© 1998

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contains the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

BULLETIN No. 118

STANDARD FERTILIZERS, 1906

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT

OTTAWA, CANADA

BULLETIN No. 118

STANDARD FERTILIZERS, 1906

OTTAWA, April 26, 1906.

W. J. GERALD, Esq.,
Deputy Minister of Inland Revenue.

SIR,—Up to the present date there have been received by this branch, in accordance with the provisions of the Fertilizers Act, 153 standard samples of fertilizers which are to be offered for sale in Canada during the present year. This number is above the average, as will be seen from the following statement of the number of such standard samples which have been sent in for analysis during the last ten years:—

In 1897	there were analysed	107	standard samples.
" 1898	" "	124	" "
" 1899	" "	154	" "
" 1900	" "	107	" "
" 1901	" "	102	" "
" 1902	" "	106	" "
" 1903	" "	128	" "
" 1904	" "	111	" "
" 1905	" "	120	" "
" 1906	" "	153	" "

The tabulated statement appended to this report gives the designations of the various brands of fertilizers, the names of the manufacturers or importers, the claims made as regards their fertilizing constituents, and the actual percentage of the latter found in the standard samples on analysis in this laboratory. The 'guaranteed contents' must be understood to indicate only the lowest percentages claimed on the manufacturers label or given in his correspondence with the Department.

As required by the Fertilizers Act, the tabulated statement contains also a column in which the relative value per 2,000 lbs. of each fertilizer is given, calculated from their contents in fertilizing ingredients, the values of these being taken as follows:—

	Cents per lb.
Nitrogen in salts of ammonia or in nitrates, as well as in compound fertilizers	17
Organic nitrogen in ground bone, fish, blood or tankage.....	16
<i>Phosphoric Acid—</i>	
Soluble in water.	6
Soluble in 1 per cent citric acid solution.....	5½
Insoluble in Thomas' phosphate powder.....	3½
Insoluble in ground rock, phosphate and fertilizers generally.....	1½
Potash in high grade salts.. ..	5

These rates are the same as those of last year, which were then modified in order to bring them to correspond more closely with the present market prices of the materials used in the manufacture of fertilizers. The valuation of each brand is calculated on the results of the analysis of the standard samples, but it has been omitted in the case of the guaranteed contents on account of the imperfect character of the information supplied in the majority of instances.

In studying the present tabulated statement there seem to be good grounds for believing that the number of fertilizers of low price is on the increase, and it would appear necessary to call the attention of the farmer to the consideration that the fertilizing constituents in these are likely to cost him more than in fertilizers of a higher grade. It costs as much to mix a ton of fertilizer containing say 300 lbs. of plant food as it does one containing twice that quantity. The cost of packing, cartage and freight is the same per ton. It is evident, therefore, that the manufacturer is in a position to sell the fertilizing constituents of a high grade fertilizer at cheaper rates per pound than those in brands of low grade. In other words, the higher the grade the cheaper can the plant food be bought. Farmers should therefore consider the advantages of purchasing only high grade fertilizers. He should be also advised to avoid those brands which have less than 2 per cent of ammonia or potash. These percentages are too low in cases where such ingredients are required, and where they are not needed it is useless to purchase them. It is a waste of money to buy nitrogen or potash in fertilizers containing less than 2 per cent of these ingredients.

I beg to request the immediate publication of this report, in order that the analyses of the standard samples may be readily compared with those of the 'fertilizers as sold' which are now being collected.

I have the honor to be, sir,

Your obedient servant,

THOMAS MACFARLANE,
Chief Analyst.

TABULATED STATEMENT of the Results of Analysis of 153 Standard
