DEPARIMYNT OF TEIR INTREIOE UNITED STATES GEOLOGICAL AND GEOGRAPHICAL- SURVEY.
F. V. HAYDEN, U. S. Geologist-in-Charge.

## HIDATSA INDIANS.

WASHINGTON MATTHEWS, ASSISTANT SURGEON UNITED STATES ARMY.

JESUI:
BIBL MAJ. - Smotirit
W.ASHINGTON: GOVERNMENT PRINTING OFFIOE. 1877.

# Unined Stites Geologioal and Geographical SURVET of the Terbitories, 

 Washington, D. O.; June 10, 1877.$\because$ During the year 1854, while engaged in exploring the then almost anknown country along the Upper Missouri and its tributaries, the writer of this note commenced the work of collecting vocabalaries of the languages and other ethnological data respecting the Indians of the Northwest. He continued this work at intervals during a period of aboutsix years, and the materials thus accumulated were finally published in 1862 in the "Transactions" of the American Philosophical Society of Philadelphia, under the title of "Contributions to the Ethnography and Philology of the Indian Tribes of the Missouri Valley". A brief sketch of the Hidatsa Indians, and an incomplete vocabulary of their language, was included in that work.

The author of the present volume, Dr. Washington Matthews, assistant surgeon United States Army, spent some jears among these Indians while stationed at a military post in performance of his official duties as a medical officer of the Army. During this period he paid great attention to the same subject, observing the manners, customs, and other characteristics of these Indians, and making a close and careful study of their language. In this way were secured the materials upon which, elaborated with the atmost care and with conspicuous ability, the present important memoir is based.

Dr. Matthews's earlier studies of the subject resulted in a HidatsaEnglish and English-Hidatsa vocabulary; prefaced by an essay on the grammatical structure of the language. A small edition ( 100 copies) was printed by Mr.J. G. Shea as one of his series of American Linguistics. At the request of the writer, -who earnestly desired to push to completion the work he had long since andertaken, but was compelled by pressure of other engagements to suspend,-Dr. Matthews spent much time in entirely remodeling and greatly enlarging the scope of his paper, to include the ethnography as well as the philology of the tribe. His final result is herewith presented.

Besides revising and adding much new matter to the vocabularies, Dr. Matthews has here made those other important additions, without which the article could hardly have been considered monographic. The whole of the "ethnography" and "philology" are new. The manner in which the work has been accomplished reflects great credit upon the author and upon the Medical corps of the Army, whose capacity for scientific work Dr. Matthews honorably illustrates in his own person. Of the value of the work as a contribution to American Ethnology, little need
be said; I regard it as the most important memoir on our aboriginal Indian languages which has appeared since the Dakota grammar and dictionary, by Rev. S. R. Riggs; was published by the Smithsonian Institution.
It was originally intended to publish this treatise as a portion of a general work on Indian efhnography now in course of preparation by the undersigned. The delay in its appearance which such course would entail, and the great merit of the work here accomplished, render it desirable, in justice both to the author and to the subject, that it should appear as a separate publication.

As circumstances rendered it impossible for the author to attend personally to the work during its passage through the press, the duty of superintending its pablication devolved upon Dr. Elliott Couee, U. S. A., to whom the thanks of the Survey are due for the carefex manner in which he has accomplished the task.

F. V. HAYDEN,<br>United States Geologist.

## ETHNOGRAPHY.

## ETHN0GRAPHY.

THE VILIAGE AT FORT BERTHOLD; AND ITS INHABITANTS.
§ 1.-The Hidatsa, Minnetaree, or Grosventre Indians, are one of the three tribes which at present inhabit the permanent village at Fort Berthold, Dakota Territory, and hunt on the waters of the Upper Missouri and Yellowstone Rivers, in Northwestern Dakota and Eastern Montana.

The history of this tribe is so intimately connected with that of the politically-allied tribes of the Aricarees and Mandans that we cannot well give an account of one without making some mention of the others. In this first part of the Ethnography, all the tribes are included.
§ 2. Location.-An arid prairie-terrace, some four miles wide, stretching sọuthward to the Missouri from the base of bluffs which form the edge of a higher plain, becomes gradually narrower as it approaches the river, and terminates in a steep bluff of soft rock and lignite which overhangs the river. On the southern extremity of this terrace, near the brow of the bluff, stand the Indian village, and what remains, since a recent fire, of the old trading-post of Fort Berthold. This is on the left bank of the Missouri, in latitude $47^{\circ} 34^{\prime}$ north, and longitude $101^{\circ} 48^{\prime}$ west, nearly. About five years ago, a large reservation was declared for them in Dakota and Montana, along the Missouri and Yellowstone Rivers. Fort Berthold is in the northeast corner of this reservation.
§ 3. Dwellings.-The village consists of a number of
houses* built very closely together, without any attempt at regularity of position. The doors face in every possible direction; and there is great uniformity in the appearance of the lodges; so it is a very difficult matter to find one's way among them.

Old-style lodges.-Most of the houses of the village were in 1865 peculiar, large, earth-covered lodges, such as were built by various tribes of Indians of the plains, in the valley of the Missouri, and sor often, with varying accuracy, described by travelers.t Each one of these lodges consists of a wooden frame, covered with willows, hay, and earth. A hole in the top, which lets in the light and lets out the smoke, and a doorway on one side, are the only apertures in the building. The door is made of raw-hide stretched on a frame, or of puncheons, and it is protected by a narrow shed or entry from six to ten feet long. Over the smoke-holes of many of the lodges are placed frames of wicker-work, on which skins are spread to the windward in stormy weather to keep the lodges from getting smoky. Sometimes bull-boats are used for this purpose. On the site of a proposed lodge, they often dig down a foot or more, in order to find earth compact enough to form a good floor; so, in some lodges, the floors are lower than the general surface of the ground on which the village stands. The floor is of earth,

[^0]and has in its center a circular depression, for a fire-place, about a foot deep, and three or four feet wide, with an edging of flat rocks. These dwellings, being from thirty to forty feet in diameter, from ten to fifteen feet high in the center, and from five to seven feet high at the eaves, are quite commodious. - The labor of constructing them is performed mostly by the women; but, in lifting and setting the heavier beams, the men assist. If, with the aid of steel axes obtained from the whites, the task of building such a house is no easy one at this day, how difficult it must have been a century ago, when the stone ax was their best implement, and when the larger logs had to be burned through in order that pieces of suitable length might be obtained!

The frame of a lodge is thus made :-A number of stout posts, from tén to fifteen, according to the size of the lodge, and rising to the height of about five feet above the surface of the earth, are set about ten feet apart in a circle. On the tops of these posts, solid brams are laid, extending from one to another. Then, toward the center of the lodge, four more posts are erected, of much greater diameter than the outer posts, and rising to the height of ten or more feet above the ground. These four posts stand in the corners of a square of about fifteen feet, and their tops are connected with four heavy logs or beams laid horizontally. From the four central beams to the smaller external beams, long poles, as rafters, are stretched at an angle of about $30^{\circ}$ with the horizon; and from the outer beams to the earth a number of shorter poles are laid at an angle of about $45^{\circ}$. Finally, a number of saplings or rails are laid horizontally to cover the space between the four central beams, leaving only a hole for the combined skylight and chimney. This frame is then covered with willows, hay, and earth, as before mentioned; the covering being of equal depth over all parts of the frame. Earlier writers speak of the sup-porting-posts of the lodge as being forked. Nowadays, they seldom take the trouble to obtain forked sticks for this purpose.

From the above description, it will be seen that the outline of a vertical section, or of the elevation of such a lodge, is necessarily an irregular hexagon, while that of its ground-plan is
polygonal, the angles being equal in number to the shorter uprights. Prince Maximilian's artist usually sketches the lodge very correctly; but Mr. Catlin invariably gives an incorrect representation of its exterior. Wherever he depiets a Mandan, Arickaree, or Minnetaree lodge, he makes it appear as an almost exact hemisphere, and always 9 mits the entry. It would seem that, in filling in his sketches, he adopted the hemisphere as a convenient symbol for a lodge. The authors referred to by name in the foot-note on page - speak of the entry or passage. *

A partition of puncheons, poles, or hurdles is often raised between the fire-place and the door, particularly in cold weather, to shelter the group around the fire-place when the door is opened. Mats, hurdles, hair-pillows, and buffalo-robes laid on the ground constitute the seats. Curtained bedsteads are arranged around the circumference of the lodge, between the shorter upionghts. Arms, implements, household-utensils, medicinebags, etc., are lung from pegs on the various supporting-posts of the lodge. A wooden mortar, wherein corn and meat are pounded, is set in the earthen floor. The space between the outer - row of supporting-posts and the outer wall is called 'atuti', or bottom of the lodye, and in it stored bull-boats, skinlodges, and various other articles; here, too, we usually find the sudatory. Valuable horses are often housed at night in these lodges, in a pen near the door; but the residents of the loghouses, to be described hereafter, keep horses in separate sheds outside.

Log-houses.-Every winter, until 1866, the Indians left their permanent village, and, moving some distance up the Missouri Valler, built temporary quarters, usually in the center of heary forests and in the neighborhood of buffalo. The chief objects of this movement were that they might have fuel convenient, and not exhaust the supply of wood in the neighborhood of the permanent village. It was also advisable that, during a portion of the year at least, they should not harass the game near home. The houses of the winter-villages resem-

[^1]bled much the log-cabins of our own western pioneers. They were neatly built, very warm, had regular fire-places and chimneys built of sticks and mud, and square holes in the roofs for the admission of light. 'Ten years ago, there were some cabins of this description in the permanent village at Fort Berthold; every year since, they are becoming gradually more numerous and threaten to eventually supplant the original earthcovered lodges. By reference to the note on page 4 , it will be seen that, in 187 !, the former outnumbered the latter by about nineteen.

Slkin-lodges.-The practice of building winter-quarters is now abandoned. As game has recently become very scarce in their country, they are obliged to travel immense distances, and almost constantly, when they go out on their winter-hunts. Requiring, therefore, movable habitations, they take with them, on their journeys, the ordinary skin-lodges, or "tepees", such as are used by the Dakotas, Assiniboines, and other nomadic tribes in this region. Such lodges, too, they have always used on their summer-hants, and on all long jourrieys except with warparties. The skin-lodges of the prairie Indians have been so often described and depicted that any further reference to them in this paper would be unnecessary. It is enough to say that the tribes here considered, construct them in the same manner as do their neighbors, often ornamenting them with paintings, quill-embroideries, and other decorations.

Hunting-lodges.-In one of his "Solitary Rambles", Palliser found, on the Turtle Mountain, four days journey from Fort Berthold, in the spring of $18 \overline{\tilde{n}} 8$; a Minnetaree hunting-lodge of which he says:-"They had built a triangular lodge of long: wooden poles, like hop-poles, piling them in the shape of a cone, and so closely as to render the hụt bullet-proof, a necessary precaution, as they could never venture there save in fearof their lives, the position lying in the regular pass of the Sioux, when they go to war with either them or the Crows. We took possession of the hut, not sorry to feel ourselves in a bulletproof shelter, in a place where, I must admit, we ran some risk of being surprised by an Indian war-party."*

[^2]In the winter of 1871, while hunting with a party of Indians from the Berthold village, in the bad-lands of the Little Missouri, I spent three nights in a lodge of exactly the same kind, which was quite old, and had often served as the temporary shelter of Hidatsa hunting-parties. It stood in an excellent but dangerous game-region, some four or five days journey from Fort Berthold, and was built for the convenience of parties composed only of men who found it advisable to visit that neighborhood without tents ör other incumbrances. There are probably other lodges of this kind in the country around Berthold, but I have seen only this one.
§ 4. Drying-frames, corn-scaffolds, or, as some call them, " gridirons", stand in various parts of the village; and are quite numerous. They must resemble much the drying-frames of the agricultural tribes of the 'far east and south, if we are to juidge by the descriptions given. They seem to differ in shape from those of the Omahas-of which the writer has seen photographs, but not the originals-by having the supporting-posts longer, and rising above the floor. They are made by setting in the ground some six or eight saplings, which rise to the height of twelve or fifteen feet. To these, at the height of seven or eight feet, cross-pieces are lashed; and on the latter a floor of poles or willow hurdles is laid; smaller poles are lashed to the tops of the upright supports. Corn and other vegetables, meat, robes, etc., are dried on these frames; and the labor of preparing and cleaning corn is done on the hurdlefloor, or on the ground underneath.
§ 5. Caches.-The numerous caches, or pits, for storing grain, are noteworthy objects in the village. In summer, when they are not in use, they are often left open, or are carelessly covered, and may entrap the unwary stroller. When these Indians have harvested their crops, and before they start on their winterhunt, they dig their caches, or clear out those dug in previous years. A cache is a cellar, usually round, with a small opening above, bąrely large enough to allow a person to descend; when finished, it looks much like an ordinary round cistern. Reserving a small portion of corn, dried squash, etc., for wirter use, they deposit the remainder in these subterranean store-
houses, along with household-utensils and other articles of value which they wish to leave behind. They then fill up the orifices with earth, which they trampledown and rake over; thus obliterating every trace of the excavation. Some caches are made under the floors of the houses, others outside, in various parts of the village-grounds ; in each case, the distance and direction from some door, post, bedstead, fire-place, or other object is noted, so that the stores may be found on the return of the owners in the spring. Should an enemy enter the village while it is temporarily deserted, the goods are safe from fire and theft. This method of secreting property has long been in use among many tribes, has been adopted by whites living on the plains, and is referred to in the works of many travelers.
§ 6. Cemetery.-Burials.-On the prairie, a short distance behind the village, are scattered around the scaffolds and the graves whereon and wherein are deposited the dead. Formerly, all who died in the village were placed on scaffolds, as is the custom with most of the Missouri Valley tribes; but the practice of burying in the ground, after the manner of the Europeans and Arickarees, is gradually becoming more common; and every year the scaffolds decrease, and the graves increase in number. When at a distance from their village on their hunts, if encamped in the neighborhood of timber, they lay the corpses in the branches of the trees instead of building scaffolds.
§ 7. Places of worship.-There are, in the village, two open spaces, which, although of irregular shape, may be called squares; one of these is in the Mandan, the other in the Arickaree quarter. Beside each square stands a large round "medicine-lodge", or temple, built as described in the second paragraph of $\S 3$, which is used for purposes that, in a general way, are called religious.

In the center of the Mandan square is a small circular palisade, about six feet high and four feet in diameter, made of neatly-hewn puncheons set closely together. It has somewhat the appearance of a large barrel, and is emblematic of the ark in which, according to Mandan mythology, the sole survivor
of the Deluge was saved. The square, the medicine-lodge, with its four poles in front, surmounted by sacrificial effigies, and the ark; as they may be seen at Fort Berthold to-day, seem to be the almost exact counterparts of those which were seen ịn the old Mandan village at Fort Clarke, in 1832 and 1833, by George Catlin and the Prince of New-Wied, if we are to judge by the drawings they have given us. Within the temple and around the ark, the Mandans still perform the ceremony of the Okeepa, which Catlin so accurately describes. The awful severities of the rite have, however, been somewhat mitigated since his day.

The medicine-lodge of the Arickarees is larger than that of the Mandans, and is used for a greater variety of ceremonies. Some of these performances, consisting of ingenious tricks of jugglery and dances, representative of various hunts, we might be inclined to call theatrical rather than religious. Probably these Indians consider them both worshipful and entertaining. It is often hard to tell how much of a religious ceremony is intended to propitiate the unknown powers, and how much to please the spectators.

The Grosventres, or Hidatsas, have no house especially devoted to their "medicine". Some of their minor rites are performed in ordinary dwellings, in temporary houses, or in the open air. Their most important ceremony is conducted in a structure of willows erected for the occasion around a tall forked log. After the ceremony (described in § 22 ), the log, or pole, is left-standing until the forces of nature throw it down. Several of these logs, in various stages of decay, may be seen on the prairie between the village and the cemetery.
§ 8. Fortifications.-Many travelers have described their towns as being fortified,* sometimes with walls, but usually with ditches and stockades, or with stockades alone. The latter system of defense was in use at the village of Fort Berthold until the winter of 1865 , when they cut down the palisades for fire-wood; and they have never since restored them. The presence of United States troops in their neigh-

[^3]borhood, and the growing weakness of the Dakotas, were probably the causes which led them to discontinue their fortifications.
§ 9. Farms and farming.-From the base of the prairieterrace described in § 2, the bottom lands of the Missouri extend to the east and to the west, up and down the river. In the neighborhood of the village, they are covered partly with forest-trees, willows, and low brush, but chiefly with the little fields or gardens of these tribes.

Five years ago, all the land cultivated around the village consisted of little patches, irregular in form and of various sizes, which were cleared out among the willows. The patches were sometimes separated from one another by trifling willowfences; but the boundaries were more commonly made by leaving the weeds and willows uncut, or small strips of ground uncultivated, between the fields. Every woman in the village capable of working had her own piece of ground, which she cultivated with a hoe; but some of the more enterprising paid the traders in buffalo-robes to plow their land. They raised the plants which nearly all the agricultural tribes of the temperate regions cultivated at the time of the discovery of America-corn, squashes, beans, and tobacco. "They alsotimproved the growth of the wild sunflower, the seeds of which they eat. Their system of tillage was rude. They knew nothing of the value of manuring the soil, changing the seed, or alternating the crops. Perhaps they had little need of such knowledge; for when the soil was worn out, they abandoned it ; and there was no stint of land in the wilderness. Sometimes, after a few years of rest, they would resume the cultivation of a worn field that was quite near the village, for proximity lent some value to the land; but they had no regular system of fallowing. They often planted a dozen grains of corn or more to the hill; and did nat hoe very thoroughly.

- Within the last few years, there has been an improvement in their farming. The bottom to the wèst of the village is still divided up and cultivated in the old way; but the bottom to the east and a part of the upland have been broken up by the Indian agency, fenced, and converted into a large field. A
portion of this field is cultivated (chiefly by hired Indians) for the benefit of the agency, and the rest has been divided into small tracts, each to be cultivated by a separate family for its own benefit. Potatoes, turnips, and other vegetables have been introduced. The men apply themselves willingly to the labors of the field; and the number of working men is constantly increasing.

The Arickarees and Mandans have doubtlessly tilled the soil for many centuries. Their accounts of the origin of corn are mingled with their earliest myths and traditions. There are some reasons for believing that the Arickarees represent an older race of farmers than the Mandans; for their religious ceremonies connected with planting are the more numerous, and they honor the corn with a species of worship. In every Arickaree lodge, there is a large ear of corn, which has lasted for generations, sticking out of the mouth of a medicine-bag. At their feasts, they make, offerings to the corn by rubbing a piece of meat on it, while they pray to it for plentiful harvests, and address it by the name of "mother". The Hidatsas claim to have had no knowledge of corn until they first ate it from the trenchers of the Mandans; and they have no important ceremonies connected with the harvesting, yet they cultivated it long before the advent of the white man.

In fávorable years, they had good harvests, and were able to sell corn to other Indians and to their traders, besides keeping all they wanted for their own use. But they are not always thas fortunate, for the soil of their country, even that on the Missouri bottoms, is not very rich; the summer season is short, with early and late frosts; the climate is dry; long droughts often prevail, to guard against which they have no system of irrigation; and, lastly, the grasshoppers-the plague of the Missouri Valley farmer-have often devoured the crops that had escaped all other enemies, and left the Indian with little more than seed enough for the coming spring.
§10. Inhabitants of the village.-When Lewis and Clarke ascended the Missouri, in 1804, they found four tribes of agricultural Indians, numerous and prosperous, inhabiting the Upper Missouri Valley, west of the Dakota nation. They had
eight permanently inhabited towns, others which they lived in only temporarily, and a number more which they had abandoned and allowed to go to ruin. They are spoken of in Lewis and Clarke's journal as the "Ricaras," "Mandans," "Minnetarees," and "Ahnahaways." All that are left of the four tribes are now gathered together in this one village, at. Fort Berthold, which does not probably number 2,500 souls. The remains, now nearly obliterated, of their old towns, may be traced on nearly every prairie-terrace adjacent to the Missouri, along six hundred miles of its course, from the mouth of the Lower White-Earth to the mouth of the Little Missouri. The Indians at Fort Berthold are, however, now generally referred to as "the three tribes"; for one of the nations spoken of by Captaini Lewis-that which he calls Ahnahaways-is no longer an organized tribe, but has been merged into the Minnetarees. (See § 11.)

Arickarees.-The first-mentioned tribe is known by the various names of Arikaraš, Ricaras, Arickarees, and Rees, all of which are from their Mandan name, Aríkāra. They are related to the Pawnees of the Platte Valley, from whom they separated more than a century ago. In 1804, they were found living farther down the Missouri than the Hidatsa and Mandan tribes, and were at war with the latter. They made peace in the course of time, and gradually followed the other tribes up the Missouri, building new villages and abandoning old ones as they went. In August, 1862, they * moved to Fort Berthold, and began to erect houses there beside those of the Mandans and Minnetarees. These three tribes have ever since occupied the same permanent village. Descriptions of the Arickarees, as they were seen at different periods, may be found in the works of Lewis and Clarke, Catlin, Maximilian, and Hayden. Lewis and Clarke give accounts of many of their early migrations, and the lastnamed three authors furnish vocabularies of their language.

The Mandans, about a hundred years ago, lived in several yillages near the mouth of Heart River. From this neighborhood, they moved up the Missouri, stopping and building villages at different localities.* In 1804; they were found

[^4]dwelling in two towns about four miles below the mouth of Knife River. One of these towns was named Métutahanke, Mitutahankish, or, as Maximilian writes it, "Mih-tutta-hangkusch," meaning Lower Village. The other was called Rùptari or Nuptadi. They were almost exterminated by the small. pox in 1837, after which, for a time, they occupied only one village. In 1845, when the Hidatsas moved away from Knife River, some of the Mandans went with them, and others followed at different times afterward. For a short time, it appears that a few Mandan families occupied the old Amahami village. We have an account of some moving up to the village at Fort Berthold as late as 1858, and of others still remaining at the mouth of Knife River at the same time.*

The word Mandan seems to be a corruption of the Dakota name Matani or Mawatani. Previous to 1837, they called themselves simply Numakaki, i.e., People, Men. They sometimes spoke of themselves and the Minnetarees together as Núweta, Ourselves. A large band of their tribe was called Siposka-numakaki, Prairie-hen People, or Grouse Men. $\dagger$ This name, Mr. Catlin, in his first work, renders "People of the pheasants",$\ddagger$ and, in his last work, presents in the shape of "Nu-mah-ḱa-kee (pheasants)", § and then, from this translation, leaves us to draw the "important inference" that the Mandans once lived in the Ohio Valley. They now often call themselves Metutahanke, after their old village below Knife River.

Captains Lewis and Clarke, Mr. Catlin, the Prince of Neuwied, and Dr. Hayden have written very full accounts of this tribe, and all but the first-named explorers ${ }^{\text {p present }}$ vocabularies of their language. The work of Prince Maximilian contains the most accurate and extensive information regarding their customs and manners. Notwithstanding the great changes in the tribe since 1834, the majority of his notes might be used without alteration in describing the Mandans of

[^5]to -day. In a few cases, however, I believe that the deductions which he drew from his observations were incorrect.*

Minnetarees.-Since the other one of the three tribes, the Hidatsas or Minnetarees, forms the principal subject of this ëssay, it is spoken of at length; the description forming the second part of this sketch.
§11. Amaíami.-The people who, by Lewis and Clarke, are generally called Ahnahaways, and, in this dictionary, Amaami, were closely allied to the Hidatsa, and spoke a language differing but slightly from that of the latter; yet they occupied a separate village and long maintained a distinct tribal organization. Their village, in 1804, was at the mouth of Knife River, and was one of three villages which for many years stood on the banks of that stream. (See §19.) In 1804, they were estimated as numbering about fifty warriors. $\dagger$ In 1833-'34, their village was said to contain eighteen houses. $\ddagger$ These estimates indicate that there was no material change in their numbers during the intervening thirty years. After the epidemic of 1837, the whole or the greater part of the surviyors joined the Hidatsa, and, as before stated, merged into the latter. In what year this fusion took place, I was unable to determine; it may have been gradual. A few of the Amakamis perhaps identified themselves with the Mandans. In 1858, after the Hidatsa had left Knife River, Boller saw some persons occupying a few huts at the mòuth of Knife River, probably the old Amahami village. He says, however, that the occupants were Mandans.§

Lewis and Clarke evidently regarded these people as distinct from the dwellers in the other two villages on Knife River; $\|$ but Catlin seemed to think that the Amahami village was merely one of the Minnetaree villages, for he says that the Minnetarees occupied the three villages on Knife River; II and the Prince of Neuwied seems to agree with Mr. Catlin.** Perhaps in the

[^6]days of these latter travelers, the Amakamis may have submitted to the authority of the Minnetaree chief.

In one instance, Lewis and Clarke spell the name of this tribe "Arwacahwas".* In 1834, their village stood on the same ground that it occupied in 1804; at both of these dates it bore the same Indian names, $\dagger$ and the people bore the same French name; $\ddagger$ yet Maximilian, aided by his interpreter, failed to recognize the resemblance between the name of the tribe as written by Lewis and Clarke and "Awachawi", as he, according to German orthography, so correctly spells it. Such, at least, is the impression produced by the perusal of the foot-note on page 335 of his work. In this note, too, Maximilian, in criticising Lewis and Clarke's spelling, does not make due allowance for the fact that the American travelers wrote in a language whose alphabet is less suited to express the Indian words than that of the language in which he wrote.

The descendants of the Amahamis, among the Hidatsa, are now known from the rest of this tribe by their preference for certain words and dialectic forms, which are not in common use among those of unmixed Hidatsa blood, and did not originally belong to the language of the latter.
§12. Population.-The population of the village is not known. It is said that the inhabitants of some of the old villages allowed a census to be taken immediately before the epidemic which proved so fatal to them. They believed that their calamity resulted from the census, and have since resisted all efforts to ascertain their numbers. Many ingenious plans have been devised for counting them without their knowledge, but they have suspected and thwarted them all. In the Reports of the Commissioners of Indian Affairs, various estimates of their strength may be found, but they are all conjectural. In the Report of 1862 , it is stated $\S$ that the Grosventres and Mandans, in that year, numbered 1,120 , and the Arickarees (then in a separate but neighboring village) $1,000,-$ total 2,120 . In.

* p. 89.

$\ddagger$ Lewis and Clarke, p. 96, "called by the French Soulier Noir, or Shoe Indians.' -Maximilian, p. 178, "Le village des Souliers."
$\S$ Pages 193 and 195, in Report of Agent S. N. Latta to the Commissioner.
the Report of 1866 are the following "approximate numbers":* Arickarees, 1,500; Mandans, 400; Grosventres, 400 ;-total 2,300 . In the Report of 1871, the population is thus given: $\dagger$ Arickarees, 1,650; Grosventres, 600; Mandans, 450 ;-total "about" 2,700 . In these estimates, which vary greatly, the first gives the population of the Grosventres and Mandans together as more than the Rees; while, in the second and third estimates, the Rees are represented as about twice as numerous as the other two tribes together. In this respect, I believe the first quoted estimate to be nearest the truth; for the houses occupied by the Grosventres and Mandans number more than those occupied by the Rees. $\ddagger$ In the estimate of 1866 , it will be seen that the Grosventres and Mandans are represented as equal to one another. I have many reasons for believing this representation to be incorrect. The conjecture of the writer, based upon all ascertainable data, is that, within the past ten years, the proper population of the village has never been more than 2,500 , and that, at present, it is much less. It is pretty certain, too, that of the three tribes the Arickarees stand first in numerical strength, the Hidatsa second, and the Mandans third.

However, if a perfect census of the village was taken any day, when no hunting-parties were out, it would not show the strength of these tribes; for the scouts who are enlisted at distant posts, their families, and the Minnetarees, who, of late years, have gone to live with the Crows, constituting in all, a large proportion of this people, could not be included.
§13. Conversation.-To the philologist, it is an interesting fact that this trio of savage clans, although now living in the same village, and having been next-door neighbors to each other for more than a hundred years, on terms of peace and intimacy, and to a great extent intermarried, speak, nevertheless, totally distinct languages, which show no, perceptible inclination to coalesce. The Mandan and Grosventre (or Minnetaree) languages are somewhat alike, and probably of a very distant common origin; but.no resemblance has yet been discovered between either of these and the Arickaree ("Ricara").

