The copy filmed here has been reproduced thanks to the generosity of:

Mills Memorial Library McMaster University

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Mills Memorial Library McMaster University

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la ccuverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PREFACE.

TN fulfilling the engagement which I had come under to the Public with respect to the History of America, it was my intention not to have published any part of it until the whole was completed. The present state of the British Colonies has induced me to alter that refolution. While they are engaged in civil war with Great Britain, inquiries and speculations concerning their ancient forms of policy and laws, which exist no longer, cannot be interesting. The attention and expectation of mankind are now turned towards their future condition. In whatever manner this unhappy contest may terminate, a new order of things must arise in North America, and its affairs will assume another aspect. I wait, with the folicitude of a good citizen, until the ferment fubfide, and regular government be re-established, and then I shall return to this part of my work, in which I had made fome progress. That, together with the history of Portuguese America,

America, and of the fettlements made by the feveral nations of Europe in the West India islands, will complete my plan.

THE two volumes which I now publish, contain an account of the discovery of the New World, and of the progress of the Spanish arms and colonies there. This is not only the most splendid portion of the American story, but so much detached, that it forms a perfect whole by itself, remarkable for the unity of the subject. As the principles and maxims of the Spaniards in planting colonies, which have been adopted in some measure by every nation in Europe, are unfolded in this part of my work; it will serve as a proper introduction to the history of their establishment in America, and convey such information concerning this important article of policy, as may be deemed no less interesting than curious.

In describing the atchievements and institutions of the Spaniards in the New World, I have departed in many instances from the accounts of preceding historians, and have often related facts which seem to have been unknown to them. It is a duty I owe the Public, to mention the sources from which I have derived such intelligence,

intelligence, as justifies me either in placing transactions in a new light, or in forming any new opinion with respect to their causes and effects. This duty I perform with greater satisfaction, as it will assord an opportunity of expressing my gratitude to those benefactors, who have honoured me with their countenance and aid in my researches.

As it was from Spain that I had to expect the most important information, with regard to this part of my work, I considered it as a very fortunate circumstance for me, when Lord Grantham, to whom I had the honour of being personally known, and with whose liberality of sentiment, and disposition to oblige, I was well acquainted, was appointed ambassador to the court of Madrid. Upon applying to him, I met with such a reception as satisfied me, that his endeavours would be employed in the most proper manner, in order to obtain the gratification of my wishes; and I am persectly sensible, that what progress I have made in my inquiries among the Spaniards, ought to be asserbed chiefly to their knowing how much his Lordship interested himself in their success.

But did I owe nothing more to Lord Grantham, than his attention in engaging Mr. Waddilove, the chaplain

of his embassy, to take the conduct of my assairs in Spain, the obligations I lie under would be very great. During five years, that gentleman has carried on refearches for my behoof, with fuch activity, perfeverance, and knowledge of the fubject, to which his attention was turned, as have filled me with no less assonishment than fatisfaction. He procured for me the greater part of the Spanish books, which I have consulted; and as many them of were printed early in the fixteenth century, and are become extremely rare, the collecting of these was such an occupation, as, alone, required much time and assiduity. To his friendly attention I am indebted for copies of feveral valuable manuferipts, containing facts and details which I might have fearched for in vain, in works that have been made public. Encouraged by the inviting good-will with which Mr. Waddilove conferred his favours, I transmited to him a fet of queries, with respect both to the customs and policy of the native Americans, and the nature of feveral inflitutions in the Spanish fettlements, framed in fuch a manner, that a Spaniard might anfwer them, without difclosing any thing that was improper to be communicated to a foreigner. He translated these into Spanish, and obtained from various perfons who had refided in most of the Spanish colonies, fuch replies as have afforded me much instruction.

5

NOTWITH-

NOTWITHSTANDING these peculiar advantages with which my inquiries were carried on in Spain, it is with regret I am obliged to add, that the fuccess with which they have been attended, must be ascribed to the beneficence of individuals, not to any communication by public authority. By a fingular arrangement of Philip II. the records of the Spanish monarchy, are deposited in the Archivo of Simancas, near Valladolid, at the distance of a hundred and twenty miles from the seat of government, and the supreme courts of justice. The papers relative to America, and chiefly to that early period of its history, towards which my attention was directed, are fo numerous, that they alone, according to one account, fill the largest apartment in the Archivo; and according to another, they compose eight hundred and feventy-three large bundles. Confeious of possessing, in some degree, the industry which belongs to an historian, the prospect of such a treasure excited my most ardent curiosity. But the prospect of it, only, is all that I have enjoyed. Spain, with an excess of caution, has uniformly thrown a veil over her transactions in America. From strangers they are concealed with peculiar folicitude. Even to her own fubjects the Archivo of Simancas is not opened without a particular order from the crown; and after obtaining that, papers cannot be copied, without paying fees of VOL. I. office

office fo exorbitant, that the expence exceeds what it would be proper to beflow, when the gratification of literary curiofity is the only object. It is to be hoped, that the Spaniards will at laft difcover this fyftem of concealment to be no lefs impolitic than illiberal. From what I have experienced in the course of my inquiries, I am satisfied, that upon a more minute scrutiny into their early operations in the New World, however reprehensible the actions of individuals may appear, the conduct of the nation will be placed in a more favourable light.

In other parts of Europe very different fentiments prevail. Having fearched, without fuccess, in Spain, for a letter of Cortes to Charles V. written foon after he landed in the Mexican empire, which has not hitherto been published; it occurred to me, that as the emperor was fetting out for Germany, at the time when the messengers from Cortes arrived in Europe, the letter with which they were intrusted might possibly be preserved in the Imperial Library of Vienna. I communicated this idea to Sir Robert Murray Keith, with whom I have long had the honour to live in friendship, and I had soon the pleasure to learn, that, upon his application, her Imperial Majesty had been graciously pleased to issue an order, that not only a copy of that letter (if it were found), but of any other papers

papers in the library, which could throw light upon the History of America, should be transmitted to me. The letter from Cortes is not in the Imperial Library, but an authentic copy, attested by a notary, of that written by the magistrates of the colony planted by him at Vera Cruz, which I have mentioned, Vol. ii. p. 32, having been found; it was transcribed and sent to me. This, no less curious, and as little known as the letter which was the object of my inquiries, did not come to my hand till that part of the history to which it relates was printed; but I have given fome account of what is most worthy of notice in it, at the end of Notes and Illustrations, vol. ii. Together with it, I received a copy of a letter from Cortes, containing a long account of his expedition to Londuras, with respect to which, I did not think it necessary to enter into any particular detail; and likewife those curious Mexican paintings, which I have deferibed vol. ii. p. 284, &c.

My inquiries at St. Petersburgh were carried on-with equal facility and success. In examining into the nearest communication between our continent and that of America, it became of consequence to obtain authoritic information concerning the discoveries of the Ruslians, in their navigation from Kamehatka towards the coast

of America. Accurate relations of their first voyage, in 1741, have been published by Muller and Gmelin. Several foreign authors have entertained an opinion, that the court of Russia studiously conceals the progress which has been made by more recent navigators, and fuffers the Public to be amused with false accounts of their route. Such conduct appeared to me unfuitable to those liberal fentiments, and that patronage of science, for which the present sovereign of Russia is eminent; nor could I difcern any political reason, that might render it improper to apply for information concerning the late attempts of the Russians to open a communication between Asia and America. nious countryman, Dr. Rogerson, first physician to the Empress, presented my request to her Imperial Majesty, who not only disclaimed any idea of concealment, but instantly ordered the journal of Captain Krenitzin, who conducted the only voyage of discovery made by public authority fince the year 1741, to be translated, and his original chart to be copied for my use. By confulting them, I have been enabled to give a more accurate view of the progress and extent of the Russian discoveries, than has hitherto been communicated to the Public.

FROM other quarters I have received information of great utility and importance. M. Chevalier de le Pinto, the minister from Portugal to the court of Great Britain, who commanded for several years at Matagrosso, a settlement of the Portuguese in the interior part of Brasil, where the Indians are numerous, and their original manners little altered by intercourse with Europeans, was pleased to send me very full answers to some queries concerning the character and institutions of the natives of America, which his polite reception of an application made to him in my name, encouraged me to propose. These satisfied me, that he had contemplated with discerning attention the curious objects which his situation presented to his view, and I have often followed him as one of my best instructed guides.

M. SUARD, to whose elegant translation of the History of the Reign of Charles V. I owe the favourable reception of that work on the continent, procured me answers to the same queries from M. de Bougainville, who had opportunities of observing the Indians both of North and South America, and from M. Godin le Jeune, who resided sifteen years among Indians in Quito, and twenty years in Cayenne. The latter are more valuable from having been examined by M. de la Condamine,

who, a few weeks before his death, made fome fhort additions to them, which may be confidered as the last effort of that attention to science which occupied a long life.

My inquiries were not confined to one region in America. Governor Hutchinfon took the trouble of recommending the confideration of my queries to Mr. Hawley and Mr. Brainerd, two protestant missionaries, employed among the Indians of the Five Nations, who favoured me with answers, which discover a considerable knowledge of the people whose customs they describe. From William Smith, Esq; the ingenious historian of New York, I received some useful information. When I enter upon the History of our Colonies in North America, I shall have occasion to acknowledge how much I have been indebted to many other gentlemen of that country.

From the valuable Collection of Voyages made by Alexander Dalrymple, Efq. with whose attention to the History of Navigation and Discovery the Public is well acquainted, I have received some very rare books, particularly two large volumes of Memorials, partly manufcript, and partly in print, which were presented to

the court of Spain during the reigns of Philip III. and Philip IV. From these I have learned many curious particulars with respect to the interior state of the Spanish colonies, and the various schemes formed for their improvement. As this Collection of Memorials formerly belonged to the Colbert Library, I have quoted them by that title.

ALL those books and manuscripts I have consulted with that attention, which the respect due from an Author to the Public required; and by minute references to them, I have endeavoured to authenticate whatever I relate. The longer I reflect on the nature of historical composition, the more I am convinced that this scrupulous accuracy is necessary. The historian who records the events of his own time, is credited in proportion to the opinion which the Public entertains with respect to his means of information and his veracity. He who delineates the transactions of a remote period, has no title to claimaffent, unless he produces evidence in proof of his affertions. Without this, he may write an amufing tale, but cannot be faid to have composed an authentic history. In those fentiments I have been confirmed by the opinion of an author *, whom his industry, erudition, and difcernment, have deservedly placed in a high rank among the most eminent historians of the age. Emboldened by a hint from him, I have published a catalogue of the Spanish books which I have consulted. This practice was frequent in the last century, and considered as an evidence of laudable industry in an author; in the present, it may, perhaps, be deemed the effect of oftentation; but as many of these books are unknown in Great Britain, I could not otherwise have referred to them as authorities, without encumbering the page with an infertion of their full titles. To any person who may chuse to follow me in this path of inquiry, the catalogue must be very useful.

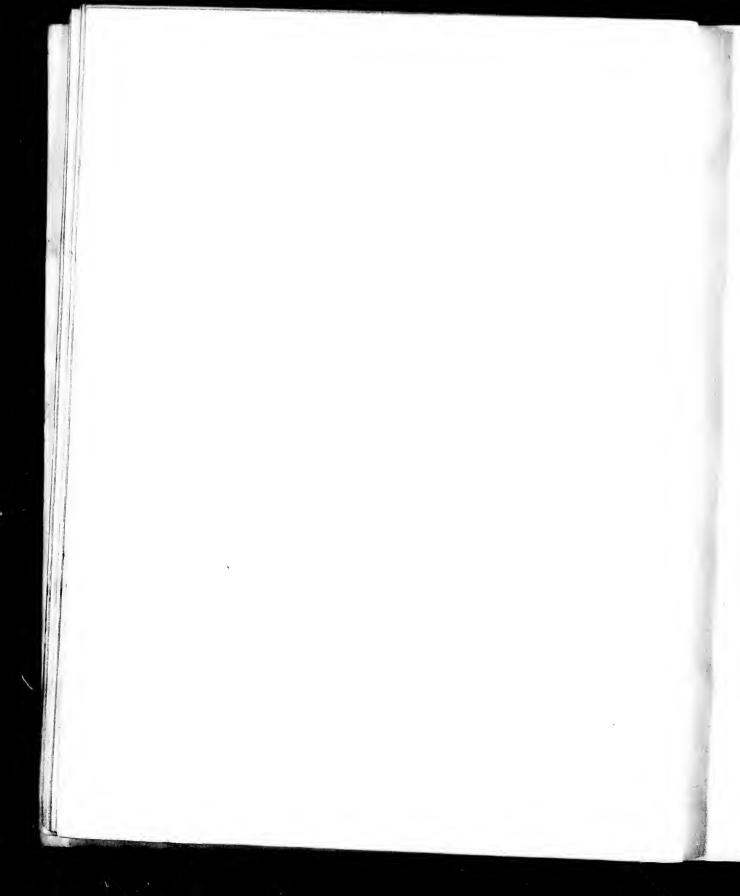

My readers will observe, that in mentioning sums of money, I have uniformly followed the Spanish method of computing by pesos. In America, the peso surve, or duro, is the only one known, and that is always meant when any sum imported from America is mentioned. The peso surve, as well as other coins, has varied in its numerary value, but I have been advised, without attending to such minute variations, to consider it as equal to four shillings and six pence of our money. It is to be remembered, however, that in the sixteenth century, the effective

tive value of a pefo, i. e. the quantity of labour which it represented, or of goods which it would purchase, was five or fix times as much as at present.

Vol. I.

CONTENTS.

VOLUME THE FIRST.

BOOK I

PROGRESS of navigation among the ancients—View of their discoveries as preparatory to those of the moderns— Impersection of ancient navigation and geography—Doctrine of the Zones—Farther discoveries checked by the irruption of barbarous nations—Geographical knowledge still preserved in the East, and among the Arabians—Revival of commerce and navigation in Europe—favoured by the Croisades—extended by travellers into the East—promoted by the invention of the mariner's compass—First regular plan of discovery formed by Portugal—State of that kingdom—Schemes of Prince Henry—Early attempts feeble—Progress along the western coast of Africa—Hopes of discovering a new route to the East Indies—Attempts to accomplish this—Prospects of success.

BOOK II.

Birth and education of Columbus—acquires naval skill in the fervice of Portugal—conceives hopes of reaching the East Indies

b 2 dies

dies by holding a westerly course—his system sounded on the ideas of the ancients, and knowledge of their navigation—and on the discoveries of the Portuguese-His negociations with different courts-Obstacles which he had to surmount in Spain-Voyage of discovery—difficulties—success—return to Spain— Assonishment of mankind on this discovery of a New World-Papal grant of it-Second voyage-Colony fettled-Farther difcoveries-War with the Indians-First tax imposed on them-Third voyage—He discovers the continent—State of the Spanish colony—Errors in first system of colonizing—Voyage of the Portuguese to the East Indies by Cape of Good Hope-Effects of this-Discoveries made by private adventurers in the New World-Name of America given to it-Machinations against Columbus-Difgraced and fent in chains to Europe-Fourth voyage of Columbus—His discoveries-distasters death.

BOOK III.

State of the colony in Hispaniola—New war with the Indians—
Cruelty of the Spaniards—Fatal regulations concerning the condition of the Indians—Diminution of that people—Discoveries and settlements—First colony planted on the continent—
Conquest of Cuba—Discovery of Florida—of the South Sea—
Great expectations raised by this—Causes of disappointment with respect to these for some time—Controversy concerning the treatment of the Indians—Contrary decisions—Zeal of the ecclesiasics, particularly of Las Casas—Singular proceedings of Ximenes—Negroes imported into America—Las Casas's idea of a new colony—permitted to attempt it—unsuccessful—Discoveries towards the West—Yucatan—Campeachy—New Spain—Preparations for invading it.

BOOK IV.

View of America when first discovered, and of the manners and policy of its most uncivilized inhabitants-Vast extent of America-Grandeur of the objects it presents to view-Its mountains-rivers-lakes-Its form favourable to commerce-Temperature-predominence of cold-Caufes of this-uncultivated-unwholesome-its animals-soil-Inquiry how America was peopled-various theories-what appears most probable-Condition and character of the Americans-All, the Mexicans and Peruvians excepted, in the state of savages-Inquiry confined to the uncivilized tribes-Difficulty of obtaining information-various causes of this-Method observed in the enquiry-I. The bodily constitution of the Americans confidered—II. The qualities of their minds—III. Their domestic state-IV. Their political state and institutions-V. Their fystem of war and public security—VI. The arts with which they were acquainted—VII. Their religious ideas and institutions-VIII. Such singular and detached customs as are not reducible to any of the former beads-IX. General review and estimate of their virtues and defects.

VOLUME THE SECOND.

B O O K V.

History of the conquest of New Spain by Cortes.

BOOK

BOOK VI.

History of the conquest of Peru, by Pizarro—and of the dissensions and civil wars of the Spaniards in that country—Origin—progress—and effects of these.

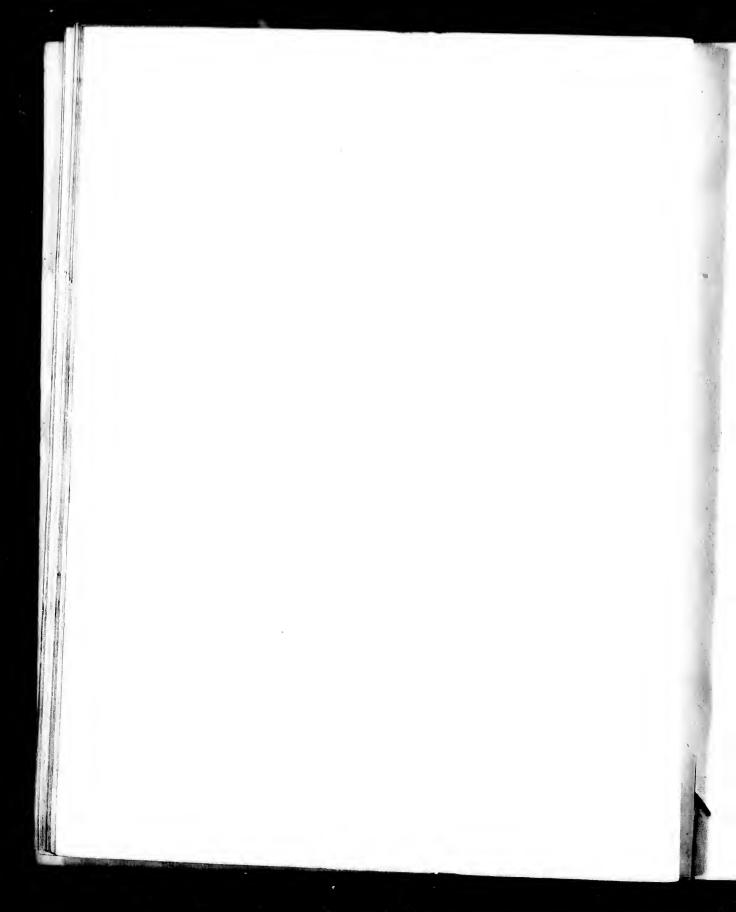

BOOK VII.

