numerous cure effected
in this neighbourly town
of an old lady living
about five miles from this
wounds in her leg for many
increased to such a alarming
usual remedies; her health
the suffering she endured
in the had recourse to your
Ointment, and she is now
in her home again, until
the recovery of Charlottetown.

Will leave Picton, every Wednesday and Friday
morning, at 5 o'clock, till further notice. For
Freight or Passage, apply to the Hon. W. W. LORD,
Charlottetown, JAMES C. POPE, Esq., Bedeque, or
to the Master on board.

Forces to Skidegate, and as usual to Picton.
Charlottetown, May 20, 1852.

Halifax, 12th July, 1853.

ARCHIBALD SCOTT, Esq.
As the Agent of various Fire Insurance
Companies, I beg to bring under your notice my
PATENT ARTIFICIAL SLATE. This
composition has been upwards of three years exten-
sively used in Newfoundland and Prince Edward Island, the
principally for covering shingled roofs, as you will
see by the accompanying circulars of specimens. It has been fully tested, and proved most success-
fully its fire proof qualities under most extraordinary
circumstances; so much so, that I am of opinion that
Fire Insurance Companies should encourage its general
application to all kinds of wood building (where the
color would be no objection to its being used, such as
the back walls of dwellings in the city, oat houses,
ware-houses, &c., as well as the roofs) by lowering
the premiums of insurance on such buildings as are
covered.

I have the honor to be, sir,
Your obedient servant,

J. W. ROSS.
Patentee and Manufacturer.

Halifax 14th July, 1853.

Sir.—In answer to your note of the 12th inst. I
consider the use of your "Artificial Slate Paint" on
shingled Roofs, as greatly diminishing the risk against
Fire—I have frequently reduced the premiums on
Buildings in the Country, upon its application.

I am, sir, your ob't servant,

AROLD. SCOTT.
Insurance Agent.

John Ross, Esq., Halifax.

Hazard's Gazette.

MISCELLANEOUS.

THE BTING OF DEATH.

In a biographical notice, giving an account of the last days of a good man who was distinguished for his serene and lofty faith, he is reported as saying, "I appear to suffer, but I do not. It seems as if some angel were standing by me, he bearing all the pain, and this poor body of mine only exhibiting the outward signs of it."

A striking instance of the same kind occurred not long since, within our own knowledge. A lady of exalted piety was suffering from protracted and fatal illness, and at certain intervals there came spasms and convulsions, giving externally all the symptoms of intolerable agony. Once when these spasms were evidently coming on, and her friends were bending over with anxious faces, she looked up with a sweet tranquil smile and said "Do not be troubled about me. You think I suffer extremely, but I do not. I know not how it is; but somehow when these convulsions come, there comes with them a sense of Divine presence, an inward power, that takes upon itself the burden of my sufferings; and those spasms are only an appearance."

It is a most beautiful and beneficent law, and when the mind is exalted with great conceptions, or filled with an all absorbing love, the body becomes less sensible to its infirmities and sufferings, and sometimes forgets them altogether. Even our natural affections and passions have power, though in a limited degree of suspending our bodily sensation. A mother who a little while ago was pale and drooping under the smallest burdens, is by and by seen hanging over the bed of her stricken child, and how changed from what she was! Her countenance that was so pale, now beams with life, and the arm that hung down is nerved with energy. The astronomer in his starry contemplation becomes free of the body; and cold, hunger, and fatigue are alike forgotten. But religious faith, when warm and clear, and its eye open wide on immortality, elevates and changes all our affections, and when it reacts upon the whole frame, it sends the tranquillising influence along all its nerves.—*Philadelphia Catholic Instructor.*

NELSON'S GOODNESS OF HEART.—Human nature is very frail. No man ever had a stronger sense of justice than Lord Nelson. He was loth to inflict punishment; and when he was obliged, as he called it, "to endure the torture of seeing men flogged," he came out of his cabin with a hurried step, ran into the gangway, made a bow to the officers, and reading the articles of war the culprit had infringed, said, "Boatswain, do your duty." The lash was instantly applied, and, consequently, the sufferer exclaimed: "Forgive me, admiral—forgive me!" On such an occasion, Lord Nelson would look round with wild anxiety, and as all his officers kept silence, he would say: "What! none of you speak for him? Avast! east him off!" And then he added to the culprit: "Jack, in the day of battle, remember me!" He became a good fellow in future. A poor man was to be flogged—a landsman—and few pitied him. His offence was drunkenness. As he was being tied up, a lovely girl, contrary to all rules, pushed through the officers, and, falling on her knees, clasped Nelson's hand, in which were the articles of war, exclaiming, "Pray, forgive him, your honor, and he shall never offend again!" "Your pretty face," said Nelson, "is a security for his good behaviour. Let him go! the fellow cannot be bad who has such a lovely creature in his care." This man rose to be a lieutenant; his name was William Pyle.

