CAPTAIN CANOT. THE SLAVER

Below we give some extracts from this book. It is a perfect revelation of the slave trade by one who was for twenty years engaged in it. The following extracts relate to scenes which occurred on ahip-board.

But wit and eleverness are not all in this world. Our captain returned in high spirits to his vossel; but we hardly reached the open sea before he was prostrated with an ague which refused to yield to ordinary remedies, and finally ripened into a fever, that deprived him of reason. Other dangers thickened around us. We had been several days off the Cape of Good Bope, buffetting a series of adverse gales, when word was brought me after a night of weary watching, that several slaves were ill of small-pox. Of all calamities that occur in the voyage of a slaver, this is the most dreaded and unmanageable. The news appalled me. Impetuous with anxiety I rushed to the captain, and regardless of fever and fissanity, disclosed the dreadful fact. He stared at me a minute us if in doubt; then opening his bureau and pointing to a long coil of combustible material, said that it communicated through the decks with the powder magazine, and ordered me to—"blow up the brig!"

The master's madness sobered his mate. I lost no time in securing both the dangerous implement and its perilous owner, while I called the officers into the cab. "ar inquiry and consultation as to our despera. tate.

The gale had lasted nine days without intermission, and during all this time with so much violence, that it was impossible to take off the gratings, release the alavee, purify the decks, or rig the wind-anils. When the first Jull occurred, a thorough inspection of the eight hundred was made, and a death amounced. As life had departed during the tempest, a careful inspection of the body was made, and it was this that first disclosed the pestilence in our midst. The corpse was silently thrown into the sea, and the malady kept secret from crew and negroes.

When breakfast was over on that fatal morning. I determined to visit the alave deck myself, and ordering an abundant supply of lanterns, descrad, so save the reset by depriving them of life. Accordingly, these wretched beings were at once sent to the forested as a hospital, and given in charge t

I have always regretted that I left Ayudah on my homeward voyage without interpreters to aid in the necessary intercourse with our slaves. There was no use on board who understood a word of their dialect. Many complaints from the negroes that would have been dismissed or astisfactorily adjusted, had we comprehended their vivacious tongues and grievances were passed over in silvence or hushed with the lash. Indeed, the whip alone was the emblem of La Estrella's discipline; and in the end it taught me the saddest of lessons.

discipline; and in the end it taught me the saddest of leasons.
From the beginning there was manifest discontent among the slaves. I endeavoured at first to
please and accommodate them by a gracious manmer; but manner alone is not appreciated by untamed Africans. A few days after our departure,
a slave leaped overboard in a fit of passion, and
another choked himself during the night. These
two suicides, in twenty-four hours, caused much
areasiness among the officers, and induced me to
make every preparation for a revolt.

We had been at see about three weeks without
further disturbance, and there was so much merriment among the gauge that were allowed to come

We had been at sea about three weeks without further disturbines, and there was so much merriment among the gangs that were allowed to come on deck; that my apprehensions began to wear away. Suddenly, however, one fair afternoon, a squall broke forth from an almost cloudless sky; and as the beatswain's whistle piped all hands to take it sail, a simultaneous rosch was made by the confined slaves at all the after-gratings, and amid the confusion of the rising gele, they knecked down the guard and poired agon deck. The sentry, at the fore-hatch seized the crok's axe, and sweeping it round him like a saythe, kept at bay the band that sought to emerge from below him. Meantime, the women in the cabin were out life. Seconding the males, they rose in a body, and the helmannan was forced to each several with his buile before he could give them below again.

About forty stalwart devile, yelling, and grinning, with all the savage, forceity of their wilderness, were now on deck armed with stayes of

broken water-casks, or billets of wood, found in the hold. The suddenness of this outbreak did not appal me, for, in the dangerous life of Africa, a trader must be always admontished and never off his quard. The blow that prostrated the first white man was the earliest symptom I detected of the revolt; but, in an instant, I had the armonest open on the quarter-deck, and the mate and stewart beside me to protect is. Matters, however, did not stand so well forward of the mainmast. Four of the hands were disabled by clubs, while the rest defended themselves and the wounded as well as they could with handspikes, or whatever could suddenly be clutched. I had always charged the cook, on such as emergency, to distribute from his coppers a liberal supply of scalding water upon the belligerents; and, at the first sign of revolt, he endeavoured to beptize the heathen with his steaming slusb. But dinner had been over for some time, as that the likewarm liquid only irritated the savages, one of whom faid the unfortunate "doctor" bleeding in the scuppers.

All this occurred in perhaps less time than I

heathen with his steaming slash. Ber dinner had been over for some time, as that the latiewarm liquid only irritated the savages, one of whom fail the unfortunate "doctor" bleeding in the scuppers.

All this occurred in perhaps less time than I have taken to tell it; yet, rapid as was the transaction. I saw that, between the squall with its flying sails, and the revolt with its raving blacks, we would soon be in a desperate plight, unless I gave the order to shoot. According, I told my comrades to sim low and fire at once.

Our carabines had been purposely loaded with buck-shot, to suit such an occasion, so that the first two discharges brought soveral of the rebels to their knees. Still, the unharmed neither fied nor ceased brandishing their weipons. Two more discharges drove them forward amongst the mass of my crew, who had retrested toward the bow-spirit; but being reinforced by the boatswain and carpenter, we took command of the hatches so effectually, that a dozen additional discharges among the ebony legs, drove the refractory to their quarters below.

It was time; for sails, ropes, tacks, sheets and blocks, were flapping, dashing, and rolling about the masts and decks, threatening us with imminent danger from the small. In a short time, every thing was made abug, the vessel put on our course and attention paid to the mutineers, who had begun to fight among themselves in the hold!

