MANUFACTURERS AND WHOLE-

MANUFACTURERS AND WHOLEILL SALE DEALERS IN BOOTS AND SHOES
624, 526 & 623 St. Paul st., Montreal.
We invite the attention of Merchants, East and West, to our large and varied stock of Boots and Shoes now on hand, and in process of manufacture for the Hall trade. Goods in every conceivable style will be found in our establishment, from the tinest kild or Satin Galter, to the strongest Stoga or Hungarian Boot. Men's, Boys', Youths', Ladies', Misses' and Children's wear, in over 200 different patterns. Special notice is requested to the fact that all our goods are hand-made, and of the very best material. The introduction of Pegging Machines having thrown a large number of workmon out of employment, and consequently reduced the cost of labor, we are thereby enabled to manufacture neater and more substantial Boots and Shoes, at no greater cost than if made by machinery; and are prepared to offer the choicest goods at the very lowest possible figures.
Orders personally or by Post, will have our immediate and most careful attention

TIFFIN BROTHERS,

THE TRADE REVIEW

Intercolonial Journal of Commerce.

MONTREAL, FRIDAY, JUNE 28, 1867.

The Banks of this city give notice that they will not transact any business on Monday, the 1st of July beyond what is legally necessary. Notes and acceptances falling due on that day of course must be paid, but other ordinary business, such as receiving deposits, drawing exchange, &c., will not be done.

We understand that the Bank of Montreal is about to send officers to St. John, N B., and Hahfax, N.S., with the view of establishing agencies at those points. The want of sufficient capital in the Lower Provinces has been felt very severely during the last year, and trade greatly crippled by the inability of the Banks to supply the needed accommodation to shippers; and we are happy to be able to give them hopes of a better state of affairs before long.

Lord Monck, the first Governor-General of the Dominion of Canada, arrived in Quebec on the 25th inst., in the S.S. "Nestorian." On lauding, he received addresses of welcome and congratulation from the City Council, Magistrates, and the Board of Trade, to which he made suitable reply, thanking them for their cordial reception of him, and stating his anticipations of a glorious and prosperous career for the new Dominion.

A despatch from Quebec states that Montreal merchants are clearing that market of imported sugars.

The M. O. S. S. Company's steamship "North American," sailed from Quebec on the 15th instant for Liverpool, via St. Johns, Newfoundland; for which port she had a number of passengers and a Company of the Royal Canadian Rifles. Up to the 25th, no word was heard from her, and great anxiety was felt here as to her safety. On the 26th, however, news was received, which, though telling of loss, relieved un-easiness as to the fato of those aboard. The "North American" went ashore on Sunday night, the 16th inst., at 11 o'clock, a mile and a half off the South point of Anticosti. Passengers and crew were all saved, and at last advices were all well. Mails, specie. and baggage, were safely landed, but the cargo was being thrown overboard in order to lighten her. The Captain had good hopes of getting her afloat on the 20th if the weather held moderate. The steamers "St. George" and "Rocket" were immediately sent to her assistance—the former to take off the passengers. The following is the cargo of the "North American:"

David Craig, 600 bbls oatmeal, \$3,000; CJ Cusack. 136 bxs cheese, \$763, 42 pkgs butter, \$331, 1,656 bbls catmeal, \$9,80; RH Hamilton I es bacon, Archor & Co, 2 es brushes; Geo S Scott, 25 bbls pot ash; Rim-

THE RIVAL MERCANTILE AGENCIES.

THE case of Dun, Wiman & Co., against J. M. Bradstreet & Son, to which we made reference to street & Son, to which we made reference last week, appears to have excited a good deal of interest throughout the United States. From the spicy character of the correspondence which has appeared in several of the American papers,-and portions of which have appeared in the Montreal dailies during the week,-it seems pretty clear that Bradstreet & Son are in a very tight place, and we are curious to see if they will wiggle out of the charges so directly brought home to them The manner in which they have been procuring information in this Province, since the piracy was discovered, is somewhat refreshing. It appears that they have no regularly appointed correspondents, or triends, in given localities; but take up the list of names in a town, select one who stands best, and write him, enclosing the list, cut from their book, requesting him to send them information as to the standing of each of the names furnished. Of course, where the individual applied to happens to be a reliable party, the information returned by him may be all right; but they have no guarantee that it is so He may be a perfect Ishmalito-his hand against every body, and every body against him. Sectarianism or political prejudices may influence him, while business rivalry and a list of other motives of a like character may actuate him to proper conclusions. The information, when clothed with the authority of a Mercantilo Agency, has an influence which could not, by any possibility, be attached to it, if an acquaintance were had with the manner in which it was obtained. Individual opinions of unknown men are hardly a safe criterion upon which to base credit transactions. The impudence of the thing, too, is of a piece with the previous operations of this firm. These people come into the Province with a very doubtful reputation. and in order to make good the reports which they previously pirated, they do not hesitate to address the leading men throughout the Province for information which they sell at, no doubt, very profitable rates.
We presume that after the exposures of the recent Chancery suit, and subsequent developments, the parties in various sections of the country, who may have hitherto responded to such inquiries, will think twice before doing so again. From all that has so far transpired, they have no guarantee but that the information may be improperly used, or that their names may not be unpleasantly associated with the unfavorable information, should they communicate

BANK OF UPPER CANADA.

The Report of the Trustees of the Bank of Upper Canada is published, with Balance Sheet up to the 18th May last. The following was the condition of the affairs of the Bank at that date, and contrasted with the statement presented to the Shareholders in November last:

Liabilities on Nov. 19, 1866.	May 13, 1867.
Circulation \$ 722,086 00	\$ 440,684 00
Due to Depositers 369,601 59	200,416 55
Due to Banks in Canada 22,562 61	6,855 15
Due on Trustees' Certificates	141,293 40
Due to Glyn & Co	287,584 31
Due to Provincial Government 1,149,430 75	1,150,608 29
Dividends unclaimed 9,026 56	9,026 56
\$2,572,0 7 51	\$2,236,468 36
Liabilities on Nov. 19, 1866.	May 13, 1867.
Cash on hand	8 7,419 41
Due by other Banks 5,450 51	
Government Debentures 17,591 99	
Municipal and other Debentures 35,382 52	21,162 52
Real Estate and Bank Furniture 1,673,623 37	1,641,756 87
Bills discounted 2,225,469 30	1,973,138 55
Mortgages 62.590 85	68, 203 40
\$4,061,941 88	\$3,706,673 75

It will thus be seen that the liabilities have been reduced \$335.539 25, and the assets \$355.268 13.

The Trustees are of opinion that the probable loss on the assets of the Bank will amount to \$1,400,000 viz.: \$900,000 on Bills Discounted and \$500,000 on Real Estate, and that they trust the estate will eventually pay all the liabilities.

THE MEETINGS OF OUR BANKS.

OME of the leading banks of the Province have recently held their annual meetings, and it cannot but have been most satisfactory to their stockholders to hear such gratifying statements as have been put before them. The past year, as every one in Canada knows, has been one of remarkable prosperity, and the fruits of it are very apparent in the remarkable freedom from losses and reverses which characterizes alike the banks of the East and the West.

First in order of importance comes of course the Bank of Montreal, which has not only the largest commercial business in this city but is the banker of the government, and its agent for the redemption of Provincial notes. Its large capital of \$6,000,000, some years ago, was positively burdensome, and it was generally conceded that a mistake had been made in increasing the amount from \$4,000,000 to \$6,000,000. So difficult was the task found of profitably employing so large a sum as \$6,000 000, that the late general manager, Mr. Davidson is reported once to have said, that the days of 8 per cent. dividends were over. The stockholders were led to expect, in fact, that 7 per cent., and even 6 would probably be the rule hereafter. Of late years, however, the trade and manufactures of Montreal have attained so large a development that the Bank has been able fully to use in the most profitable manner, not only the whole of its capital, but a considerable portion of its large volume of deposits. Since the Bank took charge of the government account, it has found a safe and profitable field of enterprise in advances from time to time to the government, the danger, however, (and by no means a slight one), being that with such constant deficits as characterised our Finance ministers' budget for many years successively, the advances might assume the character of a lock up, and go on constantly increasing. It may easily be understood that in such a state of things, serious embarrassment to the Bank might ensue. The introduction of the scheme for a Provincial currency, has, we believe, mitigated this danger considerably; in addition to which the fluances of the government have taken a fivourable turn, and revenue is balancing expenditure.

The Bank has adopted the Provincial currency scheme, (which it could do from the peculiar nature of its business, without loss or embarrassment), and it has for some time been issuing the notes of the government, acting also as the agent for their redemption according to a scale of remuneration fixed by the Currency Act of last year.

The policy of the Bank has been severely criticised of late, in consequence of the withdrawal of those facilities which have been afforded through its branches for transacting the business of Canada West. Viewed simply as a matter for the consideration of the authorities of the Bank, we can easily understand how it would seem desirable to them to concentrate their loans into a more manageable shape, and leave the discounting business of the West to banks on the spot. The business of banking requires such incessant watchfulness at all points, if losses are to be avoided or kept down to a fair average, that it is almost beyond

the power of any Board or any individual, no matter how able and vigilant, to carry on active operations with success over such an extensive field as was embraced by the bank a few years ago. We have good reason to believe that many of the heaviest losses of the Bank had their origin in the immense diffusion of its business: and no one can blame the Board, if acting simply for the interests of the Bank, they have initiated a policy of concentration, so far at any rate, as discounting is concerned. Their Western offices are now largely mere banks of deposit, although they do keep on at certain points, a few old and safe accounts. They are ready also to make short advances on produce and the like, but speaking broadly and generally, the above statement correctly describes their position.