View of institutions and manners of Mexicans and Peruvians—
Civilized states in comparison of other Americans—Recent origin of the Mexicans—Facts which prove their progress in
civilization—View of their policy in its various branches—
of their arts—Facts which indicate a small progress in civilization—What opinion should be formed on comparing those contradictory sacts—Genius of their religion—Peruvian monarchy
more ancient—Its policy founded on religion—Singular effects
of this—peculiar state of property among the Peruvians—
Their public works and arts—roads—bridges—buildings—unvarlike spirit—View of other dominions of Spain in America—
Cinaloa and Sonora—California—Yucatan and Honduras—
Chili—Tucuman—Kingdom of Tierra Firme—New Kingdom of Granada.

BOOK VIII.

View of the interior government, commerce, &c. of the Spanish colonies—Depopulation of America sirst effect of their settlements—not the consequence of any system of policy—nor to be imputed to religion—Number of Indians still remaining— * Fundamental

Fundamental maxims on which the Spanish System of colonization is founded-Condition of different orders of men in their colonies - Chapetones - Creoles - Negroes - Indians - F.celefiaftical flate and policy - Character of fecular and regular clergy -Small progress of Christianity among the natives - Mines chief object of their attention-Mode of working thefe-their pro duce-Effects of encouraging this species of industry-Other commodities of Spanish America-First effects of this new commerce on Spain-Why the Spanish colonies have not been as beneficial to the parent-flate as those of other nations-Errors in her system of regulating this commerce-confined to one port-carried on by annual fleets-Contraband trade-Decline of Spain both in population and wealth-Remedies proposed-View of the wife regulations of the Bourbon Princes-A new and more liberal system introduced—Beneficial effects of this— Probable consequences-Trade between Mexico and the Philippines-Revenue of Spain from America-whence it arises-to what it amounts.

BOOK

destined to facilitate the communication between distant countries, seem, at first, to be formed to check the progress of man, and to mark the bounds of that portion of the globe to which nature had confined him. It was long, we may believe, before men attempted to pass this formidable barrier, and became so skilful and adventrous as to commit themselves to the mercy of the winds and waves, or to quit their nativesshore in quest of remote and unknown regions.

First attempts towards navigation.

NAVIGATION and ship-building are arts so nice and complicated, that they require the ingenuity, as well as experience of many fuccessive ages to bring them to any degree of perfection. From the raft or canoe, which first served to carry a savageover the river that obstructed him in the chace, to the construct tion of a vessel capable of conveying a numerous crew with safety to a distant coast, the progress in improvement is immense. Many efforts would be made, many experiments would be tried, and much labour and invention would be employed, before men could accomplish this arduous and important undertaking. The rude and imperfect flate in which navigation is still found among all nations which are not considerably civilized, corresponds with this account of its progress, and demonfrates that, in early times, the art was not so far improved as to enable men to undertake distant voyages, or to attempt remote discoveries.

Introduction of commerce.

As foon, however, as the art of navigation became known, a new species of correspondence among men took place. It is from this æra, that we must date the commencement of such an intercourse between nations as deserves the appellation of commerce. Men are, indeed, far advanced in improvement before

commerce

воок ј.

commerce becomes an object of great importance to them. They must even have made some considerable progress towards civilization, before they acquire the idea of property, and afcertain it so perfectly, as to be acquainted with the most simple of all contracts, that of exchanging by barter one rude commodity for another. But as foon as this important right is established, and every individual feels that he has an exclusive title to poffefs or to alienate whatever he has acquired by his own labour and dexterity, the wants and ingenuity of his nature fuggest to him a new method of increasing his acquisitions and enjoyments, by disposing of what is superfluous in his own stores, in order to procure what is necessary or desirable in those of other men. Thus a commercial intercourse begins, and is carried on among the members of the fame community. By degrees, they discover that neighbouring tribes possels what they want, and enjoy comforts of which they wish to partake. In the same mode, and upon the same principles, that domestic traffic is carried on within the fociety, an external commerce is established with other tribes or nations. Their mutual interest and mutual wants render this intercourse defirable, and imperceptibly introduce the maxims and laws which facilitate its progress and render it secure. But no very extensive commerce can take place between contiguous provinces, whose soil and climate being nearly the same, yield similar productions. Remote countries cannot convey their commodities by land, to those places, where on account of their rarity they are defired, and become valuable. It is to navigation that men are indebted for the power of transporting the superfluous stock of one part of the earth, to supply the wants of another. The luxuries and bleffings of a particular climate are no longer.confined to itself alone, but the enjoyment of them is communicated to the most distant regions.

B 2

HISTORY OF AMERICA.

BOOK I.

In proportion as the knowledge of the advantages derived from navigation and commerce continued to spread, the intercourse among nations extended. The ambition of conquest, or the necessity of procuring a new settlement, were no longer the fole motives of vifiting distant lands. The defire of gain became a new incentive to activity, roused adventurers and sent them forth upon long voyages in fearch of countries, whose products or wants might increase that circulation, which nourishes and gives vigour to commerce. Trade proved a great fource of discovery, it opened unknown seas, it penetrated into new regions, and contributed more than any other cause, to bring men acquainted with the fituation, the nature, and commodities of the different parts of the globe. But even after a regular commerce was established in the world, after nations were confiderably civilized, and the sciences and arts were cultivated with ardour and fuccess, navigation continued to be so imperfect, that it can hardly be faid to have advanced beyond the infancy of its improvement in the ancient world.

Imperfection of navigation among the ancients.

AMONG all the nations of antiquity the structure of their vessels was extremely rude, and their method of working them no less defective. They were unacquainted with some of the great principles and operations in navigation, which are now considered as the first elements on which that science is founded. Though that property of the magnet, by which it attracts iron, was well known to the ancients, its most important and amazing virtue of pointing to the poles had entirely escaped their observation. Destitute of this faithful guide, which now conducts the pilot with so much certainty in the unbounded ocean, during the darkness of night, and when the heavens are covered with clouds, the ancients had no other method of regulating their course

course than by observing the sun and sars. Their navigation was of consequence uncertain and timid. They durst seldom quit fight of land, but crept along the coast, exposed to all the dangers, and retarded by all the obstructions, unavoidable in holding fuch an aukward course. An incredible length of time was requifite for performing voyages, which are now finished in a short space. Even in the mildest climates, and in feas the least tempestuous, it was only during the summer months that the ancients ventured out of their harbours. The remainder of the year was lost in inactivity. It would have been deemed most inconsiderate rashness to have braved the fury of the winds and waves during the winter ...

WHILE both the science and practice of navigation continued to be so defective, it was an undertaking of no small difficulty and danger to visit any remote region of the earth. Under every disadvantage, however, the active spirit of commerce exerted itself. The Egyptians, soon after the establishment of Navigation their monarchy, are faid to have opened a trade between the merce of the Arabian Gulph or Red Sea, and the western coast of the great Indian continent. The commodities which they imported from the east, were carried by land from the Arabian Gulph to the banks of the Nile, and conveyed down that river to the Mediterranean. But if the Egyptians in early times applied themselves to commerce, their attention to it was of short duration. The fertile foil and mild climate of Egypt produced the neceffaries and comforts of life with fuch profusion, as rendered its inhabitants so independent of other countries, that it became an established maxim among that people, whose ideas and

* Vegetius de Re milit. lib. iv.

institutions

BOOK L. institutions differed in almost every point from those of other nations, to renounce all intercourse with foreigners. In consequence of this, they never went out of their own country; they held all sea-faring persons in detestation, as impious and profanc; and fortifying their own harbours, they denied strangers admittance into them b; and it was in the decline of their power, that they again opened their ports, and resumed any communication with foreigners.

of the Phe-

THE character and situation of the Phenicians were as favourable to the spirit of commerce and discovery as those of the Egyptians were adverse to it. They had no distinguishing peculiarity in their manners and institutions; they were not addicted to any fingular and unfocial form of superstition; they could mingle with other nations without scruple or reluctance. The territory which they possessed was neither large nor fertile. Commerce was the only fource from which they could derive opulence or power. Accordingly, the trade carried on by the Phenicians of Sidon and Tyre, was more extensive and enterprizing than that of any state in the ancient world. The genius of the Phenicians, as well as the object of their policy and the spirit of their laws, were entirely commercial. They were a people of merchants who aimed at the empire of the sea, and actually possessed it. Their ships not only frequented all the ports in the Mediterranean, but they were the first who ventured beyond the ancient boundaries of navigation, and passing the Streights of Gades, vifited the western coasts of Spain and Africa. In many of the places to which they reforted, they planted colonies, and communicated to the rude inhabitants

b Diod. Sicul. lib. i. p. 78. Ed. Wesselingi. Amst. 1756. Strabo, lib. xvii. p. 1142. Ed. Amst. 1707.

fome knowledge of their arts and improvements. While they extended their discoveries towards the north and the west, they did not neglect to penetrate into the more opulent and fertile regions of the fouth and east. Having rendered themselves masters of several commodious harbours towards the bottom of the Arabian Gulph, they, after the example of the Egyptians, established a regular intercourse with Arabia and the continent of India on the one hand, and with the castern coast of Africa on the other. From these countries they imported many valuable commodities, unknown to the rest of the world, and, during a long period, engroffed that lucrative branch of commerce without a rival '.

THE vast wealth which the Phenicians acquired by monopo- Of the Jews. lizing the trade carried on in the Red Sea, incited their neighbours the Jews, under the prosperous reigns of David and Solomon, to aim at being admitted to some share of it. they obtained, partly by their conquest of Idumea, which stretches along the Red Sea, and partly by their alliance with Hiram king of Tyre. Solomon fitted out fleets, which, under the direction of Phenician pilots, failed from the Red Sea to Tarshish and Ophir, which it is probable were ports in India and Africa that their conductors were accustomed to frequent, and returned with fuch valuable cargoes as fuddenly diffused wealth and splendour through the kingdom of Israel 4. But the fingular inflitutions of the Jews, the observance of which was enjoined by their divine legislator, with an intention of preserving them a separate people, uninfected by ido-

[·] See NOTE I. at the End of the Volume.

⁴ Memoire fur le Pays d'Ophir pa: M. D'Anville Mem. de l'Academ. des Infeript. &c. tom. xxx. 83.

BOOK latry, formed a national character incapable of that open and liberal intercourse with strangers which commerce requires. Accordingly, this unfocial genius of the people, together with the disasters which befel the kingdom of Israel, prevented the commercial spirit which their monarchs laboured to introduce, and to cherish, from spreading among them. The Jews cannot be numbered among the nations which contributed to improve navigation, or to extend discovery.

Of the Carthaginians.

Bur though the instructions and example of the Phenicians were unable to mould the manners and temper of the Iews, in opposition to the tendency of their laws, they transmitted the commercial spirit with facility, and in full vigour, to their own descendants the Carthaginians. The commonwealth of Carthage applied to trade and to naval affairs, with no less ardour, ingenuity, and success, than its parent state. Carthage early rivalled, and foon surpassed Tyre, in opulence and power, but feems not to have aimed at obtaining any share in the commerce with India. The Phenicians had engroffed this, and had fuch a command of the Red Sea as secured to them the exclusive pos-Lession of that lucrative branch of trade. The commercial activity of the Carthaginians was exerted in another direction. Without contending for the trade of the east with their mothercountry, they extended their navigation chiefly towards the west and north. Following the course which the Phenicians had opened, they passed the Streights of Gades, and pushing their discoveries far beyond theirs, not only visited all the coasts of Spain, but those of Gaul, and penetrated at last into Britain. At the fame time that they acquired knowledge of new countries in this part of the globe, they gradually carried their refearches towards the South. They made confiderable

progress, by land, into the interior provinces of Africa, traded with some of them, and subjected others to their empire. They failed along the western coast of that great continent, almost to the tropic of Cancer, and planted several colonies, in order to civilize the natives, and accustom them to commerce. They discovered the Fortunate Islands, now known by the name of the Canaries, the utmost boundary of ancient navigation in the western occan.

воок

Nor was the progress of the Phenicians and Carthaginians in their knowledge of the globe, owing entirely to the defire of extending their trade from one country to another. Commerce was followed by its usual effects among both these people. It awakened curiofity, enlarged the ideas and defires of men, and incited them to bold enterprifes. Voyages were undertaken, the fole object of which was to discover new countries, and explore unknown feas. Such, during the prosperous age of the Carthaginian republic, were the famous navigations of Hanno and Himilco. Both their fleets were equipped by authority of the fenate, and at public expence. Hanno was directed to fleer towards the fouth, along the coast of Africa, and feems to have advanced much nearer the equinoctial line than any former navigator'. Himilco had it in charge to proceed towards the north, and to examine the western coasts of the European continent 5. Of the fame nature was the extraordinary navigation of the Phenicians round Africa. A Phenician fleet, we are told, fitted out by Necho king of Egypt, took its departure

BOOK !. about fix hundred and four years before the Christian æra, from a port in the Red Sea, doubled the fouthern promontory of Africa, and, after a voyage of three years, returned by the Streights of Gades, to the mouth of the Nile h. Eudoxus of Cyzicus is faid to have held the fame course, and to have accomplished the same arduous undertaking l.

THESE voyages, if performed in the manner which I have related, may justly be reckoned the greatest effort of navigation in the ancient world; and if we attend to the imperfect state of the art at that time, it is difficult to determine, whether we should most admire the courage and fagacity with which the defign was formed, or the conduct and good fortune with which it was executed. But unfortunately, all the original and authentic accounts of the Phenician and Carthaginian voyages, whether undertaken by public authority, or in profecution of their private trade, have perished. The information which we receive concerning them from the Greek and Roman authors, is not only obscure and inaccurate, but, if we except a short narrative of Hanno's expedition, is of suspicious authority . Whatever acquaintance with the remote regions of the earth the Phenicians or Carthaginians may have acquired, was concealed from the rest of mankind with a mercantile jealoufy. Every thing relative to the course of their navigation was not only a mystery of trade, but a fecret of flate. Extraordinary facts are recorded concerning their folicitude to prevent other nations from penetrating into what they wished should remain undivulged !. Many of their discoveries seem, accordingly, to have been fearcely known beyond the precincts of their own states. The

navigation round Africa, in particular, is recorded by the Greek and Roman writers, rather as a strange amusing tale, which they either did not comprehend, or did not believe, than as a real transaction, which enlarged their knowledge and influenced their opinion m. As neither the progress of the Phenician and Carthaginian discoveries, nor the extent of their navigation, were communicated to the rest of mankind, all memorials of their extraordinary skill in naval affairs seem, in a great meafure, to have perished, when the maritime power of the former was annihilated by Alexander's conquest of Tyre, and the empire of the latter was overturned by the Roman arms.

LEAVING, then, the obscure and pompous accounts of the Of the Phenician and Carthaginian voyages to the curiofity and conjectures of antiquaries, history must rest satisfied with relating the progress of navigation and discovery among the Greeks and Romans, which, though less splendid, is better ascertained. It is evident that the Phenicians, who instructed the Greeks in other useful sciences and arts, did not communicate to them that extensive knowledge of navigation which they themselves possessed; nor did the Romans imbibe that commercial spirit and ardour for discovery which distinguished the Carthaginians. Though Greece be almost encompassed by the sea, which formed many spacious bays and commodious harbours, though it be furrounded by a vast number of fertile islands, yet, notwithstanding such a favourable situation, which seemed to invite that ingenious people to apply themselves to navigation, it was long before this art attained any degree of perfection among them. Their early voyages, the object of which was piracy rather than commerce, were so inconsiderable, that the expedi-

m See NOTE III.

BOOK

tion of the Argonauts from the coast of Thessaly to the Euxine fea, appeared such an amazing effort of skill and courage, as entitled the conductors of it to be ranked among the demigods, and exalted the veffel in which they failed to a place among the heavenly constellations. Even at a later period, when the Greeks engaged in their famous enterprize against Troy, their knowledge in naval affairs feems not to have been much improved. According to the account of Homer, the only poet to whom history ventures to appeal, and who, by his fcrupulous accuracy in describing the manners and arts of early ages, merits this distinction, the science of navigation, at that time, had hardly advanced beyond its rudest state. The Greeks in the heroic age were unacquainted with the use of iron, the most ferviceable of all the metals, without which no confiderable progress was ever made in the mechanical arts. were of inconfiderable burthen, and mostly without decks. These had only one mast, which they erected or took down at pleasure. They were strangers to the use of anchors. All their operations in failing were clunify and unskilful. They turned their observation towards stars, which were improper for regulating their course, and their mode of observing them was inaccurate and fallacious. When they had finished a voyage they drew their paltry barks ashore, as savages do their canoes, and they remained on dry land until the scason of returning to fea approached. It is not then in the early or heroic ages of Greece, that we can expect to observe the science of navigation, and the spirit of discovery making any considerable progress. During that period of disorder and ignorance, a thousand causes concurred in restraining curiosity and enterprize within very narrow bounds.

But the Greeks advanced with rapidity to a state of greater civilization and refinement. Government, in its most liberal and perfect form, began to be established in the communities of Greece; equal laws and regular police were gradually introduced; the fciences and arts that are useful or ornamental in life were carried to a high pitch of improvement, and feveral of the Grecian commonwealths applied to commerce with fuch ardour and fuccefs, that they were confidered, in the ancient world, as maritime powers of the first rank. Even then, however, the naval victories of the Greeks must be ascribed rather to the native spirit of the people, and to that courage which the enjoyment of liberty inspires, than to any extraordinary progress in the science of navigation. In the Persian war, those exploits which the eloquence of the Greek historians have rendered fo famous, were performed by fleets, composed chiefly of vessels that were open, and without decks"; the crews of which rushed forward with impetuous valour, but little art, to board those of the enemy. In the war of Peloponnesus, their ships seem still to have been of inconsiderable burthen and of small force. The extent of their trade was in proportion to this low condition of their marine. The maritime states of Greece hardly carried on any commerce beyond the limits of the Mediterranean sea. Their chief intercourse was with the colonies of their countrymen, planted in the leffer Asia, in Italy and Sicily. They sometimes visited the ports of Egypt, of Gaul, and of Thrace, or passing through the Hellespont, they traded with the countries situated around the Euxine fea. Amazing instances occur of their ignorance, even of those countries, which lay within the narrow precincts

[&]quot; Thucyd. lib. i. c. 14.

