own Island *Mosa*, which was the most Easterly; the other over-against it *Jujan*; and the farthestmost (a very high one, and about Five or Six Leagues from *New Guinea*) *Arimeta*. These People had probably been visited by some *Europeans* before; for they had *Spanish* Jars and Pots amongst them: They were not surpris'd at great Guns, as the others usually were; nor so curious in looking into the Ship, as absolute Strangers to such a Thing must be supposed to be. The 21st, they sailed along by the Land North-west, and at Noon made $1^{\circ} 13'$. The Stream drove them to a Cluster of Islands, where they anchored at Thirteen Fathom, with Storms of Rain and Thunder that Night. The 23d in the Morning, setting Sail from thence, Six great Canoes overtook them a little from the Land, bringing dried Fish, Coconos, Bananas, Tobacco, and a small Sort of Fruit like Prunes. *Indians* from another Island also brought Victuals and *China* Porcelaine to barter. These People, like most of the Barbarians, were vastly fond of Beads and Iron-work; but they were remarkably distinguished from those in the last Island by their large Size, and more orange Complexion. Their Arms were Bows and Arrows, and their principal Ornaments Glafs Ear-rings of several Colours; and, by these, as well as other Signs, it appeared, that the *Dutch* were not the first *Europeans* which these People had seen: So that it is not to be considered as a Discovery.

22. The 24th, being under $30'$, they steered North-west and West South-west, along by a very pleasant Island, on which they bestowed their Master's Name, and is that, which, in the Maps, is distinguished by the Name of *Horn Island*; and the West Point of it they called *Cape of Good Hope*. The 25th, they saw an huge Tract of uneven Land on their Larboard, lying South and South-west by West. The 26th, they spied Three Islands more, the Coast reach-

ing North-west by West. The 27th, they were under $29'$ and, having a Sight of much Land to the Southward, some very high, and some as low, they passed North-west along by it. The 29th at Night, they had an Earthquake, which shook the Ship at that Rate, that the Men ran frightened out of their Cabins, expecting to find her run aground, or bulged against some Rock; but, upon Trial, they found a Depth of Water, that was unfathomable, and as plainly saw they were clear of all Danger of Rocks and Shelves; so that it was manifestly the Effect of a violent Concussion of the *Aboves*, and submarine Regions, which caused and propagated a Tremor all through the Water, and thus disturbed the Motion of the Ship. The 30th, they put into a great Bay, out of which finding no Opening, they return'd to a Northern Course again. Here the Ship trembled again with loud and horrible Claps of Thunder; and the Lightning was so like to set it on Fire, that, in all Probability, it must have flamed, had not the Clouds, that furnished the pernicious Fire, afforded Water also in prodigious Showers of Rain for the extinguishing of it. The 31st, with a Northern Course, in the Evening they passed the Equator a Second time; and, being encompassed with Land all round almost, they anchored at Twelve Fathom good Ground, near a desolate Island, that lay close by the firm Land. *Augst* 1, they made $15'$ North Latitude; and, in the Evening, with a hard Stream, went close to the Land, and, because of the Calm, anchored, tho' in a shallow Water, and very rugged Bottom. The 2d, they drove along with the Stream West and West by North, with very rainy Weather. The 3d, being still becalmed, they steered as before, and found a Bank so far in the Sea, that they could scarce see the Land, being in some Places Forty, in others Twenty, and so to Twelve Fathom, sandy Ground; and the Stream there went West South-west. The same Day, they made $35'$ North Latitude, and saw several Whales and Tortoises, with Two Islands lying to the Westward of them. And now they guessed they were at the End of the Land of *New Guinea*, having sailed 280 Leagues along by the Coast. The Rains and Calms still continued.

23. The 5th in the Morning, several Canoes came up to them, bringing *Indian* Beans, Rice, Tobacco, and Two Birds of Paradise. They bartered for One of these fine Birds, which was all white and yellow. The *Indians* spoke the *Ternate* Language, and some of them the *Spanish* and *Malayan*; which latter Tongue *Clavson* the Merchant was well skilled in. They were all of them finely clothed about their Waists, some with loose Silks, others with Breeches, and some silken Wreaths about their Heads, which were the *Mohammedans* of the Company. All of them in general had Coal-black Hair, and good Store of Gold and Silver Rings upon their Fingers. They bartered with the *Dutch* for Beads, and other Toys; but had much more mind for Linen Cloth. They appeared to be very fearful, and suspicious of them to that Degree, that they would not tell them the Name of the Country; yet they judged, that they were now at One of the Three Easterly Points of *Gilolo*, and that these People were Natives of *Tidore*; which afterwards they found to be true. The 6th in the Morning, they set forwards, holding a Northerly Course, intending to sail about the Northern Point of *Gilolo*. The 7th, they saw the North-east Point of that Island called *Moratay*, which then lay South South-east from them. The 8th at Noon, they made $4^{\circ} 3'$ North Latitude, had there very stormy Weather, and a Current that ran Northward. The 9th and 10th, they had variable Winds and Weather, and made $3^{\circ} 50'$. The 11th, they had a Prospect of the Point *Moratay* again, which they designed to have reached; but the Current drove them off from the Land Northward. The 13th, they made $2^{\circ} 58'$, the Winds continuing still to shift about, and the Rains falling pretty heavily; and this sort of Weather continued to the 17th. This Day, with much Toil and Trouble, they got under the Land, and sailed along by the Coast with fair Weather; and, in the Night, they saw several Fires upon the Land. The 18th, with still Weather, they continued driving by the Land, and at Noon were saluted by Two Canoes of *Ternateans*, who, to shew their peaceable Intentions, hung out a white Flag. They informed them, that they came from the Village *Seppy*, where very lately had been an *English* Ship, as also a Pinnacle of *Ambra-*

that had lain there Three Months for a Lading of Rice; and that some of them would conclude the next Day to the Road of *Sappy*. The 19th, they sailed into the Bay, and anchored at Ten Fathom, sandy Ground, about a Cannon-shot from the Shore. They bartered here for Hens, Sago, Tortoise, and Rice. On August 19. they had several of the Natives on board, who reported, that an *English* and *Dutch* Ship had been lately in those Parts, and had procured sufficient Provisions for their Voyage home; which News was exceedingly agreeable to People who had spent almost all their Store; and therefore there was a kind of public Rejoicing among the Crew, which now consisted of Eighty-five Men, all healthy and vigorous, and who had no other Apprehensions, than such as arose from their Scarcity of Victuals. The next Day, they had an Account, that there were no less than Twenty *English* and *Dutch* Ships at *Ternate*. On August 25 they sailed, and on September 1. they entered, the Wind being contrary, into the Bay of an Island, which seemed to be desert. Some of the Officers went ashore, in order to view the Country, and endeavoured to ascend a very high Mountain for that Purpose; but found it so very steep and rugged, that they quickly abandoned their Attempt. They saw, however, an extraordinary Curiosity here, which was a Worm as thick as a Man's Leg, and of a great Length. The Name of this Island is *Mora*, which, tho' it appeared one continued Tract of Land at a Distance, they found, upon a closer Examination, was, in Reality, composed of several Islands. On the 5th, they anchored off the Coast of *Gilolo*, where a very unlucky Accident had like to have befallen them; for, some of the Seamen going to catch Fish unarmed, Four Soldiers of *Ternate* suddenly rushed out of the Woods, Swords in Hand, intending to have killed them, as they were drawing up their Nets; but, the Surgeon calling out *Oran Hollanda*, the *Indian* Soldiers stopped, and, throwing Water on their Heads, which is a Sign of Peace in those Countries, approached them in a peaceable Manner, and told them, that the Reason of their Attempt was their taking them for *Spaniards*. At the Request of the Seamen, they were persuaded to go on board, where, having Beads and other Trifles given them, they were exceedingly well satisfied, and promised to bring them Provisions and Refreshments; which they did.

24. On the 14th, they sailed; but, the Wind being slack for Two or Three Days, made no great Progress in their Voyage. On the Sixteenth, however, they had Sight of *Ternate* and *Tidore*. On the 17th, they spoke with a *Dutch* Ship, which gave them an Account of Admiral *Spilbergen's* Voyage, as also, that there was a Squadron of Ten *Dutch* Ships under the Command of the General *John Dirichson Lam*, of *Horn*, at the *Manillas*, to defend the Trade of his Countrymen against a great *Spanish* Fleet that it was expected would come shortly to attack them at *Ternate*. The same Evening they anchored in Eleven Fathom sandy Ground before *Malaya* in *Ternate*; there Captain *Schovten*, and *Jacques le Maire*, went on shore, in order to confer with the General *Lawrence Real*, who was come thither in the Place of the deceased General *Gerard Reynst*, where they were well entertained by him, as also by the Admiral *Stephen Verbaghen*, and *Jasper Janson*, Governor of *Amboyna*, and by the whole Council of *India*. On the 18th, they sold Two of their Shallops, with a great deal of what they had saved out of the *Horn*, which was burnt in *King's Island*, and received in ready Money 1350 Reals; with Part of which they purchased from the General Two Laits of Rice, a Ton of Vinegar, the like Quantity of *Spanish* Wine, and about Three Ton of Biscuit. On the 24th, Eleven Men, and Four Boys, demanded Leave of the Captain to enter into the Company's Service; which, at the Request of the General, he very readily granted. On the 26th, they took Leave of the General, who treated them with the greatest Kindness and Respect, and accompanied their Captain and Supercargo aboard with Colours flying. On the 27th, they sailed for *Bantam*. On the 29th, they passed the Line for the Fourth time in that Voyage. On the 16th of *October*, they anchored in the Road of *Japara*; and, on the 28th, at *Jacatra*, where they found Three *Dutch*, and as many *English*, Ships in the Road. The following Night one of their Seamen died, which was the first they lost out of the

Unity, and the third that had died during the whole Voyage.

25. On the last of *October*, arrived *John Peterfon Koen*, of *Horn*, President for the *East India* Company at *Bantam*; and the very next Day he sent for the Captain, and both the Supercargoes, before the Council of the *Indies*. After a very little Discourse, he required them, in virtue of his Commission from the *East India* Company, to deliver up the Ship and Cargo immediately: The Captain and Supercargoes insisted, that the Seizure was unlawful, since they had not offended either against the Letter, or the Intention, of the Company's Charter; since, with respect to the former, they did not come into the *Indies* by either of the forbidden Passages, viz. the Cape of *Good Hope*, or the Streights of *Mogellan*, but by a Passage of their own Discovery, which, in its Consequences, must be extremely advantageous to the Commerce of their Countrymen, and to the whole trading World: That, as to the latter, it could not be the Meaning of the States General, in granting that Charter, to deprive their Subjects of the Benefits resulting from new Discoveries, since that would have been inconsistent with the sole Design of granting the Charter, which, as the Charter itself expressed, was for promoting the Commerce of the Subjects of the Republic. But all they could say signified nothing; the President told them, that, if they thought they suffered wrong, they might seek Redress in *Holland*. "This, says the Author of the *Dutch* Voyage, was done upon Monday the 1st of *November*, alter our Reckoning; but upon *Tuesday*, the 2d of *November*, by our Countrymens Reckoning there. The Reason of the Difference of the Time fell out thus: As we sailed Westward from our own Country, and had with the Sun compassed the Globe of the World, we had one Night or Sun-setting less than they; and they that came out of the West, and sailed to the East thereby, had one Day or Sun-setting more than we, which makes the Difference; and so, as we made our Reckoning of the Time then with ourselves, and did the like with our Countrymen, that Week we lost the *Tuesday*, leaping from *Monday* to *Wednesday*, and so had one Week of Six Days. Our Ship being in this Manner taken from us, some of our Men put themselves into Service with the *East India* Company; the rest were put into Two Ships (that were to go home into *Holland*) called the *Amsterdam*, and the *Zeland*, their General being *George van Spilbergen*: The Master, *William Cornelison Schovten*, *Jacob le Maire*, and Ten of our Men, went with the General in the *Amsterdam*, the Master's Name *John Cornelison May*, alias *Menfcheater*; and *Airis Clawson*, and the Pilot *Clauferjon*, with Ten others, in the *Zeland*, the Master's Name *Cornelius Rienlands*, of *Middsburgh*, which set Sail from *Bantam* the 14th of *December*." In little more than a Fortnight, viz. the 31st of that Month, died *Jacques le Maire*, their Supercargo, chiefly of Grief and Vexation, on account of the disastrous End of a Voyage which had been so prosperous to that Time. He was extremely solicitous on account of his Journal, which he had taken the utmost Pains about, recommending it to the Care of his Friends, and desiring that a full Account of this Transaction might be fairly published, that not only their Countrymen, but the whole World, might judge of the Usage they had received.

26. *January* 1. 1617. they lost Sight of the 2. The 24th, they anchored under the Island *Mauritius*, and refreshed there for Six Days. *March* the 6th, they passed the Cape of *Good Hope*, as they guessed, but saw it not. The 31st, they were under the Island of *St. Helena*, and there found the *Zeland* at their Arrival. The 6th of *April*, having supplied their Ships with fresh Water, they set Sail together. The 24th, they passed the Equinoctial the Fifth time; and, the 28th, saw the North Star, which they had not seen for Twenty Months before. *July* the 1st, the *Amsterdam* came into *Zeland*, whither the Ship of that Name had come the Day before. Thus this Voyage round the World was performed in Two Years and Eighteen Days; which, considering the Difficulties they met with, the Nature of their Court, and every other Circumstance of the Voyage, was a very wonderful thing, and might, one would have thought, have induced the

States General to have relieved them from the Hardships to which the Pride and Avarice of the *East India* Company had subjected them. The Proprietors of the *Unity*, and the *Horn*, finding, that, notwithstanding they had carried their Point in respect to the Discovery of a new Passage to the *East Indies* to the South of the Straights of *Magellan*, they had lost their Ships and Cargoes, and, consequently, all the immediate Benefit they expected from it, determined, however, to follow the dying Advice of *Jacques le Maire*, and to publish an Account of the Discovery as soon as it was possible. In order to this, they caused the Journals of *le Maire* and *Clawson* to be transcribed, examined, and compared; and then, drawing out of them such Points as seemed in any Degree obscure, they recommended them to the View of the Masters, and other Officers of the *Unity*, for Explanation: And, having thus procured an authentic Relation of this most memorable Expedition, they published it the very next Year in *Dutch*, that every body in their own Country might read it. In the Year 1619, an *English* Translation of it appeared, which was dedicated to Sir *Thomas Smith*, then Governor of the *English East India* Company; in which Dedication, the Discovery is particularly recommended to his Consideration, with a View to the Use that might be made of it in favour of our Commerce. But, notwithstanding the Author of this Dedication certainly meant well, it does not appear, that his Book was considered in any other Light than as an historical Account of new Discoveries, whereas he certainly intended it for more important Purposes. Within the Compass of a few Years, it appeared in *French*, *Italian*, and *Latin*; and the Fame of these Navigators spread all over *Europe*, while the original Adventurers were contesting the Point of Co-discovery with the *East India* Company in *Holland*. The Accounts of this Voyage, hitherto published in our Collections, have been all of them very short and imperfect, especially as to the Design of the Voyage, which we hope the Reader will here find thoroughly explained; which Pains we have rather taken, because, as we shall presently shew, there never was a Voyage that deserved it better. Other Discoveries, other Voyages to the *East Indies*, may be read for Amusement, or historical Instruction; but this should be regarded in another Light, since it points out to us a kind of Navigation capable of prodigious Improvement, and to which, perhaps, no Nation has a better Title than ourselves; since the *South Sea* Company seems to have been originally established for the Prosecution of those Discoveries which in this Expedition were begun.

27. There are few Voyages that deserve Remarks so much as this of *le Maire*, and yet it is not the easiest Matter in the World to make them. The Generality of Mankind imagine, that most great Discoveries are made by Chance, and that the ablest Seamen have been less indebted to Knowledge than to Fortune, for the Fame they have acquired by their finding out new Countries. But the elder *le Maire*, I mean *Isaac* the Merchant, actually discovered more in his Closet, than his Son did in his Voyage, though, in point of Discovery, it was far superior to any made in his Time. For the elder *le Maire*, from the Disposition of Earth and Water in the other Parts of the Globe, imagined, that there could not be a Fourth Part Water in the Southern Hemisphere. In respect to the Straights of *Magellan*, he saw they lay but in the Tenth Climate, whereas a great Part of *Europe*, *Asia*, and *America*, lay as far as the Twenty-fourth; from whence he concluded, that there must be a Continent to the South of those Straights which stretched itself into a warmer Latitude, and made a very considerable Part of the World, though hitherto undiscovered; and this was the Foundation of his Project of finding out a new Passage to unknown Countries. But the Reader may possibly inquire, why, supposing there were such a Continent, it must be concluded another *Indies*: And, to answer this Question, I must observe, that the only way of guessing rationally at the Products of unknown Countries, is by considering the Climates in which they lie, and the Nature of those Countries that are well known, and lie in the same Climates. *Le Maire* very judiciously conjectured, that, if there was such a Southern Continent, the greatest Part of it must lie be-

tween Thirty and Thirty-six Degrees of Latitude; and, as he knew, that the Coast of *Barbary*, all *Syria*, the most fruitful and pleasant Provinces of *Perfia*, the best Part of the *Indies*, all that was known of *Japan*, what had been hitherto discovered of *California*, *New Mexico*, and *Florida*, lay within the same Degrees of Northern Latitude, and that the best Part of *Chili*, and the Countries about the River of *Plate*, lay in the same Southern Climate, he, with great Justice and Probability, inferred, that, if such a Country could be discovered, it must be extremely rich and fruitful, abounding with all the Commodities that are most sought, and best esteemed, in *Europe*. When he communicated his Thoughts to Captain *Schouten*, he not only concurred with him in Opinion, but furnished him with many other Reasons in Support of it, drawn from Experience, and the Knowledge he had of the Countries already discovered in the *East Indies*; so that, on the Whole, they were fully persuaded, that, if they could bring their Project to bear, Spices, Gold, and precious Stones, might certainly be brought from these Southern *Indies*. They reasoned, in this respect, on the very same Principles that *Columbus* had laid down in Support of his first Expedition; and, therefore, there never was a Voyage undertaken upon wiser or better Grounds than this, as, perhaps too, there never was a Voyage executed with greater Ability or Success, of which the early Discovery of the Straights of *le Maire*, and the going quite round the World with the Loss of Four Men only, and one of these killed by Grief, are the strongest Instances. It is, indeed, very true, that no such Continent was discovered by this Voyage; and yet, when we consider the Matter fairly and maturely, this will be found no sort of Proof against the Truth of their Conjectures, but rather the contrary: For *Schouten* and *le Maire* did not pursue their Voyage as they intended, but ran nearer the Line, so as to make few or no Discoveries, but between Ten and Twenty Degrees of South Latitude; and the Countries they did discover were chiefly Islands, but Islands rich, fruitful, well inhabited, and well provided with Canoes, and other Vessels, all certain and infallible Marks of some adjacent Continent; so that, considering this was the first Voyage ever attempted from this Part of the World through those Seas, instead of wondering, that they made so small a Progress, we ought rather to be surprised, that with a single Ship, and with so small a Force, they were able to do so much. After all, *Columbus* did no more in his first Voyage than discover the Islands that lay off *America*; and therefore *Schouten* and *le Maire*, as they went on the same Plan, may be truly said to have met with as much Success. We cannot, therefore, but be sensible, that the Censure passed on this Discovery by the *Dutch* Writer of *Spilbergen's* Voyage, which we have taken notice of before, was equally cruel and unjust; for whereas he objected, that they had discovered no Countries or People with whom any Trade could be carried on, but barely a new Strait, the Fact is false, and they really discovered as much as could be reasonably expected: The only Wonder is, that this Discovery was not prosecuted, and that a Nation so famous for Industry, and so well turned for all commercial Improvements, as the *Dutch*, should let slip so favourable an Opportunity as this offered for extending their Trade, especially at a time when this seemed to be peculiarly cherished by the State. In order to solve this Difficulty, we need only reflect on the Hardships that were endured by the Persons who undertook this Voyage, and the Losses that were sustained by its Proprietors: These were more than sufficient to deter private Men from running the Risque of such another Expedition; because, besides all the Dangers inseparable from such an Undertaking, there was this invincible Obstacle of the *East India* Company's exclusive Charter, which, whatever became of them at Sea, was sure to overturn them on Shore; and, as to any public Prosecution of the Project, that too was scarce to be expected, since the State rarely reaps any Profit from Expeditions that would make private Men rich. But our Business here lies chiefly with the present Discovery. It may be wondered, why the People in these Islands are called Negroes, since it does not appear by subsequent Discoveries, that there are any such in those Parts. All that I can say in Answer to this is, that they are so

filed in the original Voyage in *Dutch*, and I knew no Right I had to change the Expression. It is very possible that they might call these People Negroes in Opposition to the *Indians of America*, because their Complexions were much darker, though far enough from being quite black. Later Discoveries make these People have very different Complexions, which shews, that there are many Nations in those Parts of various Hues, that intermix with each other; and, as all Accounts agree, that these People are much better skilled in Navigation than the Inhabitants of *America* were at the Time that Country was first found out, it should seem, that People, who have so much Commerce amongst themselves, are worth our finding out. I say this for many Reasons, of which, at present, I shall offer but Three. The first is, that at present there is a Necessity of discovering new Trades, because the old ones seem to be most of them over-stocked. The second, that these Countries are like to take off a great Quantity of our Manufactures, the People going for the most part clothed, and are in a great measure civilized. And, thirdly, as they lie at so great a Distance, in proportion as such a Commerce increases, it must have a very advantageous Effect with regard to our Navigation and Shipping. The only Objection that can be made is, that, if the *Dutch* have neglected it, there is little Probability that we shall be able to thrive by it; and to this I say, we shall very soon make it appear, that the *Dutch* have not so much neglected as concealed it; probably for this Reason, that, being in Possession of a very beneficial Trade in the *East Indies*, and having the Monopoly of the Spice Trade, they are rather concerned about the preventing other Nations from falling into so beneficial a

Commerce, than inclined to pursue it themselves, as having less need of it than any other Nation in *Europe*. But, to put the Matter out of Dispute, and to shew, that whatever Reasons either the *Dutch* or *Spaniards* may have for endeavouring to conceal these Southern Lands, it is, however, a Matter worthy of our Consideration, to discover them, I shall, in the next Section, and by way of Appendix to this, give the Reader a very large Memorial of a *Spanish* Discoverer, who not only conjectured, that there were such Southern Countries, but actually saw, examined, and reported what he met with in them, and what might be expected from a Trade carried on with their Inhabitants. I must first advertise the Reader, that, tho' I place this Paper as an Appendix, yet, in point of Time, the *Spanish* was prior to the *Dutch* Discoverer; but then what he discovered was concealed for many Years, and never could come to the Knowledge of *Isaac le Maire*; though, since its Publication, it serves to demonstrate the Justice and Truth of his Conjectures. Another Reason for my bringing this Memorial in here, rather than postponing it until we come to treat of the Southern Parts of *America*, is, because it gives great Light to our subsequent Circumnavigations, many Passages in which would be scarce intelligible without it. It is certainly right to be very careful in respect to Method, especially in Works of such an Extent as this; but as this Rule is founded on the Necessity of making Things clear, by placing them in such a manner as that they may reflect Light upon each other, the very same Reason obliges us to dispense with the strict Prosecution of our Plan, when such a Deviation contributes more to the Reader's Information, than the contrary Practice would have done.

SECTION X.

The Voyages of Don PEDRO FERNANDEZ DE QUIROS, for the Discovery of the Southern Continent and Islands.

1. The constant Practice of the Spanish Viceroy in the last Age to make their Court to their Masters, by endeavouring to make Discoveries.
2. Don Pedro Fernandez de Quiros employed to this Purpose by the Viceroy of Peru, and afterwards solicits the Settlement of the Countries he discovered at the Court of Spain.
3. His Description of the Country and People.
4. The Beauty, Excellence and Wholsomeness of the Climate.
5. An Account of his taking Possession of this Fourth Part of the World, which he is pleased to call La Austrialia del Espiritu Santo, for the Use of the King of Spain, in the Author's own Words.
6. Other Arguments offered in Support of his Proposal, and their Effects.
7. The Substance of a larger Spanish Memorial, in which these Countries are more particularly described.
8. Demonstrative Proofs of the Truth of his Relations.
9. This Account of de Quiros confirmed by the subsequent Experience of later Discoverers.
10. The Reasons why the Spaniards have changed their Policy, and affect now to discourage Inquiries and Discoveries of this sort.
11. There are sufficient Motives to encourage other Nations to attempt what the Spaniards, in mere Policy, decline.

1. AFTER the Spaniards had conquered *Mexico* and *Peru*, they were very desirous of discovering more distant Countries; and the Projects of the famous *Christopher Columbus* being still talked of amongst them, and his Notions being daily better understood, many of the Viceroy's were desirous of obliging the King their Master, enriching themselves, and acquiring Reputation, by becoming the Patrons of great Discoveries: With this View they frequently fitted out Fleets to the North, to the West, and to the South, in hopes of discovering the Countries between the *East* and *West Indies* more perfectly; and of these Discoveries they sent over large Accounts into *Spain*, of which we shall have Occasion to speak copiously in another Place. But, of all the Discoveries that were, by this means, made, that which occasioned most Discourse was, the finding of the Islands of *Solomon* by *Alvarez de Mendoça*, about the Year 1527. concerning which Islands the *Spaniards* had very distinct Accounts, but destroyed them all by express Order from *Spain*, on the Coming of *Sir Francis Drake* into the *Santib Seas*; but, after that Fear was blown over, the Desire of finding those Islands was revived; and this Captain *Pedro Fernandez de Quiros* made Two Voyages for that Purpose, about the latter End of the Sixteenth Century; but the exact Time does not appear. We know

however, that he was patronized and protected by the Viceroy of *Peru*.

2. This Gentleman *Don Pedro* made a Voyage to *Spain*, where, in the Year 1609. he presented several Memorials to the Court, desiring Assistance for the Conquest and Settlement of these new-found Countries, in respect to which, he avers, that he had spent great Sums of Money in Fourteen Years Time, and had travelled 20,000 Leagues by Sea and Land, in order to bring this Discovery to bear. It is from this Memorial, of which there are still several Copies remaining, some larger, and some more concise, that we are enabled to give any Account of his Discoveries. In this Memorial, he first represents to his Catholic Majesty, that the Continent he desired to settle was equal in Bigness to *Europe* and the *Lesser Asia* taken together, lying all in the Torrid Zone, and therefore, in his Opinion, like to be extremely rich. He says, that it ought to be esteemed the Fourth-part of the Globe; but, in this respect, his Meaning is not very clear. The best Interpretation, that I have met with, is this; That he reckons *Europe*, *Asia* and *Africa* the First Part; the *East Indies* the Second; *America* the Third; and this new-found Country the Fourth. As for the Extent of it, he speaks partly from his own Knowledge, but mostly from Conjecture, having discovered only

only that Part, which lay in or near 15° South Latitude.

3. As to the People, he reports, that they were of various Complexions; some white, some black, some tawny: But is positive, that the Country he saw was very well-peopled, and very well cultivated; the Inhabitants generally of a quiet and peaceable Disposition, having many Canoes, and other Vessels, in which they transported their Commodities from one Place to another. He describes very particularly the Plants, Trees, Beasts, Birds, and Fishes, of this Country, affirming, that it produced all Things necessary to human Life within itself, together with Gold, Silver, Pearl, Nutmegs, Mace, Ginger, and other Spices for Exportation, abounding likewise with vast Quantities of Sugar-canes, very large, and excellent in their Kind. He describes particularly the Bay of *St. James* and *St. Philip*, which, he says, is very large, as well as very safe and commodious. Another Haven he mentioned, to which he gave the Name of *La Vera Cruz*, capable, according to his Account, of holding 1000 Ships, with safe Anchorage every-where. This Haven, he adds, is in the Neighbourhood of Seven fine Islands, One of which he had viewed and surrounded, finding it about Fifty Leagues in Circumference; and this Haven, according to his Account, lies in 15° 40' South Latitude. He expatiates on the many Advantages that might arise from a Settlement there; and insists particularly on its being the properest Means for uniting the large Dominions, which his Catholic Majesty had already acquired, as well in the *East Indies*, as in *America*, as lying between both, and affording thereby an Opportunity of carrying on an easy and beneficial Trade with either: All which he offers to demonstrate at large to such Commissioners, well skilled in these Matters, as his Majesty should be pleased to appoint. But whether, in consequence of these Memorials, any such Commissioners were appointed, or whether, in pursuance of their being appointed, these Projects of Don *Pedro Fernandez de Quiros* were examined and approved, we have no kind of Proof.

4. After insisting on the Fertility of the Soil, the Convenience of the Ports, and their commodious Situation, he commends the Wholsomeness of the Air, which he declares to be such, that, notwithstanding he had a considerable Body of Men, who, like himself, were Strangers to the Place, exercised, while they were there, with continual Labours, exposed constantly to the open Air, often hot, and sometimes exposed to the cold Dews; yet were none of them taken sick. As to the Natives, they found them strong, healthy, and many of them very old, tho' they laboured hard, and lay upon the bare Ground; which, as he very justly observes, is a pregnant Instance of its Wholsomeness, since, if it were a moist, marshy Soil, like that of the *Philippines*, the Inhabitants would certainly raise their Dwellings upon Piles of Wood, as is usual in those Islands. He likewise takes notice, that Fleth and Fish were often kept there Two Days, and were perfectly sweet. The Fruits of that Country, gathered green, he carried back with him to *Mexico*, found, and well tasted. Besides all these Blessings, enjoyed by the Southern Continent in common with other fruitful Countries, he remarks the following Prerogatives, which distinguish it from, and render it superior to, any of the Provinces of either of the *Indies*; such as that there are no Thistles, Briars, or Thorns, that grow there; no Fens or Marshes; no Snow upon the Mountains; no standing Waters in the Fields or Meadows; no Serpents, or venomous Creatures of any Kind, in the Grass or Woods; no Crocodiles in the Rivers; no Worms among their Corn or Grain; no Gnats, stinging Flies, or any other Vermin whatever; For these Reasons, he makes no Doubt, that it ought to be preferred to all the Conquests made by the *Spaniards* in either of the *Indies*.

5. The Account he gives of his taking Possession of this Fourth-part of the Globe is very remarkable, and therefore I shall give it the Reader in his own Words, which may serve as a Specimen of the whole Performance, and convince the Reader of the Expediency of giving him an Extract only of the rest. "Such, Sire, says he, in the Seventh Article of his Memorial, are the Greatness and Goodness of the Countries which I have discovered, of which I have already taken Possession in the Name of your Majesty, and un-

der your Royal Bauuer, as appeared by the Acts, which I keep safely in my Power, whereunto I proceeded after this ensuing Manner: First, (Sire) we erected a Cross, and built a Church, in Honour of our Lady of *Loretto*. Then we caused Twenty Masses to be celebrated there; and our Troops made haste thither, to gain some Indulgences granted on *Whitsunday*. We also made a solemn Procession, and observed the Feast of the Blessed Sacrament, the which was carried in Procession, your Banneret being ever displayed, and marching before it, thro' a great Circuit of Countries, which were honoured with the Presence of the same. In Three several Places we set up our Title, in every One of which we prepared and erected Two Columns, with the Arms of your Majesty tricked and garnished thereupon; so that I may, with good Right, affirm, that, since this will challenge to be One of the Parts of the World, the Impress of *Plus ultra* is accomplished; and, because it stretched unto the Continent, whether it be forward or backward can be no great Matter. The Bounds of your Dominions are, with much Spaciousness, enlarged. Now, all this which I have performed, receiveth its Root from this faithful Zeal, which I bear unto your Majesty, that, to all the Titles, which you already possess, you may adjoin this, which I present; and that the Name of *La Austrialia del Espiritu Santo* may be blazoned and spread over the Face of the whole World, to the Glory of God, who hath revealed this Country, and hath given me the Grace to guide my Course thither, and to return to the Presence of your Majesty, before whom I present and prostrate myself with the same Affection and Zeal unto this Work, which I had before, and which hath grown up with me, as it were, from my Cradle; and, for the Nobleness and Worth thereof, I do still tender and cherish the same with the greatest Love that can be."

6. In order to give still greater Force to this Memorial, he observes at the Close, that if this new-discovered Southern Country should be sought for, and seized by any of the Northern Nations, Enemies to the Crown of *Spain*, and Heretics besides, his Catholic Majesty would not only lose the mighty Advantages before-mentioned, but might likewise find himself so terribly distressed in both the *East Indies* and the *West*, as might engage him to spend much more to recover, than was now necessary for the securing and settling this noble Country. He likewise observes, that the Gallies were on the point of departing; and that therefore it was necessary his Majesty should take some speedy Resolution, that he might be the sooner and better able to perform all that he had promised; the rather because this was the Eighth Memorial he had presented, and the Fourteenth Month he had spent in the *Spanish* Court, without being able to obtain any satisfactory Answer. In Return to this, he is said to have had an Order to levy 1200 Men in *New Spain* for the Execution of this Project, and to receive 500,000 Pieces of Eight for the necessary Expences of his Undertaking. But, after all, the Affair came to nothing, tho' the *Spanish* Court had then to good an Opinion of it, that they ordered several of the Memorials he had presented to be printed at *Seville* in 1610.

7. But, besides these, there is still extant a large *Spanish* Memorial, in which the Substance of what we have before related is contained, with such other Circumstances, as seem to speak it his last Effort; and perhaps it was upon that Memorial the Order was made, which is before-mentioned. In that Memorial he says, that he discovered 20 Islands, the Names of which he mentions, besides the Country before described, in which is *Babya de Sant Felipe y Sant Iago*, i. e. the Bay of *St. Philip* and *James*, and *Puerto de la Vera Cruz*, i. e. the Harbour of *Vera Cruz*, where they staid with Three Ships Thirty-six Days. He believed they were all one Country, from their high and double Mountains, and by the Greatness of the River *Jordan*, which appeared from an Information lodged at *Mexico*, to which he refers. He says further, that, in the Isle *Taumaco*, which is 1250 Leagues from *Mexico*, they staid Ten Days; and a Lord of that Island, who was called *Tamay*, a Man of Sense, tall and full-bodied; his Colour of a Sea-ware, or reddish; grey-eyed; with an high Nose; his Beard and Hair curled; of a grave Aspect; was of great Service to them, with his

People, in and converted were other I above Sixty They lay from the large 10 lesser Islands Arms, and, laying his F would be T were People and Canibals next Day, he in the same loes, Fowls grunting, & exprefs to t said, they ha and might T *Taumaco*, th were drown called *Pedro*, upon asking cont Times, contradicted *Chicayana*, from it. 8. He said *mace*, was another Two, *Spaniards*, another Island Sailing, was many who w Country, fu Canoes. H other Advan went thither a good Har and *James*; might coast from *Acaju* There, he Sailing, wit called *Fanos* Rivers; the Natives from Islands *Pila* said, that, i been in man *Pouro*, where him from t coloured Po said, the Po the Bay of heavy, some their being *Pedro* some much of the *Manicola*. he talked m and of the them; and them; whic Judges, as

People, in helping them to Water. He came on board, and conversed by Signs. He inquired of him, if there were other Islands round them, and if inhabited. He named above Sixty of them, and a great Country called *Manicola*. They lay from South South-east to North-east. To describe the large Islands he made large Circles, and smaller for the lesser Islands; and, for the great Country, he opened his Arms, and, pointing to the Sun, shutting his Eyes, and laying his Head upon his Hand so often, made out, that it would be Ten Weeks in sailing round them; in which were People of all Colours, some Friends, some Enemies, and Canibals; which he signified, by biting his Arm. The next Day, he saw many of his People in the Bay, who agreed in the same Account; and said, they had Cows and Buffaloes, Fowls and Swine; which they signified by crowing, grunting, &c. to make them sensible of what they would express to them; and, upon shewing them a Pearl, they said, they had of them; and in every thing told the Truth, and might be depended upon. When they sailed from *Taumaco*, they took Four of the Natives with them; Three were drowned in swimming, and the other, whom they called *Pedro*, came to *Mexico*; and, after learning *Spanish*, upon asking him Questions in different Companies at different Times, he never varied once in his Account, or ever contradicted himself. He was a Native of an Island called *Chicayana*, greater than *Taumaco*, and Four Days Sailing from it. He said it was plainer, and abounded more with Fruit. The Natives were most of his *Indian* Colour, with lank Hair; yet some were white, with red Hair; some Mulattoes, with half-curved Hair; and some were woolly-headed. In this Island were many Kinds of Oysters, with Pearl of several Sizes, in shallow Water.

8. He said farther, that, Three Days sailing from *Taumaco*, was another Island, called *Guatopo*, greater than the other Two, peopled with some as white as the common *Spaniards*, with red and black Hair. He said, that, from another Island called *Tucopia*, at the Distance of Five Days Sailing, was a great Country called *Manicola*, inhabited by many who were fair, as well as Mulattoes. It was an high Country, full of Rivers, which could not be passed but in Canoes. He talked much of the Greatness, Fertility, and other Advantages of that Island; that he and other *Indians* went thither in a great Canoe or Periagua; and he saw there a good Harbour, of a straiter Entrance than that of *Philip* and *James*; that it was betwixt Four Rivers; and that they might coast along that Country more Days than in going from *Acapulco* to *Mexico*, without seeing the End of it. There, he said, are many Pearl-oysters. In Three Days Sailing, with a stiff Gale, from *Taumaco*, is another Island called *Panosano*. It is low and plain, in which are great Rivers; the Country very fertile and populous; and the Natives some fair, and some Mulattoes. Near this are the Islands *Pilar* and *Nupon*. In all these are Pearl-oysters. He said, that, in *Taumaco*, was a great *Indian* Pilot, who had been in many more Islands, and in one great Island called *Pouvo*, where the People were very warlike. He brought with him from thence some Fish-gigs, and Arrows which had coloured Points. Upon shewing him a Piece of Plate, he said, the Points were of that Colour. *De Quiros* says, that, in the Bay of *Philip* and *James*, were many black Stones, very heavy, some of which he carried to *Mexico*, in which, upon their being assayed, they found Silver. Upon shewing *Pedro* some of these, he said, that, in *Taumaco*, there was much of that Sort, which they called *Teraque*; and also in *Manicola*. When he came to be well understood in *Spanish*, he talked much of the Populousness of their several Islands, and of the Variety of different Colours of such as inhabit in them; and of other great Countries South-east and West of them; which agrees exactly with the Conjectures of the best Judges, as well as the Experience of great Discoverers since.

9. It is a pretty extraordinary Consequence, that many People have drawn from the Negligence of the *Spaniards* in prosecuting the Discoveries of these Countries; which is, that they took these Relations of *de Quiros* for Fictions; and, upon this wife Foundation, will have us believe, that there are no such Countries as the Southern Continent or Islands by him described. This Opinion of theirs, however, is founded upon a false Fact; for his Proposals were not rejected at Court, but he met with such Delays on his Return to the *Indies*, that he died before he was able to undertake any thing. Add to this, that all who have navigated these Seas, or any Part of them, instead of confuting, have confirmed what he has delivered in relation to the Islands on this Southern Coast, and their Inhabitants. The Reader will hereafter meet with a Voyage round the World, undertaken for the Discovery of these Southern Countries by the *Dutch*, so lately as the Year 1721, wherein he will find, that they met with most of the Islands mentioned in *le Maire's* Voyage, and found the Inhabitants of other Islands, discovered by themselves, answer the Description given by *de Quiros* very exactly; for they were perfectly civilized, dwelt in woollen Houses, made use of earthen Vessels, had Flutes and Drums for Music, divided their Plantations regularly, and fenced them with Poles; all which Circumstances will be more particularly taken notice of, when we come to speak of that Voyage.

10. In the mean time, I shall conclude this Section with observing, that it has been now, for many Years, a settled Maxim in the *Spanish* Politics, not only to lay aside all Thoughts of prosecuting these Discoveries, but even to treat the Relations published of them by their best Authors as absolute Romances; and this with very good Reason: For, finding themselves so weakened, as to be no longer in a Condition to undertake any Expedition of this Nature to any great Purpose, and foreseeing, that, if they should establish themselves in Two or Three small Islands, it would only serve to encourage other Nations to dispossess them, and thereby gain not only the Settlements from whence they might be driven, but enable them to fix themselves in the Middle between their *American* Dominions and the *Philippine* Islands, to their inexpressible Prejudice, they very prudently forego a present Advantage, rather than run the Risque of such a future Inconvenience: Yet, however wise this Conduct may be in them, it is very wonderful, that other Nations should not see through it, especially at a Time like this, when an Attempt might be made at no very great Expence, and with very little Hazard, because, at all Events, our Ships might go safely round to the *East Indies*, as is evident by what has been so very lately done by Commodore *Anson*.

11. If a Project of this sort should ever come to be maturely weighed, there is no great Reason to fear, that we might find a Way to indemnify ourselves for the Loss of the *Assiento*, since, at the worst, if any Establishment could be made, either on this Southern Continent, or in some of the Islands near it, the *Spanish* Court, upon a Peace, would be glad to renew that Contract, in Consideration of our abandoning it, if that would content us; but, if we neglect this Opportunity, it is highly probable, that some other Nation will soon be before-hand with us, since there is nothing more certain, than that Schemes of this sort are daily thought of in Countries, where Commerce and Navigation are, as it were, in their Infancy, and where, as yet, the Tyranny of exclusive Companies is not known. But it is now Time to proceed in our History of Circumnavigations, and to shew how soon the Streights of *Le Maire* grew into Credit with those, who affected to doubt the Truth of their first Discovery, and who, very probably, would have buried it in Oblivion, if the Relation in our last Section had not put it absolutely out of their Power.

SECTION XI.

The Voyage of the Nassau Fleet round the Globe, under the Command of JAQUES LE HERMITE.

1. *The Motives which induced Prince Maurice, and the States, to undertake this Expedition.* 2. *An Account of the Strength of the Nassau Fleet.* 3. *Remarks on the Dutch Administration at that Time.* 4. *The Departure of the Fleet from Holland on April 9. 1623.* 5. *Accidents that befel them at their first setting out.* 6. *The Vice-admiral converts a Dutch Renegado.* 7. *A Mutiny punished on board the Overysfel.* 8. *The Fleet arrives in the Road of St. Vincent.* 9. *Description of the Islands of St. Vincent and St. Antonio.* 10. *They arrive in the Road of Sierra Leona.* 11. *A Description of Sierra Leona, and the Country thereabouts.* 12. *Anchor in the Road of Cape Lopes.* 13. *One of their Surgeons detected in poisoning several of their Men, for which he was beheaded.* 14. *Their Arrival and Transactions at the Island of Annobon.* 15. *Description of that Island.* 16. *Continue their Voyage for the Streights of Le Maire.* 17. *Their Passage through that Streight.* 18. *Observations on that Coast.* 19. *An Account of the Terra del Fuego, and its Inhabitants.* 20. *Their Passage into the South Sea.* 21. *Arrival at the Islands of Juan Fernandez.* 22. *Description of those Islands.* 23. *Disposition made for attacking the Spaniards.* 24. *Several Attempts made on the Port of Calao de Lima.* 25. *Reasons why those Attempts miscarried.* 26. *Other fruitless Attempts.* 27. *Death of the Admiral Jaques le Hermite.* 28. *They endeavour to treat with the Spaniards.* 29. *On the Refusal of the Spanish Viceroy to ransom their Prisoners, they hang them up at the Yard's-arm.* 30. *Several Disputes with the Spaniards.* 31. *The Town of Guaiquil taken by a Detachment from the Fleet.* 32. *They sail from the Island of Lima.* 33. *Make a fruitless Attempt upon Puna, which at last they burn.* 34. *Sail from thence for Acapulco.* 35. *Prosecute their Voyage from that Port to the East Indies.* 36. *Arrive at Guan, One of the Ladrones.* 37. *Proceed thence to Ternate.* 38. *The Fleet separates at Batavia.* 39. *The Admiral dies in his Passage Home, and his Ship arrives in the Texel, January 21. 1626.*

IT was observed very early, by the best Politicians in the United Provinces, that the most effectual Method of distressing his Catholic Majesty, would be the sending a Fleet into the South Seas, there to take the Ships of his Subjects, plunder the Coasts of his extensive Dominions, demolish the strongest of his Fortifications, and thereby lay him open to the Insults of future Squadrons of smaller Force. But it was thought necessary for the Accomplishment of this great Design, that larger Ships, better manned, and provided with more authentic Commissions, than the Commanders of other privateering Squadrons, should be sent to execute this Commission. It was likewise resolved, that this great Fleet should not enter the South Seas by the Streights of Magellan, but through the new-found Streights of *Le Maire*, that they might be sooner in a Condition to act effectually against the Spanish Trade, and the Spanish Settlements. Prince Maurice, of Nassau, was then High Admiral of Holland, and at the Head of the Administration; and he concurred very heartily in this Design, advancing a considerable Sum of Money towards it himself, and affording it all the Countenance and Encouragement that was in his Power. In the Autumn, therefore, of the Year 1622. a final Resolution was taken by the States General, and their Stadtholder Prince Maurice, to put this important Design in Execution, by fitting out a Fleet, consisting of no less than Eleven Ships of War, besides smaller Vessels; and the necessary Instructions for this Purpose were given to the several Admiralties of Holland, and the East India Company, who appointed the following Commissioners to have the Care of arming and equipping that Fleet, viz. *Hugo Maits van Holy, Albert Jacobini, and Abraham Brunningb*.

2. By the Care and Industry of these worthy Gentlemen, all the necessary Preparations were forwarded with such Vigour and Diligence, that, by the Spring of the Year 1623, the Fleet was in a Condition to sail. The principal Officers were then appointed, and the Person made Choice of for Admiral was *Jaques le Hermite*, an able and accomplished Seaman, who had been long in the Service of the East India Company, was accustomed to an extensive Command, and had gone through the Hardships and Fatigues of several long Voyages. Their Vice-admiral was *Hugo Schapenham*, a Man of a sweet Disposition, and generally esteemed equal, in point of Prudence and Capacity, to the great Fruit that was reposed in him. The Ships fitted out by the Admiralty of Amsterdam were, 1.

The *Amsterdam*, as Admiral, a Ship of 800 Ton, carrying 237 Men, commanded by Captain *Leenders Jacobson Steik*, having for Supercargo *Peter Wely, Engelbert Schutte* commanded the Soldiers on board, *Frederic van Renswygom* held the Post of Fiscal or Judge-advocate, *John van Walbeck* was Engineer of the Fleet, and *Justin van Vogelstein* Engineer extraordinary; she carried Twenty Brafs, and Twenty-two Iron Cannon. 2. The *Defti*, as Vice-admiral, of the like Burden of 800 Ton, carrying 242 Men, her Commander Captain *Cornelius de Witte*, her Force Twenty Brafs, and Twenty Iron Cannon. 3. The *Eagle*, of the Burden of 400 Ton, carrying 144 Men, commanded by Captain *Meyderi Egbertson*; her Force Twelve Brafs, and Sixteen Iron Cannon. 4. A Yacht, called the *Greybound*, of the Burden of Sixty Ton, commanded by Captain *Solomon Willmson*, carrying Twenty Men, and Four Pieces of Brafs Cannon. The Admiralty of Zeland equipped for this Expedition, 1. The *Orange*, of the Burden of 700 Ton, carrying 216 Men, having on board the Rear-admiral *John William Versboor*, and under him was Captain *Laurence John Quiryren*. The Admiralty of Holland fitted out: 1. The *Holland*, of the Burden of 600 Ton, carrying 182 Men, having on board *Cornelius Jacobson*, Counsellor to their Admiral, but commanded immediately by Captain *Adrian Toll*; her Force consisted of Ten Pieces of Brafs, and Twenty of Iron Cannon. 2. The *Maurice*, of the Burden of 360 Tons, carrying 169 Men, commanded by Captain *James Adrianfon*, having Twelve Brafs, and Twenty Iron Cannon. 3. The *Hope*, of the Burden of 260 Ton, carrying Eighty Men, commanded by Captain *Peter Hermanfon Slobbe*, having Fourteen Iron Cannon. The Admiralty of North Holland sent forth, 1. The *Concord*, of the Burden of 600 Ton, carrying 170 Men, commanded by Captain *John Ysbrandtze*; her Force consisted of Eighteen Brafs, and Fourteen Iron Cannon. 2. The *King David*, of the Burden of 360 Ton, carrying Seventy-nine Men, commanded by Captain *John Thomafon*, carrying Sixteen Pieces of Brafs Cannon. 3. The *Griffin*, of the Burden of 320 Ton, carrying Seventy-eight Men, commanded by Captain *Peter Cornelifon Hurdloop*, having Fourteen Pieces of Iron Cannon. The whole Force of this Fleet consisted in Eleven Sail of stout Ships, carrying 1637 Men, of which 600 were regular Troops, divided into Five Companies, consisting of 120 Men each, and carrying 294 Pieces of Brafs and Iron Cannon. The East India Company contributed largely to the Expence, though it

Safia, where there were several Dutch Ships, in order to put on board them the Merchandize taken in the Prizes, that it might be immediately transported to *Holland*. On the 12th, they came to an Anchor in that Road, where they found the *Overyffel*, a Dutch Man of War, and Three other Vessels of the same Nation, and Two other Ships, One English, and One French. The Captain came on board the Admiral the next Day, and informed him, that his Ship's Company had mutinied, and had deprived him of his Command. The Admiral immediately ordered the Authors of this Disturbance to be put in Irons on board his Ship, directing, at the same time, the *Overyffel* to take the best Part of the Sugar on board, and to prepare for her Return to *Holland*. It was resolved also to send back with her the Yacht called the *Greyhound*, on account of her heavy sailing, and to keep the little Spanish Ship in her stead, on board which were put the Captain of the Yacht, and his Crew. They likewise resolved to keep another of the Spanish Vessels, because she was new, well built, and a good Sailor, and because they were but indifferently provided with Yachts. On the 18th, the Prisoners from on board the *Overyffel* were examined; and, the Captain having desired Seven Officers of the Fleet to assist him, they were brought to their Trials on the 21st, when Four, who were fully proved to have formed a Design of running away with the Ship, were hanged at the Yard's-arm; and Three more, who were deep in the Mutiny, but not the Authors of it, were first Keellawled, and then put on board the Fleet to serve without Wages. To speak the Truth, however, one great Cause of this Mischief was, the Captain's not knowing well how to maintain his Authority. On the 24th, the Fleet sailed out of *Safia* Bay, consisting now of Sixteen Sail; and, in the Evening, the *Overyffel*, the *Greyhound*, and the Two Barks, quitted the rest, in order to return to *Holland*.

8. On July 5. the Fleet anchored in the Road of *St. Vincent*, which is extremely safe and commodious; and, as it was well known, that the rainy Season would not commence there in a Month, and that it already began to rain at *Sierra Leona*, it was resolved to disarm the Ships here, and to do every thing that was intended to be done there, except taking in Water, which could not be done, because the Hoops of their Water-casks were bad, and there was no Wood in that Neighbourhood to repair them. The Rear-admiral was thereupon ordered to go to the Island of *St. Antonio* with Three Shallops, and to carry with him some of the Portuguese Prisoners, to try, if possible, to obtain Leave to gather Lemons and Oranges by fair means, since otherwise they must be taken by foul. It was also resolved, that all the sick Men should go on shore, and the Two Companies should be left there as a Guard, and be regularly relieved once a Week; they likewise dug a Well on Shore, which soon furnished them with good Water. On the 7th, the Rear-admiral returned from *St. Antonio*, and reported, that he had been very well received by the Negroes, who shewed him vast Quantities of Oranges and Lemons, together with Fig-trees, the Fruit of which were not ripe. They likewise put into his Hands Four Letters, the last of which was dated from on board the *Leyden*, all certifying, that the Dutch Ships, which at any time put in there, had been received well. On the 9th, there was a Sermon preached in the Island of *St. Vincent*. They took there every Night a great Number of Tortoises, and as much Fish as they could tell what to do with; but they found it difficult to get any Goats at first; but by degrees they grew better acquainted with the manner of hunting them, and every Ship got at least Fifteen or Sixteen in a Day for the Use of the Company. On the 22d, the Vice-admiral embarked on board the new Yacht, which was now called the *Greyhound*, taking with him Two armed Shallops, and all the Prisoners, except the Spanish Count *Oforio*; these they landed on the Island, giving them their Liberty, and allowing each Man Twelve Reals, that is, about an English Crown, for his Subsistence. There they supplied themselves with about 22,000 Oranges, and left a Letter with the Negroes, in the nature of a Certificate of their good Behaviour. On July 25. they sailed from these Islands, in order to prosecute their Voyage.

9. The Islands of *St. Vincent*, and *St. Antonio*, are situated the farthest to the West of all the Islands of the Cape de Verd; they lie from $16^{\circ} 30'$ to 18° North Latitude, at the Distance of about Two Leagues from each other. The Bay of *St. Vincent*, where they anchored, lies in $16^{\circ} 56'$; they found 18, 20, and 25 Fathom Water, the Bottom being a firm Sand. The Island of *St. Vincent* is rocky, barren, and uncultivated, having very little fresh Water. They found, however, a small Spring, which might have served Two or Three Ships; but, by digging Wells, they obtained plenty of Water, which they thought tolerable, though it was somewhat brackish, to which they attributed the bloody Flux, that began soon after to reign in their Fleet. The Goats there are very fat, and the best-tasted in the World. The Tortoises they took were from Two to Three Feet long, and they caught them as they came ashore to lay their Eggs, which they cover with Sand, and then leave them to be hatched by the Sun. The Season of their laying is from August to February; all the rest of the Year they remain in the Sea. The Sailors esteemed them a wholesome and pleasant Food, tasting rather like Flesh than Fish. This Island is absolutely desert, but once a Year the Inhabitants of *St. Lucia* come thither, in order to catch Tortoises for their Oil, as also to hunt Goats for the sake of their Skins, which they send to Portugal, and the Flesh they carry to *St. Iago*, where it is salted, dried, and exported to Brazil. There are no Fruit-trees in this Island, except a few wild Figs, which grow in the very Heart of it; and the only Product of the Island, besides, is Coloquintida, which is a very rough Purge. The Country is excessively dry, excepting the rainy Season, which begins in August, and ends in February, though not very regularly. The Island of *St. Antonio* is inhabited by Negroes, to the Number of about 500, Men, Women, and Children; they live there as well as in the other Islands, chiefly upon their Goats. There is a little Cotton, and but a little. On the Sea-side there is a vast Plantation of Oranges and Lemons, where they can gather 50,000 in a Season. The Negroes very readily trucked them for Mercury Goods; they saw neither Hog, Sheep, or Fowl, upon the Island. On the 4th of August, they found themselves in $11^{\circ} 30'$ of Latitude, the Wind at South-west. They endured, from the Time they sailed from the Island of *St. Vincent*, continual Rain; the Inconveniencies arising from which, joined to the Effects of the bad Water they drank there, occasioned an epidemic Disorder, which carried off abundance of People.

10. On the 11th, they saw the high Coast of *Sierra Leona*; and, on the Eleventh, they anchored in the Road; and the Vice-admiral went ashore in order to find a proper Watering-place, and where they might hale the *Greyhound* on shore, to stop her Leak. When he came back, he brought with him some Negroes, who desired to see what Ships they were that lay in their Road, leaving Part of his Crew as Hostages. On the 13th, the Negroes insinuating on a Present before they would suffer any to go on shore, the Admiral sent Two Bars of Iron, Two Pieces of Cloth, and a few Ribbands, to the King's Brother, and to the Captain of the Town, with which they were very well content. The next Day they came on board, to make a Visit to the Admiral, to whom they presented an Elephant's Tooth, and some Fowls, for which they were amply recompensed. The King's Brother had on a Suit of striped Cloth, made after the Dutch Fashion, with blue Breeches, and scarlet Slippers; as for the Captain, he was dressed after the ordinary Fashion of the Country, and seemed to be a Man who had his Reputation much at Heart. The 15th, some of the Crew of the Vice-admiral found some Nuts ashore that very much resembled Nutmegs, only the Kernels were somewhat bigger; they eat them, and, as they had a fine Taste, made pretty free with them; but they had scarce got on board, before one of them dropt down dead upon the Deck; and, before he was thoroughly cold, purple Spots appeared all over him; but, by the taking of proper Medicines, the rest escaped. On the 25th of August, the *Maurice* had like to have been lost through Carelessness; for, having careened her, they forgot to shut the Scupper-holes; and, by this means, she had

had Eight Foot Water in her Hold before it was perceived. On the 28th, the Captain of that Ship died, as did also the Clerk and Supercargo of the *Amsterdam*. The Three Seamen that had been punished for the Mutiny in the *Overyffel*, having behaved very well since they came on board the Fleet, were now allowed Pay.

11. On the 4th of September they weighed Anchor from *Sierra Leona*, which is a Mountain on the Continent on the South Side of the Mouth of a River, which discharges itself into the Sea on the West Coast of *Africa*. The Road in which Ships usually anchor, lies in the Latitude of 8° 20' North. This Mountain is very high and thick, covered with Trees, by which means it is easily known by such as approach it from the North, there being no Mountain of the like Height upon that Coast. There grow here a prodigious Number of Trees, that produce a small kind of Lemons, resembling those of *Spain* in Shape and Taste; they are called *Limasfes*, and are very agreeable and wholesome, if not eaten to Excess. But this Fleet arriving at the Time they were in Perfection, and the Inhabitants giving them Leave to take as many as they pleased, they eat of them so intemperately, and, in Conjunction with the bad Air, they increased the Bloody-flux to such a Degree, that, between the 11th of August, and the 5th of September, they lost Forty Men. There are also at *Sierra Leona* abundance of Palm-trees, and some Ananas, plenty of all sorts of Wood, and a Watering-place exceedingly convenient opposite to the Road. On the Rocks they found the Name of *Francis Drake*, and other *Englishmen*, who had been there.

12. On the 4th, the Admiral fell sick. From the 11th to the 28th, they sailed with a South Wind; and, though it is looked upon as certain, that there are strong Currents in the Gulph of *Guinea*, yet they were not sensible of them, but found every Day's Run agree perfectly well with their Charts. On the 29th, they found themselves off the Island of *St. Thomas*; and, on the 1st of October, they anchored in the Road of *Cape Lopes*; but, as they found the Water there very thick, stinking, and but a small Quantity, they resolved to sail to the Island of *Annobon*; but the Wind, proving contrary, drove them back, so that they had much ado to recover the Cape. On the 4th in the Evening, both the Admiral and Vice-admiral struck on a Bank of Sand, which occasioned a great deal of Trouble and Confusion in the Fleet; but, however, with great Care and Industry, both Ships were got off. The Admiral having assisted in Person in the Shallops that were employed for this Purpose, the better to encourage the Seamen, and keep every Man to his Duty, it brought upon him a Relapse, which he never recovered. On the 6th, the Fleet endeavoured to regain the Road of *Cape Lopes*, some of the Sailors having assured their Officers, that, by digging Wells on the Coast, they might find good Water. On the 7th they came to an Anchor, and sent a Captain on shore to put this Advice in Execution; who, on his Return, reported to the Admiral, that he had been at the common Watering-place, where there was now Water sufficient for the whole Fleet. Upon which it was determined to water here, but to proceed nevertheless to the Island of *Annobon*, in order to procure other Refreshments for the Use of the sick Men, the Scurvy prevailing excessively in every Ship in the Fleet.

13. A very odd Affair fell out while they were at anchor here, which, for its Singularity, deserves to be mentioned. There were abundance of Seamen loit on board the *Maurice*, and it was observed, that many of these died soon after they had taken the Surgeon's Medicines, with Circumstances very suspicious. The Matter being debated in Council, and the Facts clearly proved, the Vice-admiral and Rear-admiral were directed to send for *James Verger* the Surgeon, and to examine him very closely. This they accordingly did, but to very little Purpose; for, notwithstanding all their Exhortations to confess, he could not be brought to say a Word; upon which they had recourse to the Torture, directing him to be drawn up to a great Height by a Rope, and then suddenly let fall, having great Weights at his Hands and Feet; which he not only endured with Constancy, but insolently told them, he gave himself no Pain about what Methods they

NUMB. 5.

thought fit to take. This Insensibility induced a Suspicion, that he had some Charm about him, which hindered his Feeling; upon which he was searched, and, in a little Bag, which hung about his Neck, they found the Skin and Tongue of a Serpent. On the 16th, they appointed another Examination, of which, when the Criminal had Notice by their coming to take him out of Irons, he sprung out of the Hands of the Men who were ordered to conduct him, and, though he was pinioned, threw himself over the Ship-side. A Trumpeter, who was near him, jumped after, and endeavoured to save him; but the Surgeon made such strong Efforts, that he had very near both drowned himself, and the Trumpeter; which a Sailor observing, threw himself into the Sea, and kept his Head above Water by Force, till the Shallop came and took them all Three up. After this Attempt, perceiving that he should be too strictly watched ever to meet with such an Opportunity again, he made the following free Confession: He said he was a Native of the City of *Louvaine* in *Flanders*, descended from *Spanish* Parents, and a Licentiate in Surgery and Physic: That he had wilfully destroyed Seven Men, because they gave him a great deal of Trouble, in order to be the sooner rid of them; that he was resolved to attempt some extraordinary Cures; and, in case he succeeded, to demand an Order from the Admiral to dine at the Captain's Table; which Favour if refused him, he resolved to poison the Admiral, Vice-admiral, and every Officer that he suspected being against his Request: that he had resolved to make a Contract with the Devil, and, for that Purpose, had invoked him often, but without Effect; that, since he had been in Irons, he had often attempted to destroy himself; and, with this View, had tried to suffocate himself with his Pillow. There appeared strong Reasons for suspecting him of other Crimes, but, being satisfied with this free Confession, the Council, which assembled on board the *Delft*, on account of the Admiral's being very weak, passed Sentence of Death upon him on the 17th; and the next Day he had his Head struck off on board his own Ship the *Maurice*, which put an End to an Affair that had given the Officers of the Fleet a great deal of Trouble.

14. On the 20th in the Morning, they had Sight of the Island of *St. Thomas*; but the Vice-admiral being sent to examine whether there was a good Road, and proper Refreshments to be met with there, he, on his Return, reported in the Negative; and the Wind continuing contrary, the Scurvy prevailing in the Fleet, and there being little Probability of their getting to *Annobon*, the Admiral directed a Day of solemn Prayer; and the Minister had Instructions to make a Discourse suitable to the Occasion, imploring the Divine Favour towards those, who were sick in the Fleet; the Preservation of those, who were yet in Health; and the giving an happy Issue to the Endeavours of the Officers to find a proper Place for Refreshment. They then steered their Course West, in order to meet with a South-east Wind. On the 29th, to their great Surprise, they saw the Island of *Annobon*, at the Distance of about Ten Leagues to the South South-west. That which made it appear extraordinary, was their missing it when they endeavoured to find it; and their falling upon it now, when they had quite altered their Course. On the 20th, they anchored in the Road of *Annobon*; and, the next Day, *Cornelius Jacobson* and the Fiscal went on shore, where they were received with a Flag of Truce; and the Governor *Don Antonio Nunez de Matos* gave his Consent, that they should deal with the Natives freely for whatever they wanted, take in Water, gather as many Oranges as they thought fit, and that they should place a Guard of Soldiers at the Watering-place, for the Security of their Seamen; upon this single Condition, that they behaved discreetly, and did nobody any Wrong. The Shallops came on board in the Evening, with Water and Oranges. On *November 1*. they obtained Forty Hogs, and a considerable Quantity of Fowls, in Exchange for Salt. On the 3d, they made the Governor a Present to the Value of 300 Livres; with which he was, by no means, satisfied. Besides, some of the *Dutch* Seamen had insulted the Negroes near the Watering-place, and had taken from them their Fowls, without paying them; which, with some other aggravating Circumstances,

provoked

provoked the Governor to such a Degree, that he was on the Point of arresting the Vice-admiral, and some other Officers, who were on shore; but, reflecting that they came in Confidence of the Promise he had made them, he suffered them to retire; but told them withal, that they should have a care another time of relying too much on the Word of any Officer; for that it was then in his Power to have carried them up into the Mountains, from whence all the Force of their Fleet could not rescue them, even if it had been twice as strong as it was. After this, they parted civilly on both Sides. To say the Truth, it was a great Indifference in the Vice-admiral *Cornelius Jacobson*, and many other Officers, to put themselves thus in the Power of a *Portuguese* Governor, upon his bare Word, and that without the least Necessity. In this Case therefore the *Dutch* Officers were greatly to blame, and the Governor deserved much Commendation, for not laying hold of Pretences so plausible to break his Promise. In this Island, a *Spaniard*, and a *Greek*, whom they had delivered from Slavery, deserted them.

15. The East End of the Island of *Annobon*, where the Road and the Village lie, is in $1^{\circ} 20'$ South Latitude. The Island is about Six Leagues in Circumference; the Land high, and tolerably good, inhabited by about 150 Families of Negroes, governed by Two or Three *Portuguese*, to whom they are extremely submissive. If any of them fail in their Duty, they are immediately sent away to *St. Thomas*; which is all the Punishment they have to fear; and indeed they are in the utmost Dread of it. The Island abounds in Bananas, Ananas, Cocoa-nuts, Tamarinds, and Sugar-canes; but what principally invites Ships to put in here to refresh, is, the great Plenty they have of Oranges. In the Three Days the *Dutch* Fleet remained here, they gathered upwards of 200,000, exclusive of what the Seamen eat on shore; and the Governor told them, that there had been several Ships there that Year, which had gathered more. These Oranges are of an excellent Taste, neither too sweet, nor too sharp, prodigiously large, and full of Juice; some of them weighed Three-quarters of a Pound, and tasted as if they had been perfumed. They are ripe all the Year round; but there is a certain Season, in which they are best, and fittest for keeping. That Season was past when the *Dutch* were there; for they were then mostly too ripe, and began to rot. They have likewise Lemons in the Island. And, with respect to Cattle, they have Oxen, Cows, Goats, and Hogs also in Plenty; which the Negroes sell for Salt. On the South-east Part of the Island there is a good Watering-place; but difficult to find, and commanded by a Stone Breastwork, from whence the Negroes might do a great deal of Mischief to any, who should attempt to water by Force. They have also in *Annobon* a good deal of Cotton, which they gather, and card, to be sent into *Portugal*. The Natives are treacherous, and therefore ought to be cautiously dealt with.

16. On *November* 4. they sailed from *Annobon*. On *January* 6. 1624. they were in the Latitude of $44^{\circ} 40'$ South, when they saw many Sea-mews, and much Herbage floating on the Water; whence they conjectured they were not far from the Southern Continent. On the 19th, the Sea appeared as red as Blood; which, they afterwards found, proceeded from an infinite Number of small Shrimps floating on its Surface. On the 26th, being in the Height of $51^{\circ} 10'$, they had a strong Gale from the South-west, so piercingly cold, that a poor Seaman, who was in Irons, had his Legs frozen. This cold Wind lasted Twenty-four Hours. On the 28th, they lost Sight of their Bark, which they never beheld any more. There were in it Eighteen Men, Three of them *Portuguese*; and the Vessel was very indifferently victualled. They were afterwards informed, that their poor People, having, in vain, used their utmost Endeavours to join the Fleet, resolved to return to *Holland*; but, wanting Water, they entered the *Rio de la Plata*, and ran up, till they found the Water fresh; after which, they continued their Voyage, suffering incredible Fatigues, and all the Extremity of Want, till they arrived on the Coast of *England*, where, being chased by a *Dunkirk* Privateer, they ran their little Vessel ashore, and afterwards arrived safe in *Holland*. On *February* 1. they saw Land at the Distance of about Five Leagues to the South South-west,

which was *Cape de Pennas*, and which looked, at that Distance, like a Range of high Mountains, covered with Snow. It was impossible to know, whether the Entrance of the Straights of *le Maire* was properly laid down in the Charts, with respect to its Distance and Bearing, by their Navigation. The Reason was, because the Pilots had got into a very bad Custom of setting down half the Ship's Run when within Sight of Land, and doubling it when out at Sea, and apprehensive of making Land. As their Instructions restrained them from touching on the Coast of *Brasil* to the North of *Rio de la Plata*, they did all they could to discover that River; but soon found, that the South-west Winds had driven them much to the East; which ought to be a Warning to such as endeavour to pass the Straights of *le Maire*, to fall in, as soon as may be, with the *Brasil* Coast, as the most likely Way to meet with Winds favourable to their Voyage.

17. On *February* 2. they found themselves at the Mouth of the Strait; which they had never so much as suspected, if *Valentine Janzon*, the Pilot of the Vice-admiral, who had passed them in the *Spanish* Caravels, had not known them by the high Lands on the West Coast; which made him continue his Route with the Ship under his Care. The Mouth, however, is easily distinguished, because the Country on the East, which is called *States Land*, is mountainous, but withal broken, and very uneven; and the West Side, which is called *Maurice Land*, has several small round Hills close to the Shore. When they gained the Entrance of the Straights, they saw Two Ships at Anchor in the Bay, which they afterwards called *Valentine's Bay*, where they had anchored, if they had not been prevented by a Shallop from One of the Ships, which, by Signals, made them apprehend, that it was dangerous; tho' they afterwards found, that this was a groundless Apprehension. The Author of the Voyage observes, that, when the Reader finds they spent Nine Months in sailing from *Holland* to the Mouth of the Straights, he may be led to imagine the Voyage very dangerous, and almost impracticable; which, however, is far from being the Truth, if it be undertaken at the proper Season of the Year; for, as he observes, the *Spanish* Caravels, which passed that Strait in the Year 1620, did not sail from *Lisbon* till the Month of *October*; and, notwithstanding they remained a considerable Time in the *Rio de Janeiro*, yet they entered the Straights in the Month of *February* following. The Reason therefore that this *Dutch* Fleet were so long at Sea, proceeded from their sailing too early in the Year from *Holland*, and passing the Line at an improper Season. Such as would make this Passage easily and certainly, should contrive to pass the Line in the End of *October*, or in the Beginning of *November*, because then they may be morally certain of meeting with the North Wind between the Tropics; which will very much facilitate their Passage through the Straights of *le Maire*.

18. On *February* 6. they had Sight of *Cape Horn*, which then bore from them Three Leagues North North-east. On the 11th, they were in $58^{\circ} 30'$ South Latitude, the Weather excessively cold; which rigorous Season the Seamen were the less able to bear, on account of their being at Short-allowance. On the 14th, they found a great Variation in the Compass; but were not able to settle it, because all the Compasses in the Fleet differed from each other; at which they were exceedingly surpris'd. In the Afternoon, the Admiral called a Council, to deliberate about the Currents, with the Advice of all the Pilots; but, at the very Instant that the white Flag was hoisted as a Signal, they discovered *Cape Horn* about Seven Leagues to the West, from whence it plainly appeared, that the Currents had driven them strongly to the East; whereas they imagined they set there to the West, according to the Account given by *le Maire*; and all their Pilots had agreed, that they were then very far to the West of the Cape. On the 16th, they were in the Latitude of $56^{\circ} 10'$, *Cape Horn* lying then East. They were then in Sight of Two Islands, lying Fourteen or Fifteen Leagues West of the Cape, which were not set down in the Charts. On the 17th, the Admiral anchored in a large Bay, which they named *Nelson Bay*. On the 18th, they discovered another, in which there was very good Anchorage, with great Convenience of Wooding and Watering; This they called the Bay of *Sid-*

penham, which were taken obliged to same time place, which cably. O with great belonging again, nor they ende 19. On and, corn alive of the fore. Th it grew c with their more easy had any A least Injur Five dead those of the Quarters, Savages h posed, to went altho their Defe hest, sinc On the 2 bound, in formed th Smoke, h chored th of his Ship del *Enego*, ral Islands was not at might leav Bay of N that Cape; sages out o lan. Si to avoid t as far as n they may n to their de as fair as n of a young strangely, Fancies, to their Legs white; and have one strong, ar Height of and they v frightful, they are as together n about their of their Cl of Trees, to let out t Feet unde Outside. Stone Ho are differ tificially h pointed w and some

penham, after their Vice-admiral. On the 22d, while they were taking in Water, there arose a sudden Storm, which obliged some of the Sailors to remain on shore; and at the same time they saw a Body of Savages near the Watering-place, who were conversing with them very freely and amicably. On the 23d in the Afternoon, the Storm rose again, with greater Violence than before; so that Nineteen Men belonging to the *Eagle* were compelled to remain on shore again, not being able to get back to their Shallop, though they endeavoured it all they could.

19. On the 24th, the Shallops returned to the Coast; and, coming to the Watering-place, found only Two Men alive of the Nineteen they had left there the Evening before. The Savages had come down upon them as soon as it grew dark, and had knocked Seventeen on the Head with their Slings, and wooden Clubs; which yet was the more easy for them to do, since none of these poor Men had any Arms: Yet none of the Seamen had offered the least Injury or Insult to these Savages. There were only Five dead Bodies found upon the Shore, among which were those of the Pilot, and Two Boys. The latter were cut into Quarters, and the former was strangely mangled; but the Savages had carried off all the rest, in order, as it was supposed, to eat them. The Shallops, for the future, never went ashore without Eight or Ten Soldiers on board for their Defence; but this Precaution was taken a little of the late, since none of these brutal Savages appeared any more. On the 25th, the Vice-admiral went on board the *Greybound*, in order to visit the Coast. At his Return, he informed the Admiral, that, going ashore where he saw Smoke, he found some of the Savages Huts, and had anchored that Night in a Road, to which he gave the Name of his Ship. He also reported, that he had found the *Terra del Fuego*, as it is marked in the Charts, divided into several Islands; and that, in order to go into the South Sea, it was not at all necessary to double Cape Horn; but that they might leave it on the South, and enter in on the East, the Bay of *Nassau* passing into the open Sea by the West of that Cape; and that he apprehended there were several Passages out of the Bay of *Nassau* into the Straights of *Magellan*. The greatest Part of the *Terra del Fuego* is mountainous; but adorned with many fine Valleys and Meadows, watered by several agreeable Rivulets, that ran down from the Hills. Between the Islands there are good Roads, where whole Fleets may anchor with Safety, and where there is all imaginable Conveniency for Wooding, Watering, and taking in Ballast. The Winds, that rage here more than in any other Country in the World, and with a Violence not to be expressed, blow constantly from the West, and may reasonably be supposed to proceed from watery Exhalations. Such Ships therefore, as are bound Westward, ought to avoid this Coast as much as they can possibly, keeping as far as may be to the South; and it is thereby very likely they may meet with South Winds, which must bring them to their desired Port. The Inhabitants of this Country are as fair as any in *Europe*, as they concluded from the Sight of a young Child; but the grown People disguise themselves strangely, by painting with a red Earth, according to their Fancies, some having their Heads, others their Arms, others their Legs and Thighs, red, and all the rest of their Body white; and many of them, from the Forehead to the Feet, have one Side red, and the other white. They are very strong, and well-proportioned, and generally about the Height of the People in *Europe*. Their Hair is black, and they wear it thick and long, to make them the more frightful. They have very good Teeth, but so thin, that they are as sharp as the Edge of a Knife. The Men go altogether naked; and the Women have only a Bit of Skin about their Middles; which is very surprising, the Severity of their Climate being considered. Their Huts are made of Trees, in the Shape of Tents, with a Hole at the Top, to let out the Smoke. Within they are sunk Two or Three Feet under the Earth; and this Mould is thrown upon the Outside. Their Fishing-tackle is very curious, and their Stone Hooks very near the same Shape with ours. They are differently armed, some having Bows, and Arrows artificially headed with Stone; others have long Javelins, pointed with Bone; some again have great wooden Clubs; and some have Slings, with Stone Knives, which are very

sharp. They are never without their Arms in their Hands, because they are always at War amongst themselves; and it seems, that they paint differently, that they may distinguish each other; for the People, about the Island of *Torbalinus*, were all painted black, and so were they about the Bay of *Schopenham*; whereas those about the *Greybound* Bay are all painted red. Their Canoes are very singular: In order to make them, they lop the Branches off a great Tree, and then bark it; the Inside they fortify with several Pieces of small Wood, and do the like on the Outside; then they cover it with another Bark; and so make it both strong and tight. These Canoes are from Ten to Fourteen and Sixteen Feet in Length, and about Two Feet broad. Seven or Eight Men can go in them; and they navigate them, so as to go as quick as our Shallops. As to their Manners, they are rather Beasts than Men; for they tear human Bodies to Pieces, and eat the Flesh, raw and bloody as it is. There is not the least Spark of Religion or Policy to be observed amongst them: On the contrary, they are, in every respect, brutal; inasmuch that, if they have Occasion to make Water, they let fly against any one that is near them, if he does not get out of their Way. They have no sort of Knowledge of the Use of our Arms, and therefore do not fear them; for they would lay their Hands on the Edges of the *Dutchmens* Swords: Yet, for all this, they are excessively cunning, faithless, and cruel, shewing all the Signs of Friendship one Minute, and knocking those on the Head, to whom they shew them, the very next. There is no such thing as getting any kind of Refreshments from them, tho' such are not wanting, if they would part with them; of which the *Dutch* were very well satisfied, by seeing Quantities of Cow-dung, and finding their Bow-strings made of Ox-sinews: Nay, a Soldier, who went ashore while the *Greybound* Yacht lay at Anchor, reported to the Vice-admiral, that he saw a large Herd of Cattle feeding in a Meadow.

20. On *February* 27. the Admiral made a Signal for sailing; and, the Wind being North, they were in hopes of getting out of the Bay of *Nassau*; but, in the Evening, they had a Storm again from the West, which lasted all Night. On *March* 3. at Noon, they had an Observation, and found themselves in $59^{\circ} 45'$ South Latitude, the Wind at North-west. Almost all Navigators had been, to that time, of Opinion, that it was easy to go from the Straights of *Le Maire* to *Chili*; but that it was scarce possible to pass from *Chili* or *Peru* into the North Sea by that Strait, because, as they imagined, the South Wind blew constantly in those Seas: But they found the Case quite otherwise, since the frequent Tempests they had from the West and North-west, rendered it, beyond Comparison, more easy to pass from *Chili* or *Peru* through the Straights of *Le Maire* into the North Sea, than it was to reach *Chili* or *Peru* from the North Sea through those Straights. On the 6th, they had still strong West Winds; which gave the Admiral infinite Concern, because they put it out of his Power to comply with the Instructions given him by the States, which required him to sail, as soon as he had passed the Straights of *Le Maire*, to the Island of *Juan Fernandez*; which, while the West Winds continued, he could not do. Upon this, he called a Council, in order to take some Resolution as to the proper Place of Rendezvous for the Fleet, in case of being dispersed, or of wintering, if these Tempests from the West should still continue to rage. The *Terra del Fuego* was proposed by some; the Straights of *Magellan* by others; but, all things well weighed, the Majority were of Opinion, that it would be best to wait Two Months for better Weather, and to employ their utmost Endeavours to double the Cape, and get into the South Sea. On the 8th, they were in 61° ; on the 14th, in 58° ; and on the 18th, 19th, and 20th, they had a fair and fresh Wind from the South-east. The Weather also became warm; so that, after all these Storms and Tempests, they began to think they were got into another World. On the 24th, they lost Sight of the *Maurice*, and the *David*; so that the Fleet consisted now only of Seven Sail; and, the same Evening, they found themselves in 47° . On the 25th, having still a fair Wind, and fair Weather, they reached 45° , and were then in great Hopes of overcoming all Difficulties.

21. On *March* 28. they saw the Coast of *Chili*, lying East South-east; in the Evening they were but a League from Shore, the Coast appearing high and mountainous. The Admiral was at this Time confined to his Bed, where, being informed they were so near the Coast of *Chili*, he expressed a great Desire to have put into the Port of *Chiloe*, but declared that his Instructions would not permit him; but, on the contrary, required that the Fleet should be employed in some Action of Importance against the *Spaniards* in *Peru*: Upon which, it was resolved to proceed immediately for the Islands of *Juan Fernandez*, there to make the best Preparations possible for attacking the *Spanish* Gallies in the Port of *Arica*, in case they were there, and to make themselves Masters of that Place, from whence they might be able to extend their Conquest, with the Assistance of the *Indians*. On *April* 1. being in $38^{\circ} 10'$, the Vice-admiral also took to his Bed, and appeared to be so much worn out with Fatigue, that they already conjectured, they should lose both him, and their Admiral, before the Voyage was concluded. On the 4th, about Noon, they had Sight of the Island *Juan Fernandez*, lying to the West North-west, in the Latitude of $33^{\circ} 50'$; the Admiral, fearing they might fall to the Northward, sent the Yacht before to seek for the Road. On the 5th, with much Difficulty, the Weather proving absolutely calm, the whole Fleet came safe to an Anchor in Sixty Fathom Water, in a fine Bay, lying North-west and South-east. On the 6th, every Ship's Company had Orders to provide themselves, as soon as possible, with as many Chevaux de Frize, and Palisades, as they could; and the Vice-admiral, being grown somewhat better, visited all the Artillery of the Fleet. In the Evening the *Griffin* came in, which they had not seen since the second of *February*: This Vessel had been in the Height of 60° , without ever having a Sight of *Cape Horn*. The Captain declared there was safe Anchorage in *Valentine Bay* for a whole Fleet; and that the contrary Intelligence, given to the Admiral by the *Shallop* of the *Orange*, was against his Consent. On the 7th, the *Orange* arrived also at the Rendezvous, having, in her Passage, twice seen the Southern Continent, viz. once in 50° , and again in 41° . On the 8th, Five of the Seamen belonging to the *Holland*, being convicted of breaking into the Hold, and stealing thence several Barrels of Wine, were, for that Offence, condemned to be hanged. The Two next Days were spent in cutting Wood, and in disposing all Things on board each Ship for the intended Attack upon the *Spaniards*. In the Evening of the 10th, the Admiral was prevailed on to pardon the condemned Sailors. On the 11th, the *David* came in, and brought Advice also of the *Maurice*, both having been Five or Six Days beating about the Island, but had been hindered from getting in by contrary Winds. On the 13th, in the Afternoon, all Things being ready, they sailed.

22. The most Easterly of the Two Islands of *Juan Fernandez*, which is also the biggest, lies in $33^{\circ} 40'$, South Latitude, about Seventy Leagues West from the Coast of *Chili*. The *Spaniards* call the former commonly *Isla de Tierra*, the latter *Isla de Fuera*. This more Eastern Island, where the *Nassau* Fleet anchored, is about Six Leagues in Circuit, and extends from East to West about Two Leagues and an half. The Road is on the N. E. and from thence there is a very delightful Prospect of beautiful Valleys covered with Clover. The Bottom of the Bay is either rocky, or a fine black Sand. There is very good and safe Anchorage here, in about Thirty or Thirty-four Fathom Water. There cannot better Water be wished for, than is to be met with here; and excellent Fishing in the Bay of various kinds. There are many Thousands of Sea Lions, and Seals, that come daily out of the Water to sun themselves on shore, of which the Seamen killed Numbers, not for Food only, but for Diversion: Many of the *Dutchmen* satisfied, that the Flesh of these Creatures tasted like Meat twice roasted or boiled; others were very well satisfied with them, and even affirmed, that their Flesh, when their Grease and Tallow was taken out, tasted as well as Mutton. Goats there are in great Numbers, but very hard to be taken; and they are not either so fat, or well-tasted, as those of *St. Vincent*. They found abundance of Palm-trees within Land, and, near the Bay, Three large

Quince-trees, the Fruit of which was very refreshing. Other Wood, for Use and Firing, they found plenty; but met, however, with none that was fit for Malts. There were formerly Ten or Twelve *Indians* constantly here, for the Sake of Fishing, and making Oil of the Seals and Sea Lions, but at this Time it was quite uninhabited. Three Soldiers, and Three Gunners, belonging to the Vice-admiral, were, by this time, so sick of the Voyage, that they demanded Leave to stay here, and obtained it.

23. From the 11th to the 22d, they had a constant South Wind: The Variation of the Needle here was found to be One Degree and an half, and Two Degrees, towards the East. As it was impossible to know how soon they might be obliged to fight, the necessary Instructions were distributed to all the Captains, and the Fleet was directed to sail for the future in Three Divisions: The first was composed of the *Amsterdam*, as Admiral, the *Holland*, the *Eagle*, and the *Griffin*: The second of the *Delft*, as Vice-admiral, the *Concord*, the *David*, and the Yacht: The third under the *Orange*, as Rear-admiral, with the *Maurice*, and the *Hope*. On *May* 8. being near the Coast of *Peru*, they took a *Spanish* Bark, in which, besides the Captain, there were Four other *Spaniards*, and Six or Seven *Indians* and Negroes. They learned from these People, that the Plate Fleet had sailed the *Friday* before, being the third of that Month, from *Calao* for *Panama*, consisting only of Five Sail, Two Ships of War, and Three Merchantmen richly laden. They were likewise informed, that the *Spanish* Admiral was still at *Calao*, being a Ship of about 800 Ton, mounted with 40 Pieces of Brass Cannon, with Two Pataches of Fourteen Guns each, with Forty or Fifty Merchantmen of no Force at all; that all the Shipping was towed ashore, and secured there by Three strong Batteries, with other Stone-works, furnished with upwards of Fifty Pieces of Cannon, all ready prepared for the Reception of the *Dutch*, of whose Motions they had early and certain Intelligence: That the Viceroy had likewise formed Four Companies of Foot, each of them composed of Four-score Men; but the Two best Companies were put on board the Ships for *Panama*; and that the Viceroy, having the Day before received an Account of the Approach of the *Dutch* Fleet, had immediately summoned the whole Force of *Peru*; so that it was not to be doubted, that he would soon have many thousand Men in the Place. All this the *Spaniards* very readily told them; and Experience afterwards shewed, that every Title of this Information was strictly true; so that nothing could be happier than taking this Prize at this Time.

24. A Council was immediately called, in which it was resolved to delay the Attack no longer than till the next Day; and, as the Admiral was absolutely incapable of Fatigue, his Distemper growing daily worse and worse, it was agreed, that the Vice-admiral should command, and his Brother-in-law *Cornelius Jacobson* was appointed Sergeant Major. Besides the Five Companies of Soldiers that were on board the Fleet, it was now thought requisite to have as many Companies of Seamen, under the Command of the Captains *Stolk*, *de Witte*, *Quevinnen*, *Tybranfon*, and *Egberison*; but, as there were not intall Vessels enough to land so great a Body of Men, it was resolved, that the Soldiers should land first, and having fortified themselves on shore, by throwing up Retrenchments, and making use of the Palisades carried along with them for that Purpose, there to maintain themselves till the next Day, when the Sailors should be landed also. On *May* 10. before Day, the Vice-admiral put himself at the Head of the Soldiers, with an Intent to have landed; but, after having rowed for some time along the Shore, he was obliged to retreat to the Fleet, finding it absolutely impossible to do any thing; though, if the Troops could have been landed, there was some Appearance, that the *Indians* and Negroes would have joined them. The Admiral ordered, that the *Greyhound* Yacht should, in the Night, go in as near Shore as possible, to afford an Opportunity of landing under the Protection of her Guns. The *Spaniards*, however, were very soon aware of this; and no sooner saw her under Sail, but they threw up a Battery near the only Place where 'twas possible to land Men, which, though mounted only with Two Pieces of Cannon, by an unlucky Shot disabled

the Yacht they discomfited the freshmen tails Tol well arm having or siderable the same the *Spani* and dist fifty Sail under the Batteries. 25. The riage of the directed the play all the *Spaniards* they began Reason exp the Expedition the Port of merce of the nations of brought ab were built, received, a Negroes to be some De portunity o ately forme *Lima*, disa Negroes, v coming Sla verity to th Masters. A up *Calao*, it Ships, shou as he could pursued, th *Arica*; and have been d fenceless as extended th and there ha sufficient to rice, for the ever, that th *Arica* having larly fortified And, as for

the Yacht, and disappointed that Design. On the 14th, they discharged their Prizes, and distributed Plenty of Refreshments through the Fleet: About Midnight, the Captains *Tol. Slobbe*, and *Egberison*, with Twelve Shallops well armed, began to row directly for the Port of *Lima*, having on board each Shallop a small Cannon, and a considerable Quantity of Fire-works. A false Attack was at the same time made to the North of *Calao*, which drew the *Spaniards* thither, while the Shallops entered the Port, and distributed their Fire-works plentifully amongst about fifty Sail of Merchant-ships, which lay there at Anchor under the Protection of the *Spanish* Admiral, and the three Batteries. As soon as the *Spaniards* perceived, by their Effects, what the *Dutch* Vessels had been doing, they began to make a dreadful Fire upon them from the Place; which had, however, but very little Effect, because the *Dutch* Shallops sheltered themselves behind the *Spanish* Vessels that were burning, and fired from thence very successfully upon their Enemies. In this Action, there were thirty or forty Ships consumed, some of which were very large; but, after the *Dutch* were retired, the *Spaniards*, with their *Indians* and *Negroes*, saved the Effects out of some of them. In this hardy Enterprize, the *Dutch* had seven killed, and fifteen wounded, the most Part of them belonging to the Vice-admiral's Shallop, which had endeavoured to board one of the Pataches, and thereby exposed themselves more than the rest. This Action was excessively bold and daring, and they would have had all the Reason in the World to have been satisfied with the Manner of its Execution, if, after it was over, they had not discovered, that if, instead of Fire-works, they had carried Hatchets, they might have cut the *Spanish* Merchant-men out of the Road, and have taken the best Part of them, with all their Cargoes. About the Grey of the Morning, nine of these flaming Ships came down upon them, and obliged the *Dutch* Fleet to weigh Anchor, and shelter themselves behind the Island of *Lima*. On the 13th, Captain *Engelbert Schutte* landed with a Company under his Command, and took Possession of the Island, throwing up a strong Retrenchment, that they might be able to hale their Shallops on shore, and careen them; which they much wanted.

25. The same Day, a Council was held on the Misfortune of their Enterprize at *Calao*; and, as their Instructions directed them, in case of any Accident of that sort, to employ all their Force in taking Prizes; and distressing the *Spaniards* in their Trade, to the utmost of their Power, they began to think of putting this in Execution. The Reason expressed in their Instructions for their carrying on the Expedition in this manner, was, that, by thus blocking up the Port of *Lima*, and putting an intire Stop to the Commerce of the Country, a Trial might be made of the Inclinations of the People, and possibly a total Revolution be brought about. The Grounds upon which these Notions were built, were Informations that Prince *Maurice* had received, as to the general Disaffection of the *Indians* and *Negroes* towards the *Spaniards*; in which tho' there might be some Degree of Truth, yet this *Dutch* Fleet had no Opportunity of proving it: For the Viceroy of *Peru* immediately formed two independent Companies of *Spaniards* at *Lima*, disarmed the *Indians*, and raised a Company of free *Negroes*, who, proud of their Liberty, and afraid of becoming Slaves again, distinguished themselves by their Severity to their Countrymen, and their Attachment to their Masters. As there was no Need of the whole Fleet to block up *Calao*, it was resolved, that *Cornelius Jacobson*, with four Ships, should cruise to the South, and make as many Prizes as he could: Yet, had the Letter of their Instructions been pursued, they should have sailed with their whole Force to *Arica*; and, after taking and plundering it, which would have been done of course, if it had been as naked and defenceless as they supposed it in *Holland*, they might have extended their Conquest thence to the rich Mines of *Potosi*, and there have acquired, at once, more than would have been sufficient to have indemnified the States, and Prince *Maurice*, for the Expence of this Fleet. It so fell out, however, that they found this Scheme absolutely impracticable, *Arica* having in it a good Garrison, the Place being regularly fortified, and well supplied with every thing necessary. And, as for *Potosi*, they had certain Information, that there

were 2000 *Spaniards* there capable of bearing Arms, exclusive of *Indians* and *Negroes*: So that all the fine Projects of *Indian* Conquests formed in *Holland*, appeared to them so many romantic *Dreams*, that neither they, nor any else, could execute.

26. On May 14, *Cornelius Jacobson* sailed with his Detachment, composed of the *Concord*, the *David*, the *Griffin*, and the *Greyhound*, in order to sail to *la Nasca*, *Pisco*, or any other Town to the South of *Lima*. On the 20th, they converted two of the *Spanish* Prizes into excellent Fire-ships; and, having filled them with Powder, Fireworks, Shells, and other Combustibles, resolved with these to make an Attempt on the *Spanish* Galleon. In the Night of the 22d, two *Greeks*, whom they had delivered from Slavery, stole a small Vessel, and made their Escape to the *Spaniards*. The next Day, a rich Ship fell into their Hands, in her Passage from *Guiaquil*, on board of which were thirty *Spaniards* and *Negroes*. On the 23d, the Rear-admiral was detached with the *Maurice* and the *Hope*, with two Companies aboard, in order to make themselves Masters of the Town of *Guiaquil*, which all the Prisoners agreed was a Place of no great Strength, but which they found in quite another Condition when they came to attack it. On the 27th, they attempted to carry in their Fireship, in which they had 2000 Weight of Powder, besides Fireworks and Shells, confined by an Arch of Brick-work six Foot thick. Five Men, of whom one was the Supercargo of the *Eagle*, navigated her into the Port of *Calao de Lima*, and came close to the Side of the *Spanish* Admiral, before they discovered their Design was impracticable; and that there was a Bank between them and the Ship, which it was impossible for them to pass; and therefore, after running thro' so much Labour and Danger, they were glad to retire to their own Fleet; and it is, indeed, very wonderful they were able to do this without being destroyed.

27. On June 2, their Admiral *Jaques le Hermite* expired in the Port of *Calao de Lima*, having been in a declining State of Health from the Time they left *Sierra de Leona*, and for four or five Months had quite lost his Strength. The Vice-admiral suffered his Flag to remain flying in the *Amsterdam*, that the Enemy might have no Notice of his Death. On the 3d, they buried him on the Island of *Lima*, with great Decency, having caused all the Prizes to be adorned with Streamers and Flags, that the *Spaniards* might apprehend, the Guns fired at his Funeral were discharged by way of Rejoicing for the Success they had met with in the South Seas. On the 6th, in the Afternoon, the *Orange* anchored as near as possible to the Point of *Calao*, in order to cover the Fireship, which it was determined should make another Attempt by Daylight: Accordingly the Supercargo of the *Eagle* carried her boldly into the Port, but to as little Purpose as before; for they then discovered, that the *Spanish* Galleon rode in a Basin, so that it was impossible for them to approach her: But the *Spaniards*, guessing at their Design, fired upon them so briskly, that they were obliged to set Fire to the Train, and their Fireship blew up, without doing any Hurt to the Enemy, or Good to themselves: Such was the End of this Attempt, which had cost them so much Hazard and Pains.

28. On the 8th of the same Month, they felt an Earthquake in the Island of *Lima*. On the 13th, the *Spanish* Prisoners having represented, that the Viceroy would be willing to treat for their Ransom, it was resolved, that a Proposal of that sort should be made: And accordingly an Officer was sent in a small Vessel into the Harbour, with a Flag of Truce. As soon as the Viceroy had notice of it, he sent Directions, that the Seamen should have their Hands tied, and their Eyes covered, while they remained in the Shallop; and that the Officer, who had the Letter, should be brought on shore. In the Evening, however, the Seamen were set at Liberty, and the *Spaniards* took all imaginable Pains to persuade them to remain where they were, and to enter into the Service of the King of *Spain*: But this being found ineffectual, and not so much as a single Man having listened to their Proposals, an Answer was given to the Letter, in these Words: That the Viceroy had nothing but Powder and Ball at the Service of the *Dutch*; that he would not enter into any Negotiation or

Treaty with them whatever for the Ransom of Prisoners; and that, if any presumed to enter the Port of *Calao* again with a Flag of Peace, he would order them to be hanged up with the Flag about their Necks. On the 14th, when this Answer was reported to the *Dutch*, they resolved, in a Council of War, to hang up all their Prisoners. The Reasons which induced them to so cruel a Proceeding were these: They were themselves much streightened for Provisions, and had scarce any Water left; it was therefore impossible for them to maintain these People, if they meant to keep them; and, at the same time, they had no Reason to keep them, since they were to expect no Ransom. On the other hand, to set them at Liberty, was against the Maxims of Prudence, as well as the Laws of War, since it could only serve to expose their Weakness to the *Spaniards*, and thereby render them the Scorn of their Enemies. On the 15. in the Morning, they put this severe Resolve of theirs in Execution, and actually hanged twenty-one *Spaniards* at the Yard's-arm of the Mizzen-mast of their Admiral, in the Sight of an infinite Number of People who were standing on the Shore. Three old Men they sent in a Bark to *Calao*, with Orders to tell the Viceroy, that since they had no Quarter to expect from him; They were resolved to give none to such as fell into their Hands; and that he ought to look upon this, as the just Effect of his own brutal Message. In the Evening, *Cornelius Jacobson* returned with the four Ships under his Command, and made a very indifferent Report, to this Purpose: That he had landed on the 4th near *Pisco*, with much Difficulty and Danger; that, having marched within Musquet-shot of the Town, he found it regularly fortified, with a Wall round it of fifteen Feet high, and a Garison of 2000 Men, besides two hundred Horse, that were employed in scouring the Country round it; that he was obliged to throw up an Entrenchment for his own Security; and that, after skirmishing for some Days with the Enemy to very little Purpose, he found, the best Step he could take was to embark his Troops, and retreat. He lost in this Expedition five Men killed, sixteen wounded, and had thirteen deserted; so that perhaps there never was a more disastrous Expedition undertaken with so great a Force.

29. On the 25th, they hanged, in the Island of *Lima*, in Sight of the whole Crew of the Fleet, a Gunner, who was taken endeavouring to desert. It was now resolved, that they should proceed to *Chili*, because they had certain Intelligence of the Situation that Country was in: The Inhabitants had been in Arms against the *Spaniards* near thirty Years, having taken from them the City and Port of *Baldivia*, which they kept. The *Chilians* were, at that time, esteemed the most warlike Nation in *America*, acting in quite another Manner than the *Indians* are wont to do; for they raised Armies of 3 or 4000 Foot and Horse, the latter being much superior to the *Spaniards*. With these they wasted the Country, and then blocked up their Fortresses. Such as were best acquainted with the Affairs of that Part of the World, were persuaded, that the *Spaniards* would willingly have quitted *Chili*, if they had not been afraid, that the Inhabitants, not satisfied with their own Liberty, would next have attempted the Conquest of *Peru*. For many Years, all the Recruits they were able to send into this Country were composed of Malefactors; but, a little before the *Dutch* Fleet arrived, they had been forced to send regular Troops from *Buenos Ayres*; and a new Mischief had arisen from thence: For these People, finding themselves very ill used, and the Service at the same time very hard, had mutinied, and dispossessed their Officers of their Command; which had thrown all things into Confusion. The *Dutch* therefore persuaded themselves, that if, while things were in this Situation, their Fleet appeared upon the Coast, the Inhabitants would join them, and something might still be made of this hitherto unfortunate Voyage; but, before this could be done, they were obliged to wait for the *Maurice* and the *Hope*, which, if they had left them, must have fallen into the Hands of the Enemies. The Scurvy prevailed all this Time in the Fleet, and especially in the four Ships that had sailed to the South, the Crews of which were so miserably reduced, that they had not Men enow to man their Shallops; so that, all things considered, they were in an hopeless Condition, and their Affairs like to grow worse,

rather than better. But, on June 26. a *Swiss*, who was very ill of the Scurvy, took it into his Head to climb up to the very Top of the highest Hill in the Island of *Lima*, which appeared on every Side a bare Rock. On the Summit, however, he met with great Plenty of a kind of Herbs, with which he was well acquainted in his own Country, and by eating of which he very soon recovered. As soon as this was known, there were enow to climb that Rock; and, by this fortunate Accident, the best Part of the Fleet was saved from Death, and, in a short time, recovered Strength and Spirits. On July 18. there arrived two *Spanish* Deserters on a Float from *Calao*; one of these was the chief of the Players at *Lima*, and the other a common Soldier. They had, in a Quarrel about a Woman, murdered the General of the *Spanish* Horse; and therefore found it necessary to make their Escape. They reported, that the Town of *Calao* was completely fortified; that they had fourscore Cannon mounted on their Works, exclusive of those in the Ships; and that, within the Place, were forty Companies of Foot, and sixteen Troops of Horse, besides some small Bodies of Militia, which were employed to defend the Watering-places, in case the *Dutch* should attempt a Descent. They likewise reported, that the *Maurice* and the *Hope* had taken four Ships near the Isle of *Puna*, and had burnt the Town of *Guaquil*, with the King's Gallion, which was upon the Stocks there.

30. From July 22. to 29. they were continually engaged with the *Spaniards*, who attacked them vigorously, because the *Dutch*, intending for *Chili*, were very sparing of their Shot at first; but, when they found, that this gave the Enemy Spirits, they assured them so warm a Reception, that the *Spaniards* made them fewer Visits. On August 5. in a full Council of War, the Vice-admiral, pursuant to the Patent of Prince *Maurice*, was installed Admiral on board the *Delft*, and there received the Oath of Fidelity from the Fleet, the Ship's Company that lay nearest going on board first. The Rear-admiral succeeded him as Vice-admiral, and *Cornelius Jacobson*, who sailed from *Holland* with the Title of Counsellor to the Admiral, was now advanced to be Rear-admiral. About Noon, the Admiral, attended by all the Shallops of the Fleet, sailed: each the *Orange*, in order to receive the Oath of Fidelity from her Crew, and Ships that were near her; which the *Spaniards* observing, attacked the Shallops in their Passage; but were so warmly received, that they were very soon glad to retreat.

31. The Vice-admiral *Persboor* returned soon after with the *Maurice* and the *Hope*, and one Prize which they had taken. They found three Vessels in the Road of *Puna*, two of which they burnt, and the third they brought with them: They afterwards ran up the River as far as the Town of *Guaquil*, which they found pretty well fortified, and defended by a good Garison; however, they determined to make a Descent, which they performed with the Loss of thirty-five Men, and afterwards attacked the Place. The *Dutch* Soldiers, overcome by Numbers, began at first to give way; but Captain *Schutte*, who commanded them, desiring them to reflect, that nothing but pushing on could preserve them, their Countrymen, or the Ship, he prevailed with them to renew the Attack, by which the Town was taken: As they had but two hundred Men in all, they found it impossible to keep the Place when they were Masters of it; and, as they had not either Shallops or Boats to carry off their Booty, they found themselves under a Necessity of burning all the rich Goods in the Warehouses, of which, as it is the Port of the Province of *Quito*, there were many, and well furnished; and then retired with the next high Tide. The *Spaniards* lost 100 Men in the Action, killed upon the Spot, besides seventeen that were taken Prisoners, and whom, soon after, they threw into the Sea, and drowned, for entering into a Conspiracy against them. At Sea they met with contrary Winds, which once drove them almost as far as *Arica*, which they intended to have attempted; but the Wind changing again, they, with very great Difficulty, rejoined their Fleet. The new Admiral hoisted his Flag on board his own Ship the *Delft*, the Vice-admiral removed into the *Amsterdam*, and the Rear-admiral into the *Orange*.

33. On Aug. 14. the Fleet sailed from the Island of *Lima*, taking with them their Prizes, which they fitted up for Service, and steered for the *Pisadoras*, and anchored the same Evening in a Bay behind those Islands. The Admiral immediately went on shore, and made the necessary Dispositions for securing the Seamen while they filled Water there, which they found very good, and in which Design they succeeded; and afterwards re-embarked their Troops, without meeting with any Opposition, tho' the Enemy was very near them. On the 16th, they continued their Course from thence for the Island of *Puna*; and, on the 24th, having Sight of the Island of *Santa Clara*, the Admiral detached three Shallops, to give the *Spaniards* notice of his Approach, to assure them of his Protection, and to gain what Intelligence they could of the Situation of Things at *Guiaquil*, which it was determined to visit once more.

33. On the 25th, about Noon, they anchored in the Road of the Island of *Puna*, where the Shallops had arrived about four Hours before, and had made themselves Masters of a little Bark, laden with Merchandize, which was to have been transported by Land from thence to *Lima*, but all the People, *Spanish* and *Indians*, were fled to a Mountain, so that they could gain no sort of Intelligence of the Disposition of the Enemy. On the 27th, they took out the great Guns and Ballast out of their three largest Ships, and drew them on shore, in order to careen them. On the 28th, the Admiral received the melancholy News of the Misfortune of a second Attempt upon *Guiaquil*, where, through the Fault of some of their Officers, their Troops had been defeated, and forced to re-embark with the Loss of twenty-eight Men. This Disorder, according to the Report of the Officer who commanded them, fell out by one half of the Company, commanded by Captain *Everson*, marching up the Hill without waiting for their Officer, moving directly towards the *Spaniards*, out of pure Vanity, and a Desire of beating the Enemy without a Commander; of which they thought themselves sure, because they saw some *Spaniards* run away on their Approach: However, when they got to the Top, they found the *Spaniards* well secured in their Houses, who, having first disordered them by a brisk Fire, sallied out, and drove them down the Hill, together with another Company, that was marching to support them. A second Attempt was made, but the commanding Officer, being wounded, and perceiving that his Men were discouraged, thought it best to make a timely Retreat: Captain *Sebutte* received a Shot in this last Action; notwithstanding which, he continued to encourage his Men to the last. It was, says the Author of the Voyage, very surprising, that they should not be able to take *Guiaquil*, burnt, and without Intrenchments, with double the Number that had taken it, when well fortified, and defended by a good Garrison. But the prevailing Opinion in the Fleet was, that the commanding Officer had not Abilities equal to the Task; and the Soldiers, believing he wanted them, did not behave with their usual Courage: Whatever the Reason was, this Defeat made a great Impression on the whole Fleet. On September 1. the three largest Ships being clean, they began to careen the rest. On the 2d, the Admiral posted separate Guards at the two Wells, he had caused to be dug for Water, in order to prevent the *Spaniards* from poisoning them. On the 9th, after much Deliberation in Council, it was resolved not to prosecute their intended Voyage to *Chili*, but to bear away immediately for *Acapulco*, as their Instructions directed, in order to cruise for the *Manilla* Ship, and that Expedition once over, to return to the Coast of *Chili*, if the Condition of the Fleet would permit. In pursuance of this Resolution, they, on the 11th of the same Month, set Fire to the Town of *Puna*, and burnt down the Church. The same Evening, four *English* and four *Frenchmen* deserted: They had behaved very bravely in the last Action, as well as very soberly during the Voyage; but they imagined, that Things began to go wrong; and therefore the wisest Step they could take, was to shift for themselves.

34. On the 12th, they sailed from *Puna*. On the 17th, they were in the Latitude of 3° South. On the 18th, they met with a South South-west Wind, which blew pretty strong. On the 20th, they expected to have seen

the *Gallapagos* Islands; but, not finding them, they took it for granted they were wrong laid down in the Maps. On October 20. they had Sight of the Coast of *New Spain*, lying to the North-east. On the 28th, at Break of Day, they were within half a League of an Island, which lies before the Port of *Acapulco*; and, in the Evening, they anchored within Sight of the Fort which had been rebuilt the Year before, on a Point running out into the Sea, in order to cover the *Manilla* Ships, which might ride safely at Anchor under the Cannon of the Fort. It was a regular Square, and each of its four Bastions mounted with ten or twelve Brass Cannon. On the 29th, the *Dutch* Admiral thought of a Method, by which he hoped to gain some Intelligence as to the Time when the *Manilla* Ship was expected; in pursuance of which, he sent a Message to the Governor, importing, that he had made a great many Prizes in the South Seas, and in them had taken several Prisoners of Distinction, which, as he intended to proceed to the *East Indies*, he was willing to set at Liberty, in Consideration of a reasonable Ransom; and therefore desired, that an Officer might be sent on board his Fleet; and he was ready to send another in his stead. The Governor sent him for Answer, That he would neither send Hostages, nor receive them; but that, if the Admiral had any such Prisoners, and would send them ashore, he was ready to pay him a reasonable Ransom. But, as the Admiral would not agree to that, the Negotiation ended. On November 1. the Ships sailed out of Port, and the Forts discharged several Pieces of Cannon, but without doing them any Hurt. In the Evening, a great Detachment was sent, under the Command of the Vice-admiral, to anchor twenty Leagues to the West of *Acapulco*, in order to look out for the Galleon, to give her Chase; and, if they could not come up with her, to force her into the Fleet. On the 2d, the Admiral, and the *Orange*, remaining still before the Port, the rest of the Ships spread along the Coast, that they might be sure of meeting with the Vessel they expected. On the 3d and 4th, the Shallops belonging to the Admiral, and to the *Orange*, went to take in Water at *Porto del Marques*, which is a League and a half from *Acapulco*. On the 7th, Captain *de Witte* being at the Watering-place with his Shallop, the Enemy attacked his Men from an Ambuscade; the *Dutch* immediately fled to their Vessel, and re-embarked; a Soldier reached the Shore just as the Boat had put off; but Captain *de Witte* ordered them to row back, going himself on Shore to save the poor Man, which cost him a Wound in the Side, of which, however, he happily recovered.

35. On September 21. the Vice-admiral's Squadron appeared in Sight; and, on the 22d, they sent a Yacht to acquaint the Admiral, that six of their Soldiers having deserted, they had seen 600 *Spaniards* the next Day, advancing towards the Shore, who, they conceived, had a Design to surprize their Men at the Watering-place; but, by good Luck, they were all embarked. From the 24th to the 28th, the Fleet continued cruising to the Westward, in Hopes of finding the Islands called *Ladrillos*, which, in a *Spanish* Journal, were said to lie 40 Leagues to the West of *Acapulco*; and that they might there meet with Water, Fish, and Potatoes, in Abundance. The *Dutch*, however, failed twice that Space without being able to find them, which, whether it was owing to any Mistake in the *Spanish* Charts, or to the Ignorance of the *Dutch* Pilots, is uncertain. On the 29th, they burnt their two Yachts, the *Greyhound* and the *Violence*, because they could hardly swim any longer; and so resolved to proceed with all the Diligence imaginable to the *East Indies*.

36. On January 15. 1625. they saw some very low Land towards the West, over which the Sea broke with great Fury, which they took to be the Coast of the Island of *Galperico*. On the 23d, the Scurvy had prevailed to such a Degree, that they had scarce Men enough in Health to work the Ships. In the Evening of the 25th, they were on the Coast of the Island of *Guan*, one of the *Ladrillos*, the Inhabitants of which came two Leagues to meet them, with all sorts of Refreshments the Island afforded, which they exchanged for old Iron. The next Morning there came off 150 Canoes, with Fruits and Garden-stuff. On the 27th, the Vice-admiral, with half the Soldiers, attempted

tempted to land on a small Island, about three Leagues to the South of the Road, but found it impracticable. In the mean time, the Rear-admiral had coasted the Bay, and found a very good Watering-place. On the 28th, they landed fifty Soldiers to protect the Scamen, while they were filling Water; and the next Day it was found necessary to strengthen that Detachment, which had been insulted by the Natives. In the Beginning of the Month of February, they brought considerable Quantities of Rice on board, and sold seventy or eighty Pounds Weight for an old Hatchet. On the 5th, the Admiral directed a general Review, when, including Spanish and Negro Prisoners, of which there were thirty-two, they found 1260 on board, by which it appeared they had lost 409 since they left Holland. The Island of Guan, which is one of those filed by the Spaniards *Isas de las Velas*, or *Ladrones*, lies in 13° 40' North Latitude: The Soil is tolerably fertile; they sow Rice in several Places, and have prodigious Quantities of Cocons. The Inhabitants sold the Dutch 200 Fowls, but they would not let them have any Cattle, though they offered them any Satisfaction. The People are of a larger Size than other Indians, but very strong, and well proportioned; they are, generally speaking, painted red: The Men go stark naked; but the Women have the Leaf of a Tree to cover their Privities. The Arms they use are Affagaies, or wooden Javelins and Slings, which they use with great Dexterity. Their Canoes are very convenient, and go at a great Rate before the Wind: Neither are they afraid to put to Sea in stormy Weather; but, in case they are overtaken, turn up their Vessels again, and empty the Water in an Instant. The Dutch experienced their Dexterity in another Profession, viz. that of Cheating; for when they came to examine those Balls of Rice, which they thought they had bought so cheap, they found the Inside of them Stones and Dirt: Besides, they stole every thing they could lay their Hands on. Such as land in this Island, ought to be extremely cautious how they ramble; for the Dutch, while they remained here, lost several of their People, through their own Folly in this respect. On February 14. they saw an Island, in 10° 30', which they took to be that of *Savedra*, which if it was, then it is wrong laid down in the Charts. On the 15th, about Nine in the Morning, they saw another Island not laid down in the Charts, the People of which endeavoured to come out to them in Canoes with Fruits and Refreshments: They were much of the same Size with the Inhabitants of the *Ladrones*; but, the Ship failing at a great Rate, they were not able to get on board. This Island appeared to be very populous, and extremely well cultivated, lying in the Latitude of 9° 45'. The 23d, it was resolved in Council, that they should continue their Course South South-west to the Height of 3°, in order to arrive at *Gilolo*, and from thence to continue their Voyage to *Ternate*. The same Day, at Noon, they had an Observation, by which they perceived, that the Currents carried them violently to the North; for the Northern Trade Wind began then to blow, the Effects of which they felt very sensibly.

37. On March 2. they had Sight of the high Mountain of *Gammanacor*, which is on the Coast of *Moco*, at the West End of *Haremanera*, or the great Island of *Gilolo*, on the West Side of which lie the Islands of the *Moluccas*. On the 4th, in the Evening, they had a fresh North Wind, which carried them to *Malacca*, the principal Place in the Island of *Ternate*; from whence the Admiral sent his Sloop to *Taluca*, where the Sieur *Jaques le Fevre*, Governor of the *Moluccas*, then was, in order to give him Advice of their Arrival. The 5th of the same Month, or the 6th, according to the Computation of the Inhabitants of those Countries, the Governor came on board to visit the Admiral; and they afterwards went ashore together. On the 13th, they had Advice, that one of the Company's Ships, called the *Fidelity*, had been lost on the Coast of *Sangi*. The same Day, part of the People on board the Fleet had Orders to go ashore, and assist in demolishing the Fort of *Calamate*, which was no longer thought necessary, and consequently the Expence of it must prove burdensome to the Company. Upon the same Motives, the Vice-admiral was sent with a Detachment to ruin the Fort at *Mour*, which is esteemed the third Island in the *Mo-*

lucas. On the 25th, the Governor sailed with a whole Fleet for *Macbian*, from whence, on the 26th, the *Concord* was sent to *Sangi*, in order to take up all that could be saved out of the *Fidelity*. April 4. the Fleet proceeded to *Ambaina*, where the Governor *Herman van Speult* was making Preparations to go to the Island of *Ceram* for the Company's Service. On the 25th, the Admiral sent the Shallop of the *Eagle* to *Batavia*, to acquaint the Governor General of the Dutch East Indies with his Arrival, and the Effects of his Expedition against the Spaniards in the South Seas. On May 14. the Admiral, and the two Governors of *Ambaina*, *Speult*, and *Gorcum*, detached two Ships, one to *Loucbou*, the other to *Cambelle*, both in the Island of *Ceram*, and followed them soon after with all their Forces, where they quickly made themselves Masters of *Loucbou*; after which they directed the Plantations of the Rebels to be burnt, their Clove-trees to be cut down, and the Place to be destroyed. On June 22. they returned to *Ambaina*. On the 28th, the Admiral, and the Governor *Speult*, sailed with the whole Fleet for *Batavia*.

38. On August 25. Governor *Speult* left the Fleet, with the *Orange*, and the *Maurice*, in order to go to *Japara*; and the rest of the Fleet continued its Course to *Batavia*, where they arrived on the 29th; and some Days after Governor *Speult* arrived with his Detachment. As there was not, at that time, any immediate Service for a Fleet of such Strength, the Governor General and Council of the Indies came to a Resolution of separating the Fleet, and employing the Ships, of which it was composed, in such a manner, as seemed to them most for the Service of the States General, and the Company. In consequence of this Resolution, the Command of the *Orange*, the *Holland*, and the *Maurice*, was given to Governor *Speult*, who was directed to sail with them to *Surat*, where he was to remain as short a time as possible, and then to continue his Route to *Holland*: The Vice-admiral *Verfchoor* was detached with the *Hope*, the *Griffin*, and two of the Company's Yachts, upon an Expedition to *Malacca*. The *Eagle* and the *David* were destined to remain on the Coast of *Coromandel*; the *Concord* was refitted, in order to proceed to *Holland*; and the *Delft* and *Amsterdam* were ordered to the Island of *Oruff*, there to be careened, and then to proceed home after the *Concord* as soon as possible; so that here the Expedition of the *Nassau* Fleet was properly at an End.

39. On October 29. Admiral *Schepenham*, finding himself extremely ill, resolved to return Home in the *Concord*, which sailed from *Batavia* with another Ship belonging to the Company, called the *Arus of Horn*. On November 3. the Admiral died on board, worn out with Care and Labour; and, on the 5th of the same Month, he was interred on the Island of *Palobococ*, two Leagues from *Bantam*. On January 21. 1626. they anchored in the Road of the Cape of *Good Hope*; and, on July 9. following, they came, without any remarkable Accident, into the *Trade*, having spent in their Voyage three Years, two Months, and eleven Days. The Length of this Voyage renders it improper to dwell long upon it here in our Reflections; and yet it would be as improper to dismiss so large and so important a Piece, without making some Remarks, in order to justify the inserting here so copious a Relation. It clearly appears from hence, that, though the Dutch might be as able, and as expeditious, in fitting out such Squadrons as we, yet they were not certainly superior to us in their Management of maritime Affairs. They owed the Alacrity and Expedition, with which such Affairs were then managed, to their having a Stadtholder; but then they owed Mistakes in the Choice of Officers, and the Occasions of other Misfortunes, to the same Cause. When private Companies of Merchants fitted out a single Ship, or perhaps two or three, for the undertaking such long Voyages, they were better managed, and turned to far better Account; of which we have a pregnant Instance in that of *Le Maire*, which was executed by the Projectors, and that with a Felicity as surprising, as the Misfortunes that attended this Voyage, concerted by much greater Men, and supported by an incomparable greater Force: At the same time we must allow, that the Intention of the Voyage was laudable; but we must likewise acknowledge, that to pursue

purse right State than makes those ever, when pension of well aware, the Situation much change *Spilbergben*, out of this made by S Judges of M then, we o should have Management without which; and, plead so gre ever, go fa Experience, mean quest selves in the; but, whether enable them had been pr be allowed, strongest Pla of *Lima*, in going, how that it was hindered it *Guiaquil*, ha Place, well other Officers were destroy of their Adm that they k going first turning to C some of the was known: wrong Choic the Excuses ditions; infu undertaken of Circumstanc ation, such in the *East I* for the Servi useless, and a right Cour *Holland*, an this Distrib I mention t ries in the V where there ordination i suffers witho if any thing mult be att

pursue right Ends by wrong Measures, more fatal to a State than the absolute Neglect of them; since the former makes those Ends grow into Disrepute with the People for ever, whereas the latter occasions only a temporary Suspension of the Endeavours to attain them. I am very well aware, that all this may be excused by observing, that the Situation of things in the *Spanish West Indies* was very much changed between the Time that *Drake*, *Candish*, and *Spilbergben*, undertook their Expeditions, and the sitting out of this Fleet; and, indeed, this very Observation is made by *Sir William Monson*, who was one of the best Judges of Naval Affairs that our Nation has to boast: But then, we ought to consider, that the first thing which should have fallen under the Care of those intrusted with the Management of this Design was to obtain proper Intelligence, without which they could not reasonably expect any Success; and, if they failed in this, they ought not surely to plead so great an Error as a legal Excuse. We may, however, go farther, and, from the Lights afforded us by Experience, question the Truth of the Fact: I do not mean questioning, whether the *Spaniards* fortified themselves in the *West Indies*; for that, no doubt, is true; but, whether their Fortifications were such as might enable them to have withstood this Force, supposing it had been properly conducted: And this, I think, cannot be allowed, since the Buccaneers long after took the strongest Places in the *Spanish West Indies*, even the City of *Lima*, in spite of the whole Force of *Spain*. Without going, however, out of this Voyage, it is easy to shew, that it was not want of Force, but want of Conduct, that hindered it from succeeding; since, in the Instance of *Guiaquil*, half the Number, under one Officer, took the Place, well fortified, which double the Number, under another Officer, failed of taking when those Fortifications were destroyed. It appears likewise, that, after the Death of their Admiral, their Councils grew unsteady, inasmuch that they knew not what to undertake. The Project of going first from *Puna* to *Acapulco*, and from thence returning to *Chili*, was so wild and absurd, that, as we see, some of the best Men in the Fleet deserted, as soon as it was known: From all which we ought to infer, that a wrong Choice of Officers was the Ruin of this Voyage, as the Excuses they made ruined the Credit of such Expeditions; inasmuch that we never hear of another being undertaken of the like kind. There are, however, some Circumstances in this Voyage worthy of great Commendation, such as the extraordinary Care taken of the Fleet in the *East Indies*, that it might be immediately employed for the Service of the Company, without remaining there useless, and at a large Expence to the State. This shewed a right Correspondence between the trading Interest of *Holland*, and the Sovereign Authority, without which this Distribution of the Ships could not have been made. I mention this the rather, because there are other Countries in the World, besides *Holland*, that depend on Trade, where there are so many Distinctions, and so little Subordination in Command, that Commerce very frequently suffers without any body's being called to Account; and, if any thing is done for its Advantage and Security, it must be attended with some sort of Perquisite, as if the

Commerce of the State was not its most important Concern, but Naval Commands were bestowed for the Advantage of private Families, and to give particular Men a legal Authority to domineer over 2 or 300 of their fellow Subjects. The last thing I shall take notice of, in this Expedition, is, that it affords the clearest Proof, that the States General of the United Provinces did not intend, that their exclusive Charter to the *East India Company* should hinder the coming of their Ships into the *East Indies* upon their lawful Occasions, and without any Design of prejudicing the *East India Company's* Trade; for, otherwise, they would have directed this Fleet, by their Instructions, to have returned by the Streights of *Magellan*; for, at the time of their setting out, it was a thing taken for granted, that there was no returning through the Streights of *le Maire*, though, as it appears from this Voyage, that was a groundless Notion, as many speculative Points in Navigation are daily found to be. To conclude, the Freedom and Plainness with which this Relation is penned, deserves the greatest Applause. There are some Countries in which Liberty is as much talked of as in *Holland*; where, if a Man had censured the Conduct of Commanders, and laid open the Causes of a Miscarriage of this Nature, with as little Reserve as this Writer has done, it would be considered as an Affront to the Government, and, what is worse, reputed, if not treated, as a Libel. Yet nothing is more certain, than that, in such Countries, one Miscarriage begets another, till at last either the State is undone, or the Government altered, which are certainly Mischiefs, that deserve to be better guarded against than the supposed Inconveniences flowing from such free Remarks. It is impossible, that Errors should be corrected, where it is penal to discover them; and it is as impossible, that Suspicion should be avoided, where Inquiries are discouraged. In the present Case, it was not only the absolute Loss of the immense Sum that this Expedition cost, that fell upon the Subjects of the Republic, but the Loss also of their Hopes, and of that Spirit which had been raised of indemnifying themselves from the Expences of a consuming Land War, by the Advantages that might have been gained by a proper Application of their Naval Force in the *Spanish West Indies*. The Neglect of this brought such a Load of Debt upon the United Provinces, and particularly on that of the Province of *Holland*, that nothing but the sudden Alteration of their Government, which soon after happened by the Suspension of the Stadtholderhip, and the wise and frugal Administration of the *de Wittes*, could have saved the Republic, which must have otherwise, after their long and glorious Struggle for Liberty against a foreign Enemy, sunk under the intolerable Consequences of that Corruption which had imperceptibly crept into the Management of their domestic Affairs. After this Expedition of the *Nassau Fleet*, there is a wide Chasm in our History of the Circumnavigations; and, as the Reader will perceive from the ensuing Sections, whatever was attempted of this kind for many Years afterwards, was rather the Effect of Chance, than of Design: So soon the noblest Spirit is damped by Disappointment, and so easily the Thirst of Discoveries check'd, when all proper Encouragements are taken away!

SECTION XII.

Captain COWLEY'S Voyage round the World.

1. The Occasion of the Voyage.
2. A concise Account of the Undertaking, and the Commander.
3. Their Departure from Virginia, August 23. 1683.
4. Proceed to the Coast of Guiney, and so round Cape Horn, to the Island of Juan Fernandez.
5. Miss a very rich Prize in the Harbour of Arica.
6. Description of the Gallapagos Islands.
7. The Revenge separates from the *Nicolas*, into which *Captain Cowley* goes as Master.
8. Sail from Cape Francisco to Gorgona, or Sharp's Island.
9. Account of their prodigious Run from thence to Guam, being 7646 Miles.
10. Their Transactions during their Stay at that Island.
11. A copious Description of the Isle, and of its Inhabitants.
12. Proceed to Canton, in China, and from thence to an Island North of Borneo.
13. *Captain Cowley* quits the Ship, and gets a Passage home from Batavia.
14. Arrival at, and Description of, the Cape of Good Hope, the

the Dutch Settlement, and the Hottentots. 15. Various Accidents that happened in their Passage
 16. He arrives safely in Holland, and comes from thence to England. 17. Remarks on the Spirit of Navigation which then prevailed, and on some Particulars in this Voyage.

THE Adventures of the *Buccaneers* in *America* have made too much Noise in the World to lay me under any Necessity of shewing what sort of People they were, in this Place especially, since the Nature of this Work will hereafter engage me in the particular History of their Exploits, which, however blameable they may be, will render them for ever famous. These Men usually fitted out small Vessels in some of our Colonies, and cruised in them till they were able to make Prize of a bigger: And, as their Designs generally required Secrecy, they very often took Masters and Pilots on board, under false Pretences; and did not explain the true Design, till they were at Sea, where they were absolute Masters. This was the Case with respect to Captain *Cowley*, a very intelligent Man, and a very able Navigator, who, being at *Virginia* in 1683. was prevailed upon to go as Master in a Privateer which was said to be bound to the *French* Port of *Petit Goave*, in the Island of *St. Domingo*, where such People used to take Commissions; but, in Reality, their Design was to put to Sea, and make what Prizes they could, without that Formality; in which Scheme, if it had been known by Captain *Cowley*, he might not, perhaps, have been so willing to engage. It may not be amiss to inform the Reader here, that this is the same Voyage, at least in Part, with Captain *Dampier's* first Tour round the World, and, therefore, it will be necessary, before we proceed to the Voyage itself, to give a concise Account of the Grounds on which, and the Commander by whom, it was undertaken; the rather, because, in the original Journal of Captain *Cowley*, published by Captain *William Hacke*, there is very little said about it; which was, in all Probability, owing to his being a little ashamed of having engaged in it.

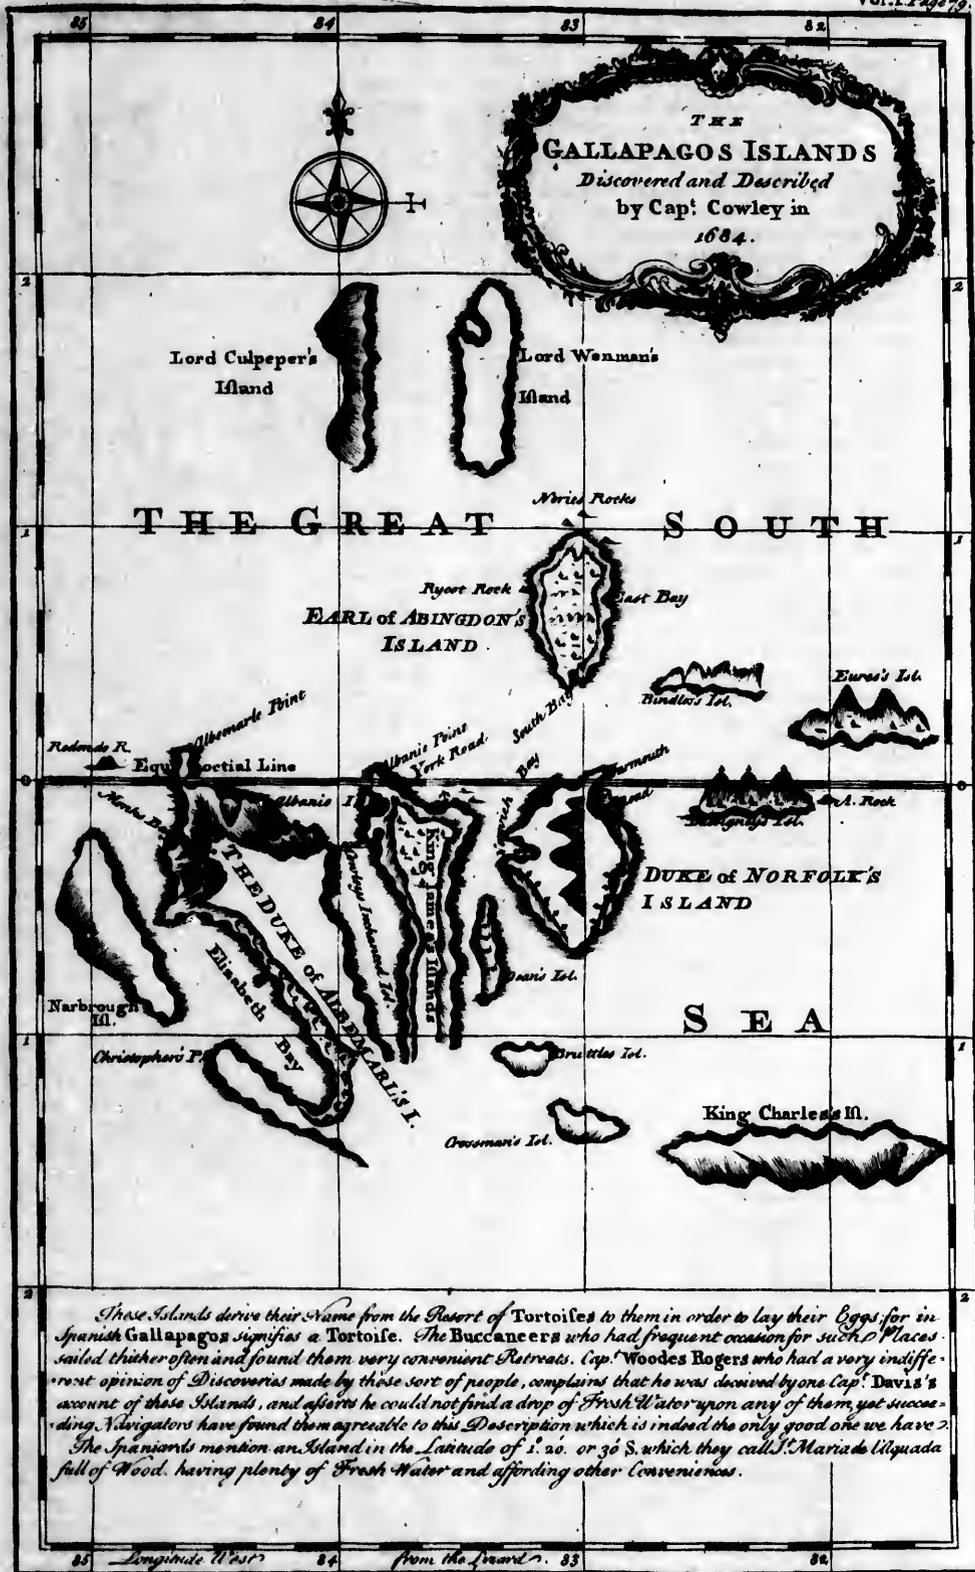

2. Amongst the *Buccaneers* that did the most Mischief in the *Spanish West Indies*, there was one Mr. *John Cooke*, a Native of the Island of *St. Christopher's*, a brisk bold Man, who distinguished himself to such a Degree, as raised him to the Post of Quarter-master on board Captain *Yanky*; and, on their taking a *Spanish* Prize, that was turned into a Privateer, he, according to the Custom of these People, claimed the Command of her; and, as he was very popular amongst them, engaged Men enough to serve under him; but, a great Majority of the *Buccaneers*, at the time this Transaction happened, being *French*, they could not bear to see an *Englishman* invested with such a Command, by the mere Choice of his Crew, without any Commission; and, therefore, to shew how much honest Men they were, who had such Commissions, after robbing the *Spaniards* under Pretence of them, they took this Occasion to plunder the *English*, who had assisted them, of their Ships, Goods, and Arms; and turned them ashore naked: This honourable Transaction happened at the Island of *Avacbe*, which our Seamen generally call *Ass*, on the Coast of *St. Domingo*; but Captain *Trislian*, an old *Buccaneer*, having a little more Good-nature than the rest, was prevailed upon to carry Captain *Davis*, Captain *Cooke*, and eight more of the *English*, to *Petit Goave*, which, in the Language of the *Buccaneers*, is stiled *Petit Guavres*; where, while they lay at Anchor, and Captain *Trislian*, and many of his Men, were on shore, the *English*, to shew how apt Scholars they were, made themselves Masters of his Ship, turned the *Frenchmen*, who were much superior to them in Number, on shore, and sailed with her immediately to the Island of *Avacbe*; and, sending in Captain *Trislian's* Name to the Governor, procured all their Countrymen to be sent on board. As they were now strong enough to set up for themselves, they resolved to make Prize of whatever came in their Way; and, in pursuance of this Resolution, took first a *French* Ship, laden with Wines; and, afterwards, another Ship of considerable Force, in which they embarked, and carried her to *Virginia*, where they arrived in *April* 1683. There they disposed of their Cargo of *French* Wines, and, having purchased Provisions, Naval Stores, and whatever else they wanted,

fitted out their Prize for a long Voyage, mounting her with eight; as Captain *Cowley* asserts, and with eighteen Pieces of Cannon, according to *Dampier*, and giving her the Name of the *Revenge*, of which Captain *John Cooke* had the Command: His Company consisted, as Captain *Cowley* says, of 52, but, as Captain *Dampier* affirms, of 70 Men.