It is well known also, that the Bank lends gold on good collaterals and for short terms, in New York, and it is said that transactions of this nature sometimes are of very great magnitude.

We have entered into these details respecting the policy and business of the Bank of Montreal, because of the prominent position it occupies in the country. Its affairs concern its stockholders in the first instance, but to a large extent they concern the public as well, especially in view of the fact that the bank is the official agent of the government.

To the public, therefore, it is a matter of interest to learn that the profits of the Bank during the last year have been so large that after paying a ten per cent. dividend, the large sum of \$300,000 has been added to Reserved Fund, raising that fund to a sum equal to 25 per cent. on the capital. The Bank has netted more than 15 per cent. during the year, and this, after making fair and full provision for every loss. This is in striking contrast to what was so gloomily anticipated some years ago, and we cannot wonder under such circumstances that the stock of the Bankstands at so high a figure as 131.

The result of the present years operations is so striking that there can be little doubt of the continuance of the present policy of the Bank with regard to its branches. And it will have this good effect that the business of the Bank will be more in the hands of those who are on the spot, and can deal with it on personal knowledge, while there will be a diminution in that competition for accounts which makes the business of lending and discounting so dangerous, and is so prolific a source of bad debts and losses.

We have not space to pursue the subject further at present; next week we may notice the meetings of other banks.

THE CORDWOOD QUESTION.

THE cordwood question is of vital importance to all the inhabitants of all the cities in Upper Canada. Fuel in this country takes its position beside wheat as one of the necessaries of life And anything bearing on its price occurring in the various transactions of individuals and companies, cannot fail to attract general attention. The paper warfare that has been raging of late regarding the proposed rival railways through the counties between the metropolis of Upper Canada and Lake Huron, has brought the cordwood question prominently forward, and Torontonians have been suddenly let into one of the secrets by which, for years past, they have been heartlessly fleeced and imposed upon and made to pay from fifty to seventy-five per cent. more for their firing than they ought-the enormous profits aforesaid going to unduly enrich one or two unscrupulous heartless speculators. such state of things, as is shown by the revelations made by Mr. Cumberland, the Managing Director of the Northern Railway Company, and those made by Mr. Laidlaw, his opponent, would account, no doubt, for the exorbitant price of cordwood in every other city in Canada as well as Toronto.

Let it be remembered that cordwood, during the past winter, was selling in Toronto at from \$7.50 to \$8 per cord. The misery that these prohibitory rates entailed on the poor, may be better imagined than described. It was so great as to produce a public agitation. Then all at once rallways became philanthropic, corporations became charitable, and a few hundred cords of wood were laid down in Toronto for the excusive use of the poor at from \$4 to \$5 per cord. To get it at this rate, however, a series of applications and certificates were necessary; in fact, it had to be sued for in forma pauperis, so that the bulk of the middling classes had to buy at \$7 or \$8 or freeze to death. Mr. Cumberland, in his June pamphlet, now tells us with refreshing coolness that all this was unnecessary.

and that all Toronto, comprising the high, low and middling classes, could, and ought to have been supplied with wood last winter at a rate less than \$5 per cord! Hear him:—

"It is a fact that we have brought very large supplies of cordwood every year from Innisfil (sixty miles) and delivered it in Toronto to the merchants at a prime cost to them of \$3.84 per cord; and if we add twenty per cent thereon for profit, the selling price would be only \$4.60. Again, on one occasion we brought down from 700 to 800 cords all the way from Collingwood (ninety-four miles), the prime cost of which, delivered to the merchants of Toronto, was \$4 a cord, to which, if we add twenty per cent. for profit, the selling price should be \$4.80 for a splendid sample of hardwood brought nearly 100 miles"

Again, in another place he says:—"We bring in (to Toronto) every year something approaching to 8,000 cords, at costs which are quite consistent with a selling price of from \$4.50 to \$5." And as touching the supply of wood that it is abundant, he argues:—"A short supply simply proves that the wood merchants under-estimated the demand, or had no capital with which to lay in sufficient stock during the season of navigation."

Here is an extraordinary state of things. The selling price of cordwood in Toronto ought to have been from \$4.50 to \$5 per cord last winter. It was in reality from \$7.50 to \$8! At the first blush one would be inclined to say the citizens themselves were to blame; that they lacked energy and enterprise, and that they allowed themselves to be swindled by a few monopolists. But it is not so. Mr. Laidlaw's pamphlet explains it. Mr. Cumberland, he says, has told only half the truth. Cordwood could be laid down in Toronto at from \$4.50 to \$5 selling rate, and so it is. Only, however, for the benefit of the "Northern Railway wood yard," and one or two other wood monopolists who have combined to sell to the citizens at from \$7.50 to \$8, or \$9 if they can raise the price up to that figure. There is no free trade in wood. The Northern Railway will only carry the article for their own wood yard, and for the wood yard of one or two parties in league with them. This is substantiated by the following notice signed by Mr Cumberland and distributed at all the stations along the Northern line:-

"Notice is hereby given, that in future no cordwood will be received, or allowed to be stacked at the stations or on side of track excepting only such as is sold and delivered under contract to the Company; nor will any cordwood be hereafter carried except from regular stations, nor then except when loaded from the teams direct on the cars All train rates and special contracts are hereby cancelled."

Besides this prohibitory order, Mr. Laidlaw quotes a circular letter addressed by an agent of the Northern Company to a few wood monopolists, offering to sell them some thousand cords of wood "which the Company have to dispose of" at various stations along the line. This letter and the above notice fully account for the fact that wood could be laid down in Toronto at a selling price of from \$4.50 to \$5 per cord, while in reality the selling price is forced up to from \$7.50 to \$8. There is no competition allowed in wood—no free trade in fuel. As Mr. Laidlaw justly complains:—"A citizen cannot buy his year's fuel from a farmer delivered at a station on the Northern Railroad, and get it down like a car of lumber, timber or wheat."

Now as we said at the beginning, this question of cheap fuel is one that affects every city in Canada. The Cumberland-Laidlaw revelations prove that in Toronto, at all events, fuel could be sold nearly at onehalf its present cost if wood was dealt with by railways in the same manner as wheat or lumber. For our part, we see no good reason why any railway should be allowed to become buyers and sellers as well as carriers, or to discriminate against the carriage of an article of prime necessity. If any Railway Company were to go into the wheat business, and were to combine with a few other monopolists to force up the price of wheat, what a shout of indignation would be heard from Sandwich to Gaspé! If any Railway Company were to issue a notice to all the station masters along their line, stating that "no flour will be received or allowed to be stored at the stations or on the side of the track, excepting only such as is sold and delivered under contract to the Company," what a tempest of honest rage would agitate the land? Yet that is precisely the manner in which a leading Railway Company presumes to deal with cordwood. Is not cordwood as important an item in the domestic economy of country and city as wheat and flour? But say that it is of less importance, still we can see no justification of the conduct of the Railway Company that refuses to carry it. Railway Companies are so far trustees for the public, that it would be highly inequitable for them to become vendors to the public of articles which it is their business to carry for hire, not sentor profit. Besides, in their capacity as common carries they are guilty of a grave breach of duty in refusing to carry cordwood for the public. There is a lesson to be learned from the Cumberland-Laidiam revolutions, and it is this.—Railway Companies ought to be compelled to deal with cordwood as with importand wheat. This is a period full of railway projects, let the guardians of the public interest see that a stringent cordwood clause is inserted in overy now constict.

NOTES ON THE TRADE OF CANADA FOR 1866.

ARTICLE III

It is statistics of the Provinces of our new Dominion for 1806, do not exhibit the full effects of the abrogation of the Reciprocity Treaty, because sufficient time had not clapsed to test the change thoroughly. Short, however, as the period was, until the returns were sent in, the injurious effects of placing barriers in the way of commerce between the United States and this country, are only too plainly seen.

VII.-TRADE WITH THE UNITED STATES.

Under the treaty of 1854, International trade kept steadily augmenting. That augmentation benefitted the people on both sides of the boundary line, and was just theme for congratulations; the statistics of 1866 show, however, that the increase of International trade has been checked, to our joint loss. The United States themselves have probably suffered more than we have, but this, after all, is but poor satisfaction to us, their exports to all the Provinces last year fell of as compared with those of 1865, with the exception of untario and quebee, and the increase in our case is very small. We annex a statement of the United States exports to British America for 1865 and '66, with the per contage of difference between them.

U S. EXPORTED.	In 1865.	In 1866	Difference.
lo Canada Fo Nova Scotia Fo N. Brunswick To Newfoundland Fo P. E. Island	\$19,589,055 4.325,857 3,056,332 1,677,855 454,000	4,041,844 not given. 1,399,038	4j increase 4 decrease 4 decrease 163 decre's 194 decre's

These figures show the American side of the account, and it certainly cannot be very gratifying to them. No country likes to see its trade contracting where formerly expansion was the rule, and it does not sugar the pill in the least that this result has been produced by the action of the sufferers themselves. The Canadian side of the account looks better—indeed as we have already shown in a former article, the trade of cutario and Quebec was never so great as in 1866, and despite all prognostications to the contrary, we sold Brother Jonathan over 50 per cent. more than we did during the previous twelve months' Our sales to the cuted States during 1865 and '66, with the per centage of difference, were as follows:

U S. IMPORTED.	In 1865.	In 1866.	Difference.
From Canada " Nova Scotia N Brunswick. " Newtoundland " P. E. Island	3,619,797 1,737,208 527,218	3,228,550 1,855,914 426,436	513 incre'se lui decre'se 7 increase 191 decre'se 22 decre'se

Some of the Lower Provinces do not seem to have got on so well with their American trade without Reciprocity, as Ontario and Quebec, but it must not be overlooked that our statistics exhibit scarcely four months' experience of the want of the Treaty. A complete revolution seems to have taken place in the trade of Prince Edward Island, for the large decrease in their sales to the United States (824 per cont.) is exactly made up by their increased sales to Great Britain. As compared with those of 1865, our experts to the mother courtry last year decreased 12 per cent, those of Nova Scotia 645 per cent, those of Newfoundland 64 per cent whilst those of Now Brunswick augmented by 144 per cent.