TORTOISE SHELL.—Tortoise shell, or rather scales, is a horny substance that forms the hard strong covering of a bony texture which covers the Testudinaria, Linn. The lamellae or plates of this tortoise are 13 in number, and may be readily separated from the bony parts by placing fire beneath the shell, thereby they start asunder. They vary in thickness from one-eighth to a quarter of an inch, according to the age and size of the animal, and weigh from 5 to 52 pounds. The larger the animal the better is the shell. This substance may be softened by the heat of boiling water; and if compressed in this state by screws in iron or brass moulds, it may be bent into any shape. The moulds being then plunged in cold water, the shell becomes fixed in the form imparted by the mould. If the turnings or filings of tortoise-shell be subjected skilfully to gradually increased compression between moulds immersed in boiling water, compact objects of any desired ornamental figure or device may be produced. The soldering of two pieces of scale is easily effected by placing their edges together, after they are nicely filed to one level, and squeezing them between the long flat jaws of hot iron pinchers, made somewhat like a hair dresser's curling tongs. The pinchers should be strong, thick, and just hot enough to brown paper slightly without burning it. They may be soldered also by the heat of boiling water, applied along with skillful pressure. But in whatever way this process is attempted, the surfaces to be united should be made very smooth, level, and clean; the least foulness, even the touch of the finger, or breathing upon them, would prevent their confluence.

It may not be generally known that editors get one important item of subsistence at a very low price—they get *bread* for nothing.

German physiologist affirms that of twenty deaths of men, between eighteen and twenty-four years of age, ten deaths is the waste of the constitution induced by smoking.

"This must be look'd into," on the spot child said when he heard his father's watch tick,

AGRICULTURE.

DISEASES OF CATTLE.—INNOCULATION.

Within the past ten years disastrous losses have been met with in some parts of Europe, by dealers in cattle, from a comparatively modern disease named pleuro-pneumonia;

it is most prevalent in the marshy districts of Holland, but is not confined to them. The symptoms of it are like inflammation of the lungs, but remedies ordinarily used for that disease have failed to be of any use in this. How this disease came to be first introduced is difficult to tell, but from what we have read upon the subject we are of the opinion that it was first caused by badly ventilated stables, and feeding a great number of animals in a small space, for fattening, on the refuse grains, &c., obtained from German and Dutch distilleries. The hot-beds of the disease are the distillery and beer districts of those countries. No less than 10 per cent of the cattle bought to be fattened for market, in some parts of Holland and Belgium, die of this disease. We have heard no word of it attacking cattle in our country, still such a disease may not be unprevaleal among stall-fed cattle in some districts; it should be looked after with zeal by those whose duties require of them a watchful care for the public health. Innoculation has been resorted to in Holland to try and arrest it. The virus for this purpose is taken from the lungs of a diseased animal, and inoculation is performed on the tails of live animals to prevent them taking it. The operation is said to be somewhat successful, and the practice is about to be introduced into England as a preventive.

GREAT CROP FROM ONE ACRE.

Mr. John T. Andrew, of West Cornwall, Ct., in a letter to the *Country Gentleman*, states that last year he raised 2,102 bushels of the common white turnips on one acre of land, with a profit of \$207.20. Farmers are beginning to find out that there are more profitable crops to be raised than fifteen bushels of oats or wheat to the acre. Mr. Andrew's mode of culture seems to have been simple and easy, and as the previous condition of the soil was the same as the present state of thousands of acres, usually considered worthless, we shall give our agricultural readers the benefit of his description, operation, and estimates:

The physical condition of the soil was such as is produced by neglect and had culture. Its organic portion had been exhausted, having a subsoil of clay, sand, and yellow, well supplied with pebbles, and covered with a surface soil not more than two or three inches thick. It was retentive of moisture, but free from standing water. Its product an annual crop of white moss, and about half a ton of hay per acre. Its previous culture was a slight manuring, breaking up, and cultivating with potosiers the previous year. Early in the succeeding spring the preparation for the turnip crop began. First the rocks were broken, and all stones removed from the field. Next the land was well manured, and ploughed not less than twelve inches deep, and thoroughly harrowed.