[^7]Almost every member of each tribe understands the languages of the other tribes, yet he speaks his own most fluently; so it is not an uncommon thing to hear a dialogue carried on in two languages, one person, for instance, questioning in Mandan, and the other answering back in Grosventre, and vice versa. Many of them understand the Dakota tongue, and use it as a means of intercommunication, and all understand the sign-language. . ${ }^{\text {,So, after all, they have no trouble in making themselves under- }}$ stood by one another. These Indians must have excellent memories and "good capacity for study"; for it is not uncommon to find persons among them, some even under twenty years of age, who can speak fluently four or five different languages.
$\S 14$. Arts.-Besides their agriculture and architecture, which have been already alluded to, the E y had the knowledge of many other useful arts, still practiced by them, which were entirely of native origin. : They manuferctured pottery; built boats of buffalo-hide; made mats and baskets of various descriptions, and wooden bowls so durable that they last for many generations; and formed spoons and ladles out of the horns of the buffalo and Rocky Mountain sheep. Their hair-brushes they made sometimes; out of porcupine-quills, but more commonly of grass-the long, tough awns of the Stipa juncea. They fashioned whistles of the bones of large birds, and fifes and other wind-instruments out of wood; some of these were for musical purposes; others were to imitate, for the hunter's benefit, the bleat of the antelope or the whistle of the elk. They garnished their clothing with porcupine-quills, which they colored brilliantly with dye-stuffs of Indian discovery. They had flint and horn arrow-heads, and horn wedges with which they split wood. They knew something of the manufacture of glass, and made rude beads and pendants out of it; they possessed various pigments, and with them recorded the events of their day in symbolic pictures; and, in the manufacture and use of the various appliances of war and the chase; they had no superiors on the plains. Their arms were the same as those of the Dakotas and other western tribes; and they have been so often described that I feel there is little left for me to say concerning them.

For cleaning the village-grounds, they had rakes made of a few osiers tied together-the ends curved and spreading. Their most important agricultural implement was the hoe. Before they obtained iron utensils of the white traders, their only hoes. were made of the shoulder-blades of elk or buffalo, attached to wooden handles of suitable length. Maximilian, in 1833,* considered the bone hoe as a thing of the past only; yet, as late as 1867 , I saw a great number in use at Fort Berthold, and purchased two or three, one of which was sent to Washington, and, I presume, is now on exhibition in the museum of the Smithsonian Institution. $\dagger$

They now make saddle-trees in somewhat the same way as we do, of wood or of part wood and part horn, covered with raw-hide. They also make neat pad-saddles of tanned elk-skin, stuffed with antelope-hair, and often handsomely embroidered, as well as other horse-equipments. They probably learned the art of making these articles some time during the last century, from the Indians of the south, of whom they first obtained horses.

For their children, they make toys, which, as with us, indicate for each sex the occupations of adult years. When the children are old enough, they make some of their own toys. They have pop-guns, the art of making which, as far as I could . discover, was not learned from the whites. The boys make representations of hunts by fashioning out of mud, with much skill, little figures of the horse, the mounted hunter, and the flying buffalo.

Glass.-The articles of glass spoken of above are chiefly of two kinds : first, large, globular, or ellipsoidal beads; and, second, flat, irregularly triangular plates or pendants, which are glazed only on one side, and have a hole at the apex. The art of making these deserves more than a mere mention, since it is commonly believed that the aboriginal Americans, even the most civilized faces, knew nothing of the manufacture of glass at the time of the Columbian discovery. The very earliest ethnographical account we have of the Arickarees and Man-

[^8]dans shows that they knew how to make glass beads; and there is no doubt that the process employed in 1804 was essentially the same as that employed to-day. The following is the account of this given by Lewis and Clarke:-"A Mr. Garrow, a Frenchman, who has resided a long time among the Ricaras and Mandans, explained to us the mode in which they make their large beads, an art which they are said to have derived from some prisoners of the Snake Indian nation, and the knowledge of which is a secret, even now confined to a few among the Mandans and Ricaras. The process is as follows: glass of different colors is first pounded fine, and washed, till each kind, which is kept separate, ceases to stain the water thrown over it ; some well-seasoned clay, mixed with a sufficient quantity of sand to prevent it becoming very hard when exposed to the heat, and reduced by water to the consistency of dough, is then rolled on the palm of the hand till it becomes of the thickness wanted for the hole in the bead; these sticks of clay are placed upright, each on a little pedestal or ball of the same material, about an ounce in weight, and distributed over a small earthen platter, which is laid on the fire for a few minutes, when they are taken off to cool; with a little paddle or shovel, three or four inches long and sharpened at the end of the handle, the wet pounded glass is placed in the palm of the hand; the beads are made of an oblong form, wrapped in a cylindrical form round the stick of clay, which is laid crosswise over it, and gently, rolled backward ańd forward until it becomes perfectly smooth. If it.be desired to introduce any other color, the surface of the bead is perforated with the pointed end of the paddle, and the cavity filled with pounded glass of that color; the sticks, with the string of beads, are then placed on their pedestals, and the platter deposited on burning coals or hot embers ; over the platter an earthen pot, containing about three gallons, with a mouth large enough to cover the platter, is reversed, being completely closed, except a small aperture in the top, through which are watched the beads; a quantity of old dried wood, formed into a sort of dough or paste, is placed round the pot so as almost to cover it, and afterward set on fire; the manufacturer then looks
through the small hole in the pot till he sees the beads assume a deep-red color, to which succeeds a paler or whitish red, or they become pointed at the upper extremity, on which the fire is removed and the pot is suffered to cool gradually; at length it is removed, the beads taken out, the clay in the hollow of them picked out with an awl or needle; and it is then fit for use. The beads thus formed are in great demand among the Indians, and used as pendants to their ears and hair, and sometimes worn round the neck."* This art is now only occasionally practiced in the village, and is mostly confined to the making of the flat, triangular pendants. I have heard the process described in much the same way as in the above quotation. From this quotation, however, which is in part ambiguous, the inference might be drawn that the ornaments, when completed, consist entirely of glass. Such is not the case in those I have seen; on the contrary, they consist of a core of baked earth covered with a thin shell of glass; and they have the appearance of having been perforated before heat was applied. But, in the matter of making the holes, the process may have been changed, or there may have been two ways of doing it.

The existence of this art among the Indians evidently greatly astonished Catlin, who gives it as one of the reasons on which he founds his theory of the Cymric origin of the Mandans. He says, speaking of the Mandans:-"In addition to this art," [pottery,] "which I am sure belongs to no other tribe on the continent, these people have also, as a secret with themselves, the extraordinary art of manufacturing a very beautiful and lasting kind of blue glass beads, which they wear on their necks in great quantities, and decidedly value above all others that are brought among them by the fur-traders.' "This secret is not only one that the traders did not introduce among them, but one which they cannot learn from them; and at the same time, beyond a doubt, an art that has been introduced among them by some civilized people, as it is as yet unknown to other Indian tribes in that vicinity or elsewhere. Of this interesting fact, Lewis and Clarke gave

[^9]an account thirty-three years ago, at a time when no traders or other white people had been among the Mandans to have taught them so curious an art."* It is surprising that Mr. Catlin, after reading the above-cited passages from Lewis and Clarke (and he leaves us to infer that he has read them), could state that the art of making these beads was confined to the Mandans; , that it was unknown to the traders; that it was beyond doubt introduced by civilized people; and thatno traders or other whites had been among these Indians before the time of Lewis and Clarke's visit.

The art of making these ornaments would appear to be old; yet the process as it existed in 1804 was evidently in part recent, since the Indians obtained the giass which they used from the whites. I have been informed by the Indians that in old days the art flourished among the Arickarees as well as among the Mandans; and certainly at the present day the Arickaree women understand it. I had two of the triangular pendants made to order in 1870, by an Arickaree woman, to whom I furnished the blue glass necessary. When I gave instructions to have the articles made, I was invited to witness the process, but circumstances prevented me from doing so. One of these pendants was sent to the Smithsonian Institution. It is strange, if true, that these Indians should have obtained their knowledge of this art from the Snake Indians, a ruder and equally remote tribe. It is also strange, and undoubtedly true, that in 1804, as well as now, they did not make their glass, but obtained it ready-made, and merely fused it for their purposes, obtaining it, doubtlessly, from the whites. It is strange that within a few years after glass beads of European manufacture were first introduced among them, and when such beads must have commanded a high price, they should pulverize them and use the powder in making ruder and more unsightly articles after their own design. But it is not probable that they should have learned such an art from civilized people prior to 1804 , when they had as yet seen but few whites, and when the whites they had seen were mostly rude Canadian frontiersmen, among whom it is not reasonable to suppose

[^10]there were any persons versed in glass-making. I have heard Indians say, with uncertainty, that in former times they found glass in the hills, and pounded it for their beads; meaning perhaps that they used natural glass, which may be found where lignite beds have taken fire, and elsewhere on the Upper Missouri. In view of all these facts, I have conjectured that they had the art of making glazed earthen ornaments before the whites came among them; and that when they saw the brilliantly-colored beads of the traders, they conceived the idea of improving their art by using these beads. If they ever possessed the art of making glass de novo, there is no record, tradition, or other evidence of it that I have been able to find.

One of many reasons, though perhaps an insufficient reason, for believing the art to be of no recent origin among them, is that they used the triangular pendants, not as ornaments only, but as evidences of betrothal, as long ago as the oldest men can remember. When a girl was promised in marriage in hef infany by her parents, as was not infrequently done, one of these pendants was-tied to her forelock so as to hang down over lier forehead. When the promise was fulfilled, the husband removed the pendant and threw it away.
§ 15. Food, etc.-Since the introduction of various articles of European food, their diet has been somewhat changed, yet they still largely adhere to their original dietary.

Their chief food, until within the last eight or ten years, was the meat of the buffalo, or bison, which, when fresh, was cooked by roasting before an open fire, by broiling on the coals or on an extemporized wooden broiler, or by boiling. Their meat was boiled in earthen pots before brass and iron pots were introduced by the whites. They knew the different effects produced by putting the meat down in hot and in cold water, and employed the former method when they did not want soup. On hunts, they sometimes boiled the meat. in skins, heating the water with hot stones, after the method employed by the Assinniboines, which has given the latter tribe its name of Stone-cookers. Sometimes they chopped the fresh meat fine, put it in a piece of bowel, and thus made a sort of
sausage, which was usually boiled. For preservation, meat is cut into thin sheets or into long strips and dried in the sun. I have seen dried meat three years old perfectly sweet. Sometimes it becomes worm-eaten without becoming rancid. In rainy weather, they often hang meat up in the smoke of the lodge to preserve it. The dried meat is sometimes eaten raw, but more frequently it is boiled or broiled; or it is broiled, pounded fine, and mixed with fat to make pemmican. They sometimes add sugar and berries to small quantities of pemmican. The meat of the elk and the deer is cooked and prepared in the same way as łuffalo-meat, and of late, since the buffalo have so greatly decreased in number, is more used than the latter.

When game is abundant, they only use choice parts of an animal; but, when it is scarce, they discard nothing. They then pound the bones into small fragments, and subject them to prolonged boiling to make soup. During one winter of great scarcity, I knew of some Arickarees, who, not having horses, could not go out on the winter-hunt, to cut up and boil their bull-boats and the raw-hide doors of their houses for food. When hungry hunters kill an animal, they often eat the liver, the kidneys, and the hoofs of the foetus, should there be one, raw. Raw liver is said to have a'saccharine taste which is not unpleasant. Occasionally they eat other parts raw, but this is only when the quarry is little, the mouths many, and the prospect of a fire distant or doubtful.

Fat porcupine, bear, and beaver meat are esteemed, particularly the tail of the latter. They are fond of marrow and fat. Birds of prey, foxes, and wolves are eaten, but only when food is scarce. Turtles and fish are used as food; but I have never heard of any such use being made of snakes. The Grosventres have but recently learned to eat dog-flesh, and they still eat horse-flesh only under pressing necessity; but the Arickarees seem to haye less prejudice to such food. Among many belonging to these tribes, a young, fat pup is considered a great delicacy. Insects, with one exception, and worms are never eaten, and few can now be persuaded to eat oysters. When a gravid buffalo, elk, or deer is killed, the liquor amnii
is generally preserved and boiled for soup, the foetus being cooked in it.

Formerly, they lived largely upon meat. When out on their hunts and war-parties, they often lived exclusively on it. There were many nomadic tribes around them who seldom tasted vegetable matter, often living for seven or eight months in the year exclusively on meat, and preserving perfect health. I have seen white men who had lived for years among the Indians, and during such residence, for six months of every year, lived on nothing but meat (and water of course), "Buffalo straight," as they expressed it, and who, in the summers only, occasionally varied their diet with a mess of roots or berries-not seeking such vegetable food with any particular: longing or avidity. In various books of western travel, these statements are corroborated; yet there are modern physiologists who would try to persuade us that an animal diet is inadequate to the sustaining of human life in a healthy condition. When subsisting for the most part on fresh meat, these Indians had the soundest gums and teeth; and no flesh when wounded healed more rapidly than theirs. Lately, however, since the increase in the consumption of bacon and flour among them, and the destruction of their game, there have been many cases of scurvy, a disease which was particularly fatal to them in the winter of 1868-69; and a tendency to abscesses, to suppurative terminations of diseases, ánd to a sluggish condition of wounds, manifests itself. The quantities of fresh meat they are able to consume are enormous. Sometimes, after a days hunt, the hunters will sit up all night cooking and-eating.

Their principal vegetable diet was the corn they raised themselves. Flour, issued by the agency, is now, to a great extent, taking its place. They eat some of the corn when it is green, but the greater part they allow to ripen. When ripe, they prepare it in various ways. They pound it in a wooden mortar with water, and boil the moist meal thus made into a hasty pudding, or cook it in cakes. They frequently parch the corn, and then reduce it to powder, which is often eaten without preparation. A portion of their corn they boil when nearly ripe; they then dry and shell it, and lay it by for win-
ter use; when boiled again, it tastes like green corn. (See Madạ́skihe in Dictionary.) This is often boiled with dried beans to make a succotash. Their beans are not usually eaten until ripe. Squashes are cut in thin slices and dried; the dried squash is usually cooked by boiling. Sunflower-seeds are dried, slightly scorched in pots or pans over the fire, and then powdered. The meal is boiled or made into cakes with grease. The sunflower-cakes are often taken on war-parties, and are said, when eaten even sparingly, to sustain the consumer against fatigue more than any other food. They gather all manner of wild roots and berries that are eaten by the nomadic tribes of the same region; but they do not consume them to the extent that the wilder tribes do. The only nuts that grow in their hunting-grounds are the acorns. I have never known them to collect or eat these.

I believe that they have always understood the value of salt and knew where to procure it. (See Matamahota in Dictionary.) They used it sparingly, however, and to season their vegetable messes only. Lately, since they can obtain salt so cheaply and plentifully from the traders and agency, they rarely hunt for it, and use it to a greater extent than they formerly did. In 1820, Major Long's Expedition met an Arickaree returning from the distant valley of the Arkansas, with about thirty pounds of pure salt, which "had evidently been formed by the evaporation of water in some pond or basin."*

In the earliest accounts that we have of these Indians, we find they cultivated a species of tobacco $\dagger$ (Nicotiana quadrivalvis). Sergeant Gass, who tried it in 1804, and who, we may presume, was a good judge of the weed, says that "it answers for smoking but not for chewing "; $\ddagger$ and, in my time, I have heard similar opinions passed concerning it by tobaccousers. Lately, the cultivation of this tobacco has been greatly neglected, as the Indians obtain an article from the whites which they prefer. It is but recently that any of them have

[^11]learned to chew tobacco. All the men smoke; but the use of the pipe is very rare among the women. These Indians seldom use tobacco alone, but mix it with the dried inner bark of one or more species of dogwood, Cornus stotonifera and $C$. sericea. (See Ope and Opehaśa in Dictionâry). They also mix with it the leaves of the Eleagnus argentea, which grows in Northern Dakota, and the leaves of a variety of Arctostaphylos woa-ursi. Sometimes they smoke the dogwood-bark alone, without any mixture of tobacco. Often they put a fragment of castoreum on top of the tobacco before lighting the pipe. The various points of ceremony and etiquette connected with smoking are the same with these tribes as with other western Indians; and they have been described by many observers.
§ 16. Inter-tribal trade.-In former days, there was a trade carried on between these tribes and their Indian neighbors. Of late years, it has greatly diminished, but it still exists. to some extent.

With the nomadic tribes around, they exchanged their agricultural produce for horses, and, recently, for robes. When the Dakotas saw a certain flower (Liatris punctata) blooming on the prairie, they knew that the corn was ripe, and went to the villages of the farming Indians to trade. From the time they came in sight of the village to the time they disappeared, there was a truce. When they had passed .beyond the bluffs, they might steal an unguarded pony or lift a scalp, and were in turn liable to be attacked.

The straight, slender spruce-poles, which form the frames of their skin-lodges, are not obtained in the immediate neighborhood of the Missouri, but are cut in and near the Black Hills, many days journêy from Fort Berthold, and in the country of the inimical Teton-Dakotas. The Berthold Indians, consequently, purchase them of the Dakotas, giving a good buffalo-horse, or its equivalent, for the number sufficient for a lodge, about a dozen.

To tribes less skilled than were they in catching wareagles, they traded the tail-feathers of these birds; a single tail being worth a buffalo-horse. Their principal standard of
value was a buffalo-horse, i.e., a horse swift enough to outrun a young adult buffalo in the fall.

It appears probable that they once carried on a trade indirectly with the tribes of the Pacific coast, for they had Dentalium shells similar to those obtained on the Pacific, and they prized them so highly that the white traders found it advisable to obtain them for the trade. As late as 1866 , ten of these shells, of inferior size, costing the traders only a cent apiece, would buy a superior buffalo robe, and formerly only two or three of the same quality were paid for a robe. Modern traders, with whom the writer has conversed, obtain their shellis from eastern importers, and know nothing of the original source of supply. They suppose, them to come from the Atlantic coast or the Great Lakes, and call them "Iroquois shells", which is probably their corruption of the Chinook "hyakwa"; but it is possible the reverse is the case.

They also used, and still use, as ornaments, fragments of the Abalone shells (one or more species of Haliotis) of the Pacific. These are now supplied to the trade under the name of California shells. Ten years ago, one of these shells, unpolished, sold for a grood robe. There is little doubt that they used Abalone, Dentalium, and other sea-shells before the traders brought them. Old traders and old Indians say so. Eren as late as 1833 , it would seem that they had not yet become a regular part of a trader's outfit; for Maximilian says of the Mandans:-"They do not disfigure the bodies; only they make some apertures in the outer rim of the ear, in which they hang strings of beads, brass, or iron rings of different sizes, or shells, the last of which they obtain from other Indian tribes. If they are questioned respecting these shells, they answer that they were brought from the sea."*
§ 17. Intercocrse with whites.-In a recent little work entitled O-kee-pa, George Catlin says:-"Two exploring parties, had long before visited the Mandans, but without in any way affecting their manners. The first of these, in 1738 , under the lead of the brothers Verendrye, Frenchmen, who afterward ascended the Missouri and Saskatchewan to the Rocky Mount-

[^12]ains; and the other, under Lewis and Clarke, about sixty years afterward." He does not tell us where the account of the expedition of 1738 is to be forund; he gives us no further evidence on this point; and, as no other mention of the journey has ever been seen by me, it will receive no further consideration in this essay.

In aletter published in Schoolcraft's Information respecting... the Indian Tribes, the writer, D. D. Mitchell, says, speaking of the Mandans:-"The early portion of their history I gather from the narration of Mr. Mackintosh, who, it seems, belonged to, or was in some way connected with, the French trading company as far back as 1772. " According to his narration, he set out from. Montreal in the summer of 1773 , crossed over the country to the Missouri River, and arrived at one of the Mandan villages on Christmas day." $\dagger=I$ haxe never seen Mackintosh's account, nor have I seen any more extensive notice of it than the one given by Mr. Mitchell; and from this, it does not appear that Mackintosh visited any of these agricultural Indians except the Mandans.

There is every probability that some of these tribes received occasional visits from white traders and adventurers a century or more ago. It may be safely stated that every one of the bands represented in the Berthold village were visited by whites at least eighty years ago, and that they have been in constant communication with representatives of civilized races ever since. In 1804, British traders and French or Canadian interpreters were found in their camps; and the travelers of that year speak of "those who visited them in 1796 " $\ddagger$ Prince Maximilian, writing in 1833, says of "Charbonneau, who was interpreter for the Manitari lănguage", that he "had lived thirtyseven years in this part of the country"; $;$ that, at his first arrival, the Knife River villages stood precisely where they were in 1833; and that Charbonneau "immediately took up his residence in the central one".\| From these statements we must conclude that Charbonneau settled among the Hidatsas about seventy-nine years ago; and old men of the tribe say that he
was not the first white man to come to their towns, yet that few preceded him.

It is likely that all the Europeans who came to these tribes in the early days were from the Hudson Bay Territory, and that they were mostly traders; but, in 1804, it seems that there were some whites sojourning in their country as hunters and trappers. The British fur-companies held the trade of these Indians until 1807,* when Manuel Lisa, who afterward founded the Missouri Fur Company, ascended the river in keel-boats to the Mandan villages and beyond. Until 1832, goods were brought up the Missouri chiefly in keel-boats or Mackinawboats, which were cordeled or towed by men, with great labor, against the rapid current of the river. Two summers, at least, were always occupied in dragging a boat from Saint Louis to the head of navigation; the crew sustaining themselves chiefly by hunting. In 1832, the first steamer reached the Mandan villages, and after that, for about thirty years, but one or two steamers a year went thus far up the river.

Although these Indians have so long known the whites, it is only, within the last twelve or thirteen years that our intercourse with them has been sufficiently extensive to materially modify their customsand eas. Previously; excepting two or three small military expeditions and accasional traveler, the only whites they saw were the few connected with the fur-trade; and these persons, as a rule, sought to produce no change in the Indian, but, on the other hand, learned the Indian languages, adopted Indian customs, and endeavored to assimilate themselves to the Indians as much as possible, often vying with one another in their efforts to become amateur savages. Before the period to which I refer, we liad traded to them woven fabrics and many trinkets of little value, had taught them the use of fire-arms and iror tools, had given them an opportunity for acquiring a taste for coffee and ardent spirits, but, in other respects, had wrought little change in their minds or manners. Eight years ago, they knew nothing of the use of money, and nothing of the English language except a few oaths and vulgar expressions, which the

[^13]more docile had learned. The conservatives were still much the same as their grandfathers were.

In 1863, and during the two following years, in consequence of the Sioux outbreak of 1862 , large military expeditions visited Fort Berthold, passing through the country of these Indians, and strong garrisons were established in their neighborhood, which are still retained. About this time too (1863), the emigration to the Montana gold-mines by way of the Missouri River began; and, instead of one steamer a year ascending the river as in the old days, they came up by dozens, some making two and three trips during the season of navigation. The Indians were thius brought into more intimate contact with the Americans, the seclusion of their country was ended, and a change more general and rapid in their affairs initiated. Since then, their game has been killed off, they have grown weaker, poorer, and more dependent, and, in many other respects, they have altered for the worse. :- As yet, no sustained effort has been made to Christianize them; and but little has been done to advance them in civilization. On the other hand, they have, according to some standards of excellence, bettered in many respects. They have of necessity given increased attention to the cultivation of the soil. The men, as before stated, have learned to perform labor, which, in earlier days, they deemed degrading. Many of their savage customs and ideas have been abandoned; and many of their ceremonies have been simplifiedor have fallen into disuse. They are generally less superstitious than they were ten years ago, and more skeptital with regard to their old myths.

Since 1866, a large number of their men have enlisted as scouts in the military service of the United States, and have been improved by the discipline of the camp. They have learned the responsibilities, and have done splendidly in the capacity of soldiers; many of them having heroically laid down their lives in our service.

During a short period of their history, the Arickarees were at war with the Americans; but for many years they have strictly maintained peace, and have fought with us and against our enemies. The Mandans and Minnetarees claim never ta
have shed a white man's blood, although some of their number have been killed by whites. For their fidelity they have been repaid in starvation and neglect. Many of these friendly Indians, particularly among the Arickarees, have, during the past ten years, died of actual hunger or the diseases incident to a state of famine. Within the past three years there seem to be some evidences of increased legislative interest in them, but the benefits arising therefrom are by no means equal to their needs or their deserts.

## PARTII.

## THE HIDATSA TRIBE.

§18. Names of the tribe.-Grosventre.-The people whose language is discussed in the accompanying grammar are commonly called, on maps, in official reports, and by white men in the Indian country, Grosventres. This was a name given to them by the early French and Canadian adventurers. The same name was applied also to a tribe, totally distinct from these in language and origin, which lives some hundreds of miles west of Fort Berthold; and the two nations are now distinguished from one another as Grosventres of the Missouri and Grosventres of the Prairie, names which would lead a stranger to suppose that they were merely separate divisions of one tribe.

In the account of Edward Umfreville, who traded on the Saskatchewan River from 1784 to 1787 , we find mention of a tribe of Indians who lived near the falls of the south branch of the Saskatchewan, and whom he calls "Fall Indians". But he remarks:-"In this people, another instance occurs of the impropriety with which the Canadian French name Indians. They eall them Grosventres, or Big-Bellies; and without any reason, as they are as comèly and as well made as any tribe whatever, and are very far from being remarkable for their corpulency."* The tribe to which he refers is doubtless that which is now known as the Atsinas, or Grosventres of the Prairie. The similarity of the Canadian misnomers in all probability led Captain Lewis, in 1804, to speak of the Minnetarees on the Missouri as "part of the great nation called Fall Indians". $\dagger$ Comparing our Hidatsa words with their synonymes in Umfreville's Fall Vocabułary, or Dr. Hayden's later Atsina Vocabulary, we can discover no affinity between the Fall and Hidatsa tongues.

Umfreville's remarks concerning the impropriety of the
name Grosventre would apply as well to those "of the Missouri" as to those "of the Prairie". Maximilian says of the IIdatsa :"The French give them the singular name of Grosventres, which is no more appropriate to them than to any other of the Indian tribes."* Palliser remarks:-"They are most absurdly termed Grosventres by the French traders, there being not the slightest foundation for branding them with that epithet." $\dagger$ Various writers who have visited this tribe concour in these opinions.

Minnetaress.-D h the works of many travelers they are called "Minnctarees", a name which iṣ spelled in various ways; thus Captain Lewis writes it "Minnetarees"; Catlin, "Minatarees"; De Simet, "Minataries"; Palliser, "Minitarees"; while in the accompanying Dictionary it is spelled Minitari, or Miditadi. This, although a Hidatsia word, is the name applied to them, not by themselves, but by the Mandans; it signifies to cross the watht, or they crossed the water. The name mav allude to the IIidatsa tradition of their own origin, or to their aceount that they came originally from the northeast, and had to cross the Sissomi before reaching the old Mandam villages, which were on the west bank of the river, or the name may have originated from some other canse ; but the story, be it true or false, which is now given by both tribes concerned, to account for its origin, ds this: When the wandering Minnetarees first reached the Missouri and stood on the bamk opposite to one of the rillages of the Mandans, the latter cried out, "Who are you?" The strangers, not understanding what was said, but supposing that the Mandans (who were provided with boats) asked them what they wanted, shouted ${ }^{\text {an }}$ return, "Minitari," to cross the water, or "Minitari mihats," we will cross the water. The Mandans supposed that in this reply the visitors gave them their nume, and called them Minitari ever after.

The name, as above intimated, will be found in this dictionary written 'Miditadi' or 'Minitari,' and its' component parts, 'mili,' water, and 'tadi,' to dross over. The reason for this varying orthography will be discovered by consulting the grammar, paragraphs 19 to 23 inchisive, where it is shown
that $l, l, n$, and $r$, are interchangeable consonants. Prince Maximilian writes the word Manitari (adding a plural ending), which represents a way in which the Mandans often pronounce it-the Mandan word for water being mani.

Hidutsa was the name of the village on Kinife River farthest from the Missouri, the village of those whom Lewis and Clarke considered the Mimetarees proper.* It is probable that after the epidemic of $18: 37$ the survivors of the other villages moved thither, or that the majority of all the survivors came from Hidatsa, which then lent its name to the whole tribe-a name now generally used by this people to designate themselves, and for which reason the one most frequently employed in this essay.

The origin of the word Iidatsa is obscure. It is said by some to mean willows; but I know of no species of willow that bears this name. By a few of the tribe it is pronounced Hidaatsa, and in this form bears a slight resemblance to the word midahadsa, the present Minnctaree generic name for all shrub willows. It may possibly be an old form of the latter word ; but, according to my present knowledge of the formation and phonetic changes of this languge, I have no reason for believing it to be so.