14

BOOK to which their navigation was confined. When the Greeks had affembled their combined fleet against Xerxes at Egina, they thought it unadvisable to fail to Samos, because they believed the distance between that island and Egina to be as great as the distance between Egina and the Pillars of Hercules °. They were either utterly unacquainted with all the parts of the globe beyond the Mediterranean sea, or what knowledge they had of them was founded on conjecture, or derived from the informations of a few persons, whom curiofity and the love of science had prompted to travel by land into the Upper Asia, or by sea into Egypt, the ancient seats of wisdom and arts. After all that the Greeks learned from them, they appear to have been ignorant of the most important facts, on which an accurate and scientific knowledge of the globe is founded.

> THE expedition of Alexander the Great into the east, considerably enlarged the sphere of navigation and of geographical knowledge among the Creeks. That extraordinary man, notwithstanding the violent passions which incited him, at some times, to the wildest actions, and the most extravagant enterprifes, possessed talents which fitted him not only to conquer, but to govern the world. He was capable of framing those bold and original schemes of policy, which give a new form to hu-The revolution in commerce, brought about by the force of his genius, is hardly inferior to that revolution in empire, occasioned by the success of his arms. It is probable, that the opposition and efforts of the republic of Tyre, which checked him fo long in the career of his victories, gave Alexander an opportunity of observing the vast resources of a mari-

> > º Herodot, lib, viii. c. 132.

BOCAL

time power, and conveyed to him some idea of the immense wealth which the Tyrians derived from their commerce, especially that with the East Indies. As soon as he had accomplished the destruction of that state, and reduced Egypt to subjection, he formed the plan of rendering the empire which he proposed to establish, the centre of commerce as well as the seat of dominion. With this view he founded a great city, which he honoured with his own name, near one of the mouths of the river Nile, that by the Mediterranean sea, and the neighbourhood of the Arabian Gulf, it might command the trade both of the east and west. This situation was chosen with such discernment, that Alexandria soon became the chief commercial city in the world. Not only during the subsistence of the Grecian empire in Egypt and in the east, but amidst all the successive revolutions in those countries, from the time of the

Ptolemies to the discovery of the navigation by the Cape of Good Hope, commerce, particularly that of the East Indies, continued to flow in the channel which the sagacity and fore-

fight of Alexander had marked out for it...

His ambition was not fatisfied with having opened to the Greeks a communication with India by sea; he aspired to the so-vereignty of those regions which furnished the rest of mankind with so many precious commodities, and conducted his army thirther by land. Enterprising, however, as he was, he may be said rather to have discovered, than to have conquered that country. He did not, in his progress towards the east, advance beyond the banks of the rivers that fall into the Indus, which is now the western boundary of the vast continent of India. Amidst the

P Strab. Geogr. lib. xvii. p. 1143. 1149.

wild!

воок

wild exploits which diffinguish this part of his history, he purfued measures that mark the superiority of his genius, as well as the extent of his views. He had penetrated as far into India as to confirm his opinion of its commercial importance, and to perceive that immense wealth might be derived from intercourse with a country, where the arts of elegance having been more early cultivated, were arrived at greater perfection than in any other part of the earth. Full of this idea, he refolved to examine the course of navigation from the mouth of the Indus to the bottom of the Persian Gulf; and if it should be found practicable, to establish a regular communication between them. In order to effect this, he proposed to remove the catarads, with which, the jealoufy of the Perfians, and their aversion to correspondence with foreigners, had obstructed the entrance into the Euphrates'; to carry the commodities of the east up that river, and the Tigris, which unites with it, into the interior parts of his Afiatic dominions; while, by the way of the Arabian Gulf, and the river Nile, they might be conveyed to Alexandria, and distributed to the rest of the world. Nearchus, an officer of eminent abilities, was entrusted with the command of the fleet fitted out for this expedition. He performed this voyage, which was deemed an enterprise fo arduous and important, that Alexander reckoned it one of the most extraordinary events which diffinguished his reign. Inconfiderable as it may now appear, it was, at that time, an undertaking of no little merit and difficulty. In the profecution of it, striking instances occur of the small progress which the Greeks had made in naval knowledge '. Having never failed

r Strab, Geogr. lib. xv. p. 1036. Q. Curtius, lib. xviii c. 9.

Strab. Geogr. lib. xvi. p. 1075.

воок

beyond the bounds of the Mediterranean, where the ebb and flow of the sea are hardly perceptible, when they first observed this phænomenon at the mouth of the Indus, it appeared to them a prodigy, by which the gods testified the displeasure of Heaven against their enterprise '. During their whole course, they feem never to have lost fight of land, but followed the carings of the coast so servilely, that they could not much avail themselves of those periodical winds, which facilitate navigation in the Indian ocean. Accordingly, they spent no less than ten months " in performing this voyage, which, from the mouth of the Indus to that of the Persian gulf, does not exceed twenty degrees. It is probable, that amidst the violent convulsions, and frequent revolutions in the East, occasioned by the contests among the successors of Alexander, the navigation to India, by the course which Nearchus had opened, was discontinued. The Indian trade carried on at Alexandria, not only subsisted, but was so much improved under the Grecian monarchs of Egypt, that it proved a great fource of the wealth which distinguished that kingdom.

THE progress which the Romans made in navigation and Of the Rodiscovery, was still more inconsiderable than that of the Greeks. The genius of the Roman people, their military education, and the spirit of their laws, concurred in estranging them from commerce and naval affairs. It was the necessity of opposing a formidable rival, not the define of extending trade, which first prompted them to aim at maritime power. Though they foon perceived that, in order to acquire the universal dominion after which they aspired, it was necessary to render themselves masters of the sea, they still considered the naval service as a subor-

Vol. I.

D

dinate

BOOK

dinate station, and reserved for it such citizens as were not of a rank to be admitted into the legions". In the history of the Roman republic, hardly one event occurs, that marks attention to navigation any farther than as it was instrumental towards conquest. When the Roman valour and discipline had subdued all the maritime states known in the ancient world; when Carthage, Greece, and Egypt, had submitted to their power, the Romans did not imbibe the commercial spirit of the conquered nations. Among that people of foldiers, to have applied to trade would have been deemed a degradation of a Roman citizen. They abandoned the mechanical arts, commerce, and navigation, to flaves, to freedmen, to provincials, and to citizens of the lowest class. Even after the subversion of liberty, when the feverity and haughtiness of ancient manners began to abate, commerce did not rise into high estimation among the Romans. The trade of Greece, Egypt, and the other conquered countries, continued to be carried on in their ancient channels, after they were reduced into the form of Roman provinces. As Rome was the capital of the world, and the feat of government, all the wealth and valuable productions of the provinces flowed naturally thither. The Romans, fatisfied with this, feem to have fuffered commerce to remain almost entirely in the hands of the natives of the respective countries. The extent, however, of the Roman power, which reached over almost the whole known world, the vigilant inspection of the Roman magistrates, and the spirit of the Roman government, no less intelligent than active, gave such additional security to commerce, as animated it with new vigour. among nations was never fo entire, nor the intercourse so perfect, as within the bounds of this vast empire. Commerce,

under their dominion, was not obstructed by the jealousy of BOOK rival flates, interrupted by frequent hostilities, or limited by partial refrictions. One superintending power moved and regulated the industry of mankind, and enjoyed the fruits of their joint efforts.

NAVIGATION felt this influence, and improved under it. As foon as the Romans acquired a taste for the luxuries of the East, the trade with India through Egypt was pushed with new vigour, and carried on to greater extent. By frequenting the Indian continent, navigators became acquainted with the periodical course of the winds, which, in the ocean that separates Africa from India, blow with little variation during one half of the year from the east, and during the other half fix with equal steadiness in the west. Encouraged by observing this, they abandoned their ancient slow and dangerous course along the coast, and as soon as the western monfoon fet in, took their departure from Ocelis, at the mouth of the Arabian gulf, and stretched boldly across the ocean '. The uniform direction of the wind, supplying the place of the compais, and rendering the guidance of the stars less necessary, conducted them to the port of Musiris, on the western shore of the Indian continent. There they took on board their cargo, and returning with the eastern monfoon, finished their voyage to the Arabian gulf within the year. This part of India, now known by the name of the Malabar coast, scems to have been the utmost limit of ancient navigation in that quarter of the globe. What imperfect knowledge the ancients had of the immense countries which stretch beyond this towards the east, they received from a few adventurers, who had visited them by land. Their excursions were not extensive, and it is probable, that while the Roman intercourse with India sub-

ł

e

d

BOOK I.

fifted, no traveller ever penetrated further than to the banks of the Ganges 2. The fleets from Egypt which traded at Musiris were loaded, it is true, with the spices and other rich commodities of the continent and islands of the farther India; but these were brought to that port, which became the staple of this commerce, by the Indians themselves, in canoes made of one tree . The Egyptian and Roman merchants, fatisfied with acquiring thefe commodities in this manner, did not think it necessary to explore unknown seas, and venture upon a dangerous navigation, in quest of the countries which produced them. But though the discoveries of the Romans in India were so limited, their commerce there was such as will appear confiderable, even to the present age, in which the Indian trade has been extended far beyond the practice or conception of any preceding period. We are informed by one author of credit b, that the commerce with India drained the Roman empire every year of more than four hundred thousand pounds; and by another, that one hundred and twenty ships sailed annually from the Arabian gulf to that country '.

Discoveries of she ancients by land, THE discovery of this new method of sailing to India is the most considerable improvement in navigation made during the continuance of the Roman power. But in ancient times, the knowledge of countries was acquired more by land than by sea d; and the Romans, from their peculiar disinclination to naval affairs, may be said to have neglected totally the latter, though a more easy and expeditious method of discovery. The progress, however, of their victorious armies contributed greatly to extend discovery by land, and even opened the navigation of new and unknown seas. Previous to the Roman

[·] See NOTE VII.

conquests, the civilized nations of antiquity had no communi- BOOK cation with those countries in Europe, which now form its most opulent and powerful kingdoms. The interior parts of Spain and of Gaul were little known. Britain, separated from the rest of the world, had never been visited, except by its neighbours the Gauls, and by a few Carthaginian merchants. The name of Germany had scarcely been heard of. Into all these countries the arms of the Romans penetrated. They entirely subdued Spain and Gaul; they conquered the greatest and most fertile part of Britain; they advanced into Germany, as far as the banks of the river Elbe. In Africa, they acquired a confiderable knowledge of the provinces, which stretch along the Mediterranean sea, from Egypt westward to the straits of Gades. In Asia, they not only subjected to their power most of the provinces which composed the Persian and Macedonian empires, but, after their victories over Mithridates and Tigranes, they feem to have furveyed the countries contiguous to the Euxine and Caspian seas, more accurately than they had been formerly, and to have carried on a more extenfive trade than that of the Greeks with the opulent and commercial nations, then feated around the Euxine fea.

ł

> FROM this fuccinct furvey of discovery and navigation, which Imperfection I have traced from the earliest dawn of historical knowledge to cal knowthe full establishment of the Roman dominion, their progress appears to be wonderfully flow. It scems neither adequate to what we might have expected from the activity and enterprise of the human mind, nor to what might have been performed by the power of the great empires that successively governed the world. If we reject accounts that are fabulous and obscure; if we adhere fleadily to the light and information of authentic history,

ledge among the ancients.

BOOK

history, without substituting in its place the conjectures of fancy, or the dreams of etymologists, we must conclude, that the knowledge which the ancients had acquired of the habitable globe was extremely confined. In Europe, the extensive provinces in the eastern part of Germany were hardly known to them. They were almost totally unacquainted with the vast countries which are now subject to the kings of Denmark, Sweden, Prussia, Poland, and the Russian empire. The more barren regions, that stretch within the arctic circle, were quite unexplored. In Africa, their researches did not extend far beyond the provinces which border on the Mediterranean, and those situated on the western shore of the Arabian gulf. In Asia, they were unacquainted, as I formerly observed, with all the fertile and opulent countries beyond the Ganges, which furnish the most valuable commodities that, in modern times, have been the great object of the European commerce with India; nor do they feem to have ever penetrated into those immense regions occupied by the wandering tribes, which they called by the general name of Sarmatians or Scythians, and now possessed by Tartars of various denominations, and by the Afiatic subjects of Russia.

A remarkable proof of this.

But there is one opinion, that universally prevailed among the ancients, which conveys a more striking idea of the small progress they had made in the knowledge of the habitable globe, than can be derived from any detail of their discoveries. They supposed the earth to be divided into five regions, which they distinguished by the name of zones. Two of these, which were nearest the poles, they termed frigid zones, and believed that the extreme cold which reigned perpetually there, rendered them uninhabitable. Another, seated under the line, and ex-

y d

tending on either fide towards the tropics, they called the torrid BOOK zone, and imagined it to be so burnt up with unremitting heat, as to be equally destitute of inhabitants. On the two other zones, which occupied the remainder of the earth, they beflowed the appellation of temperate, and taught that thefe, being the only regions in which life could fubfift, were allotted to man for his habitation. This wild opinion was not a conceit of the uninformed vulgar, or a fanciful fiction of the pocts, but a system adopted by the most enlightened philosophers, the most accurate historians and geographers in Greece and Rome. According to this theory, a vast portion of the habitable earth was pronounced to be unfit for fustaining the human species. Those fertile and populous regions within the torrid zone, which are now known not only to yield their own inhabitants the necessaries and comforts of life, with most luxuriant profusion, but to communicate their superfluous stores to the rest of the world, were supposed to be the mansion of perpetual sterility and desolation. As all the parts of the globe, which the ancients had discovered, lay within the northern temperate zone, their opinion that the other temperate zone was filled with inhabitants, was founded on reasoning and conjecture, not on discovery. They even believed that, by the intolerable heat of the torrid zone, such an insuperable barrier was placed between the two temperate regions of the earth, as would prevent for ever any intercourse between their respective inhabitants. Thus this extravagant theory not only proves that the ancients were unacquainted with the true state of the globe, but it tended to render their ignorance of it perpetual, by representing all attempts towards opening a communication with the remote regions of the earth, as utterly impracticable '.

Se NOTE VIII.

воок

But, however imperfect or inaccurate the geographical knowledge which the Greeks and Romans had acquired may appear, in respect of the present improved state of that science, their progress in discovery will seem considerable, and the extent to which they carried navigation and commerce must be reckoned great, when compared with the ignorance of early times. As long as the Roman empire retained fuch vigour as to preserve its authority over the conquered nations, and to keep them united, it was an object of public police, as well as of private curiofity, to examine and describe the countries which composed this great body. Even when the other sciences began to decline, geography, enriched with new observations, and receiving some accession from the experience of every age, and the reports of every traveller, continued to improve. It attained to the highest point of persection and accuracy to which it ever arrived in the ancient world, by the industry and genius of Ptolemy the philosopher. He flourished in the fecond century of the Christian æra, and published a description of the terrestrial globe, more ample and exact than that of any of his predecesfors.

Improvements in geography by Ptolemy.

The invation of the Roman empire by barbarous nations. But, soon after, violent convulsions began to shake the Roman state; the fatal ambition or caprice of Constantine, by changing the seat of government, divided and weakened its force; the barbarous nations, which Providence prepared as its instruments to overturn the mighty fabric of the Roman power, began to assemble and to muster their armies on its frontier; the empire tottered to its fall. During this decline and old age of the Roman state, it was impossible that the sciences should go on improving. The efforts of genius were, at that period, as languid and seeble as those of government.

From the time of Ptolemy, no confiderable addition feems to BOOK have been made to geographical knowledge, nor did any important revolution happen in trade, excepting that Conflantinople, by its advantageous fituation, and the encouragement of the eastern emperors, became a commercial city of the first note.

AT length, the clouds which had been fo long gathering Effects of round the Roman empire, burst into a storm. The barbarous quests on nations rushed in with irrefistible impetuosity, and, in the general wreck, occasioned by the inundation which overwhelmed Europe, the arts, sciences, inventions and discoveries of the Romans, perished and disappeared 5. All the various tribes, which conquered and fettled in the different provinces of the Roman empire, were uncivilized, strangers to letters, destitute of arts, unacquainted with regular government, subordination, or laws. The manners and institutions of some of them were fo rude and barbarous, as to be hardly compatible with a state of focial union. Europe, when occupied by fuch inhabitants, may be faid to have returned to a fecond infancy, and had to begin anew its career in improvement, science, and civility. The first effect of the settlement of those barbarous invaders was to dissolve the union by which the Roman power had cemented mankind together. They parcelled out Europe into many small and independent states, differing from each other in language and customs. No intercourse subsisted between the members of those divided and hostile communities. Accustomed to a simple mode of life, and averse to industry, they had few wants to supply, and no superfluities to dispose of. The names of franger and of enemy became once more words of

commercial

Hist, of Charles V. vol. i. p. 18. 72.

BOOK I. the fame import. Customs every-where prevailed, and even laws were established, which rendered it disagreeable and dangerous to visit any foreign country h. Cities, in which alone an extensive commerce can be carried on, were few, inconsiderable, and destitute of those immunities which produce security or excite enterprise. The sciences, on which geography and navigation are founded, were not cultivated. The accounts of ancient improvements and discoveries, contained in the Greek and Roman authors, were neglected or misunderstood. The knowledge of remote regions was lost, their situation, their commodities, and almost their names, were unknown.

Commercial knowledge fill preferved in the Eaftern empire,

ONE circumstance prevented commercial intercourse with distant nations from ceasing altogether. Constantinople, though often threatened by the fierce invaders, who spread desolation over the rest of Europe, was so fortunate as to escape their destructive rage. In that city, the knowledge of ancient arts and discoveries was preserved; a taste for splendour and elegance sublisted; the productions and luxuries of foreign countries were in request; and commerce continued to flourish there, when it was extinct in every other part of Europe. The citizens of Constantinople did not confine their trade to the islands of the Archipelago, or to the adjacent coasts of Asia; they took a wider range, and following the course which the ancients had marked out, imported the commodities of the East Indies from Alexandria. When Egypt was torn from the Roman empire by the Arabians, the industry of the Greeks discovered a new channel, by which the productions of India might be conveyed to Constantinople. They were carried up

the Indus, as far as that great river is navigable; thence they were transported by land to the banks of the river Oxus, and proceeded down its stream to the Caspian sea. There they entered the Volga, and sailing up it, were carried by land to the Tanais, which conducted them into the Euxine sea, where vessels from Constantinople waited their arrival. This extraordinary and tedious mode of conveyance merits attention, not only as a proof of the violent passion which the inhabitants of Constantinople had conceived for the luxuries of the east, and as a specimen of the ardour and ingenuity with which they carried on commerce, but because it demonstrates, that, during the ignorance which reigned in the rest of Europe, an extensive knowledge of remote countries was still preserved in the capital of the Greek empire.