VIII.-A NEW TREATY.

When our next statistics are laid before Parliament, the effects of abolishing Reciprocal trade will be more clearly seen. Although Ontario and Quebec have so far felt it but little, yet we have ne doubt that our transactions with the neighbouring Republic would have been larger had no hostile duties met our pro-

ductions on the frontier. About January last, Mi-Derby gave his opinion to Congress that their trade with British America had fallen off at the rate of twenty per cent, instead of steadily advancing, as was formerly the case. If this opinion be anything like correct, nothing but the sheerest folly and stubbornness can long prevent a new Recipiocity Treaty, or some similar arrangement, from being entered into by the two countries. That time will not come, however, until our new Confederate Government is fairly set in motion. But when its wheels begin to move freely, and the Americans find that we are in earnest about maintaining a separate political existence, then we certainly expect to witness a return to that close and friendly commercial intercourse which forme ly existed between the two countries.

BANK NOTE ENGRIAVING.

WE happened to see in a London paper, the other day, that the new bank notes of the Canadian Bank of Commerce, lithographed by the British American Bank Note Company of Ottawa, were in circulation, and looking exceedingly well. It is quite excusable, even for a journalist, to make an error of this kind in Canada, since bank note engraving is a new industry in the country, but happening to possess some information on the subject, we design to show how they really are made, so that in future it may be less pardonable to call them lithographed.

The conflict between good and evil, active in almost every part played by men upon the world, is nowhere more actively, resolutely, cunningly, patiently carried on than in the business of fabricating There were counterfeiters, we hardly doubt money. when bits of leather, bone or iron, were the circulating medium. And though in time the Constituted Authorities enlisted in their service the advancing Science and the higher Art of a more developed civilization, they could not distance the counterfeiter, who matched his skill against that of the artists of Government. It would be interesting to unearth the records of the trials and convictions of the makers of counterfeit coin-to learn by the light of such documents on what various governments relied for their protection; whether on the ring of their silver or the color of their gold; on the sharpness of the impression on the face of their pieces; on the milling round the edges-and to see by what strange arts the counterfelters managed to defraud, not only the unwary general public, but even the wariest of money changers; by the compounding of artful alloys; by the splitting of the . .n in two, extracting gold from the centre, and filling up the hollow with base metal; by "sweating" or shaking together sovereigns in horse-hair bags.

With this, however, we are not so much concerned at present as with the various arts by which the issuer of lawful paper money tries to protect the public and himself, and those by which the counterfeiter endeavors to imitate this lawful money, and yet clude detection and the heavy penalties which attend his crime. Issuing counterfeit bank notes, you see, if it could be easily done, would be such a profitable thing' Who would commit small larcenies, steal plate or trumpery portmonnaies, if he could render himself comfortable for life in worldly circumstances by issuing only a thousand ten dollar bilis-ten thousand dollars? And compared with a circulation of ten or lifteen millions, in Ca ada, ten thousand dollars are such a trifle! It is, however, not an easy thing, as we shall show.

First, the paper on which bank notes are printed is of a peculiar decription In England, the Bank of England relies almost exclusively upon its paper. Made of the best linen cloth, not rags; stamped with a fine bold water-mark; thick and tough, with a peculiar feel, it is a good protection, doubtless. But though this may answer in a country where almost all the circulation is the issue of one establishment, it is not sufficient here, for in the Domini n there are thirty-seven banks, all assuing notes, besides three It is not even relied upon in Government issues Scotland, much less in the United States. All that is done here is to provide a good paper, known to the trade as bank note paper-stout enough to bear handling, fine enough to bear distinctly an impression from the most delicately engraved plate. Experiments have been made to produce a parchment paper, which should be too costly for any paper manufacturer to make, except under a contract with a rich bank or with a Government, but they have not yet been successful, and we hardly think that success in checkrection. We may add to this that even in the case of the Bank of England, this protection has not been found in practice to be absolute, paper has been made to resemble the Bank of Legiand's paper, and sheets of the identical manufacture have been abstracted without attracting notice.

Secondly, the engraving of bank notes is executed by the most talented arrists that can be found. A \$6 note of the Bank of Commerce is now before us. Let as see how the engraving of this note is done. In the centre is the beautiful portrait of Her Majesty, which has been so much admired, in widow's words, with her favorite Mary Queen of Scots cap. This, we believe, was copied from a photograph brought by Notman from the best studio in England. Mark the delicacy of the finer lines, the regularity, the boldness of others, the distinctness of the whole. There is no appearance of blurring, no uncertainty about the treatment of flesh or drapery. This is the work of an artist who commands in such places as New York or Philadelphia as high a salary as the manager of a bank; a man who evidently loves his work. Nor is it dashed off in five minutes with a coarse blue pencil on tinted paper, like Gustavo Doro's later sketches; it is the work of at least a month, and cut with a graver of the hardest steel on a plate of steel but little softer. every line of which is examined with a microscope to see that it is cleanly graven. This cutting on steel is a very different thing from cutting on stone. As much as the steel is harder than the sione, so much finer can the lines be cut, so much more practice is required to do it well, so much higher is the art of steel engraving than lithography. Had there been no photograph from which to copy, a repia would have been required, and many of these are purchased to engrave from at prices summing up to hundreds of dollars. Around this por-trait we see the lottering. This is done by a different artist altogether, practiced in this specia ty, and, like Her Majesty, is graven on a piece of steel. around the note are geometric traceries, intricate and symmetrical, which no human hand, however cunning, could execute. This is designated lathe-work, and is cut by a grayer fixed in a machine made up of a dozen wheels or more set on their axes away, fellows which run crookedly enough to look at, and puzzle the unmitiated as do the movements of the planets, comets, moons. Yet like these they all move according to fixed laws, and the mathematical principles which unriddle for you the mazy dances of the heavenly lights will help you to evolve out of the movements of the eccentric wheels the beautiful series of curves which adorn the bo der and the back of our note. This latho costs some five thousand dollars, and it, too, is worked by a gentleman, part mathematician, part machinist, part artist, who makes this work the business of his

Well—these various parts of the bank note face are cut on steel—how to bring them all tegether. This again is in itself a separate profession. The steel plates, the handiwork of the various engravers, are hardened in the fire, and a roller of soft steel rolled over each, under a hydraulic pressure of from five to twenty tons. No wonder that under such compulsion the plates should yield up their beauty to the rollers. The rolls, in fact, become the counterparts of the plates, each sunken line on the plates becoming a raised one on the rolls. The rolls are hardened in their turn, and then each roll is re-transferred to the proper portion of a plate the size of four bank notes.

One would imagino that all this engraving would be an effectual bar to counterfeiting, but alas, no! There have been engravers whose virtue is not superior to the temptations modern rogues can offer, and men who are masters of their art have been led to work at night at plates for counterfeiters, after laboring in the day time in the service of established Companies, and such clover artists have, ere now, been made acquainted with the interior of Penitentiaries. This is, however, but of rare occurrence, and were it the only risk, it might in practice be disregarded. The counterfeiters, however, pressed the sun into their service, and by photography managed to get copies of the best engravings.

trade as bank note paper—stout enough to bear handling, fine enough to bear distinctly an impression from the most delicately engraved plate. Experiments have been made to produce a parchment paper, which should be too costly for any paper manufacturer to make, except under a contract with a rich bank or with a Government, but they have not yet been successful, and we hardly think that success in checkmaning the counterfeiter is to be looked for in that diagraphed the notes, printed them in black, and then

printed the desired color on them in the usual way. For a long time the engravers and banks tried to get a color that could not be obliterated, but the counterfeiters' chemists beat them hollow, until at length a Canadian, Dr. T. Sterry Hunt, invented a peculiar colour which no re-agents in any way effect and which cannot be washed off or discharged by any process which will not also quite discharge the black. This is the Green Color now known as the "Canada Bank Note Printing Tint" and which has given the name "greenbacks" to the American currency, an indistructible green ink, which, when used on the face of the notes, is an effectual guard against photographic counterfeits or alterations, by making a conjunction of two inks of different colors, one of which cannot be removed without the other.

The printing process is by no means easy to explain. The bank note printing press is very different from that from which this newspaper is ushered into the world. It is a simple cylinder, worked by the aid of four long levers backwards and forwards over a bed on which the engraved plate is laid. The printer first rubs in ink into the sunken lines of the plate with rollers-such ink being of the finest quality, intensely black, and without a particle of grit-then with his naked hand dipped in a little whiting cleans off the surplus, no machine or implement having vet been found equal to the human hand for this, and places the plate upon the press. An attendant-almost invariably a girlputs the paper upon the plate; the man turns the cylinder, and the girl removes the note, when the whole process is repeated. Each note passes three times through the press. First the backs are printed, then the green on the face, then the face in black. As each sheet comes off the press, it is placed between the leaves of a blank book, to prevent its getting blurred, and sent to a separate department to be dried before being printed on again.