There is little doubt that the tribe, or a portion of it, was once called Willows; and this may be the reason why some suppose Hillatsa to mean willows. But it is evident that even in former days travelers or their interpreters were uncertain with regard to the application of the name Willows, and later inquiries on the part of the writer have done little toward clearing the difficulty: In Lewis and Clarke's joumal (1804), we find the inhabitants of Amatiha, the first village on Knife River above its mouth, spoken of as "Mimetarees Metaharta, that is, Minnetarees of the Willows"; $\dagger$ while Prince Maximilian (1834) says that Hidatsa, or the village ori Kife River farthest from the Missouri (above Amatiha), was called "Eláh-sa (the village of the great willows)." $\ddagger$ It is plain that "Eláh-sa" is but a form of Hidatsa, for the aspirate is often pronounced or heard indistinctly; $d$ and $l$ are interchangeable with one

[^14]another in this language (see Grammar, II 20, 22), and $s$ is often used for $t s$, (see $\mathbb{I}$ 17). "Metaharta" represents possibly an old or dialectic form of "midahadsa", willow, which was mispronounced by the interpreter, and spelled from his mispronunciation by Captains Lewis and Clarke in an ill-devised way.

Other names.-Hewaktokto, the name of this tribe in the Dakota language, I have heard translated Dwellers on a Ridge; but I think the correctness of this translation may be questioned. Some of the Hidatsa believe that the appellation belonged originally ${ }^{\text {ond }} \mathrm{Cl}$ y to the Amahamis, whose name signifies mountain.

In the Arickaree language, the Hidatsa are called Witetsaán. I have heard this rendered in two ways, viz, Welldressed People and Pcople at the Water; the latter said to refer to their old residence at the ford of Knife River.

By the Crows, they are called Amasì, signifying earthen houses or "dirt lodyes", as the Upper Missouri interpreters would say.
§19. History.-These Indians relate of themselves as follows: They originally dwelt beneath the surface of a great body of water, situated to the northeast of their present home. From this subaqueous residence some persons found their way out, and, discovering a country much better than that in which they resided, returned and gave to their people such glowing accounts of their discoveries that the whole people determined to come out. Owing to the breaking of a tree, on which they were climbing out of the lake, a great part of the tribe had to remain behind in the water, and are there yet. After coming from the water, they began to wander over the prairies, and sent out couriers to explore the country around. Those who were sent to the south returned after a time with tidings of a great river and a fertile valley, of a nation whodwelt in houses and tilled the soil. They brought back with them, too, corn and other products of the country. Toward this promised land, the tribe now directed its steps, and, guided by the couriers, they reached in due time the Mandan villages on the Missouri.' When they arrived, however, instead of putting to death the newly-found people, they encamped quietly beside
them, learned of them the arts of peace, and have ever since dwelt near them.

From the descriptions of their life previous to rising from the lake, it would seem as if their tradition originally mentioned an insular home or a home beyond some great body of water. The story of their coming up out of the lake, and of the breaking of the tree by which they rose, resembles so much the Mandan tradition as to lead us to believe that one nation borrowed its legend of the other, or that the two legends sprung, at no very remote time, from a common source. Some of the modern story-tellers say that the Minnewakan, or Devil's Lake, in Northern Dakota is the natal lake of the tribe. The Hidatsa call-itwhidihopa, which, like the Dakota name, signifiés sacred̈, ;or mysterious water.

This account of their origin they tell usually as one story; but they have, besides, a voluminous account of what happened to them during their long wanderings on the prairie, from the time they left the lake until they reached the Mandan village, which account is embodied in a separate tale-the almost interminable legend of Itamapisa, the proper recital whereof, by an old story-teller, occupies three or four long winter-evenings. In this tale, it is said that they were often on the eve of death by starvation, but were rescued by a miraculous supply of buffalo-meat. Stones, they say, were strewn upon the prairie obedient to a divine order, and from them sprang to life the buffalo which they slaughtered. It was during these years of wandering, as the legend relates, that the spirit of the sun took a woman of this tribe up into the sky. In the course of time, she had a son, who descended to the earth, and, under the name of Itamapisa, or Grandchild, became the great prophet of his mother's people.

It might be more proper to introduce such tales elsewhere than under the head of history, but, perhaps, a scrap of historical truth may be picked from them, which is, that the Hidatsa were once a tribe of nomadic hunters, altemately starving and feasting as game was scarce or abundant, and that, since a comparatively recent date, they have settled in the neighborhood of the Missouri and become farmers by in-
tereomser with triber who previonsty tilled the woil. 'Thero are many cimemustames whish serom to comoborate this. It may ber remarken, tow, that the stomion from whinh the abowo items are taken are bertiencod by heve ladians to be trow, while mange ather tales, just an phansiblo an theses, they dechare to bee perery tintional.

 wher from the west. Below Fore Besthotd. It was mpon the bank of the latter stremm that the former homes of this peopple
 hages of Kinife livers. The tiest and bareest, mamed llidaten, was onf Her morh bank, ahomt there miles from the Missome, and was the home of a people whem Captains Lavis and Clather, for seme masom, megreded as the Mimetarees proper. The sesomed villages nemed . Imatha, half a mile above the menth of Kinite liver, and on the somth bank of the stresm, was the heme of a people vere closely allied to the inhalritants of Hidatsa, whe spoke a lamenge neaty but not wate the satme ses that of the formeres and hat a sepsumte chict, who setomed to acknowledies to sime extent the authority of the whet of the upper villages. The third villages mamed . Lmakami or Mahaha, was at the momb of kuife livers, on the south sides and was oeropied, as before memtomed, be the Smakamis
 motely than the dwelles in Imatiha. The present Ilidatsa or Minmetaree tribe of For Bothold Comsists of the survisors of these there villates and the ir desermdemts, with, pethaps, repenemtatives of some small wambering bomds of allied hotians wheh ao homer wist as argmead tribes. Lewis and Clarke seem to spak rew pesitively of wambering Minnetares, haming in the methborhoed of Knite liver.* and not comsidend as pate of the Crew mation. Some fory yeas betome the coming of lewis and Clarke.
i. A., ubout the vour 17ift, the Amammis and the peepple of Anatilan develt firther sonth, in the meighborhood of Itent River, alonge with the Reow and Mambans; mat it is likely that the peoplo of Ilidatsa lived there at the same time, or at an murlion date:

At one time, the Grows and the Ilidatwa (under which term I will bow inelate all the bmuts represemted in the present tribe) lised in chose proximity to mo amother, and eonstituted one mation: mot, probably, mo comsolidated tribe moder a single chief, but independent and alliod bands, making eommon camse bganst wher mons, amd spoaking slighty differont dialoets, like the varions lamols of the Dakota mation to-day. In the eonse of times, the Crows, in two banks, separated firom the llidatsib, and mored fifther to the somth and west, beeominge estranged from the latter but not inimical.to them: 'This separation took plame dombthessly, more than one humberd, and probably mot less than two humbed, years ago.

The Ilidatsa mad (fow legends agree elosely comeorning the seceession of the Crows, and their story is essentially as follows: During a semsom of semreity, while portions of hoth peoples were enemmped tugether, a single butfialo came in the netighborhood of the emup) and was killed bey some of the Ilidatsiat, who offered the panuch to the (rows. The latere, comsidering the offer illiberal, refiseed it, and a misunderstanding enisned, which resulted in separation. 'The llidatsa have wer since called the "roows he the name of Kihatsa, or they (who) reftesed the penench. (Sece kihatsa in bietionary.) It may reasomaly be doubted that such an incident as this, of itself, and without previons disagreements, woild have been sutticient to have aliemated these bands firom one another: yet it is not improbable, if, :as some say, there was, among the party of slighted Crows a very proud and powerful chief, who reganded the action of the llidatsa humters as a persomal insult. It is more likely, however, that fher parted in consequence of some general misunderstanding concerning the division of game (and other matters perhaps), which may have colminated in some particular quarrel. There is no good reason for supposing the legend to be without foundation in fact. Laws con-
cerning the distribution of game are often unlike in different bands. Cases sometimes arise, too, which their laws do not cover, and grave disputes occur in consequence. The legend and the name Kihatsa seem to have some allusion to the Hidatsa manner of dividing game. When two members of this tribe kill a buffalo, one takes the hind quarters and hump, and is said to "take the back"; the other takes the rest of the forequarters and the entrails, and is said to "take the paunch".

During the years 1804, 1832, 1833, and 1834, we have the evidence of travelers that the three Knife River villages remained just where they stood in 1796, and it is said by the Indians that there was no change until some time after the epidemic of 1837 , when the survivors of the three villages formed themselves in one on Knife River.' There they remained until 1845, when the Hidatsa (and about the same time the Mandans-see $\$ 10$ ) moved up the Missouri, and established themselves where their permanent village now stands, some thirty miles by land and sixty by rivei from their old home. Here, as before stated, they were joined by the Arickarees in 1862.

It may be well here to give some account of the tradingpost, which has lent its name to the village and the locality. In 1845, soon after the Hidatsa settled here, the American Fur Company began, with the assistance of the Indians, to build a stockaded post, which they called Fort Berthold, in honor of a Mr. Berthold of Saint Louis. In 1859, an opposition trading. company erected in the village some inclosed buildings, which they named Fort Atkinson. In 1862, the opposition ceased, and the American Fur Company obtained possession of Fort Atkinson, which they then occupied, transferring to it the name of Fort Berthold. They abandoned the old stockade, which was afterward (December 24, 1862) burned by a warparty of Sioux, who attacked the village. One side of the newer fort still stands, and is occupied by the Indian agency; the other three sides having been burned down October 12, 1874.
§ 20. Character.-To allustrate the character of the Hidatsa, I present, first, a few extracts from the writings of
other observers, placing them in chronological order of observation. Some of the quoted writers visited this tribe in the most prosperous period of their history, others in later and unhappy days; yet their opinions are not at variance with one another.
$183 \%$ - "There is no tribe in the western wilds, perhaps, who are better entitled to the style of warlike than the Minatarees; for they, unlike the Mandans, are continually carrying war into their enemjes' country; oftentimes drawing the poor Mandans into unnecessary broils, and suffering so much themselves in their desperate war-excursions that I find the proportion of women to the number of men as two or three to one through the tribe."-Catlin, N. A. Indians, vol. I, p. 187.
"This day's ramble showed us all the inhabitants of this little tribe, except a portion of their warriors, who are out on a war-excursion against'the Riccarees ; and I have been exceedingly pleased with their general behavior and looks, as well as with their numerous games and amusements, in many of which I have given them great pleasure by taking a part."Ib., p. 199.
1834.-"The Mandans and Manitaries are proud and have a high sense of honor."-Maximilian, p. 353.
1848.-"The Minataries are a noble, interesting people."Palliser, p. 198.
1851.-"Some days after, we stopped at Fort Berthold, to land some goods at the great village of the Minataries, or Osier tribe, nicknamed the Grosventres of the Missouri." * * *. * "The great chief of the latter village, called Four Bears, is the most civil and affable Indian that I met on the Missouri."-De Smet, pp. 76-77.
1854.-"The Grosventres have a large village of mud houses, very unsightly outside, but within warm and comfortable. These Indians are fine specimens of the red man. They are industrious, and raise corn enough to supply many of their neighbors with bread. They are well disposed toward the whites."-Report of Commissioner of Indian Affairs for 1854.*
1858.-"I shall ever look back upon the years spent in

[^15] if in all ing dealinge with white men I had fomend the same
 prewiation of hanisu nature would be much highor."*-Boller, prii.
" Daring the whole time that I liven among the (iros- : vombes, I mever miswod a single artiche athomgh I took no tromble to kerp my thimen out of sight. Hy homse would often bo crovided with Indians: sometimes only ond of twa wotld

 ponph: pememble, roliahlo, and homest. There keep an far as is prossible the !resty mate at Lammic."-Rement at ('ommis-

I con metores the athove opmions, and am say that the Hidatsa are to-day, for hodians, examples in industry, gemeral morality, forthomght, and theitt.
 the eromeral appeammer of these Indians thens deseribed ber a amofil ohserver:-"The Mamitaries are in fact the tallest and best fommed lodians on the Missomet, amd, in this resperet, as well as in the stegmen if their costumes the Grows omly spprash them, whom they perhaps com sumass in the latter particular." $\ddagger$ "The Mimitaries donot difter mueh in persomal sppeatamee from the Mandans: but it strikes the stranger that they ame in semeral taller. Most of the men are well-formed and stour: many of them are very tall. broad-shouldered, and musenker: the lattor mas, inded, be said of the greater prophertom of the men. Their meses are more or hess arehed and semetheres stratight. * * * The womell are mueh like the Mmatan: many of them ane tall and stout, but most of them shore and compulem. There are some prity faces smong them. which, aconding to the hdian standard of beatury, may be called hatsome."

- Poma preface These memarks seem in refer mote marti-ubady to the doress-
 he tiver? "amenes the lamans".

At the present day, it can hardly be said that they are of finer phensigue than the 'Totoms and other roving banils of the Upper Miswomi, yho have sulfored lesse, of late, from epidemic disense and bunger, but they still take greater pride in their dress and persomal appeareine than most of their neighbors. The Berpuent intermarriages of the Mandans and Ilidatsa tend. constantly to assimilate them more amb more to one amother in appearmore; yot those claming pure Ilidatsa blood are genoratly father-atit of mose prominent features than those who consider themsituen pure Mandans. We do not see as many faces amomg the Mimetarees pitted with small-pox as among the Arickaress and Mandans. Among all the tribes in the village, there are many disfigured be goiter and opacities of the comea. All of the Ilidatsa men bear on their bodies masighty ciantrices resulting from the tortures of the Nalhike.

Tattoming maly be spoken of in this comection. A few only of the ohd men are tatteocel. The marks eonsist of numerous parallel bands on one side, or orer the entire of the chest and throat, and over one or both ams. I have never seen tattooed marks on amy of this tribe elsewhere, or in any other shape. The middle-iged men, the yomige men, the women, and the children are not tattered. I believe that these marks on the old men were put on for something more than mere ornanent, and had some forgotten significance. In drickaree pieturewrifings. (irssentres are sometimes represented by a rude symbol of a man having the upper part covered with parallel stripes. Is fin as I cam leam, this particular style of tattooing is peruliar to the Mimetarees.

Complexim - Themajority of the ITidatsa have the ordinary dusky Indian complexion, which is, however, not of a miform shade, as far as I have seen, in any tribe. There are none of this nation that would be comsidered dark for Indians. Among varions tribes of western Indians may be found individuals, claming pure aboriginal blood, who possess complexions much fairer than the werage Indiam, with light-colored hair and efes. Such individuals, are more common among the Mandans and Mimetarees than ther are among most of the neighboring tribes. A natural or inherited cleamess of com-
plexion, too, is more easily discernible among members of the village tribes than among members of roving bands who are more exposed to the weather. The presence of pale Indians in these tribes was noted by travelers in early days, before intermarriages with whites were common enough fo have accounted for it.

Lewis and Clarke* and Gasst notice this fairness when speaking of the Mandans only, but their remarks are general. Catlin speaks of the faimess of the Mandans only, and supposes this peculiarity to arise from some pre-Columbian infusion of Europem blood. $\ddagger$ The Prince of New Wied, who visited these tribes but one vear later than Mr. Catlin, denies that the Mandans are of fairer complexion than their neighbors, while he asserts, at the same time, that, "after a thoroug ablution, the skin of some of them appears almost white." || I have heard old Mandans say that when the Mimetarees, including the Crows, first came among them, the strangers were a fairer race than they. Of the Crows, who, as before shown, once formed one nation with the Hidatsa, Colonel Ravnolds, in his Report of the Exploration * of the Yellowstome (1859), p. 48, says:-"The Crows are fairer than the Sions, many of the montain band being sallow and hardly a shade darker than whites who undergo similar exposure. This fact was so marked that the first seen were supposed to be half-breeds, but we were assured that they were of pure Indian descent."

It is not necessary to suppose an intermixture of European blood in order to aceount for lightness of color in an Indian. There is no reason why marked rarieties of color should not arise in the Red Race as it has done in other races of men, and as it has so oftensdone, under cultivation, within specific limits in the lower animals. I have seen full-blooded Indians who were whiter than somfe half-breeds and whiter than the darkest representatives of the Aryan Race. An increase of hairiness is a more reliable sign of Cancasian blood in an Indian than a diminution of color in the skin; and I never could discover that those fair Indians, claiming pure blood, were more hairy than others. The farness of which I speak is not albinism,

[^16]for the eyesight of the fair Indians is as perfect as that of the dark; they have no unusual appearance of the pupil, and exposure to smight darkens their skins. I have never seen an albino Indian.

Among various western tribes, individuals may be found who are characterized, even in childhood, by having coarse gray hair. From all I could see and learn, I should think that such persons are more mumerous among the Minnetarees and Mandans than in any other tribe; and they are perhaps the most numerous among the Mandans.
$\$ 22$. Ceremonies.-Their most important ceremony is that of the Dahpike or Nahpike, which formerly took place regularly once a year, but is now celebrated every second or third year only. On the day when it is determined to commence this ceremony, some men of the Hidatsa tribe, dressed and mounted as for a war-party, proceed to the woods. Here they select a tall, forked cottonwood, which they fell, trim, and bark; to this they tie their lariats, and, by the aid of their horses, drag it toward the village. In the procession, the man who has most distinguished himself ith battle, mounted on the horse on whose back he has done his bravest deeds, takes the lead; others follow in the order of their military distinction; as they drag the $=\log$ along, they fire their guns at it, strike it with their sticks, and shout and sing songs of victory. The log, they say, is symbolical of a conquered enemy, whose body they are bringing into the camp in triumph. When the log is set up, they again go to the woods to procure a quantity of willows. A temporary lodge of green willows is then built around the log, as the medicine-lodge, wherein the ceremony is performed. The participants fast four days with food in sight, and, on the fourth day, submit to tortures which rary according to the whim of the sufferer or the advice of the medicine-men. Some have long strips of skin separated from different parts of their bodies, but not completely detached. Others have large pieces of the integument entirely removed, leaving the muscles exposed. Others have incisions made in their flesh, in which raw-hide strings are inserted; they then attach buffalo skulls to the strings and run round with these until the strings become.
disengaged by tearing their way out of the flesh. Others, again, have skewers inserted in their breasts, which skewers are secured by raw-hide cords to the central pole, as in the Dakota sun-dance; the sufferer then throws himself back until he is released by the skewers tearing out of the flesh. Many other ingeniols tortures are devised. In the narrative of Long's Expedition to the Rocky Mountains, we find an account of the latter part of thisceremony,* prepared probably from the statements of Mr. Dougherty or Mr. Lisa, as the expedition did not go near the Minnetaree country. All of the torments there described, and more, are inflicted to this day. Among them is the following:-"Another' Minnetaree, in compliance with a vow he had made, caused a hole to be perforated through the muscles of each shoulder; through these holes cords were passed, which were, at the opposite ends, attached by way of a bridle to a horse, that had been penned up three or four days without food or water. In this manner he led the horse to the margin of the river. The horse, of course, endeavored to drink; but it was the province of the Indian to prevent him, and that only by straining at the cords with the muscles of the shoulder, without resorting to the assistance of his hands. And notwithstanding all the exertions of the horse to drink, his master succeeded in preventing him, and returned with him to his lodge, having accomplished his painful task." $\dagger$

In describing the Minnetarees, Prince Maximilian says that they have the Mandan ceremony of the Okipa or O-kee-pa, with some modifications; and call it Akupeli. At this time, the Hidatsa call the Mandan ceremony Akupi (of which word probably Akupehi is an old form); but they apply no suck term to their own festival. Maximilian did not spend a summer among those Indians, and, therefore, knew of both ceremonies only from description. If the Minnetaree festival to which he referred was, as is most likely, the Nahpike, he is, to some extent, in error. The rites resemble one another only in their appalling fasts and tortures. In allegory, they seem to be radically different.

The minor ceremonies are chiefly those connected with their
bands, of which the men and women have separate organizations and separate ceremonies.* Rites connected with the eagletrapping will be noticed hereafter. In one of his letters descriptive of the Minnetarees, Catlin gives an account of a greencorn dance, $\dagger$ and devotes a plate to illustrating the same. $\ddagger \mathrm{He}$ does not Tirectly say that this is a Minnetaree festivity, but introduces the description in a way calculated to lead the casual reader to suppose that it is such. I have shown the plate to several of these Indians, and have given them the description of the dance, but have been invariably informed that they never had such a ceremony. In the same letter, he speaks of an improvident waste of the harvest in gluttonous eating of the green corn. His remarks on this point certainly do not apply to the Hidatsa. In Chapter XIII of his work, Boller gives a brief description of a dance or paduididi performed by the Goose Band, an organization of the old women of this tribe; and, in Chapter XIX, he rescribes certain ceremonies of the White Cow Band. The latter band, originally, I believe, belongs to the Mandan women, but Hidatsa women are now admitted to its mrsteries.
§ 23. Mythology and superstitions.-Oljects of venera-tion.-The object of their greatest reverence is, perhaps, Itsikamahidis, the First Made, or First in Existence. They sometimes designate him as Itakatétas; or Old Man Immortal. Some Indians say that itsikamahidis means he who first made, but such a rendering is not in accordance with the present etymology of the language. They assert that he made all things, the stars, the sum, the earth, and the first representatives of each species of animals and plants, but that no one made him. He also, they say, instructed the forefathers of the tribes in all the ceremonies ant nyysteries now known to them.

Mahopa, or Mahopa-ictias, is the equivalent in the Hidatsa language for those terms in other Indian tongues which are usually translated "The Great Spirit". In this language, it may be (figuratively, perhaps) applied to the Itakatetas, or any-

[^17]thing else of a very wonderful or sacred nature. Much diversity of opinion exists among observers of Indian character concerning the ideas which the savages attach to this term; and the subject deserves more consideration than it has yet received. The ideas of all the tribes within our borders have undoubtedly been greatly modified by intercourse with the whites; and, recognizing this fact, many claim that the Great Spirit,' or, more properly, Great Mystery, is a deity of the modern Indian only. I have certainly heard some old and very conservative Minnetarees speak of Mahopa as if they mont thereby an influence or power above all other things, but not attaching to it any ideas of personality. It would now be perhaps impossible to make a just analysis of their original conceptions in this matter. But the Old Man Immortal has no vague existence ir their minds.

If we use the term worship in its most extended sense, it may be said that, besides this being, they worship everything in nature. Not man alone, but the sum, the moon, the stars, all the lower animals, all trees and plants, rivers and lakes, many bowlders and other separated rocks, even some hills and buttes which stand alone-in short, everything not made by human hands, which has an independent being, or can be individualized, possesses a spirit, or, more properly, a shade. (Seee idahi in Dictionary.)

To these shades some respect or consideration is due, but not equally to all. For instance, the shade of the cottonwood, the greatest tree of the Upper Missouri Valley, is supposed to possess an intelligence which may, if properly approached, assist them in certain undertakings; but the shades of shrubs and grasses are of little importance. When the Missouri, in its spring-time freshets, cuts dowi its banks and sweeps some tall tree into its current, it is said that the spirit of the tree cries while the roots yet cling to the land and until the tree falls into the water. Formerly it was considered wrong to cut down one of these great trees, and, when large logs were needed, only such as were found fallen were used; and to-day some of the more credulous old men declare that many of the misfortunes of the people are the result of their modern disre-
gard for the rights of the living cottonwood. The sun is held in great veneration, and many valuable sacrifices are made to it.

Future state.-They believe neither in a hell nor in a devil, but believe that there are one or more evil genii, in female shape (see mahopamiis in Dictionary), who inhabit this earth, and may harm the Indian in this life, but possess no power beyond the grave. Their faith concerning a future life is this: When a Hidatsa dies, his shade lingers four nights around the camp or village in which he died, and then goes to the lodge of his departed kindred in the Village of the Dead. When he has arrived there, he is rewarded for his valor, self-denial, and ambition on earth by receiving the same regard in the one place as in the other; for there, as here, the brave man is honored and the coward despised. Some say that the ghosts of those who commit suicide occupy a separate part of the village, but that their condition differs in no wise from that of the others. In the next world, human shades hunt and live on the shades of buffalo and other animals that have here died. There too there are four seasons, but they come in an inverse order to the terrestrial seasons. During the four nights that the ghost is supposed to linger near his former dwelling, those who disliked or feared the deceased, and do not wish a visit from the shade, scorch with red coals a pair of moccasins, which they leave at the door of the lodge. The smell of the burning leather, they claim, keeps the ghost out; but the true friends of the dead man take no such precautions.

Various superstitions.-They have a great many superstitious notions, yet I believe their superstitions are neither more numerous nor more absurd than those of the peasantry of some European nations to-day. There is, too, among them every degree of faith in these fancies, from almost perfect skepticism to the most humble credulity. I will not describe all of their superstitions known to me, but will refer, for illustration, to a few of them. They believe in the existence and visibility of human and other ghosts, yet they seem to have no terror of graveyards and but little of mortuary remains. You may frighten children after nightfall by shouting nohidahi (ghost), but will not scare the aged. They have much faith in dreams,
but usually regard as oracular those only which come after prayer, sacrifice, and fasting. They have queer notions respecting the effects of different articles of diet, thus: An expectant mother believes that if she eats a part of a mole or shrew, her child will have small eyes; that if she eats a piece of porcupine her child will be inclined to sleep too much when it grows up; that if she partakes of the flesh of the turtle, her offspring will be slow or lazy, etc.; but they do not suppose that such articles of food affect the immediate conswmer. They have faith in witcheraft, and think that a sorcerer may injure any person, no matter how far distant, by acts upon an effigy or upon a lock of the victim's hair.

It is believed by some of the Hidatsa that every human being has four souls in one. They account for the phenomena of gradual death, where the extremities are apparently dead while consciousness remains, by supposing the four souls to depart, one after another, at different times. When dissolution is complete, they say that all the souls are gone, and have joined together again outside of the body. I have heard a Minnetaree quietly discussing this doctrine with an Assinneboine, who believed in only one soul to each body.

Amulets.-Every man in this tribe, as in all other neighboring tribes, has his personal medicine, which is usually some animal. On all war-parties, and often on hunts and other excursions, he carries the head, claws, stuffed skin, or other representative of his medicine with him, and seems to regard it in much the same light that Europeans in former days regarded-and in some cases still regard-protective charms. To insure the future fleetness of some promising young colt, they tie to the colt's neck a small piece of deer or antelope horn. The rodent teeth of the beaver are regarded as potent charms, and are worn by little girls on their necks to make them industrious.

Oracles.-Since their removal to their present village, they do not seem to have any very important local oracles to consult; but when they lived on Knife River, they had at least two such holy places. One of these was a famous holy stone, or "Medicine rock" (Mihopas, or, Mandan, Mihopinis), which is described by Long and by Maximilian. It was some two or
three days' journey from their residence. The Hidatsa now seldom refer to it, and I do not think they ever visit it.

The other famous oracle, to which they now often refer, as they have still some fancies connected with it, was the Makadistati, or House of the Infants, a cavern, near the Knife River, which they supposed extended far into the earth, but whose entrance was only a span wide. This cave, they say, was inhabited by pigmies, or mysterious infants, who came out only at night, and then with great caution, lest they should be observed, and who followed a wise and watchful leader that knew the scent of man and snuffed the air as he advanced, like the leader of a band of antelope. They suppose that if he detected the presence of a human being, he gave the alarm and all retreated. After rainy nights, they saw tracks of some animals going from and returning to the cave, which tracks they said were those of the infants. The oracle was thus consulted: The childless husband, after a long fast, would repair to the neighborhood of the cave at night, and secrete himself behind a bowlder, to the leeward, to watch; if, in his hungerweakened brain, he had a vision of the infants, he returned home, confident that he would be a father within a year. The barren wife who desired children would, at sunset, lay at the mouth of the cave a tiny play-ball and a little bow and arrow. If the ball was missing in the morning; she believed that within a year she would be the mother of a girl; while if the bow and arrow were missing, she supposed she would be the mother of a boy. If neither were "taken", she went back with little hope, and could not consult the oracle again until a year had elapsed. .There are those among them who imagine that, in some way or other, their children come from the Makadistati ; and marks of contusion on an infant, arising from tight swaddling or other causes, are gravely attributed to Ricks received from his former comrades when he was ejected from his subterranean home.