AT the same time, a gleam of light and knowledge broke in upon the east. The Arabians, having contracted some relish for the sciences of the people whose empire they had contributed to overturn, translated the books of several of the Greek philosophers into their own language. One of the first was that valuable work of Ptolemy, which I have already mentioned. The study of geography became, of consequence, an early object of attention to the Arabians. But that acute and ingenious people cultivated chiefly the speculative and scientisic parts of geography. In order to ascertain the figure and dimensions of the terrestrial globe, they applied the principles of geometry, they had recourse to astronomical observations, they employed experiments and operations, which Europe, in more enlightened times, has been proud to adopt and to imitate. At that period, however, the same of the improvements made

h Ramusic, vol. i. p. 372. F.

воок

by the Arabians did not reach Europe. The knowledge of their discoveries was reserved for ages capable of comprehending and of perfecting them.

Revival of commerce and navigation in Europe.

By degrees, the calamities and defolation brought upon the western provinces of the Roman empire by its barbarous conquerors, were forgotten, and in some measure repaired. The rude tribes which fettled there, acquiring infenfibly fome idea of regular government, and some relish for the functions and comforts of civil life, Europe began to awake from its torpid and unactive state. The first symptoms of revival were discerned in Italy. The northern tribes which took possession of this country, made progress in improvement with greater rapidity than the people settled in other parts of Europe. Various causes, which it is not the object of this work to enumerate or explain, concurred in reftoring liberty and independence to the cities of Italy '. The acquisition of these roused industry, and gave motion and vigour to all the active powers of the human mind. Foreign commerce revived, navigation was attended to and improved. Constantinople became the chief mart to which the Italians reforted. There they not only met with a favourable reception, but obtained fuch mercantile privileges as enabled them to carry on trade with great advantage. They were supplied both with the precious commodities of the east, and with many curious manufactures, the product of the ancient arts and ingenuity that still subsisted among the Greeks. As the labour and expence of conveying the productions of India to Constantinople by that long and indirect course which I have described, rendered them extremely rare, and of an exorbitant price, the industry of the Italians

discovered

discovered other methods of procuring them in greater abund- BOOK ance, and at an easier rate. They sometimes purchased them in Aleppo, Tripoli, and other ports on the coast of Syria, to which they were brought by a route not unknown to the ancients. They were conveyed from India by sea, up the Perfian Gulf, and afcending the Euphrates and Tigris, as far as Bagdat, were carried by land across the Defert to Palmyra, and from thence to the towns on the Mediterranean. But from the length of the journey, and the dangers to which the caravans were exposed, this proved always a tedious, and often a precarious mode of conveyance. At length, the Soldans of Egypt, having renewed the commerce with India in its ancient channel, by the Arabian Gulf, the Italian merchants, notwithflanding the violent antipathy to each other with which Chriflians and the followers of Mahomet were then possessed, repaired to Alexandria, and enduring, from the love of gain, the insolence and exactions of the Mahometans, established a lucrative trade in that port. From that period, the commercial spirit of Italy became active and enterprising. Venice, Genoa, Pisa, rose from inconsiderable towns, to be populous and wealthy cities. Their naval power increased; their vessels frequented all the ports in the Mediterranean; they ventured fometimes beyond the Streights; visited the maritime towns of Spain, France, the Low Countries, and England; and, by distributing their commodities over Europe, began to communicate to its various nations some knowledge of the valuable productions of the east, as well as some ideas of manufactures and arts, with which they had hitherto been unacquainted.

WHILE the cities of Italy were thus advancing in their career Their proof improvement, an event happened, the most extraordinary gress favoured by the Cruperhaps fades,

BOOK

perhaps in the history of mankind, which, instead of retarding the commercial progress of the Italians, rendered it more rapid. The martial spirit of the Europeans, heightened and inflamed by religious zeal, prompted them to deliver the Holy Land from the dominion of infidels. Vast armies, composed of all the nations of Europe, marched towards Asia, upon this wild enterprise. The Genoese, the Pisans, and Venetians furnished the transports which carried them thither. They supplied them with provisions and military stores. Befide the immense sums which they received on this account, they obtained commercial privileges and establishments, of great consequence in the settlements which the Crusaders made in Palestine, and in other provinces of Asia. fources, prodigious wealth flowed into the cities which I have mentioned. A proportional increase of power accompanied this, and by the end of the Holy War, Venice, in particular, became a great maritime state, possessing an extensive commerce, and ample territories . Italy was not the only country in which the Crusades contributed to revive and diffuse such a spirit as prepared Europe for future discoveries. By their expeditions into Afia, the other European nations became well acquainted with remote regions, which formerly they knew only by name, or by the reports of ignorant and credulous pilgrims. They had an opportunity of observing the manners, the arts, and the accommodations of people more polished than themselves. This intercourse between the east and west fublished almost two centuries. The adventurers, who returned from Asia, communicated to their countrymen the ideas which they had acquired, and the habits of life they had contracted by visiting more refined nations. The Europeans began to be

k Essai de l'Histoire du Commerce de Venise, p. 52, &c.

fenfible of wants with which they were formerly unacquainted; new defires were excited; and fuch a tafte for the commodities and arts of other countries gradually spread among them, that they not only encouraged the refort of foreigners to their harbours, but began to perceive the advantage and necessity of applying to commerce themselves '.

This communication, which was opened between Europe by the difcoand the western provinces of Asia, encouraged several persons veliers by to advance far beyond the countries in which the Crusaders carried on their operations, and to travel by land into the more remote and opulent regions of the east. The wild fanaticism, which feems at that period to have mingled in all the schemes of individuals, no less than in all the counsels of nations, first incited men to enter upon those long and dangerous peregrinations. They were afterwards undertaken from prospects of commercial advantage, or from motives of mere curiofity. Benjamin, a Jew of Tudela, in the kingdom of Navarre, possessed with a superstitious veneration for the law of Moses, and solicitous to visit his countrymen in the east, whom he hoped to find in such a state of power and opulence, as might redound to the honour of his feet, fet out from Spain in the year 1160, and travelling by land to Constantinople, proceeded through the countries to the north of the Euxine and Caspian seas, as far as Chinese Tartary. From thence he took his route towards the fouth, and after traverling various provinces of the farther India, he embarked on the Indian ocean, visited several of its islands, and returned at the end of thirteen years, by the way of Egypt, to Europe, with much information concerning a large district of the globe, altogether unknown at that time to the

BOOK

1216.

western world m. The zeal of the head of the Christian church co-operated with the superstition of Benjamin the Jew, in discovering the interior and remote provinces of Asia. All Christendom having been alarmed with accounts of the rapid progress of the Tartar arms under Zengis Khan, Innocent IV. who entertained most exalted ideas concerning the plenitude of his power, and the submission due to his injunctions, sent father John de Plano Carpini, at the head of a mission of Franciscan monks, and father Ascolino, at the head of another of Dominicans, to exhort Kayuk Khan, the grandfon of Zengis, who was then at the head of the Tartar empire, to embrace the Christian faith, and to desist from desolating the earth by his arms. The haughty descendant of the greatest conqueror Asia had ever beheld, aftonished at this strange mandate from an Italian priest, whose name and power were alike unknown to him, received it with the contempt which it merited, though he dismissed the mendicants who delivered it with impunity. But as they had penetrated into the country by different routes, and followed for some time the Tartar camps, which were always in motion, they had an opportunity of vifiting a great part of Asia. Carpini, who proceeded by the way of Poland and Russia, travelled through its northern provinces as far as the extremities of Thibet. Ascolino, who seems to have landed fomewhere in Syria, advanced through its fouthern provinces, into the interior parts of Persia".

impostor, who took advantage of the slender acquaintance of the Christians with the state and character of the Asiatic nations, having informed him that a powerful Chan of the Tartars had embraced the Christian faith, the monarch listened to the tale with pious credulity, and inflantly refolved to fend ambaffadors to this illustrious convert, with a view of inciting him to attack their common enemy the Saracens on one quarter, while he fell upon them on the other. As monks were the only perfons in that age who possessed such a degree of knowledge as qualified them for a fervice of this kind, he employed in it father Andrew, a Jacobine, who was followed by father William de Rubruquis, a Franciscan. With respect to the progress of the former, there is no memorial extant. The journal of the latter has been published. He was admitted into the presence of Mangu, the third khan in fuccession from Zengis, and made a circuit through the interior parts of Asia, more extensive than that of any European who had hitherto explored them °.

To those travellers, whom religious zeal sent forth to visit Asia, succeeded others who ventured into remote countries, from the prospect of commercial advantage, or from motives of mere curiofity. The first and most eminent of these was Marco Polo, a Venetian of a noble family. Having engaged early in trade, according to the custom of his country, his aspiring mind wished for a sphere of activity more extensive than. was afforded to it by the established traffic carried on in those ports of Europe and Asia, which the Venetians frequented. This prompted him to travel into unknown countries, in expectation of opening with them a commercial intercourse, more fuited to the fanguine ideas and hopes of a young adventurer.

F322.

As his father had already carried fome European commodities. to the court of the great Chan of the Tartars, and had disposed of them to advantage, he reforted thither. Under the protection of Kublay Chan, the most powerful of all the successors of Zengis, he continued his mercantile peregrinations in Asia upwards of twenty-fix years; and during that time advanced towards the east, far beyond the utmost boundaries to which any European traveller had ever proceeded. Instead of following the course of Carpini and Rubruquis, along the vast unpeopled plains of Tartary, he passed through the chief trading cities in the more cultivated parts of Asia, and penetrated to Cambalu, or Peking, the capital of the great kingdom of Cathay, or China, subject at that time to the successors of Zengis. He mademore than one voyage on the Indian ocean, he traded in many of the islands, from which Europe had long received spiceries and other commodities, which it held in high estimation, though unacquainted with the particular countries to which it was indebted for those precious productions; and he obtained information concerning feveral countries, which he did not vifit in person, particularly the island Zipangri, probably the samenow known by the name of Japan P. On his return, he aftonished his contemporaries with his descriptions of vast regions, whose names had never been heard of in Europe, and with fuch pompous accounts of their fertility, their populousness, their opulence, the variety of their manufactures, and the extent of their trade, as rose far above the conception of an uninformed age.

ABOUT half a century after Marco Polo, Sir John Mandeville, an Englishman, encouraged by his example, visited

most of the countries in the east which he had described, and, like him, published an account of them on his return 4. The narrations of those early travellers abound with many wild incoherent tales, concerning giants, enchanters, and monsters. But they were not, from that circumstance, less acceptable to an ignorant age, which delighted in what was marvellous. The wonders which they told, mostly on hearfay, filled the multitude with admiration. The facts which they related from their own observation, attracted the attention of the more discerning. The former, which may be confidered as the popular traditions and fables of the countries through which they had passed, were gradually difregarded as Europe advanced in knowledge. The latter, however incredible fome of them may have appeared in their own time, have been confirmed by the observations of modern travellers. By means of both, however, the curiofity of mankind was excited with respect to the remote parts of the earth, their ideas were enlarged, and they were not only infenfibly disposed to attempt new discoveries, but received fuch information as directed them to that particular course in which they were afterwards carried on.

WHILE this spirit was gradually forming in Europe, a for- and by the tunate discovery was made, which contributed more than all invention of the mariners the efforts and ingenuity of preceding ages, to improve and compais. to extend navigation. That wonderful property of the magnet, by which it communicates fuch virtue to a slender rod of iron or needle, as to point towards the poles of the earth, was observed. The use which might be made of this in directing navigation was immediately perceived, and that most valuable, but now familiar instrument, the mariners compass, was

Voyages and Travels, by Sir John Mandeville.

formed.

BOOK

formed. When, by means of it, navigators found that at all feafons, and in every place, they could discover the north and fouth with fo much ease and accuracy, it became no longer necessary to depend merely on the light of the stars and the obfervation of the fea coast. They gradually abandoned their ancient timid and lingering courfe along the shore, ventured boldly into the ocean, and relying on this new guide, could steer in the darkest night, and under the most cloudy sky, with a fecurity and precision hitherto unknown. The compass may be faid to have opened to man the dominion of the fea, and to have put him in full possession of the earth, by enabling him to visit every part of it. Flavio Gioia, a citizen of Amals, a town of confiderable trade in the kingdom of Naples, was the author of this great discovery, about the year one thoufand three hundred and two. It hath been often the fate of those illustrious benefactors of mankind, who have enriched science and improved the arts by their inventions, to derive more reputation than benefit from the happy efforts of their genius. But the lot of Gioia has been still more cruel; through the inattention or ignorance of contemporary historians, he has been defrauded even of the fame to which he had fuch a just title. We receive from them no information with respect to his profession, his character, the precise time when he made this important discovery, and the accidents or inquiries which led to it: the knowledge of this event, though productive of greater effects than any recorded in the annals of the human race, is transmitted to us without any of those circumstances, which can gratify the curiofity that it naturally awakens'. Though the use of the compass might enable the Italians to perform the short voyages to which they

were accustomed, with greater security and expedition, its influence was not fo fudden or extensive, as immediately to render navigation adventurous, and to excite a spirit of difcovery. Many causes combined in preventing this beneficial invention from producing its full effect inflantaneously. Men relinquish ancient habits flowly, and with reluctance. They are averse to new experiments, and venture upon them with timidity. The commercial jealoufy of the Italians, it is probable, laboured to conceal the happy discovery of their countryman from other nations. The art of fleering by the compass, with such skill and accuracy as to inspire a full considence in its direction, was acquired gradually. Sailors, long accustomed not to quit fight of land, durft not launch out at once and commit themselves to unknown seas. Accordingly, near half a century elapsed, from the time of Gioia's discovery, before navigators ventured into any feas which they had not been accustomed to frequent.

THE first appearance of a bolder spirit may be dated from Some appearthe voyages of the Spaniards to the Canary or Fortunate Islands. accordabetd-By what accident they were led to the diffcovery of those small vavigation. ifles, which lie near five hundred miles from the Spanish coast, and above a hundred and fifty miles from the coast of Africa, contemporary writers have not explained. But about the middle of the fourteenth century, the people of all the different kingdoms into which Spain was then divided, were accustomed to make piratical excursions thither, in order to plunder the inhabitants, or to carry them off as flaves. Clement VI. in virtue of the right claimed by the holy fee to dispose of all countries possessed by infidels, crecked those isles into a kingdom, in the year one thousand three hundred and forty-four, and conferred it on Lewis de la Cerda, descended

from

BOOK

1355.

from the royal family of Castile. But that unfortunate prince, destitute of power to affert his nominal title, having never vifited the Canaries, John de Bethencourt, a Norman baron, obtained a grant of them from Henry III. of Bethencourt, with the valour and good fortune Castile '. which diffinguished the adventurers of his country, attempted and effected the conquest, and the possession of the Canaries remained for some time in his family, as a fief held of the crown of Castile. Previous to this expedition of Bethencourt, his countrymen are faid to have vifited the coast of Africa, and to have proceeded far to the fouth of the Canary islands. But their voyages thither feem not to have been undertaken in consequence of any public or regular plan for extending navigation and attempting new discoveries. They were either excursions fuggested by that roving piratical spirit, which descended to the Normans from their ancestors, or the commercial enterprises of private merchants, which attracted fo little notice, that hardly any memorial of them is to be found in contemporary authors. In a general furvey of the progress of discovery, it is sufficient to have mentioned this event; and leaving it among those of dubious existence, or of small importance, we may conclude, that though much additional information concerning the remote regions of the East had been received by travellers who visited them by land, navigation, at the beginning of the fifteenth century, had not advanced beyond the state to which it had attained before the downfal of the Roman empire.

First regular plan of difcovery AT length the period arrived, when Providence decreed that men were to pass the limits within which they had been so long confined, and open to themselves a more ample field wherein to display their talents, their enterprise, and courage. The

first confiderable efforts towards this were not made by any of the more powerful flates of Europe, or by those who had applied to navigation with the greatest assiduity and success. The glory of leading the way in this new career was referred for Portugal, one of the fmallest and most inconsiderable of the formed by the European kingdoms. As the attempts of the Portuguese to acquire the knowledge of those parts of the globe with which mankind were then unacquainted, not only improved and extended the art of navigation, but roused such a spirit of curiofity and enterprise, as led to the discovery of the New world of which I propose to write the history, it is necessary to take a view of the rife, the progrefs, and fuccefs of their various naval operations. It was in this school that the discoverer of America was trained; and unless we trace the steps by which his inftructors and guides advanced, it will be impossible to comprehend the circumstances which suggested the idea, or facilitated the execution of his great defign.

VARIOUS circumstances prompted the Portuguese to exert Circumstantheir activity in this new direction, and enabled them to ac- to this. complish undertakings apparently superior to the natural force of their monarchy. The kings of Portugal, having driven the Moors out of their dominions, had acquired power, as well as glory, by the fuccess of their arms against the insidels. By their victories over them, they had extended the royal authority beyond the narrow limits within which it was originally circumferibed in Portugal, as well as in other feudal kingdoms. They had the command of the national force, could rouse it to act with united vigour, and, after the expulsion of the Moors, could employ it without dread of interruption from any domestic enemy. By the perpetual hostilities carried on for several centuries

В О О К

against the Mahometans, the martial and adventurous spirit that distinguished all the European nations during the middle ages, was improved and heightened among the Portuguese. A fierce civil war, towards the close of the fourteenth century, occasioned by a disputed succession, augmented the military ardour of the nation, and formed or called forth men of fuch active and daring genius, as are fit for bold undertakings. The fituation of the kingdom, bounded on every fide by the dominions of a more powerful neighbour, did not afford free scope to the activity of the Portuguese by land, as the strength of their monarchy was no match for that of Castile. But Portugal was a maritime flate, in which there were many commodious harbours; the people had begun to make fome progrets in the knowledge and practice of navigation; and the fea was open to them, prefenting the only field of enterprise in which they could diffinguish themselves.

Firft attempt.

SUCH was the state of Portugal, and such the disposition of the people, when John I. furnamed the Bastard, obtained secure possession of the crown by the peace concluded with Castile in the year one thousand four hundred and eleven. He was a prince of great merit, who, by superior courage and abilities, had opened his way to a throne which of right did not belong to him. He inflantly perceived that it would be impossible to preserve public order, or domestic tranquillity, without finding fome employment for the restless spirit of his subjects. With this view, he assembled a numerous fleet at Lifbon, composed of all the ships that he could fit out in his own kingdom, and of many hired from foreigners. This great armament was deflined to attack the Moors fettled on the coast of Barbary. While it was equipping, a few veffels were appointed to fail along the western fhore

fhore of Africa bounded by the Atlantic ocean, and to discover the unknown countries situated there. From this inconsiderable attempt, we may date the commencement of that spirit of discovery which opened the barriers that had so long shut out mankind from the knowledge of one half of the terrestrial globe.