All this is never done without careful counting at each stage of the proceeding. The number of sheets of paper given to each pressman is known. He counts them on receiving them, and must give back just so many and no more before he leaves his work. He watches the fingers of the attendant girl, the girl watches his. The superintendent of the drying room counts the sheets received from the presses, and the pressman counts them when sent back dried. Finally, the notes come down to the numbering and trimming machines, where they are numbered by machinery, and beautiful and costly machinery it is too and lastly tied up after examination in parcels of consecutive thousands. From first to last there is thus a cat-like surveillance; very little trusting to honesty; nothing taken for granted. The mere rinting of bank notes is not a new thing in Canada; it has been carried on for the last 18 years, by Mr. George Matthews, and afterwards by his successors Messrs. Burland Lafricain & Co. of this city, and they say that in all this time but one \$2 sheet went astray, which was speedily traced by their system of checks to the guilty party, the notes restored, and the girl punished by imprisonment. This is something to be proud of, when we consider that their issues must have been very many millions!

We now come to another branch of our subject, the recent establishment of a complete bank note engraving establishment in Canada. There are very few engraving companies in the world. At present there are, we believe, but two in the United States, and of these but one, the American Bank Note Company, is well known here. The capital required, it will now be understood, is large; the skilled labour of all kinds, from that of the artist engravers to the printers' girlattendant difficult to obtain. Formerly, although the Canadian Banks insisted and rightly insisted on having the plates of their notes kept in Canada and printed here, they were, at least in great part, engraved by the American Bank Note Company. So were the debentures issued by the government, and many of their stamps; the balance being executed in England. But the risk attending transit, the chance of trouble with the Fenians, and no doubt several other reasons induced the government to have their engraving done under the eyes of their own officers at Ottawa; and a company, consisting of men of special eminence in the various branches of the art obtained in connection with the above named Montreal firm, s contract for the execution of the work. But the government work alone is not sufficient to maintain so large and extensive a company as this must be, and we think the various Banks of the country may fairly be asked to give it, as a Canadian enterprize, their undivided support. We are pleased to find that the Canadian Bank of Commerce has done so, and

the notes, we think, must give them satisfaction. There is this moreover to be said, that the companies in the United States have not the right to use in Canada the patent green or other colours based on the invention of Dr. Sterry Hunt, which belongs to the British American Bank Note Company exclusively. We think we notice some bills in circulation which have the common green upon them. "Ware hawk," we say. Do the managers of the institution we allude to think that the sharpers do not look closer to these matters than we do, and that they are not likely even now at work, photographing a bill of theirs from which they have removed this insufficient protection? Is the slight extra cost of the Canada Green to be for a moment seriously weighed against the injury both to the bank and to the public of such an announcement as the following:-" Counterfeits of the \$5 bills of the - Bank are in circulation; exceeding y well ex-"ecuted so that they have deceived officers of various ' banks, and were only discovered by the -- Bank itself when on cancelling No. 34724, it was discovered "that a note bearing that number had been defaced a few days previously?"

There is, in addition to procuring for ourselves the safety, convenience and comparative independence of having an Engraving Establishment in our own country, ready to execute Bank Notes. Debentures for Municipal Corporations or Railways, illustrations for books, &c. &c., this further cause for sustaining the company we allude to; viz., that we are raising up amongst us a sort of school of Art. Hitherto, lads with an artistic turn of mind, and girls who were clever at drafting or designing, have had to go to the States to gratify their ruling tastes. It is now no longer so. Already there are several young apprentices at work in the studio and the ateliers of the British American Bank Note Company. Already the talents of such artists as there are in Canada have been put in requisition to design vignettes for the company's use—illustrations of Canadian industry and scenery-such as we hope to see in future on all the official documents of the government and the corporations of the Dominion. in a recent issue of Government debentures the noble facade of the Parliamentary buildings at Ottawa. On the Provincial hundreds we have Her Majesty as she was in her youth; on the Bank of Commerce fives as she is now, in mature age. On one \$2 note we see the Allan steamship "Hibernian." another the Capitoline Hill at the seat of government. On other notes of the same bank, vignettes and lathe work of great beauty and excellence. And so national Art is growing up-like our summer vegetation, quickly but rapidly. It is for the public to see that it be not nipped by chilling neglect, as that vegetation is by winter frost. For though we hope it will eventually be like our own maple, careless of the hardness of our climate, and able to hold its own in the struggle for life without actitious aid, yet it must be remembered that even the hardy maple needs protection when first transplanted, and that without fostering care at first. the magnificent trees that adorn our city would not have survived the first twelve months' trials.

We would fain write more on this and kindred topics suggested by the subject, (as much out of proportion, by the way, to the slight error of our London confere, yet as directly traceable to it as the giant of the Arabian nights was to the small bottle the fisherman chanced to open on the strand), but we fear we have exhausted the patience of our readers, and we conclude though abruptly, here.

FARMING PROSPECTS.

THE country at present looks beautiful! Nature is now arrayed in her summer apparel, and presents a spectacle at once pleasing to the eye, enlivening to the mind, and flattering to the spectator's hopes. The fair Province of Ontario, which, before another issue, wili have become the chief pillar of our new Confederacy, never looked more beautiful than at the present time. In those parts which the writer has seen of it. and he has had good opportunity of late, the fields never looked greener, the forests more luxuriant in foliage, the waters more limpid. In the well-cleared sections, the scenery begins to remind one of the prettiest districts of England and France, the stumps are gone, new and hamdsome fences abound, fine houses strike the eye at every turn, and better than all. the fields abound with evidences that the science of husbandry is becoming better understood and more commonly practised.

As the crops generally must look promising when

the face of nature appears so fair, we need scarcely add, that the chances of a good harvest were seldom better than just now. The prospects of the farmers are nearly as bright as the beams of the great orb of day. Almost every species of crop looks well. Those sown this spring have come up well, and promise an abundant return, should nothing unforeseen occur; the breadth of land sown, too, is very little, if any, short of the average quantity, notwithstanding the prognostications of many that the unusual lateness of the spring would render it difficult for the farmers to sow as largely as usual. The meadows are exceedingly luxuriant. The clover has been out in flower for some time, and stands upon the ground so thick that there is now a certainty that the hay crop will be unusually abundant.

The fall wheat is out in ear, and the heads are rapidly filling up. The prospect at present is, that the crop will be slightly above the average, although we hardly think the great expectations expressed in some quarters will be realised, taking Ontario as a whole. This crop came through the winter in good order, but the cold, damp weather during April and part of May, inflicted considerable damage. Many of the weaker plants died in unsheltered fields, and here and there throughout the country there are fields pretty badly thinned out. Others again are quite as luxurirnt as the hay fields, and if they manage to escape the insect pests which generally assail them before ripening, they will certainly gladden the farmer's heart with a yield seldom surpassed. Taking the good and middling together, the present indications are that the crop will be a little above rather than below the average. In many sections the farmers have got their turnips in, and at the time of writing, rain is urgently needed. No damage of any consequence has yet resulted, and doubtless the drouth will not continue much longer.

Ontario is getting to be a large producer of fruit compared with what it used to be. Not so long ago but it can be remembered well, New York State claimed a monopoly in first-class fruit, but that day has gone past. Many of the orchards of that state have begun to fail, whilst this country, on the other hand, has of late largely increased and improved its fruit culture. The orchards of Ontario at present promise well-Seldom have we seen a greater profusion of blossoms than during this spring, and up to this time, the young fruit has escaped any serious injury. We think there is every prospect that of all kinds of fruit there will be at least an average supply.

During the past two weeks, the farmers of Ontario have been busy shearing their flocks and bringing their wool to market. Throughout the leading towns along the principal lines of travel, very large quantities of wool were purchased towards the close of last week. Prices have ranged a little higher than some manufacturers and commission men anticipated, and a little lower than the rates which the farming community have received of late years; in other words, prices have been pretty fair, running neither very high nor very low. The general figure has been 80c per lb .in some cases where the competition among buyers was brisk or the quality superior, the sunny side has been reached, and when these circumstances were lacking, the shady one has had to be submitted to. The extent of the clip this year is larger than usual if reports are to be credited, and as to quality, buyers speak very favourably. Indeed, it would be strange if there was not a progressive increase this season as to quantity and quality, for wool growing has become one of the farmer's most profitable undertakings.

To conclude; farming prospects in Ontario look bright at present. There is no part of the crops which can be called a failure. The poorest of them promise a fair return, whilst others were seldom ever so luxuriant before. There are a good many dangers, it is true, yet to encounter before harvest; some of these may partially blight the fair promise before us. But it is gratifying to know that, should nothing unforeseen occur, we are sure of an average harvest, and may have an unusually good one.

COMMERCIAL BANK—Yesterday the Annual Meetring of the Commercial Bank took place at the Banking House in this city. There was a good deal of discussion, but the three chief events were the postponement of any action on certain Milwankee Bonds until next meeting; the declaration of a Dividend of Three per cent; and the choice of three new Directors The Directors elected are Messrs. J. Cartwright, J. Harty, the Hon. John A. Maodonald, C. F. Gildersleeve, L. Rotton, H. Allan, and A. Morris. The last three are new Directors.—Kingston News.