I perceived at once, by the infuriate sounds proceeding from below, that it would not answer to venture in their midst by descending from the hold. When this was accomplished, a party entered, on hands and knees through the aperture, and began to press the mutineers forward towards the bulkhead of the forceastle. Still, the rehels were bot for the fight to the Jast, and boldly defended themselves with their staves against our weapons.

By this time, our lamed cook had rekindled his fires, and the water was once more builing. The hatches were kept open but guarded, and all who did not fight were and miners. I ordered a number of

unto death.

I could never account for this mutiny, especially
as the blacks from Ayudah and its neighbourhood
are distinguished for their humble manners and
docility. There can be no doubt, that the entire
gang was not united or concerned in the original
outbreak, "else we should have had harder work
in a bladuing them amid the visk and turnuit of a

outbreak. Telse we should have non unfaced or in subduing them amid the risk and turmed of a West Indian equall.

There was very little comfort on board La Estrella after the suppression of this revolt. We lived with a pent up volcano beneath us, and, day lived with a pent up volcano beneath us, and, day and night, we were conselestly vigilant. Terror reigned supreme, and the hash was its sceptre. At last, we made land at Porto Rico, and were swiftly passing its beautiful shores, when the inspector called my attention to the appearance of one of our attendant slaves, whom we had drilled as a sort of cabin-boy. He was a gentle, intelligent child, and had won the hearts of all the efficiency of the state of t

gent child, and had won the heave of all the omcers.

His pulse was high, quick and hard; his face
and eyes red and awollen; while, on his neck, I
detected half a degen rosy pimples. He was sent
immediately to the forecastle, free from contact
with any one else; and left there, cut off from the
crew, till I could guard against pestilence. It was
small pox!

The buy passed a wretched night of fever and
pain, developing the malady with all its horrors.
It is very likely that I slept as badly as the aufforfor my mind was busy with his door. Daylight found me on deck in consultation with our
veteran boatswain, whose experience in the trade
authorized she highest respect for his opinion.
Hardened as he was the old man's eyes, filled, his
lips trembled and his voice was husty, as he
whisnessed the versited in me as a sequenced in authorized and nignest respect, for his opinionhardened as he was the old man's eyes, filled, his
lips trembled and his voice was husky, as he
whispered the verdict in my asr. I guessed it
before he said a word; yet I hoped he would have
connecled against the dread sitemative. As we
went aft to the quarter deck, all ever were bent
upon us, for every one conjectured the malady and
feared the result, yet none, dared ash a question.

I ordered a general inspection of the distress ver
when a favorable report, was made. I did not ver
content, and descended to examine such one paisonally. It was true the child as he was indiceted.

For half an hour Lynd the deck in and for resilessly, and caused the green to enliget themselves
to inspection. But my saffors were as healthy as
the slaves. There was no symptom that indicated
approaching danger. I was disappointed spatis.

General Agency.

DAY-BREAK.

A writer in the Illustrated London Magazine has given us a very entertaining account of Cocent Garden Market, and dilates graphically on its aspect during the small hours of two or three o'clock in the morn-

"Two o'clock in the morning," he ob-serves, 'is the hour at which we should wish you to begin your observations. But the state of the market and the surrounding wish you to begin your observations. But the state of the market and the surrounding streets, at that hour, will have prepared you for the announcement, that for some hours previously a steady stream, or set of streams, of heavily-laden waggons and carts, has been setting into this great heart of vegetable traffic from the outlying real as of Hammersmith, Isleworth, Brentford, Hounslow, Wandsworth, on one side, and of Essex way, on the other; to say nothing of the market-trains' from country places, of which one alone, from a village in Kent, about twenty-three miles from town, brings from twenty to thirty truck-loads of fruit and vegetables three times a week, or even oftener, during the season. These importations choke up the market and ooze over into the bye-streets. Outside these are arranged scores on scores of lighter carts, arranged scores on scores of lighter carts, belonging to the retailers, from every part of town and the suburbs; the outlying fringe of all being an innumerable multitude of costermongers' barrows, whose owners are keenly on the look-out for the "bought-in" lots of the market. "To get a choice you must be early," is the rule; and so, long before the time I have mentioned, all active petailers are on the spot, eagerly inspecting cargoes and looking out for bargains. The scene about this time is truly wonderful. A bee-hive engaged in dethroning the legitimate Queen-bee and electing a constitutional monarch in her room, would be stitutional monaren in ner room, would be tranquillity compared to it. Huge waggons, like mountains of turnips, cauliflowers, cabbages, carrots, onions, &c., &c., are swiftly and steadily discharging their cargoes into the side-walks; groves of geranding and an apparatuments. niums, camellius, azaleas, carnations, mignonette, and all sorts of flowers, strew the ground at each end of the centre alley; es" (as they are technically termed), ts of potatoes and fruit, stand piled in heaps at every corner; "fancy" flowers and rare fruit—the peaches at a guinea each, and the ho grapes at the same per pound—are handed over, packed with every conceivable care, to sober-looking porters, with strict—in-junctions to be "wery careful." Business, junctions to be "wery careful." Business, meanwhile, is proceeding with a vigour only proportionate to the accompanying hubbub; and from the highly-respectable tradesman of Belgravia or Westbournia, down to the straw-chewing "coster," or the clamorous fish-wife, overy one seems driving desperate bargains, at the top of shrill and querulous voices, a deep bass running accompaniment to which is supplied by the rumbling of waggon-wheels, and the deep-toned execrations of excited drivers. Now there is a custom—was, we wish we could truly write: it is, however, we understand, happily on the wane—of