After two weeks it was again manured, and ploughed half as deep as before, and harrowed. With intervals of a few days it was ploughed and harrowed twice more, and a small quantity of manure was turned into the surface. At this stage of preparation, the soil lay in a soft, uniform bed, at least two inches deep. The change effected in its appearance was surprising. The yellow, cold, shallow and hard soil of the preceding year, had become of a rich, dark color, warm, deep and light. Through this bed furrows were drawn fifteen-inches apart, into which were drilled a composition of the richest manure from the farm, with ashes, lime and gypsum. The furrows were then turned back over these drills with the plough, leaving the land in ridges, which were slightly raked off and nicely finished with the garden rake. Through the tops of these ridges directly over the manure, a channel was made for the seed, by drawing along them the corner of a hoe with slight pressure. Into this channel the seeds were dropped by hand, half a dozen at a time, with intervals of eight-inches. They were then covered by drawing the back of the rake over them, and the planting was done, the seed deposited with regular spaces of fifteen inches one way and eight the other, on rounded and slightly elevated ridge, planted in earth made rich for their germination, and having a bed of rich manure only an inch or two below them, into which the young rootlets, as soon as formed, might plunge and revel. As soon as the plants were large enough, they were thinned out by the removal of all but the best plants from each place, and carefully hoed by hand, at intervals of a week, four times, when they became too large to work among longer without injury to the crop. There was scarcely a vacant space or small plant in the field. They were very uniform in size; the tops covered all the ground, and formed a crop unrivaled for beauty. The variety of turnip was the common long white. To show the facility with which turnips are cultivated when gathered, I will add that they were all pulled up with little difficulty in rows, with the tops all one way, by two persons, at the rate of more than a hundred a minute.

They were planted about the middle of July, and harvested on the 13th of November, and measured by disinterested men, and the result amounted in a certificate, varified in the usual manner by reliable witness before the Executive Committee of the Littlefield Agricultural Society, and received the first premium. It is thought to be the largest crop of this variety of turnip ever reported. The following is an approximation to the cost and value of the crop per acre:

Removing rocks and stones, \$3.50; manure 100 loads, \$50—half charged to first crop, \$25; first ploughing, \$2; second do., and harrowing, \$2; third do., \$2; fourth do., \$2; forming ridges, 50 cents; raking and planting, \$2.50; weeding and thinning, \$4; first hoeing, \$2; second do., \$1.50; harvesting, \$8; rent of land, \$30 per acre, \$1.50; one pound of seed, 75 cents; the income was— a large quantity of tops, \$4; 2.75; whole value of the crop, \$26.75; cost deducted, \$6.55; profit per acre, \$20.20. The cost per bushel was a small fraction below three cents.

John T. Andrew,
West Cornwall, Ct., July 23, 1863.

We assisted in measuring the turnip crop raised by John T. Andrew, and also the land on which they grew, and certify that the crop yielded two thousand one hundred and two bushels and two-thirds per acre, harvesting this day.

Nov. 13th, 1863.

FRANKLIN BRACH,
CYRUS W. GRAY.

I hereby certify that the signs of the above certificates are true and veritable.

SILAS A. GRAY, Justice of the Peace.

I certify that John T. Andrew, Esq., is one of the magistrates of this town, a successful farmer,

a man of liberal education, and of undoubted veracity.

SILAS A. GRAY,
Justice of the Peace, Sharon, Ct.

We would call the attention of farmers to the great benefit experienced, in this instance, by dry ploughing. The common rule, for such soils, is to plough from four to six inches, it being morally considered the height of folly to turn up the yellow dirt. Mr. John T. Andrew's statement is important, as showing how worn-out soils

except a light duty of 6 cents per ton, a small pilotage fee and half a cent per bushel export duty on salt.

ARRIVAL OF THE ENGLISH MAIL.

(From the *New York Times*)

THE REVOLUTION IN CHINA.

Everything relating to the progress of the Christian arms in China must necessarily possess a great interest for the English reader. It is now manifest that the struggle which is shaking Empire in its centre is not more a contention for supremacy between one race of mankind and another, than a resolute endeavour to substitute the light and truth of Christianity for the dark and degrading gloom of an ancient, but hideous, paganism. We are happy to say that the progress of the good cause continues to be as successful and wonderful as ever.