MATCH MAKING IN NEW BRUNSWICK,

WE think it cannot be doubted that the establishment of manufactories of what are apparently in themselves insignificant articles, is a matter of far greater importance than it at first appears, and that in this direction much yet remains to be done. well calculated to advance the general interests of the Dominion. The Americans well understand the importauce of small manufactures, and it is to their perreverance and skill in this particular department that very much of their general success is owing. It is astonishing what large general results may be produced by supplying some little article of general conreplence and utility, and we believe there are many of this description that we could produce quite as cheaply as we can purchase them elsewhere, and the. while saving the country much money, would materially increase the range of profitable employment. It is true that the Americans have a much more extensive market than we have, but, on the other hand, the expenses attending every description of business m the United States have been so enormously increased, and our own market under Union will be so much more extensive than ever before, that there must be many branches in which we can now, for the first time, successfully compete with them, at least manufacturing many articles for our own domestic con-sumption. But we believe that we need not stop hero. there are many branches of manufactures in which we can fairly compete in the open markets of the world-if we only set to work to discover exactly what is wanted - what is needed to effect this is intelligent personal inquiry, which we cannot help thinking would in many cases be amply rewarded. For instance; we send enormous quantities of wood goods to England in a very partially manufactured state, and as long as our forests last, will probably continue to do so, but there exists, there, an alm st unlimited market for various descriptions in a more advanced state of manufacture than w have hitherto attempted, the production of which would utilize rast quantities of tumber new comparatively useless, and materially add to the wealth of the country. In this case, "m-telligent personal inquiry" is needed to discover the exact article wanted, and, if need be, to take orders as a basis for a commencement. We happen to know of a firm in New Brunswick which has, this year, shipped some tons of hard wood spool blocks to the cotton manufactories of Glasgow, and if, in the insignificant article of a cotton reel, so large a business can be done, it will be hard to assign limits to the gross amount of small manufactures of wood alone, that could be disposed of in England.

Some time since we A occasion to describe a brief visit to a sowing much no manufactory, established at St. John. N B., which is turning out four hundred machines per month, and disposing of them entirely in foreign markets. We now propose to notice a visit to the Hampton match factory in King's County, N B., for the sake of shewing that our New Brunswick people are alive to the "signs of the times "

A pleasant run of twenty miles up the St. John and Shediac Railway, brought us to the "Ossekeag" sta-tion, and a still p'easanter walk of a mile and a halt to the beautiful little village of Hampton, on the river of the same name, where the factory is squated. By the courtesy of one of the partners of the establishment, we were enabled to witness the whole process of match making, from the hauling of the logs out of the stream to the packing of the matches in cases of twenty-seven gross each. The logs are first sawn into planks two inches in thickness, these planks are then cross-cut into handy lengths, which are again cut into blocks, equal in length to two matches; these are then passed to a steam box, from which they are sliced by a revolving machine into what are called cards. The cards are collected and sorted by children, and packed in frames, in which state they are conveyed to the drying house. The drying process occupies from eight to ten days; the cards are then taken out of the frames, and subjected to the action of a "gang" of small circular saws, which completes the process ready for depping. The whole of the necessary machinery is driven by an engine of about 30 horse power, and the fuel is furnished from the waste produced in making the matches. Thus much for the process which, perhaps, it will be said is not anything very extraordinary. It is the resul s that are most important. The capacity of the work is about 250 gross of matches per diem, which, taking 200 working days as the average for the year, gives us 75,000 gross, worth about 40c. per gross,-the respectable sum of

530 000 from the insignificant article of matches. This result has not been arrived at all at once. In the fireinstance quite a small steam engine was put up, as it was not supposed possible that the demand could be very large; this was soon followed by a larger one, and as the demand still continued to increase, it was ultimately determined to remove the whole establishment to its present site, when a yet larger steam ongine was erected, and many improvements suggested by experience, made in the various processes of manu facture. The demand is still increasing, considerable shipments have this year been made to the West Indies, and this very article, which was formerly imported exclusively from the United States, is now not oute not imported at all, but is in increasing demand all along the frontier

If this little sketch shortd lead to the production of like results in other cases, it will not have been written in vain. It appears to us that the first thing for the intending manufacturer to determine, is the character of the article to be produced. Is it one of general utility, or is it likely to become so? Next, is there an abundant supply of the necessary raw material to be obtained. If these two questions can basatisfactoring answered, skill and perseverance to overcome the dafloutiles incidental to every new undertaking, and generally accomplish the rest.

TRADE OF THE UNITED STATES.

E are in receipt of the monthly report of the Di-Treasury, shewing the imports into and the exports from the United States during each of the first four months of the present year, with the totals to the 30th of April. No comparison, however, is make between the figures for 1867 and for 1866, which greatly lessens the calue of the statistics before us. The British Board of Trade, in laying the returns of exports and imports before the public, invariably give these for the corresponding periods of the preceding year, so that the course of trade in any particular article, and the progress or otherwise of the business of the comtry in general becomes at once apparent.

From the statistics at present under consideration, we take the following figures and facts .-

Imports of foreign commodities into the United

	Free teamin	Dut ash treats	Total Imports
January	S2 14 6 426	多代 网络有什	Bart Junto
Lebruses	1.42.49	33,712,140	3 612 216
Mar h	(,435,333	24,4 4,111	31,341,6 0
April	. 2.114.34	31 212 (12	37 411, 33
•		***************************************	
Total to April 30.	1867. 88.102.712	\$121,225,103	\$1.236.86

Subjoined is a statement of the exports of domestic and toreign commodities from the Luited States for-

"anuary .		S 47 NOV THE	Foreign \$1490,114	Tintal Expense \$ 40,434,510
february		41,347,010	7 217 EMT	16,760,2.7
May h		31.5 3.05	Ex2 in, 2	51,277,916
April .		43,413,250	34,26	12,64,816
Tastes &	orti 30, 1867	\$153,507.779	\$4.104.400	4595 974 1949

At first view, it would seem that the exports were greatly in excess of the imports for the period given, but on examination we shall find that much of this apparent balance in favour of the United States is fictitious and misleading in its character. In the first lace, the value given of imports is the gold value, whereas that ' the exports is expressed in United States currency. Now the average price of gold during this year has not been below, but probably much above 135 At this rate the imports would amount

\$191,157,178

We have not taken into account the fact of the very heavy decline which has taken place in the price of cotton in the English markets since the first of January and which has rendered the actual value of the exports tvery much below their declared value, as cotton is credited with over \$122,000 000 of the total amount. From these considerations we are led to the conclusion that the balance of trade has been against. instead of in favour of the United States during the first third of this year, and that consumption in that first third of this year, and that consumption in that country is still going on faster than product on. The productive powers of the grain-growing States are doubtless very great, and the harvest of this year is expected to be a bountful one, but there is no reason to expect high prices for breadstaffs in the European markets, nor any deficiency to be filted from this significant, and the first production of the Atlantic, so that the only probable effect of a large yield of wheat would be to lower the price to consumers at home of a prime article of food, and not to increase the available wealth of the country for the purchase of the productions of foreign countries.

SHIPOWNERS, SHIPMASTERS AND UNDER-

WRITERS. From the London Shipping and Mercar tile Gauette) ELDOM has a more important document as regards the interests of shipowners, shipmasters and underwriters, appeared than that presented to the Board of frade by the Court of Lumbry beld at Liverpool into the cheum-tances attending the abandonment and loss of the litopia. Previous to the investigation was known to the public respecting this casualty was, that a vessel of that mane had left Liverpool on the 19th of March last, and that three due a niterwards she was foundered off the Irich coast, the master and crow having been picked up from the ship's longboat, and include the satisfail trockhaven. The case was certainly one for inquiry, and the major association was constant to the coast of the property of of which the report referred to is the result, ad that was known to the public respecting this casualty was, that a vessel of that name had left Liverpool on the 10th of March last, and that three days afterwards she answerable to ceremic the true quest on which may arise in this case b tween owners and under when, we torbear to express an opinion. It is stated that the ship and cargo were insured for a considerable amount. The policies on the ship were lodged with the registered owner, as security for the unpaid balance of the purchase money; and as that balance would nearly absorb the amount. If the policies if paid, tho while basiness is divested of much of the unpleasant aspect which is might otherwise have assumed. We have noticed this aspect with the view chiefly of pointing out the false position in which a ship master may place himself by disregarding the dictate of his better judgment, in taking a ship to sea in an unrafe condition. No mistaken consideration of duty to his employers show'd bree him to such a course, and if owners are to be bound who would mist upon a shipmaster fulfilling his agreement under such circumstances, the sooner be quits their service the better for his reputation and his safety.

PARIS EXHIBITION.

Paris, June 6th, 1867.

UCH has been said and written about the first M view of the "Exposition Universelle." It has been compared to a gasometer, to a prison, to a leviathan snake, and to a thousand other disagreeable objects; and I confess that I was one of the very many who described it, when in an unfluished state, as the ugliest object I had ever beheld. Consistency should, perhaps, induce me still so to describe it. But, in common justice, I cannot do so. Painted as it is now, ornamented by flags, surrounded by the most brilliant equipages in the world, and eagerly sought by the most richly-bedecked people in existence, the approach to the building is, as it is now beheld, most fascinating and attractive. Not that the edifice has changed its form in the slightest degree - not that the elevation is increased. No! it is still the same nest of oval galleries, wanting in height to give it architectural beauty, and a different form to express its true and astonishing magnitude—faults as much felt when inside as outside, since the roofs for the most part are very low, and the egg-like form of the building deprives the visitor of anything like a vista or prolouged view. The vanishing point is slways, thanks to the ci cular plan of the whole, within fifty yards of the vi itor. And yet, without all this, the approach to the Exhibition, as I said before, is pleasing to the eye, and the interior strikingly grand and picturesque. The grand principal gate opens on the Avenue d'Honneur, and is covered during its entire length, some 300 yards, by a green velvet awning spotted with golden bees, and looped up with cords and tassels of the same costly material. On the left of this road is situated the French park, on the right is that of the English. But though they are so called, they are by no means confined to these nationalities. For instance, the Great International Club, the Egyptian Temples and other edifices, the Tunisian palace, the Italian catacombs, and Mexican places of sacrifice, as well as the Chinese coffee-house and a score of other erections, intermingle with our gun sheds, our agricultural instruments and evange-loal establishments; while, on the opposite side, the Emperor's pavilion is surrounded by Swiss establishments of various kinds. But to notice any of them is not the object of my present letter, which only is intended as a general cursory glance. Suffice it to say, you pass between theatres and churches, light-houses and shawl shops, temples, mosques, palaces, beaux arts, baby nurseries, picture snops, cannons and ploughs—in a word 211 different out-door exhibitions in the parks—before you enter—that is, if you so feel inclined—the Great Exhibition itself. Here the goods are divided into national departments, not according to the nature of the goods. Thus lovers of outlery, or of drapery, of othina, or of beaux arts, must walk from one end of the edifice to the other to follow up the inspect, on of his favourite study, even to touch lightly on any of the wonder magnitude - faults as much felt when inside as outside, since the roofs for the most part are very low, and the

The first idea of this "world's rair" was well wormy of a great nation—a nation who thus invited the whole world to become her guests, and mas er minds to improve the universe, by comparing their best works and exchanging their best thoughts. It was a bold (and has been a successful) attempt to make Paris the whole asth's against.

exchanging their best thoughts. It was a roll (and has been a successful) attempt to make Paris the whole earth's capital.