Now there is a custom—was, we wish we could truly write: it is, however, we understand, happily on the wane—of "clinching" every bargain "with a glass."
For this praiseworthy object, as well as to supply the natural cravings of nature—which after the night-journey, from perhaps many miles distance in a slow, jolting waggon, or on the road by its side, may be well supposed to be of a somewhat ferocious kind, there are thrown open about this hour (two o'clock) the "Market-houses," as they are called; that is public-houses which keep a double set of servants—one for the day and one for the night—send the first to be at twelve and rouse the second at one. At two o'clock, breakfast begins in most of these houses; and to see the burly market and the profice of the second at one of the night—send the first to be at twelve and rouse the second at one. At two o'clock, breakfast begins in most of these houses; and to see the burly market gullarly arrested his progress, and said, and selected the second at one of the night care the second at one. At two o'clock, breakfast begins in most of these houses; and to see the burly market gullarly arrested his progress, and said, the second to the cause of truth. One Sabbath morning, he heavily as he stepped from his house to go to church, he met a stranger driving a heavily loaded wagon through the town. He turned upon im, stopped lifted both hands, and stood in a tragic attitude, gazing upon the ground i At two o'clock, breakfast begins in most of these houses; and to see the burly market gardeners rolling in, ordering their coffee, buttered toast, and rasher; to see the huge buggins of coffee, the enormous toasting machine, like a gigantic wire-guard stuck over with spikes; to listen to the constant hissing and crackling of rashers and chops, and other savoury comelitibles; to see these things, and to hear these things is to feel hungry at once from sympathy.

The quantities consumed are almost incredible. At one house alone the landlord informed us that his average "brew" in

The quantities consumed are almost incredible. At one house alone the landlord informed us that his average "brew" in the season was fourteen gallons of coffee every morning.

Breakfast over, business is resumed with renewed vigour. By neven or eight o'clock all the best vegetables, fruit, and flowers have been bought. Nineteen-twentieths are on their road to the retailers' shops, not a twentieth part remaining in the hands of the shopmen of the market. * * It has been well said, that one half of the world has no notion how the other half lives; and we have met with very few people, to

MARRIAGE OF THE TOUNG PASHA.

The marriage of Ghalib Pasha, son of Reschid Pasha, with Fatima Sultana, eldest daughter of the Sultan, takes place on Thursday next. In February last, the contract of marriage was signed, and the splendid presents were sent by the bridegroom's father to the Imperial palace of Theheragan. It was then directed, that the marriage and the accompanying festivities should be celebrated in the summer, but it appears that the necessities of the state have produced an effect even on the exalted personages who have never before denied themselves anything. It is resolved that the marriage shall be celebrated without the usual profusion and extravagance.

The vast cost of Eastern ceremonies would frighten the most magnificent monarchs of Europe. The expense of the approaching nuptials would amount to about three times the cost of her Britannic Majesty's coronation, and in such a case the festivities, if indulged in, must be of the grandest kind, for the young lady is the first daughter of the sovereign who has left her father's house, and the bridegroom's father is the most eminent, and in some gespects the most meritorious, of the Turkish dignitaries. For a splendid display the money is not to be had, and it is therefore resolved to establish a new precedent, and celebrate the nuptials in the modest style of the western world.

But the young couple are well provided for. A palace of vast size and splendor was commenced by Reschid Pasha some years since. The expense was too great even for a wealthy man who was every day becoming more wealthy. The honor of an imperial alliance had been promised him, and he took means to retain the palace in the hands of his family by a transaction not uncommon in Turkey. The Sultan purchased the building at a great price, and settled it on the daughter who was to marry the youthful heir to the minister. It has now been finished, and will receive the couple immediately on their marriage.

couple immediately on their marriage.

couple immediately on their marriage.

Preaching.—Of all things the most pitiable is when a man preaches to himself, and when an audience listens to be pleased with the minister. And the most glorious thing below is when the minister's preaching and the people's hearing lead to this conclusion, not, "How well the minister spoke to-day." and "How comfortably did we hear to-day!" but, "How glorious is that Saviour! how precious this soul! how weighty our responsibilities in the prospect of eternity and a judgement-seat!" We may always judge of what has been the nature of the sermon, or what has been the mood in which it was listened to, by the first remarks we hear as we retire; when people go home criticising the words of the discourse, instead of dwelling on and speaking of the lines of the subject, there is something wrong in the people's hearing, or in the minister's preaching. May God grant that all that I preach, and all that my people hear, may lead them to lift their hearts far beyond the temple, and to leave them no where except where our heart and of the Lord Jesus.—Dr. Cumming.

Gove Ruger Over r.—I have a friend.

our treasure should be, beside the throne of the Lord Jesus.—Dr. Cumming.
Gonz Right Over it.—I have a friend, whose ready wit often enlivens the social circle, and sometimes also faithfully serves weight. But seeing nothing, he loaded anxiously up to the man who had so singularly arrested his progress, and said, "Over what?" "The fourth commandment," was the quick reply—"Remember the Sabbath day, to keep it holy." It was hard starting those wheels again, and hard hunling that lead all the rest of the day. hard starting those wheels again, and hard hauling that load all the rest of the day.— Merwich Examiner.

A SINGULAR DANGER TO CATTLE,-Our A SINGULAR DANGER TO CATTLE.—Our attention was yesterday called to one of the most remarkable dangers attending the pasturage of cattle, in the western country especially, of which we have ever heard The facts which we will state show the great them. Breakfast over, business is resumed with renewed vigour. By seven or eight o'clock all the best vegetables, fruit, and flowers have been bought. Nineteen-twentieths are on their road to the retailers' shops, not a twentieth part remaining in the hands of the shopmen of the market. * * * It has been well said, that one half of the world has no notion how the other half lives; and we have met with very few people, to whom it has ever occurred to take an observation of this remarkable and unique feature in London life.