The last mail from China we learn that a detachment of the "patriot army" had suddenly made itself master of the port, trading port of Amoy, and that the inhabitants had received them either as deliverers or as captors. "The capture of Amoy," says correspondent, "is indeed, as it is, '700 miles to the rearward of the two grand armories of the insurgents, together with the conduct of the inhabitants and local authorities on the occasion, has manifested the extended organization of the rebel power and the boldness of the Tartar cause; and the orderly behaviour of the captors of Amoy immediately after the storming of the town, and the civility of the rebels to the Europeans, both, on that occasion and also at Nankin, have justified the expectations now generally entertained, that the establishment of the Ming dynasty will terminate the vexatious restrictions to foreign trade and intercourse that have hitherto prevailed."

It appears, indeed, that in view of the capture of Amoy immediately after the storming of the town, and the civility of the rebels to the Europeans, both, on that occasion and also at Nankin, have justified the expectations now generally entertained, that the establishment of the Ming dynasty will terminate the vexatious restrictions to foreign trade and intercourse that have hitherto prevailed.

We have seen notices of this ship before, but have not been able to ascertain her precise dimensions till now.

All experience has tended to show that speed and steadiness have been attained in proportion to the increase of the size of a ship. The better opinion now is, that 30 feet is the extreme depth of the highest ocean wave, and that a vessel drawing 32 feet of water, of a length of 600 feet or over, can ride the waves without being moved from a level. We have this opinion enforced upon our attention by several of the captains in the Cunard and the Collins lines.

This ship is being built by Scott Russell, Esq., the greatest naval architect of England, and is constructed in separate compartments, made water-tight, so that in case of her bow or stern breaking off, she would still be able to float in separate pieces.

We have seen notices of this ship before, but have not been able to ascertain her precise dimensions till now.

All experience has tended to show that speed and steadiness have been attained in proportion to the increase of the size of a ship. The better opinion now is, that 30 feet is the extreme depth of the highest ocean wave, and that a vessel drawing 32 feet of water, of a length of 600 feet or over, can ride the waves without being moved from a level. We have this opinion enforced upon our attention by several of the captains in the Cunard and the Collins lines.

This is doubtful if such a steamer could enter our harbour, and Halifax is therefore regarded as the most suitable port for this new move in ocean navigation. This steamer is to sail from Milford Haven, where she is now building, or from Holyhead harbour, which promises eventually to become the great steamship terminus of the British Isles.—*Portland Ad.*

HISTORY OF THE HOLY SHRINES.

In a foreign paper we find a history of the Holy Shrines, the possession of which is said to be the chief cause of dispute between Russia and Turkey. From this account we learn that sanctuaries or churches built on the site of the great miracles of the Redemption were founded by the Greeks.

They were destroyed by the Sovereigns of Persia in 614, re-established by the Emperor Heraclius and some years afterwards were taken possession of by the Kaffir Omar, who permitted the faithful to have access to them.

They were subsequently destroyed by Amurat, and re-established by his mother Mary, a Christian, in 1066. About the middle of the 14th century, Robert, King of Sicily, purchased from the Sultan of Egypt the Sanctuaries, and placed them under the guardianship of the Franciscan monks. In the beginning of the sixteenth century the Holy Land was conquered by Selim, and the treaty between his successor and Francis I. placed under the protection of the crown of France the Holy places, as well as the monks who guarded them.

In 1757 a serious collision took place between the Greeks and Latins, in consequence of some Greeks pilfering having pillaged the Latin convent of Jaffa.

Complaints were made to the Divan, and after some patient hearing of the matter, the Latins were expelled from the Church of the Virgin, and that of Bethlehem and the Holy Sepulchre and other sanctuaries were placed under the guardianship of the Greek monks. From this time the Latins gradually lost the prerogatives they had previously possessed.

From this time the Latins gradually lost the prerogatives they had previously possessed.

In 1757 a serious collision took place between the Greeks and Latins, in consequence of some Greeks pilfering having pillaged the Latin convent of Jaffa.

Complaints were made to the Divan, and after some patient hearing of the matter, the Latins were expelled from the Church of the Virgin, and that of Bethlehem and the Holy Sepulchre and other sanctuaries were placed under the guardianship of the Greek monks. From this time the Latins gradually lost the prerogatives they had previously possessed.

VARIETIES.