3. They sailed from *Acbamack* in *Virginia*, *August* 23. 1683; and were bound, Captain *Dampier* says, for the South Seas: But Captain *Cowley*, who navigated the Ship, was not in the Secret, and therefore steered for *Petit Goave*, which they suffered for a Day; and then told him, they were not bound thither, but first for the Coast of *Guinea*: Upon which he altered his Course, and steered East South-east for the Cape de *Verd* Islands, and arrived before the Island of *Salt* in the Month of *September*: They found there neither Fruits nor Water, but very great Plenty of Fish, and some Goats, though these were but very indifferent. At this time the Island, which lies in 16° Latitude, and in 19° 33' Longitude, West from the *Lizard*, was very oddly inhabited, and as oddly governed; for there were but five Men upon it, and, of these, four were dignified with Titles: One, a Mulatto, was Governor, two were Captains, one a Lieutenant, the fifth was a Boy, the only Subject, Servant, or Soldier, they had: Yet they were extremely jealous of their Reputations, and took it very ill to be called Negroes, asserting that they were white *Portuguese*, and expected to be treated with Decorum. Captain *Cooke*, who was a Man of more Good-nature than Ceremony, in Return for a Present the Governor made him of Three or four Goats, gave him a Coat to cover him with, which he exceedingly wanted, and an old Hat, which were very kindly received. They traded here for the great Commodity of the Country, which is Salt, made naturally by the Influence of the Sun's Heat upon the Sea-water, let into Ponds of about two *English* Miles in Extent. The Quantity they purchased was no more than twenty Bushels, and they paid for it in old Cloaths, giving the Governor, at his earnest Request, a little Powder and Shot into the Bargain. They sailed from thence to the Island of *St. Nicolas*, which lies West South-west from the Island of *Salt* twenty-two Leagues, and anchored on the South-east Side of the Island, which is of a triangular Form, the longest Side measuring thirty Leagues, and the other two twenty Leagues each: There they found a Governor, who was really a white Man, and had about him three or four People, pretty well clothed, armed with Swords and Pistols; but the rest of his Retinue were in a very pitiful Condition. They dug some Wells on the Shore, and traded for Goats, Fruit, and Wine, which was none of the best. The Country near the Coast is very indifferent, but within Land there are some very fine Valleys, pretty well inhabited, and abounding with all the Necessaries for Life. They continued here about five or six Days, and then held a grand Consultation, whether they should proceed directly to the South Seas in the Ship they had, or sail to the Coast of *Guinea* in Search of another: At last after mature Deliberation, they came to this wise and honest Resolution, to go immediately to the Island of *St. Iago*, in Hopes of meeting with some Ship or other in the Road, intending to cut her Cable, and run away with her; of which Circumstance Captain *Dampier* says not a Word. In pursuance of this Scheme, they stood away to the East of that Island; and, upon coming near it, they saw, over a Point of Land from the Top-mast-head, a Ship at Anchor in the Road, which seemed extremely fit for their Purpose, but proved quite otherwise; for, by the time they were pretty near her, those on board clapped a Spring upon her Cable, struck out her Ports below, and, running out her under Tier of Guns, convinced Captain *Cooke*, that he had caught a Tartar: Upon which he bore away as fast as he could; and, though the strange Ship sent ten Shot after him, yet none of them took Place. This was a narrow Escape; for they were afterwards informed, that the Ship they at-

tempted was a *Dutch East Indiaman*, of fifty Guns, and four hundred Men. They failed from thence for the Coast of *Africa* directly, and, near *Cape Sierra Leona*, they met with a Ship of forty Guns, new built, well furnished with Brandy, Water, and all kinds of Provision, which they boarded, and carried away, steering then directly for the Island of *Juan Fernandez* in the South Seas. There is not a Syllable of all this in *Captain Dampier*, though he affects to be much more particular than *Captain Cowley*.

4. They continued their Course till they arrived on the Coast of *Brasil*, from whence they steered South-west, till they were in 40° South Latitude, where they observed the Sea to be as red as Blood: This was occasioned by vast Shoals of Shrimps, which are there of a red Colour in the Water. They likewise observed vast Quantities of Seals, and so many Whales, that *Captain Cowley* remarks there were a hundred for one found in the same Degree of Northern Latitude, holding their Course still South-west, till they came into the Longitude of 47° , where they met with an Island not known before, on which *Captain Cowley* bestowed the Name of *Pepys's Island*, in Honour of that great Patron of Seamen *Samuel Pepys*, Esquire, Secretary to his Royal Highness *James Duke of York*, when Lord High-admiral of *England*. This Island had a very good Harbour, where 1000 Ships might safely ride at Anchor: it was a very commodious Place both for Wood and Water; abounded with Fowls; and, as the Shore was either Rocks or Sands, promised fair with respect to Fish. In the Month of *January* 1684, they bore away for the Straights of *Magellan*; and, on the 28th of that Month, they fell in with the *Sabidine* Islands, in the Latitude of $51^{\circ} 25'$; then steering South-west and by West, they came into the Latitude of 53° , where they made the Land of *Terra del Fuego*; but, finding greater Ripplings near the Straights of *la Maire*, they did not care to venture thro' it, but resolved to go quite round, as *Captain Bartolomeu Sharpe* did in 1681, who first discovered, that the Country called by the *Dutch*, *States Land*, is in reality an Island, in Right of which Discovery he changed its Name, and he called it *Albemarle Island*, in Honour of *Christopher Duke of Albemarle*, Son to the famous General *Monk*. On *February* 14. they had a prodigious Storm, which lasted between a Fortnight and three Weeks, and drove them out of 47° into the Latitude of $63^{\circ} 30'$, which was the farthest South that ever any Ship went: This Storm was attended with so much Rain, that they saved twenty-three Barrels of Water, though they dressed their Victuals with it during that Space. The Weather too was so excessively cold, that they could bear drinking three Quarts of burnt Brandy a Man in twenty-four Hours, without being at all the worse for it. Thence steering North-east, they came into warm Weather again; and, in the Latitude of 40° , they met with an *English* Ship called the *Nicolas*, of *London*, of 26 Guns, commanded by *Captain John Eaton*, with whom they kept Company, and sailed together for the Island of *Juan Fernandez*. They arrived there *March* 23, and anchored in a Bay at the South End of the Island, in twenty-five Fathom Water. *Captain Bartolomeu Sharpe* had been there in 1680, and, finding the Place uninhabited, called it *Queen Casbarine's Island*: At his going away, he left behind him, by Accident, a *Moskito Indian*, who remained there from that time to this; he had with him his Gun, a Knife, a small Barrel of Powder, and a few Shot. In this desolate Condition he found it equally hard to conceal himself from the *Spaniards*, (who, having notice that he was left there, came more than once to take him) and to provide for his Subsistence; and yet he accomplished both. He chose for his Habitation a pleasant Valley, about half a Mile from the Sea Coast, where he had erected a very convenient Hut, well lined with Seal-skins; and had a Bed of the same, raised about two Feet above the Ground. His Knife, by the Help of a Flint, he converted into a Saw, and with that he cut the Barrel of his Gun to Pieces; which he fashioned into Harpoons, Lances, Fish-hooks, and a long Knife, by heating the Pieces first in the Fire, and afterwards hardening them. All this cost him abundance of Labour, but, when once performed, he lived comfortably enough: When he saw the Ships at Sea, he guessed they were *English*, and im-

mediately dressed two Goats, with a large Quantity of Cabbage, to entertain them when they were ashore. It was a double Satisfaction to him, when, on their landing, he not only saw they were *English*, but many of them his old Acquaintance, particularly *Captain Edmund Cooke*, and *Mr. William Dampier*, who were on board the Ship that left him there. This Island they found very pleasant, as well as plentiful, and very conveniently situated for their Purpose, lying 110 Leagues due West from *Valparaiso*, a Port on the *Spanish* Main.

5. Sailing from thence, they steered North North-east, till they were off the Bay of *Arica*; and there the Officers of both Ships held a Council of War, in order to determine whether they should make an Attempt there, or go lower down the Coast. After much Deliberation, they determined to sail on to *Cape Blanco*, in hopes of meeting with the *Spanish* Plate Fleet from *Panama*: Which fell out to be the very worst Resolution they could have taken; for, if they had gone into the Bay of *Arica*, they must have taken a Ship with three hundred Tons of Silver on board. As it was, they continued their Course till they were in the Latitude of 10° , where they were obliged to take a Ship laden with Timber, tho' they knew it was not worth taking, to prevent their being discovered. They then sailed on Northwards to the Island of *Lobos*, in the Latitude of 7° , where they put their sick Man ashore for Refreshment, and heeled their Ships, and scraped them, that they might be the fitter for Action, for which they were very eager, their Provisions growing very low, which was another Circumstance that made their Prisoners troublesome to them, having more of their own People to feed, than they knew how to provide for. After much Consultation, they resolved to attempt *Truxillo*, in the Latitude of 8° , and about ten Miles from the Coast, where there was a Probability of their gaining a considerable Booty. At the Time they undertook to do this, they had not, in both Ships, above 100 Men able to carry Arms; but the next Day, as they were weighing their Anchors, they saw three Ships under Sail, which *Captain Eaton* chased and took; they were laden with Flour, Fruit, and Sweetmeats, which made them very agreeable Prizes, notwithstanding they had put on shore 800,000 Pieces of Eight, on their having Intelligence, that there were Enemies in those Seas.

6. The making these Prizes rendered another Council of War necessary, in order to consider how to dispose of them; in which, after much Dispute, it was judged most expedient to seek out some Place of Safety, where the best Part of the Provisions they had lately taken might be securely laid up: And this Point again affording room for a second Debate, the Issue of that was, that they should sail to the *Gallapagos* Islands, which, as we have observed in a former Voyage, the *Dutch* were not able to find. On *May* 19. they sailed from the Island of *Lobos*, and, after three Weeks Sail, fell in with the Islands they sought. The first they met with lay in $1^{\circ} 30'$ South Latitude; and this *Captain Cowley* called *King Charles's Island*; and he likewise named many more of them, particularly one after *Sir Antony Dean*, who was a Commissioner of the Navy; another under the Equinoctial, the *Duke of Norfolk's Island*; and several beyond it. They came to an Anchor in a very good Bay, lying towards the North End of a fine Island, which he called the *Duke of York's Island*. Here they met with a great Quantity of Provisions, especially Sea and Land Tortoises, some of the latter weighing two hundred Weight; which is much beyond the ordinary Size. There was likewise Abundance of Fowls, especially Turtle-doves, with Wood and Water in the *Duke of York's* Island, that were excellent; but in none of the rest. Beyond the Line they discovered five Islands: That nearest the Line, to the East, they called *Eures Island*; another small Island, to the West of it, they called *Hindlos's Island*; a much larger Island, still to the West, they called the *Earl of Abington's Island*; the other two, lying North-west, they called *Lord Wenman's* and *Lord Culpepper's Islands*. They landed in the *Duke of York's* Island; 500 Hags of Flour, a large Quantity of Sweetmeats, and other Provisions, that they might have recourse to them, in case of Necessity; and, remained there about a Fortnight, during which Time they put their Commander *Captain John Cooke*, who was in
a very

a very declining State of Health, on shore: After which, they determin'd to return again to the *American* Coasts, chiefly persuaded thereto by one of their Prisoners, a Native of *Realajo*, who assured them the Inhabitants were perfectly secure, and that the Place might be easily taken. Upon this Information, they steered North North-east; and the first Land they made, upon the Main, was Cape *Trespointas*, where, coming to an Anchor, they sent their Boat on shore, to look for Water; and, on the East Coast of the Bay, they found some, that was very good. As soon as they were in Sight of Land, their Commander Captain *John Cooke* died; and, going ashore to bury him, three *Spanish* Indians came down to see who they were, and were taken, and carried on board. Some small Time after, sending their Boat on shore again, to try if it was possible to get some Cattle, the *Spaniards*, while the Men were hunting, burnt their Boat, and lay in Ambush to take them when they came back. In this Distress, they had Recourse to a very steep Rock not far from the Shore; which, with some Difficulty, they gained, and there they continued, till the Ship sent another Boat, with twenty Men, to fetch them off. The three *Indians* they carried aboard, with Ropes about their Necks; but, as they led them, one found a Way to get his Neck out of the Collar, and made his Escape. It was now thought unnecessary to keep the rest of the Prisoners, and so they gave them Leave to shift for themselves; and then bore away for *Realajo*, where when they arrived, and made some Prisoners, they found the Country to be alarmed by the *Indian*, that had made his Escape from them, that it was impossible to do any thing; and therefore they returned very disconsolate to their Ship.

7. After this Disappointment, they resolv'd to sail for the Gulph of *St. Michael*, called also the Gulph of *Anapalla*, at the Mouth of which there are two very considerable Islands, the one called *Mangera*, the other *Anapalla*; both which they possessed themselves of. And here some Disputes arising between Captain *Davis*, who succeeded Captain *Cooke* in his Command, and Captain *Eaton*, they resolv'd to separate, tho' it was certainly for the Interest of both to keep together. It was, however, judged requisite to careen their Ships; for doing which this Place afforded all imaginable Conveniences. The *Indians* also, tho' they had been ill used by Captain *Davis's* Men, who fired upon them without any just Cause, were reconciled, and became very useful, carrying them over to an Island, where there was Plenty of wild Cows; which enabled them to stock their Vessels with Beef. This being done, and both Ships in a Condition to put to Sea, Captain *Eaton* took on board his Vessel four hundred Sacks of Flour, and prepar'd to quit the Coast, having first agreed with Captain *Cowley* to quit the Ship he was in, and to sail with him in Quality of Master, obliging himself to navigate the Ship to any Place or Port Captain *Eaton* should direct. From this Period of Time, therefore, the Voyages of *Cowley* and *Daupier* cease to be the same; which was the Reason that I thought it necessary to take in both, the rather because such as have treated of Circumnavigations have pursued this Method; and I have no Inclination to be singular, but to afford my Readers all that they can reasonably expect in a Work of this Kind, in which, I hope, I have hitherto succeeded. But to proceed to Captain *Cowley's* Voyage in his new Ship, and with his new Captain:

8. It was about the Middle of *August* when they left the Bay of *St. Michael*, and steered for Cape *Francisco*, which lies in the Latitude of 1° North; in the Neighbourhood of which Cape they met with such dreadful Storms, attended with such violent Thunder and Lightning, as they never saw in any other Place. From thence they proceeded into the Latitude of 7° ; but, finding the Country every-where alarmed, they thought fit to bear away for *Paitea*, which is but in 5° , where they took two Ships at Anchor; which the *Spaniards* refusing to ransom, Captain *Eaton* ordered them to be burnt. Then, taking Leave of the Coast, he sailed for the Island of *Gorgona*, which the Privateers generally call *Sharpe's Island*. It lies in the Latitude of $3^{\circ} 15'$, at the Distance of about four Leagues from the Main. It is in Length two Leagues, and in Breadth one. On the West Side of the Island there is a good Harbour; and, tho' the Place be uninhabited, yet it affords Wood and Water

in Abundance. The common Notion in the *West Indies* is, that it rains often in *Chili*, seldom in *Peru*, but always in the Island of *Gorgona*, where, they say, there never was a fair Day known; but, tho' this is not to be strictly taken, yet all, who are acquainted with this Island, agree, that it rains more or less in all Seasons here; which is probably the Reason, that, notwithstanding its convenient Situation, it has always remained uninhabited. They sailed from thence, and kept a West North-west Course, till they arrived in the Latitude of 13° North; and then they steered West, as low as the Rocks of *St. B. Islemew*. They then got into the Latitude of 15° , till they thought themselves out of Danger from those or any other Rocks; after which they returned into the Latitude of 13° , in which they continued their Voyage for the *East Indies*.

9. They had the Trade-wind from the Time they were in the Latitude of 10° , and a reasonable good Passage, except that the Men were, generally speaking, sick of the Scurvy, to the 14th of *March*, when they saw the Island of *Guam* or *Guana*, which bore West from them; and had an Observation the same Day, by which they found themselves in the Latitude of $13^{\circ} 2'$: And, according to Captain *Cowley's* Journal, this was a prodigious Run; for he says, that, according to his Computation, it was 7646 Miles; that is to say, departed so many Miles from *Gorgona*, by Loss made out in Longitude, which is about 2549 Leagues. The next Day, which was *Sunday, March 15*, they sailed about the South-west Part of the Island, and at length came to an Anchor in the Bay, which is on the West, and sent a Boat ashore, with a Flag of Truce; but, when they came near the Village, they were very much surpris'd to find the Inhabitants had set Fire to their Houses, and were run away. The Boat's Crew cut down some Cocoa-trees, and, having gathered their Fruit, were coming on board, when a Party of *Indians* sallied from behind some Buthes, as if they intended to have attack'd them; but, upon setting up the Flag of Truce, they order'd one of their People to peel a Wand, that it might appear white; and then they confer'd in a friendly Manner together. This good Correspondence continued, with a free Trade on both Sides, to the 17th, when the *Indians*, without the least Provocation, attack'd the *English* suddenly; who, defending themselves with their Fire-arms, killed some, wounded many, and escap'd without Hurt themselves.

10. On the 19th, the *Spanish* Governor of the Island of *Guam* came down to a Point of Land not far from the Ship, and sent his Boat aboard with three Copies of the same Letter in *Spanish*, *French*, and *Dutch*, signifying, that, as an Officer of the King of *Spain*, he desired to know, who they were, whence they came, and whither they were bound. Captain *Eaton* wrote the Governor a very civil Answer in *French*, in which he told him, that they were fitted out by some Gentlemen in *France* to make Discoveries; and that he came thither for the sake of Provisions. The Messenger no sooner deliver'd this Letter, than he was dispatch'd back with another Epistle, assuring the Captain, that he was very welcome, and desiring him to come ashore, and confer with the Governor. This Invitation was accordingly accepted, Captain *Eaton* landing with a Guard of twenty Men double-armed. As soon as he set Foot on shore, the *Spanish* Governor saluted him with a general Discharge of his Fire-arms; to which Captain *Eaton* answer'd, by firing ten Guns. The Conference was managed with great Candour and Civility on both Sides. Captain *Eaton* excus'd himself for killing the *Indians*, by assuring the Governor, that his People did it in their own Defence. To which the Governor answer'd, that he readily believ'd it, the *Indians* being a base, treacherous and bloody People; so that he could not do him a greater Pleasure, than to kill them all. At parting, the Governor promis'd him all the Accommodations the Country could afford; and perform'd this Promise with the highest Honour. On the 18th at Noon, a Captain came on board from the Governor, and brought with him ten Logs, a prodigious Quantity of Potatoes, Plantains, Oranges, Pappas, and red Pepper. In Return for all this, Captain *Eaton* sent the Governor a Diamond Ring worth twenty Pounds; and presented each of the Gentlemen, who attend'd the Captain, with a Sword. The next Day, the Governor sent another Captain, with two Ecclesiastics, to desire the Favour

of the *Indians* his Force retain'd Barrels Cannon. Captain declined was to the ver, des Captain carried of the Govern Pounds. and they quitted, there car French J nuns, Pot Silver Pe These Pe Pleasant Cocoa-nu also a ver rior to M every Day Cowley, d veniences which he the *Indian* of the M would not for their Quantity to have for Captain C fer'd his which Pres whom the and, when Net, they Boat: But charge of those on I were conce sail'd, they sent two I to sell Ric the Captai had taken Part of the Island not mit them assist them that, for the Rewar reap a pro *Spaniards* the P opo and thence at a time the Bay, a Governor, and were a Governor of Captain and Gener In the Aft by West.

11. The titude of Length, a pleasant plentifully Soil in the Plenty of manoes, Sney. The stant Trad NUMB

of the *English* Commander to spare him some Powder, the *Indians* being then in Rebellion, and he about to employ all his Force, in order to reduce them. Captain *Eaton* entertained these Messengers very elegantly, spared them four Barrels of Powder, and offered them four small Pieces of Cannon. They accepted of the former, and thanked the Captain for the Offer of the latter; which, however, they declined, and, at the same time, presented a Box, in which was the Value of 1400 Pieces of Light in Gold and Silver, desiring him to take whatever he thought fit; but the Captain absolutely refused to take a Farthing; and so they carried their Box on shore again. But, the next Morning, the Governor sent the Captain a Diamond Ring worth fifty Pounds. On the 19th, they sent out their Boat to cruise; and they forced an *Indian* Canoe on shore, which her Crew quitted, and they kept to land their Men in. On the 22d, there came a new Deputation from the Governor, with a *French* Jesuit at the Head of it, who brought them *Cocoanuts*, Potatoes, and a considerable Quantity of Chocolate, a Silver Pot to make it in, and half a Dozen *China* Dishes. These People taught the *English* Sailors how to make a pleasant kind of Milk, by scraping the inner Shell of the *Cocoanut*, which not only gives Water the Colour, but also a very sweet agreeable Taste, very little, if at all, inferior to Milk. The Governor sent them thenceforward every Day some kind of Provision or other; while Captain *Cowley*, doubting whether he should meet with the like Conveniences elsewhere, resolved to heel and scrape his Ship; which he performed with great Ease, by the Assistance of the *Indians*, as well as the *Spaniards*. Towards the End of the Month of *March*, when it was visible, that the Ship would not remain long in the Road, the Governor sent them for their Sea Stores thirty Hogs, with a proportionable Quantity of Rice and Potatoes. The *Indians* also seemed to have forgotten what happened at their first Arrival; but Captain *Cowley* kept it always in his Head, and never suffered his Men to stir, on any Pretence, without Arms; which Precaution of his saved upwards of twenty of them, whom the *Indians* had invited to go a fishing with them; and, when they saw one half of them on shore to draw the Net, they attempted to seize those that were left in the Boat: But they paid dearly for it, receiving a general Discharge of the small Arms, both from those in the Boat, and those on Land; so that few or none escaped of them, that were concerned in this Project. But, before Captain *Eaton* sailed, they played off a Stratagem of another Kind: They sent two *Indians*, who were Natives of *Manilla*, on board, to sell Rice and Fruits, who, after some Conversation with the Captain, told him the State of their Affairs; that they had taken Arms against the Governor; and that the best Part of the *Indians* were retired from *Guam* to another Island not far off; that they were determined never to submit themselves to the *Spaniards*; and that, if he would assist them, it would be very easy to reduce the Island; that, for their Parts, they desired nothing but Freedom as the Reward of their Assistance; and that the *English* might reap a prodigious Benefit from this Expedition, since the *Spaniards* were immensely rich. But the Captain treated the Proposal as it deserved, with the highest Indignation; and thenceforward admitted but two or three of the *Indians* at a time to come on board. On *April* 1. they sailed from the Bay, and anchored before the Fort, the Place of the Governor's Habitation; which they saluted with three Guns, and were answered by the same Number. On the 3d, the Governor sent his Captain, with a Present, to take his Leave of Captain *Eaton*, and to testify his Sense of the Honour and Generosity, with which he had behaved towards him. In the Afternoon they sailed with a fair Wind, steering South by West.

11. The Island of *Iguana*, *Guaña*, or *Guan*, is in the Latitude of 13° 30' North, and is about fourteen Leagues in Length, and about six in Breadth. The Valleys are very pleasant. It is interspersed with fine fruitful Meadows, plentifully watered by many Rivulets from the Hills. The Soil in these Valleys is black, and very rich, producing Plenty of *Cocoas*, Potatoes, Yams, *Papas*, Plantains, *Monanocs*, *Sour-sops*, *Oranges* and Lemons, and some *Honey*. The Climate is very hot; but, by means of the constant Trade-wind, is, notwithstanding that, very wholesome.

NUMB. 6.

The *Indian* Inhabitants are very large, well-made, active, and vigorous, some of them being seven Feet and an half high. Most of them go stark-naked, both Men and Women. They never bury their Dead; but let them lie in the Sun to putrefy and rot. They have no Arms, but Lances and Slings. The sharp End of their Lances are made with dead Mens Bones; for, upon the Decease of a Person, his Bones make eight Lances, of his Leg-bones two, of his Thighs as many, and his Arms afford four; which being cut like a Scoop, and jagged like the Teeth of a Saw, or Eel-spear, if a Man happens to be wounded with one of them, and be not cured in seven Days, he is a dead Man. "We took," says Captain *Cowley*, four of those Infidels Prisoners, and brought them on board, binding their Hands behind them; but they had not been long there, before three of them leaped overboard into the Sea, swimming away from the Ship with their Hands tied behind them. However, we sent the Boat after them, and found a strong Man, at the first Blow, could not penetrate their Skins with a Cutlass. One of them had received, in my Judgment, forty Shots in his Body before he died; and the last of the three that was killed, had swam a good *English* Mile first, not only with his Hands behind him, as before, but also with his Arms pinioned." It is certain, that the great *Manilla* Ship, that goes annually from thence to *Acapulco*, touches there for Refreshments, both going and coming; and the *Indians* stand in great Dread of her. They reported, that they had sometimes eight Ships in a Year from the *East Indies*. The *Spaniards*, who were on board Captain *Eaton*, said, that, in 1684, they had built in that Island a Ship of 160 Ton, to trade to *Manilla*; and they likewise told him, that the *Spanish* Garrison consisted, at that time, of 600 Men; and that the *Indian* Inhabitants were most of them in Rebellion. Captain *Cooke*, who was here in 1710, finds great Fault with Captain *Cowley*'s Description of this Island, which, he is pleased to say, is false; but, I apprehend, without any just Grounds. He mentions but two Instances: The first is as to the Length of the Island, which he affirms to be but ten Leagues; whereas Captain *Cowley* says it is fourteen: But, as both speak by Conjecture, I cannot say which is in the right; but Captain *Woodes Rogers*, under whose Command *Cooke* made the Voyage, and who was, to the full, as accurate a Writer, fixes the Circumference at forty Leagues; which, considering the Shape of the Island, agrees very well with what Captain *Cowley* says. The other Mistake he charges him with, is as to the Number of the Garrison, which, when *Cooke* was there, did not exceed 100 Men. In order to make out this Mistake, he asserts a direct Falshood; for he says, that Captain *Cowley* makes it 600 Men; whereas Captain *Cowley* only says, the *Spaniards* told him so; and seems to doubt it. In other Circumstances they agree tolerably well.

12. On *April* 4. they sailed West by South, and the Day after, West, when they reckoned their Distance from that Island 206 Miles. From that time they kept no certain Account, because of Calms, till they came into 20° 30' North Latitude, where they fell in with a Cluster of Islands to the Northward of *Luconia*, which is the biggest of the *Philippines*. The 23d, they met with a very strong Current, like the Race of *Portland*, at the Distance, as they computed, from *Guam* of 560 Leagues. On the Northernmost of these Islands they sent their Boat ashore, to get some Fish, and to discover the Island, on which they found vast Plenty of Nutmegs growing; but saw no People, and, as Night was drawing on, they durst not venture far within Land. This Island they called *Nutmeg Island*, and the Bay, in which they anchored, *English Bay*. They observed also Abundance of Rocks, Sands, and foul Ground near the Shore, and saw a great many Goats upon the Island; but brought very few on board. After they got through these Streights, they continued their Course South-west for *Luconia*. *April* 26. they were off Cape *Bajadore*, and, soon after, came up with Cape *Mindato*, where they met with a South-west Monsoon, which made them steer North-west for *Canton* in *China*, where they arrived safely, and fitted their Ship. They had an Opportunity here of making themselves as rich as they could desire; but they would not embrace it. There came into this Port thirteen

Y

Sail

Sail of *Tartar* Vessels, laden with *Chinese* Plunder, consisting of the richest Goods in the *East Indies*: But this would not tempt *Captain Eaton's* Men; they were for nothing but Gold and Silver, and could not bear the Thoughts of being Pedlers; neither could their Commander, by fair Words or foul, prevail upon them to alter their Resolution, which was not to fight for Silks. The *Tartars* therefore quietly pursued their Affairs at *Canton*, without having the least Knowledge of their Danger. When they had put their Ship in the best Condition possible, they continued their Voyage from *Canton* to the City of *Manilla* in the Island of *Luconia*, in order to wait there for a *Tartar* Ship, which, according to their Information, was half-laden with Silver; but, tho' they once saw her, they were not able to come up with her, because she was a clean Ship, and they as foul as they well could be. They chased her, however, for a whole Day, but to no Purpose; and then stood away for a small Island to the North of *Luconia*, to wait for a proper Wind to carry them to *Bantam* in the Island of *Java*. Instead of one, they found several Islands, where they refreshed themselves very conveniently; and, having Information from an *Indian* of an Island abounding with Bees, they sent their Boat thither, with thirty Men, who took, by Force, what they wanted, though the Island was well inhabited. About the Middle of *September* they sailed from thence, and steered South South-west, till they came into the Latitude of 10° , when they fell in with the Banks of *Peragoa*, thro' which they sailed three Days in the utmost Danger. At length they reached an Island somewhat to the North of *Borneo*, where, finding a convenient Bay, they haled their Ship ashore, set up a Tent, and planted ten small Guns for their Defence, in case the Natives should attack them; but they, having never seen white Men before, avoided them all they could. It was not long, however, before they came up with a Canoe, on board of which was the Queen of that Country, with her Retinue, who all leaped into the Sea to avoid them. They took them up without much Difficulty, and entertained them afterwards so kindly, that they were very good Friends during the Time they staid there, which was about two Months. At this Time, the *Spaniards* were at Peace with the Monarch who governed *Borneo*, and carried on a very advantageous Trade there from the *Manillas*; of which *Captain Eaton's* People were no sooner informed, than they declared themselves *Spaniards*, and passed for such all the Time they staid.

13. It was towards the End of the Month of *December* 1685, that they left this Island, in order to go to a Chain of Islands, called the Islands of *Naturab*, in 4° North Latitude. They did not stay there long; but proceeded from thence to the Island of *Timor*, where the Crew growing extremely mutinous, paying little or no Regard to *Captain Eaton's* Orders, our Author resolved to quit the Ship, and find some Way or other to get his Passage home from *Batavia*. Accordingly, himself, one *Mr. Hill*, and eighteen more of the Men, who were the same way inclined, purchased a large Boat, in which they designed to have gone to *Batavia*; but, the Wind proving contrary, they were obliged to put in at *Cerberon*, a Factory belonging to the *Dutch* upon the same Isle of *Java*, where they found they had lost both a Day in the Month, and a Day in the Week. They met here with several Pieces of bad News; such as, that King *Charles II.* was dead; and the *Dutch* had deprived the *English* of their Factory at *Bantam*, which was the second Place of Trade we, at that time, possessed in the *East Indies*; and one can never sufficiently wonder, that Care was not taken, after the Revolution, that we should have it again, the Loss of it having been extremely prejudicial to our *East India* Company, as will appear in another Place, when we come to relate this Story at large. At present we shall content ourselves with observing, that, while *Captain Couzley* was here, the *Dutch* were forming other Schemes to the Prejudice of our Trade; whereupon *Captain Couzley*, *Mr. Hill*, and a third Person, resolved to make all the Haste they could to *Batavia*, that they might not be involved in any Disputes. They got, with little Trouble, their Passage to *Batavia*, where they were very kindly received by the *Dutch* Governor General, who promised them their Passage home in a *Dutch* Ship; which he afterwards complied with: But there being, at that time, about twenty

Englishmen at *Batavia*, they purchased a Sloop, with which they intended to have gone to *Sillibar*, an *English* Factory on the Coast of *Sumatra*; but so far were the *Dutch* from permitting of this, that they took the Sloop from them, paying, however, what it cost; and put the *Dutchman* in Prison, who sold it. To justify this, they made use of many Pretences; but the true Reason was, that they had formed a Design upon *Sillibar*, which tho' they were forced to postpone, yet they were unwilling to let People go thither, for fear the *English* should prove too strong for them. The Scheme they intended to make use of for driving the *English* thence, was singular enough: They had lent the King of *Sillibar* a considerable Sum of Money some Years before, which they now proposed to demand, and to oblige the King to pay them in Pepper; by which Agreement they would have secured all the Trade in his Dominions, and then the *English* must have withdrawn their Factory of course. But, just as they were fitting out a Squadron, in order to have put this Design in Execution, a War broke out with the Emperor of *Java*; which diverted the Storm for that Time, because they were obliged to employ those Ships against their new Enemy.

14. As there was no other Way left of getting home, but in a *Dutch* Ship, *Captain Couzley* and his Friends embarked in *Batavia* Road in the Beginning of *March*; but it was the latter End of the Month before they sailed, and had a very indifferent Passage to the Cape, being reduced to Short-allowance, and even to a Pint of Water a Day. On *May* 27. their Captain died; which occasioned a good deal of Confusion: For a Council of War being called, composed of the Officers of the two Ships *Salida* and *Crisman*, there in it was resolved, that *Captain Tominnal*, Commander of the *Crisman*, should command the *Salida*; and *Captain Tominnal's* chief Mate command the *Crisman*. The Pilot also of the *Salida*, whose Name was *Houdin*, was ordered on board the *Crisman*; which he refused, and the Crew of the *Salida* maintained in favour of their Pilot, and he remained where he was. On *June* 1. they entered the Road before the Cape of *Good Hope*. The next Day, he went on shore with his Companions, and took a View of the *Dutch* Settlement there, which I chuse to give the Reader in his own Words, as a good Description of the Situation of Things at the Cape of *Good Hope* in the Year 1686, and shall hereafter afford him an Opportunity of comparing it with the State of that Settlement at present: "The Town, which is inhabited by the *Dutch*, is but small, and the Houses are built very low, by reason that, in the Months of *December*, *January*, and *February*, they are visited by great Gales of Wind. There are not above 100 of those Houses in all the Town; but they have a very strong Castle, with about eighty good Guns mounted thereon. There is also a very spacious Garden, with most pleasant Walks, which is maintained by the *Dutch East India* Company, and in which are planted almost all manner of Fruit-trees, and incomparable good Herbs. This Garden is about one Mile in Length, and a Furlong in Breadth. This is the greatest Rarity, that I saw at the Cape; for it far exceeded the *East India* Company's Garden that is at *Batavia*. They have also Abundance of very good Sheep here; but very few black Cattle, and not many Fowls. We walked, moreover, without the Town to the Village inhabited by the *Hottentots* (Hottentots), to view their nasty Bodies, and the Nature of their Dwellings, which we found to be as followeth: When we came thither, we were scarce able to endure the Stench of them, and their Habitations. They built their Houses round, (with their Fire-place in the Middle of them) almost like the Huts, that are built in *Ireland* by the wild *Irish*, the People lying in the Ashes, and having nothing under them but a Sheep-skin. The Men have but one Stone in Appearance; which is very strange. But the Women are more to be admired, who have a Flap of Skin, that covers their Nakedness; but are so ignorant, or, I may say, brutish, that they will not stick to prostitute themselves, or do whatever else you would have, for the least Recompence imaginable; and of this I am an Eye-witness. Their Apparel is a Sheep-skin (as I have already said) over their Shoulders, with a Leather Cap upon their Heads, as full of Grease as it can hold. The

" Legs are wound about with Guts of Beasts, (from the Ankle to the Knees) well greafed. The People called the *Hodmandods* (*Hottentots*) are born white; but make themselves black with Soot, and befmeat their Bodies all over; fo that, by frequent Repetition, their Skins become almoft as black as Negroes. Their Children are of a good, comely Shape, when they are young. Their Nofes, in Form, refemble a Negro's. When they marry, the Woman cutteth off one Joint of her Finger; and, if her Husband die, and she marry again, she cutteth off another Joint; and fo many Men as the marrieth, fo many Joints the lofeth. They are People that will eat any thing that is foul. If the *Hollanders* kill a Beaf, they will get the Guts, and fqueeze the Excrements out; and then, without wafhing or fcraping, lay them upon the Coals, and, before they are well hot through, they will take them, and eat them. If a Slave of the Company's have a mind to have carnal Knowledge of one of their Women, let him but give her Hulband a Bit of Tobacco-roll of about three Inches long, he will fetch her forthwith to the Slave, and caufe her to lie with him. They are Men not given to the leaft Jealoufy; yet they will beat their Wives, if they lie with the *Hodmandods* themselves; but they value it not for them to do it with Men of another Nation. They are Worflhippers of Dame *Luna*; and, when they expect to fee the Moon, there will be Thousands of them by the Sea-side dancing and finging: But, if it be dark Weather, fo that the Moon appears not, they will fay, that their God is angry with them; whereas, on the contrary, when the fad Luminary fhines, they will fay he is not angry. There happened at this Time that we were among them, that one of the *Hodmandods* (*Hottentots*) had drank himfelf dead in the Fort, whither the other *Hodmandods* (*Hottentots*) came with Oil and Milk, and put them in his Mouth; but, finding they could get no Life into him, they began to make Preparation for his Burial, which was in the following Manner: They came with Knives, and shaved his Body, Arms, and Legs through the thick Skin; then they digged a great Hole, and fet him in it upon his Breech, clapping Stones round about him, to keep him upright; after came a Company of their Women about him, making a moft horrid Noife; then they covered the Mouth of the Hole, and left him in a fitting Pofture." We need not wonder, that our Author, having received fuch Ideas of thefe People, was willing enough to continue his Voyage, which we fhall likewife purfue.

15. On June 15. 1686. they failed from the Cape of Good Hope, with a fmall Gale at South-weft, fix Ships weighing their Anchors at once, viz. the *Salida*, the *Crisman*, and *Emeland*, for *Holland*, and the other three for *Batavia*; they fired at parting, in drinking of Healths, and other Ceremonies of that fort according to the *Dutch* Custom, upwards of 300 Guns; an idle and expenfive Practice for fo wife and frugal a Nation. July 29. they were in 19° 54' South Latitude, at the Distance of 914 Miles from the Cape; the fame Day they feasted the Captains of the other two Ships on board the *Salida*. The next Day they had a very fair Wind; and, on June 4. they were in the Latitude of 14° 15', when they threw a Man overboard, a Native of *Denmark*, who died in the Night, and was cold and ftiff before any body perceived it. On the 20th of the fame Month, they were in 15° North Latitude; and the fame Day they held a Council of War upon their Captain: He was accused of having hired five Men to murder a Man of Quality, and his Lady, with fome other rich Paffengers that were on board, and then to run away with the Ship. The Perfon who accused him was the Purfer, who produced the Man who told him; and who then denied the Thing as pofitively, as he had before affirmed it; fo that the Captain was unanimously acquitted. On the 22d, according to the Author's Computation, he had failed quite round the terreftrial Globe, cutting the fame Line which he did, when he departed from *Virginia* in the Year 1683. On August 2. in the Morning, died Captain *Tominall*, of an Inflammation in the Bowels, having been ill but three Days. His Pilot was chofen, by the Officers, to fucceed him, whom the

Crew abfolutely refufed to obey; but, by the Perfufion of the other two Captains, they were brought to better Temper, and accepted him for their Commander. On August 4. they judged themselves to be within thirty Leagues of the *Ambroisias* (*Abrolhos*) a very dangerous Shore, or Bank of Sand, laid down in the Maps in 13° North Latitude; but our Author very much doubts, whether there be any fuch Shore, fince he never knew any Man that had feen it; and a Pilot, who had made fixteen Voyages to *Brasil*, affured him, there was no fuch Sand. September 5. about ten at Night, they had a violent Storm, which had like to have driven them on board the *Crisman*; but, by good Luck, when they leaft expected it, their Ship fell off, and the Wind happily filling their Sails, faved them from the Danger they were in.

16. On the 19th, about Noon, Captain *Cowley* faw Land, which he believed to be the *Iland Sbeftland*; of which he told the *Dutch* Captain, but he would not believe him. At fix in the Evening, the People on board the *Crisman* made a Signal of feeing Land, at which all the Ship's Crew of the *Salida* made a Jest of their Captain, for not believing thofe who had better Eyes than himfelf. On the 26th, they found themselves in the Latitude of 53° 35', and the fame Day came up with two Ships, one a *Dane*, the other *Englifh*, on board of whom Captain *Cowley*, and his Companions, would willingly have gone, but the *Dutch* Captain would not permit them; the *Dutch* Lord they had on board affirming, that he could not anfwer it to the States. September 28. they were before the *Maes*, with the Wind at East North-eaft; when it was Day, they faw the *Brill Church*, and *Gravel's Sand*, and then they came to an Anchor in ten Fathom Water, and rode there in Expectation of a Pilot to carry them into the *Maes*. On the 30th, he arrived at *Helvoefluyts*, having been feven Months in their Paffage from *Batavia*. From thence Captain *Cowley* travelled by Land to *Rotterdam*, where he found the *Ann Yacht* ready to fail for *England*, in which he came over as a Paffenger, arriving fafely at *London* Otober 12. 1686. after a tedious and troublefome Voyage of three Years, and near two Months.

17. The Spirit of Privateering upon the *Spaniards*, which had been raifed and promoted by the feveral Wars carried on againft that Nation by the *Dutch*, *French*, and *Englifh*, was now at its full Height; for the Licence given under the Protector *Cromwell*, and the unfettled Situation of Things with refpect to *Spain*, immediately after the Reftoration, gave great Encouragement to thefe fort of Adventurers, till at laft they grew fo powerful, that it was no eafy Matter to put an End to their Depredations; perhaps it would have been impracticable, if they had not been deftroyed by Difcord and Difputes among themselves. Many Inconveniencies mult neceffarily arife from the long Continuance of fo wicked a Practice; but, at the fame Time, it produced fome good Confequences alfo; for thefe Buccaneers were fuch bold and daring Navigators, that they not only attempted, but performed, Things almoft incredible, and which, in Procefs of Time, are come to be thought as impracticable, as they were efteemed to be before thefe Men achieved them: For Instance, the quick Marches they made by Land crofs the Isthmus of *Darien*, which they made a kind of open Road. Befides this, they found out other Paffages from the North to the South Seas, by means of the Rivers, which rife near the latter, and fall into the former. We owe likewife to them the Paffage round Cape *Horn*, without paffing the Straights of *le Maire*, which was firft performed by Captain *Sbarpe*, and afterwards by the *Revenge*, under the Direction of our Author. They alfo difcovered moft of the *Ilands*, which the *Spaniards* had but indifferent Accounts of, and lay down, it may be on purpofe, erroneoufly in their Charts, fuch as the *Gallapagos*, the firft Defcription of which is that given by our Author, encouraged by whole Example, the Privateers often vifited them afterwards. They landed likewife frequently in *California*, and, by their numerous Voyages from thence to the *East Indies*, made fome confiderable Discoveries on that Side too. Thefe were not only great Things in themselves, and of prodigious Confequence to the trading World, but were alfo very happy in another refpect; fince, had it not been for thefe lawlefs Adventurers,

turers, the Practice of granting exclusive Charters to trading Companies, which prevailed here as well as in *Holland*, had put an End to all Discoveries, and thereby extinguished that Spirit, which is the Life and Soul of Navigation, without which all maritime Power must sink and decay, or at least be transported to other Nations, where this kind of circumfribing Policy has not yet taken Place. The Number of Seamen bred up in these kind of Vessels was incredible; and, as many of them were dispersed over our Colonies, and some of them returned into *Europe*, the Accounts they gave contributed to keep up a Desire of undertaking something in those Parts, either by settling Colonies, or making Conquests from the *Spaniards*. Here, in *England*, something of that sort fell often under the Consideration of our Ministry; and King *William* gave all imaginable Encouragement to a Proposition that was made for establishing an *English* Settlement on the River *Mississippi*; but the Affair met with such Delays, and that King found himself so cramped in all his Resolutions for the public Service, that tho', for some time, this was his favourite Scheme, yet he was at last forced to lay it aside; which afterwards gave the *French* an Opportunity of working upon that Plan, which they have done with wonderful Industry, and have received all the Helps from their Government, that it was in the Power of the Government to give. I cannot forbear observing, upon this Occasion, that it was from the *French* Buccaneers, that Nation received all her Lights with respect to the Commerce of the *West Indies*; and to these People, likewise, they owe the very best Settlement they have, which is that in *Hispaniola*, the History of which we shall give at large in another Place. It were, indeed, to be wished, that the Accounts we have of these Expeditions were better and more carefully written than we find them; and yet, all Things considered, we have no great Reason to expect this from such sort of Men. It is one thing, to have the Skill of navigating a Ship; and quite another, to be able to write a clear and satisfactory Account of what happens in such a Voyage. The keeping of a Sea Journal is a Thing reduced to a settled Method, and is as much the Business of a Navigator, as the Care of the Ship; neither, indeed, is it possible for him to attend one, and neglect the other. But the turning that Journal into an historical Relation of the Voyage, and the Circumstances attending it, is a thing quite out of his Way, and which very few Seamen can do without Assistance. In respect to this, again, various Accidents may happen; for a Person may have proper Abilities for executing another History well, that may, notwithstanding, be altogether unfit for putting Memoirs of this sort into proper Order. It is very possible, thro' a History of this kind may be over, as well as under-written; and the florid Style of the Assistant ruin the plain honest Account of the Mariner. It was the Misfortune of our Author Captain *Cowley*, that he had not either the publishing of his own Journal, or the Choice of an Assistant; nay, he was not so much as acquainted with the Design of publishing it; and therefore the Deficiencies which appear in it are the more excusable. I have cor-

rected several, especially with regard to Figures; for it cannot be imagined, that a Man who is, generally speaking, very exact, should ever fall into gross Mistakes; and therefore, when these occur, they ought to be attributed to the Transcriber of his Journal, who was, perhaps, unacquainted with the Subject: But, however, Captain *Cowley's* Voyage has a great deal of Merit: It is written with the greatest Honesty and Freedom, that I have ever met with in a Work of this kind. He never dissembles the Design in which he was embarked; but fairly owns, that they intended to take the Ships of any Nation they were able to master; and, if it had not been for his Account, we should never have known how the *Revenge*, which originally carried eight, or at most eighteen Guns, came afterwards to carry forty; but he explains the Mystery, by shewing us, that the small Ship helped them to the great one. His Account also of the *Gallapagos* Islands, is also very accurate in every respect; and tho' *Dampier* has given us a much larger, and more circumstantial, Relation of this Part of the Voyage, yet he comes very short of him in this Particular. His Observations, as to the Design of the *Dutch* at that Juncture, are very judicious, and discover a great Share of public Spirit, which is the most laudable Quality in every Writer. I cannot help thinking, that it would be of great Benefit to the Public, if we had a fair and impartial History of our Disputes with the *Dutch* in regard to Trade, with a clear Account of what each Nation has gained from the other; for, as, on the one hand, it is certain, that some of the Writers, in the Reign of King *Charles II.* carried their Rancor against the *Dutch* too far, and charged them with many Things, of which they were not guilty; so, on the other hand, some People have extenuated Things too much since, and have thereby rendered the Nation blind to her own Interest. In the Prosecution of this Work, I shall do my utmost Endeavour to set such Points, as shall fall in my Way, in a fair Light; but still, I do not think this would render such a Work as I hint unnecessary. Our Trade is our great national Concern; and we never can have it too fully explained, or too minutely treated; for though the Traffick of private Persons may suffer from too free an Examination, yet it is otherwise with the Commerce of a great People: The more that is sifted and inquired into, the better, as appears in the particular Case of Interest of Money, which, till it was thoroughly handled, and all the Questions that arose about it freely and frequently debated, was never perfectly understood, to the great Discouragement of Trade, and our infinite Loss as a People. But let us at present return to the Thread of our Discourse, and take a View of Captain *Dampier's* Observations, as well in that Part of the Voyage he made together with our Author *Cowley*, as in the Remainder of it, after Captain *Davis* quitted Captain *Eaton*, and Mr. *Dampier* quitted *Davis*, and pursued his Voyage Home the best Way he could. These Voyages have, indeed, been published before; but they appear, for the first time, in their natural Order, and purged from a Multitude of Errors, by which an unwary Reader might have been easily misled.

SECTION XIII.

Captain WILLIAM DAMPIER'S first Voyage round the World, collected from his own Account.

1. The Method observed in digesting this Account.
2. A concise History of Captain *Dampier*, and his Adventures, to the Time of his Return to England, after his second Expedition to the Bay of *Campeachy*.
3. His second Voyage to America, and his Exploits with the Buccaneers from 1679 to 1681.
4. Continuation of his Adventures, to the Time of his undertaking this Voyage, August 23. 1683.
5. Description of the Island of *Salt*, and its Inhabitants.
6. Account of the Island of *St. Nicolas*, and of the Treachery of Captain *Bond* to its Inhabitants.
7. Arrive at the *Sebaldine* Islands.
8. Pass into the Cape of Good Hope round the South Seas.
9. Anchor before the Island of *Juan Fernandez*.
10. Ample Description of that Island.
11. Observations on the Weather in the Pacific Sea.
12. Description of the Island of *Lobos*.
13. Three Spanish Prizes taken.
14. Account of their Stay at the *Gallapagos* Islands.
15. A Digression concerning the several Kinds of *Tortoises*.
16. Return to the Continent, where they find themselves discovered by the *Spaniards*.
17. Are obliged to lay aside their Design upon *Rio Leja*.
18. Description of the Gulph and Islands of *Amapalla*.
19. Transactions there, and their Separation from Captain *Eaton*.
20. Account of the Island of *Plate*, and its Inhabitants.
21. Precautions taken by the *Spaniards* to prevent their Landing.
22. Join with Captain *Swan* and Captain *Harris*.
23. Account of the Town of *Paite*.

and the Buildings in Peru. 24. Description of several Kinds of Bark-logs, and their Uses. 25. Their Proceedings till they reach the Islands of St. Clara. 26. Description of the Town of Guiaquil. 27. Miscarry in an Attempt on that Place. 28. Description of the Bay of Panama. 29. Account of the adjacent Coast. 30. The Island of Gorgonia described. 31. Observations on Panama, and the Country about it. 32. The Course of the Spanish Plate Fleet described. 33. That Description continued. 34. They meet with a considerable Body of Privateers. 35. Description of the Coast near Cape Lorenzo. 36. Their Adventures on that Coast. 37. Their Engagement with the Spanish Fleet. 38. Description of the Islands of Quibo. 39. Make various Attempts, and meet with continual Disappointments. 40. They attack and become Masters of the City of Leon. 41. Further Account of their Transactions to the Separation of the Fleet. 42. Attempt Guatimala, and are repulsed. 43. Prosecution of their Voyage towards the North. 44. The City and Port of Acapulco, and other Places on that Coast, described. 45. Continuation of their Voyage to the Islands of Chametly. 46. Miscarry in their Design on the Manilla Ship. 47. Arrive at the Islands before-mentioned. 48. Some Account of Callifornia, and New Mexico. 49. Sail for the East Indies, and arrive at the Philippine Islands. 50. Description of those Islands, and of their Transactions there. 51. Other Islands, and their Inhabitants, described. 52. Their Discoveries in these Parts, the Names bestowed by them upon several Islands, with a Description of those Islands, and an Account of their Inhabitants. 53. The Islands of Celebes, Bouton, and other Places, described. 54. Copious Account of that Part of the Southern Continent, distinguished by the Name of New Holland. 55. Our Author quits the Ship at Nicobar. 56. Brief Account of his three Years Stay in the East Indies. 57. He embarks for, and returns safe to England, arriving in the Thames, September 16. 1691.

I. THE Observations heretofore made, with respect to the Difficulty of compiling Voyages, and the Causes of those Imperfections that are usually discerned in them, cannot be better illustrated, than by the subsequent Account of his own Discoveries by Captain Dampier, one of the greatest Navigators of late Years, that this Nation has to boast. His Character has been variously represented, according to the different Notions entertained of him by Men who were guided rather by their particular Prejudices or Prepossessions, than by Love of Truth, or Respect to Justice. This was, in some measure, owing to the great Disadvantages, under which his Works were published: They came out at several times, without Order, harshly written, obscure in some Places, prolix in others, and every-where full of Promises of giving the World further and better Accounts, which naturally sunk the Credit of what he was then giving; but, with all these Disadvantages, the Voyages of Captain Dampier will be always thought useful and entertaining. I have taken all the Care I could to improve them in both respects; and, I presume, the Reader will find, that they are much clearer, and more intelligible, as they stand here, than they can be found elsewhere, and that for these Reasons: I have, in the first Place, digested his several Relations into their proper Order of Time, which renders them perfectly well connected, and contributes not a little to their being better understood. By taking this Method, I have had the Opportunity of pruning away many unnecessary Digressions, and needless Repetitions, which, without Doubt, the Author himself would have done, if he had revised his own Writings, and reduced them into a just Series, of which that he had some Notion, appears from several of his Prefaces and Dedications. Thus much as to the rendering his Voyages the more useful; and, that they might still remain as entertaining as ever, I have chosen to retain his own Manner of Writing, except in the subsequent Introduction, where I propose to give the Reader a concise Account of this extraordinary Person from his own Works, previous to those Voyages, that intitle him to a Place in mine, as a very eminent Circumnavigator, and one, whose many Discoveries ought to recommend his Memory to Posterity, as a Man of infinite Industry, and of a very laudable public Spirit.

2. Captain William Dampier was descended from a very reputable Family in *Somersetshire*, where he was born in the Year 1652; and, during the Life-time of his Father and Mother, had such an Education, as was thought requisite to fit him for a Trade; but, losing both his Parents while he was very young, those, who had the Care of him afterwards, finding him of a roving Disposition, and strongly inclined to go to Sea, resolved to comply with his Humour in this respect; and, about the Year 1669, bound him to a Master of a Ship, who lived at *Weymouth* in *Dorsetshire*, with whom he made a Voyage to *France* the same Year, and, in the next, went to *Newfoundland*; but was so pinched by the Severity of that Climate, that, on his Return, he went home to his Friends in the Country, having lost much

of that Eagernefs, with which he had been possessed for going to Sea. This, however, soon returned, on his hearing of an outward-bound *East India* Ship, which was speedily to sail from the Port of *London*; and, thereupon, in the latter End of the Year 1670, he came up to *Town*, and entered himself before the Mast on board the *John and Mariba* of *London*, Captain *Earning* Commander, with whom he made a Voyage to *Bantam* in the Island of *Java*, and back; by which he acquired a great deal of Experience. He returned into *England* in *January* 1672, and retired to his Brother's House in *Somersetshire*, where he staid all the next Summer. In 1673, he entered himself on board the *Royal Prince*, commanded by the famous Sir *Edward Spragge*, and was in two Engagements against the *Dutch* that Summer; but, falling sick, was put on board an Hospital-ship a Day or two before the last Engagement, in which that brave *English* Seaman was killed, and which Mr. Dampier saw only at a Distance. After this, he went down again to his Brother's in *Somersetshire*, where, meeting with one Colonel *Hellier*, who had a large Estate in *Jamaica*, he was persuaded by him to go over to that Island, where he was to be employed in the Management of it. With this View, he sailed from the River *Thames* in the Spring of the Year 1674, and resided somewhat more than a Year at *Jamaica*; where, not liking the Life of a Planter, he, at the Persuasion of one Captain *Hodsell*, engaged himself among the *Logwood-cutters*, and embarked in *August* 1675 for *Campeachy*, where he resided for some time, and followed that Employment diligently, tho' he underwent many and great Hardships, before he had an Opportunity of returning to *Jamaica*, which he did in the End of the Year. In the *February* following, he embarked again for *Campeachy*, being now better provided for the Trade of *Logwood-cutter* than before. He continued here a good while, and acquainted himself perfectly with the Manner of cutting *Logwood*, and trading in it; which enabled him to form some Projects for advancing his Fortune: This, however, made it necessary for him to return first to *Jamaica*, and then to *England*, where he arrived on board a Ship commanded by one Captain *Loader*, in the Month of *August* 1678. It was this new Scene of Life in the Bay of *Campeachy*, that introduced him to the Acquaintance of some *Buccaneers*, and gave him a Notion of that sort of Life, in which we shall find him afterwards engaged, and of which, it is certain, he was afterwards very much ashamed; which I take to be the Reason, that, in his first Voyage round the World, he has concealed many Circumstances, with which, however, the World has been made acquainted by Captain *Cowley*, and others, who had not, perhaps, the same Reasons for keeping them secret. But to proceed with the History of our Author's Adventures.

3. In the Spring of the Year 1679, he embarked on board the *Loyal Merchant*, of *London*, commanded by Captain *Knapman*, bound for *Jamaica*, where he arrived in the latter End of *April*, the same Year, with an Intent to have provided himself in such manner, as might have ser-

him up for a complete Logwood cutter, and Trader in the Bay of *Campesbay*. But he afterwards changed his Resolution, and laid out the best Part of what he was worth in the Purchase of a small Estate in *Dorsetshire*, of a Person he knew to have a good Title; and then made an Agreement with one Mr. *Hobby*, to take a Trip to the Continent before he went for *England*. Soon after their setting out, they came to an Anchor in *Nigral Bay*, at the West End of *Jamaica*: They found there the Captains *Coxon*, *Saukins*, *Sbarpe*, and other Privateers, with whom all Mr. *Hobby's* Men presently agreed to go, and left nobody with him but our Author; who, believing that his Assistance could not do him much good, consented to go along with them too. At the Close of the Year 1679. they set out: Their first Expedition was against *Porto-Bello*, which being accomplished, they took a Resolution to cross the Isthmus of *Darien*, in order to pursue their Designs in the South Seas. On *April 5*. 1680. they landed near *Golden Island*, being between 3 and 400 strong, carrying with them such Provisions as were necessary, and Toys to gratify the free *Indians*, through whose Country they passed. In about nine Days time they arrived at *Santa Maria*, which they took without much Difficulty, but found there neither Gold nor Provisions, as they expected; so they staid there only three Days, and then embarked on board Canoes, and other small Craft, for the South Seas. On *April 23*. they were in Sight of *Pauama*; and, having in vain attempted *Puebla Nova*, before which Captain *Saukins*, then acting as Commander in chief, was killed, they went off to the Isles of *Quibo*. On *June 6*. they sailed from thence for the Coast of *Peru*; and, touching at the Islands of *Gorgonia* and *Plata*, they came to *Nio*, which they took in the Month of *October*. About *Christmas*, the same Year, they arrived in the Island of *Juan Fernandez*, which was the farthest they went towards the South: There they deposed Captain *Baribolemeu Sbarpe*, who had the chief Command after the Death of *Saukins*, and made Choice of one Captain *Walling* to command, under whom they attempted *Arica*; but were repulsed with the Loss of twenty-eight Men, among whom was their new Commander Captain *Walling*; when they sailed for some time without any Commander; but, arriving in the Island of *Plata*, their Crew split into two Factions; when it was resolved, before they proceeded to the Choice of a Commander, that the Majority, with their new Captain, should keep the Ship, and the Minority should content themselves with the Canoes and Small-Craft: Upon the Poll, Captain *Sbarpe* was restored, and Mr. *Dampier*, who had voted against him, prepared, with his Associates, to return over Land into the North Seas.

4. On *April 17*. 1681. they quitted Captain *Sbarpe*, and, without acknowledging any Commander, resolved to prosecute their Design of repassing the Isthmus, though they were but forty-seven Men in all. This was one of the boldest Undertakings that ever came into the Head of desperate Men, and yet they performed it without any considerable Loss. On *May 1*. they landed on the Continent; pass the Isthmus in twenty-three Days; and, on the 24th, embarked on board Captain *Tristrian*, a French Privateer, with whom they joined a Fleet of those sort of People, consisting of nine Vessels, on board of which were near 600 Men. This was a very great Force, and they flattered themselves with the Hopes of doing great Things against the *Spaniards*: But through Variety of Accidents, tho' chiefly through the Disagreement among their Commanders, they were able to do very little, except that these People, who came over Land, made themselves Masters of a Tartan; and, putting themselves under the Command of Captain *Hright*, continued cruising along the *Spanish* Coast, quite down to the Dutch Settlement of *Caracao*, where they endeavoured to sell a good Quantity of Sugar, which they had taken on board a *Spanish* Ship; but, failing in that Design, they prosecuted their Voyage to *Tortugas*, and from thence to the *Caracca* Coast, where they took three Barks, one laden with Hides, another with *European* Commodities, and the third with Earthen-ware and Brandy. With these Prizes they proceeded to the Island of *Roca*, where they shared them, and then resolved to separate, tho' they were but sixty in all: Of these, about twenty,

among whom our Author was, took one of the Barks, and, with their Share of the Goods, proceeded directly for *Virginia*, where they arrived in the Month of *July* 1682. There they continued for some time, and then the best Part of them made a Voyage to *Carolina*, from whence they once more came back to *Virginia*; and, having spent the best Part of their Wealth, were now ready to enter on any Scheme that could be proposed for getting more; nor was it long before such an Opportunity offered: Captain *Cooke*, of whom we have given an Account at the Beginning of the former Section, coming thither with a Prize, and declaring his Resolution to go into the South Seas, and cruise upon the *Spaniards*; Mr. *Dampier*, whose old Acquaintance he was, and who knew him to be an able Commander, readily agreed to go with him, and brought most of his Companions into a like Disposition; which was of greater Consequence to that Commander, as it furnished him with One-third of his whole Company. In this Voyage it was that Captain *Cowley* acted as Master, tho' he was not trusted with the true Design. They sailed from *Acaback* in *Virginia*, *August 23*. 1683. and steered their Course for the Cape de *Verd* Islands. In their Passage they met with a violent Storm, which lasted a whole Week; of which I the rather take notice, because it is a Circumstance omitted by Captain *Cowley*, who, having, perhaps, been in greater Storms, was not so much alarmed at this. We have now seen our Author embarked for his first Voyage round the World, the Remainder of which, for Reasons already assigned, shall be given in his own manner, and without dropping any thing that has not been before related in our Account of Captain *Cowley's* Voyage; because that would only fatigue the Reader with unnecessary Repetitions.

5. The Isle of *Salt* is situated in 16° Latitude, and in 19° 33' Longitude West from the *Lizard* in *England*. It is in Length from North to South 9 Leagues, and in Breadth about two Leagues; has abundance of salt Ponds, (whence it derives its Name) but no Trees or Grass that ever I saw. Some few poor Goats feed upon Shrubs near the Sea Side. I have also seen some wild Fowl here, and especially the *Flamingos*, a reddish Fowl, of the Shape of a Hen, but much larger, living in Ponds, or muddy Places: We shot about fourteen of them, tho' they are very shy: Their Nests they build with Mud, in the shallow Places in Ponds, or standing Waters; these they raise up like Hillocks, tapering to the Top, two Feet above the Surface of the Water, where they leave a Hole to lay their Eggs in, which when they do, or are hatching them, they stand with their long Legs in the Water close to the Hillocks, and so cover the Hollownes only with their Rumps; for, if they should sit down on them, the Weight of their Bodies would break them. The young ones can't fly, nor do they come to their true Colour or Shape, till they are ten or eleven Months old, but run very fast: Their Flesh is lean and black, but not ill tasted: They have large Tongues, and, near the Root of them, a Piece of Fat, which is accounted a great Dainty. I saw, at another time, great Store of these Birds at the Isle of *Rio la Haiba*, near the Continent of *America*, opposite to *Caracao*; but never could so fully observe their Nests, or young ones, as here. We found not above five or six Men in the Island of *Salt*; the Chief brought us three or four poor Goats; in Return for which, and some Salt we bought of him, we gave him some old Cloaths.

6. We sailed from the Isle of *Salt* to *St. Nicolas*, another of the Cape *Verd* Isles, twenty-two Leagues West South-west. From thence we came to an Anchor on the South-east Side. It is of a triangular Form, the longest Side to the East being thirty Leagues in Length, and the other two twenty Leagues each: Near the Shore it is rocky and barren; but has some Valleys farther in the Country, which produce Vines and Grapes. The Chief of the Isle, with two or three Gentlemen, brought some of the Wine aboard us, which was of a pale Colour, and tasted like *Mader* Wine, but was a little thick: They told us, that the principal Village was in a Valley, fourteen Miles from the Bay, where we then were, and contained about 100 Families: they were of a dark swarthy Complexion. After having spent five or six Days here in digging of Wells for fresh

Water, Islands, came to have pro but they Captain ried off fence. yet has May, 7 Eggs he of the A some Pla poorly E except in to the W it the be on the E bound to the *Porto* to provide Eggs, Pl Drawers, and all fo with the There is the Harb two prett drank at *Pogo* and *Jago*. Water, we sailed to *Mayo*, another of the *Cape de Verd* Islands, forty Miles East by South from the last, where we came to an Anchor to the North-west Side of it. We would have provided ourselves with some Beef and Goats here, but they would not let our Men come ashore; because one Captain *Bond*, a *Brifol* Man, had, not long before, carried off some of the chief Inhabitants under the same Pretence. This Isle is but small, and the Coast full of Shoals; yet has a considerable Commerce in Salt and Cattle. In *May, June, July, and August*, a sort of *Tortois* lay their Eggs here, but they do not approach in Goodness to those of the *West Indies*: They also plant here some Potatoes, some Plantains, and Corn; the Inhabitants live exceedingly poorly here, as well as in all other *Cape Verd* Islands, except in the Isle of *St. Iago*, four or five Leagues hence to the West: For tho' that Island is mountainous, yet is it the best inhabited of all, as having a very good Harbour on the East Side, much frequented by the *European* Ships bound to the *East Indies*, and the *Guiney Coast*; as also the *Portuguese* Ships bound for *Brazil*, who come hither to provide themselves with Beef, Pork, Goats, Fowls, Eggs, Plantains, and Cocoa-nuts, in Exchange for Shirts, Drawers, Handkerchiefs, Hats, Waitcoats, Breches, and all sorts of Linen Cloth, which is in high Esteem here with the Inhabitants, who are much inclined to Theft. There is a Fort, on the Top of an Hill, which commands the Harbour: I was credibly informed, that this Isle has two pretty large Towns, and the same sort of Wine we drank at *St. Nicolas*. There are two more of those Islands, *Pogo* and *Brava*, both small Islands to the West of *St. Iago*. The first is remarkable for its being one intire burning Mountain, on the Top whereof issues a Fire, which may be discerned a great Way off at Sea in the Night-time; a few of its Inhabitants live near the Sea-side, at the Foot of the Mountain, who subsist upon Goats, Fowls, Plantains, and Cocoa-nuts: The rest of the *Cape Verd* Islands are *St. Antonio, St. Lucia, St. Vincent, and Bona Vista*.

7. From the *Cape Verd* Isles we steered our Course to the South with an East North-east Wind directly to the Straights of *Magellan*; but at 10° North Latitude, the Wind blowing hard at South by West, and South South-west, we directed our Course to the *Guiney Coast*, and came in a few Days to an Anchor at the Mouth of *Sherborough* River, where there is an *English* Factory South of *Sierra Leona*, which drives a considerable Trade with Camwood, yielding a red Colour, used by the Dyers. Not far from the Shore we saw a pretty large Village, inhabited by Negroes; the Houses were low, except one in the Middle, where they entertained us with Palm-wine, and brought aboard good Store of Rice, Fowls, Honey, and Sugar-canes. About the Middle of *November* we prosecuted our Voyage to the Straights of *Magellan*; but, as soon as we got out to Sea, we met with *Tornadoes*, three or four in a Day, which, together with Calms, made us advance but slowly, the Wind veering at Intervals to the South and by East, and South South-east, till we were past the Equinoctial Line, about a Degree to the East of the Isle of *St. Iago*. After we were come 1° to the South of the Line, the Wind turned to the East, which made us steer South-west by West; and, the farther we got to the South, the Wind increased upon us from the East. At 3° South Latitude, we had the Wind at South-east; and at 5° at East South-east, where it held a considerable time, and carried us the 18th of *January* 1684, to 36° South Latitude, without any remarkable Accident. The Sea hereabouts being of a palish Colour, we thought to have found Ground with our Line, but found none at 100 Fathom. At Noon I computed to be 48° 50' West from the Lizard, the Variation 15° 50'. *January* 28. we made three Isles of *Sebald de Weert*, in 51° 25' South Latitude, and 57° 28' Longitude, West from the Lizard of *England*, the Variation 33° 10'. I persuaded Captain *Cooke* to anchor near those Islands, being sensible of Danger in our Passage thro' the Strait of *Magellan*, considering, especially, that Men aboard the Privateers are not so strictly at Command as in other Vessels. We came to an Anchor within two Cables Length of the Shore of the furthestmost of those three Islands, where we found foul rocky Ground, and the

Island barren, and destitute of Trees, but some *Dilldo*-bushes growing near the Sea-side. We saw the same Day vast Shoals of small red Lobsters, no bigger than one's Finger; but were perfectly like our Lobsters, except in their Colour.

8. As we found neither safe Aneloring, nor fresh Water, at those Isles, we made the best of our way towards the Straights of *Magellan*. *February* 1. we came in Sight of the Strait *le Maire*, which we found very narrow, with high Land on both Sides. The Wind at North North-west, we sailed with a brisk Gale till within four Miles of the Mouth, where, being becalmed, we found a very strong Tide setting out of the Straights to the North; but whether it flowed, or ebb'd, we were not able to distinguish, because it ran all Ways, breaking on all Sides, and tossing our Ship at such a rate, as I never saw before or since. At Eight o'Clock at Night we sailed with a West North-west Wind to the East, in order to sail round the *States* *Isle*; at the East End of which, anchoring the 7th at Noon, we found ourselves at 45° 52' South Latitude. At this End are three small rocky Islands, white with the Dung of Birds. We steered to the South, in order to sail round to the South of *Cape Horn*, the Southernmost Point of *Terra del Fuego*; but the Winds running betwixt the North-west and West, we did not see the *Terra del Fuego*. After the first Evening, we made the Strait of *le Maire*: As I did not see the Sun, at Setting or Rising, from the Time we left the Isles of *Sebald de Weert*, till we came into the South Seas, so I am norable to tell you the Variation: I made, indeed, an Observation at Noon in 59° 30' Longitude, the Wind at West by North; and at Night the Wind veered about to the South-west at 60°, the furthest South Latitude I ever was in. *February* 14. we were surpris'd by a most violent Storm in 57° Latitude to the West of *Cape Horn*, which continued till the 3d of *March*, from the South-west, and South-west and by West, and West South-west. *March* 3. it blew a fresh Gale from the South, and afterwards from the East, which brought us into the South Sea. The 9th, we found ourselves at 47° 10', and the Variation 15° 30' East. The 17th, we had a fair Gale from the South-east at 36° Latitude, the Variation 8° East. The 19th, early in the Morning, we discerned a Sail to the South of us, which we supposed to be a *Spanish* Merchantman bound from *Baldivia* to *Lima*; but proved one Captain *Eaton*, from *London*, who being bound to the South Seas as well as we, we kept Company with him quite through the Straights.

9. *March* 24. we got in Sight of the Isle of *John Fernandez*, and soon after came to an Anchor, in a Bay at the South End, in 25 Fathom Water, within two Cables Length of the Shore. We sent immediately to look after a *Muskito* Man we had been forced to leave there three Years before; and who, notwithstanding all the Search made by the *Spaniards* after him, had kept himself concealed in the Woods. When he was left there by Captain *Walling*, (after Captain *Sharpe* was turned out) he had with him a Gun, a Knife, and some Powder and Shot, which being all spent, he saw'd his Gun-Barrel into small Pieces, and these he made up into Harpoons, Hooks, and such-like Instruments; all which, though it may seem strange, yet is commonly practis'd among the *Muskito* Indians, who make all their Instruments without either Forge or Anvil. And the other *Indians*, who have not the Use of Iron from the *Europeans*, make their Hatchets, wherewith they cut their Timber and Wood, of a very hard Stone. In the Hollowing out of their Canoes, they make use of Fire besides. The Stone Hatchets of the *Indians*, near *Blewfield* River, are ten Inches long, fourteen broad, and two Inches thick in the Middle, ground away flat and sharp at both Ends; the Handle is in the Middle, being a deep Knotch, of a Finger's Length, which they bind round with a Withe of about four Feet long. Thus the *Indians* of *Patagonia* head their Arrows very artificially with grounded Flints: With these before-mentioned Instruments our *Muskito* Man us'd to strike Goats and Fish for his Subsistence; his Hut being half a Mile from the Sea-side, made of Goats-skins; as was his Bed, the same serving likewise for his Cloathing; those he had, when he

was left, being quite worn out. We had no sooner landed, than another *Muskito*, aboard our Ship, ran to meet his Countryman, and, after he had thrown himself on his Face upon the Ground, embraced him with all the Marks of Tenderness; which Ceremony being over, he came to salute us his old Friends. His Name was *Will*, and the other's *Robert*: For, though they have no Names among themselves, they love to have Names given them by the *English*.

10. The Isle of *John Fernandez* is about 12 Leagues in Circuit, seated 120 Leagues from the Continent, at $34^{\circ} 15'$. The whole Country is a pleasant Mixture of high Hills and Valleys, the Sides of the Hills being partly Woodlands, partly Savannas, *i. e.* clear Pieces of Land, naturally so without Wood; for Places cleared of Wood by Industry are not called by that Name. In the Bay of *Campachy* are very spacious Savannas; and, near the River of *Plata*, some from 30 to 100 Miles long. In *Jamaica*, *Cuba*, and *Hispaniola*, the Savannas are intermixed with Wood. The Grass in the Plains of *John Fernandez's* Isle is not so flaggy, but much kinder, than those in the *West Indies*. They have here also good Wood for Timber, but none for Masts. Their Cabbage-trees are exceeding good, but not so large as in other Places. It is observable, that the Goats that feed towards the West End of the Isle, are much fatter and better than those of the East End, though in the last there is both better and greater Plenty of Grass and sweet Water in the Valleys, whereas the West End is a champagne Country, the Grass dry, and scarce any Wood, or fresh Water. Notwithstanding its Fertility, it is destitute of Inhabitants, who might live here in much Plenty, the Plain being able to maintain a great Number of Cattle, and the Sea affording vast Numbers of Fish, as Seals, Sea-lions, Snappers, and Rock-fish. The Seals being sufficiently known and described in other Places, we will pass them by in Silence here: I will only mention, that they are most seen in the North Parts of *America* and *Europe*, and the South Parts of *Africa*, and on the *American* Coast of the South Sea from *Terra del Fuego* to the Equinoctial Line; but are never seen in the *East Indies*, nor to the North of the Line, till at 21° North Latitude. The Sea-lions are not unlike the Seals, but much bigger, twelve or fourteen Feet long, and of the Bulk of a large Bull: They have no Hair, and are of a Dun-colour, with large Eyes, and Teeth three Inches long; one of them will yield a good Quantity of sweet Oil, fit to fry Meat with: They feed upon Fish; yet is their Flesh tolerable good Food. The Snapper-fish has a large Head, Mouth, and Gills, the Back red, and Belly Ash-coloured, like a Roch, but much larger, and its Scales of the Bigness of a Shilling: Their Flesh is very good Food; I have seen them no-where but in the *West Indies*, and especially in the South Sea. The Rock-fish, called *Bacalao* by the *Spaniards*, from its Likeness to a Cod-fish, is rounder than the former, and of a dark-brown Colour, with small Scales: It likewise affords good Food, and is found in vast Plenty on the Coast of *Peru* and *Chili*. This Island has only two Bays fit for Anchorage, with a Rivulet of fresh Water in each: Both these are at the East End, and so conveniently situate, that they might be strengthened and defended by a slender Force against a powerful Army, there being no Access to them from the West over the high Mountains. Here it was that five *Englishmen*, left here by Captain *Davis*, secured themselves against a great Number of *Spaniards*.

11. After staying fourteen Days at the Island of *John Fernandez*, we set Sail again April 8. 1684. in Company with Captain *Eaton*, for the *Pacific Sea*, properly so called, being that Part of the *Mare del Zur* which extends from South to North, betwixt 30° and 40° South Latitude; and, from the *American* Shore to the West, without Limitation, as far as I know. I have failed in this Sea 250 Leagues without any dark or rainy Clouds, Tempests, Hurricanes, or any other Winds, except the Trade-winds: Notwithstanding which, the Sea runs high at the New and Full Moon, and makes Landing very unsafe. I have, however, frequently taken notice of hazy and foggy Weather in the Morning, so as to hinder the Observation of the Sun. We continued our Course towards the Line to the 24° South Latitude, in Sight of the

Continent of *America*. This vast Tract of Land belonging to *Chili* and *Peru* being very mountainous, we failed no nearer than twelve or sixteen Leagues to it, for fear of being discovered by the *Spaniards*; and the Land, from 24° to 10° South Latitude, still exceeds the former in Height, being inclosed by three or four Ridges of Mountains within one another, the furthest within the Country surpassing the rest in Height; they exceed, in my Opinion, in Height, the Peak of *Teneriff*, and of *St. Maritba*, or any other in the World, that ever I saw. Sir *John Narborough*, in his Voyage to *Baldivia*, mentions very high Lands near that City (lying upon the Coast); and I have been informed, from divers *Spaniards*, that from *Coquimbo*, at 30° South Latitude, to *Baldivia*, at 40° South, the Shore is also very high; which makes me conclude, that these Ridges extend all along the South Sea Coast from one End of *Peru* and *Chili* to the other, called the *Andes*, or *Sierra Nueva de los Andes*. This I believe to be the Reason why but few, and these very small Rivers, exonerate themselves into the Sea, scarce any of them being navigable, and some drying up at certain Seasons of the Year. Thus the River of *Uli* runs with a brisk Current from *January* to *June*, and then decreases till *September*, when it quite dries up till *January* again, as I can say on my own Experience, and as I have heard the *Spaniards* affirm the same of other Rivers on this Coast. So I look upon them rather as Torrents, occasioned by Rain at certain Seasons, than Rivulets.

12. We continued our Course at some Distance along the Coast till *May* the 3d, at $9^{\circ} 40'$ South Latitude, when we desecrying a Vessel, Captain *Eaton* took her, being laden with Timber. Afterwards we steered our Course to the Isle of *Lobos*, at $6^{\circ} 24'$ South Latitude, five Leagues from the Continent. This Isle is called *Lobos de la Mare*, to distinguish it from another nearer the Continent, and, therefore, called *Lobos de la Terra*; *Lobos* signifying as much as a Seal in *Spanish*, of which there is great Plenty hereabouts. *May* 10. we anchored near *Lobos de la Mare* with our Prize. This is properly a double Island, each of a Mile in Circuit, separated by a small Channel, only not capable of receiving any Ships of Burden: A little Way from the Shore, on the North Side, several Rocks lie scattered in the Sea: At the West End of the Easternmost Isle, is a small sandy Creek, where Ships may be secure from the Winds; all the rest of the Shore being rocky Cliffs: The Land is also rocky and sandy, without any fresh Water, Trees or Shrubs, or any Land Animal, except Fowls, as Boobies, but, above all, Penguins, a sort of Sea-fowl of the Bigness of a Duck, and having just such Feet, but the Bill is pointed; their Wings are no more than Stumps, which serve them instead of Fins in the Water; and they are covered rather with Down, than with Feathers: As they feed on Fish, so their Flesh is but of an indifferent Taste, but the Eggs are very good. The Penguins are to be seen all over the South Sea, on the Coast of *Newfoundland*, and on the Cape of *Good Hope*. I observed here also, and at the Island of *John Fernandez*, a sort of Blackbird, that all Night rests in Holes made in the Sand. The Road is betwixt the before-mentioned Rocks and the Easternmost Isle, from ten to fourteen Fathom, which, lying East and West, shelters it from the Winds, which, for the most part, blow here from the South and South South-east.

13. Upon Examination of the Prisoners, being convinced that we were discovered by the *Spaniards*, and, consequently they would keep all their richest Ships in Port, it was considered, whether we should attack some Place thereabouts; and *Truxilo*, though a populous City, and of a difficult Access in Landing, at the Port of *Guanebagno*, six Miles thence, being thought the most likely Place, we prepared for the said Expedition; and, *May* 17. found our whole Number to consist of 108 sound Men; but, the next Day, some of our Men desecrying three Vessels to the West, without the Isles, and one betwixt the Isle and the Continent, we gave them Chace; we in Captain *Cooke's* Ship that towards the Continent, and Captain *Eaton* the other two. They were soon taken, and proved to be laden with Flour from *Guanebagno* to *Panama*: In one of them we found a Letter from the Viceroy of *Lima*.

to the President of *Panama*, intimating, that, having notice of some Enemies lately come into those Seas, he had immediately sent away these three Ships to supply their Wants; at the same time, being informed by the Prisoners, that those of *Truxillo* were erecting a Fort near their Harbour of *Guanabagua*, we resolv'd to give over our Design of attacking that Place, and steer'd with our three Prizes to the Isles of *Gallapagos*, so called by the *Spaniards* from their supposed disappearing. *May 31.* we got Sight of the Islands of *Gallapagos*; and at Night came to an Anchor at the East Side of one of the Easternmost Isles, a Mile from the Shore, in sixteen Fathom Water, clear, white, hard Sand.

14. The Isles of *Gallapagos* are a good Number of large Islands, situate under and on both Sides the Line, destitute of Inhabitants; the Easternmost of them being 110 Leagues from the Continent. According to their Position in the Maps, they are in the Longitude of 18°, extending to the West as far as 176°; according to which, the Longitude from *England* West, is 68°; though, I doubt, the hydrographical Charts have not placed them far enough to the West. The *Spaniards*, who were the first Discoverers of them, describe them to be a great Number of Isles extending North-west from the Equator to 5° North. We saw no more than fourteen or fifteen, some of which were seven or eight Leagues in Length, and three or four in Breadth, pretty high and flat; four or five of the Easternmost we found rocky and barren, without either Trees, Herbs, or Grass, except what was very near the Sea-side. These Islands produce also the Dildo-tree, a sort of a Shrub of the Bigness of a Man's Leg, and ten or twelve Feet high, but without either Fruit or Leaves; instead whereof, it has sharp Prickles from Top to Bottom. These Islands afford also some Water in Ponds, and Cavities of the Rocks. Some of the Isles are low, and more fertile, and produce Trees known in *Europe*. Some of the Westernmost Isles are bigger than the rest, being nine or ten Leagues long, and six or seven broad, and afford many Sorts of Trees, especially Mammee-figs; they have also some pretty large fresh-water Rivers, and many Rivulets. As the Sea-breezes by Day, and the Night Winds, without Intermission, refresh the Air of the Isles *Gallapagos*, so they are not so much troubled with excessive Heats, nor so unwholesome, as most other Places near the Equator: During the rainy Seasons, in *November*, *December*, and *January*, they are pestered with most violent Tempests, Thunder, and Lightning: Before and after these Months, they have refreshing Showers; and their Summer Season in *May*, *June*, *July*, and *August*, without any Rains. We anchored near several of these Islands, and found frequently the Sea Tortoises sunning themselves at Noon-day (a thing not usual in most other Places). Of these we killed as many as we wanted. Captain *Davis*, at another time, came to an Anchor on the West Side of these Isles, where he and his Men fed upon Land Tortoises for three Months, and saved fifty Jars of Oil from them. He met also on that Side with divers good Channels, and Anchorage betwixt the Isles, several fresh-water Rivulets, and Store of good Trees and Fuel. Captain *Harris* (of whom hereafter) found also in some of these Islands abundance of Mammee-trees, and divers large Rivers. The Sea, adjoining to these Islands, is well stored with good and large Fish, especially with Sharks. I took the Height of the Sun with an Astrolabe. At the North-end of the second Ile we anchored at 28° North from the Line.

15. There is no Place in the World so much stored with Guanoes and Land Tortoises as these Isles. The first are far, and of an extraordinary Size, and exceeding tame; and the Land Tortoises so numerous, that some hundred Men may subsist on them for a considerable time; being very fat, and as pleasant Food as a Pullet; and of such Bigness, that one of them weighs 150 or 200 Pounds; and are from two Feet to two Feet six Inches over the Belly; whereas, in any other Places, I never met with any above thirty Pounds Weight; though I have heard them say, that at *St. Laurence*, or *Madagascar*, there are also very large ones. There are three or four Sorts of Land Tortoises in the *West Indies*: One is called by the *Spaniards* *Hackatee*, which keep most in fresh-water Ponds; they

NUMB. VII.

have small Legs, and long Necks, and flat Feet, and commonly weigh betwixt ten and fifteen Pounds. The second Sort they call *Tenopen*, much less than the former, and something rounder; but, for the rest, not unlike them, except that the Shell on their Backs is naturally coloured with a curious carved Work. Both Sorts afford very good Meat, and these last delight in marshy and low Places, and are in vast Numbers on the Isle of *Pines*, near *Cuba*, among the Woods. The Tortoises in the *Gallapagos* Islands are in Shape like the first, with long Necks, and small Heads; only they are much bigger. These Islands have also some green Snakes, and great Store of tame Turtle-doves; something less than our Pigeons, but very sweet and fat. Betwixt some of those Islands are large Channels, capable of receiving Ships of a moderate Burden. Upon the Shores there grows great Plenty of Turtle-grass, which makes those Channels abound in that Sort of Sea Tortoise which is called the Green Turtle, or Tortoise: For, you must know, that there are four or five different Sorts of Sea Tortoises; *viz.* the Trunk Tortoise, the Loggerhead, the Hawksbill, and Green Tortoise: The first is bigger, and has a rounder and an higher Beak than the rest; but its Flesh is neither wholsome, nor well-tasted, any more than that of the Loggerhead, which feed on the Moss of Rocks: It borrows its Name from its large Head. The Hawksbill (so called from its long small Mouth) is the least, and that bears the so much esteemed Shell, of which they make Cabinets, Boxes, Combs, &c. in *Europe*: Of this Shell, each has from three to four Pounds, though some have less; the Flesh is but indifferent, yet somewhat better than that of the Loggerheads; though those taken betwixt the *Sambellos* and *Porto-Bello*, make those that eat the Flesh vomit and purge vehemently. The same is observable of some other Fish in the *West Indies*, of which more anon. It is further remarkable, that the Flesh of the Hawksbill Tortoise differs according to their Food; for those that feed upon Moss, among the Rocks, have a much yellower Fat and Flesh, and not so well tasted as those that feed upon Grass; besides that their Shells are not so transparent. These Hawksbill Tortoises are in divers Parts of the *West Indies*, and have their peculiar Isles, where they lay their Eggs, and seldom intermix with any other Kind of Tortoises. However, these, as well as other Sorts of Tortoises, lay their Eggs in the Sand, and after the same manner: Their Laying-time is about *May*, *June*, and *July*, a little sooner or later; and they lay three times every Season, eighty or ninety Eggs each time, which are round, and are of the Bigness of an Hen's Egg, but covered only with a white thin Skin. In some of the Bays on the North Side of *Jamaica*, the Hawksbills lay their Eggs, as likewise on the Bay of *Honduras*, and in divers Places on the Continent of the Coast of *America*, from *Trinidad* to *Vera Cruz*, up the Bay of *New Spain*. After a Sea Tortoise gets ashore to lay, she is an Hour before she returns, because she always chuses her Place above High-water Mark, where she makes a large Hole with her Fins in the Sand, to lay her Eggs in; which done, she covers them up two Feet deep with the same Sand she had raked out before: Sometimes they will take a View of the Place beforehand, and be sure to return to the same the next Day to lay. They take the Tortoises in the Night, upon the Shore, when they turn them upon their Backs, above the High-water Mark, and so fetch them the next Morning; but a large Green Tortoise will find Work enough to two able Fellows to turn her upon her Back. The Hawksbills are also found in the *East Indies*, and on the *Guiney* Coast; but I never met with any of them in the South Seas. The Green Tortoise derives its Name from the greenish Colour of its Shell, which is better coloured than the Hawksbill, but has a round and small Head; and the Body is of such a Bulk, as to weigh from 200 to 300 Pounds; its Flesh is accounted the best of all the rest, though there is a considerable Difference, as well in their Bulk, as in the Flesh. At *Blanco*, in the *West Indies*, are larger than any in the North Sea, weighing generally 250 or 300 Pounds; their Fat is yellow, the Lean white, and both very good. But those of *Boca Toro*, to the West of *Porto-Bello*, are neither so large, nor have so white and well-tasted Flesh: And those found in the Bay of *Honduras*

2 A

Duras and *Campachy* are less than these, and their Fat of a greenish Colour. I was told, that, at *Port-Royal*, in *Campachy Bay*, they once catched one of these Green Tortoises, which was four Feet thick, from the Back to the Belly, which was six Feet broad: A Boy of ten Years old, the Son of Captain *Rock*, went in it, instead of a Boat, aboard his Father's Ship, then at Anchor a Quarter of a Mile from the Shore. The Fat of this Creature yielded eight Gallons of Oil. The Tortoises found among the little Isles on the South Side of *Cuba*, are some bigger, some less, and their Flesh sometimes green, sometimes yellow: These are carried to *Port-Royal* in *Jamaica*, where they are kept in Wires made with Stakes. The Green Tortoises feed upon Grass, a Quarter of an Inch broad, and six Inches long, growing in three, four, five, or even six Fathom Water; it is quite different from the *Manatees* Grass, which has a slender Blade. The Tortoises of the Isle of *Gallapagos* are a bastard Kind of Green Tortoises, their Shell being thicker than the others, but their Flesh not so good; besides, they are much larger, and frequently two or three Feet thick, and their Bellies five Feet broad. In the South Sea are another Kind of Green Tortoise, no bigger than the smallest Hawksbill; as they feed on Moss, so their Flesh is rank, though very fat: Both these Kinds differ from all the rest; for whereas, in other Places, the Female only goes ashore, and that in the Night-time; among those, both the Male and Female go together by Day, and return together; both are very fat at first, but, when they are ready to return, they are lean, though the Female not so lean as the Male. It is the common Opinion here, that they are nine Days ingendering, the He on the She's Back, in the Water. This is certain, that, at that time, the He will not forsake the She, who is much more fearful, and often endeavours to get away; but that the Male keeps her with his Fins, so that, if you strike the She first at their Coupling-time, you are sure of the He. They are supposed to live many Years, because they are a long time coming to their full Growth. In the South Seas, on the West End of the Coast of *Mexico*, is another Kind of Green Tortoise, much smaller than all the rest, but their Flesh very well tasted. There is one thing extremely surprising in all these Creatures; that for three Months, while they are laying their Eggs, they forsake their ordinary Places of Resort, and seek others, where they lay their Eggs; and it is generally supposed, that they do not either eat or drink all that Season. The most noted Places where they breed are, the Isle of *Caimanes*, in the *West Indies*, and the Isle of *Astenson*, in the Western Ocean; and no sooner is their Coupling-time past, but they are all gone; though it is certain, that they must swim a great Way to come to either of these Places, since it has been taken notice of, that all the before-mentioned Tortoises have been found at *Caimanes* in Breeding-time: The nearest Place from whence these Creatures can swim thither, is the Isle of *Cuba*, forty Leagues thence. Those that breed at the Isle of *Astenson*, coming from the Continent, must go at least three hundred Leagues, it being certain, that their constant Places of Abode are always near the Shore. Thus, in the South Sea, they go from the *Gallapagos* to lay their Eggs on the Continent, which is above an hundred Leagues thence. It is further observable, that not all the Tortoises leave their ordinary Places at Breeding-time, but many remain there; and, those that go, are followed by great Numbers of Fishes, especially Sharks, so that those Coasts are left destitute of Fish, till they return.

16. After a Stay of twelve Days among these Isles, one of our *Indian* Prisoners, a Native of *Rio Leja*, having given us an ample Account of the Riches of that Place, and offered his Service to conduct us thither, it was resolved to take his Advice; and accordingly we set Sail the 12th of *June*, with an Intention to touch in our Way at the Isle of *Cocoas*: We took our Course North $4^{\circ} 40'$ Latitude, with a South and by West and South South-west Winds; and, as we came West to the Isle of *Cocoas*, the Wind South-west and by South, thus we continued our Course to $5^{\circ} 40'$ N. Lat. when, despairing to make the Isle of *Cocoas*, as the Wind stood, we directed our Course to the Continent. The Isle of *Cocoas* lies in $5^{\circ} 15'$ N. Lat. its Circuit seven or eight Leagues, but has no Inhabitants. Near the Sea-

side it produces a certain pleasant Herb in the low Grounds, called *Geamadael* by the *Spaniards*. As it is environed with steep Rocks, so there is no coming near it, except that on the North-east End Ships may ride safely in a small Creek: This is what I learn from the *Spaniards*, and was confirmed to me by Captain *Eaton*. The fair Weather, and small Winds, conducted us by the Beginning of *July* to *Cape Blanco*, on the Continent of *Mexico*, so called from two white Rocks, half a Mile from the Cape, in $9^{\circ} 50'$ Latitude; they are taper, high, and steep, like two high Towers; the Cape itself is about the same Height as *Beachy-head*, on the Coast of *Sussex*, in *England*, being a full Point jutting out with steep Rocks to the Sea, but having an easy Descent on both Sides from the Flat on the Top, which, being covered with tall Trees, affords a pleasant Prospect. On the North-west Side of the Cape, the Land runs in North-east for four Leagues, making a small Bay, called the *Caldera Bay*; at the Entrance whereof, at the North-west Side of the Cape, a sweet-water Rivulet discharges itself into the Sea amongst the low Lands, which are very rich, and abounding in lofty Trees, which extend a Mile North-east beyond the Rivulet, where the Savannas begin, and run several Leagues into the Country, being here-and-there beautified with small Groves of Trees, and covered with a sweet, thick, and long Grass, some of the best I ever saw in the *West Indies*. Deeper into the Bay, the low Lands are stored with Mangroves; but, farther into the Country, the Land is higher, partly Woods, partly hilly Savannas; the Grass whereof is not so good as the former, neither are the Trees in the Woods so tall, but small and short. From the Bottom of this Bay, you may travel over hilly Savannas for fourteen or fifteen Leagues to the Lake of *Nicaragua*. On the Coast of the North Sea, Captain *Cook*, who had been very ill ever since our Departure from the Isle of *Juan Fernandez*, died, as soon as we came within two or three Leagues of this Cape (a thing frequent at Sea, for People to die in View of the Land, after a long Illness); and as, in a few Hours after, we came to Anchor a League within the Cape, near the Mouth of the before-mentioned Rivulet, at fourteen Fathom clear hard Sand, he was immediately carried on shore, under a Guard of twelve armed Men, in order to his Interment: While our Men were busy in digging the Grave, three *Spanish Indians* came to them, asking them several impertinent Questions; which our People having answered as they thought convenient, they kept them in Discourse till they found means to seize them all three, though one of them escaped their Hands again. The other two, being carried aboard, confessed, that they were sent thither as Spies, to inform themselves concerning us, from *Nicoya*, a small *Mulatto* Town twelve or fourteen Leagues hence, seated upon the Banks of a River bearing the same Name, which being a Place very convenient for building and refitting of Ships, the President of *Panama* had sent Advice of our coming into these Seas to their Magistrates. Concerning the Inhabitants of the Country, they told us, that they lived mostly by manuring of their Grounds for Corn, and feeding their Cattle in the Savannas or Plains, of which they had great Store; and that they sent their Ox-hides to the North Sea, by the Lake of *Nicaragua*; as they did also a certain red Wood, (which I suppose to be the same, called at *Jamaica* Blood Wood, or *Nicaragua* Wood) used for dying, which they exchanged there for Linen and Woolen Commodities brought thither from *Europe*. They added, that not far from thence was a large Beet-pen, where we might provide ourselves with what Cows or Bulls we had occasion for. As this was a scarce Commodity amongst us at that time, twenty-four of us were immediately dispatched in two Boats, who, under the Conduct of one of the *Indians*, landed at a Place a League from the Ship, and haled their Boats upon the dry Sand: Thus, led by their Guide, they came to the Pen, in a large Savanna, two Miles from the Boats, where, finding abundance of Bulls and Cows feeding, some were for killing three or four of them immediately; but the rest opposed the same, alleging, they had better stay all Night, and in the Morning kill as many as they had occasion for. Hereupon I, and eleven more, thought fit to return aboard, which we did without the least Opposition, expecting the coming of the rest the

next Day in the Afternoon. After them, they landed a small Row the Middle of the Afternoon, and escape the Water with Guns. They were got up flowing Water. Canoes were safe aboard, ready fitted. none, nor any Fish there called *Lane*, and very high make *Han*, our Guns, of Ash.

17. The Boatmaster, was *Cook*, decorated with *Capes*, *Rio Leja*, us, in three try about a high, part the *Old* *Vu*, being very besides, the Coast; and Night. I must bear mountain, *Nicaragua*, *Indians* are enclosed by a Mile broad. next Day; but, hearing nothing of them by Four o'Clock in the Afternoon, ten Men were sent in a Canoe to look after them. They were no sooner come into the Bay where they landed before, but they found their Comrades upon a small Rock, half a Mile from the Shore, standing up to the Middle in Water, whither they had fled for Refuge to escape the Hands of forty or fifty well armed Spaniards, with Guns and Lances, who had burnt their Boat: They were got upon the Rock at low Water; but it being then flowing Water, they must have infallibly perished, had our Canoes come but one Hour later, which now brought them safe aboard. We afterwards seized upon two Canoes, ready fitted, in this Bay; for Ships and Barks they have none, nor any Instrument for fishing, there being scarce any Fish thereabouts. This Country abounding in Wood, called Lance-wood, growing strait, like so many Ashes, and very hard and tough, we cut a good Quantity of it to make Handles or Staves for Oars, and Scouring-rods for our Guns, as being much more durable than those made of Ash.

17. The 19th of July, the Day before our Departure from the Bay of Caldera, Mr. Edward Davis, our Quartermaster, was constituted Captain, in the room of Captain Cooke, deceased: The next Day we sailed, in Company with Captain Eaton, and one of our Meal Prizes, towards Rio Leja, with a moderate North Wind, which brought us, in three Days, over-against the said Port. The Country about Rio Leja is easily discovered at Sea, by reason of an high, peaked, burning Mountain, called *Volcano Vejo*, the *Old Vulcano*, by the Spaniards. It is easily distinguished, being very high, so as to be seen twenty Leagues at Sea; besides, that there is no other Mountain, like this, on that Coast; and it smokes all Day, and also sends forth Flames at Night. If you will make the Harbour, the Mountain must bear North-east; then, steering directly with the Mountain, that Course will bring you to the Harbour, the Entrance whereof you see about three Leagues off it. You must take the Advantage of the Sea-winds to enter, which are here at South South-west. The Harbour is inclosed by a low Isle, of a Mile in Length, a quarter of a Mile broad, and one and an half from the Continent. At each End is a Chanel; that on the East, being narrow, and having a very strong Tide, is scarce ever used; but that on the West End, being much larger, is most frequented by Ships, which must, however, have a care of a certain sandy Shule on the North-west Point of the Isle, which as soon as they are past, they must keep close to the Shore of the Isle, there being a Sand-bank, which runs above half-way out from the Continent; after which, there is very good Riding near the main Shore in seven or eight Fathom Water, clear hard Sand. This Point is able to contain 200 Ships. About two Leagues thence is seated the Town of *Rio Leja*, in a fenny Country, full of red Mangrove-trees, betwixt two narrow Branches of the Sea, the Westermost whereof reaches up to the Town, and the Eastermost runs up near the Backside of it; but no Shipping can come up to the Town, the Description whereof I will give the Reader in my Return hither. We now resume the Thread of our Voyage: Being in Sight of the *Volcano Vejo*, seven or eight Leagues from the Shore, the Mouth bearing North-east, we took in our Top-sails, and made towards the Harbour; and then, setting out our Canoes, rowed up to the small Town, that makes the Harbour of *Rio Leja*, by Nine a Clock in the Morning; where we discovered an Houfe, and, soon after, three Men going into a Canoe on the Inside of the Island, and making what Haste they could to row to the Continent; which before they could reach, we overtook them, and carried them to the little Isle. At the same time we observed one on Horseback on the Continent, riding away full Speed towards the Town. They frankly confessed, that they had been placed there by the Governor of *Rio Leja*, who had been adviced of our coming into those Parts, to keep Watch Day and Night; and that Horseman we saw riding away, was placed upon the same Account on the Continent, within an Hour's Riding of the Town. Thus, finding ourselves discovered, the Horseman being gone three Hours before Eaton and his Canoes came to the Island, the Design upon that Town was laid aside for this Time. This small Island has a curious Spring

of fresh Water, some Trees, and good Store of Grass; but no Beasts to feed upon it; and is situate at 12° 10' North Latitude. We staid till Four o'Clock in the Afternoon; then we went aboard again, and, pursuant to a Consultation held betwixt Captain Eaton and Captain Davis July 26, took our Course the next Day for the Gulph of *Amapalla*.

18. This Gulph is a large Branch of the Sea, entering eight or ten Leagues deep into the Country. On the South Side of its Entrance, it has a Point, or Cape *Cafuina*; and, on the North-west Side, *St. Michael's* Mountain, at 12° 40' North Latitude. They both appear very remarkable at Sea; for the Cape is an high round Point, appearing at a Distance like an Icele, the Land near it being very low; and Mount *Michael* is an high peaked Hill, not very steep, at the Foot whereof, on the South-east, is a low Plain, of a Mile in Length. Here it is that the Gulph enters on that Side; and, betwixt those low Grounds and Point *Cafuina*, are two high Isles, at twelve Miles Distance from each other, the Southermost being called *Mangera*, the other *Amapalla*. *Mangera* is an high round Island, two Leagues in Circuit, inclosed on all Sides with Rocks, except on the North-east Side, where is a small sandy Creek. The Soil is black, but not deep, full of Stones, and produces very lofty Trees. It has one Town in the Middle, inhabited by *Indians*, with an handsome *Spanish* Church. The Inhabitants have a few Plantations of Maiz and Plantains; and no other Sort of tame Fowl, but some Cocks and Hens; nor any other Beasts, but Cats and Dogs. From the Town to the Creek is a steep and rocky Path. The Isle of *Amapalla* has the same Soil as the other Island; but is much larger, having two Towns two Miles asunder, one to the North, the other to the East. The last stands on a little Plain on the Top of an Hill, a Mile from the Sea, and has a fair Church. The other Town is less; yet has an handsome Church. I have observed one Thing in most of the *Indian* Towns under the *Spanish* Jurisdiction, that the Images of their Saints in their Churches are represented with an *Indian* Complexion, and partly in their Dress; whereas, in the Towns inhabited by *Spaniards*, they retain their own Complexion and Dress. But to return to the Inhabitants: They have good Store of Maiz, and large Hog-plums; but few Plantains. The Hog-plum-tree is of the same Bigness with our largest Plum-trees, with Leaves of the same Breadth; but shaped like an Hawthorn-leaf, and, in Colour, of a light-green. The Wood is brittle, and the Fruit oval, of the Bigness of a small Horse-plum. At first it is green; but, when ripe, half-red and half-yellow, with a large Stone, and little Pulp about it. It has a pleasant Taste; but it is rare to meet with any of them ripe without Maggots in them. This is the only Place I ever saw them at in the South Sea. In *Campachy* Bay they grow in great Plenty; and, in *Jamaica*, they fence their Grounds with them. They have also some Fowls; and no *Spaniard* lives there, except the Father or Priest, who takes care of these two Villages, and the Town in the Isle of *Mangera*. As they have little or no Money, they pay their Tribute in Maiz to the Governor of *St. Michael's* Town, seated at the Foot of *St. Michael's* Mount; and the ghostly Father has the Tenths of all. Besides this Priest, we found but one here, (the Secretary of the Town) who could speak and write *Spanish*; for their Casica or Magistrate could do neither. This Bay or Gulph has many other Islands, but uninhabited. One pretty large we saw belonging to a Monastery, where four or five *Indians* looked after the Cattle, that fed there in great Numbers. This Gulph has two Chanels, one betwixt Cape *Cafuina* and *Mangera*, the other between this last Place and *Amapalla*. The best Anchorage is on the East Side of *Amapalla*, opposite to the low Grounds, the rest being high Lands. As you go in deeper, you may ride on the North-east Side of *Amapalla*, close to the Main. This the *Spaniards* call the Port of *Martin Lopez*. The Gulph extends a great Way beyond the Isle; but it is not deep enough to bear Ships of Burden.

19. Captain Davis being sent before, with two Canoes, into this Gulph, to get some Prisoners, he came to *Mangera*, where, finding a Path from the Creek, he followed it towards the Town; but the Inhabitants no sooner had notice of his coming, than they ran all into the Woods, leaving only the Priest behind them; who being taken, with two

Boys

Boys his Attendants, Captain *Davis* made them conduct him to the Isle of *Amapalla*, where being landed, he marched up to the before-mentioned Place, a Mile from the Landing-place, on the Top of the Hill. The Inhabitants, who saw them advance, were ready to retire into the Woods; but the Secretary, an Enemy to the *Spaniards*, having persuaded them, that they were Friends, who craved their Assistance against their common Oppressors, they bid *Davis* and his Men welcome. After the first Salutation, they marched towards the Church, (the Priest, brought along by Captain *Davis*, at the Head of them) their only Place of public Meeting, whether for Consultations or Diversions, where they kept their Vizards, Hautboys, Strumtrums, (a kind of Cittern) and other musical Instruments. Here they meet to make merry, especially in the Night preceding or next ensuing any Holiday, where they dance, sing and play, with antic Dresses and Gestures; tho', to speak Truth, their Music and Mirth have something very melancholy in them, suitable to the Yoke they groan under, I mean that of the *Spaniards*. But to return to Captain *Davis*: His Intention was, as soon as they were all got into the Church, to engage all their Assistance against the *Spaniards*, to accomplish which the Priest had promised his good Offices; but, just as a few of the remaining *Indians* were entering the Church, one of Captain *Davis*'s Men pushed a Man forwards, to halsten him into the Church; which the *Indian* being frightened at, set up his Heels, and the rest, taking the Alarm, followed; so that Captain *Davis* and the Frier being left alone in the Church, he ordered his Men to fire at them; which being done, the Secretary was killed in the Fray: And so the whole Project vanished into Smoke, by the Foolishness of one inconsiderate Fellow. The same Afternoon, our Ship being entered the Gulph between Cape *Castro* and the Isle of *Mangera*, came to an Anchor on the East Side, near the Isle of *Amapalla*. Captain *Davis* came aboard us with the Frier, who told us, that, since the Secretary was killed, they had no other way than to fend for the *Casca*; which being done by the Priest, he came, attended by six other *Indians*, who did us considerable Service, in conducting us whither we had Occasion to go, especially to fetch Beet; for which they were rewarded to their Satisfaction. On this Island of *Amapalla* a Company of *English* and *French* landed afterwards, and thence came to the Continent, and marched by Land to the *Cape River*, which has got its Name from its discharging itself into the North Seas near Cape *Gratia*. At the Source of this River they made Bark-logs, wherewith they passed into the North Seas. However, they were not the first Inventors of this Passage, something of it having been discovered by some *English* thirty Years before, who went up this *Cape River* into the North Seas in Canoes, to the same Place where the *French* built their Bark-logs, and thence to an inland Town called *Segovia*. They performed this not without incredible Difficulty, and in no less than a Month's time, by reason of the many Cataracts of this River, which obliged them frequently to hale their Canoes ashore, and drag them over Land, till they were past these Water-falls. I have spoken with several, that were in this Expedition, and, if I mistake not, Captain *Sbarpe* was one of them. But to return to our Voyage: After we had careened, and provided our Ships with fresh Water, Captain *Davis* and Captain *Eaton* broke off Confortship; and the last left the Gulph September 2.

20. September 3. 1684. having seen the Frier on shore, we failed, with the Land-wind at West North-west, out of the Gulph of *Amapalla* through the Chanel betwixt *Mangera* and the Isle of *Amapalla*, directing our Course to the Coast of *Peru*. As the Tornadoes, with Thunder, Lightning, and Rains, are very frequent on these Coasts from June to November, we had our Share of them, coming most from the South-east; but afterwards, the Wind veering to the West, it held till we came within Sight of Cape *St. Francisco*, where we met with fair Weather, and a South Wind. This Cape, being an high full Point of Land, lies at 1° 20' North Latitude, and is covered with lofty Trees. As you pass by it from the North Side, you may easily mistake a small low Point for the Cape; but, soon after you pass it, you will discover it with triple Points. The Land near it is high, and the Mountains appear black. We plied

along the Shore, to the Advantage both of the Sea and Land-winds, the first blowing from the South, as the Land-winds do from South South-east, tho' sometimes, when we were opposite to a River's Mouth, the Wind would turn to South-east. September 20. we came to an Anchor near the Isle of *Plata*, at sixteen Fathom, being now fallen in with the Places whence I began the Account of this Voyage, after having compassed the whole Continent of *South America*. The Isle of *Plata*, situated at 1° 10' South Latitude, is about four Miles in Length, and one and an half in Breadth, of a pretty good Height, and inclosed with rocky Cliffs, except in one Place on the East Side, which is the only Place where a fresh-water Torrent falls down from the Rocks. The Top is flat and plain, the Soil sandy; yet it produces three or four Sorts of low and small Trees, not known in *Europe*. These Trees were much overgrown with Moss; and pretty good Grass is to be found here in the Beginning of the Year; but here are no Land Animals to feed upon it, that vast Number of Goats, which used to be here formerly, being all destroyed. However, they have a great many Boobies and Men-of-war Birds. Some say the *Spaniards* have given it the Name of *Plata Island*, ever since Sir *Francis Drake* carried thither the *Cacafoga*, a rich Ship of theirs, laden with Plate. The Place for Anchorage is on the East Side, about the Middle of the Isle, close to the Shore, within two Cables Length of the sandy Bay, in eighteen or twenty Fathom of fast oily Ground, and very smooth Water; because the South-east Point of the Isle keeps off the Force of the South Winds, which commonly blow here. In this sandy Bay, opposite to the Anchoring-place, is good Landing, this being the only Place, that leads you up into the Isle. From the South-east Point runs out a small Shoale about a Quarter of a Mile into the Sea, where, when it flows, you see great Rising in the Water. The Tide is strong, flowing to the South, and ebbing to the North. At the same Point are three small, but high Rocks, about a Cable's Length from the Isle; and as many, but much larger, at the North-east End. All round the Island there is deep Water, except in the before-mentioned Road; and, near the Shoale, there are great Plenty of these small Sea Turtles mentioned before: And the Island bears four or five Leagues West South-west from Cape *St. Laurento*.

21. After a Day's Stay here, we continued our Voyage to Point *St. Helena*, bearing South from the Isle of *Plata*, at 2° 15' South Latitude. It appears high and flat like an Isle, being surrounded with low Grounds, and covered on the Top with Thistles; but without Trees. As it jets out into the Sea, it makes a good large Bay to the North Side, a Mile within which, on the very Sea-side, stands a wretched Village, called also *St. Helena*, inhabited by *Indians*; but the Ground, tho' low, being sandy and barren, they have neither Trees nor Grass, or any Corn or Fruit, except Water-melons; which are very good here. They are forced to fetch their Water as far as the River *Calanche*, four Leagues thence, at the Bottom of the same Bay. They live chiefly upon Fish, and are supplied with Maiz for *Agairane*. Near this Town, about five Paces above the High-water Mark, there issues out of the Earth a certain bituminous Subst. ce, called *Agairane* by the *Spaniards*, which, by long Boiling, becomes hard like Pitch, and is used as such by the *Spaniards*. To the Leeward of the Point, directly opposite to the Village, is good Anchorage; but, on the West Side, very deep Water. Some of our Men, being sent in the Night-time to take the Village, landed in their Canoes in the Morning, and took some Prisoners, and a small Bark set on Fire by the Inhabitants, alleging, that they had done it by special Order from the Viceroy. Our Men coming back the same Evening, we returned again into the Isle of *Plata*, where we anchored September 26. which very Evening, we sent some of our Men to *Manta*, an *Indian* Village, two or three Leagues West of Cape *St. Laurento*, to get more Prisoners, in hopes of better Intelligence. *Manta* is a small Village, inhabited by *Indians*, on the Continent, seven or eight Leagues from the Isle of *Plata*. Its Buildings are mean, and scattered; but, being raised on an easy Ascent, afford a very agreeable Prospect towards the Sea-side. The Church here is very fine, and adorned with carved Work.

because this the Ground the Corn n plied with where the Parts of Pe Spring of f opposite to is a Rock, appears ab safe Anch Sand. because this Place was formerly inhabited by *Spaniards*. As the Grounds about it are dry and sandy, they bear neither Corn nor Roots, but only a few Shrubs. They are supplied with Provisions by Sea, this being the first Place, where the Ships bound from *Panama* to *Lima*, and other Parts of *Peru*, refresh themselves. They have an excellent Spring of fresh Water between the Village and the Sea. Just opposite to the Village, one Mile and an half from the Shore, is a Rock, which proves often dangerous, because it never appears above Water; but, a Mile within this Rock, is safe Anchorage at six, eight, or ten Fathom, hard and clear Sand. About a Mile West from the Anchoring-place, a Shore runs out a Mile into the Sea. Behind the Town, directly South of it, a good Way into the Country, stands a very high Mountain, rising up into the Clouds like a Sugar-loaf; and therefore serves for a good Sea-mark, there being none other like it on all that Coast. We returned to our Men, who landed, about Day-break, one Mile and an half from the Village; but the Inhabitants, being already stirring, took the Alarm, and so got all away, except two old Women, who, being taken Prisoners, declared, that the Viceroy, upon News brought him, that a good Number of the Enemies were come over the Isthmus of *Darien* into the South Seas, had ordered the Burning of their Ships, the destroying of all the Goats in the Isle of *Plata*, and no more Provisions to be kept, than for their own present Use.

22. We returned the next Day to the Isle of *Plata*, where we found our Ship. Here we staid, unresolved what Course to take, till *October 2.* when Captain *Swan*, Commander of the *Cygnit of London*, a rich Ship, which was designed to trade on that Coast, came to an Anchor in the same Road; but, being disappointed in his Hopes to traffick thereabouts, his Men had forced him to take aboard a Company of Privateers he met with at *Nicoya*, being the same we were told of at *Manata*; for they were come by Land, under the Command of Captain *Peter Harris*, Nephew to the same Captain *Harris*, who was killed before *Panama*. Captain *Swan's* Ship being unfit for Service, by reason of his Cargo, most of his Goods were sold upon Credit, and the rest thrown overboard, except the fine Commodities, and some Iron for Ballast. Then Captain *Davis* and Captain *Swan* joined Company by Consent; and *Harris* had a small Bark given him. Our Bark, which had been sent three Days before cruising, brought in a Prize laden with Timber, which they had taken in the Bay *Guiaquil*. The Commander told us, that it was credibly reported at *Guiaquil*, that the Viceroy was fitting out ten Frigates to chase us, out of those Seas. This made us wish for Captain *Eaton*; and it was resolved to send our small Bark towards *Lima*, to invite him to join Company with us. This done, we fitted up another small Bark into a Fireship; and, *October 20.* failed for the Isle of *Labos*. The Wind being very slack, we did not pass by the Point of *St. Helena* till the 23d, and the 25th crossed the Bay of *Guiaquil*. The 30th, we doubled the Cape of *Blanco*, at 3° 48', the worst Cape in the South Seas to double, because you cannot here, as in most other Places, stand off at Sea, by reason of the strong Current, which, setting North-west, will carry a Ship off more in two Hours, than she can get again in five. Thus we were forced to keep near the Shore, which is not often performed without great Difficulty; for as there are no Land-winds here, it generally blows hard at South South-west, or South by West. The Cape is surrounded with white Rocks on the Sea-side, whence, questionless, it has got its Name; and the Country near it appears steep and rugged.

23. *November 2.* we lay about six Leagues off *Poyta*, whence we sent several Canoes, manned with 110 Men, to attack the Town, a small Sea-port belonging to the *Spaniards*, at 5° 15', built on a sandy Rock near the Sea-side, under an high Hill. It has two Churches, tho' not more than seventy-five or eighty Houses, low, and meanly built. It is like most of the other Buildings all along the Coast of *Peru*. They build their Walls with a kind of Brick made of Earth and Straw, dried only in the Sun, three Feet long, two broad, and one half thick. In some Places, they only lay Poles across, covered with Mats instead of Roofs; but sometimes they used Roofs. The Reason why they build so meanly, is partly because they want Materials of good Stone and Timber, partly because it never rains, which only makes them solicitous of keeping out the Sun; and those

Walls, tho' never so slight and brittle, yet will there hold firm for a considerable time, as they were at first, being not shaken or mouldered by the Wind and Rains. The Timber the better Sort make use of in their Buildings is brought thither from other Places. Their Walls, as well as those of their Churches, are neatly whitened, both within and without, with very large Beams, Posts, and Doors, all adorned with carved Work, besides good Pictures brought thither from *Spain*, and rich Hangings of Tapestry, or painted Calicoes. But the Houses of *Poyta* were not of that sort, tho' their Churches were large and handsome. Close by the Sea is a small Fort; which, with *Musquets* only, commands the Harbour, as another on the Top of an Hill commands both that and this Port. They are obliged to fetch their fresh Water, as also their Fowls, Hogs, Plantains, and Maiz, from *Colon*, a Town two Leagues North North-east from *Poyta*, where a fresh-water River empties itself into the Sea.

24. The dry Tract of this Country begins to the North from Cape *Blanco*, and reaches to *Cochimbo*, at 30° South Latitude, where I never saw or heard any Rain, nor of any green Thing growing, either in the Mountains or Valleys, except in some Places watered constantly with divers Rivers. The People of *Colon* are much addicted to Fishing, which they perform in Bark-logs: These are composed of divers round Logs of Wood, like a Rafter, but in different Manners, according to the Use they are intended for, or the Custom of the People that make them. Those designed for Fishing are only three or four Logs of light Wood, eight Feet long, joined to each other on the Sides with Wooden Pegs and Withes. The middlemost is always longer than the rest, especially at the fore Part, which ends, by Degrees, in a Point, the better to cut the Waves. Those intended for carrying Merchandize are made after the same manner and Shape, of twenty or thirty great Trunks of Trees, joined together, thirty or forty Feet long. Upon these they fasten, with Wooden Pins, another shorter Row of Logs cross-ways. From this double Bottom they raise a Raft of ten Feet, by the means of Posts set upright, which are the Supporters of two thick Trees laid across each other, just like our Wood-piles, but not so close as in the Bottom of the Float, and at the Ends and Sides only, the inner Part being hollow. In this, at four Feet high from the Beam of the Bottom, they lay small Poles close together, which serve for a Bottom of another Room, on the Top whereof they make just such another Floor. The first Story serves for the Hold, in which they stow Ballast, and Water-casks, or Jars; and the second for the Seamen, and what belongs to them. Above this second Floor the Goods are stowed, as high as they think fit, which seldom exceeds ten Feet. Some Space is left behind for the Steersman, and before for the Kitchen, especially in long Voyages, because they sometimes go 5 or 600 Leagues. They have a very large Rudder, and, in the Midst of this Machine, a Mast, with a large Sail, like our West-country Barges. As they cannot go but before the Wind, they are only fit for those Seas, where the Wind blows constantly one Way, seldom varying above a Point or two in the whole Voyage betwixt *Lima* and *Panama*. If thereabouts they meet, as sometimes it happens, with a North-west Wind, they drive before it till it changes, having nothing else to do in the mean while but to avoid the Shore; for they never sink at Sea. These last Bark-logs carry sixty or seventy Tons of Wine, Oil, Flour, Sugar, Quito Cloth, Soap, dressed Goat-skins, &c. They are managed by three or four Boatmen only, who, after they come to *Panama*, sell both the Goods and Vessel there, because they cannot go back in them by the Trade-wind. The fishing Bark-logs are likewise furnished with Mats and Sails, and are much easier managed than the large ones. These get out at Night with the Land-wind, and return in the Day-time with the Sea-wind. These small Bark-logs are used in a great many Places in the *West Indies*, and in some in the *East Indies*. On the Coast of *Coremandel* they use only one, or sometimes two Logs, made of a light Wood, without Sail or Rudder, managed by a single Man, who, with his Legs in the Water, steers the Log with a Paddle.

25. The next Town of Consequence to *Poyta* is *Pinra*, a spacious Place, forty Miles thence, seated in a Valley upon a River, which discharges itself into the Bay of

Chirapee, at 7° North Latitude. This Bay, tho' much nearer to *Puna* than *Payta*, yet it is seldom visited by Ships of Burden, being full of Shoals; but, instead thereof, they sail to *Payta*, one of the best Harbours on the Coast of *Peru*; being sheltered at the South-west, by a Point of Land, which renders the Bay very smooth, and consequently safe from Anchorage, from six to twenty Fathom in clear Sand. Most Ships, bound either to the North or South, touch at *Payta* for fresh Water, which is brought thither from *Colon* at a reasonable Rate. November 3. early in the Morning, our Men landed four Miles South of *Payta*, where they took some Prisoners that were set for a Watch, who told us, that the Governor of *Piura* was come with 100 Men to their Assistance: Notwithstanding this, our Men attacked the Fort on the Hill, and took it with little Opposition; whereupon the Governor and Inhabitants quitted the Town: Our People soon entered it, but found it empty of Money, Goods, and Provisions. The same Evening, we came with our Ships to an Anchor not far from the Town, a Mile from the Shore, at ten Fathom Water; we stayed six Days, in Hopes of getting a Ransom for the Town; but, perceiving we were not likely to have any, it was laid in Ashes. At Night we set Sail hence, with the Land Wind towards *Lobos*. The 14th Day, we came within Sight of the Isle of *Lobos de Terra*, bearing East from us; and, at Eight o'Clock at Night, came to an Anchor at the North-east End of it, at four Fathom Water. The Isle of *Lobos de la Terra* is of an indifferent Height; and, at a Distance, appears altogether like the Isle of *Lobos de la Mare*; we anchored at the North-east End of it, in four Fathom Water. It has, at the North End, a Rock, a Quarter of a Mile from the Shore; and, betwixt it, a Chanel of seven Fathom Water. In the Afternoon, we sailed with a South-east Wind to *Lobos de la Mare*, where we arrived May 19. The 26th, in the Evening, we discovered a Bark at a Distance, which was sent to see whether we were still in the Sea; but we, keeping close under the Shore, remained there undiscovered. The 29th, in the Morning, we set Sail for the Bay of *Guaia*, situate betwixt Cape *Blanco* to the South, and Point *Chandy* to the North, twenty-five Leagues from Cape *Blanco*. In the Bottom of this Bay lies a small Isle, called *St. Clara*, extending East and West, having many Shoals to the North; which makes the Ships, bound for the *Guaiaquil*, to pass on the South Side of it. The *Spaniards* say, there lies a very rich Wreck on the North Side; but that there is very hard coming at it, by reason of the great Multitudes of Carfish; which Fish is not unlike a Whiting, but with three Fins on the Back, and one on each Side, which have each a Bone; and, if they strike into the Flesh, it proves frequently mortal: They are met with all along the *American* Coasts, and likewise in the *East Indies*; their Flesh is both sweet and wholesome.

26. From the Isles of *St. Clara* to *Punta Arena*, the sandy Point being the Westernmost Point of the Isles of *Puna*, is seven Leagues East North-east: Here Ships, bound for *Guaiaquil*, take in their Pilots, which live in a Town of the said Isle, bearing the same Name, on the South Side, seven Leagues from Point *Arena*. The Isle of *Puna* itself is low, stretching fourteen Leagues East and West, and five Leagues broad: It has a strong Tide round the Shore, which is full of little Creeks and Rivers: Near this Town is a small Point, where the Inhabitants are obliged to keep a constant Watch. The inland Part of the Isle is good Pasture-ground, intermixed with some Wood-lands, producing divers, to us, unknown Trees; and, amongst the rest, abundance of Palmetoes, a Tree about the Thickness of an ordinary Ash, and thirty Feet high, with a straight Trunk, without Branches or Leaf, except at the very Top, where, spreading into small Branches three or four Feet long, each of them produces at the Extremity one single Leaf, of the Breadth of a large Fan, which, at first, sprouts and spreads like a Fan plaited together, but, by degrees, opens and spreads like a Fan unfolded. The Houses of the Town of *Puna* are built on Posts ten or twelve Feet high, into which they go up by Ladders, and are thatched with Palmeto-leaves: The like Contrivance I have seen among the *Malayans* in the *East*

Indies. The best Place for Anchorage is directly opposite to the Town, within a Cable's Length of the Shore, at five Fathom Water. From *Puna* to *Guaiaquil* is seven Leagues, and one League to the Entrance of the River *Guaiaquil*, which is two Miles over, and afterwards runs up into the Country in a pretty Strait Chanel, the Grounds on both Sides marshy, and full of red Mangrove-trees: About four Miles on this Side of the Town of *Guaiaquil* the River is divided, by a small low Island, into two Channels; that to the South-west is the broadest, though the other is as deep. From the upper End of this Isle to the Town is near a League, and the River thereabouts of the same Breadth, where a Ship of great Burden may ride with Safety, especially towards that Side where the Town stands. It is seated close by the River, partly on an Afcnt, and partly on the Foot of a small Hill, with a great Descent towards the River-side. It is defended by two Forts, erected on the low Grounds, and another on the Hill, being one of the best Sea Ports belonging to the *Spaniards* in the South Sea, under the Jurisdiction of a Governor, and beautified with divers fine Churches, and other good Buildings. They export Coocoas, Hides, Tallow, Sarsaparilla, Drugs, and Woollen Cloth, called *Quito Cloth*. The Coocoas grow on both Sides of the River above the Town, having a smaller Nut than those of *Campachy*. The Sarsaparilla delights in watery Places near the River-side; and the *Quito Cloth* is made in an Inland Town called *Quito*: It is coarse, and therefore worn only by the Vulgar all over the Kingdom of *Peru*.

27. *Quito* is a populous Place, seated in the Heart of the Country, inhabited by some *Spaniards*, by most *Indians*, under the *Spanish* Jurisdiction, being inclosed with a Ridge of high Mountains, which abound in Gold: The Rivers rising amongst them carry abundance of Gold-dust along with them into the lower Grounds, especially after violent Rains, which is afterwards cleansed and washed from the Sand. *Quito* is reckoned the richest Place for Gold in all *Peru*, but unwholesome, the Inhabitants being frequently subject to Fevers, Head-ach, Gripping in the Guts, and Fluxes; but *Guaiaquil* is much more wholesome. Having formed a Design against the Town of *Guaiaquil*, we left our Ships at Cape *Blanco*, and steered with a Bark, and some Canoes, to the Isle of *St. Clara*, in the Bay of *Guaiaquil*, and thence in two Canoes to Point *Arena*, where we took, the next Day, some of the Fishermen of *Puna*, and afterwards their Watch, together with the whole Town and Inhabitants. The next Ebb, we took a Bark laden with *Quito Cloth*, coming from *Guaiaquil*; the Master whereof told us, that there were three Barks full of Negroes coming with the next Tide. From thence we, lying near the Town of *Puna*, embarked all our Men in Canoes, leaving only five Men aboard the Bark, with Orders not to fire at any thing till next Morning at Eight o'Clock, by which time we supposed we should have taken the Town. We had not rowed above two Miles, but we met with, and took, one of the Barks laden with Negroes; the Master whereof having told us, that the other two would not come out till the next Tide, we rowed forward; but our Canoes being heavily laden, it was Break of Day before we came within two Leagues of the Town, there being not above an Hour's Flood: Now we absconded all Day in an adjacent Creek; and, at the same time, sent one of our Canoes to our Bark left near *Puna*, not to fire till the next Day; but to no Purpose; for the before-mentioned two Barks with Negroes, being come out of the Harbour with the Evening Tide, passed by without being seen or heard by us; and, falling down with the Ebb towards *Puna*, our Bark, seeing them full of Men, fired three Guns at them, before our Canoes could bring them our last Orders. But we took the Masters of both the Barks, as they were making their Escape on Shore. The firing of these three Guns put us all into a great Consternation, as not questioning but that thereby the Townsmen had taken the Alarm; and therefore some were for advancing to the Town immediately, others for returning to our Ships: But as the Ebb Tide hindered us from going upwards, so Captain *Dueta*, with fifty of his Men, resolved to march by Land to the Place; the rest, judging it impracticable, remained in the Creek to see the Issue of the Enterprize. After four Hours,

Captain *Davis* and his Men, having been almost choaked in the Marches among the Mangrove-woods, returned without having been able to advance far on their Way to the Town. It was then resolved to row up in Sight of the Town; and, if we found ourselves discovered, to retire without attempting: So, rowing through the North-east Chanel, we got in the Night in View of the Town, when, at the Discharge of a Musquet, we saw, on a sudden, the whole Town full of Lights, where, as there was but one seen before, this appeared almost an infallible Sign, that we were discovered; but, as some alleged, that these Lights were used by the *Spaniards* in the Nights before Holy-days, as the next Day was, they upbraided Captain *Swan* and his Men with Cowardice: We landed in a Place two Miles on this Side of the Town, which being all over-run with Woods, we were forced to expect Day-light. We had two *Indian* Guides; one was run away from *Guiaquil*, the other a Prisoner we had taken three Days before; the last being led by a Cord by one of Captain *Davis's* Men, who seemed one of the most forward in the Enterprize; but now, perhaps, beginning to repent his Rashness, cut the Rope wherewith the Guide was tied, and so let him make his Escape into the Town: When he judged him to be out of Danger of being retaken, he cried out, that somebody had cut the Rope; so that, after we had searched in vain for our Guides, it was unanimously resolved to desert; however, about Break of Day, we rowed up into the Middle of the River, where we lay still about half an Hour, without being in the least molested from the Town, though we landed on the opposite Bank to a Beef-clofe, and killed a Cow. We returned the ninth to *Puna*; and, in our Way, seized upon the three before-mentioned Barks, laden with 1000 hilly Negroes; out of them we kept about sixty, and left the rest with the Barks behind; whereas, if we had carried them all to *St. Maria*, on the Isthmus of *Darien*, we might, with their Assistance, have worked the Gold Mines on that Side; and, by erecting a Fort or two at the Entrance of the River of *St. Maria*, and with the Assistance of the Natives our Friends, and some Thousands of *English* and *French* Privateers from all Parts of the *West Indies*, have not only maintained ourselves there against all the Power of *Spain*, but also extended our Conquests to the Coasts and Gold Mines of *Quito*.

28. We set Sail again the 13th, and arrived at the Isle of *Plata* the 16th; where, after having provided ourselves with fresh Water on the Continent, we parted our Clovies, and resolved unanimously to direct our Course to *Lovelis* a Town in the Bay of *Panama*. Accordingly we set Sail *December* 23, with a brisk South-south-west Wind, towards the Bay of *Panama*. The next Morning, we passed in Sight of *Cape Passao*, 8' South of the Line, being a round Point, but very high, divided in the Middle, bare towards the Sea, but covered with Fruit-trees to the Land Side; the Land hilly and woody. Betwixt this and the *Cape St. Francisco*, you see Abundance of small Points, which inclose so many sandy Creeks, full of Trees of several kinds: As our Design was to look for Canoes, in some River or other unfrequented by the *Spaniards*, so our *Indian* Pilots were but of little Use to us: However, as we were indifferent for the rest what River we came to, so we endeavoured to make the River of *St. Iago*, by reason of its Nearness to the Isle of *Gallo*, in which there was much Gold, and where there was safe Anchorage for our Ships. We passed by *Cape St. Francisco*; whence, to the North, the Sea Side is full of Trees, of a vast Height and Thickness: From this Cape the Land runs more easterly into the Bay of *Panama*, this Cape being its Boundary to the South, as the Isles of *Cobaya* or *Quito* are to the North. Betwixt this Cape and the Isle of *Gallo* are several large Rivers, but we passed them all to go to *St. Iago*, a large navigable River, 2° North: About seven Leagues up in the Country it divides itself into two Branches, which inclose an Isle four Leagues in Circumference; the broadest is the South-west Chanel; they are both very deep, but the narrowest has sandy Banks at its Entrance; so that, at low Ebb, a Canoe cannot pass over them. Beyond the Isle, the River is a League broad, the Chanel strait, with a swift Current; it flows three Leagues up the River, but to what Height, I am not able to tell: It runs through a very

rich Soil, producing all sorts of the tallest Trees usually found in this Climate; but especially red and white Cotton-trees, and Cabbage-trees, of the largest kind. The white Cotton-tree grows not unlike an Oak, but much taller and bigger; the Trunk strait, without any Branches to the Top, where it sends forth strong Branches; the Bark is very smooth, the Leaves of the Bigness of a Plum-tree-leaf, dark-green, oval, smooth, and jagged at the Ends; they are not always biggest near the Roots, but often in the Middle of the Trunks. The Cotton they bear is Silk Cotton, which falls in *November* and *December* upon the Ground; but not so substantial as that of the Cotton-shrub, but rather like a Down of Thistles; they don't think it worth their while to gather it in the *West Indies*, but in the *East Indies* they put it into their Pillows. In *April* the old Leaves fall off, which, in a Week's time, are supplied by fresh. The red Cotton-tree is somewhat less; but, for the rest, altogether like the other; except that it produces no Cotton, and its Wood hard, tho' both are somewhat spongy; they are found in the fat Grounds, both in the *East* and *West Indies*. The Cabbage-tree is the tallest in those Woods, some being above 120 Feet high: It is likewise without Boughs or Branches, except on the Top, where its Branches are of the Thickness of a Man's Arm, and twelve or fourteen Feet long; two Feet from the Stem come forth small long Leaves, of an Inch broad, so thick and regular on both Sides, that they cover the whole Branch: In the midst of these high Branches shoots forth the Cabbage itself; which, when taken out of the outward Leaves, is a Foot in Length, and of the Thickness of the Small of a Man's Leg, being white like Milk, sweet and wholesome: Betwixt the Cabbages and the large Branches sprout forth other small Twigs, two Feet long, very close together; at the Extremities of which grow hard and round Berries, of the Bigness of a Cherry, which, once a Year, fall from the Trees, and are excellent Food for the Hogs. The Trunk has Rings half a Foot asunder, the Bark is thin and brittle, the Wood hard and black, and the Pith white; as the Tree dies after its Head is gone, they cut them down before they gather the Fruit.

29. As the Coast and Country of *Lima* has continual dry Weather, so this Part of *Peru* is seldom without Rains; which, perhaps, is one Reason why they have made but small Discoveries on this Coast: Add to this, that when they go from *Panama* to *Lima*, they don't pass along the Coast, but sail up to the West, as far as the *Cobaya* Isles, for the West Winds, and thence stand over to the *Cape St. Francisco*: In their Return they coast it; but their Ships, being then laden, are not fit to enter the Rivers, which, as well as the Sea Side, are covered with Woods and Buses, and therefore are fit Places for the Natives to lie in Ambuscade. These *Indians* have some Plantations of Maiz and Plantains, as also some Fowls and Hogs. We entered the River of *St. Iago*, with four Canoes, *December* 27, by the lesser Branches, and met with no Inhabitants till within six Leagues of its Mouth, where we discovered two small Huts, thatched with Palmeto-leaves; and, at the same time, *Indians*, with their Families and household Goods, paddling against the Stream much faster than we could row, because they kept near the Banks. On the opposite Side to the West, we saw many other Huts a League off; but, the Current being very rapid, we did not care to venture cross it. In the two Huts, on the East Side, we found nothing but a few Plantains, Fowls, and one Hog, which seemed to be of the *European* Kind, such as the *Spaniards* brought formerly into *America*, but especially to *Jamaica*, *Hispaniola*, and *Cuba*, where they feed in the Woods (being marked beforehand) in the Day-time; and at Night are called, and kept in Pens, by the founding of a Conch-shell. On the Continent of *America*, they don't turn their Hogs into the Woods. We returned the next Morning into the River's Mouth, with an Intention to sail on to the Isle of *Gallo*, where we had ordered our Ships to meet us. This Isle is but small, and without Inhabitants, seated at 3° North Latitude, in a spacious Bay, three Leagues from the River *Tomaco*, and four Leagues and a half from an *Indian* Village of the same Name: It is indifferently high, and well stored with Timber-trees: At the North-east End is a good sandy Bay, near which is a fine Spring of fresh

Water,

Water, and against the Bay is very good Anchorage, at six or seven Fathom Water; there is but one Chanel to approach the Isle at four Fathom Water, but you must go in with the Flood, and come out with the Ebb. The River of *Tomaco*, supposed to have its Rise amongst the rich Mountains of *Quito*, has borrowed its Name from an adjacent Village of the same Name. Its Banks are well peopled by the *Indians*, and some *Spaniards*, who traffick for Gold with them. It is so shallow at the Entrance, that only Barks can enter it. The Town of *Tomaco* is a small Place, seated near the Mouth of a River, for the Entertainment of the *Spaniards*, who traffick in those Parts. From this Place to the Branch of the River of *St. Iago*, where we then were at Anchor, is five Leagues. As the Land here is low, and full of Creeks, we left the River December 21. and crossed these small Bays in our Canoes: In our Way we saw an *Indian* House, whence we took the Matter, and whole Family, and so rowed forward, and came at Twelve at Night to *Tomaco*: Here we seized upon all the Inhabitants; and, among the rest, one *Don Diego de Pinas*, a *Spanish* Knight, whose Ship was not far off at Anchor to hide Timber: So we took her, and found thirteen Jars of good Wine aboard her, but no other Lading. An *Indian* Canoe came aboard us, with three of the Natives, who were frail and well-limbed, but of low Stature, with black Hair, long Visages, and small Noses and Eyes, and of a dark Complexion. The 31st, several of our Men, who had been seven or eight Leagues up the River, returned with their Canoes, and brought along with them some Ounces of Gold they had found in a *Spanish* House, but the People were fled.

