Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou Illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been reshot to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	✓	24x	28x

The copy filmed here has been reproduced thanks to the generosity of:

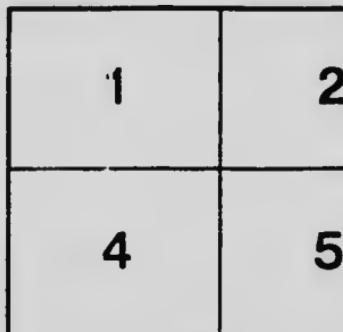

Library
Agriculture Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

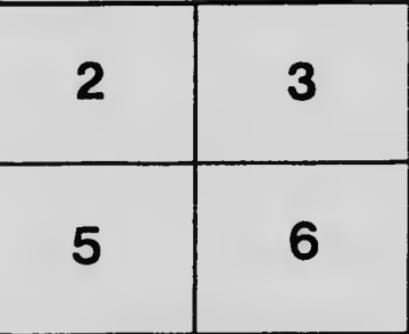

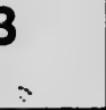

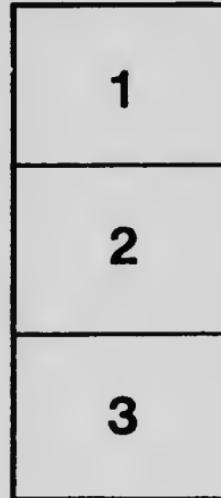

Bibliothèque
Agriculture Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

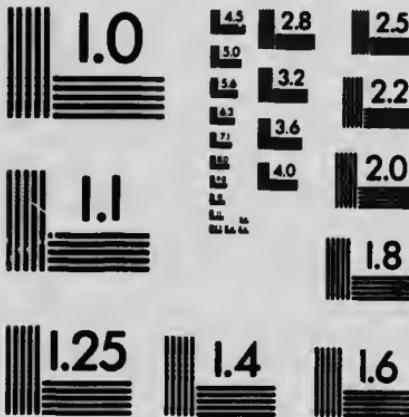

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

CIRCULAR No. 8

BACKYARD PIG FEEDING

Is Practicable and Profitable in Cities, Towns
and Villages

BY

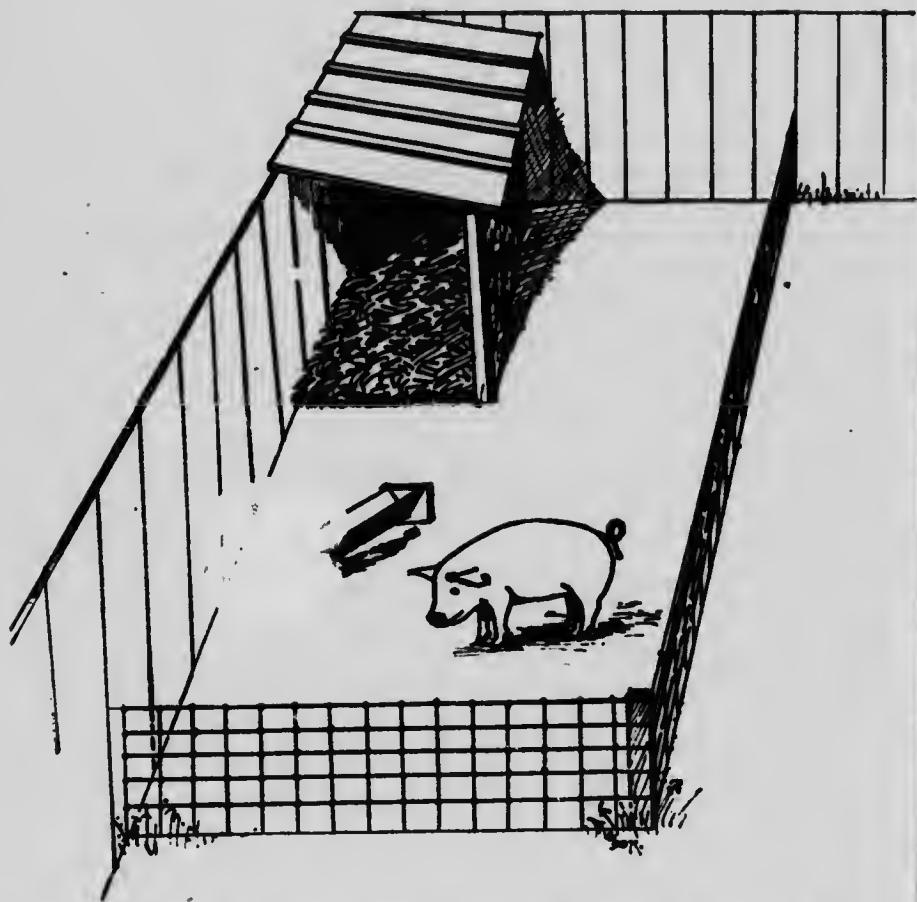

H. M. KING, B.S.A., Associate Professor of Animal Husbandry
Ontario Agricultural College, Guelph, Ontario

FEED A PIG BECAUSE

1. HOGS MULTIPLY RAPIDLY AND MATURE QUICKLY, SO THAT THEY OFFER THE QUICKEST MEANS OF INCREASING THE ARMIES' SUPPLY OF MEAT.
2. HOGS PRODUCE MORE MEAT FROM A GIVEN AMOUNT OF FEED THAN ANY OTHER DOMESTIC ANIMAL.
3. HOGS GIVE A GREATER WEIGHT OF DRESSED CARCASS IN PROPORTION TO LIVE WEIGHT THAN ANY OTHER ANIMAL.
4. THE CARCASS OF THE HOG CONTAINS MORE EDIBLE MEAT IN PROPORTION TO BONE THAN THAT OF ANY OTHER ANIMAL.
5. PORK AND BACON CONTAIN A LARGE PROPORTION OF EDIBLE FAT WHICH IS VITALLY NEEDED IN THE RATIONS OF SOLDIERS.
6. BACON IS THE MOST COMPACT FORM IN WHICH MEAT CAN BE SHIPPED ABROAD.
7. ONE OR TWO PIGS CAN BE KEPT IN THE BACK-YARDS OF THOUSANDS OF URBAN HOUSEHOLDS WITH PROFIT.

TORONTO, ONTARIO, MARCH, 1918

**"The Pen is mightier than the sword"—
especially if there is a Pig in it.**