This settled, the difficulty of finding a fitting site within the boundaries next arose. The search for such a spot was long and ardurous, and ended by the Emperor giving up for twelve months his only extensive drilling round, the Champ de Mars—a level plain on which he could with ease manœuvre 80,000 soldiers. But even this, though covering some 31 acres, was considered too small; and it was only by the great ingenuity of the architect, and the positive absence of architectural beauty, that it could be (as it has been) made to fulfil the desired purpose.

The next question which arose was the realization of a sum sufficient to defray the necessary expenses, which were estimated at 20 000,000 francs (±800,000). The Government gave 12,000 000 francs, and a number of rich capitalists guaranced the remaining 8,000,000 francs.

of rich capitalists guaraneed the remaining 8,000,000 france.

This settled, the work began. The ground was cleared. The ironwork, which had all been previously formed in the workshops of the contractors, was brought to the spot—foreign commissioners were appointed, and the wondrous undertaking began to shew its form and figure.

Within three months the wonderful show was thrown open to the public under the most adverse circumstances. The exhibitors were culp bly behindhand in sending in their goods. The elements seemed determined that the undertaking should not be completed; petty squabbles arose, and only those, like myself, who daily visited the spot during the progress of the works, can tell how impossible it seemed to inaugurate the building on the first of April. But the French Emperor seldom or never changes his plans so in spite of every opposition he open d the then unsuccessful Exhibition on the day appointed.

Every one growled—every one (including the representatives of the press) predicted the utter failure of the project, and indeed everything looked blank. The roads were knee deep in mud. The goods were still unpacked. The object of the originators of the mighty marvel had been changed. National glory was obscured

by the love of gain. The parks and alleys, the galleries and the outskirts, were sold at fabulous prices, and beauty was fairly suffocated by greed.

But a sudden change came over the spirit of the

But a sudden change came over the spirit of the dream.

The weather has suddenly changed Crowned heads have visited Paris, and millions of straugers have come over to gaze upon them as they have contemplated the glories of the great Exhibition. Napoleon the Third is no longer an unrecognised Sovereign. The King of Belgium, the King of Greece, the Emperor of Russia, the Queen of Portugal, the Princes of Wales, the Crown Prince of Prussia, and the Princes Royal of England, have already visited him, and very many of them have assembled while I write this despatch. They are guests of the Prisoner of Ham and a simple young lady of Sco'ch extraction. The King of Italy and the Queen of England are expected. The Viocroy of Egypt comes on the 14th inst. and (mirabi'e dic 'u) the Fultan will arrive for the first time in Europe on the 28th. All to do honour to Napoleon thanks to the Exposition Universelle!!!

Who then shall call it a failure?

It has preserved the peace of Europe.

It has attracted the attention of the most distant nations.

nations.

It has made the fortune of its projectors.

It will leave on a most moderate calculation £27,-000,000 sterling for the benefit of the Parisians.*

Lastly it has consolidated the political power of France. It has allied the Sovereigns of Europe, and marked Paris as the Capital of the World.—Correspondent Gazette.

* I thus calculate the gain of the city. Supposing 8,000,000 trangers visit Paris, and only spend (on an average) £5 5s each - hep will expend £4,200,000 sterling, of which say the outlay nuply was £17,000,000, then the net profit left within the city walls amounts to £37,007,00.

ST. JOHN TRADE REPORT.

St. John. N.B. June 22, 1867.

HE general business of the week has been without material change, with the exception of the flour market, which has experienced a complete break down. Although we na urally look for a busy time at this season of the year, to compensate for the habitual dullness of the winter months, yet from various causes things cannot be said to be at all brisk. Country merchants buy sparingly, and there is less doing than usual on Nova Scotia account. The bulk of the spring importations has been landed, and stocks of every kind are tolerably complete. Sterling Exchange is becoming more plentiful, but all offering is freely absorbed by the banks at rates current for some time The shipping arrivals of the week, with cargo. have been confined to two vessels from Scotch ports, and one from Philadelphia with coals, two from New York, and one from Boston, with general cargoes, one from Portland with flour, and the usual steamers. Besides these there have arrived nineteen vessels in ballast, most of them ships of large tonnage, one of them, the "America," from New York, ran on the rocks at the west end of Partridge Island during a thick fog, and will be a total loss. We notice that on the 1st July, an additional steamer will be placed on the route between Boston, Portland and St. John, which will give us three departures each way per week. There is also the boat to Boston, via Yarmouth, N.S., and steamers twice a week to Windsor and Digby, so that there is no lack of accommodation for the travelling public.

LUMBER. -The clearances of the week have amounted to thirteen vessels for ports in Great Britain with timber and deals, two for West India ports, and four for United States with sawn lumber of various descriptions. The mills are now fully supplied with logs, and lumbermen are complaining that sales are beginning to drag. The large amount of tonnage in port causes freights to rule very low, and at present there seems to be no prospect of any advance. We quote:

Spruce logs are selling at \$5 50 to \$6 00, and sapling pine at from \$4 to \$7, according to quality. Spruce deals \$9, laths \$1 to \$1 10. The bulk of the shingles exported are manufactured on the Upper St. John. (many of them on American territory) and shipped at Fredericton, consequently quotations here are merely nominal.

FLOUR, &c.-The flour market is completely paralized, and the small sales already possible in the regular way of business, have been still further curtailed. During the week several auction sales have taken place which have had the effect of leaving the market in a still more unsettled state. Under these circumstances we prefer giving the actual results of these sales to making quotations more or less unreliable. On Monday 17th, 800 bb s Dundas mills and other brands realized \$7.75 to \$8.50; on Thursday, 200 bbls Rose Valley mills, &c , realized \$6.60 to \$7.45; and on Saturday 900 bbls Viaduct, Napier, &c. brought \$6 25 to \$7 75. The demand for oatmeal is not brisk, but neither is the stock large, and prices do not appear to have been much affected by the great fall in flour. We quote to-day at \$7 to \$7 50, according to quality. Cornmeal \$4 75 to \$5.

PROVISIONS, &c .- In this department there is but little change. Pork remains steady at the same rates as quoted for some weeks past. Butter is in ample supply for current wants, and there is at present no prospect whatever of Canadian shipments of this article becoming profitable.

Notwithstanding the cold and backward spring, all accounts from the country concur in representing the crops as being unusually promising. The prospects of the hay orop in particular are described as first rate, and a personal inspection during the past week of one of our finest agricultural districts, assures us that these accounts are not in the least overstated.

A steam flour mill is about to be erected at Sussex in King's Co. The intention of the proprietors is to import wheat from Canada via Shediac, and to manu. facture flour for local consumption. Sussex is situated about 40 miles from St. John, on the line of the St. John and Shediac Railway, and besides being the centre of a considerable population, would be a favorable point for distribution, yet we doubt very much whether competition with the Western Canadian mills would be successful.

The fine new steamer "Rothesay," belonging to Mesers Lunt, made the run from St. John to Fredericton, a distance of 95 miles in less than five hours.

We append below a copy of the alterations in the New Brunswick Tariff made during the session just hasola

CAPI

An Act to amend the Law relating to the imposition of Duties for raising a Revenue.

Section.

Section.

1. Imposes additional duty on rum, alcohol, &c. Table of Exemptions.
 Limitation.

Passed 10th June, 1867.

Passed 10th June, 1867.

Be it enseted by the Governor, Legislative Council, and Assembly, as follows:—

I Instead of the duty imposed by an Act made and passed in the thirtieth year of the Reign of Her present Majesty intituled An Act relating to the imposition of Duties for raising a Revenue, upon Rum, Alcohol, and all other Spirits not enumerated in the Act to which it is an amendment, there shall be collected and paid unto the Queen for the use of the Province, upon all such Rum, Alcohol, and other Spirits not herein enumerated, brought into the Province from any part of the British Empire or Foreign place, being either below proof or of the strength of proof of Sykes' Hydrometer, 50 cents per gallon; and for all such Spirits being over proof by Sykes' Hydrometer, such duty of 50 cents per gallon shall be increased in proportion for any greater strength as may be indicated by the said Hydrometer per gallon. said Hydrometer per gallon.

and Hydrometer per gallon.

2. Notwithstanding the provisions of any Act in force Imposing Duties for raising a Revenue, or to levy an impost for Railway purposes, the following goods, wares, and merchandize, shall be imported into the Province free, and be exempt from the payment of any Duty whatever, viz:

Anchors, acids—sulphuric and muriatic, brass or patent metal, in sheets, bars, bolts or scraps, barills, barley, chain cables, and other chains, canvass under No. 6, coals, copper, in sheets, bars, bolts, and scraps, corn broom brush, furs, skins and tails of all kinds, guano, hemp, hides, green, dried, salted, and cured, ink—printers', junk, iron, in pigs, bolts, bars and sheets, and railway rails and chairs, and fastenings for railway rails, marble in its crude and unwrought state, mahogany, rough timber, or sawn, manilla, unmanufactured, manures of all kinds, pelts, rags, slate—roo'cing, salt, soda ash, steel, in bars and sheets, tin, block and plate, tobacco, unmanufactured zinc, in pigs and sheets.