Transple Occurance.—A letter from Pecatonics, Winnebage county, Ill., dated August 14, says:

"I witnessed yesterday one of the most melancholy seenes I ever beheld. In the town of Lysander, one mile south of Pecatonica depot, there lay enshrined in five coffins, a Mr. Marchant, two sons and two daughters, all of whom were struck by lightning during a thunder shower, about two o'clock, A. M.—leaving in the family only the wife, and one son about eight years cld; they both being much injured by the shock, the woman remaining mentally daranged, continually bemoaning the less of her family." necessity there is at all times for farmers and others to be most careful and pruden

stomach and gradual accumulation of so indigestible a substance was dreamed of.

"Your Paper due to Cone, Sin." We recommend a careful perusal of the following plain statement, both to postmesters, and as subscribera; it is from a paper called The Advence, published at Hernando, Rins:

"The uncertain arrival, or uncertain delivery of papers at country post offices, is often the ground of complaint against publishers and aditure. Many of the offices are poorly supplied with conveniences for taking care of papers, so matter with what certainty they atrive. The papers are jumbled into a few pigeon holes or piled upon a deak, box, or barrel, to await the call of subscribers—in the midst of boots, buts, bridles, horse collars, and other coarse wares which may be called for during the day by customers. Country postmasters, in most cases, being engaged in some mercantile business, many newspapers and their way late some obscure corner, where they are hid in a mountain cave. In comes a man for the paper; and as it can t be found, of course it didn't come. The indignant subscriber consequently abuses the rascally editor, and perhaps calls for pen, ink, and paper, to write a letter of complaint about not sending his paper penetually; when if the said paper were endowed with apsech, it would cry out here I am, aqueezed behind this box or under this barrel. We must have seen just such things at many country post offices elsewhere as in this country.—Those remarks have no reference to any particular office, but meant for all where they will apply.

GENERAL INTELLIGENCE

"La TRIBUNE." The New York Commercial Advertiser, after referring to the fact, that a "Diving Company" are now operating on the wreck of this vessel, furnishes the following particulars touching the circumstances attending her

"Diving Company" are now operating on the wreck of this vessel, furnishes the following particulars touching the circumstances attending her loss:

La Tribune, at the time she was lost, was considered as fine a vessel as then belonged to the British during the war with France. The place where she was lost is "Herring Cove Head," about ten miles to the Westward of Halifax and but a few miles from where the remains of the ill-fated steamship Humboldt now lie. The loss of La Tribune was a melancholy one. When coming from sea, it being hazy at the time, she struck on Thrumpeap Shoals, to the Eastward of Halifax, where she runshipped her rudder: the wind then began to blow from the Southeast, and during the day increased to a gale. After a while, the ship came off the rocks, but having lost her rudder she vas unmanageable, and drifted toward the Western abore, opposite an immence bluff of rocks and one of the most dangerous spots along that iron-bound coast. During the afternoon, the fishermen, from the surrounding villages assembled in large numbers, willing to render any assistance in their power to the unfortunate crew of the ship, which was thee within apealing distance of the shore, but her commander and his officers, with drawn swords, forbade the men to leave her, expecting that assistance would be sent from Halifax by the Government, which was done, but too late. In the meantime, the gale increased and night coming on, the Government vessele could not reach them, and the people on the shore and landing them behind a cluster of rocks. In the last attempt his frail bark was dashed to pieces, but he succeeded in gaining the shore, and next moraing he and his companions were reacued by the people when the gale subsided. The dead bodies and the fragments of the vessel were found at rewn along the edore.

The materiale saved from La Tribune, are easid to be almost as soft as cheese. This vessel had a large amount of specie on board. She was a double-banked frigate, and rated 44 guns.

ENOLAND TO CANADA.—The London

ENGLAND TO CAMADA.—The London Times devotes one of its stately leaders to "the Crisis in Canada," The tenor, not the language of the article is given thus: "Come, darling, get on you'll little footies and see if you can't begin to toddle alone—mother can't always be with you to hold you up. Go now and play with you to the translater. See what is atrapping big fellow he is, and he and you were twins." He, the brother Jonathan. See what a strapping up re-low he is, did he and you were twins! He, the wifful young ecaping root, wented himself a long time age, and here you are, with a mouthful of teeth, still hanging to the popilla and drawing sustenance from the maintilary fountain, which is drained nearly to the last drop. "

Fins Ar Quasse.—We learn from the Quebec Observer extra of last Thursday, that on the night previous a fire broke out in the officer's quarters of the Royal Artillery, above the mess room, it is believed from a defect in the chimney, and had been long smouldering. The military and firemen made incredible exertions to save the building, and finally succeeded, although the two upper stories were completely gutted.

Sir Allan McNab, the new premier, is one of his manifestoes, thus defines his position on the elergy reserves question:

"My opinion on the subject of the elergy reserves has never been concealed. I was in favor of holding the (imperial) statute as a final estilement; (i. e. providing for an arbitrary division of the proceeds of the reserved lands among two or three denominations) and I have in Parliament, of the proceeds of the been accertained, however, that at least three-fourths of the members of Assembly are in favor of secularization, and it only remains for me to how to their decision, and submit to their deliberate judgmant."

The Quebec papers state that Lord Elgin is now in passession of his efficial appointment a Governor General of India.

ring, and the Russians were making great preparations to resist an anticipated attack by the allied fleet. The port is defended by several fortifications, and new ones are being streeted, consisting of one or two masked batteries, with thres or four mortars.

The Governor has under his command a full regiment of caldiers, thoroughly equipped, and is confident on stand a pretty long siege.

Pettopath contains between 3400 and 4000 inhabitants by ding a few Americans and Englishmed in the American store. Everybody is obliged to be a soldier or a sailor, and to respond to the Governor's call at a moment's solice. The town is citasted on an inland bay, the entrance to which, from the occan, is through a narrow inlet, three miles in length, studded with islands, and commanded by several batteries.

A vessel may enter without danger, although there are many difficulties to esconate. Capt. Hedges, with the Boston, beat in and out in a fog.