Ar the time when John fent forth these ships on this new voyage, the art of navigation was fill very imperfect. Though Africa lay fo near to Portugal, and the fertility of the countries already known on that continent invited men to make farther discoveries, the Portuguese had never ventured to fail beyond Cape Non. That promontory, as its name imports, was hitherto confidered as a boundary which could not be passed. But the nations of Europe had now acquired as much knowledge, as emboldened them to difregard the prejudices and to correct the errors of their ancestors. The long reign of ignorance, the constant enemy of every curious inquiry, and of every new undertaking, was approaching to its period. The light of science began to dawn. The works of the ancient Greeks and Romans began to be read with admiration and profit. The sciences cultivated by the Arabians were introduced into Europe by the Moors fettled in Spain and Portugal, and by the Jews, who were very numerous in both these kingdoms. Geometry, aftronomy, and geography, the sciences on which the art of navigation is founded, became objects of fludious attention. The memory of the discoveries made by the ancients was revived, and the progress of their navigation and commerce began to be traced. Some of the eauses which, during this century and the laft, have obstructed the cultivation of science in Portugal, did not exist, or did not operate in the Vol. I. fame

воок

BOOK I. fame manner, in the fifteenth century; and the Portuguese, at that period, seem to have kept pace with other nations on this side of the Alps in literary pursuits.

les faccofs.

As the genius of the age favoured the execution of that new undertaking, to which the peculiar state of their country invited the Portuguese, it proved successful. The vessels sent on the discovery doubled that formidable Cape, which had terminated the progress of former navigators, and proceeded a hundred and fixty miles beyond it, to Cape Bojador. As its rocky cliss, which stretched a considerable way into the Atlantic, appeared more dreadful than the promontory which they had passed, the Portuguese commanders durst not attempt to fail round it, but returned to Lisbon, more satisfied with having advanced so far, than ashamed at having ventured no farther.

Prince Henry the director of the Portuguese discoveries.

1415.

INCONSIDERABLE as this voyage was, it increased the passion for discovery, which began to arise in Portugal. The extraordinary success of the king's expedition against the Moors of Barbary, added strength to the spirit of enterprise in the nation, and pushed it on to new undertakings. In order to render these successful, it was necessary that they should be conducted by a person who possessed abilities capable of discerning what was attainable, who enjoyed leisure to form a regular system for prosecuting discovery, and who was animated with ardour that would persevere in spite of obstacles and repulses. Happily for Portugal, she found all those qualities in Henry duke of Viseo, the fourth son of king John by Philippa of Lancaster, sister of Henry IV. king of England. That prince, in his early youth, having accompanied his father in his expedition to Bar-

оок

bary, diffinguished himself by many deeds of valour. To the martial spirit, which was the characteristic of every man of noble birth at that time, he added all the accomplishments of a more enlightened and polished age. He cultivated the arts and fciences, which were then unknown and despised by persons of his rank. He applied with peculiar fondness to the study of geography; and by the instruction of able masters, as well as by the accounts of travellers, he early acquired fuch knowledge of the habitable globe, as discovered the great probability of finding new and opulent countries, by failing along the coast of Africa. Such an object was formed to awaken the enthusiasm and ardour of a youthful mind, and he engaged with the utmost zeal to patronize a design that might prove as beneficial, as it appeared to be splendid and honourable. In order that he might purfue this great scheme without interruption, he retired from court immediately after his return from Africa, and fixed his residence at Sagres, near Cape St. Vincent, where the prospect of the Atlantic ocean invited his thoughts continually towards his favourite project, and encouraged him to execute it. In this retreat he was attended by some of the most learned men in his country, who aided him in his refearches. He applied for information to the Moors of Barbary, who were accustomed to travel by land into the interior provinces of Africa, in quest of ivory, gold-dust, and other rich commodities. He confulted the Jews fettled in Portugal. By promifes, rewards, and marks of respect, he allured into his service several persons, foreigners as well as Portuguese, who were eminent for their skill in navigation. In taking those preparatory steps, the great abilities of the prince were feconded by his private virtues. His integrity, his affability, his respect for religion, his zeal for the honour of his country, engaged perfons of all ranks to G_2 applaud

applaud his defign, and to favour the execution of it. His fehemes were allowed by his countrymen to proceed neither from ambition, nor the defire of wealth, but to flow from the warm benevolence of a heart eager to promote the happiness of mankind, and which justly intitled him to assume a motto for his device, that described the quality by which he wished to be distinguished, the talent of doing good.

Discovery of Forto Santo, 1418.

His first effort, as is usual at the commencement of any new undertaking, was extremely inconfiderable. He fitted out a fingle ship, and giving the command of it to John Gonzalez Zarco and Tristan Vaz, two gentlemen of his household, who voluntarily offered to conduct the enterprise, he instructed them to use their utmost efforts to double Cape Bojador, and thence to steer towards the fouth. They, according to the mode of navigation which still prevailed, held their course along the fhore; and by following that direction, they must have encountered almost insuperable difficulties in attempting to pass Cape Bojador. But fortune came in aid to their want of skill, and prevented the voyage from being altogether fruitless. A fudden squall of wind arose, drove them out to sea, and when they expected every moment to perish, landed them on an unknown island, which from their happy escape they named Porto Santo. In the infancy of navigation, the discovery of this small island appeared a matter of such moment, that they instantly returned to Portugal with the good tidings, and were received by Henry with the applause and honour due to fortunate adventurers. This faint dawn of fuccess filled a mind ardent in the pursuit of a favourite object with such sanguine hopes as were fufficient encouragement to proceed. Next year, Henry fent out three ships under the same commanders, to whom he joined Bartholomew Perestrello, in order to take pof-

fession of the island which they had discovered. When they began to settle in Porto Santo, they observed towards the fouth a fixed foot in the horizon, like a small black cloud. By degrees, they were led to conjecture that it might be land, and of Madeira. fleering towards it, they arrived at a confiderable island, uninhabited, and covered with wood, which on that account they called Madeira'. As it was Henry's chief object to render his discoveries useful to his country, he immediately equipped a fleet to carry a colony of Portuguese to these islands. By his provident care, they were furnished not only with the teeds, plants, and domestic animals common in Europe; but as he forefaw that the warmth of the climate and fertility of the foil would prove favourable to the rearing of other productions, he procured flips of the vine from the island of Cyprus, the rich wines of which were then in great request, and plants of the fugar-cane from Sicily, into which it had been lately introduced. These throve so prosperously in this new country, that the benefit of cultivating them was immediately perceived, and the

1420.

As foon as the advantages derived from this first fettlement Double Cape to the west of the European continent began to be felt, the fpirit of discovery appeared less chimerical, and became more adventurous. By their voyages to Madeira, the Portuguese were gradually accustomed to a bolder navigation, and instead of creeping fervilely along the coast, ventured into the open In confequence of taking this course, Gilianez, who

BOOK

1433.

commanded one of prince Henry's ships, doubled Cape Boiador, the boundary of the Portuguese navigation upwards of twenty years, and which had hitherto been deemed unpaffable. This fuccessful voyage, which the ignorance of the age placed on a level with the most famous exploits recorded in history, opened a new sphere to navigation, as it discovered the vast continent of Africa, still washed by the Atlantic ocean, and firetching towards the fouth. Part of this was foon explored; the Portuguese advanced within the tropics, and in the space of a few years they discovered the river Senegal, and all the coast extending from Cape Blanco to Cape de Verd.

Advance within the tropics.

Astonished at what they dif-

HITHERTO the Portuguese had been guided in their discovered there. coveries, or encouraged to attempt them, by the light and information which they received from the works of the ancient mathematicians and geographers. But, when they began to enter the torrid zone, the notion which prevailed among the ancients, that the excessive heat, which reigned perpetually there, was fo fatal to life as to render it uninhabitable. deterred them, for some time, from proceeding. Their own observations, when they first ventured into this unknown and formidable region, tended to confirm the opinion of antiquity concerning the violent operation of the direct rays of the fun. As far as the river Senegal, the Portuguese had found the coast of Africa inhabited by people nearly resembling the Moors of Barbary. When they advanced to the fouth of that river, the human form feemed to put on a new appearance. They beheld men with fkins black as ebony, with short curled hair, flat nofes, thick lips, and all the peculiar features which are now known to distinguish the race of negroes. prising alteration they naturally attributed to the influence of heat.

воок

heat, and if they should advance nearer to the line, they began to dread that its effects would be still more fatal. Those dangers were exaggerated, and many other objections against attempting farther discoveries were proposed by some of the grandees, who, from ignorance, from envy, or from that cold timid prudence which rejects whatever has the air of novelty or enterprise, had hitherto condemned all prince Henry's schemes. They represented, that it was altogether chimerical to expect any advantage from countries fituated in that regionwhich the wisdom and experience of antiquity had pronounced to be unfit for the habitation of men; that their forefathers, fatisfied with cultivating the territory which Providence had allotted them, did not waste the strength of the kingdom by fruitless projects, in quest of new settlements; that Portugal was already exhausted by the expence of attempts to discover lands which either did not exist, or which nature destined to remain unknown; and was drained of men, who might have been employed in undertakings attended with more certain fuccefs, and productive of greater benefit. But neither their appeal to the authority of the ancients, nor their reasonings concerning the interest of Portugal, made any impression upon the determined philosophic mind of prince Henry. The discoveries which he had already made convinced him that the ancientshad little more than a conjectural knowledge of the torrid zone. He was no less satisfied that the political arguments of his opponents with respect to the interest of Portugal were malevolent and ill-founded. In those sentiments he was strenuously supported by his brother Pedro, who governed the kingdom as guardian of their nephew Alphonfo V. who had fucceeded to the throne during his minority; and instead of slackening his efforts.

1438.

BOOK efforts, Henry continued to pursue his discoveries with fresh ardour.

Papal grant to Portugal of what countries it should discover.

Bur, in order to filence all the murmurs of opposition, he endeavoured to obtain the fanction of the highest authority in favour of his operations. With this view, he applied to the Pope, and represented, in pompous terms, the pious and unwearied zeal, with which he had exerted himfelf during twenty years, in discovering unknown countries, the wretched inhabitants of which were utter strangers to true religion, wandering in heathen darkness, or led astray by the delusions of Mahomet. He befought the holy father, to whom, as the vicar of Christ, all the kingdoms of the earth were subject, to confer on the crown of Portugal a right to all the countries possessed by Infidels, which should be discovered by the industry of its fubjects, and fubdued by the force of its arms. He intreated him to enjoin all Christian powers, under the highest penalties, not to molest the Portuguese while engaged in this laudable enterprife, and to prohibit them from fettling in any of the countries which they flould discover. He promised that, in all their expeditions, it should be the chief object of the Portuguese to spread the knowledge of the Christian religion, to establish the authority of the holy see, and to increase the slock of the universal pastor. As it was by improving with dexterity every favourable conjuncture for acquiring new powers, that the court of Rome had gradually extended its usurpations, Eugene IV. the pontiff to whom this application was made, eagerly feized the opportunity that now prefented itself. He inflantly perceived, that by complying with prince Henry's request, he might exercise a prerogative no less flattering in its

own nature, than likely to prove beneficial in its confequences. A Bull was accordingly iffued, in which, after applauding in the strongest terms the past efforts of the Portuguese, and exhorting them to proceed in that laudable career on which they had entered, he granted them an exclusive right to all the countries which they should discover, from Cape Non to the continent of India.

EXTRAVAGANT as this donation, comprehending fuch a large portion of the habitable globe, would now appear even in Catholic countries, no person in the sisteenth century doubted that the pope, in the plenitude of his apostolic power, had a right to confer it. Prince Henry was foon fensible of the advantages which he derived from this transaction. His schemes were authorifed and fanctified by the bull approving of them. The spirit of discovery was connected with zeal for religion, which, in that age, was a principle of fuch activity and vigour, as to influence the conduct of nations. All Christian princes were deterred from intruding into those countries which the Portuguese had discovered, or from interrupting the progress of their navigation and conquests *.

THE fame of the Portuguese voyages soon spread over Eu- Fame and rope. Men, long accustomed to circumferibe the activity and Fregrets of the Portuknowledge of the human mind within the limits to which they guese differhad been hitherto confined, were aftonished to behold the fphere of navigation so suddenly enlarged, and a prospect opened of visiting regions of the globe, the existence of which was unknown in former times. The learned and speculative reasoned and formed theories concerning those unexpected discoveries. The vulgar inquired and wondered; and enter-

1449.

prifing adventurers crouded from every part of Europe, foliciting prince Henry to employ them in this honourable fervice. Many Venetians and Genoese, in particular, who were, at that time, superior to all other nations in the science of naval affairs. entered aboard the Portuguese ships, and acquired a more perfect and extensive knowledge of their profession in that new school of navigation. In emulation of these foreigners, the Portuguese exerted their own talents. The nation seconded the defigns of the prince. Private merchants formed companies, with a view to fearch for unknown countries. The Cape de Verd islands, which lie off the promontory of that name, were discovered, and soon after, the isles called Azores, As the former of these are above three hundred miles from the African coast, and the latter nine hundred miles from any continent, it is evident, by their venturing so boldly into the open feas, that the Portuguese had, by this time, improved greatly in the art of navigation.

Death of prince Henry.

1463.

While the passion for engaging in new undertakings was thus warm and active, it received an unfortunate check by the death of prince Henry, whose superior knowledge had hitherto directed all the operations of the discoverers, and whose patronage had encouraged and protected them. It is true, that during his life, the Portuguese, in their utmost progress towards the south, did not advance within five degrees of the equinoctial line; and, after their continued exertions for has a century, hardly sisteen hundred miles of the coast of Africa were discovered. To an age acquainted with the efforts of navigation in its state of maturity and improvement, those essays of its early years must necessarily appear feeble and unskilful. But, inconsiderable as they may appear, they were sufficient to turn the curiosity

From 1412 to 1463.

curiofity of the European nations into a new channel, to excite BOOK an enterprising spirit, and to point the way to future discoveries.

ALPHONSO, who possessed the throne of Portugal at the time The passion of prince Henry's death, was so much engaged in supporting his pretentions to the crown of Castile, or in carrying on his expeditions against the Moors in Barbary, that the force of his kingdom being exerted in other operations, he could not profecute the discoveries in Africa with ardour. He committed the conduct of them to Fernando Gomez, a merchant in Lifbon, to whom he granted an exclusive right of commerce with all the countries of which prince Henry had taken possession. Under the restraint and oppression of a monopoly, the spirit of discovery languished. It ceased to be a national object, and became the concern of a private man, more attentive to his own gain, than to the glory of his country. Some progress, however, was made. The Portuguese ventured at length to cross the line, and, to their astonishment, found that region of the torrid zone, which was supposed to be scorched with intolerable heat, to be not only habitable, but populous and fertile.

1471.

JOHN II. who succeeded his father Alphonso, possessed talents capable both of forming and executing great defigns. part of his revenues, while prince, had arisen from duties on the trade with the newly discovered countries, this naturally turned his attention towards them, and fatisfied him with refpect to their utility and importance. In proportion as his knowledge of these countries extended, the possession of them appeared to be of greater consequence. While the Portuguese proceeded along the coast of Africa, from Cape Non to the

Revives with additional

river

BOOK' river of Senegal, they found all that extensive tract to be fandy, barren, and thinly inhabited by a wretched people, professing the Mahometan religion, and subject to the vast empire of Morocco. But to the fouth of that river, the power and religion of the Mahometans were unknown. The country was divided into small independent principalities, the population was considerable, the foil fertile, and the Portuguese soon discovered that it produced ivory, rich gums, gold, and other valuable commodities. By the acquifition of these, commerce was enlarged, and became more adventurous. Men, animated and rendered active by the certain prospect of gain, pursued discovery with greater eagerness, than when they were excited only by curiofity and hope.

Its progress.

F484.

promoted it with all the ardour of his grand-uncle prince Henry, and with superior power. The effects of this were immediately felt. A. powerful fleet was fitted out, which, after discovering the kingdoms of Benin and Congo, advanced above fifteen hundred miles beyond the line, and the Portuguese, for the first time, beheld a new heaven, and observed the stars of another hemisphere. John was not only

This spirit derived no small reinforcement of vigour from-

the countenance of such a monarch as John. He declared himself the patron of every attempt towards discovery, and

those countries. He built forts on the coast of Guinea; he fent out colonies to fettle there; he established a commercial intercourse with the more powerful kingdoms; he endeavoured.

folicitous to discover, but attentive to secure the possession of

to render such as were feeble or divided, tributary to the crown of Portugal. Some of the petty princes voluntarily acknowledged themselves his vassals. Others were compelled to do so by force of arms. A regular and well digested system was formed with respect to this new object of policy, and by firmly adhering to it, the Portuguese power and commerce in Africa were established upon a solid foundation.

BOOK

By their constant intercourse with the people of Africa, the Hopes of dis-Portuguese gradually acquired some knowledge of those parts covering a new route to of that country which they had not visited. The information the East inwhich they received from the natives, added to what they had observed in their own voyages, began to open prospects more extensive, and to suggest the idea of schemes more important, than those which had hitherto allured and occupied them. They had detected the error of the ancients concerning the nature of the torrid zone. They found, as they proceeded fouthwards, that the continent of Africa, instead of extending in breadth, according to the doctrine of Ptolemy 2, at that time the oracle and guide of the learned in the study of geography, appeared fenfibly to contract itself, and to bend towards the east. This induced them to give credit to the accounts of the ancient Phenician voyages round Africa, which had long been deemed fabulous, and led them to conceive hopes that by following the fame route, they might arrive at the East Indies, and engrofs that commerce, which has been the fource of wealth and power to every nation possessed of it. The comprehensive genius of prince Henry, as we may conjecture from the words of the pope's bull, had early formed some idea of this navigation. All the Portuguese pilots and mathematicians now concurred in

z. Vide Nov. Orbis Tabul. Geograph. Secund. Ptolem. Amst. 1730. representing B O O K

representing it as practicable. The king entered with warmth into their sentiments, and began to concert measures for this arduous and important voyage.

Schemes for accomplishing this.

BEFORE his preparations for this expedition were finished, accounts were transmitted from Africa, that various nations along the coast had mentioned a mighty kingdom situated on their continent, at a great distance towards the east, the king of which, according to their description, professed the Christian religion. The Portuguese monarch immediately concluded, that this must be the emperor of Abyssinia, to whom the Europeans, feduced by a mistake of Rubruquis, Marco Polo, and other travellers to the east, absurdly gave the name Prester or Presbyter John; and as he hoped to receive information and affishance from a Christian prince, in prosecuting a scheme that tended to propagate their common faith, he refolved to open, if possible, fome intercourse with his court. With this view, he made choice of Pedro de Covillam and Alphonso de Payva, who were perfect masters of the Arabic language, and sent them into the east, to search for the residence of this unknown potentate, and to make him proffers of friendship. They had it in charge, likewife, to procure whatever intelligence the nations which they visited could supply, with respect to the trade of India, and the course of navigation to that continent .