3. This Act shall continue and be in force during the time the said recited Act to which it is an amend-ment continues, or until altered by the Parliament of Canada.

BY TELEGRAPH.

ST. JOHN, N.B., June 27th, 1867.

TENERAL aspect of business unchanged; flour market still very unsettled, and quotations merely nominal. Sterling Exchange declined, 60 day bills on London, ten per cent premium. Montreal O.S.S. Cos. ship St. David arrived from Halifax with troops.

CHARL-TTETOWN, P. E. ISLAND MARKET REPORT.

[From the Circular of A. McNeill]

REIGHTS.—To Halifax: Oats 50 to 7c; Potatoes 7c to So; Catment 40c; Butter, per 100 lbs, 8.c. Fish per bbl, 50c, Pork per bbl, 50c, Oysters per bbl, 60c. To Boston. Oats 12c cy. Oatmeal &c cy. Butter \$1 cy, per 100 ibs, Fish \$1 cy, per bbl. Oysters por lbl. 75c, Eggs \$1 cy, per bbl. To Shediac . Do per barrel buik. To Pictou. 20c per bbl bulk 1 rom Toron o and Hamilton, via Suspension Bridge and Boston, upon Through Bills of Lading, \$1 per bbl for Flour Flour from Boston, 40c. Oats to England, 8d to 9d sterling, per 45 lbs.

STEAMERS - Leave Charlottetown for Pictou, Conso, Hairfax, and Boston every Monday afternoon, and for Picton every Tuesday, Thursday, and Saturday mornings, connecting with Railway for Halifax, and for Shediac on Tuesday and Friday evenings, connecting with Railroad for St John, N B. They leave Boston on Tuesday, and Halifax on Thursday, of each week, for this port. Shediac every Wednesday and Saturday, on arrival of train from St. John, and Picton every Inerday, Thursday and Saturday, on arrival of train from Halifax.

FLOUR.—Although the stocks are small the tendency of prices is downward, a decline being anticipated as the season advances. Demand is limited, and supply continues to be sufficient for present wants. Very httle Canadian or American Extra in the market. Duty on American Flour ls 6d per barrel.

CORNMEAL .- Prices are well maintained, but during the coming week they will probably sympathize with the downward tendency of Flour. Stock small. Duty on American Meal 1s 6d per barrel.
OATMEAL.—Prices nominal, very little being in the

market.
Molasses.—Stock is ample. Very little enquiry. Duty 4d per ral.

SUGAN. - Stocks are small. Quotations firm. Duty
7s per 112 lbs.

SALT—Scarce. Quotations firm.

78 per H2 lbs.
SALT—Scarce. Quotations firm.
Firm.—No receipts fet Reports from the Fishing
Stations represent the prospect for Mackerel catch to

Stations represent the prospect for Mackerel catch to be good.

LUMBER—Continues in good supply. Good seasoned Pine Boards wanted, which would command outside quotations. Shingles are a drug in the market Good lar specifications of Spruce Deals would probably realize £6 L6s per M., deal measure.

OATS—Are scarce, and round lots cannot now be secured at quotations.

BARLEY—Round lots cannot be procured, and the same remarks may now be applied to Potatoes. Prices in both cases nominal.

WEATHER—Continues fine, though cold, and upon the whole fave grable to the growing crops.

MONEY MARKET.

WE have no change to note; money is easy and demand moderate Sterling Exchange is unchanged, but rates are firm at quotations.

The following are the latest quotations of Sterling Exchange, &c .--

Past wood

ITHE business of the past week has been very limited as regards the regular trade between the city and the country, and the jobbing trade has also been quiet, little doing with the exception of some transactions in sugars and teas.

SUGAR.-The stock of raw sugar in this city in first hands is now almost none. During the week, everything that could be got has been picked up, leaving the market quite bare. We note sales of some 1200 hhds ordinary at \$7.80 to \$3.37; according to quality Good fair Barbadoes and Cuba is now held at \$8 60; Choice Porto Rico at \$8.75 to \$9. Refinery sugars are also scarce and prices advanced

Molasses.-Trade in this article is dull, supply in market being very low. A sale is reported of 200 puns. Trinidad at about 87 ic.

ILAS-Are generally quiet. There is a fair demand for high priced greens, and we note a sale of a line of some 600 lif chests of that quality at prices which have not been made public. A lot of 200 packages, princi-pally high grade green and another mixed lot of 200 of chests also changed hands.

In other articles there is little or nothing doing, and we refer to our list of prices for market quotations.

THE HARDWARE TRADE.

Brush George Charlebos, A., & Co, Fathern & Cas chall, Currie W & F F & Co Syans & Frans Frans I be H - rr

Gilbert F.E. Hall, Kav & Co. Ireland, W H. Kershaw & Edwards. Morland, Watson & Co. Mulholland, & Itaker Robertson, Jas.
Robertson, Jas.
Round, John & Sons.
Waddell & Pearce

DEMAND for many articles still continues about equal to supply, and considering the lateness of the season, a large business is being done.

Pio Inon -The supply at present is large, but holders refuse to accede to the demands of buyers, and consequently there are but comparatively few transactions Prices are nominally as given in our list, but for quantities a trifle under would be accepted. Large transactions are making for Chicago at 5 per cent under our quotations, cash

BAR IRON -For this article we reduce our rates 10c. to what appears to be the market price, although it has given way in this respect, the demand is still large, and many sizes are not to be had, especially of rounds

HOOP AND BAND IRON-Are in large supply Prices are firm at our quotations, but there are very few transactions taking place.

CUT NAILS-Are still scarce, although prices are not altered. Manufacturers find themselves unable to fill orders.

CANADA PLATES-Are just now in large supply. and offers to sell ex ship, for round lots have been made at \$3.75 to \$4 for best brands.

TIN PLATES - Are very plentiful, and prices nomi nal

THE LEATHER TRADE,

Hua & Richardson. Seymonr, M. H. Seymour, C. E. Shaw F. & Bros. Smyth & Edminson.

WE have no special change to notesinco last report, the market continuing quiet, with only moderate sales, as is usual at this season

SPANISH Sole .- The receipts are not in excess of the demand, both being limited, and sales are effected at recent quotations.

SLAUGHTER SOLE .- The demand is unimportant, and prices are weaker in consequence it would be impossible to move large parcels except at a further reduction.

HARNESS-Has at present a very limited inquiry. and difficulty is experienced in effecting sales, even at slight concessions

WAXED UPPER-Has been in better request, and sales have been made more freely, reducing the stock in first hands to a very low point.

GRAINED UPPER-Is quiet, there having been little or no inquiry the past week.

BUPP AND PERRIED. - There has been a fair demand the heaviest sales being of common grades at a reduction in price, while superior is unchanged.

PATENT AND ENAMELLED-Are very quiet, the demand being very slight indeed.

CALFSKINS-Have not been in special request, and no large sales are reported.

Sprits-Have sold more freely, but prices are hardly as firm

SHEERSKINS .- Colours are not in large supply, and Russets are not plenty.

Hipes.-Thire is no change in the market, stocks are light, with on the whole less inquiry.

THE BOOT AND SHOE TRADE.

Amos, Millard & Co. | Linton & Cooper. Hunter, Duffy & Johnson. | Smith & Cochrane. Smyth & Edminson.

QTOCKS of heavy goods for the fall trade so far are very light. This result has arisen in great measure from the fact that large buyers, anticipating a considerable advance on present prices, have endea-voured to secure their fall supply at present quotations. Several large contracts have been taken, and partly filled, thereby reducing stocks of heavy grades There is every probability of an advance taking place. and we understand a few of our manufacturers have already raised their quotations on this class of goods. Tallow, per ib

MONTREAL PRODUCE MARKET.

Akin & Kirkpstrick. Cameron & Ross. Cameron & Ross. Converse, Colson & Lamb. Crawford, James. Hobson, Thomas, & Co Kirkwood, Livingstone & Co

Landiaw, Michieton & Co. Lectaing, Thomas & Co. Mitchell, Robt, Raphael, Thomas W. Sinclair Jack & Co. Symour, C. E.

FLOUR.—We have to note a decided improvement in the general tone of the market within the past two or three days. There has been more outward movement and an improved domand for city consumption, and with restricted receipts prices of the leading grades have improved fully but per barrel. In the lighter grades little has been done, and no marked change in value can be reported. Superfine sold at the close at rates ranging from \$7.40 to \$7.60, the bulk of transactions being at, and in vicinity of \$7.50. The supply of strictly good bakers superline has become scarce, and some holders of such demand \$7.75, but thus far have not been met by buyers, though present indications are that this figure or even higher will shortly be reached. In No. 2 and the lower grades there is little movement, there, is however, a fair amount changing hands as compared with the previous stagnation. Bag Flour-is favourably influenced by the general improvement, and now commands a proportionate advance on late nominal rates. RycFl ur meets an improved demand, and prices have advanced some 25c from the lowest point reached, closing firm with improving tendency.

It is gratifying to note that thus far scarcely any flour has soured, and as the large proportion of early and winter ground has already passed into consumption, comparatively little remains of questionable condition, so that the fears indulged, of loss in this direction are greatly allayed, and barring the contingency of liberal supplies of wheat from the West, prospects bid fair for good prices, pending the incoming harvest.

OATMEAL-Little has been done during the week. and rates may be considered mostly nominal.