30. January 1. 1685. as we were going in our Canoes from *Tomaco* towards *Gallo*, we took a Packet of Letters in a *Spanish* Boat, sent from *Panama* to *Lima*, whereby we understood, that the President of *Panama* wrote to hasten the Plate Fleet thither from *Lima*, the *Armada* from *Spain* being come to *Porto-Bello*: This News soon made us alter our Resolution of going to *Lavelia*; instead whereof, it was resolved to rendezvous among the *King's* or *Pearl* Islands, not far distant from *Panama*, and by which all Ships, bound to *Panama* from the Coast of *Lima*, must of Necessity pass. Accordingly we sailed the 7th; the 8th, we took a Ship of 90 Tons, laden with Flour, and continued our Voyage, with a gentle South Wind, towards *Gorgonia*, an Isle twenty-five Leagues distant from that of *Gallo*, where we anchored the 9th, at the West Side of it, in thirty-eight Fathom clean Ground, two Cables Length from the Shore, in a sandy Bay, the Land against it very low. This Isle is seated at 3° North Latitude, and is remarkable for two high Rifings, called the *Saddles*: Its Length is two Leagues, and its Breadth one League, about four Leagues from the Continent. At the West End is another small Isle. *Gorgonia* is full of large Trees, and watered by many Rivelets: It has no other Animals but Monkeys, Conies, and Snakes: It is extremely subject to Rains; and the only Difference observable in the Seasons is, that in the Summer the Rains are more moderate. The Sea round it is so deep, that there is no Anchorage, except at the West End, where the Tide rises eight Feet. Mussels and Periwinkles are here in great Plenty: The Monkeys open the Shells at Low-water. Here are also Abundance of Pearl-oysters; these are fixed four, five, or six Fathom under Water, to the loose Rocks, by Beards, or small Roots, like the Mussels: They are like our Oysters, but something flatter and thinner; the Flesh is slimy, and not to be eaten, unless dried beforehand, and boiled; some have twenty or thirty Seed-pearls, others one or two pretty large ones, lying at the Head of the Oysters, betwixt the Fish and the Shell; but the Inside of the Pearl carries a brighter Lustre than the Pearls themselves. The 13th, we pursued our Voyage to the *King's* Isle, being now two Men of War, and two Tenders, one Fireship, and the Prize: We sailed forward with the common Trade-wind South, along low Land on the Continent near the Sea Side, but with a Prospect of Mountains deeper into the Country. The 16th, we passed by Cape *Corientes*, at 5° 10' Latitude, being an high Point, with four small Hills on the Top; the Current then running strong to the North. The 21st,

we came in Sight of Point *Garachina*, at 7° 20' North Latitude. The Land is high, rocky, and without Trees near the Sea Side: Within the Point is plenty of Oysters and Mussels. About twelve Leagues from this Point, are the *King's* or *Pearl* Isles; betwixt these and the before-mentioned Point of *Garachina*, is a small, flat, barren Isle, called *Galleria*, near which we came to Anchor for that time. The *King's* or *Pearl* Isles are a good Number of low woody Isles, seven Leagues from the Continent, and twelve Leagues from *Panama*, and fourteen Leagues in Length North North-west by North, and South-east by South. In the Maps they are called the *Pearl* Isles, tho' I never could see one Pearl-oyster, or any thing like it, near them. The Northernmost of these is called *Pachta*, or *Parbeque*, a small Isle, eleven or twelve Leagues from *Panama*; the Name of that most South is *St. Paul's*; the rest, tho' bigger, have no particular Names. Some of these are planted with Plantains, Bananas, and Rice, by the Negroes belonging to the Inhabitants of *Panama*. The Chanel, betwixt them and the Continent is seven or eight Leagues broad, of a moderate Depth, and has good Anchoring all along. The Isles, tho' lying close together, yet have their Chanels fit for Boats. At the End of *St. Paul's* Isle is a convenient careening Place, in a good deep Chanel, inclosed by the Land. You must enter in on the North Side, where the Tide rises ten Feet perpendicular. The 25th, we brought our Ships in with a Spring-tide; and, after having cleared our Barks first, we sent them the 26th to cruise towards *Panama*: They brought us, the fourth Day after, a Prize, coming from *Lavelia* with Maiz, or *Indian* Corn, salted Beef, and Fowls. *Lavelia* is a large Town, seated on the Bank of a River, on the North Side of the Bay of *Panama*, seven Leagues from the Sea Side: At *Nata* is another Town, seated in a Plain, near another Branch of the same River: These two Places supply *Panama* with Hogs, Fowl, Beef, and Maiz. In the Harbour where we careened, we found Abundance of Oysters, Mussels, Limpits, and Clams; these last are Oysters, that stick so close to the Rocks, that you must open them where they grow, if you will eat the Meat. We also met with some Pigeons and Turtle-doves.

31. Our Ships being well careened by the 14th of February, and provided with Fuel and Water, we sailed out from amongst the Isles the 18th, and anchored in the great Chanel, betwixt the Isles and the Continent, at sixteen Fathom Water, soft oozy Ground; and the next Day cruised in the Chanel towards *Panama*, about which the Shore appears very beautiful, with Variety of small Woods and Hills; besides that, a League from the Continent, you see divers small Isles, scattered partly with Trees; and the *King's* Isles, on the other Side the Chanel, afford a very fair Prospect, according to their various Shapes and Situations. The 16th, we anchored within a League of the Island of *Parbeque*, in seventeen Fathom Water; and the 18th, steered our Course with a North North-east Wind directly towards *Panama*, where we anchored directly opposite to *Old Panama*, once a Place of Note in those Parts; but the greatest Part thereof being laid in Ashes in 1673. by Sir *Henry Morgan*, it was never rebuilt since. About four Leagues from the Ruins of *Old Panama*, near the River Side, stands *New Panama*, a very handsome City, in a spacious Bay of the same Name, into which disembogue many long navigable Rivers, some whereof are not without Gold; besides that, it is beautified with many pleasant Isles; the Country about it affording a delightful Prospect to the Sea, by reason of Variety of adjacent Hills, Valleys, Groves, and Plains: The Houses are for the most part of Brick, and pretty lofty, especially the President's; the Churches, Monasteries, and other public Structures, which make the best Shew I ever saw in the *West Indies*: It is encompassed with a high Wall of Stone, on which are mounted a good Number of Guns, which formerly were only planted to the Land Side, but now also to the Sea. This City has a vast Traffick, as being the Staple for all Goods to and from all Parts of *Peru* and *Chili*; besides that, every three Years, when the *Spanish* Armada comes to *Porto-Bello*, the Plate-Fleet comes thither with the *King's* Plate, besides what belongs to the Merchants.

Merchants; whence it is carried on Mules by Land to *Porto-Bello*, at which time every thing is excessive dear at this Place.

32. The *Spanish* Armada, which comes every three Years into the *West Indies*, arrives first of all at *Caribagena*; whence they dispatch immediately an Express by Land to *Lima*, and another with two Packets of Letters by Sea, one for the Viceroy of *Peru* at *Lima*, the other for the Viceroy of *Mexico*. I cannot absolutely tell which Way the Packet for *Mexico* goes, after its Arrival at *Porto-Bello*, whether by Sea or Land; but I suppose by Sea to *La Vera Cruz*; but that for *Lima* goes by Land to *Panama*, and so by Sea to *Lima*. Upon this Occasion I cannot but tell the Reader, that some time before my going to the South Seas, being then aboard Captain *Coxon's* Ship, in Company of three or four other Privateers, we took the Packets bound from *Caribagena* to *Porto-Bello*, four Leagues from this last Place: In them we found many Letters from the Merchants of *Spain*, directed to their Correspondents, intimating, that the same Year a certain Prophecy being published in *Spain*, that some *English* Privateers would open themselves a Way into the South Seas, they desired them to be upon their Guard. As by this Way we understood the Passage by Land over the Isthmus of *Darien*, and those *Indians* had sought our Assistance of late against the *Spaniards*, so this gave us the first Encouragement to venture upon that Enterprize; and as we knew the *Spaniards* to be a bigotted Generation, we sent most of the Letters (sealed up again) to *Porto-Bello* to augment their Fear. The first Occasion of our contracting a Friendship with the *Indians*, on the Isthmus of *Darien*, happened thus. About fifteen Years before, Captain *Wright* took a young *Indian* Lad, among the *Jamballo* Isles, unto whom he gave the Name of *John Gratt*, and bestowed him afterwards upon some *Mokitoes*, who carried him to their Country, where he married, learned their Language, and staid among them till six or eight Months before our taking the said Packet. Captain *Wright* took another *Indian* Boy, twelve Years old, the Son of a Man of Note among them, whom he carried to the Country of the *Mokitoes*, to be educated by them: Here, meeting with *John Gratt*, he persuaded the Captain to restore the Boy to his Friends, and thereby to commence a Friendship with them; but, the Captain alleging the Fierceness of those Nations, *Gratt* offered his Service to bring the Matter about: Accordingly, being set ashore in his *Indian* Habit, he called out to them in his own Tongue; and they acknowledging him for their Countryman, he proposed a strict Alliance with the *English*; alleging, that they were a good sort of People, and declared Enemies of the *Spaniards*; telling also the Father of the Boy, that if he would go aboard the Vessel he flew them, being at Anchor, he might have his Son again: Whereupon about thirty of them went aboard Captain *Wright* with Refreshments; and, being kindly entertained there, they returned with the Boy and Captain *Wright* ashore, and entered into a strict Confederacy against the *Spaniards*; and thereby opened the Way by Land into the South Seas, the Discovery whereof is, in a great measure, owing to the before-mentioned Letters, and taking of *John Gratt*.

33. But, to return to the *Spanish* Armada at *Caribagena*: After a Stay of sixty Days in this Port, it sails hence to *Porto-Bello*, where it remains only thirty Days, and takes to the King's Treasure brought thither from *Panama*, which is said to amount to 24,000,000 Pieces of Eight, besides Plate and Goods belonging to the Merchants. When the Merchants steal the Custom of the Plate, they sack it up among Merchandize, and send it to *Vera Cruz*, upon the River *Chagre*, where they fall down the River, and so go farther by Sea to *Porto-Bello*: From this Harbour they weigh Anchor precisely on the 30th Day to the River's Mouth, where the Admiral will sometimes stay a Week longer to oblige the Merchants. From *Porto-Bello* the Armada returns to *Caribagena*, where it meets with the King's Money, brought thither out of the Country, as also with a large *Spanish* Galleon, (called by them a *Patache*) which, upon the first Arrival of the Armada at *Caribagena* from *Spain*, goes along the Coast to deliver the King's Tribute. After a set Time, the Ar-

NUMB. 7.

mada returns from *Caribagena*, by the Way of the *Flavanna*, in the Isle of *Cuba*, where, meeting with the Flota, or a small Squadron of Ships, come thither from *Vera Cruz*, with the Riches of the City and Country of *Mexico*, and what is brought thither by the annual Ship from the *Phillippine* Isles, they all join, and sail for *Spain*, through the Gulph of *Florida*. *Porto-Bello* being an unhealthy Place, the Merchants of *Lima* make as short Stay there as they possibly can: But *Panama* is seated in a much clearer Air, as enjoying the Benefit of Sea Wind from ten or eleven of the Clock in the Morning, till eight or nine of the Clock at Night, and the Land Wind from nine, till the Morning; besides that, *Panama* having on the Land-side an open champagne Country, it is seldom troubled with Fogs; nor is the wet Season, which holds from *May* to *November*, so excessive at *Panama*, as on the other Side of the Bay, tho' it is severe enough in the Months of *June*, *July*, and *August*, in which Season the Merchants of *Peru*, who are used to a constant serene Air, without Rain or Fogs, cut off their Hair, to preserve them from Fevers, whilst they are obliged to stay here.

34. The 20th, we anchored within a League of three little rocky Isles, called the *Perico* Islands; and, the 21st, took another Prize, laden with Hogs, Beef, Fowl and Salt, from *Lavelia*. The 24th, steered over to the Isle of *Tobago*, in the same Bay, six Leagues South of *Panama*: Its Length three Miles, and its Breadth two. It is very rocky and steep, except on the North Side, where it has an easy Descent; and, as the Soil is black and good up to the Middle of the Mountains, they produce abundance of Fruit, as Plantains, Bananas, and, near the Sea-side, Cocoa and Mammee-trees; these last are large and strait, without Knots, Boughs, or Bunches, and sixty or seventy Feet high. At the Tops sprout out some small Branches, thick and close together; the Fruit is of the Bigness of a large Quince, round, and covered with a grey Rind, which, before it is ripe, is brittle; but, when come to Maturity, grows yellow, and will peel with Ease. The ripe Fruit is of the same Colour, like a Carrot, smells and tastes well, and has two rough flat Stones in the Middle, each of the Bigness of a large Almond. The South-west Side is covered with Trees and Fire-wood, but the North Side has a very fine fresh-water Spring, which falls from the Mountains into the Sea. Near it formerly stood a pretty Town, with a fair Church, but the greatest Part has been destroyed by the Privateers. Opposite to the Town, a Mile from the Shore, is good anchoring, sixteen or eighteen Fathom Water, soft dusky Ground. At the North North-west End lies a small Town, called *Tobagilla*, with a Chanel betwixt both; and, on the North-east Side of *Tobagilla*, another small one, without a Name. Whilst we were at an Anchor near *Tobagilla*, we were in great Danger of being trepanned by a pretended Merchant of *Panama*, who, under colour of trading privately with us, brought his Bark laden with Merchandize in the Night to the South of the *Perico* Isles, where we were then at Anchor, according to his Appointment, which was intended for our Destruction; for, instead of a Bark, he advanced with a Fireship, pretty near us, hailing us with the Water-word. Thereupon, some of our Men, more suspicious than the rest, bid her come to an Anchor; which she not doing, they fired at her; which so terrified the Men, that they got into their Canoes, after they had set her on Fire, and we were forced to cut our Cables, to escape the Danger. At the same time Captain *Swan*, who lay a Mile from us at Anchor, saw a small Float, with only one Man upon it, driving towards his Ship, but soon after disappeared; he supposed this to have been a Machine, made up with combustible Matter, to fasten to his Rudder, (as it happened to Captain *Skarpe* near *Coquimbo*) but that the Fellow, thinking himself discovered, had not Courage enough to go forward in the Enterprize; but Captain *Swan* thought also fit to cut his Cables, and to keep under Sail all Night. The Fireship was framed and managed by one Captain *Bond*, who formerly run away from us to the *Spaniards*, without whose Assistance they could not have fitted her out, it being almost incredible, how grossly ignorant the *Spaniards*, especially in the South Seas, are in Sea Affairs; nay, which is worse, you seldom see above

2 C

one

one *Spaniard* (perhaps the Commander) in one of their Ships in the *West Indies*, all the rest being *Indians*. In the Morning, while we were busy in recovering our Anchors, we discovered a whole Fleet of Canoes, full of Men, pass betwixt *Tobagilla* and the other Isle, who proved *English* and *French* Privateers, lately come out of the North Sea over the *Isthmus of Darien*; there were 280 in all, 200 *French*, and 80 *English*; these last were taken aboard Captain *Davis*, and Captain *Swan*, and the rest put into our *Flower Prize*, under the Command of Captain *Gronet*, their Countryman: In Return for which, he offered Captain *Davis*, and Captain *Swan*, each a Commission from the Governor of *Petit Gouve*, it being their Custom to carry along with them blank Commissions from the said Governor. Captain *Davis* accepted of one; but Captain *Swan*, having one from the Duke of *York*, refused it.

35. Every thing being thus disposed, we set Sail, *March* the 2d, towards the Gulph of *St. Michael*, in quest of Captain *Townley* (who they told us was coming with 180 *English* over the *Isthmus of Darien*). This Gulph lies thirty Leagues South-east from *Panama*, and you must turn for your Passage betwixt the *King's Isles* and the Continent. In it many Rivers disembogue into the Sea: On the South it is bounded by the Point *Garrachina*, at 6° 40' North Latitude, and to the North by *St. Lorenzo*; whereas the Name of Point *Garrachina*, in the Maps, is given to the North Cape, and that of the South Cape quite left out, as well as that of *St. Lorenzo*, which properly belongs to the North Cape. The most noted Rivers, that discharge themselves into the Gulph of *St. Michael*, are *St. Maria*, *Sambo*, and *Congo*: This last has its Rise far in the Country, and, being joined by many small Streams on both Sides, disembogues on the North Side of this Gulph, a League from Cape *St. Lorenzo*: It is deep and navigable some Leagues into the Country, but not very broad. It is neglected by the *Spaniards* by reason of its Nearness to *St. Maria*, where they have their Gold Mines. As I was never in this River *Sambo*, so I cannot say much of it, except that the Tide at its Mouth seems to denote it a large River: It empties itself into the Sea on the South Side of the Gulph near *Garrachina*. Between the Mouths of these two Rivers, on either Side of the Gulph, it runs narrower towards the Land, making five or six Isles; beyond which, deeper inward, the Shore closes so near, with two Points of low Land, as to make a straight Chanel, not half a Mile broad. This is the Entrance to the innermost Part of the Gulph, making a Bay of three Leagues over, to the East End whereof are the Mouths of divers Rivers, but especially of *St. Maria*, the largest River of all that falls into this Gulph, being navigable for eight or nine Leagues, as far as the Tide flows; beyond which, it is divided into several Branches, fit only for Canoes: The Flood rises eighteen Feet in this River. Near six Leagues to the South of the Entrance of the River of *St. Maria*, the *Spaniards* built, about twenty Years ago, the Town of *St. Maria*, on account of its Nearness to the Gold Mines. Soon after it was taken by Captain *Coxon*, *Harris*, and *Sharpe*, but was rebuilt soon after again; for, when Captain *Harris* (the Nephew of the former) took it a second time, he found in it great Store of Wine, iron Pickaxes, and other Instruments the Slaves used in digging the Gold-mines. I have been told, that, besides what Gold they got out of the Ore and Sand, they found sometimes Lumps as big as an Hen's Egg, and bigger, wedged in betwixt the Rocks. Such a one Mr. *Harris* (who got 120 Pounds of Gold there) kept by him; it has several Crevices full of Earth and Dust. In the adjacent Mines the *Spaniards* employ their Slaves in a dry Season; but, when the Rivers overflow, they can't work without great Inconveniency; and then it is, that the *Indians* wash the Gold out of the Sands, forced down from the Mountains by the violent Rains, which the *Spaniards* buy of them, and gain as much by it as they do by their Mines; for, during the wet Season, they retire with their Slaves to *Panama*. Captain *Gronet* saw Captain *Townley*, with his Crew, at this Town, making Canoes, it being at that time abandoned by the *Spaniards*. Near the Mouth of this River of *St. Maria*, on the North Side, they have lately built another Town, called *Seuchadareet*, being a more airy

Place than that of *St. Maria*: The Land all about the Gulph is low and fertile, producing Abundance of large Trees.

36. *March* 3. as we were steering for the Gulph, Captain *Swan* kept near to the Continent, as we did nearer to the *King's Isles*; where, at Two of the Clock in the Afternoon, near the Place where we had careened our Ships, we met Captain *Townley*, with his Crew, in two Barks which they had taken, one laden with Brandy, Wine, and Sugar, and the other with Flour. As he wanted Room for his Men, and had Occasion for the Jars in which the *Spaniards* carry their Wines, Brandy, and Oil, in these Parts, containing seven or eight Gallons apiece, he distributed Part thereof amongst our Ships, being then all at Anchor among the *King's Islands*: But, as it was towards the latter End of the dry Season, and all the Water dried up, we sailed to the Point of *Garrachina*, in hopes of finding fresh Water. The 21st, we anchored two Miles from the Point, and found the Tide very strong, coming out of the River *Sambo*. The 22d, we anchored at four Fathom within the Point; we found the Tide to ride nine Feet, and the Flood to set North North-east, and the Ebb South South-west: The Natives brought us some Refreshments; but, as they did not understand in the least the *Spanish* Tongue, I suppose they had no Commerce with the *Spaniards*: Meeting with no fresh Water here, we set Sail for *Porto-Pinas*, lying seven Leagues Southward by West hence, at 7° North Latitude. It derived its Name from the vast Numbers of Pine-trees growing there. The Country rises, from the Sea Side, by a gentle Ascent, to a considerable Height, and is pretty woody near the Shore: At the Entrance of the Harbour are two small Rocks, which render the Passage into it narrow, and the Harbour but of a slender Compass; besides that, it lies exposed to the South-west Wind. This made us not go into the Harbour, but send our Boats to fetch some fresh Water, which they could not perform, by reason of the high Sea near the Shore; so we turned towards Point *Garrachina*, where we arrived the 29th. In our Way, we took a Vessel laden with Cocoa from *Guiaquil*: Finding ourselves here also disappointed in getting of fresh Water, we sailed the 30th for *Tobago*, with a South South-west Wind, being now in all nine Ships. *April* 1. we anchored at the Isle of *Pachogue*, and the 3d at *Perico*: Our Men took a Canoe, with four *Indians*, and a Mulatto; who, being found to have been in the same Fireship that was sent out to burn our Ship, was hanged immediately. Whilst we were employed in filling of Water, and cutting of Wood for Fuel, we sent four Canoes to the Continent, to get some Sugar in the adjacent Sugar-works, to make our Cocoa up into Chocolate; but especially to get some Coppers, which we much wanted to boil our Victuals in, since our Number was so considerably increased: They brought us three Coppers. In the mean while, Captain *Davis* sent his Bark to the Isle of *Otoque*, seated in the Bay of *Panama*, but uninhabited, except by a few Negroe Slaves, who bred up some Fowls and Hogs there. Here our Men met with a Messenger sent to *Panama*, with an Account that the *Lima* Fleet was sailed: Most of the Letters had been thrown into the Sea; yet, out of the remaining Part, we understood that the Fleet was coming under a Convoy, composed of all the Ships of Strength that they had been able to bring together from *Peru*. Being informed that the *King's* Ships always came that Way where we now lay, we sailed the 10th from *Tobago* to the *King's Isles*, and the 11th anchored at the Place, where we careened. Here we met with Captain *Harris*, who had brought along with him some Men (we had heard the *Indians* mention before) from the River *St. Maria*, but they were not near so many as they reported. The 19th, 250 Men were sent in Canoes to the River *Cheapo*, to surprize the Town of the same Name. The 21st, we followed, and arrived the 22d at the Isle of *Chepelia*, a pleasant Island, seated in the Bay of *Panama*, seven Leagues from the City of that Name, and one League from the Continent, being about two Miles long, and as many broad, low on the North Side, but rising by an easy Ascent to the South. The Soil is very good, producing in the low Grounds Store of delicious Fruits, such as Plantains, Sapadillos, Avogato-pears, Mammes, Mammee-Sapotas, Star-apples, &c. is a good Anchor-

ing-place, where is also a very good Spring of fresh Water near the Sea-side. This *Isle* lies directly opposite to the River *Cheapo*. The *Sapadillo*-tree is altogether like a Pear-tree, and the Fruit like a *Bargamot*-pear, only it is something longer: When it is first gathered, it is hard, and the Juice clammy; but, a few Days after, becomes juicy and sweet; it has two or three black Kernels, like a *Pom-pion*-seed. The *Avogato* Pear-tree is as high, and higher, than our Pear-trees, with a black, but smooth Bark, large oval Leaves; the Fruit of the *Bigness* of a large Lemon, of a green Colour at first, but yellow when ripe. The Pulp is yellowish, and as soft as butter; and, after they have been gathered three or four Days, the Rind will come off with Ease. The Stone is as big as a good *Horse-plum*. As this Fruit is insipid, so it is commonly eaten with Sugar and Lime-juice, being looked upon by the *Spaniards* as a great Provocative, who have therefore planted them in most Places of the North Sea, where they inhabit. The *Mammee*-*Sapota* is neither so big, nor so tall, as the *Mammee* at *Tobago*; nor is the Fruit either so large, or so round. The Pulp is quite red, with a rough, flat, longish Stone, and the Rind smooth. It is a pleasant and wholesome Fruit. There are also some wild *Mammee*-trees, which grow very tall and strait, and are consequently used for Mats; but the Fruit is not esteemed. The Star somewhat resembles our Quince-tree, but much larger, bearing Abundance of oval broad Leaves. The Fruit is of the *Bigness* of a large Apple. It is reckoned a very good Fruit; but I never tasted it.

37. The River of *Cheapo* has its Rise in the Mountains on the North Side, being inclosed afterwards between them and the Mountains on the South Side. It turns to the West, and at last, forcing its Way to the South-west, makes a kind of a Semicircle, and afterwards runs gently to the Sea, where it discharges itself seven Leagues from *Panama*. It is very deep, and a quarter of a Mile broad; but, by reason of the Sands that choke up its Entrance, is navigable only by Barks. About six Leagues from the Sea-side stands the City of *Cheapo*, on the Left Bank of the River, in a champagne Country, affording a very pleasant View, by reason of divers adjacent Hills, covered with Woods, tho' the greatest Part is good Pasture-ground; but the South Side of the River is all Woodland for many Leagues. The 250 Men before-mentioned, sent to this Place, returned the 24th, having taken the Town without the least Opposition; but found nothing worth mentioning there. In the Way thither, they took a Canoe with armed Men, sent to watch our Motions; but the Men escaped for the most part. The 25th being joined by Captain *Harris*, we sailed the 26th, and arrived at *Tobago* the 28th; and finding ourselves now 1000 strong, it was consulted, whether we should make an Attempt upon *Panama*; but being informed by our Prisoners, that they had received a considerable Reinforcement from *Porto-Bello*, that Design was laid aside. May 4. we sailed again for the *King's* *Isles*, whereabouts we cruised till the 22d, when we sent two Canoes to the *Isle* of *Chepilio*, to get some Prisoners. They returned the 25th, with three Seamen of *Panama*, who informed us, that, having issued a strict Order there not to fetch any Plantains from the adjacent *Isles*, this had occasioned a great Scarcity; and that they expected every Day the Arrival of the Fleet from *Lima*. On the South Side of the *Isle* *Pacbeque* lie two or three small *Isles*, and betwixt them a Chanel not above seven Paces wide, and a Mile in Length. On the East Side of this Chanel we lay at Anchor with our whole Fleet, consisting of ten Sail, but only two Men of War, viz. Captain *Davis*, thirty-six Guns, 156 Men, and Captain *Swan*, sixteen Guns, 140 Men, the rest being provided only with Small-arms, making in all 296 Men; we had also one Fireship. Hitherto we had the Wind at North North-east, with fair Weather; but, the 28th, the rainy Season began. About eleven of the Clock, beginning to clear up, we discovered the *Spanish* Fleet three Leagues West North-west from the *Isle* of *Pacbeque*, standing to the East, we being then at Anchor a League South-east from the *Isle*, betwixt it and the Continent. About three in the Afternoon we sailed, bearing down right before the Wind upon the *Spaniards*, who kept close on a Wind to come up with us; but, Night approaching, we exchanged only a few Shot. As soon as it began to be dark, the *Spanish* Admiral put out a Light at his Top, as a Sig-

nal for the Fleet to come to an Anchor. In half an Hour after, it was taken down again; but appeared soon after as before, which we supposing to be in the Admiral's Top, kept under Sail, being to the Windward; but found ourselves deceived in our Expectation, by a Stratagem contrived by the *Spaniards*, who, having put this second Light on the Topmast-head of one of their Barks, sent her to the Leeward; so that, in the Morning, we found they had got the Weather-gage of us. They came up with full Sail, so we were forced to make a running Fight of it all the next Day, almost quite round the Bay of *Panama*; for we came to anchor against the *Isle* of *Pacbeque*. Captain *Townley*, being hard pressed by the *Spaniards*, was forced to make a bold Run through the before-mentioned Chanel betwixt *Pacbeque* and the three adjacent small *Isles*; and Captain *Harris* was forced away from us during the Fight. Thus our long-projected Design vanished into Smoke. The *Spanish* Fleet, according to the Report of some Prisoners taken afterwards by Captain *Wright*, consisted of fourteen Sail, besides *Periagoges*, or Boats of twelve or fourteen Oars apiece, among which were eight Ships of good Force; viz. from eight to forty-eight Guns. They were computed to have 3000 Men aboard the whole Fleet, and two Fireships. The 30th in the Morning, we saw the *Spanish* Fleet three Leagues to the Leeward of us at Anchor, and, at ten of the Clock, with an easy Gale from the South, making the best of their Way to *Panama*. We do not know their Loss. We had but one Man killed, Captain *Gronet*, who was not in the Fight, laid the Fault thereof on his Men. He was ordered to leave us, in a Consultation held for that Purpose, where it was also resolved to sail for the *Isles* of *Quibo*, or *Cobaya*, in quest of Captain *Harris*.

38. We sailed June 1. 1685, with a South South-west Wind, passing betwixt the Point *Garachina* and the *King's* *Isles*. The 5th, we passed in Sight of the *Isle* *Coucebo*, a small, low, round, woody *Isle*, four Leagues South South-west from *Pacbeque*, uninhabited, and the last of the *Isles* in the Bay of *Panama*. We sailed forward on the North Side of the Bay, (the Way all Ships from *Panama* must pass) and came, the 10th, in Sight of the *Moro de Porcos*, an high round Hill on the Coast of *Lavelia*. This Side of the Bay of *Panama* runs out West to the *Isles* of *Quibo*. On these Coasts are many Rivers and Creeks; but not near so large as those on the South Side of the said Bay. Near the Sea-side this Coast is partly hilly, partly low Grounds, with very thick Woods; but, in the Heart of the Country, they have fruitful Plains for Cattle. Some of the Rivers on this Side afford also Gold; but not in such a Quantity as those on the other Side. There is scarce any Settlement along this Coast, except what is along the Rivers, that lead to *Lavelia* and *Nata*, these being the only Places I know of betwixt *Panama* and *Puebla Nova*. From *Panama* is good travelling all over *Mexico* through the Savannas or Plains; but, towards *Peru*, there is no Passage beyond the River *Cheapo*, by reason of the thick Woods, and many Rivers. In our Voyage to *Quibo*, the Wind being constantly at South South-west and South-west, we met with very bad Weather; so that we did not reach these *Isles*, till June 15. where we met with Captain *Harris*. The *Isle* of *Quibo* or *Cobaya*, at 7° 14' North Latitude, is near seven Leagues long, and four broad, being all low Land, except at the North-east End, on which Side, as also to the East, there is excellent good Water. It abounds in Trees of all sorts; in Deer and black Monkeys, the Flesh of which is reckoned very wholesome and good. It has also some Guanoes and Snakes. From the South-east End of this *Isle* runs out a Sand-bank half a Mile into the Sea; and a League to the North Side of this, to the East, is a Rock a Mile from the Shore, which, at the last Quarter Ebb, is seen above Water. For the rest, Ships may come to an Anchor at any other Place a quarter of a Mile from the Shore, at six, eight, ten and twelve Fathom, clean Sand and Ouse. Besides this, there are several *Isles* lying on the South-west Side; some to the North and North-east. The *Isle* of *Quicarra* is pretty large, lying to the South-west of *Quibo*; and, to the North of it, is a small *Isle* called *Ransberia*, which produces great Plenty of the *Palma*-*Maria*-trees. They are very fruit-bodied, tough, and of a very good Length, and consequently fit

for Masts: The Grain of the Wood runs twisted gradually. They have no Resemblance to the Palm-tree. To the North-east of *Rancheria* lie the little Islands of *Canales* and *Cantarras*, with their Channels betwixt them, where there is good Anchorage. They have Plenty of good Water and Trees; and they appear at a Distance to be Part of the Continent: But the Isle of *Quibo* being the longest, and most considerable of them all, they are generally comprehended under the Name of the Isles of *Quibo*.

39. June 6. it being agreed, that, since we had missed at Sea, we should try our Fortune by Land, the City of *Leon* was pitched upon, (on the Coast of *Mexico*) as being nearest to us; but, wanting Canoes to land our Men, we cut down Trees, to make as many as we had Occasion for. In the mean time 150 Men were sent to make themselves Masters of *Puebla Nova*, (a Town on the Continent near these Isles) in hopes of getting some Provisions there. They took the Town with much Difficulty, and returned the 26th; but met with nothing there, except an empty Basket. July 5. Captain *Knights* came to us, having been farther to the West, where meeting with no Purchase, he sailed to the South as far as the Bay of *Guasquil*, where he took two Bark-logs with Wine, Oil, Brandy, Sugar, Soap, &c. The Matter declared, that the Merchants-ships, designed to have been sent away by the Spanish Fleet to *Panama*, did stay behind at *Peyta*, till further Orders; and that, had he had more Strength, they might easily have been taken. In a Month's time, our Canoes being got ready, Captain *Harris*, with his Men, went on board Captain *Davis* and Captain *Swan* (his Ship being rotten); and, July 20. we sailed from *Quibo* towards *Rio Leja*, the next Port to the City of *Leon*, being now 640 Men, eight Sail of Ships, three Tenders, and a Fireship, the Wind at South South-west. Coasting along, we passed by the Gulph of *Nicevas*, that of *Dulce*, and the Isle of *Canes*, the Land low, covered with Wood, and almost destitute of Inhabitants. We had variable Winds; but most South-west and West South-west, the Land-winds at North North-east. We were much pestered with Tornadoes. August 8. at 11° 20' North Latitude, we discovered the *Volcano Vejo*, or *Old Vulcano*, (the Sea-mark of *Rio Leja*) bearing North-east by North; and no sooner had we brought the said Mountain to bear North-east, but we made Provision for landing the next Day. The 9th. we sent 520 of our Men in thirty-one Canoes towards the Harbour of *Rio Leja*. The Weather was fair, and the Wind favourable, till two in the Afternoon, when a Tempest, mixed with Thunder and Lightning, had almost buried us in the Sea; but, after half an Hour, it began to abate, and so did the Agitation of the Sea, it being observable, in those hot Countries, that the Waves soon rise and fall. At seven of the Clock at Night it was calm; but, finding we could not be ready to land before Day, (being five Leagues from Shore) we staid thereabouts till next Evening, for fear of being discovered; but, about three of the Clock, another Tornado had like to have put an End to our Enterprize. However, as the same did not last long, we entered the Creek lying on the South-east Side of the Harbour, leading to *Leon*, in the Night; but durst not go farther till Day-break, when we rowed deeper into the Creek, which is very narrow, and the Land on both Sides marshy near the Banks, and full of Mangrove-trees; so that there is no passing through them. Beyond the Mangrove-trees, upon the firm Ground, they cast up a final Intrenchment. We rowed as fast as we could, and landed 470 Men, leaving the rest (of which Number I was one) to guard the Canoes. The City of *Leon* stands twenty Miles in the Country, in a sandy Plain, near a peaked burning Mountain, thence called the *Vulcano of Leon*, the Way to it being through a champagne Country, covered with long Grass. Betwixt the Landing-place and the City were several Sugar-works; and, about Mid-way a delicious fordable River, being the only thing they met with in their Way. Two Miles on this Side the City is an *Indian* Town, where a pleasant sandy Road leads you to the City, the Houses whereof are Stone, and large, with Gardens about them; but low, and covered with Pantle. It has three Churches, and a Cathedral. Its Situation is in a sandy Plain, with Savannas all round about it, which drink up the Rain, and afford a free Passage to the Breezes from

all Sides. This makes it both healthful and pleasant, tho' it is not a Place of great Commerce, all their Substance being in Cattle and Sugar-works.

40. Our Men marched at eight of the Clock, Captain *Townley* leading the Van, at the Head of eighty of the bravest Men. Captain *Swan* followed him with 100 more; and Captain *Davis* brought up the Rear with 170, in Conjunction with Captain *Knights*. Captain *Townley*, being advanced two Miles before the rest, and having forced seventy Horse to a Retreat at four Miles on this Side of the City, marched forward, and, at three of the Clock in the Afternoon, with his eighty Men only, entered the Town without Resistance; but met with some Opposition from five hundred Foot and two hundred Horse, first in a broad Street, and afterwards in the great Market-place; but the Foot, seeing the Horse take to their Heels, also retreated, leaving the Town to our People's Mercy. Captain *Swan* came not into the Town till four o'Clock; *Davis* about five; and *Knights*, with the Remainder, not till six. The Spaniards killed one of our Men, that straggled behind, being very old, and refusing to accept of Quarter, and took one *Smith* Prisoner. Next Day, the Governor sent Word he would ransom the Town. We demanded 30,000 Pieces of Eight, and Provisions for 1000 Men for four Months; which he not relishing, we set the City on Fire the 14th, and marched towards our Canoes the next Morning. *Smith* was exchanged for a Gentlewoman. We released another Gentleman, upon his Parole to deliver to us 150 Oxen for his Ransom at *Rio Leja*, the Place we intended to attack next. The 16th in the Afternoon, we came back in our Canoes to the Harbour of *Rio Leja*, where our Ships were come to an Anchor by that time. The Creek, that leads from *Rio Leja*, extends from the North-west Part of the Harbour's Mouth to the North, about two Leagues from the Isle in the Harbour's Mouth, to the Town. The first two-third Part are broad; but afterwards closes in a narrow deep Channel, lined on both Sides with many Cocoa-trees. A Mile from the Entrance of the Creek, it winds to the West. Here it was, that the Spaniards cast up an Intrenchment, fronting the Entrance of the Creek, defended by 100 Soldiers, and twenty Guards. Below it a Boom of Trees was made across the Creek; so that they might have kept off 1000 Men, had they not wanted Courage to keep their Post; but, at the Firing of two of our Guns, they quitted it, leaving us at Liberty to cut down the Boom. This done, we landed, and marched to the Town of *Rio Leja*, a fine Borough, seated a Mile thence, upon a small River, in a Plain. It has three Churches, and an Hospital, with an handsome Garden to it, the Place being seated in an unwholesome Air, among the Fens and Marshes, which send forth a noisome Scent. We took the Town without the least Opposition. The Country about it has many Sugar-works, and Inclosures for Cattle; and great Quantities of Pitch, Tar and Cordage are made by the Country-people. It produces also Melons, Pine-apples, Guavas, and Prickle-pears.

41. The Shrub, that bears the Guava-fruit, has long and small Boughs, a white and smooth Bark, and Leaves like the Hassle. The Fruit resembles a Pear, with a thin Rind, and many hard Seeds. It may be eaten while green, a thing seldom observed in Fruits either in the *East* or *West Indies*. It is yellow, soft, and well-tasted. After it is ripe, it may be baked like Pears, and will coddle like Apples. There are different Sorts, distinguished by their Shape, Taste, and Colour; some being red, others yellow, in the Inside. Before it is ripe, it is astringent; but afterwards loosening. The Prickle-pear grows upon a Shrub five Feet high, in many Places in the *West Indies*. It thrives best in sandy sandy Grounds, near the Sea-shore. Each Branch of the Shrub has two or three round Leaves, of the Breadth of a Man's Hand, not unlike House-leek, edged with Prickles of an Inch long. At the Extremity of the Leaf grows the Fruit, of the Bigness of a large Plum, small towards the Leaf, and thicker to the End, where it opens like a Medlar. The Fruit has also small Prickles, is green at first, but turns red by degrees. The Pulp is of the same Colour with the Substance of a thick Syrup, with small black Seeds. Its Taste is pleasant and cooling. I have often observed, that, if you eat twenty or more of them at a time, they will colour the Urine as red as Blood; but without any ill Consequence.

We found nothing considerable in the Town, except 500 Packs of Flour, and some Pitch, Tar, and Cordage. We received also the 150 Oxen promised by the Gentleman we released at Leon, which, together with the Sugar, and some other Cattle we found in the Country, was extremely welcome to us. We staid here from the 17th to the 24th. The 25th, Captain Davis and Captain Swan parted, the first having a mind to return to the Coast of Peru, the other intending to go farther to the West. As I had a Curiosity to be better acquainted with the Northern Parts of the Continent of Mexico, I left Captain Davis, and went aboard Captain Swan. Captain Townley, with his two Barks, joined us; but Captain Harris and Captain Knight followed Captain Davis. The 27th, Captain Davis, with his Ship, went out of the Harbour; but we staid some time behind, to provide ourselves with Water and Fuel.

42. By this time our Men began to be much afflicted with Fevers, which we attributed to the Remains of a contagious Distemper, that lately reigned at Rio Leja; for Captain Davis's Men underwent the same Fate. September 3. we sailed again, steering to the West. We had bad Weather all along the Coast, with violent Tornadoes, Thunder, and Lightning. The Tornadoes blew from the North-west. The tempestuous Weather kept us out at Sea; so that we saw no Land till the 14th, at 12° 51' North Latitude. We came in Sight of the Vulcano or burning Mountain of Guatimala. It appears with a double Peak, like two Sugar-loaves, betwixt which sometimes break out the Fire and Smoke, especially before bad Weather. The City of Guatimala is seated near the Foot of this high Mountain, eight Leagues from the South Sea, and forty or fifty Leagues from the Gulph of Motique in the Bay of Honduras in the North Seas. It is reputed a rich City, the Country about it abounding in several Commodities peculiar to it, and transported thence into Europe, especially the four noted Dyes, Indico, Otta or Anatta, Silver, and Cochineal. The Land near the Vulcano of Guatimala is low by the Sea-side; but, by degrees, becomes higher and higher for about ten Leagues from the Shore. We saw abundance of Drift-wood and Pumice-stones floating in the Sea. These last were thrown out by the Mountain, and washed by the Rains into the Sea. The 24th, at 14° 30' North Latitude, the Weather being settled, Captain Townley went ashore with 106 Men to the West, in hopes to find a Landing-place, and some Refreshments for our sick Men. We lay by till the 26th, when, coasting along to the West, with a North-west Wind, we saw a Track of high Land, beginning at the East, and running for ten Leagues within the Land to the West, where it links by an easy Descent. On this Side of it, near to the Sea, we saw rich Pasture-plains, mixed with pleasant Groves. The Country near the Seashore was defended by sandy Hills; but the boisterous Waves would not let our Men land with their Canoes. We were forced to coast still for eight or nine Leagues farther, but Captain Townley, seeing no Prospect of landing, returned aboard with his Men October 2. But, being resolved to try his Fortune again, he forced his Canoes ashore in a sandy Bay, where he landed with the Loss of one Man, and most of the Powder spoiled with the salt Water. When they were got ashore, they found the Country full of Tortoises, and unfordable Rivulets; so they were forced to return to their Canoes. They were charged by 200 Spaniards and Indians; but these they soon repulsed, and forced them to take the Way of Teguantapeque, the same Town that Captain Townley went to look for, but could not get Sight of. Immediately after his Return, we sailed again, with a brisk North North-east Wind, still coasting to the West, within two Miles of the Shore. At six Miles from the Land we found nineteen Fathom, and, at eight Miles, twenty-one Fathom, coarse Sand. We could not discover either Creek or Bay for twenty Leagues farther, till we came to the Isle of Tangola, where there is safe Anchorage. It is high, but small, yet well furnished with Wood and Water, about a League from the Continent, which has a vast Pasture-grounds near the Sea, but high Woodland inland in the Country. We sailed a League farther into the Port of Guatulo, one of the best in the Kingdom of Mexico, at 15° 30' North Latitude. On the East Side of the Entrance of the Harbour, about a Mile from it, is a

NUMB. 7.

small Isle adjacent to the Shore, and, on the West Side of the said Entrance, a great hollow Rock, open at the Top, through which the Waves of the Sea force their Passage, as if through a Pipe, with a great Noise, and to a great Height, even in the calmest Weather; so that it affords a good Mark to Seamen bound for this Port. The whole Depth of the Harbour is about three Miles, and its Breadth one Mile. It runs in North-west. The West Side is the more secure, because the rest is exposed to the South-west Winds, which are frequently on this Coast.

43. Here Captain Townley landed again with some Men; and, marching to the East, came to the River Capalita, which has a very swift Current; but is deep at its Entrance. A League from Guatulo, two of our Men swam over the River, where they seized upon three Indians, that were placed there to keep Watch. As they could not speak Spanish, so they made Signs, that they could conduct them to a Village; whereupon 140 Men were sent, under the Conduct of Captain Townley, (myself being one) who returned the 8th, having seen, after fourteen Miles March, a small Indian Village, where they found nothing but some Vineloes drying in the Sun. The Vinello grows on a small kind of Vine, creeping up about the Trees. This, at first, bears a yellow Flower, which produces a Cod of the Bigness of the Stem of a Tobacco-leaf, and about four or five Inches long. This Cod is green at first, but, when ripe, becomes yellow: The Seeds are black. After they are gathered, they lay them in the Sun, which makes them soft, and of a Chestnut-colour. They squeeze it flat afterwards with their Fingers. The Spaniards, who buy this Commodity very cheap of the Indians, flake them afterwards with Oil. I never heard of any of the Vineloes, except hereabouts, about Cacocha in the Bay of Campeachy, and Beccotora. Near this last Place, I gathered them myself, and endeavoured to cure them, but could not succeed, as I know other Persons, who have lived many Years in these Parts, and have attempted the same with no better Success, I am apt to believe the Indians have some peculiar way to cure them, that hitherto is unknown to us. The 10th, we sent four Canoes before to the West, to expect our coming at Port Angels; and, in the mean while, endeavoured to take some Prisoners. The 12th, we sailed with our Ships from Guatulo, the Land lying along to the West, inclining to the South, for twenty or thirty Leagues, the Sea-winds at West South-west and South-west, the Land-winds at North. We coasted along as near as we could to the Shore, to take the Benefit of the Land-wind, the Sea-wind being against us, besides that we were kept back by the Current setting to the East; so that we were forced to come to an Anchor at Sacrificio, an Isle half a Mile long, a League to the West of Guatulo, and half a Mile from the Continent. To the West of the Isle appears a good Bay, but it is rocky. The best Anchorage is betwixt the Isle and the Continent, at five or six Fathom Water, tho' the Tide is pretty strong here, the Sea rising about six Feet. The 13th, we continued coasting to the West near the Shore, which was high and woody, with divers sandy Bays; but the Waves very boisterous near the Shore. Two of our Canoes returned the 22d, and told us, they had lost Company of the other two; that they could not find Port Angels; and had endeavoured, in vain, to land at a Place, where they saw great Store of Cattle, being then just a-breach Port Angels, though those in the Canoes did not know it. We went in, and came to an Anchor there. It is a broad open Bay, having two or three Rocks at the West End. For the rest, there is good Riding at thirteen, twenty and thirty Fathom Water; but Ships lie exposed to all Winds, the Land-winds excepted, till they come at twelve or thirteen Fathom Water, where they are sheltered against the Trade-winds, which are West South-west. The Flood rises about five Feet, runs to the North-east, and the Ebb at South-west. The Landing-place is close to the West Side, before the above-mentioned Rock; but, as the Waves run very high, there is but indifferent landing. It lies at 15° North Latitude, and is inclosed, on the Land-side, by high sandy Grounds, Part abounding with Woods, Part Plains, with very good Grass. The 23d, we landed 100 Men, who subsisted two or three Days upon salt Beef, and got Store of salt Maiz, Hogs, Cocks and Hens, in an adjacent Houle to the Plain; but

2 D

could

could carry but little aboard, by reason of the great Distance from the Sea-side. The 27th, we sailed in the Morning with the Land-wind; about Noon the Sea-wind blew; and, at Night, we anchored at sixteen Fathom Water, near a small rocky Isle, sixteen Leagues West from Port Angels, and half a Mile from the Continent. The 28th, we continued our Voyage with the Land-wind; the Sea-wind blew hard in the Afternoon, and, at Night, we met with the other two Canoes we had sent out from Guatulco; they had been as far as the Port of Acapulco; and, in their Return, took in fresh Water in spite of 150 Spaniards that would have opposed it. Thence they came into a Salt-water Lake, or Pond, on the Banks of which finding Abundance of dry Fish, they brought some aboard us. As we were just off this Lake, we sent twelve Men in a Canoe for more Fish. The Entrance of the Lake is closely hemm'd in with Rocks on both Sides, that the Passage betwixt them is not above Pistol-shot over, but within the Lake is a considerable Compass. The Spaniards, being alarmed already, now seeing our Canoes before the Lake, posted themselves behind the Rocks, and fired such a Volley of Shot upon our Canoe, at her entering into the Pond, that they wounded five of our Men: However, our People rowed forward into the Lagune, or Pond, out of Gun-shot, where they staid two Days and three Nights, not daring to attempt to re-pass the same Way they came: At last Captain Townley, who lay nearer to the Shore than we, hearing the firing of some Guns that Way, manned one of his Canoes, and, beating the Spaniards from the Rocks, opened them a free Passage; so they returned aboard October 31. This Lagune is in 16° 40 North Latitude.

44. November 2. we passed by the Rock of *Algotrofs*; the Land near it is high, woody, and mountainous in the Country; six Miles to the West of the said Rock, lie seven or eight white Cliffs to the South by West, whereof a large Shole runs out five Miles at Sea. Two Leagues to the West of these Cliffs is an handsome River, having a small Isle at its Entrance: The East Chanel is shallow and sandy, but that to the West will admit of Canoes. The 3d, we came to an Anchor opposite to this River, one Mile and an half to Shore, at fourteen Fathoms. The Spaniards having cast up an Intrenchment along the West Chanel, defended by 200 Soldiers, we landed our Men, and forced them thence with little Opposition: We found here a good Quantity of Salt, designed for the salting the Fish they take in the Lake; but we saw no Nets, Hooks, or Lines, nor any Bark, Canoe, or Boat. Marching three Leagues into the Country, we took a Mulatto Prisoner, who informed us, that lately there was a stout Ship come from Lima to Acapulco: Captain Townley standing in need of a better Ship than that which he possessed, it was agreed (though not without some Opposition from Captain Swan) to fetch the said Ship out of that Harbour. The 5th, we continued coasting to the West toward Acapulco: The 7th, twelve Leagues from the Shore we saw the high Land of Acapulco, very remarkable for a round Hill betwixt two other Hills; the Westermost being the largest and highest, with two Hillocks on the Top; but the Eastermost is higher and more peaked than the Middlemost. Acapulco is a Town and Harbour, at 17° North on the West Side of the Continent, belonging to the City of Mexico, being the only Place of Commerce on the West Coast, though, at the same time, there are only three Ships that come hither, viz. two that go constantly every Year betwixt this Port and Manilla in *Iuconia*, one of the *Philippine* Islands, and another once a Year to and from Lima. This last comes to Acapulco about *Christmas*, laden with Quicksilver, Cocoa, and Pieces of Eight, and stays there till the Manilla Ships arrive; from these she takes in her Cargo of Spices, Calicoes, Muslins, &c. for Peru, and so returns to Lima. This is but a moderate Vessel, but the two Ships from Manilla carry about 1000 Tons: These two so order their Voyage, as that one or other of them is always at Manilla: One of them sets Sail from Acapulco about the Beginning of April, and, after sixty Days, touches at Guam, one of the *Ladron* Isles, for Refreshments: After three Days Stay, she continues her Voyage to Manilla, where she commonly arrives in June. Soon after, the other Ship being ready to sail from Manilla with the *East India* Commodities, she

fleets her Course thence to thirty-six or forty Degrees North Latitude, before she can get the Wind to carry her into the Coast of America; first, she falls into the Shore of California; and then, coasting to the South, certainly meets a Wind to bring her to Acapulco. After she has made the Cape of St. Lucas, the South Point of California, she runs over to Cape Corientes at 20° North Latitude, whence the coasts to Sallagua; where, having put ashore the Passengers bound for the City of Mexico, she continues coasting along to Acapulco, which commonly happens about *Christmas*; and, upon her Return to Manilla, the other Ship undertakes her Voyage to Acapulco, a Port so large and convenient, as to be able to contain some Hundreds of Ships without Danger. Cross the Entrance of the Harbour is a low Isle, one Mile and a half long, and half a Mile broad, stretching from East to West. At each End is a deep Chanel for the Entrance of their Ships, and their coming out, provided they enter with the Sea-wind, and come out with the Land-wind, and these blow at stated Times of the Day or Night. The Chanel at the West End is narrow, but so deep, that there is no Anchorage. Through this the Ships come in from Manilla, but the Ships from Lima pass through the South-west Chanel. The Harbour runs in eight Miles to the North; then, closing up in a narrow Chanel, goes a Mile farther to the West. At the Entrance of this Chanel, on the North-west Side, just by the Sea-side, stands the Town of Acapulco, near which is a Platform with a good Number of Guns; and over-against the Town, on the East Side, stands a strong Castle, defended by no less than forty great Guns: Ships commonly ride within Reach of this Castle, at the Bottom of the Harbour. Captain Townley went with 140 Men, in twelve Canoes, to fetch out the Lima Ship; but, by Strefs of Weather, was forced into Port Marquis, a good Harbour, a League East of the Port of Acapulco: Here they staid all Day, and the next Night rowed *looffy* to Acapulco, where they found the Ship riding at Anchor 100 Yards from the Cattle and Platform; so that, finding it impossible to carry her off, he returned much dissatisfied. The 11th, we sailed farther to the West, with the Land-wind at North-east. As the Sea-winds are here at South-west, we sailed along a sandy Bay, twenty Leagues in Length, where there was good Anchorage two Miles from the Shore; but the Sea-waves fell with such Violence against it, that there is no safe Landing-place. Near the Sea-side the Grounds are low, and abound with Trees, especially with spreading Palm-trees, which are sometimes twenty or thirty Feet high, but no bigger than an ordinary Ash. The Country is intermixed with many small Hills, which are, for the most part, barren; but the Valleys very fertile. At the West End of this Bay, jets out into the Sea the Head of *Petaplan*, at 17° 20' North Latitude, being a round Point, that appears like an Isle at Sea. A little farther to the West, is a little Knot of round Hills: We entered betwixt these and the Point, where we anchored at the North-west Side of the Hill, at eleven Fathom Water. Here we sent 170 Men ashore; who, marching fourteen Miles into the Country, came to a wretched Indian Village, left by the Inhabitants; so that we met with nobody but a Mulatto Woman, with four small Children: Being brought aboard, she declared, that a Caravan of Mules, laden with Flour and other Goods, designed for Acapulco, had stopt their Journey on the Road to the West of this Village. So we sailed farther to the West the 12th, about two Leagues, to a Place called *Cbequetan*, a pretty good Harbour, having the Conveniency of a fresh-water River, and Abundance of Wood: We landed ninety-five Men the 9th, in six Canoes, (having the Mulatto Woman for their Guide) at *Estapa*, a League West of *Cbequetan*. Hence they were carried by their Guide through a pathless Wood, by a River-side, into a Plain, near which, in a Farm-house, they found the Caravan, consisting of sixty Mules, laden with Flour, Chocolate, Cheeses, and European-ware; all this they carried, except the earthen Vessels, with some Beef they had killed, and brought to the Canoes, and thence to our Ships. Captain Swan went afterwards ashore, and killed eighteen Cows more without the least Opposition. The Country is woody; but fertile, and watered with many Rivers and Rivulets.

45. The 21. we failed with the Land-wind, which is at North here, and the Sea-wind at West South-west, coasting along to the West. At first the Land appears with ragged Hills; but, farther to the West, with fruitful Valleys betwixt them. The 25th, we passed by an high Hill, divided into Peaks, at 18° 8' North Latitude: The *Spaniards* say, there stands a Town, called the *Cupan*, not far from it, but we could not find the Way to it. The 26th, 200 Men were sent to endeavour to find out the City of *Colima*, a rich Place; but, though they rowed twenty Leagues along the Shore, they could not meet with any Place to land in, and saw not the least Sign of any Inhabitants. At two Places they saw two Horsemen, and our Men followed them, but lost the Track in the Woods; so we returned the 28th on board; and, soon after, the *Volcano*, or burning Mountain, of *Colima*, very remarkable for its Height, at 18° 36' North Latitude, six Leagues from the Sea-side, appeared, with two high Points, from each of which issues always either Fire or Smoke. The Valley, in which it stands, bears the Name of the Mountain, as does the adjacent Town, the chief City of all the Country. If we may credit the *Spaniards*, it is a most delightful and fertile Valley, abounding in Cocons, Corn, and Plantains, being ten or twelve Leagues wide to the Sea, and stretching a great Way into the Country; but there is no Landing-place near it, occasioned by the Impetuosity of the Waters; for, about two Leagues from the East Side, is low woody Ground, and, at the End, is a deep River, which disembogues into the Sea; but, by reason of a Land-bank at the Mouth, there is no Entrance, even for Canoes. The 29th, 200 Men were sent again, to try whether they could find any Path or Track leading to the Town of *Sallagua*, seated, as the *Spaniards* report, at the West End of the Bay of the Valley of *Colima*; but, the Waves running so high, there was no landing, they returned aboard the 30th. December 1. we came in Sight of the Port of *Sallagua*, at 18° 52': It is a Bay, parted by a rocky Point about the Middle; so that it appears like two distinct Harbours, in either of which is safe anchoring at ten or twelve Fathom Water, tho' the West Harbour is the best, having, besides this, the Conveniency of a fresh-water Rivulet falling into the Sea. We saw a good Number of armed *Spaniards*, to whom we gave a Visit, the next Morning, with 200 of our best Men; but the Foot never stood one Charge, and the Horse soon followed them: In the Pursuit, our Men, lighting upon a broad Road, leading through a woody and rocky Country, followed it for four Leagues; but, finding not the least Foot-steps of any Inhabitants, they turned back, and in their Way took two straggling Mulattoes, who assured them, that the broad Road led to the City of *Orrab*, four long Days Journey from hence, and that these Men were sent from that City to secure the Ship from *Manilla*, that was to set Passengers ashore there. The *Spanish* Maps place the Town of *Sallagua* hereabouts, but we could see no Signs of it. December 6. we failed again, coasting to the West towards Cape *Corientes*, in hopes of meeting thereabouts with the Ship expected from the *Philippines*. The Sea-winds are here North-west, and the Land-wind at North; the Land indifferently high, sprinkled with many ragged Points, and woody. Here I was afflicted with the Dropsy, and so were many of our Men: This being a common Disease on this Coast, the Natives pretend to cure it with the Stone or Cod of an Alligator (of which they have four, viz. one near each Leg within the Flesh) beaten to Powder; but we had not the good Fortune to meet with any of these Creatures, though they are sometimes found hereabouts. Betwixt *Sallagua* and Cape *Corientes* are divers good Ports we did not touch at. As we approached the Cape, it appeared with many white Cliffs, and, deeper into the Country, with peaked Hills; to the West of these runs a Ridge of Mountains, beginning with an high steep Mountain at the East End, with three Peaks, resembling a Crown; whence the *Spaniards* called it *Coronada*, the Crown Land; but at the West End it terminates in an easy Descent. The 11th, we were in Sight of Cape *Corientes*, bearing North by West, and the *Coronada* to the North. This Cape is pretty high, very steep and rocky towards the Sea, but flat on the Top, and covered with

Trees; it is at 20° 28' North Latitude: I found its Longitude from *Teneriff* 23° 56', keeping thereby to the West, according to our Course; pursuant to which Computation it is, from the *Lizard* in *England*, 121° 41', and the Difference of Time eight Hours six Minutes. The Ship from the *Philippines* being obliged to make this Point in her Voyage homewards, we took our Stations with our four Sail, so as that we judged we could not well miss the Ship: But, as we wanted Provisions, fifty or sixty Men were sent in a Bark to the West of the Cape to get some: They returned the 17th without any Purchase, not being able to get about the Cape, the Wind being generally North-west and South-west on this Coast; however, they left four Canoes, manned with forty-six Men, behind, who intended to row to the West. The 18th, we failed to the Isles of *Chamelly*, eighteen Leagues to the East of Cape *Corientes*: They are five low, small, and woody Isles, surrounded with Rocks, and lying in Form of an Half-moon, within a Mile from that Shore, betwixt which, and these Isles, there is safe Anchorage. They are inhabited by Fishermen, Servants to some of the Inhabitants of the City of *Purification*, a considerable Place, fourteen Leagues up in the Country. The 20th, we entered on the South-east Side, and anchored betwixt the Isles and the Continent; we found here fresh Water, Wood, and Rock-fish in great Plenty. The 21st, sixty of our Men, under Captain *Townley*, were sent seven or eight Leagues to the West, to surprise an *Indian* Village.

46. The 24th, the four Canoes, left thereabouts by Captain *Townley's* Bark, returned to us near the Cape, having got beyond it by the Help of their Oars, and landed in the Valley of *Valderas*, or *Val d'Iris*, the Valley of *Flags*, lying at the Bottom of a deep Bay, included between Cape *Corientes* on the South-east, and the Point *Ponisque* on the North-west. The Breadth of the Valley is three Leagues; the sandy Bay is level to the Sea, and affords a good Landing-place. In the midst is a good fresh-water River, navigable with Boats; but, at the later End of the dry Season, viz. in *February*, *March*, and *April*, it becomes brackish. On the Land-side, this Valley is bounded by a green Hill, which, by its easy Descent into the Valley, affords a delightful Prospect; as do the wide-spread Pastures, stored with Cattle, the pleasant Groves of Guavas, Orange, and Lime-trees, which grow wild here in vast Numbers. In this delightful Valley we landed thirty-seven Men, who, advancing three Miles into the Country, were attacked by 150 *Spaniards*, Horse and Foot: By good Fortune there was an adjacent Wood, which afforded an happy Retreat to our Men, who from thence fired so furiously upon the *Spaniards*, that they killed their Leader, and seventeen Troopers, besides many wounded, with the Loss only of four Men, and two wounded: This made the Enemy retreat; however, had the Foot seconded the Horse, scarce one of our Men could have escaped. The 28th, Captain *Townley* returned aboard with forty Bushels of Maiz, which he had taken in an *Indian* Village to the East of Cape *Corientes*, five Leagues in the Country. We continued cruising off this Cape till the first of *January*, when we failed for the Valley of *Valderas*, to provide ourselves with some Beef: At Night we anchored at sixty Fathom Water, a Mile from the Shore. We continued here till the 7th, and landed 240 Men (50 whereof were constantly employed to watch the Motions of the *Spaniards*): We killed and salted as much Beef as would serve us two Months; and, had we not wanted Salt, we might have had much more. By this time our Hopes of meeting with the *Manilla* Ship being quite vanished, we concluded, that, whilst we had been employed in looking for Provision ashore, she had given us the Slip to the East; which proved true, according to the Account we had afterwards by several Prisoners. The Loss of so great and rich a Prize must chiefly be attributed to the Willfulness of Captain *Townley*, who would needs attempt the Taking of the *Lima* Ship in the Harbour of *Acapulco*, when, at the same time, we ought to have provided ourselves (as we might then have done) with Beef and Maiz for such an Enterprize, which whilst we were forced to seek, we lost this Ship; whereas, had we not wanted Necessaries, we might have gone even as far as Cape *Luca*, in *California*, where

where Sir Thomas Cavendish formerly took one of these *Manilla* Ships. Hitherto we had a double Design in View; first, the taking of the *Manilla* Ship; secondly, the Search after rich Towns and Mines near this Coast, not knowing that the Wealth hereabouts lies all in the inland Country; but now, finding ourselves quite deceived in our Hopes, we parted, Captain *Townley* going back to the East, and we, in Captain *Swan's* Ship, to the West.

47. *January* 7. we sailed from this Valley, the Land-wind being at North-west, and at Night passed by *Pontique*, the West Point of the Valley of *Valderas*, ten Leagues from Cape *Corientes*, at 20° 50' North Latitude. A League beyond it, to the West, lie two little Isles, called the *Pontiques*: Beyond those, the Shore runs ragged to the North for eighteen Leagues. The 14th, we came to anchor in a Chanel betwixt a small, white, rocky Isle and the Continent, at fourteen Fathom, at 21° 15'. The Isle is three Leagues from the Main; we anchored one League from it. From this Island the Land runs in North, making a sandy Bay: We anchored one League from the Continent, but there is no Landing. We found the Land-wind all along here at North-east, and the Sea-wind at North-west. The 20th, we anchored one League on the East Side of the Isles of *Chamely*, (different from the before-mentioned) being a Knot of six small Isles at 23° 11', a little to the South of the Tropic of *Cancer*, three Leagues from the Continent: One or two of them only have some sandy Creeks to the Sea-side, and produce a certain Fruit, called *Penguins*: These are of two Sorts, red and yellow; the last grows on a Stem, of the Thickness of a Man's Arm, a Foot from the Ground, with Leaves of half a Foot long, and one Inch broad, edged with Prickles: The Fruit grows just at the Top of the Stalk in Clusters; they are round, and of the Bigness of an Hen's Egg: The Rind is pretty thick, and the Pulp full of black Seeds, of a delightful Taste. The red *Penguin* is no bigger than an Onion, but of the Shape of a *Nine-pin*; it does not grow on a Stalk, but immediately out of the Ground, standing upright, sometimes sixty or seventy in a Cluster, being encompassed with prickly Leaves of one Foot and an half long, or two Feet long. Captain *Swan* went with 100 Men to the North, to find out the River *Cullacan*, supposed to lie at 24° North Latitude, in the Province of *Cullacan*, with a fair rich Town upon its Banks: But, though they had rowed above thirty Leagues, they could find no River, neither was there any safe Landing-place. Seven Leagues North North-west from the Isles of *Chamely* is a Lake, with a narrow Entrance, at 23° 30', called *Rio de Sal*: by the *Spaniards*, it having Water enough for Canoes to enter. Our Men landed on the West Side, and took some Maiz at an adjacent Farm-house, and, at another Landing, an *Indian*, who informed us, that five Leagues thence there was an *Indian* Town: So our Men marched towards it, and, coming near the Place, were encountered by a good Body of *Spaniards* and *Indians*; but these being beaten back after the first Charge, they entered the Town, where they found only two or three wounded *Indians*, who told them, that the Town was called *Maffatan*, and that five Leagues hence there were two rich Gold Mines. We staid here till the 2d of *February*, when eighty Men were sent, and landed in the River *Rofario*, about three Leagues from the Sea. They came to a pretty little Town, (of the same Name) where the Prisoners assured them, that the before-mentioned Mines were not above two Leagues from thence; but, as we had present Occasion for Provisions, we carried aboard ninety Bushels of Maiz, without searching after the Mines. The 3d, we anchored against the Mouth of the River *Rofario*, one League from the Shore, in seven Fathom, at 22° 15' North Latitude. But as this small Quantity of Provisions was not likely to do our Business for our intended Voyage, we landed, the 8th, forty Men, to seek the River *Oleta* (supposed to lie to the East of the River *Rofario*); but they returning without any Booty, or without being able to find it, we resolved to go on to the East, to the River of *St. Iago*, where we anchored the 14th, two Miles from the Shore, in seventeen Fathom Water, soft oozy Ground, three Leagues from the white high Rock of *Maxenteibo*, bearing North North-west, as the high Hill *Zelino* bore South-east of us.

48. The River of *St. Iago*, one of the most considerable on this Coast, lies in 22° 15'. It has ten Feet Water on the Bar at Low-water, but the Height it flows I am not able to tell: Its Breadth, at the Entrance, is about half a Mile; but it is broader within, three or four Rivers discharging themselves into it there: The Water is brackish; but, near the Mouth, on the sandy Shore, you may dig fresh Water at three or four Feet. Captain *Swan* sent out seventy Men to look for a Town, the Country having a fair Prospect. After they had rowed up and down two Days, they landed in a Corn-field, where, while they were busy in gathering the Maiz, they seized an *Indian*, who told them, that four Leagues farther there was a Town, called *Sta. Pecaque*. They were no sooner come on board, but Captain *Swan*, with 140 Men, went in eight Canoes five Leagues up the River, which was thereabouts not above a Pistol-shot wide, with high Banks; and, landing his Men, marched through fertile Plains and Woods for three or four Hours: At their Approach, the *Spaniards* quitted the Place; so we entered it without Opposition. The Town of *Sta. Pecaque* is seated on the Side of a Wood, in a spacious Plain. It is not very large, but neatly built, with a square Market-place in the Middle, as most *Spanish* Towns are, and has two Churches. There are Silver Mines five or six Leagues from this Town: The Ore whereof is carried from this Place by Mules to *Compostella*, where it is refined. *Compostella* is the Capital of this Part of *Mexico*, twenty-one Leagues distant from *Pecaque*, inhabited by about 70 white Families, and 5 or 600 *Matlots* and *Indians*. As our Men found plenty of Maiz, Sugar, Salt, and Salt-fish here, Captain *Swan* ordered one half of them to carry Provisions aboard, whilst the other took care of the Town: This they did by Turns, having got some Horses to ease them in their Labour. Thus they continued for two Days; but, the 19th, Captain *Swan*, being informed by a Prisoner, that 1000 armed Men had lately marched from *St. Iago* (a rich Town up the River, three Leagues thence) to attack our Men, ordered his People to get all the Horses they could, and to march all together, with what Provisions they could carry, to their Canoes; but they refusing to obey him, till all the Provisions could be carried on board, he was forced to let one half of them go on with 54 Horses; but they had not marched a Mile, before the *Spaniards*, lying in Ambush, attacked and killed them all upon the Spot: Captain *Swan* marched to their Relief, but came too late, being all slain and stript, though, at the same time, they never attempted to engage him, having, questionless, paid pretty dear for their Victory. Amongst the Slain was Mr. *Ringrose*, who published the Account of Captain *Storpe's* Adventures, and the History of the *Buccaners*. Captain *Swan* being returned aboard with the rest of his Men, with what Provisions they had got, it was resolved to sail to Cape *St. Lucas*, on *California*, in hopes of a Commerce with the *Indians* there, and, consequently, in the Lake of *California*. This Lake is properly a Chanel, or Part of the Sea, betwixt the Isle and the Continent; but either not much known by the *Spaniards*, or else concealed by them, for fear that the other *European* Nations should find out that Way to the Mines of *New Mexico*; for they vary considerably about it in their Charts; some make it an Isle, others join it to the Continent, but not one of them, that I know of, gives an Account of the Tides, the Depth, or Harbours, in or near this Lake; whereas their hydrographical Maps describe the Coasts towards *Asia*, on the West Side of the Isle from Cape *St. Lucas* to 40° North *New Mexico* (according to the Report of the *Spaniards*, and some *English* Prisoners there) lies near fifty Leagues North-west from *Old Mexico*, where the richest Mines of all this Country are supposed to be; though there are, questionless, some also in other Parts hereabouts, as well as on the Continent, near the Main-land of *California*; though, as the *Spaniards* have Mines enough to manage, they have not taken the Pains to discover them; and the vast Distance of this Country has, no doubt, been the Occasion, that no Discoveries have been made by others, or are like to be made, unless a nearer Way thither could be found, I mean by the North-west: I am not ignorant, that divers unsuccessful Attempts have been formed for the Discovery of a

North-west their search David's or Search out thence along the West: discovering Japan, Cor take the Ac mer to get have time on these Ca California. North-west Passage: The Reason whereof I attribute to their searching for the Passage at the Beginning through *Davis's* or *Hudson's* Bay; whereas, in my Opinion, the Search ought to have been begun in the South Seas, and thence along by *California*, and to a Passage made back into the West Seas. The same Rule might be observed in discovering the North-east Passage, viz. to winter about *Japan*, *Corea*, and the North-east Part of *China*, and so take the Advantage of the approaching Spring and Summer to go along the Coast of *Tartary*, whence you may have time enough to reach *Arcangel*, or some other Port, on these Coasts. From hence we sailed the 21st towards *California*, with a North-west and West North-west Wind. After we came past the Isles of *St. Mava*, we had strong Winds at North North-west, and at North, (the usual Trade-wind) and consequently lost Ground till *February 6*. so that the 7th we were forced to the East again, to the *Marias*, where we anchored the 7th, at the East End of the middlemost of these Isles, in eight Fathom, good clear Sand. This Isle we called *Prince George's Isle*. The Isles called *Marias* are three Islands, stretching North-west and South-east fourteen Leagues, of an indifferent Height, stony, barren, and uninhabited, at 12° 40' North Latitude, forty Leagues distant from Cape *St. Lucas* on *California*, bearing East South-east, and twenty Leagues from Cape *Corientes*, bearing upon the same Points of the Compass with Cape *St. Lucas*. They produce some Cedars, and, near the Sea-side, a green prickly Plant, with Leaves not unlike the Penguin-leaf, and a Root like that of the Sempervive, but much longer. The *Indians* of *California* have a great Part of their Subsistence from these Roots. We baked and eat some of them, and found them to taste like the *English* Burdock boiled. I had been long sick of the Dropsy, so I was laid in the Sand, and covered up to the Head for half an Hour. I sweated exceedingly, and, I believe, with good Effect; for I began to mend soon after. We remained here careening till the 26th; but as there is no fresh Water to be gotten here in the dry Season, we were forced to sail to the Valley of *Valderas*, where we anchored the 28th, near the Mouth of the before-mentioned River; which being also brackish at this time, we sailed three Leagues nearer to the Cape *Corientes*, and anchored by a small round Isle, half a Mile from the Shore, four Leagues to the North of the Cape. The Rivulet, where we filled our Water, is on the Continent, just opposite to the Isle. Being by this time sufficiently convinced of our Mistake concerning the Riches of this Coast, and the Probability of finding some Sea-ports worth our taking, founded upon an erroneous Opinion we had conceived, that the Commerce of this Country was carried on by Sea, whereas it is intirely managed by Land, by the Help of Mules, we were the sooner prevailed upon to try our Fortune in the *East Indies*.

49. Our Men, being encouraged with the Hopes of better Success for the future, and thro' the Persuasions of Captain *Swan*, sailed from Cape *Corientes* March 31. with the Land-wind at East North-east, till they got four Leagues at Sea, when a fresh Sea-wind at West North-west carried us by Night nine Leagues South-west from the Cape. Next Morning, the Sea-wind blowing briskly at North North-east, we were, at Noon, thirty Leagues from the Cape; for, so soon as you are clear of the Shore and Land-winds, the Sea Breezes are at East North-east, where it stood, till we found ourselves within forty Leagues of *Guam*. After the first Day, we advanced apace in our Voyage, having very fair Weather, and a fresh Trade-wind. At our first setting out, we directed our Course to 13° North Latitude, which is much the same Latitude with *Guam*. Then we steered West in that Latitude. In all this Voyage, we saw neither Fish nor Fowl, except once, being then, according to my Account, 5975 Miles West from Cape *Corientes* in the Kingdom of *Mexico*, when we saw a vast Number of Boobies, supposed to come from some Rocks not far off, and mentioned in some hydrographical Maps (but we did not see them). After we had sailed 1900 Miles, our Men began to murmur; but, being encouraged with fair Words by Captain *Swan*, we sailed forward; and, seeing some Clouds setting in the West, they were looked upon as the Forerunners of Land. May 20. at four o'Clock in the Afternoon, being in 12° 55' North Latitude, and steering

NUMB. VIII.

West, we discovered, to our great Joy, the Isle of *Guam*, at eight Leagues Distance; for, as our Bark passed over a rocky Shore, and no such Shore is in the *Spanish* Charts, we were not a little doubtful, whether the Land we saw was the Isle of *Guam*; for we had only three Days Provision left. Now the Isle of *Guam* bore North North-east eight Leagues. This gives 22' to my Latitude, and takes 9' from my meridian Distance; so that the Isle is at 13° 21' North Latitude, and the meridian Distance from *Corientes* 7302 Miles, or 125° 11'. *Guam* is one of the *Ladron* Isles, under the *Spanish* Jurisdiction. Its Length is twelve Leagues, and its Breadth four, lying North and South, defended by a small Fort, with six Guns, and a Garrison of thirty Soldiers, under a *Spanish* Governor, for the Convenience of the *Philippine* Ships, that touch here for Refreshments in their Voyage from *Apuco* to *Manilla*. The Soil is indifferently fruitful, producing Rice, Pine-apples, Water-melons, Must-melons, Oranges, Limes, Cocoa-nuts, and a certain Fruit called the Bread-fruit, growing on a Tree as big as our large Apple-trees, with dark Leaves. The Fruit is round, and grows on the Boughs, like Apples, of the Bigness of a good Penny-loaf. When ripe, it turns yellow, soft, and sweet; but the Natives take it green, and bake it in an Oven, till the Rind is black. This they scrape off, and eat the Inside, which is soft and white, like the Inside of new-baked Bread, having neither Seed nor Stone; but, if it is kept above twenty-four Hours, it is harsh. As this Fruit is in Season eight Months in the Year, the Natives feed upon no other sort of Bread during that time. They told us, that all the *Ladron* Isles had Plenty of it. I never heard of it in any other Place. May 31. we came to an Anchor on the West Side of this Isle, near the Middle of it, one Mile from the Shore, there being no anchoring on the East Side, by reason of the Trade-wind, which forces the Waves with great Violence against it on that Side. The Natives are strong-limbed, Copper-coloured, with long black Hair, small Eyes, high Noses, thick Lips, very white Teeth, and of a stern Countenance, tho' they were very affable to us. The Air is accounted exceeding wholesome, except in the wet Season betwixt *June* and *October*. They are extremely ingenious in building certain Boats or Procs, (used all over the *East Indies*) of about twenty six or twenty-eight Feet long, and about five or six Feet high from the Keel, which is made of the Trunk of a Tree, like the Canoes, and sharp at both Ends. They manage these Boats by a Paddle, instead of a Rudder, and a square Sail, with such incredible Swiftness, that they will sail twenty or twenty-four Miles an Hour. These Boats are absolutely flat on one Side, like a Wall; but the other is round, and full-bellied, like other Vessels. Along this Side, parallel with the Boat, at six or seven Feet Distance, is fastened a Log of light Wood of one Foot and an half wide, and sharp at each End, by two Bamboos of eight or ten Feet long, laid at each End of the Boat. This Log keeps the Boat from over-setting. The *Dutch* and *English* call it an Outlier or Outlager. These *Indians* inhabit in small Villages on the West Side near the Shore, and have certain Priests to instruct them in the Christian Religion. By means of some Presents sent to the Governor, and an obliging Letter from Captain *Swan*, we obtained good Store of Hogs, Cocoa-nuts, Rice, Wheat Biscuits, and other Refreshments, besides fifty Pounds of *Manilla* Tobacco; and, being informed by one of the Friars, that the Isle of *Mindanao*, one of the *Philippine* Islands, inhabited by Mahomedans, abounded with Provisions, we sailed *June 2*. with a strong East Wind, and arrived the 21st at the Isle of *St. John*, one of the *Philippine* Islands.

50. The *Philippines* are a Range of large Islands, reaching from 5° North Latitude to 19°, and to 16° Longitude. The chief of them is *Luconia*, where *Magellan* was killed with a poisoned Arrow, and is now intirely under the *Spanish* Subjection. Their capital City here is *Manilla*, a large Town and Sea-port, seated at the South-east End, opposite to the Isle of *Mindora*, a Place of great Strength, and vast Trade, because the two great Ships from *Acapulco* fetch thence vast Quantities of *India* Commodities, brought thither by the *Chinese* and *Portuguese*, and sometimes also by the *English* of *Fort St. George*, tho' by Stealth, the *Spanish* allowing no Commerce here to the *English* or *Dutch*,

2 E

for

for fear they should discover both their Weakness, and the Riches of those Isles, which abound in Gold. To the South of *Luconia* are twelve or fourteen other large Isles, (besides an infinite Number of lesser ones) inhabited by *Spaniards*; but the two Southernmost, viz. that of *St. John* and *Mindanao*, are the only ones not subject to the *Spanish* Jurisdiction. The Isle of *St. John* lies between 7° and 8° North Latitude, on the East Side of *Mindanao*, about four Leagues from it. Its Length, from North North-west to South South-east, is thirty-eight Leagues, and its Breadth about the Middle twenty-four Leagues. The Soil is very fat and fertile. The 22d, coming one League of the East Side of the Isle of *Mindanao*, with a South-east Wind, we steered along the East Side towards the North End, till we came into 7° 40', where we cast Anchor in a small Bay, a Mile from the Shore, in ten Fathom, rocky foul Ground. The Isle of *Mindanao* is, next to *Luconia*, the largest of all the *Philippine* Islands, its Length being sixty Leagues, and its Breadth forty or fifty, the South End at 5° North Latitude, and the North-west End reaching almost to 8° North Latitude. The Soil is generally fat; and the stony Hills produce many Sorts of Trees, most of which are not known among us. The Valleys are watered with fresh Brooks and Rivulets, and stored with divers sorts of ever-green Trees, with Rice, Water-melons, Plantains, Bananas, Guavaes, Nutmegs, Cloves, Betle-nuts, Durians, Jacks or Jackas, Cocoa-nuts, Oranges, &c. but, above all the rest, a sort of Trees, which grow wild in Groves several Miles long, called the Libby-tree by the Natives, which furnishes the Sago. The poor People feed upon it instead of Bread here for three or four Months in the Year. The Tree is not unlike the Cabbage-tree; the Bark and Wood hard, full of a white Pith, like that of the Elder-tree. They cut down the Tree, and, splitting it in the Middle, take out the Pith, which they stamp or beat well in a Mortar or Trough; which done, they put it in a Cloth, and, pouring Water upon it, stir it well, till the Water carries also the Substance with it through the Cloth into the Trough. This, after it is well-fertiled, they separate from the Water, (by drawing it off) and bake it into Cakes. The Sago, transported hence into other Parts of the *East Indies*, is dried into small Pieces, like Comfits, and used, with Milk of Almonds, as a good Remedy against Fluxes, being very affringent. The other Fruits, being either very well known, or sufficiently described by divers Authors, we will forbear to mention in this Place. We shall only add, that the Nutmegs here are extremely large and good; but they do not care to propagate them, for fear the *Dutch*, who monopolize the Trade of the *Spice* Islands, should be induced to give them a Visit. This Isle affords also both wild and tame Beasts, as Horses, Cows, Buffaloes, Goats, wild Hogs, Deer, Monkeys, Guanoes, Lizards, Snakes, Scorpions, (whose Sting is in their Tails) and those called Centepees, or Hundred-legs by the *English*, no bigger than a Goose-quill, but five Inches long: They sting fiercer than a Scorpion. Of tame Fowls they have only Ducks and Hens; but, of the wild Kind, Pigeons, Parrots, Parakeets, Turtle-doves, Bats as big as our Kites; and of small Birds an infinite Number. Their Hogs feed in prodigious Herds in the Woods, and have thick Knobs growing over their Eyes. In the Heart of the Country are Mountains, that afford considerable Quantities of Gold. Their chief Fish are Bonnetoes, Snooks, Cavalies, Bremes, Mullers, and Sea-tortoises. Neither do they want Harbours, Creeks, and Rivers. The Climate of *Mindanao* is not so excessive hot, especially near the Sea-side, considering its Situation near the Line, where the Sea-breezes cool the Air by Day, as the Land-winds do at Night. The Wind blows from the East from *October* to *May*, when it blows West to *October* again. These West Winds produce the wet Season, which is heaviest in *July* and *August*, and begins to remit, by degrees, in *September*, and ceases in *October*, when the East Wind brings fair Weather till *May*. Tho' the Inhabitants of the Isle of *Mindanao* are generally alike in Colour, Stature, and in their Religion, (being *Mohamedans*) yet they differ in their Language and Government. I will only mention such as are come to my Knowledge: The Hillanoons, Mountaineers, living in the Heart of the Isle, are Masters of the Gold-mines, and are rich also in Bees-wax, both which they ex-

change with the *Mindanyans* for foreign Commodities. The *Sologus*, inhabiting the North-west End of the Isle, traffick with those of *Manilla*, and some other adjacent Islands; but not with those of *Mindanao*. The *Alfores* were formerly under the same Government with the *Mindanyans*, but were separated from them, by falling to the Share of younger Children of the Sultan of *Mindanao*, who, of late, has laid Claim to them again. The *Mindanyans*, properly so called, are of low Stature, with small Limbs, little Heads, and strait Bodies; small Eyes, short Noes, wide Mouths, thin red Lips, and black Teeth, but sound. Their Hair is black and strait; their Complexion tawny, but something brighter than that of other *Indians*. They are ingenious and nimble, but much addicted to Idleness; civil and obliging to Strangers, but withal implacable, when once disoblighed. Their Clothings are, a Turban tied once round the Head with Cloth, the Ends fringed or laced, tied in a Knot, and hanging down. They wear also Breaches, and Frocks over them; but neither Stockings nor Shoes. The Women tie their black and long Hair together in a Knot, hanging down behind. They are smaller-featured than the Men, and have very little Feet. Their Garments are only a Piece of Cloth sewed together at both Ends, and a Frock reaching a little below the Waist. They covet the Acquaintance and Conversation of white Men, and will be very free with them, as far as they have Liberty. One peculiar Custom they have in the City of *Mindanao*, that, as soon as any Strangers arrive, the Men of *Mindanao* come aboard, to invite them to their Houses, where they are sure to inquire, whether any of them have a mind for a *Pagally* (or innocent Female Friend). The Strangers, in Civility, are obliged to accept the Offer made them of such a Friend, and to shew their Gratitude by a small Present, as the Continuance of the same Friendship must be purchased by some other Trifles; in Return for which, they have the Liberty to eat, drink and sleep in their Friends Houses (for their Money). They have no other Entertainment there *gratis*, except a little Tobacco and Betel, a mean Way of begging, tho' practised even among the richest of the Place. The Capital of this Isle bears the same Name with the Island, and is seated on the South Side, two Miles from the Sea, upon the Bank of a small River, in 7° 20' North Latitude. Their Houses are built upon Posts, from fourteen to twenty Feet high, having only one Floor, but many Rooms or Partitions. The Sultan's House rests upon 150 great Posts, and was much higher than the rest, with great broad Stairs leading up to it. In the Hall stood twenty Pieces of Iron Cannon, placed on Field Carriages. The General, and other great Men, have also some Guns in their Houses, the Floors whereof are generally well matted, they using no Chairs, but sitting cross-legged. Their ordinary Food here is Rice, Sago, and some small Fish; but the better Sort eat Buffaloes and Fowl, tho' a great deal of Rice with them. They use no Spoons, but take their Victuals up in their Fingers. They speak, in the City of *Mindanao*, both the *Mindanyan* and *Malayan* Languages. Their Prayers are in *Arabic*, and they retain also some *Turkish* Words. Some of the old People of both Sexes can speak *Spanish*, because the *Spaniards* had formerly divers Forts in this Island, and would, without Question, have brought it under Subjection, had not the Fear they were in of being attacked by the *Chinese* at *Manilla* obliged them to withdraw their Troops thence; which Opportunity the present Sultan's Father laid hold on to make himself Master of their Forts, and to expel them from the Isle. But, at this time, as they are most afraid of the *Dutch*, so they have often invited the *English* to make a Settlement there, believing them not so encroaching as either of the before-mentioned Nations. The chief Trades in this City are Goldsmiths, Blacksmiths, Carpenters, and Shipwrights; for they build good Ships both for Trade and War. Their chief Commodities, exported, are Gold, Bees-wax, and Tobacco. The two first they purchase from the Mountaineers; and the last grows all over the Isle in vast Plenty. These they exchange for Calicoes, Mullins, and *China* Silks. The *Mindanao* Tobacco is reckoned no-way inferior to that of *Manilla*; yet you may buy ten or twelve Pounds of it for a Real. The People of *Mindanao* are generally afflicted with a dry Scurf all over their Bodies, with violent Itchings, which

when scratched, raiseth the Skin into small white Flakes, like the Scales of small Fish, and, after it goes away, leaves broad white Spots on their Bodies. As it is not infectious, I did not perceive they made any great Account of it. They are also troubled with the Small-pox; but their ordinary Distempers are Fevers, Agues, Fluxes, violent Pains, and Gripings in the Guts. They have many Wives; but I never could learn their Marriage Ceremonies, except that they feast their Friends for the most Part of the Night. They are under the Government of a Sultan, who is poor enough; but so absolute, that he even commands every private Subject's Purse at Pleasure. He was between fifty and sixty Years old, and had twenty-nine Concubines, besides his Queen. When he goes abroad, he is carried on a Couch upon four Mens Shoulders, attended by a Guard of eight or ten Men. He has a Brother called *Raja Laut*, who is both chief Minister and General, a shrewd Man, of good Conversation, who both speaks and writes *Spanish* very well. In their Wars they make use of Swords, Lances, and Hand-crests, a Weapon much like a Bayonet, which the greatest to the meanest always wear about them. They never fight any pitched Battle in the Field, but make small wooden Forts, defended by Guns, wherein they encamp, and endeavour to surprize one another by small Parties; and they neither give nor take Quarter. They are *Mohammedans*, their *Sabbath* being on *Friday*, when the Sultan goes to his Mosque twice. In his Mosque they have a great Drum, with one Head only, called a *Gong*. This they use instead of a Bell, and is beat by a Man at twelve, three, six, and nine of the Clock, Day and Night. They never circumcise their Males till they are eleven or twelve Years old, which, as it is done with a great deal of Solemnity, private People keep their Children, till some Man of quality circumcises his, and so make a general Circumcision. This Office is performed by a *Mohammedan* Priest, who takes hold of the Foreskin of the *Penis* with two Stricks, and snips it off with a Pair of Scissors. We were present at the Circumcision of *Raja Laut's* Son, which was performed with extraordinary Magnificence. Their only Fast I ever heard of is their *Ramadan* time, which was then in *August*. They spend a whole Month in fasting every Day till Evening, when they employ an Hour in Prayers, and afterwards go to Supper. This Fast begins at one New-moon, and continues till they see the next. But it is time to return to our Voyage: We came to Anchor at the North-east Side of the Isle; but, understanding by some of the Natives, that the City of *Mindanao* was on the West Side, we steered to the South-east with a South-west Wind. Coming to the south-east End of the Isle, we sailed to the East of two small Isles, three Leagues distant from the Shore; and, July 4. anchored on the South-west Side of a deep Bog, four Leagues North-west from the two before-mentioned small Isles, in fifteen Fathom Water. The Land within the Bay, on the East Side, was high and woody, yet watered with several Rivers; but, on the West Side, bordering on the Sea, we saw large Plains, abounding in long Grass, and vast Store of Deer, of which we killed as many as we thought fit. We staid here till the 12th, when, steering our Course to the West, we arrived July 18. at the Entrance of the River *Mindanao*, in 6° 22' North Latitude, and 23° 12' Longitude West from the *Lizard* of *England*, where we anchored in fifteen Fathom Water, clear hard land, two Miles from the Shore. Soon after, *Raja Laut*, and one of the Sultan's Sons, came aboard us, and demanded *Spanish*, who we were; and, being told, that we were *English*, they asked, whether we were come to settle among them, of which they had had some Promise before, and were now in hopes to see it effected, and to serve them for Protection against the *Dutch*, whom they very much dreaded. Truly, had we considered the Matter, it would have been much for our Advantage to have done so, considering the commodious Situation of the Isle of *Mindanao* betwixt the *Spice* Islands (the three Isles of *Meangis* abounding in Spice and Cloves, being scarce twenty Leagues hence) and the *Philippines*; neither did we want any thing requisite for such a Settlement, being provided with all sorts of artificers, as Carpenters, Bricklayers, Shoemakers, Taylors, &c. as also with convenient Tools, Arms, Guns great and small, and Ammunition sufficient for such a Beginning:

And, notwithstanding the great Distance of this Island from *England*, we needed not have been without Hopes of seasonable Supplies thence, provided the Ships set out the latter End of *August*, and, passing round *Terra del Fuego*, stretch over towards *Mindanao*; or else they might coast down the *American* Shore as far as it was found requisite, and then direct their Course for this Isle, to avoid the *Dutch* Settlements, and to have the Advantage of the East Trade-wind after they were past *Terra del Fuego*; by which means this Voyage might be performed in six or seven Months, which, passing by the Cape of *Good Hope*, would at least require eight or nine Months. But to return to *Raja Laut* and his Nephew: They invited Captain *Swan* ashore, and promised to furnish him with what Provisions he wanted, desiring, that, in the mean time, we should secure our Ship in the River, for fear of the approaching West Winds; which Captain *Swan*, after some Deliberation, agreed to. The River, on which *Mindanao* stands, being but narrow, and having not above eleven Feet Water on the Bar at Spring-tide, we had much-ado to get our Ship a quarter of a Mile above the Mouth, where we moored the Head and Stern in an Hole; so that she always lay afloat. The City of *Mindanao* is a Mile in Length, but not very broad, stretching along the Right flank of the River as you enter it, tho' it has also some Houses on the opposite Side. The Inhabitants frequently came aboard us, and invited our Men to their Houses, where they were kindly entertained after their Manner with Tobacco and Betel; and such of them as had Money and Cloaths, did not want their Pagallies or Platonic Companions. Captain *Swan* was daily entertained at *Raja Laut's* House; and such of his Men as had no Money, had boiled Rice, Scraps of Fowl, and of Buffaloes Flesh given them. After their Fast was over, we were diverted with the Women-dancers, and such-like Sports, as are usual in this Country. But, notwithstanding all these outward Appearances of Friendship, we soon after began to discover *Raja Laut's* sinister Intentions; for, our Ship's Bottom being much eaten with the Worms, and we beginning in *November* to remove the sheathing Plank, to see whether the Worm had penetrated to the main Plank, in Presence of the said *Raja*, he could not forbear to discover his Thoughts, by shaking his Head, and telling us, that he never saw a Ship with two Bottoms before; besides, that he did not perform his Promise in providing us with Beef, pretending he could get none; and borrowed a considerable Sum of Gold of Captain *Swan*, which he never paid, notwithstanding he received considerable Presents of him before. These Disappointments began to induce the greatest Part of our Men to think of leaving this Place (such especially as had not much Money); Therefore, our Ship being provided with new Planks, instead of the worm-eaten, and the Bottom sheathed and tallowed by *December* 10. they began to urge Captain *Swan* to prepare for the Continuation of their Voyage. Captain *Swan* appointed them *January* 13. 1687. to be all aboard ready to sail; but, many of them being unwilling to part so soon as others, having dispersed themselves in the Country, (by the Encouragement of *Raja Laut*) and the Captain himself not being very ready to come on board, by reason of some Disorders amongst our Men, they deposed him from his Command; and, having chosen Captain *Teat* in his room, weighed the 13th in the Morning, and sailed *January* 13. from the River *Mindanao*, leaving Captain *Swan*, with about forty-four of his Men, (besides sixteen buried there) behind, in the Town or City of *Mindanao*. We coasted to the West, along the South Side of the Isle of *Mindanao*, and the next Day we passed in Sight of *Chambungo*, a Town of this Isle, thirty Leagues from the River of *Mindanao*, said to be a good Harbour. Six Leagues on this Side of the West of the Isle of *Mindanao*, we saw a great many small low Isles, and, three Leagues to the South of them, another Island, stretching twelve Leagues in Length, and South-west. Betwixt these Isles, and also between them and the great Isle, are good Channels; but a strong Tide. The 17th, we anchored on the East Side of these Isles, in eight Fathom, and to the West, upon the Shore of *Mindanao*, saw the Ruins of an old Stone Fort, formerly belonging to the *Spaniards*. The 27th, we got about the West Point of *Mindanao*, lying under the Shore to the North, with a fresh North-

North-east Gale; and continued the same Course, till we came a-breadth some of the other *Philippine* Isles to the North of us, and then steered towards them, yet so as to keep on the West Side. *February 3.* we anchored in a Bay on the West Side of an Island without a Name, in $9^{\circ} 15'$, on the West Side of the Isle of *Sebu*, in eighteen Fathom Water, only Ground. Its Length is eight or ten Leagues. In the Middle of this Bay, we saw a low, small, woody Isle, haunted by a sort of Bats, of the Bigness of a large Fowl, their Wings, when extended, being seven or eight Feet long: Every Night we saw them, in vast Swarms, take their Flight towards the great Isle, and return to the little one in the Morning.

51. We sailed hence *February 10.* with a North Wind, coasting along the West Side of the *Philippine* Isles. In our Passage by *Panga*, (a large Isle inhabited by the *Spaniards*) we saw many Fires, supposed to be lighted to give Notice of our Approach, it being rare to see a Ship on this Coast. The 18th, we came to an Anchor at the North-west End of the Isle of *Mindora*, in ten Fathom: It is a large Isle, the Middle of it lying in 13° Longitude. It stretches in Length forty Leagues North-west and South-east. A small Brook of Water runs into the Sea near the Place where we anchored, and we saw good Store of Hogs and Oxen, but they were so wild we could catch or kill none. Whilst we were here, a Canoe, with four *Indians*, came hither from *Manilla*, who told us, that the Harbour of *Manilla* was seldom without twenty or thirty Vessels, *Chinese*, *Portuguese*, and *Spaniards*; and that if we had a Mind to trade, (clandestinely) they would carry our Letters to certain Merchants there. The 21st, we sailed again, and, the 23d, came to the South-east End of the Isle of *Luconia*. We took two *Spanish* Barks from *Pagassanum*, a small Town on the North-east of this Isle, bound to *Manilla*: One of these had Goods aboard for the *Acapulco* Ship. The Isle of *Luconia* extends in Length 6 or 7 $^{\circ}$ of Longitude, and its Breadth, near the Middle, sixty Leagues. The South End is in $12^{\circ} 30'$, and the North End in 90° North Latitude. It is surrounded by many other small Isles, especially at the North End. *Mindora* is the Chief, and the nearest to it, and imparts its Name to a Channel that runs between it and the Isle of *Luconia*, called the Straights of *Mindora*. The Country is partly composed of large Pasture Plains, and partly of Mountains. These afford some Gold, as the Savannas or Plains are well stored with Buffaloes, Bulls, Horses, Sheep, Goats, and Hogs. The Inhabitants, who live in little Towns, are *Indians*, under the *Spanish* Jurisdiction, and instructed in the Romish Religion by *Spanish* Priests. *Manilla* is the chief, if not the only City of the Isle of *Luconia*, seated at the Foot of a Ridge of high Hills fronting the Harbour near the South-west Point of the Isle in 14° North Latitude. It is defended by a strong Wall; and the Houses are spacious, strong, and covered with Panicle; and the Streets large and regular, with a Market-place in the Middle. They have many fair Churches and Convents. The Harbour is very large. Besides the two great *Acapulco* Ships, they have abundance of small Vessels of their own. The *Chinese* have commonly thirty or forty Junks or stout Vessels here: And the *Portuguese* have also Liberty of Commerce in this Isle. Many *Chinese* Merchants reside constantly in this City. A League on this Side the City is a strong Fort to defend the Harbour, where the great Ships lay at Anchor. The greatest Part of this Relation I had from Mr. *Coppinger*, our Chirurgeon, who came hither from the Coast of *Coromandel*. The Time of the Year being too far spent for our Purpose, we resolved to sail for *Pulo Condore*, a Knot of small Isles on the Coast of *Cambodia*, and to return in *May*, in our Way thither, got Sight of the South End of the *Prajel* Shoals, of three little sandy Isles, or large Spots of Sands, standing just above the Water, a Mile from us. *March 13.* we came in Sight of *Pulo Condore*, or the Isle of *Condore*, and anchored the 14th on the North Side of the Isle, in ten Fathom, clean hard Sand, two Miles from the Shore. *Pulo Condore* is the chief of a Knot of Isles, and the only inhabited one of them, in $8^{\circ} 40'$ North Latitude, forty

Leagues South by East from the Mouth of the River of *Cambodia*. Two of these Isles are pretty high and large, the rest very small. That I speak of, is five Leagues long, lying East and West, and three Miles broad, but in some Places not a Mile. The other large Isle is three Miles long, stretching North and South: Betwixt those two, at the West End of the largest, is a convenient Harbour, the Entrance on the North Side, where these two Isles lie a Mile asunder. On the largest Isle grows a tall Tree, the Trunk three or four Feet Diameter, which the Inhabitants cut horizontally half through, a Foot from the Ground, and then cutting the upper Part alope inwardly down, till it meets with the transverse Cut, thence distils a Liquor into an Hollow made in the Semicircular Stump; which, when boiled, becomes good Tar; and, if boiled still more, perfect Pitch, and answers both Uses. Such a Tree affords two Quarts of Juice every Day for a Month together, then dries up, and recovers again. Here are also Mango-trees, the Fruit whereof they pickle, while they are green, with Salt, Vinegar, and a little Garlick. Grapes grow in this Isle on a flat Tree, of a Foot Diameter, in Clusters about the Body of the Tree, like the Cocons; they are both red and white, much like our Grapes, and of a pleasant Taste. This Isle also abounds in wild Nutmeg-trees. These are of the Bigness of our Walnut-trees, and the Fruit grows amongst the Boughs, like our Walnuts. It is smaller than the true Nutmeg, but grows like it, and is of the same Shape, but without Smell or Taste. Besides Hogs, Guanoes, and Lizards, these Isles have divers Sorts of Birds, as Parrots, Parraquetoes, Turtle-doves, Pigeons, and wild Cocks and Hens. The Sea affords Limpets, Mussels, and Tortoises. They have many fresh-water Brooks running into the Sea for ten Months in the Year, and lie very conveniently for Trade with *Japan*, *China*, *Manilla*, *Tunquin*, *Cochinchina*, &c. The Inhabitants of the Isle of *Condore* are originally *Cochinchinese* of a middle Stature, but well-shaped, much darker than the *Mindamans*; their Hair is straight and black, their Eyes of the same Colour, but small, and so are their Noses, yet pretty high; their Lips thin, with a little Mouth, and white Teeth. They are very civil, but poor, having no other Employment but to gather the Juice for Tar, and draw some Oil from the Fat of the Tortoise, which they transport to *Cochinchina*. They offer their Women to all Strangers for a very small Matter; a Custom used also at *Pegu*, *Siam*, *Cochinchina* and *Cambodia*; in the *East Indies*, and on the Coast of *Guinea*, in *Africa*, and also at *Tunquin*. They are Pagans, and worship chiefly the Elephant and Horse, besides other Images of Birds and Fish. But I observed none of human Shape. *March 15.* we looked for a Place to careen in; and, having met with one, we entered the same the 16th, where we staid till the 6th of *April*, when we went hence to the Place where we anchored before, on the North Side of the great Isle, to fill fresh Water, which being accomplished by the 21st, we sailed again from *Pulo Condore*, our Course West by South, with an East North-east Wind, for the Bay of *Siam*. The 23d, we came to the Isle of *Ubi*, forty Leagues West of the Isle of *Condore*, lying at the Entrance near the South-west Point of Land, that makes the Point of *Siam* called the Point of *Comodia*. Its Circumference is seven or eight Leagues, being higher Land than any of the *Condore* Isles. It has good Water on the North Side, where you may anchor; but the best Anchorage is on the East Side, against a small Bay. The 24th, we entered the Bay of *Siam*, which is very deep; and went in among the Isles, at the Bottom of the Bay. In one of these we found a small Village, inhabited by Fishermen, but no Fish: So we turned back; but, being becalmed, did not return to *Pulo Ubi* till *May 13.* where we cast Anchor on the East Side, and were detained by Tempests till the 20th. The 21st, we sailed thence back for *Pulo Condore*, where we came to an Anchor the 24th: Here five or six of our Men, going aboard a *Malayan* Vessel, were stabbed by the Ship's Crew. *June 4.* being provided with Fuel and fresh Water, we sailed from *Pulo Condore* with a South-west Wind, intending to make *Manilla*; but the Wind soon turning East and South-east, and continuing so for ten Days, we were forced to alter our Course, and steer for the little *Praja*, a small low Island enclosed with Rocks, in the

Way betwixt *Canton* (a *Chinese* Sea Port) and *Manilla*, in $20^{\circ} 4'$ North Latitude; but the East Winds continuing for five or six Days longer with great Violence, we saw ourselves obliged to alter our Resolution once more, and to obey the Wind, which brought us near the *Chinese* Shore the 5th of *June*, where we came to an Anchor on the North-east End of the Isle of *St. John*, lying on the Sea Coast of *Quanton* or *Canton*, in *China*, in $22^{\circ} 30'$ North Latitude. The only Grain we observed here was Rice, in great Plenty. Their tame Cattle were *China* Hogs, Buffaloes, Goats, and some Oxen. The Inhabitants were *Chinese*, and, consequently, now under the Subjection of the *Tartars*. In the Isle of *St. John* was a small Town, built in a marshy Ground, upon Posts: The Houses mean, low, and ill-furnished. The Inhabitants live for the most part by cultivating their Grounds, which produce Rice. Whilst we lay at Anchor here, a *Chinese* Junk lay near us: She was flat both at the Head and Stern, with little Huts on her Deck of three Feet high, covered with Palmetto-trees. She had a large Cabin with an Altar and Lamp burning in it. The Hold was divided into several Partitions, each of them so tight, that, if a Leak should spring in one, the Goods in the next would receive no Damage. Every Merchant has his particular Room, where he stows his Goods, and sometimes lodges in it himself. These Junks have no more than two Masts, *viz.* a Main-mast and Fore-mast: The last has a square Sail, and square Yard; but the Main-mast has a Sail narrow aloft like a Sloop's Sail. In fair Weather they use also a Top-sail, which they hale down on the Deck in foul Weather, Yard and all. The Main-mast of the biggest Junks are as big as any of our third-rate Men of War, but not peiced, being all of one Tree.

52. As we saw the Forerunners of an approaching Tempest, we weighed Anchor, not to want Sea-room. It was not long before we found our Guess too true; for the next Day, being the 4th of *July*, the Wind coming to the North-east, we were surpris'd by the most violent Tempest I ever remember in all my Voyages; which lasted, by intervals, till the 6th, when the Weather proved very serene. We refitted our Ship; but our Men, being terrified to the highest Degree by the last Storm, and dreading the approaching Full-moon, resolv'd to steer towards the *Isadores*, or *Fisher* Isles, in 23° North Latitude. There are a good Number of Islands lying betwixt the Isle of *Formosa*, and the Continent of *China*. Betwixt the two Easternmost is a good Harbour; and, on the West Side of the Easternmost, is a large Town and Fort, defended by a *Tartar* Garrison of about three hundred Men. The Houses were low, but neatly built. On the Island, on the West Side of the Harbour near the Sea-side, we saw another small Town, inhabited by *Chinese*; and most of the other Isles have some *Chinese* (more or less) living in them. We came to an Anchor in the Harbour *July* 20. and, sending our Boat ashore, were civilly received by the *Tartarian* Governor, who sent us some Presents, (among the rest a Heifer, the finest I ever eat in my Life) but would not allow us either to trade there, or come ashore on that Isle. In Return for which, Mr. *Read* (now our Captain) sent him a Silver-hilted Sword, a Carbine, and a gold Chain. We sail'd from hence the 29th with a South-west Wind, steering for certain Islands we had pitched upon, that lie betwixt *Formosa* and *Luconia*, being known by no other Names than the *Five Isles*. We sail'd by the South-west End of *Formosa*, a large Isle situated betwixt $21^{\circ} 20'$, and $25^{\circ} 10'$ North Latitude, from South to North. Its Longitude is from $142^{\circ} 5'$, to $143^{\circ} 16'$ East from the Pike of *Teneriff*. It was formerly well inhabited by the *Chinese*, and frequented by the *English*; but the *Tartars* have since spoiled the Harbour, for fear the *Chinese* should fortify themselves there. *August* 6. we came to an Anchor on the East Side of the Northernmost of the five Isles in fifteen Fathom Water: They lay in $20^{\circ} 20'$ North Latitude; and their Longitude, according to the Charts, in $141^{\circ} 50'$. Contrary to our Expectations, we found, on the Isle near which we anchored, three or four large Towns. The Westernmost Isle is the biggest: This the *Dutch* among us called the *Prince of Orange* Isle, being seven or eight Leagues long, and two broad, stretching North and South. There

NUM. 8.

are two more large Isles; the Northernmost we called *Grafton* Isle: It stretches four Leagues in Length North and South, and is one League and an half broad: Unto the third great Isle we gave the Name of *Monmouth* Isle, lying to the South of *Grafton* Isle, three Leagues long North and South, and one broad: The other two Isles, lying East and West, betwixt *Monmouth*, and the South End of *Orange* Isle, are called the *Bashee*, (from a certain Liqueur we drink there) and the *Goat* Isles. *Orange* Island is the largest, but uninhabited, being rocky and barren, and no Anchorage near it. *Monmouth* and *Grafton* Isles are hilly, but well inhabited. The *Goat* and *Bashee* Isles are flat and even, and the first has one Town in it. The Hills of all these Isles are rocky, but the Valleys fertile in Grass, Plantains, Bananas, Pine-apples, Pompions, Sugar-canes, Potatoes, and some Cotton; and are well watered with Brooks of fresh Water. They are also well stored with Goats and Hogs, but scarce any Fowl, either wild or tame. The Natives are short and thick, round-visaged, with low Foreheads, and thick Eye-brows; their Eyes of an hazel Colour, and small, but much bigger than the *Chinese*; their Noses are both low and short; their Lip and Mouth middle-sized, with white Teeth, and thick, black, lank Hair, cut short to their Ears; their Complexion is of a dark Copper-colour. They go always bare-headed; and the greatest Part have no Cloaths, but a Clout about the Middle: Some have Jackets of Plantain-leaves, as rough as a Bear-skin. The Women have a short Petticoat of coarse Calico, (of their own making) which reaches a little below the Knees. Both Sexes wear Earrings made of a yellow Metal, (they dig out of their Mountains) having the Weight and Colour of true Gold, but something paler: Whether it were such in Effect or no, I am not able to say; for it looks of a fine Colour at first, but afterwards fades; which made us suspect it, and therefore our People did not purchase much of it. We observed the Natives to besmear it with red Earth, and then, putting it into a quick Fire till it was red-hot, brought it to its former Colour again. Their Houses are small, and scarce five Feet high. They inhabit in Villages built on the Sides of rocky Hills, three or four Rows one above another. These rocky Precipices are framed by Nature into different Degrees, or, as it were, deep Steps or Stories, upon each of which they build a Row of their Houses, and a second up to them, gradually, by Ladders set from each of these Rows up to one another in the Middle of it; which if they remove, there is no coming at them. They are also very expert in building their Boats, (for the Men live mostly by Fishing) much like our *Deal* Yalls. They have also larger Vessels, managed with twelve or fourteen Oars, two Men on one Bank. They never kill any Goats or Hogs themselves, but feed upon the Guts or Intrails, and their Skins, which they broil, after they have sing'd the Hair off. They make also a Dish of Locusts, which come at certain Seasons to devour their Potatoes. They take them with Nets, and broil or bake them in an Earthen-pan. This Dish eats well enough. Their ordinary Drink is Water; but, besides this, they boil a sort of Liqueur out of the Juice of Sugar-canes, mixed with Blackberries: This they put afterwards into Jars, and let it work four or five Days. After it is settled, it becomes clear, and affords a strong and pleasant Liqueur, in Taste and Colour not unlike *English* Beer. The Natives call this Liqueur *Bashee*; whence our Crew gave this Name to one of the Isles. What Language they speak, I know not, as not having any Affinity either with the *Chinese* or *Malayan* Languages. The only Arms they use are Lances, headed with Iron; and they wear a kind of Armour of a Buffalo's Hide, without any Sleeves, which reaches down below the Knees, where it is three Feet wide, and as stiff as a Board, but close about their Shoulders. I could not perceive them worship any thing; neither saw I any Idols, or any Government or Precedency among themselves, except that the Children were very respectful to their Parents. However, it is likely, they have some ancient Customs instead of Laws; for we saw a young Lad buried alive, as we supposed, for Theft. They have but one Wife, and the and the Children are very obedient to the Head of the Family; the Boys are educated to Fishing, and the Girls to work with their

2 F

Mother

Mothers in the Plantations, which are in the Valleys, where every Man plants his own Ground according to the Bigness of his Family. For the rest, they are a sort of civil quiet People, not only to Strangers, but also among themselves; for all the Time we were here, whilst they came frequently aboard us, they used to exchange their yellow Metal, their Goats, and Fruit, for Iron: We never observed them to differ, either amongst themselves, or our Men, even when there was not Occasion wanting. They have no Coin or Seals, but give their Pieces of yellow Metal by Guess. During our Stay here, we had provided ourselves with seventy or eighty fat Hogs, and plenty of Potatoes, for our intended Voyage to the Isle of *Manilla*: But, *September 25*, being again surpris'd with a most violent Tempest, which forced us out to the Sea, we were every Moment in Danger of being swallowed up by the Waves till the 29th, when, the Fury of the Winds being somewhat allay'd, we made the best of our Way back to the Isle, of which we got Sight the 30th, but could not come to anchor in the same Place where we were before, till the first of *October*. This last Storm so dishearten'd our Men, that they all resolv'd to lay aside their Design of Cruising before *Manilla*; but, by the Persuasion of Captain *Roed*, and Captain *Teat* the Master, they resolv'd to go to *Cape Comorin*, and thence into the *Red Sea*. As the Eastern Monsoon was at hand, our nearest and best Way had been to pass through the Strait of *Malacca*; but Captain *Teat* persuad'd them to go round on the East Side of the *Philippine* Isles, and so, keeping South of the *Spice* Isles, to pass into the *Indian Ocean*, about the Isle of *Timor*.

53. We sail'd *October 3*: from the Isles to the South, intending to pass through the *Spice* Islands; we sail'd on the East Side of *Luconia*, and the other *Philippine* Islands, coasting to the South. From the Isle of *Luconia* we steer'd to the South; and, on the 15th, with a North-east Wind, directed our Course West, for the Isle of *Mindanao*, where we anchored at the South-east; and the 16th, between two small Isles, in $5^{\circ} 10'$ North Latitude, four Leagues from the Isle of *Mindanao*. Whilst we lay here, the young Prince of one of the adjacent *Spice* Islands came on board us, and told us, that Captain *Swan*, and some of his Men, were still in the City of *Mindanao*, and highly esteem'd there for the great Services they had done against the *Alfoores*. But I have been inform'd since, that he, and his Surgeon, as they were going aboard a *Dutch* Ship in that Road, were overfet, and drown'd by the Natives, by *Reja Lau's* Order, (as was suppos'd) who had seiz'd all his Gold. We sail'd hence *November 2*, for the Island *Celebes*, where we anchored the 6th at the North-east End. The Isle extends itself from North to South, in 7° Latitude, and in Breadth 3° . It lies under the Line, the North End at $1^{\circ} 30'$ North Latitude, and the South End at $5^{\circ} 80'$ South Latitude: At the South End of the Isle is a Gulph, eight Leagues wide, and fifty long, running directly North into the Country, having divers small Islands in the Middle of it. Near the south End, at the West Side of the Isle, is seated *Macassar*, a rich and strong Town belonging to the *Dutch*: By reason of the strong Current setting to the West, we had much ado to get to the East Side of the Isle; and the 22d, being at $1^{\circ} 20'$ Leagues, we saw a large Opening like a Creek; and, six Leagues to the South of it, a Range of large and small Isles, and many Shoals, betwixt which and the Isle of *Celebes* we pass'd, not without Trouble, and came to an Anchor half a Mile from the great Island, in eight Fathom sandy Ground, in $1^{\circ} 50'$ South Latitude. We staid there till the 29th, and the 30th steer'd away South betwixt two Shoals, at 3° South Latitude, ten Leagues from the Isle of *Celebes*. Towards the Evening, we saw two or three Spouts: A Spout is a Piece of a Cloud, hanging down, seemingly sloping, and sometimes bending like a Bow, but never perpendicular; after which the Sea begins to foam, and you see the Water move gently round, till, increasing in a whirling Motion, it flies upwards a hundred Paces in Circumference at the Bottom, but lessning gradually to the Smalness of a Spout, through which the Sea-water appears to be convey'd into the Clouds, as is manifest by the Increase of the Bulk and Blackness thereof: Then you see immediately the Cloud (which was immove-

able before) drive along, and the Spout keeping the same Course for half an Hour, till the Sucking is over, and then breaking off, all the Water that was below the Spout, or pendulous Cloud, fall again into the Sea, with a terrible Noise and Clashing; however, these Spouts are more terrible than dangerous. *December 1*, steering South, with a South South-east Wind, at $3^{\circ} 34'$ South Latitude, we got Sight of the Isle of *Bouton*, about ten Leagues South-west of us; the 5th, we got close to the North-west End of *Bouton* Isle, but the Harbour is at the East Side of it, in $4^{\circ} 54'$ South Latitude. This Island stretches twenty-five Leagues in Length South-west, and North-west four Leagues from the South-east End of the Isle of *Celebes*; its Breadth is ten Leagues: Within a League of the Harbour, and half a Mile from the Sea, is a long Town, called *Callafufung*, seated on the Top of a small Hill, in a pleasant Plain, inclos'd with a Walk of Cocoa-trees, and about these with a strong Stone Wall. The Inhabitants are not unlike the *Mindanayans*, but neater, are *Mohammedans*, and speak the *Malayan* Language: Their Sultan is absolute Master over them. The 6th, they brought us Eggs, Fowls, Potatoes, &c. aboard; and the Sultan came afterwards in Person in a Boat, guarded by ten or twelve Musquetiers. We staid here till the 12th; and then, steering to the South-east, we pass'd near four or five small Isles, $5^{\circ} 40'$ South Latitude, six Leagues from *Callafufung* Harbour. We saw three Towns on them, and heard the Drums beating all Night as we were among the Shoals, lying on the South-west Wind of these Isles. The 16th, we got clear of the Shoals; and, the 16th, pass'd by *Omba*, a high Island, in $8^{\circ} 20'$ South Latitude, six Leagues from the North-east Part of the Isle of *Timor*; its Length is fourteen Leagues, its Breadth six Leagues. Eight Leagues to the West of *Omba* we saw another Isle, with a large Town on it, and Fires by Night; which, by its Situation, we guess'd to be the Isle of *Pentare*: Here we were beaten amongst the Shoals till the 22d, when we got through with a North Wind, keeping close by *Pentare*. The 28th, we saw the North-west Point of *Timor*, distant eight Leagues South-east by East. The Isle of *Timor* is high and mountainous, stretching in Length seventy Leagues North-east and South-west, its Breadth sixteen Leagues, the Middle of it in 9° South Latitude. The 29th, we discover'd two small Isles near the South-west End of *Timor*; and, being got clear of these, we stood off South towards *New Holland*, Part of the *Terra Australis incognita*.

54. The 31st, we stood to the South Wind at West, in $15^{\circ} 20'$ Latitude; at Night we stood in the North for fear of a Shore, laid down in the Charts, at $23^{\circ} 50'$, bearing South by West from the East End of *Timor*: In the Morning we saw the Shore, being a Spot of Land, appearing above the Surface of the Water, with divers Rocks about it, ten Feet above the Water. It is of a triangular Form, each Side one League and a half long. This Shore is represented in our Charts sixteen or twenty Leagues from *New Holland*; but we ran at least sixty Leagues afterwards due South, before we fell in with it; and I am very certain, that no Part of *New Holland* lies so far to the North by forty Leagues, as it is laid down in our hydrographical Maps; for I found the Tides on the Coast of *New Holland* keeping their constant Course, the Flood running North by East, and the Ebb South by East. *January 4*, 1638. We fell in with the Land of *New Holland*, at $10^{\circ} 50'$ Latitude; and, running along to the East twelve Leagues, came to a Point of Land, three Leagues to the East of which is a deep Bay. We anchored a League to the East of this Point, *January 5*, two Miles from the Shore, in 29 Fathom, hard Sand and clean Ground. *New Holland* is a vast Track of Land, but whether an Isle, or Part of the Continent, is unknown hitherto: Thus much I am sure of, that it neither joins to *Asia*, *Africa*, or *America* hereabouts: It was even low and sandy Ground, the Points only excepted, which are rocky, and some Isles in this Bay. This Part had no fresh Water, except what was dug, but divers sorts of Trees, and, among the rest, the Dragon-tree, which produces the Gum-dragon, or Dragon-blood: We saw neither Fruit-trees, nor so much as the Track of any living Animal, except one which seem'd to be the Footstep of a Beast, of the Bigness of a large Mastiff-dog.

M leave this u an Intent t 56. Acc byaur, and bigger than the Sou looked out

Some few Land-blrds they have, but none bigger than a Black-bird, and scarce any Water-fowl: Neither does the Sea afford any Fish, except Tortois and Manatees, of both which they have vast Plenty. The Inhabitants are the most miserable Wretches in the Universe, having no Houses or Covering but the Heavens; no Garments, except a Piece of the Bark of a Tree, tyed like a Girdle round the Waist; no Sheep, Poultry, or Fruits, but feed upon a few Fish, Cockles, Mussels, and Periwinkles; without Religion or Government, but cohabit promiscuously: For the rest, their Bodies are strait, thin, and strong-limbed, with great Heads and Eye-brows, and round Foreheads: Their Eye-lids are constantly half closed, to keep the Flies out, which are excessive troublesome here: They have large Bottle Noses, thick Lips, and wide Mouths. Both Men and Women, old and young, want the two Fore-teeth of the upper Jaw; but whether they draw them, I am not able to tell. They have no Beards, but black short curled Hair like the African Negroes, and are as black as those. Their Weapons are a sort of wooden Cutlasses; instead of a Lance, they have a strait Pole, sharpened and hardened at the End. Of their Language I can say nothing, but that they speak pretty much in the Throat. We landed several times, and at last brought them to something of a Familiarity with us, by giving them some old Cloaths; but could never prevail with them to give us the least Assistance in carrying Water, or otherwise, they being very averse to working.

55. March 12. we failed hence, taking our Courfe North. The 26th, we were in the Latitude of *Cocoa* Island, which lies in $12^{\circ} 12'$. The 28th, we fell in with a small Isle, at $10^{\circ} 30'$: We failed from hence the same Afternoon, the Wind at West and North-west, which continued with tempestuous Weather till April 7. when we got Sight of the Isle of *Sumatra*, bearing North, being then at 7 South Latitude; and, the 8th, saw the West End of that Isle, being at 6° South Latitude. We failed along the West Side of *Sumatra*; and, the 12th, came first to an Isle, scarce a Mile in Circumference, so low, that the Tide overflows it: It has a sandy Soil, and Store of *Cocoa*-nuts: Its Situation is 4° South, fifteen Leagues West of *Sumatra*. The 19th, being in $3^{\circ} 25'$ South Latitude, we saw the South-west Point of the Isle of *Naf-Jaco*, bearing North five Miles Distance. The 25th, we crossed the Line, coasting to the North, on the West Side of *Sumatra*. May 1. we ran down by the North-west End of *Sumatra*, directing our Courfe to the *Nicobar* Islands; we got Sight of them the 4th, a Cluster of Islands lying South of the *Andaman* Isles; but the most Southerly of them is properly called the *Nicobar*, lying four Leagues North North-west from the North-west End of *Sumatra*. The Inhabitants trade promiscuously with all the *European* Nations; their chief Commodities being Ambergreece and Fruits. May 5. we anchored in a small Bay, at the North-west End of the Isle of *Nicobar*, properly so called, in eight Fathom Water; its Length is twelve Leagues, the Breadth three or four, in $7^{\circ} 30'$ North Latitude. It produces Plenty of *Cocoas* and *Mallories*, a Fruit of the Bigness of the Bread-fruit at *Guam* (before-mentioned) which the Natives boil in Water in covered Jars. The Inhabitants here are strait-limbed, long-visaged, with black Eyes, and well-proportioned Noses; their Hair is lank and black, their Complexion of a Copper-colour; the Women have no Eye-brows; I suppose they pulled them out because the Men did not like them: The Men wear only a kind of Shafr round their Middle, and the Women nothing but a Petticoat from the Waist to the Knees: Their Language had some Words of *Malayan* and *Portuguese* in it; their Habitations were built upon Posts near the Sea-side, but I could find no settled Government among them. Their Canoes were flat on one Side, with Outlayers like those of *Guam*. Mr. Hall, Mr. Ambrose, and I, being desirous to leave this unruly Crew, were left ashore on this Isle, with an Intent to go hence to *Abin*.

56. Accordingly we left this Isle May 5. with four *Malayans* and a *Portuguese*, in a *Nicobar* Canoe, not much bigger than our Below-bridge *London* Wherries; we rowed to the South four at a time, by Turns. The 7th, we looked out for *Sumatra*, supposing we were within twenty

Leagues of it; but, instead thereof, saw *Nicobar* at eight Leagues Distance; at Noon we found $6^{\circ} 55'$ Latitude. The 18th, the Wind increasing upon us, we were forced to run before the Wind and Sea; the Tempest was so violent, that we expected every Moment to have been swallowed by the Sea-waves. The 19th, to our great Joy, one of our *Malayan* Friends cried out *Pulo Way*, i. e. the Isle of *Way*, situated near the North-west End of *Sumatra*, which, about Noon, we discovered to be the very Isle of *Sumatra*. The high Land they had mistaken for the Isle of *Way*, proved the *Golden Mountain* of *Sumatra*. The 20th, we steered with a West Wind for the Shore; and, in the Afternoon, anchored near the Mouth of the River *Passange Louca* (in the Isle of *Sumatra*) thirty-six Leagues to the East of *Abin*, and six Leagues to the West of *Diamond Point*. As we were half dead with the Fatigues of this Voyage, we were carried to a small Fisher-town near the River, where we were kindly treated by the Inhabitants, and staid till June, when we left this Place; and, in three Days Sail, arriv'd at *Abin*. In July following, I went with Captain *Welder* to *Tonquin*, and returned to *Abin* in April 1689. where I staid till September; when, making a short Voyage to *Manacca*, I came thither against *Christmas* 1690. Soon after, I went to Fort *St. George*; whence, after a Stay of five Months, I came back to *Bencouli*, an *English* Factory on the West Coast of *Sumatra*. But before I give you an Account of my Return to *England*, I must not forget one Passage concerning the painted Prince, who died at *Oxford*; his Name was *Isoly*, and was purchased by one Mr. *Moody* at *Mindanao*, together with his Mother: Mr. *Moody* and I went together to *Bencouli*; where, at parting, he gave me half the Share in this painted Prince, and his Mother, and left them in my Custody. They were born in the Isle of *Meangis*, abounding in Gold, Cloves, and Nutmegs, as himself told me: He was curiously painted down the Breast, betwixt his Shoulders behind, but most of all on the Thighs before, after the Nature of Flower-work. By what I could understand, this Painting was done by pricking the Skin, and rubbing in it a certain Gum of a Tree, called *Damurer*, used instead of Pitch in some Part of the *Indies*. He told me, that they wore golden Ear-rings, and Bracelets about their Arms and Legs; that their Food was Potatoes, Fowl, and Fish. As to his Captivity, he said, that, as one Day, he, his Father and Mother, were going in a Canoe to one of the two adjacent Isles, they were taken by some *Mindanao* Fishermen, who fold them all to the Interpreter of *Raja Laut*, with whom he and his Mother lived as Slaves five Years, and then were sold for sixty Dollars to Mr. *Moody*. Some time afterwards, Mr. *Moody* presented me also with his Share in them, but the Mother died not long after, and I had much ado to save the Son's Life.

57. During my Stay at *Bencouli*, I served in the Quality of a Gunner of the Fort; but, my Time being expired, I got aboard Captain *Heath*, in the *Defence*, with my painted Prince, in order to my Return for *England*. January 25. we failed in Company of three Ships more; but had not been long at Sea, before a fatal Distemper rag'd aboard us, which we attributed to the Badness of the Water taken in at *Bencouli* during the Land-floods, which is often impregnated with the Tinctures of poisonous Roots or Herbs: The best Remedy we had, was to mix some Tamarinds with the Rice we eat, which I believe preserved the Lives of many of our Men, having scarce so many Men left as were able, but with great Difficulty, to bring us to the Cape of *Good Hope*, where we came to an Anchor the Beginning of April, by the Assistance of a *Dutch* Captain and his Men. The Cape of *Good Hope* is the Southermost Point of the Continent of *Africa*, in $34^{\circ} 30'$ South Latitude, in a very temperate Climate. It appears, at Sea, in divers remarkable Points or Eminencies, affording an agreeable Prospect; the most considerable of which is, a Mountain on the West Side of the Cape, called the *Table Mountain*, from its Flatness on the Top. To the North of it is a large Harbour, with a low flat Isle lying off it, by which you may enter at either Side; the best Riding is near the Continent. The Country thereabouts produces good; but short Grass, and Trees, but not in great Plenty; and, when cultivated, produces large Quantities

Quantities of Wheat, Barley, and Pease, besides Fruits of divers Sorts, as Apples, Pears, Quinces, large Pomgranates, and such Plenty of Grapes, as furnishes them with Wine, sufficient not only for their own Use, but also for Sale to such Ships as come to this Cape: The Wine is sweet, pleasant, and strong. Near the Harbour are but few Farms; but, twenty Leagues in the Country, are many Settlements of the Dutch and French Refugees. They have also Plenty of Sheep, Goats, Hogs, Horses, and Cows; but Oxen thrive not so well here, by reason of the short Pasturage. They have some wild Beasts, but I only saw the wild Ass, a beautiful Creature, with black and white Stripes: Neither do they want Ducks, Dunghil-fowl, and Ostriches; and the Sea affords them abundance of Fish. Opposite to the Harbour, near the Shore, the Dutch have a strong Fort, (the Residence of the Governor) and to the West of it a Dutch Town; on the Back-side whereof is the House belonging to the East India Company, with a spacious Garden, stored with all manner of Fruits, Herbs, Roots, Walks, and Arbours. The Natives of this Country are called the *Hottentots*, a middle-sized People, with small Limbs, and active Bodies, flat oval Faces, large Eye-brows, and black Eyes. They besmear their Bodies with Grease: Upon their Heads they wear nothing but some Shells; and, on their Bodies, a Mantle of Sheep-skin, with the woolly Side outwards, and another Piece, like an Apron, hanging before from the Navel. Instead of this, the Women have a Sheep-skin round the Middle. Their Houses are very mean, and so is their Furniture, consisting only of two or three earthen Pots to dress their Victuals in, which is Herbs, Flesh, or Shell-fish; these they catch among the Rocks. They have neither Temples, Idols, nor any other peculiar Place of Worship. They celebrate, indeed, several nocturnal Dances, with Singing, at the new and full Moon; but these are performed near their Fluts, and seem to be rather

Pastimes, or Merry-meetings, than any thing relating to religious Worship. For the rest, they are a lazy Generation; for they never manure their Grounds, but are contented with feeding their Cattle, which they exchange for Tobacco. After a Stay of six Weeks here, we sailed, May 3, towards *St. Helena*, an Isle seated in 16° South Latitude, where we arrived June 20. It is about nine Leagues long; and, though 400 Leagues from the Continent, enjoys a serene Air, (except in the rainy Season) and a temperate and healthy Climate; which, together with the refreshing Herbs this Island produces, is the Reason that our *East India* Ships touch here to recover their Seamen from the Scurvy, which they do in a little time. This Isle, after its first Discovery by the Portuguese, was possessed by the Dutch; but these relinquishing it for the Cape of Good Hope, the English settled here till 1672, when they were beaten out by the Dutch, who were forced, soon after, to surrender it again to the English, under Captain *Mendonça*. We have now a Fort there, with a Garrison, and a good Number of great Guns, to defend the common Landing-place, being a small Bay, not above 500 Paces wide: Within this Bay stands a small English Town, the Inhabitants having their Plantations deeper into the Country, which furnish them with Potatoes, Plantains, Bananas, Hogs, Bullocks, Cocks, and Hens, Ducks, Geese, and Turkeys, in vast Plenty. July 2, 1691, we left this Isle, steering our Course for England. We took the Mid-way, betwixt *Africa* and the American Continent, still to the North of the Line; and came to an Anchor in the Downs, September 16, following. After my Arrival in the *Thames*, being in want of Money, I sold, at first, Part of the Property I had in the before-mentioned *Prince Leah*, and, by Degrees, all the rest. I understood afterwards, that he was carried about for a Sight, and shewn for Money; and that, at last, he died of the Small-pox at Oxford.

SECTION XIV.

Captain WILLIAM DAMPIER's Voyage to New Holland, and New Guiney, from his own Account.

1. The original Design of this Voyage, and its Connexion with the former.
2. Captain Dampier sails in the *Roebeck* from the Downs, January 14, 1699.
3. Description of Santa Cruz, and the Island of Teneriff, one of the Canaries.
4. The Island of Mayo described.
5. Account of that of St. Iago.
6. The Author's Arrival in the Bay of All Saints in Brasil.
7. The Town and Country about it described.
8. Continuation of the Voyage to the Cape of Good Hope.
9. Arrival in Sharks Bay on the Coast of New Holland.
10. Account of several subsequent Discoveries, and of the many Errors in the Dutch Charts.
11. Difficulties occurring in their Commerce with the Indian Natives.
12. The Country and Coast of New Holland described.
13. The Author's Expectations, and the Grounds of these Expectations.
14. Reasons for quitting the Coast of New Holland.
15. The Author sails for the Island of Timor.
16. Arrival on the Coast, and Accidents there.
17. Account of the Island Anamabao, or Anabao, adjoining to Timor.
18. Transactions during the Author's Stay there.
19. A copious Description of the Island of Timor.
20. Condition of the Dutch and Portuguese Settlements there.
21. Description of other Islands, and their Inhabitants.
22. Cockle Island, and its Productions.
23. Other Islands in those Seas, and Things remarkable in them.
24. The Main-land of New Guiney, and its Inhabitants, described.
25. Departure from thence, and Discovery of many Islands.
26. Particulars relating to the Inhabitants, and their Commerce.
27. Discovery of Cape St. George, and Cape Orford.
28. The Author resolves to land; and, if possible, enter into Commerce with the Natives on the Continent of New Guiney.
29. Finding that very difficult, has recourse to various Arts.
30. At last obliged to take Resolutions by Force.
31. He leaves that Coast, and proceeds to make fresh Discoveries.
32. The Islands of Nova Britannia, &c. described.
33. Other Transactions in this Voyage.
34. Islands of Misacombey, Pentare, &c.
35. Continuation of the Voyage from Batavia.
36. The Ship springs an incurable Leak.
37. The Author runs the *Roebeck* ashore on the Island of Ascension.
38. Returns safe to England aboard the *Canterbury* East-India-man.
39. Remarks upon this Expedition.

THE Reputation of his Voyage round the World, recommended our Author to the Favour of the most ingenious Persons, and to the greatest Encouragers of public-spirited Undertakings that the Age produced; and, amongst these, to the Right Honourable *Thomas Herbert*, Earl of *Pembroke*, who most worthily discharged the Office of Lord High Admiral in the Reign of King *William III.* to whom our Author ap-

plied himself for Favour and Protection, as well as for his Countenance in the Design he had formed for prosecuting those Discoveries, which his last Voyage had given him Hopes might be done with Effect. It is well enough known, that Propositions of this Kind are very rarely agreeable to great Ministers; which is sometimes owing perhaps to their being very indifferent Judges of such Matters. It was the good Fortune of Captain *Dampier*, to

address himself to a Patron of quite another Kind, who listened to his Offers with a just Degree of Attention, encouraged in him that laudable Ambition, which prompted him to expose himself in so noble a Design, and furnished him with Means for undertaking that Voyage, which he had so long meditated for the public Advantage. This, therefore, ought to be considered as a supplemental Voyage to the last, and, indeed, in this Light the Author seems to have considered it, by his frequent References from this to that.