Voyage of Bartholomew Diaz.

1486.

WHILE John made this new attempt by land, to obtain fome knowledge of the country, which he wished so ardently to discover, he did not neglect the prosecution of this great defign by sea. The conduct of this voyage, the most arduous and important which the Portuguese had ever projected, was

² Faria y Sousa Port. Asia, vol. i. p. 26. Lastau Decouv. de Port. 1. 46.

committed to Bartholomew Diaz, an officer whose fagacity, experience, and fortitude rendered him equal to the undertaking. He stretched boldly towards the fouth, and proceeding beyond the utmost limits to which his countrymen had hitherto advanced, discovered near a thousand miles of new country. Neither the danger to which he was exposed, by a succession of violent tempests in unknown seas, and by the frequent mutinies of his crew, nor the calamities of famine which he suffered from losing his store-ship, could deter him from prosecuting his enterprise. In recompence of his labours and perseverance, he at last descried that lofty promontory which bounds Africa to the fouth. But to descry it, was all that was in his power. The violence of the winds, the shattered condition of his ships, and the turbulent spirit of his sailors, compelled him to return, after a voyage of fixteen months, in which he discovered an extent of country far greater than any preceding navigator. Diaz had called the promontory which terminated his voyage Cabo Tormentoso, or the stormy Cape; but the king, his master, as he now entertained no doubt of having found the long defired route to India, gave it a name more inviting, and of better omen, The Cape of Good Hope b.

BOOK 1486.

THOSE fanguine expectations of success were confirmed by More certain the intelligence which John received over land, in confequence fuccess, of of his embassy to Abyssinia. Covillam and Payva, in obedience to their master's instructions, had repaired to Grand Cairo. From that city, they travelled along with a caravan of Egyptian merchants, and crossed over to Aden, on the Red Sea. There they separated; Payva sailed directly towards Abyssinia; Covillam embarked for the East Indies, and having visited Ca-

BOOK lecut, Goa, and other cities on the Malabar-coast, returned to Sofala, on the east fide of Africa, and thence to Grand Cairo, which Payva and he had fixed upon as their place of rendez-Unfortunately the former was cruelly murdered in Abyssinia, but Covillam found at Cairo two Portuguese Jews. whom John, whose provident fagacity attended to every circumstance that could facilitate the execution of his schemes, had dispatched after them, in order to receive a detail of their proceedings, and to communicate to them new instructions. By one of these Jews, Covillam transmitted to Portugal a journal of his travels by fea and land, his remarks upon the trade of India, together with exact maps of the coasts on which he had touched; and from what he himself had observed, as well as from the information of skilful scamen in different countries, he concluded, that by failing round Africa, a passage might be found to the East Indies '.

Preparations for another voyage.

THE happy coincidence of Covillam's opinion and report, with the discoveries which Diaz had lately made, left hardly any shadow of doubt with respect to the possibility of sailing from Europe to India. But the vast length of the voyage, and the furious storms which Diaz had encountered near the Cape of Good Hope, alarmed and intimidated the Portuguese to fuch a degree, although by long experience they were now become adventurous and skilful mariners, that some time was requisite to prepare their minds for this dangerous and extraordinary voyage. The courage, however, and authority of the monarch, gradually dispelled the vain fears of his subjects, or made it necessary to conceal them. As John thought himself now upon the eve of accomplishing that great defign, which

e Faria y Sousa Port. Asia, vol. i. p. 27. Lasitau Decouv. i. 43.

had been the principal object of his reign, his earnestness in profecuting it became so vehement, that it occupied his thoughts by day, and bereaved him of fleep through the night. While he was taking every precaution that his wisdom and experience could fuggest, in order to ensure the success of the expedition, which was to decide concerning the fate of his favourite project, the fame of the vast discoveries which the Portuguese had already made, the reports concerning the extraordinary intelligence which they had received from the east, and the prospect The attention of the voyage which they now meditated, drew the attention of fixed upon it. all the European nations, and held them in suspence and expectation. By some, the maritime skill and navigations of the Portuguese were compared with those of the Phenicians and Carthaginians, and exalted above them. Others formed conjectures concerning the revolutions which the success of their schemes might occasion in the course of trade, and the political state of Europe. The Venetians began to be disquieted with the apprehension of losing their Indian commerce, the monopoly of which was the chief source of their power as well as opulence, and the Portuguese already enjoyed in fancy, the wealth of the East. But, during this interval, which gave fuch scope to the various workings of curiofity, of hope and of fear, an account was brought to Europe of an event no less suddenly extraordinary than unexpected, the discovery of a New World new object. fituated in the west, and the eyes and admiration of mankind turned immediately towards that great object.

graphy, astronomy, and the art of drawing. To these he applied with such ardour and predilection, on account of their connection with navigation, his favourite object, that he advanced with rapid proficiency in the fludy of them. qualified, he went to fea at the age of fourteen, and began his career on that element which conducted him to fo much glory. His early voyages were to those ports in the Mediterranean which his countrymen the Genoese frequented. This being a fphere too narrow for his active mind, he made an excursion to the northern seas, and visited the coasts of Iceland, to which the English and other nations had begun to refort on account of its fishery. As navigation, in every direction, was now become enterprising, he proceeded beyond that island, the Thule of the ancients, and advanced several degrees within the polar circle. Having satisfied his curiosity by a voyage which tended more to enlarge his knowledge of naval affairs, than to improve his fortune, he entered into the fervice of a famous sca-captain, of his own name and family. This man commanded a small squadron, sitted out at his own expence, and by cruifing fometimes against the Mahometans, fometimes against the Venetians, the rivals of his country in trade, had acquired both wealth and reputation. With him Columbus continued for feveral years, no less distinguished for his courage, than for his experience as a failor. At length, in an obstinate engagement, off the coast of Portugal, with some Venetian caravels, returning richly laden from the Low Countries, the vessel on board which he served took fire, together with one of the enemy's ships, to which it was fast grappled. In this dreadful extremity his intrepidity and presence of mind did not forsake him. He threw himself into the sea, laid hold of a floating oar, and by the support of it, and his dexterity in fwimming,

fwimming, he reached the shore, though above two leagues distant, and saved a life reserved for great undertakings ".

to Lisbon, where many of his countrymen were settled. They guese service. foon conceived fuch a favourable opinion of his merit, as well as talents, that they warmly folicited him to remain in that kingdom, where his naval skill and experience could not fail of rendering him conspicuous. To every adventurer, animated either with curiofity to visit new countries, or with ambition to distinguish himself, the Portuguese service was at that time extremely inviting. Columbus listened with a favourable ear to the advice of his friends, and having gained the efteem of a Portuguese lady, whom he married, fixed his residence in Lisbon. This alliance, instead of detaching him from a scafaring life, contributed to enlarge the sphere of his naval knowledge, and to excite a defire of extending it still farther. His wife was a daughter of Bartholomew Perestrello, one of the captains employed by prince Henry in his early navigations, and who, under his protection, had discovered and planted the islands of Porto Santo and Madeira. Columbus got possession of the journals and charts of this experienced navigator, and from them he learned the course which the Portuguese had held in making their discoveries, as well as the various circumstances which guided or encouraged them in their attempts. fludy of these gratified and inflamed his favourite passion; and while he contemplated the maps, and read the descriptions of

the new countries which Perestrello had seen, his impatience to

visit them became irresissible. In order to indulge it, he made

a voyage to Madeira, and continued during feveral years to

воок П. trade with that island, with the Canaries, the Azores, the settlements in Guinea, and all the other places which the Portuguese had discovered on the continent of Africa.

The effects of their discoveries upon him.

By the experience which Columbus acquired, during such a variety of voyages to almost every part of the globe with which. at that time, any intercourse was carried on by sea, he was now become one of the most skilful navigators in Europe. But, not fatisfied with that praife, his ambition aimed at fomething more. The successful progress of the Portuguese navigators had awakened a spirit of curiosity and emulation, which set every man of science upon examining all the circumstances that led to the discoveries which they had made, or that afforded a prospect of fucceeding in any new and bolder undertaking. The mind of Columbus, naturally inquisitive, capable of deep reflection, and turned to speculations of this kind, was so often employed in revolving the principles upon which the Portuguese had founded their schemes of discovery, and the mode in which they had carried them on, that he gradually began to form an idea of improving upon their plan, and of accomplishing difcoveries which hitherto they had attempted in vain.

He forms the idea of a new course to In-

To find out a passage by sea to the East Indies, was the great object in view at that period. From the time that the Portuguese doubled Cape de Verd, this was the point at which they aimed in all their navigations, and, in comparison with it, all their discoveries in Africa appeared inconsiderable. The fertility and riches of India had been known for many ages; its spices and other valuable commodities were in high request throughout Europe, and the vast wealth of the Venetians,

[·] Life of Columbus, c. iv. v.

BOOK

arising from their having engrossed this trade, had raised the envy of all nations. But how intent soever the Portuguese were upon discovering a new route to those desirable regions, they fearched for it only by fleering towards the fouth, in hopes of arriving at India, by turning to the east, after they had failed round the farther extremity of Africa. This course, however, was still unknown, and, even if discovered, was of such immense length, that a voyage from Europe to India must have appeared an undertaking extremely arduous, and of very uncertain iffue. More than half a century had been employed in advancing from Cape Non to the equator; a much longer space of time might elapse before the more extensive navigation from that to India could be accomplished. These reflections upon the uncertainty, the danger and tediousness of the course which the Portuguese were pursuing, naturally led Columbus to confider whether a shorter and more direct passage to the East Indies might not be found out. And, after revolving long and feriously every circumstance suggested by his superior knowledge in the theory as well as practice of navigation, after comparing attentively the observations of modern pilots with the hints and conjectures of antient authors, he at last concluded, that by failing directly towards the west, across the Atlantic ocean, new countries, which probably formed a part

PRINCIPLES and arguments of various kinds, and derived The princifrom different fources, induced him to adopt this opinion, histheory was feemingly as chimerical as it was new and extraordinary. fpherical figure of the earth was known, and its magnitude ascertained with some degree of accuracy. From this it was evident, that the continents of Europe, Asia, and Africa,

of the vast continent of India, must infallibly be discovered.

formed but a small portion of the terraqueous globe. It was fuitable to our ideas concerning the wildom and beneficence of the Author of Nature, to believe that the vast space. still unexplored, was not covered entirely by a waste unprofitable ocean. but occupied by countries fit for the habitation of man. It appeared likewise extremely probable, that the continent, on this fide of the globe, was balanced by a proportional quantity of land in the other hemisphere. These conclusions concerning the existence of another continent, drawn from the figure and Aructure of the globe, were confirmed by the observations and conjectures of modern navigators. A Portuguese pilot, having Afretched farther to the west than was usual at that time, took up a piece of timber artificially carved, floating upon the fea: and as it was driven towards him by a westerly wind, he concluded that it came from fome unknown land, fituated in that quarter. Columbus's brother-in-law had found, to the well of the Madeira isles, a piece of timber fashioned in the same manner, and brought by the fame wind; and had feen likewife canes of an enormous fize floating upon the waves. which refembled those described by Ptolemy, as productions peculiar to the East Indies.4. After a course of westerly winds. trees, torn up by the roots, were often driven upon the coasts of the Azores, and at one time the dead bodies of two men, with fingular features, which resembled neither the inhabitants of Europe nor of Africa, were cast ashore there.

As the force of this united evidence, arising from theoretical principles and practical observations, led Columbus to expect the discovery of new countries in the Western Ocean, other reasons induced him to believe that these must be connected

d Lib. i. c. 17.

7

with

with the continent of India. Though the ancients had hardly BOOK ever penetrated into India farther than the banks of the Ganges, yet some Greek authors had ventured to describe the provinces beyond that river. And, as men are prone, and at liberty, to magnify what is remote and unknown, they reprefented them as regions of an immense extent. Ctesias affirmed that India was as large as all the rest of Asia. Onesicritus, whom Pliny the naturalist follows, contended that it was equal to a third part of the habitable earth. Nearchus afferted, that it would take four months to march from one extremity of it to the other, in a straight line . The journal of Marco Polo, who travelled into Asia in the thirteenth century, and who had proceeded towards the East far beyond the limits to which any European had ever advanced, feemed to confirm these exaggerated accounts of the ancients. By his magnificent descriptions of the kingdoms of Cathay and Cipango, and of many other countries, the names of which were unknown in Europe, India appeared to be a region of vast extent. From these accounts, which, however defective, were the most accurate that the people of Europe had at that period received, with respect to the remote parts of the East, Columbus drew a just conclusion. He contended, that in proportion as the continent of India stretched out towards the East, it must, in consequence of the spherical figure of the earth, approach nearer to the islands which had lately been discovered to the west of Africa; that the distance from the one to the other was probably not very considerable; and that the most direct, as well as shortest course, to the remote regions of the East, was to be found by failing due west ".

This notion concerning the vicinity of India to the western. parts of our continent, was countenanced by some eminent writers among the ancients, the fanction of whose authority was necessary, in that age, to procure a favourable reception to any tenet. Aristotle thought it probable that the Columns of Hercules, or Straits of Gibraltar, were not far removed from the East Indice, and that there might be a communication by fea between them b. Seneca, in terms still more explicit, affirms, that, with a fair wind, one might fail from Spain to India in a few days 1. The famous Atlantic island described by Plato, which many supposed to be a real country, beyond which a vast unknown continent was situated, is represented by him as lying at no great distance from Spain. After weighing all these particulars, Columbus, in whose character the modesty and diffidence of true genius was united with the ardent enthusiasm of a projector, did not rest with such absolute assurance cither upon his own arguments, or upon the authority of the ancients, as not to confult fuch of his contemporaries as were capable of comprehending the nature of the evidence which he produced in support of his opinion. As early as the year one thousand four hundred and seventy-four, he communicated his ideas concerning the probability of discovering new countries, by failing westwards, to Paul, a physician of Florence, eminent for his knowledge of cosmography, and who, on account both of the learning and candour which he discovers in his reply, appears to have been well intitled to the confidence which Columbus placed in him. He warmly approved of his plan, fuggested several facts in confirmation of it, and encouraged him to persevere in an undertaking so laudable, and which must

To a mind less capable of forming and of executing great His Schemes deligns than that of Columbus, all these reasonings, and obser- for carrying it into execuvations, and authorities, would have ferved only as the foundation of fare plaufible and fruitless theory, which might have furnished matter for ingenious discourse, or fanciful conjecture. But with his fanguine and enterprifing temper, speculation led directly to action. Fully fatisfied himself with respect to the truth of his system, he was impatient to bring it to the test of experiment, and to fet out upon a voyage of discovery. The first step towards this was to secure the patronage of some of the confiderable powers in Europe, capable of undertaking fuch an enterprise. As long absence had not extinguished the affection which he bore to his native country, he wished that it should reap the fruits of his labours and invention. With this view, he laid his scheme before the senate of Genoa, and making He applies to his country the first tender of his service offered to sail under the banners of the republic, in quest of the new regions which he expected to discover. But Columbus had resided for so many years in foreign parts, that his countrymen were unacquainted with his abilities and character; and, though a maritime people, they were fo little accustomed to distant voyages, that they could form no just idea of the principles on which he founded his hopes of fuccess. They inconsiderately rejected his propofal, as the dream of a chimerical projector, and lost for ever the opportunity of restoring their commonwealth to its ancient fplendour '.

BOOK II.

to the king of Fortugal;

HAVING performed what was due to his country, Columbus was so little discouraged by the repulse which he had received, that, instead of relinquishing his undertaking, he pursued it with fresh ardour. He made his next overture to John II. king of Portugal, in whose dominions he had been long established, and whom he considered, on that account, as having the fecond claim to his fervice. Here every circumstance feemed to promise him a more favourable reception. He applied to a monarch of an enterprifing genius, no incompetent judge in naval affairs, and proud of patronifing every attempt to discover new countries. His subjects were the most experienced navigators in Europe, and the least apt to be intimidated either by the novelty or boldness of any maritime expedition. In Portugal, Columbus's skill in his profession, as well as his perfonal good qualities, were thoroughly known; and as the former rendered it probable that his scheme was not altogether chimerical, the latter exempted him from the suspicion of any finister intention in proposing it. Accordingly, the king listened to him in the most gracious manner, and referred the confideration of his plan to Diego Ortiz, bishop of Ceuta, and two Jewish physicians, eminent cosmographers, whom he was accustomed to consult in matters of this kind. As in Genoa. ignorance had opposed and disappointed Columbus; in Lisbon, he had to combat with prejudice, an enemy no less formidable. The persons, according to whose decision his scheme was to be adopted or rejected, had been the chief directors of the Portuguese navigations, and had advised to search for a passage to India, by steering a course directly opposite to that which Columbus recommended as shorter and more certain. They could not, therefore, approve of his proposal, without submitting to the double mortification, of condemning their own theory,

England.

cations

BOOK cations to kings and ministers, he took the precaution of sending into England his brother Bartholomew, to whom he had fully communicated his ideas, in order that he might negociate, at the same time, with Henry VII. who was reputed one of the most fagacious as well as opulent princes in Europe.

Obstacles to his fuccels in Spain.

IT was not without reason that Columbus entertained doubts and fears with respect to the reception of his proposals in the Spanish court. Spain was, at that juncture, engaged in a dangerous war with Granada, the last of the Moorish kingdoms. The wary and suspicious temper of Ferdinand was not formed to relish bold and uncommon designs. Isabella, though more generous and enterprifing, was under the influence of her hufband in all her actions. The Spaniards had hitherto made no efforts to extend navigation beyond its ancient limits, and had beheld the amazing progress of discovery among their neighbours the Portuguese, without one attempt to imitate or to rival them. The war with the Infidels afforded an ample field to the national activity and love of glory. Under circumstances fo unfavourable, it was impossible for Columbus to make rapid progress with a nation, naturally slow and dilatory in forming all its resolutions. His character, however, was admirably adapted to that of the people, whose confidence and protection he folicited. He was grave, though courteous in his deportment; circumspect in his words and actions; irreproachable in his morals; and exemplary in his attention to all the duties and functions of religion. By qualities so respectable, he not only gained many private friends, but acquired fuch general esteem, that, notwithstanding the plainness of his appearance, fuitable to the mediocrity of his fortune, he was not confidered as a mere adventurer, to whom indigence had fuggested a visi-

onary

onary project, but was received as a person to whose propositions ferious attention was due.