GRAIN.-Wheat.-Nominal rates for U. C. Spring are \$1.50 to \$1 55, but as arrivals are direct to millers, few, if any sales have taken place. Pcas .- Receipts have almost entirely ceased, and the parcels in store or affoat have, with few exceptions, been at length or anost nave, with lew exceptions, been at length shipped. There are one or two enquiries for small lots to complete cargoes, but at this late stage of the season no operations on a large scale would be indulged in, especially in view of the heavy shipments and the late downward turn in Britain, rates are therefore virtually nominal. Oats—Are extremely dull, there being no shipping demand, and the stock on hand and arriving being fully adequate to the small consumptive wants.

Consumptive wants.

Poirs—Remains unchanged, both in value and demand prices are, however, weak, and were purchasers of wholesale parcels to come forward, some concession would doubtless be made. At the same time, holders are not pressing, and the business done is of a mere retail character.

LARD—Nominal calcal the

LARD-Nominal; sales being insufficient to base

LARD-Nominal; sales being insufficient to base quotations on.

HAMB, CUTMEATS, &a.—The inferior quality of a good deal of the late arrivals has caused a wide range of prices, the near approach of the fly season making holders anxious to be quit of doubtful stocks. The supply of City Cured Hams is ample, and the local domaind freely met at 10; to 11;e. There has been little or no export enquiry as yet this season.

BUTTER.—The past week has been but a repetition of the stagnation of the past many months, and, judging from prevent appearances, it will be some time before any change can be reported. The make is

before any change can be reported. The make is likely to be considerable this season, as the weather has been latterly very favorable for grass, and with such advantages as this country now possesses, it is to be hoped that the quality manufactured during the present season will be such as to raise the name of Canadian Butter, and to enable it to more successfully compete in the markets of the world with its hitherto more esteemed rivals. The importance of the subject induces us to refer again and again to it. It is a national disgrace, as well as a heavy national loss, that our Butters should rank so much lower in estimation and value than those of almost any out r country in the world. Reasonable care and skill, with a purpose to mend the present state of things, would change the whole trade and materially add to the profit of all concerned.

cerned.

Ashes.—Pots have slightly advanced during the week, and close quiet and firm at quotations. Pearls weak and lower with few buyers.

Fgirs. - Lamb Skins 50ccach. Caliskins 9cc to 25c.

Pritts.—Lamb Skins Sociach. Callekins Social Per Ib.
Sheared Lamb Skins Ziceach.
N.B. Berr.—Extraind first quality includes nothing but the best, large, tat, stabled oxen; second quality includes the best grass-fed oxen, the best stabled cows, and the best three-year old steers, ordinary consists of bulls and the refuse of lots.
Singer.—Extra includes Cossets, and when those of an inferior quality are thrown out.

DEMARKS.

The quality of the Beef Cattle at market was not equal to last week, and helders were asking, early in the morning, last week's prices for a poorer grade, which made a hard market; but as the dervers gave in to the butchers, the Cattle were disposed of, and our quotations remain the same as last week.

SHEET AND LAMPS,—The market for Sheep was rather dull, and good sheared sold at 4: per ib, averaging 73 lise; the quality of the old Sheep generally was not so good as last week. The supply of spring Lambs was fair, and they sold readily at a slight decline from last week's raies.

CAMERON & ROSS.

THE GAZETTE.

NEW SERIES.

A JOURNAL OF THE DOMINION OF CANADA PRICE ONE PENNY.

THE GAZETTE is now Published by the Montreal Printing and Publishing Company, and no expense is spared to make it what it claims to be-" The Journal of the Dominion of Canada."

It contains all the latest news by mail and telegraph It contains more reading matter than any other daily paper in the Dominion.

It contains correspondence from all parts of the world.

Read what other papers think about it. The Quebec

North.

Read what other papers think about it. The Quebec News says:—

The Montreal Gazette.—Our cotemporary comes to us clothed in a new dress, and in a complete change of typographical appearance. The proprietorship has lately been merged into a joint-stock company, though Messrs. Lowe & Chamberlin remain the leading spirits of the enterprise. It is now, as it has been all along one of the ablest conducted sheets in the Province, and is, without exception the only newspaper in the proper sense of the term, that we can boast of. Its typographical appearance is really beautiful, and the very large quantity of reading matter it contains will make it most acceptable to its patrons. We doubt, however, if Montreal has sufficiently advanced in wealth and intelligence to make such an enterprise a success. We have been anxious to try the experiment all along but found it wouldn't pay. We wish our cotemporary every prosperity, and hope it is the be muning of a now era in journalism in the Dominion.

The London Even ng Advertiser is very nearly as The London Even ng Advertiser is very nearly as The Basette in its new

The London Even ng Advertiser is very nearly as complimentary thus noticing The Gazette in its new

The London Reen by Advertiser is very hearty accomplimentary thus noticing The Gazette in its new form:—

The Montreal Gazette appears in an entirely new dress, and is, we think, the handsomest sheet in the Dominion of Canada. As the type is small, though sharp and distinct, a very large amount of reading, matter is given in each issue. Placard types are eschewed, the advertisements being set up in a neat, compressed style. The typegraphy of the paper has a thoroughty English appearance. We have often thought of adopting a stringent rule with regard to the hand-bill advertisements which disfigure newspapers, and probably shall do so ero long. Where all amnouncements are displayed in black letter, what advantage has one merchant over another? Where all the advertisements are neatly and compressedly displayed, no person can complain, and the advertisements are certain to be more widely read. The Gazette is about the size of the Evening Advertiser, which is another proof—if proof were needed—that a superfluity of waste paper is no indication of influence or status. The Gazette is published under the auspices of a joint-stock company, numbering among its members leading capitalists, interary men, heads of the mechanical departments, etc. The Gazette has long been the leading paper of Montreal, and under the present arrangements will take a first place among the press of the Dominion. We wish our cotemporary every success, and we hope its enterprise may prove abundantly remunerative.

The Dundas Courier wishes success to the new enterprise in the following handsome terms:—

every success, and we hope its enterprise may prove abundantly remunerative.

The Dundas Courier wishes success to the new enterprise in the following handsome terms:—

Aloutreal Gazette.—Quite a transformation has lately taken place in the appearance and general conduct of this well-known journal. In the first place, the hand-bill form of displaying advertisements is entirely discarded, and the old country style adopted, of condensing them in the smallest space, and, at the same time, so classifying them that they are much easier found out. By this means more room is given for general reading matter. In the second place, it is published on the co operative system, under the name of the "Montreal Printing and Publishing Company." The company comprises the firms of Lowe & Chamberlin, Longmoore & Co., together with "assistant editors, reporters, the heads of the printing and press departments, a number of literary men and a few friends". By this ombination the Gazette must become a power in the new Dominion, and will, in all probability, prove to be in Canada what the Times is in England, the leader of public opinion. In addition to all these advantages, the price has been reduced to a penny, and arrangements are to be such that the paper can be had at all the principal points in the Dominion. To mail subscribers, the advance price of the Dally has been reduced to \$5. The Gazette has always, in dealing with public questions, taken a higher tone than most other leading journals in the Province, and we doubt not that under the new order of things no falling off in this respect need be feared. We wish the new enterprise the greatest possible measure of success.

These are only a few of the notices which have appeared in the papers all over the British Provinces.

These are only a few of the notices which have appeared in the papers all over the British Provinces, but may be taken as a sample of the others.

Registered letters at the risk of the Publishers.

All business communications to be addressed to the Secretary of the Montreal Printing and Publishing Company, Montreal.

All newspapers copying this advertisement for three months will be furnished with the Daily Gazette for the same time as an exchange, on receipt of the paper containing the notice.

POPULAR SCIENCE

THE SCIENTIFIC AMERICAN TO BE GREATLY ENLARGED.

THIS widely circulated and Popular Journal of the Industrial Arts and Sciences enters its twentysecond year on the 1st of January next, and the Publishers propose to signalize the occasion by enlarging it to the size of the most costly Scientific Journals of Great Britain, without, however, in creasing the subscription price.

It is almost superfluous to speak of the great value of this Popular and Useful Journal to all classes, and especially to Mechanics, Manufacturers, Inventors, Lagineers, themists, Agriculturists, and all who love to read of the wondrous progress which now marks every department of Mechanical Engineering and the Industrial Arts and Sciences generally.

The Editorial department is very ably conducted, and many of the best writers in this country and Europe are contributors to its jages. Many of the articles have the charm of romance about them, and inspire the mind with noble ideas.

The Scientific American has the largest circulation of any similar journal in existence, but it ought to have a million of readers in this growing country.

The engravings of New Inventions, Tools, Implements for the Farm, Workshop and Household are very numerous and are splendidly executed by the best artists in the world. This feature of the paper is to 15 staking, and has wen the praise of the united press of this country and Europe.

Another feature peculiar to the Scientific American is the official publication of every Patent granted by the Government Patent Office. Each number contains the weekly issue of Patent Claims, with copious notices of new inventions, togother with Reviews of Foreign Inventions and Discoveries in every department of Science.

Whoever reads the Scientific American is instructed and entertained, without being bothered with hard words and dry details.

The American and karopean Patent Offices, in connection with the scientific American, form an immense Maseum of Michanical Nevelties, which furnish constant employment to a large corps of Scientific Examiners who prepare drawings and specifications for Patents.

This firm is no doubt the most extensive in the

Now is the time to send in subscriptions to the scientific American, so as to begin with the new volume.

The numbers for a year make up a splendidly illustrated volume of \$32 pages. Terms.—\$3 per annum; \$150 for six months; \$1 for four months; Clubs of ten and upward, \$2.0 each, Canadian subscribers, \$3 25 per annum, always in advance. Specimen numbers sent free, also, a pamphlet of advice to inventors Address