A very cheap and serviceable type of pen and shelter which can be built in almost any backyard. Shelter is provided from sun and rain and if on high ground no floor is required.

BACKYARD PIG FEEDING IS PRACTICABLE AND PROFITABLE

H. M. KING, O.A.C., GUELPH.

The hog plays a most important part in rationing our armies and those of our Allies. No other animal can so quickly and economically produce the meat and fat in which our European Allies are so woefully short. Eventual success of our armies depend, in no insignificant degree, upon the ability of Canadians to raise hogs—and more hogs.

In this important work residents of villages, towns and cities can give most helpful assistance. Nor need the work be unpleasant. "As dirty as a pig," is an old saying which maligns the hog. If given a chance to be clean, the pig is among the most cleanly of domesticated animals. With reasonably good management, the hog is neither unsanitary nor offensive when fed in the backyard of an urban dwelling; while the table refuse, otherwise wasted, may be profitably utilized by him. The householder, in short, who in this year of trial feeds a pig, at once performs a most urgent patriotic service and utilizes spare moments and table refuse very profitably for himself.

THE PIG THAT PAYS.—Weanling pigs, at from six to eight weeks of age, weigh in the neighborhood of thirty pounds. If males, they should be castrated either before or shortly after weaning. Young sow pigs will make as economical gains as the barrows. Generally speaking, pigs that are fairly long, deep, with rather short, broad heads, fairly strong bone, and an abundant coat of silky hair, make the best use of the feed supplied, and consequently will make the most economical gains.