The Governor thicky, and our informast also, that it would be impossible to take the post with anything short of a fleet of steamers, as new batteries are being built to cover every approach. The Russians were daily looking for the arrival at Petropaulski of an English frigate and corvette on their way to Amoor river, at the mouth of which they (the Russians) have built several strong forts.

Nearly the whole population of Augusta, Ga., have quitted the city, and the country for miles around is covered with tents. The fever was increasing. The post-office was closed and the mile delayed, there being no one to distribute them.

The price of flour is rapidly declining.

The Dissuprior of Political Parties in the United States under the name of "Know-Nothings," and the extraordinary success which has everywhere attended them at the polis, have startled the Government and produced a profound sensation throughout the old Democratic ranks. It appears that large numbers of the new organization are Democrate, who have thrown off their old leaders on account of their leaning so much upon what is called foreign influence. The Whig ranks will also be thinned by the descrition of the native-born population, who will unite with the new order, and thus the old political party distinctions will be abolished.

Nobody is better acquainted with this fact than the President of the United States, and he has consequently set himself vigorously to work to root out this Know-Nothing-ism. Accordingly all public officers who shew any leaning towards this party are summarily dismissed; but even this high-handed course has not had the effect intended, and more decided steps are being taken to give effect to the President's feelings. For this purpose, a public meeting was held at Washington last week, to attempt to re-organize the Democratic party on the basis of opposition to the Know-Nothings, at which the following resolution was put and declared to be adopted, although it is said the Nays were in the ascendant:

Resolved, That the Democratic party will wage unceasing war upon the secret organizations known as Know-Nothings, and, for that purpose, will form a National Democratic Association; that we will forget political antecedents, and cordially unite with the Whigs:

After considerable sharp-shooting, the meeting was adjourned to last Friday, and we learn from a telegraph despatch to the Boston papers that shout 1900 persons attended. Considerable feeling was manifested, and the Whigs and Know-Nothings organized a counter meeting, and there appeared to be little diminution in the numbers. The despatch says:

After considerable sharp-shooting, the meeting was adjourned to last Friday, and we lea

A Mormon train, consisting of nine wagons and

a mormon train, consisting of aine wagons and come fifty persons, crossed the Missouri at Bellevus, Nebraska, on the 14th August, on their return from a six years' residence at Salt Lake. They left on account of the immoralities and and oppression of the Mormon Church.

The New York hotel and boarding house keepers are reducing the price of their board. House rents in that city are also being considerably lowered.

board. House rents in that city are also being considerably lowered.

PUBLIC IMPROVEMENT IN BOSTON.—The Auditor, in his annual report, speaks as follows of the public improvements in Boston, consummated under the superintendence of the Joint Special Committees on Public Lands. From the year 1836 to 1854, about 1,500,000 square feet of land, exclusive of streets, have been reclaimed from a very unhealthy and worse than useless condition, and rendered eligible and desirable for private dwellings and business purposes. Nearly five miles of streets have been filed up and graded; common sewers laid therein, sidewalks made and edge stones put down in a large portion of them. Five public apunus have been laid out and enclosed with tree fences, and in other respects rendered pleasant and attractive places of renort. Seven stone fountains have been completed; about 1,000 trees set out, and 3,000 frest of see walt constructed. These extensive and important improvements were made at an expenditure of \$504,990.

Steamer Argo, with a cargo of silk, saltpetre, linesed and indigo, arrived at Plymouth, England, on the 4th, from the Cape of Good Hops, July 28. The Cholera had ewopt of 5000 inhabitants from Port Louis and the adjacent districts; negroes suffered more than Indians and Europeans. The copper districts of Hamaqualand promise to equal the famous mines of South Australia. The whole district appears to be one mass of copper. War was inevitable between the Boers over the Orange river and Letzes, and it would be a deadly strang of Literact oncerning the Atlantic's recent passage from Liverpool, may a febre gale which she encountered.—

"Buring twenty-one, years of the trials incident in one life." I have a deadly trangle on the same life.

Orders have been issued for the construction of two first-rate ships of war of the following dimensions:—The first will have a measurement of 4116 tone, and be 260 feet long and 60 feet broad; the second will measure 3359 tone, be 345 feet long, and 61 feet broad.

o A warrant has been issued which confers a great benefit on the Royal Marine Corps, whose services have been of great importance recently. It has hitherto been the practice to deduct a contain sum from their pay for the rations supplied to them when serving affoat, and this deduction the warrant now issued abolishes, which will be equivalent to an addition of about 4.jd. par day to each private.

We perceive that Professor Holloway, of 244, Strand, London, has established a House in New York for the sale of his popular Pills and Ointment, which have enjoyed such reputation for a number of years in every other part of the world; particulars of some of the cures they have effected have long since reached this country, and there is no question but that they are exactly the kind of medicines wanted here. We would strongly advise our friends to give them a trial, and there is no fear, but that they would continue to use them whenever any medicine would be requisite.

Hoofland's GERMAN BITTERS, prepared and sold by Dr. Jackson, at the German Medical Store, 120, Arch street, Philadelphis, daily increase in their well deserved celebrity, for the cure of all diseases arising from derangement of the liver. These Bitters have, indeed, groved a bleasing to the afflicted, who show their gratitude by the most flattering testimonials. This medicine has established for itself a name that competitors, however wily their schemes, or asductive their promises, cannot reach. It gained the public confidence by the immense benefits that have been derived from it, and will ever maintain its position.

From the New-York Observer THE BROKEN THREAD.

I love to look upon the movements of well-devised machinery: there is music in its whirr, and buzz, and clatter. My theory of the beautiful takes in the steady motion of the polished shaft, and the grand harmony of design you can see in the thousand diverse forms of motion it imparts. The factory has more of the life of human thought than the picture or the bust, and well nigh as much as the sweet harmonies of music. In it, too, you can adore the Great Universal Creator, and can find instructive analogies for his providential doings. When, from the secret chamber of the inventor's soul, a mighty engine leaps, complete in all its complicated parts, or a mechanism so delicate that it can beat to the pulse of thought a thousand miles away, why should we less admire what God hath wrought, than when we see the acorn push from out its little shell the giant oak?