2. I failed, says he, from the Downs, January 14. 1698, with a fair Wind, in his Majesty's Ship the *Roebuck*, carrying in this Voyage twelve Guns, fifty Men and Boys, and twenty Months Provision. We took our Departure from the *Start*, which was the last Land we saw in *England*, as the first we saw, after we were out of the Channel, was *Cape Finisferre*, which we made on the 19th; and, on the 28th, made *Lancrota*, one of the *Canary Islands*. We then stood away for the Island of *Teneriff*, where I intended to take in Wind and Brandy for my Voyage. January 30. I anchored in the Road of *Santa Cruz*, the finest Port in the Island for my Purpose. The Road before this Place is but very indifferent, lying so open to the East, that Winds from that Quarter make a great Swell, and render it very dangerous going ashore in Boats. The best Landing is in a small sandy Cove, about a Mile to the North-east of the Road, where there is very good Water; insomuch that Ships which take in their Lading at *Oratavia*, which is the principal Part of the Island for Trade, send their Boats thither for Water. That Port, however, is rather more exposed to Westerly, than this to Easterly Winds, which was the Reason I declined it. There are between this Watering-place and *Santa Cruz* two small Ports, which, with several Batteries, serve to command the Road, and secure the Place from being insulted by Privateers. The Time I stayed here gave me all the necessary Opportunities for considering the Place, its Inhabitants, and the Country adjacent; and therefore enabled me to form such a Description of them, as may satisfy the Reader's Curiosity, and give him a tolerable Idea of an Island so often mentioned by Navigators, on account of the placing here the first Meridian, from which the Degrees of Longitude in our Maps are generally reckoned.

3. This Town of *Santa Cruz* is a small Town, without any Wall about it, and defended only by two Forts. It was here that our famous Admiral *Blake* destroyed the *Spanish Gallions April 20. 1657.* and the Wrecks of some of them are lying still there in fifteen Fathom Water. Soon after my Arrival, I went by Land to the City of *Laguna*, the Metropolis of this Isle, and the Residence of the present Governor-General of the *Canary Islands*, whose Name is *Don Pedro de Panto*, a Native of this Island, and not long ago President of *Panama*, in the South Seas, a very worthy Man, strictly just, and very kind to Strangers. The City of *Laguna* is of a tolerable Size, and very compact, making a very agreeable Prospect at a Distance. It stands Part of it against an Hill, and Part in a Level. The Houses have mostly strong Walls, built with Stone, and covered with Pantile: They are not uniform; yet they appear pleasant enough. There are many fair Buildings, among which are two Parish Churches, two Nunneries, an Hospital, four Convents, and some Chapels, besides many Gentlemens Houses. The Convents are these, of *St. Austin*, *St. Dominis*, *St. Francis*, and *St. Diego*. The two Churches have pretty high square Steeples, which top the rest of the Buildings: The Streets are not regular; yet they are mostly spacious, and pretty handsome; and, near the Middle of the Town, there is a large Parade, which has good Building about it. There is a strong Prison on one Side of it, near which is a large Conduit of good Water, that supplies the whole Town. They have many Gardens, which are set round with Oranges, Limes, and other Fruits; in the Middle of which are hot Herbs, Saladings, Flowers, &c. and, indeed, if the Inhabitants were curious this Way, they might have very pleasant Gardens; for, as the Town stands high from the Sea, on the Brow of a Plain that is all open to the East, and hath, consequently, the Benefit of the true Trade-wind which blows

NUMB. 8.

here, and is most commonly fair, there are seldom wanting, at this Town, brisk, cooling, and refreshing Breezes all the Day. On the Back of the Town there is a large Plain, of three or four Leagues in Length, and two Miles broad, producing a thick kindly Sort of Grass, which looked green, and very pleasant, when I was there, like our Meadows in *England* in the Spring. On the East Side of this Plain, very near the Back of the Town, there is a natural Lake or Pond of fresh Water. It is about half a Mile in Circumference; but, being stagnant, 'tis only used for Cattle to drink. In the Winter, several Sorts of Wild-fowl resort hither, affording Plenty of Game to the Inhabitants of *Laguna*: This City is called *Laguna* from hence; for that Word, in *Spanish*, signifies a Lake or Pond. The Plain is bounded on the West, the North-west, and the South-west, with high steep Hills, as high above this Plain, as this is above the Sea; and 'tis from the Foot of one of these Mountains that the Water of the Conduit, which supplies the Town, is conveyed over the Plain in Troughs of Stone, raised upon Pillars; and indeed, considering the Situation of the Town, its large Prospect to the East, (for from hence you see the grand *Canary*) its Gardens, cool Arbours, pleasant Plain, green Fields, the Pond and Aqueduct, and its refreshing Breezes, it is a very delightful Dwelling, especially for such as have not Business that calls them far and often from hence; for, the Island being generally mountainous, steep, and craggy, full of Rifings and Fallings, 'tis very troublesome travelling up and down in it, unless in the Cool of the Mornings and Evenings; and Mules and Asses are most used by them, both for Riding and Carriage, as fittest for the stony uneven Roads. Beyond the Mountains, on the South-west Side still farther up, you may see from the Town and Plain a small peaked Hill overlooking the rest; this is that which is called the *Pike of Teneriff*, so much noted for its Height; but we saw it here at so great a Disadvantage, by reason of the Nearness of the adjacent Mountains to us, that it looked inconsiderable in respect to its Fame. The true Malmsey Wine is produced in this Island, and is esteemed the best white Wine in the World. Here is also *Canary Wine*, and *Verdona* or green Wine. The *Canary* grows chiefly on the West Side of the Island, and therefore is commonly sent to *Oratavia*, which, being the chief Sea-port for Trade in the Island, the principal *English* Merchants reside there, with their Consul, because we have a great Trade for this Wine. I was told, that that Town is bigger than *Laguna*; that it has but one Church, but many Convents; that the Port is but ordinary at best, and is very bad when the North-west Winds blow. These North-west Winds give notice of their coming, by a great Sea that tumbles in on the Shore for some time before they come, and by a black Sky in the North-west. Upon these Signs Ships either get up their Anchors, or slip their Cables, and put to Sea, and ply off and on till the Weather is over: Sometimes they are forced to do so two or three times before they can take in their Lading, which 'tis hard to do here in the fairest Weather; and for fresh Water they send, as I have said, to *Santa Cruz*. *Verdona* is green, strong-bodied Wine, harsher and sharper than *Canary*: 'Tis not so much esteemed in *Europe*, but is exported to the *West Indies*, and will keep best in hot Countries; for which Reason I touched here, to take in some of it for my Voyage: This Sort of Wine is made chiefly on the East Side of the Island, and shipped off at *Santa Cruz*.

4. We failed from *Santa Cruz February 2.* towards the Isle of *Mayo*, one of the *Cape Verd* Islands. The 9th, being in the Latitude of 15° 4', we steered away West North-west for the said Isle, where we anchored the 11th in the Road, which is the leeward Part of the Isle, in fourteen Fathom, clean Sand, and smooth Water. The Isle of *May* is roundish, seven Leagues in Circuit, in 15° North Latitude. On the West Side of it, where the Road for Ships is, there is a large sandy Bay, within which is a spacious Salt Pond: Those who come hither to lade Salt, take it up as it kems, and lay it up in Heaps. The *English* have a considerable Trade here in Salt, which costs nothing but the Labour to take it out, and wheeling it from the Pond; and the Carriage thence to the *Frise Boat*, as the Seamen call it, (by which it is conveyed aboard the Ships)

11 G

being

being performed by Mules, is very cheap. For the rest, the Soil of it is generally barren, the Ground being Sand or loose Stone, without any fresh-water Rivers or Ponds, except one Spring in the Centre of the Isle, running thro' a Valley, where the Inhabitants have three small Towns, *Pinefe, St. John's, and Lagoa*. The Inhabitants are Negroes, by Descent, and resembling those of *Africa*. As they are Subjects of *Portugal*, so they follow their Religion, but have Priests and a Governor of their own Nation. Their Fruits are chiefly Figs, and Water-melons; their best Land-animals Goats and Asses: The Sea affords them Dolphins, Bonettas, Mulletts, Snappers, Silver-fish, Garfish, and green Tortoises, during the wet Season in *May, June, July, and August*, which is their Time of Laying. It may seem somewhat strange, that not a Turtle only, but all Sorts of amphibious Creatures, lay their Eggs, not in the dry, but wet Season, which one would imagine might destroy them. To account for this, however, with some Degree of Probability, we ought to consider, that these Animals all lay their Eggs very deep; so that the Rain, being drank up by the Sand over them, not only never reaches so as to spoil them, but checks also the rising Heat; and, by keeping it down, answers all the Intentions of a Stove, or hot Bed.

5. *February 19.* we sailed from hence to *St. Iago*, six Leagues to the West; and, the next Day, anchored near *St. Iago Town*, lying on the South-west Side of the Isle, in 16° North Latitude, the Residence of the *Portuguese* Governor, and of the Bishop of all the *Cape Verde* Islands. This Town stands scattering against the Sides of two Mountains, between which there is a great Valley, which is about 200 Yards wide. Against the Sea there is a straggling Street, Houses on each Side, and a Run of Water in the Bottom, which empties itself into a fine small Cove, or sandy Bay, where the Sea is commonly very smooth; so that here is good Watering and good Landing at any time, though the Road be rocky, and bad for Ships: Just by the Landing-place there is a small Fort, almost level with the Sea, where is always a Corps-de-garde kept on the Top of an Hill: Above the Town there is another Fort, which, by the Wall that is to be seen from the Road, seems to be a large Place: They have Cannon mounted there; but how many I know not, neither what Use that Fort can be of, except it be for Salutes. The Town may consist of 2 or 300 Houses, all built of rough Stone, having also one Convent, and one Church; the People in general a black, or at least of a mixt Colour, except only some few of the better sort, *viz.* the Governor, the Bishop, some of the Gentlemen, and some of the Padres; for some of these are black. The People about *Praya* are thievish; but those of *St. Iago Town*, living under their Governor's Eye, are more orderly, though generally poor, having little Trade; yet, besides chance Ships of other Nations, there come hither a *Portuguese* Ship or two every Year, in their Way to *Brazil*. These vend among them a few *European* Commodities, and take off their principal Manufactures, *viz.* striped Cotton, which they carry with them to *Brazil*. Another Ship also comes hither from *Portugal* for Sugar, their other Manufacture, and returns with it directly thither: For 'tis reported, that there are several small Sugar-works on this Island, from which they send Home near 100 Tons every Year: And they have Plenty of Cotton growing up in the Country, wherewith they cloathe themselves, and send also a deal to *Brazil*. They have Vines, of the Fruit of which they make some Wine; but the *European* Ships furnish them with better, though they drink but little of any. Their chief Fruits are (besides Plantains in abundance) Oranges, Lemons, Citrons, Melons, (both Musk and Water-melons) Limes, Guavas, Pomgranates, Quinces, Custard-apples, and Papaws, &c. The Custard-apple (as we call it) is a Fruit as big as a Pomgranate, and much of the same Colour: The outside Husk-shell, or Rind, is, for Substance and Thickness, between the Shell of a Pomgranate and the Peel of a *Seville Orange*, softer than this, yet more bitter than that. The Coat or Covering is also remarkable, in that it is beset round with small regular Knobs, or Risings; and the Inside of the Fruit is full of a white soft Pulp, sweet, and very pleasant, and most resembling a

Custard of any thing, both in Colour and Taste; from whence, probably, it is called a Custard-apple by our *English*: It has, in the Middle, a few small black Stones or Kernels, but no Core; for 'tis all Pulp: The Tree that bears this Fruit is about the Bigness of a Quince-tree, with long, small, and thick-set Branches spread much abroad. At the Extremity of here-and-there one of which, the Fruit grows upon a Stalk of its own, about nine or ten Inches long, slender and tough, and hanging down with its own Weight. A large Tree of this Sort bears usually twenty or thirty Apples, very seldom more. This Fruit grows in most Countries within the Tropics; I have seen of them (tho' I omitted the Description of them before) all over the *West Indies*, both Continent and Islands, as also in *Brazil*, and in the *East Indies*. The *Papaw* too is found in all these Countries, though I have not hitherto described it: It is a Fruit about the Bigness of a Musk-melon, hollow in it, and much resembling it in Shape and Colour, both Outside and Inside; only in the Middle, instead of the Kernel which the Melons have, there have an handful of blackish Seeds, about the Bigness of Pepper-corns, whose Taste is also hot on the Tongue, somewhat like Pepper. The Fruit itself is sweet, soft, and luscious, when ripe; but, while green, is hard and unfavoury; though, even then, being boiled, and eaten with salt Pork or Beef, it serves instead of Turneps, and is as much esteemed. The *Papaw*-tree is about ten or twelve Feet high; the Body, near the Ground, may be a Foot and an half or two Feet Diameter, and it grows up taper to the Top: It has no Branches at all, but only large Leaves growing upon Stalks, which proceed out of the Body: The Leaves are of a roughish Form, and jagged about the Edges, having their stalks, or Stumps, longer or shorter, as they grow nearer to or further from the Top. They begin to spring from out of the Body of the Tree at about six or seven Feet high from the Ground, the Trunk being bare below; but, above that, the Leaves grow thicker and larger till towards its Top, where they are close and broad. The Fruit grows only among the Leaves, and thickest among the thickest of them; inasmuch that, towards the Top of the Tree, the *Papaws* spring forth from its Body, as thick as they can tick one by another; but then, lower down, where the Leaves are thinner, the Fruit is larger, and of the Size I have described; and at the Top, where they are thick, they are but small, and no bigger than ordinary Turneps, yet tasted like the rest. As to the Land-animals, Fowls and Fish, there is nothing I can say about them that ought to detain the Reader; and therefore I will proceed in my Voyage, after remarking, that the Road of *St. Iago* is so bad, that in my Life I think I never saw one worse.

6. We sailed from *St. Iago* *February 22.* and my Intention was to have gone to *Pernambuco*, and from thence directly to the Coast of *New Guiney*, and this out of pure Compassion to my Ship's Company, who were but very young Seamen, there being only two in the Ship that had ever passed the Line, and those two were none of the oldest. They, therefore, grew very uneasy; talked much of returning to *England*; and, at last, gave me so much Disquiet, that I began to doubt *Pernambuco* was no fit Place for me to trust myself in, because, as the Ship must ride two or three Leagues from the Town, and not under the Command of any Fort, they might easily, in case of my going on shore, have cut or slip't their Cables, and have run away with the Ship. After mature Deliberation, therefore, I altered my Course, and stood away for the Bay of *All Saints*, and arrived before the Place on *March 25.* and anchored in the Port very safely. *Bahia de todos los Santos*, as the *Portuguese* call it, or *The Bay of All Saints*, lies in the Latitude of 13° South, has the Conveniency of a very good Harbour, secured and commanded by three several Forts. The Place itself consists of about 2000 Houses, most of which are hid from the Ships in the Harbour; but those that are seen, being intermix'd with Trees, afford a very pleasant and delightful Prospect. There are, in the Town, thirteen Churches, Chapels, and Convents, besides one Nunery, *viz.* the *Ecclesia major*, or Cathedral, the Jesuits College, which are the chief, and both in Sight from the Harbour; *St. Antonio, Sta. Barbara*, both Parish-churches; the *Franciscan* Church, and the *Dominicans*; and

two Convents, the Sea-side go imbriculis, as the Shot by the Tower Middle of Edge of the are seventy fine Palace fine Stone: but indifferently, observed, a rious about to Pictures. two Convents of *Carmelites*; a Chapel for Seamen close by the Sea-side, where Brats commonly land, and the Seamen go immediately to Prayers; another Chapel for poor People, at the farther End of the same Street, which runs along by the Shore; and a third Chapel for Soldiers at the Edge of the Town, remote from the Sea; and an Hospital in the Middle of the Town. The Nunnery stands at the outer Edge of the Town next the Fields, wherein, as I was told, are seventy Nuns. Here lives an Archbishop, who has a fine Palace in the Town, and the Governor's Palace is a fine Stone Building, and looks handsome to the Sea, tho' but indifferently furnished within; both *Spanish* and *Portuguese*, in their Plantations abroad, as I have generally observed, affecting to have large Houses, but are little curious about Furniture, except some of them with respect to Pictures. The Houses of the Town are two or three Stories high, the Wall thick and strong, being built with Stone, and a Covering of Pantile, and many of them have Balconies. The principal Streets are large, and all of them paved or pitched with small Stones. There are also Parades in the most eminent Places of the Town, and many Gardens, as well within the Town, as in the Out-parts of it, wherein are Fruit-trees, Herbs, Salladings, and Flowers, in great Variety, but ordered with no great Care nor Art. The Governor, who resides here, is called Don *John de Lancastrio*, being descended, as they say, from our *English Lancaster* Family; and he has a Respect for our Nation on that Account, calling them his Countrymen: I waited on him several times, and always found him very courteous and civil. Here are about 400 Soldiers in Garrison; they commonly draw up, and exercise in a large Parade before the Governor's House, and many of them attend him when he goes abroad. The Soldiers are decently clad in brown Linen, which, in these hot Countries, is far better than Woollen; but I never saw any clad in Linen, but only these. Besides the Soldiers in Pay, he can soon have some Thousands of Men in Arms upon Occasion. The Magazine is on the Skirts of the Town, on a small Rising between the Nunnery and the Soldiers Church; it is big enough to hold 2 or 3000 Barrels of Powder, but I was told, it seldom had more than 100 in it, sometimes but eighty; there are always a Company of Soldiers to guard it, and Centinels looking out both Day and Night. A great many Merchants always reside at *Bahia*; for 'tis a Place of great Trade. I found here above thirty great Ships from *Europe*, with two of the King of *Portugal's* Ships of War for their Convoy, besides two Ships that traded to *Africa* only, either to *Angola*, *Gambia*, or other Places on the Coast of *Guinea*; and abundance of Small-craft, that only run to and fro on this Coast, carrying Commodities from one Port to another. The Merchants, that live here, are all to be rich, and to have many Negro Slaves in their Houses, both of Men and Women. They are chiefly *Portuguese*, Foreigners having but little Commerce with them; there was one Mr. *Cock*, an *English* Merchant, a very civil Gentleman, and of a good Repute. He had a Patent to be our *English* Consul; but did not care to take upon him the public Character, because *English* Ships seldom come here, here having been none in eleven or twelve Years before this Time. Here was also a *Danish* and a *French* Merchant, or two; but all have their Effects transported from *Europe* in *Portuguese* Ships, none of any other Nation being admitted to trade hither. There is a Custom-house by the Sea-side, where all Goods imported or exported are entered; and, to prevent Abuses, there are five or six Boats, that take their Turns to row about the Harbour, searching any Boats they suspect to be running Goods. The chief Commodities, that the *European* Ships bring here, are Linen Cloths both coarse and fine, some Woolens, also Bays, Serges, Perpetuanas, &c. Hats, Stockings of Silk and Thread, Bisquet-bread, Wheat, Flour, Wine, (chiefly *Port*) Oil-olive, Butter, Cheese, &c. and salt Beef and Pork would be good Commodities there. They bring hither also Iron, and all manner of Iron Tools, Pewter Vessels of all sorts, as Dishes, Plates, Spoons, &c. Looking-glasses, Beads, and other Toys; and the Ships that touch at *S. Iago* bring thence, as I said, Cotton, which is afterwards sent to *Angola*. The *European* Ships carry from hence Sugar, Tobacco, either in Roll or Snuff, never in

Leaves, that I know of. These are the staple Commodities, besides which, there are Dye-woods, as Fustic, &c. with Wood for other Uses, as speckled Wood, Brazil, &c. They also carry home raw Hides, Tallow, Train-oil of Whales, &c. Here are also kept tame Monkeys, Parrots, Partridges, &c. which the Seamen carry home. The Sugar of this Country is much better than that which we bring home from our Plantations; for all the Sugar, that is made here, is clayed, which makes it whiter and finer than our Muscovado, as we call our unrefined Sugar. Our Planters seldom refine any with Clay, unless sometimes a little to send home as Presents for their Friends in *England*. Their Way of doing it here is, by taking some of the whitest Clay, and mixing it with Water, till it be like Cream: With this they fill up the Pans of Sugar, that are sunk two or three Inches below the Brim, by draining the Mellasses out of it, first scraping off the thin hard Crust of the Sugar, that lies at the Top, and would hinder the Water of the Clay from soaking through the Sugar of the Pan. The Refining is made by this Percolation for ten or twelve Days Time, that the clayish Liquor lies soaking down the Pan: The white Water whitens the Sugar as it passes through it, and the gross Body of the Clay grows hard at the Top, and may be taken off at Pleasure, when scraping off with a Knife the very upper Part of the Sugar, which will be a little sullied, that which is underneath, will be white almost to the Bottom; and such as is called Brazil Sugar is thus whitened. When I was there, this Sugar was sold for fifty Shillings per Hundred, and the Bottoms of the Pots, which is very coarse Sugar, for about twenty Shillings per Hundred, both Sorts being then scarce; for here was not enough to lade the Ships, and therefore some of them were to lie here till the next Season. The *European* Ships commonly arrive here in *February* or *March*; and they have generally quick Passages, finding, at that Time of the Year, brisk Gales to bring them to the Line, little Trouble then in crossing it, and brisk North North-east Winds afterwards to bring them hither. They commonly return from hence about the latter End of *May*, or in *June*. It was said, when I was here; that the Ships would sail *May* 20. and therefore they were all very busy, some in taking in their Goods, others in careening and making themselves ready. The Ship that come hither commonly careen at their first Coming, here being a Hulk belonging to the King for that Purpose. This Hulk is under the Charge of the Superintendent I spoke of, who has a certain Sum of Money for every Ship that careens by her. He also provides Firing, and other Necessaries for that Purpose; and the Ships commonly hire of the Merchants here each two Cables to moor by all the Time they lie here, and so save their own Hempen Cables; for these are made of a sort of Vegetable String, springing from the Top of a Tree, and in its Substance resembling Hair, which is very strong and lasting. There is a great Trade carried on here of different Kinds; but particularly a sort of Whale-fishing. These Creatures are but small; but, as they come in great Numbers, the killing of them turns to good Account, as may appear from the Profit arising by the Royal Licences, which bring thirty thousand Dollars annually to the King of *Portugal*. The Inhabitants of this City are, generally speaking, rich, or at least in very good Circumstances; so that few or none of them want their Negro Slaves for all domestic Uses, by whom also they are carried, when they go abroad, in a kind of Hammocks, where they lie or sit at their Ease, either covered with a Curtain, or exposed, as they think proper. Besides this Port or Bay of *All Saints*, there are two Harbours much frequented in *Brazil*, viz. *Pernambuco* or *Fernambuco*, and *Rio Janeiro*; and, besides these, there is a Town and Haven called *St. Paul's*, near which they gather much Gold; but the People are said to be a sort of Banditti, without Laws, Order or Government: But, however, as they have a great deal of Money, they are very well furnished with *European* Commodities. Indeed Money is every-where plenty in this Country since the Discovery of the Gold Mines; which must increase the Regret of the *Dutch*, who were once Masters of the best Part of *Brazil*.

7. The Country about the City of *Bahia de todas las Santos* is flat, neither very high, nor excellent low, sufficiently watered with Rivers and Rivulets. The Soil is, generally speaking,

speaking, pretty good; and when cultivated, produces, besides other Vegetables, Sugar-canes, Cotton, Indico, Tobacco, Maiz, and Fruit-trees, as also some other Trees peculiar to this Country; as the Sapiera, Vermatico, Coniaftric, Griteba, Serrie, three Sorts of Mangrove-trees, and as many Sorts of Cotton-trees, both wild and planted. They have also a sort of a bastard Cocoa-nut tree, not near so big as the common ones in the *East* or *West Indies*. The Kernel is sweet, but hard. At the Top of these Cocoa-trees grows a black Thread, like Horsehair, but longer, of which they make Cables, that are more serviceable and lasting, than those made of Hemp. The rest of their Fruits are Oranges of several Sorts, especially *China* Oranges, Limes, Pomgranates, Pomcitrons, Plantains, Bananas, right Cocoa-nuts, Guavas, Cocoa-plums, wild Grapes, (besides *European* Grapes) Hog-plums, Cullard-apples, Sour-lops, Calshews, Papahs, Jennipahs, Manchinel-apples, and Mangoes, (tho' these last are but rare as yet) Anisahs, Mericalahs, Potangees, &c. (Fruits not to be seen in other Countries) Petunbos, Mungareos, Mackifhaws, Inguas, Oree, Musteran de Ovas, Palm-berries, Physic-nuts, Cablage-trees, &c. They have also abundance of Ground-fruit; such as Callavances, Pine-applet, Pompions, Water-melons, Musk-melons, Cucumbers; of Yams, Potatoes, Cassavas; of Garden-herbs, Cabbages, Turneps, Onions, Leeks, and all sorts of Sallading. They have great Plenty and Variety of wild Fowl; viz. Yammas, Maccaws, (a large Sort of Parrots) common Parrots, Flamingoes, Carrion-crows, Chattering-crows, Cockcoos, curious-coloured Bill-birds, Corresfoes, Turtle-doves, Pigeons, Jaunettes, Clocking-hens, Crabcatchers, Corresfos, *Mufrovy* Ducks, common Ducks, Widgeons, Teal, Curlews, Men-of-war-birds, Boobies, Noddies, Pelicans, &c. The chief of their tame Fowl are Ducks, and other Dunghil Fowl. Of these they have two Sorts, one of the same Size with ours, and another larger, which are sold at a dear Rate here. Their Land-animals are, Horses, Black Cattle, Sheep, Goats, Coneys, Hogs, Leopards, Tygers, Monkeys, Pecary, (a sort of wild Hogs) Armadillos, Alligators, Guanoes, Lizards, Serpents, Frogs, and a sort of amphibious Creature called *Cachora de Aqua* by the *Portuguese*, and Water-dogs by the *English*, from their Resemblance to a flaggy Maltill-dog, with four short Legs. They have here also the *Amphibiana*, or two-headed Snake, of a grey Colour, with black Streaks. Its Bite is reckoned incurable: The best is, that it seldom wounds. Having two Specks in the Head, instead of Eyes, some say it is altogether blind, and lives under-ground like a Mole. Its Length is about fourteen Inches, with an Head at each End; whence the *Portuguese* call it *Cobra de dos Cabeças*, i. e. *The Snake with two Heads*; but I never saw one of these. The Sea hereabouts affords Tarpeins, Mullers, Groopers, Snocks, Gar-fish, Gorafus, Baramas, Coquindas, Cavallies, Dog-fish, Herrings, Seroco, Oko de Boy, Whales, Lobsters, Crayfish, Shrimps, Crabs, common Oysters, Conchs, Wilks, Cockles, Mussels, Periwinkles, and three Sorts of Sea-tortoses, viz. the Hawk-bill, Loggerhead, and green Tortoise. The first is the most esteemed, its Shell being the most beautiful, and therefore sold very dear, and is a very considerable Commodity.

8. *April* 3. in the Morning, we sailed from this Harbour; and, at twelve o'Clock, Cape *Salvadore* bore North, distant six Leagues. The 27th, we came in the Latitude of the *Absidio* Shoals, viz. in 18° and 19° South Latitude. *May* 3. at 20° our meridian Distance from Cape *Salvadore* was 234 Miles, the Variation 7°. The 12th, being in 31° 10' South Latitude, we began to have West Winds; but met with nothing of Moment, except a dead Whale, the Carcase whereof was intirely covered with Birds of divers Sorts, as Pintado-birds, Shearwaters, Petrels, &c. We saw also abundance of Sea-weeds in 30° 32' South Latitude, near the Meridian of the Isle *Tryfan d'Acumna*, as laid down by the *Portuguese*. *June* 2. I saw a large black Fowl, with a white flat Bill, which is said never to fly above thirty Leagues from the Cape of *Good Hope*; whereas, according to my Account, we were ninety Leagues from thence; but soon after found, I was not above twenty-five Leagues from the Cape. *June* 3. steering to the East, we saw a Sail, which proved the *Antelope* of *London*, coming the Day before from the Cape. We kept Company till

the next Day, when they steered for the *East Indies*, and for the Coast of *New Holland*, lying North North-east from the Cape. We did not lose Sight of one another till *June* 6. The 7th, it was very tempestuous Weather, and the Wind continued pretty high till the 16th, and moderate till the 20th, the Wind from West North-west to South by West, when we had run 600 Leagues, and were in 34° 17' South Latitude, and 39° 24' Longitude East from the Cape. The Winds continued at North-east by East till the 27th, and afterwards between North North-west and South South-west till the 4th of *July*; in which Space we sailed 782 Miles. All which time we met with nothing of Remark, except some Birds and Whales; especially as we came nearer to the Shore. About ninety Leagues from the Land, we began to see Sea-weeds, and, about thirty Leagues distant, some Skuttle-bones floating on the Water. *July* 25. being in 26° 14' South Latitude, and 85° 52' Longitude East from the Cape of *Good Hope*, we saw more Sea-weed, like Moss. The 28th, the same increased upon us; and, the 29th, we saw Skuttle-bones, Bonetoes, and Skip-jacks, a Fish of eight Inches long, not unlike a Roch. The 30th, we saw more Skuttle-bones and Sea-weeds, and a sort of Fowls we had not seen before, of a grey Colour, with red sharp Bills, but, for the rest, not unlike Lapwings.

9. *August* 2. we stood in towards the Land, to look for an Harbour to refresh ourselves, after a Voyage of 1121 from *Brafil*. We saw an Opening in 26° South Latitude; but, finding nothing but Rocks and foul Ground, we stood off again the 2d. The 4th, we had 60° 56', and fifty-five Fathom Water; and, the 5th, saw Land again, ten Leagues distant, in 25° 30' South Latitude. The 6th, we saw an Opening in the Land, in which we anchored in two Fathom and an half of Water, *August* 7. I called the Mouth of this Sound *Sharks Bay*, lying in 25° South Latitude, and, according to our Reckoning, in 87° Longitude East from the Cape of *Good Hope*, which is less by 195 Leagues than is laid down in the common Draughts. The Land is pretty high, but the Shore steep to the Sea. The Mould is Sand by the Sea-side, producing a large sort of *Samphire*, which bears a white Flower. Farther in, the Mould is reddish, mixed with a sort of Sand, producing some Grass, Plants, and Shrubs. The Grass grows in great Tufts, as big as a Bushel, here-and-there a Tuft, being intermixed with a great deal of Heath, much of the kind we have growing on our Commons in *England*. Of Trees and Shrubs here are divers Sorts; but none above ten Feet high, their Bodies about three Feet round, and five or six Feet high before you come to the Branches, which are bushy, and composed of small Twigs there, spreading abroad, tho' thick-set, and full of Leaves, which were mostly long and narrow. The Colour of the Leaves was one Side whitish, and on the other green; and the Bark of the Trees was generally of the same Colour with the Leaves, of a pale Green. Some of these Trees were sweet-scented, and reddish within the Bark, like *Sassafras*, but darker. Most of the Trees and Shrubs had, at this time, either Blossoms or Berries on them. The Blossoms of the different Sorts of Trees are of divers Colours, as red, white, yellow, &c. but mostly blue; and these smelt very sweet and fragrant, as did also some of the rest. There were, besides, many Plants, Herbs, and tall Flowers, some very small Flowers growing on the Ground, that were sweet and beautiful, and, for the most part, unlike any I had seen elsewhere. There were but few Land-fowls: I saw none, but many of the larger Sort of Birds, but five or six Sorts of small Birds. The largest Sort of these were no bigger than *Larks*, some no bigger than *Wrens*, all singing, with great Variety of fine shrill Notes; and we saw some of them with Young-ones in them. The Water-fowls are, *Penguins* (which had Young-ones, this being the Beginning of the Spring in those Parts) Curlews, Gallens, Crabs, Cormorants, Gulls, Pelicans, and some Water-towls, as I have not seen any-where besides. The Land-animals that we saw here, were only a sort of *Macropods*, distant from those in the *West Indies*, chiefly as to their Legs, which they jump, as the rest of their Species do, and are like them, very good Meat; and a sort of *Guanoes*, differing from them in some remarkable Particulars, as these had a larger and more frightful Head, and had

Tail; and, at the Rump, where a Tail should have been placed, there appeared something resembling an Head; but without Mouth or Eyes. Their Legs also differed from other Creatures of the same Kind, by their appearing to be so made, as to carry the Body either way; which, with the Particular before-mentioned, might make a common Spectator apprehend this Creature had two Heads. They were speckled black and yellow, like Toads; and had Scales on their Backs, like Crocodiles. They are very slow in Motion; and, when a Man comes nigh them, they will stand stock-still, and hiss, without endeavouring to get away; and the Body, when opened, hath a very unfavourable Smell. I never saw such ugly Creatures any-where, but here. The Guanas, in other Parts, I have observed to be very good Meat, and have often eat of them with great Satisfaction; but tho' I have eaten of Snakes, Crocodiles, and Alligators, yet, I believe, the quickest Sense of Hunger would not have tempted me to taste the Guana of *New Holland*. The Sea-fish we saw here, (for there was no Fresh-water of any kind to be seen) are chiefly Sharks. There are abundance of them in this Sound; which was the Reason I called it *Sharks Bay*. There were also Skates, Thornbacks, and other Fish of the Prey-kind, (one Sort especially like the Sea-devil) and Guardfish, Bonatos, &c. Of Shell-fish we got also there Mussels, Periwinkles, Limpits, Oysters, both of the Pearl-kind, and of such as were eatable, besides Cockles, &c. The Shore was lined thick with many other Sorts of very strange and beautiful Shells, of Variety of Colour and Shape, most finely spotted with red, yellow, &c. such as I have not seen any-where, but at this Place. I brought away a great many of them; but lost all, except a very few, and those not of the best. There are also some green Turtles, weighing about 200 lb. Of these we caught two, which the Water ebbing had left behind a Ledge of Rocks, which they could not creep over. These served all my Company two Days, and they were indifferent sweet Meat. Of the Sharks we caught a great many, which our Men eat very favourably. Among these we caught one, that was eleven Feet long. The Space between its two Eyes was twenty Inches, and eighteen Inches from one Corner of its Mouth to the other. Its Maw was like a Leather-sack, very thick, and so tough, that a sharp Knife could scarce cut it; in which we found the Head and Bones of an Hippopotamus, the hairy Lips of which were still found, and not putrefied; and the Jaw was also firm, out of which we plucked a great many Teeth, two of them eight Inches long, and as big as a Man's Thumb, small at one End, and a little crooked; the rest not above half so long. The Maw was full of Jelly, which stunk extremely; however, I saved for awhile the Teeth, and the Shark's Jaw. The Flesh of it was divided among my Men, and they took care that no Waste should be made of it, but thought it, as things stood, good Entertainment.

10. We anchored at three several Places in this Bay; August 7. at the West Side. Here we staid till the 10th. We searched for fresh Water; but found none: However, we got some Wood for Fuel. The 11th, we steered farther in; towards Afternoon saw the Land, that makes the South of the Bay; but, meeting with Shoals, I steered away to the East; and, the 12th, passed the North Point of the Land, and stood farther into the Bay, to see what Land we could observe to the East, which we saw right a-head; but, having but shoal Water, I made the best of my way to return to the West Entrance. The 14th, I sailed again out of this Bay to the North-east, coasting along the Shore. The 15th, we were in 24° 41'; and, the 16th, at 23° 22'. The 17th, we saw Land again. The 18th, we saw abundance of Whales near a shoal Point, in 22° 22'; and, the 19th, in 21° 42'; the 20th, at 19° 37'. The 21st, we saw abundance of Sea-snakes, of two different Sorts and Shapes. At Noon, bearing in South-east by East, the Land appeared like a Cape; but, anchoring about five Leagues from the *Bluff-point*, it proved the East End of an Isle, six Leagues in Length, and one in Breadth, being surrounded on all Sides with many other small rocky Isles, which, in all Appearance, are a Range of Islands, stretching from North North-east to West South-west, perhaps as far as *Sharks Bay*, and nine or ten Leagues in Breadth towards *New Holland*. The Tides I met with a little while

NUMB. IX.

after gave me a Suspicion, that there might be a kind of *Archipelago* of Isles, and a Passage to the South of *New Holland* and *New Guiney* into the great South Sea Eastward; but, being in want of Water, I would not attempt the Discovery of it. This Place is in 20° 21'; whereas *Tasman*, in his Draught, has laid it down in 19° 50', and has represented the Land as joining in one Ridge to the Continent. We went ashore in the Isle of *Bluff-point*, where we found two or three Shrubs, one like *Rosemary*; whence I called it *Rosemary Isle*; and two Sorts of Grain, like Beans, one growing on Bushes, the other on a kind of creeping Vine. We saw also some Cormorants, Gulls, Crabcatchers, &c. as also Limpits, Periwinkles, Oysters, on the Rocks, some green Tortoises, Sharks, and Water-snakes. The 23d, we ran out again; and, the 25th, we still coasted along. The 27th and 28th, we saw no Land; but, the 30th, in 18° 21', made the Land, and anchored in eight Fathom Water, thirty Leagues from the Shore.

11. August 30. being in 18° 21', we made the Land again, and saw many great Smokes near the Shore; and, having fair Weather, and moderate Breezes, I steered in towards it. At four in the Afternoon, I anchored in eight Fathom Water, clear Sand, about three Leagues and an half from the Shore. I presently sent my Boat to sound nearer in, and they found ten Fathom about a Mile nearer the Shore, and, from thence still farther in, the Water decreased gradually to nine, eight, seven, and, at two Miles Distance, to six Fathom. This Evening, we saw an Eclipse of the Moon; but it was abating before the Moon appeared to us; for the Horizon was very hazy, so that we could not see the Moon, till she had been half an Hour above the Horizon; and, at two Hours twenty-two Minutes after Sun-set, by the Reckoning of our Glasses, the Eclipse was quite gone, which was not of many Digits. The Moon's Centre was then 33° 4' high. The 31st betimes in the Morning, I went ashore with ten or eleven Men, to search for Water. We went all of us armed with Muskets and Cutlasses for our Defence, expecting to see People there, and carried also Shovels and Pickaxes to dig Wells. When we came near the Shore, we saw three tall, black, naked Men on the sandy Bay a-head of us; but, as we rowed in, they went away. When we were landed, I sent the Boat, with two Men in her, to lie a little from the Shore at Anchor, to prevent her being seized, while the rest of us went after the three black Men, who were now got up to the Top of a small Hill, about a quarter of a Mile from us, with eight or nine more Men in their Company. They, seeing us come, ran away. When we came on the Top of the Hill where they first stood, we saw a plain Savanna about half a Mile from us. Farther in from the Sea, there were several things like Haycocks standing in the Savanna, which, at a Distance, we thought were Houses, looking just like the *Hottentots* Houses at the Cape of *Good Hope*; but we found them to be so many Rocks. We searched about these for Water; but could find none, nor any House, nor People; for they were all gone. Then we turned again to the Place where we landed, and there we dug for Water. While we were at work, there came nine or ten of the Natives to a small Hill a little Way from us, and stood there menacing and threatening us, and making a great Noise. At last one of them came towards us, and the rest followed at a Distance. I went out to meet him, and came within fifty Yards of him, making to him all the Signs of Peace and Friendship I could; but then he ran away, neither would any of them stay for us to come nigh them, tho' we tried three or four times. At last, I took two Men with me, and went in the Afternoon along by the Sea-side, on purpose to catch one of them, if I could, of whom I might learn where they got their fresh Water. There were ten or twelve of the Natives a little Way off, who, seeing us three going away from the rest of our Men, followed us at a Distance. I thought they would follow us; but, there being for awhile a Sand-bank between us and them, that they could not then see us, we made an Halt, and hid ourselves in a Bending of the Sand-bank. They knew we must be thereabouts; and, being three or four times our Number, thought to seize us: So they dispersed themselves, some going to the Sea-shore, and others beating about the Sand-hills. We knew, by what Rencontre we had had

with them in the Morning, that we could easily outrun them; so a nimble young Man, that was with me, seeing some of them there, ran towards them, and they, for some time, ran away before him; but he soon overtaking them, they faced about, and fought him. He had a Cutlass, and they had wooden Lances, with which, being many of them, they were too hard for him. When he first ran towards them, I chafed two more, that were by the Shore; but, fearing how it might be with my young Man, I turned back quickly, and went up to the Top of a sandy Hill, whence I saw him near me, closely engaged with them. Upon their seeing me, one of them threw a Lance at me, which narrowly missed me. I discharged my Gun to scare them; but avoided shooting any of them, till, finding the young Man in great Danger, and myself in some, and that, tho' the Gun had a little frightened them at first, yet they had soon learnt to despise it, tossing up their Hands, and crying *Pooh, pooh, pooh*, and coming on afresh with a great Noise, I thought it high time to charge again, and shoot one of them; which I did. The rest, seeing him fall, made a Stand; and my young Man took the Opportunity to disengage himself, and come off to me. My other Man also was with me, who had done nothing all this while, having come out unarmed; and I returned back with my Men, desisting to attempt the Natives no further, being very sorry for what had happened already. They took up their wounded Companion; and my young Man, who had been struck through the Cheek with one of their Lances, was afraid it had been poisoned; but I did not think that likely. His Wound was very painful to him, being made with a blunt Weapon; but he soon recovered of it. Among the *New Hollanders*, whom we were thus engaged with, there was one, who by his Appearance and Carriage, as well in the Morning, as the Afternoon, seemed to be the Chief of them, and a kind of Prince or Captain among them. He was a young brisk Man, not very tall, nor so personable as some of the rest, tho' more active and courageous. He was painted (which none of the rest were at all) with a Circle of white Pigment, a sort of Lime, as we thought, about his Eyes, and a white Streak down his Nose, from his Forehead to the Tip of it; and his Breast, and some Part of his Arms, were also made white with the same Paint; not for Beauty or Ornament, one would think; but, as some wild *Indian* Warriors are said to do, he seemed thereby to design the looking more terrible, this his Painting adding very much to his natural Deformity; for they all of them have the most unpleasant Looks, and the worst Features, of any People I ever saw, though I have seen great Variety of Savages. These *New Hollanders* were probably the same sort of People, as those I met with on this Coast in my Voyage round the Globe; for the Place I then touched at, was not above forty or fifty Leagues to the North-east of this, and these were much the same blinking Creatures; here being also abundance of the same kind of Flesh-fishes teizing them, and with the same black Skins, and Hair frizzled, tall and thin, &c. as these were; but we had not the Opportunity to see whether these, as the former, wanted two of their fore Teeth. We saw a great many Places where they had made Fires, and where there were commonly three or four Boughs stuck up to Windward of them; for the Wind, which is the Seabreeze in the Day-time, blows always one Way with them, and the Land breeze is but small. By their Fire-places we always found great Heaps of Fish-shells of several Sorts; and 'tis probable, that these poor Creatures here lived on the Shell-fish, as those I described before did on small Fish, which they caught in Wires, or Holes in the Sand at Low-water. These gathered their Shell-fish on the Rocks at Low-water, but had no Wires that we saw, whereby to get any other Sorts of Fish, as, among the former, I saw not any Heaps of Shells as here, though I know they also gathered some Shell-fish: The Lances also of these were such as the former had; however, they being upon an Island with their Women and Children, and all in our Power, they did not there use them against us, as here on the Continent, where we saw none but some of the Men at a Distance, who came out purposely to observe us: We saw no Houses at either Place; and I believe they have none, since the former People on the Island had none,

though they had all their Families with them. Upon returning to my Men, I saw that they had dug eight or nine Feet deep, yet found no Water: So I returned aboard that Evening; and the next Day, being *September 1*, I sent my Boatwain ashore to dig deeper, and sent the Sail with him to catch Fish. While I staid aboard, I observed the Flowing of the Tide, which runs very swift here, so that our Nun-buoy would not bear above the Water to be seen. It flows here, as on the Part of *New Holland* I described formerly, about five Fathom; and here the Flood runs South-east by South till the last Quarter; then it lies right in towards the Shore, which lies here South South-west, and North North-east, and the Ebb runs North-west by North. When the Tides slackened, we fished with Hook and Line, as we had already done in several Places on this Coast, on which, in this Voyage hitherto, we had not but little Tides; but, by the Height, Strength, and Course of them hereabouts, it should seem, that if there be such a Passage or Strait going through Eastward to the Great South Sea, as I said one might suspect, one would expect to find the Mouth of it somewhere between this Place and *Rosmary* Island, which was the Part of *New Holland* I came last from.

12. If it were not for that sort of Pleasure which results from the Discovery even of the barrenest Spot upon the Globe, this Coast of *New Holland* would not have charmed me much. The Lands here, as well as in other Parts of *New Hells*, that I have seen, are so fenced by a Chain of Sand-hills towards the Sea, that there is no such Thing as discerning what lies beyond them; at High-water the Tides rise so surprisingly on this Coast, that the Land appears very low; but, at Low-water again, it appears of an insupportable Height; but then the Shore is so rocky, that there is no such thing as landing with a Boat; but at High-water a Boat may very easily come in over all those Rocks to the only Bay which surrounds this Coast. The Land, for about 5 or 600 Yards from the Sea, is of a dryish sandy Soil, with nothing but a few Shrubs and Bushes, which, when I was there, seemed to be in Bloom, bearing Flowers of several Colours, such as Yellow, Blue, and White, of a very fragrant Smell; and, as to their Fruit, they seem to be a kind of Pease or Beans. Farther within Land, the Country seemed to be low and level, partly Savannas, and partly Wood-land: The former affords a coarse kind of Grass, and the latter Groves of Trees that are small, and not above twelve or fourteen Feet high. There are very few Land-animals; some Lizards I saw, and some of my Seamen saw two or three Creatures not unlike Wolves, but so lean, that they looked like mere Skeletons. As for Land-fowls, there are Crows, Hawks, Kites, and Turtle-doves, that are small, but very plump and fat. The Sea-fowls are Pelicans, Boobies, Noddies, Curlews, Sea-pies, in great Numbers. There are abundance of Whales in these Seas, and those of the large Kind. We saw also green Turtle, but there being no proper Chanel for them, we caught none, as having no Place to set a Turtle-net in. We saw some Sharks, and caught with Hooks and Lines, some Rock-fish and Old-wives. Of Shell-fish, we found here Oysters of the Pearl-kind, and fit for eating; and Wilks, Mussels, Limpets, Prowinkles, and many other Sorts; and I gathered several curious Shells on the Shore. The Scurvy beginning to prevail amongst my Men, gave me great Uneasiness, especially, as I had Reason to apprehend, that the Disease would increase, rather than diminish, while I remained here, on account of the bad Air, and brackish Water; and therefore I frequently sent ashore to search for fresh-water Springs, or to dig Wells, but to no Purpose: Wherefore I determined to proceed in my Voyage; and, if I met with a Retirement elsewhere, to prosecute my Course to the Island of *Tiner*.

13. I had spent about five Weeks in ranging off and about the Coast of *New Holland*, in Length of about 100 Leagues; and had put in at three several Places to see what there might be thereabouts worth discovering; and at the same time, to recruit my Stock of fresh Water and Provisions, for the farther Discoveries I purposed to attempt on the *Terra Australis*. advantageously, in the richest Climates of the World, the Torrid and Temperate Zones, having in it, especially, all the Advantage of the Torrid Zone, as being known to reach from the Equator itself (within a Degree) to the Tropic of Capricorn, and beyond it; that in coasting round it, which I designed by this Voyage, if possible, I could not but hope to meet with some fruitful Lands, Continent or Island, or both, productive of any of the rich Fruits, Drugs, or Spices, (perhaps Minerals also, &c.) that are in the other Parts of the Torrid Zone, under equal Parallels of Latitude, at least a Soil and Air capable of such, upon transplanting them hither, and Cultivation. I meant also to make as diligent a Survey as I could of the several smaller Islands, Shores, Capes, Bays, Creeks, and Harbours, fit as well for Shelter as Defence, upon fortifying them; and of the Rocks and Shoals, the Soundings, Tides, and Currents, Wind and Weather Variation, &c. whatever might be beneficial for Navigation, Trade, or Settlement, or be of Use to any who should prosecute the same Designs hereafter, to whom it might be serviceable to have so much of their Work done to their Hands, which they might advance and perfect by their own repeated Experiences. As there is no Work of this kind brought to Perfection at once, I intended, especially, to observe what Inhabitants I met with, and to try to win them over to somewhat of Traffick, and useful Intercourse, as there might be Commodities among any of them that might be fit for Trade or Manufacture, or any found in which they might be employed; though, as to the *New Hollanders* hereabouts, by the Experience I had had of their Neighbours formerly, I expected no great Matters from them. With such Views as these I set out at first from *England*; and would, according to the Method I proposed, have gone Westward thro' the *Magellanic* Strait, or round *Terra del Fuogo* rather, that I might have begun my Discoveries upon the Eastern and least known Side of the *Terra Australis*: But that Way was not possible for me to go, by reason of the Time of Year in which I came out; for I must have been compassing the South of *America* in a very high Latitude, in the Depth of the Winter: I was therefore necessitated to go Eastward, by the Cape of *Good Hope*; and, when I should be past it, 'twas requisite I should keep in a pretty high Latitude, to avoid the general Trade-winds that would be against me, and to have the Benefit of the variable Winds, by all which I was in a manner unavoidably determined to sail in first with those Ports of *New Holland* I have hitherto been describing: For, should it be asked, why, at my first making that Shore, I did not call into the Southward, and that Way try to get round to the East of *New Holland*, and *New Guinea*, I confess, I was not for spending any Time more than was necessary in the higher Latitudes, as knowing that the Land there could not be so well worth the Discovery, as the Parts that lay nearer the Line, and more directly under the Sun. Besides, at the Time when I should come first on *New Holland*, which was early in the Spring, I must, had I stood Eastward, have had, for some time, a great deal of Winter Weather, increasing in Severity, though not in Time, and in a Place altogether unknown, which my Men, who were heartless enough to the Voyage at best, would never have borne, after so long a Run from *Brazil* hither. For these Reasons, therefore, I chose to coast along to the Northward, and so to the East; and so thought to come round by the South of *Terra Australis* in my Return back, which should be in the Summer Season there. And this Passage back also I now thought I might possibly be able to shorten, should it appear, at my getting to the East Coast of *New Guinea*, that there is a Channel coming out into those Seas, as I now suspected, near *Rosemary Island*, unless the high Tides, and great Indraught thereabouts, should be occasioned by the Mouth of some large River, which hath often Low-lands on each Side of its Outlet, and many Islands and Shoals lying at its Entrance. But I rather thought it a Channel, or Strait, than a River; and I was afterwards confirmed in this Opinion, when, by coasting *New Guinea*, I found, that other Parts of this great Tract of *Terra Australis*, which had hitherto been represented as the Shore of a Continent, were certainly Islands, and 'tis probable, the same with *New Holland*; though, for Reasons I shall

afterwards shew, I could not return the Way I proposed to myself to fix the Discovery. All that I had now seen from the 27° South Latitude, to the 25°, which is *Sharks Bay*, and again from thence to *Rosemary Islands*, and about 20° Latitude, seems to be nothing but Ranges of pretty large Islands against the Sea, whatever might be behind them to the Eastward, whether Sea or Land, Continent or Islands. It was now necessary for me to consider what Step to take next; and, after mature Deliberation, I resolved to continue coasting along the Shore to the North Eastward, in order to the further Discovery of the Country, from a full Persuasion, that, at least, in the Latitude of 16° 15', I should not miss of sweet Water, having been there before, and met with it by digging. This Notion was certainly reasonable in itself, and yet Experience shewed it was but indifferently founded; and a very little Accident of this sort became of Consequence among a Crew ready to lay hold of any Opportunity to call their Commander's Knowledge in question, to magnify the Difficulties of the Voyage, and to countenance whatever might seem to support their own favourite, though impracticable, Design of returning Home.

14. Such, I say, were my Thoughts of the Matter; when, *Sept. 5. 1699*, I put to Sea with a gentle Gale: Yet was I quickly obliged to change my Design. In a Day's time I perceived, that the Shoals upon the Coast would make it a very difficult, if not impracticable, Thing to sail along the Shore, or to put in where I might incline to do it. I therefore edged farther off to Sea, and so deepened the Water from eleven to thirty-two Fathom. The next Day, being *September 6*, we could but just discern the Land, though we had then no more than about thirty Fathom uncertain Soundings; for, even while we were out of Sight of Land, we had once but seven Fathom, and had also great and uncertain Tides whirling about, that made me afraid to go near a Coast so shallow, where we might be soon aground, and yet have but little Wind to bring us off: For should a Ship be near a Shore, we might be hurled upon it unavoidably by a strong Tide, unless there should be a good Wind to work her off. Thus, also, on the 7th Day, we saw no Land, though our Water decreased again to twenty six Fathom; for we had deepened it, as I said, to thirty. This Day we saw two Water-snakes, different in Shape from such as we had formerly seen; the one was very small, though long; the other long, and as big as a Man's Leg, having a red Head, which I never saw any have before or since. We had this Day 16° 9' Latitude by Observation: I was, by this time, to the North of the Place I thought to have put in at; and though I knew, by the Experience I had of it then, that there was a deep Entrance in thither from the Eastward, yet, by the Shoals I had hitherto found, so far stretched on this Coast, I was afraid we should have the same Trouble to coast along afterwards beyond that Place; and, besides the Danger of running almost continually amongst Shoals on a strange Shore, and where the Tides were strong and high, I began to bethink myself, that a great Part of my Time must have been spent in being about a Shore I was already almost weary of, which I might employ with greater Satisfaction to my Mind, and better Hopes of Success, in going forward to *New Guinea*: Add to this, the particular Danger I should have been in upon a Lee shore, such as is here described, when the North-west Monsoon should once come in, the ordinary Season of which was not now far off, though this Year it staid beyond the common Season; and it comes on storming, at first, with Tornadoses, violent Gulls, &c. Wherefore, quitting the Thoughts of putting in at *New Holland*, I resolved to steer away for the Island *Timor*; where, besides getting fresh Water, I might probably expect to be furnished with Fruits, and other Refreshments, to recruit my Men, who began to droop, some of them being already, to my Grief, afflicted with the Scurvy, which was likely to increase upon them, and distable them, and was promoted by the brackish Water they took in last for boiling their Oatmeal. 'Twas now, also, towards the latter End of the dry Season, when I might not, probably, have found Water so plentifully upon digging at that Part of *New Holland*, as when I was there before: And then, considering the Time also that I

must necessarily spend in getting into the Shore, through such Shoals as I expected to meet with, or in going about to avoid them, or in digging of Wells, when I should come thither, I might very well hope to get to *Timor*, and find fresh Water there, as soon as I could expect to get it at *New Holland*, and with less Trouble and Danger. Such were the Reasons, that conduced to my forming a settled Resolution to bear away immediately for the before-mentioned Island, which I executed without Delay.

15. It was on *September 8.* that we sailed for *Timor*, where I had heard there were both *Dutch* and *Portuguese* Settlements; but whereabouts in the Island, I knew not; and therefore it was the same Thing to me which Side of it I made first. On the 14th, in the Evening, I had Sight of it; but it was the 15th before I attempted to land. The Country appears pleasant enough to the Eye; for the Mountains were covered with Wood, and the adjacent Meadows were very rich in Grass, though we could discover no Signs of Inhabitants, much less of *European* Plantations. This, and the Wind's blowing again from the South-east, engaged me to try what might be done on the North Side of the Island, where I was sure of having smooth Water, and had a Probability of finding easier Landing; for, on the Side where I was, the Land was so incumbered with Mangroves, that there was no such thing as getting ashore without running great Hazards. On the 18th, about Noon, I altered my Course, and steered back towards the South-west End of the Island. In the Evening, we saw the Island of *Rotee*, and another Island to the South of that; on both which Islands we discovered Smoak in the Day-time, and Fires in the Night. I was afterwards informed, that the *Portuguese* have Sugar-works upon the Island of *Pite*; but, as I knew nothing of that now, and the Country had not a very promising Aspect, I did not attempt anchoring there, but stood over again to the Coast of *Timor*. On the 21st, in the Morning, being very near that Island, I saw a very large Opening, which, from East to West, appeared to be five Leagues in Breadth; into which I entered with my Ship, founding as I went; and, at last, anchored in nine Fathom Water, at the Distance of about a League from the Shore. This appeared to me then as a large Inlet, or Bay, which entered very deep into the Island of *Timor*; but I afterwards found, that it was really a Strait, or Passage, between that and another Island, called *Anamabao*, or *Anabao*. I was led into my Mistake by the Sea Charts, which represent both Sides of the Opening as Parts of the same Coast, making the Whole but one Island, and calling it by the Name of *Timor*. Such Errors as these are frequent, happening sometimes through Accidents, sometimes from Design; and therefore a greater Service cannot be rendered to Navigators in general, than to rectify such Mistakes; and it would be well, if those, who make Maps and Charts, would be careful in perusing Voyages, and not content themselves with barely copying such Draughts as come to hand, by which means they frequently adopt, not only the Mistakes, but the mischievous Designs, of others, who, by false Representations, endeavour to conceal what ought to be made known for the public Good.

16. I proposed to have sailed through this Opening to the Main, but I had not sailed far, before the Wind came about to the South-east, and blew so strong, that I could not venture with Safety nearer that Side, because it was a Lee-shore; besides, my Boat was on the East Side of the *Timor* Coast; for the other way, as I found afterwards, the *Anabao* Shore; and the great Opening I now was in, was the Strait between that Island and *Timor*; towards which I now tacked, and stood over. Taking up my Boat, therefore, I ran under the *Timor* Side, and anchored at three o'Clock, in 29 Fathom, half a Mile from the Shore. That Part of the South-west Point of *Timor*, where we anchored in the Morning, bore now South by West, Distance three Leagues; and another Point of the Island bore North North-east, Distance two Leagues. Not long after, we saw a Sloop coming about the Point last-mentioned with *Dutch* Colours, which I found, by sending my Boat aboard, belonged to a *Dutch* Fort, the only one they have in *Timor*, about five Leagues from hence, called *Concordia*. The Governor of the Fort was in the Sloop, and about forty

Soldiers with him. He appeared to be somewhat surpris'd at our coming this Way, which, it seems, is a Passage scarce known to any but themselves, as he told the Men I sent to him in my Boat; neither did he seem willing, that we should come near their Fort for Water. He said also, that he did not know of any Water on all that Part of the Island, but only at the Fort; and that the Natives would kill us, if they met us ashore. By the small Arms my Men carried with them in the Boat, they took us to be Pirates, and would not easily believe the Account my Men gave them of what we were, and whence we came. They said, that, about two Years before this, there had been a stout Ship of *French* Pirates here; and that after having been suffer'd to water, and refresh themselves, and been kindly us'd, they had on a sudden gone among the *Indians*, Subjects of the Fort, and plundered them, and burnt their Houses. And the *Portuguese* here told us afterward, that those Pirates, whom they also had entertained, had burnt their Houses, and had taken the *Dutch* Fort, (though the *Dutch* cared not to own so much) and had driven the Governor and Factory among the wild *Indians*, their Enemies. The *Dutch* told my Men further, they could not but think we had of several Nations (as is usual with Pirate-vessels) in our Ship, and particularly some *Dutchmen*; though all the Discourse was in *French*, for I had not one who could speak *Dutch*: Or else, since the common Draughts make no Passage between *Timor* and *Anabao*, but laid down both as an Island, they said, they suspected we had plunder'd some *Dutch* Ship of their particular Draughts, which they are forbid to part with. With these Jealousies, the Sloop returned towards their Fort, and my Boat came back with this News to me. But I was not discourag'd at this News, not doubting but I should persuade them better when I should come to talk with them. So the next Morning I weigh'd, and stood towards the Fort: The Winds were somewhat against us, so that we could not go very fast, being oblig'd to tack two or three times; and, coming near the farther End of the Passage, between *Timor* and *Anabao*, we saw many Houses on each Side, not far from the Sea, and several Boats lying by the Shore. The Land on both Sides is pretty high, appearing very dry, and of a reddish Colour, but highest on the *Timor* Side. The Trees on either Side were but small, the Wood thin; and, in many Places, the Trees were dry and wither'd.

17. The Island *Anamabao*, or *Anabao*, is not very big, not exceeding ten Leagues in Length, and four in Breadth; yet has two Kingdoms in it; viz. that of *Anamabao* on the East Side towards *Timor*, and the North-east End; and that of *Anabao*, which contains the South-west End, and the West Side of the Island; but I know not which of them is biggest. The Natives of both are of the *Indian* Kind, of a swarthy Copper-colour, with black lank Hair. Those of *Anamabao* are in League with the *Dutch*, as they afterwards told me, and with the Natives of the Kingdom of *Cepang*, in *Timor*, over-against them, in which the *Dutch* Fort *Concordia* stands. But they are said to be inveterate Enemies to their Neighbours of *Anabao*. Those of *Anabao*, besides managing their small Plantations of a few Cocoa-trees, fish, strike Turtle, and hunt Buffaloes, killing them with Swords, Darts, or Lances: But I know not how they get their Iron; I suppose by Traffick with the *Dutch* or *Portuguese*, who send now-and-then a Sloop, and trade thither, but well-armed; for the Natives would kill them, could they surpris'e them. They go always armed themselves; and, when they go a Fishing or Hunting, they spend four or five Days, or more, in ranging about, before they return to their Habitation. We often saw them after this at these Employments, but they would not come near us. The Fish or Flesh that they take, besides what serves for present spending, they dry on a Barbacue, or wooden Grate, standing pretty high over the Fire, and to carry it home when they return; we saw some time afterwards to the Places where they had Meat thus a drying, but did not touch any of it. But, to proceed: I did not think to stop any-where till I came to the Fort, which yet I did not see; but, coming to the End of this Passage, I found, that, if I went any farther, I should be open again to the Sea: I therefore stood in to the Shore on the East Side, and anchored in four Fathom

Water, from seeing for it; and, told me, th and that it w being now. Next Mornin *Indians*, Ne thence, cam where they were armed much Noise from landing. Notice of t the 23d, I Governor, t the King's young Man with the Go Queries abo him, that I desired to sp come ashore the Stern-th Boat again, solicited him and, at last, ashore; and a Guard of receive him: of Water, a Watering-pl he had Order *India* Compa come the W approach the we been Encl for Water. Insepect into therefore be g that I had them, would on board, wh and that I w The Govern wanted, pro order'd, tha Boat full of off the Fort, t fill them; fo The same A with an Offic vernor, whic a Ton of W 18. Water, sandy Ground, a Point of Land still hindering me from seeing the Fort. But I sent my Boat to look out for it; and, in a short time, she returned; and my Men told me, they saw the Fort, but did not come near it; and that it was not above four or five Miles from hence. It being now late, I would not send my Boat thither till the next Morning; mean while, about two or three hundred *Indians*, Neighbours of the Fort, and sent probably from thence, came to the sandy Bay, just against the Ship, where they staid all Night, and made good Fires. They were armed with Lances, Swords, and Targets, and made much Noise all the Night. We thought it was to scare us from landing, should we attempt it; but we took little Notice of them. The next Morning, being September the 23d, I sent my Clerk ashore, in my Pinnace, to the Governor, to satisfy him, that we were *Englishmen*, and in the King's Ship, and to ask Water of him, sending a young Man with him, who spake *French*. My Clerk was with the Governor pretty early; and, in Answer to his Queries about me, and my Business in these Parts, told him, that I had the King of *England's* Commission, and desired to speak with him: He beckoned to my Clerk to come ashore; but, as soon as he saw some small Arms in the Stern-sheets of the Boat, he commanded him into the Boat again, and would have him be gone: My Clerk solicited him, that he would allow him to speak with him; and, at last, the Governor consented, that he should come ashore; and sent his Lieutenant, and three Merchants, with a Guard of about an hundred of the native *Indians*, to receive him: My Clerk said, that we were in much want of Water, and hoped they would allow us to come to their Watering-place, and fill. But the Governor replied, that he had Orders not to supply any Ships but their own *East India Company*, neither must they allow any *Europeans* to come the Way that we came, and wondered how we durst approach their Fort. My Clerk answered him, that, had we been Enemies, we must have come ashore among them for Water. But, said the Governor, you are come to inspect into our Trade and Strength, and I will have you therefore be gone with all Speed. My Clerk answered him, that I had no such Design; but, without coming nearer them, would be contented, if the Governor would send Water on board, where we lay, about two Leagues from the Fort; and that I would make any reasonable Satisfaction for it. The Governor said, that we should have what Water we wanted, provided we came no nearer with the Ship; and ordered, that, as soon as we pleased, we should send our Boat full of empty Casks, and come to an Anchor with it off the Fort, till he sent Slaves to bring the Casks ashore, and fill them; for that none of our Men must come ashore: The same Afternoon I sent up my Boat, as he had directed, with an Officer, and a Present of some Beer for the Governor, which he would not accept, but sent me off about a Ton of Water.

18. After this, I sent my Boat ashore several times, with the same Officer on board, to transact Matters with the Governor. But, as this Officer had no great mind to the Voyage, and desired nothing so much as to see us obliged to return home, he made such strange Reports of the Governor, that the rest of the Officers, and the Ship's crew, grew uneasy; so that though we were kindly entertained by the Inhabitants of the other Island, who brought us every Day Fish and Fruits to sell, yet it was resolved, in a Council held upon this Subject, that we should leave the Neighbourhood of the *Dutch* Fort, and endeavour, if it was possible, to find the *Portuguese* Settlements, where we were in hopes of being better treated. On the 27th in the Morning, we anchored in the Middle of *Copang* Bay; but, being able to discover nothing worth mentioning there, we sailed from thence still Northward, in Search of the *Portuguese* Settlements. On the 29th, we continued coasting, without finding any proper Place to land. The next Day I sent my Mate ashore, who discovered a very good Watering-place in a Bay where there was safe Anchorage; which was a very acceptable Service; and I went the next Morning on shore, in order to give the necessary Directions. In the Space of three Days, we filled about twenty-six Ton of Water, and then had on board about thirty Ton in all. The two following Days

NUMB. 9.

we spent in Fishing with the Saln, and the first Morning caught as many as served all my Ship's Company: But we had not afterward so good Success. The rest of my Men, who could be spared from the Ship, I sent out, with the Carpenter's Mate, to cut Timber for my Boats. These went always attended by three or four armed Men, to secure them. I shewed them what Wood was fitting to cut for our Use, especially the Calabash and Maho; I shewed them also the manner of stripping the Maho-bark, and of making therewith Thread, Twine, Ropes, &c. Others were sent out a Fowling, who brought home Pigeons, Parrots, Cockatoos, &c. I was always with one Party or other myself, especially with the Carpenters, to hasten them to get what they could, that we might be gone from hence. On the 6th of *October* I sailed from this Place; and, on the 12th, arrived safely at the first *Portuguese* Settlement, and was very well received there, the People seeming very willing to do me any Service in their Power. And, afterwards, I stood round again nearer to the *Dutch* Fort of *Concordia*; from whence the Governor sent me a Message, by which all former Mistakes were cleared up, and a good Understanding restored; so that, at the Request of that Gentleman, I went ashore, and dined with him at his Fort; where I found great Plenty of very good Victuals, very well dressed, the Linen white and clean, and all the Plates and Dishes either Silver, or very fine *China*. This, indeed, must be said in Favour of the *Dutch*, that in all their Settlements, every thing is managed with the utmost Decency and Order. After Dinner he shewed me some Drawers full of Shells, of which he had a very curious and well-chosen Collection. He seemed to be highly frank and open; told me, that, as to Naval Stores, it was not in his Power to supply me; but that, for fresh Provisions, or whatever else he could spare, I might be sure of them: For which I thanked him, but made no Use of his Offer; because my Ship lay at a good Distance from the Fort, and I was afraid of trusting my Men so far in the Country, for fear the Natives should attack them. We met with great Plenty of Grain, so that, during all the Time we staid here, very little of our salt Provisions were consumed. We saw almost every Day exceeding black Clouds, and heard it thunder for near a Month in the Mountains, where we likewise saw it rain, but none came near us till about four Days before our Departure: Previous to my Account of which, I shall give an exact Description of the Country.

19. The Island of *Timor* is about seventy Leagues long, and sixteen broad: It lies nearly South-east and South-west. The Middle of it lies in about 9° South Latitude. It has no navigable River, nor any Harbours, but abundance of Bays for Ships to ride in safely enough at some Seasons of the Year. The Shore is very bold, free from Rocks, Islands, or Shoals, excepting a few, which are visible, and therefore easily avoided. It is a pretty even Shore, with sandy Bays, and low Land, for about three or four Miles up into the Country; but, beyond that Space, it is mountainous. There is no Anchoring but within half a League, or a League at farthest, from the Shore; and the low Land, that bounds the Sea, hath nothing but red Mangroves, from the Foot of the Mountains, till you come within 150 or 200 Paces of the Sea; and then you have Sand-banks, covered with a sort of Pine, so that there is no getting Water on this Side because of the Mangroves. At the South-west End of *Timor* is a pretty high Island, called *Anabao*. It is about ten or twelve Leagues long, and about four broad; near which the *Dutch* are settled. It lies so near *Timor*, that it is laid down in our Draughts as Part of that Island; yet we found a narrow deep Channel, fit for any Ships to pass between them. This Channel is about ten Leagues long, and, in some Places, not above a League wide. It runs North-east and South-west, so deep, that there is no anchoring but very nigh the Shore. There is but little Tide, the Flood setting North, and the Ebb to the Southward. At the North-east End of this Channel are two Points of Land, not above a League asunder, one on the South Side upon *Timor*, called *Copang*; the other on the North Side, upon the other Island *Anabao*. From this last Point the Land trends away Northerly two or three Leagues, opens to the Sea, and then bends in

2 I

again

again to the Westward. Being past these Points, you enter into a Bay about eight Leagues long, and four wide. This Bay turns in, on the South Side, North-east by East from the South Point before-mentioned, making many small Points, or little Coves. About a League to the East of the said South Point, the Dutch have a small Stone Fort, situated on a solid Rock, close by the Sea. This Fort they call *Concordia*. On the East Side of the Fort, there is a small River of fresh Water, which has a broad boarded Bridge over it, near the Entry into the Fort. Beyond this River is a small sandy Bay, where the Boats and Barks land. About an hundred Yards from the Sea-side, and as many from the Fort, and forty Yards from the Bridge on the East Side, the Company, as at most of their Forts, have a fine Garden, surrounded with a good Stone Wall. In it is plenty of all sorts of Sallads, Cabbages, Roots for the Kitchen, and a Parterre. In some Parts of it are Fruit-trees, as Jacas, Pumplentof, Oranges, sweet Lemons, &c. and, by the Walls, are Cocoa-nut and Toddy trees in great plenty. Besides these, they have Musk and Water-melons, Pine-apples, Pomecitrons, Pomegranates, and other sorts of Fruits. Between this Garden and the River there is a kind of Paddock for Black Cattle, of which they have plenty. Beyond the Company's Ground, the Natives have their Houses, in Number about fifty or sixty. There are forty or fifty Soldiers belonging to this Fort: But I know not how many Guns they have; for I had only Opportunity to see one Bastion, in which they had four Guns. Within the Walls, there is a neat little Church or Chapel. As to the Natives of this Island, or original *Indian* Inhabitants, they are of a middle Stature, straight-bodied, slender-limbed, long-visaged, their Hair black and lank, their Skin very swarthy. They are very dextrous and nimble, but wistful lazy in the highest Degree. They are said to be dull in every thing, but Treachery and Barbarity. Their Houses are but mean, their Cloathing only a small Cloth about their Middle; but some of them, for Ornament, have Frondets of Mother-of-pearl, or thin Pieces of Silver or Gold, made of an oval Form, of the Breadth of a Crown-piece, curiously notched round the Edges, five of these, placed one by another a little above the Eye-brows, making a sufficient Guard and Ornament for their Forehead. They are so thin, and placed on their Foreheads so artificially, that they seem riveted thereon; and indeed the Pearl-oyster-shells make a more splendid Shew, than either Silver or Gold. Others of them have Palmeto-caps, made in divers Forms. As to their Marriages, they take as many Wives as they can maintain; and sometimes they sell their Children to purchase more Wives. I inquired about their Religion, and was told they had none. Their common Subsistence is *Indian* Corn, which every Man plants for himself. They take but little Pains to clear the Ground; for, in the Day-time, they set Fire to the withered Grass and Shrubs, and that burns them out a clear Plantation against the next wet Season. What other Grain they have, besides *Indian* Corn, I know not. Their Plantations are very mean; for they delight most in Hunting: And here are wild Buffaloes and Hogs enough, tho' very shy, because of their frequent Hunting. They have a few Boats, and some Fishermen. Their Arms are Lances, thick, round, short Truncheons, and Targets. With these they hunt, and kill their Game; and the same Weapons they use against their Enemies too: For this Island is now divided into many Kingdoms, and all of different Languages, tho' in their Customs and Manner of Living, as well as Shape and Colour, they seem to be originally of one Descent. The chiefest Kingdoms are, *Cupang*, *Anabie*, *Lorribie*, *Pobumbie*, *Namquimal*: The Island also of *Anamabao* or *Anabao* is a Kingdom. Each of these has a Sultan, who is Supreme in his Kingdom, and hath under him several Rajas, and other inferior Officers. The Sultans, for the most part, are Enemies to each other; which Enmities are fomented and kept up by the Dutch, whose Fort and Factory are situated in the Kingdom of *Cupang*; and therefore the Bay, near which they are settled, is commonly called *Cupang* Bay. They have only as much Ground as they can keep within Reach of their Guns; yet this whole Kingdom is at Peace with them, and they freely trade with its Inhabitants, as also with the Islanders on *Anabao*, who are at Peace, as well with the Natives of *Cupang*, as with the Dutch residing there.

But they are implacable Enemies to those of *Anabie*, who are their next Neighbours, and in Amity with the *Portuguese*; as are also the Kingdoms of *Pobumbie*, *Namquimal*, and *Lorribie*. It is very probable, that these two *European* Settlements on this Island are the greatest Occasion of their continual Wars. The *Portuguese* boast excellently of their Strength here, and that they are able, at Pleasure, to rout out the Dutch, if they had Authority so to do from the King of *Portugal*; and that they often write to the Viceroy of *Goa* about it; and, tho' their Request is not yet granted, nevertheless (as they say) they live in Expectation of it. These have no Forts; but depend on their Alliance with the Natives: And indeed they are already so mixt, that it is hard to distinguish whether they are *Portuguese* or *Indians*. Their Language is *Portuguese*; and the Religion they have is *Romish*. They seem, in Words, to acknowledge the King of *Portugal* for their Sovereign; yet they will not accept of any Officers sent by him. They speak indifferently the *Malayan* and their own Country Languages, as well as *Portuguese*; and the chiefest Officers, that I saw, were of this mixt Descent: Neither did I see above three or four white Men among them; and of these two were Priests. Of this mixt Breed there are some Thousands, of whom some have Small-arms of their own, and know how to use them. The chief Person (as I before said) is called Captain-major. He is a white Man, sent thither by the Viceroy of *Goa*, and seems to have great Authority here. I did not see him; for he seldom comes down. His Residence is at a Place called *Porto Nova*, which, the People at *Lapbaa* told me, was a great Way off; but I could not get any particulate Account about it. Some told me, that he is commonly in the Mountains, with an Army of *Indians*, to guard the Passes between them and the *Capangoyans*, especially in the dry Seasons. The next Man to him was *Alexis Mendia*. He is an *Indian*, speaks very good *Portuguese*, and is of the *Romish* Religion. He lives five or six Miles from the Sea, and is called the Lieutenant. He commands next to the Captain-major, and hath under him another at this Fort on the Sea-side) if it must be so called; for, at best, it is but a Block-house.

20. What I observed of greatest Consequence during my Stay in this Island, was the different State, and still more different Policy, of the *European* Nations settled here; I mean the Dutch and *Portuguese*: And, I believe, the Account I am about to give of them may pass for a pretty good Description of all their Settlements; by which I mean, that, as their Genius is alike, so its Consequences are pretty near the same in all. The Dutch Fort, as I have observed, is a regular just Fortification, well provided with Artillery and Ammunition, and has a sufficient Number of Soldiers to secure them against any Attempts of the Natives. They depend therefore intirely upon themselves, and, by always suspecting, are never deceived. They carry on a very considerable Trade, because they furnish the Natives with a greater Variety, and better Sorts of Goods, than their Rivals in Commerce the *Portuguese*. As for the latter, they have a Block-house or two, but hardly any Guns; and are wretchedly provided with Ammunition. This is owing to the Looseness of their Government, or, to speak with greater Propriety, to their having no Government at all; for tho' they boast much of being *Portuguese*, yet they pay no Obedience to the Viceroy at *Goa*, who consequently troubles not himself about them, but leaves them to provide military and naval Stores at the world's Hand, that is, to purchase them from the *Chinese*. As they are, in a manner, *Indians* themselves, they trust to their own Strength, and that of the Natives; and, because they can muster ten times as many Men as the Dutch, they fancy themselves much stronger. These crafty Neighbours of theirs never bring this to Trial; but have spirited up the People of *Cupang* against them to such a Degree, that they are continually at War with the *Portuguese*, and never give them any Quarter. This is the Reason that their Captain-major remains always in the Mountains, where, if he did not guard the Passes carefully, the *Portuguese*, notwithstanding their boasted Strength, would soon be driven from the Coast. Notice from the Dutch Fort at *Concordia*, the People of *Cupang* have an House, or rather Hovel, built, on purpose to hold *Portuguese* Heads; for, whenever they kill any of their

Enemies, hither they bring his Head; and, when I was there, it was said to be almost full: So that, while the Portuguese are threatening to drive the Dutch out of the Island, the Dutch, without so much as uttering their Resentments, are taking off their Heads as fast as they can. Besides the People already described, there are also here some Chinese Merchants from Maccao. They bring hither coarse Rice, coarse or mixed Gold, Tea, Iron-work, Porcelane, and Silk both wrought and raw. They get in Exchange pure Gold, as it is here gathered, Bees-wax, Sandal-wood, and Coire. It is said there are about twenty small Chinese Vessels come hither every Year from Maccao, and commonly one Vessel a Year from Goa, which brings European Commodities, Calicoes, and Mullins. Here are likewise some small Barks, that trade from this Place to Batavia, and bring from thence both European and Indian Goods, and Rice. The Vessels generally come hither in March, and stay till September; and, by this means, secure the Benefit of the Trade-winds, and obtain regular and advantageous Markets for their Commodities. This Country, take it all together, is very rich and plentiful. Fruit-trees they have of all Kinds in great Plenty, and abundance of Timber. In their Plantations they have Indian Corn, and Rice; and might have ten times as much, if they were not so lazy; wild and tame Beasts innumerable; and Fowls in vast Quantities: Besides, that there are Woods swarming with Bees, which make vast Quantities of Honey and Wax. Their Mountains and Brooks afford a great deal of Gold; and they have likewise much Copper; but I do not know where they get it. The Sea is very well stocked with Fish, among which the most remarkable are Cocklemerchants or Oyster-crackers. They feed on Shell-fish, having two very hard, thick, black Bones in their Throat, with which they break to Pieces such Shell-fish as they feed upon. As for Shell-fish, they have Oysters of three Sorts; viz. long Oysters, common Oysters, which are very fat, and a third Sort, the Shells of which resemble a Stone so much, as not to be easily distinguished from it: Yet these are the best; for they are very sweet, and well-tasted, being likewise of such Size; that three or four of them will serve for a Dinner. There are Cockles here as big as a Man's Head, of which two or three are enough for a Meal; they are very fat and sweet; Crayfish, Shrimps, &c. Here are also many green Turtles, some Alligators, &c. We sailed from Timor on December 12. 1699, and saw, during the Remainder of that Month, several small Islands. On New-year's-day, we first discovered the Coast of New Guiney, which appeared to be very high Land; and, soon after, we discovered Islands almost on every Side.

21. On January 14. 1700, we saw in the Afternoon some Smoke from the Islands lying to the West of us; therefore I bore away towards them, with all the Advantage that a brisk Gale could give me. About seven in the Evening, we anchored in thirty-five Fathom Water, at the Distance of about two Leagues from a pretty large Island. We remained where we were that Night, and saw many Fires on shore. In the Morning we weighed again, and ran farther in, thinking to have shallower Water; but we ran within a Mile of the Shore, and came to thirty-eight Fathom, good, soft, holding Ground. While we were under Sail, two Canoes came off within Call of us. They spoke to us; but we neither understood their Language, or Signs. We waved to them to come on board, and called to them in the Malayan Language to do the same; but they would not: Yet they came so nigh us, that we could shew them such Things as we had to truck with them, tho' neither would this entice them to come aboard; but they made Signs for us to come ashore, and away they went. Then I went after them in my Pinnace, carrying with me Knives, Beads, Glasses, Hatchets, &c. When we came near the shore, I called to them in the Malayan Language. I saw but two Men at first, the rest lying in Ambush behind the bushes; but, as soon as I threw ashore some Knives, and other Toys, they came out, flung down their Weapons, and came into the Water by the Boat's Side, making Signs of Friendship, by pouring Water on their Heads with one Hand, which they dipped into the Sea. The next Day in the Afternoon, several other Canoes came on board, and brought many Roots and Fruits; which we purchased.

This Island has no Name in our Draughts; but the Natives call it *Pulo Sabuda*. It is about three Leagues long, and two Miles wide, more or less. It is of a good Height, so as to be seen eleven or twelve Leagues. It is very rocky; yet, above the Rocks, there is good yellow and black Mould, not deep, tho' producing plenty of good tall Trees, and bearing any Fruits or Roots, which the Inhabitants plant. I do not know all its Produce; but what we saw were, Plantains, Cocoa-nuts, Pine-apples, Oranges, Papoes, Potatoes, and other large Roots. Here is also another sort of wild Jackas, about the Bigness of a Man's two Fists, full of Stones or Kernels, which eat pleasant enough when roasted. The Libby-tree grows here in the swampy Valleys, of which they make Sago-cakes. I did not see them make any; but was told by the Inhabitants, that it was made of the Pith of the Tree, in the same manner I have before described. They shewed me the Tree whereof it was, and I bought about forty of the Cakes. I bought also three or four Nutmegs in the Shell, which did not seem to have been long gathered; but, whether they be the Growth of this Island, or not, I can't say; for the Natives would not tell whence they had them, and seemed to prize them very much. What Beasts this Island affords, I know not; but here are both Sea and Land-fowl: Of the first, Boobies and Men-of-war-birds are the chief; some Golden and milk-white Crab-catchers. The Land-fowls are, Pigeons, about the Bigness of Mountain-pigeons in Jamaica, and grow about the Size of those in England, and much like them; but the inner Part of their Feathers is white, and the Outside black; so that they appear all black, unless you extend the Feathers. Here are large Sky-coloured Birds, such as we killed at New Guiney, and many other small Birds unknown to us. Here is likewise abundance of Bats, as big as young Conies, their Necks, Heads, Ears, and Noses, like Foxes; their Hair rough; that about their Necks is of a whitish-yellow; that on their Heads and Shoulders black. Their Wings are four Feet over from Tip to Tip. They smell like Foxes. The Fish are Bass, Rock-fish, and a sort of Fish like Mulletts, Old-wives, Whiprays, and some other sorts, that I know not; but no great Plenty of any: For it is deep Water till within less than a Mile of the Shore; then there is a Bank of Coral-rocks, within which you have shole Water, white clean Sand; so there is no good Fishing amongst these. This Island lies in 2° 43' South Latitude, and its meridian Distance from Port Babao on the Island of Timor is 486 Miles. Besides this Island, here are nine or ten other small Islands, as they are laid down in the Draughts. The Inhabitants of this Island are a sort of very tawny Indians, with long black Hair, who, in their Manners, differ but little from the Mindanays, and others of these Eastern Islands. These seem to be the chief; for, besides them, we saw also curled-pated New Guiney Negroes, many of which are Slaves to the others, but, I think, not all. They are very poor; wear no Cloaths; but have a Clout about their Middle, made of the Rinds of the Tops of Palm-tree-trees; but the Women have a sort of Calico-cloths. Their chief Ornaments are blue and yellow Beads worn about their Wrists. The Men arm themselves with Bows and Arrows, Lances, Broad-swords, like those of Mindanao. Their Lances are pointed with Bone. They strike Fish very ingeniously with wooden Fish-gigs, and have a very dextrous Way of making the Fish rise; for they have a Piece of Wood curiously carved and painted, much-like a Dolphin (and perhaps other Figures). These they let down into the Water by a Line, and a small Weight to sink it. When they think it low enough, they hale the Line into their Boats very fast; and, the Fish rising up after this Figure, they stand ready to strike them when they are near the Surface of the Water. But their chief Livelhood is from their Plantations; yet they have large Boats, and go over to New Guiney, where they get Slaves, fine Parrots, &c. which they carry to Ceram, and exchange for Calicoes. One Boat came from thence a little before I arrived here, of whom I bought some Parrots, and would have bought a Slave; but they would not barter for any thing, except Calicoes, which I did not chuse. Their Houses on this Side were very small, and seemed only to be for Necessity; but, on the other Side of the Island, we saw good large Houses. Their Procs are narrow, with Outliers on each Side, like

other

other *Malayans*. I cannot tell of what Religion these are; but I think they are not *Mohammadians*, by their drinking Brandy out of the same Cup with us, without any Scruple. At this Island we continued till the 20th Instant, having laid in Store of such Roots and Fruits as the Island afforded. On the 20th, at half an Hour after six in the Morning, I weighed; and, standing out, we saw a large Boat full of Men, lying at the North Point of the Island. As we passed by, they rowed towards their Habitations, where we supposed they had withdrawn themselves, for fear of us, (tho' we gave them no Cause of Terror) or for some Differences among themselves; which of the two, was out of our Power to determine, tho' the former, however unreasonable, seemed to us the most probable; and their future Conduct confirmed us in that Opinion.

22. After we left this Coast, where we found it impossible to do any thing, in regard either to Discoveries or Trade, we passed by many small Islands, and through many dangerous Shoals, without meeting with any thing remarkable; till, on *February 4*, we found ourselves off the North-west Cape of *New Guiney*, which is called by the *Dutch* Cape *Mala*. There lies off this Cape a small woody Island, which I sent my Boat to examine, intending to have anchored near it; and as they brought me, at their Return, a Cockle of a prodigious Size, and reported that they had seen many more that were still bigger, I thought fit to call this *Cockle* Island. The next Day in the Afternoon, I sent both Boats thither, one to cut Wood, and the other to fish; which Boats, at their Return, brought me several Cockles of ten Pounds Weight; but, as it was High-water, they were not able to get any of the very large ones; for the Shells they brought the Day before weighed 78 lb. In the Afternoon, I went myself ashore on another Island, where I found more Pigeons than I had ever observed before, though all these Islands abound with that sort of Fowl. Here also were such Plenty of Cockles, that, in an Hour's time, we could have loaded the Boat with them. This Place I called *Pigeon* Island; and, on the 7th in the Afternoon, my Men brought me from thence one empty Cockle-shell, weighing 258 lb. The same Evening, we anchored near a very pleasant Island, about two Leagues and an half in Length; the Country high, and exceeding well clothed with Wood: The Trees of them were of several Sorts, most of them unknown to us, but all of them green and flourishing; many of them bore Flowers of different Colours, some white, some purple, some yellow, all exceedingly fragrant, so as to be smelt at a considerable Distance. These Trees were, generally speaking, tall and straight, and one in particular of a clean, smooth Body, without Knot or Limb, between sixty and seventy Feet high, and three fathoms about. The Soil of the Island is black, but not deep. On this Island I went ashore the next Morning, drank his Majesty's Health, and called it *King William's Island*. On the 9th, being to the Eastward of *King William's Island*, we plied all the Day between the Main and several other Islands, having the Wind Easterly, and fair Weather; but it soon altered, and we had a great deal of Rain. On the 14th, we found ourselves about six Leagues from the Continent of *New Guiney*, which appeared very high; and we saw two Head-lands, at about twenty Leagues distant from each other, the one East, the other West; the last is called the Cape of *Good Hope*: The Variation of the Compaſs here was 4° to the East. On the 15th, we saw an uninhabited Island, to which I gave the Name of *Providence*, which lies at no great Distance from another small Island mentioned in the *Dutch* Charts, by the Name of *William Scouter's Island*.

23. We crossed the Line on the 16th, and found the Variation 6° 26' to the East; but, in a few Days, the Variation increased to very near 9°. We saw, on the 23d in the Afternoon, two Snakes; and, the next Morning, another passing by us, which was vigorously attacked by two Fishes, that had kept us Company five or six Days: They were shaped like Mackrel, and were about their Bigness and Length, and of a yellow Colour, inclined to green. The Snake swam away from them very fast, keeping his Head above Water: One Fish snapt at his Tail; but, when he turned himself, the Fish would withdraw, and the other would snap; so that, by turns, they kept him

employed; yet he still defended himself, and swam away a great Pace, till they were all out of Sight. The 25th, betimes in the Morning, we saw an Island to the Southward of us, at about fifteen Leagues Distance: We bore away for it, supposing it to be that which the *Dutch* called *Wijbars's Island*; but, finding it another Place, I called it *Matthias*, it being that Saint's Day. This Island is about nine or ten Leagues long, mountainous, and woody, with many Savannas, and some Spots of Land, which seemed to be cleared. At eight in the Evening we lay by, intending, if we could, to anchor under *Matthias* Isle: But, the next Morning, seeing another Island about seven or eight Leagues to the Eastward of it, we steered away for it: At Noon, we came up fair with its South-west End, intending to run along by it, and anchor on the South-east Side; but the Tornadoes came in so thick, that I could not venture in. This Island is pretty low and plain, and clothed with Wood. The Trees were very green, and appeared to be large and tall, as thick as they could stand one by another. It is about two or three Leagues long; and, at the South-west Point, there is another low, small, woody Island, about a Mile round, and about a Mile from the other. Between them there runs a Riff of Rocks, which joins them; the biggest of these I called *Squally Island*, on account of the tempestuous Weather we met with upon its Coasts. The Desire of making Discoveries obliges a Man to lay hold of every Circumstance that is in the least promising, and to neglect nothing that may gain him a tolerable Acquaintance with the Coasts he visits. Subsequent Voyagers may easily discover great seeming Errors in such a Man's Conduct; but impartial Judges will be always ready to allow, that it is one thing to attempt, and another to prosecute Discoveries. He who engages in the former, usually steers in the Dark, and moves without Guide or Information; whereas the latter follows the Lights which the other had struck out, and not only improves the Effects of his Sagacity, but acquires Wisdom also by attending to his Mistakes. Yet the Pleasure of the Discovery is certainly more quick and lively, than that of any critical Inquirer into the Conduct of his Voyage. In this Expedition, however, the Discoveries were not great enough to excite Envy; and yet, possibly, they may deserve Attention and Prosecution; since, though the Countries were not rich which we saw, yet they were pleasant, and appeared extremely capable of Improvement. It is also to be observed, that we visited the Out-skirts only of the Country; and, by the Fringes of a Carpet, it is very hard to judge of the whole Piece. In order to conquer this Difficulty, and, at the same time, to rid ourselves of the Dangers and Distresses we continually experienced in steering among these Islands, we resolved to bear away for the Continent, in hopes of indemnifying ourselves for the Sufferings and Disappointments we had hitherto met with on the Coast of *New Guiney*.

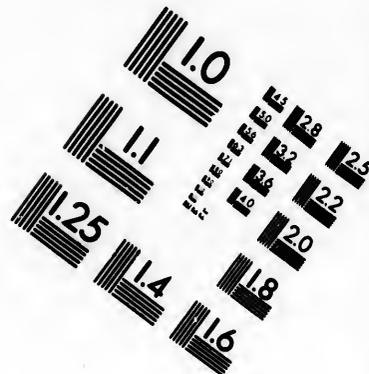

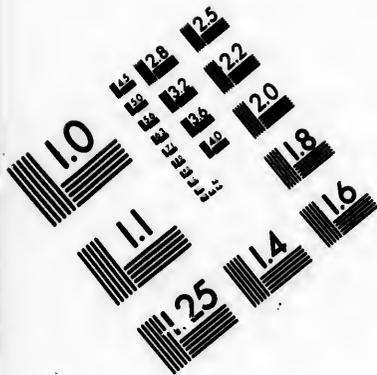

24. The Continent appeared high and mountainous, adorned with flourishing Trees. The Sides of the Hills had many large Plantations, and Pieces of cleared Land, which, together with the Smokes we saw, are certain Signs of its being well inhabited; and I was desirous of entering into Commerce with the Inhabitants: Being nigh the Shore, we saw first one Proc; a little after two, or three more, and, at last, a great many Boats came from all the adjacent Bays: When they were forty-six in Number, they approached so near us, that we could see each others Signs, and hear each other speak, though we could not understand them, nor they us. They made Signs for us to go in towards the Shore, pointing the Way: It was equally Weather, which at first made me cautious of going too near, but the Weather beginning to look pretty clear, I endeavoured to get into a Bay a head of us, which we could have got into well enough at first; but, while we lay by, we were driven so far to Leeward, that now it was more difficult to get in. The Natives lay in their Procs round us, to whom I shewed Beads, Knives, and Glasses, to allure them to come nearer; but they would not come so nigh, as to receive any thing from us: Therefore I threw out some Things to them, viz. a Knife fastened to a Piece of Board, and a Glass Bottle corked up with some Beads in it, which they took up, and seemed well pleased. They

often struck their Left Breast with their Right Hand, and as often held up a black Truncheon over their Heads, which we took for a Token of Friendships: wherefore we did the like; and, when we stood in towards their Shore, they seemed to rejoice; but, when we stood off, they frowned; yet kept us Company in their Procs, still pointing to the Shore. About five o' Clock we got within the Mouth of the Bay, and founded several times, but had no Ground, tho' within a Mile of the Shore. The Basin of this Bay was above two Miles within us, into which we might have gone; but, as I was not sure of Anchorage there, so I thought it not Prudence to run in at this Time, it being near Night, and seeing a black Tornado rising in the West, which I most feared; besides, we had near 200 Men in Procs close by us; and the Bays, on the Shore, were lined with Men from one End to the other, where there could not be less than three or four hundred more. What Weapons they had, we knew not, nor yet their Design; therefore I had, at their first coming near us, got up all our small Arms, and made several put-on Cartouch-boxes to secure us from Treachery. At last I resolved to go out again, which when the Natives in their Procs perceived, they began to sling Stones at us as fast as they could, being provided with Engines for that Purpose; and therefore I named this Place *Slingers Bay*: But at the Firing of a single Gun they were all amazed, drew off, and stung no more Stones; they got together, as if consulting what to do; for they did not make in towards the Shore, but lay still, though some of them were killed or wounded, and many more of them had paid for their Boldness, but that I was unwilling to cut off many of them, which if I had done, I could not hope afterwards to bring them to treat with me. The next Day, we sailed close by an Island, where we saw many Smokes, and Men in the Bays, out of which came two or three Canoes, taking much Pains to overtake us, but they could not, though we went with an easy Sail, and I could not now stay for them: As I passed by the South-east Point, I founded several times, within a Mile of the sandy Bays, but had no Ground. About three Leagues to the Northward of the South-east Point, we opened a large deep Bay, secured from West North-west and South-west Winds: There were two other Islands that lay to the North-east of it, which secured the Bay from North-east Winds; one was but small, yet woody; the other was a League long, inhabited, and full of Cocoa-nut-trees. I endeavoured to get into this Bay, but there came such Flaws from the high Land over it, that I could not; and, Night coming on, I would not run any Hazard, but bore away to the small inhabited Island, to see if we could anchor on the East Side of it: When we came thither, we found the Island so narrow, that there could be no Shelter; therefore I tacked, and stood towards the greater Island again; and, being more than midway between both, I lay by. Between seven and eight at Night, we saw a Canoe close by us; and, seeing no more, suffered her to come aboard; she had three Men in her, who brought off five Cocoa-nuts, for which I gave each of them a Knife, and a String of Beads, to encourage them to come off again in the Morning; but, before these went away, we saw two more Canoes coming; therefore we stood away to the Northward from them, and then lay by again till Day. We saw no more Boats this Night, neither designed to suffer any more to come aboard in the Dark. By nine a Clock the next Morning, we were got within a League of the great Island, but were kept off by violent Gulfs of Wind.

25: On March 3. being about five Leagues to Leeward of the great Island, we saw the Main-land a-head, and another great high Island to the Leeward of us, Distance about seven Leagues, for which we bore away; it is called in the Dutch Draughts *Garrai Dennis* Ile. It is about fourteen or fifteen Leagues round, high, and mountainous, and very woody. Some Trees appeared very large, and tall; and the Bay, by the Sea-side, abounded with very large Cocoa-nut-trees; where we also saw some small Houses. The Sides of the Mountains are thick-set with Plantations; and the Mould, in the new-cleared Land, seemed to be of a brown-reddish Colour: This Island is full of Points, shooting into the Sea; between which are many sandy Bays full of Cocoa-nut-trees. The Middle of the Island lies

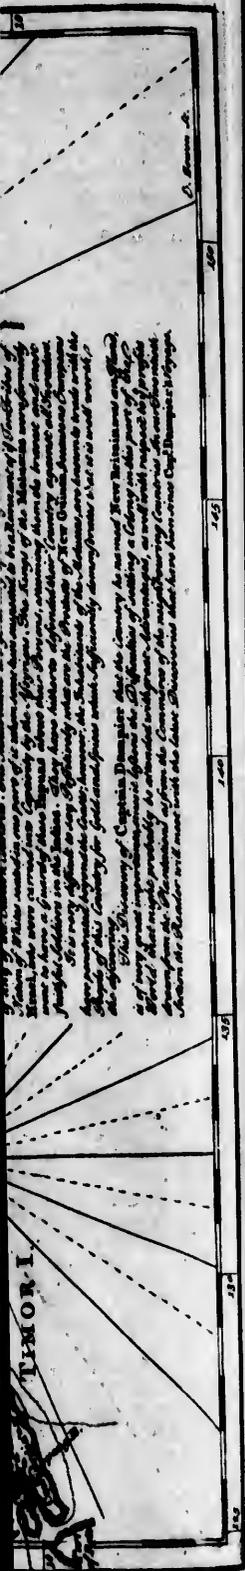

NUMA. 9.

in 9° 10' South Latitude; it is very populous; the Natives are very black, strong, and well-limbed People, having round Heads, their Hair curled and short, which they shave into several Forms, and dye it also of divers Colours, viz. Red, White, and Yellow. They have round Faces, with broad Bottle-noses, yet agreeable enough; till they disfigure them by Painting, and by wearing great Rings through their Noses, as big as a Man's Thumb, and about four Inches long; these are run quite through both Nostrils, one End running out by one Cheek-bone, and the other End against the other, and their Noses so stretched, that only a small Slip of them appears about the Ornament: They have also great Holes in their Ears, wherein they wear such Stuff as in their Noses. They are very dextrous, active Fellows in their Procs, which are very ingeniously built: They are narrow and long, with Outlayers on one Side; the Head and Stern higher than the rest, and adorned with many Devices, viz. some Fowl, Fish, or a Man's Hand painted or carved; and though it is but rudely, yet the Resemblance appears plainly, and shews an ingenious Fancy: But with what Instruments they make their Procs, or this kind of carved Work, I know not; for they seem to be utterly unacquainted with Iron: They had very neat Paddles, with which they manage their Procs dextrously, and make great Way through the Water. Their Weapons are Lances, Swords, Slings, and some Bows and Arrows: They have also wooden Fiffigs for striking Fish. Those that came to assault us in *Slingers Bay*, on the Main, are in all respects like these; and, I believe, these are no less treacherous: Their Speech is clear and distinct; the Words they used most when near us, were *Vacouee Allemais*; and then they pointed to the Shore: Their Signs of Friendship are either a great Truncheon, or Bough of a Tree, full of Leaves, put on their Heads, often striking their Heads with their Hands.

26. The next Day, we had a pleasant Gale of Wind, which carried us under an high Island, very woody, and full of Plantations on the Descents of its Mountains, and on the Shores of its Bays. This Island lies in the Latitude of 3° 25' South, and is distant from the Meridian of Cape *Mabo* 316 Miles. On the South-east Part of it are three or four more small woody Islands, one high and peaked, the other low and flat, all thick-planted with Cocoa-nut-trees, and other Wood. On the North, there is another Island of an indifferent Height, and of a somewhat larger Circumference than the great high Island last-mentioned. We passed between this and the high Island; the high Island is called in the Dutch Draughts *Anthony Cave's* Island; as for the flat low Island, and the other small one, it is probable they were never seen by the Dutch, nor the Islands to the North of *Garrai Dennis's* Island. As soon as we came near *Cave's* Island, some Canoes came about us, and made Signs for us to come ashore, as all the rest had done before, probably thinking we could run the Ship a-ground any-where, as they did their Procs; for we saw neither Sail nor Anchor amongst any of them, though most *East Indians* have both: Those had Procs made of one Tree, well dug, with Outlayers on one Side; they were but small, yet well shaped. We endeavoured to anchor, but found no Ground within a Mile of the Shore; we kept close along the North Side, still founding till we came to the North-east End, the Canoes still accompanying us, and the Bays were covered with Men going along; as we sailed, many of them strove to swim off to us, but we left them a-stern. The Current now driving in towards the flat Island, we were followed by a Canoe from *Cave's* Island: To each of those in it I gave a Knife, a Looking-glass, and a String of Beads. We shewed them Pompons and Cocoa-nuts, intimating, that we should be very well pleased to have more of them, which instantly produced three out of their Boat. We next shewed them Nutmegs; and they, by their Signs, gave us to understand, that they had such growing on their Island. They were likewise shewed Gold-dust, which they knew, and cried out, *Manneel! Manneel!* pointing towards the Land. Soon after they were gone, two or three Canoes came from the flat Island, and invited us thither. These People were black, with frizzled Hair, tall, lusty, well-shaped Men; they made the same Signs of Friendship, and seemed to speak the same Language. Their Canoes

2 K

were

were very neatly made, and finely carved, with the Figures of various kinds of Fish upon them; and, of all the *Indians* we had ever seen, these seem'd the most tractable and polite.

27. We soon after saw another Island, called in the *Dutch Maps* *St. John's*; the People of which spoke the same Language with those of *Cave's* Island. We saw from hence an Head-land to the South of us, beyond which we could discover no Land at all; whence I suppose, that from thence the Land trends away more Westerly. This Head-land lies in the Latitude of $5^{\circ} 2'$ South, and its Meridian Distance from Cape *Mabo* is 1290 Miles; in the Night we lay by, for fear of overshooting this Head-land; between which and Cape *St. Mary's*, the Land is mountainous and woody, having many Points of Land shooting out into the Sea, which make so many fine Bays. The Coast lies North North-east and South South-west. We saw neither Smokes nor Plantations near this Head-land, which we opened fair by Night; and, as no *Dutch* Charts described this Coast so far by ten Leagues, I called it Cape *St. George*. It lies in $5^{\circ} 5'$ South Latitude, and, as I said, is distant from the Meridian of Cape *Mabo* 1290 Miles. I likewise called the Bay, formed by this Mountain, *St. George's* Bay, and the Island before it *St. George's* Island. The next Morning we saw a burning Mountain up in the Country. The Day after, we pass'd by the South-west Cape of this Bay, leaving it to the North of us; and, when we came a-breast of it, I called up my Officers, and named it Cape *Orford*, in Honour of my noble Patron *Edward Russel*, Earl of *Orford*. This Cape lies in $5^{\circ} 24'$ South Latitude, and 44 Miles West from the Meridian of Cape *St. George*. The Land on each Side of the Cape is more Savanna than Wood-land; and it is highest on the North-west Side. The Cape itself is a Bluff-point, of an indifferent Height, with a flat Table-land at Top. When we were to the West of the Cape, it appear'd to be a low Point, shooting out: There were many Inhabitants about it. We steered along South-west as the Land lies, keeping about six Leagues off the Shore, and being desirous to cut Wood, and fill Water: If I saw any Conveniency, I lay by in the Night, because I would not miss any Place proper for those Ends, for fear of wanting such Necessaries. This Coast is high and mountainous, and not so thick set with Trees as that on the other Side of Cape *Orford*, but otherwise pleasant enough. I could have wish'd for some more favourable Opportunities than had hitherto offer'd themselves, as well for penetrating into the Heart of the new discovered Country, as for opening a Trade with its Inhabitants, both of which, I very well knew, could they be brought about, must prove extremely beneficial to *Great Britain*. For this Reason I continued my Endeavours in spite of so many Disappointments; and, perceiving my Officers and Men more tractable and obedient than formerly, resolv'd to examine the Continent we had now in View, as minutely as we had lately done the Islands; the Fruits of which Inquiry, such as they were, shall be laid before the Reader with the same Truth and Sincerity, which, I hope, appear conspicuously in the former Part of this Relation; for, tho' Discoveries be not in a Man's Power, yet a candid Relation of his Attempts, which is, may afford Lights to others, and thereby procure them that Success, of which he failed.

28. On *March* 14. we had Sight of a pretty deep Bay, with some Islands about it, in which I judg'd we might ride pretty securely, and meet also with some Refreshments; for, by the Smokes we saw, it was very evident, that the Country was full inhabited: About 10, we saw a Point, which ran pretty far out into the Sea, and a Bay within, where we were in hopes of meeting with fresh Water; and our Hopes were greatly increas'd, when, going with a moderate Gale into the Bay, we discern'd all the Marks of a well-cultivated Country, viz. Cocoa-trees, regular Plantations, and a considerable Number of Houses. When I came within four or five Miles of the Shore, six small Boats came off to view us, with about forty Men in them. Perceiving that they would not come aboard, I made Signs to them to go ashore; but they did not, or would not, understand me: Therefore I whistled a Shot over their Heads out of my Fowling-piece; and then they pulled away for the Shore as hard as they could. There were no sooner

ashore, but we saw three Boats coming from the Island to Leeward of us; and they soon came within Call, for we lay becalm'd; one had about forty Men in her, and was a large well-built Boat; the other two were but small. Not long after, I saw another Boat coming out of that Bay, where I intend'd to go: She likewise was a large Boat, with an high Head and Stern, painted, and full of Men. This, I thought, came off to fight us, as probably they all did; therefore I fired another small Shot over the great Boat that was nigh us, which made them take to their Paddles. We still lay becalm'd; and therefore they, rowing wide of us, directed their Course towards the other great Boat that was coming off. When they were pretty near each other, I caus'd the Gunner to fire a Gun between, which he did very dextrously; it was laden with round and Partridge-shot; the last dropt in the Water somewhat short of them, but the round Shot went between two Boats, and grazed about 100 Yards beyond them: This so frightened them, that they both rowed away for the Shore as fast as they could, without coming near each other; and the little Boats made the best of their Way after them; and now, having a gentle Breeze at South South-east, we bore into the Bay after them. When we came by the Point, I saw a great Number of Men peeping from under the Rocks. I order'd a Shot to be fired to scare them: The Shot grazed between us and the Point; and, mounting again, flew over the Point, and grazed a second time just by them. We were oblig'd to sail along just by the Bays; and, seeing Multitudes under the Trees, I order'd a third Gun to be fired among the Cocoa-nut-trees to scare them; for my Business being to wood and water, I thought it necessary to strike some Terror into the Inhabitants, who were very numerous, and, I had Reason to fear, treacherous. After this I sent my Boat to sound; they had first forty, and at last twenty Fathom Water: We followed the Boat, and came to Anchor about a Quarter of a Mile from the Shore, in twenty-six Fathom Water, fine black Sand and Ouse. We rode right against the Mouth of a small River, where I hop'd to find fresh Water. Some of the Natives standing upon a small Point at the River's Mouth, I sent a small Shot over their Heads to fright them, which it did effectually. In the Afternoon, I sent my Boat ashore to the Natives, who stood upon the Point by the River's Mouth, with a Present of Cocoa-nuts: When the Boat was come near the Shore, they came running into the Water, and put their Nuts into the Boat: Then I made a Signal for the Boat to come aboard, and sent both it and the Yawl into the River to look for fresh Water; ordering the Pinace to lie near the River's Mouth, while the Yawl went up to search. In an Hour's time, they returned aboard with Barrecoes full of fresh Water, which they had taken about half a Mile up the River: After which, I sent them again with Casks; ordering one to fill Water, and the other to watch the Motions of the Natives, lest they should make any Opposition; but they did not, and so the Boats returned a little before Sun-set with a Ton and a half of Water; and the next Day, by Noon, brought aboard about six Tons of Water.

23. I sent ashore Commodities to purchase Hogs, Yams, and other Roots. But my Men returned without any thing, the Natives being unwilling to trade with us; yet they admir'd our Hatchets and Axes, but would part with nothing but Cocoa-nuts, which they climb the Trees for; and, so soon as they gave them our Men, they beckon'd to them to be gone, for they were afraid of us. The 18th, I sent both Boats again for Water; and, before Noon, they fill'd all my Casks. In the Afternoon I sent them to cut Wood; but, seeing about forty Natives standing on the Bay, at a small Distance from our Men, I made a Signal for them to come aboard again; which they did, and brought me Word, that the Men were pulling that Way, but were afraid to come nigh them. At four o'Clock I sent both the Boats again for Wood, and they returned in the Evening. Then I call'd my Officers, to consult, whether it were convenient to stay here longer, and endeavour a better Acquaintance with these People: They all gave their Opinions for staying longer here. So the next Day I sent both Boats ashore to fish, and to cut more Wood. While they were ashore, about thirty or forty

Boats coming from the Island soon came within Call, for we about forty Men in her, and was the other two were but small. Not a Boat coming out of that Bay, she likewise was a large Boat, Stern, painted, and full of Men. off to fight us, as probably they all another small Shot over the great which made them take to their Paddled; and therefore they, rowing their Course towards the other great off. When they were pretty near the Gunner to fire a Gun between, it was laden with round the last drop in the Water somewhat round Shot went between two Boats, 0 Yards beyond them: This so they both rowed away for the Shore without coming near each other; and the best of their Way after them; and Breeze at South South-east, we bore off. When we came by the Point, 10 Men peeping from under the shot to be fired to scare them: The us and the Point; and, mounting Point, and grazed a second time just obliged to sail along just by the Bays; under the Trees, I ordered a third of the Cocoa-nut-trees to scare them; ing to wood and water, I thought it ne Terror into the Inhabitants, who and, I had Reason to fear, treacherous Boat to found; they had first forty, whom Water: We followed the Boat, about a Quarter of a Mile from the Fathom Water, fine black Sand and light against the Mouth of a small River to find fresh Water. Some of the in a small Point at the River's Mouth, ver their Heads to fright them, which in the Afternoon, I sent my Boat ashore stood upon the Point by the River's t of Cocoa-nuts: When the Boat was they came running into the Water, to the Boat: Then I made a Signal aboard, and sent both it and the Yawl k for fresh Water; ordering the Pin-River's Mouth, while the Yawl went Hour's time, they returned aboard f fresh Water, which they had taken the River: After which, I sent them ordering one to fill Water, and the Motions of the Natives, left they opposition; but they did not, and so little before Sun-set with a Ton and a the next Day, by Noon, brought s of Water.

re Commodities to purchase Hogs, pots. But my Men returned without ves being unwilling to trade with us; r Hatchets and Axes, but would part coa-nuts, which they climb the Trees as they gave them our Men, they be gone, for they were afraid of us. h Boats again for Water; and, before my Casks. In the Afternoon I sent but, seeing about forty Natives stand- small Distance from our Men, I made come aboard again; which they did, ord, that the Men were passing that said to come nigh them. At four the Boats again for Wood, and they ing. Then I called my Officers, to were convenient to stay here longer, ter Acquaintance with these People: Opinions for staying longer here. So both Boats ashore to fish, and to cut e they were ashore, about thirty or forty

forty Men and Women passed by; they were a little afraid of our People at first, but, upon their making Signs of Friendship, passed quietly; the Men were dressed very fine with Feathers about their Heads, and Lances in their Hands; the Women had no Ornament, or any thing to cover their Nakedness, but a Bunch of green Boughs before and behind, stuck under a String, which came round their Waists; they carried large Baskets on their Heads full of Yams. And I have observed, among all the wild Nations I have known, that they make the Women carry the Burdens, while the Men walk before without carrying any other Load than their Arms. In the Afternoon I sent the Boats ashore for Wood. Some of our Men going to the Natives Houses, found they were now more shy than they used to be, had taken down all the Cocoa-nuts from the Trees, and driven away their Hogs: Our People made Signs to them, to know what was become of their Hogs, and other Things. The Natives, pointing to some Houses at the Bottom of the Bay, and imitating the Noise of those Creatures, signified, there were Hogs and Goats of several Sizes, which they expressed by holding out their Hands at several Distances from the Ground.

30. At Night our Boats came aboard with Wood; and next Morning I went myself, with both Boats, up the River, to the Watering-place, carrying with me such Trifles as I thought most proper to induce them to a Commerce with us: But I found they were very shy. I saw but two Men and a Boy: One of the Men, by some Signs, was persuaded to come to the Boat's Side where I was: I gave him a Knife, a String of Beads, and a Glass-bottle; the Fellow called out Cocoas, Cocoas, pointing to a Village hard by; and signified, that he would go for some; but he never returned. I took eight or nine Men with me, and marched to their Houses, which I found very mean, and their Doors made fast with Withes, the Inhabitants being all withdrawn out of Fear. I visited three of their Village; and, finding the Houses abandoned by the Inhabitants, I brought out some small Fishing-nets, in Recompence for those Things they had of us. As we were coming away, we saw two of the Natives; I shewed them the Things that we carried with us; and called to them, Cocoas, Cocoas, to let them know, that I took those Things, because they had not made good what they had promised by their Signs, and by their calling out Co.co.as. While I was thus employed, the Men in the Yawl filled two Hogheads with Water, and all the Barrecoes. In the Afternoon I came aboard, and found all my Officers and Men very importunate to go that Bay where the Hogs were said to be. I was loth to yield to it, fearing they would deal too roughly with the Natives. At last I consented, sending those Commodities I had ashore with me in the Morning, and giving them a strict Charge to act cautiously for their own Security. The Bay I sent them to, was about two Miles from the Ship. As soon as they were gone, I got all things ready, that, if there was Occasion, I might assist them with my great Guns. When they came to land, the Natives appeared, shaking their Lances, and threatening them; and some were so daring, as to wade into the Sea, holding a Target in one Hand, and a Lance in the other. Our Men held up such Commodities as I had sent, but to no Purpose; for the Natives waved them off. Seeing therefore they could not be prevailed upon, my Men, being resolved to have some Provision among them, fired some Musquets to scare them away; which had the desired Effect upon all but two or three, who stood still in a menacing Posture, till the boldest of them dropt his Target, and ran away, being shot in the Arm. He, and some others, felt the Smart of our Bullets; but none were killed, our Design being rather to fright than hurt them. Our Men landed, and found abundance of tame Hogs running amongst the Houses. They shot nine, which they brought away. They had but little Time; for, in less than an Hour after they went from the Ship, it began to rain: Therefore they got what they could into the Boats; for I had charged them to come away, if it rained. By that time the Boat was aboard, and the Hogs taken in, it cleared up, and my Men desired to make another Trip thither before Night: This was about five in the Evening, and I consented, giving them Order

to repair on board before Night. In the Close of the Evening they returned with eight Hogs more, and a little live Pig; and, by this time, the other Hogs were jerked and salted. These that came last, we only dressed and corned till Morning, and then sent both Boats ashore for more Refreshments, either of Hogs or Roots; but, in the Night, the Natives had conveyed away their Provisions of all Sorts. Many of them were now about the Houses, and none offered to hinder our Boats landing; but, on the contrary, were so amicable, that one Man brought ten or twelve Cocoa-nuts, left them on the Shore, after he had shewed them to our Men, and went out of Sight. Our People, finding nothing but Nets and Images, brought them away; these two of my Men brought in a small Canoe; and, presently after, my Boats came off. I ordered the Boatswain to take care of the Nets; the Images I took into my own Custody.

31. I sent the Canoe in the Afternoon to the Place from whence they brought her, and in her two Axes, two Hatchets, (one of the helved) six Knives, six Looking-glasses, a large Bunch of Beads, and four Glass-bottles. Our Men drew the Canoe ashore, placed the Things to the best Advantage in her, and came off in the Pinnace I sent to guard them: And now, being well-stocked with Wood, and all my Water-casks full, I resolved to sail the next Morning. All the time of our Stay here we had very fair Weather, only a Shower of Rain sometimes in the Afternoon, which lasted not above an Hour at most; also some Thunder and Lightning, with very little Wind. We had Sea and Land-breezes, the former between the South South-east, and the latter from North-east to North-west. This Place I named *Port Mountague*, in Honour of my noble Patron. It lies in 60° 10' South Latitude, and meridian Distance from Cape *St. George* 151 Miles West. The Country thereabouts is mountainous and woody, full of rich Valleys, and pleasant fresh-water Brooks: The Mould in the Valley is deep and yellowish, that on the Side of the Hill of a very brown Colour, and not very deep, but rocky underneath, yet excellent planting Land. The Trees, in general, are neither very strait, thick, nor tall; yet appear green and pleasant enough; some of them bore Flowers, some Berries, and others big Fruits, but all unknown to any of us. Cocoa-nut-trees thrive very well here, as well on the Bays by the Sea-side, as more remote among the Plantations; the Nuts are of an indifferent Size; the Milk and Kernel very thick and pleasant. Here is Ginger, Yams, and other very good Roots for the Pot, that our Men saw and tasted. What other Fruits or Roots the Country affords, I know not. Here are Hogs and Dogs; other Land-animals they saw none. The Fowls we saw, and knew, were Pigeons, Parrots, Cockadores, and Crows, like those in *England*, a sort of Birds about the Bigness of a Black-bird, and smaller Birds many. The Sea and Rivers have Plenty of Fish; we saw abundance, though we caught but few; and these were Cavellies, Yellow tails, and Whiprays.

32. We sailed *March* 22. On the 24th in the Evening, about ten o'Clock, I was called out of my Cabin, where I then lay much indisposed, to see what the Ship's Crew called a Miracle: On the North-west by West there appeared a large Pillar of Fire, shooting gradually for three or four Minutes; then sinking in the same time, till it was scarce visible; then rising again, and blazing as before. I knew it immediately to be a Vulcano, or burning Mountain, and steered for it accordingly. On the 25th of the same Month in the Evening, we found ourselves within three Leagues of the Island, in which this burning Mountain was, and about two Leagues from the Continent. There was a good Chanel to pass between them; and I kept nearer the Main than the Island. About seven in the Evening I founded, and had fifty-two Fathom, fine Sand and Ouse. I stood to the Northward, to get clear of this Streight, having but little Wind, and fair Weather. The Island all Night vomited Fire and Smoke; and, at every Explosion, we heard a dreadful Noise, like Thunder; and saw a Flame of Fire after it, the most terrifying that ever I beheld. The Intervals between these Explosions were about half a Minute, some more, others less: Neither were these Pulses or Eruptions alike; for some were but faint Convulsions, in compari-

passion of the more vigorous: Yet even the weakest vented a great deal of Fire; but the largest made a roaring Noise, and sent up a large Flame twenty or thirty Yards high; and there might be seen a great Stream of Fire running down to the Foot of the Island, even to the Shore. From the Furrows made by this descending Fire, we could, in the Day-time, see great Smokes arise, which probably were made by the sulphurous Matter thrown out of the Funnel at the Top, which, tumbling down to the Bottom, and there lying in an Heap, burned, till it was either consumed or extinguished; and so long as it burnt, and kept its Heat, so long the Smoke ascended from it, which we perceived to increase or decrease, according to the Quantity of Matter discharged from the Funnel. But the next Night, being shot to the Westward of the burning Island; and the Funnel of it lying on the South Side, we could not discern the Fire there, as we did the Smoke in the Day, when we were to the Southward of it. This Vulcano lies in the Latitude of $5^{\circ} 33'$ South, and its meridian Distance from Cape St. George is 332 Miles West. The East Part of New Guinea lies forty Miles to the West of this Tract of Land; and, in most of the Charts, they are laid down as contiguous; but I found a large Passage between them, calling the North-east Promontory of New Guinea, King William's Cape; and, when I had perfectly discovered the Island, I called it *Nova Britannia*. It lies from $2^{\circ} 30'$ to $6^{\circ} 30'$ South Latitude, and has about $5^{\circ} 18'$ Longitude. It appears to be, for the most part, high Land, mixed with Valleys, and everywhere abounding with large and stately Trees. The Island seems to be very fully inhabited by a Race of strong, well-made Negroes, with whom I could enter into no Correspondence, because my Pinnace was in such a Condition, that we could not safely make use of it to go on shore. I likewise discovered another Island, about eleven or twelve Leagues long, which I called *Sir George Rooke's Island*; and not long after another, which, from its Form, I named *Crown Island*; and, to the North-west of that, we discerned a still larger Isle, which I called *Sir Robert Rich's Island*. On April 2. we discovered another burning Island, and soon after many other Islands, amongst which we discovered three Vessels with Sails; a thing unusual, and which we had never seen before, since we were upon these Coasts. On April 12. the Sky, at Sun-rising, looked very red in the East, near the Horizon; and there were many black Clouds both to the South and North of it. About a quarter of an Hour after the Sun was up, there was a Squall to the Windward of us, when, on a sudden, one of our Men on the Forecastle called out, that he saw something a-stern; but could not tell what. I looked out for it, and immediately saw a Spout beginning to work within a quarter of a Mile of us, exactly in the Wind. We presently put right before it. It came very swift, whirling the Water up in a Pillar, about six or seven Yards high. As yet I could not see any pendulous Cloud, from whence it might come, and was in hopes it would soon lose its Force. In four or five Minutes time, it came within a Cable's Length of us, and passed away to Leeward; and then I saw a long pale Stream coming down to the whirling Water. This Stream was about the Bigness of a Rainbow. The upper End seemed vastly high, not descending from any dark Cloud; and therefore the more strange to me, as I never had seen the like before. It passed about a Mile to Leeward of us, and then broke. This was but a small Spout, not strong, nor lasting; yet I perceived much Wind in it, as it passed by us. The Current still continued at North-west, a little Westward, which I allowed to run a Mile per Hour. I guessed from hence, that the Land is disjointed here; and that there is a Passage to the Southward.

33. We were now returning, and therefore I shall be shorter in my Accounts. On the 26th, we saw the Island of *Ceram*, and endeavoured to pass between it and the Island of *Bonao*; but could not. We then made the Island of *Bonro*, where we met with a *Chinese* Vessel, which, thro' a Mistake, gave us a good deal of Trouble; for, about eight at Night, she came close by us on our Weather-side, which occasioned our getting all our Guns ready, Matches lighted, and Small-arms upon the Quarter-deck; but the standing one Way, and we another, we were soon far

enough asunder. At ten the next Morning, having little Wind, I sent the Yawl aboard of her. She was laden with Rice, Arrack, Tea, Porcelane, and other Commodities, bound for *Ambona*. The Commander said, that his Boat was gone ashore for Water; and asked our Men, if they saw her; for she had been missing two or three Days, and they knew not what was become of her. They had their Wives and Children aboard, and probably came to settle at some new *Dutch* Factory. The Commander also informed us, that the *Dutch* had lately settled at *Ampulo*, *Monippe*, *Bonao*, and on a Point of *Ceram*. The next Day, we passed between *Kellan* and *Bonro*. After this, we had, for several Days, an high-rolling Sea, occasioned more by a Current, than Wind, which carried us five-and-twenty Miles to the South of our true Course. We were now on the Coasts of a known Country; and therefore I resolved to take the first Opportunity that offered of putting into Port, in order to procure such Necessaries as I wanted, and for the making the Repairs requisite in my Ship, which, by being so long out, was now become very foul and crazy, tho' we did not, at that time, suspect her being in so rotten and ruinous a Condition, as we afterwards found her; neither was it long before we met with the Opportunity we wished for.

34. On the 14th, we discovered the Island *Misacombi*; and, the next Day, sailed along to the West, on the North Side of the Island. In some Charts it is called *Omba*, a mountainous Island, diversified with Woods and Savannas, about twenty Leagues long, and five or six broad. We saw no Signs of Inhabitants on it. We fell in nearest to the West End of it, and therefore I chose to pass on, intending to get through to the Southward between this and the next Isle to the West of it, or between any other two Islands to the West, where I should find the clearest Passage, because the Winds were now at North-east, and East North-east, and the Isle lies nearly East and West; so that, if the Winds continued, I might be a long time in getting to the East End of it, which yet I knew to be the best Passage. Afternoon, being near the End of the Isle *Pentare*, which lies West from *Misacombi*, we saw many Houses and Plantations in the Country, and abundance of Coconut-trees growing by the Sea-side. We also saw several Boats sailing cross a Bay or Chanel at the West End of *Misacombi*, between it and *Pentare*. We had but little Wind, and that at North, which blows right in; with a Swell; wherefore I was afraid to venture in, tho' probably there might have been good Anchoring, and a means of acquiring a Commerce with the Natives. I continued steering to the West, because, the Night before at Sun-setting, I saw a small, round, high Island to the West of *Pentare*, where I expected a good Passage. We could not that Day reach the West End of *Pentare*; but saw a deep Bay to the West of us, where, I thought, there might be a Passage through between *Pentare* and *Louhana*; but the Lands were shut within one another, so that we could not see any Passage. I ordered them to sail seven Leagues more Westward, and lie-by till next Day. In the Morning, we looked out for an Opening; but could see none: Yet, by the Distance and Bearing of an high round Island, called *Poitore*, we were got to the West of the Opening; but not far from it. I therefore tacked, and stood to the East; and the rather because I had Reason to suppose this to be the Passage I came through in the *Cycnet*, mentioned in my Voyage round the World; but I was not yet sure of it, because we had rainy Weather; so that we could not now see the Land so well as we did then. We accidentally saw the Opening at our first falling in with the Islands, which now was a Work of Time and Difficulty to discover: However, before ten o'Clock, we saw the Opening. The Wind was South South-west, and we plied to get through before Night; for we found a good Tide helping us to the South. About seven or eight Leagues West of us, we saw an high, round, peaked Mountain, from the Top of which a Smoke seemed to ascend, as from a Vulcano. There were three other very high peaked Mountains, two on the East, and one on the West of that which smoked. It was twelve at Night before we got clear of two other small Islands; and there we had a very violent Tide setting us through against a brisk Gale of Wind. When we were through, we continued our Course for *Timor*, in Sight

of which we came on *May 18*. On *June 23*, we saw the Straights of *Sunda*; and, towards the latter End of the Month, we arrived safely in the Road of *Batavia*.

35. I staid at *Batavia* upwards of three Months, where I first ordered the Ship to be repaired, and afterwards found it necessary to careen her; for which Purpose I hired Vessels to take in our Guns, Ballast, Provisions, and Stores. While we lay here, we heard several Reports in relation to our Men of War, that were cruising on the Coast of *India*; and there was much Discourse likewise of Pirates, who had committed great Depredations on the Coast, and particularly in the Straights of *Malacca*. I did not hear of any Ships sent out to reduce them. At my first coming in, I had been told, that two Ships had been sent from *Ambony* in quest of me, which was quickly confirmed by one of the Skippers, whom I, by Accident, met with here. He told me, they had three Protests against me; that they came to *Pulo Sabuda*, on the Coast of *New Guiney*, twenty-eight Days after my Departure thence; and went as far as *Scouten's Island*, and, hearing no further News of me, returned. Something likewise to this Purpose Mr. *Merry*, Commander of the *Fleet Frigate*, told me at my first Arrival here; and that the General at *Batavia* had a Copy of my Commission and Instructions; but I looked upon it as a very improbable thing. However it was, I did not give myself much Trouble about these things, knowing well, that the better they were acquainted with the Authority by which I was protected, the less ready they would be to offer me any Injury. The *Dutch*, during the Time we lay here, came to a Resolution of sending three Ships sooner to *Europe* than was usual. The Day fixed for their sailing was the sixteenth of *October*, and I took all proper Precautions to be ready to sail about the same time they did. Accordingly, on the 17th of the same Month, at half an Hour after six in the Morning, I sailed from *Batavia*, having the Advantage of a fair Wind at South; so that, on the 19th about Noon, I fetched up the three *Dutch* Ships before-mentioned. *November 29*. in the Morning, we saw a small Hawk flying about the Ship, till it was quite tired. Then she rested on the Mizentop-sail-yard, where we caught her. It is probable she was blown off from *Madagascar* by the violent Northerly Winds, that being the highest Land to us, tho' distant near 150 Leagues. *December 30*. we arrived at *Cape Good Hope*, and departed again on *January 11*. 1701. About the End of the Month, we saw abundance of Weeds or Blubber swim by us; for I cannot determine which. It was all of one Shape and Colour. As they floated on the Water, they seemed to be of the Breadth of the Palm of a Man's Hand, spread out round into many Branches, about the Bigness of a Man's Finger. They had, in the Middle, a little Knob, no bigger than the Top of a Man's Thumb. They were of a dusky Colour; and, as they swam in the Water, did not appear to be stronger than a kind of Jelly. These sort of things are frequent in those Seas, and indeed in most Parts of the *East Indies*. Sharks are not very common here; yet some I have seen, particularly off the Island of *Timor*. In my Return, I saw one under the Stern of our Ship, which was, beyond Comparison, the largest that ever I beheld; and all my Crew were of the same Opinion. Our Ship, after all the Care that had been taken, appeared to be still leaky; but we were in hopes of meeting with an Opportunity at *St. Helena* to discover the Cause of our Misfortune, and to find some Means to remedy it: In which, however, we were disappointed, tho' as much Care was taken by the superior Officers, as it was possible for Men to take in their Stations.

36. *February 2*. we anchored in *St. Helena* Road; and sailed again from thence on the 13th. On the 21st, we made the Island of *Ascension*, and stood in towards it. The 22d, between eight and nine o'Clock, we sprung a Leak, which increased, so that the Chain-pump could not keep the Ship free; whereupon I set the Hand-pump to work also, and, by ten o'Clock, sucked her: Then wore the Ship, and stood to the Southward, to try if that would ease her; and then the Chain-pump just kept her free. At five the next Morning, we made Sail, and stood in for the Bay, and, at nine, anchored in ten Fathom and an half, sandy Ground. The South Point bore South South-west, Distance two Miles; and the North Point of the Bay North-

cast half North, Distance two Miles. As soon as we anchored, I ordered the Gunner to clear his Powder-room, that we might there search for the Leak, and endeavour to stop within-board, if it was possible; for we could not heel the Ship so low, it being within four Streaks of the Keel; neither was there any convenient Place to hale her ashore. I ordered the Boatswain to assist the Gunner; and, by ten o'Clock, the Powder-room was clear. The Carpenter's Mate, Gunner, and Boatswain, went down; and, soon after, I followed them myself, and asked them, Whether they could come at the Leak? They said, they believed they might, by cutting the Cieling. I told the Carpenter's Mate, who was the only Person in the Ship, that understood any thing of Carpenters Work, that, if he thought he could come at the Leak by cutting the Cieling, without weakening the Ship, he might do it; for he had stopped one Leak so before; which, tho' not so big as this, yet, having seen them both, I thought he might as well do this, as the other: Wherefore I left him to do his best. The Cieling being cut, they could not come at the Leak; for it was against one of the Foothook-timbers, which the Carpenter's Mate said, he must first cut, before it could be stopped. I went down again to see it, and found the Water to come in very violently. I told them, I had never known any such thing as cutting Timbers to stop Leaks; but if they, who ought to be the best Judges in such Cases, thought they could do any Good, I bid them use their utmost Care and Diligence, promising the Carpenter's Mate, that I would always be a Friend to him, if he could and would stop it. He said, by four o'Clock in the Afternoon he would make all well, it being then about eleven in the Forenoon. In the Afternoon, my Men were all employed in pumping with both Pumps, except such as assisted the Carpenter's Mate. About one in the Afternoon I went down again; and the Carpenter's Mate was cutting the Alter-part of the Timber over the Leak. Some said, it was best to cut the Timber away at once. I bid them hold their Tongues, and let the Carpenter's Mate alone; for he knew best, and I hoped he would do his utmost to stop the Leak. I desired him to get every thing ready for stopping the Violence of the Water, before he cut any farther, for fear it should overpower us at once. I had ordered the Carpenter to bring all the Oakum he had, and the Boatswain to bring all the waste Cloaths, to stuff in upon Occasion; and had, for the same Purpose, sent down my own Bed-cloaths. The Carpenter's Mate said, he should want short Stanchions to be placed so, that the upper Part should touch the Deck, and the under Part rest on what was laid over the Leak; and presently took a Length for them. I asked the Master Carpenter what he thought best to be done. He replied, till the Leak was all open, he could not tell. Then he went away to make a Stanchion; but it was too long. I ordered him to make many of several Lengths, that we might not want of any Size: So, once more desiring the Carpenter's Mate to use his utmost Endeavours, I went up, leaving the Boatswain and some others there. About five o'Clock, the Boatswain came to me, and told me, the Leak was increased; and that it was impossible to keep the Ship above Water, when I expected, on the contrary, to have had the News of the Leak's being stopped. I presently went down, and found the Timber cut away; but nothing in Readiness to stop the Force of the Water from coming in. I asked them, Why they would cut the Timber, before they had got all things in Readiness? The Carpenter's Mate answered, they could do nothing till the Timber was cut, that he might take Dimensions of the Place; and that there was a Chalk he had lined out preparing by the Carpenter's Boy. I ordered them, in the mean time, to stop in Oakum, and some Pieces of Beef, which was accordingly done: But all to little Purpose; for now the Water gushed in with such Violence, notwithstanding all our Endeavours to check it, that it flew in over the Cieling, and, for want of Passage out of the Room, overflowed it above two Feet deep. I ordered the Bulkhead to be cut open, to give Passage to the Water, that it might drain out of the Room; and withal ordered to clear away about the Bulkhead, that we might bale; so that now we had both Pumps going, and as many baling as could; and, by this means, the Water began to decrease, which gave me some hope of saving the Ship. I asked the

Carpenter's Mate, What he thought of it? He answered, Fear not; for, by ten o'Clock at Night, I'll engage to stop the Leak. I went from him with a very heavy Heart; but, putting a good Countenance upon the Matter, encouraged my Men, who pumped and baled very briskly; and, when I saw Occasion, I gave them some Drums to comfort them. About eleven o'Clock at Night, the Boat-swain came to me, and told me, that the Leak still increased; and that the Plank was so rotten, it broke away like Dirt; and that now it was impossible to save the Ship; for they could not come at the Leak, because the Water in the Room was got above it. The rest of the Night we spent in pumping and baling. I worked myself, to encourage my Men, who were very diligent; but the Water still increased, and we now thought of nothing but saving our Lives: Wherefore I hoisted out the Boat, that, if the Ship should sink, we might be saved; and, in the Morning, we weighed our Anchor, and warped in nearer the Shore, tho' we did but little Good.

37. In the Afternoon, with the Help of a Sea Breeze, I ran into seven Fathom, and anchored; then carried a small Anchor ashore, and warped in, till I came within three Fathom and an half; where, having fastened her, I made a Raft to carry the Mens Chests and Bedding ashore, and before eight at Night most of them were ashore. In the Morning, I ordered the Sails to be unbent to make Tents, and then myself and Officers went ashore. I had sent ashore a Puncheon, and a thirty-six Gallon Cask of Water, with one Bag of Rice, for our common Use; but great Part of it was stolen away before I came ashore, and many of my Books and Papers lost. On the 26th following, we, to our great Comfort, found a Spring of fresh Water, about eight Miles from our Tents, beyond a very high Mountain, which we were forced to pass over; so that now we were, by God's Providence, in a Condition of subsisting for some time, having very good Turtle by our Tents, and Water for the fetching. The next Day I went up to see the Watering-place, accompanied with most of my Officers. We lay by the Way all Night, and the next Morning early got thither, where we found a very fine Spring on the South-east Side of the high Mountain, about half a Mile from its Top; but the continual Fogs make it so cold here, that it is very unwholsome living by the Water. Near this Place are abundance of Goats and Land-crabs. About two Miles South-east from the Spring, we found three or four Shrub-trees, upon one of which was cut an Anchor and Cable, and the Year 1642: About half a Furlong from these, we found a convenient Place for sheltering Men in any Weather: Hither many of our Men retreated, the hollow Rocks affording convenient Lodging. The Goats, Land-crabs, Men-of-war-birds, and Boobies, are good Food, and the Air proved here exceeding wholsome. About a Week after our coming ashore, our Man, that lived at this new Habitation, saw two Ships making towards the Island; before Night they brought me the News; and I ordered them to turn about a Score of Turtles for these Ships, if they should touch here; but, before Morning, they were out of Sight, and the Turtles were released again. Here we continued, without any other Ship, till April 2. when we saw eleven Sail to Windward of the Island; but they likewise passed by. The Day after, appeared four Sail, which came to anchor in this Bay. They were, his Majesty's Ships the *Anglesey*, *Hastings*, and *Lizard*, and the *Canterbury East India Ship*. I went on board of the *Anglesey*, with about thirty-five of my Men; and the rest were disposed of into the other two Men of War.