An account, given in Long's travels, of a certain hill, which: "was supposed to impart a prolific virtue to such squaws as resorted to it", etc.,* seems to refer to this oracle;

[^18]but, if such is the case, I believe the account to be incorrect in some respects.
§ 24. Marriage, etc.-Marriage is usually made formal by the distribution of gifts on the part of the man to the woman's relations. Afterward, presents of equal value are commonly returned by the woman's relations, if they have the means of returning them and are satisfied with the conduct of the husband. After the marriage, if the husband is a young man taking his first wife, he becomes an inmate of his father-in-law's lodge, and helps, by his hunting, to support his wife's parents. Some travelers have represented that the "marriage by purchase" among the Indians is a mere sale of the woman to the highest bidder, whose slave she becomes; but I feel that they misrepresent the custom, unless where their remarks may apply to some.modern irregularities among the least reputable persons. Certainly, they misrepresent the custom as it exists in this tribe. The presenting of the wedding-gift is a form. The gift itself is a pledge to the parents for the proper treatment of their daughter, as well as an evidence of the wealth of the suitor and his relations. The larger the marriage-gift the more flattering it is to the bride and her relations; hence, the value of the presents offered has something to do in favoring a suitor's cause; but girls are left much to their own choice in selecting husbands for themselves. Parents sometimes, by persuasion, but rarely by any harsh coercion, endeavor to influence a daughter in the reception or rejection of an offer. I have known many cases where large marriage-presents have been refused from one party, and gifts of much less value accepted from another, simply because the girl showed a preference for the poorer lover. The fame of a man as a warrior, his influence and position in the tribe, do more to secure him a good wife than the presents he may offer. Skill in hunting is a high recommendation; parents commonly advise their daughters to marry the men who will never leave the lodge unprovided with meat. I knew a case of a poor young Mandan, who had a sickly and worthless wife of another tribe, to whom, however, he was very kind; when she died, a well-to-do Grosventre, "who had three fine daugh-
ters, gave them all to the young widower in marriage, and with them a.valuable present in horses and other property, saying, "The young man has a good heart, and will be kind to my children when I am dead:" Sometimes when a girl is crossed in her love, she elopes with her favorite. The pair ramain out on the prairie for a week or so, and then return to the village. Usually this ends the trouble. They are then considered married, but such marriages are looked upon as undignified, and different terms are applied to a marriage by elopement and a marriage by parental consent. (See kidale and uahe in Dictionary.)

Polygamy is practiced, but usually with certain restrictions. A man who marries the eldest of several sisters has a claim to the others as they grow up; and in most cases marries them, unless they, in the mean time, form other attachments and refuse to live with him. As certain female cousins are regarded as younger sisters, a man has often much latitude in selecting wives under this law. A man usually takes to wife the widow of a brother, unless she expresses an unwillingness to the arrangement, and he may adopt the orphans as his own children. When a Grosventre takes a second wife who is no relation to the first wife the results are generally unhappy. Sometimes the first wife leaves him and returns to her relations; sometimes she succeeds in chasing the second wife away. Occasionally, if the husband is well off, he provides them with separate establishments; sometimes, again, but rarely, the two wives agree.

Divorce is easily effected; yet, among the better class of people in the tribe, it is rare. A young man who possesses sufficient recommendations to secure a comely and industrious girl of good reputation and well connected is usually in no hurry to part with her, nor is she willing to leave him for trifling causes. The unions of such people often last for life. Among persons of different character, divorces are common. The Minnetaree woman is, as a rule, faithful to her husband, particularly when she is married to the man of her choice. It sometimes happens, however, that á married woman elopes. The injured husband may then satisfy himself by seizing all the property of the
seducer and of the seducer's friends that he can lay his hands on, and the latter often give him opportunities of doing so, or voluntarily come forward with presents to appease him. If the husband should at firşt slay his faithless wife, which is rarely done, no one would call him to account for it; but if he or any of his relations have made seizures or accepted presents on account of the elopement, he does not dare to touch her when she returns. But the most praiseworthy course for the husband to pursue is to send for the runaways, request their return to the village, and, when they come back, invite them to his lodge and formally present the woman to her seducer, giving him a horse or some other valuable gift into the bargain. In short, if he would show that "his heart is strong", he must treat the whole afferir as if he had had a good riddance. If a man discards a wife for infidelity, or if she elopes from him, he hopelessly disgraces bimself if he takes her back.

Notwithstanding that such are their customs, it must be remembered that their social discipline is not very severe. Punishments by law, administered by their soldier band, they have, but only for serious offenses against the regulations of the camp. He who simply violates social customs of the tribe often subjects himself to no worse punishment than an occasional sneer or taunting remark; but for grave transgressions he may lose the favor and regard of his friends.

With the Minnetarees, as with other western tribes, it is improper for a man to hold a direct conversation with his mother-in-law; but this custom seems to be falling into disuse.
§25. Names.-Children are named when a few days old. Sometimes to males four names are given all of which will have the same noun, but each one a different adjective. Only one of these names will be commonly used. In after years, the names of the males are changed once, or oftener, or rather new names are given; for they will be called as often by the old names as by the new. The first new name is usually given to a youth after he has first struck an enemy in battle. The names of women are rarely changed. Sometimes, if a name is long, a part of it only is used in ordinary conversation. .Nicknames are often given on account of some absurd saying,
ludicrous circumstance, or personal peculiarity; and it sometimes happens that a person is called by his nickname almost to the exclusion of his proper name. Boys are sometimes named in honor of distinguished warriors deceased. Horses are rarely named; but names are often given to dogs, particularly to such as children keep for pets. White men known to the tribe are ordinarily named by these Indians from personal peculiarities; thus, we have for whites names which translated signify Long Neck, Fish-Eyes, Antelope-Eye, Old Crane, etc. A white man who has been for many years employed at Fort Berthold as an ox-driver, and who has, in consequence of his employment, frequently occasion to say "wo, wo-haw!" is known among the Grosventres as momohas (Englished, Mómohaush or Bobohaush): Whites are sometimes called by the translations of their regular Christian-names or surnames. Thus, an old interpreter named Pierre Garreau is called mis (Englished, Meesh or Beesh), from mi', a rock; and a Mr. Pease, who formerly traded at Fort Berthold, is known to the tribe as amazis (Englished, Amaúzhish), from amazi, beans. It is probable that some of these translations are made by the whites and then employed by the Indians.

I have seen some members of this and of other tribes who are ashamed to tell their names, and when asked for their names will answer reluctantly and with apologies, or seek a third party to give the information; while other Indians, apparently as conservative, exhibit no such hesitancy. I think that sensitiveness on this point is not so common among the Indians at Fort Berthold as among other tribes; nor is it as common among them now as it was ten years ago.
§ 26. Relationship.-To illustrate their system of relationship, some of the Hidatsa names for relations are here synoptically given, although they may be found also in the Dictionary, each in its alphabetical order.
adutáka,-grandfather or great-grandfather, or grandfather's brothers.
ikú,—grandmother, great-grandmother, grandmother's sisters.
áté,-father, father's brothers, uncles in the male line.
atě-ka'ti, -a true father.
tatis, -another term for father, never used with the pronouns.
ika' or ' $k$ ans,-mother, mother's sisters, aunts in the female line.
hidú, - a true mothor (same word as for bone).
hu,-another term for mother, said to be of anahami origin.
itidu,-a mother's brothers, uncles in the female line.
isámi,-a father's sisters, aunts in the male line.
itakisia,-a gencral name for sisters and female cousins, also the only name for a man's younger sister.

- itamétsa, -a general name for brother or male cousin, also used in the sense of companion as in English. The only term. for a woman's elder brother.
itaku,-a woman's younger sister.
idú,-a woman's elder sister.
itamia, -a man's elder sister.
itsúka,-a man's or woman's younger brother.
faka,-a man's elder brother.
idisis,-a son, said by both parents.
ikí, -a daughter, a brother's daughter.
kidá,-a husband.
itadamia, -a wife, a wife's sisters, particularly her younger sisters.
úa,-a true wife.
isikisi,-a husband's brother.
ida'ti,-a wife's brother, a brother's husband.
The above terms are for relations of the third person; many of them having the possessive pronoun of the third person ' $i$ ' inseparably prefixed, or to be removed only when pronoums of the first and second persons are used. To make the forms of the first and second persons 'ma' and 'di' are respectively substituted for 'i', or the fragmentary pronouns ' $m$ ' and ' $d$ ' used. We have thus, máté, my father ; matsuka, my younger brother; dúa, your wife; diaka, your elder brother, etc. The words tatis, ikia, and hidu do not ordinarily take possessive pronouns, but are the same for all persons. All these may end with $\dot{\mathbf{s}}$. (See I 90 in Grammar.)

In the above definitions, male cousins and adopted brothers are included under the term brother, and female cousins and adopted sisters under the term sister. Hence it is evident that their words expressive of relationship are often applied to the most distant and indefinite connections.

On examination of the foregoing list, the following facts may be noted: Of the terms for brother and sister, certain ones are used only for relatives of the male, others only for those of ${ }^{\circ}$ the female; some are applied only to elder, others only to younger relatives; while two of the terms are general. There is a separate term for a maternal uncle, but none for a paternal uncle; he is called by the same name as a father. When they wish to distinguish between an actual father and a father's brothers, they use the adjective ka'ti, true, real, in speaking of the former. While there is a name for paternal aunt, there is none to distinguish maternal aunt from mother; yet there is a special word to designate the real mother, although she is commonly called by the terms which apply as well to her sisters. There are two names for wife ; one for a, wife by actual marriage, the other for an actual wife as well as what might be called a potential wife, i. e., a wife's sisters. There are two terms for brother-in-law, but no general term, as with us.

It must not be supposed, from the wide significance of some of their terms, that they do not discriminate between all grades and conditions of kinship. When they have no single word to define the relationship, they employ two or more words.
§ 27. Hunting.-Their methods of hunting are much the same as those of all the other plain Indians.' In former days they made antelope-parks;* they stampeded herds of buffalo over bluffs; they approached animals carefully until within close arrow-range, or decoyed them to approach the hunter by imitative sounds, or, as in the case of antelope, by displaying attractive objects. When they obtained horses, the chasing of the buffalo became common; and when they came into the possession of fire-arms, they began to hunt much as white

[^19]men do. They still often employ the primitive methods; thus, when they find antelope abundant, they make the oft-described antelope-park. The bow and arrow are still largely employed by the hunters; and fall-traps and snare-traps are made to catch foxes and other small animals. The boys practice themselves in the use of the bow by shooting at marmots and small birds, and in winter they set horse-hair snares for snow-buntings. The majority of their modes of capturing and killing the lower animals have been so extensively described by other observers* that I will make no further reference to them here. But I will give an account of their eagle-hunt, which, as far as I know, has never been fully described in any book of travels, although Maximilian:and Hayden both speak of it.

Eagle-hunting.-Late in the autumn or early in the winter, when they go out on their winter-hunt, a few families seek some quiet spot in the timber, and make a camp with a view to catching eagles. After pitching their tents, they first build a small medicine-lodge, where the ceremonies, supposed to be indispensable, are parformed, and then make several traps on high places among the neighboring hills. Each trap consists of a hole dug in the earth, and covered with sticks, sods, etc.; a small opening is left in the covering; a dead rabbit, grouse, or other animal is tied on top; and an Indian is secreted in the excavation below. The eagle, seeing the bait, sweeps down and fastens his claws in it; but, the bait being secured, he is unable to remove it. When the eagle's claws are stuck, the Indian puts his hand out through the opening, and, catching the bird by both legs, draws him into the hole and ties him firmly. The trapper then re-arranges the top of his trap, and waits for another eagle. In this way many eagles are caught; they are then brought alive into camp, the tails are plucked out, and the bird is set at liberty, to suffer, perhaps, a similar imprisonment and mutilation at some future time.

The covered hole or trap is called amasi'. When the trap-ping-season is over, they break up the camp; and, if the locality is not already provided with a name, they call it the

[^20]amasi' of whoever was master of ceremonies during the season. Two instances of this manner of naming are given in the list of Local Names.

The medicine-lodge is built after the manner of their ordinary earth-covered dwelling-houses, but is much smaller. The door-way is low and small; and the door; consisting of a skin stretched on a frame, is suspended from the top by a string. On the inside of the lodge, opposite to the door, is a sort of altar, on which various charms and relics are placed; around the edge, to the right and left of the door, hay is spread to serve as seats; and, in the center, is the fire-place. At night, after the trappers return, they sit to the left; their visitors sit to the right, as they enter. The latter enter and leave the lodge only by opening the door on the side corresponding with their seats. No person is allowed to spit on the floor, but he may spit behind him in the hay. Women are not allowed to enter the lodge, but may come to the door and hand in food and water.

When some of the men wish to take part in the trapping, they go, during the day, after a preliminary fast, to the medi-cine-lodge. There they continue without food until about midnight, when they partake of a little nourishment, and go to sleep. They arise just before dawn, or when the morningstar rises; go to their traps; ${ }^{\text {sit }}$ there all day without food or drink, watching for their prey, and return about sunset. As they approach the camp, every one there rushes into his lodge, for the hunter must see, or be seen by, none but his fellowhunters until he enters the medicine-lodge. - On entering the lodge, they stay there for the night. About midnight they eat and drink for the first time since the previous midnight, and then lie down to sleep, to arise again before the dawn and go to their traps. $:$ If there be one among them who has caught nothing during the day, he must not sleep at night, but must spend his time in loud lamentatiốn andin prayer. The routine described must be continued by each hunter four days and four nights, after which he returns to his own lodge hungry, thirsty, and tired, and follows his ordinary pursuits until he feels able to go again to the eagle-traps. During the four
days of the trapping, the hunter sees none of his family, and speaks to none of his friends except those who are engaged in the trapping at the same time. They believe that, if any eagle-hunter does not properly perform all these rites, the eagle, when caught, will get one of his claws lonse and tear the captor's hands. There are men in the tribe who have had their hands crippled for life in this way.

The chief objects of pursuit in this hunt are the tailfeathers and largest wing-feathers of the war-eagle, Aquila chrysectus, which are in such great requisition as emblems of valor. Of course, other birds of prey besides the war-eagle often seize the bait; of such three species are considered worthy of capture; but these inferior birds are often slain at the trap instead of being brought home alive.
§ 28. Warfare.-The tales which some of the old men of this tribe tell of the warlike expeditions of their fathers and grandfathers seem searcely credible, although from the descriptions of distant countries that they contain they bear internal evidence of truth. The journeys performed by the Hidatsa war-parties of the last century were very long, but those undertaken by single individuals were more extraordinary. I have heard it related (with many descriptive embellishments and minute particulars) of an old warrior that he traveled directly to the south oin foot until he reached the Platte River; there he built himself a bull-boat, and floated far down the Lower Missouri, where he found the land all forest, and where he plucked fruits and shot birds such as he had never seen before; and there, from the head of some unknown Indian, he raised a scalp, and returned to his people after an absence of twenty lunar months. Another story is told of one who traveled toward the north-star until he came to a land where the summer was but three moons long. Here he raised the scalp of some poor Tinneh, and came back to his native village in about seventeen moons from the day he started.

The Sinnetarees now rarely meet the Shoshonees, or Snake Indians of the Rocky Mountains, either in war or in peace; yet, in 1804, as appears from the account of Lewis.
and Clarke, an almost constant warfare was carried on between these two tribes. There are old men now among the Hidatsa who speak of battles that they fought in their youth on the banks of streams that flow to the west. There are middle-aged men in this tribe who have, on mounted warparties, passed through the Dakota hunting-grounds to strike the Chippeways in Minnesota. When the Chippeways would see the tracks of the scalp-hunters pointing toward the western prairies, they would perhaps blame the Dakotas, and revenge themselves on the latter. Of late years, their military operations have become more restricted since the Dakotas have given them all they could, attend to near home.

Occasionally they have pitched battles with their enemies, but most of their hostilities consist in the raids of small war-parties, whose great object is not to take many scalps at any hazard but to inflict some injury without loss to themselves. The popularity of a partisan leader depends much on the small cause for mourning which his excursions entail on the tribe. When, however, they fight to resist a war-party, or meet an enemy by accident when they are not out on a regular war-excursion, they fight with little regard for life.* Many of their war-parties start out on foot, expecting to return with stolen horses.

Prisoners of war.--Young children are often taken prisoners of war. .They are neither ill-treated nor compelled to perform unusual labors. Sometimes they are adopted by people who have lost children, and are then treated with parental kindness. When they have grown to maturity, they sometimes return to the tribe whence they came, but more often remain with their captors. I have never seen or heard of these Indians taking adult prisoners, for the purpose of torturing them to death, as was so common among the eastern tribes. The Hidatsa kills his enemy outright.

The bodies of the slain, however, they mutilate in every conceivable shape. Sometimes they burn them whole, on large pyres; sometimes they hack them in pieces and burn

[^21]the fragments as offerings to the sun. Palliser gives an account of a fight between the Minnetarees and the Sioux at Fort Berthold, which he closes with the following remarks:"The skirmish now terminated ; the Sioux retired and the Minnetarees returned to their village in triumph, dragging the body of their unfortunate victim along with them: Then commenced a truly disgusting sight; the boys shot arrows into the carcass of their fallen enemy, while the women, with their knives, cut out pieces of the flesh, which they broiled and ate. I turned away chilled with horror, and the whole scene haunted me for hours, and frequently afterward."* I first read this after I had known these Indians for some years, and was much surprised, for I had never heard of cannibalism among them, and had known of cases where some had died of hunger without resorting to this practice, which, among starving Europeans, is not uncommon. I had also heard Mr. Palliser's former hunting-companions and acquaintances on the Upper Missouri speak of him in terms of high praise as a man of veracity; and I have heard the adventures related in his book corroborated by eye-witnesses; therefore I took particular pains to inform myself on this point; and I wàs assured by the oldest white residents, as well as by the oldest Indians, that none of this tribe had ever, under any circumstances, devoured human flesh. They say that the neighboring tribe of Crees do sometimes eat parts of the bodies of enemies slain in battle; and they account for his assertion either by supposing that there were Crees visiting the camp at the time, or that the horrified Palliser "turned away chilled" upon witnessing the cutting and broiling, and without waiting to see if the flesh was eaten, but taking the latter for granted.
§ 29. Stories.-Long winter-evenings are often passed in reciting and listening to stories of various kinds. Some of these are simply the accounts given by the men of their own deeds of valor, their hunts and journeys; some are narrations of the wonderful adventures of departed heroes; while many are fictions, full of impossible incident, of witchcraft and magic. The latter class of stories are very numerous. Some of them

[^22]have been handed down through many generations; some are of recent origin, while a few are borrowed from other tribes. Of course, the interest of a tale depends much on the way it is told; although the plot remains the same with different narrators, the accessories and embellishments are added by each one to suit himself. Thus, some old men acquire great reputations as story-tellers, and are invited to houses and feasted by those who are desirous of listening to them. Good storytellers often originate tales, and do not disclaim the authorship. When people of different tribes meet, they often exchange tales with one another.

As an example of their tales of fiction, I have selected a story, said to belong originally to this tribe, and to have been known to it from time immemorial. An old Indian will occupy several hours in telling it, with much elegant and minute description, which I omit. On the other hand, I add nothing, and give the following as a simple abridgment of the tale as I have heard it told.

Tale of fiction.-Near the mouth of Burnt Creek, on the east bank of the Missouri, are the vestiges of some large round lodges, which stood there before the Indians came into the land. They were inhabited by various mysterious beings of great power in sorcery. In one of the lodges lived the two great demi-gods Long Tail and Spotted Body; a woman lived with them, who took care of their lodge, and who was their wife and sister; and these three were at first the only beings of their kind in the world. In a neighboring lodge lived an evil monster named Big Mouth, "who had a great mouth and no head". He hated the members of Long Tail's lodge, and when he discovered that the woman was about to become a mother he determined to attempt the destruction of her offspring.

When Long Tail and Spotted Body were absent on a hunt one day, Big Mouth entered their lodge, and, addressing the woman, said that he was hungry. The woman was greatly frightened, but did not wish to deny him her hospitality; so she proceeded to broil him. some meat on the coals. When the meat was cooked, she offered it to him in a wooden dish

He told her that, from the way his mouth was made, he could not eat out of a dish, and that the only way she could serve him the food so that he could eat it was by lying down and placing it on her side. She did as he intimated, when he immediately devoured the meat, and in doing so tore her in pieces. She died, or seemed to die; but the children thus rudely brought into the world were immortal. One of these he seized, and throwing him into the bottom of the lodge, said: "Stay there forever among the rubbish and let your name be Atùtish."* The other he took out and threw into a neighboring spring, saying to him: "Your name is Máhash; $\dagger$ stay there forever, where you will love the mud and learn to eat nothing but the worms and reptiles of the spring."

When Long Tail and Spotted Body came home, they were horrified to find their sister slaughtered; they mourned her duly, and then placed her body on a scaffold, as these Indians do. After the funeral, they returned hungry to the lodge, and put some meat on the fire to cook. As the pleasant odor of the cooking arose, they heard an infantile voice crying and calling for food. They sought and listened, and sought again, until they at length found Atutish, whom they dragged forth into the light, and knew to be the child which they supposed was devoured or lost forever. Long Tail then placed Atutish on the ground, and, holding his hand some distance above the child's head, made a wish that. "he would grow so high"; and instantly the child attained the stature, mind, and knowledge of a boy about eight years old. Then Long Tail made many inquiries concerning what had happened to him and the whereabouts of his brother ; but the child could give no information of what took place during the visit of Big Mouth.

In a day or two after this transaction, the elders made for the child a little stick and wheel (such as Indian children use in the game called by the Candians of the Upper Missouri roulette), and bade him play round in the neighborhood of the lodge, while they went out to hunt again. While he was play-

* Or atutis. See 'atuti' in Dictionary.
† Or mahas. See 'maha' in Dictionary.
I have given above these two names in an English form for the convenience of the reader.
ing near the spring, he heard a voice calling to him and saying "miakaṣ" (my elder brother). He looked in the direction from which the voice proceeded, and saw little Mahash looking out of the spring. Wanting a playmate, Atutish invited him to come out and play. So Mahash came out; and the two brothers began to "amuse themselves. But when Long Tail and his brother approached the lodge, on their return from the hunt, Mahash smelled them far off, rushed away like a frightened ${ }^{\circ}$ beast, and hid himself in the spring. When the elders returned, Atutish told them all that had happened while they were gone. They concluded that he of the spring must-be their lost child, and devised a plan to rescue him, which they communicated to Atutish.

Next morning they made another and smaller roulettestick, for the enchanted child to play with. Then they divested themselves of their odor as much as possible, and hid themselves near the spring and to the leeward of it. When all was ready, Atutish went to the edge of the spring, and cried aloud "Mahash! Do you want to come out?" Soon the latter lifted his head cautiously out of the spring, raised his upper lip, showing his long white fangs, snuffed the air keenly, looked wildly around him, and drew back again into the water. Atutish then went near where he had seen his brother rise, and called again to him; but the child answered from the water that he feared to come out, as he thought he smelt the hunters. "Have no fear," said Atutish; "the old men are gone out hantiitg and will not be back till night. I am here alone. Come out to the warm sumlight. We will have a good time playing; and I will give you something nice to eat." Thus coaxed and reassured, the other ventured out, still looking mistrustfully around him. Atutish then gave him a piece of boiled buffalotongue to eat, which the little boy said was the best thing he had ever tasted. "Very well," said Atutish, "let us play, and I will stake the rest of this tongue against some of your frogs and slugs on the game." Mahash agreed; and soon, in the excitement of the play, he forgot his fears. They played along with the roulette some time without much advantage on either side, until, at length, they threw their sticks so evenly
that it was impossible to tell which was farthest from the wheel. They disputed warmly, until Atutish said, "Stoop down and look close and you will see that I have made the best throw." The other stooped over to observe; and, while his attention was thus engaged, his brother came behind the little fellow, seized him, and held him fast. Atutish then called to the concealed hunters, who rain up, threw a lariat around the struggling captive and boand him firmly. Having secured the wild boy, their next task was to break the spell by which his tastes and habits were made so umatural. To accomplish this, Long Tail and Spotted Body put him in the sweat-house and there steamed him until he was almost exhansted. They then took him out and begare to whip him severely. As they plied the lash, they made wishes, that the keen scent would leave his nose, that the taste for reptiles would leave his mouth, that the fear of his own kind would leare his heart, ete. As they progressed with this performiance, he suddenly cried out to Atutish, "Brother, I remember myself now. I know who I am." When he said this he was released; and his first impulse was to run to the spring. He ran there; but when he reached the edge, he stopped, for he found that he no longer loved the black mud and the slimy water: and he returned to the lodge.

Long Tail then placed the twins side by side, and holding his extended hand, palm downward, above tleir lieads, a little farther from the ground than on the previous oecasion, wished that they would both be "so high"; when, at once, they grew to the size of bors about fourteen years old, and they grew in wisdom correspondingly. Then Long Tail made bows and. hunting-arrows for the boys, and a pair of medicine-arrows for their protection and for use on extraordinary occasions; and he addressed them saying, "You are now big enough to protect youselves. Go out on the prairie and hunt, and we will see which one of you will be the best hunter." After that time they went out every day, and became expert hanters.

Once. as they were looking for game among the hills, they came to a scaftold on which a corpse was laid. "There," said Atutish, "is the body of our mother. She was murdered, no one knows how:" "Let us try the strength of our medicine-
arrows on her," said Mahash; "perhaps we can bring her back to life." So saying he stepper close to the seaffold and shot straight up. As the arrow turned to fall, he cried out, "Take care, mother, or you will get hurt;" and, as it descended near the body, the scaffold shook and a low groan was heard. Then Atutish stepped nearly under the scaffold and shot up in the air. As his arrow tumed to fall, he cried out, "Mother! Mother ! Jump quick, or the arrow will strike you." At once she arose, jumped down from the scaffold, and, recognizing her children, embraced them. 'The boys then asked her who was the author of their calimities, and how it all happened. She pointed to the lodge of $\operatorname{Big}$ Mouth, and related all the circumstances of her death. Upon hearing this, the boys swore they would be revenged. Their mother endeavored to dissuade them, describing Big Mouth to them, assuring them that his medicine was potent, and that he would certainly destroy them if they went near him. They paid no attention to her remonstrances, but proceeded to plot the destruction of the monster.

Now, this Big Mouth had a very easy way of making a living. He neither trapped nor hunted, nor took pains to cook his food. He simply lay on his back, and when a herd of deer came within sight from his lodge, or a flock of birds flew overhead, no matter how far distant, he turned toward them, opened his great mouth, and drew in a big breath, when instantly they fell into his mouth and were swallowed. In a little while, the boys had their plans arranged. They built a large fire, and heated some small bowlders in it: Then they carried the stones to the top of his lodge, put them near the smoke-hole, and began to imitate a flock of blackbirds. "Go away, little birds," said Big Mouth; "you are not fit to eat, and I am not hungry; but go away and lét me sleep, or I.will swallow you." "We are not afraid of yon," said the boys; and they began to chirp again. At length Big Mouth got angry. He turned up his mouth, opened it wide, and just as he began to draw his breath to suck them in, the boys stepped aside, and hurled the stones down into the lodge. "Oh, what sharp claws those birds have! They are tearing my throat," exclaimed the monster, as he swallowed the red-hot rocks. The next moment he
roared with pain and roshed for his water-jars, drinking immonse draughts; but the stemn made by the water on the rocks swelled him up: and the more he drank the worse he swelled mutil he burst and died.

The boys brought the booly home, and, atter they had danced sutficiently around it, their mother praised them for what they had done, but she said, " You must not be too venturesome: All these lodges around are inhabited by beings whose powers in soreery are great. You camot always do as well as you have dome this time. You should keep away from the rest of them. There is one old woman in particular whom you must awoid. She is as powerful as Big Mouth; but you cannot kill her in the same way that you killed him, for she catches her food, not in her mouth, but in a basket. Whenever she sees anything that she wants to cat she turns her basket toward it and it drops in dead. If she sees a Hock of wild geese among the clouds, no matter how high they fly, she cam bring them down.". When the boys heard this, they said nothing in reple to their mother, but set off secretly to compass the death of the witch. Ther went to the lodge of the latter, and, standing near the door, eried, "Gramdmother, we have come to see you." "(fo away, children, and don't amons me." she replied. "(nrmmother, fou are very nice and good, and we like you. Won't you let us in?" continued the bovs. "(Oh, no." said she, " I don't want to hurt rou; but begone, or I will kill you." Despite this threat, ther remained, and again spoke to her, saying. "(rimudmother, we have heard that you are very strong medicine, and that you have a wonderful basket that ean kill arrthing. We cam same ly believe this. Won't you lend us the basket a little while until we see if we can catch some lirds with it?" She refused the basket at first, but, after much coaning and flattering, she handed it to them. So somener were ther in possession of the basket than they turned it upon the witch herself. and she dropped into it dead.

After this exploit, the mother again praised her bors but again warned them to beware of other evil genii of the place, which she described. One of these was a man with a pair of
wonderful moceasins, with which he had only to walk round anything that he wanted to kill. Another was a man with a magici knife, with which he could instantly cut or kill anything that he threw the knife at. These individuals they destroyed in the same mamer that they overcame the basket-woman, by coaxing them to lend their magic property, and then slaying the owners with their own weapons. On each occasion, the boys retained the charmed articles for their future use.