I lately visited a New England cotton mill, and saw there one very simple operation which interested me much. It was the reeling off, from the spools to the beam, of I love to look upon the movements of well-

tion which interested me much. It was the reeling off, from the spools to the beam, of the threads which were to constitute the warp of the fabric. I watched the process for some time, admiring the steadiners of the pull upon the threads, their siry appearance, and the regular wedge-like shape they took in coming from the square spool frame. But suddenly there was a halt. Can it be, that these little threads have overstrained the gearing? Oh, not. Look sharp, and you see that one of those threads sharp, and you see that one of those threads is broken; it is but one of some hundreds, yet it is missed, and the machine refuses to

go on without it.

I withdrew thoughtfully: there was a lesson here, I knew, but what was it? I was but partially satisfied with the lyrical solution so readily suggested:

"Our life contains a thousand springs, And dies if one be gone; Strange that a harp of thousand strings Should keep in tane so long!"

A week or two afterwards I was in one of A week or two alterwards and in driving the cities of Comecticuti, and, in driving with a sight-seer's indefiniteness of purpose, with a sight-seer's indefiniteness of suburban through its pleasant streets and

through its pleasant streets and suburban avenues, we came upon the city burying ground.

We slighted, entered the Egyptian gateway, and were at once secluded from the world of life, treading the quiet walks which many a sorrowing parent, child, and friend had trodden before us. And yet we sauntered heedlessly along, choosing rather to enjoy, in our inmost spirits, the tonic air of a beautiful morning, than to conjure up some bilious conceits, that might to some seem more appropriate to the place. There is a time to weep at the graveyard, and that time occurs often enough for us all; why then waste our tears in sickly sentimentalism? So reasoned we at any rate, if at all, and little did we regard the "Siste Vister" demands for reflection that came upon us, highwaynan like, at every turn. We had too keen ah appetite for the beautiful in nature and art to care for these obtrusive warnings: it was but death speaking from strangers' graves.

But it toucheth thee, and thou art troubled. A tremor acizes me; the familiar form of one whose place in my heart is a hallowed one, lenga from its dark-draped shrine. In an instant it has flitted through a thousand scenes of joyous college life, and left me a mourner anew at the urn of early friendship. The marble utterance of that little monument, so chaste, so simple, so

I will that they a me be with me w behold my glory me."

I knew not till him, but felt the many warm hes hands of Him to cerity of youth, h It is well with it by the former rents, or the prorents, or the pro-classmates, for, a sacred spot, asha have to take a than we can get

a thousand springs, by gone; of thousand strings tune so long!"

We sometimes feel that the innumerable facts, continually presented to the mind of the observer by nature, are almost too lightly regarded. The calm indifference, with which men familiar to the external features of nature, are accustomed to regard facts as important as any extant, seems almost a species of stoical blasphemy. The law of life is by far the most marvellous in natural sciences, and especially in that department where, from the minuteness of forms, study has heretofore been very limited. We allude to Entomology. A little observation in this department will unfold to the student a series of wonders unsurpassed by the gigantic exhibition of phenomana presented in Ningara and Vesuvius.

Not the least astounding among these facts is the extraordinary multiplicity of species—the innumerable diversity of forms connected with animate nature. The larger forms, such as are daily presented to us, seem comparatively limited, and we easily comprehend the remon; if they were very numerous, so must be their means of subsistence can be gleaned from a square unite, under the most favourable conditions, and that amount is not large, the existence of the larger forms comprises extremely limited numbers. But when we descend to Entomology and Conchology, we are confused with the almost innumerable diversity of species and variety. Of the beetle alone there have been ascertzined no less than 13 thousand branches of this one family. When surveying these apparently disgusting insects, what an idea of creative power might we gather from a knowledge like this? The study of every branch of the insect creation presents the same fruitful reflection.

Lyonnet, a French naturalist, spent several variety and interactives of a structure of a structure of a structure of a structure.

Lyonnet, a French naturalist, spent several years in examining the structure of a single insect, and left the work unfinished, thus showing the exceeding delicateness of the structure. In the body of an insect, about an inch in length, M. Stratus has enumerated three hundred and six pieces, composing the structure of the outer envel-ope; four hundred and ninety-four muscles, ope; four hundred and ninety-four muscles, for putting these in motion; twenty-four pairs of nerves to animate them, and forty-eight pairs of trachese, or breathing organs, equally ramified and divided, to convey air and sustenance to this complicated tissue.

We regard the common house-fly as a contemptible insect—but how important an

object of study its structure may be, can be learned from the fact, that its eye is one of the most singular and curiously constructed mirrors that science has yet invented, or study discovered. The number of lenses in its eyes is numbered at six or seven in its eyes is numbered at six or seven thousand—in the eye of a dragon fly, twelve thousand—the eye of a butterfly, seventeen thousand. The house-fly's wing has a power of six hundred strokes in a single second, which can propel it thirty-five feet, while the speed of the swiftest race horse is but ninety feet per second—more than a mile per minute. The beauty of the butterfly is proverbial; hut how much more intense should be our admiration when we learn that it is a thing of 34,000 eyes, and that in a single wing there have been found 100,000 scales! The wings of many insects are of such extreme tenuity that 50,000 of them, placed over each other, would not compose the thickness of a quarter of an inch; and yet, thin as they are, each is double, so that the actual lamins here would be 100,000.