38. After this happy Escape, we left the Island of *Ascension* on March 8. and arrived safely at *Barbados* on May 8. 1701. Thro' the Desire I had of returning to *England*, and to vindicate my Character, which, I knew, must suffer greatly from the unlucky Accident that had befallen me, I took the first Opportunity that offered of returning in the *Canterbury East-India-man*; in which Passage I met with nothing

material. The same earnest Desire to clear up Mistakes, to do myself Justice in the Opinion of the World, and to set the Discoveries made in this unfortunate Voyage in their proper Light, that it may be of Use to the World, how unlucky soever it proved to me, is the Reason that induced me to publish it; and I persuade myself, that such as are proper Judges of these sort of Performances, will allow, that I have delivered many things new in themselves, capable of affording much Instruction to such as meditate future Discoveries, and which, in other respects, may be of great Utility to the present Age, and to Posterity.

39. The great Length of this Voyage obliges me to be very short in my Remarks, which I shall therefore confine to a few important Heads, and leave the rest to the Penetration of the Reader. In the first Place, I shall take notice, that this Voyage is not only a proper Supplement, but a most authentic Voucher for the Truth of many Passages in the last, since Captain *Dampier* verified to the Officers and Company, in this Expedition, the Discoveries which he insisted to have made when last at Sea; and this Testimony of his Veracity ought to afford the greater Degree of Credit to what still rests upon his single Authority. In the next Place, I must desire the Reader to remark, that how unfortunate soever this Voyage might be, and however short it might fall of what *Dampier* had promised to his Patrons at the Time of undertaking it; yet, as the Author has very justly observed, it was, in itself, of very great Consequence. It has shewn us a new *Indies*, in which, whenever that Spirit of Industry shall revive, which first extended, and then established our Commerce, we may be able to undertake Settlements as advantageous, as any that have been hitherto made by this or any other Nation. These Settlements might be made, without giving any Offence to our Neighbours; for it never can be presumed, that our political Views in *Europe* ought to restrain us from prosecuting Discoveries in the *East* or *West Indies*, for the Inlargement of our Trade, notwithstanding that such an Inlargement might not be agreeable to some of our Allies. We have discovered, in the Prosecution of former Wars, but especially since the breaking out of the last War with *Spain*, that we cannot make any Conquests for the Benefit of our Commerce, without exciting Jealousies in all our Neighbours; which ought to induce us to the most vigorous Prosecution of those Discoveries, at which they have no Right, and on account of which they have no Reason to take the least Umbrage. The Relations given us by Captain *Dampier* agree exactly with those formerly given by *de Quiros*, *le Maire*, and other Discoverers, that we cannot entertain the least Doubt of the Possibility of finding, in the Southern Part of the Globe, Countries worth our looking after: And indeed, if there were no other Merit in this Voyage, this alone would be sufficient to recommend it to our Esteem, that it has removed for ever those Suspicions, that were entertained of the Accounts formerly given of those Countries. It may not be amiss to conclude these Reflections, by putting the Reader in mind of the many Advantages, that visibly result from the Manner, in which this History of Circum-navigations has been digested, since it is impossible for him not to discern, that every succeeding Voyage gives Light to the former, and, by adding to the Discoveries already made of vast Continents, and innumerable Islands, heretofore unknown, enables us to make so true a Judgment of what is yet to be performed towards attaining the perfect Knowledge of the whole Globe, that a better Method than this cannot be devised for the Encouragement and Furtherance of that sort of Knowledge, which is, of all others, the most useful and satisfactory, and, with respect to which, this may be considered as a new Attempt, since what has hitherto been done in this Way by *Eden*, *Hackluit*, *Purcbas*, and other Writers, serves rather to shew us what was wanting to such an History, and to demonstrate its Usefulness, than to afford the intelligent Reader a solid and regular System of such Discoveries, even to the Times in which they wrote.

SECTION XV.

The Voyage of WILLIAM FUNNELL round the World, as Mate to Captain WILLIAM DAMPIER.

1. *Introduction, containing the Reasons why this Voyage ought to be attributed rather to Mr. Funnell, than to Captain Dampier.*
2. *The Motives to this Expedition, and the Force of the Ships which were originally fitted out.*
3. *The Advantages expected from this extraordinary Undertaking.*
4. *The St. George sails from the Downs, April 7. 1703. and proceeds to the Cape de Verd Islands.*
5. *Prosecutes her Voyage thence to Cape Horn.*
6. *Arrive at the Island of Juan Fernandez, and refresh there.*
7. *Compelled to quit that Coast, and leave five Men, and all their Stores, on that Island.*
8. *Again unlucky in attempting the same Ship, which occasioned their former Misfortune.*
9. *The Island of Gallo, and its Productions, described.*
10. *Captain Dampier, in the St. George, parts from Captain Stradling, in the Cinque-ports.*
11. *Obtain exact Intelligence of the Preparations made against them by the Spaniards.*
12. *Account of the River of St. Iago, and the Alligators found there.*
13. *Attacked by a Spanish Man of War, fitted out to take them.*
14. *The Country about the Bay of St. Matthew described, with its Productions.*
15. *Mr. Clippington (Clipperton) Captain Dampier's chief Mate, leaves him.*
16. *Description of the Middle Islands, and their Produce.*
17. *Account of Shell-fish on that Coast.*
18. *Take a Ship, commanded by a Spaniard brought up in England.*
19. *Attack the Manilla Ship, and are beat off.*
20. *Mr. Funnell, with most of the Ship's Company, leave Captain Dampier.*
21. *Sail from the Gulph of Amapalla for the East Indies.*
22. *Occurrences in their Voyage toward the Ladrone Islands.*
23. *Hardships suffered in this Passage.*
24. *Description of the Island Magon, and its Inhabitants.*
25. *Arrive on the Coast of New Guiney.*
26. *Description of the Islands Deceit and Disappointment.*
27. *Other new Islands discovered and described.*
28. *Their Arrival at the Dutch Settlement of Manipa.*
29. *Sail in the most miserable Condition for Amboyna.*
30. *Arrival there, and the cruel Usage of the Dutch.*
31. *The Island of Amboyna particularly described.*
32. *Sent Prisoners in a Dutch Vessel to Batavia.*
33. *Base Practices of the Dutch, in order to monopolize Trade.*
34. *Their Reception at Batavia.*
35. *Observations made there.*
36. *Arrival at the Cape of Good Hope.*
37. *Occurrences in their Voyage home.*
38. *Difference of Weather in North and South Latitudes.*
39. *Author's safe Arrival in England, August 26. 1706.*
40. *Some Account of the several Persons mentioned in this Expedition.*
41. *Remarks upon the Whole.*

1. **T**HIS Voyage has usually passed under the Name of Captain *William Dampier*; but, as he proceeded only to the South Seas, and the Circum-navigation was intirely performed by Mr. *William Funnell*, I thought it more proper, that his Name should stand in the Title than that of *Dampier's*, with whom, in this Voyage, we have much less to do. Thus much, however, is in Justice due to Captain *William Dampier*, that it was upon his Credit, and in Expectation of his being able to do great Matters in the *Spanish West Indies*, that these Ships were fitted out, and this Expedition undertaken; which shews, that the Misfortune he met with in the *Redbuck*, had not affected his Character with the Merchants, who, to be sure, were the properest Judges in this Matter. The Point they aimed at was Plunder, rather than Discovery; and yet there is something very remarkable in this Voyage in that way, and the unknown Islands which Mr. *Funnell* met with in his Passage from the South Seas to the *East Indies*, are the strongest Confirmation of what former Discoverers have reported, as to large, well-cultivated, and populous Countries, in those Parts. It must likewise be acknowledged, that *Funnell's* Voyages, though they are recounted with the greatest Appearance of Sincerity and Simplicity, yet are better digested, and may be, consequently, read with more Satisfaction, than *Dampier's*; probably, because he had but one Point in View, *viz.* that of giving his Readers a fair and agreeable Account of his Adventures.

2. It must be observed, that this Expedition was undertaken in the Beginning of the last general War, when mighty Expectations were raised of performing great Exploits against the *Spaniards*, who, of a sudden, from being our fast Friends, and favourite Allies, came to be considered as our Enemies, on their accepting the Duke of *Anjou*, Grandson to *Lewis XIV.* for their King. This induced the Merchants to believe, that, with a reasonable Force, a very profitable Expedition might be made into those Parts, where the Buccaneers, with small Vessels, and those ill provided, had performed such extraordinary Things; and, therefore, when they had obtained the best Information they could, as to the Methods proposed to be taken for the effecting such a Design, they entered cheer-

fully on the Expences necessary for that Purpose. In order to this, they fitted out at first two Ships of twenty-six Guns, and 120 Men each, designed for the South Seas. The one was named the *St. George*, Captain *William Dampier* Commander, in which was Mr. *William Funnell*; and the other the *Fame*, *John Pulling* Captain. They were both supplied with all warlike Stores, and very well victualled for nine Months; and had Commissions from his Royal Highness Prince *George*, then Lord High Admiral, to proceed against the *French* and *Spaniards*; and both were upon the same Terms, of No Purchase, no Pay. But, whilst they were in the *Doums*, there arising some Difference between the two Captains, Captain *Pulling*, in his Ship the *Fame*, went away, intending, as he said, to go and cruise among the *Canary* Islands, and they never saw him afterwards; but, before their going from *Ireland*, they were joined by another Ship, sent after them on Purpose; she was a small Vessel, named *The Cinque-ports Galley*, Burden about ninety Tons, sixteen Guns, and sixty-three Men, *Charles Pickering* Captain: Which Ship was also very well victualled, and provided for the Voyage. It must be remarked here, that this Desertion of Captain *Pulling* was absolutely the Ruin of the Voyage; and, therefore, this ought to be a Warning to all Societies of Merchants, that enter upon such Undertakings, never to join two Officers, of discordant Tempers, on any Terms; for, where Harmony is wanting, Success cannot be expected. Besides, Officers intrusted on such Occasions ought to know, that the first Principle of their Conduct should be Duty to their Owners; for this, in private Men of War, comes in the Place of Loyalty, which is the supreme Virtue in the Commander of a King's Ship; and, where either is wanting, it is absurd to hope for any great Matters. Pride, Selfishness, and narrow Notions, can never make a Figure any-where, much less in a Naval Expedition, where, if it once becomes a Maxim, that every Man ought to take care of himself, there is an End of all; whereas, if it be laid down as a fundamental Point, that the general Good is, in all Cases, to be pursued, the Advantage of Individuals will follow of course, and every Man be enriched by barely pursuing Orders.

3. The original Design of this Undertaking, says Mr. Funnell, was to go first into the River of *Plate*, as far as *Buenos Ayres*, in order to take two or three Spanish Gallies, which Captain *Dampier* asserted were usually there; and if, by that Expedition, we got to the Value of 600,000*l.* then we were to return again without proceeding further; but if we missed of Success there, then to cruise upon the Coast of *Peru* for the *Baldvia* Ships, which bring down Gold to *Lima*; but if that Design should also fail, then to attempt some rich Towns, according as Captain *Dampier* should think fit: And after that, we were, at the usual Time of the Year, to go upon the Coast of *Mexico*, to look for the great Galeon which trades from *Manilla*, one of the *Philippine* Islands, to *Acapulco*, on the Coast of *Mexico*, and which is commonly reported to be worth fourteen Millions of Pieces of Eight. The Reason we did not go to *Buenos Ayres* was, because, on our Arrival at *Madeira*, we had Advice, that the Galeons from thence were safely arrived at *Teneriff*. How well we pursued the latter Part of our Instructions, the subsequent History of our Voyage will sufficiently declare, in which I have used the greatest Sincerity and Freedom, setting down every thing that happened, in the manner in which it happened, with whatever appeared to me worthy the Reader's Notice, in the plainest way imaginable: So that I flatter myself the Whole will be found useful; and that the latter Part, especially, will be esteemed new, curious, and entertaining, inasmuch as it contains many Things which have never hitherto been published in our Language.

4. We sailed on *April* 30. 1703. out of the *Doums*; and, on *May* 18. anchored at *Kinsale* in *Ireland*. Here we refitted and victualled our Ship, and were joined by the *Cinque-ports*; and, on *September* 11. left *Kinsale*; and, on the 25th, we reached the Island of *Madeira*, where we did not anchor, but lay off-and-on for our Boats, that were sent ashore for Necessaries. By a good Observation, I make this Island to lie in the Latitude of $32^{\circ} 20'$ North, and Longitude, by my Account, from *London*, $18^{\circ} 5'$ West. We departed *September* 28. and, on the 30th, saw *Palma* and *Fare*, the two Westermost of the *Canary* Islands, they being in all seven, so called from *Canaria*, the chief. We did not stop here, but made the best of our Way for the *Cape de Verd* Islands; and, *October* 6. saw the Island of *Mayo*, lying in the Latitude of $15^{\circ} 10'$ North, and Longitude from *London* $24^{\circ} 29'$ West. We lay off-and-on all Night, but could not get off any Salt, because here ran so great a Surf, that we dared not venture our Boats ashore: So, on *October* 7. in the Morning, we bore away for *St. Jago*, and, at Noon, anchored at *Prior Bay*. This Bay lies in the Latitude of $14^{\circ} 5'$, and West from *London* $24^{\circ} 47'$. This is one of the Southermost and most fruitful of the *Cape de Verd* Isles, abounding in Hogs, Fowls, *Guiney* Hens, Monkeys, Maiz, Oranges, Lemons, Dates, Water-melons, Plantains, Bananas, &c. Here is good Water, but troublesome fetching; and Wood is very dear. The Natives of this Place were formerly *Portuguese*, who were banished thither for Murders, Thefts, and other Villainies; but now they are mostly black, by reason of their Commerce with their Women Slaves, which are *Guiney* Negroes; but, notwithstanding they have changed their Colour, yet they still retain their Vices, Thieving being commoner here than in any Place I have been at; inasmuch that they will take your Hat off your Head at Noon-day, in the Midst of Company: You must also be very wary how you trade with them; for, if you let them have your Goods before you have theirs, you will be sure to lose them. At this Place we watered our Ship, and refreshed ourselves; and here being some Disagreement between our Captain and first Lieutenant, the former turned the latter ashore, with his Chest, Cloaths, and Servant, much against both his and his Servant's Will, about twelve o' Clock at Night. At four the next Mornings, being *October* 13. we parted from the said Island, not fully resolved what Place to touch at next.

5. On *November* 2. we passed the Equator, about forty-five Leagues to the Westward of the Meridian of the Island of *St. Jago*: We saw this Day abundance of Flying-fish. On the 8th, in the Evening, we found the Variation, by a good Amplitude, to be $5^{\circ} 20'$ Easterly, Latitude by Ob-

ervation South $10^{\circ} 20'$, and Longitude West from the Island of *St. Jago* $5^{\circ} 36'$. There are three Islands called by the Name of *St. Ann's*, not above a Stone's-throw from each other; they are very full of Woods, as is all the *Brazilian* Coast. These Islands are distant from the Main about four Miles. This Place is very much troubled with Southerly Winds, which blow in Gusts; therefore your only Way is to lay your best Anchor to the Southward, and all little enough sometimes. The Islands produce nothing but Wood, and have a vast many Sea-fowl upon them, which our Sailors called Boobies. The Booby is much about the Bigness of a Duck: Some are quite white, some grey; they have Feet like a Duck, being a Water-fowl; they feed mostly upon Flying-fish, which they catch flying: I have made many a Meal of these Birds, but it was for want of other Victuals: They taste very fishy, and, if you do not salt them very well before you eat them, they will make you sick. They are so silly, that, when they are weary of flying, they will, if you hold out your Hand, come and sit upon it; from whence I conjecture, that they are called Boobies. *November* 24. we anchored at the Island of *Le Grand*, whose Latitude is $23^{\circ} 30'$ South, Longitude from *London* $40^{\circ} 24'$ West; and found here about 11° East Variation. This is a very woody Island, and hath several very good Springs of fresh Water upon it. The Soil is black, and the Island is about nine Leagues round, and distant from the Main about three Miles. In it are Jackals, Lions, Tygers, &c. which, in the Night, make a most hideous Noise, enough to terrify any Man. Here are Rum, Sugar, and several sorts of *Indian* Fruits, to be had, but very dear, on account of their supplying the Town of *Saint Paul's* with these Necessaries; near which Town is said to be a Gold Mine, accounted one of the richest hitherto known. It is distant from the Town of *Le Grand* about 300 Miles; and is reckoned, by the vast high Mountains that intercept the Passage, to be sixty Days Journey. At this Place we wooded, watered, and refitted our Ship. Here our new first Lieutenant, with eight of our Men, our Captain and they falling out, went ashore with their Goods, and left us here: Alfo *Charles Pickering*, Captain of the *Cinque-ports*, our Consort, departed this Life, and his Body was buried ashore at the Watering-place, with the usual Ceremony of firing of Guns; and Mr. *Thomas Stradling*, his Lieutenant, took Command of his Ship. Here is good Fish of various Sorts, as the Silver-fish, and several others. The Silver-fish is about twenty Inches long, in Height, from the Top of his Head to the Bottom of his Belly, eight Inches; he hath five small Fins on the hinder Part of his Head, and one large one, reaching from the hindermost of the five small ones to the Tail: He has two middling ones, one on each Side near the Gills, and a large one, stretching from the Middle of the Bottom of his Belly to his Tail, which is half-mooned. He has a large Eye, a wide Pair of Nostrils, and a small Mouth: It is a very thin Fish, and very bony: He is of a very fine transparent White, and thence called by us a Silver-fish. We sailed from the Island *Le Grand* *December* 8. resolving not to touch any more till we arrived at the Island *Juan Fernandez*, in the South Seas. On the 29th of the same Month, we sailed near the Islands of *Sebaldi de Weert*; from which Island there came a very remarkable Bird, which, because it pleased me very much then, I will now describe. It was about the Bigness of a Duck, and of a very fine white Colour; his Bill yellow, and, both above and below the Bill, were long grey Hairs like Whiskers; and, instead of Feathers at the Bottom of his Eyelids, he had short stiff Hairs, which were black.

6. We prosecuted our Voyage for the South Seas till *January* 4. 1704. when, in the Latitude of $57^{\circ} 50'$, we met with a most dreadful Storm, in which we were separated from our Consort the *Cinque-ports*, which added to the Number of our Uneasinesses, and put the Seamen much out of Humour. On the 20th of the same Month, we were in the Latitude $60^{\circ} 51'$ South; and, believing that we had now doubled *Cape Horn*, we tacked and stood to the Northward. On *February* 4. we saw the Island *la Moucha*, in the Latitude of $38^{\circ} 30'$ South. This Island is very well inhabited by *Indians*, who are always at War with the *Spaniards*, and indeed with all white Men, be-

cause they think Leagues in Length which run a League from the Port *St. February* 5. we Latitude, by *London* $80^{\circ} 19'$ *andez*, and so it, our Capt. tacked, and stood after we had stood not seeing any Island; and, passing fort Captain *Stradling* arrived here three Bay, in two finding it not conform to the great Bay, Water, the Variation.

7. At this Island fitted our Ships, deal of Time, and ashore; during which Captain *Stradling* an Height, that but, at last, the Lieutenant of Captain *Stradling* their Ship. On the Sail, on which we and stood to Sea, proved, seeing us us, and we made first making what eleven at Night, think convenient Pinnaque towed under *Stradling's* Boat by Dog. At Sun-rise began to engage it of about 400 Tons fought her very eleven Hours; and then, off. As for our Guns, and then fell the Fight. We had several wounded other Trial with his Consequence to let he would discover stroy our whole Part it; saying, that, at of our being in the Merchant Ships from coast and not fail of taking in the Year. Upon noon came up; and Captains to let her we concluded to re-anchors, Long-boats, with a Ton of Sea-Captain *Stradling* hither to the West Part of going out after the all his Sails, except other Stores. We the Land, so that we it; but it falling calm and rowed towards the two Sail; the Captain fired several Shots gave us an Account each of about this thought it convenient Coast of *Peru*, leaving Captain *Stradling* with other Nations for now we had nothing cording to their Account for the Coast of *Peru* Land, it being very NUM. X.

cause they think them *Spaniards*. It is a high Island, four Leagues in Length, and has many Sholes on the West Side, which run a League or more into the Sea. It is distant from the Port *Valdivia* twenty-five Leagues Northward. February 5. we found the Variation to be $7^{\circ} 20'$ Easterly by Observation South $35^{\circ} 33'$ Longitude, from *London* $80^{\circ} 19'$. February 7. we saw the Island *Juan Fernandez*, and so stood off-and-on; but, drawing pretty near it, our Capt. thought it not to be the right Island; so we tacked, and stood to the Eastward; but, on February 10. after we had stood about thirty Leagues to the Eastward, not seeing any Land, we stood back again to the same Island; and, passing by the great Bay, we saw our Comfort Captain *Stradling* in the *Cinque-ports*, who had arrived here three Days before: So we anchored in the little Bay, in twelve Fathom Water, ousy Ground; but, finding it not convenient lying here, we weighed, and went to the great Bay, where we anchored in thirty-five Fathom Water, the Variation there being $6^{\circ} 5'$ Easterly.

7. At this Island we wooded, watered, heeled, and refitted our Ships, the doing of which took us up a great deal of Time, and obliged both Ships Company to be much ashore; during which time, a Difference happened between Captain *Stradling* and his Men, which rose at last to such an Height, that the Crew absolutely refused to go on board; but, at last, the Matter was compromised by the Mediation of Captain *Dampier*, and the Men returned on board their Ship. On February 29. 1704. our People desir'd a Sail, on which we all hurried aboard, slipped our Cables, and stood to Sea. The *Frenchman*, for so he afterwards proved, seeing us get under Sail, tacked, and stood from us, and we made the best of our Way after him, our Comfort making what Haste he could after us; and, about eleven at Night, we came close up with him, but did not think convenient to engage till Day. In this Chace our Pinnace towed under Water; so we cut her loose; Captain *Stradling's* Boat got also loose, and in her were a Man and a Dog. At Sun-rise the next Morning, being *March 1.* we began to engage the said Vessel, which was a *French* Ship, of about 400 Tons and 30 Guns, well mann'd. We fought her very close, Broadside and Broadside, for seven Hours; and then, a small Gale springing up, she sheered off. As for our Comfort, he fired about ten or twelve Guns, and then fell a-stern, and never came up again during the Fight. We had nine of our Men killed in the Dispute, and several wounded: We were desirous to have had another Trial with him, knowing it would be of dangerous Consequence to let him go; for, if we did, we were sure he would discover us to the *Spaniards*, which would destroy our whole Proceedings. But our Captain was against it; saying, that, at the worst, if the *Spaniards* should know of our being in those Seas, and so should hinder their Merchant Ships from coming out, yet that he knew whither to go, and not fail of taking to the Value of 500,000 *l.* any Day in the Year. Upon this, we lay by for our Comfort, who soon came up; and it was quickly agreed between the two Captains to let her go; so the Enemy stood from us, and we concluded to return to *Juan Fernandez* to get our Anchors, Long-boats, and several Tons of Water cask'd, with a Ton of Sea-lions Oil, which we had left here; and Captain *Stradling* had left five of his Men, who were gone to the West Part of the Island, and knew nothing of our going out after the Enemy; he had also left behind him all his Sails, except those at the Yard, with a great many other Stores. We had then the Wind at South, right off the Land, so that we found it very difficult to get up with it; but it falling calm, the *Cinque-ports* put out her Oars, and rowed towards the Island: Presently after which, we saw two Sail; the *Cinque-ports* was pretty near them, and they fired several Shot; but she rowed away to us, and gave us an Account, that they were two *French* Ships, each of about thirty-six Guns: So the two Captains thought it convenient not to go in, but to go away for the Coast of *Peru*, leaving behind Captain *Stradling's* five Men, with other Necessaries that we could very ill spare; for now we had neither of us any Boats: However, according to their Agreement on *March 6.* we stood away for the Coast of *Peru*; and, on the 11th, fell in with the Land, it being very high, three Rows of Hills one within

NUMS. X.

another, that towards the Water lowest, and that farthest within Land highest. We were then in the Latitude of $24^{\circ} 53'$ South; from thence we coasted along Shore to the Northward; and, on the 14th, pass'd the Port of *Copiapo*. This is said to be a very good Port, and to be fenced from almost all Winds. Near to the Port are four or five Rocks; and within Land it is inhabited by *Indians*, who make good Wine; here are said also to be good Meat, Corn, and other Necessaries. In this Port they load Wine, Money, and other Goods, for *Cochimbo*: We would very willingly have gone ashore here to have got some Refreshments, but could not for want of Boats: The Land continues very high and mountainous; so that, I think, it is the highest Land I ever saw.

8. We were surpris'd, on the 19th of the same Month, by seeing the Colour of the Waves of the Sea changed into red for seven or eight Leagues; though, upon sounding, we found no Ground for 170 Fathom; but, upon drawing up the Water, and examining it closely, this Accident appeared to be owing to a vast Quantity of Fish-spawn swimming on the Surface. We were now in the Latitude of $16^{\circ} 11'$ South, and had only forty-eight Minutes Variation to the Eastward, having sail'd by the three famous Ports of *Arica*, *Tlo*, and *Arequipa*. On *March 22.* we found ourselves off the Port of *Lima*, the Capital of *Peru*, where we saw two Sail of Ships steering for that Port: We presently gave Chace, and soon came up with the stemmost; she proved to be the Ship we fought with off the Island of *Juan Fernandez*. We were very eager to stop her going in; for, if we could have done it, it would have hindered the *Spaniards* from having Intelligence of us: Besides, we did not question the taking of her, because now our Men were in Health; whereas, when we fought her before, we had between twenty and thirty very sick and weak; but, being willing to shew themselves, they had done what they could. We consider'd also, her Guns, Ammunition, and Provisions, would be very welcome to us; so we concluded to engage her ourselves, and to send Captain *Stradling* after the other, which seem'd not so big; but Captain *Dampier* did not think advicable to attack her; and, whilst the Matter was disputing, both the Ships got into *Lima*, from whence twenty such as ours could not have forced them out. This kind of Proceeding gave great Offence to most of the Crew, and bad Consequences might have follow'd it, if we had not, in the Space of a few Days, taken two very considerable Prizes; the first of 150, the second of 200 Tons, out of which we took what we thought would prove most serviceable, and then dismiss'd our Prizes. On *April 5.* we began to prepare for the great Stroke our Captain had in his Head, viz. that of landing on the Coast, and plundering some rich City; with which View our Carpenters were order'd to fit up our Launches, or *Spanish* Long-boats, so as to land our Men with Safety, and to fix two Patereroes in each Launch. On the 11th of the same Month, we took, as if she had been sent on purpose for our Service, a Bark of about fifty Tons, laden with Plank and Cordage. This Bark we took in Sight of the Isle of *Gallo*, under which we anchored the next Day with our Prize, which we resolv'd to keep, in order to make use of her in the intended Expedition.

9. This Island of *Gallo* is in $2^{\circ} 45'$ Latitude, Longitude from *London* West $76^{\circ} 38'$, distant from the Main about five Leagues, in Length two Leagues, in Breadth one: When you are to the Southward of it, it appears in three Hummocks, which, at a Distance, look like three Islands; and the Land between each is very low; but when you are to the North-west of it, at the South End, you will see a small Island, or rather Rock, which looks much like a Ship under Sail; and, when you are at the North End, you will see open the Land, as that you will see Part of it does not join to the Island, as it seems to do when you are to the Westward of it. At the North-east End of this Island are three small Islands, or rather Rocks; one is pretty big, and at a Distance looks like a Barn, and the other like two Sail of Ships. At this Island you may see the Mainland, which is very low near the Water-side, but prodigious high up in the Country. Here we anchored in thirty-five Fathom Water, two Cables Length from the Shore, hard Sand. We anchored in the North-west Part

M m

of

of the Island; the Northernmost Point bearing North half West, the Southernmost, South-west: The Watering-place goes in with a full Gap, over which, upon the Hill, is a plain Spot of red Earth, bearing North-west half North. Tho' there are also several other good Watering-places upon this Island; and in the North-east Part at *Segnetta* is the best anchoring; here you may wood and water very secure from any Enemy. The Island is very woody, affording large Timber, which is often sent in Shipping up to the Coast of *Peru*. Here are some few wild Monkeys, with abundance of Lizards; and a large sort of Lizard called a Lion-lizard; they are about the Bigness of a Man's Arm; I measured one, which, from the Head to the End of the Tail, was three Feet eleven Inches; he has a large sort of a Comb upon his Head, which stands up like an Helmet, or Head-piece, to defend his Head; when he is assaulted or affrighted, he fits his Comb up an-end; but otherwise it lies down flat, in a deep Dent in his Head just fitted to it; so that, when it is down, it can hardly be perceived: He has two very large Eyes, a large Mouth, with a great many small sharp Teeth. His Skin is very tough, of a dark Colour, full of black, yellow, and bluish Spots: In all other Things he resembles the common Lizard: When they are pursued, they will run very swift; yet our Dog often caught them.

10. After remaining here five Days, we concluded to sail from hence; but, just as we were going to get up our Anchors, we discovered a Ship standing in for the Island, which, when she came very near, we came out and took. She was a small Vessel, of fifty Tons, commanded by a *Mexico*. On board this Ship we found a *Guernsey* Man, who had been taken by the *Spaniards* as he was cutting Logwood in the Bay of *Campeachy*, and had been in their Hands above two Years, and must have continued a Prisoner for Life, if we had not released him. When we sailed from the Island of *Galle*, our Resolution was to attack immediately the Town of *Santa Maria*, which lay to the Northward, because we expected to find there great Quantities of Gold, brought thither from the adjacent Mines of the same Name; but this Design unluckily miscarried, whether through Fear, Confusion, or the Enemies having early Intelligence, which enabled them to lay Ambuscades, that cut off abundance of our Men, I cannot pretend to determine. This, however, is certain, that, by *May 1*, we were so sick of our fruitless Attempts on shore, that we resolved to go immediately on board, which accordingly we did; but there we met with new Difficulties; for such was our Scarcity of Provisions, that five green Plantains were ordered to be boiled for every six Men. But, to our great Comfort, when we were almost out of Hopes, as well as Patience, we descried a Sail at twelve this Night, which came to an Anchor close by us. We soon got up our Anchor, and took her without any Resistance. She proved a great Ship, of about 150 Tons: She was deeply laden with Flour, Sugar, Brandy, Wine, about thirty Tons of Marmalade of Quinces, a considerable Quantity of Salt, with some Tons of Linen and Woollen Cloth; so that now we might supply ourselves with Provisions for four or five Years. I was put on board this Prize on Behalf of Captain *Dampier*, and our Ship's Company; and the Master of the *Cinque-ports* was put on board as Chief for Captain *Stradling*, and his Ship's Company. We carried our Prize into the Bay of *Panama*; and, on the 14th, anchored under the Island of *Tobago*. Here Captain *Dampier* and Captain *Stradling* disagreed; and the Quarrel came at last to such an Height, that there was no pacifying them; so that, at last, it was concluded to part Company, all the Men being left at Liberty to go with which Captain they pleased; in consequence of which, five of our Men went to Captain *Stradling*, and five of his came to us. We were told by the Prisoners, that there were 80,000 Dollars on board our Prize; that they were taken in by Stealth at *Lima*, and lay at the Bottom in the Run of the Ship. Our Captain did not believe this, and was unwilling to stay longer, that we might have romaged her to the Bottom, because he thought Loss of Time would mar his greater Designs: Having, therefore, taken out a Quantity of Provision, he was dismissed; and we, on *May 19*, parted from the *Cinque-ports*, intending to beat up again upon the Coast of *Peru*.

11. *June 7*, we saw a Sail, gave Chase, came up with her, and took her. She was about 150 Tons, came from *Truxillo*, and was bound for *Panama*, laden with Flour, Sugar, Brandy, &c. with some Bales of wrought Silk in her. We took a Packet, which we opened; the first Letter we happened to read, was from the Captain of the *French* Ship we fought off the Island of *Juan Fernandez*, and met with again off the Port of *Lima*. It was directed to the President of *Panama*, and gave an Account, "That he fought two *English* Privateers off the Island of *Fernandez*; that the smallest of the two fired but eight or ten Guns at him, and then fell a-stern, and did not come up again during the Fight, as he believed, for want of Wind; that the great Ship (meaning us) fought him Broadside and Broadside for more than six Hours; that we killed them a great many Men; and that, at his coming to *Lima*, he sent ashore thirty-two of his Men, each of which had either lost a Leg, an Arm, or an Eye; and that it was a great Chance we had not taken him, for that, at our parting, they had given themselves over as lost, not having Men to defend themselves." We also had Account, by other Letters, that the two *Frenchmen* which we saw off the Island *Juan Fernandez*, had met with a Boat at Sea, in which there were an *Englishman* and a Dog. (This was the Boat which belonged to Captain *Stradling*, and which broke loose from him as we chased the *French* Ship off *Juan Fernandez*): That the said two *French* Ships had been in at *Juan Fernandez*, and had taken up our Anchors, Cables, Long-boat, with all Captain *Stradling's* Stores, and his five Men, and our Negro, which were left there. We also had Advice, that the *Spaniards* had fitted out two Men of War against us; the one of thirty-two Brass Guns, twenty-four Pounders each; the other of thirty-six Guns, of the same Bigness: That each of them had 350 Seamen, and 150 Soldiers, choice Men; and that they lay cruising for us in the Bay of *Guaquil*, between Point *St. Helena* and Cape *Blanco*, from the 7th to the 12th. We were forced to go away with an easy Sail, because of our Prize, which failed very heavy; and, seeing it was likely to be a great Hindrance to us in beating to Windward, we concluded to go into some Place to romage her: Accordingly, the same Day, we went into *Sardinas* Bay, and anchored with our Prize in ten Fathom Water, about four Miles off Shore: We durst not venture any nearer in, because of so many Shoals and Banks of Sand, which lie off it, and which were very imperfectly laid down in all our Draughts.

12. The Sea-coast here is inhabited by *Indians*, but they are not very numerous. Here are several small Rivers, which run with fresh Water down to the Sea-side; and from this Place, by the Sea-side, all along to the Southward, till you come to the Bay of *Tacames*, are white Cliffs, and many Shoals, as far as to Point *Gallera*. From this Bay of *Sardinas*, six Leagues to the Southward, is the great River of *St. lago*, the Mouth of which is about three quarters of a Mile over; but there is no good anchoring, until you are got well within the Mouth. This River is seldom made use of by Shipping, it lying out of the Way; only in case of Necessity, or by Chance, they put in for Refreshment: for here is Plenty of all sorts of Provisions. It hath, on the Sea-side, fourteen or fifteen Pieces of broken Ground, of a whitish Colour; and, at the North-end of them, is the Bay of *Sardinas*, wherein we careened our Ship, and romaged our Prize, and watered at one of the fresh-water Rivers, the Water of which was white like Milk, and both smelt and tasted very strong of Musk, occasioned by many Alligators swimming in it. We shot several of them, one of which measured thirty Feet in Length, and was bigger about than a large Bullock. This Creature is very full of great Scales, from the Neck to the End of his Tail: He has a very large sharp Set of Teeth, with very long Claws on his Feet: It is an amphibious Creature, living on Land, as well as in Water; when they are lying on Shore, they look like a great Tree fallen-down, and for such one would take them at a Distance. They will run very fast on the Land, and are of such Strength, that they will take an Horse or Cow, and carry it down to the Water, and there devour it. They will seize on any thing, as well on Land as in the Water.

Water; and if there be a great deal of it, it is usually in great abundance. They run in their own way, and turn his unwieldy from him. seek them, we find them, and the Middle in bite, raise their hold out this and it fastens. The Females Eggs are about almost as thick as they are quite fit to be eaten, very Water of strong of them would almost nauseous, there Prejudice to the

13. On *July 13*, we saw a Sail, and came up to be on purpose to take her. She was pretty near each did not mind the gage; in order and the Wind blow nately came by the rts, and cut all Helm to be elapsing this, inter Soil they could, but not they thought to had increased their out. Captain *Dampier* better upon one of best to put before fight, than to be Flag at the Main- to give nor take it as fast as we could Windward, at a not come to make the two Watches; the other looked weary, the others refreshed themselves five Guns to the he about 110 or Noon to half an Distance; for he Shot sometimes within the same time, flying growing dusk, the We had none of Enemy; only two and Faces blasted Morning betimes, have had another Expectation, he had *Dampier* told us, Coast of *Peru*, in of *Tacames*. Accordingly, we anchored with twenty Men, returned on board viz. that they had about fifty Houses; it, and had left not the River, however of about fifty Tons, would have served to likewise took another with Plantains. The Long-boat. She

Water; and commonly make great Havock amongst Cattle, if there be any near the Place where they harbour, which is usually in fresh-water Rivers. The *Indians* are not greatly afraid of them, neither in the Water, nor on Land. They run in a Circle, and this great Creature is not able to turn his unwieldy Body so quickly, but that they easily get from him. The *Indians* likewise go into the Water, to seek them, with a Piece of Iron, like an Harpoon at both Ends, and two Pieces of Iron across. This they hold by the Middle in their Hand; and the Alligators, when they bite, raise their Heads out of the Water. Then the *Indians* hold out this Piece of Iron to them, at which they bite; and it fastens in their Mouth, and keeps it open like a Gag. The Females lay Eggs, about 100 at a time. These Eggs are about the Bigness of a Goose's; but the Shell is almost as thick as an Ostridge's. I have seen many of them, they are quite round. The Flesh of the Alligators is not fit to be eaten, it being very strong and musky; nay, the very Water of the Rivers, which they were in, tainted strong of them, that is, of Musk, that a Draught of it would almost suffocate us. But, notwithstanding it is so noxious, there are no Instances of its doing any sort of Prejudice to the Constitutions of such as drink it.

13. On June 21. being off the Bay of *Guiniquil*, we saw a Sail, and came up with her the next Day. This happened to be one of those *Spanish* Men of War fitted out on purpose to take us, and a Ship of thirty-two Guns. Being pretty near each other, they gave us a Broadside; but we did not mind them. All our Care was to get the Weather-gage; in order to which, while we carried too much Sail, and the Wind blew very fresh, our Fore-topmast unfortunately came by the Board. Immediately we got our Hatchets, and cut all clear away; and our Captain ordered the Helm to be clapt a-weather, and bore away. The Enemy, seeing this, immediately bore away after us, with all the Sail they could, hoping to come up; for now they doubted not they should take us. We, observing that our running had increased their Courage, resolved to lie-by, and fight it out. Captain *Dampier's* Opinion was, that he could fail better upon one Mast than the Enemy, and therefore it was best to put before the Wind; but, however, chose rather to fight, than to be chased ashore: So, hoisting the bloody Flag at the Main-topmast-head, with a Resolution neither to give nor take Quarter, we began the Fight, and went to it as fast as we could load and fire. The Enemy kept to Windward, at a good Distance from us; so that we could not come to make use of our Small-arms: But we divided the two Watches; and one was to manage the Guns, whilst the other looked on; and, when those at the Guns were weary, the others were to take their Places, till they had refreshed themselves. By this means we fired, I believe, five Guns to the Enemy's one. We fired about 560, and he about 110 or 115; and we fought him from twelve at Noon to half an Hour past six at Night, altho' at a good Distance; for he kept so far to Windward of us, that our Shot sometimes would hardly reach him, tho' his would, at the same time, fly over us. At half an Hour past six, it growing dusk, they left off firing; and we did the same. We had none of our Men either killed or wounded by the Enemy; only two, through Carelessness, had their Hands and Faces blasted. We lay-by all Night, and, in the Morning betimes, looked out for our Enemy, expecting to have had another Brush with him; but, contrary to our Expectation, he had made Sail from us in the Night. Captain *Dampier* told us, that his Intention was now to leave the Coast of *Peru*, in order to go and get Provisions in the Bay of *Tacamas*. Accordingly, having weathered Point *Galera*, we anchored in that Bay, and sent our Boat ashore, with twenty Men, to look for Provisions; but they soon returned on board again, with a very untoward Account; *viz.* that they had met indeed with an *Indian* Village of about fifty Houses; but that the Inhabitants had abandoned it, and had left nothing behind them in their Houses. In the River, however, we found a fine Bark, of the Burden of about fifty Tons, with as much new Plank by her, as would have served to build another of the same Size. We likewise took another small Bark of about ten Tons, laden with Plantains. This Bark we intended to keep instead of a Long-boat. She had two Masts, and two square Sails;

and, when we had fitted her for our Purpose, we called her the *Dragon*. The Country hereabouts is very pleasant, and well wooded and watered, with all the Conveniency imaginable.

14. About seven Leagues to the Northward lies the Bay of *St. Matthes*. The Land about it is very high, and has a great many Shoals running from it two Leagues into the Sea; and for three or four Leagues, the Water is shallow, that is, from four to six Fathom where it is deepest. Southward and Northward to the Sea there are white Cliffs, and the Bay lies between them. In the Bottom of the Bay there are two Rivers, that empty themselves into the Sea; but they are both what the Seamen call Alligator-water, that is, white and musky, as I have before described it. On each Side of these Rivers are Shoals of Sand, and, near their Mouths, very fine Groves of tall, spreading, green Trees, which are the Marks to find these Rivers by; for their Mouths are so narrow, as not to be discerned at a Distance. These Rivers are seldom used by the *Spaniards* for any thing but Refreshment: And, to say the Truth, there cannot be a properer Place for that Purpose, since all the Country round about abounds with every kind of Provision, that this Part of the World affords. About two Leagues up the River, there are several Villages, inhabited by the *Indians*, who, when the *Spaniards* come hither, furnish them with Cocoa-nuts, Plantains, Bananas, and other kinds of Fruit. As we have often mentioned these, and shall be obliged to mention them frequently hereafter, it may not be amiss to enter into a particular Description of them here, for the Reader's Information, and to render our Accounts perfectly intelligible: The Cocoa-tree is, generally speaking, from fifty to an hundred Feet in Height, for the most part, strait and slender. This Tree produces Leaves of four Fathom, or four and an half in Length, and bears the famous Nut of the same Name, which, with its outer Rind, is larger than a Man's Head. This outer Rind being taken off, there appears a Shell, which will hold near a Quart. Within the Shell is the Nut; and within the Nut is about a Pint and an half of pure clear Water, which is very cool, pleasant, and sweet. The Kernel of the Nut is also very pleasant and good, which, if it be pretty old, we scrape all to Pieces. The Scrapings we set to soak in about a Quart of fresh Water for three or four Hours, and then strain the Water, which, when strained, hath both the Colour and Taste of Milk; and, if it stand awhile, it will have a thick Head on it, not unlike Cream. This Milk, being boiled with Rice, is accounted by our Doctors to be very nourishing; for which Reason we often give it to our sick Men. The Leaves of the Trees serve to thatch Houses. Of the outer Rind of the Nut they make what resembles Linnen Cloth. They also make of it Ropes for Ships, and Rigging, Cables, &c. which are a good Commodity in most Parts of the *West Indies*. The Shell of the Nut will make very pretty Drinking-cups. It will also burn very well, and make a fierce and hot Fire. The Kernel serves instead of Meat, and the Water contained therein instead of Drink; and, if the Nut be very old, the Kernel will, of itself, turn to Oil, which is often made use of to fry with, but most commonly to burn in Lamps; so that from this Tree they have, as is commonly said, Meat, Drink, Clothing, Houses, Firing, and Rigging for their Ships. These Trees may be known by any Ships passing by; for they have no Leaves, except just at the Top. At the Bottom of the Leaves the Cocoa-nuts grow, ten, fifteen, or twenty in a Cluster, hanging by a small String, which is full of Joints. The Plantain-tree is about thirteen or fourteen Feet in Height, and about four Feet round. The Leaves of the Tree are about eight or nine Feet long, and two Feet broad, and end in a round Point. The Fruit grows at the Bottom of the Leaf, upon a great Stalk, in a Cod about eight Inches long, and of the Bigness of a Black-pudding. The Cod is of a fine yellow Colour, often speckled with red. This being taken off, the Inside of it is white; but the Plant in itself is yellow, like Butter, and as soft as a ripe Pear. There grow fifty or sixty sometimes upon a Stalk, and five or six Stalks upon a Tree. They are an extraordinary good Fruit; and in most Parts of the *East* and *West Indies* there is great plenty of them. The Banana tree is much the same, only the Fruit is not so long as the Plantain, that being about eight

eight Inches long, and the Banana not above six. It grows in the same manner as the Plantain, fifty or sixty in a Cluster upon one Stalk. The Fruit is very mellow, and extraordinary sweet and good. On July 31. we left the Bay of *Tacames*, and carried our little Prize, named the *Dragon*, with us, not designing to touch at any Place, till we came to the Gulph of *Nicoya*.

15. We sailed from the Bay of *Tacames* cross the Bay of *Panama*, and from thence continued our Voyage to the Gulph of *Nicoya*, where, on August 16. we anchored near certain Islands, which the *Spaniards*, from their being seated near the Centre of the Bay, call the *Middle Islands*; and, the next Morning, our Captain and Carpenter went in a Canoe, to see if a proper Place for careening could be found amongst them. In the Evening of the same Day, while we were employed in dressing a Couple of Turtles, which the Captain had brought on board, our little Prize came to us again. They had been up the River *Changel*, and found two or three *Indian* Houses, and some Plantain-walks. The *Indians* climbed the Trees, and cut down from them as many Plantains as they would have. They found also two Canoes haled upon the Sand, and brought them both off. In their Way, they caught eight Turtles, and eat nothing of their own Provisions, but fed upon Turtle during the Time they were away from us. They gave us an Account, that they had found out a very good and secure Place at the Island *St. Lucas* for us to lay our Ship ashore in; that it was in a fine deep Bay, which, at the Entrance, was not above a Pistol-shot over; that, with five or six Guns upon each Point at the Entrance, we might so fortify ourselves, that no Enemy durst approach us; for that ten of us might defend ourselves against 500. However, we found the *Middle Island* to be as convenient as any Place could be; and, our Captain seeming to like the Place, and knowing we could fortify ourselves here, and with as little Trouble, we chose it. Accordingly, on the 18th, it being fair Weather, and calm, we towed our Ship in amongst the Islands, and lay within Stone's Cast of the Shore all round, with one Anchor a-head, and a Cable out at our Stern, which was made fast to a great Tree on the Shore. As soon as we had fastened our Ship, all Hands went ashore, and began to build Tents for our Cooper and Sail-maker to work in, and to put our Goods and Provisions in. In the mean time, our chief Mate was sent in the small Bark called the *Dragon*, with twenty Men armed, and two *Patericos*, to cruise in the Gulph; where after he had cruised five or six Days, he returned with a *Spanish* Bark of about forty Tons. She had in her some few Jars of Brandy, with Wine, and some Sugar. They were going to repair her, being very old; and for that Purpose had five or six Carpenters and Caulkers on board, who came very opportunely to help us to repair our Ship; for we had great Need of Workmen. We took out our Powder, Shot, and all our Ammunition, with all our Bread, some of our Flour, and two Quarter-deck Guns, and put them on board this last Bark. Then we got all the rest of our Things ashore, and made every thing ready for cleaning our Ship. The Bottom of it was, in many Places, eaten like an Honey-comb; inasmuch that the firm Plank was not thicker than an old Sixpence: Nay, in some Places in the Hold, we could thrust our Thumbs quite through with Ease. Our Ship being in this Condition, and we in want of Planks to new-bottom her, our Carpenter was forced to make an hard Shift, and stop the Leaks as well as he could with Nails and Oakum. On September 2. the chief Mate Mr. *Clippington*, having quarrelled with Captain *Dampier*, drew over one-and-twenty Men to his Party; and, having made himself Master of the Bark, in which was all our Ammunition, and the best Part of our Provisions, got up her Anchor, and went without the Islands, from whence he sent us Word, that he would put ashore our Powder, Shot, and other Ammunition, (reserving only what was requisite for his own Use) in an *Indian* House; which he did accordingly, and we sent our Canoes to fetch it on board.

16. These Islands are extremely pleasant and fruitful, abounding with all things requisite to Life; such as Fish of various kinds, and very good Birds of different sorts; and of amphibious Creatures such as are most admired, and of the greatest Use, particularly Turtles and Guanas. But, as general Descriptions are seldom satisfactory, I will enter

into a more distinct Account of the Creatures most remarkable here, whether Birds, Beasts, or amphibious Animals. The Maccaw is a very beautiful Bird; his Feathers of all the Colours in the Rainbow. In point of Size, he resembles an Hawk; in Shape a Parrot, only his Bill is perfectly white, and his Feet and Legs as absolutely black. The Carrion-crow is as big as a small Turkey, and, in all respects, very like one; for I never saw any Difference, either in Colour or Shape. The Flesh of them both smells and tastes so strong of Musk, that there is no eating of it. These Creatures commonly resort to Places where any dead Creature is, and feed upon it; for which Reason they are called Carrion: But the Reason why they are called Crows, I know not; for they are nothing like them. The Pelican is almost as big as a Swan. Its Colour is inclinable to white; only the Tips of its Wings are brown. It hath a long Bill, of about twenty Inches, with a very large Crop joining to the lower Part of his Bill, and so descending by the Throat like a Bag or Satchel, very observable, and of a Largeness almost beyond Credit, into which it receives Oysters, Cockles, Conchs, &c. or any other Shell-fish, which being not able to break, it retains them until they open, and then, vomiting them up, picks out the Meat. As for their making an Hole in their Breast, to give their Blood to their Young, I do not believe it, nor ever saw any such thing, altho' I have seen thousands, both young and old, together, and have eaten many of them. They are good Food; only they taste fishy. They have broad Feet, like a Duck, being Water-fowls; but they roost commonly on Rocks, and in Trees, and always sit with their Heads to the Wind; so that, if the Wind changes whilst they are at Roost, they turn about their Heads to it. They are heavy Birds, and fly very slow; and always, when they sit, either on Rocks, Trees, or in the Water, they rest their Bills upon their Crop. The Guana is a sort of Creature, some of which are found on Land, and some in the Water. It is about three Feet long, more or less, and is a very ugly Creature to look at, having great, sharp, black and green Scales, from the fore Part of his Head to the End of his Tail, and a Set of great sharp Teeth, with four long Claws upon each Foot. They breed commonly in the Roots of old Trees, near the Water-side, and frequent the Water as well as Land. When they are stewed with a little Spice, they make good Broth; and the Flesh looks very white, and eats well; but, if they are not extraordinary well boiled, they are very dangerous to eat, making Men very sick, and often putting them into a Fever.

17. There are several sorts of Sea-turtles; but we account the green Turtle the best Meat. They have several Islands and sandy Bays, where they go to lay their Eggs, which they do in different Places, at different Times. And therefore at one, or at several of these Places, their Season of laying is always the same, yet, in different Places, their Seasons are different. I have been at the catching of them in most times of the Year, and commonly found them full of Eggs. When they want to lay, they go ashore in some sandy Bay, and, with their Fins, make an Hole in the Sand about two Feet and an half deep, wherein they lay their Eggs, commonly about eighty or ninety at a time. Then they cover them up with the Sand they scraped out of the Hole; and so leave them for the Heat of the Sun to hatch. Thus, they lay two or three times in a Season; and, after they have laid, they go off to Sea, and leave the Young, when hatched, to shift for themselves, which, as soon as they get out of the Shell and Sand, retire to the Water. The Eggs are round, about the Bigness of a Duck's, with a white, thin, tough Skin over them; but no Shell. Both the Eggs and the Turtle are extraordinary good Food. I have seen of this sort of green Turtle several times from 200 to 350 and 400 Weight. The Lean of them, before it is dressed, looks like Beef; but the Fat is as green as Grass, and yet is very wholesome Food. The Pearl-oyster is much about the Bigness of our common Oyster; but flat and broad. It hangs to the Rocks by a long String-beard, like a Mussel. The Pearl lies in the thickest Part of it. Some have six or seven Pearls in them. The *Spaniards* make several Voyages to this Gulph of *Nicoya*, and to the Island *California*, for them. The *Indians* go down in seven or eight Fathom Water, and bring up eight, ten or

twelve Oyster them. The Oyster very both boiled a good. The Oysters, not oyster: Who Red like a Cl have often eat better Victuals Pieces, and Men. The Men when dressed, be good Vict And though it these would fear our Nicety in these Dishes co

18. We sail and, on October where we had monly, though *Guatemala*. twelve Oysters at a time, while the Men on board open them. The Meat of this Oyster is very green, and the Oyster very fat: I have eat of this Oyster several times, both boiled and stewed, and found them to be tolerably good. The great Oyster grows to the Rocks, as other Oysters, not hanging to them by a Beard as the Pearl-oyster: When they are opened, one Part looks of a fine Red like a Cherry, the other Part is of a fine White: I have often eat of this sort of Oyster, but it was for want of better Victuals: They are so large, that one of them cut in Pieces, and stewed, is sufficient for a Meal for five or six Men. The Mussels here are so large, that one of them, when dressed, will suffice two Men; and they are tolerable good Victuals, when stewed with Pepper and Vinegar: And though it may be true, that, in our own Country, these would scarce go down; yet it must be observed, that our Nicety in Eating is pretty well conquered before any of these Dishes come to our Tables.

18. We sailed from the *Middle Islands* on September 23. and, on October 7. we were in the Latitude $13^{\circ} 7'$ North, where we had Sight of the two high Mountains, commonly, though I think improperly, stiled the *Vulcanoes of Guatimala*. The first of these, which is the highest, and affords a most beautiful Prospect, lies on the North Side of the City; and, in the Year 1534. threw out a Torrent of Water, which totally overwhelmed it, and occasioned the Building of the new City at three Leagues Distance. The other Mountain, which is properly a *Vulcano*, lies on the South; and in the rainy Seasons, from April to November, rages most terribly. It sometimes throws out Stones as big as a House; and this, with such monstrous Eruptions of Flame, that, at the Distance of six Miles, in a dark Night, you may see to read a Letter. We took, on the 9th, a Bark of about eighty Tons in Ballast, bound for *Rio Leja*. She had a small Quantity of Provisions on board, which were very acceptable to us. This Bark was commanded by one Captain *Christian Martin*, a *Spaniard*, born at the *Canaries*, but brought up in *London*; he was Servant formerly to Captain *Eaton*, and came with him into the South Seas in Quality of his Gunner; but, falling out with the Men, ran away from them at the Island *Gorgonia*, where he lay concealed six Days, till the Ship was gone; after which he cut down two Trees, which he drew to the Water-side, and bound them together with Twigs; fixed a Mast; and of two Shirts which he had with him, made a Sail; and, having filled a large Bag with Oysters, which he made fast to the said two Trees, he, in the Morning betimes, put off from the Island *Gorgonia*; and, in the next Day in the Afternoon, got into the River of *Bonaventure*, where he went ashore, and had but ill Usage from the *Spaniards*, who sent him to *Lima*, where he was examined, cleared himself, and was set at Liberty. He spoke very good English. We were, at this time, sixty-four Men and Boys, all in good Health, and in extreme high Spirits. On November 23. we took a small Bark, of sixty Tons, from *California*, laden with Plank, but having on board, likewise, several Parcels of Pearl that had been fished up on that Coast. On December 4. we came into the Bay of *Nativity*, in which we took a new Ship, of the Burden of about sixty Tons, laden with Ammunition and military Stores for the Use of the *Acapulco* Ship, for which we were cruising, and for the Sight of which our People longed as earnestly, as if there had been no Difference between seeing and taking her; neither was it long before they had their Wish in one respect, tho' not in another. We took out of our Prize as much of the Ammunition as was left; for when they perceived our Design, the Ship's Company quitted her, having first thrown over-board the best Part of their Cargo, and left the rest scattered about in the utmost Confusion.

19. Being off the *Vulcano of Colima* on December 6. in the Morning, we discovered a Sail, and soon came up with her. This proved to be the great *Manilla* or *Acapulco* Ship, which we had been so long wishing to meet with. As we were well provided, we gave her a great many Broadsides, before she could get any of her Guns clear; for they did not suspect us to be an Enemy, and were not at all prepared for us. Captain *Martin*, who was then a Prisoner on board us, advised to lay her aboard

immediately, while they were all in a Hurry, and that this would be the only Way to take her; but if we gave them so much Time, as to get out their great Guns, they would certainly beat us to Pieces, and we should lose an Opportunity of making ourselves Masters of the Value of sixteen Millions of Pieces of Eight: And accordingly it happened; for Time being delayed in quarrelling between those of us that would lay her aboard, and those that would not, the Enemy got out a Tier of Guns, and then were too hard for us; so that we could not lie along her Side to do her any considerable Damage; for our five Pound Shot, which was the biggest we had, signified little against such a Ship as she was; but any of her Shot, which were eighteen and twenty-four Pounders, if they happened to strike us, our Ship, being very much decayed, it would drive in a Piece of Plank of three or four Feet: So being much damaged, and receiving a Shot particularly from the Enemy, betwixt Wind and Water, in our Powder-room, by which we had two Foot of Plank driven in on each Side the Stern, the Signal was made to stand off from the Enemy. Our Design being thus disappointed, all our Men grew discontented, and were for going Home, knowing we would do no good in these Parts, either for ourselves or Owners, having Provision but for three Months, and that very short, and our Ship being ready of herself to fall in Pieces. Our Captain desired our Consent to cruise here six Weeks longer, and then he would permit us to go for *India*, to some Factory, where we might all dispose of ourselves as we should think most for our Advantage. To this we all agreed, and accordingly cruised along Shore to the Eastward, in Sight of the Land; and passed by several noted Ports, as *Acapulco*, *Port Angels*, *Port Gualulco*, and several others. We now intended to go in Search of a proper Place to water our Ship and Bark, for our proposed Voyage to the *East Indies*; and, after some Consideration, we fixed upon the Gulf of *Amapalla* for that Purpose.

20. January 5. 1705. we met with such vast Quantities of Fish, that, in half an Hour's time, we caught near three-score Albicorees, from sixty to ninety Pounds Weight each, besides vast Quantities of other Fish. The Albicoree is about four or five Feet in Length, weighing from 50 to 100, and 150 Pound Weight: He hath eleven Fins on his Back, one pretty large one, one middling one, and nine small yellow ones near the Tail: He hath one large Fin on one Side near the Gills, and twelve Fins under his Belly; one on each Side underneath near the Gills, one near the Middle of the Belly, and nine small yellow Fins extending in his Tail. It is a very fleshy Fish, having little or no Bones, except the Back-bone, and is extraordinary good: It is a prodigious strong Fish when in the Water: They prey mostly upon Flying-fish, as do the Dolphins and Bonetoes. On the 6th of this Month, a new Revolution happened in our Affairs; for thirty of our Men agreed with Captain *Dawpier*, to remain with him in the South Seas, but with what View, or on what Terms, remained to us, who were not of that Number, an impentrate Secret. Our Company consisted of thirty-three Men; and, notwithstanding what had happened, we sailed together, according to our first Resolution, for the Gulf of *Amapalla*, where we arrived, and anchored on the 26th. The very same Day, all the Provisions that were left were equally divided amongst us by the Owners Agent; and we had four Pieces of Cannon, with a proper Proportion of small Arms and Ammunition, assigned us for our Defence in our Voyage. The next Care was, to take in Water; and, with this View, we landed on the Island of *Conchagua*; and, after some Search, we found behind the Hills a large Bottom, in which was a large Plantain-walk, and a great deal of Rain-water that fell from the Mountains. This was very inconvenient for us; because, lying so behind the Hills, we knew we must be forced to carry all our Water over a high Hill, which we could hardly climb by ourselves: But seeing there was no Remedy, we first cut down the Bushes, which were in our Way, to make us a clear Path; after which, the Hill being pretty steep on the Land-side towards the Bottom, wherein was the fresh Water, we, with our Axes and Shovels, cut out Steps in the Hill; and our Sail-maker having, in the mean time,

made us a Canvas Pipe of about ninety Fathom long, to carry our Water from the Top of the Hill down to our Cask, which lay at the Foot of it, we went to work to fill our Water, each Man having with him a six Gallon Cask. The Water which we took up was very muddy; and, on the Top of it, grew Duck-weed, as it does usually in our Ditches: At first we raked the Duck-weed away; but our Doctor persuading us, that if we took up the Weeds, they would mightily preserve our Water, we, according to his Advice, took up both Weeds and Water together. When each Man had filled his six Gallon Cask, he carried it up to the Top of the Hill, and then poured it into the Canvas Pipe, which conveyed it down the Hill into our Cask. Thus we employed ourselves for four Days; and, having filled about twenty-five Tons, which we concluded would last longer than our Victuals, and got it on board our Vessel, the next Day, being *January 31. 1705.* we all went ashore to the Plantain-walk; and, having cut down a sufficient Quantity of them, we returned at Night on board our Vessel, intending to sail next Day. This Evening, two of our Men, who had resolved to stay with Captain *Dampier*, left him, and came over to us; so that now we were thirty-five in Number, *viz.* thirty-four *English*, and one little Negro Boy, whom we had taken from the *Spaniards*. During the Time of our watering our Bark, the Men on board the Ship belonging to Captain *Dampier*, were busy in refitting their Ship as well as they could: The Carpenter stopped the Shot-holes, which they had in their Powder-room, with Tallow and Charcoal, not daring, as he said, to drive in a Nail, for fear of making it worse; and the four great Guns, which usually stood between Decks, were put down into the Hold, there being sixteen besides, which was more than they had Men to manage; for there remained with them no more than twenty-eight Men and Boys, and most of them Landmen; which was a very insignificant Force, for one who was to make War on a whole Nation.

21. We left the Gulph of *Amapalla* on *February 1. 1705.* and Captain *Dampier*, with his Ship the *St. George*, at Anchor in it. We steered out betwⁿ the Gulph of *Amapalla* and the Island *Mangera*, and many times had not above two Fathom Water. We had a fine Gale of Wind at North-east, which soon carried us out of the Mouth of the Gulph. So long as we had been in any of the Harbours on this Coast of *Mexico*, we had seldom been allowed any thing but Flour, excepting that we used to go ashore, and found upon the Rocks Store of Conchs, Oysters, Mussels, Snails, &c. of which we made many a good Meal. But now, being in hopes of getting into a Land of Plenty, we bore Hunger with more Patience; and, indeed, we had need of great Patience; for now our Commons were lessened to half a Pound of coarse Flour a Man *per* Day, with two Ounces of salt Meat every other Day. Our Vessel was a small Bark, with two Masts, of about seventy Tons, which we had taken from the *Spaniards*; but, whilst we lay here, she was so eaten by the Worms, that she began to grow very leaky; and, to add to our Afflictions, we had no Carpenter; neither, if any of us should fall sick, had we any Doctor, or any Medicines to make use of; and, which was worst of all, we had no Boat to assist ourselves, if our Vessel should fail us; for the Doctor, Carpenter, and Boat, were left with Captain *Dampier*: Yet, trusting to God's Providence, who had already delivered us out of so many Dangers, we proceeded on our intended Voyage to *India*. A bolder Attempt than this, all Circumstances considered, was perhaps never made by such an Handful of Men; and nothing but a Desire of seeing our Country, could have supported us under it.

22. The very Prospect of the Difficulties that we were sure to go thro', gave us Spirits to provide against them; and we held, on this Occasion, a kind of Council, in which we determined on two Things; the first was our Course, and the latter was our Allowance. We knew very well, that the Wind we then had was only a Land-wind; and that, by running one hundred Leagues to Sea, we should meet with the true Trade-wind, blowing either North-east, or East North-east. Our Business was then to get into the Latitude of 13° North, which is that of the Island of *Guam*, and then to bear away before the Wind. It was on *February 2.* that we determined these Points. All that Day,

and most of the Night, was fine calm Weather; so that we caught abundance of Yellow-tails, which were swimming about our Vessel. This Fish is about four Feet in Length, and has twenty Fins on his Back; one middling one near the hinder Part of his Head, one large one near the Middle of his Back, and eighteen small ones, stretching from the large one to his Tail. He has two large Fins near his Gills, one on each Side; and thirteen under his Belly, *viz.* one middling one underneath the Gills, one large one near the Middle of his Belly, which goes in with a Dent, and eleven small ones, stretching from the large one to his Tail, which is half-mooned: He has a very large Head, a great Eye, and is extraordinary good Food. It is very fleshy, having no Bone but the Back-bone: These Fish, when taken by us, looked very white, but the Tips of their Fins and Tail were yellow; and for this Reason we called them Yellow-tails. They were very welcome to us; for, whilst they lasted, which was three Days, we saved our Provisions, feeding upon nothing else but this Fish. On *February 3.* the first Part of the Day, it was calm; in which time, five or six Turtles coming near the Vessel, we caught two of them, which still served to help us, and save our Sea-stores, which otherwise had not been sufficient to keep us from perishing.

23. On the Evening of the same Day, we had the Land-wind at North-east, a fine brisk Gale; and therefore we took our Departure from Mount *St. Michael*, in the Gulph of *Amapalla*; and continued our Course South-west, and South-west by West, till we were in the Latitude of 10°; and then, finding we had the Trade-wind, we bore away West North-west, according to our former Resolution. The next Thing we did, was to make Studding-sails out of our Main-sail, and Main-top-sail; we got our Studding-sail up by Day-break every Morning, and at Sun-set haled them down again; for it commonly blew so fresh in the Night, that we were forced to set our Top-sail, and, with the rising of the Sun, the Wind abated; yet we always had as much as we could well carry with our Studding-sails. We continued, during our whole Voyage, to adhere steadily to that Rule of Diet, which we had prescribed ourselves; and of the Slenderness of which the Reader will be a proper Judge, when I enter a little into Particulars. From the third to the last of *February*, we fed entirely upon Plantains, making two Meals a Day, and allowing each Man two Plantains at a Meal. We then had recourse to our Flour, of which half a Pound a Day was allowed to each Man, and every other Day two Ounces of salt Beef or Pork; but the Meat had been so long in Salt, that, when we boiled it, it thrunk one half; and therefore we concluded, that it would be better to eat it raw, which we did, so long as it lasted, all the Voyage after: But, in the Beginning of the Month of *April*, that began to fail, so that we were forced to have recourse to Flour alone; which, besides its being measured out to us in so scanty a Proportion, as half a Pound to each Man for a whole Day, was likewise very much spoiled, being full of Maggots, Spiders, and other Vermin; so that nothing but the Extremity of Want could oblige us to eat it. It is, indeed, surprising to behold this strange Change, and to perceive Flour, that a few Days before was white and fine, in a manner all alive, the Maggots tumbling one over another. On strict Inquiry, however, it seems, this Change is produced by the Eggs of Spiders deposited amongst it; for, out of these, the Maggots are bred, which fed voraciously on what afforded them a kind of Nest, till such times as they became living Creatures. It must be confessed, that Words very faintly describe the Miseries of such a Life as this; but then it must be considered, that Work makes the Time pass away; and that the Hopes of accomplishing a very difficult Voyage, keeps up Mens Spirits, and gets the better of their Apprehensions of sinking under it. Some little occasional Assurances we met with in this long Course, such as sometimes catching a Dolphin; at other times we saw many Sea-birds, such as Boobies, Noddies, &c. which would come and settle upon our Vessel, and happy was he that could catch one of them. In this manner we passed away about ten Weeks; at the End of which we were in a very melancholy Condition, and nothing but the Hopes of speedily seeing Land, could possibly have

kept us from despairing; but, as this was daily expected, it took up all our Thoughts, and calmed all our Sorrows.

24. *April 10.* we saw the Clouds gather about the Horizon much more than usual: This was a sure Sign of Land; for it is common between the Tropics to be foggy over the Land, though it be never so clear at Sea; therefore all this Night we took care to look out, and on the 11th, in the Morning betimes, we saw the Island of *Magon*, bearing West, distant about ten Leagues. It is an high woody Island, and very plain and green on the Top: So we stood towards it; and, when we had brought it to bear North, distant about a Mile, being so near, we laid our Ship by, and several Fishing-boats came to us, and brought us some Fish, with Eggs, Yams, Potatoes, &c. The Men in those Fishing-boats were a very tall large-limb'd People, of a tawny Complexion, having long black Hair reaching down to their Middle. They all go stark-naked, not so much as covering their private Parts. In Exchange of what we had of them, we would have given them Money; but they looked on it, and gave it us again, making Signs to us to give them Tobacco in the room of it; which we did, and they seemed very much pleas'd. We also gave them some old Shirts, which they immediately tore in Pieces, and rolled them round their Heads. We would have given each of them a Dram of Brandy, but they were afraid to drink it: Only one of them, seeing us drink to each other, and that it did us no hurt, at last made Signs, that he would drink with us: So we gave him a Glassful, which he immediately drank off; but we thought the Fellow would never shut his Mouth again; for he was so amazed at the Heat it had left in his Mouth, and in his Belly, that, I believe, he thought he had set himself on Fire. He laid himself down, and roared like a Bull, which scared most of the rest of them away: After he had roared near half an Hour, he fell fast asleep; and we, being in haste, put the poor Fellow into his Boat, and made Signs to his Consorts to take care of him, that he might not fall over-board. They seem'd to be a very civil People; but, however, we did not care to let too many of them come into our Vessel at a time. Their Language we could not understand at all. When they first approach'd us, they tied two Sticks together, in Fashion of a Cross, and held them up for us to see; which was, as we supposed, to signify to us, that they had some Knowledge of the Christian Religion: We, in Return, shew'd them a Crucifix, which we had taken from the *Spaniards*; at the Sight of which they all bowed their Bodies, and came on board. This Island of *Magon*, I conceive, lies in the Latitude of 13° North, and we made Longitude from the Mouth of *St. Michael's*, West 120° 9', or 7029 Miles, allowing between 58 and 59 Miles to a Degree of Longitude in this Parallel. The Boats that these Fishermen came on board in, were about forty Feet in Length, and about seventeen or eighteen Inches broad aloft, but not above three broad below: Their Head and Stern were alike: The Bottom, to the Water's Edge, was one intire Piece, but hollow; upon which, for the Side of the Boat, was a Piece of thin Plank, about three Feet broad, and of the same Length as the Boat itself: It had its lower Edge sew'd with Rattans to the Bottom of the Boat: They had two long Poles put out of one Side; one was within ten Feet of one End of the Boat, and the other within ten Feet of the other End, so that they lay distant from each other about 120 Feet; the Poles were about thirty Feet in Length; at the End of which was a long Piece of Plank, about twenty-one Feet, of the same Shape, and about one-fourth Part of the Bigness of the Bottom of the Boat: This Piece is laid across at the one End of the Poles from the one Pole to the other, where it is very securely made fast; and this, all together, is called the *Outlayer*, or *Outleaker*. This is always the Weather-side, and the Use of it is to keep the Boat from overletting; for, without the *Outleaker*, the Boat is so narrow, that it would not bear itself: They have but one Sail, which is made of Mat, and like our *Bermudas* Sail; it is not above two Inches broad at Top, and hales out by a Boom: When they have a mind to go about, it is only letting go the Sheet of the Sail, and haling aft on the same Side, at the other End of the Boat; and then that which was the Stern before, becomes the Head, any End

going foremost, and no Distinction in the Building of either End, but it is the same Side still that always remains the Weather-side. The Conveniency of these Vessels are very great, and the Contrivance of them exceedingly ingenious, so that we are able to build nothing like them.

25. It was resolv'd, on mature Deliberation, to bear away from hence for the Coast of *New Guiney*, without putting in to the Island of *Guam*, of which we had Sight. The Weather continued fair, and the Wind brisk, as well as favourable, till we arriv'd in the Latitude of 4° North; and then we had a Calm for no less than seven Days; in which Space we had no way to relieve our Hunger, but by drinking a good large Draught of Water, and then lying down to sleep. On the 3d of *May*, we had a fine Gale, which continu'd to the 5th, when it died away before we saw any Land. About ten in the Evening, we were all sensible of a very odoriferous Smell brought to us by the little Air there was; from whence we concluded, that we could not be far distant from some Land, whence this fragrant Breeze must blow. Upon this, we began to search our Charts, but to no manner of purpose; for in none of them was there any Land laid down. The next Morning, however, we found our Conjecture verified, and actually saw Land at no great Distance. The same Day we caught two Bonetoes, which were very welcome to us; for they made a good Meal for all our Company. This Fish is commonly about three Feet in Length, and two Feet about; he hath two middling Fins on his Back, with eleven small ones, stretching to his Tail, the like Number opposite, under his Belly, with two large ones, one on each Side, near his Gills; a very sharp Head, with a small Mouth; a full Eye, and an half-mooned Tail; it is a very fleshy Fish, having no Bone but his Back-bone, and they make very good Broth. About Noon we were in Sight of three small Islands, all of them low Land, but exceedingly green and pleasant, affording a most delightful Prospect from the Sea, and especially to us, who had not seen Land for so long a time. We had likewise an Observation, by which we found, that we were in the Latitude of 50° North; and, as the Eastermost of those Islands was four Leagues to the South-east, it must be, consequently, in the Latitude of 42° North.

26. As we were cautious of venturing upon an unknown Coast in the dark, we stood off all Night; and very well it was for us, that we did so; for the next Morning, being the 7th of *May*, about Day-break, we found ourselves within a Ship's Length of a great Ledge of Rocks, which ran from one Island to the other, which we not seeing before, and thinking to go between the two Islands, had like to have been upon them: But, through God's Mercy, a small Breeze of Wind coming from the Shore, we got off, and stood to the Westernmost Island, because we saw many Shoals lying off the rest of them. The Rocks we were like to have been upon were near the Northernmost Island, which, upon account of our miraculous Escape, we called the Island of *Deceit*. When we came near the Westernmost Island, which was the biggest of the three, we stood in for the Island; and, as we drew nearer, about forty or fifty of their flying Procs came off, and in them might be about 450 Men, allowing ten to each Proc; and we could discern Multitudes of People upon the Shore; for, as we pass'd by any of these Isles to go to the next, the People also followed us; their flying Procs lay at a Distance from us, and viewed us, till we beckoned, and made Signs for them to come to us; then one of them, which was in the Midst, advanced towards us, and, being pretty near, lay and looked on us for awhile. We still made Signs for him to draw nearer; then he came within a Ship's Length of us, and lay still again. In her were ten Men, all naked, and, in the Midst of them, a grave old Man, of a pleasant Countenance, who had on his Head a Four-corner'd Cap, without a Crown, but otherwise he was quite naked, as were all the rest of them. This Man, by the Respect all the rest in the Boat shew'd to him, we guess'd to be a King or Prince. At their Approach to us they sung a Song, which continu'd about a Quarter of an Hour: We could not understand it, but it was tun'd very prettily: When this Song was done, they came almost close to our Vessel's

Veffel's Side, and then fung another Song. This was begun by the grave old Man, and followed by all the rest in the Boat; which done, they put themselves in a Posture of praying, and made several Bows and Cringes towards us, after the Manner of their Country; then one of the Men in the Boar, having a very sore Leg, held it up to us, and pointed to the Wound. By the Signs he made to us, we understood, that he would have us to cure it; for we being white, and they having probably never seen any white Men before, they seemed as if they did not think us to be mortal Men. After this, we poured some Water out of a Bucket into a Glas, and, pointing to our Mouths, made Signs that we wanted Victuals and Drink: Then they shook their Heads, in way of Denial, as I suppose; but, seeing us still make towards the Island, one of the Men in the Boat blew an Horn; at the Sound of which, all the rest of the Boats made boldly to us: Upon this, we all believing they would be aboard of us, fired a Musquet over them, not designing to harm, but only to frighten them; at the Noise of which they seemed wonderfully amazed, and drew back, menacing us at a Distance with their Paddles, and still following us. So seeing, as I said before, many Hundreds of them upon the Shore, and finding we could have nothing from them but by Force, and having no Anchors or Cables by which we dared trust our Bark, and, besides, having no Boat to go ashore in, so that should we swim ashore, as some of our Men proposed, yet we could not carry our Arms with us, and the *Indians* might knock us in the Head with Stones which we were in the Water, we concluded there was no good to be done here: Wherefore, examining our Water, and finding sufficient for eighteen Days, at a Quart of Water each Man *per* Day, we resolved to leave these Islands, and to trust to God's Providence to guide us to a more friendly Place, where we might supply our Wants, not doubting but we should furnish ourselves with Water at some Island or other, in a Place where there were so many: So we left the said Islands, and called the Westmost of them the Island of *Disappointment*, because we made certain Account of getting some Water here, but could not. They were all three low, flat, even Islands, full of several Sorts of Trees, all very green and flourishing; and, no doubt, if we had had a Boat, we might have met with something which would have been beneficial to ourselves, and of Advantage to our Country, as we might also at several other small Islands, which we afterwards passed by. The Inhabitants of most of these Islands were a very large strong-boned People. They had long, black, straight Hair, which reached down to their Middle; and they all go stark-naked, not so much as covering their privy Parts. I think I never saw such a Parcel of stout-limbed Fellows together in my Life. It is certain, therefore, that the Islands hereabouts are abundantly peopled, though they are utterly averse to any Communication with Whites, perhaps from a Notion, that all Whites are *Spaniards*; and yet it is not altogether clear, that even the *Spaniards* ever attempted making a Settlement in any of these Islands.

27. When we left these Islands, we had a fresh Gale of Wind at East; and, steering South-west, we met continually with Weeds and Grass in the Water; which inclined us to believe, that we were not far from Land; and yet, on founding, we had no Ground at an hundred Fathom. On the eighth of *May*, early in the Morning, we discerned the Coast of *New Guiney*; from which we were then distant eighteen or nineteen Leagues. The Sight of Land engaged us to think of building a Boat with a few old Boards, and such other Materials as we had, though they did not seem altogether fit for the Purpose; which Boat, when completed, though it was not the strongest or most beautiful thing in the World, yet proved exceeding useful and convenient. On the 9th, we had very bad Weather, the Wind shifting all round the Compass. We had time enough to consider this Part of *New Guiney* with much Attention; the Land appeared very mountainous, black, and rocky, without Harbour, Bay, or Road, where we might anchor safely. The Mountains were so bleak and barren, the Valleys so narrow and deep, that we, at first Sight, conceived the Country uninhabited; nor did our

future Acquaintance engage us to change our Opinion, since we saw no Inhabitants, or Signs of Inhabitants. The same Day we passed by two small Islands, each of which might be a League in Length; they were low, but very well clothed with small green Trees. We saw, at the same time, Part of the great Island of *Gilolo*, at eight Leagues Distance, and kept on our Course West South-west, intending to pass through that Island, and the Continent of *New Guiney*, into the *East India* Sea. We had very bad Weather till the eleventh, and, the Night being very dark, we missed the common Passage, and found ourselves in the Morning among many small Islands; when, perceiving we had overshot the Passage, and the Wind being at East, we resolved to look out for a Passage to the Southward, amongst those Islands: Accordingly we stood to the Southward, but found a great many Rocks and Shoals, which stretched from one Island to another: At Night, there being little Wind, and not daring to venture further amongst those unfrequented Islands and Shoals, we resolved to lie-by, intending, in the Morning, if the Winds should prove Westerly, to return back, and go through the common Passage; but, if it still continued Easterly, than to endeavour to find out a new Passage to the Westward. This Night we saw two or three Fires, which were made on shore by the Inhabitants. The Islands here were most of them of a good Height, and pretty well clothed with several Sorts of Trees, which all appeared very green and flourishing. On the 12th, we had fair Weather, with a fine fresh Gale at North-east: So we proceeded to the Westward, and, at the same time, had a strong Tide setting to the Westward. About eight this Morning, we shot between two high Head-lands, which were distant from each other near two Miles. Upon this, some of us went to the Top-mast-head, to look if we had a clear Passage through; and we saw no Hindrance: So we got through by two in the Afternoon. It was in Length about seven Leagues, and about two Miles broad. In it we could find no Anchorage, till within a Ship's Length of the Shore, and then we had thirty Fathom Water. The Land here was of an indifferent Height, and very woody. At Noon, the Tide setting back to the Eastward, and it being calm, we drove, by five in the Evening, half way back again, and drove with our Vessel so near the Shore, that we kept her off with our Poles; and might have stepped from our Barks to the Shore, and yet our Vessel never touched the Ground, the Water being very deep close to the Shore. Not long after, a strong Gale springing up again by seven in the Evening, we got clear of this Streight the second time; and then it fell calm again, and we drove with the Tide, which still set to the Westward. In this Streight we saw a flying Proe under Sail, but it did not come near us. We also, in some of the small Bays, saw several old Houses, some standing, and some half down, but could not see any Inhabitants. On the 13th, we had little Wind at East South-east, and sometimes calm; but, when we had any Wind, we steered away South by West. Here we saw a great many Islands to the Southward of us, but none of them so near together, but that there was room to pass between them, and scarce any Ground to be found with one hundred Fathom of Line. We still found we got but very little, the Tides setting sometimes to the Southward, and then again to the Northward; so that we were not got yet above a League to the Southward of the said Streight, which we, after the Name of our Bark, called *St. John's* Streights; and, I believe, we were the first *Europeans* that ever past it.

28. At this time a large *Indian* Proe came on board us, in which was a Freeman of *Ambony*. We acquainted him with our great Want of Victuals, having had nothing for a long time to eat but Flour and Water, and so little of that, as would hardly keep us alive. He told us, if we would go to the Island of *Manipa*, which was then in Sight, he would be our Pilot, and carry us in, where he did not doubt but we might have Rice enough for our Money to carry us to *Batavia*. Accordingly we steered directly for *Manipa*, and, in our Way, passed by the Island *Keyla*, which is a small, but high Island, very well inhabited, and clothed with several Sorts of Trees. Its chief Produce is Rice, and some few Cloves; and here was a *Dutch* Cor-

poral, with six all the Cloves- we proceeded at Night, and North-west Er two Men abo quaint him wi Morning, a *D* board, and re *Dutch East In* those belonging there, they we told him, it w to put in here should not hav *Batavia*: Wh and inform the a very weak C would bring us and, at four in us Word, That if we would go So we were fore deavour, if the This Island of *M* well, about fift in the Latitude Island *Bona* abo Island, and prett all the *Molucca* which Shoals, fo off the Shore: V has good Draugh near it. The *M* as the Island *Key* good Springs of Side of the *M* Guns. The *M* Corporals, and a *N* twenty *Dutch* Sol Cloves and Rice, *Ambony*. The *I* They catch abou own Ufe, but alfo 29. We stood at South South-east Top-fails, and we now quite out of *Ambony*, the Sou Wind was right a that we could fear of getting to *Bata* us thither; and be weather the Shoals Island of *Bouton*: the Wind continu ward, till we came the Wind veering South-east: But, ward, so that we Likelihood of g sent, shared all th the Whole of what Pounds and three Bran; and every c as he could. On the South South-east west; and soon we small Island, not al indifferent Heigh It is pretty well fur not inhabited: Nei fresh Water upon it till twelve at Nigh down upon us, bef our Sails; it almost fail and Main-topfa and two of our For over, it fell calm; NUMB. 10.

poral, with six Soldiers, whose only Business it was to see all the Clove-trees cut down and destroyed. From hence we proceeded to *Manipa*, where we arrived about twelve at Night, and came to an Anchor in a small Bay at the North-west End of the Island: Then our *Dutch* Pilot sent two Men ashore with a Letter to the Governor, to acquaint him with our Wants. On the 23^d, betimes in the Morning, a *Dutch* Corporal, with two Soldiers, came on board, and read to us an Order which he had from the *Dutch East India* Company; That if any Ships, except those belonging to the *Dutch East India* Company, anchored there, they were not to supply them with any thing. We told him, it was for want of Victuals that we were forced to put in here; and that, if we could have substituted, we should not have touched at any Place till our Arrival at *Batavia*: Wherefore we desired him to go ashore again, and inform the Governor of our Wants. He, seeing us in a very weak Condition, promised he would, and that he would bring us Word again: Accordingly he went ashore, and, at four in the Evening, returned again, and brought us Word, That we should have no Provision there; but, if we would go to *Amboyna*, there we might be supplied. So we were forced to leave this unfriendly Place, and endeavour, if the Wind would permit, to go to *Amboyna*. This Island of *Manipa* is in Length, South-east and North-west, about fifteen Miles, in Breadth about eight, and lies in the Latitude of 3° 25' South, and Westward of the Island *Bona* about twenty Miles. It is a remarkably high Island, and pretty well inhabited by the *Malayans*, as are all the *Molucca* Islands. It is Shole almost all round; which Sholes, some of them, stretch a League and an half off the Shore: Wherefore, unless a Man be acquainted, or has good Draughts of the Place, it is dangerous coming near it. The Island is of a good Height, but not so high as the Island *Keylan* before-mentioned: On it are several good Springs of fresh Water; and, on the South-west Side of the Island, the *Dutch* have a small Fort of six Guns. The Island is governed by a *Dutch* Serjeant, three Corporals, and a Master Gunner, and they have under them twenty *Dutch* Soldiers. On this Island grows vast Plenty of Cloves and Rice, of which they send great Quantities to *Amboyna*. The Inhabitants are most of them Fishermen. They catch abundance of Fish here, not only for their own Use, but also to supply *Amboyna*.

29. We stood to the South-westward, having the Wind at South South-east; and, it blowing fresh, we reefed our Top-sails, and went away under our Courses. We were now quite out of Heart; for we did not expect to reach *Amboyna*, the South-east Monsoons being set in, which Wind was right against us; and besides, it blew so hard, that we could scarce carry any Sail; and we could not think of getting to *Batavia*, because we had not Victuals to carry us thither; and besides, as the Wind was, we could not weather the Sholes, which lie to the East South-east of the Island of *Bouton*: So that, being almost in Despair, and the Wind continuing, we kept our Course to the Southward, till we came over-against the Island *Bouro*; and then, the Wind veering to the South South-west, we stood away South-east: But, finding a strong Current setting to Leeward, so that we rather lost than got Ground, and seeing no Likelihood of getting to *Amboyna*, we, by general Consent, shared all that was eatable on board our Vessel; and the Whole of what each Man's Share amounted to was six Pounds and three Quarters of Flour, with five Pounds of Bran; and every one designed to be as sparing of his Part as he could. On the 25th, the Wind veering about to the South South-east, we tacked, and stood to the South-west; and soon weathered the Island of *Ambou*, which is a small Island, not above three Leagues in Length. It is of an indifferent Height, and lies in the Latitude of 4° 5' South. It is pretty well furnished with Trees of several sorts; but not inhabited: Neither do I know, whether there be any fresh Water upon it. From hence we continued our Course till twelve at Night, when an hard Gale of Wind coming down upon us, before (through Weakness) we could hand our Sails, it almost overset our Vessel. It split our Main-sail and Main-top-sail all to Pieces, broke our Main-stay, and two of our Fore-shrouds. As soon as the Squall was over, it fell calm; and then we had so great a Sea, occa-

sioned, as I believe, by the meeting of several Currents, that, we thought, our Bark could not hold it out, she laboured so much; and the Sea took us so on all Sides, that we were almost covered with Water. On the 26th, it sprung up a fine fresh Gale at South-east: Whereupon, knowing we could not weather the Sholes, we tacked, and stood away North-east for the Island of *Amboyna*. On the 27th, the Wind continuing, we held the same Course; and, on the 28th betimes in the Morning, saw the Island of *Amboyna*, bearing due North, distant about six Leagues: So we stood away directly for the Island, and, by Noon, came just off the Harbour; a joyful Sight to us then! tho' we had, soon after, Cause to look upon it as the worst Sight we had ever seen: So frail are the Hopes of Man, and so apt are we to desire what leads to our own Destruction!

30. As we entered the Harbour of *Amboyna*, we met with two Ships coming out, laden with Cloves, and bound for *Batavia*. The Captain of one of these Ships came on board us, desired to know whence we came, whither bound, and a Journal of our Voyage, promising to return it, when he should meet with us at *Batavia*. We gave him the best Answer we could to all his Demands; and our Owners Agent gave him a succinct Relation of our Voyage; which was a very happy Accident, since to it we owed our Preservation, as will be shewn hereafter. That Night we stood in to the Harbour; and, the next Morning, which, according to our Account, was *Tuesday*, but with them *Wednesday*, two *Dutch* Oranbics (for so they call the Vessels which they use there) came on board us, each rowed, or rather paddled, by forty Men. In these Vessels came the Fiscal, Secretary, several *Dutch* Gentlemen, and about eighty Soldiers, who took Possession of our Bark. They also went down, and sealed up all our Chests; and the two Oranbics towed us in; and, by Noon, we got up as high as the Town, where they moored our Vessel in the common Anchoring-place. Here we continued till the 31st, not knowing how they designed to dispose of us; in which Time they would not afford us any Victuals, tho' we offered them a Crown for a Pound of Beef, Pork, or Bread. In the Evening, we were all sent on shore, where they had provided two Rooms for our Reception near the Stadt-houze; and our Bark, Money, and Goods, except what we had about us, were all taken from us: And, soon after, our Vessel and Goods were sold at a public Outcry. We were fed with very bad Meat, which we, who had been at Short-allowance so long, and our Stomachs very weak, could ill digest; and, if we would have better, we must buy it with our own Money. Several of us had the good Luck to have some Money about us, and, as long as that lasted, we bought our own Victuals of our Keeper for a *Spanish* Dollar, which was five Shillings and a Penny Value, tho' he would give us no more than five *Dutch* Shillings, to the Value of about half a Crown; and, for this Half-crown, we could have no more Victuals, than we could have bought for Five-pence, if we had been at Liberty to go into the Town; so that, instead of having five Shillings for our *Spanish* Dollar, we had indeed no more than five Pence. It cannot be expected, that, after such hard Usage as this, I should be extremely fond of the *Dutch* Government at *Amboyna*. However, the Leisure I had, and the several Opportunities that offered, of inquiring into the present Condition of the Place, led me to frame a pretty large, and, I will be bold to say, just Account of that Island, and all its Inhabitants. This, I flatter myself, will be the more acceptable to the Public, because of the Care taken by the *Dutch* to stifle all Descriptions of this Place, even by their own People; so that I never heard of any lately printed: And this Conduct of theirs is founded on a Maxim of the *East India* Company, viz. that the best Way to preserve their Trade in those Parts, and particularly their Monopoly of Spices, is to contrive every possible Method for deterring other Nations from sending Ships into that Part of the World, and to use such as straggle thither in such a manner, as to fright their Countrymen effectually from following their Example.

31. This Island of *Amboyna*, so famous, or rather infamous, for the Cruelties that were formerly committed there by the *Dutch* upon the *English*, is in Length from North-east to South-west, twelve Leagues. It is high and mountainous.

tainous. The Hills are, in great measure, barren; but the Valleys are very fruitful. The Soil is black, and the Surface affords Salt-petre. The Middle of the Island lies in the Latitude of about $3^{\circ} 4'$ South. It is inhabited by *Malayans*, who are the original Natives. They are of a middle Stature, and tawny; but the Women are of a brighter tawny than the Men, and have long black Hair, which reaches down to the Calves of their Legs. They have round Faces, small Mouths, Noses, and Lips. They wear a Linen Waistcoat, which reaches no farther than the lower Part of their Breasts; and, about their Middle, they wear a Piece of Cloth, about four Yards wide, and a Yard deep. This they roll round them, and it serves them instead of a Petticoat; for none are allowed to wear Petticoats, but the *Dutch* Women only: Neither are any of the *Malayan* Men allowed to wear an Hat, excepting only their King. Although the *Malayans* are the most numerous, yet the *Dutch* are possessed of all the Sea-coast, and have here a strong Castle, built of Stone, and mounted with sixty Guns, besides several other small Fortifications in other Parts of the Island. Near this Castle is a small Town, of about 100 *Dutch* Houses, all strongly built of Stone, Brick, and Timber; but all very low, none exceeding one Story, because of Earthquakes, to which this Place is very subject; so that, should they be built higher, it would endanger the falling of them, as they often do, notwithstanding they are so low. Whilst we were here, we had a great Earthquake, which continued two Days, in which Time it did a great deal of Mischief; for the Ground burst open in several Places, and swallowed up several Houses, and whole Families. Several of the People were dug out again, but most of them dead; and many of them had their Legs or Arms broken by the Falls of Houses. The Castle-walls were rent asunder in several Places, and we thought, that it, and all the Houses, would have fallen down. The Ground, where we were, swelled like a Wave of the Sea; but near us we had no Hurt done. As to the *Dutch* Policy in the Island, it is governed by a Council, which consists of five Persons; viz. the Governor, the chief Merchant (or upper *Koop-man*), the *Malayan* King, the Captain of the Fort, and the Fiscal, who is in the Nature of a Judge. Upon the Island are said to be about 350 *Dutch* Soldiers, with 120 or 130 *Dutch* Freemen and petty Officers, and near as many of the *Chinese*, who live here for the Advantage of Trade, although they are not allowed to trade in Spice, that being a peculiar Trade, which the *Dutch* Company reserve to themselves; so that, I reckon, they can make in all about 550 fighting Men, *Dutch* and *Chinese*. As to the *Malayans*, they would be but of little Service to them, but rather be glad to assist any-body against them. The *Malayan* Women are said to be great Whores, of which they are not ashamed. They are soon ripe, and often married by nine Years of Age; and many of them are said to have Children by ten or eleven. All near the Water-side are forced to be under the *Dutch* Government, which is very absolute and tyrannical: For any small Fault they are severely handled; and many think themselves well off, if they are not made Slaves, and wear an Iron upon their Leg during Life: Those, I say, who dwell near the Sea-side, are all subject to the *Dutch* Government, and are Christians; but those within the Country, who are called the *Hill Malayans*, are *Mohammedans*. They are always at War with the *Dutch*; and, if they take any of their Prisoners at any time, they never give him any Quarter; but, after they have kept him in Prison five Days, without either Victuals or Drink, they bring him out, and, first of all, rip up his Breast with a sharp Knife, and take out his Heart; at which there is great Rejoicing of all the *Malayans* that are present. Then they cut off his Head, and embalm it with Spice to keep; and they who can fiew most of those Heads, are accounted the most honourable, and value themselves much upon it. The dead Body is left exposed to the ravenous Birds of Prey to feed on. The *Dutch*, to retaliate this Usage, when they take any of these *Malayans*, load them with many Irons, and lay them in Prison, where they lie for some time; after which they cut off their Noses and Ears, and then they are sent to Prison again, where they continue some further time; after which they are brought out the second and last time, and then they rack them till they die. As for those under their own Go-

vernment, if they are found guilty of Thieving, they often cut off their Noses and Ears, and put a great Iron Chain about their Legs, and so make them Slaves during Life. There were near 500 of these poor Wretches, who were in continual Slavery, whilst we were here; and they always took care to keep them employed, some in sawing of Timber, others in cutting of Stone, some in carrying Burdens, and other Labour. At Sun-rising every Morning, they are let out of the Prison in which they are kept, the Men in one, and the Women in another, and are immediately sent to work, where they continue till twelve at Noon; at which time they return back, and have an Hour's time to dine. Their Dinner is always the same, being a Pint of coarse Rice boiled for each Man. At one they are sent to work again, where they continue till six in the Evening; at which time they are brought back, and go to Supper, which is always the same, both in Quantity and Quality, with their Dinner. Soon after they have supped, they are put into their Lodgings, and locked in, where they lie upon the bare Boards, and have seldom any thing but a large Piece of Wood, which commonly serves five or six of them for a Pillow. Sometimes these poor Wretches make shift to escape; but, if they are caught again, they are sure to be severely handled. There was one of these poor Slaves, a Woman, who had been harshly used by the *Dutch*; and, having once made her Escape, and being taken again, she, knowing how cruelly she should be used, cut her own Throat the Day before her appointed Punishment; after which, she was, by the Hair, dragged out of the Prison all round the Town, and then hung upon a Gibbet by her Feet, with her Head downwards; which is the common Punishment of any that are guilty of Self-murder. Such as are in Debt, and cannot satisfy their Creditors, are, by them, turned over to the Company, who send them to work among their Slaves. They have nothing allowed them but Rice and Water, as the other Slaves; only they have Two-pence a Day given them towards the Payment of their Debts, which avails but little; so that it is very seldom, if ever, that any one gets abroad, till he is carried out dead. But tho' the poor Natives are thus severely handled, yet the *Dutch* themselves will wink at each other's Faults; so that it is a great Rarity for any one of them to be punished, unless it be for Murder. In any other Case, a small Matter of Money will buy off a great Fault. The Women, that are Slaves to the Freemen, have all the Liberty that may be from their Masters and Mistresses; only they are obliged every Night to bring them a certain Acknowledgment, which is commonly about Sixpence, and to find their own Victuals, Cloaths, &c. in Default of which, they are severely used. They may whore and steal, and all is well, if the daily Acknowledgment be but brought, and no Complaint be made against them. The chief of this Island's Products are Cloves, Ginger, Pepper, Rattans, Canes, and some few Nutmegs. The Clove-tree is not of a very great Body, but rather slender. It is in Height from twelve to thirty or forty Feet. The Branches are small, the Leaves about five Inches long, and two broad, and end tapering. One of these Leaves, rubbed between the Fingers, will smell very strong of Cloves; but, without rubbing, they have no Smell at all. The Cloves grow out at the Tip of the Branches, ten, twelve, or fourteen in a Cluster. They are first white, then green, then of a dark-copper Colour, which is the Time of their being ripe. The Manner of gathering them is, to spread Cloths or Sheets round the Bottom of the Tree for a good Distance; then they shake the Tree, and all the Cloves that are thoroughly ripe, and fit to be gathered, fall down. The rest, which are left upon the Tree, they suffer to remain for about six or seven Days; then they shake as many more of them off as are ripe, and will fall. This they do four or five times, till they are all down. The usual Time of gathering of them is *October* and *February*. Those which are ripe in *October*, are called the Winter Clove, this being the End of their Winter; and they are not accounted so good or strong as the other. These they commonly preserve, and put up in small Jars of about a Quart, of which they transport great Quantities to several Parts of the World. Those which are ripe in *February*, are called the Summer Clove. These are esteemed much better and stronger than the former, because they have the best Part of the Summer

to ripen in; who fair Weather, and the Rays of the sun received On Cinnamon, grow take. These Trees Pounds Weight sure to have a d those Trees upon after, and a Regi They are numbe Number they we down, and destr All these Trees Freemen; but th pany sets them ar any one brings t he is severely fin ever Cloves the Freemen are oblig of Sixpence a Pou the Island are ingr if any Freeman, a Value of ten Pou feited to the Com Life. Althou about five hundred in this Island; yet o a great many of th other Business; fo each Year, eight or of this Place goes Orambies, some wit 40 Paddles, fowice, I reckon there may 150, or 160, and *Malayans* to each 75 Orambies are di consisting of 20 O commanded by one Flag. The Rear co by the Fiscal, who are in the middle who hath twelve *Du* jeant, for his Body-g Governor carries wit Princes, for fear they Order they go and cially those that do,

to ripen in; whereas the former have not above a Month's fair Weather, and all the rest is rainy and cloudy; so that the Rays of the Sun cannot come to them. It is the common received Opinion, that Cloves, Nutmegs, Mace, and Cinnamon, grow all upon one Tree; but it is a great Mistake. These Trees commonly bear sixty, seventy, or eighty Pounds Weight at a time; and, every six Years, they are sure to have a double Crop. There is a vast Number of these Trees upon this Island, which are very carefully looked after, and a Register kept of them in the Company's Books. They are numbered once a Year; and beyond a certain Number they will not let them increase, but cut them down, and destroy them, for fear of lessening the Price. All these Trees belong to the *Dutch* Company; or their Freeman; but those that belong to the Freeman, the Company lets them an Allowance as to their Number; and, if any one brings up more than what the Company allows of, he is severely fined, and his Trees forfeited; and whatsoever Cloves the Trees belonging to Freeman produce, the Freeman are obliged to sell to the Company, after the Rate of Sixpence a Pound: So that, properly, all the Cloves in the Island are ingrossed into the Company's Hands. And, if any Freeman, or other, sells or conveys away to the Value of ten Pounds, all that he has in the World is forfeited to the Company, and he becomes a Slave during Life. The Inhabitants used formerly to cheat the *Dutch* in the Sale of their Cloves; for it was common with them to put their Cloves in a large Sheet, which they hung up by the four Corners, under the Ceiling of their House; and upon the Floor, immediately under the Cloves, they set a large Tub of fresh Water, which the Cloves, being very dry, and of an hot Nature, would, by degrees, draw up, and make a large Addition to their Weight, without being easily perceived. But now the *Dutch* are grown too cunning for them; for they always try them, by giving them a small Philip with their Forefinger on the Head; and then, if the Clove be thoroughly ripe, and no Deceit has been used, the Head will break asunder, like a Piece of thin brittle Glass; but, if it has been watered, then the Clove will be tough, and the whole Clove will sooner bend, than the Head fly off. There are some few Nutmegs upon this Island, the Trees of which are much like the Peach; but they grow mostly at the Island *Banda*, from whence two or three Ships Loads are exported every Year. The Fruit of this Tree consists of four Parts: The first and outward Rind is like that of a green Walnut; the second is dry and thin, which we call Mace; the third is a tough thin Shell, like that of a Chestnut; and the fourth is the Kernel, included in the said Shell, which we call Nutmeg. There are said to be upon this Island some Mines of Gold. One of the *Malayans* shewed me some of the Ore, which, he told me, was taken out of them; but this was a great Crime, and, if the *Dutch* should know it, he said, he should be severely punished; for this is an extraordinary Secret, which, as much as they can, they keep from all *Europeans*. Although, as I said before, they can raise about five hundred and fifty fighting Men, upon occasion, in this Island; yet once every Year they are forced to spare a great many of their People, which are sent away upon other Business; for, commonly, on the 20th of *October*, each Year, eight or ten Days sooner or later, the Governor of this Place goes his Progress, attended with about 75 *Orambies*, some with 100, some 80, some 50, and some 40 Paddles apiece, in each of which go two *Dutch* Soldiers. I reckon there may be in this whole Fleet, of *Dutch*, about 150, or 160, and about 5250 *Malayans*, reckoning 70 *Malayans* to each *Oramby* one with another. These 75 *Orambies* are divided into three Squadrons, the first consisting of 20 *Orambies*; which Squadron is always commanded by one of the Council, who carries a yellow Flag. The Rear consists of 20 more, and is commanded by the Fiscal, who commonly carries a red Flag: The rest are in the middle Squadron, and attend the Governor, who hath twelve *Dutch* Soldiers, a Corporal, and a Sergeant, for his Body-guard, and carries a blue Flag. The Governor carries with him the *Indian* King, and all their Princes, for fear they should rebel in his Absence. In this Order they go and visit the Eastern Islands, but especially those that do, or are capable of producing Cloves

or Nutmegs; and, at every Island they go to, they have an additional Strength. The Time of their cruising in this manner is commonly six Weeks, during which they cut down, burn, and destroy, all the Clove and Nutmeg-trees they can find, except such as are reserved for the Company's Use; for all or most of these Islands do or would produce Cloves; but they will not suffer them, because they have enough to supply all *Europe* at *Ambonya* alone; and even there also, as I said before, they will permit but a certain Number, lest too great Plenty of them should lower the Price. Upon all these Islands the *Dutch* Company keep Soldiers, three, six, nine, or twelve, according as they are in Bigness, whose only Business it is to see the Trees cut down, or, at least, to take care, that they do not increase; for they are very jealous, lest the *English* or *French* should serve them such a Trick as they themselves served the *English* at *Ambonya*. During the time of their cruising, they gather Tribute from all the petty Kings and Princes of these Islands; and commonly, at the End of about six Weeks, return again. Of Beasts, here are Bees, Hogs, wild Deer, &c. Of Fowls, here are several Sorts, the *Crocadore*, the *Cassawaris*, the *Bird of Paradise*, &c. The *Crocadore* is a Bird of various Sizes, some being as big as Hens, and others no bigger than Pigeons: They are in all Parts exactly alike; their Feathers are all over white, excepting only a Bunch upon their Head; which is always either yellow or red. The Bunch of Feathers lies so close, fitted into a Dent in the Head, that they cannot be perceived, unless when the Bird is frightened, and then he sets it up an-end, and it spreads open like a Fan. The Flesh and Legs of this Bird are very black, and they smell very sweet. When they fly wild up and down the Woods, they cry *Crocadore, Crocadore*; for which Reason they go by that Name. The *Cassawaris* is about the Bigness of a large *Virginia* Turkey; his Head is the same as a Turkey's; and he has a long, stiff, hairy Beard upon his Breast before, like a Turkey; he hath two great Legs, almost as thick as a Man's Wrist; with five great Claws upon each Foot; he has an high round Back, and, instead of Feathers, only long Hairs, and the same upon the Pinions of his Wings. It lays an Egg so big, that it will hold a Pint; the Shell is pretty thick, spotted with green and white, and looks exactly like China-ware. I never tasted the Eggs, but the Bird itself is extraordinary good Victuals, as I have tried several times: It tastes very like a Turkey, but much stronger. The Birds of *Paradise* are about the Bigness of Pigeons; they are of various Colours, and are never found or seen alive, neither is it known from whence they come. I have seen several of them here embalmed with Spice, which preserves them from Decay; and, so embalmed, they are sent as Rarities to several Parts of the World. It is related of these Birds, that when the Nutmegs are ripe, which is in the Months of *February* and *March*, they resort to the Places where they grow, viz. to *Banda*, and this Island, and eat off the outer Rind of the Nut; after which, they fall down dead-drunk, and an innumerable Company of Ants gather about them, feed upon them, and kill them. Of Fish, here are also several Sorts; but the most noted is the *Sea Porcupine*: It is in Length about three Feet, and two Feet and an half round. It has a very large Eye, with two Fins on his Back, and one large one on each Side, near his Gills. It is very full of sharp-pointed Quills; and, from thence, is called the *Sea Porcupine*. This Island of *Ambonya* is all over sandy, but the Water is so deep, that there is no anchoring near it, but at the *Ley* (which is at the West End of the Island) in forty Fathom Water, close to the Shore, and in the common Harbour. This Harbour runs up a great Way into the Island, and almost divides it into two, so that they are, in a manner, two Islands, being only joined by a small Neck of Land, so narrow, that the *Malayans* often hale their Canoes over. At the Entrance into the Harbour on the East Side, there is a small Fortification of about six Guns; and, close to it, is twenty Fathom Water; and, about a League farther up, is the Harbour for Ships, where they lie under the Command of their great Cattle; which, ever since the Massacre of the *English*, has been called the *Cattle Pitavia*. About two Miles further to the North-east, within the Harbour, is

the Place where formerly our *English* Factory was settled; and near it is said to be the Hole into which the *English* were thrown, after they had been massacred by the *Dutch*. There were few of us now here but expected the same Fate; and some of the Inhabitants were no way shy to tell us, that the Journal, which was sent in the *Dutch* Ships that we met going out from hence for *Batavia*, was our Protection; for they were sensible, that, upon those Ships Arrival at *Batavia*, it would be presently known, that a Part of Captain *Dampier's* Company was arrived at *Amboyna*, and from thence it would spread all over *India*; and so they knew, if we fared otherwise than well, we should be inquired after. A little to the Eastward of this Island are several other small Islands, the most noted and biggest of which are *Boangbesay* and *Hinomsa*; they lie East from *Amboyna*, at a small Distance: They are of an indifferent Height, and not above a third Part so big as the Island of *Amboyna*; they are both pretty well fortified, and produce the Island of *Banda*, which also belongs to the *Dutch*. It lies in the Latitude of $40^{\circ} 10'$ South, and bears from *Amboyna* East South-east, Distance 28 Leagues. The Island is said to be in form of a Man's Foot and Leg, and to be pretty well fortified; and, as it has the same Reputation for Nutmegs as *Amboyna* for Cloves, the Governor of *Amboyna* is reckoned the chief Governor of all those Spice Islands, even to *Ternate* and *Tidore*, which are also Spice Islands, in Possession of the *Dutch*, and lie about forty Miles to the Northward of the Equator. Whilst we were at this Island of *Amboyna*, we were so much troubled with Muskitoes, (which are a sort of Gnats) that every Night we were forced to put ourselves in a Bag before we could go to sleep; for otherwise those Creatures would bite us, that there was no getting Rest; and where-ever they bit, they commonly raised a red Blister, almost as broad as a Silver Penny, itching very much; and many cannot forbear scratching themselves, so as to cause Inflammations, which sometimes occasion the Loss of a Limb. During our Stay here, we had the Liberty of a broad paved Yard, about sixty Yards square; but they would by no means let us go out into the Town, being very jealous of us, and desirous to prevent our knowing their Strength, or making any other Discoveries, which they thought might be prejudicial to them. Here we remained from *May* 31. to *September* 14. 1705. at which time there being three of the Company's Sloops ready to sail hence, laden with Cloves, twenty-five of our Men were sent away with them for *Batavia*, and ten of us left behind, who were, as they said, to go in another Vessel, which was almost ready to sail. On *September* 27. a *Malayan* Man was brought in here at *Amboyna* to the Stadt-house, to be tried for his Life: He was accused, by his own Wife, for murdering his Slave: The Slave had been dead about six Months, and he had concealed it; but, happening to fall out with her Husband, she went before the Fiscal, in the Heat of her Anger, and declared it: So her Husband was put in Prison, and the Corps of the dead Slave dug up; but, it being consumed and rotten, no Marks of Violence could be perceived upon it; and it was generally believed, that the Man's Wife accused him wrongfully: He was upon his Trial when the Earthquake happened, at which time I observed, that it is a common Error to suppose, that, during an Earthquake, it is always calm; for we had a fine fresh Gale at South South-west, both Days on which the Earthquake happened. This Earthquake made all the Court break up, being in fear the House should fall on their Heads: So the Man was committed to Prison again; and the next Day, being *September* 28. about eleven at Noon, the Court being set again, the Man was again brought to his Trial; when, in about a Quarter of an Hour, when his Wife was in her greatest Violence against him, the Earth shook very much again, and caused them all to break up a second time. The same Day myself, with four more of our Men, were sent on board a *Chinese* Sloop for *Batavia*: The other five of our Men, which were left behind, they promised should be sent after us in a short time; yet we never heard of them since: But whether they languished out their Days in Confinement, found some quicker Period to their Miseries, or were detained in the *Dutch* Service during Life, are Points

that will not be speedily cleared up, since our Government has never thought fit to inquire after, or demand them.

32. After we had left *Amboyna*, we sailed South-west by West, till we came to the Island of *Lanacas*, which lies in the Latitude of $5^{\circ} 27'$ South, and I make its meridian Distance from *Amboyna* $2^{\circ} 35'$ West, or 155 Miles. We then steered West by North, till we made the two Islands *Cabeses*, where, it falling calm, we sent our Boat ashore on the Eastermost, and cut down some hundred of Cocoa-nuts, which were brought on board. This Eastern Island of *Cabeses* is low, not inhabited, but full of Cocoa-nut-trees, which are planted here for the Use of such *Dutch* Ships and Vessels as pass by for *Batavia*; for it is a sort of Miracle, to see any *European* Ship here except the *Dutch*. Off this Island we met our Bark, which had brought us from *America* to *Amboyna*; the *Dutch*, after they had taken her from us, had fitted her up, put a Mizzen-mast in, and made a very good Vessel of her. This Island lies in the Latitude of $5^{\circ} 23'$ South, and nearly West by North from the Island *Lanacas*, distant about forty-five Miles; it is Shole two Miles from the Shore. To the South-west of this lies the other Island of *Cabeses*, which is a pretty high Island, and upon it the *Dutch* always keep a Corporal and six Soldiers, who, two or three times a Year, go round the Island, to see that no Cloves are planted; and if there be, they cut them down and burn them, for fear any other Nation should take it from them; which if they should, I am apt to believe *Amboyna* would be of little Use to them, Cloves being the only Product that is valuable upon it. We passed next by the South End of the Island *Bouton*, which is a pretty large Place, in the Latitude of $5^{\circ} 45'$ South. We steered Westward from hence, passing between the Island *Cebebes* and the Island *Zalayer*. The South Part of the Island *Cebebes* is very high Land: It is very well inhabited, and is a very large Island, taking up seven Degrees in Latitude. At the South End of this Island, on the West Side, the *Dutch* have a Factory called *Macassar*, where they have a Fort of about seventy Guns, manned with six or seven hundred *Dutch* Soldiers. The chief Product of the Place is Rice, with which they supply all or most of their Eastern Islands. Here are also said to be several Gold Mines, of which the *Dutch* are not yet Masters; for the Inhabitants are often at War with the *Dutch*, and have kept them hitherto from those Places. There lie between the South End of this Island *Cebebes*, and the Island of *Zalayer*, three low small Isles; and the very best Passage is that which lies between the Island next to *Zalayer*, and another very little one which lies to the Northward. This is called the second Passage, and the first, third, and fourth of these Passages are exceedingly dangerous, so that Ships generally avoid them if it be possible.

33. I should willingly give an Account of every Island I mention, if it was in my Power; but, as it is not, the Reader must be satisfied with what I can say without Injury to Truth. This Island of *Zalayer* is of a moderate Height, it is inhabited by *Malayans*, and planted all round with Cocoa-nut-trees. The Inhabitants are forced yearly to send Store of Oil and Match to the *Dutch* at *Macassar*, by way of Tribute. From hence we steered West by North, till we had passed a dangerous Shole, called the *Brill*, and then we haled up South-west; and, in the Night, saw a small Island just by us, which finding we could not weather, we tacked and stood the other Way till Day-light; and then, finding ourselves to the Southward of the said Island, we tacked and stood to the South-westward, and soon after two other low small Islands, bearing from the North to the North-west. We could see the Ground very plain for about two Miles, and never had above six, or under five Fathom Water, though it looked as if there was not above two Fathom: We came over this Shole about a League to the Southward of these two small Islands; and this is accounted the narrowest Shole; for, further to the Southward, it is five or six Leagues over; but there also is no Danger, because you have very even Soundings, as five or six Fathom, seldom over or under. But to the Northward of these two Islands it is very dangerous, it being all very foul rocky Ground, and in some Places not above four or five Feet Water. Therefore go to the Southward of these

Islands

Islands, and you their Maps, have which should have those two Isles; always go over, those two Islands, the Southward of belonging to the Cap very exactly as we others which were ference: I asked once; and he told Sholes and dangerous not desire any bod Foreigner should com and sail by their amongst Rocks and lose their Ship, as w mon Draughts, it b belonging to the E as they can; or, at and happen into the send them away, an be. How far the *Dut* of acting, from the conceive either their I cannot take upon v very plain, that M row Schemes of Th to the keeping us in which the Divine Pi in private Life the preferred to the Cap single Person; if, t Good of Society ou tered; then, methin should have Force w pany, and even of with the common G a little enthusiastic, ways my private Op veries have been mad fation took place, b Christianity have bee tion, it looks as if th habited Parts of the afforded them of em and therefore I en to limit or prevent ture, but will likew To seek new Count their Wealth, or ma in them, is a Design tion certainly will av of Countries hitherto Poor at home, and the most distant and great and good Desig with the Views of P scarce fail of becom sses it with a Spirit v mane an Undertakin

34. On *October* 2 *Batavia*; and, as foot of our Men, who w Major of the Castle transmit the General which we received b that we should be fat Loss of Time, and of us drew up an A the Major to the Ge that very speedily w *tober* 27. we were all ready Money was ret Loss of Time, and tistfaction; only the that the Governor o if there was any thin

Islands, and you will be safe: Although the *Dutch*, in their *Maps*, have laid down the Dangers to the Southward, which should have been laid down to the Northward of those two Isles; and the safe Shoals, which we and they always go over, they have laid down to the Northward of those two Islands, whereas we and they always went over to the Southward of them. We had a Draught on board belonging to the Captain of the Vessel, which shewed all this very exactly as we found it: I compared it with several others which were on board, and found a great deal of Difference: I asked the Captain the Reason of their Difference; and he told me, that the *Hollanders* knew all the Shoals and dangerous Places herabouts very well; but did not desire any body else should know them; so that, if any Foreigner should come into those Parts amongst these Shoals, and sail by their Draughts, they might unexpectedly be amongst Rocks and Shoals, where they would certainly lose their Ship, as we had done, if we had sail'd by the common Draughts, it being the *Dutch* Policy to keep all Ships, belonging to the *English* or *French*, as far off these Islands as they can; or, at least, if they come amongst them, and happen into their Hands, as we did, they take care to send them away, and let them know as little of them as may be. How far the *Dutch* may be able to justify such a Method of acting, from the Conduct of other Nations, where they conceive either their Safety or Interest as nearly concerned, I cannot take upon me to determine: But this, I think, is very plain, that Mankind in general suffer by all these narrow Schemes of Thinking, which undoubtedly contribute to the keeping us in Ignorance of those Parts of the World, which the Divine Providence never meant to conceal. If, in private Life the Welfare of the Family ought to be preferred to the Caprice, and even to the Interest, of any single Person; if, from the just Maxims of Policy, the Good of Society ought always to take place of private Interest; then, methinks, the same Method of Reasoning should have Force with regard to the Concerns of a Company, and even of a whole Nation, when they interfere with the common Good of Mankind. It may be thought a little enthusiastic, but, I must confess, it has been always my private Opinion, that, as all these great Discoveries have been made, not only since the Christian Dispensation took place, but since the fundamental Doctrines of Christianity have been set free from the Errors of Superstition, it looks as if the Almighty designed, that all the inhabited Parts of the Globe should have an Opportunity afforded them of embracing so excellent a Rule of Life; and therefore I persuade myself, that all the Attempts made to limit or prevent this, are not only impious in their Nature, but will likewise be found impracticable in the End. To seek new Countries for the sake of spoiling them of their Wealth, or making Slaves of the People who dwell in them, is a Design so base and barbarous, that no Nation certainly will avow it; but to aim at the Discovery of Countries hitherto unknown, in order to employ our Poor at home, and to extend the Blessings we possess to the most distant and distressed People in the Universe, is a great and good Design; and seems so exactly to coincide with the Views of Providence, that I think the Nation can scarce fail of becoming rich, happy, and glorious, that pursues it with a Spirit worthy of so noble, generous, and humane an Undertaking.

34. On *October 21. 1705.* we entered the Harbour of *Batavia*; and, as soon as we landed, we were sent to the rest of our Men, who were still in Custody. A little after, the Major of the Castle was sent to us, and desired we would transmit the General, by him, an Account of our Losses, which we received by our being taken at *Ambony*; and that we should be satisfied on all Accounts as to our Effects, Loss of Time, and Imprisonment. Accordingly, we each of us drew up an Account of our Losses, and sent it by the Major to the General, who returned us for Answer, that very speedily we should have our Freedom. On *October 27.* we were all sent for to the Fort, and most of our ready Money was returned to us again; but for our Goods, Loss of Time, and Imprisonment, we could have no Satisfaction; only the General told us, he had given us all that the Governor of *Ambony* had sent to him; and that, if there was any thing more, he knew nothing of it; and

NUMB. 10.

that we were now at our Liberty to go whither we pleased. We desired, that, since our Vessel was taken from us by the Company, he would be pleased to take care to find us some Ship, in which we might return home; which he promised he would. We were forced to be content, and went and took Lodging in the Town, till we could meet with an Opportunity of returning home. In the Space of about seven Weeks that I remained here, I made all the Observations I could on the Place, and its Inhabitants. The former I found in as good Condition as it was possible, and the latter appeared to me as prudent and industrious a People as ever I saw; but the Descriptions that have been already published of both are so exact, as to render it unnecessary for me to trouble the World with my Collections. I shall content myself, therefore, with making a very short Description of the Place, as I think it necessary to render my Work all of a Piece; and shall refer the curious Reader, for further Satisfaction, to the large Accounts that have been published by *Dutch*, *French*, and *English* Writers; but especially the first, who are equally capable and willing to represent it fairly.

35. This City of *Batavia* is the chief Place the *Dutch* have in *India*, receiving, by Shipping, the Product of *India*, *Japan*, and *China*. It is inhabited by several sorts of People, as *Dutch*, *Portuguese*, *Chinese*, *Persians*, and *Negroes*; but the *Malayans* are the Natives: The *Dutch* are Masters of the Place, and have a very fine large Town, in which are seven Churches, *Dutch*, *Portuguese*, *Malays*, and *Chinese*, with several very spacious Houses, built after the *European* manner: The Town is all walled and moated round; and the Walls are abundantly provided with Cannon. In the Middle of the Town, in a great square Place, is a very fine Stadt-houfe, where all public Affairs are transacted. The Town, with all the Fortifications, is commonly governed by one of the States of *Holland*, who has the Title of General of *India*, and all other Governors are subordinate to him. The Inhabitants here do not care how often they change their General; for, at the coming of a new one, all Prisoners are released, except such as have committed Murder. He has twelve to assist him, who have always the Title of Rads, or Lords of *India*: These are such as have been formerly chief Governors in several Places in *India*, as of *Ceylon*, *Ambony*, *Malacca*, &c. The Town is divided by Canals, over which, almost in every Street, there are Bridges laid, and Booms to hale across, which let no Boats go in or out after Sun-set. The chief Produce of the Place is Pepper, of which the *Dutch* yearly export great Quantities: Here are also some few Diamonds, and other Precious Stones. Of Fruits here are Plantains, Bananas, Oranges, Lemons, Pomegranates, Mangostans, and Rumbostans. The Mangostan is about the Bigness of a Golden-runner; it is quite round, and looks like a small Pomegranate. The outside Rind is like that of a Pomegranate, only of a darker Colour; but the Inside of the Rind is of a fine Red; within this Rind is the Fruit, which is of a fine White, and lies in Cloves almost like Garlick; there are commonly four or five Cloves in each, and they are very soft and juicy; within the Clove is a small black Stone. We commonly suck the Fruit from the Stone, and the Fruit is very delicious; the Stone we throw away, being very bitter, if chewed. The Rumbostan is about the Bigness of a Walnut, when the green Peel is off. It is also pretty near the Shape of a Walnut, and hath a thick tough outer Rind, which is of a deep Red, full of little Knobs of the same Colour; within the Rind is the Fruit, which is quite white, and looks almost like a Jelly; and within the Fruit is a large Stone; it is very delicate, and though a Man eat ever so much, yet it never does him any Harm, provided he swallows the Stones as well as the Fruit; but otherwise they are said to cause Fevers. The Island of *Java*, on the North Side of which *Batavia* stands, is in Length, from East to West, about ten Degrees. The Wind and Weather is extremely regular at *Batavia*, and the *Dutch* Inhabitants know how to make use of it at all Seasons to the best Advantage. In the Eastern Monsoon the Land-winds are at South-east, sometimes more South-erly; and the Sea-winds at North-east fine pleasant Gales. This Easterly Monsoon is accounted the good Monsoon, it being fine fair clear Weather, beginning in *April*, and

2 P

ending

ending in *October*; but the Westerly Monsoon is called the bad Monsoon, being rainy and blustering Weather, with much Thunder and Lightning, especially in *December*, *January*, and *February*. This bad Monsoon begins in *November*, and ends in *March*, or the Beginning of *April*. In it the Land-winds are at West South-west, and South-west; and the Sea-winds at North-west, and West North-west. The Anchor-ground, all along the North Side of *Java*, from the Island *Madura* to *Batavia*, is fine ousy Ground, and clear of Rocks. The principal Places on this Side of the Island are *Batavia*, *Bantam*, *Japara*, *Samarang*, *Surabon*, *Taggall*, the *Quale*, and *Rambang*; all these Places are settled by the *Dutch*: They afford Rice, with which they supply all their Out-factories hereabouts, as also very good Plank for building Ships with. The chief Place for building is *Rambang*, whither the Freemen go to build their small Vessels, as Sloops and Brigantines; also several Ships of five, six, or seven hundred Tons, lade with Timber as *Rambang*, the *Quale*, *Japara*, &c. and each Ship, when full, taketh a great Rait of the largest of the Timber in a Tow to *Batavia*: Some of these Rafts are said to be thirty Feet square, and to draw twenty-two Feet Water: There are commonly six of these Ships, which are thus laden with Timber; and they commonly make four Voyages in the good Monsoon; for in the bad they cannot do any thing. All this Timber is commonly landed upon a small Island, between four and five Leagues from *Batavia*, where the Ship-carpenters are usually kept at Work; nay, they are said to be never out of Employ; they are about 200 in Number; and the Island is called *Unrust*, or *Omrust*. The *Dutch* careen their Ships here; and it is very well fortified, being (to use a Sea Phrase) all round a Bed of Guns.

36. We had Notice given us on *September* 2. that all of us who desired to return to *England*, should go immediately on board the *Dutch East India Fleet*; which accordingly we did, and sailed the next Day. This Fleet consisted of twelve Sail, as well provided in every respect as any Ships I ever saw; and we made the Voyage in as good Order, arriving on *February* 3. 1706. at the Cape of *Good Hope*. The *Dutch* have here a strong Fortresa; and, about half a Mile Distance from thence, a very fine Town, consisting of a small Church, and 150 Houses. The Land in the Neighbourhood is very high, and most of the Mountains are barren, producing only a few Shrubs. The Country within is full of Lions, Tygers, Elephants, and other wild Beasts, which give the People, who are settled here, great Disturbance. It is for this Reason, that the Government has found it necessary to promise to any one who kills a Lion fifty-two Guilders, which amounts to four Pounds six Shillings and Eight-pence; and for killing a Tyger, he has a Reward of twenty-four Guilders, or forty Shillings: There was a *Scotchman*, while we were here, who killed four Lions, three Tygers, and three wild Elephants; for which he had his Reward accordingly, to the aforesaid Proportion. This Country produces several sorts of Fruits, common, and not common, with us in *Europe*, as Pomgranates, Water-melons, Chestnuts, with some Plantains and Bananas; and great Plenty of very good Grapes, of which the *Dutch* make a very pretty pleasant Wine, called Cape Wine, in great Quantities, which, by *Retale*, is commonly sold at Eight-pence a Quart. It produces likewise abundance of Garden-fruit, which is very refreshing to those that arrive here sick of the Scurvy: Here are also abundance of Sheep, very large, and, I think, as good Meat as ever I eat. Of Fowls here are several sorts, but the most remarkable is the Ostrich, which is a very large Fowl: The Bird itself is little valuable, but its Feathers are sent as Rarities to several Parts of the World: Their Eggs are very good Meat, as I have experienced many times. That these Birds feed upon Iron, Stones, or any thing that chances to be near them, is fabulous; but, like a great many other Fowls, they pick up small Stones, which only serve to digest their proper Food; they are of several Colours, as black, white, &c. The most remarkable amphibious Animal here is the Seal, or, as the *Dutch* call it, the Sea Hound: They are the same as those before spoken of at the Island *Juan Fernandez*; only the Fur of these is not so fine. In this Harbour, on the South Side, are two high Mountains, the one called the *Table Land*, which is pretty plain and even

at the Top, and the other called the *Sugar-loaf* from its Shape; at the Top of this *Sugar-loaf* the *Dutch* have a small House, and four Guns mounted: Here they always keep a good Look-out; and at the Approach of any Ship or Ships, hoist a Flag, and fire as many Guns as they see Ships, to give notice to those at the Town. It is not easy to guess what the Reasons were, which induced the *English* to part with their Property in this Place, which is of such mighty Consequence to the *Dutch*, and which might have been made so advantageous to themselves: To speak the Truth, the *Dutch* are very civil and complaisant here; and, except their not permitting us to travel up into the Country, which might have produced more Knowledge of it, than perhaps would have been convenient for them, they indulged us in every thing we could ask, and furnished us with Provisions of all kinds, extremely good, and at very reasonable Rates. It is impossible to leave this Place, without making a few Reflections on the Conduct of the *English* and the *Dutch*, with respect to their Policy, in providing Places of Refreshment for their Ships in their Passage to the *Indies*. Both have found the Necessity of having such Places, and, by an unaccountable Accident, have exchanged the Places of which they are possessed: The *English* have the Island of *St. Helena*, lying in the Latitude of 16° South, and 22° Longitude West from the Cape of *Good Hope*. This Island was first discovered by the *Portuguese*, who put some Goats and Swine on Shore there, the Breed of which still continues; and the Place is very plentifully stocked with them. The *Dutch* inhabited here first, but afterwards thought fit to quit it; and then we took Possession of it, from whom the *Dutch* took it again, but were soon dispossessed of it, and we have enjoyed it peaceably ever since. This Island is about nine or ten Leagues in Length, not quite so much in Breadth, and above 300 Leagues from the Continent of *Africa*: Near the Sea it is almost every-where encompassed with high Rocks, which hinder the Approach, there being but one Place for landing; and within there are many Mountains, but most of them covered with wholesome Herbs and Plants, and the Valleys are so fruitful, that they produce whatever is brought from other Parts, and planted in great Perfection. It would be certainly one of the most delightful Spots upon the Globe, and afford the pleasantest Living, if it was somewhat larger, nearer some Continent, or more frequented, than it is at present. The Air is wonderfully wholesome, the fresh Water excellent, the Fruits in the highest Perfection, and the Sea abounding with Fish. The only Misfortune there is, flows from the want of Industry in cultivating these Advantages, and correcting such Inconveniencies as fall within the Power of Man to remedy. The *Dutch*, when they took Possession of the Cape of *Good Hope*, found it the most barren despicable Spot that was ever seen, or indeed could be well imagined; yet, perceiving the Importance of it, they resolved to settle there, and improve it, cost what it would: In this they met with many Difficulties; but they were resolved not to be discouraged; and, by persevering, they have rendered it, in all respects, the finest Settlement in the World, and have proved many settled Points in Planting-policy to be absolutely false; of which I shall instance one, and that is, the making Wine, which has been over and over declared a thing impracticable in that Climate; but they have now great Plenty both of Red and White, but especially of the latter, which, after two Years keeping, is very justly esteemed preferable to the finest Canary. The Industry of the *Dutch*, and their great Success in their Improvements, invites our Ships, as well as theirs, to the Cape of *Good Hope*; and this is the principal Reason why we do not make all those Advantages of *St. Helena*, of which the Place is capable. This, at the same time, shews the different Genius of the two Nations; for, if the Cape had been ever so long in our Possession, there is great Reason to doubt, whether we should have made any such Improvements, as, on the other hand, if the *Dutch* could have kept *St. Helena*, after they took it from us in 1673, it is probable they would have made it another sort of Place than it now is; and not have suffered the Inhabitants to want Bread, merely from their not having Power to destroy the Rats that breed in the Rocks, and from thence fall out in such

Numbers, as to their Plantations this, considering only beyond the ment; which is, justly accounted it very moderate G Let us now return these Reflections. 37. We were in the *East India* without Surprise Trade by the Gov up much more Re the many Instance dence in this resp *East India* Compa in Company with but his Signals all cheerfully as if he proceeds that he Voyages to and fr fail with as much composed intirely that our Ships, est to make some Stay have the Opportun also very surpris ample of the *Dutch* come, in every re Signal, as They are pen to the Ships of Company. On the Ship's Company, to a Mess, that is, to be pleased, besides more Victuals than w 5th, a Man being *Dutch* Vice-admiral, t ur Ship, and tried fo mned to die. He*

Numbers, as to destroy the Kitchen-gardens belonging to their Plantations: I say, they would hardly have suffered this, considering one Advantage that *St. Helena* has, not only beyond the Cape, but even beyond any other Settlement; which is, that, as it is at present fortified, it may be justly accounted impregnable, though there should be but a very moderate Garrison to defend it. But enough of this: Let us now return to the Voyage which gave Occasion to these Reflections.

37. We were now to continue our Voyage to *Europe* in the *East India Fleet*; and it was impossible to see, without Surprise and Satisfaction, the Care taken of their Trade by the Government established here. It would take up much more Room than we have to spare, to enumerate the many Instances that might be given of the *Dutch* Prudence in this respect. One, however, shall suffice. The *East India Company's* Admiral not only hoists his Flag in Company with the Men of War belonging to the States, but his Signals also are obeyed by those Men of War as cheerfully as if he was Admiral of their own Fleet. Hence proceeds that Regularity that is observed in all their Voyages to and from the *East Indies*, when these Squadrons sail with as much Harmony, in every respect, as if it was composed entirely of Ships of War; which is the Reason that our Ships, especially in a Time of War, are content to make some Stay at the Cape of *Good Hope*, in order to have the Opportunity of coming home with them. It is also very surprising, to see how great an Effect the Example of the *Dutch* has upon our Countrymen, who become, in every respect, as regular, and as attentive to Signal, as they are; so that very rarely any Accidents happen to the Ships of either Nation, when they sail thus in Company. We had an Opportunity of observing this during the Time of our Voyage to and from the Cape, where we were excellently provided with every thing requisite for our Voyage, on which we proceeded on the 24th of *March*, with a fresh Gale of Wind at South-east, and went out between *Penguin* Island and the Main-land, having the Main on the Starboard-side, and the Island on the Larboard. This is a pretty low sandy Island; in the Middle of which, upon the highest Part of it, they have a few Guns mounted, and near them a Flag-staff, on which, at the Approach of any Ship, they hoist a Flag, and fire a Gun, to give Notice to the Town. This Island takes its Name from a vast Number of Birds, called *Penguins*, which commonly resort near it. These Birds are about the Bigness of a wild Duck; they do not fly, but flutter, having no Wings, but Stumps only, like young Ducks, and these Stumps serve them for Fins in the Water. They have a sharp Bill, but Feet like a Duck, and their Flesh but indifferent Food. This Kind of Fowl is not so large here as in the Streights of *Magellan*, nor so good; however, more Use would be made of them, if the *Dutch* Ships were not always so well provided when they sail from the Cape, that the Seamen do not find themselves under any Temptation to take up with rank or disagreeable Food: And this may be one Reason, why they are, generally speaking, pretty free from Diseases; one Effect, among many, of their strict Discipline, of which they stand in need as much as the Sailors of any Country, being extremely fond of strong Liquors, and very abusive when intoxicated with them; and, therefore, their Officers are very commendably careful in their Endeavours to prevent it, which they never omit. We were now twenty-four Sail of us, *viz.* nine *English*, and fifteen *Dutch*; and the Gale continuing, soon carried us to the true Trade. We met with nothing material till the 10th of *April* 1706. When two of the *English* Ships, sailing very heavily, fell a-tern, and lost our Company: They put into *St. Helena*, and, as we afterwards heard, were taken out of the Road by the *French*. On the 11th, we had 25 Hogs killed for the Ship's Company, and the Commodore ordered an Hog to a Mess, that is, to every seven Men, to dispose of as we pleased, besides our daily Allowance, so that we had more Victuals than we could tell what to do with. On the 15th, a Man being barbarously murdered on board the *Dutch* Vice-admiral, the Murderer was brought on board our Ship, and tried for his Life, and the same Day condemned to die. He owned the Murder, and desired the

Favour of the Court, that he might chuse his own Death, which was granted; and he chose to be shot; which the next Day was accordingly done, all the Fleet lying by till his Death, and then we all made Sail again. On the 17th, we saw the Island of *Ascension*, but did not touch here for 'Turtle, although it was their Laying-time: The Reason was, because we were so well supplied with Provisions at the Cape, that we had no Occasion for more; and the *English* Ships being willing to keep us Company, they also did not touch here. On the 19th, we had fine fair Weather, with a fresh Gale at South-east: About eleven this Morning happened a great Earthquake; at first it seemed as if the Ship ran along upon the Ground: So we heaved out a Lead on each Side, with two hundred Fathom of Line, but found no Ground. The whole Fleet felt the Shock at the same time, so that for half a Quarter of an Hour there was nothing but making of Signals, and firing of Guns. We then reckoned the Island of *Ascension* to bear South-east, distant about forty Leagues. We steered thence to the North-west, and had soon an Opportunity of observing the great Advantage resulting from our imitating the Regularity of the *Dutch*: When I say this, I mean it of the *English* Ships in Company, which had quitted their Design of bearing up for the Island of *Ascension*, in order to remain with the Fleet.