When all this was done, the old mother called her boys and told them there was but one more dangerous being that they had to guard therselves against. She said, "He lives in the sky, where you can not get at him; but he can hurt you, for his arm is so long that it reaches from the heavens to the eath. His name is Long Arm." "Very well," said the boys, "we will beware of him." One morning, soon after receiving this advice, they went out very early to hunt, but could find nothing to kill. They walked and ran many miles, until late in the day, when they became very tired and lay down to sleep on the prairie. As was their custom, they stuck their medicine-arrows in the ground, close beside them. The arrows possessed such a cham that if any danger threatened the boys they would fall to waken them. While the brothers lay asleep, Long Arm looked down from the clouds, and, beholding them, stretched his great arm down toward them. As the arm descended, the arrows fell hard upon the boys, but the latter were so tired and sleepy that they did not waken, and Long Arm grasped Atutish and bore him to the sky. In a little while, Mahash woke up and discovered, to his horror, that the warning arrows had fallen and that his brother was gone. He looked round carefully on the prairie for the departing tracks of his brother or for the tracks of the man or beast that had captured him, but in vain. When at his wit's end, and almost in despair, he chanced to glance toward the sky, and there, on the face of a high, white summer cloud, he saw the doubled track of Long Arm, where he came near the earth and went back. Mahash laid down his bow and arrow and other accouterments, retaining only his medicine-knife, which he concealed in his shirt. He next stuck his magic arrows into the
gromed and got on top of them, and then he cmouched low, strained every musele, and sprong upward with all his might. He jumped high emough to catch hold of the raged edge of the cloud. From that he serfumbled higher until he at last grot on Lomg Arm's trail, which he followed. For fear of recognition, he wished himself smaller, and, beeoming a little, toddling child, moved on mutil he eame to a great erowd, moving in one direction, with much talk and excitement. He ran up to an old woman who walked a little apart, and asked her what was the matter: She informed him that they had, just eaptured one of the childrein of the new race which was growing on the carth-a boy who had destroved many favored genii, and that the were about to kill and bum him. "Grambmother," said Mahash, "I would like to see this, but I am too little to walk there. Will you carry me?" she took him on her back and brought him to the place where the erowd had gathered. There he satw his brother tied to a stake, and a number of people dancing around him. He thought that if he could only reach the post mohserved and touch the eords with his medi-cine-kuife, he could release his brother: but for some time he was puazled how to do it. At length he slid down from the old womans back, and wished that for a little while he might turn to an ant. He became one, and, asesuch, crawled through the feet of the crowd and up to the fosst, where he cut the cords that bomed Atutish. When the latter was free, Mahash resumed his proper shape, and they both ram as hard as they could for the edge of the clouds. The crowd pursued them; but, as each formost romer approached, Mahash threw his knite and disabled him. At last, Long Arm started after the brothers, ruming very fast. As he came within his arm's length of them, he reached out to grasp one of them. As he did so. Mahash again threw his knife, and severed the great arm from the shoulder. The boys got back saffely to the earth. Then, having ridded themselves of all their enemies, the $y$ lived in peace and in time they moved away from that locality:

Sibo. Divisions of time-Many writers represent that sarage Indian tribes divide the year into twelve periods corre-
sponding to our months, and that each month is named from some meteorological occurrence or phase of organic creation ohservable at the time. Among others, Maximilian presents us with a list of twelve months,*-"The month of the seven cold days", "The pairing month"; "The month of weak eyes", etc. LIe introduces this list in one of his chapters descriptive of the Mandaus. He does not say it is their list of months. He publishes it without comment; and yet it is presented in such a way as to lead the reader to suppose that it is the regular and original Mandan calendar. Other authors present lists of Indian months in much the same way. $\Lambda s$ the results of my own observations, I should say that the Mandans and Minetareesfe generally aware that there are more than twelve lunations in a year, that they as yet know nothing of our manner of dividing the year, and that, although when speaking of "moons", they often comect them with natural phenomena, they have no formal names for the lunar periods. I think the same might be said of other tribes who are equally wild.

The Hidatsa recognize the lapse of time by days, by lunar periods, and by years. They also recognize it by the regular recurrence of various natural phenomena, such as the first formation of ice in the fall, the breaking up of the Missouri in the spring, the melting of the snow-drifts, the coming of the wild geese from the south, the ripening of various fruits, etc. A common way of noting time, a few years ago, was by the development of the buffalo calf in utero. $A$ period thus marked by a natural occurrence, be it long or short, is called by them the kadu, season, time, of such an occurrence. Some long seasons include shorter seasons; thus they speak of the season of strawberries, the season of service-berries, etc., as occurring within the season of warm weather. They speak of the seasons of cold weather, or of snow (tsidie, mada), of warm weather (ade), and of death, or decay (mata), which we consider as agreeing with our seasons of winter, summer, and fall; but they do not regularly allot a certain number of moons to each of these seasons. Should you ask an interpreter who knew the European calendar what the "Indian names of the

[^23]months" were, he would probably give you names of a dozen of these periods, or natural seasons, as we might call them, corresponding in time to our months. In a few years, when these Indians shall know more of our system of noting time than they now do, they will devise and adopt regular Hidatsa names for the months of our calendar.

Other facts concerning their cognizance of time may be learned from Paragraphs 256 and 257 of the Grammar, and by referring in the Dictionary to the following words, which are names of different parts of the astronomical day:-atade, ata, kiduhakute, midiatede, midiate, midiatedu, midiate-odaksipe, midimapedupahide, midimapedupahi, midimapedupahi-dakamidi, midiimahpide, midiimahpi, opade, opa, oktside oktsi, oktsidu, mape and maku.

## PHILOLOGY.

## PHILOLOGY.

§. Classification of the Hidatsa language.-The language of the Mimetarees has been classified as belonging to the linguistic group, called the Dakota group, and very properly so called, not becanse there is any evidence that the present Dakota tongue is the parent language of the group or the most direct representative of an archaic parent language, but because it is the most extensively spoken, and the most thoroughly and intelligently studied language of the group.
§II. Relations of Dakota to Hidatsa.-The Hidatsa language resembles the Dakota in many respects; and a large list might be made of words which are the same in both languages, if we allow for the interchangeability of certain lingual and labial sounds in the Hilatsa, to be described hereafter. The following are examples:-hota, gray; i, mouth; ista, eye; itopa, fourth; ma, I; mini or midi, water; nita or dita, thine; nopa or dopa, two; te, die; topa, four; besides particles, such as i, denoting the instrument, to, interrogative, etc.

There are many more words in each language which very closely resemble their synonymes, or approximate synonymes, in the other; and several which in both languages are perfect homonymes and imperfect synonymes. These statements are illustrated in the following list:-

| (Dakota.*) | (midatsa.) |
| :---: | :---: |
| dote, | doti, throat ; |
| hi, | hi, tooth, edge, point ; |
| hir, | hi', feuthers, fur, hair; |
| lia, | hia, rough; |
| inkpa,d | icpu, point; |
| inonpa, | inopa, second; |
| ité, | íte, face ; |
| mita, | mata, my, mine; |
| mitawa, | matawae, mine; |

(Dакота.)
nag̀i,
3, to shoot and hit,
oti, ti, tipi,
ożu,
po,
pte,
pute,
supe,
to,
u,
wa,
wasićur,
wata,
win,
(HIDATSA.)
dahi or uali, ghost;
u , to wound;
ati, house ;
oze, to plant ;
pue, foggy ;
mité, cow;
apute, upper lip ;
sipe, bowels ;
tohi, blue:
hu, to come;
ma' or wa', snow ;
masii or wasi, uhite man;
mati or wati, boat ;
mia or wia, uoman.

In a number of words which are nearly or quite synonymous in both languages, we find little difference in sound, except that the Dakota of (English chi in chain) stands in place of the Hidatsa d; as in these examples:-
(Daкотa.)
ćag̀u,
ćancan,
ćante,
ćaże,
cekpa,
ćeżi,
ćute, side ;
ćahaliake, vertebre ;
mićun,
nićun,
(HIDATSA.)
dako, lungs;
dada, to tremble :
da'ta, heart;
dazi, name;
delpa, navel;
dezi, tongue ;
duta, ribs;
dahalia, vertebral processes;
madu, my elder sister ;
didu, or nidú, thy elder sister.

More commonly, however, we find the difference to consist chiefly in the Dakota words having $y$, where the Hidatsa words have d. As the Dakota causative prefixes ya and yu are represented in the Hidatsa by da and du, many verbs may be placed under this head. In the following words, and in many others, we have instances of this difference :-
(Dакота.)
ya,
ya, to go,
yaga, to peel with the teeth, rakdecia, to tear with the mouth, yakepa, to drink ap, as water, yamni,
(HIDATSA.)
da, thou;
da, go thou;
dahade, to shell with the teeth;
dahesia, to tear with the teeth;
dakupi, to drink dry;
dami, three;
(DAKOTA.)
yuba, to lift, yuhileća, to tear in pieces, etc., vulipa, to throw down, etc., yuhuga, to break a hole in, etc., yuksa, to break off, etc., yuska, to loosen; to untie, yusikića, to press, squeeze, yuta, yuza,
(hidatsa.)
duhe, to lift, duha, lift thou.; duhesa, to tear in any way;
duhpi, to take down off of; duhohi, to break across ; dutsaki, to pull apart ; dusika, to open, as a box; dutsikti, to strangle ; duti, to eat ; dutsi, take hold of.

In some' of the above verbs it will be seen that the roots are much alike in both languages. Many of the quoted definitions embody similar ideas, although they are differently worded. It is well to remind the reader that even in the Dakota, in verbs beginning with ya and yu , the y is changed to d in the conjugation. (See Riggs's Dakota Grammar, § 50.)

In some cases, we find that the Dakotas use s where the Hidatsa usually use ts; but on this point usage is somewhat divided in the Hidatsa. (See Grammar, I 17.)

| (Dakota.) | (Hida'isa.) | (ENGLISH.) |
| :--- | :--- | :--- |
| haska; | hatski, | long; |
| sibe, | tsi (itsi), | foot; |
| sinte, | tsite, | tail; |
| sui, | tsidia, | cold; |
| nisunka; | ditsuka, nitsuka, | your younger brother. |

And some other words might be quoted to exemplify this difference.

In the words naği and dahi, cağu and daho, yağa and dahada, quoted above, and in others, the $\dot{g}$ of Dakota takes the place of hin Hidatsa.

Although, as has been shown, there are many words alike or nearly alike in these two languages, allowance being made for certain uniform sound-changes, it must be remembered that a large majority of the Dakota words have no resemblance to anything in the Hidatsa. Reduplication in verbs, which is a prominent feature of the Dakota tongue, I have not observed to occur in the Hidatsa except in one word, ikaka.
§ III. Relations of Crow to Hidatsa. - The Hidatsa bears a greater resemblance to the Crow than to any other language. Some speak of one as being but a dialect of the
other; and so they might be regarded if we use the word dialect in a very wide sense. The Crow has its own dialects, differing. to no great extent from one another. My opportunities for: studying this language, particularly the dialects of the Mountain Crows, have been very limited. A vocabulary which I prepared of the language as spoken by the River Crows has been destroyed. I cannot, therefore, give a very full comparison of the Crow and Hidatsa. The Crow words presented below are from Dr. Hayden's Ethnography and Philology, which contains the most complete and accurate Crow vocabulary extant.

A comparison of Hayden's Crow vocabulary with this Dictionary shows that many words of similar meaning are spelled alike in both, as adaka, you see ; amaka, I see; apaka, a mosquito; da, go; di, you; ika, he sees; malia, a spiring; mape, day ; ope, tobacco ; ua, a wife, etc.; and that many other synonyms are nearly alike in spelling, as in the following examples, in each of which the Crow word precedes the Hidatsa:ame, ama, earth ; apake, apahi, cloud; ape, apa, leaf; aze, azi, river ; daho, daho, lungs ; dahpitse, dahpitsi, lear ; deze, dezi, tongue; due, duhi, lift; ho, hu, come; hoce, hutsi, wind; ide, idi, blood; mia, mi', stone ; mie, mia, woman ; mihahie, mihaka, duck; oki, uki, clay ; pohe, puhi, foam. .

The oft-quoted consonants (Grammar, Iq' 19-23), which are interchangeable in the Hidatsa, are also interchangeable in the Crow, but perhaps in a less degree in the latter than in the former. Of the labial series, the Crows seem to prefer $b$ more than the Hidatsa; and of the linguodental series they use $r$ and $n$ to a greater extent than we find it used by the latter tribe. By taking this permutation of consonants into consideration, we find many words alike or nearly alike, both in Crow and Hidatsa, which would otherwise seem different. Examples:-
(CROW.)
amahabe, are, are, arek, apana, apani,

| (HIDATSA.) | (ENGLISH.) |
| :--- | :--- |
| amahami, | mountain; |
| ade, | warm; |
| ade, adets, | ache, it aches : |
| apadi, | to grow: |
| apadi, | porcupine; |

(CROW.)
atsimina, barue, batse, watsi, batsihua, batsua, batsua, batebue,
bi, bidia, bide, birake, bitskipe, bua, ibek, iruke, kana, mana, mina, mine, nake, nam, namo, nomina, nop,
(HIDATSA.) . (ENGLISH.)
atsimidi, milk;
maduhi, I lift;
matse, watse, man;
matsikoa, sugar;
matsu, , cherry;
matsua, sinew ;
maitamua, bell;
$\mathrm{mi}, \mathrm{bi}, \quad$ - $\quad$, ;
mide, bide, •............
mida, fire:-
midaha, kettle ;
mitskapa, . rose ;
mua, bua, fish;
imia, to cry;
iniuka or iruka, meat;
kada, kara, run away ;
mada, uinter:
mida, goose :
midi, - water;
daka, child;
dami, nawi, three;
damn, namu, ; deep;
dumidi, twist, wind;
dopa, nopa,
tico.

The Crows commonly use a sibilant, as $s, s k$, or $z$, where the Hidatsa use some other dental, as $t$. There are many Crow words which, except in this respect, differ but slightly or not at all from their Hidatsa synonymes, as the subjoined list will.show:(cRow.)
-ashe,
ashu, bas, base, basape,
baze, -bishe, dusä, isa, ise, same, sapa, sape, sheëk, shipie,

| (hidatsa.) | (ENGLISH.) |
| :---: | :---: |
| ati, | house; |
| atin, | head; |
| máta, | mine; |
| matá, | autumn ; |
| matapa, | - my moccasin.; |
| mati, | -boat: |
| mite, bite, | buffílo; |
| duta, | rib; |
| ictia, | large |
| ite | face; |
| 1ami, tuămi, | how many; |
| tapa, | what; |
| tape, | uho; |
| tets, | dead; |
| tipia, | mud; |

(CROW.)
sho, shorak, shop,

(ENGLISH.)
iellere; where, etc.; four.
In a few cases, the above rule seems to be reversed, as in buata, motsa, coyote, wolf, dakaka, tsakaka, birl; tameh, tsame, hot; azkate, azikaza, little river; miekate, miakaza, young ivoman; tsecte, tisesia, wolf; atanua, asiadi, to steal. In these examples, the Crow words stand first.

The Crow has an oral period as well as the Hidatsa; in the former it is $k$, in the latter ts. (See Grammar, II 33,168 .) As these oral periods are much used, they constitute an important element in the difference in tone of the two languages.

The Crows sometimes use swhere the Hidatsa use $\dot{\mathrm{s}}$ or ts, and é (English ch in chuin) where the Hidatsa use k. There are many other instances of changes of sound in these languages which I have not now the means of illustrating sufficiently.
§ IV. Some difficulties in the study of the Hidatsa.The interchangeable labial and linguo-dental sounds are very perplexing features of this language. The sounds of $m, i$, and $w$ are interchangeable; so also are those of $d, l, n$, and $r$. These permutations exist in other Indian tongues, though in few, I presume, to the extent to which they exist in this tongue. In the Dakota language, for instance, changes in these sounds are said to mark difference in dialect, while within each dialect the labiats and linguals are not interchanged to an extent sufficient to excité remark.

The present. Hidatsa tribe represents several bands formerly distinct; and the present language of this people, no doubt, represents nearly as many ancient dialects, the distinctive features of which cannot easily be determined at this day. The consolidation of these diverse dialects has had, perhaps, some share in producing this confusion of sounds; but, at most, it has had a very limited share. I believe that these Indians do not well appreciate the differences between these allied sounds as they fall on their ears, and consequently make no effort to distinguish them with their tongues. I have often,
for experiment, taken a word which contained two or more of these sounds, and pronounced it, in the course of conversation, with every possible change, and without being once misunderstood. Thus, the word madakoe, my friend, my comrade, which contains but one labial and one dental sound, may be pronounced in at least twelve different ways,-which we have characters to represent, as, madakoe, marakoe, manakoe, malakoe, badakoe, barakoe, banakoe, balakè, wadakoe, warakoe, wanakoe, ane walakoc,-without fear of misapprehension, although they usually pronounce it malakoe or barakoe. Furthermore, when you hear an Indian uttering a sound belonging to one of these two series, you are often at a loss to select a character to express it. His labial will often sound as much like $m$ as like $b$, or as much like $w$ as, $m$. Among linguo-dental sounds, it is often impossible, even after several repetitions of a word by an Indiạn speakeir, to decide between $d$ and $r$, or between $l l, l$, and $n$, as the best suited to represent the sound that smites your ear. In other words, there are labial, lingual, and dental sounds which we have not yet learned to distinguish, and which we have no characters to represent. I marvel not that old Charbonneau should have "candidly confessed" to Prince Maximilian, after a residence of thirty-seven years among the Minnetarees, that he could never learn to pronounce their language correctly.*

In the Grammar (1119-23), where this subject is further discussect, it, will be seen that I have selected a standard letter to represent each scries, - $m$ for the labial, and $d$ for the lingual or linguo-dental. When I first commenced to form my vocabulary, I adopted a different course, and put down each word in all the forms in which I heard it; but, in time, I discovered that I might fill a large volume with these repeated words, and, in the end, only confuse the student, obscure the truth, and misrepresent the language.

When I first obtained some insight into the extent to which these permutations existed, I could scarcely trust my senses, and often feared that I labored under some subjective difficulties. At other times, when, in the mouth of the same speaker, and almost in the same breath, I would hear a well-

[^24]known word suddenly change its form, I would puzzle mysiself -by supposing that the change took place in accordance with some inscrutable grammatical rule. But when I came into the possession of vocabularies collected by others, I became better satisfied with the results of my own observations. In the compared vocabularies presented below, it will be seen how differently each author spells one and the sanie word, and that their differences arise chiefly from the transmutability of the sounds to which I have referred. In the first column (Say), the vowels have the English sound; and, in the second column (Hayden), they have the continental sound.

Lest some should urge that these variations in orthography might be sufficiently accounted for by taking into considera-tion the changés which time may have produced in the lan-guage-for the quoted authors wrote at different dates-or by supposing the vocabularies to have been written from the dictation of men who spoke different dialects, I must call atten - $_{\text {d }}$ tion to the fact that there are many instances where one word, in different connections, is spelled with different interchangeable consonants by the same author. (In the following examples, the Hidatsa words in parentheses are forms given in the accompanying Dictionary.) Thus, Say presents us with two different forms of duetsa or luetsa, one, in "nowassa-pa"' (duetsapi), nine, and "ape-lemoisso" (ahpiduetsa), eleven; with two forms of daka, child, a diminutive ending, in "sacanga-nonga" (tsakaka-daká), egg, and "weepsa-langa" (miiptsa-daka), tomahawk; with two forms of masi, white man, in "French, boshe", and "Spaniard, wasshe-omantiqua" (the latter is doubtlessly intended for masi umatikoa, white men at the south-see note 15, page 82); and with two forms of dohpaka, people, in "Snake Indians, mabucsho-rochpanga" (mapoksia, dohpaka), and "Les Noire Indians; ateshupesha-lohpanga" (ati, sipisa, dohpaka). In Hayden's vocabulary, we find two different spellings of matse, man, in "bautse-itse" (matse-etsi), chief, and "makariste-matse" (makadista-matse), boy; two spellings of adui, sour, pungent, etc., in "adawi", sour, and bidi-arawi (midi-adui), whisky; and two spellings of midi, sun, in "midi-ewukpi" (midi-imahpi), sunset, and "bidi-waparepehe" (midi-mapedupahi or bidiwaperupahi); midday, noon. I regret that, in preparing these remarks, I have not had access to a copy of Maximilian's original work, which contains a vocabulary of the Minnetaree language ; but I have no doubt that instances of this kind might be drawn from it.

Besides making the various labial interchanges mentioned above, they sometimes, but yery rarly, use $b$ for $p$; and occasionally, too they combine the sounds of $b$ and $w$, thus ama may be pronounced abwa. A third series of interchangeable consonants might be mentioned, namely, a sibilant series. To some extent they confuse the sounds of $s, \dot{s}$ (English $s h$ in $s^{2} u n$ ),
and ts (see Grammar, III 17,18), and illustrations of this confusion might be taken from the vocabularies I have quoted; but these sibilant interchanges do not occwr to such a marked extent as do the labial and lingual changes, and, when heard, théry are not so perplexing to the English student.
§V. Sonant character.-The Hidatsa language is sonorous and pleasing to the ear; but I consider it less musical than the Dakota. One of the chief reasons for the difference in tone between the Hidatsa and Bakota languages, I believe to be the almost total absence, in the former, of the nasal-vowel ending ( y$)$ so common in the latter (see Grammar, $\mathbb{I} \mathbb{I} 4,14$ ). The aspiration of the vowel in the Hidatsa takes the place of the nasal ending to a great extent. Another reason for difference of tone is that the Hidatsa shorten and obscure their vowels to a greater extent than the Dakotas. The Hidatsa is spoken with much inflection, and the vowels are often increased in quantity to express different shades of meaning.

If a-party of Indians should be seated in an adjoining room, or at a short distance from the listener, conversing, where the voices can be heard, but not a syllable distinguished, the accustomed ear has little difficulty, in discerning which one of the many languages of the plains the Indians are speaking. Each language has its owi peculiar sonant characuer. It is more difficult to distinguish by this character the Hidătsa from the Crow than from the Dakota or Mandan, and more difficult to distinguish it from the latter than from the former of these two. The tones of these four languages belonging to the Dakota group are somewhat alike ; so much alike that a person possessing but limited acquaintance with them might mistake ${ }^{\text {s }}$ one for another, hearing it at a distance as I. have described. But the contrast in tone between these tongues and the neighboring, but alien, Arickaree is well marked, and any quickeared person might learn at once to distinguish it from them.
§VI. Chavges in course of time.-I have said that the three languages spoken in the village at Fort Berthold show no perceptible inclination to coalesce (Ethnography, § 13). I have said this, well knowing that the statement was somewhat at
variance with the opinions of earlier observers.* The few Mandan and Minnetaree words given by Lewis and Clarke in proper names show, as far as they go, that the languages have not materially changed since 1804 . There áre now, and doubtlessly there were in 1804 , many points; of correspondence between the Mandan and Hidatsa languages; but there are none which may not be more easily explained by supposing the two languages to have sprung from a common source than by supposing them to have been reciprocally changed by contact. I never could discover that the Hidatsa and Mandan spoken by the rising generation resembled one another more than did those languages as spoken by the old men. I do not claim that the long and intimate intercourse which has existed between these two tribes has produced no approximation or coalescence of their languages. It is but reasonable to suppose that the contrary is the case; but I could never get an Indian to point out to me, nor could I ever otherwise discover, a satisfactory instance of such coalescence.

Throughout the past hundred years, the Mandans have had ass much intercourse with the Arickarees as with the Minnetarees; yet I never could trace any resemblance between the modern Mandan and Arickaree tongues. As far as I have observed them, there is not a single word alike in both. It is not likely that intercourse has produĉed a noteworthy approximation of languages in one case and none whatever in the other. There is no doubt that the Hidatsa language has changed in the course of time; but the change has resulted chiefly from causes other than the influence of the Mandan tongue. Some of the old men occasionally converse among themselves in terms which younger members of the tribe do not understand, and, when asked what they mean, they, say they are trying to speak the old language.

[^25]

## HIDATSA GRAMMAR.

## HIDATSA GRAMMAR.-.

## I. LETTERS.

1. Trenty letters, exclusive of the apostrophe, are used in this work to express in writing the Hidatsa language. Fifteen of the letters are essential, and fire non-essential.

## Essential Letters.

2. Of the essential letters, five are vowels, and ten, consonants.
3. The vowels are $\boldsymbol{a} \mathbf{e} \mathbf{e}, \mathbf{i}, \mathbf{\infty}$, u.
a has three sounds; -a (unmarked) has the sound of English a in father; $\breve{a}$ (short) has the sound of English $a$ in what; a (obscure) has the sound of short $\breve{u}$ in tun.
e has three sounds;-e (unmarked) has the sound of English ai in air; $\check{e}$ (short) has the sound of English $e$ in ten; $\bar{e}$ (long) has the English sound of $e$ in they.
i has two sounds;-i (unmarked) has the sound of English $i$ in marine; $\breve{1}$ (short) has the sound of English $i$ in tin.
© has the sound of English $o$ in tone.
$u$ has the sound of English $u$ in rude.
4. The apostrophe (') is placed after rowels to denote a peculiar force or aspiration, not initial, in pronouncing them, which slightly modifies the sound.
5. The consonants are $\mathbf{c}, \mathbf{d}, \mathbf{h}, \mathbf{h}, \mathbf{k}, \mathbf{m}, \mathbf{p}, \mathbf{s}, \dot{\mathbf{s}}, \mathbf{t}, \mathbf{z}$.
c has the sound of German ch in ich.
d has the common English sound before consonants; but before vowels it hass a slight sound of English th in this. d is interchangeable with $n, l$, and $r$.
h has the sound of English $h$ in hat.
li represents the guttural surd no longer in use in English; it is like the German ch in machen, but a somewhat deeper sound.
L: has the English sound, as in took.
m has the ordinary English sound, assin man; it is interchangeable with $b$ and $u$.
p has the ordinary English sound, as in pan.
$s$ has the sound of English $s$ in sun.
S has the sound of English $s h$ in shun.
$t$ has, before consonants, the ordinary English sound, as in tin; but before vowels it has a slight sound of English th in thin.
$z$ has the sound of English $z$ in azure.

## Non-essential Letters.

6. The non-essential letters are five of the seven interchangeable consonants of the language; they are $b, l, n, r$, and $w$; they have all the ordinary English sounds. The language might be written or spoken without them. $b$ and $w$ are interchangeable with the essential letter $m$, and $1, n$, and $r$ with the essential letter d.

## Remarks.

7. As no great advantage could be seen in retaining two sets of characters, capitals are, here, entirely dispensed with in writing the Indian words; but, in the Ethnography, where a Hidatsa proper name is used, temporarily, as an English word, the initial letter is a capital. Proper names are easily recognized by the termination $\dot{\text { s. }}$.
8. The following letters of the English, it will be seen, are not included in this alphabet: $f, g, j, q, v, x$, and $y$. The sounds of $f, g,{ }^{*}$ and $v$ are not in the langaage. It is a difficult matter for these Indians, or any one else, to pronounce $i$ followed by a vowel (and many other vowel combinations) without an intervening consonantal sound of $y$; elsewhere in their tongue this sound is not heard, and a character to represent it. would be useless. $k$ is the equivalent of $q$. English $j$ might be represented by dz, and $x$ by, ks; but neither of these combinations has been found in the Hidatsa.
9. Some of the tribe occasionally pronounce the first sound of a like English $a$ in hall, and make other slight variations of the vowel sounds, which, however, seem to be only individual peculiarities of speech, or modifications unavoidably produced by preceding or succeeding consonants. It is believed that all the standard variations are duly represented.
10. Often before a final ts, and more rarely before a final $\mathbf{k}$ or $\dot{s}$, long vowels may be shortened, e changed to 1 , and a to a. ( $1 \uparrow$ 30-33).
"11. It was originally thought advisable to include a short $\breve{u}$ in the alphabet, or to introduce a new character to represent the sound of English $u$ in tub; but it is now believed that wherever this sound constantly occurs it is as a modification of a.
11. o is never shortened, as in the English word not; but a sound much like short $\check{\sigma}$ is heard in the modification of a, which is represented thus, ă.
12. The sounds of English $u$ in pure and oi in oil, are not found in this language; nor is the sound of ou in our ever used except occasionally in the word ho or hao.
13. The nasal modification of vowels, so common in the Bakota, does not properly belong to the Hidatsa, although a few of the tribe use it with aspirated a' in the words a'tsi, idáti, iba'taha, and haka'ta.