Percussion Caps Superseded. A new composition has lately been invented by Messrs. Winiwarter and Gersheim, of Vienna, for the purpose of superseding the ordinary percussion caps, and, in many instances, the gunpowder charge also. The most prominent feature of these gun primers, as the composition is called, are the absence of a metallic coat or cover, and their uniform explosive power, the materials being of such a nature that, after a detonation, no residue whatever is left behind. The materials which form the new composition are fulminating mercury, chlorate of potash, and sulphide of antimony, the dangerous properties of which ingredients are diminished by the application of colloidion, which is used as a cement, and it is the ingenious employment of this substance which constitutes the chief peculiarity of the invention.

The Mormons.—If recent accounts from Great Salt Lake City be not exaggerated, Mormonism is working its own cure. That which persecution failed to do in Illinois, and which the constitution and laws of the United States have not reached in the Rocky Mountains, internal dissension seems in a fair way to accomplish. The community of the Latter Day Saints is a house divided against itself, and it cannot stand.—It is a wonder that it has not yet shown symptoms of decay. With no evil or moral code for their guidance and government, but what is based upon the pretended revelations of a gross imposter, it is remarkable that so large a body of people should have remained so long subject to this base delusion. Internal dissensions are now prevalent in Utah, and threaten to scatter the Saints as wide and as completely as the confusion of tongues did the builders of Babel.

India Rubber Teeth.—The Scientific American says that this article, in the form of purified white India Rubber, has been patented in England for making artificial teeth, gums, and palates. It adds:—“The adhesion is complete, it can be moulded with perfection to suit every inequality of the gums and teeth, and supplies an artificial periosteum, as it were, to the teeth, when they become painful by the wasting away of the gum. Added to these is the elasticity of the material which completely obviates the inconveniences that arise from any motion with artificial teeth made by other means.”

According to Hunt's Merchants' Magazine, the amount of money circulating in the United States is \$292,477,257, being \$13 for each inhabitant. It was \$11 in 1826 and in 1836; and in 1830 only \$2 20.

BEHAVIOUR IN COMPANY.—On the subject of behaviour in company, Legh Richmond gave the following excellent advice to his daughters: “Be cheerful, but not giggers. Be serious, but not dull. Be communicative, but not forward. Be kind, but not servile. Beware of silly, thoughtless speeches; although you may forget them, others will not. Remember God's eye is in every place, and his ears in every company. Beware of levity and familiarity with young men; a modest reserve, without affectation, is the only safe path. Court and encourage serious conversation with those who are truly serious and conversible; and do not go into valuable company without endeavouring to improve by the intercourse permitted to you.—Nothing is more unbecoming, when one part of a company is engaged in profitable and interesting conversation, than that another part should be trifling, giggling, and talking comparative nonsense to each other.”

An Alderman once called upon Dr. Francis, when the following dialogue took place: “Doctor I have a strong tendency to the gout; what shall I do to arrest it?” “Take a bucket of water and a ton of anthracite, three times a week.” “How?” “Drink the former and carry the latter up three pairs of stairs.” We have not heard that he needed advice afterwards.

A Gardener in New York has succeeded in obtaining a variety of the Prairie Rose, as fragrant as the old Damask Rose. This will be highly esteemed.

Johnson says he never was in a tight place but once, and that was when he had a mad bull by the tail. Had he held on, it would have dragged him to death over a stubble-field, while if he had not held on the critter would have turned round and gored him to death. The question now is, which did Johnson do—hold on or let go!

It would require several horses to draw all the strings of a piano-forte to concert pitch, the strain upon them, when perfect tune, being about seven tons.

The good husband keeps his wife in the whole some ignorance of unnecessary details. He knows little who will tell his wife all he knows.

I know nothing that more moves us to tears than the hearty kindness of a dog, when something in human beings has pained or chilled us.

Romances generally end with a marriage. And many young girls, when they leave school, would wish to go through the romance of life—as we do most romances—by beginning at the end.

The Christian Inquirer has this sensible remark:—“The giddy folly and the overworked pretences are extreme forms of the same mental impoverishment.”

Mechanics, Inventors & Manufacturers.

\$450 IN SPLENDID PRIZES. \$450.

VOLUME IX of the SCIENTIFIC AMERICAN commenced on the 17th of September. It is clearly destined to be the standard work of all technical, scientific, Manufacturers, and Farmers, in all departments of useful knowledge, especially in the arts and sciences, and is widely regarded as a sound and able journal. Nearly all the PATENTS which issue weekly from the Patent Office are illustrated with ENGRAVINGS, and the CLAIMS of all the PATENTS are published in its columns; thus making the paper a perfect SCIENTIFIC AND MECHANICAL ENCYCLOPEDIA for future as well as present reference.