38. On the 14th of *June*, we saw four Sail of *French* Privateers; which were waiting there for our homeward-bound Ships: They came up, and looked on us; but thought it not advisable to make any Attempt, and soon bore away. On the 30th, we found ourselves in the Latitude of $62^{\circ} 40'$ North, which was the furthest Northward that I ever was; and I could not but take notice of the Difference of Cold in this Place; and in 60° of Southern Latitude; for there we had continual Showers of Snow or Hail, and the Weather very cold; whereas here, on the contrary, we found the Weather very fair and moderate: The Reason of which, I suppose, was this; when we were to the Southward, we were always pretty near to the Main of *America*, having it to the West of us; likewise, when we were to the Northward, we were always pretty near the Main-land of *Europe*, having it to the East of us. Now, being near the Land, we always account the Land-winds the coldest; and the Sea-winds the warmest. Thus the North-easterly Wind is accounted the coldest Wind we have in *England*, *Holland*, &c. but in the same Latitude North, near the Coast of *America*, the North-west Wind is commonly accounted the coldest; and, in the same Height of South Latitude, on the Coast of *America*, the South-west Wind is the coldest; as, near the Cape of *Good Hope*, the South-east Wind is the coldest. Now, the Westerly Winds, at such a Height, both in North and South Latitude, having generally the Predominancy over the Easterly, very much alter the Degrees of the Heat or Cold of the Weather; for which Reason, in the South Part of *America*, the Westerly Wind caused cold Weather; but, to the Northward; the Westerly Wind caused warm Weather; and, as the Easterly Wind, being near the *European* Shore, is the coldest, so, being near the *American* Shore, in the same Height of Southern Latitude, the Westerly Wind is the coldest. These Observations are of very great Use to Seamen, and especially to Commanders, because they enable them to guess what Weather they are to expect on any Coast, and even to have a tolerable Foresight of what may happen in Voyages for Discovery; the Appearance of which Foresight, the Commander is of infinite Consequence to encourage the private Men, who obey with the greatest Cheerfulness, and undertake, with the greatest Alacrity, whatever they are commanded, by a Man, of whose Judgment they have a good Opinion, and of whose Skill they have had frequent Experience; whereas the least Diffidence in a Commander sinks the Courage of his Sailors, doubles the Fear of every Danger, and becomes an Occasion for future Suspicion and Contempt.

39. We saw, in the Evening of the 3d of *July*, the Islands of *Faro*, bearing East and by North, distant about ten or twelve Leagues. We sounded, but had no Ground at 110 Fathom; at twelve at Night we had Ground at 85 Fathom, and at 75 by three in the Morning. On the

4th of July at Noon, the two Islands of *Fare* bore South-east, distant about eight Leagues. We then, steering North-east, had Ground at eighty Fathom, small Pieces of broken Shells. All last Night we kept firing a Gun every Half-hour, to give notice to the Cruisers, whom we expected to meet here. On the 5th, according to our Expectations, we met with our Convoy, which had been cruising for us; they consisted of eight *Dutch* Men of War, four Victuallers, and three of the Company's Privateers: After mutual Salutations, we proceeded to the South-eastward, being all bound for *Amsterdam*: And, on the 15th of July, we all arrived safely in the *Tesl*; and, on the 17th, we got to *Amsterdam*. After which, myself, and the rest of our Company, went to see several Parts of *Holland*: And, on the 26th of August 1706, after many Dangers both by Sea and Land, we happily arrived in *England*, being but eighteen out of one hundred eighty-three. The News of our Misfortunes reached home before us, and every body was solicitous to have an Account of what had befallen us in the *East Indies*, and especially in the Island of *Ambogna*, under the Power of the *Dutch*. These Importunities led me into an Opinion, that as complete an Account of our Voyage, as it was in my Power to give, might not be unacceptable to the Public; which occasioned the Pains I have taken in compiling this small Work; wherein, as there are many Adventures not altogether unentertaining, so I hope, that some of the Descriptions, Observations, and Discoveries, may with Justice be thought useful.

40. It has hitherto been the just Complaint of such as read Voyages with Attention, that they are often left in the Dark, as to very material Circumstances, while, at the same time, they are more than sufficiently informed as to Circumstances of very little or no Importance. I have often wondered, that, considering the many Editions through which *Dampier's* Voyages have passed, there never was any Care taken to supply their visible Deficiencies. The Reasons are very evident to me, why *Dampier* did not publish this last Voyage of his to the South Seas. If he had spoken the Truth, he must have done himself no great Credit; and, if he had attempted to impose Falshoods on the World, his Officers were most of them alive, and ready to contradict him: He chose, therefore, and I think it the most prudent Choice he ever made in his Life, to be absolutely silent. This Silence, however, gives not the least Satisfaction to the Reader, who, no doubt, would be glad to be informed of all the Transactions of that Voyage, of which *Mr. Funnell* has related only a Part; though, to say the Truth, that was all in his Power. This Task I shall endeavour to perform the best I can, having taken a great deal of Pains to satisfy myself in these Particulars. The Reader may remember, that, the 19th of May 1704, Captain *Dampier*, in the *St. George*, left his Consort, Captain *Stradling*, in the *Cinque-ports*, at the *King's Island*, in the Bay of *Panama*; after which, we hear no more of them. The Force that Captain *Stradling* had with him was very insignificant, and, therefore, they could not maintain themselves long in the South Seas; which drove them, for the sake of Shelter and Refreshment, to the Island of *Juan Fernandez*; and in such a Condition they were when they came thither, that honest *Alexander Selkirk* chose rather to stay by himself in that Island, than run the Hazard of returning into the South Seas on board the *Cinque-ports*: In which he shewed a great deal of Judgment; for the *Cinque-ports* actually foundered on the Coast of *Babacorá*, and only Captain *Stradling*, and six or seven of his Men, were saved, and sent Prisoners to *Lima*, where Captain *Stradling* was actually living at the time Captain *Rogers* came into the South Seas; but what became of him afterwards, I cannot say. The next Person that left our famous Captain, was his Mate, *Mr. Clippinton*, as he calls him; but the Gentleman's Name was *John Clipperton*, of whom we shall have Occasion to say much in a succeeding Voyage. He was certainly a Man of Parts and Spirit, and, in all human Probability, would not have left Captain *Dampier*, if he had not thought, that he would obligately remain in the South Seas in his old rasy Ship the *St. George*, till she foundered; and, finding that a great Part of the Crew were of the same Opinion, thought

proper to leave him at the Middle Islands, where he was careening; and where it was plain to all who saw her, the *St. George* was no longer fit to put to Sea. This was on Sept. 2. 1704; and *Mr. Clipperton* had now with him no more than twenty-one Men, in a Bark of ten Tons, with two Masts, and two Square-sails, two Pattereroes, and two or three Barrels of Powder and Shot; yet he ventured into *Ria Leon*, on the Coast of *Mexico*, where he took two *Spanish* Ships at Anchor: One was very old and worm-eaten, for which Reason he ordered her to be immediately sunk; the other Ship was new, and had on board her Goods to a considerable Value. Captain *Clipperton* therefore, for so he was now called, sent on shore two of his Prisoners, with a Letter to the *Spanish* Governor, demanding ten thousand Pieces of Eight, by way of Ransom for that Ship. The Prisoners spoke so handsomely of *Clipperton*, that the Governor resolved to treat with him; and therefore sent him Word, that he did not think his Proposition unreasonable; but that, as the Owners were absolutely ruined, and the Town very poor, it was impossible for him to comply with it; but if 4000 Pieces of Eight, which was all they could raise, would content him, it should be sent aboard in ready Money, and they would rely upon his Honour for the Discharge of the Ship. Captain *Clipperton* accepted the Proposal; but, at the same time, informed the Governor, that they were in great want of Provisions and Water; and therefore expected, that whatever could be eat or drank, should not be included in the Capitation. This was very readily agreed to, the Money sent on board the next Morning, and, as soon as the Provisions could be got out of her, the Ship was very honourably restored. Captain *Clipperton* sailed from thence to the Gulph of *Salinas*, where they drew their little Vessel ashore, in order to clean and refit her, which they did very effectually; and then resolved, even in this Cockle-shell of a Boat, to sail for the *East Indies*; which they did, and, keeping in the Latitude of 18° North, reached the *Philippine* Islands in fifty-four Days. While they were among these Islands, there came off a Canoe, with a *Spanish* Priest in it, whom they detained till they were furnished with fresh Provisions, and then set him at Liberty. The next Scheme they formed, was to go to the *English* Settlement at *Pulo Condore*, which lies in the Latitude of 8° 40' North; and accordingly came thither: But, understanding that the *English* had been massacred by their *Indian* Soldiers on March 3. 1705, they found there was no Safety to be expected there; and therefore instantly bore away for *Macao*, a Port belonging to the *Portuguese* in *China*, where they all shifted for themselves as well as they could. Some went to *Benjar*, in order to enter into the *East India* Company's Service; others to *Gis*, to serve the *Portuguese*; and some entered into the Pay of the Great Mogul; for, after so long a Voyage, they were so bare, that any Means of providing for themselves appeared very agreeable. As for Captain *Clipperton*, he returned to *England* in 1706, and lived afterwards to make another Voyage round the World in the *Success*, of which, in its proper Place, we shall give an Account. It is requisite, in the mean time, to go back again to Captain *Dampier*, in order to shew what became of him, after so great a Part of his Ship's Company had deserted him. It is not easy to conceive a Man in a worse Situation, than *Mr. Dampier* found himself at the time *Mr. Funnell* and his People left him. It was at the Close of the Year 1704, they took this Resolution; and all the People that it was in the Power of *Dampier* to keep with him were but twenty-eight; and even these he prevailed upon to stay, by representing, that there was nothing easier than to make their Fortunes by surprising some small *Spanish* Village; and that the fewer there were of them, the fewer there would be to share the Booty. After some Consultation, they resolved to attack *Puna*, an Hamlet or Village consisting of about thirty Houses, and a small Church. There is a Lieutenant who commands there, and the Inhabitants were pretty well to pass. Accordingly he landed in a dark Night, surprised the Inhabitants in their Beds, and so took Possession of the Place with very little Trouble. After plundering this Town, they repaired to the Island of *Lobos de la Mar*, in order to consider what they should do next; and, by the Way, took a small *Spanish* Bark, well furnished with

Provisions

Provisions. A quit their own continue their they left the *St.* having taken out their Resolution in hopes all the however, they of the *Dutch* Goods sold, and to shift as well Captain *Dampier* naked to his Own and their Misfortunes Tempers, that few bearings, which him; and, when who have Comm of. Yet, as there so eminent a Man Public expressed Captain *Dampier* Diltres; and he Honour to kiss h of the Dangers h however, were fo they resolved never and this, with the unlucky Voyage, World once more, commanded by Ca whose Voyage will the present I shall

41. It is very clear in this Voyage, wcerely writtun, as ar no mighty Force re in the South Seas have suffered him t to preserve the Affe that he might have and his Owners, in against him. It is Care and Attention ever wanting Provis Voyage was, that S themselves, and wh of any kind of Disci Body of Men super as well provided wit broke, exercised, an which others do not digious Advantage, made in the *West I* and the Stories we h drawn many People they are superior to are dangerous Mista they spread; and, taken to refute them consider, what is under regular Com acquainted with the manded by experien Arms that constitute the Men have acqui Officers, it is certain Service, is by no m Country where he n Buccannere, they n Qualifications, regul they were pretty n their Success was o no Authority, but v their own People, as there was no such conducting them, so and Discretion: Wh cesses were mere ter

Provisions. After some Consultation, it was resolv'd to quit their own Ship, and to endeavour, in this Bark, to continue their Voyage to the *East Indies*. Accordingly they left the *St. George* at Anchor under this Island, after having taken out all that was valuable; and then executed their Resolution of sailing to the *Indies*, where they were in hopes all their Troubles would have ended. In this, however, they were quite mistaken; for, arriving in one of the *Dutch* Settlements, their Bark was seiz'd, their Goods sold, and themselves turned loose into the World to shift as well as they could: This was the End of Captain *Dampier's* unfortunate Expedition, who returned naked to his Owners, with a melancholy Relation of his and their Misfortunes, occasioned chiefly by his own odd Temper, which made him so self-sufficient and overbearing, that few or none of his Officers could endure him; and, when once Dissention begins amongst those who have Command, all Success may be justly despair'd of. Yet, as there was a Degree of Compassion due to so eminent a Man, notwithstanding all his Failings, the Public expressed it, in the strongest manner possible, to Captain *Dampier*, on his coming home, even in this Distress; and he was introduced to the Queen, had the Honour to kiss her Hand, and to give her some Account of the Dangers he had run through. The Merchants, however, were so sensible of his Want of Conduct, that they resolv'd never to trust him more with any Command; and this, with the Poverty brought upon him by his last unlucky Voyage, oblig'd him to make the Tour of the World once more, in Quality of Pilot, on board the *Duke*, commanded by Captain *Woodes Rogers*: The History of whose Voyage will be the Business of the next Section; the present I shall close with a very few Remarks.

41. It is very clear, from the several Particulars recorded in this Voyage, which I take to be as honestly and sincerely written, as any I have ever met with, that there is no mighty Force requisite to carry on a Privateering War in the South Seas; since, if *Dampier's* Temper would have suffer'd him to live on such Terms as were requisite to preserve the Affections of his People, it is most certain, that he might have rais'd an immense Fortune for himself, and his Owners, in spite of any thing the *Spaniards* did against him. It is also very apparent, that, with due Care and Attention, there was no sort of Danger of their ever wanting Provisions. But the thing that ruin'd their Voyage was, that Spirit of Discord which remain'd among themselves, and which, at last, render'd them incapable of any kind of Discipline. It is Command that makes one Body of Men superior to another equal in Number, and as well provided with Arms; for, by this means, they are broke, exercised, and know their Duty in all Situations, which others do not; and this naturally gives them a prodigious Advantage. The late Attempts that have been made in the *West Indies* seem to discredit this Opinion; and the Stories we have been told of the *Buccanniers*, have drawn many People to imagine, that, in such Attempts, they are superior to Men under regular Command. These are dangerous Mistakes, such as may have fatal Effects, if they spread; and, therefore, every Opportunity should be taken to refute them. In order to do this, we must first consider, what is meant by regular Troops, and Men under regular Command; which certainly implies, Men acquainted with the Principles of their Profession, commanded by experienced Officers. It is not the Cloth and Arms that constitute a regular Force, but the Knowledge the Men have acquired in military Discipline; and, as to Officers, it is certain, that an old Man, who has never seen Service, is by no means fit for Command, especially in a Country where he never set his Foot before. As to the *Buccanniers*, they were, with respect to their personal Qualifications, regular Troops, and, in time of Action, they were pretty much under Command; to which all their Success was owing: But then, as their Officers had no Authority, but what they deriv'd from the Choice of their own People, and held this only during their Pleasure, there was no such thing as forming regular Designs, or conducting them, for any Length of Time, with Prudence and Discretion: Whence it came to pass, that all their Successes were mere temporary Advantages, not at all bene-

NUMB. XI.

ficial in their Consequences to themselves, or their Country. To say the Truth, the only Use that can be made of them, is to prove, that much greater Things may be done by Men better command'd. There is the same Difference between *Buccanniers* and regular Forces, as between Men of strong Parts without Education, and Men of equal Parts with the Advantages of Learning: The former sometimes produce lively and surprising Pieces, but all excellent and lasting Works come from the latter. I do not know whether this Comparison will at first Sight be well relish'd; but, I am confident, that, when thoroughly considered, it will be found perfectly just, and equally agreeable to Reason and Experience. The next Remark that I shall make on this Voyage is, that it fully demonstrates the Capacity of our Seamen, to do any thing that can be expected from Persons skilful in that Profession. We see, by the Instance of Captain *Clipperton's* sailing, with twenty-one Men, in a Bark of ten Ton, from the South Seas to *China*; by Mr. *Funnell's* doing the same thing in a Vessel not much bigger, and with very few more Men; and by Captain *Dampier's* doing the like, in Circumstances very little better; that this is not such a terrible, such an impracticable Navigation, as some People of late, for what Reasons I know not, have endeavour'd to represent it: And if great Advantages may arise to the Commerce of this Nation, by Voyages into this Part of the World, I think no Man in his Senses can be perswaded, that there is any thing very difficult, much less impossible, in pursuing them; since these Examples shew, that this is, in Fact, the easiest and the shortest Way to the *East Indies*, and to the richest and most valuable Parts of them. The Usage Captain *Dampier* met with in this, as well as in his former Voyage, and the Treatment of Mr. *Funnell*, and his People, at *Ambogna*, are Proofs sufficient of the Temper of the *Dutch*, and of their preferring the Interest of their Commerce to any Respect for their Allies. If we think this right in them, as one would imagine our Government did, from their never inquiring after those Subjects that were lost, or resenting the Usage those met with that escap'd, Why are we not as careful of our own Trade? Why do we not prosecute it with the same Vigour? or, Why are we bound to have so much more Complaisance for our Allies, than they have for us? It seems to be a Matter quite out of Question, that Commerce is not of greater Consequence to them than to us: Both subsist by it, and both must be undone without it. I do not mean to insinuate, that we ought to differ with the *Dutch*, much less that we should invade their Settlements, or endeavour to ruin their Trade; all I aim at is, to shew how reasonable, and how practicable a thing it is, to extend our own, and how much therefore it ought to be our Study. To this I beg Leave to add, that as this was always right, so it is now become absolutely necessary: The Nation launches out into much larger Expences, than in former Times; and from hence it is evident, that, if she does not draw larger Advantages from Trade, she must be undone: This is a Truth of so great Consequence, that no Man, who loves his Country, can prevail upon himself to mince the Matter: Besides, all national Expence consisting in the Export of Wealth, it follows, that we ought, at this Juncture especially, to encourage such kind of Commerce, as may repair this Loss in the quickest and most effectual Manner. This Voyage, and several of the preceding, shew us, that here is a short and speedy Passage to very rich and pleasant Countries; from whence we may derive immediately large Quantities of Gold, exclusive of other valuable Commodities. Besides, we are now at War with *Spain*, and that Crown has very considerable Dominions in those Parts; where, though I believe they may be comparatively stronger than they are in the *American* Dominions, yet most certain it is, that they are every-where upon bad Terms with the Natives, and have a much greater Compas of Territory than they are able to defend. There is no doubt to be made, that two or three Ships, well manned, would be able to make a very profitable Voyage this Way. I would not be understood to be a warm Advocate for Privateering, which, I must confess, I think below the Dignity of the *British* Nation; but, as we were drawn into this War by the Depredations of the *Spanish* Pri-

2 Q

vateers.

vateers, as we can get very little by it in any other Shape than that of Privateering, as the Expence it has brought upon us, in the Interruption of our Trade, requires effectual and quick Supplies, we have unquestionably a Right to indemnify ourselves, and our Interest makes it our Duty to pursue it. Nay, this is the most probable Method of putting an End to the War: We may, by this means, interrupt the Commerce between their *East* and *West Indies* to such a Degree, that, in Conjunction with the other Methods already taken to distress them, it may deprive them of the Means of carrying on the War; and thereby incline them, not only to a present Peace; but to maintain and preserve it; that they may not have to do again with a Power so capable of disturbing, and even destroying them, in all those Parts of the World, where no other Power can reach them. I cannot help adding a Word or two more upon this Subject, before I leave it; and that is; with respect to the Policy of Maritime Powers in the Management of their Wars; because; if we may judge from the Reason of Things, or the Course of Events, this has not been hitherto so well understood as it ought to be: A Maritime Power ought certainly to avoid, as much as possible, quarrelling with her Neighbours, and making an endless or vain-glorious Shew of her Naval Strength. Small Squadrons, sent frequently on long Voyages, will serve to air and exercise her Seamen in the public Service, without burdening herself, or frighting the rest of the World by frequently drawing together numerous and useless Fleets. The Neglect of this Maxim has been the Ruin of every Maritime Power that ever existed, with the Addition of another Error of a contrary Nature, I mean, the carrying on of lingering Wars, and not making a short Use of superior Power at Sea. When Peace can be no longer preserved, the next best Measure is, to restore it as soon as possible; and this can be done no other way, than by a bold and vigorous Prosecution of the War; for, to act coolly, and protract, is to discredit your own Power, and to encourage the Enemy. This leads me to the last Remark, which this Voyage shall furnish: The Misfortunes that attended *Dampier*, *Stradling*, *Clipperton*, and *Funnell*, induced a Notion, that it was to no manner of Purpose to fit out Privateers from hence to the South Seas; and abun-

dance of plausible Arguments were brought to prove it; which met with greater Encouragement, because the *Bristol* Administration, at that time, was engaged in the Prosecution of a War upon the Continent, that rendered it very inconvenient to disoblige any of our Allies, more especially the *Dutch* and the House of *Austria*, neither of which were well pleased with such kind of Expeditions: Yet, in spite of these concurring Circumstances, *Mr. Dampier* could not forbear endeavouring to spirit up a new Voyage to the South Seas, where he had already spent so many Years of his Life to so very little Purpose. He was well satisfied, that it was not through any Difficulty in the Voyage, from the superior Strength of the Enemy, or the Want of proper Qualities in our People to succeed in such Schemes, that so many of them had failed, but merely from their being but indifferently conducted; and therefore he flattered himself, that, if this Evil was once removed, things would go better, and he might still have an Opportunity of retrieving his Circumstances; or, at least, of acquiring a tolerable Subsistence. It was with this View that he addressed himself to the Merchants of *Bristol*, who are justly reputed the most active and pushing People in this Nation. They heard his Proposals with Patience, examined them with Attention, and, at last, saw so much of Probability in what he offered, and such Likelihood of his proving a good Pilot, tho' he had been but an unlucky Captain, that they determined to fit out two Ships at his Instance; but resolved to dispose of them as they thought proper. This gave Rise to that Voyage, which is to be the Subject of our next Section; a Voyage the best concerted, and the best conducted, of its kind; and therefore we need not wonder, that it was the most successful. We draw now near the Close of this Part of our Work; and I should very readily incline to shorten the remaining Relations as much as possible: But there are so many Circumstances curious in themselves, and Transactions of such Importance to the Trade and Welfare of this Nation, that, I flatter myself, my Readers will be very well pleased to find, that I have preserved the same Order in these, as in the rest, and do not frustrate their just Expectations by hasty and imperfect Abridgments.

SECTION XVI.

The Voyage of Captain WOODS ROGERS in the Duke, and Captain STEPHEN COURTNEY in the Duchess, round the World.

1. An Account of the Undertaking, and of the principal Proprietors.
2. The Rules fixed by them for the Conduct of the Voyage.
3. The Duke and Duchess sail from Bristol, June 15. 1708.
4. They arrive at Cork, and make up their Complement of Men.
5. Prosecute their Voyage from Cork to the Canaries.
6. A Prize taken, and discharged.
7. Another Prize taken, which occasions great Disputes.
8. Articles framed for the Regulation of Plunder, with a Copy of those Articles.
9. The Linguist left behind on the Island of St. Antonio, for disobeying Orders.
10. State of the Cape de Verd Islands at that time.
11. A dangerous Mutiny suppressed.
12. A Description of the Island of Grande.
13. The History of the famous Alexander Selkirk, on which the Story of Robinson Crusoe was founded.
14. Description of the Island of Juan Fernandez.
15. Proceed in their Voyage to the South Seas.
16. Their Adventures on the Coast of Peru.
17. A Spanish Prize taken after an obstinate Engagement.
18. The Town of Guaiquil taken, and a Copy of the Capitulation.
19. Account of the Plunder taken there.
20. Description of the Town of Guaiquil.
21. A copious Account of the Province of the same Name, and of its Inhabitants.
22. They sail for the Gallopagos Islands.
23. Continue to cruise on the South Sea.
24. They fit up a Prize, and call her the Marquis.
25. Grant reasonable Terms to their Prisoners.
26. New Disturbances amongst the Ships Companies.
27. Remarkable Occurrences on the Cruise.
28. A further Account of the Gallopagos Islands.
29. Repair to the Coast of Mexico.
30. Arrival on the Coast of California.
31. They discover, attack, and take the lesser Acapulco Slip.
32. Discover the larger Ship, and resolve to engage her.
33. They attack, but, after an obstinate Engagement, are forced to leave her.
34. High Disputes among themselves.
35. Description of California.
36. They proceed from thence to the Island of Guam.
37. Continue their Voyage to the East Indies.
38. Description of the Island of Bouton.
39. Arrival at Batavia, and an Account of what happened there.
40. Proceed, with their Prize, for England, and arrive safely in the Downs, October 1. 1711.
41. Remarks upon the Voyage.

IT has been universally allowed by such as are proper Judges of such Expeditions, that there never was any Voyage of this nature so happily adjusted, so well provided for in all respects, or in which the Acci-

dents, that usually happen in Privateers, were so effectually guarded against. All this, I conceive, was chiefly owing to the personal Abilities of the Gentlemen at *Bristol*, who charged themselves, not only with the Expences of this Expedi-

Expedi-

Expedition, but these worthy to learn; viz. Mr. James Elphinstone, Esq; S. Thomas Geldney, John Duckinfield, Mr. John Green, Hawksworth, M. Captain Stephen Courtney, and some other Gentlemen, till the Ships were Choice of proportionate: Captain Courtney was a bold, active, and not give up his not to be flattered to him. He and was naturally most singularly qualified for him to this Commission, his Authority in finding out Expeditions, Captain Stephen Courtney of very amiable Character, the Expence of which he might see how prevent Misarrangement of them. Command, was a Reason. He was the Decline of his commending the Use of a rough Temper about him: But his Effect, which was Party to support him Edward Cooke, who had been twice taken Privateers, and again The Pilot, in the *Duchess*, who was now the South Seas, and, from his Experience were also extremely Officers, and, as private Men.

2. The Proprietors lay down Rules for were digested into mittee of the Proprietors Constitution. It ran For the better of the present Voyage, written, Owners, Duke and Duchess Courtney, Captain Woods Rogers, William Dampier, Mr. Fry, Mr. Courtney, and Mr. Wasse, Council on board Courtney, Captain Bathe, John Rogers, and others, were on board the said Ship, in command; but, when the Ships above-mentioned, the Captains Rogers, Courtney, and Wasse, of them, to Council referred to all Matters and Things necessary for the Service, in case of Death, above Officers of Council appointed to come on board, and direct, that

Expedition, but with the Care of all things relating to it. These worthy Gentlemen were, as far as I have been able to learn; *viz.* Alderman *Batcbelor*, *John Rumsfy*, Esq; Mr. *James Hollidge*, Captain *Philip Ireake*, *Christopher Shuter*, Esq; Sir *John Hawkins*, Mr. *Francis Rogers*, Mr. *Thomas Geldney*, Captain *Thomas Dover*, Mr. *Webb*, Mr. *John Duckinfield*, Mr. *John Corstley*, Mr. *William Saunders*, Mr. *John Grant*, Mr. *Daniel Hickman*, Mr. *Richard Hawksworth*, Mr. *Thomas Clemens*, Mr. *Thomas Coues*, Captain *Stephen Courtney*, Mr. *Laurence Hollifer*, Merchants of *Bristol*, and Mr. *Palmer*, and Mr. *Alton*, with some other Gentlemen of *London*, who were not concerned till the Ships were at Sea. Their first Care was to make Choice of proper Officers, in which they were very fortunate: Captain *Woods Rogers*, who commanded in chief, was a bold, active, indefatigable Officer, one that would not give up his Opinion too readily to others, and who was not to be flattered by other Peoples giving up their Opinions to him. He had been a large Sufferer by the *French*, and was naturally no great Friend to that Nation; but his most singular Quality, and that which indeed recommended him to this Command, was a peculiar Art he had of maintaining his Authority over his Seamen, and his Readiness in finding out Expedients in the most difficult Conjunctions. Captain *Stephen Courtney* was a Man of Birth, Fortune, and of very amiable Qualities: He contributed considerably to the Expence of the Voyage, and took a Share in it, that he might see how it was managed, and be able either to prevent Miscarriages, or, at least, to make a faithful Report of them. Captain *Thomas Dover*, who was third in Command, was a Proprietor also, and went for the same Reason. He was by Profession a Physician, and, towards the Decline of his Life, made a Noise in the World, by recommending the Use of crude Mercury. He was a Man of a rough Temper, and could not easily agree with People about him: But his unwarlike Disposition had one good Effect, which was this; that it hindered his making any Party to support him in his ill Humours. As for Captain *Edward Cooke*, who was second to Captain *Courtney*, he had been twice taken by the *French*, once by four *Dunkirk* Privateers; and again by two Men of War of fifty Guns. The Pilot, in the larger Ship, was Captain *William Dampier*, who was now to proceed for the fourth Time into the South Seas, where his Name was very well known, and, from his Exploits, terrible to the *Spaniards*; and they were also extremely careful in the Choice of their inferior Officers, and, as far as it was possible, even of their private Men.

2. The Proprietors, in the next Place, undertook to lay down Rules for the Conduct of the Voyage; which were digested into the following Piece, signed by a Committee of the Proprietors, and styled very properly *The Constitution*. It ran thus:

For the better Government, and regulating of Affairs of the present Voyage, we, whose Names are under-written, Owners, and appointed Directors for the Ships *Duke* and *Duchess*, do hereby appoint and constitute Captain *Woods Rogers*, Captain *Thomas Dover*, Captain *William Dampier*, Mr. *Carlton Vanbrugh*, Mr. *Green*, Mr. *Fry*, Mr. *Charles Pope*, Mr. *Glendall*, Mr. *Bullet*, and Mr. *Wasse*, all Officers on board the *Duke*, to be Council on board the said Ship; and Captain *Stephen Courtney*, Captain *Cooke*, Mr. *William Stretton*, Mr. *Batbe*, *John Rogers*, Mr. *White*, and the Master, Officers on board the *Duchess*, to be Council on board the said Ship, in case they should be separated from each other; but, when in Company, the Officers of both Ships above-named are, conjunctly, at the Summons of the Captains *Rogers*, *Dover*, and *Courtney*, or any two of them, to come on board either Ship, and be the Council referred to in our general Orders, to determine all Matters and Things whatsoever that may arise, or be necessary for the general Good, during the whole Voyage. In case of Death, Sicknefs, or Desertion, of any of the above Officers of either Ship, the rest that are of the Council appointed as aforesaid for the Ship, shall convene on board their own Ship, and chuse another fit Person into that Office and Council. We farther require and direct, that all Attempts, Attacks, and Designs,

upon the Enemy, either by Sea or Land, be first consulted and debated, either in the Particular, if separated, or in the general Council, if together; and, as the Majority thereof shall conclude, how or when to act or do, it shall be indispensably, and without unnecessary Delay, put cheerfully in Execution. In case of any Differences, or Misbehaviour, amongst the Officers and Men, which may tend to the Disturbance of the good Concord and Government on board, either the Men, or Persons, may appeal to the Captain to have a Hearing and Decision by a Council; or the Captain shall call a Council, and have it heard and decided, and may prefer or displace any Man according to Desert. All Decision and Judgment of this Council shall be finally determined by the Majority of Voices; and, in case of an Equality, Captain *Dover* is to have the double Voice, as President of the Council; and do accordingly order him to be President. All Matters transacted in this Council shall be registered in a Book by the Clerk appointed for that Purpose. Dated in *Bristol*, July the 14th, 1708.

John Batcbelor, &c.

3. We have two Accounts of this Voyage, one by Captain *Rogers*, the other by Captain *Cooke*, and both in the manner of a Journal. I shall follow Captain *Rogers* chiefly; but, where it is necessary, shall take in explanatory Circumstances and Descriptions from Captain *Cooke*; yet, as they were both Eye-witnesses, and agreed pretty well in their Relations, I do not think it necessary to break the Thread of the Discourse, in order to mention their Names, but proceed, as near as may be, in the Words of Captain *Rogers*. All Things necessary being provided, says he, we were first to sail for *Cork*, in order to make up our Complement of Men; our Force standing thus: The *Duke*, Burden about 300 Tons, 30 Guns, and 170 Men, Captain *Woods Rogers* Commander, Captain *Thomas Dover* second Captain, with three Lieutenants, &c. and the *Duchess*, Captain *Stephen Courtney* Commander, Captain *Edward Cooke* second Captain, with three Lieutenants, Burden 270 Tons, 26 Guns, and 151 Men: Both Ships had legal Commissions from his Royal Highness Prince *George of Denmark*, Lord High Admiral of *England*, to cruise on the Coasts of *Peru* and *Mexico*, in the South Seas, against her Majesty's Enemies, the *French* and *Spaniards*, and to act jointly, as belonging to the same Owners, Merchants in *Bristol*. On the 15th of *June*, 1708. we towed down from *Hong-road* to *King-road*, in order to fit our Ship, and the better to keep our Seamen on board; where we continued till *Monday August* the 1st; and then, at eleven in the Forenoon, unmoored; and at two weighed, with our Consort the *Duchess*, eight Sail of other Ships, and two Sloops; and having little Wind, and that Westery, towed down about five Miles below the *Holmes*, where we anchored in about nine Fathom Water: At one in the Morning weighed, and made Sail with a small Easterly Breeze; shortened Sail, at eight, for our Consort; and, at twelve, the Island of *Londy* bore West by South, distant about three Leagues; in the Evening, saw a Sail right a-head, which we chased till Night, and then shortened Sail for the Ships a-stern.

4. On the 5th of *August*, we had Sight of the *Irish* Shore; and, about eight in the Evening, we weighed with the Flood, a small Gale at East: It came on to blow, and veered to the Northward. We had a *Kinsale* Pilot on board, who endangered our Ship, it being dark and foggy. Before Day, he would have turned us into the next Bay to the Westward of *Cork*, had not I prevented it; which provoked me to chastise him for undertaking to pilot a Ship, since he understood his Business no better. The rest of our Company, except the *Diamond* and *Shoresone* Galley, got into *Cork* before us; only our Consort staid in the Harbour's Mouth, till we came up with her. On the 9th, in the Afternoon, came in the *Hastings*, with the Fleet under her Convoy, which we left in *King-road*. We spent the Time, till the 27th of *August*, in adjusting all Things, and taking on board our fresh Men provided for us at *Cork*, and in discharging several we had brought from *Bristol*, and whom, by Experience, we knew not to be fit for our Purpose. On the 28th, in the Morning, we fell down to the *Spit-end*, by the *Hastings* Man of War, as our Consort did the

The Night before: When I came without the *Spit-end*, I saluted the *Hastings* with seven Guns; she returned five, and I three for Thanks. We had now above double the Number of Officers usual in Privateers, and a large Complement of Men to each Ship. We took this Method of doubling our Officers, to prevent Mutinies, which often happen in long Voyages; and that we might have a large Provision for a Succession of Officers in each Ship, in case of Mortality. Our Ship was now so full, that we sent our Sheet-cable, and other new Store-cordage, to Mr. *Nobles Rogers*, at *Cork*, to make Room for our Men and Provisions, having three Cables besides, and being willing rather to spare that, than any thing else we had on board. Our Crew were continually marrying while we staid at *Cork*, though they expected to sail immediately. Among others, there was a *Dane* coupled by a Romish Priest to an *Irish* Woman, without understanding a Word of each other's Language, so that they were forced to use an Interpreter; yet I perceived, that this Pair seemed more afflicted at Separation, than any of the rest: The Fellow continued melancholy for several Days after we were at Sea. The rest, understanding each other, drank their Cans of Flip till the last Minute, concluded with a Health to our good Voyages, and their happy Meeting, and then parted unconcerned. Most of us, the chief Officers, embraced this Design of Privateering round the World, to retrieve the Losses we had sustained by the Enemy. Our Complement of Sailors in both Ships was 333, of which above one-third were Foreigners from most Nations; several of her Majesty's Subjects on board were Tinkers, Taylors, Hay-makers, Pedlars, Fiddlers, &c. one Negro, and about ten Boys. With this mixed Crew we hoped to be well manned, as soon as they had learnt the Use of Arms, and got their Sea Legs, which we doubted not soon to teach them, and bring them to Discipline.

5. On the first of *September* we took sailing Orders, the better to keep Company with the *Hastings* and Fleet; and, after having agreed with our Consort Captain *Courtney*, on Signals between us, which are so common, that I need not insert them here, and appointed Places of Rendezvous, in case of Separation, and how long to lie for each other at every Place, about ten in the Morning we came to sail with the *Hastings*, and about twenty Merchant Ships bound to the Southward and Westward, Wind at North and by West: We should have sailed the Day before, but could not weigh and cast our Ships clear of the rest; some at that time drove, and the *Sherstone* Galley ran quite ashore on the *Spit*. In the Night it grew moderate Weather, and Captain *Paul* of the *Hastings* got her off to sail with us. Our Holds were full of Provisions, our Cables, a great deal of Bread, and Water-casks between Decks, and 183 Men aboard the *Duke*, with 151 aboard the *Duchess*; so that we were very much crowded, not fit to engage an Enemy, without throwing Provision and Stores overboard. The next Day, we, and our Consort, stood out of the Fleet, to chase a Sail we saw to Windward. Our Ships sailed as well as any in the Fleet, not excepting the Man of War; so that we began to hope we should find our Heels, since we went so well, though deep-laden. We found the Chace to be a small Vessel coming into the Fleet from *Baltimore*. On the 4th, it blew fresh in the Morning: Captain *Paul* made a Signal for me, Captain *Courtney*, and Captain *Edwards*, Commander of the *Scipio*; and, after speaking with him, he sent his Boat for us, being larger than ours: We, with Mr. *Dover*, and Mr. *Vanbrugh*, went in her, and found Captain *Paul* aboard his Ship. He proposed to me and Consort, when he left the Fleet, which would be very soon, to cruise a few Days together off *Cape Finestre*. After having asked us what we wanted, that he could supply us with, he gave us Scrubbers, Iron Scrapers for the Ship-Bottom, a Speaking-trumpet, and other Things, that we had not; but he would accept nothing from us, because our Voyage would be long; but told us, he should be well pleased, if our Owners returned him the same Necessaries for his Ship when he came back. About six in the Evening we returned to our own Ship, and, having called all our Crew upon Deck, we acquainted them whither we were bound, and what our Designs were, that, in case any Disputes had arisen,

we might have sent the Mutineers home in her Majesty's Ship of War; but there was nobody at all dissatisfied, except one poor Fellow, who was to have been Tything-man that Year, and was apprehensive his Wife would be obliged to pay forty Shillings for his Default; but, when he saw every body else easy, and strong Hopes of Plunder, he likewise grew quiet by degrees, and drank as heartily as any body, to the good Success of the Voyage.

6. On the 10th, about six in the Morning, we saw a Sail, to which we immediately gave Chace: About three in the Afternoon we came up with her, and then she bore downright upon us, shewing *Swedish* Colours: I fired twice at her, before she brought to; then went aboard her with my Yawl, Captain *Courtney's* Boat being just before me. We examined the Master, and found he came round *Scotland and Ireland*; we suspected he had contraband Goods on board, because some of the Men, we found drunk, told us, they had Gunpowder and Cables on board: So we resolved to examine her strictly, put twelve Men on board her, and kept the *Swedes* Master, and twelve of his Men, on board our Ships. The next Morning, after we had examined the Men, and searched the Ship, we found it difficult to prove she was a Prize; and not willing to hinder Time to carry her into any Harbour, to examine her farther, we let her go without the least Embezzlement. The Master gave me two Hams, and some rough-dried Beef; and I gave him a dozen Bottles of *Redhead* Cyder. They saluted us at parting with four Guns: She belonged to *Stadt* near *Hamburg*, and was a Frigate-built Ship, of 22 Guns, about 270 Tons. While I was on board the *Suede* Yesterday, our Men mutiny'd; the Ring-leaders being our Boatwain, and three other inferior Officers. This Morning, the chief Officers having kept with me in the After-part of the Ship, we confined the Authors of this Disorder, in which there was not one Foreigner concerned: We put ten of the Mutineers in Irons, a Sailor being first soundly whipped for exciting the rest to join him; others, less guilty, I punished and discharged; but kept the chief Officers all armed, fearing what might happen. The Ship's Company seeming too much inclined to favour the Mutineers, made me more easy to forgive: Some begged Pardon, and others I was forced to wink at: However, they began to find their Design frustrated, which was to make a Prize of the *Suede*, who they alleged had much contraband Goods aboard, though we could see none: Yet they obstinately insisted, that we apparently gave away their Interest, by letting her go without plundering her. I laboured to convince them of the Necessity of our making Dispatch; and that, if we could make her a Prize, it would unman our Ships too much to send her into any Port; besides other Disadvantages it might procure to ourselves and Owners, should we be mistaken; which pacified the major Part: Our Consort's Men were at first very uneasy; but, finding the Malecontents quelled aboard our Ship, they all kept quiet. We had afterwards a great deal of Trouble with these Fellows, who did us more Mischief when in Irons than before, by stirring up the Men to release them; pretending, that they suffered in the Cause of the Crew, and therefore the Crew ought to rise and rescue them. This determined me to make some Examples; but I still resolved to go the mildest way to work I could; and therefore began with removing *Giles* Cash from being Boatwain, and made another in his room, without intending any thing farther. But, on *September* 4. this intestine Storm rose higher than ever; for a Sailor came up to me at the Steerage-deck, with the best Part of the Ship's Company at his Heels, demanding the Boatwain immediately out of Custody. Upon this, I desired him to speak with me by himself on the Quarter-deck; which he did; where the Officers assisting me, I seized him, and made one of his chief Contraband whup him. This Method I thought best for breaking any unlawful Friendship among themselves; which, without ferent Corrections to other Offenders, allayed the Tumult, so that now they began to submit quietly, and those in Irons begged Pardon, and promised Amendment. This Mutiny would not have been easily laid, were it not for the Number of our Officers, which we began to find very necessary to bring our Crew to Order and Discipline; which is always very difficult in Privateers, and without which is impossible

impossible to carry. The next Evening *Crown* Galley in Irons, by the Command of him so harshly. out of Irons, on the Promises of dutiful them as were pettish, and all on account that now we were ing good Humour their Expectations, would not willing, and were therefore Gratitude for having

7. On the 18th, right a-head, between We chased, and at a small *Spanish* Ship with several Men a sundry sorts of Goods Morning, bore away off-and-on, and for the Owners Agents to treat about ransom, visions, and other eight in the Morning Town, with a Letter there, wherein they of the Bark, alleging to in those Islands, and the Kings of *France* by the latter, that there by a *French* representing the living upon Permission Bark were not imm would be made on t able at home for inter Letter was signed by *John Crape*, and *G Rogers*, and Captain Answer; imputing to the *Spanish* Vessel could not justify passions, without sonjelly; the *English* being-ground, and the away all the Prisoners any Detriment to the and seek their Redress there being no *Tim Vanbrugh*, they would another Letter came *Peulden*, the Consul *English* Men of War ver committed Host should insist on ransom made Prisoners in En nor there delivered were brought in by in our Custody might excepting a Present the aforesaid Consul the above-mentioned to the same Purpose the Value of 450 P the Bark, in Wine, to prevent increasing ing but Reparation Captains *Rogers* and ening to cruise among their lost Time, and unless they received the Morning, we st Ship; but, soon after

NUM. 11.

impossible to carry on any distant Undertaking like ours. The next Evening, we put our old Boatswain on board the *Crown* Galley in Irons; and sent home Letters to our Owners, by the Cominander, to justify our Conduct in treating him so harshly. The next Day I discharged the Prisoners out of Irons, on their humble Submission, and most solemn Promises of dutiful Behaviour for the future: Such among them as were petty Officers, we restored to their Commands, and all on board were forbid to disobey or reproach them, on account of any past Errors in their Conduct; so that now we were all quiet again, and the Crew in exceeding good Humour, Things having ended much beyond their Expectations, there not being a Man in Irons who would not willingly have compounded for a Whipping; and were therefore excessive brisk and diligent to shew their Gratitude for having escaped it.

7. On the 18th, at five in the Morning, we saw a Sail right a-head, between *Fuerteventura* and *Grand Canary*: We chased, and at ten came up with and took her, being a small *Spanish* Ship, bound from *Teneriff* to *Fuerteventura*, with several Men and Women Passengers, and laden with sundry sorts of Goods: The next Day, at eight in the Morning, bore away for *Oratavia* Road, where we stood off-and-on, and sent away the Prize's Boat, with one of the Owners Agents, a Priest, and the Master of the Prize, to treat about ransoming the Vessel, and to get Wine, Provisions, and other Necessaries, for both Ships. About eight in the Mornings, of the 20th, a Boat came from the Town, with a Letter from the *English* Merchants residing there, wherein they expostulated with us for making a Prize of the Bark, alleging, that there was a free Trade agreed to in those Islands, between her Majesty of *Great Britain*, and the Kings of *France* and *Spain*, so religiously observed by the latter, that they had caused an *English* Ship, taken there by a *French* Privateer, to be restored: And farther, representing the Danger that might arise to themselves, living upon Permission in the Enemy's Country, if the said Bark were not immediately restored, for which Reprisals would be made on them; as also, that we should be answerable at home for interrupting the settled Commerce. This Letter was signed by *John Poulden*, Consul, *Bernard Walsh*, *John Crope*, and *George Fitzgerald*, Merchants. Captain *Rogers*, and Captain *Courtney*, immediately returned an Answer; importing, that, having no Instructions relating to the *Spanish* Vessels trading among those Islands, they could not justify parting with the Bark on their bare Opinions, without some Order or Proclamation of her Majesty; the *English* being protected there only on Anchoring-ground, and the Bark being taken at Sea: That, in case *Mr. Vanbrugh* were not restored, they would carry away all the Prisoners they had; and, if they apprehended any Detriment to the Factory, they might ransom the Bark, and seek their Redress in *England*. They desired Dispatch, there being no Time to lose; and, upon sending back *Mr. Vanbrugh*, they would release their Prisoners. At Night another Letter came in Answer to this, from *Mr. William Poulden*, the Consul; the Effect whereof was, That the *English* Men of War were civilly received there, and never committed Hostilities; and that it was strange we should insist on ransoming any *Spaniards*, who were never made Prisoners in *England*, or elsewhere: And the Governor there delivered up to him any *English* Prisoners that were brought in by Privateers; wherefore he desired those in our Custody might be dismissed, and the Bark discharged, excepting a Prefent of Wine in Return. With this, from the aforesaid Consul at the City *Laguna*, came another from the above-mentioned Merchants at *Oratavia* Port, much to the same Purport with the others, only offering to pay the Value of 450 Pieces of Eight, the Sum demanded for the Bark, in Wine, Brandy, Sugar, Oil, Barley, and Greens, to prevent incensing the Natives against them, not questioning but Reparation would be made them in *England*. The Captains *Rogers* and *Courtney* replied at the same time, threatening to cruise among the Islands, to make Amends for their lost Time, and to cannonade the Town of *Oratavia*, unless they received Satisfaction. On the 22d, at four in the Morning, we stood in for the Shore, making a clear Ship; but, soon after, we saw a Boat coming, with our

Owners Agent, and *Mr. Croft*, one of the *English* Merchants, bringing five Buts of Wine, and other Refreshments. We lay by off the Town, took the Goods out of the Prize, sold the Bark to *Mr. Croft* for 450 Dollars, and put the Prisoners aboard her. Thus ended this troublesome Affair, and we were once more at Liberty to mind our own Concerns, and to think of prosecuting our Voyage, which we did, after first holding a Committee, where the Whole of the late Transaction was candidly examined, and unanimously approved; which Method, for every body's Security, we steadily pursued through the whole Voyage; and felt the happy Effect of it on our Return, when every Transaction appears in its proper Light to our Owners.

8. On the last of *September* we ran by *Santa Lucia*, one of the *Cape de Verd* Islands; and, by eight in the Morning, being very near the West End of the Island of *St. Vincent*, we bore away between it and the Island of *St. Antony*, and then into the Harbour of *St. Vincent*; and, about eleven a Clock, came to an Anchor in ten Fathom Water, within the Rock: Then seeing several Men ashore, and knowing the Island not to be inhabited, Captain *Cooke* went in the Pinnace armed, to see what they were, and found them to be *Portuguese*, come from the Island of *St. Antony* to catch Sea Tortoises, or, as the Seamen call them, Turtles; who told him, we might wood and water here. This Island lies in Latitude of 16° 55' N. and 25° 36' Longitude from the Meridian of *London*. There are on it great Plenty of *Guiney* Hens, some Hogs and Goats; and, in the Road, we caught Plenty of Fish. In the Woods there are abundance of large Spiders, as big as small Walnuts; and their Webs very troublesome to get thro', being as strong as ordinary Threads, and very many of them. While we lay here, new Disturbances arose amongst the Men in relation to Plunder; for here we had an Opportunity of purchasing Things, and therefore every Man wished, that he had something to purchase with. The Effects taken in the late Prize occasioned these Heart-burnings; to put an End to all which, and to fix the People in a firm Resolution of doing their Duty, we determined to settle this Affair at once, by framing such Articles, as, without giving our Owners any Ground of Complaint, might inspire the Seamen with Courage and Constancy, and make them as willing to obey, as their Officers were ready to command. It cost some Trouble, to be sure, to adjust and settle these Articles; but that was thoroughly compensated, by our finding, that they effectually answered our Purpose; and that, among such a Number of People, there was not one who refused to comply. This Paper was drawn up in the following Terms.

The Articles to be observed on board the Duke and Duches.

1. THAT all Plunder, taken on board any Prize by either Ship, shall be equally divided between the Companies of both Ships, according to each Man's respective whole Shares, as shipped by the Owners, or their Orders.
2. That what is Plunder shall be adjudged by the superior Officers and Agents in both Ships.
3. That if any Person on board either Ship do conceal Plunder, exceeding the Value of a Piece of Eight, during twenty-four Hours after the Capture of any Prize, he shall be severely punished, and lose his Share of the Plunder. The same Penalty for being drunk in the Time of Action, or disobeying the superior Officer's Command, or concealing himself, or quitting his Post in Sea or Land Service.
4. If any Prize be taken by Boarding, then whatsoever is taken shall be every Man's own, as follows; *viz.* a Sailor, 10 *l.* any Officer below a Carpenter, 20 *l.* a Mate, Gunner, Boatswain, and Carpenter, 40 *l.* a Lieutenant or Master, 80 *l.* and the Captains, 100 *l.* each, above the Gratuity promised by the Owners to such as shall signalize themselves.
5. Public Books of Plunder are to be kept in each Ship, attested by Officers; and the Plunder to be appraised by the Officers chosen, and divided as soon as possible after the Capture; every Person to be sworn and searched as soon

as they come aboard, by such Persons as shall be appointed for that Purpose; the Person or Persons refusing shall forfeit their Share of the Plunder as above.

6. In Consideration that Captain Rogers, and Captain Courtney, to make both Ships Companies easy, have given the whole Cabin-plunder, which, in all Probability, is the major Part, to be divided as aforesaid, we do voluntarily agree, that they shall have 5 l. per Cent, to each of them, over and above their respective Shares, in Consideration for what is their Due out of the Plunder aforesaid.

7. That a Reward of twenty Pieces of Eight shall be given to him who first sees a Prize of good Value, or exceeding fifty Tons in Burden.

8. That such of us as have not already signed to the Articles of Agreement, indented with the Owners, do hereby oblige themselves to the same Terms and Conditions as the rest of the Ships Companies have done, half Wages and half Shares.

9. And for the true Execution of the above Articles, according to the Intent and Meaning thereof, and to prevent Frauds relating to Plunder, we do actually agree, that four Men shall be chosen out of the *Duke*, and four Men out of the *Duchess*, two for the Ship's Company, and two for the Officers of each Ship, who are to receive Plunder into their Possession, and to search every Man aboard, and coming from each Prize; and we make this public, to the end that no Person, either Officer, or Fore-mast-man, may refuse being searched by those Men chosen to that Purpose, on Penalty of losing their Shares in the Prize and Plunder, and undergoing such Punishment as the Captains shall think proper to inflict on them.

To which Articles of Agreement we have set our Hands, as our full Intent and Meaning, without any Compulsion, dated *October 7. 1708.*

Signed by the Officers and Men of both Ships.

9. We were at this time under some Difficulties upon another Account: We had sent our Linguist on shore to get Refreshments. After staying two Days, in which time we heeled and cleaned our Ships, and got Wood and Water on board, our Boat returned with nothing but Limes and Tobacco, and no News of our Linguist: But, soon after, there came another Boat, belonging to that Part of the Island where the Governor lives, with his Deputy Governor, a Negro, who brought Limes, Tobacco, Oranges, Fowls, Potatoes, Hogs, Bananas, Milk, Water-melons, and Brandy, which we bought of him, and paid in such Prize-goods as we had left of the Bark's Cargo, cheap enough. They are poor People, and will truck at any Price for what they want, in such Payments as they can make. We were now ready to fail, and, therefore, called a Council, to consider what was to be done with respect to our Linguist, who had promised the Deputy Governor to wait for him at the Water-side, but was not so good as his Word; and, therefore, as this appeared to be intirely his own Fault, the Officers of both Ships came unanimously to a Resolution, that we had better leave him behind, than suffer two Ships to wait for one Man who had disobeyed his Orders. We were the more inclined to do this, in order to set a proper Example, that other People might learn, when sent ashore, to comply with their Instructions, and come on board directly when they had done their Business, without flattering themselves, that fine Words, and fair Excuses, would atone for Breach of Orders, and the Delay of the Voyage, to gratify the Humours and Fancies of private Men. It was, indeed, but a very indifferent Place to leave him; but, on the other hand, as he knew the Language, was well acquainted with the People among whom he was left, and might easily find a Passage home, we persisted in our Resolution, and gave the necessary Directions for sailing as soon as possible, that we might not lose the Advantage of the Season, or be obliged to double *Cape Horn* at a wrong Time of the Year.

10. On the 8th of *October*, at seven in the Evening, after putting the Deputy Governor ashore, where he must lie in an Hole of the Rocks, there being no House on that Part of the Island, we failed, our Comfort having got before us, and lying with a Light for us. There were

several Negroes on the Island, that came from *St. Nicolas*, and *St. Antonio*, to make Oil of Turtle, there being very good green Turtle at this time of the Year, which I sometimes allowed our Men to eat; they have likewise wild Goats, but in no great Plenty, wild Asses, *Guiney Hens*, Kerlews, and abundance of Sea Fowls. Captain *Dampier*, and others aboard our Ships, that had formerly put in at *St. Iago*, another of these *Cape de Verd* Islands, told us, that though this Island is not often frequented by Ships, yet it is preferable to *St. Iago*, for such as are outward-bound; because it is a much better Road for Ships, and more convenient for Water and Wood, and has better Landing. The Island is mountainous and barren; the plainest Part lies against this sandy Bay, where we rode. The Wood that grows in it is short, and fit for no Use but Firing. They have very large Spiders here, which weave their Webs so strong betwixt the Trees, that 'tis difficult to get through them: Where we watered, there is a little Stream, that flows down the Hill, from a Spring, and is very good; but, in other Parts, it is brackish. This Island was formerly inhabited, and had a Governor; but is now only frequented, in the Season for catching Tortoises, by the Inhabitants of the other Islands, who are, for the most part, Negroes and Mulattoes, and very poor. The Stock of wild Goats in this Island is almost destroyed by the People of *St. Nicolas* and *St. Antonio*. The Heats were excessive to us, who came newly from *Europe*; so that several of our Men began to be sick, and were blooded. Some of our Officers, that went ashore to hunt, could meet no Game, but a wild Ass, which, after a long Chace, they got within Shot, and wounded; yet he afterwards held out so as to tire them, and they returned empty and weary. These Islands are so well known, that I need not say much of them: They are ten in Number, of which *St. Iago*, *St. Nicolas*, *Bonavisia*, *St. Antonio*, *Brava*, *Mayo*, and *Fuega*, are inhabited; the latter is so named from a Volcano. *St. Iago* is much the largest and best, and the Seat of the chief Governor: It produces a small Matter of Indico, Sugar, and Tobacco, which, with their Goat-skins, and others, they send to *Lisbon*. The Capital is of the same Name, and the See of a Bishop. There is also a Town, called *Ribera Grande*, which is said to consist of 500 Houses, and has a good Harbour towards the West. The Air of this Island is not very wholesome, and the Soil uneven. Their Valleys produce some Corn and Wine. Their Goats are fat, and good Meat; and the Shes are said to bring three or four Kids at a time, once in four Months. *St. Nicolas* is the best-peopled next to *St. Iago*. The Island *Mayo* has a great deal of Salt, naturally made by the Sun, from the Sea-water which is left from time to time in Pits on shore: It is known, they load many Ships with that Commodity in a Year, and are able to furnish some Thousands, had they Vent for it. The fine *Marroquin* Leather is made of their Goat-skins. The other inhabited Islands afford more or less of Provisions: They have their Name from *Cape Verd*, on the *African* Coast, from whence they lie about 160 Leagues to the Westward. In our Passage towards the Coast of *Brazil*, some new Disputes arose amongst the Men; and, after various Consultations, it was resolved, that one *Page*, who was a second Mate on board the *Duchess*, should be sent to serve on board the *Duke*, from whence *Mr. Ballet* was to remove on board the *Duchess*. Captain *Cooke* was sent to execute this Order; but *Page* refused to obey it; upon which a Dispute followed, that ended in Blows: However, *Page* was at last brought on board our Ship, where, being charged with Mutiny, he desired to go to the Head to cut himself, before he made his Defence; which being permitted, he jumped over-board, in hopes of getting back to the *Duchess*, while both the Captains were absent; but he was taken up, brought on board again, and punished, which put an End to this Disension.

11. On the 18th of *November*, we anchored before the Island of *Grande* in eleven Fathom Water. While we lay here, there were new Quarrels, and things had certainly come to a great Height on board the *Duchess*, if Captain *Courtney* had not put eight of the Ringleaders immediately into Irons; which frightened the rest, and, in all Probability, prevented an Attempt to run away with the Ship: Yet

did not quite free in the Afternoon Woods, thinking Sparks ran away Night were to fire really by Monkey Water, hallowing again. About Quarter-deck spi board; but they made our People that ran away, of them off the immediately sent the coming up near no Purpose; at rowed in the Can a Frier, and had Mines, I suppose. The Frier had just full of Wood, as us he had some not run away with hide, knew our F ther back. The and was brought to Slaves, that rowed where our Surgeon in two Hours time could; but he was and the Death of Justice in *Portugal*. Men were taken a Month we left this a short Description

12. The Island a small Cliff and Middle of the high there is a small rises in three little the Island is the lea it appears alike on round white Rocks to *Grande*, between in. On the Starb the Main is much belt Way, when y the Starboard Side to the Watering-co to the fresh-water most Point of the is between small lit the second Cove u behind the first Po two Islands. This are two other Cove between them, but this Cove. We f found less than ten know or found the North-east about The Island of *Gran Land*, and so is th Water-side is thic abounds with Mon of good Timber, Oranges and Lem Woods. The Ne Rum, Sugar, and tho' not good to fin Fowls and Hogs, son are cheap, but Corn, Bananas, and Pine-apples, t except Cassado, (the *lies*) which they cal have no kind of Sal most of the Time sun being right ov

did not quite free us from ill Humours; for, on the 25th, in the Afternoon, two Irish Land-men stole into the Woods, thinking to get away from us, though two such Sparks ran away the 3d from the *Duchefs*, and in the Night were so frightened with Tygers, as they thought, but really by Monkeys and Baboons, that they plunged into the Water, hollowing to the Ship, till they were fetched aboard again. About four next Morning, the Watch on the Quarter-deck spied a Canoe, and called her to come on board; but they not answering, and striving to get away, made our People suspect they had either got our Men that ran away, or were coming, by Agreement, to fetch them off the Island which was uninhabited. We immediately sent the Pinnace and Yawlafter them; the Pinnace, coming up near the Canoe, fired, to stay them, but to no Purpose; at last, they wounded one of the *Indians* that rowed in the Canoe: He that owned and steered her was a Frier, and had a Quantity of Gold, which he got at the Mines, I suppose by his Trade of confessing the Ignorant. The Frier had just run the Canoe ashore on a little Island, full of Wood, as our Boats landed; and afterwards told us he had some Gold there. A *Portuguese*, that would not run away with the Father, because he had no Gold to hide, knew our People to be *Englifs*, and called the Father back. The Man that was wounded could not move, and was brought by our Men, with the Father and several Slaves, that rowed the large Canoe, on board our Ship, where our Surgeon dressed the wounded *Indian*, who died in two Hours time. I made the Father as welcome as I could; but he was very uneasy at the Loss of his Gold, and the Death of his Slave; and said, he would seek for Justice in *Portugal* or *England*. The next Day, both our Men were taken and put in Irons; and the last Day of this Month we left this Place, of which I shall give the Reader a short Description.

12. The Island *Grande* is remarkably high Land, with a small Cliff and a Tip standing up on one Side, in the Middle of the highest Land, easy to be seen, if clear. And there is a small Island to the Southward without it, which rises in three little Hummocks: The nearest Hummock to the Island is the least; as we came in-and-out we saw it, and it appears alike on both Sides. There is also a singularly round white Rock, that lies on the Larboard Side nearest to *Grande*, between it and the Main at the Entrance going in. On the Starboard Side there are several Islands, and the Main is much like Islands, till you get well in. The best Way, when you open the Coves that are inhabited on the Starboard Side going in, is to get a Pilot to carry you to the Watering-cove within *Grande*; otherwise find in a Boat to the fresh-water Cove, which lies round the inner westernmost Point of the Island, and near a League in the Passage is between small Islands, but room enough, and bold: It is the second Cove under the first high Mount, and round behind the first Point you see when you are in between the two Islands. This is the Cove where we watered; there are two other Coves very good, with some Shole-banks between them, but no Shole-ground before we come to this Cove. We found all the Passage in, and seldom found less than ten Fathom Water, but had not Time to know or sound the rest of the Coves. The Town bears North-east about three Leagues distant from this Cove. The Island of *Grande* is near about nine Leagues long, high Land, and so is the Main within: All you see near the Water-side is thick, covered with Wood. The Island abounds with Monkeys, and other wild Beasts; has Plenty of good Timber, Fire-wood, and excellent Water, with Oranges and Lemons, with Guavas growing wild in the Woods. The Necessaries we got from the Town were Rum, Sugar, and Tobacco, which they sell very dear, tho' not good to smoke, 'tis so very strong. We had also Fowls and Hogs, but the latter are scarce; Beef and Mutton are cheap, but no great Quantity to be had; *Indian* Corn, Bananas, and Plantains, Guavas, Lemons, Oranges, and Pine-apples, they abound with, but have no Bread, except Cassado, (the same Sort as is eaten in our *West Indies*) which they call *Faranada Pan*, Bread of Wood; they have no kind of Salading. We had fine pleasant Weather most of the Time we were here, but hot like an Oven, the Sun being right over us. The Winds we did not much

observe, because they were little and variable, but commonly between the North and the East. We cleared an ordinary *Portuguese* here, called *Emanuel de Santos*, and shipped another, whose Name was *Emanuel Goncalves*. I had *Newhoff's* Account of *Brazil* on board; and, by all the Inquiry and Observation I could make, found his Description of the Country, its Product, and Animals, to be just, particularly of that Monster called *Liboya*, or the *Roebuck Serpent*; which I inquired after, thinking it incredible, till the *Portuguese* Governor told me, there are some thirty Feet long, as big as a Barrel, and that devour a *Roebuck* at once, from whence they had their Name. I was also told, that one of these Serpents was killed near this Place a little before our Arrival. Tygers are very common here on the Continent, but not so ravenous as those of *India*. The Product of *Brazil* is well known to be Redwood, Sugars, Gold, Tobacco, Whale-oil, Snuff, and several sorts of Drugs. The *Portuguese* build their best Ships here. The Country is now become very populous, and the People delight much in Arms, especially about the Gold Mines, where those of all Sorts resort, but mostly *Negroes* and *Mulattoes*. 'Tis but four Years since they would be under no Government, but now they have submitted. Some Men of Repute here told me, the Mines increase very fast, and that Gold is got much easier at those Mines, than in any other Country. The *Brazilian* Women are very fruitful, have easy Labour, retire to the Woods, where they bring forth alone, and return after washing themselves and their Child; the Husbands lying a-bed the first twenty-four Hours, and being treated as if they had endured the Pains. The *Tapoyars*, who inhabit the inland Country on the West, are the most barbarous of the Natives, taller and stronger than the rest, and indeed than most *Europeans*. They wear little Sticks through their Cheeks and Under-lips, are said to be Man-eaters, and use poisoned Darts and Arrows; they change their Habitations according to the Season, and live chiefly by Hunting and Fishing. Their Kings, and great Men, are distinguished by the manner of shaving their Crowns, and their long Nails. Their Priests are Sorcerers; make them believe, that the Devils appear to them in Form of Insects; and perform their diabolical Worship in the Night, when the Women make a dismal Howling, which is their chief Devotion: They allow Polygamy, yet punish Adultery by Death; and when young Women are marriageable, but courted by nobody, their Mothers carried them to their Princes, who deflower them, and this they reckon a great Honour. Some of these People were much civilized by the *Dutch*, and very serviceable to them, but still kept under Subjection to their own Kings. We continued our Voyage, coasting very far to the South, where we endured great Cold, which affected our Men extremely, inasmuch that a third Part of both Ships Companies fell sick; and this induced us to bear away for the Island of *Juan Fernandez*; which we, however, did not find very easily, on account of its being laid down differently in all the Charts; and Captain *Dampier* was likewise a good deal at a Loss, tho' he had been here so often, and tho' he had a Map of the Island in his Head, that agreed exactly with the Country when we came to see it: Which ought to induce Sea-officers to prefer what is properly their Business to idle Amusements; since, with all this Knowledge, we were forced to make Main-land of *Chili* in order to find this Island, and did not strike it without Difficulty at last.

13. On *February* 1. 1709. we came before that Island, having had a good Observation the Day before, and found our Latitude to be 34° 10' South. In the Afternoon, we hoisted out our Pinnace; and Captain *Dover*, with the Boat's Crew, went in her to go ashore, though we could not be less than four Leagues off. As soon as the Pinnace was gone, I went on board the *Duchefs*, who admired our Boat attempting going ashore at that Distance from Land. It was against my Inclination; but, to oblige Captain *Dover*, I let her go: As soon as it was dark, we saw a Light ashore. Our Boat was then about a League from the Island, and bore away for the Ships as soon as she saw the Lights: We put our Lights aboard for the Boat, tho' some were of Opinion, the Lights we saw were our Boat's Lights: But, as Night came on, it appeared too large for that: We fired

our

our Quarter-deck Gun, and several Musquets, shewing Lights in our Mizzen and Fore-shrouds, that our Boat might find us whilst we were in the Lee of the Island: About two in the Morning our Boat came on board, having been two Hours on board the *Ducbefs*, that took them up a-stern of us; we were glad they got well off, because it began to blow. We were all convinced the Light was on the Shore, and designed to make our Ships ready to engage, believing them to be *French* Ships at Anchor, and we mult either fight them, or want Water. All this Stir and Apprehension arose, as we afterwards found, from one poor naked Man, who passed, in our Imagination, at present, for a *Spanish* Garifon, a Body of *Frenchmen*, or a Crew of Pirates. While we were under these Apprehensions, we stood on the Backside of the Island, in order to fall in with the Southerly Wind, till we were passed the Island; and then we came back to it again, and ran close aboard the Land that begins to make the North-east Side. We still continued to reason upon this Matter; and it is in a manner incredible, what strange Notions many of our People entertained from the Sight of this Fire upon the Island. It served, however, to shew Peoples Tempers and Spirits; and we were able to give a tolerable Guess how our Men would behave, in case there really were any Enemies upon the Island. The Flaws came heavy off the Shore, and we were forced to reef our Top-sails when we opened the middle Bay, where we expected to have found our Enemy; but saw all clear, and no Ships, nor the other Bay next the North-east End. These two Bays are all that Ships ride in, which recruit on this Island; but the middle Bay is by much the best. We guessed there had been Ships there, but that they were gone on Sight of us. We sent our Yawl ashore about Noon, with Captain *Dover*, Mr. *Fry*, and six Men, all armed: Mean while we and the *Ducbefs* kept turning to get in, and such heavy Flaws came off the Land, that we were forced to let go our Top-sail Sheet, keeping all Hands to stand by our Sails, for fear of the Winds carrying them away: But when the Flaws were gone, we had little or no Wind. These Flaws proceeded from the Land, which is very high in the Middle of the Island. Our Boat did not return; we sent our Pinnace with the Men armed, to see what was the Occasion of the Yawl's Stay; for we were afraid, that the *Spaniards* had a Garifon there, and might have seized them. We put out a Signal for our Boat, and the *Ducbefs* shewed a *French* Ensign. Immediately our Pinnace returned from the Shore, and brought abundance of Cray-fish, with a Man cloathed in Goat-skins, who looked wilder than the first Owners of them. He had been on the Island four Years and four Months, being left there by Captain *Straddling* in the *Cinque-ports*; his Name was *Alexander Selkirk*, a *Scotsman*, who had been Master of the *Cinque-ports*, a Ship that came here last when he saw our Ships, which he judged to be *English*. During his Stay here, he saw several Ships pass by, but only two came in to Anchor: As he went to view them, he found them to be *Spaniards*, and retired from them; upon which they shot at him: Had they been *French*, he would have submitted; but chose to risque his dying alone on the Island, rather than fall into the Hands of *Spaniards* in these Parts; because he apprehended they would murder him, or make a Slave of him in the Mines; for he feared they would spare no Stranger that might be capable of discovering the South Seas. The *Spaniards* had landed, before he knew what they were; and they came so near him, that he had much ado to escape; for they not only shot at him, but pursued him to the Woods, where he climbed to the Top of a Tree, at the Foot of which they made Water, and killed several Goats just by, but went off again without discovering him. He told us, that he was born at *Large*, in the County of *Fife*, in *Scotland*, and was bred a Sailor from his Youth. The Reason of his being left here, was a Difference between him and his Captain; which, together with the Ship's being leaky, made him willing rather to stay here, than go along with him at first; and, when he was at last willing to go, the Captain would not receive him. He had been at the Island before to wood and water, when

two of the Ship's Company were left upon it for six Months, till the Ship returned, being chased thence by two *French* South Sea Ships. He had with him his Cloaths and Bedding, with a Firelock, some Powder, Bullets, and Tobacco, a Hatchet, a Knife, a Kettle, a Bible, some practical Pieces, and his mathematical Instruments and Books. He diverted and provided for himself as well as he could; but, for the first eight Months, had much ado to bear up against Melancholy, and the Terror of being left alone in such a desolate Place. He built two Huts with Pimento-trees, covered them with long Grass, and lined them with the Skins of Goats, which he killed with his Gun as he wanted, so long as his Powder lasted, which was but a Pound; and that being almost spent, he got Fire by rubbing two Sticks of Pimento Wood together upon his Knee. In the lesser Hut, at some Distance from the other, he crested his Victuals; and in the larger he slept, and employed himself in reading, singing Psalms, and praying; so that he said, he was a better Christian, while in this Solitude, than ever he was before, or than, he was afraid, he should ever be again. At first he never eat any thing till Hunger constrained him, partly for Grief, and partly for want of Bread and Salt: Nor did he go to Bed, till he could watch no longer; the Pimento Wood, which burnt very clear, served him both for Fire and Candle, and refreshed him with its fragrant Smell. He might have had Fish enough, but would not eat them for want of Salt, because they occasioned a Looseness, except Cray-fish, which are as large as our Lobsters, and very good: These he sometimes boiled, and at other times broiled, as he did his Goats Flesh, of which he made very good Broth, for they are not so rank as ours: He kept an Account of 500 that he killed while there, and caught as many more, which he marked on the Ear, and let go. When his Powder failed, he took them by Speed of Feet; for his way of Living, continual Exercise of Walking and Running, cleared him of all gross Humours; so that he ran with wonderful Swiftness thro' the Woods, and up the Rocks and Hills, as we perceived when we employed him to catch Goats for us: We had a Bull-dog, which we sent, with several of our nimblest Runners, to help him in catching Goats; but he distanced and tumbled both the Dog and the Men, caught the Goats, and brought them to us on his Back. He told us, that his Agility in pursuing a Goat had once like to have cost him his Life; he pursued it with so much Eagerness, that he catch'd hold of it on the Brink of a Precipice, of which he was not aware, the Bushes hiding it from him; so that he fell with the Goat down the Precipice, a great Height, and was so stunned and bruised with the Fall, that he narrowly escaped with his Life; and, when he came to his Senses, found the Goat dead under him: He lay there about twenty-four Hours, and was scarce able to crawl to his Hut, which was about a Mile distant; or to stir abroad again in ten Days. He came at last to relish his Meat without Salt or Bread; and, in the Season, had Plenty of good Turneps, which had been sowed there by Captain *Dampier's* Men, and have now overspread some Acres of Ground. He had enough of good Cabbage from the Cabbage-trees, and seasoned his Meat with the Fruit of the Pimento-trees, which is the same as *Jamaica* Pepper, and smells deliciously: He found also a black Pepper, called *Malaga*, which was very good to expel Wind, and against Gout in the Guts. He soon wore out all his Shoes and Cloaths by running in the Woods; and, at last, being forced to shift without them, his Feet became so hard, that he ran every-where without Difficulty; and it was some time before he could wear Shoes after we found him; not being used to any so long, his Feet swelled, when he came first to wear them again. After he had conquered his Melancholy, he diverted himself sometimes with cutting his Name on the Trees, and the Time of his being left, and Continuance there. He was at first much persecuted with Cats and Rats, that had bred in great Numbers, from some of each Species, which had got ashore from Ships that put in there to wood and water: The Rats gnawed his Feet and Cloaths whilst asleep, which obliged him to chase the Cats with his Goats Flesh, by which many of them became so tame, that they would lie about him in Hundreds, and soon delivered him from the Rats: He likewise caught

some Kids; and, to divert himself, would, now-and-then, sing and dance with them, and his Cats: So that, by the Favour of Providence, and Vigour of his Youth, being now but thirty Years old, he came, at last, to conquer all the Inconveniences of his Solitude, and to be very easy. When his Cloaths were out, he made himself a Coat and a Cap of Goat-skins, which he stitched together, with little Thongs of the same, that he cut with his Knife. He had no other Needle, but a Nail; and, when his Knife was worn to the Back, he made others, as well as he could, of some Iron Hoops, that were left ashore, which he beat thin, and ground upon Stones. Having some Linnen-cloth by him, he sewed him some Shirts with a Nail, and stitched them with the Worked of his old Stockings, which he pulled out on purpose. He had his last Shirt on, when we found him in the Island. At his first coming on board us, he had so much forgot his Language, for want of Use, that we could scarce understand him; for he seemed to speak his Words by halves. We offered him a Dram; but he would not touch it, having drank nothing but Water since his being there; and it was some time before he could relish our Victuals. He could give us an Account of no other Product of the Island, than what we have mentioned, except some black Plums, which are very good, but hard to come at, the Trees, which bear them, growing on high Mountains and Rocks. Pimento-trees are plenty here, and we saw some of sixty Feet high, and about two Yards thick; and Cotton-trees higher, and near four Fathom round in the Stock. The Climate is so good, that the Trees and Grass are verdant all the Year round. The Winter lasts no longer than *June* and *July*, and is not then severe, there being only a small Frost, and a little Hail; but sometimes great Rains. The Heat of the Summer is equally moderate; and there is not much Thunder, or tempestuous Weather of any sort. He saw no venomous or savage Creature on the Island, nor any other sort of Beasts, but Goats, the first of which had been put ashore here, on purpose for a Breed, by *Juan Fernandez Spaniard*, who settled there, with some Families, till the Continent of *Chili* began to submit to the *Spaniards*; which, being more profitable, tempted them to quit this Island, capable, however, of maintaining a good Number of People, and being made so strong, that they could not be easily dislodged from thence. *February 3.* We got our Smith's Forge on shore, set our Coopers to work, and made a little Tent for me to have the Benefit of the Air. The *Dutch* had also a Tent for their sick Men; so that we had a small Town of our own here; and every-body employed, a few Men supplied us all with Fish of several sorts, all very good, in such abundance, that, in a few Hours, we could take as many, as would serve 200. There were Sea-fowls in the Bay, as large as Geese; but eat fishy. The Governor never failed of procuring us two or three Goats a Day for our sick Men; by which, with the Help of the Greens, and the wholesome Air, they recovered very soon of the Scurvy; so that *Captain Dover* and I both thought it a very agreeable Seat, the Weather being neither too hot, nor too cold. We spent our Time, till the 10th, in refitting our Ships, taking Wood on board, and laying in Water, that which we brought from *England* and *St. Vincent*, being spoiled by the Badness of the Casks. We likewise boiled up about eighty Gallons of Sea-lions Oil, as we might have done several Tons, had we been provided with Vessels. We refined it for our Lamps, and to save Candles. The Sailors sometimes use it to fry their Meat, for want of Butter, and find it agreeable enough. The Men, who worked on our Rigging, eat young Seals, which they preferred to our Ship's Victuals, and said, it was as good as *English* Lamb, though I should have been glad of such an Exchange. We made what Haste we could to get all the Necessaries on board, being willing to lose no Time; for we were informed at the *Canaries*, that five stout *French* Ships were coming together to these Seas.

14. The Island of *Juan Fernandez* lies in the Latitude of $33^{\circ} 49'$ South, Longitude from *St. Mary's* $5^{\circ} 38'$ meridional Distance from the same $4^{\circ} 43'$ West, the Variation of the Compass here 6° East. This Island is high ragged Land, in Length about six Leagues, and about three in Breadth. I know of nothing about it that may endanger a Ship, but what may be seen. We anchored in the great Bay, our belt

NUMB. II.

Bower in forty Fathom Water, and then carried the Stream-anchor in with the Shore, which we let go in about thirty Fathom Water, mooring on and off about a Mile from the Bottom of the Bay, where we found plenty of Fish of several sorts, as Silver-fish, Snappers, Bonetoes, and a very large Cray-fish. The Wind here commonly blows off the Shore, sometimes very hard Squalls, else generally calm; and the Water we rode in very smooth, by reason of the Winding of the Shore. The Man we found here, mentioned at our coming to this Island, told me, it had never blown in above four Hours all the time he was there. The Situation of the Island is North-west and South-east, and receives its Name from its first Discoverer *John Fernandez a Spaniard*. It is all Hills and Valleys, and, I question not, would produce most Plants, if manured; for the Soil, in most Places, promises well; and there are some Turneps, and other Roots, which, I suppose, were formerly sowed; and there is great plenty of Wool and Water, as also of wild Goats, which we daily took with Dogs, or else shot them. In every Bay, there are such Multitudes of great Sea-lions, and Seals of several sorts, all with excellent Furs, that we could scarcely walk along the Shore for them, as they lay about in Flocks, like Sheep, the Young-ones bleating like Lambs. Some of the Sea-lions are as big as our *English* Oxen, and roar like Lions. They cut near a Foot in Fat, having short Hair, of a light Colour, which is still lighter in the young ones. I suppose they feed on Grass and Fish; for they come ashore by the Help of their two Fore-feet, and draw their Hinder-part after them, and lie in great Numbers in the Sun. These we kill chiefly to make Oil, which is very good; but it is an hard Matter to kill them. Both the Seals and Lions are so thick on the Shore, that we were forced to drive them away, before we could land, being so numerous, that it is scarce credible to those, who have not seen them; and they make a most prodigious Noise. Besides, we met with such plenty of Fish, as Pollock, Cavallos, Hakes, Old-wives, and large Cray-fish, as good as our Lobsters, &c. that, in four Hours, two Men in a Boat near the Shore, in five or six Fathom Water, might take enough to serve 200 Men. There are but few Birds: One sort burrows in the Earth, like Rabbits, which the *Spaniards* call *Pardelas*, and say, they are good to eat. One of them flew into the Fire at our sick Mens Tent. And here are also Humming-birds, about as big as Bees; their Bill about the Bigness of a Pin; their Legs proportionable to the Body; the Feathers mighty small, but of most beautiful Colours. They are seldom taken, or seen, but in the Evening, when they fly about, and sometimes, when dark, into the Fire. I had almost forgot the wild Cats here, which are of several Colours; but, being of the *European* kind, no more need be said of them. I believe there is no venomous Creature on the Island. This Island produces a sort of Cabbage-tree, which is in the nature of a Palm; the Cabbage small, but very sweet. The Tree is slender and strait, with Knots about fourteen Inches above one another, and no Leaves, except at the Top. The Branches are about twelve Feet in Length; and, about a Foot and an half from the Body of the Tree, shoot out Leaves, which are four Feet long, and an Inch broad, growing so regularly, that the whole Branch looks like one intire Leaf. The Cabbage, when cut out from the Bottom of the Branches, is about a Foot long, and very white; and, at the Bottom of it, grow Clusters of Berries, five or six Pounds Weight, like Bunches of Grapes, as red as Cherries, bigger than our black Cherries, with a large Stone in the Middle, and taste almost like our Haws. The Trunk of the Tree is eighty or ninety Feet long, being always cut down to get the Cabbage. We found here some *Guiney* Pepper, and Silk Cotton-trees, with several other sorts of Plants, whose Names I am not acquainted with. Pimento is the best Timber, and most plentiful, on this Side the Island; but very apt to split, till a little dried. We cut the longest and cleancit to split for Fire-wood. The Cabbage-trees abound about three Miles in the Woods, and the Cabbage very good. Most of them are on the Tops of the nearest Mountains. In the first Plain, we found store of Turnep-greens, and Water-crests in the Brooks, which mightily refreshed our Men, and cleaned them from the Scurvy. The Turneps, *Mr. Selkirk* says, are good in our Summer Months, which

is Winter here; but, this being Autumn, they were all run to Seed: So that we could not have the Benefit of any thing, but the Greens. The Soil is a loose black Earth, the Rocks very rotten; so that, without great Care, it is dangerous to climb the Hills for Cabbages. Besides, there are abundance of Holes dug in several Places by a sort of Fowls, like Puffins, which fall in at once, and endanger the wrenching or breaking of a Man's Leg. Mr. *Selkirk* told me, he had seen Snow and Ice here in July; but the Spring, which is in September, October, and November, is very pleasant, when there was abundance of good Herbs, as Parsley, Purslain, Sithes in great plenty, besides an Herb found by the Water-side, which proved very useful to our Surgeons for Fomentations. It is not much unlike Feverfew, of a very grateful Smell, like Balm; but of a stronger and more cordial Scent. It is in great plenty near the Shore. We gathered many large Bundles of it, dried them in the Shade, and sent them on board, besides great Quantities that we carried in every Morning to strew the Tents; which tended much to the speedy Recovery of our sick Men, of whom none died, but two belonging to the *Duchess*; viz. *Edward Wilts*, and *Christopher Williams*.

15. On February 12. we held a Consultation, in which we made several Regulations for preserving Secrecy, Discipline, and strict Honesty, on board both Vessels; and, on the 17th, we settled another Matter of as great Importance, which was, that two Men from on board the *Duke* should be put on board the *Duchess*, and two Men from on board the *Duchess* on board the *Duke*, in order to see, that Justice was reciprocally done by each Ship's Company to the other. On the 28th, we hoisted both Pinnaces into the Water, to try them under Sail, with a Gun fixed in each of them, and whatever else was requisite to render them very serviceable small Privateers. We found the Nights very cold, and the Days not near so warm as might have been expected in that Latitude, where there never falls any Rain, but such Dews in the Night, as are equivalent to it, tho' the Air is, generally speaking, serene. On May 15. in the Evening, we saw a Sail: Our Comfort, being nearest, soon took her. She was a little Vessel, of sixteen Ton, from *Paya*, bound to *Cheripe* for Flour, with a small Sum of Money to purchase it; the Matter's Name *Antonio Heliagos*, a *Mexico*, or one begotten between an *Indian* and a *Spaniard*; his Crew eight Men, one of them a *Spaniard*, one a Negro, and the rest *Indians*. We asked them for News; and they assured us, that all the *French* Ships, being seven in Number, sailed out of these Seas six Months ago; and that no more were to return: Adding, that the *Spaniards* had such an Aversion to them, that, at *Callao*, the Seaport for *Lima*, they killed so many of the *French*, and quarrelled so frequently with them, that none were suffered to come ashore there for some time before they sailed from thence. After we had put Men aboard the Prize, he hailed off close on a Wind for *Lebos*, having shot within it; and, had we not been better informed by the Crew of the Prize, might have endangered our Ships, by running in farther, because there are Shoals between the Island and the Main. There is a Passage for Boats to Windward to come into the Road, which is to the Leeward of these Islands, in a Sound between them. It is not half a Mile broad; but above a Mile deep; has from ten to twelve Fathom Water, and good Anchor-ground. There is no coming in for Ships, but to Leeward of the Islands. We went in with a small Weather-tide, though I never perceived it to flow above three Feet whilst we lay here. The Wind commonly blows Southerly, veering a little to the Eastward. On the Eastermost Island, (which was on our Larboard Side as we lay at Anchor in the Sound) there is a round Hummock, and behind it a small Cove, very smooth, deep, and convenient enough for a Ship to careen in. There we haled up, and fitted our little Frigate. The highest Part of the Island appears, in the Road, not much higher than a large Ship's Top-mast-head. The Soil is an hungry, white, clayish Earth, mixed with Sand and Rocks. There is no fresh Water, or green Thing, on the Islands. Here is abundance of Vulturs *alias* Carrion-crows, which looked like Turkeys, that one of our Officers, at landing, blessed himself at the Sight, and hoped to fare deliciously here. He was so eager, that he would not stay till the Boat could put him

ashore; but leaped into the Water with his Gun, and, getting near enough to a Parcel, let fly at them: But, when he came to take up his Game, it stunk insufferably, and made us merry at his Mistake. The other Birds here are, Penguins, Pelicans, Boobies, Gulls, and a sort of Fowls like a Teal, that nestle in Holes on the Land. Our Men got Loads of them, which they skinned, and praised them for very good Meat. We found abundance of Balustruses, and empty Jars, that the *Spanish* Fishermen had left ashore. All over this Coast they use Jars instead of Casks for Oil, Wine, and all other sorts of Liquids. Here is abundance of Seals, and some Sea-lions. The Seals are much larger than at *Juan Fernandez*; but the Fur not so fine. Our People killed several, with a Design to eat their Livers; but one of our Crew, a *Spaniard*, dying suddenly after eating them, I forbade the Use of them. Our Prisoners told us, they accounted these old Seals very unwholesome. The Wind, always blowing fresh over the Land, brought an ugly noisome Smell aboard from the Seals ashore; which gave me a violent Head-ach; and every body else complained of this nauseous Smell. We found nothing so offensive at *Juan Fernandez*. Our Prisoners told us, they expected the Widow of the late Viceroy of *Peru* would shortly embark for *Acapulco*, with her Family and Riches, and stop at *Paya* to refresh, or sail near in Sight, as customary, in one of the King's Ships of thirty-six Guns; and that, about eight Months ago, there was a Ship, with 200,000 Pieces of Eight aboard, the rest of her Cargo Liquors and Flour, which had passed *Paya* for *Acapulco*. Our Prisoners added, that they left *Seignor Morel* in a stout Ship, with dry Goods, for *Lima*, recruiting at *Paya*, where he expected in a few Days a *French* built Ship belonging to the *Spaniards* to come from *Panama* richly laden, with a Bishop aboard. *Paya* is a common recruiting Place to those, who go to or from *Lima*, or most Parts to Windward, in their Trade to *Panama*, or any Part of the Coast of *Mexico*. Upon this Advice, we agreed to spend as much Time as possible cruising off of *Paya*, without discovering ourselves, for fear of hindering our other Designs.

16. On April 1. we took a Gallion, by which I mean no more than a Ship built in that manner, commanded by two Brothers, whose Names were *Joseph* and *John Morel*. She was of the Burden of 500 Ton, laden with dry Goods and Negroes. The next Day we took another Prize; and, on the 7th, Mr. *Vanbrugh* was removed from the Council. But here our Authors differ: Captain *Rogers* says, that Captain *Dover* accused him of great Insolence to him; but Captain *Cooke* says, that it was Captain *Rogers* himself that accused him, for offering to vote with him, right or wrong, upon all Occasions. It was a great Pity these Disputes happened at that time, when all things were preparing for Action, and a Resolution taken to attack the Town of *Guiaquil*, however provided; in order to which, it was determined to send the *Duke* and the *Beginning* to *Paya*, the latter to go in and take a View of the Harbour, to see if there were any Ships in it, and afterwards to cruise with thirty Men, in hopes of falling in with the aforesaid Bishop. This was a Season of great Consultation, which was soon succeeded by Action. And here I chuse to follow both Authors, in order to avoid that Air of Partiality and Vanity, which appears in one of them, the World desiring to know only Facts, and not being at all edified with the Disputes amongst two or three Captains for Command, tho' it does not appear, that Captain *Courtney* was ever affected with this sort of Folly. On April 11. there was a grand Council held on board the *Duke*, wherein all things were fully considered, the Conquest of *Guiaquil* resolved on, and a Paper, in the Nature of Instructions from the Committee to the Commanders in chief, was prepared; which, however formal it might seem, was undoubtedly a very right Method, and kept, as well as taught, every Man in his Duty.

17. On April 12. it was resolved in a Committee, not to send the *Beginning* Prize into *Paya*, as had been agreed on, for fear of being discovered; but to attempt the Town of *Guiaquil*, the Enterprize to be conducted by the three Captains *Dover*, *Rogers*, and *Courtney*; the first to command a Company of Marines of seventy Men; the second a Company of Officers and Sailors of seventy-one Men; the third such another Company of seventy-three Men; Captain

Dampier,

Dampier, with the cañon, twenty-two *Cooke* to command Captain *Roberts* 320 Men: The 266 more. On that is, *Wbite Cap* distant ten Leagues, agreed, for the all Bedding and Liquors and Prov with all Sorts of should be allowed every Man above Shares; that all Watches, found of any Kind, sh Womens Ear-ring Stones; and, in plain in this O pedition, meet ag and determine wh without Fraud to and Men: That low-anc, so as to wrought Gold of Precious Stones, wearing Apparel, Misdemeanour, a keep any Plunder and carry it to the case any Town, I Encouragement a mentioned, should the Gratuity prom themselves: But other of the Enc fomers, and the A be divided among Plunder taken al pointed for that the Satisfaction of any Disorder altho discourage the M Action, burn or d launch Prisoners, to be severely punish ing, we saw a Sail the *Duke's* Boat, co by Capt. *Cooke*, r Hulse, that neither in the Boats, nor Muskets, four P nor any Water; Ship for the Space first near her, she them, and hoisted head: The *Duke's* saw the was *French* had given us bef had been so long Bishop. Capta

Dampier, with the Artillery, and, for a Reserve, upon Occasion, twenty-two Men: In all, 238. Captain *Edward Cooke* to command the *Duchess*, with Forty-two Men; Captain *Robert Fry*, the *Duke*, with forty Men; Total, 320 Men: The *Blacks*, *Indians*, and Prisoners, were about 266 more. On the 13th, we haled in for *Cape Blanco*, that is, *White Cape*; and at Noon it bore East South-east, distant ten Leagues: A Committee being held, it was agreed, for the Encouragement of Officers and Men, that all Bedding and Cloaths, Gold Rings, Buttons and Buckles, Liquors and Provisions, for their own Expence and Use, with all Sorts of Arms, except great Guns for Ships, should be allowed as Plunder, to be equally divided to every Man aboard, or a share, according to his whole Shares; that all wrought Gold or Silver, Crucifixes, Watches, found about the Prisoners, or wearing Apparel of any Kind, should also be Plunder, except Money, Womens Ear-rings, loose Diamonds, Pearls, and Precious Stones; and, in case any thing was not sufficiently explained in this Order, a Committee should, after the Expedition, meet again, upon Application made to them; and determine what further ought to be reputed Plunder, without Fraud to the Owners, or Prejudice to the Officers and Men: That no Persons should misinterpret this Allowance, so as to secure or conceal either wrought or unwrought Gold or Silver, Pearls, Jewels, Diamonds, or Precious Stones, nor found about Prisoners, or their wearing Apparel, which should be looked upon as a high Misdemeanour, and severely punished: That none should keep any Plunder, but deliver it to his Officer publicly, and carry it to the Place appointed to deposit it: That in case any Town, Fort, or Ship, were taken by Storm, the Encouragement agreed on at the Island of *St. Vincent* mentioned, should be allowed to each Man, over-and-above the Gratuity promised by the Owners to those that signalized themselves: But if any Party should be engaged with another of the Enemy, and defeat them, then all the Prisoners, and the Arms and Moveables about them, should be divided among them only who were in Action: All the Plunder taken a shore, to be taken aboard by Persons appointed for that Purpose, and entered in public Books, for the Satisfaction of all concerned. Those who should commit any Disorder a shore, disobey Command, quit their Post, discourage the Men, behave themselves cowardly in any Action, burn or destroy any thing without Orders, or debauch Prisoners, to lose all their Shares of the Plunder, and be severely punished otherwise. On the 15th in the Morning, we saw a Sail near the Shore; and, having little Wind, the *Duke's* Boat, commanded by Capt. *Fry*, and the *Duchess's*, by Capt. *Cooke*, rowed directly for her, going off in such Haste, that neither of us had the Swivel Guns we used to carry in the Boats, nor our full Complement of Men, only ten Musquets, four Pistols, and not much Powder and Shot, nor any Water; and rowed very hard to come with the Ship for the Space of six Leagues: The *Duke's* Boat coming first near her, she put out *Spanish* Colours, fired a Gun at them, and hoisted a *Spanish* Flag at the Main-top-mast-head: The *Duke's* Boat then lay-by for us to come up; we saw she was *French* built, and, by the Account the Prisoners had given us before, concluded it must be the Ship we had been so long cruising for, which was to carry the Bishop. Our Ships being almost out of Sight, and the *Spaniards* so near the Coast, and making the best of her Way to run a shore in a sandy Bay, we resolved to lay her aboard in each Bow, and accordingly made the best of our Way, I being then on her Weather Quarter, and Captain *Fry* on her Lee: We designed to have told them we were Friends, till got out of the Way of their Stern-chace; but the *Duke's* Men, thinking the *Spaniards* had been going to give us a Volley, poured in their Shot among them, then laid in our Oars, and fell to it: The Dispute was hot for a long time, we keeping a constant Fire, and the Enemy answering; who killed two of Captain *Fry's* Men, and wounded one of his, and two of mine. One of the dead Men was Captain *John Rogers*, our second Lieutenant, and Brother to Captain *Rogers*, who behaved himself very well during the Action. The *Duke's* Boat, finding the Enterprise too difficult, bore away; and some time after we did the like. Captain *Fry*, having put some of his Men

aboard us, given us some Powder and Shot, and taken in our wounded Men, stood away for the Ships, whilst I made again to the Ship, resolving to keep her from the Shore, and, rather than fail, to clap her aboard; the *Spaniards*, perceiving what we designed, edged off to Sea, and we after them. Our Ships came up apace, and we kept close to the *Spaniard*, sometimes firing at him. The *Duchess*, being come up, fired a Shot or two at him; and then he struck, and we clapt him aboard. The Men begged for good Quarter, and we promised them all Civility imaginable. This Ship came from *Panama*, and was bound for *Lima*, to be fitted out for a Man of War, the Captain having his Commission accordingly. There were seventy Blacks, and many Passengers, with a considerable Quantity of Pearls aboard; the Lading, Ballegoods, and something belonging to the Bishop; but they had set him on Shore, with several Passengers, where they touched last. The Vessel was about 270 Ton Burden, commanded by *Don Joseph Arizabala*, who told us, the Bishop had been landed at Point *St. Helena*, and gone by Land to *Guiaquil*. We found several Guns in the Hold, for the Ship would carry twenty-four, but had only six mounted. Many of the Passengers were considerable Merchants at *Lima*, and the briskest *Spaniards* I ever saw. When the *French* had this Vessel, she was called *la Lune d'Or*, the Golden Moon. Captain *Cooke* (whose Account we follow) remained aboard her, sending the Captain and Prisoners to our Ships.

18. On the 21st in the Morning, the *Beginning* was sent a-head towards Point *Arena*, on the Island of *Puna*, for fear of any Danger; but she found there only an empty Vessel riding close under the Point: She proved to be a new *Spanish* Bark, that had been sent to load Salt; but the Men, having Sight of us, thought proper to abandon her: All Apprehensions were now totally removed, and, at five in the Afternoon, the Transports rowed for the Town of *Guiaquil*, and at eleven saw a Light in the Town; whereupon we rowed as easy as could be, for fear of Discovery, till within a Mile of it; then heard a Centinel call to another, talk some time, and bid him bring Fire. Perceiving we were discovered, we rowed over to the other Side, against the Town, saw a Fire made where the Centinels talked, and, soon after, many Lights all over the Town; and, at the Water-side, heard them ring the Alarm-bell, fire several Volleys, and light a Fire on the Hill where the Beacon was kept, to give the Town Notice, that we were come up the River. Hereupon the Boats came to a Grappling, and such an hot Dispute arose among some of our chief Officers, that they were heard a shore; but the *Spaniards*, not understanding what they said, fetched an *Englishman*, and conducted him along the Shore, to interpret what they heard. However, before he came, the Dispute was over. This Account we had from that very *Englishman*, who afterwards came over to us, and proceeded in the Voyage. A Council was held in the Stern of one of the Boats, to resolve, whether we should land immediately, or stay till Day-break; and the Officers differing in their Opinions, it was agreed, since we did not know the Ground, and the Barks were not come up, which had near half the Men and the Artillery, to stay till Day-light, when it was hoped the Barks would join; and fell a little Way down the River to meet them, hearing several Musquet-shots in our Way, which, at first, we thought might be from the *Spaniards* along the Shore. On the 22d, at Break of Day, we saw one of our Barks at Anchor close under the Shore, within a Mile of the Town, and at Flood, the other coming up the River; then rowed back to the Bark which had fired those Musquets at some Fishermen passing by, whom we took. When all our Forces were joined, we held a Council in the Pinnace, proceeded up the River, and sent a Flag of Truce with the Captain of the *French* built Ship, the Governor of *Puna*, and another Prisoner; then towed up the Barks a-breast against the Town, and came to an Anchor. When the Captain of the *French* built Ship came to the Corregidor, or Mayor of the Town, he asked our Number, which the Captain magnified. The Corregidor answered, They were Boys, and not Men: And the Captain replied, He would find they were Men; for they had fought him bravely in their

open Boats, though he had killed one of the Commanders Brothers, and wounded and killed others; and, therefore, advised him to agree for the Ransom of the Town, for, though he had 3000 Men, he would not be able to withstand them: To which the Corregidor replied, My Horse is ready. On the 23d. having towed the Barks close up before the Town, and brought them to the Pinnacle, went up the River after some Vessels, and brought six of them to an Anchor by our Barks; we also took Possession of two new, of about 400 Ton each; then went ashore with a Flag of Truce, and the Governor came on board one of the Prizes, to agree about the Ransom of the Town and Ships; but could not be then concluded, but promised to meet the Captains again at seven in the Evening; yet he was not so good as his Word. The Boats went up the River again to see for more Ships, and returned without finding any: However, we took several Canoes, with some Plate on board. On the 24th in the Morning, the Governor came off again to treat: Our Captains thought to have seized him, because he had forfeited his Word in not returning over Night, and sending Word that Morning, that he had more People come into the Town; but he, alleging that it was contrary to a Flag of Truce, was set on Shore again, and an Hour's Time given him to get his Men ready. However, the Boat went and came two or three times with the Flag of Truce; but the Governor and Captains not agreeing, all Things were made ready, and towed nearer the Shore, wearing our Union Jack at our Main-top-mast-heads. At four in the Afternoon the Men landed, with so much Bravery, that the Spaniards fired only their first Volley, and fled, our People pressing them, and pursuing them to their Cannon, which they soon gained, only the Gunner, who was an *Irishman*, standing by them till he was wounded in four Places, whereof he died soon after, as we were informed by some Prisoners we took. Our Men marched in a Body through both Towns, driving out the Enemy, placed three Guards in the three Churches, and set Fire to five or six Houses in the old Town, that stood adjoining to the Wood, left the Spaniards should have any Cover from them to annoy our Guard, which was within Pistol-shot. All this Night they kept firing out of the Woods at our Centinels, or any other, that stirred out of the Guard, yet did no Harm; several Parties of Horse and Foot came down, without making any Attempt: In the mean while the *Duke's* Pinnacle, which was commanded by Lieutenant *Connely*, with twenty-two Men, went up the River, landed at every House, took their Plate, and what else of Value they found, and had some Skirmishes with the Enemy, in which one of our Men was wounded. On the 25th, the Enemy appeared thick in the Woods, sometimes coming out; and our Guards had some Skirmishes with them, in which one Man was wounded, to that they expected to be attacked. In the Night, one of our Centinels shot another of ours, who was going a little Way from his Post, and did not answer when challenged three times. Our first Lieutenant's Pistol went off by his Side, and wounded him in the Leg; and another of our Men was shot through the Foot by one of our People. Our Surgeon cut off a Man's Arm, who had been hurt with one of our Grenade-shells, which broke in the Bark when fired out of a Cohorn. The Afternoon was spent in shipping off Provisions from the Town, and disposing all Things, in case we should be attacked in the Night, the Enemy appearing about the Outhouses; for which Reason, the Captains thought fit to join all the Forces at the main Guard, where they had their Cannon mounted. On the 26th in the Morning, Captain *Courtney* marched to his Guard again, to cover the Men who were getting down Provisions, &c. Several Prisoners were taken, and brought to the main Guard. Messengers, with a Flag of Truce, came about ransoming the Town, but could not agree: In the Afternoon brought one Boat of Provisions aboard the Barks; and at three returned, to ransom the Town, which was at last agreed on for 30,000 Dollars; we to have three Hostages, and to stay at *Puna* till they could raise the said Sum, the People having carried their Money out of Town, and being dispersed, that there was no raising it whilst we were there, the Inhabitants of the adjacent Country having withdrawn all their Effects. On

the 27th in the Morning, the Hostages for Ransom were put on board, as was a Boat's Lading of Brandy: We took down our Union Flag, and hoisted a Flag of Truce, firing a Gun for a Signal, that the Spaniards might come into the Town, and that no Hostilities should be committed on either Side during the Time we had agreed to stay for the Money, having before concerted with the Spaniards to make the said Signal for them to come in to secure what we had left, that the *Indians* and *Blacks* might not rob: And, I am apt to believe, they had plundered as much as we had taken; for we took several, as we went the Rounds, laden with Goods, which they owned they had stolen; and were afterwards informed, that, in the Hurry, the Inhabitants had given Plate and Money to *Blacks* to carry out of the Town, and could never hear of it after. In the Evening, Mr. *Halsey*, and Mr. *Duck*, were sent from the Ships in the last Prize, and the *Beginning* Galley, to the Island *Puna*, for Water, of which there began to be Want on board; and with Instructions to go up the River, to get Intelligence of the Forces on Shore, we at Sea having heard nothing from them since their Departure, and the Prisoners saying, they were certainly all cut off; which was but little regarded, any farther than to keep a strict Watch over them. In the Afternoon, the Men ashore went aboard the Barks, which carried them, and some others we had taken, up the River: At six weighed, and rowed off the Shore. On the 28th in the Morning, our Barks weighed with the first of the Ebb, the *Duke's* Pinnacle making the best of her Way down to the Ships, and the Float going ashore to fetch off the great Guns, then weighed, and fell down the River. Two of the Barks ran a-ground on the middle Shoal, that lies right against the Island. In the Evening they were afloat again; then we towed them over on the Starboard Side, where the Chanel was, firing a Gun for the rest to weigh; and, at the last of the Ebb, came to an Anchor about a Mile from the Island, and saw the *Beginning*, and another Vessel, under the Shore, whether they were come for Water, took Water out of the Barks, and put into the *Beginning*, and dispatched her to the Ships. On the 29th in the Morning, the Barks weighed, and got down to *Puna*, where they anchored off the Town. Captain *Rogers*, in the *Duke's* Pinnacle, came on board, and gave an Account, that they had taken, plundered, and ransomed the Town of *Guaquil*; that three of our Men had been killed; two by our own People, and one by the Spaniards; and four wounded: That the Inhabitants, whilst treating, had carried off their Money and Plate, retiring to the Woods, and leaving their Guns; four whereof were taken, with a considerable Quantity of Meal, Pease, Sugar, Brandy, and Wine, which was coming down in the Barks. What we killed and wounded of the Enemy could not be known, because they carried them off. The same Day *Hugh Tidcomb*, who was shot by his fellow Centinel, died. Having from the Ship-side discovered a Sail standing up the River, with the Tide of Flood; we sent both Ships Boats after her, and, at four in the Afternoon, she struck to the Boats. They brought her in at Night. She was a small Spanish Bark from *Cberipe*, and bound up to *Guaquil*, having on board 330 Bags of Meal, and 140 Arrobas, that is, 35 hundred Weight of Sugar, some Onions, Quince, and Pomegranates: This, with the six Barks, and two great Ships ransomed with the Town of *Guaquil*, makes fourteen Prizes taken in those Seas. Captain *Woodes Rogers*, in his Relation, blames Captain *Courtney* for being in a Hurry to quit the Place, though he acknowledges, that his Lieutenant Mr. *Stretton*, was shot by Accident in his Leg, his own Pistol going off unluckily, which rendered it necessary to send him instantly on board the Small-craft; and that most of their Men were grown careless, weak, and heartily weary of their new Trade of being Soldiers. One Circumstance he mentioned, which deserves Notice for its Singularity. As he was marching out of the Town, he happened to miss one *John Gabriel*, a *Dutchman*, who served in his own Company; and took it for granted, that he was either taken or killed. But the poor Fellow had a better Time of it: He happened to take up his Quarters in a certain House, where there was some excellent Brandy; which the *Dutchman* attacked so often,

that, at last, it laid him on the Floor; and in this Condition he was, when Captain Rogers and his Men quitted the Place. A little after, the Master of the House awaked, and found the Dutchman stretched at his full Length, and so fast, that it was a difficult Matter to distinguish, whether he was dead or asleep. The Spaniard resolv'd to make the Experiment; but, first of all, called in his Neighbours, who advis'd him to secure the Dutchman's Arms; which being done without any Difficulty, they next raised him up, and let him on his Feet, when, after a little Tottering, he opened his Eyes, and began to stare about him, being sensible that he was not asleep, and not very well satisfied to find himself awake, and in such Company. His Landlord, however, soon set his Heart at Rest, by restoring him his Arms, and advis'd him to make all the Hastè he could to join his Companions, who were not yet embark'd. There did not need many Intreaties to set the Dutchman forward; he mov'd with all the Alacrity imaginable, and got safely aboard. If this Story be a little strange, Captain Rogers adds an Observation, that is still stranger, which is, that, of all the Men who landed on this Occasion, there was not a Soul, that drank a Cup too much, but this poor Dutchman; which if true, the Town of Guaiquil had the Honour to be plunder'd by the soberest Set of People, that ever were of their Profession. But it is now time to come to the Forms of Capitulation, which the Spaniards, as Persons most deeply interested in it, desired might be drawn up in proper Form; and so they were, with the Omission only of a single Circumstance; viz. that the Place was taken by Force of Arms, which, the Spaniards insisted, should be particularly specified, to demonstrate, that they had been beaten, before they consented to treat; and to this the English very willingly yielded, which produced the following Scheme of Articles, which satisfied both Parties, procuring one the Money they wanted, and satisfying the other as to the Point of Honour; a thing no Spaniard ever willingly gave up.

Contract for the Ransom of the Town of Guaiquil.

WHEREAS the City of Guaiquil, lately in Subjection to Philip V. King of Spain, is now taken by Storm, and in the Possession of the Captains Thomas Dover, Woods Rogers, and Stephen Courtney, commanding a Body of her Majesty of Great Britain's Subjects; we the Underwritten are content to become Hostages for the said City, and to continue in the Custody of the said Captains Thomas Dover, Woods Rogers, and Stephen Courtney, till 30,000 Pieces of Eight shall be paid to them for the Ransom of the said City, two new Ships, and six Barks; during which time no Hostility is to be committed on either Side between this and Puna; the said Sum to be paid at Puna, in six Days from the Date hereof; and then the Hostages to be discharged, and all the Prisoners to be delivered immediately: Otherwise the said Hostages do agree to remain Prisoners, till the said Sum is discharged in any other Part of the World. In Witness whereof, we have voluntarily set our Hands this 27th Day of April, O. S. and the 7th of May, N. S. in the Year of our Lord 1709.

19. The Plunder we took here, exclusive of the Ransom we received for the Town, was very considerable; for we found there 230 Bags of Flour, Beans, Peas, and Rice; fifteen Jars of Oil; 160 Jars of other Liquor; some Cordage, Iron-ware, and small Nails; with about four half Jars of Powder; about a Ton of Pitch and Tar; a Parcel of Clothing and Necessaries; and, as I guess, about 1200 *l.* in Plate, Ear-rings, &c. and 150 Bales of dry Goods; four Guns; and about 200 Spanish ordinary useless Arms and Musquet-barrels; a few Packs of Indico, Cocoa, and Anorin; with about a Ton of Loaf-sugar. We left abundance of Goods in the Town, besides Liquors of most sorts, and Sea-stores, with several Warehouses full of Cocoa, divers Ships on the Stocks, and two new Ships unrigg'd, upwards of 500 Ton, which cost above 80,000 Crowns; and then lay our Anchor before the Town. We were also to deliver four Barks ashore, and leave two here, to bring down the Ransom. By this it appears, the Spaniards had a good Bargain; but this Ransom was far better for us, than to burn that we could not carry off. The Hostages informed us,

NUMB. II.

that, during the Treaty, 80,000 Pieces of Eight of the King's Money were sent out of the Town, besides their Plate, Jewels, and other Things of the greatest Value; so that it is certain, that, if we had landed at first, and given them no Time at all, we had been much greater Gainers than we were; and I have great Reason to believe, that we might, in that Case, have made 300,000 Pieces of Eight, in ready Money, Plate, and Jewels; and yet the Place had never been so poor for forty Years past, as at the Time we took it, there having been a Fire about a Year and an half before, which had burn'd down best Part of the Town, and occasion'd a very great Expence in rebuilding it. As it was, we thought ourselves very happy; and all imaginable Care was taken, that every Man concern'd in the Expedition found his Account in it; by which the Expediency of the Articles before-mentioned fully appear'd; and our People were so perfectly satisfied with the Usage they received on this Occasion, that they express'd the greatest Alacrity in the Execution of every Enterprize, that was afterwards undertaken. To say the Truth, this is a Matter of the utmost Importance with Privateers; for, if the Men have the least Jealousy of their being ill-treated, such Disputes arise, as do infinitely more Mischief, than the Value of what can be gotten by such Practices. But to proceed with our Affairs: When May 2. came, which was the last Day appointed to wait for the Money, and no Boat arriving, we began to be very uneasy. At length, however, a Boat arriv'd, and brought us 22,000 Pieces of Eight; which we received, and dispatched the Boat back again, telling them we design'd to leave the Place the next Morning, and would carry away the Hostages, if they did not come time enough to prevent it. We staid, however, till the 6th; and then Captain Courtney was resolv'd to depart, being apprehensive, that we should be attacked by the French and Spanish Squadron. I endeavour'd, but in vain, to convince him, that, as yet, we were not in any Danger of being attacked; because it was not possible, that the French and Spaniards could have received notice by this time at Lima, and have fitted out a Force sufficient to engage us. We sail'd however, and came to an Anchor, about four in the Afternoon, a few Leagues before Point Arena. The next Morning about two o'Clock, we were preparing to sail, when Mr. Morel, and a Gentleman from Puna, related to our Prisoners, brought us 3500 Pieces of Eight more towards the Ransom. This put us in so good an Humour, that, in the Afternoon, we discharged all our Prisoners, except the Morels, the three Hostages, and three or four more. The Gentleman, that came from Guaiquil, had a Gold Chain, and some other things of Value, with which he bought our Bark the *Beginning*, which was now of no further Use. We gave the Captain of the French Ship, three Negro Women, Mr. Morel, another; and to most of the Prisoners, their Wearing-apparel; so that we parted very good Friends. They told us, that one Don Pedro Cienfuegos, whom we put ashore at Puna, and who was a Man of great Credit, had got together a considerable Sum of Money, and design'd to buy Goods of us; for which Purpose he would be down in twelve Hours time: But the Majority of our Officers would not believe them; but, conceiving this to be a Scheme for detaining us till the French and Spanish Fleet came, were in so much the greater Hurry to get away. But, before we proceed, let me give you a short Description of the Town of Guaiquil, as we found it.

20. Guaiquil is divided into two Parts, called the *Old* and the *New Towns*; both of them together consisting of about 500 Houses, joined by a long wooden Bridge, for People to pass over on Foot, above half a Mile in Length, with some Houses on each Side at a Distance. It is situated in a low boggy Ground, so dirty in Winter, that, without this Bridge, there would be scarce any going from one House to another: There is but one regular Street along the River-side to the Bridge, and from it along the *Old Town*. Before the Church of *Sant Iago* is a very handsome Parade; but the Church itself lies in Ruins. There are, in all, four Churches, viz. *Sant Iago*, or *St. James* the Apostle, which, as I said, is destroyed; *St. Augustin*, *St. Francis*, and *St. Dominic*; and before this last another Parade, with an Half-moon, on which six Guns may be planted; but there were none when we came. Besides these,

2 T

there

there is a Chapel, and there had been a Church of *St. Ignatius*, belonging to the Jesuits, but burnt down. They were all decently adorned with Altars, carved Work, Pictures, an Organ in that of *St. Augustin*; but the Plate belonging to them was carried away, the Priests and Students being all gone into the Woods: Some of the Houses were of Brick, particularly about the Parade, before the Fire; the rest of Timber, or Bamboes split, and some of them decently furnished. In the Merchants Storehouses, there were great Quantities of Meal, Brandy, Sugar, Cloathing, Cordage, and Iron. The Inhabitants had some Calashes; but I know not of what Use they could be, unless to carry them a Stone's-throw to Church; especially in Winter, all about being so foul and boggy, that there could be no Road made for them. This morass Ground was full of the largest Toads I ever saw, some of them as big as an *English Two-peny Loaf*. There were 2000 Inhabitants of all sorts, including *Indians*, Mulattoes, and Blacks. The *Englishmen*, who had lived in the Town, told us, that the *December* before, when they had made public Rejoicings for the Birth of the Prince of *Asturias*, which lasted three Weeks, they had mustered 1100 Foot, and 500 Horse, all in Arms, which came from the Country round about; besides a much greater Number unarmed, the greatest Part whereof must have been *Indians*. They baited 200 Bulls to Death after the *Spanish* Fashion, and ran at the Ring with their Spears; both which Exercises they are very expert in, and much addicted to. The *Sunday* before we landed, they had launched one of the new Ships in Presence of the Bishop; who asked what they might cost building; and was told, the one 40,000 Dollars, the other more, both of which designed to trade to *Chili*; and Orders were given not to employ the Carpenters about any other Work, till the King's two Ships, then expected from *Lima*, were rebuilt. This Town is well seated for Trade, and for building of Ships, as lying fourteen Leagues from Point *Arena*, and seven from *Puna*, up a large River, which receives several small ones that fall into it, with many Villages and Farm-houses round about. The Water is fresh for four Leagues below it; and all along the Banks grow abundance of Mangroves and *Sarsaparilla*; and, on account of this latter, the Water is accounted good for the *French* Disease: However, when the Floods come down from the Mountains, the Water is not reckoned so wholesome, by reason it brings along several poisonous Plants and Fruits, among which is the *Mancanilla* venomous Apple, whereof all Birds that taste die; and we saw Hundreds of them dead on the Water whilst we were there. They have great Plenty of Bees, Goats, Sheep, Hens, Ducks, *Miscory* Ducks, and some Sorts unknown to us in *England*; as also Horses, and great Numbers of Carrion-crows, which the *Spaniards* will not suffer to be killed, preserving them to devour all Carrion. The Ships here are built under Sheds, to shelter the Men from the Sun. The Town is governed by a Corregidor, being the supreme Magistrate appointed by the King. At our coming, the Officer was one Don *Jeronimo Bas*, a young Man about twenty-four Years of Age, born in the *Canaries*. It may seem a little extraordinary, that so young a Man should be intrusted with such a Command; but it is to be considered, that native *Spaniards*, for so such are accounted that are born in the *Canaries*, have much earlier Titles to Honour, than Persons born in this Country; and, indeed, by the Regularity of the *Spanish* Government, it is no hard Matter for a young Man, of a reasonable Capacity, to perform the Functions of it with Credit to himself, and so as to give Satisfaction to the People. The Accounts which have been given of this Place by the *French* Buccaneers are so false, that there is not the least Degree of Truth in them; inso-much that, from their Descriptions, it scarce appears to be the same Place, had they not left infamous Marks of their being here: For when they took the Town of *Guiaquil*, about twenty-two Years ago, they discovered little or no Bravery in the Attack, (tho' they lost a great many Men) and committed a deal of Barbarity and Murder after they had the Place in their Power, which was above a Month, here and at *Puna*. The Seasons here are improperly called Winter and Summer: The Winter is reckoned from the Beginning of *December* to the last of *May*; and all that

Season is sultry hot, wet, and unhealthy: From the latter End of *May* to *December* is serene, dry, and healthy, but not so violently hot as what they call Winter. Their *Cocoa* is ripe, and mostly gathered between *June* and *August*; and of the other Fruits, natural to those Climates, some are ripe, and others green, all the Year. But, as our Prisoners furnished us with a very full and exact Account of all the adjacent Country dependent on the Government of *Guiaquil*, I have judged it requisite to add to this Account of the Town, a View likewise of the Province, that the Reader may perfectly apprehend the Condition of the *Spanish* Inhabitants therein; and judge from thence, as from a Sample, of the State of this great Empire of *Peru* at the Time that we were thus engaged in attacking its Ports and Coast; where we acted as became Men who had legal Commissions, and did nothing that was not justified by the Law of Arms, which, in time of War, is the Law of Nations. Having done this, I shall return to our Expedition, and not trouble the Reader with any Digressions for the future.

21. The City or Town of *Guiaquil* is the Metropolis of a Province of that Name in *Peru*, governed by a President, with five or six *Odors*, which make a Royal *Audiencia*, or chief Court of Judicature, accountable only to the Viceroy in military Affairs; every Province has a Government of the same Nature. The Governors are commonly appointed, or, to speak more properly, purchase their Offices, in *Old Spain* for Life, or good Behaviour; and in case any die, or misbehave themselves, the Viceroy may name another during his Time, which ought to be but five Years; but sometimes he gets these Officers of his own placing confirmed by an Order from *Spain*, which is a considerable Part of the Viceroy's unknown Profits. The late Viceroy continued fourteen Years, several new ones having died by the Way. The King of *Spain* himself scarce lives in more Splendor, than his Viceroy in the City of *Lima*, where the chief Courts of Judicature are kept, and Appeals are brought thither from all Courts and Provinces of this extensive Kingdom. I should not here mention the vast Wealth the late Viceroy obtained during his Government, the Sum being so large, that I thought it fabulous; but that I was informed of it by so many Hands, who told me, that about four Years ago he died, worth, at least, 8,000,000 Pieces of Eight; and left it to his Widow and Children, but the greatest Part to his eldest Son, the *Comde de la Moncloa*, besides vast Sums he gave away in Charity during his Life-time, and the Churches, Frieries, and Nunneries that he built. He left a better Character behind him, than any Viceroy had done for an Age past. The *Comde*, his eldest Son, waits here, expecting to succeed the present Viceroy of *Peru* or *Mexico*, if the Government holds in *Old Spain*; but the People hope he will follow his Father's Example, rather than that of the present Viceroy: For whereas all former Governors discouraged Foreigners as much as possible, to secure the Trade to the *Spaniards*, the present Viceroy does all for the *French*; for he openly espouses their Interest, and encourages them; whereas the *Spaniards* say, that he racks, and heavily oppresses, their own Countrymen. The Corregidor that last died at *Guiaquil*, tho' he had possessed the Office but four Years, had amassed 300,000 Pieces of Eight, tho' his Post was not allowed to exceed above 2000 Pieces of Eight per Annum; but all the Corregidores make vast Advantages by Seizures, and trading privately by themselves. The Trade to and from *Mexico* is forbidden here, under the severest Penalty; especially transporting Quicksilver from *Peru* thither, because Quantities are brought from *Old Spain*, which is imposed on the Refiners at great Rates. Here are many Ships employed coasting in this Kingdom; but a Trade is so severely prohibited between them and *Mexico*, that all the Commodities, with Silver and Gold in Returns, may have little other Circulation in these vast Countries, but by the Flota and Galleons to and from *Old Spain*. Yet, notwithstanding the Severity used against private Traders by the Viceroy and Corregidores, there are some that use it, who have no Mercy shewed them, if caught, all being shewed in the King's Name; tho' his Majesty has little or no Share of it, all such Seizures (as I am told) being divided amongst those Officers, and the poor Sufferer banished, or confined

to a Gaol. All comes by the private Traders, then in the North all over *Peru*. a good Certificate their Commodities ever the Goods for fear of worse trest in the Vice-serve; so that the chief Officers Viceroy are so for the Corregidores to Hand, which can publicly known; on their Accounts, of prohibited Goods. Thus, being they stop all Complaints they trade for have tinent; whilst other nished as above. unjustly are too me is no Country natu-terribly oppressed, without Reason, th with all that he has comes hither like as and that every Offi-ten times more th-Prey for him, that The Province about which makes it the repairing of Ships at a time on the St- chief Commodity t- is *Cocoa*, which is the South Sea; is Year than 30,000 C and sometimes dou-nerally at half an R- so that the Cargau- Eight and a half. In the Town- *iards* compute at- lieve, there are ma- between the *Spani-*

to a Gaol. All *English* and *Dutch* Goods, except what comes by the Gallions, are prohibited here; so that the private Traders, after they have, by Stealth, purchased them in the North Seas, must vend them in like manner all over *Peru*. And if the wholesale Merchants have not a good Certificate from the Commerce of *Sevill*, that their Commodities come by the Flota or Gallions, whenever the Goods are questioned, they must discover them, for fear of worse Punishments, unless they have a good Interest in the Viceroy, which costs dear to purchase and preserve; so that the Trader makes little Profit, but where the chief Officers have a Feeling; Yet tho' those mercenary Viceroy's are so severe on others, they themselves employ the Corregidors to negotiate a Trade for them by a third Hand, which cannot be done to the Purpose without being publicly known; so that Ships are constantly employed on their Account, and carry Quicksilver, and all manner of prohibited Goods, to and from *Mexico*, out of bye Ports. Thus, being their own Judges, they get vast Estates, and stop all Complaints in *Old Spain* by Bribes. The Goods they trade for have a free Passage, and sail through the Continent; whilst others, if they do but offer at it, are punished as above. Their other Ways of getting Money unjustly are too many; but, in short, in my Opinion, there is no Country naturally more rich, nor any People more terribly oppressed. The *Spaniards* say, and I believe not without Reason, that a Viceroy, after purchasing his Place with all that he has, and quitting *Old Spain* as poor as *Job*, comes hither like an hungry Lion, to devour all that he can; and that every Officer under him in the Provinces (who are ten times more than necessary) are his Jackals to procure Prey for him, that they may have a Share of it themselves. The Province abounds with several sorts of good Timber, which makes it the chief Country of *Peru* for building and repairing of Ships; there is seldom less than six or seven at a time on the Stocks before the City of *Guiaquil*. The chief Commodity this City, and its chief Province, afford, is *Cocoa*, which is so plentiful, as to supply most Places of the South Sea; they say, there is never less exported in a Year than 30,000 Cargaus, each Cargau 81 lb. Weight, and sometimes double the Quantity: It was purchased generally at half an Rial per Pound, but now much cheaper, so that the Cargau may be bought for two Pieces of Eight and a half. Their Coasting Trade is for Salt and Salt-fish from Point *Santa Helena*, and most vend at *Quito*, and other distant Places within Land: A vast Quantity of Timber is laden here for *Truxillo*, *Cbana*, *Lima*, and other Sea-ports, where it is scarce. It pays a great Freight, and is a profitable Trade. They export also from hence Rice, Cotton, and some dried jerked Beef. There are no Mines of Silver or Gold in this Province, but Plenty of all sorts of Cattle, and very cheap, especially on the Island *Puna*, where we supplied ourselves with what we could conveniently. Here is no other Corn but *Indian*; so that all their Flour is brought from *Truxillo*, *Cberipe*, and other Places in the windward Parts: It blows here always Southerly. They are also supplied with several sorts of Woollen Cloth, and very strong good Bays made at *Quito*. Their Wines, Brandy, Oil, Olives, and Sugar, &c. come from *Piscola*, *Nasea*, and other Places to Windward: All sorts of *European* Goods come hither from *Panama*, whither they are brought over Land from *Porto-Bello* out of the North Seas; so that the Number of Ships that come and go from hence, without including Coasters, are no less than forty Sail every Year; which shews, that the Port of *Guiaquil* is no mean Place of Trade in this Part of the World. A Market is also kept on Bark Logs and Boats in the River, every Day, before the Town, with all that the Country affords, in great Plenty. The other Towns of the Province are governed by Lieutenants, deputed by the Corregidor; above half of them border on the same River, and its Branches; so that they can join these of the Capital in two Tides, tho' at several Leagues Distance. *Porto Vaco* was formerly the Metropolis of the Province, before the Government was removed to *Guiaquil*. In the Towns, and the whole Province, the *Spaniards* compute at least 10,000 Inhabitants; but, I believe, there are many more, taking in all the mixt Races between the *Spaniards*, *Indians*, and Negroes, which they

divide and subdivide into eleven Denominations. The natural *Spaniards* are the fewest by far of all the Inhabitants; and, were it not for these Mixtures, which the Fathers of the Church keep united, the *Indians* might again take Possession of their Country; for the *Spaniards* would be too few to keep it, and much more incapable of peopling it. Few of those Prisoners that fell into our Hands were healthy and sound; near half of the *Spaniards* discovered publicly to our Doctors their Malady, in order to get Physic from them against the *French* Disease, which is so common here, that they reckoned it no Scandal to be deep in the Powdering-tub; and, the Heat of the Country facilitating the Cure, they make very light of it. All the *Spaniards* I discoursed allow, that this rich Country is not a tenth peopled, nor are half the *Indians*, far within Land, civilized; tho' they affirm, their King has, in the *West Indies*, more Subjects of several Colours, than in all *Spain*, or the rest of his Dominions in *Europe*; which may be true.

22. On *May 11*. we had a strong Gale at South South-west. We bore away for the *Gallapagos* Islands; and in a very melancholy Condition we were: For we had upwards of twenty Men taken ill on board the *Duke*, and near fifty on board our Consort seized with a malignant Fever, contracted, as I suppose, at *Guiaquil*, where I was informed, that, about a Month or five Weeks before we took it, a contagious Disease, which reigned there, swept off ten or twelve Persons every Day for a considerable time; so that the Floors of all the Churches (which are their usual Burial-places) were filled so fast, that they were obliged to dig a large and deep Hole, of about a Rood square, close by the great Church, where I kept Guard; and this Hole was almost filled with the Corpses half-putrefied. The Mortality was so very great, that many of the People had left the Town; and our lying so long in the Church, surrounded with such unwholsome Scents, was enough to infect us too. About this time Captain *Courney* was taken ill; and Captain *Dover* went on board to prescribe for him. In twenty-four Hours, we had fifty Men down, and the *Ducbe's* upwards of seventy; and, in the following twenty-four Hours, there were ten more down in each Ship. On the 17th, we discovered Land; and, on the 18th at Day-break, we were within four Leagues of two large Islands, almost joining together, having passed the other that we saw Yesterday. We sent our Boat ashore to look for Water, and agreed with our Consort where to meet, in case of Separation. They turned towards the Windward, and left us to try this Island for Water. All our Prizes were to stay near us under Sail, by a remarkable Rock. But, in the Afternoon, the Boat returned with a melancholy Account, that no Water was to be found, the Prizes we expected lying to Windward for us by the Rock, about two Leagues off Shore; but Mr. *Hatley* in a Bark, and the *Havre de Grace*, turned to Windward, after our Consort the *Ducbe's*; so that only the Galleon, and the Bark that Mr. *Selkirk* was in, staid for us. We kept plying to Windward all Night, with a Light out; which they followed. At five in the Morning, we sent our Boat ashore again, to make a further Search in this Island for Water. In the Evening, the Boat returned, and reported, that there was no Water to be found, though the People went three or four Miles up into the Country. They likewise told me, that the Island is nothing but loose Rocks, like Cinders, very rotten, and heavy; and the Earth so parched, that it will not bear a Man, but breaks into Holes under his Feet; which makes me suppose there has been a Vulcano here, tho' there is much shrubby Wood, and some Greens, on it; yet there is not the least Sign of Water; nor is it possible, that any can be contained on such a Surface. In short, we found these Islands very little answered either our Expectations, or the Descriptions we had of them; and our Loss of Mr. *Hatley*, who, with five of our Men, two *Spanish* Prisoners, and three Negroes, lost us in a Bark, where they were provided only with Water for two Days, and scarce any other Necessaries, together with many unlucky Accidents, made us wish ourselves from amongst these Islands; and therefore, on *May 26*. Captain *Dover* and I went on board the *Ducbe's*, where, after a Consultation, it was resolv'd to run in for the Island *Plata* to water, and so come

come off again, for fear of meeting with two *French* Ships, one of sixty, and the other of forty-six Guns, and the *Spanish* Man of War, who, we were advised, would be suddenly in Search of us; but, if we could find no Water in any of those Islands going in, we designed to fit our Ships there, and not go near the Main, our Ships being out of Order, and our Men sickly and weak, and several also having been buried. We failed on the 27th; and, on the 30th, we held another Council on board the *Duchess*, where it was agreed to go first to *Gorgona*, to see if there were any *English* Ships there, and afterwards to *Mangla*, *Malaga*, or *Madulinar*, where are some *Indians*, Enemies to the *Spaniards*, who, as the Pilots informed us, seldom came thither, nor could thence get Intelligence of us; and, if we could trade with the *Indians*, might have Swine and Fowls, good Bananas, Plantains, and other Refreshments. In this Course, the *Duchess* took a Prize, which proved to be a Vessel of the Burden of ninety Ton, bound from *Panama* to *Guiaquil*, called the *St. Thomas de Villa Nova*, *Juan Navarro Navaret* Commander. There were about forty People aboard, including eleven Negro Slaves; but little of *European* Goods, except some Iron and Cloth. The next we made the Island of *Gorgona*; and, on the 8th, our Boats brought in another Prize, which was a small Bark, of about fifteen Tons, called the *Golden Sun*. She belonged to a Creek on the Main, and was bound for *Guiaquil*, *Andros Enriquez* Master, with ten *Spaniards* and *Indians*, and some Negroes; no Cargo, but a very little Gold-dust, and a large Gold Chain; together about 500 *l.* Value, which were secured aboard the *Duchess*. On *June* 19. in the Evening, there was a Consultation on board the Ship above-mentioned, at which some of my Officers and Captain *Dover* assisted. Being discomposed, I was not with them; but resolved to act in Confortship, according to their Agreement. After they had examined the Prisoners, they resolved to go to *Malaga*, an Island which had a Road, where we designed to leave our Ships, and, with our Boats, row up the River for the rich Gold Mine of *Barbacore*, called also by the *Spaniards* the Mines of *St. Juan*, from a Village about two Tides up the River, of that Name. There we designed to surprize Canoes, as fitter than our Boats to go against the Stream; for this Time of the Year being subject to great Rains, which make a strong Fresh down the River, our Pilot, an old *Spaniard*, did not propose to get up to the Mines in less than twelve Days. I had often before suspected his Knowledge; but, according to their Resolutions on board the *Duchess*, we made Sail about twelve o'Clock that Night, and steered North-east for the Place. In the Morning, I discoursed Captain *Morel*, as I had done several times before, and all the rest of the Prisoners, who agreed, that this Island called *Malaga* was an unfrequented Place, and not fit for Ships, that ever they heard of. I had also two Prisoners on board, that were taken in the last Prize, who had been at the said Island very lately. I examined them separately, and they agreed, that a Ship could not be safe there; and that, the Place being so narrow, it was impossible to get in, but with the Tide, which ran very strong; that the Entrance was full of Shoals, and had not Water enough, but at Spring-tides, for our Ships to get out or in: Besides that, if a Ship gets loose, (as we must moor Head and Stern) she would run all a-drift, and very much endanger the Whole. They added, that the River was so narrow, before we could get to the Mines, that the *Indians* and *Spaniards* might fell Trees across, and cut off our Retreat, there being thick Woods on the Banks of the River, from whence the *Indians* would gall us with their poisoned Arrows; for those about the Mines were at Amity with the *Spaniards*, and a bold and very numerous People. Upon this Information, I was surprized, that the Council had not informed themselves better, before they resolved on going to this Place, and immediately sent Mr. *White* our Linguist, with the two Prisoners, on board the *Linguist*, to undeceive Captain *Courtney*, and his Officers, and to desire his Company, with some of the rest, without Loss of Time, that we might agree how to act for our Safety and Interest, and not to proceed farther on this hazardous Enterprize. On a solemn Consultation, this was accordingly resolved; and, in Compliance of that Resolution, we came back to *Gorgona*, our Condition being so bad at this Jun-

cture, that, if we had been attacked, we should scarce have been in a Condition to have defended ourselves.