HOW TO FEED THE PIG.—It is necessary to supply growing pigs with foods which are concentrated in character, that is, containing not too much fibre and bulk. Young pigs are generally weaned onto skim milk, so that when this food is not available, we must try to replace it as best we can. At the outset, then, some shorts or middlings should be available. They are relished by the pigs, and may be fed to a certain extent right through to fattening time. Tankage, which can also be purchased at the feed store, can be fed with profit. It helps to take the place of the skim milk. It should be fed sparingly at first, forming two or three per cent. of the meal ration, and this may be increased to ten per cent. as the hog grows and becomes accustomed to it. Coming in a dry powder form it is conveniently mixed with the grain before feeding.

As the pig gains in weight and reaches about three months or so in age, it will be necessary to supply some heavier grain. Ground barley, gradually added, is excellent, while a little oat chop may be fed. Finely ground screenings can be fairly cheaply obtained and may form part of the ration, supplemented with ground barley or oats to keep the feed from becoming too close in texture. In feeding meal to pigs, feed just what they will nicely clean up all, no more. The most economical gains are made when the pig is kept just slightly below his limit and at no time overstepping it. If water is supplied constantly, the meal should not be made too sloppy. If the meal is dampened there will be less waste than if fed dry.

Experiment shows that it takes, on the average, about four or four and one-half pounds of meal, fed to pigs confined in pens, to produce a pound of gain. If, then, it is going to take about one hundred and fifty pounds of gain to make a pig ready for market, some idea can be formed as to the amount of feed it will be necessary to buy. Of course anything fed which acts as a supplement to the grain will lessen the amount of grain necessary.

FEED THE HOUSEHOLD GARBAGE.—The hog is the most economical consumer of by-products. Much of the garbage will be relished by him, but care must be taken to keep broken dishes and glass out of the garbage can, and not to feed

anything that will tend to cause poisoning, such as soapy dish water, etc. Dish water which contains no chemical or soap has some food value for pigs. Assuming that a small yard is supplied the pig for exercise, care must be taken not to sour the ground by feeding the garbage always in one place, and allowing it to become stagnant. Garden refuse should find a place in the ration of every pig kept in the back yard. The weeds that are pulled out, the plants that are hoed out when thinning, the tops that are cut off, etc., if thrown into the yard supply the green food which is necessary to keep the pig in a thrifty condition. The grass that is mowed from the lawn will be relished, particularly if the pig's yard is small, and what he does not eat will, when dried, make a fairly satisfactory bed for him to lie on. Ordinarily it will not be found practicable to cook the garbage. Materials such as potato peelings are much more valuable for pigs when cooked, and if they can be cooked they should be fed along with the meal ration.

VERMIN LOWE PROFITS.—Lice tend to weaken the vitality of pigs, and render them more susceptible to disease. Two parts of creolin to one hundred parts of water make a good dip for lice. Crude petroleum is also effective. One application is seldom sufficient, and a little applied from time to time will do no harm.

Pigs ENJOY MUD BATH.—Pigs perspire very little, and suffer from heat; consequently they enjoy wallowing in water or mud. In very hot weather an improvised mud bath in a shady spot adds to the comfort of the pig, and cheapens the cost of production.

The "A" shaped Hog House—the cheapest kind of permanent pen that can be built.

A CHEAP, BUT EFFICIENT HOUSE.—During the warmer months of the year warm houses are not required for growing pigs. About all that is necessary is shelter from the hot sun and wind, and a dry bed. If the yard is surrounded by a tight board fence, a cheap and satisfactory form of shelter can be made by adopting some such plan as shown in the illustration. The board fence forms shelter on two sides, and the roof, which can be made of rough lumber, supplemented with battens, and given a slight pitch, forms shelter from the sun and rain. If the location is high, and natural drainage is good, it will not hurt the pigs if no floor is supplied. In very damp weather, or if the location is not very high, a few boards or planks will keep the pigs' sleeping quarters elevated and dry, and will help to prevent rheumatism and crippling. If no litter is available, a bale of shavings will be sufficient to keep the quarters comfortable for some time.

If a more permanent type of house is deemed advisable, the "A" shaped pen, as shown, might be used. The size can be varied with the number of pigs kept. The cost of materials for these houses is less than for the other kinds.

CURING OF PORK.—If interested, write The Department of Agriculture, Toronto, for Bulletin No. 225.