[^26]15. The sound represented by coccurs only after i, and in accented syllables which are not terminal.
16. The English sound of $c h$ in chain is represented by ti.
17. In words beginning with $\cdot t$, the $t$ is occasionally dropped by women and young people, who thus say sakits for tsakits, sitska for tsitska, etc.; but, according to the best usage of the language, the plain sibilant is never found alonewith a vowel and never begins a syllable.
18. Sometimes tsi is used where ts is to be regarded as the standard; thus itsuasiuka, a horse, may be pronounced itsiuasjuka.
19. In acquiring the language, and making, a correct analysis of its words, ene of the greatest difficulties to be encountered is the interchangeability of certain consonants.
20. There are two important series of interchangeable consonants; a labial series consisting of $m, b$, and $w$, and a dental, or linguo dental, series consisting of $d, l, n$, and $r$. The constitnent sounds of each series are subject to interchanges so arbitrary and frequent that no definite rales can be given for them. The following remarks, however, will be found to apply: ( $T \| 21,22$ ).
21. $m$ is regarded as the standard letter of the labial series; it is the one most commonly used by those who are considered the best speakers. of the langaiage. Before the vowel $i, b$ is as commonly used as in in initial syllables, and w more commonly in median and terminal syllables.
22. $d$ is the standard of the dental series. When $r$ is substituted for d, it is more commonly done by men than by women, while the latter appear to have a greater preference for $l$ and $n$ than the former. A desire for euphony seems sometimes to determine speakers in their choice.
23. Whenerer, in any word, a non-essential letter is heard as often, or nearly as often, as its corresponding essential, the fact is shown in the Dictionary in one of three ways: 1st, by putting the modified syllable in brackets and indicating its position in the word by dashes, thus "liamua [-bu-]" and "liami [-wi]" denote that these words are very often pronounced liabua and liawi; 2d, by placing the entire modified word in brackets; and, 3d, by giving the modified word in its alphabetical order, referring to the same word with the standard spelling. Where a non-essential letter is heard oftener than the standard letter, the fact is shown by prefixing plus [ + ] in the brackets, thus, "dopa [ + mopa].

## II. SYLLABLES.

24. The words are divided into syllables in such a manner as to make the etymology as clear as possible. It is desigued that each syllable shall represent one complete factor of a word, or, in case of contraction, more than one, but not the fragments of these factors joined together in an arbitrary way to simplify the task to the tongue and ear of the English-speaking student.
25. A very large proportion of the syllables end with vowels. The more common cases in which they end with consonants are given below. (Tๆ 26-33).
26. Initial and median syllables may end with c or k. ( $\|\| 27,28$ ).
27. Syllables ending in i occasionally take $c$ after $i$ when another syllable is suffixed ( $\boldsymbol{\|} 15$ ); this nost frequently happens when the added syllable begins with $k$, $p$, or $t$; thus we have micki from mi, and halipicti from halipi.
28. In the prefixes ak, dăk, and mạk, the $k$ is seldom transferred to the following syllable.
29. Terminal syllables (and consequently words) may end in $k, t, \dot{s}$,

30. A syllable may be closed by $\mathrm{k}: 1 \mathrm{st}$, when verbs ending in ki form the imperative by dropping $i$, as amaki is changed to amati; 2d, when ak, duk, and tok are ased as suffixes; 3d, when ak, dätk, or mạk stand alone; and, 4th, in the words dak, tok, and tsakak.
31. A syllable may be closed by $t$, when a verb ending in ti forms its imperative by dropping $i$, as kipsítiti is changed to kipsít.
32. Proper names commonly end with is.
33. A word which closes a sentence, or stands alone forming a sentence by, itself, commonly terminates in ts, if not with $k$, $t$, or $\dot{\mathrm{s}}$. ts answers the purpose of a rocal period in most cases. (TI 168):
34. Syllables are frequently contracted by the elision of their vowels.

3 $\overline{\text { a }}$. A contracted syllable, when not terminal, belongs to the succeeding syllable.
36. A syllable consisting of a single rowel, when following immediately an accented vowel, or standing immediately between two other v.owels, may sometimes be omitted.

## III. WORDS.

37. Words will be considered under the usual eight heads (articles excluded) of nouns, pronouns, verbs, adjectives, adverbs, prepositions, conjunctions, and interjections.

## Nouns.

38. For conrenience of description, nouns may be divided into two c’asses, primitive and derivative.

## Primitive Nouns.

39. Primitive nouns are such as, with our present knowledge of the language, we are unable to analyze either in whole or in part; as ma', snow; 'i', mouth; ista, eye, etc.
40. Nearly all the monosyllabic nouns are primitive, as are also the names of many things which are longest known to the people.
41. Mauy of the primitive nouns of the Hidatsa have, in kindred languages, their counterparts, which they closely resemble in sense and sound.

## Derivative Nouns.

42. Derivative nouns are such as we are able to analyze in whole or n part.
43. Derivative nouns may be formed from words of any class, but chiefly from verbs, adjectives, and other nouns, either primitive or derived, by certain prefixes and suffixes, the commonest of which are $i$, $\mathrm{adu}, \mathrm{o}, \mathrm{aku}, \mathrm{ma}$, the possessive pronouns, and the diminutives dáka and káza.
44. i, prefixed to transitive verbs, forms nouns denoting the instrument or material with which the action is performed; thus, ita, an arrow, is from ta, to kill, and ikipạisi, a towel, from kipạkisi, to rub back and forth. Nouns formed in this way are commonly prefixed by other nouns (denoting the recipient of the action), by the prefix ma, or by both; thus, maikipạkisig, iteikipạkisii, and maiteikipạkisi are more commonly used than ikipakisi, although all these words denote the same thing. Nouns of the material are seldom heard without such prefixes; thus, maikikak, ithread (from kikaki, to sew), and maitēidusiuki, soap (from ite, the face, and dusuki, to wash), are not feard in the simple forms of ikikaki and idusiuki.
45. adu (an adverb of time and place when used alone) is employed as a prefix to form nouns under the following circumstances: ( $\| \uparrow 46-48$ ).
46. adu, prefixed to verbs, forms nouns denoting the part on which the action is performed; as, adukikaki, a seam, from kikaki, to sewo. Here ma, or the name of the thing to which the part belongs, precedes adu.
47. adu is also prefixed to verbs to form nouns, which signify the place where an action is performed; thus, from kidusia, to put avoay carefully, comes adukiditáa, a place of deposit. In this case ma, or the noun denoting the object of the action, frequently precedes adu; e.g., maadukidusia, a place where anything is put away or stored, matạkiadukidusia, a cupboard.
48. adu is prefixed to intransitive verbs and adjectives to denote one or more of a kind or class which the verbs or adjectives describe; thus, from idฝ̊kisa, left-handed, comes aduidakisa, a left-handed person, and from kiadetsi, brave, skillful, etc., comes adukiadetsi, one of the brave or skilled. In this case, ma usually precedes ada.
49. o, prefixed to a verb, may form therewith the name of the action; ias in odídi, walking, gait, from dídi, to walk.
50. $o$ is used in the same way as adu, to denote the place where, or the part whereon, an action is performed; as in odútsi, a mine, from dútse, to obtain.
51. aku (a relative pronoun when used alone), prefixed to a transitive verb, forms a noun denoting the agent or performer of the act, and is nearly or quite synonymous with the English suffixes er and or. In this case, aku is commonly preceded by the name of the object; thus,
from masipisa, grapes, and dùti, to eat, we have masipisiaakuduti, grapeeater, $i$. e., the cedar-bird, or Ampelis cedrorum.
52. aku is sometimes used in the same sense as adu, in Par. 48. In this sense, it is common before the adjectives denoting color; as in akutohi, beads, from tohi, .llue, and akusipisa, llack cloth, from siipiṡa, black.
53. ma (to be distinguished from the pronoun ma) is a prefix of very extended use in the language. With some nouns, however, it is rarely used, while to a different class it is indispensable. It may be regarded as an indefinite particle, or as a universal noun or pronoun, qualifled by the words to which it is prefixed. Some of the more common instances of its use are here given.
54. ma is prefixed to nouns of the instrument beginning with $i$, as in Paragraph 44, when the object on which the instrument is employed is not designated. When, for precision of definition, the object is namedy its name takes the place of ma. When the name of the material of which the instrument is made is included, it commonly precedes ma; thus, from maidutsada, a sled, comes mida-maidutsada, a wooden sled.
55. ma is prefixed to adjectives to form the names of articles which possess in a marked degree attributes to which the adjectives refer; thus, from tsikoa, sweet, we have matsikoa, sugar.
56. ma is prefixed to verbs to form the names of objects on which the action denoted by the verb has been performed; thus, from kidutskisi, to wash out, comes makidutskisi, a lot of washed clothes.
57. Many words beginning with ma drop this prefix when incorporated with the possessive pronouns.
58. The possessive pronouns, (m), ma, mata, (d), di, dita, i, and ita, are placed before the name of the thing possessed; then, together, they are pronounced as one word, and the pronoun regarded as a prefix.
59. In many cases, where possessive pronouns are prefixed, the noun denoting the thing poscessed loses its first syllable, has its accent removed, or is otherwise much changed ; as in itápa, his moccasins, from hupa, moccasins; itasi, his robe, from masii, a robe.
60. Some words are rarely, others never,* heard without a prefixed possessive pronoun ; as, itadsi, leggings, his leggings ; iṡami, a father's sister ; itsuka, a man's younger brother.
61. But few words, formed as shown only in Par. 58, are given in the Dictionary, while all known words in the $3 d$ person, formed as in Pars. 59 and 60, are laid down. In the cases of such words as are referred to in Par. 60, as never being heard without a pronoun, the noun, with the yronoun omitted, is given sometimes as a hypothetical word.

* This construction is only found with names of things, which necessarily belong to some one, and cannot otherwise exist (as blood relations), or are usually so conceived (as certain articles of personal property), and only to a limited number of such names.

## Diminutives.

62. daka, which, when used alone, means the offspring or young of anything, is emplosed as a diminutive suffix of general application. Ex.-idaka, his or its young (the offspring of any individual or species mentioned); dalipitsidaka, a bear's cub, from dalipitsi, a bear ; miiptsidaka, a hatchet, from miiptsi, an ax.
63. kaza is a diminutive suffix, whose use is limited to about twenty words of the language, including proper names. Ex.-masuakaza, a puppy, from maśúka, a dog; miakaza, a young woman, from mia, a woman; amatikaza, the Little Missouri River, from amati, the Missouri.
64. The adjective kadiṡta is also used as a diminutive.

## Compound Nouns.

- 65. There are certain words which may be considered as compound - nouns, because they closely resemble in structure compound nouns in English; although no definite distinction can be made in Hidatsa between compound and other derived nouns, since the so-called prefixes and suffixes are really words-the most of them capable of being used alone.

66. Compound nouns are formed in the various ways described inPars. 44, 46, 47, 54, and 57, and also by simpls placing two or more nouns together or bs joining nouns to verbs, adjectives, and adverbs; e. g., istamidi, Zears, from ista, the eye, and midi, water ; masitadalipitsisui, bacon, from masi, white man, itadalipitsi, nis bear, and súi, fat; istaoze, eye wash, collyrium, from ista, eye, and oze, to pour into ; itahatski, the Dakota Indians, from ita, arrows, and hatski, long; amasitakoamasi, the people of Prince Rupert's Land, from amasitakoa, at the north, and masi, white men.
67. When a componnd noun is formed by simply placing two nouns together, the first word commonly denotes the possessor, the second the thing possessed. ( $\mathbb{1}$ 84).
68. Sometimes verbs, adjectives, and adverbs are used as nouns without undergoing any change of form ; as oze, to pour, a drink; patsatikoa; at the west, the west.

## Properties of Nouns.

## Gender.

69. Gender is distinguished by using, for the masculine and feminine, different words, which may either stand the common gender.
70. matse, man, sikaka, young man, itaka, old man, the terms used for male relations (as itsuka, idisii, etc.), for callings exclusively masculine, and the compounds of these words (as makadista-matse and itakalie), are nouns of the masculine gender, applied to the human species.
71. min, woman, kadulie, old voman, terms used for female relations (as idu, itakisa, etc.), for those employed in labors exclusively feminine; and the compounds of these (such as miakazu, a young romen), are nouns of the feminine gender, applied to the human species.
72. kedapi, bull, when used alone, means a buffilo bull; but as a suffix, either with or without the interposition of adu, it desiguates the male of any of the lower animals.
73. mite, the generic name for buffulo, means also a buffalo cow.
74. mika, a mare, is used as a suffix to denote the females of the lower animals. It follows the specific name, with or without the intervention of adu.
75. When the species has been previously mentioned, or is otherwise understood, the specific name need not be prefixed to kedapi, adukedapi; mika, or adumika.

## Number.

76. Hidatsa nouns suffer no change of form to indicate the difference between singular and plural.
77. Some nouns we know to be singular or plural from their original meaning. or from the sense in which they are used. In other cases, our only means of making a distinction is by the use of numeral adjectives, or such adjectives as ahu, many, etsa, all, kausita, fero, etc.

## Case.

78. In view of their syntactical relations, Hidatsa nouns may be parsed as having the same cases as nouns of other languages; but they are not inflected to indicate case except, doubtfully, in the possessive.
79. Possession is ordinarily shown by the use of the possessive pronouns, which stand before the noun denoting the thing possessed, and are usually considered as prefixed to it.
80. Two kinds or degrees of possession are indicated in the language. One of these may be called intimate, integral, or non transferable possession; such as the possession we have in the parts of our body, in our blood-relations; the possession which anything has in its parts or attri-butes-the words idakoa, his fivend or comrade, and iko'pa, her friend or comrade, are put with this class. The other kind, or degree, is that of acquired or transferable possession; it is the possession we hare in anything which re can acquire, or transfer from one to another.*
81. Intimate or non-transferable possession is shown by the use of the simple possessire pronouns, i , his, her, its, di, your, ma, my, and the contractions, m and d. Ex.-saki, hand, isabi, his or her hand, disaki, your

* The terms here employed for the different classes of possession, as shown by the different kinds of pronouns, are the best which, at pressent, present themselves; but they do not accurately corer all cases.
hand, masaki, my hand; iaka, a man's elder brother, diaka, your elder. brotner, miaka, my elder brother.

82. Transferable possession is shown by the componnd possessipe pronouns, ita, dita, and mata, which are formed by adding the syilable 'ta' to the simple pronouns. Ex.-midaki, a shield, itamidaki, his shield, तitamidaki, your shield, matamidáki, my shield.
83. The noun denoting the possessor is placed before the noun denoting the thing possessed, and, when the former appears in a sentence, only the possessive pronoun of the third person can; of course, be used.
84. Possession may be indicated by simply placing the name of the possessor before that of the thing possessed, withont the use of an intervening pronoup; the two words may be written separately, or as a compound word ( 91966,67 ), if the signification requires it. Some cases of this mode of showing possessionmay be regarded as simply an omission of the pronoun $i$; others, as the use of one noun, in the capacity of ant adjective, to qualify another noun.
85. When the name of the possessor ends with a rowel, the ' $i$ ' of ita may be dropped, in which case the names of possessor and possessed, with the intrrposed 'ta', may be written as a compound word with it vowel or syllable elided, as shown in Pars. 34 and 36. But if we regard tha'ta' as belonging to the noun denoting the possessor, we have as true a possessive case as is made by the English "apostrophe and $s$ ". The possessive particle ta is never used alone as a pretix.
86. The position of a word in a sentence and the conjagation of the verb which follows, usually show whether it is in the nominative or Gjective. Often, too, the case is rendered unmistakable by the meaning of the word and by the context.

## Proper Noins.

87. Proper names, whether of persons, domestic animals, or places, are usually terminated with the consonant $\dot{s}$, if not already closed by another consonantal sound, as $t$ or $k$.
88. st may be regarded as the regular sign of a proper noun. It is well to end any proper name with $\dot{\text { s }}$, where another terminal consonant does not interfere, butsit may be omitted when, in calling a person. we accent the last syllable of his name, when we annex the word azi to the name of a river, and occasionally under other circumstancest
89. $\dot{s}$ is not suffixed to the names of tribes or nations when the whole people are referred to. Perhaps such words are not regarded as proper nouns by this tribe; but if the name of the tribe is used to distinguish one member of it, and is thus employed as a proper name, it takes the terminal s.
90. Words temporarily employed as proper names (as terms of relationship, etc.), may take the terininal s, if there would be danger of ambiguity without it.
91. The name of a person mas consist of a single word; usually a 7

## 98

## HIDATSA- GRAMMAR.

noun; as, tsatsex, Eagle (the spotted eagle), motsasi, Coyote, amaziś, Beans.
92. Personal names are, howerer, more commonly compound woris formed-(1) of twe nouns; as, pedetskiliiś (pedětskia and ilii), Crow.crop, ista-uetsés, Ironeye;-(2) of a noun and a verb; as, tsakaka-umakis, Nitting bird, dalipitsi-idubis, Rising bear;-(3) of a nom and an adjective; as, tisesaliadaliis, Lean:volf, tsakaka-tohis, Blue bird;-(4) of a noun and adverb; as, midikoa-miis, Woman-at the water; -(5) of a pronoun, noun, and aljective; as, itamidaki-iliotạ! is, His white shield,-and in rarious other wayse.- -
93. Names of females often begin with the word mia (wia, bia), or end with mia, miis (wiis), all of which mean roman. Ex.-miahopas, Medicine-voman; miadalipitsis, Bear-uoman; tsakakawiis, Bird-zoman; matạ́limiis, Turtle-ucoman.
94. Localities are named from physical peculiarities or historical associations. The names of various localities known to the tribe are appended to the Dictionary.

## Syntax of Nouns.

95. A noun precedes a verb, adjective, noun in apposition, or any part of speech used as its predicate. Since there is no rerb to be, used as in English, any word except a conjunction or interjection may be employed as the predicate of a noun.
96. The name of 'the person spoken to' commouly follows a verb in the imperative; but in almost all other cases a noun, whether subject ${ }^{\circ}$ or object, stands before the verb.
97. When the names of both subject and object appear, the former usually precedes the latter.
!s. The name of the possessor precedes that of the thing possessed.

## PRONOUNS.

99. Hidatsa pronouns may be divided into four classes, namely; persomal, relative, interrogative, and demonstrative.

## Personal Pronouns.

100. Personal pronouns are of two kinds, simple and compound.
101. Simple, or primary, personal prououns consist, in the :ingular, of but one syllable; they may stand alone, as separate words, but are usually found incorporated wi:h other words.
102. Compound personal pronouns consist of more than one syllable. are derired from simple pronouns, and, except those in the possessive case, are used as separate words.
103. Personal pronouns exhibit, by their different forms, their person, number, and case.

[^27]104. They hare the first, second, and third persons, the singular and plural numbers, and the nominative, possessive, and objective cares.

## Simple Personal Pronouns.

105. The simple personal pronouns are five in number; they are mis and mi (sometimes contracted to m ) for the first person, da and di (sometimes contracted to $d$ ) for the second person, and i for the third person.
106. They stand alone when used for repetition and emplasis, but otherwise are incorporated with other words.
107. ma, $I$, and da, thou, are the proper nominative forms; they are used as the nominatives of transitive verbs, but may also be employed as the nominativesof certain intransitive verbs which have an active se̛tisé; as, amáki, he sits, amanaki, I sit, adamaki, you sit, They may be prefixed or suffixed to, or inserted into, verbs; thus we have kikidi, he hunts, makikidi, I hunt, dakikidi, you huint; katsihe, he extinguishes, kà. tsima, I extinyuish, kạtsida; you extinguish ; akakạsi, he writes, amakakạis, I urite, adakakạsi, you urite.
108. ma, my, is used in the possessive case, prefixed to the noun denoting the thing possessed, in intimate or non-transferable possession ; as in masiaki, my hand, from saki, hand; matsi, my foot, from itsi, his foot. (IT S1).

1:9. mi , $m e$, di, thec, and i, him, her, it, are prefixed to transitive verbs to denote the object; as, from kidesi, he loves, we have mikideṡं, he loves, me, dikidesi, he loves thee, ikidesi, he loves him, her, or it, midakidesis (me. thou lovest), you love me, and dimakidesis (thee I love), I love you.
110. mi and di are, however, used as the nominatives of such intransitise verbs as imply only quality or state of being; and of qualifying words used as verbs.
111. di, thy, your, and i, his, her, its, theirs, are also used in the possessive case, prefixed to the nawe of the thing possessed, to denote nontransferable possession. ( $\mathbb{T}$ 81). Examples.-disaki, your hand, isiaki, his hand, from saki, hand; ditsi, your foot, itsi, his foot (the hypothetical word, tsi, is not used. without the possessive pronouns).

11\%. ma and mi, da and di, are commonly contracted, when placed before vowels, according to orthographic rules already given ( $\uparrow T 144,35$ ); as in makulii, my ear, dakulii, your eur, from akulii, ear ; misita, my eye, dista, your eye, from ista, eye.
113. The possessive pronoun, $i$, is often omitted before words beginning with a vovel, where possession is intimated; thus, akulii, ear, is also his or her ear ; ista, eye, also his or her eye.
114. When the pronoun of the third person, singular, stands alone, it is often pronounced hi.
115. The plural forms of simple pronouns are not incorporated; thex are mido, plural of ma and mi; dido, plural of da and di; and hido, plural of $i$.

## Compound Personal Pronouns.

116. The compound personal pronouns are formed from the simple pronouns by means of suffixes. The words most readily recognizab̂fe. as of this class, are micki, dicki, and icki (with their plurals), and the possessives, mata, dita, and ita.
117. micki (1st person), dicki (2d person), and icki (3d person) are used in an emphatic and limiting sense, and are nearly synonymous with the English words myself, thyself, and himself or herself. They may be used alone, as uominatives or objectives to verbs, but are commonly repetitions, being followed by the simple incorporated pronouns with which they agree.
118. Their plurals, used in the same way as the singular forms, are midoki (ourselves), didoki (yourselves), and bidoki (themselves).
119. máta, my, our, díta, thy, your, and ita, his, her, its, their, are compound possessire pronouns, which are ordinarily used to indicate an acquired or transferable possession ( $\Pi \| 80-82$ ), and are prefixed to nouns, denoting the thing possessed. ( $\mathbb{1} 83$ ).
120. In compound words, formed of the names of possessor and pos. sessed with the pronoun ita, the $i$ of ita may sometimes be dropped. ( $1 T 1.36,85$ ).
121. mata, dita, and ita have not separate forms for singular and plural.
122. The words matamae (1st pers.), ditamae ( 2 d pers.), and itamae (3d pers.), are used respectively as the equivalents of the English words mine or my own, thine or thy own, and his, hers, its, theirs, or his own, etc., and also as the equivalents of the Dakota words mitawa, nitawa, and tawa. The Hidatsa words, however, I regard not as pronouns, but as nouns formed by prefixing the compound possessive pronouns to the noun 'mae'. According to the usual custom with interchangeable consonants, these words are often pronounced matawae, nitawae, and itawae.

## Synopsis of Personal Pronouns.

> simple.

Singular.
1st pers. $\left\{\begin{array}{l}\text { nom., ma and mi. } \\ \text { poss., ma. } \\ \text { obj., mi. }\end{array}\right.$
2 d pers. $\left\{\begin{array}{l}\text { nom., da and di. } \\ \text { poss., di. } \\ \text { obj., di. }\end{array}\right.$ 3d pers. $\left\{\begin{array}{l}\text { uom., } \\ \therefore \text { poss., i. (TI 133). } \\ \text { obj., i, or hi. }\end{array}\right.$

Plural.
all cases, mido.-
all cases, dido.
all cases, bido.

## Compound.

With 'ki' for emphasis and limitation.

Singular.

- 1st pers., micki.

2 d pers., dicki.
3d pers., icki.

Plural. midoki. didoki. hidoki.

With 'ta' to denote transferable possession.
Singular and Plural.
1st pers., mata.
2d pers., dita.
3d pers., ita.

## Relative Pronouns.

123. The interrogatives tapa, what? tapé, who? aku ( $\|\| 51,52$ ), and $s$ me other words are used as relative pronouns.

## Interrogative Pronotuns.

124. Interrogative prononns, and all other interrogative words of the language, begin with $t$, which, being always followed by $\hat{a}$ vowel in these words, has a slight sound of English th in thing. (TI 5).
125. tapé, who! tapa, what? taka, what? to, which or where? tua, which? how? are the principal interrogative pronouns.
126. Their čompounds, tapeitamae, whose $\%$ tapata, takata, tota, whither? todu, where? tuami, how many? etc., etc., are sometimes used as pronouns, although usually filling the offices of nouns, adjectives or adverbs.

## Demonstrative Pronouns.

127. The demonstrative pronouns are hidi, this, hido, that, with ku and $\dot{s} \ddagger$ or sia, that, him, distinctive or emphatic forms.
128. Their compounds are hidimi, this many, hidika, this much, hiduka, this way, kutapa, what is that? kuadu, that place, kutsaki, setsaki, that alone, sedu, just there, etc., etc. These, like the compounds of interrog. ative pronouns, are used as pronouns, but more commonly as other parts of speech.

## Syntax of Pronouns.

129. All simple pronouns in the objective case, or used separately for emphasis, and usually all compound pronouns in any case, precede the verb.
130. Personal pronouns in the objective commonly precede those in the nominative.
131. When mi or di is used as the nominative of an intransitive verb ( $\$ 110$ ), or of any word used as such, it stands before the verb.
132. When ma or da is used as an incorporated prououn in the nom. inative ( $\mathbb{T}$ 107), its position in the verb is usually determined as follows: (1st) In a verb formed directly from a verbal root and beginning with any consonant (except $m$ followed by a), the pronoun is prefixed in the indicative; as in kikisiki, he measures, makikisiki, $I$ measure, dakikiṡki, you measure; patṡaki, he cuts; wapatsạki, $I$ cut, dapatsaki, you cut. (ㄹ.1) In a verb formed directly from a verbal root and beginning with a vowel, or the syllable ma, the pronoun is inserted in the indicative; while the verb, if beginning in the third person with $i$ or o, is made to begin with $a$ in the first and second persons. Ex.-asadi, he steals, amasiadadi, $I$ steal, adasadadi, you steal; maihe, he tries, mamahe, I try, madahe, you try; iku'pa, he hates, amaku'pa, I hate, adaku'pa, you hate; odapi, he discovers, amodapi, I discover, adodapi, you discover. (3d) In a transitive verb formed from an intransitive verb by the addition of be, ha, or ke, the pronoun is suffixed.
133. There is no incorporated pronoun in the third person nominative.*
134. The use of irreorporated pronouns being necessary to the conj 1 gation of verbs, they cannot be omitted when several verbs refer to tise same subject or object.
135. Incorporated possessive pronouns must be prefixed to the name of each thing possessed, even when but one possessor is indicated.
136. A demonstrative, relative, or interrogative pronoun usually stands at the beginning of the clause to which it belongs.
137. When a relative and demonstrative pronoun appear in the same sentence, the clause containing the former usually stands first.
138. Some modifications of the above rules will be discussed under the head of verbs.

## VERBS.

139. Almost any word in the language may be used and conjugated as an intransitive verb, and may again, by certain suffixes, be changed to a transitive verb, and be conjugated as such.
140. Adjectives, nouns, adverbs, and prepositions are often thus treated; pronouns, conjunctions. and interjections rarely.
141. But there is a large number of words in the language which are used only as verbs and are not derived from other parts of speech; these may be called verbs proper.
142. Many verbs proper we cannot analıze, and therefore consider them as primitive verbs. Such are ki, to bear or carry; hu, to come; de, to depart; eke, to know, etc.

[^28]143. Other verbs proper, which we calderivative, are formed, by the use of cerrain prefixes and suffixes, from verbal roots, from primitive verbs, and from other derivative verbs.

## Verbal Roots.

144. Verbal roots are not used as independent words. A great number have been found in the language; but satisfactory meanings have been discovered for a very few ouly, some of which are here given for illustration : liăpi, bark, peel; liesese, tear through; liohi, break across; lin, spill; overset; kahe, spread, siretch ; kape, tear into, lacerate; kạ.'tsi, notch; kide, push; kiti, clear off; ktade, pound in, peg; midi, tırist ; mitsi, mince ; mu, make noise ; mudsi, roll up; papi, roughen, chap; pi, penetrate; plin, or pliuti, squeeze.or press out ; pkiti, smooth out (\% fr. kiti); psu, distocate ; ptsu or ptsuti, thrust forth; sipi, loosen ; siki, open out; s̀ku, extract ; suki, erase ; ta, destroy; tạki, place in contact, shut; tạpi, squeeze; tsa, separate; tsada, slide ; tsa'ti, stick, polish; tsiti, raze; tski, squeeze on a small surfuce from different directions, shear, strangle, etc.; tskipi, pare; tskise, waṣh; tskupi, bend. Some of these may be modified roots, containing something more than the simplest radical idea, but could not be well further analyzed.

## Prefixes and Sufires.

145. Some of the prefixes and suffixes referred to are independent words, but many of them are used only when connected with verbs. Some are to be regarded as adverbs, others perhaps as auxiliary verbs.