23. On the 13th of *June*, about four in the Morning, we anchored in forty Fathom Water, and resolved to careen the *Duchess* first, and then the *Duke*; our Sick we removed aboard the *Galcon*, and the sick Officers on board the *Harve de Grace*, where they had all the Conveniences we could afford them. We likewise set up a Tent ashore for the Use of the Armourer, and Cooper's Crew, and directed a Place to be cleared for our sick Men Tents; all which was performed with such Diligence, that, by the 28th, we got our Provisions on board, mounted all our Guns, having in fourteen Days caulked our Ships all round, careened, rigged, and stowed them again both fit for the Sea; which was great Dispatch, considering what we had to do was in an open Place, with few Carpenter, and void of the usual Conveniences for careening. The *Spaniards*, our Prisoners, being very dillatory Sailors, were amazed at our Expedition; and told us, they usually take six Weeks, or two Months, to careen one of the King's Ships at *Lima*, where they are provided with all Necessaries, and account it good Dispatch. On the 29th, we set up a Tent on shore for the Sick, who were, even by this time, much better than when we came to the Island, notwithstanding the *Spaniards* represented it as extremely sick and unwholome; but the bare lying ashore, having their Doctors with them, and an Opportunity of walking about when they grew a little better, had so good an Effect, that while our found Men were employed in fitting our Ships for Sea, our sick Men gathered Strength enough to return to their Duty. Our *Spanish* Prisoners went into the Woods with us, shewed us Timber that was proper to be cut, and gave us every other kind of Assistance in their Power. We not only set up Coopers and Armourers Tents, but now set out Ground for a Rope-yard, erected a Tent for a Smith, another for a Block, the third for a Sail-maker, and each had his Crew to act under him, for the better Dispatch of Business. It is not to be supposed, that these People were all excellent in their Professions; but, however, they made a shift to carry on Things very well for our Work, Necessity and Practice having taught them many Resources, which the ablest Man, in their Branches of Business, would never have thought of, or, perhaps, could have been brought to believe practicable, if they had been told of them by others. By this Method of acting, we had settled not only a Plantation, but a Manufacture, on the little Island of *Gorgona*; and, as every Officer had his Charge, and surveyed a particular Sort of Artizans, we had Business enough upon our Hands, and were all thoroughly and pleasantly employed. Our *Spanish* Prisoners looked on with Amazement at our working from Break of Day till Night in that Climate, and in that manner; and, what most of all surprized them, was our finding out some new Expedient, when pressed by new Difficulties, and when, in the Judgment of our *Spaniards*, it was impossible for us to proceed any further; so that our Diligence and Success raised our Credit with them prodigiously. The Natives of *Old Spain* are accounted but ordinary Mariners; but here they are much worse, all the Prizes we took being rather cobbled, than fitted out for the Sea; so that, had they such Weather as we often met with in the *European* Seas in Winter, they could scarce ever reach a Port again, as they are fitted; but they sail here Hundreds of Leagues. The *French* used her as a Victualler, and sold her at *Lima*, as they had done several others, for four times the Money they cost in *Europe*. 'Tis certainly a good Method they took, at first trading hitler, to bring a Victualling Ship, with no other Goods but Provisions and Stores, along with them. Generally one of these small Ships comes out with two Traders; and since in six, nine, or twelve, Months time which they stay in those Seas, they expend their Provisions, and lessen their Men by Mortality or Desertion, they sell their Victualling Ship; and, being recruited with Men and Provisions out of her, they return well victualled and manned, to *France*: But now they pass into *Chili*, where they sell the remaining Part of the Cargo, and salt up a new Stock of Provisions for their homeward-bound Passage; so that they need bring no more Victu-

24. While we were at the *Harve de Grace*, of each Ship aboard, resolving to carry Ship to cruise in Seas. This was then employed from the 2nd till she was completed of the *Marquis*, having We saluted each of on board her, distilled drank her Majesty's own Success, in Course soon after sent two *Marquis*; the *Duchess* taken at *Guiaquil*, twenty very good repaired, that they in *England*. The to provide her with I agreed to put *Courtney* twenty-six, white Men, and to Commander, and *Pope*, to command Captain, with his Wages with ours in

25. The next thing Prisoners, which be no Use at all. It should be all set ashore to engage them in a several times discourse about reforming their them to Advantage till now; because we have the Cargoes undeal with us. In Days as near it as Money we should pay they left Hostages would carry to *England*, provided we would Prize-goods. Then *Leon*, and putting a provided one of the cure, would be Host that neither of them World. I mention them here, provided pay us the Money at in six Days, if they Eight, being the last Prizes and Goods, N with Strangers, especially prohibited in than the prime Cost to deal with us; so that unless we sold the finding it worth our must run in treating them all ashore, if the *Morels* and *Navent* our burning to Some of our People they were first taken now every body used Method, because it tunity of trading, and which were of no hinder our sailing, we put seventy-two with our two *Pinna* 13th in the Morning our Prisoners, and twelve Hogs, and which were very we of Value in the Village far up the River, th

24. While we were here, we agreed together to fit out the *Havre de Grace* with twenty Guns, and put Men out of each Ship aboard her under Captain *Cooke's* Command, resolving to carry her home with us, and to make a third Ship to cruise in our Company whilst we were in these Seas. This was the great Work on which we were employed from the 29th of *June* to the 9th of *July*, when she was completely finished; and we gave her the Name of the *Marquis*, having provided a good Entertainment: We saluted each of the other Ships with three Huzzas from on board her, distributed Liquor among the Company, drank her Majesty's and our Owners Healths, and to our own Success, in Conjunction with our new Consort. We soon after sent two of our Main-deck Guns on board the *Marquis*; the *Duchess's* did the like; which, with four taken at *Guiaquil*, and twelve that were in the Ship, made twenty very good ones; the Carriages all new, or so well repaired, that they were as good and strong, as if mounted in *England*. The next thing to be considered was, how to provide her with Men: This was very soon settled; for I agreed to put thirty-five on board her, and Captain *Courteney* twenty-six, so that her Complement was sixty-one white Men, and twenty Negroes, Captain *Edward Cooke* Commander, and our second Lieutenant, Mr. *Charles Pope*, to command under him. We agreed, that the Captain, with his Officers and Men, should have equal Wages with ours in the like Posts, to encourage them.

25. The next thing of Consequence was to get rid of our Prisoners, which began to be a Burden upon us, and of no Use at all. It was therefore determined, that they should be all set ashore, after trying every Method possible to engage them in a Scheme for trading with us. We had several times discoursed the two *Morells*, and *Don Antonio*, about ransoming the Goods, and were in Hopes of selling them to Advantage, but deferred coming to Particulars till now; because we plainly saw, that unless they could have the Cargoes under a Quarter Value, they would not deal with us. I proposed going to *Panama*, and lying six Days as near it as they pleased, till they brought the Money we should agree for, at a moderate Rate, provided they left Hostages on board us, whom, on Failure, we would carry to *England*. To this they would have agreed, provided we would take 60,000 Pieces of Eight for all the Prize-goods. Then I proposed their ransoming the Gallion, and putting a great Part of the Goods aboard her, provided one of those three, and another they could procure, would be Hostages for the Sun. They answered, that neither of them would go Hostage to *England* for the World. I mentioned delivering the Gallion and Cargo to them here, provided two of them would be Hostages to pay us the Money at any other Place but *Panama* or *Lima*, in six Days, if they would give us 120,000 Pieces of Eight, being the lowest Price we would take for all the Prizes and Goods, Negroes, &c. They told us, that trading with Strangers, especially the *English* and *Dutch*, was so strictly prohibited in those Seas, that they must give more than the prime Cost of the Goods in Bribes, to get a Licence to deal with us; so that they could not assure us of Payment, unless we sold the Goods very cheap: Therefore, not finding it worth our Time, and knowing the Danger we must run in treating with them, we desisted, and ordered them all ashore, still hoping that this would compel the *Morells* and *Navarre* to get Money for us, and prevent our burning the Ships we could not carry away. Some of our People were for keeping several others when they were first taken, but they were over-ruled; though now every body seem to confess, that had been a better Method, because it would have given us a greater Opportunity of trading, and of riddling our Ships of those Goods which were of no Value to us here, and served only to hinder our sailing. But to proceed: On the 10th of *July*, we put seventy-two Prisoners on board the Bark, and, with our two Pinnaces, the sailed for the Main. On the 13th in the Morning, these Vessels returned from Landing our Prisoners, and brought off seven small Black Cattle, twelve Hogs, and six Goats, some Limes and Plantains, which were very welcome to us. They met with little efficacy of Value in the Village they were at; and, the others being far up the River, they did not think it worth while to visit

them. The Country where they landed was so poor, that our Men gave the Prisoners five Negroes, some Bays, Nails, &c. to purchase themselves Subistence. The Inhabitants ashore had Notice of our taking *Guiaquil*, and were jealous of our being at this Island, because they heard our Guns when we fired, in order to scale them after careening. According to the Report of our People, our Prisoners were not extremely well pleased with the Change of their Situation, or even with the Recovery of Liberty; in such a Place; and seemed to regret the Advantages they enjoyed on board us. To say the Truth of the Matter, I verily believe, that *Don Antonio*, the *Fleming*, Sig. *Navarre*, and the *Morells*, did not expect to part with us so suddenly; but, by continuing with us, and knowing we could not carry away all the Prizes and Goods, they hoped we should of course have freely given them what we could not keep: We apprehended that was the principal Reason of their not closing with our Terms, which were advantageous to them; besides, should we have been attacked, they believed we must then put them in Possession of their Ships, which were of no Use for fighting. But, to obviate all their Hopes of benefiting themselves at this easy Rate, without participating of their Money, the Magnet that drew us hither, I made them sensible, at parting, that, as we had treated them courteously, like generous Enemies, we would sell them good Bargains for whatever Money they could bring us in ten Days time; but that we would burn what we did not dispose of, or carry away. They begged we would delay burning the Ships, and promised to raise what Money they could, and return within the Time to satisfy us. One of the chief Prisoners we now parted with, was *Don Juan Cardoso*, designed Governor of *Baldivia*, a brisk Man, of about thirty-five Years of Age: He had served as a Colonel in *Spain*, had the Misfortune to be taken in the North Seas by an *English* Privateer near *Porto-Bello*, and carried to *Jamaica*, from whence he was sent back to *Porto-Bello*. He complained heavily of the Usage he met with from the *Jamaica* Privateer; but we parted very good Friends, and he returned us hearty Thanks, and a Stone Ring for a Present to one of the *Duchess's* Lieutenants, that had lent him his Cabin while he was sick on board. We allowed Liberty of Conscience on board our floating Commonwealth to our Prisoners; for, there being a Priest in each Ship, they had the great Cabin for their Mass, whilst we used the Church of *England* Service over them on the Quarter-deck. On the 15th of *June*, came on board, in a small Canoe, one *Michael Kendall*, a free Negro of *Jamaica*, who had lived for some time as a Slave in the Village our People had plundered: He happened not to be there then; but, as soon as he had an Account of it, he fairly ventured his Life to get away to us. From him we received the following remarkable Account of an Attempt made upon the Gold Mines, in which he was himself concerned. His Relation was to this Effect: That, when War was declared at *Jamaica*, he embarked under the Command of one Captain *Edward Roberts*, who was joined in Commission from the Governor of *Jamaica*, with the Captains *Rash*, *Golding*, and *Pilkington*. They had 106 Men, and designed to attempt the Mines of *Iago*, at the Bottom of the Gulph of *Darien*. There were more Commanders and Men came out with them, but did not join in this Design. They had been about five Months out, when they got near the Mines undiscovers. They sailed fifteen Days, up the River in Canoes, and travelled ten Days by Land afterwards: By this Time, the *Spaniards* and *Indians*, being alarmed, laid Ambuscades, and shot many of them. The Enemy having assembled at least 500 Men, and the *English* being diminished to about sixty, including the Wounded, the *Spaniards* sent them a Flag of Truce, and offered them their Lives, after a small Skirmish, wherein the *English* lost four, and the Enemies about twelve Men. The *English*, being in want of Provisions, quite tired out, and not knowing their Way back, agreed to deliver their Arms, on condition to be used as Prisoners of War. Having thus yielded, the *Spaniards* and *Indians* carried them in Canoes three Days up the River that leads to the same Mines they designed to attempt, treated them very well, and gave them the same Food that they eat themselves. But the

fourth Day, when they came to a Town beyond the Mines, and thought all Danger had been past, an Order came from the chief Spanish Officer to cut them all off, which the Indians and Spanish Troops did, as those poor distressed Wretches sat at Victuals; so that in this barbarous Manner they were all massacred in a few Minutes, except a Scots, a French, and an English Boy, with twelve free Negroes, which, at the Intercession of a Priest, they kept for Slaves. This Man, being one of them, happened to be sold first to the Mines, where, he says, he cleared at least three Pieces of Eight a Day for his Master; and from thence he was sold to this Place. We took Notice of this to the *Morells*, who came the next Morning with Money to ransom what they could of us, putting them in mind of the different Treatment they had from us, and how grateful they ought to be for it; which they seemed very readily to acknowledge, and, indeed, behaved, upon all Occasions, with much Honour. We sold them good Bargains, 'tis true; but, on the other hand, they ran great Hazards in trading with us, and trusted us always with their Persons and Money, at the same time that we had the Effects in our Hands they came to purchase. On the 18th, a Negro, belonging to the *Duckets*, was bit by a small, brown, speckled Snake, and died within twelve Hours, notwithstanding the Doctor used his utmost Endeavours to save him. There are abundance of Snakes on this Island; and, the *Spaniards* say, some are as thick as the Middle of a Man's Thigh. I saw one as big as my Leg, and above three Yards long. Their Bite proves generally mortal. In the Afternoon we had a Consultation, and agreed, that the same Bark we took, belonging to the Main, right against this Island, should be given to the Lieutenant's Brother that was plundered, and who came over with our Bark; for, being a Man in some Authority on shore, we hoped this Favour would influence them to trade with us whilst we were here. That Morning, Messieurs *Morell* and *Navarre* went a second time in our Bark for Money. One of the same Sort of Snakes, that killed the Negro, was found on our Fore-castle, as they went off, and killed by our Men. We suppose it came aboard on the Cable, they being often seen in the Water.

26. On the 11th of *August*, the Officers we appointed to appraise the Plunder, met on board the Galeon, and valued the Clothing, in order to divide it amongst the Officers and Men of each, according to their respective Shares. On the 3d in the Afternoon, they made an End of appraising the Cloths, at a very low Rate, amounting to four hundred Pounds; and the Silver-hilted Swords, Buckles, Snuff-boxes, Buttons, and Silver Plate in Use aboard every Prize we took, and allowed to be Plundered, at four Shillings and Sixpence per Piece of Eight, amounted to 743*l.* 15*s.* besides 3*lb.* 12*oz.* which was in Rings, Gold Snuff-boxes, Ear-rings, and Gold Chains, taken about Prisoners. This I believe an exact Account. Early next Morning we had like to have had a Mutiny amongst our Men: The Steward told me, that several of them had last Night made a private Agreement; and that he heard some Ringleaders, by way of Encouragement, boast to the rest, that sixty Men had already signed the Paper. Not knowing what this Combination meant, or how it was designed, I sent for the chief Officers into the Cabin, where we armed ourselves, secured two of those mutinous Fellows, and presently seized two others: The Fellow that wrote the Paper we put in Irons: By this time, all Hands were upon Deck, and we had got their Agreement from those who were in the Cabin: The Purport of which was, to oblige themselves not to take their Plunder, nor to move from thence, till they had Justice done them, as they termed it. There being so many concerned in this Design, the Captains *Dover* and *Fry* desired I would discharge those in Confinement, upon their asking Pardon, and faithfully promising never to be guilty of the like, or any other Combination, again. The Reason we shewed them this Favour was, that there were too many guilty to punish them at once; and, not knowing what was designed aboard the *Duckets* and *Marquis*, we were of Opinion, they had concerted to break the Ice aboard the *Duke*, and the rest to stand by them. Upon this, I used all the Arguments I could offer, shewed them the Danger and Folly of Com-

binations, and exhorted them to believe, they would have Justice done them in *England*, should any thing seem uneasy to them now, or in the whole Course of the Voyage; adding, that we had done all that we could for their Good, and would continue our Endeavours, not doubting their good Intentions, provided they were not misled. With these, and other healing Arguments, all appeared easy and quiet, and every Man seemed willing to stand to what had been done, provided the Gentlemen, that were Officers, and not Sailors amongst us, had not such large Shares, which they alleged was unreasonable; and that they could not possibly, in a Privateer, deserve what they were allowed, in proportion to the Ship's Company. This we did in part yield to, in order to appease these Malecontents, by making some Abatements on Mr. *White's*, Mr. *Bath's*, and Mr. *Vanbrugh's* Shares; so that we hoped this difficult Work would, with less Danger than we dreaded, be brought to a Conclusion; for Disputes about Plunder are the common Occasion of Privateers quarrelling amongst themselves, and ruining their Voyages. Another Paper was drawn up, for every Man to swear what Cloaths, Goods, &c. he had received of the Agents, and to restore whatever he had taken without the Agents Knowledge; in order to a just Distribution of the Plunder; and every one was to oblige himself in a Penalty of twenty Shillings for every Shilling Value that should be found about him concealed, besides the former Penalty agreed on, of losing his Share of any Prize or Purchase, for concealing above the Value of half a Piece of Eight. And, for the Encouragement of Discoveries, the Informer was to have half the Penalty, and the Protection of the Commander. This Paper was objected against by several of the Officers, who insisted, that there ought to be a greater Latitude allowed them to advantage themselves, since they had ventured their Lives thither on so difficult an Undertaking: Which made us defer signing it till a better Opportunity; for, unless such Agreements as these had been constantly promoted, as Occasion required, the Temptation of Interest would have made us fall into irrecoverable Confusions aboard, which generally end in a Separation, or worse. Some time after this, I proposed another thing, which, I thought, would prove very advantageous for our Owners, and the common Interest; and this was, the sending Captain *Cooke*, in the *Marquis*, with a Cargo of our Prize-goods, to the *Brazils*; which Commission he would have executed. By this I proposed to save our Provisions, since he would not have required any great Stock for that Voyage, and, consequently, might have remained longer in the South Seas. In the next Place, I proposed Profit; for these Goods would have come to an extraordinary Market at the *Brazils*, and have yielded twice or thrice as much as we could make of them any other Way: And, lastly, after securing, in this manner, so considerable an Advantage on our Voyage, as we must have reaped from the Produce of these Goods, our Ships had been sufficiently provided for attacking the *Acapulco* Ship. But my Consorts did not understand, or at least would not approve, these Reasons; and so the Project fell to the Ground, which they, however, repented afterwards, when it was too late.

27. On the 7th, we gave Sig. *Morell* and *Navarre* their Ships, and all the Goods we could not carry away, for what Money our Agents received of them. As for the Effects in the Bark, we agreed for 12,000 Pieces of Eight, which, with 3000 there remained of the old Debt for the Ransom of *Guinaquil*, made 15,000 in the Whole, and which were to be brought in twelve Days. Captain *Cooke* valued the Money now on board, for the Use of the Owners, 20,000 Pounds, and the Goods at 60,000 Pounds. We gave these Gentlemen a Paper, which might serve to protect them, in case they fell into the Hands of the *Spaniards*; and we intended to have taken an Acknowledgment under their Hands, as to the Particulars of the Bargain; but the Bark sailed away from us in the Night. I cannot help taking notice here of the honourable Behaviour of our Crew during the Time these Prisoners were on board, in order to shew how much they regarded the Credit of their Commission, and of their Country. Amongst our Prisoners taken on board Sig. *Navarre's* Ship from *Panama*, there was a Gentlewoman, and her Family; her

eldest Daughter, teen, was newly We assigned them and none were to separate their Children from their Mothers. I shewed evident Mischance. But, I amongst us, my Charge of the Gall Years of Age, he dian to Females, young Men had his amongst Privateer them to Temptation who behaved himself was some Days in stopped here to rest where he gained ments, for his Ci Husband extolled some concealed T male Negro, that w them narrowly; a Things, cunningly fore delivered to C of good Value. Y apparel and Necessi and parted very fr who put them on sh they did expect, or been in the like C Gold, to purchase t Island of *Gorgona* h therefore it is need for which Reason w Voyage.

After this, where the *Indians* Help of a Priest, e 27th, we began to sent several of our b the *Marquis* ashore while the rest load generally treacherou on them. Our Peo sular Notice, that were first daubed, we had amicably tre

eldest Daughter, a pretty young Woman, of about Eighteen, was newly married, and had her Husband with her. We assigned them the great Cabin aboard the Galleon; and none were suffered to intrude amongst them, or to separate their Company: Yet the Husband (I was told) shewed evident Marks of Jealousy, the Spaniards epidemic Disease. But, I hope, he had not the least Reason for it amongst us, my third Lieutenant *Glendall* alone having Charge of the Galleon and Prisoners; for, being above fifty Years of Age, he appeared to be the most secure Guardian to Females, that had the least Charms, tho' all our young Men had hitherto appeared modest, beyond Example amongst Privateers: Yet we thought it improper to expose them to Temptations. At this time, Lieutenant *Courtney*, who behaved himself so modestly to the Ladies of *Guatquil*, was some Days in Possession of *Navarre's* Ship, before we stopped here to remove these Prisoners aboard the Galleon, where he gained their Thanks, and public Acknowledgments, for his Civilities to these Ladies; and even the Husband extolled him. We had notice these Ladies had some concealed Treasure about them, and ordered a Female Negro, that we took, and who spoke *English*, to search them narrowly; and found some Gold Chains, and other Things, cunningly hid under their Cloaths. They had before delivered to Captain *Courtney* Plate, and other things, of good Value. We gave them most of their Wearing-apparel and Necessaries, with three Female Mullatto Slaves, and parted very friendly. They confessed to our People, who put them on shore, that we had been much civiler than they did expect, or believed their Countrymen would have been in the like Case; and sent back the Husband with Gold, to purchase some Goods and two Slaves of us. The Island of *Gorgona* has been more than once described, and therefore it is needless to trouble the Reader with it here; for which Reason we shall proceed in the History of the Voyage.

28. *August* 11. we failed, and, the next Morning, came up with a Brk which created so much Uneasiness; and put Mr. *Selkirk* and his Crew on board her. As our Ships were but very thinly manned, and there was likely to be more Action than since we had been in these Seas, it was therefore thought adviseable to recruit a little; which, considering where we were, will seem a little extraordinary: But the Milytery will be very soon explained, by my telling the Reader, that, on the 16th, we mustered the Negroes on board the *Duke*, and found them thirty-five, strong able Fellows, fit for Service. When they were together, I told them, that, if they would behave bravely, and act faithfully, their Slavery was at an End; on which thirty-two of them engaged, and desired they might be improved in the Use of Arms, which some of them already understood; adding, that, if I would allow them Arms and Powder, these would teach the rest. Upon this, I made *Michael Kendall*, the *Jamaica* free Negro, who deserted from the Spaniards to us at *Gorgona*, their Leader; and charged him to be continually exercising them, because I did not know how soon we might meet with an Enemy. I took down the Names of those that had any; and those that wanted, I bestowed Names on them; and, to confirm our Contract, I made them drink a Dram all round, to our good Success. At the same time, I gave them Bays for Cloaths; and told them, they must look upon themselves as *Englishmen*, and no more as Negro Slaves to the Spaniards: At which they expressed themselves highly pleased. The next Morning, we saw a Sail; and both the *Duchess* and we gave Chace, and took her in an Hour's time. She was a Vessel of seventy Ton, and had four-and-twenty Negroes, Men and Women, in her. After this, we stood over to the Bay of *Jecames*, where the *Indians* are free; and, with much-ado, by the Help of a Priest, entered on Trade with them. On the 27th, we began to heel and clean our Ships Bottoms; and sent several of our best Sailors, and two Carpenters, to assist the *Marquis* ashore. Our Men kept one half at Arms, while the rest loaded the Boats, lest the *Indians*, who are generally treacherous, should watch an Opportunity to fall on them. Our People, that came off the Shore, took particular Notice, that the red Paint, with which the *Indians* were first daubed, was a Declaration of War; and, after we had amicably treated with them, they rubbed it off; but

still kept their Arms. We sent them three large wooden *Spanish* Saints, that we had out of *Morell's* Ship, to adorn their Church; which they accounted a great Present: And I sent a feathered Cap to the chief *Indian's* Wife; which was likewise very well accepted: And I had a Present of Bows and Arrows in Requital. In the mean time, our Linguist and Prisoner managed their Business beyond Expectation, selling very ordinary Bays at one Piece of Eight and an half *per* Yard, and other things in Proportion; so that we had Provisions very cheap. On *September* 1. we failed from thence; and, on the 6th, Captain *Courtney*, Captain *Cooke*, and Captain *Dampier*, dined on board of me, when Captain *Cooke* complained of his Ship being crank; and that we need not have tacked so near the Shore, since we might easily have fetched the *Gallapagos* without tacking. All agreed to this, except our Pilot, who was positive of seeing other Lands about 100 or 110 Leagues from the Main, under the Equinox. He told us, he was at them formerly, and has described them in one of his Voyages; and that those Islands we were at, lay to the West of them: But we judged him mistaken, or we had seen them in the last Run to and from these Islands. On the 8th, we ran over and beyond where our Pilot affirmed the Islands were; so that we all agreed, that the Island he was at, when a Buccannering, could be no other, but those we were at, and were going to now, the nearest Part of them lying 165 Leagues to the Westward of the Main-land. The same Day, we made one of the *Gallapagos* Islands; and, the next Day, hoisted out our Pinnace: Captain *Dover* and Mr. *Glendall* went in her for the Shore. The *Duchess's* Pinnace returned very soon, laden with Turtles. In the mean time, we came to an Anchor in about thirty Fathom Water, about two Miles off Shore, being rocky at Bottom. In letting go the Anchor, the Buoy-rope was immediately cut off; and our Ship drove; so that we thought our Cable was also cut: But, after driving about half a Mile, the Ship rode very well. In the Evening, our Boats, that left us after we came to an Anchor, returned, laden with excellent Turtle. We sent our Yawl and some Men ashore, to turn these Creatures in the Night: But to no Purpose; because we afterwards found, they only came ashore in the Day. I sent our Pinnace, and Lieutenant *Fry*, to sound out a better Anchoring-place, while we hove up the Anchor, and came to Sail. Our Boat returned; and, by ten o'Clock, we had our Ship again to an Anchor within less than a Mile of the Shore, right against a white sandy Bay. I went ashore in the Pinnace, and carried Men to walk round the Bay, to get Turtles. The Island is high, like the rest; but some low Land on this Side down to the Sea. It is very rocky, dry, and barren, without Water, like those we had already seen. On the 12th, I sent to the *Duchess*, who was at an Anchor a good Distance from us, to know how they were stocked with Turtle. At ten the Boat returned, with an Account, that they had about 150 Land and Sea Turtles; but not generally so large as ours. We had no Land Turtles as yet; but about 150 Sea Turtles. The *Marquis* had the worst Luck. On the 13th, the *Duchess's* People having informed us where they got their Land Turtles, I sent our Pinnace, which, at Night, returned with thirty-seven, and some Salt they found in a Pond; and the Yawl brought twenty Sea Turtles: So that we were very full of them. Some of the largest of the Land Turtles are about 100 Pounds Weight; and those of the Sea upwards of 400. The Land Turtles laid Eggs on our Deck. Our Men brought some from the Shore, about the Bigness of a Goose's Egg, white, with a large thick Shell, exactly round. The Creatures are the ugliest in Nature; the Shell not unlike the Top of an old Hackney-coach, as black as Jet; and so is the outside Skin, but shriveled, and very rough. The Legs and Neck are long, and about the Bigness of a Man's Wrist; and they have Club-feet, as big as one's Fist, shaped much like those of an Elephant, with five thick Nails on the Fore-feet, and but four behind; and the Head little, and Visage small, like Snakes; and look very old and black. When at first surprized, they shrink their Neck, Head, and Legs, under their Shell. Two of our Men, with Lieutenant *Stratton*, and the Trumpeter of the *Duchess*, affirm they saw vast large ones of this sort, about four Feet high. They mounted two Men on the Back of one of them, which, with its

usual slow Pace, carried them, and never regarded the Weight. They supposed this could not weigh less than 700 lb. I do not affect giving Relations of strange Creatures, so frequently done by others; but where an uncommon Creature falls in my Way, I cannot omit it. The *Spaniards* tell us, they know of none elsewhere in these Seas; but they are common in *Brasil*. On the 15th, we had a fine Breeze, came up to the rest, and agreed to lie by, with our Heads to the Eastward, till Midnight, being in Sight of the Rock, where we lost poor *Hatley*, when last here. On the 16th at four o'Clock in the Afternoon, we sent our Yawl for Captain *Cooke* and Captain *Courtney*, with whom we agreed to bear away, seeing so many Islands and Rocks to the Westward, we did not care to incumber ourselves among them in the Night. By six, we found the Remedy worse than the Disease, and, at Mast-head, could see all low Rocks, almost joining from Island to Island, that we seemed Land-locked for three Points of the Compass, and no-way open, but to the South-east, from whence we came; so we resolved to return that Way, and made short Trips all Night, keeping continual Sounding, for fear of Shoals, and had from forty to sixty Fathom Water. In the Morning, we had got far enough to Windward to return. We could have no Observation, the Sun being in our Zenith, tho' we found the Weather here much colder, than in any Latitude within ten Degrees of each Side the Equator. The *Duckeys* (not being so well provided with Turtle as we) sent her Boat ashore on another Island, where they got her Lading of excellent Turtle, leaving a vast Number on shore that they could not bring away. We had as many aboard as we had Room for. At seven we all joined, and agreed to lie-by till two in the Morning, whence we continued our Course, with an easy Sail, till Day-break: We were a-bread of the *Thoroughfare*, where we tried for Water the last time. I ordered a Gun to be fired at a venture, to see if it were possible Mr. *Hatley* could be there alive, and then seeing, or hearing us, might make a Smoke on shore, as a Signal; but we had no such good Luck; so that our Hopes for him were all vanished, and, we finally concluded, that we could do no more for him, than we have done already. The 18th and 19th, we saw several more Islands, one of them a large one, which we supposed reached near the Equinoctial, and abundance of small Islands betwixt us. The 19th at Noon, we had an indifferent good Observation, Latitude $2^{\circ} 2'$ North. We saw in all (some that we searched, and others that we viewed at a Distance at both times) no less than fifty, but none that had the least Appearance of fresh Water. Sig. *Morell* tells me, that a *Spanish* Man of War, employed to cruise for Pirates, was once at an Island that lies by itself in Latitude $1^{\circ} 20'$ or $30'$ South; they called it *St. Maria del Aquada*, a pleasant Island, and good Road, full of Wood, and plenty of Water, and Turtle of both Sorts, with Fish, &c. lying about 140 *Spanish* Leagues West from the Island of *Plata*; but, I believe, it is at least thirty Leagues more, and that it is no other but the same Island where Captain *Davis*, the *English* Buccaneer, recruited; and all the Light he has left to find it again is, that it lies to the Westward of these Islands he was at with the other Buccaneers, which, as I have before examined, can be no other than these Islands we have been twice at. We had no Occasion to look for this Island the second Trip, though, I believe, it is easy to find it without farther Directions. Here are most Sort of Sea-birds among these Islands, and some Land-birds, particularly Hawks of several Sorts, and Turtle-doves, both so very tame, that we often hit them down with Sticks. I saw no Sort of Beasts; but there are Guanas in abundance, and Land-turtle almost on every Island. 'Tis strange how the latter got here; because they cannot come of themselves, and none of that Sort are found on the Main. Seals haunt some of these Islands, but not so numerous, nor their Fur so good, as at *Juan Fernandez*: A very large one made at me three several times, and, had I not happened to have a Pike-staff, pointed with Iron, in his Hand, I might have been killed by him: I was on the level Sand when he came open-mouthed at me, out of the Water, as quick and fierce as the most angry Dog let loose: I struck the Point into his Breast, and wounded him all the three times he made at me; which forced him

at last to retire, with an ugly Noise, snarling, and shewing his long Teeth at me out of the Water. This amphibious Beast was as big as a large Bear.

29. On the first of *October* we made the Main-land of *Mexico*, which Captain *Dampier* no sooner saw, than he declared, it was in the Neighbourhood of that Place that he attacked the Lesser *Manilla* Ship in the *St. George*. Our Men began to grow ill again, and two of them dropt down on the Deck, occasioned by a kind of scorbutic Apoplexy; but, upon Bleeding, they came soon to themselves. The next Day we made Cape *Corientes*, which we knew by our Charts. Captain *Dampier*, indeed, had been here; but it was a long time ago, and, therefore, he seemed to know but little of the Matter; yet, when he came to land in Places, he recollected them very readily. One Business now was, to look for the Islands called *Tres Marias*, to procure some Refreshments; and found this a Work of Difficulty, being very uncertain as to their Situation. On the 4th in the Afternoon, Cape *Corientes* bore East North-east about ten Leagues: The next Morning, being very clear Weather, we discovered two Islands at the Distance of fourteen Leagues, one bearing North by West, the other North by East. At Noon we had an Observation, and found ourselves in the Latitude of $20^{\circ} 45'$ North. The Sight of these Islands was very satisfactory; for, though our Men had their Fill of Land and Sea-turtle, which kept them from the Scurvy, yet I found them weak, it being but a faint Sort of Food, except they had enough Bread or Flour with it; whereas they had but a Pound and a Quarter of Bread or Flour for five Men a Day; which was done to prolong our Stock of Bread against we came to live wholly on our salt Provisions, and should be then forced to allow more. On the 6th, we sent Lieutenant *Fry*, in the Pinnace, on shore, on the Eastermost Island, to try whether there was any good Road or Convenience for us to recruit there. At nine they returned, and told me, the Island had foul Ground near half a Mile from the Shore, bad Anchorage, worse Landing, and no fresh Water, but Wood enough. A melancholy Fate to us, our Water growing short. We haled on a Wind for the middle Island, which Captain *Dampier*, I believe, can remember he was at, when he belonged to Captain *Swan*, and found Water. Having little Wind, we sent our Boat towards the Island, to view it, before we could get up thither with the Ship. The *Duckeys*'s People, and our Pinnace, had been ashore at several Places on the South-east Side of the Island, and found better Water at every Place. On the 8th, those that had been on the Island reported, they saw no Sign of any Peoples being lately there, but found a human Skull above-ground, which we supposed to be one of the two *Indian* Captains *Dampier* tells us were left here by Captain *Swan* about 23 Years ago; for Victuals being scarce with these Buccaneers, they would not carry the poor *Indians* any farther; but, after they had served their Turns, left them to make a miserable End on a desolate Island. We kept a Light on all Night, and a Fire in the Island, that, if the *Manna* and Bark, who had left Company, saw it, and had a Gale, they might come into Anchor-ground: But, having no Sight of them at Day-break, I went on board our Company, and proposed my going out to look after them; but they made light of it, and thought it needless, believing they would be in assist us without any Assistance. The Remnant of Cattle, Hogs, and Plantains, at *Vecames*, held to me *Gallapagos*; and we fed on the Turtle ever since, excepting those two last Days. This accidental Stock of fresh Food was some Refreshment to our Men, and prolonged our Stock of European Provisions. On the 9th, I sent Lieutenant *Glendall* to view the other Side of the Islands, and he told me, on his Return, that it was much better than this, had several sandy Bays, in which he saw the Tract of many Turtle. Upon this Intelligence, I sent back the Boat thither in the Evening, and next Morning they came aboard with a full Load of Turtle, and left another behind them ready turned; and, which was of much greater Consequence, they found pretty good Water, whereas what we had hitherto drank was physical, and purged excessively. As we wooded, watered, and furnished ourselves with fresh Provisions here, and as they

are Places very Islands of *Tres* four Leagues at most, which apply five Leagues in Leagues the long Leagues: The *Coons*: Near the least Islands. One of like a Ship usual Signal for These Islands has Pigeons, Doves killed great Number than ours: We *Coons*; the latter were easily beat worthy of Rema we found but two Streams near other which, I supposed that grow in the Turtle here are v any I have seen; but three Sorts of ferent Sorts at few them all, except Turtle, (as they a and some of them of that Sort, bec Those at the *Gall* observed came a Night, quite diff the rest. All tha them in the Nigh lay their Eggs, a these had 800 Egg and ready for lay Turtle were six write, considering where-ever those they have nothing to be better into shore to watch ca Eggs without Dist Time and Place. me, they found th and, in about tw in them, complet little longer, I m rough Satisfaction From whence I divers of our Sail found Eggs in th Days time after, but Films: This within that time, observed, more of the Sand ever Numbers, and qu Fish about the Sorts mentioned Plenty of Turtle, the chief Officers without Hares, various Sizes and with Tufts of Fea Anchor-ground Soundings, from the Shore. Betw the same Depth, no Shore, but w west Point, and fame, with anothe the least Island, the Shore.

30. On the 10th proved the Point the Sailors call C. NUMB. 12.

are Places very little known. I shall describe them. The Islands of *Tres Marias* lie North-west, in a Range about four Leagues asunder. The largest Island is the Westermost, which appears to be high double Land, and about five Leagues in Length; the Middle Island about three Leagues the longest Way; and the Eastermost scarce two Leagues: These are also high Lands, and full of Trees. Near the least Island are two or three small, broken, white Islands. One of the outermost of these appeared so much like a Ship under Sail at a Distance, that we gave the usual Signal for a Chace, but soon found our Mistake. These Islands have abundance of different Sorts of Parrots, Pigeons, Doves, and other Land Birds, of which we killed great Numbers, with excellent Hares, but much less than ours: We saw abundance of Guanas, and some Raccoons; the latter barked and snarled at us like Dogs, but were easily beat off with Sticks. I think the Water more worthy of Remark, than any thing we saw here; because we found but two good Springs, which ran down in large Streams near others, that were very bitter and disagreeable, which, I suppose, might proceed from Shrubs and Roots that grow in the Water, or from some Mineral. The Turtle here are very good, but of a different Shape from any I have seen; and, though vulgarly there are reckoned but three Sorts of Turtle, we have seen six or seven different Sorts at several times, and our People have eat of them all, except the very large Whooping or Loggerhead Turtle, (as they are called) found in *Brazil* in great Plenty, and some of them above 500 lb. Weight; we did not eat of that Sort, because then our Provisions were plentiful. These are the *Gallapagos* Islands, both Male and Female, I observed came ashore in the Day-time, and not in the Night, quite different from what I have seen or heard of the rest. All that we caught in this Island, was by turning them in the Night, and were She's, which came ashore to lay their Eggs, and bury them in the dry Sand; one of these had 800 Eggs in its Belly, 150 of which were skinned, and ready for laying at once. I could not imagine, that Turtle were six Weeks in hatching, as some Authors write, considering the Sun makes the Sand so very hot where-ever those Eggs are found, and, instead of a Shell, they have nothing but a very thin Film: In order therefore to be better informed, I ordered some of our Men on shore to watch carefully for one, and suffer her to lay her Eggs without Disturbance, and to take good notice of the Time and Place. Accordingly they did so, and assured me, they found the Eggs added in less than twelve Hours; and, in about twelve Hours more, they had young ones in them, completely shaped, and alive: Had we itaid a little longer, I might have given myself, and others, thorough Satisfaction in this quick Production of Tortoises: From whence I am inclinable to credit the Report of divers of our Sailors, who assert, that where they have found Eggs in the Sand, and looked for them in three Days time after, in the same Place, they found nothing but Films: This shews, that the young ones are hatched within that time. They assured me also, that they had observed, more than once, that the young Brood run out of the Sand every Day, directly for the Sea, in great Numbers, and quicker than the old ones. There was little Fish about the Shores of this Island, and of the same Sorts mentioned at other Places in these Seas; but the Plenty of Turtle, at this time, supplied that Defect: We, the chief Officers, fed deliciously here, being scarce ever without Hares, Turtle-doves, Pigeons, and Parrots of various Sizes and Colours: Many had white, or red Heads, with Tufts of Feathers on their Crowns. We found good Anchor-ground about this middle Island, and gradual Soundings, from twenty to four Fathom Water, close by the Shore. Between this and the least Island, 'tis about the same Depth, where we were: Between them I found no Shole, but what was visible; as a Rock off the South-west Point, and a Shole off the North-east Point of the same, with another at a great Distance from that Point of the least Island, but neither runs above half a Mile from the Shore.

30. On the 1st of *November* we saw High-land, which proved the Point of *California*, or that Head-land which the Sailors call *Cape St. Lucas*. It was now necessary to

NUMB. 12.

put in Execution the Rules we had formerly laid down for Cruising; as also to settle our Regulations about Plunder, and against Gaming; which was done on the eleventh. According to our Agreement, mine was to be the outermost Ship, the *Duchess* in the Middle, and the *Marquis* next the Land; the nearest Ship to be six Leagues at least, and nine at most, from the Shore; the Bark to ply to-and-fro, and carry Advice from Ship to Ship: By this Agreement, we could spread fifteen Leagues, and see any thing that might pass us in the Day within twenty Leagues of the Shore; and, to prevent the Ships passing in the Night, we were to ply to Windward all Day, and drive all Night. On the 5th of *November* we changed our Situation, and the *Duchess* was next the Shore, and the *Marquis* in the Middle. It gave us great Satisfaction, to consider, that in this very Place, and about this very Day, Sir *Thomas Candish* took the *Manilla* Ship. On the 16th, we sent the Bark to look for Water on the Main; and next Morning they returned, having seen wild *Indians*, who paddled to them on Bark-logs: They were fearful of coming near our People at first, but were soon prevailed with to accept of a Knife or two, and some Bays; for which they returned two Bladders of Water, a couple of live Foxes, and a Deer's-skin. Till now, we thought the *Spaniards* had Millionaries among these People; but they being quite naked, having no Sign of *European* Commodities, nor the least Word of *Spanish*, we concluded they were quite savage. We dispatched the Bark and Boat a second time with Trifles, in hopes to get some Refreshment from them. On the 18th, before Sun-set, we could perceive our Bark on the Shore; and, having little Wind, she drove most Part of the Night, to be near us in the Morning: We sent our Pinnace, and brought the Men aboard, who told us, that their new Acquaintance were grown very familiar, but were the poorest Wretches in Nature, and had no manner of Refreshment for us: They came freely aboard to eat some of our Victuals, and, by Signs, invited our Men ashore. The *Indians* swam ashore to guide the Bark-logs that our Men were on, there being too much Sea to land out of our Boat. After they got safe on shore, the *Indians* led each of our Men, betwixt two of them, up the Bank, where there was an old naked Gentleman, with a Deer-skin spread on the Ground, on which they kneeled before our People, who did the like, and wiped the Water off their Faces without a Cloth. These that led them from the Water-side, took the same Care of them for a Quarter of a Mile, and led them very slowly, through a narrow Pass, to their Huts, where they found a dull Musician, rubbing two jagged Sticks across each other, and humming to it, to divert and welcome their new Guests. After these Ceremonies were over, our People sat on the Ground with them, eat broiled Fish, and were attended back in the same manner, with the *Indian* Music. The Savages brought a Sample of every thing they had, except their Women, Children, and Arms, which we find are not common to Strangers. Their Knives, made of Sharks Teeth, and a few other of their Curiosities, our People brought aboard to me, which I preserved, to shew what Shifts may be made. On the 28th in the Afternoon, we heard the *Marquis* fire a Gun, which was answered by the *Duchess*, who had the middle Birth. We tacked immediately, and made all possible Sail, supposing they had seen a Stranger. The *Marquis* stood to us, towards the Shore, and we soon met her: By four o'Clock I was aboard them, and inquired into the Cause of the Alarm; was surprised to hear they took us for the *Manilla* Ship, and the Gun they fired, was to alarm the *Duchess* to give Chace, as she had done all the Day, though not regarded by us, who knew the *Marquis*, and admired they could mistake the *Duke*. Immediately each Ship returned to his Station. Soon after our main Tie gave way, and our main Yard came down at once, but did no other Damage. Next Morning we saw the Bark coming off Shore, where she had been becalmed: Being longer wanting than usual, we were afraid they were cut off by the *Indians*. We got our Bale-goods up from abast, to see for the Leak; but all to no Purpose; we found several of the Bales that had received some Damage, which we dried and repacked, and fold what was damaged,

2 X

among

among the Ship's Company. The same Night, our Lazareto-door being broken open, and losing Bread and Sugars, this Morning I ordered a Search, and found the Thief. I blamed the Steward for his Remissness: He told me, he lay next the Door, with the Key fastened to his privy Parts, because he had it once stolen out of his Pocket; I suppose by the same Thief, who was so dexterous as to get it now, without disturbing him; but, not being ingenious enough to fasten it to the same Place, he was discovered: His Mess-mate was also guilty, but, knowing his Friends *Bristol*, I was unwilling to punish him, though, Provisions being scarce, it made the Crime the greater; for we expected no Recruit till we got to the *East Indies*. I ordered the first to be severely whipt at the Geers, and the other, and a *Dutchman*, to be afterwards left with him in Irons. On the 9th of *December*, Mr. *Duck*, the Master of the Bark, came aboard, and presented me with some Dolphins he had from the *Indians*. I ordered our Master to go with him, and endeavour, if possible, to discover the Shore along to the Northward, to find out a better Harbour than that where the *Indians* lived; and, if they met with the *Duchess*, to tell Captain *Courtney*, I thought it convenient for one of the Ships to go into the Bay we had already discovered, and there to take in Water and Wood, &c. so to fit our Ships by turns, to save Time, and, consequently, Provisions, which began now to grow short with us. We were also something dubious of seeing the *Manilla* Ships, because it was near a Month after the Time they generally fall in with this Coast that we were here cruising for them; but, what embarrass'd us most was, the Impossibility of procuring any Intelligence which might deliver us from this Perplexity. To act with Judgment and Spirit in so nice a Conjecture, it was resolved on the 4th, that the *Marquis* should go into the Harbour, in order to visit; that I and the *Duke* should keep the outward Birth, and the *Duchess* remain between us and the Shore. It was likewise fixed, that we should cruise but eight Days longer in hopes of this *Manilla* Ship. On considering our Provisions, we found the Bread on board all the Ships, at our present short Allowance, for about seventy Days at most. Our Run to *Guam*, one of the *Ladrones*, could not possibly be performed in less than fifty Days; which, added to the Time we were fall to remain here, made it evident, that, on our Arrival there, we should have Bread only for eleven Days: And, even then, we ran two Hazards; the first, that our Voyage might be longer, and, in that case, our Bread must fail, before we arriv'd at *Guam*; the other, that, in case we had such a Remainder of Bread when we came there, it was not quite certain, that we should obtain a Supply. Yet, at all Events, we were obliged to resolve upon this Course, because it was simply impossible for us to go round by *Cape Horn*, and so to the *Brazils*, where we might have sold our Goods to vast Advantage, and made our Voyage back to *Great Britain* in much less Time.

31. The Thoughts of all these Difficulties naturally made us a little melancholy: However, on the 21st of *December*, we bore away for the Port where the *Marquis* was refitting; but, about nine in the Morning, the Man at the Mast-head cry'd out, that he saw a Sail, besides the *Duchess* and Bark, distant about seven Leagues from us. We hoisted our Ensign immediately, and bore away after her; the *Duchess* did the like; but, it falling calm, I ordered the Pinnace to be manned, and sent out, to make what she was. In the mean time, our Ship's Company were strangely divided in their Opinions: Some were very positive, that it was the *Marquis* come out of Port; and, to confirm this, they asserted, that the Sail had no Fore-top-mast; upon which we recalled the Pinnace, put a Cap aboard her for the *Marquis*, and then sent her away again; and by this time it was Noon. All the rest of the Day we had very little Wind, so that we made no great Way; and the Boat not returning, kept us in a languishing Condition, not being able to determine, whether the Sail was our Consort the *Marquis*, or the *Acapulco* Ship. Our Pinnace was still in Sight, and we had nothing to do but to watch her Motions: We could see, that she made towards the *Duchess*'s Pinnace, which rowed to meet her: They lay together some time, and then the *Duchess*'s Pinnace went

back to their Ship, which gave us great Hopes. In order to obtain some Certainty, I ordered Mr. *Fry* on board the *Duchess*, in our Yawl, to know what that Ship was, and to agree, if she was not the *Marquis*, how to engage her: As soon as the Yawl was gone, we hoisted *French* Colours, and fired a Gun, which the Stranger answered; and this, in some measure, cleared the Doubt. Mr. *Fry*, however, quickly returned, with the joyful News, that this was really the *Manilla* Ship, for which we had waited so long, and of seeing which we now began to despair. This revived all our Courage, and every body was as active in preparing for the Engagement, as we could possibly desire. The Thoughts of being made at once, dispersed all our melancholy Reflections on the Shortness of our Provisions, and our long Run to *Guam*: We had now nothing in our Heads, but being Masters of the mighty Treasure on board this *India* Ship; and every Moment seem'd an Hour, till we came up with her. We agreed the two Pinnaces should tend her all Night, and keep shewing false Fires, that we might know whereabouts they and the Chace were; and, if we were so fortunate as to come up with her together, we agreed to board her at once. We made a clear Ship before Night, had every thing in Readiness to engage her at Day-break, and kept a very good Look-out all Night for the Boat's false Fires, which we saw, and answered frequently. At Day-break we saw the Chace upon our Weather-bow, about a League from us, the *Duchess* a-head of her to Leeward, near about half a far. Towards six our Boat came aboard, having kept very near the Chace all the Night, and received no Damage; but told us, the *Duchess* pass'd by her in the Night, and the fired two Shot at them, but they returned none. We had no Wind, but got out eight of our Ship's Oars, and rowed above an Hour; then there sprung up a small Breeze. I ordered a large Kettle of Chocolate to be made for our Ship's Company (having no spirituous Liquor to give them); then we went to Prayers, and, before we had concluded, were disturb'd by the Enemy's firing at us. They had Barrels hanging at each Yard-arm, that look'd like Powder-barrels, to deter us from boarding them. About eight o'Clock we began to engage her by ourselves; for the *Duchess*, being to Leeward, and having little Wind, did not come up. The Enemy fired her Stern-chace upon us first, which we returned with our Fore-chace several times, till we came nearer; and, when close aboard each other, we gave her several Broad-sides, plying our small Arms very briskly; which they returned as thick for awhile, but did not fire their great Guns half so fast as we. After some time, we shot a little a-head of them, lying thwart her Hawle, close aboard; and plied them so warmly, that she soon struck her Colours two-thirds down. By this time the *Duchess* came up, and fired about five Guns, with a Volley of small Shot; but the Enemy, having submitted, made no Return. We sent our Pinnace aboard, and brought the Captain, with the Officers, away; and, having examined them, found there was another Ship come out of *Manilla* with them, of larger Burden, having about forty brass Guns mounted, and as many Pattereroes; but, they told us, they lost her Company three Months ago, and reckon'd she was got to *Acapulco* before this time, the sailing better than this Ship. This Prize was called by the swelling Name of *Nuestra Señora de la Incarnacion Defenganio*, Sir *John Pickberty* Commander; she had twenty Guns, twenty Pattereroes, and 193 Men aboard, whereof nine were killed, ten wounded, and several blown up with Powder. We engaged them about three Glasses; in which time, we had only myself and another Man wounded. I was shot through the Left Check; the Bullet struck away great Part of my upper Jaw, and several of my Teeth, Part of which dropt down upon the Deck, where I fell: The other, *William Powell*, an Irish Landman, was slightly wounded in the Buttock. They did us no great Damage in our Rigging; but a Shot disabled our Fore-mast. I was forced to write what I would say, to prevent the Loss of Blood, and because of the Pain I suffer'd by speaking. On the 23d of *September*, after we had put our Ships to rights, we stood in for the Harbour, which was distant about seven Leagues to the North-east. Our Surgeons went on board the Prize, to dress their wounded Men. About four in the Afternoon

we came to an anchor on board the *Marquis*, and which that Ship in going on board her was in the Evening Points; first, we next, how we Ship, which we bility of our taking. We agreed that for to believe the manner of the man, viz. the famous Mr. *Duck* make the best Terms. As to the other very desirous of the other *Manilla* Reflections cast, of last Prize so for Captain *Courtney*, *Marquis*; and the Committee, forced to stay it however, agreed on board the *Duchess* to attack the *Jeopards*, she and the Prize, we put Prize, in our ment we made Pieces of Eight agreed to sell the and to take the *don*, for the rou he very readily his Hand, that was settled, we rity, during the and for this we could.

32. On *Obrist* Top of an Hill. Sea, with Influx of Ships in the Colours, that were Prisoners, and which indeed was that this was a well-manned, and was carried, it for which we were tomorrow, the Captain sent the found there were instantly put all away her Sails, twenty-two Harkeeps, assist, and about 170, being Rudders, Sails, our Prize, a few give them Victuals very safely; yet want of each Ship our Prize, and in sift our Consorts in Sight. Captain Prize, and exact that guarded the I was in so weak so much swelled loud enough to of the chief Officers suaded me to sit Prize. We were seven a Clock; which we took t

we came to an Anchor, and received the Compliments of all on board the *Marquis*, on our sudden and unexpected Success, and which afforded us no small Satisfaction: We found that Ship in good Condition, ready to sail, and all the Men on board her very brisk, and eager for Action. At eight in the Evening, we had a Consultation on the two great Points; first, what should be done with the Hostages; and, next, how we should act with respect to the other *Manilla* Ship, which we thought there was at least a great Probability of our taking, if we could remain here a little longer. We agreed that it would be best, since we had good Reason to believe the Hostages from *Guiaquil*, and the Commander of the *Manilla* Ship, who was a French Gentleman, viz. the Chevalier *Jean Picberri*, Brother to the famous *Mr. du Cass*, to be Men of strict Honour, to make the best Terms possible, and then set them at Liberty. As to the other, we met with greater Difficulty. I was very desirous of going out with the *Duchess* to cruise for the other *Manilla* Ship; but there having been some Reflections cast, on account of the *Duchess* not engaging our last Prize so soon as it was thought she might have done, Captain *Courtney* was absolutely bent on going out with the *Marquis*; and the Officers of both Ships voting for this in the Committee, my Proposal was over-ruled, and we were forced to stay in the Harbour against our Will. It was, however, agreed, that we should put ten of our best Hands on board the *Duchess*, that she might be the better able to attack the *Acapulco* Ship, if we saw her; and, on *Christmas-eve*, she and the *Marquis* sailed. As soon as they were gone, we put Part of the Goods aboard the Bark into the Prize, in order to send away our Prisoners. The Agreement we made with them was this: As there were still 4000 Pieces of Eight due for the Ransom of *Guiaquil*, we agreed to sell them the Bark and Cargo for 2000 more; and to take the Chevalier *Picberri's* Bills, payable in *London*, for the round Sum of 6000 Pieces of Eight; which he very readily gave us, and an Acknowledgment under his Hand, that he thought it a good Bargain. When this was settled, we had nothing to look to but our own Security, during the small time that our Conforts were cruising; and for this we made the most prudent Disposition we could.

32. On *Christmas-day* we posted two Centinels on the Top of an Hill, from whence they had a fair View of the Sea, with Instructions, whenever they saw three Sail of Ships in the Offing, to make three Wuffs with their Colours, that we might have Time enough to secure our Prisoners, and to get out to the Relief of our Conforts; which indeed we expected, as having certain Intelligence, that this was a much stronger Ship than the other, better manned, and better provided in all respects; so that, if she was carried, it must prove very hot Work on both Sides, for which we were to prepare. On the 26th, in the Afternoon, the Centries made three Wuffs, and we immediately sent the Yawl to them for better Satisfaction, and found there were three Sail out at Sea: Upon which we instantly put all the Prisoners aboard the Bark, taking away her Sails, and fetched our Men aboard, leaving only twenty-two Hands belonging to us aboard the Prize, to keep, assist, and look after them. The Prisoners, who were about 170, being secured aboard our Bark without Arms, Rudders, Sails, or a Boat, and moored near a Mile from our Prize, a few more of our Men than was sufficient to give them Victuals and Drink, might have guarded them very safely; yet, for the more Security, we left a Lieutenant of each Ship, and the above Men well armed, aboard our Prize, and immediately weighed, in order to go and assist our Conforts to attack the great Ship, when she came in Sight. Captain *Dover* thought fit to go on board the Prize, and exchange Posts with one of the Lieutenants that guarded the Prisoners, and sent him to us in his stead. I was in so weak a Condition, and my Head and Throat so much swelled, that I yet spoke in great Pain, and not loud enough to be heard at any Distance; so that all the rest of the chief Officers, and our Surgeons, would have persuaded me to stay in the Harbour in Safety aboard our Prize. We weighed our Anchors, and got under Sail at seven a Clock; we saw Lights several times in the Night, which we took to be our Conforts Boats making false Fires.

In the Morning, at Day-break, we saw three Sail to Windward of us; but were so far distant, that we could not make which were our Conforts, and which the Chace, till about nine a Clock, when we saw the *Duchess* and Chace near together, and the *Marquis* standing to them with all the Sail she could croud. We made what Sail we could; but were to Leeward of them three or four Leagues, and, having a scant Wind, made little Way. At Noon, they bore South-east of us, being right to Windward about three Leagues. In the Afternoon, we saw the *Marquis* come up with the Chace, and engage her pretty briskly; but soon fell to Leeward out of Cannon-shot, and lay a considerable time, which made us think she was some way or other disabled. I ordered the Pinnace to be manned, and sent away to her; and, if what we suspected proved true; and we had no Wind to get up with them before Night, our Boat might dog the Chace with Signals till the Morning, that she might not escape us, and the other Ships; but, before the Boat could get up with them, the *Marquis* made Sail, and came up with the Chace; and both went to it again briskly for four Giffes and upwards. Then the Ship, which we took to be the *Duchess*, steered a-head to Windward of the Enemy, I suppose to fix her Rigging, or stop her Leaks. Meanwhile the other Ship kept her in Play, till she bore down again; and each, firing a Broadside or two, left off, because 'twas dark. They then bore South of us, which was right in the Wind's Eye, distant about two Leagues: By Midnight we were pretty well up with them, and our Boat came aboard, having made false Fires, which we answered. They had been aboard the *Duchess*, and the *Marquis*; and told me, the former had her Fore-mast much disabled, and the Ring of an Anchor shot away, with several Men wounded, and one killed, having received a Shot in the Powder-room, and several in their upper Works, but all stopt: They engaged the Ship by themselves the Night before, which was what we took to be the Boats Lights, being out of the Hearing of the Guns. At that time they could perceive the Enemy was in Disorder, her Guns not being all mounted, and consequently their Netting-deck and Close-quarters unprovided; so that had it been my good Fortune, in the *Duke*, to accompany the *Duchess*, as I desired, we all believed we might then have carried this great Ship; or if they, in the *Duchess*, had thought of taking most of the Men out of the *Marquis*, who did not sail well enough to come up to their Assistance at first, they alone, very probably; might have taken her, by boarding at once, before the *Spaniards* had experienced our strength, being afterwards so well provided, as encouraged them to lie driving, and give us all Opportunity to board them when we pleased. Captain *Cooke* sent me Word, that the *Marquis* had fired near all her Shot and Powder; but had escaped very well; both in Masts, Rigging, and Men. I sent our Boat with three Barrels of Powder, and Shot in Proportion, and Lieutenant *Fry*, to consult our Conforts how to engage the Enemy to the best Advantage at Break of Day. The Chace had made Signals to our Ship all the Day and Night, because she took us for her Confort, which we had in Possession; and, after it was dark; had edged away to us; otherwise I should not have been up with her, having very little Wind, and that against us. In the Morning, as soon as it was Day, the Wind veering at once, put our Ship about, and the Chace fired first upon the *Duchess*, who, by means of the Wind's veering, was nearest the Enemy; she returned it smartly; we stood as near as possible, firing as our Guns came to bear: But the *Duchess* being by this time thwart the Haws, and firing very fast, those Shot that missed the Enemy, flew from the *Duchess* over us, and betwixt our Masts; so that we ran the Risk of receiving more Damage from them, than from the Enemy, if we had lain on her Quarters, and cross her Stern, as I designed, while the Enemy lay driving there: This forced us to lie along-side, close aboard her, where we kept firing Round-shot, and did not load with any Bar or Partridge, because the Ship's Sides were too thick to receive any Damage by it; and, no Men appearing in Sight, it would have been a Clog to the Force of our Round-shot.

33. We kept close aboard her, and drove as she did, as near as possible: The Enemy kept to their Close-quarters; so that we did not fire our small Arms, till we saw a *Man* appear;

appear, or a Post open; then we fired as quick as possible. Thus we continued for four Glasses, about which time we received a Shot in the Main-mast, which much disabled it: Soon after, the *Duck's* and we firing together, we came back close under the Enemy, and had like to have been all aboard her; so that we could make little Use of our Guns. Then we fell a-stern in our Birth Along-side, where the Enemy threw a Fire-ball out of one of her Tops, which, lighting upon our Quarter-deck, blew up a Chest of Arms and Cartouch-boxes, all loaded, and several Cartridges of Powder in the Steerage; by which means Mr. *Vanbrugg*, our Agent, and a *Dutchman*, were very much burnt. It might have done more Damage, had it not been quenched soon. After we got clear of each other, the *Duck's* stood in for the Shore, where she lay braced to, mending her Rigging, &c. The *Marquis* fired several Shot, but to little Purpose, her Guns being small: We were close aboard several times afterwards, till at last we received a second Shot in the Main-mast, not far from the other, which rent it miserably, and the Mast settled to it; so that we were afraid it would drop by the Board; and, having our Rigging shattered very much, we steered off, and brought to, making a Signal to our Comforts what to do: In the Interim, we got ordinary Fishes for a Support to the Main-mast, and fastened it, as well as we could, to secure it at present. Captain *Courtney* and Captain *Cooke* came aboard, with other Officers; where we considered the Condition the three Ships were in, their Masts and Rigging being much damaged, in a Place where we could get no Recruit; that, if we engaged her again, we could propose to do no more than what we had already done, which was evident did her no great Hurt, because we could perceive few of our Shot entered her Sides to any Purpose; and our small Arms availed less, there being not a Man to be seen Above-board; that the least thing in the World would bring our Main-mast, and likewise the *Duck's* Fore-mast, by the Board, either of which, by its Fall, might carry away another Mast, and then we should lie a perfect But for the Enemy, having nothing to command our Ships with; so that, by his heavy Guns, he might either sink or take us: That, if we went to board her, we should run a great Hazard in losing a great many Men, with little Hopes of Success, they having above treble the Number aboard to oppose us; and there being now, in all our three Ships, not above 120 Men fit for boarding, and those but weak, having been very short of Provisions; so that, if we had boarded her, and been forced off, or left any of our Men behind, the Enemy by that means might have known our Strength, and then gone into the Harbour, and took Possession of the Prize in spite of all we could do to prevent it. Besides, our Ammunition was very short, having only enough to engage a few Glasses longer: All this being seriously considered, and knowing the Difficulty we should have to get Masts, and the Time and Provisions we must spend before we could get them fitted, we resolved to forbear attempting her further, since our battering her signified little, and we had not Strength enough to board her: Therefore we agreed to keep her Company till Night, then to lose her, and make the best of our Way into the Harbour, to secure the Prize we had already taken. We engaged first and last about seven Hours, during all which time we had, aboard the *Duke*, but eleven Men wounded, three of whom were scorched with Gunpowder. I was again unfortunately wounded in my Left Foot with a Splinter, just before we blew up on the Quarter-deck; so that I could not stand, but lay on my Back in a great deal of Miskery, Part of my Heel-bone being struck out, and all under my Ankle cut above half-through; which bled very much, and weakened me, before it could be dressed and stopped. The *Duck's* had about twenty Men killed and wounded: Three of the latter, and one of the former, were my Men. The *Marquis* had none killed or wounded, but two scorched with Powder. The Enemy's was a brave lofty new Ship, the Admiral of *Manilla*, and this the first Voyage she had made. She was called the *Vigonia*, of about 900 Tons, and could carry sixty Guns, about forty of which were mounted with as many Pattereroes, all Bra's; her Complement of Men on board, as we were informed, was above 450, besides Passengers; they added, that 150 of the Men

on board this great Ship were *Europeans*, several of whom had been formerly Pirates, and, having now got all their Wealth aboard, were resolved to defend it to the last. The Gunner, who had a Post in *Manilla*, was an expert Man, and had provided the Ship extraordinary well for Defence, which made them fight so desperately. They had filled up all between the Guns with Bales, to secure the Men; She kept a *Spanish* Flag at her Main-top-mast-head all the Time she fought us: We shattered her Sails and Rigging very much, shot her Mizen-yard, killed two of her Men out of her Tops, which was all the Damage we could see we did them, tho' we could not place less than 500 Shot (Six-pounders) in her Hull. These large Ships are built at *Manilla*, with excellent Timber, that will not splinter, they have very thick Sides, much stronger than we build in *Europe*. Thus ended our Attempt on the biggest *Manilla* Ship; which I have heard related to many ways at home, that I thought it necessary to set down a very particular Circumstance of it, as it stood in my Journal. Had we been together at first, and boarded her, we might probably have taken this great Prize; but, after the Enemy had fixed her Netting-neck, and Close-quarters, they valued us very little. I believe also we might have burnt her with one of our Ships; but that was objected against by all the Officers, because we had Goods of Value on board all our Ships. The Enemy was the better provided for us, because they had heard at *Manilla*, from our *English* Settlements in *India*, that there were two small Ships, fitted from *Bristol*, that designed to attempt somewhat in the South Seas, and that Captain *Dampier* was Pilot; which was the Reason they had so many *Europeans* aboard the great Ship, most of whom having, as I said, their Wealth aboard, they would fight to the utmost; and, having agreed to pay no Freight there, had filled up all between the Guns with Bales, to secure the Men. The two Ships were to have joined at Cape *St. Lucas*, expecting to meet us off Cape *Corientes*, or *Natividad*. This was a great Disappointment to us, and gave, no doubt, much Reputation to them: Indeed they defended themselves gallantly; and, in all human Probability, would have defended her to the last; and yet, perhaps, they were as much indebted to our Squabbles, as to their own Courage and Conduct: Which shews what Care ought to be taken on board all such Vessels, to avoid Disputes, which are always fatal to great Undertakings, and small ones. We were sensible of it, when it was too late; but our Sense of it would not recal what was past, nor could it prevent what was to come; for, instead of taking Warning, as reasonable People should have done, by the Effects of this gross Mistake, we, on the contrary, suffered ourselves to be thrown by it into new and greater Disorders, than had hitherto arisen during the Voyage.

34. On *January* 1. 1710. we returned again into *Pearl*; and, as we were now determined to make as quick Dispatch as possible in our Passage to the *East Indies*, we immediately parted with our Prisoners, giving them the Bark, with Water and Provisions sufficient for their Voyage to *Acapulco*. Then we applied ourselves to settling our own Affairs. We spent our Time to the 7th in refitting, wooding, and watering; and very satisfactory it was for us to find as much Bread on board the Prize, as, with our old Stock, might supply us in our long Run to *Guam*. On the 2d, we fetched our three wounded Men from on board the *Duck's*. One of them, whose Name was *Thomas Young*, a *Wesleyan*, had lost one of his Legs; another, who was also a *Wesleyan*, had his Face miserably torn; and a third, whose Name was *John Gold*, was wounded in the Thigh; and, besides these, there was a very honest *Portuguese*, one *Emanuel Goncalves*, killed. About this time, Captain *Courtney*, and his Officers, with those on board the *Marquis*, were too willing to compliment Captain *Dover* with the chief Command of the Prize, which, till now, I thought he would not have accepted, his Posts already being above a Commander of any of our Prizes; but I and my Officers were against it, because we believed Captain *Fry*, or others, were fitter Persons to take Charge of her; which we insisted on. And Captains *Courtney* and *Cooke* came to me, where they agreed to a Paper, that was drawn up while we were all together, in such a manner, as I thought would have satisfied every one. Captain *Courtney* carried this Agreement

to Captain *Dover* be content with w prize, they spent of making Capta brought a Paper, mander, without that should navig he should think f this Morning, to ward, having her and desired that that the Committe would make use c then all aboard the our last Meeting, me, and my Offic diately answered b signed on the 9th *Dover* might be a Owner, we all agr care of her Cargo, could be made for l Consequence to us, structions to me, t curest Methods to be fo fortunate, as pulco Ships; so tha Sides, I desired the determine what th Time might be lost the *Batcbelor*, to en long Debate, they w act in equal Posts, Ship, tho' under Ca molested or contr Duty it was to see, to the Interest of the Nature of an Agent, at first; only he had which was so small a mon, that we all co they chose Officers, Men aboard her, the thirteen, which, wit *Laf-Car*, and other I present about 110 b first Agreement, I w to my Instructions fr ences about this Affa safe Arrival in *Grea* thirty-five good *Han quis* put no more tha and *Cooke*, and two e to me, where we sig two Commanders, re amongst them; and of Rendezvous was to where we designed to willing to have conr had not been satisfie to conceal it; and th in Justice to myself, give the Whole; wh sonable, because it m the like Circumstance ours, there is nothing

35. As I have not scriptions, so, before to give the Reader s because most of what fore it deserves the g *Spaniards*, that some *California* and the N meeting with those V dust not venture any Probability, it joins Northward: For the Sign of being near having more Territo

to Captain *Dover* to sign it; not doubting, but all would be content with what we had concluded; yet, to our Surprise, they spent the Remains of the Day, and instead of making Captain *Dover* comply with it, undid all, and brought a Paper, which impowered him to be sole Commander, without the least Restraint of not molesting those that should navigate the Ship, but to order every thing as he should think fit. I sent a Letter to Captain *Courtney* this Morning, to know what Measures were going forward, having heard nothing from him since the 7th Instant; and desired that there might be no Loss of Time, but that the Committee might meet once more, to try if they would make use of their unbiassed Reason: They were then all aboard the *Marquis*, where I heard they had, since our last Meeting, concerted how to frame a Protest against me, and my Officers of the Committee, which was immediately answered by a Protest from me, both which were signed on the 9th. I had always desired, that Captain *Dover* might be aboard her; for, being a considerable Owner, we all agreed he was a very proper Person to take care of her Cargo, and to have all Accommodation that could be made for him in that Ship, which was of such vast Consequence to us, and our Employers: That, in their Instructions to me, they strictly charged me to use the securest Methods to bring her safe home, in case we should be so fortunate, as we now were, to take one of the *Acapulco* Ships; so that, after the Protests were over on both Sides, I desired they might assemble together, and finally determine what the Majority would agree on, that no Time might be lost: So all the Council met again on board the *Batclor*, to endeavour an Accommodation. After a long Debate, they voted Mr. *Fry* and Mr. *Stretton* both to act in equal Posts, to take Charge of the navigating the Ship, tho' under Captain *Dover*; but they were not to be molested or contradicted in their Business by him, whose Duty it was to see, that nothing should be done contrary to the Interest of the Owners, and Ships Companies, in the Nature of an Agent, almost in the same manner I proposed at first; only he had the Title of chief Captain in that Ship, which was so small a Difference, where Titles were so common, that we all consented to it: And at the same time they chose Officers, agreeing, that we should put thirty Men aboard her, the *Duchess* twenty-five, and the *Marquis* thirteen, which, with thirty-six *Manilla* Indians, called *Laf-Cas*, and other Prisoners we had left, made her Complement about 110 Men. The Majority keeping to their first Agreement, I was obliged to come into it, according to my Instructions from our Owners; so that all our Differences about this Affair were at an End, and we drank to our safe Arrival in *Great Britain*. In the Morning, we put thirty-five good Hands aboard her: The *Duchess* and *Marquis* put no more than their Share. The Captains *Courtney* and *Cooke*, and two or three more of the Committee, came to me, where we signed a Paper for Captain *Dover*, and the two Commanders, recommending Peace and Tranquillity amongst them; and that, in case of Separation, the Place of Rendezvous was to be *Guam*, one of the *Ladrone* Islands, where we designed to touch. I should have been very unwilling to have committed all this Dispute to Writing, if I had not been satisfied, that it was no longer in my Power to conceal it; and that, since it was known in part, I ought, in Justice to myself, my Friends, and to Truth itself, to give the Whole; which I conceive so much the more reasonable, because it may hereafter prove useful to Persons in the like Circumstances: And, in so perplexed a Business as ours, there is nothing so serviceable as Precedents.

35. As I have not filled this Work with a Variety of Descriptions, so, before I quit *America*, it may not be amiss to give the Reader some Account of *California*; the rather because most of what I relate I was Eye-witness of, and therefore it deserves the greater Credit. I have heard from the *Spaniards*, that some of their Nation had sailed as far betwixt *California* and the Main as 42° North Latitude, where, meeting with shoal Water, and abundance of Islands, they durst not venture any farther; so that, if this be true, in all Probability, it joins to the Continent a little farther to the Northward: For shoal Water and Islands are a general Sign of being near some Main-land. But the *Spaniards*, having more Territories in this Part of the World, than

they know how to manage, are not curious after further Discoveries. The *Manilla* Ships, bound to *Acapulco*, often make this Coast in the Latitude 40° North; and I never heard of any, that discovered it farther to the Northward. Some old Draughts make it join to the Land of *Jesso*; but all this being yet undetermined, I shall not take upon me to affirm, whether it is an Island, or joins to the Continent. The *Dutch* say, they formerly took a *Spanish* Vessel in those Seas, which had sailed round *California*, and found it to be an Island; but this Account cannot be depended on, and I chuse to believe it joins to the Continent. There is no certain Account of its Shape or Bigness; and, having seen so little of it, I shall refer the Reader to our common Draughts for its Situation. What I can say of it from my own Knowledge is, that the Land where we were is, for the most part, mountainous, barren, and sandy, and had nothing but a few Shrubs and Bushes, which produced Fruit and Berries of several sorts. Our Men, who went in our Bark to view the Country about fifteen Leagues to the Northward, say, it was there covered with tall Trees. The *Spaniards* tell us of several good Harbours in this Country; but we found none of them near this Cape. We frequently saw Smoke in several Places; which made us believe the Inhabitants were pretty numerous. The Bay, where we rode, had but very indifferent Anchoring-ground in deep Water, and is the worst Recruiting-place we met with since we came out. The Wind, at this Time of the Year generally blowing over Land, makes it good Riding on the Starboard Side of the Bay, where you anchor on a Bank, that has from ten to twenty-five Fathom Water: But the rest of the Bay is very deep; and, near the Rocks, on the Larboard Side, going in, there is no Ground. During the Time of our Stay, the Air was serene, pleasant, and healthful; and we had no strong Gales of Wind, very little Rain, but great Dews fell by Night, when it was very cold. The Natives we saw here were about 300. They had large Limbs, very strait, tall, and of a much blacker Complexion, than any other People, that I had seen in the South Seas; their Hair long, black, and strait, which hung down to their Thighs: The Men stark-naked; and the Women had a Covering of Leaves over their Privities, or little Clouts made of Silk-grass, or the Skins of Birds and Beasts. All of them, that we saw, were old, and miserably wrinkled. We suppose they were afraid to let any of their young ones come near us; but needed not: For, besides the good Order kept among our Men in that respect, if we may judge by what we saw, they could not be very tempting. The Language of the Natives was as unpleasant to us, as their Aspect; for it was very harsh and broad, and they pronounced it so much in their Throat, as if their Words had been ready to choke them. I designed to have brought two of them away with me, in order to have had some Account of the Country, when they had learnt so much of our Language, as to enable them to give it; but, being short of Provisions, I durst not venture it. Some of them wore Pearls about their Arms and Necks, having first notched it round, and fastened it with a String of Silk-grass; for, I suppose, they knew not how to bore them. The Pearls were mixed with little red Berries, Sticks, and Bits of Shells, which they looked upon to be so fine an Ornament, that, tho' we had Glass-beads of several Colours, and other Toys, they would accept none of them. They coveted nothing we had, but Knives, and other cutting Instruments; and were so honest, that they did not meddle with our Coopers or Carpenters Tools; so that, whatever was left ashore at Night, we found in the Morning. We saw nothing like *European* Furniture or Utensils about them. Their Huts were very low, and made of Branches of Trees and Reeds; but not sufficiently covered to keep out Rain. They had nothing like Gardens or Provisions about them. They subsisted chiefly on Fish while we were here, which, with the Miserableness of their Huts, that seemed only to be made for a time, made us conclude, they had no fixed Habitation here, whatever they might have elsewhere; and that this was their fishing Season. We saw no Nets or Hooks, but wooden Instruments, with which they strike the Fish very dextrously, and dive to Admiration. Some of our Sailors told me, they saw one of them dive with his Instrument, and, whilst he was under Water, put up his Striker, with

a Fish on the Point of it, which was taken off by another, that watched by him in a Bark-log. The Reader may believe of this what he pleases; but I give it the more Credit, because I myself threw some rusty Knives over-board, on purpose to try the Divers, who seldom missed catching a Knife before it could sink above three or four Fathom; which I took to be an extraordinary Proof of their Agility. Instead of Bread, they used a little black Seed, which they ground with Stones, and eat by Handfuls. Some of our Men thickened their Broth with it, and said, it tasted somewhat like Coffee. They have some Roots, that eat like Yams; a sort of Seeds, that grow in Cods, and taste like green Pease; a Berry, which resembles those of Ivy, and, being dried at the Fire, eats like parched Pease. They have another, like a large Currant, with a white tartish Pulp, a Stone, and a Kernel. This sort of Fruit they seem to value much. They have also a Fruit, which grows on the Prickle-pear-tree, tastes like Gooseberries, and makes good Sauce. They have many other Seeds and Plants unknown to us; but I was not in a Condition to view and describe them. They seem to have an hunting Season, by the Skins of Deer we saw among them. They paid much Respect to one Man, whose Head was adorned with Feathers, made up in the Form of a Cap. In other Respects, they seemed to have all things in common; for, when they exchanged Fish with us for old Knives, of which we had plenty, they gave the Knives to any that stood next; and, after they had enough, we could get no Fish from them. They appeared to be very idle, and seemed only to look after a pretent Subsistence. They observed our Men very attentively, while they cut Wood, and filled Water; but did not lend us an Hand at either, or indeed in any thing that required hard Labour. Their Arms are Bows and Arrows, with which they can shoot Birds flying. Their Bows are about seven Feet long, and of a tough Wood, unknown to us, with Strings of Silk-grass; their Arrows about four Feet and an half, made of Cane, and pointed with Fish-bones, that they shape for the Purpose. Most of their Knives, and other cutting Instruments, are made of Sharks Teeth. I saw two or three large Pearls in their Necklaces and Bracelets; and the Spaniards told me, they had Quantities of them from the inner Part of the Gulph of California, where they have Missionaries planted among them. Our Men told me, they saw heavy shining Stones ashore, which looked as if they came from some Mine; but they did not inform me of this, till we were at Sea; otherwise I would have brought some of them, to have tried what Metal could have been extracted out of them. The Spaniards likewise informed me, that the Country in general within, on the Main-land of Mexico, is pleasant, and abounds with Cattle and Provisions of all sorts. The Natives grew very familiar with us, and came frequently aboard, to view our Ships; which they mightily admired. We saw no Boats or Canoes among them, or any Craft, but Bark-logs, which they steered with Paddles at each End. We gave one of the Natives a Shirt; but he soon tore it in Pieces, and gave it to the rest of his Company, to put the Seeds in, which they used for Bread. We saw no Utensils for Cookery amongst them; nor do I suppose they have any, for they bury their Fish in a Heap of Sand, and make a Fire over it, till they think it fit for eating. There were in this Bay all the Fish usual in these Seas. The fresh Water here is good; and they have abundance of Sarsapilla. They make a Fire in the Middle of their Huts, which are very low and smoky. We saw no extraordinary Birds here. I was told by our People, that had been ashore, that they obtain Fire, by rubbing two dry Sticks one against the other, as customary amongst the wild Indians. The Entrance into the Harbour may be known by four high Rocks, which look like the Needles of the Isle of Wight, as you come from the Westward; the two Westmost in form of Sugar-loaves; the innermost has an Arch, like a Bridge, through which the Sea makes its Way. Here you ride Land-locked from East by North back to the South-east by East: Yet it is but an ordinary Road, if the Wind should come strong out of the Sea; which it never did while we lay there. I think it may not be amiss to add to these Facts, which cannot be disputed, some Conjectures, that carry in them great Probability, and, if ever they should be demonstrated to be Certainties, would be attended

with very important, and to us, that inlabit this Northern Part of the World, advantageous Consequences. There have been many Opinions started about the Peopling of America; but that which, to me, appears the most probable, is, that its Inhabitants came hither from Tartary, by that Northern Continent, which is supposed to join this Country to some Part of Asia: I say, to me this appears the most probable, and my Reason for it is this; because the Spaniards, who come hither annually from Manila or Luconia, one of the Philippine Islands in the East Indies, are forced to keep in an high Latitude, for the Benefit of the Westerly Winds; and have often found, finding Ground in Latitude 42° North, in several Places of the Ocean betwixt the East Indies and America, which makes me conclude there must be more Land, tho' none of them, as I have heard of, ever saw any Continent, till they fell in with California in about 38° or 39° North Latitude. I have often admired, that no considerable Discoveries have yet been made in South Latitude from America to the East Indies. I never heard the South Ocean has been run over by above three or four Navigators, who varied very little in their Runs from their Course, and, by consequence, could not discover much. I give this Hint, to encourage our South Sea Company, or others, to go upon some Discovery that Way, where, for aught we know, they may find a better Country than any yet discovered, there being a vast Surface of the Sea from the Equinox to the North Pole, of at least 2000 Leagues in Longitude, that has hitherto been little regarded, tho' it be agreeable to Reason, that there must be a Body of Land about the South Pole, to counterpoise those vast Countries about the North Pole. This I suppose to be the Reason, why our ancient Geographers mentioned a Terra Australis incognita, tho' very little of it has been seen by any-body. The Land near the South Pole in the South Sea, from California to Japan, is wholly unknown, altho' the old Maps describe the Straights of Anan, and a large Continent, which is but imaginary; for the Dutch themselves, who now trade to Japan, say, they do not yet know, whether it be an Island, or join to the Continent. I have now done with California, of which the Spaniards would know very little, but for these annual Vessels, that sail from Manila to Acapulco. As I have mentioned these Ships, I shall take Occasion to observe, that, generally speaking, those that come from Manila, are much richer than our Prize; for she waited a long time for the Chinese Junks to bring Silk; which not arriving, she came away with a Cargo mixed with abundance of coarse Goods. Several of the Prisoners assured me, that it was a common thing for a Manila Ship to be worth 10,000,000 Pieces of Eight; so that, had it not been for this Accident, we had taken an extraordinary Prize indeed. After my Return into Europe, I met, in Holland, with a Sailor, who had been on board the large Ship, when we engaged her; and he let us into the Secret, that there was no taking her, as the Gunner kept constantly in the Powder-room, declaring that he had taken the Sacrament to blow the Ship up, if we boarded her; which made the Men, as may be supposed, exceedingly resolute in her Defence. I was the more ready to credit what this Man told me, because he gave a regular and circumstantial Account of the Engagement, as I could have done from my Journal.

36. January 10. we weighed from Port Seguro, but were becalmed under the Shore till the 12th in the Afternoon, when there sprung a Breeze, which ran us out of Sight of the Land. We took our Departure from Cape de Lucas, which bore North by East, at twelve o'Clock. Distance fifteen Leagues: We were forced to go with little or no Refreshment, having but three or four Pounds, and a very slender Stock of Liquor: Several of our Men were in a weak Condition, besides myself, Mr. Vanbrugh, and the rest that were wounded. We were forced to allow but one Pound and an half of Flour, and one small Piece of Meat to five Men in a Mess, with three Pints of Water a Man for twenty-four Hours, for Drink, and dressing the Victuals. We struck down ten of our Guns into the Hold to ease our Ship. On the 16th, the Batavolier made Signal, to give us some Bread, they having found a good Quantity of Bread and Sweet meats on board her, but none of Flesh-kind. We had one thousand Weight of Bread

our Share, the hundred Weight Prize two Calks of Pork, they having in Flesh. On the very much discoloured immediately founded the Dutchess, and we got into the L told us, it was Islands and Shole time ago. Ever B Acapulco, runs in they make the Mill milling some Pie and found the Th fore, and forgiven punished now, le to follow this bad our Runs so long I ordered them t Watch to give th their Mies-mates, Irons. March the Northernmost bear seven Leagues; 1 South-west five L great Shole betw We ran along th of Guam, from w look at the Ships would venture on of the Island bore a low small Island, it and Guam. pleasant: Off it t ward; but, keepin near it, there is the Shole. After Loof, and stood betwixt this and cane heavy Flaws and at other times the Afternoon in t off Shore, where Island to the South Leagues; and an North North-west, our stopping at the visions was very haulted; and wha cially our Bread a fourteen Days, at recruit quietly, we aboard, that were in case of sending of them, as we w Colours, came und in the Boat, who, Friends, came on h from the Governo Letter, and the n with a generous C which made us v ment was provide Gentlemen, to whi myself; but was the Batavolier, whic be sent from each handsome Present, vility, and the Ke the 12th, there w Marquis, to whic after which, a Con Resolution was cu went with several o who received the Respeet, having no Landing, and the

our Share, the *Duchess* as much, and the *Marquis* five hundred Weight; in lieu of which, we sent back to the Prize two Casks of Flour, one of *English* Beef, and one of Pork, they having but forty-five Days Provisions aboard in Flesh. On the 26th in the Morning, the Water was very much discoloured, at which being surpris'd, we immediately sounded, but found no Ground. We spoke with the *Duchess*, and agreed to go away West South-west, till we got into the Latitude of 13°, because our *Spanish* Vessel told us, it was dangerous going into 14°, by reason of Islands and Shoals, where a *Spanish* Vessel was lost some time ago. Ever since, the *Manilla* Ship, in her Return from *Atapuesco*, runs in Latitude 13°, and keeps the Parallel, till they make the Island of *Guam*. On the 18th, the Steward mitted some Pieces of Pork, we immediately searched, and found the Thieves: One of them had been guilty before, and forgiven, on Promise of Amendment; but was punished now, lest Forbearance should encourage the rest to follow this bad Practice, Provisions being so short, and our Runs so long, which might prove of ill Consequence: I ordered them to the Main-jeers, and every Man of the Watch to give them a Blow with a Cat-of-nine-tails; and their Mess-mates, being privy to the Theft, were put in Irons. *March* the 11th, we had Sight of both Islands, the Northernmost bearing North North-west, distant about seven Leagues; and the Body of the Westernmost West South-west five Leagues. The *Spaniards* say there is a great Shole between these Islands, but nearest to *Serpana*. We ran along the Shore, being satisfied it was the Island of *Guam*, from whence there came several flying Procs to look at the Ships; they ran by us very swift, but none would venture on board. At Noon, the Westernmost Part of the Island bore West; and, at the same time, we made a low small Island, joining to *Guam*, with a Shole between it and *Guam*. The Island appeared green, and very pleasant: Off it there runs a Spit of Sand to the Southward; but, keeping it a good Birth from you, as you come near it, there is no Danger, being gradual Soundings to the Shole. After we were clear of it, we sprung our Loof, and stood in for the Harbour, which lies Midway betwixt this and the North Part of the Island. There came heavy Flaws of Wind off Shore, sometimes for us, and at other times against us; but we got to an Anchor in the Afternoon in twelve Fathom Water, about half a Mile off Shore, where there was a little Village. The small Island to the South bore South of us, distant about three Leagues; and another small one to the Northward bore North North-west, about two Leagues. The Necessity of our stopping at these Islands to get a Refreshment of Provisions was very great, our Sea-store being almost exhausted; and what we had left, was very ordinary, especially our Bread and Flour, which was not enough for fourteen Days, at the shortest Allowance. In order to recruit quietly, we endeavoured to get some of the Natives aboard, that were in the Procs, to keep them as Hostages, in case of sending any of our Men to the Governor. One of them, as we were turning into the Harbour with *Spanish* Colours, came under our Stern: There were two *Spaniards* in the Boat, who, on our assuring them, that we were Friends, came on board; and, soon after, came a Message from the Governor, to whom we wrote a very respectful Letter, and the next Day received a civil Answer to it, with a generous Offer of any thing the Island afforded; which made us very easy. On the 13th, an Entertainment was provided on board the *Bartolow* for the *Spanish* Gentlemen, to which I was carried, being not able to move myself; but was hoisted in a Chair out of the Ship into the *Bartolow*, where we agreed, that a Deputation should be sent from each Ship to wait on the Governor with an handsome Present, in Acknowledgment for his great Civility, and the Readiness he expressed to supply us. On the 15th, there was another Entertainment on board the *Marquis*, to which I was carried as to the former; and, after which, a Committee was held, in which our former Resolution was confirmed. On the 16th, our Pinnace went with several of our Officers to the Governor's ashore, who received them with all imaginable Friendship and Respect, having near 200 Men drawn up in Arms at their Landing, and the Officers and Clergy of the Island, to

condukt them to the Governor's House, which was a very handsome Seat, considering where we found it. They entertained them with at least sixty Dishes of several Sorts, the best that could be got on the Island; and, when they took their Leaves, each fired a Volley of Small-arms. They presented the Governor, according as we had agreed, with two Negro Boys, dressed in Liveries, twenty Yards of scarlet Cloth-ferge, and six Pieces of Cambrick, which he seemed wonderfully pleased with, and promised to assist us in whatever lay in his Power. The very next Day we got our Dividend, being about 60 Hogs, 99 Fowls, 24 Baskets of *Indian* Corn, 14 Bags of Rice, 44 Baskets of Yams, and 800 Cocoa-nuts. On the 18th, there was an Entertainment aboard us, where we had most of our Officers, and four *Spanish* Gentlemen from the Governor. I made them as welcome as Time and Place would permit, diverting them with Music, and our Sailors dancing till Night, when we parted well-pleas'd on both Sides. We got some more Bullocks on board, being small lean Cattle, but what we gladly accepted. Each Ship had fourteen in all. Next Morning each Ship had two Cows and Calves more: Being the last, we had a Meeting on board the *Marquis*, where it was agreed to make an handsome Present to the Governor's Deputy, who got our Provisions together, wherein he used all possible Dispatch. We gave him, and the rest of the Gentlemen, what they esteem'd double the Value of what we received of them; which they certified under their Hands, and that we had been very civil to them: We also gave them the like Certificate, signed by all our Officers, to shew to any *English* that might have Occasion to recruit there; and parted very friendly. Having finished that Affair, it was agreed, that we should steer from hence a West by South Course, to go clear of some Islands that lie in our Way; and then thought it proper to steer directly for the South-east Part of *Mindanao*, and from thence the clearest Way to *Ternate*. In the mean time I put an old *Spaniard* ashore, called *Antonio Gomes Figuero*, whom we took in the first Bark in the South Seas, and kept in order to carry him to *Great Britain*, to condemn all our Prizes taken there; but, he being now not likely to live, we agreed to dismiss him, he giving us a Certificate, that he law us attack and take several Prizes, all Subjects to *Philip V.* King of *Spain*, &c. I gave him some Clothes, and other Things, to help him in his Sickness; then put him ashore to the Deputy Governor, and the rest of the *Spanish* Officers, who gave us a Certificate, that they received such a Person. The Governor presented us with one of their flying Procs or Prows, which I shall here describe, because of the Oddness of it: The *Spaniards* told me it would run twenty Leagues in an Hour, which I think exceeds the Truth; but, by what I saw, I verily believe they may run twenty Miles, or more, in the Time; for, when they viewed our Ships, they pass'd by us like a Bird flying. These Procs are about thirty Feet long, two broad, and about three deep; they have but one Mast, which stands in the Middle, with a mat Sail, made in the Form of a Ship's Mizzen. The Yards are slung in the Middle, and a Man sits at each End to steer her; so that when they go about, they don't turn the Boat as we do, to bring the Wind on the other Side; but only change the Sail, so that the Jack and Sheet of the Sail are us'd alike, and the Boat's Head and Stern are the same; only they change them, as Occasion requires, to sail either Way; for they are so narrow, that they could not bear any Sail, were it not for Booms that run out from the Windward Side, fastened to a large Log, shaped like a Boat, and near half as long, which becomes contiguous to the Boat: On these Booms a Stage is made, above the Water, on a Level with the Side of the Boat, upon which they carry Goods or Passengers. The great Inconvenience in sailing these Boats is before the Wind; for, by the Outlayer, which is built out on one Side, if the Wind presses any thing heavy on the contrary Side, the Boat is overset, which often happens. As soon as the Boat returned from landing Signior *Figuero*, we put under Sail, having a fine Breeze of Wind at East North east. *April* 14. in the Afternoon, we made Land, which bore West North-west, distant about ten Leagues; and suppos'd it to be the North-east Part of *Celebes*. We saw three Water-

spots; one of which had like to have broken on the *Marquis*, but the *Duchess*, by firing two Shot, broke it before it reached her. We saw a very large Tree afloat, with a Multitude of Fish about it, and two large Islands, the Southernmost bearing South-west, distant about eight Leagues, and the Northernmost West North-west, seven Leagues, both being the same Land we saw the Day before; and the latter we then supposed to be the South-east Part of *Morotay*, and the other, the North Part of *Gilolo*. In this Condition we sailed till towards the latter End of the Month, with this additional Vexation, that our Ship was to leaky, that it was as much as four Men were able to do to keep her free half an Hour. Captain *Dampier* discouraged us very much: He had been twice here, and therefore what he said amongst the Seamen, passed without Dispute; and he laid it down as a thing certain, that if we could not reach *Ternate*, or find the Island of *Tula*, it was impossible for us to get any Refreshment, there being nothing to be met with on the Coast of *New Guiney*. There were, in the mean time, great Heart-burnings on board all the Ships about the Reduction of our Allowance, so that we were obliged to enlarge it again; so little is Reason able to prevail against Hunger. We held frequent Consultations, but to very little Purpose; and, though we sailed the best Part of the Month of *May* through the Straights of *New Guiney*, yet we were able to observe nothing worth mentioning, except that it is most certain, these Islands, which are scattered through the Straights, and few or none of which are peopled, would all of them bear Spice, and afford immense Riches to this Nation, if they were settled. It may, indeed, be objected; That, from the Account I have given of the Difficulty of this Passage, no great Encouragement can arise to the fixing Colonies or Plantations there: But to this I answer; That this Difficulty arises intirely from the Want of proper Charts, for the Direction of such as sail in those Seas; and these might certainly be very soon provided, if such Settlement came once to be considered as a national Concern. The Passage, otherwise, is not either difficult or dangerous: But, when Men are at a Loss how to steer, are short of Provisions, in leaky Ships, and clogged with great Cargoes, they may have many Reasons to complain, which, with good Management, might never betel any of the Vessels employed in settling those Islands. On the 18th of *May*, we passed between the High-land of *New Guiney* and the Low-land of *Gilolo*: And, on the 20th, we made another high Island, which we took to be *Ceram*; and Captain *Dampier* inclined to think our Conjecture was right.

37. On *May* 24. being in the Latitude of the Island of *Bouro*, we expected to make that Land, which is about twenty Leagues to the South-west of *Ceram*, and near the same Distance, in a Parallel, with *Ambonya*, which we designed to have touched at, if the Wind had proved favourable: But, as the South-east Monsoon was now set in, we were out of hopes of reaching it; and, notwithstanding the Skill of Captain *Dampier*, we were still very doubtful, whether the Island we passed by last, was *Ceram* or *Bouro*. By an Observation we had at Noon, it appeared, that we were in $4^{\circ} 30'$ South Latitude, and $237^{\circ} 29'$ Longitude West from *London*. As we were now in the Latitude of the Southern Part of *Bouro*, we imputed our not seeing it, to the Currents setting us to the Westward of it. The next Day, we came to a Resolution not to spend any more Time in searching for *Bouro*; as also to drop our Design of going to *Ambonya*, and to make the best of our Way for the Straights of *Bouton*; where, if we arrived safely, we might get Provisions sufficient to carry us to *Batavia*. In pursuance of this Agreement, we haled away South-west by South for them, having a fresh Gale of Wind at East; but, by two in the Morning, we fell in with a Parcel of Islands to the Eastward of *Bouton*; and had certainly been ashore on one of them, had not the Weather cleared up at once. We made a shift, and wore: The Ships then stood off North-east from the Land till Day-break, when we saw it trending from South by East, to South-west by South, about six Leagues Distance, which made a fine large Bay; but, as we stood in, we perceived an Opening, and that there were two Islands, with three

lying thwart the Outlet to the Southward of both: We hoisted out our Pinnace, and sent her ashore; the *Duchess* did the same, from whence they brought off some Coco-nuts, of which there were Plenty there; and told us, there were *Malayan* Inhabitants, who seemed to be very friendly. Up the Bay we saw several Boats, Houles, and abundance of the native *Malayans* walking along the Shore: We sent in our Boats for Provisions and Pilots, and myself and the *Marquis* turned up very near to the Town; but, finding several times, found no Ground. The Natives informal us, there was a Bank, opposite to the Town, where we might anchor. Abundance of People came off with *Indian* Wheat, Coco-nuts, Yams, Potatoes, Papas, Hens, and several sorts of Birds, to truck with us for Cloaths, Knives, Scissars, and other Toys, being very civil to all Appearance. They are *Mobammedans*, of a middle Stature, and tawny; but the Women are somewhat clearer than the Men; having very long black Hair, their Mouths, Lips, Noies small; they wear a Linen Waistcoat, which reaches only to the lower Part of their Breasts; and about their Waist a Piece of Cloth, three or four Yards wide, and a Yard deep, which they wrap about them, instead of a Petticoat. The Men that came off were all naked, having only a Cloth rolled about their Middle, to cover what ought to be; some of the better sort of People had a loose sort of Waistcoat, and a Piece of Linen rolled about their Heads, with a Cap of Palm-tree-leaves, to keep the Sun from scorching. They brought off several Cicatoes and Parrots, very fine Birds. Along the Shore-side, we saw several Weirs they had to catch Fish. In turning up, we found the Current very strong against us, and the Prize lost Ground considerably; wherefore, in the Evening, the *Duchess* fired a Gun; we ran out, and drove all Night. The Names of these two Islands are *Cambaya* and *Wanbus*: These Islands lie in Latitude $5^{\circ} 13'$, Longitude 238° West from *London*. We stood from those Islands to the Westward, and ran along-shore, as near as we durst, to weather the Westernmost Point of Land, where we expected to find an Harbour; but, as we neared it, found a long Tract of High-land, trending to the Southward as far as South-west and by South: We agreed in Opinion That was the Island *Bouton*, but that we had overshoot the Straights. We made Sail to see if we could discover any Land farther to the Southward; but, finding none, we sailed on, keeping the Wind as near as possible, because of the Current, which sets strong to the South-west. By two a Clock in the Morning, we were near a small Island, that bore South South-west of us about two Leagues; but, having clear Weather, we stood from it till Day-break, there being no other Land near it that we saw, except that we came from, which we had opened five Points farther to the Westward. I was unwilling to act any longer without the Consent of the Committee: So the major Part of us met aboard the *Duchess*, where we agreed to stand back and make the Land plain, so as to be fully satisfied what it was, and withal to find a Recruit of Water and Wood, before we proceeded any farther, being in want of every thing, being then in South Latitude $5^{\circ} 50'$, Longitude $238^{\circ} 38'$ W from *London*. In pursuance of this Agreement, we stood back the next Day, and made little or no Sail all Night. In the Morning, we had very fine clear Weather, and made the Land exceeding plain, which was very high, with Islands under it. It looked most of it as if inhabited, being pretty thick of Wood, and promising us, in other respects, Plenty of Refreshments; but our Misfortune was that we could not meet here with any Ground that would hold our Anchors; and, the next Day, the *Duchess*, tacking over to the other Side of the Bay, had no better Fortune, but was forced to return, without anchoring, to us again. A little before she came back, our Boat, which we had sent on shore, returned; the People on board having, by Presents, engaged some of the *Malayans* to come on board with them; in which they certainly judged right, tho' we could make no Use of their Intelligence for want of an Interpreter: I sent to the *Batcbelor*, who had one, but Captain *Dover* refused to let him come to me, notwithstanding he had no Use for him: Then I sent a second time, that I might know the best Anchoring-place for our Ships, and treated the People with Sweetmeats, and other

Things they furnished them aboard the *B* water near us; but on the Shores, not want of the *Lang*; the *Malayans* that Signa, and pointed they called *Boroo*; has been formerly tells us of a Town the King resided in the bare Story: The Pinnaces and the *L* Town, being willing jelly the King of visions, for which the better Appearance along with him Feet, there are P Northward six Le Ship might, on O could have carried were not willing to create more than or enough to keep co

38. On the 30th the King, with a N Shoes nor Stocking The first Question on board, was, H without Leave full *Bouton*? He brought striped Cloth, a B &c. as a Present fr Officers we had seen had been very well the King resided, is several great Guns: A Guns fired by every which he seemed ver tered at the Island 5 us with Fowl, *Indi Guiney* Corn, &c. v old Cloaths, &c. 7 clear; yet our Office than was intended, those *Moor* being v from them every I Pinnace came down were four Lalls of R King, and cost 600 lowed to make up t light; and that M ment. The next M bund among the fou deliver it, and receiv the King, was detain sions began to come Town of *Bouton* is fe Top whereof is a I on which there are C King, and a conside said Fort, where an King has five Wives, called *Pury Bassas*, Heads, to manage th black Hair, wears a Spangles; goes alw sometimes clad like pears in State, has a Jacket. In Council, Cloth; is always are Match-locks; beside Head-piece, and can other holds a Shield; it at his Feet, one her a lighted Match outh his Spitting-ba it on his Left Hand, Numb. XIII.

Things they fancied, but could not keep them, or send them aboard the *Batcbeler* to secure her, seeing white Shoal-water near us; but they passed by us, in danger of running on the Shoals, not knowing the best Anchoring-place for want of the Linguist, I so earnestly desired to understand the *Malayans* that had now left us. At parting, they made Signs, and pointed to the Land to the Northward, which they called *Booreo*. Our Pilot, Captain *Dampier*, says he has been formerly through the Straights; and, in his Book, tells us of a Town, near the South Part of them, where the King resided; but he knew nothing of it now, except the bare Story. Upon this, we agreed to send one of the Pinnaces and the Linguist along with him, to find out the Town, being willing to venture him to wait on his Majesty the King of *Bouton*, to solicit for a Supply of Provisions, for which we would gladly pay; and, to make the better Appearance, we sent Mr. *Fanbrugh* and Mr. *Cunely* along with him. The Water flows here above fifteen Feet. There are Places near to the Town, which lie to the Northward six Leagues, from whence we rode, where a Ship might, on an Occasion, be laid afloat to rest; and we could have carried the *Duke* thither to stop her Leak, but were not willing to lose Time, since we found it did not increase more than one Pump could vent, which we had Men enough to keep continually going.

38. On the 30th, in the Morning, a Prow came from the King, with a Nobleman on board, who had neither Shoes nor Stockings; and a Pilot to carry us up to Town. The first Question this *Indian* Lord asked, after he came on board, was, How we durst come to an Anchor there, without Leave first had and obtained of the great King of *Bouton*? He brought each Commander a Piece of *Bouton* Striped Cloth, a Bottle of Arrack, some Rice in Baskets, &c. as a Present from the King; as also a Letter from the Officers we had sent ashore, giving an Account, that they had been very well received; and that the Town where the King resided, is large, walled, and fortified, and has several great Guns: Another Present was returned, and five Guns fired by every Ship, at the Messenger's going off, at which he seemed very well pleased. We wooded and watered at the Island *Sampo*, and several Prows came off to us with Fowl, *Indian* Corn, Pompions, Papas, Lemons, *Guiney* Corn, &c. which they trucked for Knives, Scissars, old Cloaths, &c. The People were civil, but sold very dear; yet our Officers making a long Stay at the Town than was intended, we began to suspect they were detained, those *Meers* being very treacherous: However, we heard from them every Day; and, on June 5. the *Duchess's* Pinnace came down with Mr. *Coveley*, who told us, there were four Laits of Rice coming, which was bought of the King, and cost 600 Dollars, 50 Dollars in Tale being allowed to make up the Weight, because the Royals were light; and that Mr. *Fanbrugh* was detained for the Payment. The next Morning it came, and was equally distributed among the four Ships; some great Men coming to deliver it, and receive the Money: A *Portuguese*, sent by the King, was detained till our Boat returned, and Provisions began to come more plentifully, and cheaper. The Town of *Bouton* is seated on the Afcend of an Hill; on the Top whereof is a Fort inclosed with an old Stone Wall, on which there are Guns and Pattercocks mounted. The King, and a considerable Number of People, live in the said Fort, where an Herb-market is kept every Day. The King has five Wives, besides Concubines, and four Men, called *Pary Bassas*, who carry great Canes, with Silver Heads, to manage their Affairs. His Majesty, on his long black Hair, wears a sort of green Gauze, strewed with Spangles; goes always bare-footed and bare-legged; is sometimes clad like a *Dutch* Skipper; but, when he appears in State, has a long Calico Gown over his short Jacket. In Council, he sits on a Chair covered with red Cloth; is always attended by a Sergeant and six Men, with Match-locks; besides three others, one of which wears a Head-piece, and carries a large Scimitar in his Hand; another holds a Shield; and the third a great Fan. Four Slaves sit at his Feet, one of them holding his *Betele*-box, another a lighted Match, another his Box to smoke, and a fourth his Spitting-bafon. The petty Kings and great Men sit on his Left Hand, and before him; every one attended

NUM. XIII.

by a Slave in the Council-chamber, where they chew *Tobacco*, and chew *Betele*, in the King's Presence; and speak to him sitting cross-legged, joining their Hands, and lifting them up to their Forehead. The Town of *Bouton* is very populous; and by it runs a fine River, which, they say, comes down from ten Miles up the Country, ebbs and flows considerably, and has a Bar at the Entrance; so that Boats cannot come out at Low-water. At least 1500 Boats belong to this River, fifty whereof are Prows for War, carrying Pattercocks, and forty or fifty Men each. About fifty Islands are tributary to the King, who sends some of his Prows, once a Year, to gather in the Tribute, which consists of Slaves, each Island giving him ten Inhabitants out of every hundred. There is one Mosque at *Bouton*, which is supplied with Priests from *Moca*, the People being *Mohammedans*. They are great Admirers of Music; their Houses are built upon Posts; *Dutch* Money is current here, and *Spanish* Dollars. On the 17th, our Pinnace returned, with Mr. *Fanbrugh*, and all our Men, having parted very friendly with his Majesty, but could not get a Pilot for Money: However, we resolved to stay no longer, and to trust wholly to Almighty Providence for our future Preservation. We dismissed the *Portuguese* Linguist, and began to unmoor our Ships. The next Day, we made three Islands to the Northward of *Zalayer*; and the Looing of other Land to the Westward of all which, we took to be the Southermost Part of *Celebes*. On the 10th, our Pinnaces came up with this small Vessel; who told them, they were bound for *Macassar*, a *Dutch* Factory, on the South Part of *Celebes*. The Pinnace took the Master of her on board, who promised to pilot us, not only through the Straights of *Zalayer*, but to *Batacia*, if we would keep it secret, for fear of the *Dutch*. He sent his Vessel to lie in the narrower Passage, between the Islands, till such time as our Ships came up. About four a Clock we entered the Streight, betwixt the Islands that are next to *Zalayer*, and another little one to the Northward of that, being the middlemost of the three; having found a good Passage, three Leagues over, all deep Water, steering through North-west by West, to give the Larboard Islands a good Birth; then we made the Southermost Part of *Celebes*. The same Morning, the Pilot promised to carry us through the Channel the great *Dutch* Ships generally went for *Batacia*, and by that means avoid the Shoals, called the *Brill* and *Bunker-ground*. The *Brill* has very uneven Soundings; and, in many Places, but three Fathom Water, and less: So we haled away to the Northward, keeping the Island *Celebes* aboard, the South-west Part of which trends away in Low-land, with high Mountains at the Back of it; and off the Point there lies a Rock, pretty high and remarkable. At four o' Clock we came in to Sounding, and had ten Fathom; the first east the Rock off; the South-west Point bore then North, distant about six Leagues; and we had an Island a-head of us, from North-west by West, to North North-west, being low and level, about three Leagues long, and near the same Distance from the Main: As we entered, it grew narrower; we stemmed with the North Part of the Island, till we came within a League and half of it; then steered North a little, to weather a Spit of Sand lying off the Island, by which means we opened three small Keys; after we were clear of the Shore, we haled up about seven, and came to an Anchor under the Island, behind the Spit of Land, in ten Fathom Water, very good clean Ground. The Rock of *Celebes* then bore North-east by North four Leagues, the Northernmost of the Keys two Leagues, and the middlemost West South-west three Leagues: The other being shut in with the long Island, we kept the Land going all the Way constantly thro'; and had never less than six Fathom, nor more than ten: As soon as it was Day, we weighed, and went betwixt the two small Keys, keeping nearest the Northernmost Sounding all the Way, and had no more than ten Fathom. The Water still deepening, being clear of them, we haled away West, and then South-west, having a fresh Gale at South-east, and South-east and by East; no Land in Sight at Noon, but Part of the High-land at *Celebes*, which bore East, distant about twelve Leagues. It was very well for us that we met with this Pilot; for, having no good Charts, nor any one acquainted with those Seas, we had

small Vessels to come into the Canals of the City. It lies in a Bay, in which there are seventeen or eighteen Islands, which so break off the Sea, that, tho' the Road is very large, yet it is safe. The Banks of the Canals through the City are faced with Stone on both Sides, as far as the Boom, which is shut up every Night at nine o'Clock, and guarded by Soldiers. There are Canals cut out of the main River for smaller Vessels; and every Boom pays Toll. All the Streets run in straight Lines, most of them being above thirty Feet broad on each Side, clear of the Canals, and paved next the Houses with Bricks. All the Streets are very well built and inhabited, fifteen of which have Canals; and they reckon fifty-six Bridges on them, most of them of Stone. The Country-houses and Buildings round the City are generally neat and well-contrived, with handsome Gardens for Fruit and Flowers, Fountains, and Statues. The vast Quantities of Cocoa-nut-trees every-where afford delightful Groves. They have fine Structures here; particularly the Crois Church, built of Stone, and the Inside very neat. There are two or three Churches for the Dutch, and two for the Portuguese Protestants, who are a mixt sort of People. There is one Church also for the Protestant Malaysians. The Town-house is built of Brick, in a Square, about the Centre of the City, two Stories high, and very finely built; where all Courts are held, and all Matters relating to the Civil Government of the City are determined; and the Senators and Directors of the Military Affairs meet. There is an inner Court, inclosed with an high Wall, and a double Row of Stone Pillars, where the Officers of Justice live. Here are Hospitals, Spin-houses, and Rasp-houses, the same as in Amsterdam, with all other public Buildings, equal to most Cities in Europe. The Chinese have also a large Hospital in this City for their aged and sick Persons; and manage their Charity so well, that you never see a Chinese that looks despicable in the Street. The Dutch Women have greater Privileges in India, than in Holland, or any-where else; for, on slight Occasions, they are divorced from their Husbands, and share the Estate betwixt them. A Lawyer told me at Batavia, he has known, out of fifty-eight Causes all depending in the Council-chamber, fifty-two of them were Divorces. Great Numbers of the Natives, who are Criminals, are chained by Pairs, and kept at hard Labour, under a Guard, perpetually clearing the Canals and Moats round the City, or any other Work for the Public. Three Leagues West from the Town is the Island Onrest, where all the Company's Ships are refitted. There are Magazines of naval Stores, defended by Platforms of Guns. And the Castle at Batavia is quadrangular, lies in a Level, and has four Bastions and Curtains, faced with white Stones, and provided with Watch-houses. In this Castle, or rather Citadel, the Dutch Governor General, and most of the Members of the Council of India, with the other Officers of Batavia, have their Residence. The Governor's Palace is of Brick, large and well-built. In this Palace is the Council-chamber, the Secretary's Office, and Chamber of Accounts. The General's Hall is hung with bright Armour, Ensigns, Flags, &c. taken by the Dutch here. The Governor gives Audience to Strangers, who are introduced to him by the Shabander, who is Commissioner of the Customs. The Garison on Duty is generally about 1000 strong; and all the Outworks are said to be furnished with Provisions, as well as can be; but the Soldiers are kept much under, except the Governor's Guards, who have large Privileges, and make a fine Appearance. The Governor General lives in as great Splendor as a King: He has a Train and Guard; viz. a Troop of Horse, and a Company of Foot, with Halberds, in Liveries of yellow Satin, richly adorned with Silver-lace and Fringes, to attend his Coach, when he goes abroad. The Guards are as well equipped as those of most Princes in Europe. His Lady has also her Guards and Train. He is chosen but for three Years, out of the twenty-four Counsellors, called Rads of India, twelve of whom must always reside in the City. The Chinese have the greatest Trade here, farm most of the Excise and Customs, live according to their own Laws, and are allowed their idolatrous Worship; and have a Chief, that manages their Affairs with the Company, who allows them great Privileges, and particularly a Representative in Council, who has Vote, when any of the Chinese are tried for Life. But

these Privileges are allowed only to such Chinese as inhabit here; for others are not permitted to stay above six Months in the Town, or on the Island Java. The other Strangers, besides Europeans, are Malaysians, with some from most Parts of India. The Javanese, or ancient Natives, are numerous, and said to be barbarous and proud; of a dark Colour, and flat Faces, thin, short, black Hair, large Eyebrows and Cheeks. The Men are strong-limbed; but the Women are small. The former have a Wrapper of Calico three or four times round their Bodies; and the latter from their Arm-pits to their Knees. The Men have two or three Wives, besides Concubines; and the Dutch say, they are much addicted to lying and stealing. Those on the Coast are generally Mohammedans; but the others Pagans. The Women are not so tawny as the Men, and many of them handsome; but, in general, amorous, and unfaithful to their Husbands, being very apt to give Poison, which they do very cunningly. The Town is very populous; but not One-sixth of them Dutch. The Chinese here go all bare-headed, with their Hair rolled up, and long Gowns, carrying Fans in their Hands. The Dutch say, they are more industrious, and acute in Trade, than themselves. The Discipline and Order of the Dutch here, both in Civil and Military Affairs, is truly admirable. They have all the Necessaries for building and careening Ships, as well as in Europe; and their Officers as regular as in his Majesty's Yards; whereas we have nothing like it in India. They keep the Natives very much in Awe, being perfectly despotic in their Government; because, they say, the Natives are naturally so treacherous, that they are obliged to punish them severely for small Faults: But they are more tender to the Chinese, because of the great Trade they have by their Means; and that they pay great Rents for their Shops, besides large Taxes; and from 16 to 30 per Cent. for Money, which they frequently borrow of the Dutch. I was told there are here about 80,000, who pay the Dutch a Dollar a Head each Month, for Liberty to wear their Hair, which they are not allowed to wear at home, since they were conquered by the Tartars. There come hither from China fourteen or sixteen large Junks yearly, being flat-bottomed Vessels, from 3 to 500 Tons Burden. The Merchants come along with their Goods, which are lodged in different Partitions in the Vessels, like Warehouses, for which they pay a certain Price, and not for the Weight or Measure of the Cargo, as we do; so they fill them with what they please. They come in with an Easterly Monsoon, and generally arrive in November or December, and return the Beginning of June; so that the Dutch have all Chinese Commodities brought to them, cheaper than they can fetch them: And, being conveniently situated for the Spice-trade, they have all in their own Hands. Batavia wants no Commodities that India affords. They have seldom less than twenty Sail of Ships at Java, from thirty to fifty and sixty Guns each, with Men enough for them on all Occasions; so that they might easily drive us out of most Parts, if not all India, should we ever have an unfortunate War with them. Their Soldiers are very well trained, and there is a Company always on Duty at every Gate of the City and Citadel; and they have 7 or 8000 disciplined Europeans in and about the City, who can be assembled and ready for Action at a very short Warning. It is the Metropolis of their Indian Settlements, and sends Governors and Officers to all the rest. The late General, before we came hither, had War with the Indians, which, I was informed, had like to have spoiled their Settlements; but, at last, they divided the Natives amongst themselves, brought them to a Peace on advantageous Conditions, and are now pretty secure of the Sea-coasts. There are many pleasant Seats about the City, and the adjacent Country abounds with Rice, Sugar-cane-fields, Gardens, and Orchards, Mills for Sugar, Corn, and Gunpowder; so that this is one of the pleasantest Cities in the World. I do not think it so large as Bristol; but it is more populous. They have Schools for Latin, Greek, &c. and a Printing-house. They have lately begun to plant Coffee here, which thrives very well; so that, in a little time, they may be able to load a Ship or two: But I am told, it is not so good as that in Arabia.

40. On the 17th of October we arrived at the Watering-place on the Main, having sailed from Batavia on the 14th.

On the 19th, at two in the Afternoon, we came to an Anchor with our best Bower, in a Bay about a League to the Westward of Java Head, in fifteen Fathom Water, only Ground, about a Mile from the Shore; sent our Pinace for Water, and then our Sail-maker, Wooders, &c. Captain Pike, and Mr. Block, came in a Boat from *Batavia*, the first of them, chiefly, after his Steward, who, I suppose, had concealed himself, unknown to most of us, aboard the *Batcbelor*. In the Evening, Captain Pike lent us his Boat and Men; we put into her several of our Men, with Arms and Provisions from each Ship; and sent her away to *Pepper Bay*, to buy Fowls, and other fresh Provisions, giving them for that Purpose Knives, and other Toys, which the Natives there value above Money. In the Evening we had much Thunder, Lightning, and Rain, which put us in Fear for the Men sent to *Pepper Bay*; continued wooding and watering till the 28th, and sent several Men ashore to kill Buffaloes, which being extremely wild, they could shoot none, and durst not stay ashore at Night, by reason of the many Tygers: One of them was very near seizing a Man of ours, who, to save himself, was obliged to take the Water; at least twenty Shots were made at the Tyger before he went off, and they saw several others at the same time. The *Indian King*, and his People, dealt friendly with us, trucking Fowls, and what else they had to spare, for Knives, and the like. They generally came aboard every Day, and, we giving them some Trifle at parting, they were kind to our Men ashore. The Wind being commonly at South-east, and a fresh Gale, we were under some Apprehensions for our Men sent to buy Fowls in *Pepper Bay*, having heard nothing of them since their Departure, and mistrusting the Boat might be overlet, or the Men detained by the *Javans*. But, on the 25th in the Evening, the Boat returned, to our great Satisfaction, with the Men, bringing about twelve Dozen of Fowl, some Mangoes, &c. Captain Pike's Steward came on board the *Duchefs*, hoping we would conceal him; but was immediately sent on board the *Batcbelor* to his Commander, who gladly received, and promised to pardon him. On the 28th of *December*, Mr. *James Wase*, our chief Surgeon, died; and we buried him decently the next Day, with our Naval Ceremonies, as usual, being a very honest useful Man, a good Surgeon, and bred up at *Leyden*, in the Study of Phycic, as well as Surgery. We made Land the 15th of *December*, came in with the Shore the 18th, and had Sounding in 60 and 70 Fathom, the Ground grey-gret with small Stones and Shells; had a strong Southerly Current, South Latitude $34^{\circ} 2'$, Longitude $334^{\circ} 34'$ West from *London*. The same Day we had very hard Flaws of Wind off the High-land, till we came within Sight of the Lion's Head and Rump, two Hills over the *Cape Town*; and this Day we arrived in the Harbour of the Cape, saluted the *Dutch Fort* with nine Guns, and were answered by seven. We anchored in six Fathom Water, about a Mile off Shore, and found only one *English Ship*, called the *Donegal*, Captain *Cliff* Commander, homeward-bound for *Mocha*, and two *Middleburghers*, outward-bound for *Batavia*, in the Harbour, besides the Guard-Ship, and two or three Galliot. On the 29th, we moored our Ship, and got down our Yards and Top-masts, to guard against the hard Flaws of Wind off the Table-land, which frequently blow very fresh between East South-east and South-east. We sent sixteen sick Men ashore. On the 1st of *February*, I offered some Proposals, in Writing, to Captains *Dever* and *Courney*, with the rest of the Committee; wherein I told them, It was my Opinion, we should lose too much Time to stay for the *Dutch Fleet*, in order to have the Benefit of her Convey to *Holland*; which would not only be out of our Way, but very tedious and chargeable; and we having large Quantities of decaying Goods on board, the Time we should lose by waiting for the *Dutch*, might be advantageously employed in *Brazil*, where we could lie in very little Danger of the Enemy, and vend them at great Rates, and thence get to *Bristol* through the North Channel, having the Summer before us, continuing in the Latitude of 53 or 56° , two or three hundred Leagues before we got the Length of the North of *Ireland*; and by that mean, might avoid the Tract of the Enemy. I earnestly

pressed, that, if they could not agree to this, one of our Privateers might take this alone, and the other keep with the *Batcbelor* and *Dutch Fleet*. But the Majority was against any thing but going home with the *Dutch Fleet* all together; so that all I could do more, was to remind them of examining the Goods aboard the *Batcbelor*, and to take out of her so much Goods in safe Package, as would lie in the like Room of *European Goods*, on board the *Duchefs*; that, if any Accident should happen to the *Batcbelor*, we might have Part of her Value in another Bottom. I desired, if any amongst them were not of this Opinion, they would give their Reasons to the contrary in Writing; but we could agree on nothing. On *April 2*, at Day-break, the Flag hoisted a blue Ensign, loosed the Fore-top-sail, and fired a Gun, as a Signal to unmoor: As we were heaving in our Cable, it rubbed against the Oakum, which had got into the Leak, and occasioned the Ship to be as leaky again as ever, she having been indifferent tight for some time, and we were in hopes it would have continued. About Noon I came aboard very thin, and in no better Health than I was when I went first ashore at our Arrival here: Presently after I went aboard the Flag, there being a Signal made for all the *English Commanders*. We had before received our Orders, which were very particular, and to be punctually observed. About four in the Afternoon, the Flag, Vice, and Rear-admirals, weighed with Part of the Fleet, and fell down to *Robins* or *Penguin Island*, where they lay for the rest of the Ships. On the 6th, in the Afternoon, we all weighed from *Penguin Island*, being sixteen *Dutch*, and nine *English Ships*, having a fine fresh Breeze at South South-east. The Cape of *Good Hope* has been so often described, that I do not think it necessary to detain the Reader with any Account of it here. There happened nothing remarkable in our Voyage till *June 5*, when the Admiral made a Signal for all the *English Commanders*, and four of the *Dutch Skippers*, to come on board; where we had an excellent Entertainment; and the good Humour of the *Dutch Admiral* soon made all the Company understand each other without a Linguist, tho' we had much ado to get one at first meeting: We parted before the Sun set, and had a fine Day. The 28th, being got into the Latitude of 51° North, we had thick foggy Weather; so that the Flag fired two Guns every Half-hour, and each Ship answered with one. This continued several Days, which consumed a great deal of Powder; but, by the Noise of the Guns, it was easy to keep Company, tho' sometimes so thick for several Hours, that we could not see three Ships Length. On *July 14*, we saw two Ships in the Afternoon; one of which we spoke with, being a *Dane*, bound for *Ireland*; she informed us of the *Dutch Men of War* that were cruising for us off *Sbetland*, (being ten Sail) whom we saw four or five Days ago, and reckoned herself now about forty Leagues from the Land. We had Sounding then in seventy Fathom Water, brown gravelly Ground. I just had time to send the Owners a Copy of my Letters from the Cape of *Good Hope*; and to let them know, that we were now got so far safe towards the Conclusion of a fatiguing Voyage. In the Morning, we made *Fair Island*, and *Foul Island*, lying off of *Sbetland*. Presently after we saw the Men of War; but, having little Wind, and they a good Way distant from each other, we could join but one of them by Noon. The next Day all the Men of War joined us, except one or two, with the Fishing-doggers, which were cruising off to the North-east of *Sbetland*. After mutual Salutations, both by the *English* and the *Dutch Ships*, one of the Men of War was sent out to see for the missing Ships. The Inhabitants of those Islands came aboard with what Provisions they had, being very poor People, and subsist most by Fishing. On the 17th, I wrote a single Letter to the Owners in general, by a *Scotts Fishing Boat* belonging to *Sbetland*, advising them of our joining the Men of War who are ordered with the Fleet to the West, where we hoped to meet an *English Convey*. The *Dutch India Admiral*, though but a Company's Ship, wears the Flag, gives Signals and Orders to the *Dutch Men of War*, which is not suffered among the *English*; and, in the whole Run from the Cape, kept an exact Discipline in the Fleet, not suffering any of the Commanders to

Chap. I.
out of the Ship or Leave. Or Commodore m Land; present Colours. The we parted with of the Men of V The Flag, and modore, and aft him in Sight of over the Bar, th their own Count *Fatberland*. At Anchor in six F On the 24th in order to go up us, we gave him Afternoon I went from our Owner from hence. On hal Orders to b *Dutch Convey* to aboard from *Amst* on the 1st of *Aug* charged what Me and afterwards w the *Duchefs* and *Vlister*, being a b ing, we had *Neu Hidar*: Mr. *Pep* Morning, came a they went for the for *Amsterdam*. Their coming and and others, bounc Convey the same I the 6th, we weigh Consorts, it being for our better Secu the *India Compan* had dealt for noth obviate this, and *India Company*, of respect, the Officers there never was an or any Transactio visions, and other Suspicion might re drawn up, and the luntarily swore to had News of our C was very acceptable in the utmost Une home, so that we aboard, till now we for falling down to Afternoon, we go our Convey at *Am* way, and *Dunwich* Morning, the Win the *Taxel*, and by re In the Afternoon, to; and next Mo bore away again I *Dutch Men of War* *London*: After seei ward, with the *Car* next Morning. O consulting, that our the Sea, in case we requested Captain please to stay, thot we could be provi *sterdam*; which was Day, we weighed, On the 1st of *Octob* an Anchor in the came on board; a went on shore with NUMB. 13.

out of the Ships to visit each other at Sea without a Signal, or Leave. On the 23d, the Weather being close, the Commodore made a Signal about ten o'Clock for seeing Land; presently all the Fleet answered him with their Colours. The Pilot-boats coming off aboard the Ships, we parted with the *Rotterdam* and *Middleburgh* Ships, most of the Men of War going with them to see them safe in. The Flag, and all the *English* Ships, saluted the Commodore, and afterwards we saluted the Flag, to welcome him in Sight of *Holland*; and, as soon as they were got over the Bar, the *Dutchmen* fired at their safe Arrival in their own Country, which they very affectionately called *Fatherland*. About eight at Night we all came safe to Anchor in six Fathom Water, about two Miles off Shore: On the 24th in the Morning, the *Dutch* Flag weighed, in order to go up to the unhovering Place: As he passed by us, we gave him three Huzzas, and nine Guns. In the Afternoon I went up to *Amsterdam*, where we had Letters from our Owners, to direct us how to act, and proceed from hence. On the 28th, the *English East India* Ships had Orders to be in Readiness for sailing with the first *Dutch* Convoy for *London*. We got some Provisions aboard from *Amsterdam* on the 30th. When I came aboard, on the 1st of *August*, by Consent of our Council, we discharged what Men we shipped at *Batavia* and the Cape, and afterwards went away from *Amsterdam*. On the 4th, the *Duchefs* and *Batbelor* went up to the Road called the *Wlister*, being a better Road than the *Texel*. In the Evening, we had News of some of our Owners being at the *Hilidar*: Mr. *Pope* went to wait upon them, and, in the Morning, came aboard with them: After a short Stay, they went for the *Duchefs* and *Batbelor*, desiring thence for *Amsterdam*. We welcomed them with fifteen Guns at their coming and going. The *English East India* Ships, and others, bound for *England*, weighed with the *Dutch* Convoy the same Day, having a fine Gale at North-east. On the 6th, we weigh'd from the *Texel*, and went up to our Consorts, it being by a particular Order from the Owners, for our better Security, being obliged to wait here, fearing the *India* Company would be troublesome, although we had dealt for nothing but Necessaries in *India*. In order to obviate this, and convince the World, as well as the *East India* Company, of our Honesty and good Conduct in this respect, the Officers first drew up an Affidavit, setting forth, there never was any Commerce carried on in the *Indies*, or any Transactions of buying and selling, but for Provisions, and other Things, for the Ships; and, that no Suspicion might remain, an Abstract of our Journal was drawn up, and the best Part of the Ship's Company voluntarily swore to it. On the 19th in the Afternoon, we had News of our Convoy lying without the *Texel*; which was very acceptable to the Crews of each Ship, who were in the utmost Uneasiness at our long Stay, being just at home, so that we had much ado to keep the Companies aboard, till now we got every thing in Readiness, in order for falling down to them. On the 20th, about five in the Afternoon, we got down to the *Texel*, where we found our Convoy at Anchor, being the *Essex*, *Canterbury*, *Medway*, and *Dumwich* Men of War. On the 22d in the Morning, the Wind being at North-east, we weighed from the *Texel*, and by ten of the Clock got clear of the Chanel. In the Afternoon, the Commodore took the *Batbelor* in tow; and next Morning, the Wind being against us, we bore away again for the Harbour; as did likewise four *Dutch* Men of War, that came out with us, bound for *London*: After seeing us safe in, he stood off to the Northward, with the *Canterbury* and *Medway*, but came in the next Morning. On the 24th, our Officers met, where, consulting, that our three Ships wanted Necessaries to keep the Sea, in case we should meet with bad Weather, we requested Captain *Roffey* our Commodore, that he would please to stay, should the Wind be fair, till such time as we could be provided with the said Necessaries from *Amsterdam*; which was granted. On the 30th, at Break of Day, we weighed, as did likewise four *Dutch* Men of War. On the 1st of *October*, about eleven o'Clock, we came to an Anchor in the *Downs*, where several of our Owners came on board; and, after they had visited every Ship, went on shore with some Prisoners, to examine them about

NUMB. 13.

our Capture, &c. At three this Morning, the *Essex* made a Signal to unmoor; and betwixt nine and ten weigh'd, he being ordered up to the *Buoy in the Nore*, and we to make the best of our Way to the *Hope*. *October* 14, at eleven o'Clock, we and our Consort got up to *Eriff*, where we came to an Anchor, which ends our long and fatiguing Voyage.

41. It was owing to this Expedition of *Woods Rogers*, that the Spirit of Privateering in the South Seas was not totally lost in *England*, where abundance of Art had been used to propagate an Opinion, that it was simply impossible for any Privateer Squadron to act with Success, at least for their Owners; and that, if any thing was taken, it must be in a bucanneering Way, that is, for the sole Advantage of the Crew: But, in all these respects, this Voyage has undeceived us, and plainly shewn, that, under proper Command, our People are able to do as great Things now, as ever they did in the Days of *Elizabeth*; and, indeed, it is offering the greatest Indignity to our Seamen to think otherwise. Amongst the rest of the Bug-bears invented to terrify our People from going into those Seas, one was, the dreadful Treatment they met with from the *Spaniards*, when, by any Accident, they fell into their Hands. As to this, Captain *Rogers* has set the Matter in its true Light. He deploras the Loss of Mr. *Hatley* in the most affecting Terms; probably from an Opinion, that he might be starved at Sea, or forced to live ashore on some of the barren *Gallapagos* Islands; but he very fairly tells us, that, after that Gentleman fell into the Hands of the *Spaniards*, he was very kindly treated, and sent up to *Lima* as a Prisoner of War, which was what he had Reason to expect. It is indeed true, that, when he and his Boat's Company landed at *Cape Passao*, and surrendered themselves, they were very barbarously used, having their Hands tied behind them, hung up by their Necks, and almost half-layed with Whips: But then, by whom was this done? Why, by a mixed People, the Off-spring of Negroes and *Indians*, who bore an implacable Hatred to every Man of a white Complexion, out of mere Aversion to the *Spaniards*. In this Distress they had probably ended their Days, but for a Priest, who interposed, and preserved them. As for the *Englishmen*, that remained in that Country, (which is perhaps the hardest Case that can be put, with respect to the Danger of those Expeditions) Captain *Stradling*, of whom we have said so much in the last Section, after returning safe to *London*, though he remained long a Prisoner in those Countries, gives us the following Account of their Condition, melancholy indeed, as Exiles from their native Country, but not very frightful in other respects.

" In *Mexico*, the Prisoners, who are employed in cutting Logwood, have no way to escape the Severity of the *Spaniards*, but to turn Papists, and be baptized after their manner: Then they have the Liberty to chuse a Godfather, who is generally a Man of Note, and they serve him as a Footman in Livery. One *Boyle*, who joined Captain *Rogers* at *Guiaquil*, was baptized there by an Abbot in the Cathedral of *Mexico*; had Salt put in his Mouth, and Oil poured upon his Head; and small Parcels of Cotton, which rubbed it off, were distributed as precious Relics among the Penitents, because taken off the Head of a converted Heretic, as they called him. The native *Spaniards* enjoy all Posts in the Church and Monasteries, and admit no *Indians*, nor any mixed Breed, to those Preferments; which they think a necessary Piece of Policy, that they may the better keep the Country in Subjection to *Spain*. Some of those Prisoners, who are forced to be pretended Converts, do now-and-then make their Escape, tho' it be dangerous to attempt it; for, if taken, they are generally confined to the Work-houses for Life. There are several *Englishmen*, who were Prisoners in this Country, that, by Compliance, have obtained their Liberty; particularly one *Thomas Bull*, who was born in *Dover*, and taken in *Campeche*. He was a Clockmaker, had been eighteen Years here, and was about forty-five Years old, lives in the Province of *Tabasco*, and grown very rich. One Captain *Thompson*, born in the *Isle of Wight*, had been here about twenty Years, is about fifty Years old, grown rich, and com-

3 A

manded

manded the Mulattoes, who took Captain Pack at the Beginning of the War. The Person who told me this, was a Combmaker, and endeavoured to escape from *La Vera Cruz*; but was taken, and sent Prisoner to *Mexico*, where he came off to *Peru*, after he had his Liberty, by pretending he went to buy Ivory to make Combs. He gave me a long Account of his Ramble amongst the *Indians*, and says, that he was at the Mouth of the River *Mississippi*, which falls into the Gulph of *Mexico*, but could not pass it: He adds, that the *Indians*, on the Bay *Pillacki*, have murdered several of the *Padres*, out of an Aversion to the *Spaniards*, but shewed a great Inclination to trade with the *English*. Such of them as will not turn *Papists*, are kept in close Custody, either in the Mines, or Workhouses, at *Mexico*, which City is about as long as *Bristol*. Those that are put in Workhouses are chained, and employed in carding of Wool, rasping of Logwood, &c. They have more Manufactures of Woolen and Linen in *Mexico* than in *Peru*: Abundance of Raw Silk is brought from *China*; and, of late Years, wrought up into rich Brocades, equal to any made in *Europe*. The *Mulattoes* and *Indians*, on very slight Occasions, are put into the Workhouses, and kept there till they pay their Debts or Tribute; but no *Spaniards*, except for the worst of Crimes. There are many *Englishmen*, who were taken cutting Logwood in the Bay of *Campeche*, in several of those Workhouses. They have abundance of Sheep in the Country, which yield excellent Wool, of which the *English* Prisoners have taught them to make Cloth, which would be worth about 15 s. a Yard in *England*; but there it yields eight Pieces of Eight. They have also taught them to make Bays, and other sort of coarse Woollens. At *Chepa* in *Mexico*, about Latitude 12° North, there is a great River, which sinks into the Earth at once, runs under the Mountains, and rises with a large Stream, about fifteen Leagues from the Place where it sunk. This River is twice as broad as the *Thames*; it afterwards joins that of *Tabasco*, and falls into the North Sea, as most of the great Rivers of this vast Continent do. About this Place there are high Mountains, with Plains on the Top, where the Air is very temperate, and all our *European* Fruits grow; whereas, at the Bottom of those Mountains, they have none but the Fruits of hot Climates, tho' 'tis not above five Leagues asunder. There are also Woods of Pines, &c. on those Mountains, amongst which there are Birds, which sing together in an agreeable Concert, that resemble a fine Organ; so that Strangers are amazed to hear such Music strike up of a sudden in the Woods. There is also a strange Creature in those Woods, called by the *Spaniards* an *Ounce*, much of the Size of a Wolf-dog; but it has Talons, and the Head is more like that of a Tyger: It kills Men and Beasts, which makes travelling thro' the Woods dangerous; yet this Creature is reported to eat nothing but the Heart of its Prey. I had many more Relations from this Man, who had been seven Years a Prisoner in this Country; but they being too tedious, I shall add nothing more concerning *Mexico*, but that the Worm is larger, and eats the Bottoms of the Ship more, on its Sea-coast, than any other Place. All the Coasts, from *Guiaquil* in *Peru*, to the Northward, as far as the Latitude of 20° in *Mexico*, are reckoned unhealthy, but the contrary from *Guiaquil* Southward."