We often see in pools of water small bits

We often see in pools of water small bits of elongated straw and wood, seemingly having the power of motion. With what interest has science invested these, when we find that each elongated tube is the we and that each clongated tube is the home of a caddis-worm, which is ultimately to become a worm or fly—such as the ephe-meron fly, whose peculiar characteristics we have before noticed. These worms are and hence they glue together small bits of wood and straw to make a house for shelter; and when the frail castle is too buoyant they add a piece of gravel to preserve the be burdensome nor too buoyant. We regard the web of a common spider as the trifling excrescence of a disgusting insect—but it is an object of intense curiosity, when we reflect that each thread is composed of 4000 threads, and that 4,000,000 of these 4000 threads, and that 4,000,000 of these small threads would not make a cord thicker than a single hair from a man's headly. There is one species of spider that lives in water, in a house of air, like a diving bell; and another builds a house in the ground, with a door upon elastic hinges, which keep it constantly shut.

The first folio "Shakspear," of 1623, has just been sold by auction for £250.

PROSPECTUS

SCIENTIFIC AMERICAN.

Tenth Year .- Splendid Engravings and Prizes HE Tenth Annual Volume of this useful publication commences on the 17th day of Sep-

lication commences on the 17th day of September next.

THE "SCIENTIFIC AMERICAN" is an ILLUSTRATED PERIODICAL, devoted chiefly to the promulgation of information relating to the various Mechanic and Chemic Arts, industrial Manufactures, Agriculture, Patents, Inventions, Engineering, Millwork, and all interests which the light of PRACTICAL SCIENCE is calculated to advance.

Its general contents embrace notices of the LATEST AND BEST SCIENTIFIC, MECHANICAL, CHEMICAL, AND AGRICULTURAL, DISCOURLES,—

LATEST AND BEST SCIENTIFIC, MECHANICAL, CREMICAL, AND AGRICULTURAL, DISCOVERIES,—with Editorial comments explaining their application: notices of NEW PROCESSES in all branches of Manufactures; PRACTICAL HINTS on Machinery; information as to STEAM, and all processes to which it is applicable; also Mining; Millwriting. Dyeing, and all arts involving CHE-MICAL SCIENCE; Engineering, Architecture, comprehensive SCIENTIFIC MEMORANDA: Proceedings of Scientific Bodies: Accounts of Exhittons,—together with news and informatione upon THOUSANDS OF OTHER SUBJECTS.
Rports of U. S. PATENTS granted are alsob published every week, including Oppical Copies of all the PATENT CLAIMS; these Claims are published in the Scientific American in Advance

of all the PATENT CLAIMS; these Claims are published in the Scientific American IN ADVANCE OF ALL OTHER FAPERS.

The CONTRIBUTORS to the Scientific American are among the MOST EMINENT scientific and practical men of the times. The Editorial Department is universally acknowledged to be conducted with GREAT ABILITY, and to be distinguished, not only for the excellence and truthfulness of its discussions, but for the fearlesaness with which error is combated and false theories are exploded.

exploded.

Mechanics, Inventors, Engineers, Chemists, Wanufacturers, Agriculturists, and PEOPLE IN EVERY PROFESSION IN LIFE, will find the SCIENTIFIC AMERICAN to be of great value in their respective callings. Its counsels and suggestions will save them HUNDREDS OF DOL. tions will save them HUNDREDS OF CONTROL STATES Annually, besides affording them a continual source of knowledge, the experience of which is beyond pecuniary estimate.

The SCIENTIFIC AMERICAN is published the SCIENTIFIC AMERICAN is published.

once a week; every number contains eight large quarto pages, forming annually a complete and splendid volume, illustrated with SEVERAL HUNDRED ORIGINAL ENGRAVINGS. Tems of Subscription, one Copy, for One Year \$2.

Subscriptions received by George T. Haszard, Agent for P. E. Island.

Notice to Travellers.

IT has become an established fact that accidents will happen notwithstanding the care and attention which may be paid to the safety and convenience of travellers. Explosions will take place, bridges will be left open, and cars run off the track as usual. It is well enough for the public and legislators to caution companies to "beware," and "take head?" yet these causalties will occur, which result in severe contusions, broken limbs, barns, bruises, &c.

The Mexican Mustang Liniment, Upon such occasions, is invaluable? The weathful effects of its southing and healing properties have induced many, who have tried it, to always carry a tottle of it with them when they are travel-

The Renowned Remedy!

ULCERS CASE CERTIFIED BY THE MATOR OF BOSTON.

Copy of a Letter from J. Noble, Esq., Mayor of Boston, Lincolnshire.

To Professor HoxLow A.*

Deir vir.—Mrs. Sarah Dixon, of Liquorpond street, Boston, has this day deposed before me that for a considerable period she was severely afflicted with Scrofulous Sores and Ulcare in her arms, feet, legs, and other ports of her body; and although the first of medical advice was obtained, at the cost of a large sum of money, she obtained no abstement of suffering, but gradually grew worse.

Being recommended by a friend to try your Ointment, she procured a small pot, and a bex of the Pills, and before that was all used, symptoms of amendment appeared. By persevering with the medicines for a short time longer, according to the directions, and strictly adhering to your rules, as to diet, &c., she was perfectly cared, and now enjoys the best of health.

I remain, Dear Sir, yours traly,

MEDICAL AID HAD FAILED.

Copy of a Letter from Mrs. Elizabeth Yeates, of the Post Office, Aldwick Road, near Bognor, Sussex, dated January 12th, 1853.

To Frofessor Hollowary,
Sir,—I suffered for a considerable period from a severe attack of Erysipeias, which at length settled in my leg, and resisted all medical treatment. My sufferings were very great, and I quite despaired of any permanent amendment, when I was advised to have recourse to your Ointment and Pills. I did so without delay, and am happy to say the result was eminently successful, for they effected a radical cure of my leg and restored me to the enjoyment of health. I shall ever speak with the utmost-confidence of your medicines, and have recommended them to others in this neighborhood similarly afflicted, who derived equal benefit.