## Prefixes.

146. The more important prefixes, whose meanings hare been determined, are ada, ak, da, dak, du, ki, mạk, and pa.
147. ada immediately precedes the root, and denotes that the action is performed by the foot, or by means of heat or fire; as in adaliuli, to breale across with the foot, from hohi, break across, and adakite, to cleur off by fire, as in burning a prairie, from the root kite, clear off.
148. ak denotes that the action is performed with or on something; as, aksiue, to spit on, from sué, to spit.
149. da denotes that the actiou is done, or may properly be done, with the month; it stands immediately before the root, and is often pronounced ra or la. Ex.-datsa, to bite off, from tsa, separate; daliese, to tear with the teeth, from the root liese, tear.
150. dăk (or dăka) stands immediately before a root or rerb to denote that the action is performed with a sudden forcible impulse, or with great force applied during a short time, and usually repeated at short intervals; as in dăktsạki, to chop, from tsạki, cut; dakaliolii, to break across with a blow, from the root liulii, break across. n is often used as the initial sound of this prefix.
151. du is prefixed to roots, to convert them into verbs, without mate rially adding to their significance; it may be said to denote geueral or indefinite causation ; is sometimes prononnced ru or lu. Ex.-duliohi, to break across in any voay or by any means, from liolii, break across; clumidi, to twist in any way, from the root midi, twist.
152. ki is sometimes added directly to verbal roots, but more commonly to verbs. It may be added to any verb, no matter how formed, and is the most extensively used verbal prefix in the language. It intensifies the meaning; denotes that the action is done forcibly, repeatedly, completely, with difficulty, or over the entire object. Some. times it merely strengthens, without altering the meaining of the verb; in other cases, it totally changes its application. Some verbs are never used without it. Ex.-dalipa, to put the arms around, Eidalipa, to huj; pati, to fall down, kipati, to fall from a great height. The words kime, to tell, and kidesi, to love, have not simpler forms.
153. mạk (or mạki) is prefixed to verbs to denote opposition or reciprocity; that the action is performed by two contending parties, that the motion is from opposite directions, that two actors mutually and reciprocalls perform the action; thus, from pataki, to close, comes makipataki, to close anything which has both sides moved in the act, as a book or a pocket-conb, and from ikü'pa, to hate, mạkiiku'pa, to hate mutually, to hate one another.
154. pa is a cansative prefix, denoting that the action is done by the hand, or by an instrument held in the hand, or that it may be properly so performed. It stands immediately before roots and primitive verbs. Ex.-pahn, to pour with the hand, from hu, spill; pamidi, to twist with the hand, from midi, twist.

## SUFFIXES.

155. The principal suffixes to verbs are adsi, adui, de, he, ha, ke, ksia, and ti, with duk aud tok for the subjunctive, di, diha, mi, and miha for the futare indicative, and ts for the closing of sentences.
156. adsi denotes a resemblance or approach to the standard described by the simpler form of the verb; it is most commonly, however, used with adjectives, rarely with verbs proper. ( 1 226). Ex.-mitapa; to lie, to deceive, mitapadsi, to equivocate.
157. adai denotes progression and incompleteness in action on condition; it answers sometimes the purpose of the English termination ing in present participles. Verbs ending in adui are íntransitive and usually preceded by ki. Ex.-titsi, thick; titsadui, or kititsadui, gradually in. creasing in thickness; isia, bad, isiadui, deteriorating, to become progressively worse.
158. Verbs lose their final vowels when adsi and adui are suffixed.
159. de may be translated, almost, nearly, about to, and denotes an incomplete action or condition. It is added to, and forms, intrausitive
verbs. Ex.-tsipiti, to full upon the water, to be in a condition to sink, tsipitide, to be about to full, or nearly falling, on the woater.
160. he, signifyiug generally to make or cause, changes some intransitive verbs, and words used as such, to transitive. Verbs take it in the third person indicative, but rarely retain it in the first person; while in the second person indicative, and in the imperative, it is dropped or changed, to ha. The incorporated pronouns are suffixed to rerbs furmed by the addition of he, which suffix they sometimes folluw, but more commonly replace. Ex.-komi, complete, finished, komibe, he finishes, komima, I finish, komida, you finish, komibada, finish thou!
161. ha is the form of 'he' used in the second person.
162. ke, signifying to cause, to change, to use for, is added to intransitive verbs, to form transitive verbs. It is more exteusive in its application than be, and may be added to any of the numerous words of the language which are capable of being used as intransitive verbs. It is retained in all persons, tenses, and modes, and followed by the incorporated pronouns. When ke is suffixed, the verb is most commonly put in the intensive form. The more familiar iustances, only, of its use are given in the Dictionary. Ex.-hisi, red, hisike, to dye or color red, dyed $r \in d$; isia, bad, išiake, to make bad, change from good to bad, damaged, debased, kiisiake (intensive), he damages, kiisiakema, I damage, kiisiakeda, you damage; ati, a house, kiatike, to use for a dwelling, or convert into a - ducelling; midi, water, kimidike, to liquefy.
163. ksia denotes that an action is performed habitually or excessively, or that a quality exists to a constant or excessive degree ; it is used with verbs proper and adjectives: Ex.-mitapa, to lie or dëceive, mitapakṡa, to lie habitually or excessively; ide, to speak, ideksia, to"speak garrulously or unguardedly, to say too much." (TI 231).
164. ti, denoting a favorable couditiou or readiness to perform an act, is added to intransitive verbs, forming new intransitive verbs. Ex.hua, to cough, huăti, to be about to cough, to feel a desive to cough; halipi, to sneeze, halipicti, to desire to sneeze; tsipi, to sink, tsipiti, to fall upon the water, to be placed in a condition favorable for sinking.
165. duk, used alone as an adverb of future time, is suffixed to subjoined verbs, to denote doubtor coudition in regard to future time, and is therefore equicalent to a sign of the subjunctive mode in the future tense. Ex.-miadéheduk ditamamits, if I am angered, I will kill you.
166. tok; an adverb used to denote doubt and interrogation, is usually used independently, but may be suffixed to verbs to indicate the past and present tense of the sulojunctive mode; as in madetok diamakatats, had I gone, I rould not liave seen you.
167. di ( Ud $^{2}$ person singular), diba (2d person plural), mi (1st person singular), and miba (1st person plural) denote the fature tense, indica-. tive mode, and may follow any verb which takes ma and da for its incorporated nominative pronouns. They have the appearance of being

## Properties of Verbs.

## Person.

172. The first and second persons are shown by the incorporated pronouns, ma and mi for the former, da and di for the latter. The third person is shown by the simple form of the verb.

## Number.

173. In the conjugation of the verb, number is indicated only in the future indicative, where mi and di are used in the singular, for the first and second persons respectively, and miha and diha in the plural. (T167).

## Mode.

174. Three modes only, the infinitice, indicative, and imperatice, are shown in the conjugations of verbs. The subjunctive and potential are indicated by adverbs or additional verbs.

## Infinitice.

175. The intinitive mode is the same as the third person indicative, the simple torm of the verb. It is, however, rarely used, finite ve: bs being employed instead; thus, "I try to congl" is more frequently ren. dered mahua mamahets, $I$ eough $I$ try, than hua mamahets, to cough I try.
176. In the third person, no distinction is made between the infinitive and indicative; thus, har maikets may be rendered either to cough he tries or he coughs he tries.

## Indicative.

177. The simple form of the verb is used as the third person indica-s tive. For the first and second persous this is modified by the incorporated pronouns; and for the future tense, as shown in Pars. 167 and 173.

## Imperative.

178. The imperative morle has five forms.
179. The first cousists in usiug the same form as the second persou indicative; this is doue mostly in verbs which have the incorporated pronouns suffixed.
180. The second is made by changing final $i$ or $e$ of the infinitive to a, or using an intiuitive ending in a or $\mathfrak{a}$.
181. The third is formed by dropping the final i of verbs ending in $k i$, and sometimes of those ending in ti; thus, we have amak, imperative of amaki.
182. In the fourth form, the auxiliary da is added to the second form of the imperative; it is usually, but not invariably, placed after the verb. da seems to be a furm of the verb de, to depart, meaning go thou!
183. The fifth form of the imperative mode is made by adding dilist iustead of da.
184. The fourth and fiflh forms are used when immediate compliance with the order is desired.

## Tense.

185. But two distinctions, in regard to time, are made in conjugating verbs; one of these is for indefinite, the other for future time.
186. Other varieties of time are expressed by adverbs, suffixed or independent, or by other words used independently.
187. The indefinite tense, used for both present and past time, is shown by the simple form of the rerb, with or without the iucorporated pro. nouns.
188. For the future tense, indicative mode, mi and miha are added to the indefinite for the firsteperson, and di and diha for the second person; in the third person, the form is the same as in the indefinite.
189. Sometimes, to a verb in the third person, future tense, at the close of a senteuce, they are heard to ald hits, pronouncing it as a separate word. This may be a part of the conjugation, but is, more probably, a personal pronoan of the third person, hi, with the ending ts, added for emphasis.

## Conjugation.

190. All transitive and some intransitive verbs are properly conjugated, having different forms for the different in des and tenses.
191. The greater part of the intransitive verbs, and words used as such, are rot properly conjugated, since they suffer no change of form in the different modes and tenses.
192. The verbs which are conjugated may be known by taking ma ( $I$ ) and da (thou) for their incorporated pronouns in the nominative; while those which are not conjugated have the pronouns mi and di incorporated in the nominative case.

## Conjugated Verbs.

193. The conjugation has three priucipal forms. In the first form, the pronouns are prefixed; in the second, inserted; and, in the third, suffixed.
194. In adding the prononns, however, some additional changes are made in the verl, producing in all ten varieties of the conjugation.
195. In the first variety, the incorporated prououns are simply prefised to the third person, or simple form of the rerb; while the latter remains unchanged. Ex.-kidĕsi, to love, or he loves.
Infinitive Mode.
kiděsi, to love..
Indicative Mode.
Indefinite Tense.
Singular and Plural.
$3 d$ person. kiděsi, he, she, or it loves or loved, they love or loved. 2d person. dakiděsi, thou lovest, you loveror loved. 1st person. makıděsi, I or we love or loved.
Future Tense.
Singular.
$3 d$ person. kiděsi, he, she, or it icill love.
'2d person. dakeděsidi, tliou wilt love.
1st person." makidĕs̆imi, I will love.
Plural.
$3 d$ person. kiděsi, they will love.
っd person. dakiděsidiha, you will love.
1st person. makiděsimiha, we uill love.

> Imperative Mode.
> kid̉̉́ṡa, kiděṡada, kiděṡadiba, love thou, love ye.
196. In the second variety, the first letter of the simple form is dropped when the pronouns are prefixed, and the pronouns are contracted to m
and d. The words belonging to this variety are not numerous; they all begin with $d$, and cousequently in the indicative mode, indefinite teuse, the forms of the second and third persons are the same. Ex.-duti, to eat, to chew.

Infinitive Mode.
duti, to cliew or eat.
Indicative Mode.
Indefinite Tense.
Singular and Plaral.
(without terminal ts.) (with terminal ts.)
3d.person. duti, he eats, etc. $\quad$ dutits.
2d person. duti, you eat, etc. dutits.
1 st person. muti, $I$ eat, etc. mutits.
*
Future Tense.
Singular.
3d person. duti, he will eat, etc. dutĭts.
〔d person. dutidi, thou wilt eat. dutidĭts. 1st person. mutimi, I will eat. mutimits.

Plaral.
$3 d$ person. duti, they will eat. 2d person. dutidiha, you will ext. 1 st person. mutimiha, we will eat. mutimihats.

Imperative.
dut. da' dut, etc. eat, eat thou.
197. The third variety of the conjugation has the pronouns prefixed to the unaltered simple form; but the letter a is in turn prefixed to the pronouns, causing them to appear inserted in the verb; further, the pronouns are contracted by the omission of their vowels. Most verbs beginning with o belong to this variety. Ex.-ókipapi, to find, to recover something lost, but not to make an original discovery.

Infinitive Mode.
okipapi, to find.
Indicative Mode.
Indefinite Tense.
Singular and Plural.
3d pers. okipapi, he, she, or it finds, or found, or they, etc.
$2 d$ pers. adokipapi, you find or found.
1 st pers. amokipapi, $I$ or we find or found.

## Future Tense.

Singular.
3d pers. okipapi, he, she, or it will find.
2d pers. adokipapidi, thou wilt find.
1 st pers. amokipapimi, 1 will find.
Plural.
3d pers. okipapi, they will find. 2d pers. adokipapidiha, you will find. 1st pers. amokipapimiba, we will find.

Imperative Mode.
okipapa, okipapa da', okipapa dilī̃.
198. In the fourth variety, the incorporated pronouns are inserted in the rerb by being placed immediately after the first syllable of the simple form, while no change is made in the latter, except the separation of the syllables. Verbs conjugated thus have a or e for their first syllables. Ex.-éke, to know, to recognize.

Infinitive Mode. eke, to know.

Indefinite Tense.
Singular and Plural.
(withont terminal ts.) (with terminal ts.)
3 3 pers. eke, he, etc., knours, or knew. ekĕts.
e2d pers. edake, you know or knew. edakets.
1st pers. emake, I know or knex. emakěts.
Future Tense.
Singular:
3d pers. eke, he, etc., will know.
थd pers. edakedi, thou wilt knou. 1st pers. emakemi, I will knouc.

Plaral.
3d pers. eke, they will know.
$2 d$ pers. edakediha, you will knous. 1st pers. emakemiha, we will knou.
ekěts.
ekěts. edakedlts. emakemits. edakedilats. emakemihats.

Imperative Mode.
eka, eka da', eka diha.
109. To the fifth variety, belong verbs beginning with ma. In it, the incorporated pronouns come after the first syllable, and are substitnted for the second syllable of the simple form, which is, therefore, changed bs the loss of a syllable. Ex.-maihu, to trade, to buy.

# Infinitive Mode. <br> mailu, ${ }^{*}$ to trade. <br> Indicative Mode. <br> Indefinite Tense. 

Siugular and Plnral.
3d pers. maibu, he or she trades or traded, they, etc. 2d pers. madahu, you trade or traded. 1st pers. mamahu, I or we trade or traded.

## Future Tense.

Singular.
3 pers. maibu, he or she vill trade. 2d pers. miadahudi, thou wilt trade. 1st pers. manahumi, I will trade.

Plural.
3d pers. . maihu, they will trade.
$2 d$ pers. madahudiha, you will trade.
1 st pers. mamahumiha, we will trade.
Imperative Mo童e.
madahu da', maihu da'.
200. In the sixth variets, the incorporated pronouns are inserted in the same way as in the fourth; but the syllable da is inserted, in the first and second persons, immediately before the last syllable of the verb. This extra interpolated syllable does not seem to answer the purpose of either promoun, adverb, or auxiliary; its ntility has not been discorered. aśadi, to steal, atádi, to go out of a house, and perhaps a few other verbs, are conjugated in this way.

Infinitive Mode.
asiadi, to steal.

## Indicative Mode.

Indefinite Tense.
Singular and Plural.
3 pers. asiadi, he or she steals or stole, they steal or stole.
$2 d$ pers. adasadadi, you steal or stole.
1st pers. amasadadi, I or wee steal or stole.

# HIDATSA GRAMMA 

Future Tense.
Singular.
3d pers. asiadi, heor she will steal.
od pers. adasiadadidi, thou vilt stenl.
1st pers. amaṡadadiini, $I$ witil steal.
$=-$ Ping
3d pers. asadi, they uitl steal.
$2 d$ pers. adasadadidiha, you vill steal. 1 st pers. amaṡädadimiha, ve uill steal.

Imperative Mode.
aśada da', asada diba.
201. To the seventh vaciety belong verbs beginning in i not the intorporated pronoun of the third person objective). Here the incor-- porated pronouns are inserted, but i is changed to a. Es.-ika; to see.

Infinitive Mode.
ika, to see
Indicative Mode.
Indefinite Tense.
Singular and Plural.
3 pers. ika, he or she sees or saw, they see or save. $2 d$ pers. adaka, you see or sav. 1 st pers. amaka, I or we see or sazo.

Future Tense:
Șingular.
3d pers. ika, he or she rill see. $2 d$ pers. adakadi, thou wilt see.
1 st pers. amakami, I will see.
Plural.
3d pers. ika, they will see.
$2 d$ pers. adakadiha, you will see.
1 st pers. amakamiba, we will see.
Imperative Mude.
ika, ika da', ika diha:
Besides these, ika has a reduplicated form in the imperatire, usel in an exclamatory manner, ikaka! See there! Betold! ${ }^{-}$
202. The eighth variety is distiuguished by the incorporated pronouns of the nominative being substituted for the last syllable of the infinitive form. Nearly all transitive verbs formed from intransitive verbs by the suffix be belong to the eighth variety. Ex.-liapihe, to lose.

## Infinitive Mode.

liapine, to lose.
Indicative Mode.
Indefinite Tense.
Singular and Plural.
3d pers. liapile, he or she loses or lost, or they lose or lost. od pers. liapida, you lose or lost.
lst pers. lappima, I lose or lost, or we lose or lost.
Future Tense.
Singular.
$3 d$ pers. liappihe, he will lose.
$2 d$ pers. liạpidadi, thou wilt lose.
1st pers. liappimami, I will lose.
Plural.
3d pers. liạpihe, they will lose.
$2 d$ pers. liapidadiha, you will lose.
1st pers. liạpimamiha, we will lose.
Imperative Mode.
liạpida, da' liappida, liạpihada.
203 . The ninth variety is the same as the eighth, with the addition of the simple possessive pronouns, in full or contracted, prefixed to the verb. In thiș variety are found but few verbs; they are formed from nouns by the addition of the suffix he; they undergo a double inflection, one to denote possession of the noun, and the other to show person, tense, etc., in the verb. Ex.-úahe, to make or cause to be a wife, to wed, from ua, a wife. uahe, in its active sense, or used personally, is said of the male.

Infinitive Mode.
uahe, to make a wife, to wed.
Indicativf Mode.
Indefinite Tense.
Singular and Plural.
3 pers. wabe, he makes his wife, he or'they wed or icended, etc.
2d pers. duada, you make your wife or wives, you wed or wedded, etc.
18t pers. muana, I make my wife, $I$ or we wed, etc.

Future I'ense.
Singular.
$3 d$ pers. uahe, he will make his wife, or wed. 2d pers. duadadi, thou wilt make thy wife, or wed. 1st pers. muamami, I will make my wife, or ued.

Plural.
3d pers. uahe, they will make their wives, or wed. $2 d$ pers. duadadiha, you will make your wives, etc. 1st pers. muamamiha, we will make our wives, or wed.

Imperative Mode.<br>duada, duaha da', duaba diha.

201. In the tenth variety, the pronouns are suffixed to the simple form, which in itself remains unchanged. Transitive verbs formed from the intransitive by the addition of ke are conjugated in this way. Ex.kitsạkíke, to render completely good, to make whole or sound, to change from bad to good, etc., from tsaki, good.

Infinitive Niode.
kitsạkike, to make good.
Indicative Mode.
Indefinite Tense.
Singular and Plural.
3d pers. kitsạkike, he, she, it, or they make or made good.
2d pers. kitsạkikeda, you make or made good.
1 st pers. kitsakikema, I or we make or mate good.
Future Tense.
Singular.
$3 d$ pers. Litsakike, he, she, or it will mahe good.
$2 d$ pers. kitsạkikedadi, thou wilt make good.
1 st pers. kitsạkikemami, I will make good.
Plural.
3d pers. kitsạkike, they vill make good,
52d pers. kitsakikedadiha, you will make gooc?.
1st pers. kitsakikemamiha, we will make good.
Imperative Mode.
kitsạkikeda, kitsakike diha.

## Unconjugated Verbs.

205. All adjectives, adverbs, nouns, etc., used as predicates of nouns, are regarded as intransitive verbs, there being no copula in the langaage. These intransitive verbs, and such others as denote only quality or condition, suffer no change of form to denote different modes and tenses. They may, bowever, take the incorporated pronouns mi and di for their nominatives.
206. These pronouns are nrefixed. To verbs beginning with consonauts they are usually prefixed in full. Ex.-liie, old, to be old.
liie, he, she, or it is or was old, they are or were old. diliie, thou art or wert oll, you are or vere old.
miliie, $I$ am or was otd, we are or were old.
207. Before verbs beginning with vowels, the pronouns are often contracted. Ex.-adáliise, to be ignorant.
adaliise, he is or was ignorant, they are or were ignorant.
dadaliise, thou art or wert ignorant, etc.
madaliise, I am or was ignorant, or we were ignorant, etc.
208. Transitive verbs in the third person, or used in a passive sense or impersonally, with pronouns in the objective case prefixed, have the same appearance as the unconjugated intrausitive verbs, except that for the third person the objective pronoun i is used; thus, from alion, to conceal, we have
ialioa, he conceals it, or it is concealed. dialioa, he conceals you, or you are concealed. mialioa, he conceals me, or 1 am conceuled.

## Trregular and Defective Verbs.

209. There are a few irregular and defective verbs in the language, of which the following are examples:
210. hi, to draw into the mouth, to drink or inhale, may, with terminal ts, be conjugated thus:
211. hits, fie drinks or drank or will drink, they drink, etc.
212. dats, you drink or drank.
213. mats, $I$ drink or drank.
214. dadits, you will drink.
215. mamits, I uill drink.

Here, in the fourth and fifth forins, there are (with the terminal) bnt the pronouns and signs of the fature teuse, and in the second and third forms, only the pronouns.
211. matú, there is or there are, has no other form.
212. muk (sometimes pronounced as the E.aglish word book) signifies gice.me. It may be an irregular imperative of the verb ka, to give, but is more probably a defective verb.
Compound Verlbs (so called).
213. Sometimes two verbs are used together to express an idea for which there is no single word in the language. When both verbs are in the third person indicative, or when one is in the infinitive, they often appear to us as a single word, particularly if their English equivalent is a single word; but when conjugated, it is found that each assumes its own proper furm, the same as if used independently. Ex.-akhu, to bring, consists of ak, to be with, and hu, to come. This, when inflected, appears as two separate words, one conjugated, the other unconjugated; thus, ak-hu, he brings; dak-dahu, you bring; mak-mahu, I bring; dakdahudi, you will bring; mak-mảhumi, I will bring, etc.
214. Again, a noun and a verb may be used together to express an idea for which there is no single word in the language; thus, from hi, to draso into the mouth, we have ope-hi, to draw tobacco into the mouth, i. e., to smoke, and midi-hi, to draw water into the moutl, or drink.
215. Some expressions, such as these, are, for courenience of definition, put in the Dictiouary as componud verbs.

## Syntax of Verbs.

$\geq 16$. Almost all sentences are closed by verbs or words used as such; the principal exception being where interrogative adverbs are used to qualify an entire sentence.
217. When a verb denoting quality or condition, and another denoting action, are used in the same sentence with a common subject, the former precedes the latter; or, in other words, conjugated verbs commonly follow unconjugated cerbs.
218. Verbs in the infinitive usually precede those in the indicative.
219 . Any word used alone, with the terminal ts, in answer to a question, may form a sentence by itself; for it is used as a verb in the simple form, where a personal pronoun of the third person is understood to be in the nominative.
$\because 20$. In this language, as in other lauguages, "active transitive verbs govern the objective case". It might be said that all transitive verbs govern the ohjective case, for the existence of a passive form is questionable. ( 9 170). When an objective pronoun is followed by the simple form of a transitive rerb, the latter may be parsed as in the third person indicative; although, in translating the expression into English, a verb in the passive voice may be used.
201. Other points connected with the syntax of the verb have been referred to in the discussion of the etymology.

## ADJECTIVES.

292. There are certain intransitive verbs in the Hidatsa, which are used in the same sense as the adjectives of European languages, and may be translated by them. For the convenience of the English student, these rerbs will be called aljectives, and described as such.
293. There are a large number of the adjectives, which we cannot analyze with our present knowledge of the language, and which may be called primitive.
294. Derivative adjectives are formed from primitive adjectives, from other derivatives, from nouns, adverbs, etc., by forming compound words, or by the use of suffixes having the force of adverbs.
225 . The force of the adjective is modified by the adverbial suffixes
 and also by adverbs used independenty, as shown in the following paragraphs.
295. adsi is suffixed to denote an approach to the standard qualit $s$ or positive degree, as indicated by the simple form of the adjective; thus, from hisi, reil, scarlet, comes hisiadsi, of a dull red color, crimson or purple. ( $\mathrm{Tl}_{156 \text { 15). }}$
296. isat, or ise, is of much the same signification as adsi, but sometimes applied differently; it signifies like or resembling. Ex.-From tobi, blue, sky-blue, comes tohisia, of an impure or uncerfain blue, bluish; from sipi, black, comes sipisa, resembling black, i. e., of a deep color hardly to be distinguished from black. adsi may follow isě to denote a wider variation from the standard quality.
297. de is a suffix, which may be translated almost or nearly. Ex.Eakilitround Eakilide, almost round; tsamutsi, straight, tsa mutside,

298. di increases the signification of the adjective to which it is suffixed; "its use is not very extended ; it seems to be suffixed only to words of three syllables, ending with $i$ and accented on the penult. Ex.padopi, short, low-sized, padopidi, very short; tamulii, minute, tamulidi, rery minute.
299. tsậki, good, takes, as an increased or inteusified form, tsalkícti, which may be a compound of tsaki and ictia, great. tsakicti commonly takes the suffix di ; thus, tsakictidi denotes a very high degree of excellence.
300. kṡa denotes that the quality exists excessively, habitually; or continuously. Ex.-isía, bad, isiagkíàa, persistently bad. (Tl 163.)
301. ka'ti, much, true, truly, is a word used indepeudently as an adjective and adverb. As an adverb, it is used to limit the significance of adjectives to the true or standard qualities; as in hisi-ka'ti, true rea, bright red, isia-ka'ti, truly bad, unqualifiedly bad.
302. When two nouns are compared together in regard to quality, and either one used as the standard of comparison for the other, the expressions itadotadu and itaokadu are used. The former means at the near side of it, and indicates the less degree; the latter signities on the far side of it, or beyond it, and indicates the greater degree. These expressions give us more nearly the equivalents of the comparative degree of English than anythiug else in the Hidatsa.
303. An adjective mas be formed of a noun and an adjectire. Ex.-

From mika', grass, and tohisa, bhish, comes mika'tohisa, green (grassbuish).
235. Some adjectives are compounds of two other adjectives; as, tsidisipi, bay, from tsidi, yellow, and sipi, black.

## Numerals.

236. The Ilidatsa system of numeration is antrictly decimal ; consequently, there need not be more than ten pimitive numeral adjectives.
$\geq 37$. There are, however, not more than eight; these eight are-
duétsa (or luetsa), one, kiliu, five, dopit (or nopa), tico, dími (or nawi), three, tópa, fow, akáma (or akawa), six, sípua, seven, and pítika, ten.
237. dopapi, eight, is a compound of diga, too, and pi (which seems to be the roos of pitika); it probably signities ten less toco.*
238. duetsapi, mine, is a compound of duetsa, gete, and pi, and seems to mean ten less one.
$\because 40$. Multiples of ten less than one hundred are named on the same principle as in Euglish; thus we have-
dopapitika (two tens), tuenty,
damiapitika, thirty,
topápitika, forty,
kiliúapitika, fifty,
akámápitika, sixty, sapúapitika, seventy, dopapiapitika, cighty, and duétsapiapitika, ninety. It will be seen that the first word of each of these compounds, if not ordinarily ending in a, is made to do so in this connection, and that the aecent is sometimes removed.

241 . The word for one hundred, pitikictia, signifies great ten. The term for one thousand is, pitikictia eikakodi,-the meaniug of akakodi, I know not.
$\because 42$. Numbers orer ten, but not multiples of ten, are named by the addition of the word alipi (portioned; a part or division), thus:
alipiduetsa, eleren, alipidopa, treelee, alipidami, thirteen, alipitopa, fourtecn,
dopápitika-alipiduétsa, tzenty-one, dopápitika-alipidópa, tucenty too, damiapitika-alipidámi, thirty-three, topápitika-alipitópa, forty four, etc.
243. With the exception of the word for first, itsika, the ordiuals are formed by prefising i to the cardinal numbers; thus, we have idopa, secomd, idami, third, itópa, fourth, etc.

## Syntax of Adjectives.

244. Adjectives usually immediately follow the nouns or pronouns whieth they qualify.
*-Some judicious remarks on this paragraph, and on Par. 239, may be found in a paper On Numerals in American Indian Languages, etc. By J. Hammond Trumbull, LL. D. Hartford, 1875. pp. 28,29 .
245. Qualifying words are often seen used as nouns or prowouns; this is particularly the case with mumeral adjectives, and such words as ahn, many,-etsa, all, iha, other, kausta, few, etc.