The next remarkable Thing in this Voyage, is the Prudence shewn in the Oeconomy of it, which ought to recommend it as a Precedent on all such Occasions for the future; and this excellent Management appeared particularly in the Method taken of holding Councils before any Transactions of Importance, to consider the proper Means for effecting it; and then, when the Thing was fresh in every body's Head and Memory, to bring the Conduct of the Affair under Examination, so as to procure another Resolution of the Committee, either approving or disapproving it. By this Measure all Facts were so effectually settled, that they would admit of no Disputes after they came home; and it is very plain, that the Debates which happened aboard, were hindered from growing to a dangerous Height by this very thing: For, as nothing could be absolutely determined while they were aboard, every body was anxious and affi-

duous in settling properly the Papers, upon the Testimony of which, the Sense of their Owners, in regard to their Conduct, was to be determined; and thus the Hopes of prevailing at home, made People easy under what they took to be Hardships abroad. In saying this, however, I differ in Opinion from Captain *Woodes Rogers*, who, tho' he had experienced the Benefits resulting from this Method of acting, yet is pleased to say, "Another great Inconvenience we laboured under, was the want of Power to try Offenders, as on board his Majesty's Ships of War; which obliged us to connive at many Disorders, and to be mild in our Punishments: But which was still worse, there was no sufficient Power lodged in any one Hand, to determine Differences amongst our chief Officers; which was a great Omission, and might have proved of dangerous Consequence, because of the Divisions which happened amongst us." Yet I dare say it will be apparent, notwithstanding the Captain's Observation, that if any such Power had been lodged, even in himself, it must have done more Hurt than Good; since nothing but the Uncertainty of whose Conduct would be approved or disapproved at their Return, prevented Malcontent Officers from endeavouring to form Parties among the Ship's Company, which Reason and Experience shews us, is the most dangerous Thing that can happen in Expeditions of this sort; and which, as the Reader will remember, proved the Ruin of Captain *Dampier's* Design, of which we have given a long Account in the preceding Section: But it is natural for Men in Power to believe the Extension of their own Authority as profitable to others, as agreeable to themselves.

A third Circumstance that deserves Regard, is the Weakness of the *Spaniards*; for it appears plainly, that they were not, at this time, in a much better Condition than when *Drake* and *Candish* ravaged their Colonies; and of this Captain *Rogers* was so sensible, that, in the Preface to his Book, he lays it down as a thing extremely practicable, not only to plunder the *Spanish* Settlements on the Coast, but even to fix Garisons there, which, he thinks, it would not be in the Power of the *Spaniards* to expel, before they received a Relief from *Britain*. "Our taking of *Guiaquil*," says he, with an Handful of raw undisciplined Men, is a sufficient Proof of this; and they may soon fortify themselves, so as no Power, that can be brought against them, would be able to dislodge them. The whole *Spanish* Force in that Sea consists but of three small Ships; and their Land Troops are so little accustomed to War, that they are not able to look a Body of disciplined Men in the Face, as we ourselves and others have found by Experience: Besides, the Natives of *Chili*, who are a brave People, have such an Aversion to the *Spaniards*, because of their Cruelty and Oppression, that, when they find the Mildness of an *English* Government, they will readily join us, in order to be freed from that intolerable Servitude, under which they have groaned so long." I will not take upon me to say, that, at this time, such a Scheme as he recommends would be practicable; but this, I think, I may safely say, that nothing that has since happened, down to the Time of the present War, has shewn such a Design to be impossible. At the time Captain *Rogers* wrote, he had before his Eyes the Example of the *French* carrying on, partly with, and partly without the Consent of the *Spaniards*, such a Commerce in that Part of the World, as enabled them to make head against the rest of all *Europe*: Which is a Circumstance that deserves to be very well considered; since, if the Wealth of *Spain*, in the Hands of *France*, may prove the Ruin of all her Neighbours, it seems to be a natural Inference, that it is not only lawful, but absolutely incumbent upon us, to prosecute the only Method that can possibly prevent it. The Account he has given of the Matter is this: "The *French* sent from *Rebelle*, in 1698, two Ships, under the Command of *M. Boucquesne* and *St. Malo*, to the South Sea, with a Cargo of Goods, to try what could be done in Trade there, as appears by his Journal. They have so improved his Discovery, and carried on such a vast Trade in those Seas ever since, that there have been in the South Sea, in one Year, seventeen Ships of War and Merchantmen, with all sorts of Goods; and the Advantage they made of it was so great, that I was th-

Voyage of Capta
such a Design to b

formed, by several Merchants whom we took in those Seas, that, by a modest Computation, the *French*, in a few of the first Years of that Trade, carried home 100 Millions of Dollars, which is near twenty-five Millions Sterling, besides the Advantages they made by trading to the North Sea, when they convoy the *Spanish* Gallies and *Flota* to and from the *West Indies*." This was written before the Close of the last War; and it is worthy of Notice, that, since the present War commenced, the *French* and *Spaniards* have had recourse again to the same Expedient, I mean that of licensing Ships from *St. Malo* to trade to the South Seas, contrary not only to Treaties, but in direct Violation of the Privileges of the native *Spaniards*, who cannot but be sensibly affected, to see the only Trade they have, and by which alone they are able to bear the heavy Burden of a *French* Government, thrown into the Hands of Foreigners. But, however angry they may be, it does not appear, that at this Juncture they have the Means of redressing this Grievance in their own Hands; whereas, so far as it affects us, we certainly have; and, either by following these *French* Interlopers into the South Seas, or by watching them closely in their Return home, may render ineffectual this Expedient for turning the Riches of the new World to the Subversion of the Peace of the old. If this cannot be done, our ruining the *French* Trade elsewhere will fall short of the End proposed; because, being temporary only, if they can find a Way to carry on this Commerce effectually in the mean time, it will, in a great measure, supply the Losses they sustain in the other Branches of their Commerce: As, on the other hand, if we can put an End to this, as well as to the rest, it must soon bring the War to a Conclusion; for the modern Maxim, that Money does all Things, is never found more agreeable to Truth, than when applied to military Affairs, which demand so great and so constant an Expence, that, if a Nation cannot supply it, she must be content to accept of those Terms, and remain in that Condition, which her Neighbours are willing she should be in; and this is that Condition, to which I conceive we would be willing to reduce the *French*.

Before I take my Leave of this Subject, I cannot forbear putting the Reader in mind of the great Utility of Voyages to the South Seas; and observing, that as these can never be undertaken but when we are at War with the *Spaniards*, so that Opportunity ought never to be let slip; since, otherwise, we are in Danger of losing all Knowledge of that Navigation, to which we have a Right in common with the rest of Mankind; which, some time or other, may turn to the infinite Advantage of the *British* Nation. The Reader has seen what Succession of Adventurers there has been from the Days of Queen *Elizabeth* to this time; all of whom have intimated the mighty Advantages that might be expected from our endeavouring to fix in some Part, rather than be continual Wanderers in the South Seas. The grand Objection has been, that it is very difficult to furnish Provisions for so long an Expedition, or to keep our Ships sufficiently manned, so as to be in a Condition of settling when they come thither. But, perhaps, we ought to inquire, whether these Difficulties really spring from the Design itself, or from our Method of managing it; for, undoubtedly, if there be not as much of Prudence in the Conduct of a public Scheme, as is generally seen in the Management of a private Concern, we may easily guess what will be the Fate of it. The good Sense and great Attention of the *Bristol* Merchants, appear in the Precautions they took for the right Management of this Expedition, which effectually answered their Intentions: And shall we be weak enough to believe, that a Project, formed for the common Benefit of the *British* Nation, might not be as well regulated, and as successfully executed, as one which tended only to the Benefit of a few Merchants in one of its Ports? It is easy enough to conceive, that if wrong Methods are used, or right ones neglected, if Ships go out at improper Seasons of the Year, heavily loaded with Things unnecessary, commanded by unexperienced or fresh-water Seamen, who think any Hardship intolerable, we need not wonder that things miscarry. But this very Voyage of Captain *Woods Rogers* clearly demonstrates such a Design to be very practicable, notwithstanding what

is daily thrown out to make the contrary Notion gain Belief; for their Ships were much fuller of Men than is usual for Ships of their Burden, and yet they carried Provisions for sixteen Months; which puts it beyond all Dispute, that Men of War, and Transports, may conveniently go on this Expedition, well filled with Men, and carry twelve Months Provision at least for each Ship; Besides, for every Man of War, or Transport, that carries considerable Numbers of Men, a proportionable Victualler may be allowed, with no more Men than are enough to sail her; so that she may carry eight or ten Months Provisions more for the other Ships, that imbarque the Men. Thus a sufficient Number may go for a Settlement, and fully victualled for twenty-two Months, which is time enough, and to spare, to go and return from the South Seas; and, if any Ship should lose Company, there is little Danger of their meeting again at Places appointed for Rendezvous. 'Tis true, the Distance from Home is great, but the Ships that have traded thither find it an easy Passage in a proper Season; and their Men continue more healthful, than those that trade to the *West Indies* by the North Seas. The general Distemper in such long Voyagers is the Scurvy; and the Methods to prevent the ill Effects of it are so well known, that they may be easily provided against. The Ships may likewise refresh by the Way, first at the *Cape de Verd* Islands, and then at *Brazil*; betwixt which, and the South Sea, is the longest Passage, and that, in all Probability, cannot exceed ten Weeks at Sea; so that, when they arrive at *Chili*, the Climate is so wholesome, and agrees so well with *European* Constitutions, that such as are sick speedily recover. Then, as to proper Places for a Settlement, where Provisions abound, there are so many of them on the Coast of *Chili*, &c. that a Body of Men disciplined, and under good Commanders, may easily settle there. It is not indeed easy to say, where such a Settlement might be made with the greatest Probability of Success; but, sure, it is very strange, that no Attempt has been hitherto made to discover that Continent that lies between *California* and *Japan*; since, that there is such a Continent, seems to be a Point the *Spaniards* are as industrious to conceal, as other Nations are negligent of inquiring after it, though none of their Subjects, that ever were in those Seas, quitted them, without recommending it to the Notice of their Countrymen. Sir *Francis Drake*, the first, and, perhaps, the most knowing of our Discoverers, took Possession of *California*, with this View particularly. The brave *Candish*, his only Rival in Reputation, suggested the same thing; and, if I mistake not, delivered his Thoughts at large on this Subject, in a Discourse directed to the Queen his Mistress, and delivered to his Patron the Lord *Hunsdon*, in relation to a Map of *China*, which he brought over, and of which I shall have Occasion to speak more largely in another Place. Captain *Dampier*, though he was far from being a deep Politician, yet saw and mentioned the Expediency of some such Settlement; which was again hinted by Captain *Rogers*. If the Reader should incline to be farther informed, as to the Advantages that might be reasonably expected from our having a Colony in those Parts, I will endeavour to give him some Satisfaction in that Particular. First, then, this Situation would afford us an Opportunity of corresponding in both the *East* and *West Indies*, and that with much greater Ease than the *Spaniards* find in carrying on their Trade between *Manilla* and *Acapulco*; because we should not have above half the Run of their Ship to either of the *Indies*; and, as the Winds on that Coast are constant and regular, we must, in the Space of a few Years, establish a safe and certain Correspondence. In the next Place, there is the highest Probability, that, in such a Climate, we might meet with, or, in a short Space, create, a considerable Demand for our coarse Cloths, and other Manufactures, which would be doubly advantageous to the Nation, by encouraging Industry at home, and increasing and enlarging our Navigation. There is another Circumstance that deserves to be mentioned, and it is this; that such a Colony would give us an Opportunity of examining effectually, whether there be any such thing as a practicable Passage into these Seas, either from the North-east, or the North-west; which is an old Question revived of late Years, and with good Reason, since the Solution of it would not only

only redound to the Benefit of several Nations, but to that of Europe in general.

It, notwithstanding all that has been said, there should appear something romantic, or, perhaps, ridiculous, in supposing the public Councils of this Nation in such a Situation, as that Projects of this Sort should be esteemed worthy their Notice; or any Part of our Naval Force employed at such a Distance, and where their Commanders could expect so little, even from the Success of their Undertaking, what hinders, that a private Company, by which I mean a Copartnership of particular Merchants, may not carry into Execution such a Design? We have seen, by a Variety of Instances, by the *East India Company* in *Holland*, by the *English East India Company*, by our *Levant*, by our *Hudsons-bay*, but especially by our *Russia Company*, what private Merchants are able to do, if properly countenanced and encouraged. The *Dutch* and *English East India Companies* rose both of them out of private Undertakings, while the State wisely assisted and supported them by her Authority, for the sake of promoting the public Good. If, therefore, at this Juncture; when there are so many private Men who have acquired large Fortunes, while the settled and ordinary Trade of the Nation is in some measure necessarily suspended by the War; while the Interest of the public Debt continues low, and yet that Debt is daily increasing; if, I say, while Things are in such a Situation, a Body of Merchants should undertake to discover new Countries, and to make new Settlements, what Reason is there to doubt of their meeting with Encouragement and Success? There needs no mighty Sum to fit out two Privateers, and a Tender; and, besides, the very Expences of the Voyage might be probably borne by the Prizes taken in the South Seas, or both Schemes pursued at once, by wintering in *California*, and waiting the Arrival of the *Acapulco* Ships upon those Coasts. It is on all Hands acknowledged, that the Climate is temperate and healthy, that the Natives are friendly and honest, that the opposite Continent of *America* is very rich, and but thinly peopled by the *Spaniards*; so that, on the Whole, there is nothing astonishing or absurd in supposing, that 3 or 400 Men, well-disciplined, and under experienced Commanders, should maintain themselves here, without any great Difficulty or Inconvenience, for seven, eight, or nine Months: We think it no Hardship to keep them continually on Ship-board, for two or three Years, in other Services, to at least as little Purpose. There is, however, another Thing to

be considered, and it is this; that, sailing from *California* in a higher Latitude than usual, they might, if they found it practicable, winter in any new-discovered Port, and be sure to return time enough to *California*, to accomplish the other Part of their Scheme; or, if they should fail of meeting with a proper Port in any of the Islands or Continents between *California* and the *East Indies*, they may continue their Voyage to *China*, where they might find themselves at Liberty to form and execute new Projects, equally honourable to themselves, and advantageous to their Owners. At all Events, therefore, a Scheme of this sort, judiciously carried into Execution; must be very beneficial to the Nation: It would serve to extirpate old Errors, by informing us of new Truths; it would heighten our Credit for Maritime Power and Skill; it would exercise Men of active Spirits, improve their natural Parts, and point out to them the Means of transmitting Wealth to their Descendants, and their own Fame to latest Posterity. If it should be demanded, why I am so warm in recommending such a Design; my Answer is, because I think it for the Service of my Country, which can never be made happy at home, or maintain her Reputation abroad, but from the Appearance of such a Spirit, as would be necessary to accomplish such a Design: And therefore to labour in exciting this, seems the highest Point of Patriotism, of which a private Man is capable. If a severer Critic should inquire, What Connexion this has with my History; I answer, The closest that can be: For, to what End do we record the Transactions of Times past, but that they may become Examples to succeeding Ages? This Voyage of the *Duke* and *Duchess* was, by far, the most successful of any that was ever set on foot at the Expence, and under the Management, of private Merchants; and, beheld in that Light, is, of all others, the properest to encourage *British* Traders to exert themselves in the same Way. I might perhaps go too far, should I assert, that this Voyage gave Rise to the *South Sea Company*; but thus much I can safely say, that the Success of this Voyage was what the Patrons of that Company chiefly insisted upon in their Defence, when the Plan of it was attacked as insufficient and chimerical. I shall, however, conclude with this Remark; that, as this is the last *English* Voyage of its kind so prosperous, and so well conducted, as to merit such Observations, so the Succinctness with which I treat the rest, will sufficiently excuse my dwelling so long on so agreeable and so important a Subject.

SECTION XVII.

The Voyage of Captain JOHN CLIPPERTON round the World, from an authentic Journal.

1. *The Occasion of the Voyage, and the Reason of obtaining the Emperor's Commission.* 2. *The English and Flemish disagree, and the Emperor's Commission is laid aside.* 3. *Captain Shelvocke removed, and Captain Clipperton appointed Commander in Chief.* 4. *Instructions given by the Owners.* 5. *The Ship sail from Plymouth, February 15. 1719; and are separated in a Storm.* 6. *Captain Clipperton prosecutes his Voyage to the Canaries.* 7. *Arrival, and Description of the Cape de Verde Islands.* 8. *Continuation of his Voyage to the Straights of Magellan.* 9. *They arrive at the Island of Juan Fernandez, and cruise there for the Speedwel.* 10. *Proceed for the South Seas, where they make abundance of Prizes.* 11. *One of the Prizes escapes, and alarms the Coast.* 12. *They continue cruising with good Success.* 13. *A further Account of their Transactions in those Seas.* 14. *Their amazing Success, notwithstanding the Smallness of their Number.* 15. *A Conspiracy among the Crew to run away with the Ship, and turn Pirates.* 16. *Sail for the Gallapagos Islands.* 17. *Meet with Captain Shelvocke very unexpectedly on the Coast of Mexico.* 18. *Separate from him again, and go to the East Indies.* 19. *Arrive at Guam, and are very ill treated by the Governor.* 20. *Continue their Voyage thence for China.* 21. *Come into the Port of Amoy with great Difficulty.* 22. *A Mutiny there, in which Captain Clipperton is deprived of his Command.* 23. *The Consequences of that Mutiny, and the Captain's Care for his Owners.* 24. *Their Arrival at Macao.* 25. *The Crew separate, and shift for themselves.* 26. *Captain Clipperton returns Home, and dies of a broken Heart.* 27. *Remarks upon the Voyage.*

1. **A**T the time that the Affairs of this Nation, and of all Europe, were extremely embarrassed, by Disputes between the late Emperor Charles VI. and his Catholic Majesty King Philip V. of Spain, and the Quadruple Alliance was negotiating, some Merchants here, foreseeing that it could not be long before we broke

with Spain, or Spain broke with us, resolved, about the Beginning of the Year 1718, to fit out two Ships for the South Seas, in hopes that they might make as happy a Voyage as the *Duke* and *Duchess* had done, under the Command of Captain *Woodes Rogers*; and, with this View, they provided two fine Ships, in every respect fit for the

Voyage:

Voyage; the Success. But expected between have his Imp Scheme was let very necessary on board the R Command of t per Authority Seamen, who v induced the Gen mendation of o of Captain Ge nant in the Roy Officer, and w ever bore Com Parts, ready S made him a ver this Scheme, as tions he received commanded by t to wait for the E Flemish Officers as as much Wine the Supply of bo cold a Climate, a vision in the Sou try for the sake c

2. It was in t tain Shelvocke failed of his Commissio Imp l Court, a the Air of a Ger the Names of the ty-six Guns, and and the lesser, of named the *Starve* rial Majesty's Prin Captain *Shelvocke* 3 Officers; and wh with his Wine and the *Downs*, where *Eugene*, that had b was likewise instrud there, by hoisting viuing Strangers al that might give ind ing into the Desig Ship. But Capta discretionary Power manage Things in Firing of Guns, an by degrees; and, a Fleming, and six C Confort the *Prince* some time. The the first Uneasiness, at Deal for several putes quickly grew Flemish Seamen, co of being commande such a manner, that them; and, as the these Disputes were Ship's Crew was in they might easily h mixt Company, of the *Spaniards*, was, event, a very imp Care and Expence i obliged to lay aside Emperor's Commissi duced, since they making use of it, between *Great Brit* lved to procure K back all the Men a barges, and allowi his Resolution was

Voyage; the one called the *Speedwell*, and the other the *Success*. But the War not breaking out so soon as was expected between the two Crowns, it was judged requisite to have his Imperial Majesty's Commission. When the Scheme was settled and adjusted on this Foot, it was thought very necessary to find out some Gentleman who had served on board the Royal Navy, that might take upon him the Command of the Expedition, and be able to carry a proper Authority over the *Flemish* Soldiers, as well as *English* Seamen, who were on board. This Situation of Things induced the Gentlemen Proprietors, on the warm Recommendation of one of their own Number, to make Choice of Captain *George Sbelvoeke*, who had served as a Lieutenant in the Royal Navy, had the Character of being a good Officer, and was certainly an accomplished a Seaman as ever bore Command. He was, besides, a Man of quick Parts, ready Speech, and very winning Address; which made him a very proper Person for carrying into Execution this Scheme, as it was then modelled. The first Instructions he received, were to proceed with the *Speedwell*, then commanded by Captain *Robert Mitchell*, to *Ostend*, there to wait for the Emperor's Commissions, and to receive his *Flemish* Officers and Seamen on board the Ship, together with as much Wine and Brandy, as was thought proper for the Supply of both Ships, during so long a Voyage, in so cold a Climate, as that of *Cape Horn*; and for their Provision in the South Seas, which was bought in that Country for the sake of Cheapness.

2. It was in the Month of *November 1718*, that Captain *Sbelvoeke* sailed to *Ostend*, in order to execute this Part of his Commission. To shew the greater Respect to the Imperial Court, and, at the same time, to give this more the Air of a *German* Expedition, it was resolved to change the Names of the Ships; and therefore the biggest, of thirty-six Guns, and 180 Men, was called the *Prince Eugene*; and the lesser, of twenty-four Guns, and 106 Men, was named the *Starenberg*, after Count *Starenberg*, his Imperial Majesty's Prime Minister. The Complement of Men Captain *Sbelvoeke* was to take in, was sixty *Flemings*, under 3 Officers; and when he had got them on board, together with his Wine and Brandy, he was to proceed directly for the *Downs*, where he was to meet his Consort the *Prince Eugene*, that had been fitted and manned in the River: He was likewise instructed to make no sort of Shew or Parade there, by hoisting of Colours, giving Entertainments, inviting Strangers aboard, or, in short, doing any thing that might give inquisitive People an Opportunity of prying into the Design of the Voyage, or the Strength of the Ship. But Captain *Sbelvoeke*, apprehending that he had a discretionary Power, and, perhaps, finding it impossible to manage Things in that Country without a little Shew, some Firing of Guns, and now-and-then a Dinner, gave into it by degrees; and, at last, sailed for the *Downs* with ninety *Flemings*, and six Officers on board, where he found his Consort the *Prince Eugene*, which had waited for him there some time. The Accident of his staying so long, created the first Uneasiness, his Owners having some of them waited at *Deal* for several Days, in Expectation of him; but Disputes quickly grew high, when it was found, that the *Flemish* Seamen, confiding in their Numbers, and proud of being commanded by their own Officers, behaved in such a manner, that the *English* knew not how to act with them; and, as there was constantly a mixed Command, these Disputes were so often repeated, that at last the whole Ship's Crew was in a Flame, and the Owners saw, what they might easily have guessed before, that to send out a mixt Company, of *Englishmen* and *Flemings*, to cruise upon the *Spaniards*, was, in itself, a very ill-judged, and, in the Event, a very impracticable thing; so that, after all the Care and Expence it had cost them, they found themselves obliged to lay aside all Thoughts of proceeding under the Emperor's Commission; to which they were the more easily induced, since they were no longer under a Necessity of making use of it, the War being, by this time, begun between *Great Britain* and *Spain*. It was, therefore, resolved to procure King *George's* Commission, and to send back all the Men and Officers to *Flanders*, paying their Charges, and allowing two Months Wages to the Men. This Resolution was no sooner taken, than it was put in

Execution: But, before we part with his Imperial Majesty's Commission, it may not be amiss to take a Copy of it. I have always had a great Dislike to filling up Books with public Instruments and Records; but this Commission of the Emperor's is really a Curiosity, in point both of Style and Substance; and, as I believe it is the only one of its kind that ever was procured by *British* Subjects, I hope my Readers will be very well satisfied with my inserting it, especially when I observe, that this Commission was obtained before the *East India* Company was erected at *Ostend*; which shews how dangerous a thing it is, for the Subjects of the maritime Powers to apply to foreign Princes for Commissions, since it opens the Secrets of their Trade, and puts such Courts upon Schemes they would not otherwise have thought of. But to the Commission: Thus it ran.

A Translation of the Imperial Commission.

" Charles VI. by the Grace of God, Emperor of the
 " Romans, always August; King of *Germany*, *Castile*,
 " *Leon*, *Aragon*, *Naples*, *Sicily*, *Jerusalem*, *Hungary*,
 " *Bohemia*, *Dalmatia*, *Croatia*, *Navarre*, *Granada*, *Toledo*,
 " *Valencia*, *Galicia*, the *Balearic Islands*, *Seville*,
 " *Sardinia*, *Corduba*, *Corfica*, *Murcia*, *Juan Algarve*, *Algier*,
 " *Gibraltar*, the *Canary Islands*, also of the *East Indies*,
 " the Islands and foreign Lands of the Western
 " Sea, &c. Archduke of *Austria*; Duke of *Burgundy*,
 " *Brabant*, *Milan*, *Stiria*, *Carinthia*, *Carnioia*, *Luxemburg*,
 " *Wirtemberg*, the *Upper* and *Lower Silesia*, *Albens*,
 " and *Neapatita*; Prince of *Suabia*; Marquis of the sacred
 " *Roman Empire*, *Burgau*, and *Moravia*; Earl of *Habsburg*,
 " *Flanders*, *Tyrol*, *Barcelona*, &c. We make
 " known and testify to all the World, by the Tenor of
 " these Presents, that of our own Motion, and from the
 " Fulness of our Power, we have allowed and granted our
 " Imperial Permission, and free Liberty, to the faithful,
 " and (of us) most deserving Man *George Sbelvoeke*, upon
 " a certain and experienced Opinion of his Honesty, confirmed
 " by a long Series of good Actions, to prepare
 " and fit out for War the Ship called the *Prince Eugene*,
 " able to carry thirty-two Guns, or thereabouts, and to
 " sail with her well fitted and furnished with Arms, thro'
 " any Seas far and wide, to follow and pursue any such as
 " are the Enemies of our most August House, but chiefly
 " the Enemies of the Christian Name, and to take and
 " seize their Ships, to the end that our Subjects, and
 " our Shores, may be freed from the Incurfions of the
 " *Turks*, and be rendered safe from all Enemies; or that
 " our Enemies may be punished for their Insolence, should
 " they offer any Injury to our Dominions or Subjects.
 " But we have not otherwise granted and allowed this
 " Power and *Cæsarean* Permission to the aforesaid *George*
 " *Sbelvoeke*, than upon Condition that he suffer the aforesaid
 " named Ship, with all the Effects wherewith she is laden,
 " to be estimated and valued by our General Archthallasic
 " College, commonly called The Office of Admiralty of
 " the *Spanish Flanders*; and that he fit out and furnish the
 " said Ship for War, by Order and Appointment of the
 " said Office of Admiralty; and also give the proper Security,
 " and take the usual Oath required by the said Office,
 " or to whomsoever the Admiralty shall authorize and im-
 " power, by Order of our Governor, or our Plenipotentiary
 " in *Flanders*, viz. that he is the true Commander of
 " the Ship; and that he will exactly observe our Orders
 " and Rules relating to Naval Affairs and Hostilities; and
 " take care, they be inviolably observed by the Seamen,
 " and such as sail with him: Likewise, that a List or Catalogue
 " be made, in which the Names and Surnames of the Persons
 " who serve in the said Ship, with their Birth, Country,
 " and Habitation, be clearly expressed, that the Commerce
 " of our Subjects own Confederates shall not be disturbed,
 " or any ways hindered; that Ships taken from the Enemy
 " shall not be sunk in the Sea, nor the Prisoners set on shore,
 " or dispersed on Islands, or distant and remote Countries,
 " to hide and conceal the nature of their Booty: That no
 " Chests, Boxes, or Trunks, which shall be found in the
 " Ship when taken, shall be opened, or any Part of the
 " Prize-goods taken away, moved, or clandestinely sold:
 " Lastly, that he use his best Endeavours

"vours to procure the Writings and Proofs relating to the Goods aboard the Prize-ships, that the Action and Seizures may be approved by the Officers of the Admiralty above-mentioned; to which Officers he is to deliver those Proofs, together with the Prize; and also to acquaint them with the Day, Hour, and Place of the Sea; in which the Ship was taken: But if he should be compelled by Strefs of Weather, or Enemies, to make into another Port, he must inform the above-mentioned Office of Admiralty of all these Things; and, by the Direction und Appointment of the same, pay the tenth Part of the Value of the Prize, the Expences in unloading the Goods, and Warehouse-room, being first deducted.

"Upon these Conditions we do allow and grant, to the above-named Captain *George Shelbocke*, the free Use of our *Cæsarian* and Imperial Flag, Arms, and Ensign; and we command our Generals, Governors, and chief Commanders, by Sea or Land, and all the Officers and Attendants of our Ports, (and we also desire of the Governors, Commanders, and Attendants, and Officers of our Allies, and neutral Princes) that they kindly receive the said Captain *George Shelbocke* into the Ports or Stations of their Jurisdictions, protect him with their Patronage, and allow and permit him freely to sail, pass and repass, and act in an hostile manner against our Enemies, under the Limitations above-mentioned, for we think it expedient for our Imperial Service; nor shall we act otherwise towards the Subjects, or any Commanders of Ships of our Allies, or neutral Princes, but treat them with the same Favour and Protection: In Testimony of which, we have ordered and commanded these Presents, subscribed by our own Hand, and authorized by the Seal of our Imperial Arms, and under-written by *Ramundus a Vilina Perlas*, Marquis of *Rialp*, our Secretary of State, as usual, to be made. Given in our City of *Vienna*, 16 July, A. D. 1718, of our Government of the Empire 5. of *Spain* 13. of *Bohemia* and *Hungaria* 5.

"CHARLES."

"The said Captain *George Shelbocke* may make use of this Imperial Commission in warring against the *Spaniards*, and any Subjects of the Possessor of that Crown; but not against any other Power, though even Enemies to the Christian Name, on either Side of the Equinoctial Line, nor do them the least Injury. Done at *Brussels*, the 28th of Sept. 1718.

"CASTILLON."

3. A Commission once obtained from his *Britannic Majesty*, the Ships returned to their old Names, the *Success* and *Speedwel*; but another Revolution happened of a more extraordinary Nature, which was, the turning Captain *Shelbocke* out of his Command, and making him but second in this Expedition. This was, in all Probability, owing to some little Mistakes in his Conduct when he made that short Trip to *Flanders*, as well as to the Change of Circumstances, which might have inclined the Proprietors to prefer another Officer, since now the whole Fate of the Expedition depending on the perfect Knowledge of, and right Conduct in, the South Seas, a Man of another Turn was necessary. This Officer, who was thus preferred to Captain *Shelbocke*, was a Person we have often mentioned before; viz. Captain *John Clipperton*, who, in Captain *Dampier's* Voyages, is called *Clippington*, who served under him in the Capacity of a Mate, and of whose Adventures, after his Separation from *Dampier*, we have already given a Detail: But, as we are now to accompany him a second time round the World, it may not be amiss to give a farther Account of him; the rather, because what I deliver, is from unquestionable Authority, having been favoured with many Lights in compiling this Voyage. He was born at *Yarmouth*, in the County of *Norfolk*; and his Relations being most of them Seafaring People, he was from his Infancy bred up in that way; and, having failed in almost all Sorts of Vessels to most of the Ports of *Europe*, once to the *West Indies*, and once round the Globe, he had by this means gained great Experience, and was

allowed, by all who knew him, to be an able Pilot, an experienced Seaman, and an Officer as capable of conducting the Expedition he undertook, as any Man then in *Great Britain*. It is true, Captain *Clipperton* had his Faults; as, indeed, who is without them? but they were very far from being either gross in themselves, or dangerous to other Men. He was a blunt, rough, free-spoken Sailor, had not much the Air of a Gentleman, and, therefore, he never affected it; was free and easy amongst his Seamen; and, though he was somewhat passionate, yet he was soon appeased, and was ready to repair any Injury or Injustice he had done in Heat of Blood. He had a strict Regard to what he took to be his Duty, was a Man of honest Principles, and had a great deal of Justice and Humanity in his Nature. His Circumstances were but indifferent, which induced him to undertake this Voyage for the Rafting himself, and his Family, which he left during this time in *Ireland*. The Character Captain *Clipperton* had obtained amongst the Merchants for his Skill, Fidelity, and Ready Courage; recommended him to the Proprietors of this Expedition, who, having now advanced upwards of fifteen thousand Pounds towards it, thought proper to put him into the *Success*, and intrust him with the chief Command, leaving Captain *George Shelbocke* in the *Speedwel*, where he had under him, as his second Captain, a Person we have often mentioned before, viz. Captain *Simon Hatley*, the same whom Captain *Woodes Rogers* left among the *Galapagos* Islands, and who was a long time afterwards Prisoner among the *Spaniards*.

4. The Instructions these Gentlemen received, were in Substance these: That they should proceed with all imaginable Diligence to *Plymouth*; from whence they were to sail, with the first fair Wind, for *Cape Horn*, or the Straights of *Magellan*, and to make their Passage either round that Cape, or through those Straights, as they'd to them appear most convenient; then to sail into the South Seas, cruise on the Coasts of *Chili*, *Peru*, and *Mexico*, and endeavour, if possible, to meet the *Acapulco* Ship. To prevent all Disputes and Disorders, their Proprietors directed the Captains to adhere steadily to these three Maxims: First, To be careful, above all things, not to separate from each other; because that would, in all Probability, prove the Ruin of their Voyage. They were next enjoined to undertake nothing of Importance without holding a Council of Officers, stating the Question in Writing that was to be debated, drawing up the Resolutions, with the Reasons upon which it was grounded, in concise Terms, and obliging every Officer present to sign it. They were, lastly, directed to call a Council in the same manner, as soon as possible, after any Action had happened, or any Prize of Consequence been taken, in which the Conduct of the Officers concerned might be examined, and a true Judgment passed upon it on the Spot, subscribed by the Persons assisting at the Council, to prevent all Possibility of Dispute. That neither of the Commanders might take Offence at the Strictness of these Rules, or not enter sufficiently into the Motives of them, the last thing the Proprietors did, was, to present each of the Captains with *Mr. Rogers's* Voyage, that they might never be at a Loss for proper Precedents throughout the Expedition. But these Precautions proved in a great measure useless, since the Expedition wore an unfortunate Aspect from the Beginning; for the Ships were obliged to lie three Months at *Plymouth*, waiting for a Wind: During which time, all Things fell into Confusion, and Factions were formed, in which the Crews of both Ships were involved, as one of the Historians of this Voyage rightly observes, from the Captains down to the Cabin-boys. Captain *Shelbocke* highly stomached the Affront that had been offered him, in giving his Ship, and the chief Command, to another Person; and Captain *Clipperton* being a boisterous Man, knowing *Shelbocke's* Retentment, having himself strong Passions, and not being able to conceal them, they were nothing but Debate and Disputes; so that every day carried up Complaints to the Proprietors, and brought down Instructions, Reproofs, and Exhortations to Can. and Harmony, so long as they remained in Port. It is certainly a very tedious and troublesome Office, to be obliged to record this sort of Quarrels; but, as the Fate of the

Voyage dependent to undertake Account, we had, indeed, but and myself, if, that must attend between the Comm both; in which made as profpe But it to fell off for his Friend which he ought Owners, and th in this, as well proved the Cause

5. On the 13 *Clipperton*, and with a fair Wind haps ever happened had still on board other Liquors, and and, how fatal a this time, will be fresh Gales, squa unent their belt their Anchors, a shorten Sail for that he came this complained to C Ship, which proceed aloft; and theret Brandy, which w Opportunity of st Hold, which wou better than he did was, undoubtedly *person*; though, a it argued very lit leaving him; and *person* had not an order to have the Voyage. On the tween nine and ten take in their Top made a Signal for *Shelbocke* readily of Ships were under Canvas all the Night in the Afternoon, *person*, in the *Success* East, whereas Cap Journal, stood away Day they never saw Seas by mere Acc History we propos Captain *Clipperton*, which hitherto there though there are extant; viz. one v other by Captain B the Captain's Apol contains abundance entertaining Style, a Account very agre some Years after, *Shelbocke*, and is writt Author protests at Prejudice in his Pow readily in his Refol in which, however, some Extracts fro Voyage. But this Reflections and Inve the Thread of the of either Voyage: divide them; and, Power, the Rise and done with it, and Captain *Clipperton's*

Voyage depends upon them; and, as it would be impossible to understand what follows, without such a previous Account, we must go through it as well as we can. It had, indeed, been happy for the Proprietors, the Reader, and myself, if, on mature Consideration on the Consequences that must attend perpetual Heart-burns and Disputes between the Commanders, they had wisely removed one, or both; in which case, they might, very probably, have made as prosperous a Voyage as the *Duke and Duchess*. But it so fell out, that the Concern every Gentleman had for his Friend in Post, got the better of that Concern which he ought to have had for himself, his Fellow-Owners, and the common Good of the Voyage; so that in this, as well as in many other Cases, private Views proved the Cause of public Ruin.

5. On the 13th of February 1719, the *Success*, Captain Clipperton, and the *Speedwel*, Captain *Shelvocke*, sailed with a fair Wind, but, with as odd a Circumstance, as perhaps ever happened; which was this: That the *Speedwel* had still on board the whole Stock of Wines, Brandies, and other Liquors, designed for the Supply of both Ships; and, how fatal a Mistake it was not to divide them before this time, will very soon appear. On the 15th, they had fresh Gales, squally, with Rain. In the Evening, they unbent their best and smallest Bowers in the *Success*, stowed their Anchors, and found themselves often obliged to shorten Sail for the *Speedwel*. Captain *Shelvocke* tells us, that he came this Day under the Lee of the *Success*, and complained to Captain Clipperton of the Crankness of his Ship, which proceeded from their having too much Weight aloft; and therefore desired him to send for his Wine and Brandy, which would give him (Captain *Shelvocke*) an Opportunity of striking down some of his Guns into the Hold, which would have enabled him to have sailed much better than he did: But this, it seems, was neglected; and was, undoubtedly, a very great Omission in Captain Clipperton; though, at the same time, we must acknowledge, it argued very little Distrust in him of Captain *Shelvocke's* leaving him; and is the fullest Proof possible, that Clipperton had not any Intention to desert the *Speedwel*, in order to have the sole Conduct and Management of the Voyage. On the 19th, there arose a violent Storm between nine and ten at Night, which obliged both Ships to take in their Top-sails. The Gale increasing, the *Success* made a Signal for the *Speedwel* to bring to; which Captain *Shelvocke* readily obeyed; and, by eleven o'Clock, both Ships were under bare Poles; not able to suffer one Knot of Canvas all the Night through. On the 20th, about two in the Afternoon, the Storm abated, and Captain Clipperton, in the *Success*, made Sail, steering South and by East, whereas Captain *Shelvocke*, according to his own Journal, stood away to the North-west; so that from this Day they never saw each other, till they met in the South Seas by mere Accident. Here then properly begins the History we propose to include in this Section, viz. that of Captain Clipperton, in the *Success*, round the Globe, of which hitherto the World has had no distinct Relation, though there are two Histories of this Voyage already extant; viz. one written by Captain *Shelvocke*, and the other by Captain *Beagle*. The former is, strictly speaking, the Captain's Apology for his own Conduct; though it contains abundance of curious Things, is written in a very entertaining Style, and has a Spirit in it, which enlivens the Account very agreeably. The other, though published some Years after, contains the Charge against Captain *Shelvocke*, and is written with uncommon Acrimony. The Author professes an Intention to do his Adversary all the Prejudice in his Power, and appears to have perilled very steadily in his Resolution to the very last Page in his Book; in which, however, there are many curious Things, and some Extracts from a Journal of Captain Clipperton's Voyage. But this whole Book is so blended with Reflections and Invectives, that it is no easy Matter to pursue the Thread of the Relation, so as to judge of the Effects of either Voyage: And, therefore, I found it necessary to divide them; and, having stated, as fairly as was in my Power, the Rise and Subject of this Dispute, I have now done with it, and shall content myself with prosecuting Captain Clipperton's Voyage round the World; in which

he met with a great Variety of Accidents that deserve to be known; performed some Things worthy of Notice; and, certainly shewed as great an Inclination to do Justice to his Proprietors, and to maintain the Honour of his Country, as, from a Man under his Circumstances, could be expected: And therefore I have always thought it hard, that private Prejudices should hinder his Merit from being brought into public View.

6. As Captain Clipperton, who was now at Sea, was very indifferently provided, without his Consort, he was obliged to take upon him a discretionary Power of dispensing, in some respects, with his Instructions; but this he exercised very rarely, and with the uttermost Caution. In regard to essential Points, he never digressed from them, but consulted his Officers constantly, and did his utmost to prosecute his Voyage with Effect. The first Place of Rendezvous appointed by them was the *Canary Islands*; and, therefore, he sailed thither with such Expedition, that he arrived there on the fifth of March; and, having taken in some Refreshments, for which, as all his Liquors were on board the *Speedwel*, he had great Occasion, he continued cruising, as directed by his Instructions, in that Station, for ten Days, in hopes of seeing his Consort; but, being disappointed, he resolved to continue his Voyage, for fear he should miss her at the next Place of Rendezvous, which was at the *Cape de Verd Islands*; and, accordingly, he left *Gomera* on the 15th, in order to be early in his next Station. These Islands, which the Ancients called the *Fortunate Islands*, by reason of their Fertility and Temperature of Air, having been discovered by the *Spaniards* in the Year 1402, they named them the *Canaries*, or the *Islands of Dogs*, because they found great numbers of these Creatures here. They are seven in all; viz. *Lancerota*, *Puerie* or *Fort Ventura*, the *Great Canary*, *Teneriff*, *Gomera*, *Hiero* or *Fero*, and *Palma*. The *Great Canary* is far distant from the others, and contains 9000 Inhabitants. It is the Seat of the Bishop, the Inquisition, and of the Council Royal, which governs all the seven Islands. There is a Mountain on the *Teneriff*, called the *Pic of Teneriff* or *Terraia*, which, according to the common Opinion, is the highest in the World. It may be distinctly seen at sixty Leagues Distance. There is no travelling to the Top of it but in July and August, because all the Year besides it is covered with Snow; though there is none to be seen at other Places of that Island, nor in the other six, at any Time of the Year. It is three Days Journey to the Top of it; whence you may easily see all the *Canary Islands*, though some of them are sixty Leagues distant. *Hiero*, or *Fero*, is also one of the biggest, but very barren, and so dry, that there is not one Drop of fresh Water to be found in it, except in some Places on the Sea-side, where it is also very troublesome and dangerous to fetch it; but this Place the Providence of God supplies with Rain, to remedy that Inconvenience; for there grows, almost in every Place, a sort of Tree, which is pretty big, and incomparably thick of Branches and Leaves; and its Leaves are long and narrow, always green and lively: This Tree is always covered with a little Cloud, that hangs over it, and wets the Leaves by its Dew, so that a fine clear Water distils from them into little Pails, which the Inhabitants set to catch it. This Water falls in such large Quantities, that it not only abundantly supplies the Necessity of the People, but is sufficient also to water the Cattle. The *Canaries* in general are very fertile, and abound with all Sorts of Provisions: They afford great Store of Cattle, Store of Corn, Honey, Wax, Sugar, Cheese, and Skins. The Wine of that Country is pleasant and strong, and transported into all Parts of the World. The *Spanish* Ships, that sail into *America*, commonly stay at those Islands to take in Provisions. On the Right-hand of those Islands, about 100 Leagues off, the Mariners very often perceived an Island named *S. Parazona*; they say it is all over green, very pleasant, and full of Trees, and has Plenty of all manner of Provisions: They likewise say it is inhabited by Christians, but no Man can tell of what Denomination they are, nor what Language they speak. The *Spaniards* in the *Canaries* often have attempted to go thither, but never could find the Way into it; which raised an Opinion in the People, that it was an Illusion,

Illusion, or an enchanted Island; or that the Island is only seen at certain times, and not always. But others allege a better Reason, by saying, the Island is small, and almost covered with Clouds; and that the Strength of the Currents is so powerful there, that they drive the Ships from it. However, it is certain, that there is such an Island, at such a Distance from the *Canaries* as I mentioned before.

7. On the 21st in the Evening, they saw *St. Vincent*; and, about ten the next Morning, anchored in the Bay, where they found a *French Merchant-Ship*, and the *Diamond of Bristol*, taking in a Cargo of *Asses* for *Jamaica*. This was the next Place of Rendezvous. They spent ten Days cruising in the Neighbourhood, in hopes of meeting with their Contort the *Speedwell*, but in vain; which put the Crew much out of Heart: So that Captain *Clipperton* found it a very difficult Matter to engage them to continue the Voyage. And indeed, considering the Condition they were in, it is no Wonder, that they were a little diffident of the Success of their Expedition, considering the Courte they were to steer, which was for the Streights of *Magellan*, without any Supply of Wine, Brandy, or other Liquor, to keep up their Spirits; and withal their Force so inconsiderable, that they had great Reason to doubt, whether it would be possible for them to undertake any thing, or even get safely out of the South Seas, in case they found nothing worth undertaking. Before we quit these Islands, it will be proper to give a short Account of them, as they were at this time: The *Cape de Verd Islands*, which are, by the *Dutch*, called the *Salt Islands*, from the Quantity of Salt found there, were discovered by the *Portuguese* in the Year 1572, who inhabit some of them to this Day. They are ten in Number; viz. *St. Iago*, *St. Lucia*, *St. Vincent*, *St. Antonio*, *St. Nicolas*, *Ilha Blanca*, *Ilha de Sal*, *Ilha de Maio*, *Ilha de Fogo*, and *Ilha de Bona Vista*. They reach from the *Green Cape*, of which we shall speak hereafter, 160 Leagues into the Sea. Some were of Opinion, that they were named *Green Islands* from the *Green Cape*; others, because the Sea that surrounds them is covered with a green Herb, by the *Portuguese* called *Sergalfo*, or *Cresses*; because it is much like *Water-cresses*. This Herb so covers the Sea, that you can hardly see the Water; nor can Ships sail thro' it, but with a stiff Gale of Wind. It produces Berries, much like white Gooseberries; but they have no manner of Taste. Nobody can tell how it grows; for there is no Ground or Land about the Place where it floats upon the Water: And it cannot come from the Bottom of the Sea, because the Sea is very deep, and, in many Places, unfathomable. You begin to see that Herb, when you come to the Latitude of 34°, where it lies so thick, that one would take it for so many Islands; but, what is more observable, you cannot see this Herb any-where else. When the *Portuguese* discovered those Islands, they were all desert and uninhabited; but now they afford plenty of Rice, Meal, *Tartarian* Wheat, Oranges, Lemons, Citrons, Bananas, Ananas, Ignames, Batatas, Melons, Cucumbers, Pompions, and several other sorts of Fruits. They produce also Garden and Wild-figs, have Vineyards which bear Grapes twice a Year, and abundance of great and small Cattle, but especially Kids. The Islands of *Bona Vista*, *Maio*, and *de Sal*, have Meat enough to lade the Ships, that go to *Brazil*. The Capital City is *St. Iago*, the Governor whereof commands all the Islands under the King of *Portugal*, and resides there. It hath also an Archiepiscopal See; and the Jurisdiction of that Prelate reaches not only over the Islands, but over all the Conquests the *Portuguese* have made on this Side the Cape of *Good Hope*. All the Islands of *Cape de Verd* are good Places to take in fresh Water upon a long Voyage; for, in the Island of *Maio*, as we said before, there is a little River to the East, and, the Land being uninhabited, nobody can hinder you from taking it; and, coming back, you may touch at the Island of *St. Antonio*, where there is also very good fresh Water, with good Refreshment of Fruits, as Oranges, &c. There are in that Island some *Portuguese*; but so few, that they cannot hinder you from taking what you please.

8. On May 29. they had an Observation, and found themselves in the Latitude of 52° 15' South, being then off the Straights of *Magellan*, distant from *Fuego*, one of the *Cape de Verd Islands*, 1580 Leagues, meridional Difference 36°

4' West. The next Day, they entered the Streights, which appeared like a large deep Bay. Proceeding higher up to *Queen Elizabeth's Island*, they sent their Pinnace ashore on the Main to a fresh-water River, which was at this time frozen up. They saw large Flocks of Geese and Ducks hereabouts; but they were very shy. The Surgeon's Mate, by some Accident, was left ashore, when the Boat came off; and the next Morning, when he was brought aboard, he was near dead with Cold. They remained some time at *Queen Elizabeth's Island*, which is dry, and, generally speaking, barren, except as to Salads, of which they found great plenty, that were of infinite Service to them; at that time, when they were sick of the Scurvy. The only Herb, that deserves to be particularly taken notice of, was Smalage, of an extraordinary Size, which they eat raw, boiled in their Soups, and kept the Juice of it in Bottles. On June 11. they sent their Carpenter, with their Casks, on shore, to fill their empty ones, and to look a proper Piece of Wood for a Mizzen-mast. They met with great plenty of Wild-fowl and Shell-fish on shore; which were very welcome to all the Ship's Company, who found their Stomachs increase, as they were obliged to come to Short-allowance. On the 22d, they anchored in a fine Bay, which, from its Depth, they called *No-bottom Bay*. The Trees on shore were very high, and loaded with Snow; so that there could not be a more astonishing Prospect. On the 29th, came a Canoe, with four *Indians*, that is to say, two Men, a Woman, and a Boy, on board them. They were of a middle Stature, dark Complexion, their Faces broad and round, low Foreheads, black Hair, very lank, and short, with no Cloathing, except a Piece of Skin to cover their Middles. What seemed most remarkable was, their having a kind of a Streak round their Wrists, of an Azure, perfectly fine. It seems, that these Savages are extremely jealous of their Women; for, notwithstanding all that could be said to them, they would not permit the Woman, who was with them, to come on board. Captain *Clipperton* ordered them Bread and Cheese, and a Dram of Brandy, tho' it was very scarce. The former they eat very heartily, or rather greedily; but the latter proved disagreeable to their Smell, and they could not be prevailed upon to taste it. They brought some wild Geese and Ducks, which they exchanged for Knives; and had a Fire in the Middle of their Canoe, which was made of the Bark of Trees sewed together. They had Bows and Arrows, and some Fishing-tackle along with them. After about two Hours Stay, they rowed ashore, making Signs, that they would come again. The next Day in the Afternoon, the Pinnace was sent ashore, and returned in the Evening, with the *Indian* Canoe laden with large Mussels, which the *Indians* had trucked with their People for Bread, Knives, and other Things. In the Beginning of the Month of July, they found the Weather very moderate. The Natives were very far from being so mischievous a People as they are generally represented; of which they had two remarkable Instances: The first was, that one of their Men, whom they had on shore two Nights and a Day, was very kindly treated by them: The other, that one of the Natives being, by Accident, left on board the Ship, they came the next Day, without any Fear, and carried him away with them; which shews, that, if they are well treated, they are not treacherous. Another *Indian* Canoe, that came on board, had several Women in it, each with a Necklace of very small shining Shells of five or six Rows, very nicely strung, which looked like Mother-of-pearl. All this time, their Ship's Company was very sickly, and scarce a Day passed, but some or other died; which was generally attributed to their want of something comfortable in so rigorous a Climate; for, tho' they had sometimes fair moderate Weather for two or three Days together, yet it was continually varying; and, perhaps, for two or three Days afterwards, they had nothing but Snow, Rain, and Sleet, with great Flaws from the Shore, that were intolerably sharp. On July 8. they buried their Master Gunner ashore, under a treble Ditcharge of their Small-arms. They caused a Flag-Plank to be driven at the Head of his Grave, on which was the following Inscription: *Mr. William Pridham, Gunner of the Succell, deceased July the 7th, 1719, in the Straights of Magellan, and lies buried here.* On the 20th in the Morning, Captain *Mitchel* and Lieutenant *Darison* went in the Pinnace

Terra del Fuego Discovery of the have went thro' see if there was furnished with a 29th, the Pinnace which the *Tartar* hazardous to go shore, and, that they were forced to return thoroughly; yet west of Cape *Ze* a Seal, which the well as any Venetian *Mitibell*, who to look for this n mination, could n but only into an that their Ship After Captain *M* their Voyage thro Danger and Diffic short Allowance, Men. On *August* the Crew were the that it was simply thing immediately mined to pursue h solved to filter for and last Place of F 0. On *Septembe* anchored before t searched very dilig many of the *Spee* ner of Purpose. I spect, with his Inf ing about the Illanc an Inscription to b the Landing-place Crew to come altho thus, Captain *John* *Magye* was Surgeon tremely well know Ship's Company. Name was not infer that having cruised b also a long time Pr think fit to give the He next sent ashore of all the Convenie very; but found it Sick to Health, or lerable Spirits, wit Brandy, or other fl given to drinking i the Thoughts of be sick, dejected them changeable while the falling, and they had ever, they took a gr them for the present their Sea Store, bec ing them; some *P* Island, having left a g likewise wooded and cleaned their Ship, th to act in the South S to cruise alone; for nion, that the *Spee* so to his Ship's Com them from cutting ce ing away with the sick Men did wit very extraordinary, Island, compared w were sure to meet w Captain *Clipperton* naming in Possession nance of which, the Num. 13.

Jornal del Fuego, or the South Shore, in order to make a Discovery of the Passage that the *French Tartan* is said to have went through into the South Sea May 1713. and to see if there was any anchoring beyond Cape *Quad*, being furnished with all Necessaries for that Purpose. On the 29th, the Pinnace returned, having found the Passage thro' which the *Tartan* passed, but so narrow, that it was judged hazardous to go far that Way: But their Provisions fell short, and, that Place affording no manner of Supply, they were forced to return, before they could satisfy themselves thoroughly; yet they found several good Bays to the North-west of Cape *Quad* to anchor in. The *Indians* gave them a Seal, which they broiled and roasted, and said it eat as well as any Venison. On August 1. in the Morning, Captain *Mitchell*, with three other Officers, went a second time to look for this new Passage; but, after the strictest Examination, could not find, that it led into the South Seas, but only into an icy Bay, and this Passage too so narrow, that their Ship could not have made Way thro' it. After Captain *Mitchell* returned, they resolved to prosecute their Voyage through the Straights, which, with much Danger and Difficulty, they did, being all the time at very short Allowance, viz. at one Piece of Beef or Pork to six Men. On August 18. they arrived in the South Seas, but the Crew were then in so weak and weary a Condition, that it was simply impossible for them to undertake any thing immediately: Besides, Captain *Clipperton* was determined to pursue his Instructions closely; and therefore resolved to steer for the Island of *Juan Fernandez*, the third and last Place of Rendezvous.

9. On September 7. Captain *Clipperton*, in the *Success*, anchored before the Island *Juan Fernandez*, which he searched very diligently, in Hopes of finding some Testimony of the *Speetwells*'s having been there, but to no manner of Purpose. His next Care was to comply, in all respects, with his Instructions, by remaining upon, and cruising about the Island for a full Month. He likewise ordered an Inscription to be cut, on a remarkable Tree, fronting the Landing-place; so that it was impossible for any Ship's Crew to come ashore, and not see it. This Inscription ran thus. Captain *John — W. Magee*, 1719. This *William Magee* was Surgeon on board the *Success*, and a Person extremely well known by Captain *Shelvoeke*, and all his Ship's Company. The Reason why Captain *Clipperton*'s Name was not inserted in this Inscription, was plainly this; that having cruised before in the South Seas, and having been a long time Prisoner among the *Spaniards*, he did not think fit to give them Notice of his Return into those Parts. He next sent ashore most of his sick People, and made use of all the Conveniences the Island afforded for their Recovery; but found it extremely difficult, either to restore the Sick to Health, or to preserve those that were well in tolerable Spirits, without so much as a Drop of Wine, Brandy, or other strong Liquor; not that his People were given to drinking in an extravagant Degree, but because the Thoughts of being without any Cordial, if they fell sick, dejected them excessively. The Weather was very changeable while they continued there, abundance of Rain falling, and they had also some hard Gales of Wind: However, they took a great many Goats, which not only served them for the present eating, but likewise served to increase their Sea Store, because they had an Opportunity of salting them; some *French* Ships that had touched on the Island, having left a great Quantity there ready made. They likewise wooded and watered with great Conveniency, and cleaned their Ship, that the might be in the better Condition to act in the South Seas, where it was now visible they were to cruise alone; for Captain *Clipperton* was clearly of Opinion, that the *Speetwells* was lost; or at least he gave out so to his Ship's Company to pacify them, and to hinder them from cursing continually Captain *Shelvoeke*, for running away with their Liquors, which, however, some of the sick Men did with their dying Breaths. One thing was very extraordinary, that the Beauty and Fertility of this Island, compared with the Dangers and Difficulties they were sure to meet with in the South Seas, tempted four of Captain *Clipperton*'s Men to enter into a Scheme for remaining in Possession of so valuable a County. In pursuance of which, they actually ran away from the Ship,

and betook themselves to the Mountains: As it was very inconvenient to lose so many good Hands at such a time, and not a little dangerous to leave them in such a Place, Captain *Clipperton* ordered the necessary Measures to be taken for apprehending them, but without Effect. At last, the Day before the Ship was to leave the Island, Captain *Mitchell*, with some more Officers, went in the Pinnace to the East Part of it, to look for these four Men, who had then absented a Fortnight, two of which Men they found in the Custody of the Goat-hunters, having met with them in Pursuit of their Game; who affirmed, they had greater Difficulty in securing these Fellows, than in killing double the Number of Goats; because they were forced to fire several times at them before they would surrender. The Prisoners acknowledged, that, for the first five Days, they were hard put to it, being forced to subsist wholly on the Cabbage-trees, of which here is great Plenty; but added, that, having, by good Fortune, one Night found some Fire that was left by their Hunters, it served them in good stead; for they could then dress their Flesh, and fill their Bellies. The same Evening, they brought on board all the Fish they had salted, four Casks of Seal-oil, and whatever else belonged to them. As soon as the Crew were on board and mustered, on October 7. they prepared to sail; and, in the mean time, Captain *Mitchell* went on shore again in the Long-boat, to set up a Cross already cut for that Purpose, at the Foot of which he buried a Bottle, in which was contained a Letter for Captain *Shelvoeke*, directing another Place of Rendezvous, and some proper Signal to know each other by at Sea. At eight in the Morning, they weighed from the Island of *Juan Fernandez*, and left their two Men in Possession of it, who are to be reputed Successors to Governor *Selkirk*; tho', for any thing I know, we have not the slightest Memoirs of their Administration.

10. After leaving the Island of *Juan Fernandez*, Captain *Clipperton* sailed Northward, till he was in the Parallel of *Lima*, where he intended to act, though he was now in a very indifferent Condition, having lost thirty Men between the Time of his passing the Equator, and his leaving the Island of *Juan Fernandez*. His Men expressing some Uneasiness in relation to Plunder, he resolved, if possible, to set that Point to rights, by fixing a Paper to the Main-mast, which was assented to by the whole Ship's Company.

" I. The Man who first spies a Sail, proving a Prize, to have five Dollars for every hundred Ton the Prize measures.

" II. Every Man aboard a Prize, found drunk, or in any indudent Act with a white or black Woman, to be punished according to the Nature of his Offence.

" III. Every Man, of whatsoever Degree, concealing any Money, or other Thing, above the Value of half a Dollar, shall forfeit his Share of such Prize, and twenty Dollars out of his Share in the next that shall be taken."

On October 25. being in the Latitude of *Lima*, they gave Chace to a small Vessel, which they came up with, and took about eleven a Clock. She was their first Prize, and but an ill Omen of their Success in this Profession, since she proved, in all respects, hardly worth taking. She was a Snow of forty Ton Burden, laden with Sand and Rubbish for Manure: She had seven *Indians*, and two Negroes aboard, her Master being left sick ashore. All that Captain *Clipperton*'s People could find worth taking, was two Jars of Eggs, as much Treacle, and a Couple of Pieces of Eight in ready Money. The next Day, they met with a better Prize, which was a Ship called the *St. Vincent*, of 150 Tons, laden with Wood from *Guaiquil*. There were two Friers, sixteen *Indians*, and four Negroes aboard. On the 30th, they had the good Fortune to take a large Ship, bound from *Panama* to *Lima*: She was called the *Trinity*, of the Burden of 400 Tons; and had been taken by Captain *Rogers*, when he plundered *Guaiquil* ten Years before: She had a great many Passengers on board, and a Lading of considerable Value. On November 2. they took another Prize, which was a Vessel of seventy Tons, on board of which were the Countess of *Laguna*, and several other Passengers, a great deal of ready

Money, and upwards of 400 Jars of Wine and Brandy, which were Articles very much wanted. Captain *Clipperton* desired the Countess to inform him, whether she was inclined to stay on board the Prize, or accept of the Accommodations they were able to afford her on board the *Sucefsi*. She made the former her Choice, and the Captain very politely sent an Officer of Marines, with a Guard, on board the Prize, to prevent her being molested; and with strict Orders, to suffer nobody to enter her Cabin but her own Domesticities: And he likewise sent Part of the Wine and Brandy on board the other Prizes, for the Use of his Seamen, who were in Possession of them, and to whom, no doubt, this was a very welcome Refreshment.

11. It is a Mistake that many able Officers, both by Sea and Land, have committed, and therefore we need the less wonder at it in Captain *Clipperton*; that the Desire of Acquiring grows with Acquisition, till the Power of preserving is absolutely lost: He had already detached several Officers, and above a Third-part of his Company, to take care of his Prizes; and yet was as eager to take more, as if, instead of a Privateer weakly manned, he had commanded a Squadron of Ships of War. On the 12th, they discovered a Vessel at some Distance, which was a *London* built Pink, of 200 Tons Burden, bound from *Panama* to *Lima*, with Wood, a Cargo of very little Value to them; yet this Prize they added to their Number. The Name of her was the *Rofario*; and her Master, who was a very cunning Fellow, soon saw the Error that *Clipperton* had committed, and resolved to take Advantage of it: He guessed, by the Number of Prizes that were already with the *Englisb* Commodore, he could not send many Men on board his Ship; and, having about a dozen Passengers, he directed them, under the Command of a *French* Boatswain, to hide themselves in the Hold, with Orders, on his making a certain Signal, to seize as many of the *Englisb* as came down; assuring them, that he, with the Ship's Company, would be able to manage the rest. As soon as the Ship struck, Captain *Clipperton* sent Lieutenant *Serjeantson*, with eight Men, to take Possession of her; who, as soon as he came on board, ordered all that appeared to him, such as Seamen, *Indians*, and Negroes, into the great Cabin, and placed a Centinel at the Door of it. Thinking that all Things were now secure, he commanded the Top-sails to be hoisted, in order to stand to the Commodore: The Men, not in the least apprehensive of Danger, went down into the Hold to see what was in the Ship; upon which the Passengers, who were concealed, sallied out; knocked most of them down; and the *French* Boatswain, coming behind Mr. *Serjeantson*, knocked him down likewise, and then ordered them to be all bound. The *Spaniards* in the great Cabin, in the mean time, secured the Centinel, and, having thus recovered their Ship, began next to consider what they should do with her. The Captain was for getting ashore at all Events; which Design of his he pursued so eagerly, as to run his Ship upon the Rocks, where himself, his Company, and his Prisoners, were all in equal Danger; which he no sooner perceived, than he ordered all the *Englisb* to be unbound, and, by good Fortune, every Man of them got safe on shore; after which, Lieutenant *Serjeantson*, and his People, were sent away directly Prisoners to *Lima*. The Viceroy of *Peru* was no sooner acquainted with this hardy Action, than he gave Orders for the building a new Ship at *Guiaquil* for the Captain, and ordered all the Traders to be taxed towards the Expence of her; intending this as a Reward for the Service he had rendered to the Public, and hoping thereby to encourage others to behave as he had done. On the Arrival of the Prisoners at *Lima*, they were closely examined; and one of them gave a full Account of every thing he knew, and particularly of the two Men left upon the Island of *Juan Fernandez*, and of the leaving there a Bottle, with a Letter in it for his Comfort: Upon which, the Viceroy ordered a small Vessel to be fitted out, to fetch away those two Men, and the Bottle containing the Signals; and this was accordingly performed. I have drawn the Whole of this Relation together, that the Reader might have it in one View; and shall now return to Captain *Clipperton*, and the manner in which he prosecuted his Voyage after this unlucky Accident.

12. It was the 20th, about three in the Afternoon, when he perceived, that his last Prize was retaken; for, making a Signal to attack, and observing that the *Pink*, instead of obeying it, made all the Sail she could for the Shore, he immediately suspected what had happened; and, finding it impossible to come up with her, began to consider next what was fittest for him to do, to prevent the bad Effects that might be reasonably apprehended from her Crew getting on shore: And therefore the next Morning he very prudently determined to set all his *Spanisb* Prisoners at Liberty, as well to save Provisions, which, at that time, he could very ill spare; as that their good Usage might be speedily known, and returned to such of his Men as were in their Power. It is not easy to conceive, how a wild, or a better, Expedient could be thought of at such a Juncture; and therefore it is but doing Justice to this Officer to remark, that his so suddenly recollecting himself, and correcting his Error, was sufficient to excuse him; especially if we reflect, that, for one Officer, capable of making such an Amends for it, there might be twenty found, who, after falling into such a Mistake, could never think of making any Amends at all, but rather employ their Wits in framing Fictions to conceal it. On the 24th, they took another Prize, called *Cayetan*, of about 200 Tons Burden, laden with Wood from *Panama* for *Lima*, having on board forty Negroes, and thirty *Spaniards*, most of them Passengers. On the 27th, they came to an Anchor with all their Prizes at the Island *La Plata*, where the Captain began seriously to consider, how he should make the most of this Expedition for his Owners, as well as himself, and his Company. He knew that all the Coast was alarmed; and that two Men of War, one of fifty, the other of thirty Guns, were fitted out on Purpose to take him: He was sensible, that the Goods he had on board were not likely to be ranfomed in that Part of the World; and that they would prove mere Drugs, if brought into this; and therefore laid all these Things together; and, reflecting on a Proposition formerly made by Captain *Woodes Rogers*, to send a Cargo of such kind of Prize-goods to *Brasil*, he resolved to try the Experiment; and according he fitted out the *Bark*, in which he took the Countess of *Laguna*; mounted her with eight Guns; and, putting on board her thirteen *Englisbmen*, and ten Negroes, with what Provisions and other Necessaries he could spare, he called her the *Chalk*. Into this Vessel he put a Cargo of *European* Commodities, valued at 10,000 Pounds and upwards; and, on the 27th, she sailed for *Brasil*, under the Command of Captain *Mitchell*. As soon as she was gone, the Captain determined to part with his other Prizes, both of which he presented to the *Spaniards*, after taking out of them what he thought valuable, and detaining only the Captain of one of them for his Pilot, and all the Negroes; after which he sailed from that Island, in order to cruise in his former Station.

13. On December 12. they saw a Sail about five in the Evening, and, at seven, took her. She was called the *Rofario*, bound from *Clerippe* for *Panama*, laden with *Peruvian*. Their Launch and Pinnace were all Day employed in bringing on board the Flour, and other Provisions, in order to discharge her. Having got as much Flour out of her as they could well stow away, they cut her Main-mast by the Board, lest she should overset, and so let her go. The Prisoners informed them, that their Men, who were lately taken by the *Spaniards*, were sent to *Lima* by Land. Here they continued to cruise, standing off all Day, and towards the Shore at Night; but nothing happened till the 27th, that they anchored in *Guanabaco* Bay, in nine Fathoms, dry Ground, and found two Ships at Anchor. They fired a Shot at each; but they made no Return. Sending then their Boats aboard, they found them abandoned, and could discover, that all the Lading had been just taken out, and nothing left aboard, except some Bread, and a few Jars of Water. They hung out a Flag of Truce, and fired two Guns at half an Hour's Interval, hoping they would have come aboard to ransom their Ships. They answered from Shore; but, no Boat coming, they fired again, and remained there till the next Day, when, seeing it was in vain to wait any longer, and that they would neither ransom nor beg their Ships, they pulled down the Flag, and set the

Ships on Fire. I followed to bear Islands, there be there unmolested and accordingly put this Design in *Tork* *Tork's* Island, if they found good and after ten Days Northward. I do that this intirely thrown upon him civil Account of do to observe, that, History of Circum comparing their Mistakes, commi each other, and them entertained, rest.

14. On the 21st ing till eleven at N on their firing of proved to be the having on board the President there, a *Lima*. This was on was circumvent Seas, when he was who now lay at his standing, with all a *Spaniard* dying of this Ship, the Mar ing to their Ceren Office for the Deac which lay ready on a large Bag of Balla thrice, as their Cust a good Voyage, the presently floated, an see it, which the N very ill Omen, and ing Accident to be Priest, who was on swain of that Ship, Island of *Velas*; w they would persuad cattle to the Shore. Goods they liked On the 16th, they Fr some Fowls and Fr the same time decl would net suffer the Captain *Mitchell* had of their Cattle; but they had been forced appeared the more p months belonging to body. The next D *Pilla Roche* were in Honour, to which he endeavoured men, and secure th er. Upon this, Cap days; yet, on the 2 ready to go ashore, le on April 14. the Ma some aboard; and, ransom, the Lady a marquis only remain er delivered up to sion, Captain *Clipp* d outwitted by th ord, and thereby p Captain for trustin the Gulph of *And* re, repaired to the h great Ease. On

Ships on Fire. After the taking of these Ships, it was resolved to bear away for Retirement to the *Gallapagos* Islands, there being a greater Probability of their doing it there unmolested, than in any other Part of the South Seas; and accordingly, towards the latter End of the Year, they put this Design in Execution. On *January 9. 1720*, they anchored in *York Road*, on the North Side of the *Duke of York's Island*, immediately under the Equinoctial, where they found good Water, scrubbed and cleaned their Ship, and after ten Days quitted those Islands, and sailed to the Northward. I cannot help remarking upon this Occasion, that this intirely justifies Captain *Cowley* from the Aspersions thrown upon him by later Writers, as if he had given a fanciful Account of those Islands; and I must intreat my Readers to observe, that, among other Advantages resulting in this History of Circumnavigators, it is no small one, that, by comparing their Accounts, we correct abundance of their Mistakes, committed chiefly from their Prejudices against each other, and from the Passion that almost every one of them entertained, of passing for an abler Seaman than the rest.

14. On the 21st, they made a Sail, and continued chafing till eleven at Night, when they came up with her; and, on their firing of their first Gun, she struck. This Ship proved to be the *Prince Eugene*, bound from *Panama*, and having on board the Marquis *de Villa Roche*, who had been President there, and all his Family, who were going to *Lima*. This was the very Ship, in which Captain *Clipperton* was circumvented, and taken in his last Voyage in these Seas, when he was very indifferently used by this Marquis, who now lay at his Mercy, and whom he used, notwithstanding, with all the Civility possible. On *February 10.* a Spaniard dying of a Wound he had received at the taking this Ship, the Marquis desired he might be buried according to their Ceremonies; which was granted. When the Office for the Dead had been performed, and the Corpse, which lay ready on a Grating, was thrown over-board, with a large Bag of Ballast tied at his Feet, the Spaniards crying thrice, as their Custom is on such Occasions, *Bon Voyage*, i. e. a good Voyage, the Body, to the Admiration of every one, presently floated, and continued floating as far as they could see it; which the Marquis *de Villa Roche* concluded to be a very ill Omen, and declared, that he expected some surprising Accident to be the Consequence. On *March 8.* a Priest, who was on board the *Prince Eugene*, and the Boatswain of that Ship, desired Leave to go on shore on the Island of *Velas*; which was granted them, on condition they would persuade the Inhabitants to drive some Black-cattle to the Shore, in order to exchange them for what Goods they liked best; which they faithfully promised. On the 16th, they returned with four Head of Black-cattle, some Fowls and Fruit, as a Present to the Marquis; but at the same time declared, that their *Alcalde* or Governor would not suffer them to trade. They likewise said, that Captain *Mitchell* had been ashore there, and had shot some of their Cattle; but that 200 Men appearing under Arms, they had been forced to retire: Which Account of theirs appeared the more probable, from their having Linen and Cloths belonging to Captain *Mitchell's* Men in their Custody. The next Day, some Letters from the Marquis *de Villa Roche* were intercepted, very little suitable to that Honour, to which the Spaniards Nobility usually pretend, and he endeavoured to stir up the People to surprisè their Men, and secure the Boat, when they came ashore to water. Upon this, Captain *Clipperton* confined him for some Days; yet, on the 20th, he allowed the Marquis and his Lady to go ashore, leaving their only Child as an Hostage. On *April 14.* the Marquis, his Lady, and the Governor, came aboard; and, an Agreement being made for their ransom, the Lady and Child were sent on shore, and the Marquis only remained as an Hostage. The Prize was soon delivered up to the Captain. In this whole Transaction, Captain *Clipperton* appears to have been deceived and outwitted by this Nobleman, who basely broke his Word, and thereby provoked the Crew to murmur against the Captain for trusting him. On *April 20.* they anchored in the Gulph of *Amapala*; and, not being able to water there, repaired to the Island of *Tigers*, where they did it with great Ease. On *June 4.* they sailed to *Gorgona* on the

same Errand, and were well supplied. On the 24th, they made another Prize, which proved the *St. Vincent*, which they had taken once before. She was now commanded by *Don Clement de Andrado*, laden with Timber and Coco-nuts. On *August 11.* they anchored, with their Prize, at the Island of *Lobos de la Mar*, where they set up Tents on shore, scrubbed and cleaned their Ship, and took whatever they thought valuable out of their Prize.

15. The Ship's Company, while they lay here, talked over their Affairs, till they began to think them desperate. Sometimes they reflected on the Captain, for pretending to remain in these Seas without their Consent: At other times, they blamed him for giving into the Spanish Marquis's Project for ransoming his Ship, which, they believed, would never be performed: And now-and-then the Ship's Corporal, one *James Reck*, a bold, busy, intriguing Fellow, threw in some sly Insinuations, that, if they must go through such Hardships, it was better they should do it for their own sakes, than for other Peoples. And one *Joseph Maynard*, the Boatswain's Mate, pushing Things still further, a Plot was at last formed for seizing the Captain, the rest of the Officers, and running away with the Ship. They likewise agreed, that, when their Design was brought to bear, the Officers should be set on shore on the Island of *Lobos*, and all, who afterwards opposed them, shot without Mercy. This wicked Contrivance, however, was happily discovered on *September 6.* the two Ringleaders severely punished, and the rest pardoned; by which wise Conduct the Conspiracy was suppressed. On the 17th, they took a Fishing-boat, with a good Quantity of Salt-fish, well cured; but found the *St. Vincent*, which they had left at Anchor under the Island of *Lobos*, driven ashore, and sunk; and, upon this, they put thirty-eight Spanish Prisoners on board the Fishing-boat, and sent them away. On *November 1.* they entered the Bay of *Conception*, where missing a Prize that out-failed them, they bore away for *Coguinbo*, where they took a Ship laden with Tobacco, Sugar, and Cloth, in their Passage. On the 6th in the Afternoon, they opened that Harbour, where they saw three Men of War lying, with their Top-sails loose; and, seeing no sooner spied them, than they cut their Cables, and stood after them. The *Success* haled close on a Wind, and their Prize did the same; upon which the Spanish Man of War, that sailed best, gave Chase to the latter, and, at three in the Afternoon, came up with, and took her. The other two Ships crowded all the Sail they could, till about four in the Afternoon, when the biggest, having her Mizzen-top-mast carried away, fired a Gun, tacked, and stood in for the Shore; which favourable Opportunity the *Success* embraced to make her Escape. In the Spanish Prize, they lost their third Lieutenant *Mr. James Milne*, and twelve of their Men. The Captain of the Spanish Man of War, who took him, was the famous *Don Blas de Lefso*, who was Governor of *Cartagena*, when attacked by Admiral *Vernon*. *Don Blas* treated his Prisoner a little roughly at first, being enraged to find he had mistakèd the English Privateer, and only retaken a Spanish Prize, and, in the first Transport of his Passion, struck *Mr. Milne* over the Head with the Flat of his Sword; but, when he came to himself, he sent for him up; and, finding him stripped by his Soldiers, he generously asked his Pardon, ordered him a new Suit of Cloaths, and kept him for some time on board his Ship. He afterwards procured his Liberty at *Lima*, paid for his Passage to *Panama*, where he gave him a Jar of Brandy, and another of Wine, for his Sea-sickness, put 200 Pieces of Eight in his Pocket, and sent him to *England*. This unlucky Accident of losing their Prize revived the ill Humours among *Clipperton's* Men, who did not indeed plot again, but became exceedingly dejected. On the 16th, they saw another Sail, and gave Chase, which, after a few Guns fired on both Sides, bore away, being a clean Ship, and left them; which was another lucky Escape: For she was likewise a Ship of Force, fitted out to take Captain *Selwacke*, and commanded by one *Fitzgerald*, who, knowing this was not *Selwacke's* Ship, and doubting what Strength she might be of, had no great Stomach to engage her. These repeated Disappointments, as they broke the Spirits of his Crew, so they had a very bad Effect on Captain *Clipperton* himself, who began now to betake himself to drinking; and, as this Vice generally grows upon

People under Misfortunes, he grew at last to such a Pitch, that he was hardly ever quite cool or sober. It was chiefly owing to this unhappy Practice, that he fell into so many Errors in his future Conduct. And, though it is true, that Drunkenness is rather an Aggravation than an Excuse, yet, if we consider, that this poor Man was a mere Sailor, and had not had the Benefit of a liberal Education, that he fell into it purely through Despair, and that he still shewed, upon all Occasions, great Marks of an humane and generous Disposition, together with an inflexible Honesty, in regard to his Owners Concerns, we cannot help pitying him; because it is impossible to say, how far human Nature is able to bear, without the Help of certain Supports, such an heavy Load of Misfortunes as this poor Gentleman met with.

16. In this sad Plight they resolv'd to continue cruising to the North, not only in Search of Plunder, but also of a Supply of Provisions, and especially of Flour, having expended all they had, and being reduced to three Pounds of Indian Cern for a Mess of six Men, and that but once a Day. In this Cruise they had but indifferent Fortune; and, therefore, on the 27th, being in Sight of Point Helena, they resolv'd to set ashore the Spanish Prisoners taken in the last Prize, in which they afterwards lost Lieutenant Milne; and then determin'd to go once more to the Gallapagos Islands, in order to refresh quietly, and restore their People to Health and Spirits; which Scheme they immediately put in Execution. In their Passage to these Islands, they began to suspect some Error in their Log-line; and, upon measuring, found it three Fathoms too short, which occasioned an Error in this Run of fifty-two Miles, or thereabouts. On the 4th of December, they lost Mr. Thomas Fairman their Purser; and the same Day found themselves very near the Gallapagos Islands, and in the Latitude of 36° North, with a very strong Current to the South-west; against which they were oblig'd to ply. On the 6th, they sent the Pinnace to discover an Anchoring-place at one of the Islands, which return'd without finding any, but saw abundance of Tortoise ashore. Upon this, they sent the Pinnace and Yawl to get some; and they return'd with Fish enough to serve the Company a Day; but, there running a prodigious Surf, they could not land or look for Turtle. They kept plying off and on, and founded in foul Ground from eighty to fifty Fathom. The Lat. of the Island 9° North. It was a mere Rock; so they left it, and steer'd away for another South-west, being the same which the Spaniards make to lie under the Equator; they run along there, but could find no Anchoring; so that, being unwilling to lose more Time, they made the best Way they could to the Isle of Cocos, where they hop'd certainly to get some Fish, Fowl, and Cockles, most of their People being very sick and weak. On the 7th and 8th, they saw several Islands to the North east, but pass'd through them very happily, and got quite clear of them by the 9th; but, as their People daily fell sick, they grew very apprehensive of the Dangers that must ensue in case of their missing the Island. On the 17th in the Morning, they had the Satisfaction of beholding the long-look'd for Island of Cocos, at the Distance of about nine Leagues to the North-west, which fill'd them with inexpressible Joy. On the 18th, they went all ashore, that could be spar'd from on board the Vessel with Safety, in order to build a kind of Booth for the Reception of their Sick; which, as soon as it was finish'd, were carried ashore, and conveniently lodg'd. The Marquis de Villa Roche went also ashore, where they got great Plenty of Fish, Fowl, and Eggs, together with Cocoa-nuts, and other Refreshments. The Captain open'd here the last Hogsh'd of Brandy for the Use of the Ship's Company, and gave every Man a Dram a Day; and, on New Year's-day, he allow'd a Gallon of strong Beer to every Mess; and, by having this Plenty of nourishing Food, and much Ease, the Crew began to recover, and were able to wood and water, though with much Difficulty; for there was a great Swell coming in from the Northward constantly at Full-moon and Change; therefore they were forc'd to wait till the Spring-tides were abated, before they could get any thing off. On the 17th of January 1721, the Captain made the necessary Dispositions for sailing; but it

was three Days before he could get his People on board, and then there were no less than eleven of them missing, viz. three Englishmen, and eight Negroes. It is not easy to conceive, what could induce the former to hazard themselves in such a Place as this, at so great a Distance from the Continent, so little frequented by Ships, and where they had but a small, indeed scarce any, Chance of ever getting off; but it must be attributed to their Dread of the Dangers and Fatigues to which they were continually expos'd on board, and to their living constantly at Short-allowance; whereas here they were sure of Plenty of Provisions, without any other Labour than that of procuring and dressing them. It is also more than probable, that they might receive some Assurances from the Marquis, of their having a Ship sent for them, when he obtained his Liberty; which, at best, was an hazardous Contingency, and, there is great Reason to doubt, was never performed, as the Reader will see in the Sequel of this Voyage.

17. On the 25th, they arriv'd on the Coast of Mexico, where they met with an extraordinary Adventure; for, discovering a Sail about seven in the Evening, they sent their Pinnace to give Chase; to whom she struck about eleven; and, on the Return of the Pinnace, they had the surprising Account, that this was a Spanish Ship, call'd the *Jesu Maria*, but now in the Hands of Captain Shelbocke, who command'd her; and the Account he gave of the Matter to their People was this, that he had no more than forty of his Men aboard, the rest being all dead, or dispersed: That he lost the *Speedwel* at *Fernandez*, where they staid five Months, and built a Bark out of the *Speedwel's* Wreck; with which they put to Sea, and coasted along *Chili* and *Peru*, meeting several Ships; but could do nothing with them, till they came to *Pisco*, near *Lima*, where they took this Prize, being the Ship he went in there to look for. They differ'd much in their Account, but had no regular Command among them, being all alike: As the Method is in the *West India* Privateers, they had chosen a Quarter-master, carrying every thing by a Majority of Votes; so that they found they had quite broken their Articles with their Owners, and had shar'd all among themselves. On the 27th, Captain Shelbocke hoist'd St. George's Colours, and fired three Guns, as a Signal to speak with them; on which the *Success* lay-to for his Boat, which came aboard with a Letter for Captain Clipperton; who immediately sent back the Boat for their Purser, to be examin'd concerning their Actions on the Coast of *Brasil*, and elsewhere: They sent away the Boat; but the Purser, Mr. Hendric, staid, who gave but a dark Account of their Proceedings, that he was not allow'd to take any Account of the Treasure for the Owners: At eight Captain Shelbocke came aboard, being sent for by Captain Clipperton, and the Agent, to give an Account of his Transactions. The Boat brought Mr. Dod, their Lieutenant of Marines, to continue in the *Success*, having been us'd very ill for his Attachment to the Owners Interest, at least as he asserted, and was firmly believ'd by Captain Clipperton, and his Officers. The next Day Captain Shelbocke sent on board them six Chests of Pitch and Dammars, and two Barrels of Tar, with six Slabs of Copper: Captain Clipperton spar'd him twenty-four Quarter-deck Guns, some great Shot, and Compass, and a few other Necessaries: His People laid out a great deal of Money with the Crew of the *Success*, for Cloaths, Shoes, Hats, and other Necessaries: There remain'd with them also two of the *Speedwel's* Officers; Mr. Hendric, the Purser, and Mr. Dod, the Lieutenant of the Marines, desirous to go with them to *China*. The *Success*, still keeping to the Northward, on the Coast of Mexico, saw Captain Shelbocke several times, as they were sensible, by his making Signals; but, considering, in the Beginning of the Month of March, that both Time and Place afford'd them a fair Opportunity of coming up with the *Manilla* Ship, before she enter'd *Acapulco*, the Officers determin'd, the next time they saw Captain Shelbocke, to propose to him the making such an Attempt. On the 13th, they made a Sail, which, by its Signals, proving to be Captain Shelbocke, they brought to; and the Captain, with his Lieutenants, came on board them. At this general Consultation it was agreed by the Officers of both Ships, that the Attempt should be

made jointly; and that, to prevent their meeting with the same Fate which befel Captain *Rogers* and Captain *Courney*, when they attempted the biggest *Manilla* Ship, they should run her aboard at once, having indeed no other Chance for taking her. Accordingly they cruised for her; and, on the 15th, Captain *Clipperton* held another Consultation, wherein Proposals being agreed on, were signed, and sent to Captain *Sbelvocke*; that if he and his Crew would refund all the Money shared among themselves contrary to the Articles with the Owners, and agree to put it in a joint Stock, then all Faults should be forgot, both Companies would unite, and proceed to cruise for the *Acapulco* Ship. This Proposition was but indifferently received by Captain *Sbelvocke*, and his People, who did not care to part, in any Shape, with what they possessed, and therefore declined giving any Answer to this Proposal. We shall, in the next Section, mention the Reasons assigned by Captain *Sbelvocke* for this manner of proceeding: Our Business at present lies with Captain *Clipperton*, and his People, who, perceiving that there was nothing to be expected from their Consort, determined to manage their own Affairs the best way they could. In the first Place, they considered, that the Time of meeting with the *Manilla* Ship was by some Days elapsed; that most of their People were weak and sickly; that, even at their present short Allowance, they were victualled but for five Months; and that, consequently, it was their Business to think of going directly to the *East Indies*, without Loss of Time, in order to preserve what they had got for their Owners and themselves. This Resolution appeared, in every respect, so reasonable and well-founded, that it was instantly put in Execution; and, without waiting for, or consulting Captain *Sbelvocke* any more, they concluded to leave the South Seas, being then to the South South-east of Port *Marquis*, and in the Latitude of 16° 50' North. In order to understand the latter Part of this Account, it is necessary to say somewhat of the Times when these *Acapulco* Ships sail. They usually leave the *Philippine* Islands about the Beginning of *July*, and they arrive at the *Ladrones* about the Beginning of *September*: From thence they proceed to *Acapulco*; in which Port they are commonly expected about the Middle of *January*; and then the Ship usually remains in Port till towards the latter End of the Month of *April*, and then she sails again from *Acapulco* for *Manilla*. Yet this is not to be considered as a constant Rule; for, according as the Winds set in earlier or later, it alters. In the present Case, it is plain, the Ship they waited for, was not the Vessel expected from, but the Galeon that was to return to, the *Philippine* Islands; on board which, there is always a prodigious Quantity of Silver: Yet it must be owned, that either the Ship sailed earlier than usual, or else they left her behind them when they sailed for the *East Indies*, whither we now are to extend them.

18. The Run from the Coast of *Mexico* to the Island of *Guam*, they performed in fifty-three Days; and, on the 10th of *May*, arrived in Sight of the Island *Serpana*, in the Latitude of 13° 42' North; though, in the *Spanish* Charts, this Island is generally laid down in 14°. In this Passage they lost six of their People, and the rest of them were so weak and low, that nothing could be a more joyful Sight to them than this Island. They determined, however, to proceed to that of *Guam*, as best known to *Europeans*, and where they were most likely to meet with Provisions; in which, perhaps, they judged the Matter wrong; for, in their present weak Condition, it would have been more advisable to have gone to *Serpana*, where the *Spaniards* have not so great a Force. *May* the 13th, they anchored in the Road, and sent their Pinnace ashore, with a Flag of Truce, in order to obtain some Provisions; but the People sent them for Answer, That, without the Governor's leave, they could not trade with them for Fish, Fowl, or Greens: And, therefore, Applications were immediately made to him for that Purpose; which had, at present, a favourable Reception. Mr. *Godfrey*, the Owners Agent, who had been sent up to *Umatta*, where the Governor lives, returned on the 16th on board one of their Proes, with a message, importing, That if they behaved civilly, and did honestly, they should be furnished with Provisions.

NUMB. XIV.

Soon after their own Launch arrived, and brought on board some Cattle, Bread, Sugar, Brandy, Fruit, and Greens. On the 17th, the Governor sent them an handsome Present of Palm-wine, Sugar, and Brandy, with a large Quantity of Chocolate. In Return for which, his Health was drank by the whole Ship's Crew, under a Salvo of Seven Guns: This was the last Act of Civility that passed between them: But, before we come to these Disputes, it will be necessary to say something of the State of the Island at that Time. This Island lies directly North and South; and, according to the best Account that could be obtained of it, from a Negro belonging to the Marquis de *Villa Roche*, who travelled quite round it, it is near ten Leagues in Length, and five in Breadth: There are several Villages upon it; but the most remarkable are these that follow; *viz. Umatta, Atry, Agana, Anigua, Ala, Hugatee, and Rigues*. The native Inhabitants were formerly very numerous, not fewer, it is said, than 15,000; but, at this time, there were scarce a tenth Part so many, at least under the Dominion of the *Spaniards*; for there are still some hundreds that have established themselves in the Mountains, and preserve their Freedom, notwithstanding all the Efforts made by the *Spanish* Governor to reduce them. These *Indians* are a strong, active, vigorous, and warlike People; but, withal, reputed equally cruel and treacherous: Perhaps, the *Spaniards* exaggerate their ill Qualities to extenuate their own; for it is certain, they have used these People hardly. The *Spanish* Garrison consists of 300 Men, which are relieved from time to time from the *Manillas*; and his Catholic Majesty allows 30,000 Pieces of Eight per Annum for their Maintenance; though it is of no other Use, than to afford Succour to the annual Ship in her Passage to and from the *East Indies*, in which respect it is of great Service.

19. On the 18th of *May*, their Prisoner, the Marquis de *Villa Roche*, went ashore, in Company with the Agent, the first Lieutenant and Doctor having agreed with the Governor about his Ransom; they gave him five Guns at landing. Our Launch was employed six Days in bringing Wood, Water, and Provision aboard; during which time, the Governor desired he might have some Arms and Ammunition in Exchange: Accordingly Captain *Clipperton* sent him twelve Fuzees, three Jars of Powder, sixty round Shot, four Pair of Pistols, besides Cutlasses, long Swords, and Daggers. The 25th, they received a Letter, wherein the Governor demands the Marquis's Jewels, some consecrated Plate, and two Negroes, being Christians, and Subjects to the King of *Spain*; as also a Certificate, under the Captain and Officers Hands, that Peace was proclaimed, detaining Mr. *Godfrey* and Mr. *Priety* till all this was performed. Hereupon the Captain sent a Letter, with a Certificate, that the *Solidad*, the last Prize we took on the Coast of *Chili*, told us, there was a Peace between *England* and *Spain*; but, withal, assured the Governor, that if he did not, in twenty-four Hours, send the Ransom with the two Gentlemen, he would demolish the Houses upon the Shore, burn the Ship in the Harbour, and do all the Mischief he could at the *Philippine* Islands. Soon after they received a Letter, that the Governor would pay for the consecrated Plate, and desired more Powder and Shot: To which the Captain answered, That he would not spare any more, or Negroes. On the 28th, their Yawl went ashore for more Provision; but the Officer, who had the Government of the Village, told them, we should have no more, unless they sent more Powder and Shot: Upon which they immediately weighed, staying for no Answer by Mr. *Godfrey* or Mr. *Priety*, and sent the Pinnace a-head to found, making the best of their way to the Ship in the Harbour. The People ashore had raised a Battery during this sham Treaty, from whence they began to fire at their Pinnace; which, being returned, gave Account, that what Chanel they found, was within Pistol-shot of the Shore. At six in the Afternoon, making up to the Ship, they ran a-ground, the *Spaniards* having carried her in hole Water; so that now they sustained two Fires, one from the Battery over their Heads, and another from the Ship. At nine they got foul of the Rocks, where they cut away two of their Anchors, endeavouring to get the Ship off; during which time, the Enemy fired so warmly with Stones and

Shot,

Shot, from a new Battery erected on an Hill, that they suffered extremely in their Hull and Rigging. They had three Men wounded, besides the Misfortune of losing Mr. Davison, their first Lieutenant, who was an honest Man, and a good Officer. Thus the *Success* was forced to lie in a miserable Condition, exposed to the continu'd Fire of the Enemy, who, in the Night, had still this Advantage of them, that the Surface of the Water being as smooth as a Mill-pond, easily shewed them their Position; whereas they had no other Direction for their Aim than the Flashes of the Guns from the *Spanish* Battery. In this Emergency, the Captain being overcome with Liquor, and quite unable to command the Ship, the Officers came to a Resolution of running out clear of the Enemy as soon as they could get the Ship afloat; and signed a Paper to indemnify Mr. Cook, if he would take upon him the Command. At four in the Afternoon they set her a floating, and cut away the small Bower-anchor; but, in ten Minutes, they run a-ground again; at nine carried out the Kedge-anchor; but, in heaving, the Hawler broke: They immediately carried out another Hawler, with a Lower-deck Gun to it, having now lost all their Anchors, and still a-ground. At two in the Forenoon the Enemy hail them several times to surrender, or expect no Quarter; at five they carried out the Main-top-mast Shroud-hawler on the Starboard-bow, with another Gun, still plying the Enemy with their great Guns below, and Small-arms in the Poop. They did them little Mischief, though the *Spaniards* never missed them; especially their Boats, as soon as they saw them stir. At eleven in the Forenoon they carried out the rest of the small Bower, with two Lower-deck Guns, right a-head, into five Fathom; they cleared away the Hold, ready to start their Water, to make the Ship lighter; got their Upper and Lower-deck Guns forward, to bring her by the Head, the Ship hanging abaft on the Rock; they kept two Guns out of the Stern-ports continually firing at the Enemy's new Battery, but could not bring them to bear: During this twenty-four Hours, they had happily only one wounded; but the Ship was wretchedly torn and mangled between Wind and Water. The 30th, at six in the Afternoon, the Ship floating, they cut away the Yawl, being sunk by the Shot; the other Boats were much damaged; they hove to their small Bower, then cut away it and the other two Hawlers, and sent their Pinnace a-head, to tow the Ship off: Just as they got afloat, the Enemy fired so smartly from the new Battery, that their Shot raked them through between Wind and Water, killing one of their People, and wounding two others. Thus they lost both their Bow-anchors and Cables, the Stern and Kedge-anchors, four Hawlers, four of their Lower-deck Guns, and nineteen Barrels of Powder, two Men killed, and six wounded, having stood for no less than fifty Hours a fair Mark for the Enemy to fire at; and, if they had not got clear, it was believed they would have sunk them before Morning. The whole Crew were very sorry for Mr. Godfrey and Mr. Priddy, not knowing how the Governor might use them ashore. At ten in the Forenoon they brought-to, and began to splice their Rigging, not a Rope of which escaped a Shot; as for the Masts and Yards, they were all severely peppered, and the Carpenters worked all Night, stopping the Holes in the Ship's Bottom. At seven in the Forenoon they stowed their Guns in the Holdbar in the Ports, hoisted in the Launch and Pinnace, and at Noon steered away West, with an easy Sail, hoping to save their Passage before the Monsoons came on. Their Carpenters were employed in fixing the Masts and Yards, and the rest of their People in fixing the Rigging. At six in the Afternoon the Body of the Island *Guan* bore East seven Leagues; from whence they took their Departure, North Latitude $13^{\circ} 20'$, allowing half a Point North-east Variation, designing now for *Cbina*. This was certainly one of the worst Errors committed by *Clipperton*; for he should never have quitted the Marquis, who had behaved so dirtily to him before, without having the Money in his Hand; nor had the Marquis any Title to Favour: A Nobleman, that nets the Scoundrel, degrades himself. Besides, if Captain *Clipperton* had kept the Marquis, there had been an End of all his Schemes, and either the *Spanish* Governor of *Guan* would not, or could not, have treated him as he

did; for it is more than probable, that he was forced to behave in this strange Manner by the Marquis. The last Mistake of *Clipperton*'s was his pretending to attack the Town in the manner he did. The Commander of a Privateer should never attempt Revenge, unless he is certain of compassing his Design; and, if he had dissembled, as well as the Enemy, he might have found an Opportunity of making them repent their ill Usage.

20. It was a very dangerous Voyage upon which they were now to enter: The Run from *Manilla* is generally esteemed 400 Leagues, and they were to sail much farther, without any considerable Addition to their Stock of Provisions, ruffled by the late Accident, and apprehensive that their Vessel would scarce last out the Voyage; for, on the 23d of *June*, they found her, on a strict Examination, in a very shattered Condition, having scarce a whole Timber in her upper Works, discovered one of their Fashion-pieces to be shot through, which, being the chief Support of the After-part of the Ship, they were obliged to trap her, to keep her together. It blowing pretty fresh, they durst not carry Sail, but were forced, for a Week together, to sail under bare Poles, through variable Winds, and bad Weather. This was a melancholy Condition for People to be in, in Seas with which they were little acquainted, and sailing by Draughts on which they could not depend. Yet, the Journal I make use of, acknowledges, that both *Dampier*'s Accounts and Charts were right, and that to a Degree of Exactness, much superior to those laid down by Persons of much greater Figure; so that if it had not been for his Assistance in his Books and Charts, they could scarce have extricated themselves from the Difficulties they were in. On the 24th of *June*, they were in Sight of the *Babsee* Islands; and, on the last Day of the Month, they saw the Island-shoals of *Prata*. On the 1st of *July*, they fell in with other Islands, and found several Boats that were fishing; though no such Islands are laid down in any Chart, and this put them intirely out of their Way; so that, not being able to form any Judgment of their true Course, they anchored under one of these Islands, in 13 Fathom Water, and dispatched away their Pinnace for Intelligence, how *Macao* bore from them, for which Port they were bound.

21. On the 2d of *July*, the Pinnace returned with a Boat, in which there were three *Chinese* Sailors, whom they could not understand, and from whom all they could learn was, that *Canton* lay to the South-west. On the 3d, finding they were too far to Leeward of *Macao*, and not being able to get a Pilot, they resolv'd to take the only Course there was left them to take, which was, to sail for *Amoy*; before which Port they arriv'd on the 5th in the Evening, but were afraid to enter it in the Night, and therefore plied off and on till Day-light. They took notice of a great Number of Snakes in the Sea, which were brought down by the Rivers that empty themselves on that Coast. The Entrance of the Port of *Amoy* is remarkable enough; for it has an high Mountain, on the Top of which is a Tower, which may be seen twenty Leagues off at Sea; on one Side of it is a little Island, that lies immediately before the Bay. The River *Changebeu* discharges itself here into the *Chinese* Sea, and thereby forms a spacious Bay, about eight Leagues in Circuit, where Ships may lie very safely at Anchor, all the Difficulty being in their getting once into Port; which they accomplish'd very happily in the Evening of the 6th of *July*, and were extremely well pleas'd to find themselves once more in a Place where they might hope to obtain Refreshments, to be able to repair their Ship; or, if that should be found impracticable, to obtain a Passage from thence to *Europe*. The Captain too rejoiced as much as any of them; for, having had his full Share of Afflictions and Misfortunes at Sea, he was extremely delighted with the Prospect of securing a small matter of Money to his own Use, and sending home what belonged to the Owners, in case his Ship was really, as the People reported, past repairing.

22. They were no sooner anchored in this Port, than they had ten Customhouse Officers put on board them. Mr. *Amey*, as in most other Ports in *Cbina*, the Customs are under the Direction of a single Mandarin, stiled the *Diippo*, or Master General of the Customs. The *French* call the

Officer *Hoppo*, the Pronunciator, a justly reputed an invariable Man they can after saying t Character of t I shall only ad thought to be ciples of Hono house Officers to be; and wh ton answer'd, t ain; and the der to obtain t house Officers n ber of Men an intended to stay then they depar mutinied, and in pay them their *Success* was in made this Dema ler, to whom we, in the Captain's had best desist, t Balls through his all regular Proce rity. The Peopl some Cattle, Fo were paid: And, to wait on the H treated them with anchor in the Ha soons were over; soon after receive Compensation, un ing to 1700 Dolla already taken notic to Captain *Clipperton* Mr. *Davison* succe the unfortunate A who now deman in which he was fi by a continual Co *Clipperton*, and th things were likely Allowance should t Prisoners, and to N board them from th frustless; for the N While these Disput go ashore, without *perion* would have declared on their Si things fell into Cor they had their Prize Credit of their Cou due to their Officer the Place, whom th he would do them J Mr. *Clipperton* was Mandarin's demand Men Satisfaction, th newed that they w their Return to *Lon* (now styled) gave th which produced a G ship, with a perem *Clipperton*, imm em over to the Me ly. This Transac ut, as they must b well upon them, b 23. On *September* ant to the Mandat served for such as w those who were d rved on board the s

Officer *Hoppo*; which may, perhaps, set us right as to the Pronunciation. The *Chinese*, in general, are very justly reputed the craftiest People in the World; and it is an invariable Maxim of their Policy, to chuse the cunningest Man they can find to execute the Office of *Hoppo*; and, after saying this, we need not descend to the particular Character of the Man Captain *Clipperton* had to deal with. I shall only add, that the People of *Amoy*, in general, are thought to be the least nice in Points of Honour, or Principles of Honesty, in *China*. The first thing these Custom-house Officers demanded was, what the Ship was reputed to be; and what Business she had there. Captain *Clipperton* answered, the Ship belonged to the King of *Great Britain*; and that she put in there by Strefs of Weather, in order to obtain Provisions and other Necessaries. The Custom-house Officers next demanded an exact Account of the Number of Men and Guns, their Cargo, and the Time they intended to stay; all which they put down in Writing, and then they departed. The very next Morning, the Men mutinied, and insisted, that the Captain should immediately pay them their Prize-money, because they were satisfied the *Success* was in no Condition to put to Sea. The Man, who made this Demand, was one *John Dennison*; and Mr. *Taylor*, to whom we are indebted for this Account, interposing in the Captain's Behalf, one *Edward Boreman* told him, He had best desist, unless he had a mind to have a Brace of Balls through his Head; so that here was plainly an End of all regular Proceedings, as well as of the Captain's Authority. The People brought aboard a good Quantity of Rice, some Cattle, Fowls, Wood, and Water; for which they were paid: And, on the 12th, the Officers went on shore, to wait on the *Hoppo*, who had a very fine Palace, and who treated them with great Civility, and gave them Leave to anchor in the Harbour, and to remain there till the Monsoons were over; for which, however, he demanded, and soon after received in ready Money, a very extraordinary Compensation, under the Title of Port Charges, amounting to 1700 Dollars, which is about 400 *l.* Sterl. We have already taken notice, that Captain *Mitchell* went out Second to Captain *Clipperton*; and that, on his going to *Brasil*, Mr. *Darvion* succeeded him; and, on his being killed in the unfortunate Affair of *Guam*, Mr. *Cook* succeeded him, who now demanded thirty Shares, in Right of his Office; in which he was supported by the Men, whom he courted by a continual Compliance with their Humours. Captain *Clipperton*, and the rest of the Officers, seeing the Turn things were likely to take, were very desirous, that some Allowance should be made to the Officers that were taken Prisoners, and to Mr. *Hendrie* and Mr. *Dod*, who came on board them from the *Speedwell*: But their Endeavours were fruitless; for the Men would hear of no such Allowances. While these Disputes lasted, some took it in their Heads to go ashore, without asking Leave; and, when Captain *Clipperton* would have corrected them, the whole Company declared on their Side, and prevented it. After this, all things fell into Confusion: The Men refused to work till they had their Prize-money; and, to shew they valued the Credit of their Country no more than they did the Respect due to their Officer, they applied to the chief Mandarin of the Place, whom the *Chinese* style *Hsyung*, and desired, that he would do them Justice against their Captain. Upon this, Mr. *Clipperton* was summoned before him; and, on the Mandarin's demanding a Reason why he refused to give his Men Satisfaction, the Captain produced the Articles, which shewed that they were not to share their Prize-money, till their Return to *London*. But Captain *Cook* (for so he was now styled) gave the Mandarin another sort of Account; which produced a Guard of Soldiers being sent on board the ship, with a peremptory Order from the Mandarin to Captain *Clipperton*, immediately to settle the Shares, and pay them over to the Men; with which he was obliged to comply. This Transaction would admit of some Remarks; but, as they must be obvious to every Reader, I shall not dwell upon them, but proceed with my Relation.

23. On September 16. this Distribution was made, pursuant to the Mandarin's Order; and, no Allowance being reserved for such as were taken Prisoners, the Representatives of those who were dead, or the two Gentlemen, who had served on board the *Speedwell*, the Prize-money stood thus:

	Dollars.
The Share of Money and Plate	280
The Share of Gold	100
The Share of Jewels	39

The Total of a Fore-mast-man's Dividend - 419
Which, at 4 s. 8 d. a Dollar, makes *English Money*
97 *l.* 15 s. 4 d.

According to this Distribution,		l. s. d.
The Captain's Share was	1466	10 00
The second Captain	733	35 00
The Captain of Marines, Lieutenants of the Ship, and Surgeon	488	16 08

But tho' Captain *Cook*, and his Associates, had the good Luck to carry their Point in this manner, yet Captain *Clipperton's* Defence had to much Weight with the chief Mandarin, that, before he obliged him to proceed to this Distribution of Shares, he ordered one Half of the Cargo to be secured for the Benefit of the Owners; which, in ready Money, wrought Silver, Gold, and Jewels, amounted to between 6 and 7000 *l.* Sterl. which he caused to be immediately put on board a *Portuguese East Indiaman*, called the *Queen of Angels*, Don *Francisco la Vero* Commander: Which Ship was unfortunately burnt at *Rio Janeiro* on the Coast of *Brasil*, June 6. 1722. So that of these Effects the Owners received no more, the Charges of Salvage deducted, than 1800 *l.* I have drawn all these Facts together, tho' the last of them did not happen till their Arrival at *Macao*, that the Reader might, in one View, see the Consequences of this Mutiny, and the Means, by which the Proprietors of this Expedition were defeated of its Profits, notwithstanding all the Care that Captain *Clipperton* could take to secure their Property. The Reader will easily perceive, that there was a strange Mixture of Right and Wrong, of Justice and of Violence, in the Conduct of the *Chinese* Mandarin towards Captain *Clipperton* and his People. I have endeavoured already to throw some Light upon the Subject, by giving the Reader a general Account of the Disposition and Conduct of these People; but, as I have some very particular Memoirs, not only of this Transaction, but of the State of Things in general in this Port at that time, I presume I shall do him a Pleasure, if I dwell somewhat longer upon this Subject. The People, and even the Mandarins, at *Amoy*, have so managed Matters for a long Space of Time, that, amongst their Countrymen, who should know them best, they have acquired to their Port the Epithet of *Hiamuin Booz*, i. e. *Amoy* the wicked, or, still more literally translated, *Amoy* the roguish. The Fishermen upon the Coast shake their Heads, and pronounce these Words with a very significant Air, whenever they meet with any *European* Ship inclined to put into that Port; but, for want of understanding the Language, or, perhaps, from a Confidence in their own Prudence, they very rarely make a right Use of these Warnings; which, in a short time, however, they are sure to repent: For it is a certain Rule, that particular Provinces never acquire such Marks or Characters of Dishonesty, without deserving them. The Custom of this Port is, to disarm every Ship that comes into it, and then to send two Frigates, or, as they are called in the *Chinese* Tongue, *Chanpanis*, full of Men, to ride near the Vessel, in order to observe her, and execute the Directions, which the Mandarins may send them. Besides the monstrous Imposition, under the Name of Port-Charges, which has been already mentioned, they have some other strange Methods of coming at Money here; for tho' the Small-craft of the Country seem to have free Liberty of carrying on board all sorts of Provisions, which, being in great plenty there, ought to be afforded at a moderate Price, yet, in Reality, every one of these Vessels goes on board the *Chanpan* first, and there pays a Consideration for Leave to go on board the strange Vessel; and, by this means, the Price of all manner of Provision is raised about a third. Another mean Artifice, practised by the Mandarins, is, sending Presents of Wine, Provisions, and costly Curiosities, to the Captains, and other Officers; of which, when the Ship is ready to sail, they send a very exact Memorial, with the Prices tacked to it; and the last Article is so much for the Clerk's writing the Bill: Which must be discharged in Money or Commodities,

ditics, before their Arms or Ammunition are returned. It would require a Sheet or two to lay open all the rest of their Practices; and therefore I shall content myself with giving the Reader an Account of what happened to a *British* Ship in this Port in the Year 1715, which, very probably, was of Service to Captain *Clipperton*, and hindered him from being worse treated than he was. This Ship anchored in the Port of *Amoy*; and, having run through the whole Circle of their Frauds, sold the best Part of their Cargo, at last, to Merchants recommended by the chief Mandarin, who very fairly became Bankrupts in twenty-four Hours after they had the Goods in their Hands. The Captain bore this with the greatest Patience; he did not so much as suffer any harsh Expression to escape him; he took all things in good Part, and even duped the *Chinese* themselves by his studied Dissimulation; but, as soon as he had Licence to depart, he made a clear Ship, loaded all his Guns, ordered his Men to their respective Posts, and then cut away a *Japanese* Junk of twice the Value of his Cargo, and carried her into the Bay directly. This surprised the *Chinese* excessively; but they immediately fitted out twenty or thirty Chanpans, crowded full of Men, who had the Courage to venture very near the *British* Ship, till the Captain discharged a Stern Gun; and then they fled precipitately into Port. This Affair being brought before the Emperor, he ordered all the Mandarins at *Amoy* to be cashiered, and Satisfaction to be made for the *Japanese* Junk out of their Effects; only the chief Mandarin had a milder Sentence than the rest, being mulcted a Year's Profits of his Employment. This gave them a great Dread to the *English* Ships; and perhaps one Reason that induced them to side with the Seamen against Captain *Clipperton* was, that they might have Power on their Side. In short, during the Stay they made of ten Weeks, they sufficiently experienced all the Artifices of this fraudulent and covetous People, from whom the Captain had now no way to defend himself, but was obliged to submit to whatever they demanded. By December 25. the Season and their Inclinations concurred to deliver them from so uneasy a Situation; for, by this time, even the common Men began to be weary of the Place, or rather of the People, who carried their Scheme of Politics quite through, and, in small as well as great Matters, shewed themselves as finished Cheats, as the World could possibly produce, of which almost every Man, who dealt with them, was a competent Witness. On September 25. their Arms and Ammunition were again put on board the *Succes*, and the very same Day they weighed out of the Harbour, and got into the Road or Gulph, from whence they proposed going to *Macao*, in order to have the Ship survey'd, the Crew insinuating, that she was not in a Condition to put to Sea, in order to return home; and Captain *Clipperton* affirming the contrary, as well knowing, that they insisted on this Point purely to justify their own Conduct, and prevent their being punished in *England* for their Behaviour in *China*.

24. On September 30. they weighed Anchor from the Bay of *Amoy*, which lies in the Province of *Tonkin*, in order to proceed to *Macao*, in the Road of which they anchored October 4. This was formerly one of the most considerable Places in *China*, tho' it is now much fallen to Decay. This Place has been now above 150 Years in the Hands of the *Portuguese*: And the Manner in which they became possessed of it is an excellent Specimen of *Chinese* Generosity; for they, coming from *Malacca* and *India* to trade with the *Chinese*, and being overtaken with the bad Weather, some Ships miserably perished, for want of secure Harbours, in the Islands about *Macao*; which made them ask some Place of Safety to winter in, till the Season would allow them to return home: And the *Chinese*, for their own Advantage, gave them a Spot of rocky Land, then inhabited by Robbers, that they might expel them, as they did. At first, they were permitted to build thatched Houses; but afterwards, having bribed the Mandarins, they not only erected substantial Structures, but Forts. One of these is at the Mouth of the Harbour, called the *Fort of the Bar*, the Wall of which terminates at the Rock called *Appenba*, which is an Hermitage of the Fathers of the Order of St. *Augustin* on the *Hill*. The other, being the biggest, is called the *Fort of the Mountain*, because situated on the very Top of an Hill. There is also another high Fort, called *Nuestra*

Senhora da Guia, or, Our Lady of Guidance. The City of *Macao* stands on a Peninsula; and there is a very strong Wall built across the Isthmus, with a Gate in the Middle of it, through which the *Chinese* go in and out at Pleasure; but it is Death for any *Portuguese* to pass that way. Some Travellers have reported, that the *Portuguese* were Sovereigns here, as in other Places in the *East Indies*: But they never were; for the *Chinese* are much too wise a People to suffer any thing of that kind. It is indeed true, that, taking all things together, the City of *Macao* is as fine, or perhaps a finer City, than could be expected, considering its untoward Situation. It is likewise true, that it is very regularly and very strongly fortified; and that there are upwards of 200 Pieces of Brass Cannon upon its Walls: But, with all this, it can only defend itself against Strangers. The *Chinese* ever were, and ever will be, Masters of it, without firing a Cannon, or striking a Blow. They have nothing to do, but to shut that Gate, which they have often done, and place a Guard there; for *Macao* is then undone. The Inhabitants cannot subsist so much as for a Day, without receiving Provisions from the adjacent Country; and, besides, the Place is so shut in by well-peopled Islands, and the *Chinese* are so much Masters at Sea, that, on the slightest Difference, the *Portuguese* at *Macao* might be starved. But to proceed from Reasoning to Facts: The *Portuguese* have indeed the Government within the City-walls over their own People, and yet *Macao* is, strictly and properly, a *Chinese* City: for there is a Governor resident upon the Spot, and an *Hoppo*, or Commissioner of the Customs; and these *Chinese* Mandarins, with all their Officers and Servants, are maintained at the Expence of the City, who are at the Charge of the *Portuguese* Government also. In spite of all this, the Inhabitants were formerly excessively rich, which was owing to the great Trade they carried on to *Japan*; which is now, in a manner, lost: But, as they are seated near *Canton*, and are allowed to go to the two annual Fairs at that City, and to make trading Voyages when they are over, they still find a way to subsist, and that is all; for the prodigious Presents they were forced to make to the *Chinese* Mandarins upon all Occasions, eat up, in a great measure, their Profit. A Vessel, that goes to *Canton*, pays, in the first Place, 100 *l.* Sterl. for Leave to trade; they are next forced to make a considerable Present for Permission to have their Goods brought on board by the *Chinese*, to whom they not only pay ready Money for what they buy, but advance it likewise sometimes a Year before-hand. After all this, there is a Present necessary for Leave to depart, which is at least double to what was given for Leave to trade; and they pay Duties to the Emperor for all they buy, over and above these Presents to his Ministers. As soon as Captain *Clipperton* in the *Succes* entered the Port, he saluted the Forts; which Compliment being returned, he went on shore, and found in the Place the Captain of a *Portuguese* Man of War, whose Name we have mentioned before, and who undertook to carry what belonged to the Owners to *Brazil*. The Crew found themselves a little at a Loss here, the *Portuguese* Captain declaring absolutely in favour of their Cominander; and then went Mr. *Cook*, and another Gentleman, proposed going to *Canton*, to consult Mr. *Winder*, Supercargo to an *East Indian* man, and Son to one of the principal Proprietors, as to the Measures which should be taken about carrying the *Succes* home; and, upon their Return, the Ship was surrized, condemned, and sold for 4000 Dollars; which was much less than she was worth; but that was none of Captain *Clipperton's* Fault, who, to shew that he still adhered to his former Opinion, agreed with the Persons who had bought her for his Passage in her to *Batavia*; a plain Indication, that there was no Danger of her foundering at Sea. The Ship sold, the Crew immediately conceived, that every Man was at Liberty to shift for himself, and to use his best Endeavour to save what little was left him, after so unlucky an Expedition. They had Reason indeed to think it so lucky, since they were, by this time, satisfied, that Captain *Mitchell*, his Crew, and Cargo, were all gone to the Bottom, or else fallen into the Hands of the *Spaniards*, which was to them pretty much the same thing. It was, however, some Consolation to them, that they were in the Neighbourhood of the *English* Factory at *Canton*; and therefore

six Dollars apiece *Chinese* Boats that, in hopes *England*, and one: But, before the Danger; and wait for another upon this Loss a they heard was, and that most of a short Stay at *Taylor's* getting going thither in of the *English* Dollars an Head some Cafes, then their Passage, the Mandarin's, who winked at those to raise a confid the Pirates, and p fengers for their ber of Facts that boasted Wisdom Science of dextro spection of the L they are as much the Use of the *Chinese* boast that haps, a better T them, than by an provement, their this political Track

25. On November at *Canton*, where imaginable Assista was what they are time, several Ship in *India*, and the Vessels being solic perion's Men on b to *Great Britain* Favour; and acco *Taylor*, and two o Captain *Peacock*, a ropan Ships lay, The rest of their C 9th, they failed, in *East Indian* man, Mr. *Taylor* arrive cember, failed from brary, came to S arrived in *London*. ed, some sooner, s as for Captain *Mit* Crew, he was nev stroyed on the Islan sake of getting tre considered as the Administration, I Reason. In the first rain *Rogers* lays up gage Captain *Clipp* Way, especially h mended Captain R Rule and Guide of pence. In the nex in itself so very real who had the Good trying the Experin Prizes they had ta the South Seas, be vensors for Licence Profits could refut ers or Sellers. Th back again to *Euro* fore, if there was where they might b duce invell'd to, as

six Dollars apiece being required for a Passage in one of the Chinese Boats thither, twenty of them agreed to it immediately, in hopes of getting a Passage from thence home to England; and of this Number Mr. Taylor the Mate was one: But, before they came to sail, he had a Foresight of the Danger; and therefore chose to lose his Money, and wait for another Convenience; and he had Reason to look upon this Loss as a Piece of Frugality, since the next News they heard was, that the Boat had been taken by a Pirate, and that most of the People had lost their Things. After a short Stay at Macao, an Opportunity offered for Mr. Taylor's getting speedily and safely to Canton, a Mandarin going thither in an armed Boat, for which he, and the rest of the English Seamen that went with him, paid twenty Dollars an Head: And their Passage taught them, that, in some Cases, there may be Frugality in Expence; for, in their Passage, they saw a Pirate take a Boat in Sight of the Mandarin's; which plainly shewed, that the Government winked at those things, and perhaps thought it good Policy to raise a considerable Revenue, partly by Presents from the Pirates, and partly by Sums paid by Merchants and Passengers for their Protection; which is one among a Number of Facts that might be brought to prove, that the boasted Wisdom of the Chinese is nothing more, than the Science of dextrously hiding their Robberies from the Inspection of the Law; a sort of Practice, in which, perhaps, they are as much exceeded by some Northern Nations, as in the Use of the Compaſs, of which, notwithstanding, the Chinese boast that they were the first Inventors; and, perhaps, a better Title might be made to that Invention by them, than by any body else; but, with respect to Improvement, their Compaſs, and their Manner of managing this political Trade of Pirating, are equally clumsy.

25. On November 4. they arrived at the English Factory at Canton, where they were well received, and promised all imaginable Assistance towards their getting home, which was what they now chiefly aimed at. There were, at this time, several Ships there ready to sail, first for several Ports in India, and then for Europe. The Captains of these Vessels being solicited by the Factory to take Captain Clipperton's Men on board, they met, and agreed to carry them to Great Britain for five Pounds a Man, being a very great Favour; and accordingly they all paid their Money. Mr. Taylor, and two or three more, went aboard the *Maurice*, Captain Peacock, at *Wanapo*, being the Place where the European Ships lay, about three Leagues down Canton River. The rest of their Company divided in several Ships. On the 9th, they sailed, in Company of the *Maclefield*, an English East Indiaman, and an *Offender*, called the *House of Austria*. Mr. Taylor arrived safely at *Batavia* in the Month of December, sailed from thence to the Cape of Good Hope in February, came to *St. Helena* in March, and, in May 1722, arrived in London. The rest of the Ship's Company returned, some sooner, some later, as Opportunities offered; but, as for Captain Mitchell, who was sent to *Brasil* with a small Crew, he was never heard of, and most probably was destroyed on the Island of *Velas*, where he went ashore for the sake of getting fresh Provisions. This has been generally considered as the greatest Blemish of Captain Clipperton's Administration, I must confess I think, without any just Reason. In the first Place, I conceive, the great Stress Captain Rogers lays upon that Expedient might very well engage Captain Clipperton to try what might be done in this Way, especially since the Owners had so strongly recommended Captain Rogers's Account of his Voyage, as the Rule and Guide of that, which was to be made at their Expence. In the next Place, I must own, I think the Project in itself so very reasonable, that I do not wonder an Officer, who had the Good of the Voyage at Heart, was desirous of trying the Experiment. They very well knew, that the Prizes they had taken would produce little or nothing in the South Seas, because the Sums, demanded by the Governors for Licences to trade, were so extravagant, that no Profits could result from such a Commerce, either to Buyers or Sellers. They knew too, that carrying those Goods back again to Europe was doing little or nothing; and therefore, if there was a Probability of sending them to a Place, where they might be sold to great Advantage, and the Produce invested so, as to procure considerable Profit on the

Voyage from *Brasil* to London, it appears to me in the Light of a very good Design. As to the Vessel in which Captain Mitchell embarked; it was very fit for his Purpose, and every way well provided, and his Crew, of thirteen English, and ten Negroes, sufficient for the Navigation. Captain Mitchell himself was a very good Officer, and, for any thing that appears, was very well satisfied with the Command to which he was appointed: Neither is there the least Intimation, that this Scheme of Captain Clipperton's was censured, even by his own mutinous Crew, till the Event shewed, that it was unsuccessful: So that, on the Whole; I think, the Captain was rather to be commended than condemned for this Action, by which he could propose no Advantage to himself, but in common with the Owners, from the Success of the Voyage. But it is time to quit these Reflections, in order to come to the last Scene of Captain Clipperton's Life.

26. He failed in the *Success*, after she was sold, as a Passenger, from *Macao* to *Batavia*; from whence he procured a Passage home in a Dutch East India Ship, and arrived, in the Beginning of June 1722, at *Galway* in Ireland, where he left his Family, in a very bad State of Health, occasioned partly by his great Fatigues, but chiefly through the Concern he was under for the Loss the Owners had sustained by this unfortunate Voyage. It may indeed be objected, that, on his Arrival in *Holland*, he ought to have returned thence to London, and given the Proprietors the best Account in his Power of the Undertaking, and of his Management. But, when we reflect, first, on his sending home their Moiety of the Profits in the Portuguese Ship, which, by the way, very nearly reimbursed the Expence they had been at in fitting out the *Success*, the Purchase-money of the Ship being taken in, and if we next advert to the weak Condition he was in, when he went to *Galway*, where he did not live a Week, we may very well excuse him. He might very probably have hoped, that the Comfort of seeing his Wife and Children might contribute to restore his Health, and enable him to make a Voyage to London, when in a Condition, to settle his Accounts; or, if he found himself so very low, as absolutely to despair of recovering at all, it was very natural for him to desire the Satisfaction of seeing his Family in his last Moments. But, above all, we ought to remember, that it was not in his Power to do more for the Proprietors, than he had done; and therefore he was at the greater Liberty to take all the Care he could of his private Concerns. It is a very easy matter to censure the Conduct, blacken the Memory, and misrepresent the Actions, of a poor Man in his Grave; but, from this plain and faithful Account of all his Transactions, I dare say, every impartial Reader will agree, that he was an Object of Pity, rather than Resentment, since, after so many long Voyages, in which he suffered so many and so great Hardships, he died at last of a broken Heart, with a broken Fortune.

27. The Remarks that have been made on the last Voyage, have such a Relation to this, that, if I was not, as I really am, pretty much streightened for Room, I should not take up much of the Reader's Time in Observations. A very few Remarks are necessary, and I shall make but a few, and such as have a Tendency to explain the Nature of all Expeditions of this Kind. In the first Place, I shall take notice, that the Expence of this Adventure, though much larger than it need have been, by procuring his Imperial Majesty's Commission, and the wasting some Money in *Flanders*, was not excessively great, or such as ought to discourage all future Undertakings of this Nature. It was, as the Proprietors themselves admit, no more than 14,000*l.* and, when it is considered, that two large fine Ships were fitted out, capable, in all respects, if their Commanders had agreed, and done their Duty, of combating the whole Force of the Spaniards in the South Seas, if, I say, we consider this, and suffer ourselves at the same time to remember, that at least as much is spent in a Season at *Pauxball*, or *Ranelagh*, we may justly wonder, that the South Seas do not swarm with English Privateers. It is true, there are some French Ships gone thither by Permission, which may be of tolerable Strength; but, except these, there is no Reason to suspect, that the Spaniards are stronger, than at the Time Captain Clipperton made his Voyage. Our Efforts, during this War, have been chiefly

made in the North Seas; and, therefore, the Spanish Governors have turned their Attention mostly on that Side, and, consequently, they neglected this. It must be owned, that Captain Clipperton's Voyage proved a great Loss to his Owners, who did not receive above 2000*l.* for between seven and eight that they laid out: Yet, if we consider, that, notwithstanding his Separation from his Consort, and many other unlucky Accidents that he met with, he actually secured 6000*l.* for his Owners, besides 5000*l.* lost with Captain Mitchell, and one thousand more, for which the *Success* was sold, we shall find, that he made more than a saving Voyage of it; and that, consequently, if both Ships had done their Duty, the Expedition had been at least as gainful as that of the *Duke* and *Duchess*, which cost very little more than this, and which produced 170,000 Pounds, one Moiety of which belonged to the Proprietors; which is sufficient to shew, the ill Turn that this Affair took, ought by no means to discourage us from undertaking such an Expedition for the future; since we can scarce propose any other, that has a Prospect of being more advantageous, or less hazardous. I shall next observe, that the Skill of Captain Clipperton has fully shewn us, that there is nothing extremely dangerous in a Voyage to the South Seas. He sailed on the 15th of February, and he entered the Streights of Magellan the 29th of May, which makes but seventy-three Days in the Whole, out of which we are to take twenty, that he cruised for his Consort at the *Canaries*, and *Cape de Verde* Islands; so that we may very well suppose, that, if the Ships had been together, and had met with none of these unlucky Accidents, they might in three Months have doubled *Cape Horne*. To these Observations I shall add another, and so conclude. It appears to have been Captain Clipperton's Intention to have come home in the *Success*, instead of selling her at *Macao* for about half what she was worth; and, if he had done this, it is very highly probable, he had saved all the Money which was lost in the *Portuguese East Indiaman*, and made a tolerable Voyage. The contrary Scheme, of selling, destroying, and getting home at any Rate, appears to have been pursued by Captain Cook, and the Ship's Company, who, provided they got Possession of the Shares they had carved out for themselves, were not in any Pain about the Interest of the Proprietors. This shews how necessary it is to be secure as to the Characters of under Officers, before they are employed in Expeditions of this Nature. A Man

of a narrow and selfish Disposition, who has nothing at Heart but the adding to his own Fortune by any Method, and at any body's Expence, will never fail to invent, or to promote, any Scheme that seems calculated for his own Advantage, tho' diametrically opposite to the Design of the Voyage: And the having a Spirit or two of this Sort, is sufficient to disturb and confound any Privateer's Crew; since such are generally made up of Men low in Birth, mean in Understanding, and necessitous in point of Fortune, which was the Case here, as Captain *Betagh* acknowledges in the Account of the Voyage, where he professes, that, when they left *Phymouth*, he was sure the Ship's Company could not raise 5*l.* amongst them all. It is true, there might be a Difficulty in getting many Persons of Sense, Probity, and in tolerable Circumstances, to undertake a Privateering Voyage to the South Seas; But, this is what need not be endeavoured; for tolerable Terms, granted to half a dozen Seafaring People, would answer the End, and procure the Captain, or Commander in Chief, Friends enough to support him, whenever he was in the Right; for, though it be very easy to seduce the private Men by enflaming Speeches, yet it rarely happens, that they plot and execute any wicked Design, without the Encouragement, or Connivance at least, of some of their Officers; but, when once they are satisfied, that a Party is formed amongst them against the Commander in chief, they are always backward in their Duty, think every thing that is expected from them a Hardship, and are never to be satisfied as to their Demands of Plunder, &c. As a further Proof of this, the Reader need only observe, that while Captain Mitchell, and Mr. *Drayson*, were on board, there fell out none of these Disputes, none of these Mutinies; but, after the unfortunate Business at *Guam*, when Captain Clipperton had made to free with the Glass, as not to be able to command when the Ship was in the utmost Danger, there was an End of Discipline; and *Cook*, who appears to have been raised on that Occasion to a temporary Command, by the Consent of the Ship's Crew, invested himself thenceforward with a Title and Authority of second Captain; and pushed the Business of sharing the Prize-money, that he might be considered in that Quality upon the Distribution of the Money; which single Act was the absolute Ruin of the Voyage. Such untoward Influence may one Man's Vices have on the Fortunes of many.

SECTION XVIII.

Captain GEORGE SHELVOCKE's Voyage round the World from his own Account.

1. The Author's Departure from England, and Separation from Clipperton.
2. Proceed to the Canaries, and Cape de Verd Islands.
3. Their Arrival at the Island of St. Catharine's, on the Coast of Brazil, Proceedings there, and Description of that Island.
4. Disputes and Disturbances among the Ship's Crew, and the Means taken to appease them.
5. Continuation of the Voyage to the Streights of le Maire, and Passage through them.
6. They cruise on the Coast of Chili, with indifferent Success.
7. Arrival at, and Description of, the Island of Chiloe.
8. Arrival in the Bay of Conception.
9. Sail for the Island of Juan Fernandez.
10. Prosecute their Voyage, and cruise on the Coast of Peru.
11. Arrival in, and Description of, the Port of Arica.
12. Transactions in the Cruise from thence to Payta.
13. Arrival at, and Attack of, the Town of Payta.
14. A smart Engagement with the Spanish Admiral in the South Seas.
15. Sail back to the Coast of Chili, and are shipwreck'd on the Island of Juan Fernandez.
16. Account of their Transactions while forced to remain on that Island.
17. Build a Bark there, in order to proceed again into the South Seas.
18. Description of the Island of Juan Fernandez, in the Condition which they found it.
19. They attack and make themselves Masters of Iquique.
20. Take a large Spanish Ship, called the *Jesu Maria*, on the Coast of Peru.
21. Continue their Voyage to the Island of Quibo.
22. Their several Interviews with Captain Clipperton in the *Success*.
23. Cruise on the Coast of Mexico, and take another large Spanish Ship, called the *Sacra Familia*.
24. Sail once more for Quibo, and are exposed to great Hardships in their Passage.
25. They are attacked by a stout Spanish Ship, and, after an obstinate Dispute, take her.
26. Other Adventures in those Seas.
27. Arrival at Puerto Seguro, on the Coast of California.
28. Description of the South Part of that Country, and its Inhabitants.
29. Sail from thence for the East Indies, and arrive safely at Canton.
30. Proceed from thence for England, and arrive safely at London, August 1. 1722.
31. Remarks upon this Voyage.

I N the Introduction to the former Voyage, I have given a large Account of the Motives on which it was founded; the original Plan of acting under

an Imperial Commission; the Reason why this Plan was changed, and Captain Clipperton advanced to the chief Command; so that there needs nothing more on that Subject

here. I shall the Scheme of the Command of Men; his second a very good Cl Mr. William Be tain himself has therefore I have as it is in my P explanatory Circ as may let the R of February 17 Company with t pany together no nine and ten o Storm of Wind our Top-sails: very much pref *Success*'s Lee; i ing-to: By elev with our Yards Knot of Canvas Mizen. here. I shall therefore observe, that, according to the new Scheme of the Voyage, Captain *Shelvocke* retained the Command of the *Speduel*, a Ship of 24 Guns, and 106 Men; his second Captain was Mr. *Simon Hatley*, who has a very good Character in Captain *Rogers's* Voyage; and Mr. *William Betagh* was Captain of Marines. The Captain himself has written an Account of the Expedition, and therefore I have it in my Choice to make use of it as far as it is in my Power; adding, as Occasion requires, such explanatory Circumstances from Captain *Betagh's* Account, as may let the Reader into the whole Affair. On the 13th of February 1719, we sailed, says Captain *Shelvocke*, in Company with the *Sucefs*, from *Plymouth*, and kept Company together no longer than to the 19th, when, between nine and ten o'Clock at Night, there came on a violent Storm of Wind at South-west, which obliged us to take in our Top-sails: The Gale increasing upon us, and being very much pressed, I haled up my Fore-sail under the *Sucefs's* Lee; upon which they made a Signal for bringing-to: By eleven o'Clock we were under bare Poles, with our Yards a-portland, not being able to suffer one Knot of Canvas all Night, except for a little while a reefed Mizzen. About Midnight, a Sea struck us upon the Quarter, and drove in one of our Quarter's, and one of our Stern dead Lights, where we shipped great Quantities of Water before we were able to stop them again, and were, for a considerable time, under continual Apprehensions of foundering. This Accident exposed us to the greatest Danger; we were not able to get the Ship before the Wind, nor could we work the Pumps upon Deck, the Lee one being all the time under Water; and, besides this, had a Succession of prodigious Seas driving over us, so that none could stand on their Legs. In these melancholy Streights, the Chain-pump was the only thing we could have recourse to, by means of which it pleased God that we were delivered from impending Destruction. On the 20th, we had no Sight of the *Sucefs*, or any other Vessel, so that at Noon we set the Main-sail double-reefed, at Midnight let the Top-sails, and stood to the North-west. In the Morning, the Helm-coat was washed away, which was not secured again without much Difficulty. This Storm so terrified the greatest Part of our Ship's Company, that I was informed, that seventy of them were resolved upon bearing away for *England*, and that they had formed a Complaint against the Ship; for they alleged, that the was so very crank, that he would never be able to carry us to the South Seas. I endeavoured to appease these Mutineers by Reason, and fair Usage; but to very little Purpose: They continued, in spite of all I could say, in a firm Resolution of pursuing their first Design, and returning to *England*; but, having recourse to my Officers, who, appearing upon the Quarter-deck, well armed, and appearing resolute, the Mutineers lost their Spirits, and seemed inclinable to do their Duty, except two or three hardly stubborn Fellows, whom I ordered to the Geers; but the rest of the Crew interposed, and promising to wipe off all Memory of past Offences, by the Regularity of their future Conduct, obtained their Parlon.

2. As the *Canaries* was the first Place of our Rendezvous, we continued our Course thither; and, meeting several Ships in our Passage, inquired carefully after the *Sucefs*, but were able to gain no Intelligence of her whatever. On the 17th of March, we arrived at the *Canaries*, and cruised there the Time appointed by our Instructions; in which Time there happened very little remarkable, except the taking a small Prize of sixteen Ton, with a little salt, and some Wine, on board; and the best Part of the latter the Boat's Crew drank, before they brought the Prize to the Ship. The next Place I thought of going to was the *Cape de Verde* Islands, in Hopes, that, amongst them, we might either meet with, or at least gain some intelligence of, Captain *Clipperton*. We arrived on the 4th of April in the Road of the Isle of *May*, where we saw a Wreck, and an *English* Ensign lying near a great smoke on the Land. As we stood in for Information, a boat came off, and acquainted us, that it was the *Fanzitern* East Indiaman, Captain *Hide* Commander, who had the misfortune of running ashore about three Weeks before. Upon which, I began to think, that this might be a good