The SCIENTIFIC AMERICAN is very extensively circulated—in circulation in the last Volume exceeding 15,000 copies per week. It is in form for binding; each volume contains SEVERAL HUNDRED ENGRAVINGS and over FORTY HUNDRED PAGES of Reading Matter, with an Index. The practical receipts alone are worth to any family much more than the cost of the paper.

The Publishers offer the following valuable prizes for the largest list of subscribers sent in by the 1st January next:—\$100 will be given for the largest list; \$75 for the second; \$50 for the third; \$45 for the fourth; \$40 for the fifth; \$35 for the 6th; \$30 for the 7th; \$25 for the 8th; \$20 for the 9th; \$15 for the 10th; \$10 for the 11th; \$5 for the 12th. The cash will be paid to the order of the successful competitor, immediately after January 1st.

TERMS:—One copy one year, \$2; one copy six months, \$1;

ROCKLIN FULLING MILL.

THE Subscribers, in returning thanks to the public of P. E. Island for the liberal patronage with which they have been favoured, hope, by careful attention to the wants of their customers, to meet a continuance of their favour.

July 19th, 1853.

VETERINARY PRACTICE,

Under the Patronage of His Excellency Sir

ALEXANDER BANNERMAN, Knight.

GEORGE LORD, begs leave respectfully to inform his friends and the public in general, that he has resumed his practice in the VETERINARY LINE, under the patronage of His Excellency Sir ALEXANDER BANNERMAN, Knight.

After a successful practice of 27 years—14 in England, and 13 in America—in the course of which he has been extremely instrumental, through his skill, in the recovery of many valuable Horses and Cows; he proposes that, in re-opening a general of PRACTIC PATRONAGE, he may be entitled to say that he considers himself to be as well qualified to prescribe MEDICINES and perform OPERATIONS, in the capacity of Horse and Cow DOCTOR, as any individual who has ever practised in this line in this Colony; and he, therefore, presumes that he may confidently look forward to a renewal of that patronage which he formerly enjoyed in this land.

RESIDENCE—Next door to the Victoria Hotel, Water Street, Charlottetown.

REFERENCE—Messrs. DeBrisay & Co, Apothecaries' Hall. At the Depot of the Royal Agricultural Society.

June 15th, 1853.

The following is a copy of the Certificates which Mr. Lord has received from His Excellency.

George Lord, has attended, and practised for

some of my cattle at Government House Farm, he has done so successfully, and I shall readily employ him again. A. BANNERMAN, Lt. Governor.

BELLS! BELLS! BELLS!

THE Subscribers manufacture and keep constantly on hand, all sizes of Church, Factory, Steam-boat, Ferry, Locomotive, School House and Plantation Bells, with the best description of Hangers.

These Bells are made from the best stock, and the small sizes undergo the same process in manufacturing as Church Bells. An experience of thirty years, with a great many recent improvements, and an entirely new method of casting, enables us to obtain the most melodious tone, combining also, in extraordinary vibrations.

Nearly 9,000 Bells have been cast and sold from this Foundry, which is the best evidence of their eminence.

We have fifteen Gold and Silver medals

at our office, which were awarded for the “best Bells for sonorosity and purity of tone.”

We pay particular attention to the getting up Peaks or Chimes, and can refer to those furnished by us. Our establishment is contiguous to the Erie and Champlain Canals, and Railroads running in every direction, which brings us within four hours of New York. Cash paid for old Copper, Old Clocks, Levels, Compases, Transits, Theodolites, &c., for sale, of superior workmanship. All communications, either by mail or otherwise, will be immediately attended.

N. B.—Those persons favourable to the Races will

find the list opened for Subscriptions thereat, at the Store of the Royal Agricultural Society, at the Victoria Hotel, the Globe Hotel, and at the Drug Stores of W. E. WATSON and JAMES GILLIGAN.

These Reprints have been in successful operation

in this country for twenty years, and their circulation is constantly on the increase, notwithstanding the competition they encounter from American periodicals of a similar class, and from the numerous Eclectics and Magazines made up of selections from foreign periodicals. This fact shows clearly the high estimation in which they are held, inasmuch as they are established on a firm basis, and will be continued without interruption.

Although these works are distinguished by the political shade above indicated, yet but a small portion of their contents is devoted to political subjects. It is their literary character which gives them their chief value, and in that they stand