A DREADFULLY DISEASED ANGLE CURED AFTER BEING GIVEN UP BY THE FACULTY,

AT MALTA AND PORTSMOUTH HOSPITALS.

I remain, Dear Sir, yours very traly, (Signed) JOHN SMITH.

MOST ASTONISHING CURE OF SCROPULO

I remain, Dear Sir, yours truly,
(Signed) J. NOBLE,
Dated August 12th, 1852.

N EXTRAORDINARY AND RAPID CURE OF ERYSIPELAS IN THE LEG, AFTER MEDICAL AID HAD FAILED.

I am, Sir, your obliged and faithful Servant,
(Signed) ELIZABETH YEATES.

AT MALTA AND PORTSMOUTH HOSPITALS.
The following important communication has been forwarded to Professor Holloway for publication, by Mr. B. Dirson, Chemist, Kingst., Norwich.
Copy of a Letter from Captain Smith, of Great Yarmoulh, dated January 19th, 1833.
To Mr. Dixon,
Dear Sir,—I send you the particulars of a cure effected by Professor Holloway's invaluable medicines:—Mr. John Walton, late in Her Majesty's Service, in the British Fleet at Malta, had a very bad ulcerated ancle, and after having been in the Malta Hospital for six months, was sent to England as an invalid to Portsmouth Hospital, where he remained an inmate four months, there, as at Malta, refusing to have the limb amportated, he was turned out incurable. He time amportated he was turned out incurable. He time amportated he was turned out incurable. He time amportated he that all hope was lost. At this period, by my advice, he tried Holloway's Ontment and Pilis, which, by arremitted application, healed all the ulcers, and restored him to perfect health and strength.

I remain, Dear Sir, yours very truly,
(Signed) JOHN SMITH.
Albert Hotel, Great Yarmouth.

SURPRISING CURE OF A BAD BREAST, NER-YOUS DEBILITY, AND GEBERAL ILL.

It is a central place for business, several Roads converging from it. There is also on the Premises, a Saw Mill, with an abundance of Wood around it. Further particulars can be made known to tnown to

Princetown Road, (11 miles,) Aug. 19, 1854.

LEAVING THE ISLAND.

MR. J. WEATHERBIE intending to remove from this Island, in a few weeks from this date, requests all persons having any claims against him to furnish their accounts for settlement, and all who are indebted to him, are respectfully and earnestly requested to come. forward and settle the same, without delay, and thereby prevent the unnecessary trouble and expense of falling into the hands of an Attorney, which Mr. W. would much regret. Office next door on Prince Street to Temperance Hall.

AYER'S PILLS.

AYER'S PILLS,

A NEW and singularly successful remedy for the A cure of all Billious decases — Captiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflamination, Fernale complaints, &c., &c. Indeed, and Limbs, Fernale complaints, &c., &c. Indeed, very few are the diseases in which a Pargative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmies but effectual Cathartic wave more freely used. No person, can feel well while a costive habit of body prevalls; bosides it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Billious derangements. They all tend to become or produce the deep seated and formidable distempers which load the heartes all over the land. Hence a cellable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to sacet that demand. An extensive trial of its vitrues by Physicians, Professors, and Patients, has shown results surpassing anything hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exaltant position and haracter as to forbid the auspicion of unitruth. Among the eminent gentlemen to whom se are allowed to refer for these facts, are Proor. Valantiers Mort, the distinguished Surgeon of New York City.

Door. A. Havra, Practical Chemist of the Port of Boston, and Geologist for the State of Massachusetts,

Port of Boston, and Geologist for the State of Masnachusetts.

Ina L. Moorin, M. D., an eminent Surgeon and
Physician, of the City of Lowell, who has long used
them in his extensive practice.

H. C. Scuttivick, Eq., one of the first merchants in New York City.

C. A. Davis, M. D., Sup't and Surgeon of the
United States Marine Hospital, at Chelsea, Mass.

Did space permit, we could give many hundred
such names, from all parts where the Pills have
been used, but evidence even more convincing than
the certificates of these eminent public men is
shown in their effects upon trial.

These Pills, the result of long investigation and
study, are offered to the public as the best and
most complete which the present state of medical
ecience can afford. They are compounded not of
the drugs themselves, but of the medicinal virtues
only of Vegetable reuseds.

Tracted by chemical
system of composition for medicines has been found
in the Cherry Pectoral and Pills both, to pruduce a
more officient remedy thin had history haven in the Cherry Pectoral and Fills both, to produce a manner as to insure the best results. This system of composition for medicines has been found in the Cherry Pectoral and Fills both, to predicte a more efficient remedy than had hithests beam obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more of leas of vertical and process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more of leas of vertical and the internal composition, every medicine is burdened with more of leas of vertical and the internal obmoving and the second individual wirtue only that is desired for the curative effect is present. All the inert and obmoving qualities to stress of each substance employed are left behind, the surstive virtues only being retained. Hence it is self-evident the effect should prove as they have proved more parely remedial, and the Fills a survey, are proved more parely remedial, and the Fills a survey, are proved more parely remedial, and the Fills a survey, are medicine known to the world.

As it is frequently expedient that my medicine known to the world.

As it is frequently expedient that my medicine should be taken under the consel of an attending Physician, and as he could not properly judge of a reasoly without knowing its composition. I have simplied the accurate Formula by which both my Pectoria and Fills are made to the whole body of Pracetitionses in the United States and British American. For the world the taken the survey when the survey is the whole body of Pracetitionses in the United States and British American. For the world the taken the survey when the survey. The results of the survey of the survey of the survey. The provision was formed.

The composition of my preparation was formed. The owner, and the survey of the survey. The provision was formed. The owner, and the survey. The provision was formed.

There life consists in their anystem. I have no my survey of