## ADVERBS.

246. Thereare adverbs which are apparently primitive; as, tax, not, duk, when, tia, a long time, etc. Many primitive adverbs are used as suffixes, as already shown when describing verbs and adjectives.
247. A large number of adjectives are used as adverbs, without undergoing any change of form. When primitive adjectives are thus used, they appear as primitive alverbs. Ex.-sua, slow, slowly, hita, fleet, fleetly, ătsa, near, tisia, fur.
248. Derivative adverbs are formed from nouns, from demonstrative and interrogative pronouns, from adjectives, and from other adverbs.
249. A large number of adverbs of place are formed from nouns by suffixing the prepositions (postpositions), du, lia, ka, koa, and ta; thus, from dunata, the middle, we have dumatadu, in or through the middle, dumatalia, toward the middle, dumataka, on the middle, dumatakoa, at the middle, and dumatata, facing the middle, or in the direction of the middle.
250. Words formed thius (T 249), might be regarded as merely nouns in the objective, with their governing prepositions; but they are pronounced and used as if belonging to the same class of words as the English adverbs windward and forward: Since every uoun in th:e language is capable of taking one or more of these postpositions, the uumber of adverbs of this character is very great.
251. From nouns, adverbs of time are formed by suffixing du, duk, and sedu ; the firsty of these means in or during any time, the second in or during future time, the third in or during past time ; thus, from maku, night, we have makudu, during the night, nightly, makuduk, during the coming night, "to-night", makusंedu, during the past night, or " last night"; from oktsia, meaning also night, we have oktsisedu, oktsiadu, and ofktsiaduk; from ata, daylight or dawn, we have ataduk, to-morrow, eto
252. From pronouns, adverbs are Cormed in much the same way as from nouns; thas, from the demonstrative se, we have sedu, int that time or place, sekoa, at that place, just there, seta, in that direction, and from the interrogative to, we have tóta, whither, todu and tóka, where, wherein, whereat.
253. When adjectives are used as adverbs, the same suffixes, to modify their force and meaning, are used in the one case as in the other. Adjectives which can denote the manner of performing the action are those chiefly used as adverbs.
254. Adverbs are formed from numeral adjectives by suffixing to the names of the cardinal numbers du, and the compound preposition tsakoa; thus we have dobadu, at two times, or on two occasions, twice,
dámidu, thrice, topadu, four times, and also dópatsakoa, at or in tioo places, dámitsakoa, at or in three places, tópatsakoa, in four places, etc.
255. From ordinals, adverbs are formed by the addition of du; thus, ítsikadu, in the first place or order, firstly, idópadu, in the second place or order, secondly, idámidu, thirdly, itópadu, fourthly, etc.
256. In adverbs of time, formed by adding to nouns du, duk, and sedu as indicated in Par. 251, the numeral adjectives are inserted between the noun and the adverbial suffix in the manner and for the purpose here indicated; thus from óktsi or óktsia, night:
oktsíadu, during the night.
oktsidópadu, during two nights.
oktsitópadu, during four nights.
oktsíaduk, during the coming night or to-night.
oktsidopaduk, two nights hence, or during the night after next.
oktsidámiduk, three nights hence.
oktsitópaduk, four nights hence.
oktsísedu, last night, during last night.
oktsidópasiedu, night before last, two nights ago.
oktsitópaṡedu, four nights ago.
257. Adverbs formed from nouns are often used as nouns; thus, átaduk, during to morrow or to-morrow, oktsísedu, during last night, or last night, adésedu, during last summer, or last summer.
258. Adverbs are used as predicatès to nouns, and in this position, there being no copula, fill the office of intransitive verbs.
259. "Adverbs qualify verbs, adjectives, and other adverbs", as in other languages.
260. Adverbs usually precede the words which they qualify; but ka'ti, much, or truly, tă, not, ta, only, and the interrogative tok, more commonly follow the words they qualify.

## PREPOSITIONS.

261. ak (T148), which is prefixed to verbs, and du, in or during, lia, toward, ka, in, koa, at, ta, in the direction of, facing, which are suffixed to nouns ( $\$ 249$ ) to form adverbs, fill more fully the office of prepositions than anything else in the language. They are not, however, used as independent words; and, from the position which they occupy in regard to nouns, would be more properly called postpositions.
262. aka, on, and api, with, are perhaps to be regarded as independent or separate prepositions.
263. There are many adverbs which answer the purpose of prepositions, and may be translated by the English prepositions. Adverbs formed from nouns which are the names of place, belong particularly to this class; thus, from míkta, the bottom, comes miktákoa, below, and miktáta, doun ; from amaho, the interior, amahóka, within or in; from atási, all out of doors, atásikoa, out.
264. Prepositions, separate and incorporated, and all adrerbs used as prepositions, follow the nouns which they govern.
265. When incorporated, they may be found suffixed to the nouns which they govern, or prefixed to the verbs which follow; but in either case they cowe, of course, after the noun.

## CONJUNCTIONS.

266. There are two words which are possibly simple conjunctious; they are ísia, and, also, and duma, but.
267. Other words used in joining words and sentences perform also the duties of adverbs and prepositions, and are properly to be classed as such.
268. Cunjunctions commonly stand between the words, clauses, or sentences-which they connect.

## INTEREECTIONS.

269. There are not many words which are purely exclamatory or interjectional; a large number of the words which are used as interjections being verbs.
270. The following words, however, cannot be well analyzed, and may be regarded as true interjections:
u! oh! expressing pain or astonishment, and commonly preceding a sentence.
ihe! there now! does that satisfy you'? etc.
ki ! is used in doubt and astonishment.
hidi! used by children when teased; perhaps from the demonstrative pronoun hidi.
hukahé! used by men to express surprise and delight; as when much game is killed at a volley, etc.
tsakạk'! an expression of disgust and impatience, may be a derived word.

## HIIATSA DICTIONARY．

## .2

a，n．；a tree，a plant；the entire plant as distinguished foom its parts；－used after＇ma＇or as a suffix to nouns；as，kohati，corn， kohatia，a stalk of corn．
a，n．；a muscle．
a aí te，v．$t$ ；to strike by throw－ ing；to hit or bruise with a stone or uther missile．
a át ti，v．；hurt or bruiséd by a missile．
ai da［ara］，$n . ;$ the arms；the forelegs of quadrupeds．
ai da，n．；the bair of the head； the locks．
ă dĭ，a causative prefix to verbs， denoting b，y the fort，or by heat or fire．（9） 147）．
a da a du ie tía，$n$ ．，fr．ada and aduictia；the brachium，the upper part of 1 he arm．
a dăi du i，$v . i$ ．，fr．ade and adui； becoming painful．
ă da ha，$v . i$. ；to be burning ； burnt，parched，charred．
ăi dă lia he，$r$ ．t．， 3 d pers．；to parch or burn．
 cause to burn ；to be burned or parched．
íl dă liă pe，v．t．，fr．ădă and liăpi；to kick；to bark or denude by kicking．
ă dia lié lie，v．t．；to seize，take hold of，cling to ；－also ădălielii．
ă dă lié se，$v . t$ ．，fr．ădă and liese；to tear with the foot；to tear with the parss，as a beast．
a．

## ada

a dæ̌ hi se，$v . t$ ．；to be ignorant of．－madăliisets，I don＇t know， I am ignorant．
a dă hi se ke，v．$t$ ．；to make ig－ norant；to leaye in ignorance．
ă dă lió hin，v．t．，fr．ăd̆ and． liohii ；to break with the foot．
a dắ lipa ko a，$n$ ．；the Mandan Indians．
a dă hipi，$n$ ．，$f r$ ．adu and alipi； a part of anything ；－also adạti－ pi．
a ḍ̣̆ lipi ke，v．t．；to make or be made a portion；to make one thing a part of another．
ぶ dă liu，v．t．，fr．ădă and liu；to spill with the foot；to upset by kicking ；－also adaliue．

SEEK, v. t., kidi, kikidi.
Seize, $\boldsymbol{v}$. $t$., adalielii.
SÉRVICE-BERRy, $n$., matsutạpa.
SET, v. i., imalipi.
Seven, adj., siapua. - TH, isiapua.
Seventeen, adj., alipisiapua.
Seventy, adj., ṡapuapitika.
Sever, v. t., adatsaki, dutsaki.
SEw, v. t., kikaki.
ShabBy, adj., kuti.
SHAD-buSH, n., matsutạpaa.
Shade, n., dahi, dalilii. -v., aduoktsihe.
Shadow, $n$., aduoktsi.
Sнаке, v. t., liakahe; adato'ti, dakato'ti, 'kiadato'ti, kipato'ti, etc.
Shallow, adj., liepi, liepikṡa.
Shame, v. $t$., itạdike, kiitodike.
Sharp, adj., siptse.
Shave, v. t., dakakiti, kidakakiti.
SHawl, n., masidaliami.
SHE, pron., i, se.
Shear, v. t., datskiti.
Shell, v. t., dasie, daliade.
Sheep, $n$. See Bighorn.
SHield, n., midaki.
Shine, v. i., amaliati, kaditska.
Shirt, $n$., matsé-ituli.
Shiver, v. i., dada.
Shoal, n., aduliepi, maaduliepi.
Shoe, n., hupa, itapa.
Sноот, $v$. , di, tadatodi, uahipi.
Shore, $n$., midideta.

Slow.
SHORT, adj., padui, padopi, padopidi.
SHORTEN, v. t., paduike, kipaduike.
Shortening, part., paduadui, kipadopadui.
SHOT, n., adupóadui-kadísta.
SHOULDER, n., idasipa.
SHOULDER, v. i., idaśpakipe.
SHove, v. t., kipkidi, kiptsuti, pakidi.
SHOVEL, $n$., amaidạhisie.
SHOW, v.t., atehe, ateheke.
SHUT, r. t., kipatạki, mạkipatạki.
Sick, adj., ilioade.
Side, $n$., adupạtska, tsu, tsuta.
Sigh, $v . i .$, idiali, kiidiahi.
SILVER, $n$., uetsailiôtaki.
SINEW, n., matsua, matsuapạkisi.
Sing, v. i., pahi, kipahi.
Stivk, v. i., tsipi. - v, t., tsipike, kitsipike.
Siriús, $n$., ickadehi.
Sister, r., idu, iku, itakisa, itaku, itamia. - IN-LAW, uaka.
Sit, v. i., amaki, kiamaki.
SIX, num. adj., akama.
Sixth, iakama.
Sixteen, adj., alipiakama.
Sixty, adj., akàmaapitika.
Skate, $n$., maidaktsadake. - $\boldsymbol{v}$. i., daktsadake.

SKEWER, n., maipatsa'ti.
Skiff, $n$., midamati.
Skin, $n$. See Pelt and Robe.
Skull, n., atúbidu.
Skunk, n., lioka.
Sky, n., apalii.
SLed, n., maidutsada, midamaidu. tsada.
Sleep, v. t., hami, hamikṡa, hidami.
Sleepy, adj., hamicti, hidamicti, liolioi.
Slide, v. i., dutsada, kidutsada.
SLow, adj., sua.

SLowly.
Slowly, adv., hopa, ṡua, şuaha.
Smack, v., datsope.
Small. See Little. - pox, maliaka.
Smart, v. i., hasisisi, kihasisí.
Smash, v.t., dakata [nakata], ualipi.
Smell, n., maaduiditsi, maiditsi. - v.t., mupi. - v. i., iditsi.

Smoke, n., v. i., pie, piekṡa. - vi. $t .$, opehi.
SMоотн, adj., tsutsute. - v. t., kipkite, kitsutsutike, pakiti.
Smoothing-iron, n., maikipkiti, maituliiikipkiti.
Snag, $n .$, midaicpati.
Snail, $n$., maiśpadumidi.
SNaKE, n., mapoksia.
SNap, v. i., adatạlipe.
Sneeze, $r$. i., halipi, kihalipi.
SNow, n., ma'pedetskistapedi. v. i., ma'pi, ma'pits.

Snow-bird, $n$., madadaka.
SNUFF, $n$., maibalipi.
Soap, n., maitidusuki [maitirusuki.]
Socket, n., ioki, maióki.
Soft, adj., tapa.
Soften, v. t., tapake.
Sorl, v. t., kiawatsakike, kiiliatsakike, kitsadatsakike, etc.
Solled, adj. See Dirty.
Soldize, n., akumakikua, masi". akumakikúa.
Son, n., idiṣi.
Song, $n$., makipahi.
Soon, $a d v$., itekoahiduk.
Sore. See Scar. - v. i., ade, hasisisi.
Soup, n., hupa.
Sour, adj., adui. - v.t., aduike.
Source, $n$., aziicpu.
South, n., adv., umata, umataha, umatakoa, umatata.
Sow, v. t., amaoze.

STOMACH.
SPAN, $n$., itakidakahe, siakiitakida-- kahe.

Span, v. t., kidakahe.
Spill, v. t., adaliu, liu, paliue.
Spirit, n., dalii, idahi, dokidahi.
SPIT, v., aksiue, kiakṡue, sue.
Spoiling, part., isiadui, kiisiadui.
Sponge, $n$., midiidaliupi, maimidipike.
SPOOL, n., midaiapi.
Spoon, n., azi, azidelii, azišipiṡa, aziuetsa.
Spotted, adl., puzi.
Spread, r. t., dakahe, kidulia.
Spring, n., maha.
Spring, v. i., dutsisisi, kidutsisí:
Sprinkle, $v$. $t$., duto'ti, kiduto'ti.
SPROUT, n., aduisamike. - v. i., apadi, isamike.
Square, $n$., adupaliitopa.
Squaw, n., mia, amakadolipákamia.
Squeal, $r$. i., dạki [nạki].
Squeeze, $r$. $t$., datati, datapi, dutskapi, dutskati, kidatati, kidatapi, kidutsati.
SQUINTT-ETED, udj., istaduta.
Squirt, r. $t$., datskati.
Stain, r.t. See Soll.
Star, n., icka.
Starve, $r$. t., kiadiitike, kiliadaliike, kiliadaliikṡake.
Steal, r. t., asadi.
Steant, $r . i .$, pue. - boat, matisisis.
Steep, adj., daliạpesii.
STEM, n., aduhúpa, hupa.
Stench, n., aduiditsiisia.
Sternum, n., imạkidu.
STіск, n., midakaza. - v. t., datsa'ti, kidatsa'ti, kipakade, pakade, patsa'ti. See AdHERE.
Stiñg, v. t., hasisisike, kihasisisike.
Sturk, $c$. $i$., iditsiisia.
Stomach, n., kilia.

## Stone.

Stone, n., mi', mi'kaza.
Stop, v., haka'ta, liaka'tihe, kiliaka'tike, opsasasa.
STOPPLE, n., iapati, maiapạti.
Stove, n., úetsa-aduua.
Store, v. t., kidusia.
Store-room, n., adukidusia, maadukiduṡa.
Straight, adj., tsamutsi [tsawntsi].
Straighten, v. t., tsamutsike, tsamutsihe, kitsamutsike. - iNG, part., tsamutsadui.
Strangle, v. t., dutskiti.
Strawberry, n., amaalioka.
Strengthen, v. t., itsiike, kiitsiike.
Strike, v.t., diki.
Stripe, v. t., lialiike, kilialiikè, kipuzike, puzike.
Striped, adj., puzi.
Strong, adj., itsii, itsiits.
Strouding, n., akuhisi.
Sturgeon, n., muapadelii.
Subordinate, $n$., maiske.
SUCK, v. $t$., a'tsihi, datsuki.
Suckle, v. t., a'tsihike.
Sugar, $n$., matsikoa ( $f r$. tsikoa).
Sultry, adj., adeksia.
Summer, n., ade, maade.
Sun, n., midi [bidi], mapemidi. - RISE, midiate. - SET, mịdiimalipi.
Sunday, n., mapehopa.
SUNFISH, n., muatsuki.
SUPPORT, v.t., alksie, kiạksie, oki.
Surfeit, $v . t$., kiliapạtike, kiliapa. tikṡake.
SURROUND, v. t., ialialia, oki, optsati.
SURVEY, v. t., ama kikişki.
SWallow, n., amaṡodiṡa.
SWALLOW, v. t., , kipe, pe.
SWEEP, v. t., masialia.
SWEET, adj., tsikoa.

Ten.
SWEETEx, v. t., ketsikoake, tsikoake.
SWELL, v. i., kipuake, puadui.
Swell, to CaUSE tó, v. t., kipuake, puake.
Swelling, n., adupua. - part., kipuadui, puadui.
SwIM, v. i., midididi [bidiniri].
Swing, n., maikidakudsi. -v.t., dakudsi, kidakudsi.
Swollen, adj., pua, puạts, katsuka.
SWORD, n., midiisii.
Syringe, $n$., maidatskati.

## T.

Tall, n., icpe, tsita.
Tainted, adj., puade.
TaKe, v. t., dutse, kidutse, kuts. - BACK, kudsi. - DOWN, dulipi, kidulipi.
Tale, n., mazi.
Talk, n., aduide, ide. - v. i., ide.
Tall, adj., hatski, maku.
Tally, c. i., dakaptsihe [nakaptside].
Tangled, adj., sikia, sipe.
Tapering, adj, tsobi, tshuahe.
Tassel, n., okiicpu.
Taste, r. t., kikiṡki.
Tattoo, r. $t$., pi, kipi.
Tattooing, $n$., pi, adupi.
TaWny, adj, sidl. - TO MAKe, $v$. $t$., ṡidike, kisidike.
Tea, n., midapa [bidapa].
Tear, v. t., adaliese, dalieṡe [la-], duliese, dukapi, kiadahèse, kịduliesie, etc.
Tears, $n$., istamida.
Tediolsly, adv., hopa.
Tell, $v . t$., kime.
Tenple, n., atihopá.
Ten, num.adj., pitika. Tenth,ipitika.

## Tenthly:

Tenthly, $a d v$., ipitikadu.
Tendon, n., akazi.
Tent, n., atitsuabe, masiilii ati.
Tepid, adj., sakapi. - to make, sakapike.
Terrified, part., hopaṣi, kihopạsi.
Terrify, $r$. $t$., hopạsike, kihopạsíke.
That, pron., hido, ku, kua, kutsa. ki, se, setsạki.
Thee, pron., di [ni].
Theft, $n$, maașadi.
Theirs, pron., itamae. See 1122.
Themselves, pron., hidoki.
Then, $a d v$., sedu ['seru].
There, adr., biduka, kuadu, sedu, sekoa. - ARE, $v$., matu.
Thick, adj., tạtsi, titsi, titsiksia.
Thicken, $r$. $\begin{gathered}\text {.; tatsike, titsike, ki- }\end{gathered}$ tatsike, kititsike.
Thickening, part., tatsadui, titsadui, kitạtsadui, kititsadui.
Thickish, adj., tạtsadsi.
Thin, adj, liapi; liadalii.
Think, $v$. $i$. and $t$., idie.
Thind, num. atlj., idami [inawi].
Thirsty, aljg., udsi.
Thirty, num. adj., damiapitika.
Thirteen; num. adj., alipidami.
This, pron., hidi. - MUCH, adr., hidika, hidikats. - Place, hidikoa.
Thoc, pron., da, di.
Thousand, num. adj., pitikictiaakakodi.
Thread, n., maikikạki.
Three, num. adj., dami [nawi].
Throat, n., doti [loti].
Through, prep., adv., dumatadu.
Throw, $v$. t., ise, kipạtike, pạtibe.
Thumb, $n$., sakita.
Tifunder, $n$., tahu, tahuidaka.*
Thus, adr., hidise, kua.
Tіск, $n$., uạkitạtsi.
Tickle, $v . t$., sasulukihe.

Twenty.
Tie, v. $t$, dutskiti.
Tire, v. t., dahika'tike, kidahika'tike.
Triked, adj., daheha'ti.
To, prep., lia, ka.
Tobacco, $n$., ope. - bag, opeisi.
To-DAv, $n$., $a d v$., hídi-mape.
Toe, $n$., itsiadutsamihe.
Together, adv., apika, ikupa.
To-morrow, n., adv., ataduk [ataruk].
Tongrje, n., dezi.
To-Night, n., hidi-oktsi, makuduk, oktsiaduk.
Tooth, $n ., ~ i, ~ i s a, ~ h i . ~$
Top, i., icpu.
Torn, part., dahesid, duliése, pakapé.
Toss, $r$. t., liamike, kiliamike.
Totem, n., daki.
Tough, adj., kawicka.
Toward, prep., lia, ta, dotalia.
Towel, n., maikipakisi. See $\uparrow 44$.
Trade, $x$. i. See But.
Trader, n., akumaíhu.
Trail, $n$., adi.
Tramp, $r$. i., dakatạlii.
Trample; r. t., adatạpi, adatehe.
Transparent, adj., delii.
Trap; n., itipe, maitipe, maikiku.
Travelling-pabty, $n$., dadi.
Tremble, i. i. See Shiver.
Triangle, $n$., adupaliidami.
Truly, adv., ka'ti.
Try, $r$. $t$., maile [waihe].
Tuber, n., kaksia.
Tuck, $r$. t., opaṡa, opaṡaku.
Tumor, n., adupua.
Turbid, adj., midisia.
TURN, $r$. t., dumidi, dumilia, katake.
Turnip, $n$., abi'.
Turtie, n., matalii.
Twelve, num. adj., alipidopa.
Twenty, num. adj., dopapitika.

## Twice.

TwICE, adv., dopa, dopatsakoa.
Twilight, n., ba'pesiede.
TWINKLE, v. i., kaditskia.
TWIN, n., dakadutska [nakalu-].
Twist, v. t., adamidi, dumidi, kidumidi, pamidi.
Two, ниm. adj., dopa [nópạts].

## U.

UdDER, $n .$, a’tsi.
Ugly, adj., isia, iteisia.
UNCLE, h., ate, itadu.
Under, prep., miktakoa [wikta-].
Understand, v. t., eke.
Unfold, v. t., dakatihe.
Unite, v. t., , kiikupake, kiduétsake.
Untie, $v$. t., dasíipi, dusipi, dutsipi, kidutsipi.
Upland, $n$., amaadatsa.
Upon, prep. ade., akoka.
Upright, $n$., aduiptsii.
Upset, v. t., adaliue, liue.
Ursa Major, $n$, ickas̃apua.
Us, pron., mido [miro, wido].

## v.

Valley, $n$., amaliakupi.
Value, $n:$, imasí.
$\checkmark$ $\triangle$ Por, $n$., pue.
Varnish, n., maikitsatike.
Venison, $\sim$., tsitatalai iduksiti.
Venús, ${ }^{\prime} n$., ickaictia.
Vermilion, $n$., ui, iteui.
Very, adv., ka'ti.
Vest, n., mapatópe.
Village, n., ati, ati ahu.
Vine, n., masipisiaa.
Vrolin, n., maśítamakipahi.
Virginia creeper, $n$., mahopamiaitamatsua.
Visit, v. t., uzie, kiuzie, midedi.

## Whiskey.

Vomit, v. i., kade.
Voracious, adj., adítiksia.

## w.

Wagon, $^{n}$., midaikaki.
Waist, n., hedapi.
Wait, v. i., hakata.
WAKEN, v. t., itsihe.
$W_{\text {alk, }}$ v. $i$, dide. See Gait.
$W_{A R}, n$. , makimạkia.
WARM, adj., ade, tsame.
War-Party, $n$., matsedidi.
Warping, $^{\text {p }}$ part., kisakapadui, sàkupadui.
WARRIOR, n., akumakikua.
$\mathrm{W}_{\mathrm{ASH}}, v$. .. , dusiuki, dutskisi, kidusuke, kidutskisi.
Waśhing, $n$., makidutskisí.
WASP, $n$. , mapatatskakiditi.
Watch, n., midiikikisisi [bidi-].
Water, n., midi. - v.t., midihike.
Watery, adj., miditsi.
Wave, $n$., mididặhisisi [bididạliisi].
Wave, v. t., pato'ti.
We, pron., ma, mi, mido, midoki.
Wearily, adv., hopa.
Weasel, $n$., utsitsa.
Wed, c.t., uabe.
WEDGE, $n .$, mitsi.
Weep, v. i., imia, istamidi pạti.
Weigh, v. t., kikiski.
Weight, n., maikikisiski.
Well, adv., tsạkihe.
West, $n ., a d j$., adv., patsati, patsatikoa. - WARD, patsatilia.
$\mathrm{W}_{\mathrm{ET},}$ adj., adạtskui. - v.t., adạ. tskuike, kiadạtskuike.
What, pron., tapa, taka, takada, to.
When, adv., tuakaduk, tuakasedu.
Where, ade., to, todu [toru], toka.
Which, pron., tapa, tape.
WHIP, $n$., iki. - v., diki.
Whiskey, n., midiadui [bidialui].

## Whisper.

WHISPER, v. i., tsitside.
Whistle, $n .$, ikozi. - v. kozi.
White, adj., atạki, ihotaki, oliati.

- MAN, $n$., masii.

Whiten, v. t., ihotạkike, kiatạkike, etc.
White-wash, $n$., atiipkiti.
Whither, adv., tapata, toka, tokta, tota.
Wно, pron., tape.
Whole, adj., liakaheta.
Whose, pron., tapeta, tapeita, tapéitamae.
Why, adv., tosie.
Wide, adj., soki.
WIFE, n., itadamia, ua.
Wild, adj., idapudi.
Willow, n., maliuhisia, midahadsi.
Wind, $n$., hutsi.

- WIndow, ia., maikika.

Wing, $n$., icpa.
Wink, $v: i .$, istaliulii.
Winter, $n$., mada, tsidie. Nee Last and Next.
With, prep., api, apika, ikupa.
WOLF, $n$., motsa [botsa], tsieṡa.
Wolf-berry, $n$., masiukaaksju.
Woman, n., mia, miakaza.
Wood, n., mida [bida].

- Work, v., dahe, kiksia.

WORM, n., hupaakuikutski, mapokṡa.
WORMWOOD, n., iliokataki-akusipisáa.

## Yourselves:

Worsie, adj., isia-itaókakon.
Wound, $n$., aduu, àduakṡạki, odakṡake. - v.t., u, dakṣạki, dukạpi, idahpi, kidakṡaki, kidukapi.
Wrap, v. t., pudsike.
WRinkle, $v . t$., lipike, kiliipike.
Wrinkled, adj., liipi, lipits.
Wrist, n., ikuti.
Write, v. i., akakạ̀i.
Writing, $n$., maạkakasisi.

## Y.

YaRDSTICK, $n$., maikutski.
Yawl, $n$., midamati.
YAWN, v. i., ida.
Ye, pron., dido [niro].
Year, n., mada. See Winter.
Yeast, n., maahapiikidakapusi.
Yellow, adj., tsi, tsidi. - ISH, tsidadsi. - DyE, $n$., itsidike. - то maKe, v., kitsidike, tsidi-
ke. - turning to, tsidadui.
YEs, $a d v .$, e, hao.
Yesterday, $n$., húdisiedu.
Yonder, adv., oka.
You, pron., da, di [na, ni].
Young, $n$., daka, idaka. - MAN,
sikaka. - woman, miakaza.
Your, pron., di, dita.
Yours, pron., ditamae [nitawaets].
Yourself, pron., dicki.
Yourselves, pron., didoki.

[^29]
[^0]:    "In the fall of 1872 , Dr. C. E. McChesney, then physician at the Berthold agency, counted, with great care, the bnildings in the village, and, in a letter, gave me the following results:--
    Old-style (round) lodges of Rees ............ ............... ......................... 43
    Log-cabins of Rees ......................................................................... 28
    Total number of houses of Rees ........................................................... 71
    Old-style lodges of Grosventres and Mandans........................................ . 35
    Log-cabins of Grosventres and Mandans....... ..................................... 69
    Total namber of honses of Grosventres and Mandans ......................... 104
    Total of houses in village ...... ............................................................. 175
    He remarks :-"I conld not separate the Grosventres from the Mandans, owing to the stupidity of the interpreter. If anything, this number is under, certainly not over: but it does not vary more than ten."-Some five or six houses, occupied by white men with Indian families, were probably not included in this enumeration.
    † Lewis and Clarke, pp. 73, 78.-Gass, pp. 72, 73.-Maximilian, p. 343.-De Smet, pp. 76-77, and others.-Compare with descriptions of Kanzas, Omaha, and Pawnee lodges in Long's expedition, pp. 120, 200, 436.

[^1]:    * Perbaps it would be well to illustrate this with a copy of plate 47, vol. 1, of Catlin, and a copy of the figure on p. 343 of Maximilian.

[^2]:    * p. 266.

[^3]:    * Lewis and Clarke, pp.69, 70, 72, 73, 74, 82, 84, etc.-Maximilian, p. 342.-Catlin, N. A. Indians, pp. 73, 204.

[^4]:    *For an account of these movements, see Lewis and Clarke, pp. 83-85.

[^5]:    * Boller, pp. 35,36.
    $\dagger$ The Mandan name Siposka (Hidatsa, sitska or tsitska) is applied to the Tetrao phasianellus (Linn.) or Sharp-tailed Grouse, the prairie-hen of the Upper Missonri.