EERDINAND and Isabella, though fully occupied by their His scheme operations against the Moors, paid so much regard to Colum- examined by bus, as to remit the confideration of his plan to the queen's judges, confessor, Ferdinand de Taiavera. He consulted such of his countrymen, as were supposed best qualified to decide with respect to a subject of this kind. But true science had, hitherto, made fo little progress in Spain, that those pretended philosophers, selected to judge in a matter of such moment, did not comprehend the first principles, upon which Columbus founded his conjectures and hopes. Some of them, from mistaken notions concerning the dimensions of the globe, contended that a voyage to those remote parts of the east, which Columbus expected to discover, could not be performed in less than three: years. Others concluded, that either he would find the ocean to be of infinite extent, according to the opinion of some ancient philosophers; or, if he should persist in steering towards the west beyond a certain point, that the convex figure of the globe would prevent his return, and that he must inevitably perish, in the vain attempt, to open a communication between. the two opposite hemispheres, which nature had for ever disjoined. Even without deigning to enter into any particular discussion, some rejected the scheme in general, upon the credit of a maxim, under which the ignorant and unenterprifing fhelter themselves in every age, "That it is presumptuous in. any person, to suppose that he alone possesses knowledge superior to all the rest of mankind united." They maintained, that if there were really any such countries as Columbus pretended, they could not have remained fo long concealed,

BOOK

nor would the wisdom and sagacity of former ages have left the glory of this invention to an obscure Genoese pilot.

who make an unfavourable report concerning it. IT required all Columbus's patience and address to negociate with men capable of advancing such strange propositions. He had to contend not only with the obstinacy of ignorance, but with what is still more intractable, the pride of false knowledge. After innumerable conferences, and wasting five years in fruitless endeavours to inform and to satisfy them, Talavera, at last, made such an unfavourable report to Ferdinand and Isabella, as induced them to acquaint Columbus, that until the war with the Moors should be brought to a period, it was impossible for them to engage in any new and expensive enterprise.

WHATEVER care was taken to fosten the harshness of this declaration, Columbus considered it as a final rejection of his proposals. But happily for mankind, that superiority of genius, which is capable of forming great and uncommon defigns, is usually accompanied with an ardent enthusiasm, which can neither be cooled by delays, nor damped by disappointment. Columbus was of this fanguine temper. Though he felt deeply the cruel blow given to his hopes, and retired immediately from a court, where he had been amused so long with vain expectations, his confidence in the justness of his own system did not diminish, and his impatience to demonstrate the truth of it by an actual experiment became greater than ever. Having courted the protection of fovereign states without success, he applied, next, to persons of inferior rank, and addressed fuccessively the dukes of Medina Sidonia, and Medina Celi, who, though subjects, were possessed of power and opulence

more

more than equal to the enterprise which he projected. His negociations with them proved as fruitless, as those in which he had been hitherto engaged; for these noblemen were either as little convinced by Columbus's arguments as their superiors, or they were afraid of alarming the jealoufy, and offending the pride of Ferdinand, by countenancing a scheme, which he had rejected ".

BOOK

AMID the painful fensations occasioned by such a success- Negociation fion of disappointments, Columbus had to sustain the additional in England. diffress, of having received no accounts of his brother, whom he had sent to the court of England. In his voyage to that country, Bartholomew had been so unfortunate as to fall into the hands of pirates, who having stripped him of every thing, detained him a prisoner for several years. At length, he made his escape, and arrived in London, but in such extreme indigence, that he was obliged to employ himself during a considerable time, in drawing and felling maps, in order to pick up as much money as would purchase a decent dress, in which he might venture to appear at court. He then laid before the king the proposals, with which he had been entrusted by his brother, and, notwithstanding Henry's excessive caution and parfimony, which rendered him averse to new and expensive undertakings, he received Columbus's overtures, with more approbation, than any monarch to whom they had hitherto been presented.

Spain,

BOOK II.

Spain, refolved to visit the court of England in person, in hopes of meeting with a more favourable reception there. He had already made preparations for this purpose, and taken measures for the disposal of his children during his absence, when Juan Perez, the Prior of the monastery of Rabida, near Palos, in which they had been educated, earnestly solicited him to defer his journey for a short time. Perez was a man of confiderable learning, and of some credit with Queen Isabella, to whom he was known personally. He was warmly attached to Columbus, with whose abilities as well as integrity he had many opportunities of being acquainted. Prompted by curiofity or by friendship, he entered upon an accurate examination of his system, in conjunction with a physician settled in the neighbourhood, who was a confiderable proficient in mathematical knowledge. This investigation fatisfied them fo thoroughly, with respect to the solidity of the principles on which Columbus founded his opinion, and the probability of fuccess in executing the plan which he proposed, that Perez, in order to prevent his country from being deprived of the glory and benefit, which must accrue to the patrons of such a grand enterprife, ventured to write to Isabella, conjuring her to confider the matter anew, with the attention which it merited.

Moved by the representations of a person whom she respected, Isabella desired Perez to repair immediately to the village of Santa Fé, in which, on account of the siege of Granada, the court resided at that time, that she might confer with him upon this important subject. The first effect of their interview was a gracious invitation of Columbus back to court, accompanied with the present of a small sum to equip him for the journey. As there was now a certain prospect, that the

1491.

воок war with the Moors would speedily be brought to an happy issue by the reduction of Granada, which would leave the nation at liberty to engage in new undertakings; this, as well as the mark of royal favour, with which Columbus had been lately honoured, encouraged his friends to appear with greater confidence than formerly in support of his scheme. The chief of these, Alonso de Quintanilla, comptroller of the finances in

Castile, and Luis de Santangel, receiver of the ecclesiastical revenues in Aragon, whose meritorious zeal in promoting this great design, entitles their names to an honourable place in history, introduced Columbus to many persons of high rank,

and interested them warmly in his behalf.

But it was not an easy matter to inspire Ferdinand with Is again disfavourable sentiments. His cold distrustful prudence still regarded Columbus's project as extravagant and chimerical, and in order to render the efforts of his partizans ineffectual, he had the address to employ in this new negociation with him, fome of the persons who had formerly pronounced his scheme to be impracticable. To their aftonishment, Columbus appeared before them with the same confident hopes of success as formerly, and infifted upon the fame high recompence. He proposed that a small fleet should be fitted out, under his command, to attempt the discovery, and demanded to be appointed perpetual and hereditary admiral and viceroy of all the feas and lands which he should discover, and to have the tenth of the profits arifing from them, fettled irrevocably upon himfelf and his descendants. At the same time, he offered to advance the eighth part of the sum necessary for accomplishing his design, on condition that he should be entitled to a proportional share of benefit from the adventure. If the enterprise should L 2 totally

воок

totally miscarry, he made no stipulation for any reward or cmolument whatever. Instead of viewing this conduct as the clearest evidence of his full persuasion with respect to the truth of his own fystem, or being struck with that magnanimity, which, after fo many delays and repulses, would stoop to nothing inferior to its original claims, the persons with whom Columbus treated, began meanly to calculate the expence of the expedition, and the value of the reward which he demanded. The expence, moderate as it was, they represented to be too great for Spain, in the present exhausted state of its finances. They contended, that the honours and emoluments claimed by Columbus, were exorbitant, even if he should perform the utmost of what he had promised; and if all his sanguine hopes should prove illusive, such vast concessions to an adventurer would be deemed not only inconfiderate, but ridiculous. In this imposing garb of caution and prudence, their opinion appeared fo plaufible, and was fo warmly supported by Ferdinand, that Isabella declined giving any countenance to Columbus, and abruptly broke off the negociation with him which she had begun.

This was more mortifying to Columbus than all the disappointments which he had hitherto met with. The invitation to court from Isabella, like an unexpected ray of light, had opened such prospects of success, as encouraged him to hope that his labours were at an end; but now darkness and uncertainty returned, and his mind, firm as it was, could hardly support the shock of such an unforescen reverse. He withdrew in deep anguish from court, with an intention of prosecuting his voyage to England, as his last resource.

ABOUT that time Granada furrendered, and Ferdinand and Isabella, in triumphal pomp, took possession of a city, the reduction of which extirpated a foreign power from the heart of fuccessful. their dominions, and rendered them mafters of all the provinces, extending from the bottom of the Pyrenees to the frontiers of Portugal. As the flow of spirits which accompanies success clevates the mind, and renders it enterprifing, Quintanilla and Santangel, the vigilant and differning patrons of Columbus, took advantage of this favourable fituation, in order to make one effort more in behalf of their friend. They addressed themselves to Isabella, and, after expressing some surprise, that she, who had always been the munificent patroness of generous undertakings, should hefitate so long to countenance the most splendid scheme that had ever been proposed to any monarch, they represented to her, that Columbus was a man of a found understanding and virtuous character, well qualified, by his experience in navigation, as well as his knowledge of geometry, to form just ideas with respect to the structure of the globe and the fituation of its various regions; that, by offering to risk his own life and fortune in the execution of his scheme, he gave the most satisfying evidence both of his integrity and hope of fuccess; that the sum requisite for equipping fuch an armament as he demanded was inconfiderable, and the advantages which might accrue from his undertaking were immense; that he demanded no recompence for his invention and labour, but what was to arise from the countries which he should discover; that, as it was worthy of her magnanimity to make this noble attempt to extend the fphere of human knowledge, and to open an intercourse with regions hitherto unknown, so it would afford the highest satisfaction to her piety and zeal, after re-establishing the Christian faith in those provinces

BOOK vinces of Spain from which it had been long banished, to discover a new world, to which she might communicate the light and bleffings of divine truth; that if now she did not decide inflantly, the opportunity would be loft irretrievably; that Columbus was on his way to foreign countries, where some prince, more fortunate or adventurous, would close with his propofals, and Spain would for ever bewail the fatal timidity which had excluded her from the glory and advantages that fhe had once in her power to have enjoyed.

> THESE forcible arguments, urged by persons of such authority, and at a juncture fo well chosen, produced the defired effect. They dispelled all Isabella's doubts and fears; she ordered Columbus to be infantly recalled, declared her resolution of employing him on his own terms, and regretting the low state of her finances, generously offered to pledge her own jewels, in order to raife as much money as would be needed in making preparations for the voyage. Santangel, in a transport of gratitude, kiffed the queen's hand, and in order to fave her from having recourse to such a mortifying expedient for procuring money, engaged to advance immediately the fum that was requisite %

The conditions of his agreement with Spain.

Columbus had rocecded fome leagues on his journey, when the messenger from Habella overtook him. Upon receiving an account of the unexpected revolution in his favour, he returned directly to Santa Fé, though some remainder of diffidence flill mingled itself with his joy. But the cordial reception which he met with from Isabella, together with the near prospect of setting out upon that voyage which had so long been the object of his thoughts and wishes, soon effaced the

· Herreia, dec. r. lib. i. c. 8.

remembrance

remembrance of all that he had fuffered in Spain, during eight tedious years of folicitation and fuspense. The negotiation now went forward with facility and dispatch, and a treaty or capitulation with Columbus was figned on the feventeenth of April, one thousand four hundred and ninety-two. The chief articles of it were, r. Ferdinand and Isabella, as sovercigns of the ocean, constituted Columbus their high admiral in all the seas, islands, and continents which should be discovered by his industry; and stipulated, that he and his heirs for ever should enjoy this office, with the fame powers and prerogatives which belonged to the high admiral of Castile, within the limits of his jurisdiction. 2. They appointed Columbus their viceroy in all the islands and continents which he should discover; but if, for the better administration of affairs, it should hereafter be necessary to establish a separate governor in any of those countries, they authorised Columbus to name three persons, of whom they would chuse one for that office; and the dignity of viceroy, with all its immunities, was likewife to be hereditary in the family of Columbus. granted to Columbus and his heirs for ever the tenth of the free profits accruing from the productions and commerce of the countries which he should discover. 4. They declared, that if any controversy or law-suit shall arise with respect to any mercantile transaction in the countries which should be discovered, it should be determined by the sole authority of Columbus, or of judges to be appointed by him. 5. They permitted Columbus to advance one-eighth part of what should be expended in preparing for the expedition, and in carrying on commerce with the countries which he should discover, and intitled him, in return, to an eighth part of the profit P.

P Life of Columbus, c. 15. Herrers, dec. 1. lib. i. c. q.

B O O K

THOUGH the name of Ferdinand appears conjoined with that of Isabella in this transaction, his distrust of Columbus was still so vicient, that he refused to take any part in the enterprise, as king of Aragon. As the whole expence of the expedition was to be defrayed by the crown of Castile, Isabella reserved for her subjects of that kingdom an exclusive right to all the benefits which might redound from its success.

The preparations for his voyage.

As foon as the treaty was figned, Isabella, by her attention and activity in forwarding the preparations for the voyage, endeavoured to make fome reparation to Columbus for the time which he had lost in fruitless solicitation. By the twelfth of May, all that depended upon her was adjusted; and Columbus waited on the king and queen, in order to receive their final instructions. Every thing respecting the destination and conduct of the voyage, they committed implicitly to the disposal of his prudence. But, that they might avoid giving any just cause of offence to the king of Portugal, they strictly enjoined him not to approach near to the Portuguese settlements on the coast of Guinea, nor in any of the other countries to which they claimed right as discoverers. Isabella had ordered the ships, of which Columbus was to take the command, to be fitted out in the port of Palos, a small maritime town in the province of Andalusia. As the prior Juan Perez, to whom Columbus had already been fo much indebted, refided in the neighbourhood of this place, he, by the influence of that good ecclesiastic, as well as by his own connection with the inhabitants, not only raifed among them what he wanted of the fum that he was bound by treaty to advance, but engaged feveral of them to accompany him in the voyage. The chief of these associates were three brothers of the name of Pinzon,

BOOK
II.

But, after all the endeavours and efforts of Isabella and Columbus, the armament was not fuitable either to the dignity of the nation by which it was equipped, or to the importance of the fervice for which it was destined. It consisted of three vesfels only. The largest, a ship of no considerable burden, was commanded by Columbus, as admiral, who gave it the name of Santa Maria, out of respect for the Blessed Virgin, whom he honoured with fingular devotion. Of the fecond, called the Pinta, Martin Pinzon was captain, and his brother Francis pilot. The third, named the Nigna, was under the command of Vincent Yanez Pinzon. These two were light vessels, hardly superior in burden or force to large boats. This squadron, if it merits that name, was victualed for twelve months, and had on board ninety men, mostly failors, together with a few adventurers who followed the fortune of Columbus, and fome gentlemen of Isabella's court, whom she appointed to accompany him. Though the expence of the undertaking was one of the circumstances that chiefly alarmed the court of Spain, and retarded fo long the negotiation with Columbus, the fum employed in fitting out this fquadron did not exceed four thousand pounds.

1492.

As the art of shipbuilding in the fisteenth century was extremely rude, and the bulk and construction of vessels were accommodated to the shore and easy voyages along the coast which they were accustomed to perform, it is a proof of the courage as well as enterprising genius of Columbus, that Vol. I.

BOOK

he ventured, with a fleet fo unfit for a distant navigation, to explore unknown feas, where he had no chart to guide him, no knowledge of the tides and currents, and no experience of the dangers to which he might be exposed. His eagerness to accomplish the great defign which had so long engrossed his thoughts, made him overlook or difregard every circumstance that would have intimidated a mind less adventurous. pushed forward the preparations with such ardour, and was feconded fo effectually by the persons to whom Isabella committed the superintendence of this business, that every thing was foon in readiness for the voyage. But as Columbus was deeply impressed with sentiments of religion, he would not set out upon an expedition fo arduous, and of which one great object was to extend the knowledge of the Christian faith, without imploring publickly the guidance and protection of Heaven. With this view, he, together with all the persons under his command, marched in folemn procession to the monastery of Rabida. After confessing their fins, and obtaining absolution from them, they received the holy facrament from the hands of the prior, who joined his prayers to theirs for the fuccess of an enterprise which he had so zealously patronized.

His departure from Spain. NEXT morning, being Friday the third day of August, in the year one thousand sour hundred and ninety-two, Columbus set sail, a little before sun-rise, in presence of a vast crowd of spectators, who sent up their supplications to Heaven for the prosperous issue of the voyage, which they wished, rather than expected. Columbus steered directly for the Canary Islands, and arrived there without any occurrence that would have deferved notice on any other occasion. But, in a voyage of such expectation and simportance, every circumstance was the object

of attention. The rudder of the Pinta broke loofe, the day after they left the harbour, and that accident alarmed the crew, no less superstitious than unskilful, as a certain omen of the unfortunate destiny of the expedition. Even in the short run to the Canaries, the ships were found to be so crazy and ill appointed, as to be very improper for a navigation which was expected to be both long and dangerous. Columbus refitted them, however, to the best of his power, and having supplied himself with fresh provisions, he took his departure from Gomera, one of the most westerly of the Canary Islands, on the fixth day of September.

BOOK 1492.

HERE the voyage of discovery may properly be said to begin; The course for Columbus holding his course due west, left immediately the usual tract of navigation, and stretched into unfrequented and unknown feas. The first day, as it was very calm, he made but little way; but on the fecond, he loft fight of the Canaries; and many of the failors, dejected already and difmayed, when they contemplated the boldness of the undertaking, began to beat their breafts, and to shed tears, as if they were never more to behold land. Columbus comforted them with affurances of fuccess, and the prospect of vast wealth, in those opulent regions whither he was conducting them. This early discovery of the spirit of his followers taught Columbus, that he must prepare to struggle, not only with the unavoidable difficulties which might be expected from the nature of his undertaking, but with fuch as were likely to arise from the ignorance and timidity of the people under his command; and he perceived that the art of governing the minds of men would be no less requisite for accomplishing the discoveries which he had in view, than naval skill and an enterprising courage. Happily M 2 for

B O O K

for himself, and for the country by which he was employed. he joined to the ardent temper and inventive genius of a projector, virtues of another species, which are rarely united with them. He possessed a thorough knowledge of mankind, an infinuating address, a patient perseverance in executing any plan, the perfect government of his own passions, and the talent of acquiring the direction of those of other men. All these qualities, which formed him for command, were accompanied with that superior knowledge of his profession, which begets confidence in times of difficulty and danger. To unskilful Spanish sailors, accustomed only to coasting voyages in the Mediterranean, the maritime science of Columbus, the fruit of thirty years experience, improved by an acquaintance with all the inventions of the Portuguese, appeared immense. As soon as they put to sea, he regulated every thing by his sole authority; he superintended the execution of every order; and allowing himself only a few hours for sleep, he was at all other times upon deck. As his course lay through seas which had! not formerly been visited, the sounding-line, or instruments. for observation, were continually in his hands. After the example of the Portuguese discoverers, he attended to the motion of tides and currents, watched the flight of birds, the appearance of fishes, of sea-weeds, and of every thing that floated on the waves, and entered every occurrence, with a minute exactness, in the journal which he kept. As the length of the voyage could not fail of alarming failors habituated only to short excursions, Columbus endeavoured to conceal from them the real progress which they made. With this view, though they run eighteen leagues on the fecond day after they left Gomera, he gave out that they had advanced only fifteen, and he uniformly employed the same artifice of reckoning short during the

the whole voyage. By the fourteenth of September, the fleet was above two hundred leagues to the west of the Canary Isles, at a greater distance from land than any Spaniard had been Applehenbefore that time. There they were ftruck with an appearance larms of his no less assonishing than it was new. They observed, that the crew. magnetic needle, in their compasses, did not point exactly to the polar star, but varied a degree towards the west; and as they proceeded, this variation increased. This appearance, which is now familiar, though it still remains one of the mysteries of nature, into the cause of which the sagacity of man hath not been able to penetrate, filled the companions of Columbus with terror. They were now in a boundless unknown ocean, far from the usual course of navigation; nature itself feemed to be altered, and the only guide which they had left was about to fail them. Columbus, with no less quickness than ingenuity, invented a reason for this appearance, which, though it did not fatisfy himself, seemed so plausible to them, as dispelled their fears, or silenced their murmurs.

воок 1402.

HE still continued to steer due west, nearly in the same latitude with the Canary Islands. In this course he came within the sphere of the trade wind, which blows invariably from east to west, between the tropics and a few degrees beyond them. He advanced before this steady gale with such uniform rapidity, that it was seldom necessary to shift a fail. When about four hundred leagues to the west of the Canaries, he found the sea so covered with weeds, that it had a resemblance to a meadow of vast extent; and in some places they were so thick, as to retard the motion of the vessels. This strange appearance occassioned new alarm and disquiet. The failors imagined that they were now arrived at the utmost boundary of the navigable

B O O K II. ocean; that these floating weeds would obstruct their farther progress, and concealed dangerous rocks, or some large tract of land, which had sunk, they knew not how, in that place. Columbus endeavoured to persuade them, that the appearance which had alarmed, ought rather to have encouraged them, and was to be considered as a sign of approaching land. At the same time, a brisk gale arose, and carried them forward. Several birds were seen hovering about the ship , and directing their slight towards the west. The desponding crew resumed some degree of spirit, and began to entertain fresh hopes.

These in-

Upon the first of October they were, according to the admiral's reckoning, feven hundred and feventy leagues to the west of the Canaries, but lest his men should be intimidated by the prodigious length of the navigation, he gave out that they had proceeded only five hundred and eighty-four leagues; and, fortunately for Columbus, neither his own pilot, nor those of the other ships, had skill sufficient to correct this error, and discover the deceit. They had now been above three weeks at fea; they had proceeded far beyond what former navigators had attempted or deemed possible; all their prognostics of discovery, drawn from the flight of birds and other circumstances, had proved fallacious; the appearances of land, with which their own credulity or the artifice of their commander had from time to time flattered and amused them, had been altogether illusive, and their prospect of success seemed now to be as distant as ever. These reflections occurred often to men, who had no other object or occupation, than to reason and discourse concerning the intention and circumstances of their expedition.

BOOK

1492.

They made impression, at first, upon the ignorant and timid, and extending, by degrees, to fuch as were better informed or more resolute, the contagion spread at length from ship to thip. From fecret whifpers and murmurings, they proceeded to open cabals and public complaints. They taxed their fovereign with inconfiderate credulity, in paying fuch regard to the vain promises and rash conjectures of an indigent foreigner, as to hazard the lives of so many of her own subjects, in prosecuting a chimerical scheme. They affirmed that they had fully performed their duty, by venturing so far in an unknown and hopeless course, and could incur no blame for refusing, at last, to follow a desperate adventurer to certain destruction. contended, that it was necessary to think of returning to Spain, while their crazy vessels were still in a condition to keep the sca, but expressed their fears that the attempt would prove vain, as the wind, which had hitherto been fo favourable to their course, must render it impossible to fail in the opposite direction. All agreed that Columbus should be compelled by force to adopt a measure on which their common safety depended. Some of the more audacious proposed, as the most expeditious and certain method for getting rid at once of his remonstrances, to throw him into the fea, being perfuaded that, upon their return to Spain, the death of an unfuccefsful projector would excite little concern, and be inquired into with no curiofity.

COLUMBUS was fully fensible of his perilous situation. He The address had observed, with great concern, the fatal operation of igno- in soothing rance and of fear in producing difaffection among his crew, and faw that it was now ready to burst out into open mutiny. He retained, however, perfect presence of mind. He affected to feem ignorant of their machinations. Notwithstanding the agitation

hey

B O O K II. agitation and folicitude of his own mind, he appeared with a cheerful countenance, like a man fatisfied with the progress which he had made, and confident of success. Sometimes he employed all the arts of infinuation to foothe his men. Sometimes he endeavoured to work upon their ambition or avarice, by magnificent descriptions of the fame and wealth which they were about to acquire. On other occasions, he assumed a tone of authority, and threatened them with vengeance from their fovereign, if, by their dastardly behaviour, they should defeat this noble effort to promote the glory of God, and to exalt the Spanish name above that of every other nation. Even with feditious failors, the words of a man whom they had been accustomed to reverence, were weighty and persuasive. They not only restrained them from those violent excesses, which they meditated, but prevailed with them to accompany their admiral for fome time longer.

Their fears

As they proceeded, the indications of approaching land feemed to be more certain, and excited hope in proportion. The birds began to appear in flocks, making towards the fouth-west. Columbus, in imitation of the Portuguese navigators, who had been guided, in several of their discoveries, by the motion of birds, altered his course from due west towards that quarter whither they pointed their slight. But, after holding on for several days in this new direction, without any better success than formerly, having seen no object, during thirty days, but the sea and the sky, their hopes subsided faster than they had risen; their sears revived with additional force; impatience, rage, and despair, appeared in every countenance. All sense of subordination was lost: the officers, who had hitherto concurred with Columbus in opinion, and sup-

Danger of a mutiny.

ported

BOOK

ported his authority, now took part with the men; they affembled tumultuously on the deck, expostulated with their commander, mingled threats with their exposulations, and required him inflantly to tack about and return to Europe. Columbus perceived that it would be of no avail to have recourse to any of his former arts, which having been tried fo often, had loft their effects; and that it was impossible to rekindle any zeal for the success of the enterprise among men, in whose breasts fear had extinguished every generous sentiment. Hefaw that it was no less vain to think of employing either gentle Diffress of or fevere measures, to quell a mutiny so general and so violent. It was necessary, on all these accounts, to soothe passions which he could no longer command, and to give way to a torrent too impetuous to be checked. He promifed folemnly to his men that he would comply with their request, provided they would accompany him, and obey his commands for three days longer, and if, during that time, land were not discovered, he would then abandon the enterprise, and direct his course towards Spain '.

ENRAGED as the failors were, and impatient to turn their Encouraging faces again towards their native country, this proposition did of success. not appear to them unreasonable. Nor did Columbus hazard much in confining himself to a term so short. The presages of discovering land were now so numerous and promising, that he deemed them infallible. For some days the sounding line reached the bottom, and the foil which it brought up indicated land to be at no great distance. The flocks of birds increased, and were composed not only of sea fowl, but of such land

birds as could not be supposed to fly far from the shore. The crew of the Pinta observed a cane floating, which seemed to have been newly cut, and likewise a piece of timber artificially carved. The failors aboard the Nigna took up the branch of a tree with red berries, perfectly fresh. The clouds around the fetting fun assumed a new appearance; the air was more mild and warm, and, during night, the wind became unequal and variable. From all these symptoms, Columbus was so confident of being near land, that on the evening of the eleventh of October, after public prayers for success, he ordered the fails to be furled, and the ships to lie by, keeping strict watch, lest they should be driven ashore in the night. During this interval of suspence and expectation, no man shut his eyes, all kept upon deck, gazing intently towards that quarter where they expected to discover the land, which had been so long the object of their wishes.

Land discovered.

ABOUT two hours before midnight, Columbus, standing on the forecastle, observed a light at a distance, and privately pointed it out to Pedro Guttierez, a page of the queen's wardrobe. Guttierez perceived it, and calling to Salcedo, comptroller of the fleet, all three faw it in motion, as if it were carried from place to place. A little after midnight, the joyful found of land, land, was heard from the Pinta, which kept always a head of the other ships. But, having been so often deceived by fallacious appearances, they were now become flow of belief, and waited, in all the anguish of uncertainty and impatience, for the return of day. As foon as morning dawned, their doubts and fears were dispelled, they beheld an island about two leagues to the north, whose flat and verdant fields, well stored with wood, and watered with many rivulets, prefented

Friday, Oct. 12.

2

fented to them the aspect of a delightful country. The crew of the Pinta inftantly began the Te Deum, as a hymn of thanksgiving to God, and were joined by those of the other ships, with tears of joy and transports of congratulation. This office of gratitude to Heaven was followed by an act of justice to their commander. They threw themselves at the feet of Columbus, with feelings of felf-condemnation mingled with reverence. They implored him to pardon their ignorance, incredulity, and insolence, which had created him so much unnecessary disquiet, and had so often obstructed the prosecution of his well-concerted plan; and passing, in the warmth of their admiration, from one extreme to another, they now pronounced the man, whom they had so lately reviled and threatened, to be a person inspired by Heaven with fagacity and fortitude more than human, in order to accomplish a design, so far beyond the ideas and conception of all former ages.

ō

78 di.

d,

As foon as the fun arose, all the boats were manned and First interarmed. They rowed towards the island with their colours difplayed, warlike music, and other martial pomp; and as they approached the coast, they saw it covered with a multitude of people, whom the novelty of the spectacle had drawn together, and whose attitudes and gestures expressed wonder and astonishment at the strange objects which presented themselves to their view. Columbus was the first European who set foot in the New World which he had discovered. He landed in a rich dress. and with a naked fword in his hand. His men followed, and kneeling down, they all kissed the ground which they had so long defired to fee. They next erected a crucifix, and prostrating themselves before it, returned thanks to God for conducting their voyage to fuch an happy issue. They then took N 2 folemn

BOOK II.

folemn possession of the country for the crown of Castile and Leon, with all the formalities which the Portuguese were accustomed to observe in acts of this kind, in their new discoveries.

Their mutual aftonishment.

THE Spaniards, while thus employed, were furrounded by many of the natives, who gazed, in filent admiration, upon actions which they could not comprehend, and of which they did not foresee the consequences. The dress of the Spaniards, the whiteness of their skins, their beards, their arms, appeared strange and surprising. The vast machines in which they had traversed the ocean, that seemed to move upon the waters with wings, and uttered a dreadful sound resembling thunder, accompanied with lightning and smoke, struck them with such terror, that they began to respect their new guests as a superior order of beings, and concluded that they were children of the Sun, who had descended to visit the earth.

THE Europeans were hardly less amazed at the scene now before them. Every herb, and shrub, and tree, was different from those which flourished in Europe. The soil seemed to be rich, but bore few marks of cultivation. The climate, even to Spaniards, felt warm, though extremely delightful. The inhabitants appeared in the simple innocence of nature, entirely naked. Their black hair, long and uncurled, floated upon their shoulders, or was bound in tresses around their heads. They had no beards, and every part of their bodies was perfectly smooth. Their complexion was of a dusky copper colour, their features singular, rather than disagreeable, their aspect gentle and timid. Though not tall, they were

Life of Columbus, c. 22, 23. Herrera, dec. 1. lib. i. c. 13.

well shaped, and active. Their faces, and other parts of their body, were fantastically painted with glaring colours. They were shy at first through fear, but soon became familiar with the Spaniards, and with transports of joy received from them hawks-bells, glass beads, and other baubles, in return for which they gave fuch provisions as they had, and some cotton yarn, the only commodity of value that they could produce. Towards evening, Columbus returned to his ships, accompanied by many of the islanders in their boats, which they called canoes, and though rudely formed out of the trunk of a fingle tree, they rowed them with furprifing dexterity. Thus, in the first interview between the inhabitants of the old and new worlds, every thing was conducted amicably, and to their mutual fatisfaction. The former, enlightened and ambitious, formed already vast ideas with respect to the advantages which they might derive from those regions that began to open to their view. The latter, fimple and undifferning, had no forefight of the calamities and desolation which were now approaching their country.

COLUMBUS, who now assumed the title and authority of Columbus asadmiral and viceroy, called the island which he had discovered title of ad-San Salvador. It is better known by the name of Guanabani, miral and which the natives gave to it, and is one of that large cluster of islands called the Lucaya or Bahama isles. It is situated above three thousand miles to the west of Gomera, from which the squadron took its departure, and only four degrees to the fouth of it; so little had Columbus deviated from the westerly course, which he had chosen as the most proper.

COLUMBUS employed the next day in visiting the coasts of Proceeds tothe island; and from the universal poverty of the inhabitants, fouth.

he.

BOOK II.

he perceived that this was not the rich country for which he fought. But, conformably to his theory concerning the difcovery of those regions of Asia which stretched towards the east, he concluded that San Salvador was one of the illes which geographers described as situated in the vast ocean adjacent to India. Having observed that most of the people whom he had feen wore fmall plates of gold, by way of ornament, in their nostrils, he eagerly inquired where they got that precious metal. They pointed towards the fouth, and made him comprehend by figns, that gold abounded in countries fituated in that quarter. Thither he immediately determined to direct his course, in full confidence of finding there those opulent regions which had been the object of his voyage, and would be a recompence for all his toils and dangers. He took along with him feven of the natives of San Salvador, that, by acquiring the Spanish language, they might serve as guides and interpreters; and those innocent people considered it as a mark of distinction when they were selected to accompany him.

Discovers Cu-

HE saw several islands, and touched at three of the largest, on which he bestowed the names of St. Mary of the Conception, Fernandina, and Isabella. But as their soil, productions, and inhabitants, nearly resembled those of San Salvador, he made no stay in any of them. He inquired every where for gold, and received uniformly for answer, that it was brought from the south. He followed that course, and soon discovered a country of vast extent, not perfectly level, like those which he had already visited, but so diversified with rising grounds, hills, rivers, woods, and plains, that he was uncertain whether it might prove an island, or part of the con-

tinrnt. The natives of San Salvador, whom he had on board, called it Cuba; Columbus gave it the name of Juanna. He entered the mouth of a large river with his fquadron, and all the inhabitants fled to the mountains as he approached the shore. But as he refolved to careen his ships in that place, he fent some Spaniards, together with one of the people of San Salvador, to view the interior parts of the country. They, having advanced above fixty miles from the shore, reported, upon their return, that the foil was richer and more cultivated than any they had hitherto discovered; that, besides many scattered cottages, they had found one village, containing above a thoufand inhabitants; that the people, though naked, seemed to be more intelligent than those of San Salvador, but had treated them with the same respectful attention, kissing their feet, and honouring them as facred beings allied to Heaven; that they had given them to eat a certain root, the taste of which resembled roafted chefnuts, and likewife a fingular species of corn called maize, which, either when roasted whole or ground into meal, was abundantly palatable; that there feemed to be no four-footed animals in the country, but a species of dogs, which could not bark, and a creature resembling a rabbit, but of a much smaller size; that they had observed some ornaments of gold among the people, but of no great value "."

THESE messengers had prevailed with some of the natives to accompany them, who informed Columbus, that the gold of tures with rewhich they made their ornaments was found in Cubanacan. By this word they meant the middle or inland part of Cuba; but Columbus, being ignorant of their language, as well as unaccustomed to their pronunciation, and his thoughts running con-

Life of Columbus, c. 24-28. Herrera, dec. 1. lib. i. c. 14.

tinually

воок П.

tinually upon his own theory concerning the discovery of the East Indies, he was led, by the resemblance of sound, to suppose that they spoke of the Great Khan, and imagined that the opulent kingdom of Cathay, described by Marco Polo, was not very remote. This induced him to employ fome time in viewing the country. He visited almost every harbour, from Porto del Principe, on the north coast of Cuba, to the eastern extremity of the island; but, though delighted with the beauty of the scenes, which every where presented themselves, and amazed at the luxuriant fertility of the foil, both which, from their novelty, made a more lively impression upon his imagination *, he did not find gold in fuch quantity as was fufficient to fatisfy either the avarice of his followers, or the expectations of the court to which he was to return. The natives, as much astonished at his eagerness in quest of gold, as the Europeans were at their ignorance and fimplicity, pointed towards the east, where an island which they called Hayti was situated, in which that metal was more abundant than among them. Columbus ordered his squadron to bend its course thither; but Martin Alonso Pinzon, impatient to be the first who should take possession of the treasures which this country was supposed to contain, quitted his companions, regardless of all the admiral's signals to flacken fail, until they should come up with him.

Discovers the island Hispaniola. Columbus, retarded by contrary winds, did not reach Hayti till the fixth of December. He called the port where he first touched St. Nicholas, and the island itself Espagnola, in honour of the kingdom by which he was employed; and it is the only country, of those he had yet discovered, which has retained the name that he gave it. As he could neither meet

B O O K II.

with the Pinta, nor have any intercourse with the inhabitants, who fled in great confernation towards the woods, he foon quitted St. Nicholas, and failing along the northern coast of the island, he entered another harbour, which he called Concep-Here he was more fortunate; his people overtook a woman who was flying from them, and after treating her with great kindness, dismissed her with a present of fuch toys as they knew were most valued in those countries. The description which she gave to her countrymen of the humanity and wonderful qualities of the strangers; their admiration of the trinkets, which she shewed with exultation; and their eagerness to participate of the same favours; removed all their fears, and induced many of them to repair to the harbour. The strange objects which they beheld, and the baubles which Columbus bestowed upon them, amply gratified their curiofity and their wishes. They nearly resembled the people of Guanahani and Cuba. They were naked like them, ignorant, and fimple; and feemed to be equally unacquainted with all the arts which appear most necessary in polished societies; but they were gentle, credulous, and timid, to a degree which rendered it easy to acquire the ascendant over them, especially as their excessive admiration led them into the same error with the people of the other islands, in believing the Spaniards to be more than mortals, and descended immediately from Heaven. They possessed gold in greater abundance than their neighbours, which they readily exchanged for bells, beads, or pins; and, in this unequal traffic, both parties were highly pleafed, each confidering themselves as gainers by the transaction. Here Columbus was visited by a prince or cazique of the country. He appeared with all the pomp known among a fimple people, being carried in a fort Vol. I.

of palanquin upon the shoulders of sour men, and attended by many of his subjects, who served him with great respect. His deportment was grave and stately, very reserved towards his own people, but with Columbus and the Spaniards extremely courteous. He gave the admiral some thin plates of gold, and a girdle of curious workmanship, receiving in return presents of small value, but highly acceptable to him.

COLUMBUS, still intent on discovering the mines which yielded gold, continued to interrogate all the natives with whom he had any intercourse concerning their situation. They concurred in pointing out a mountainous country, which they called Cibao, at some distance from the sea, and farther towards the east. Struck with this found, which appeared to him the fame with Cipango, the name by which Marco Polo, and other travellers to the east, distinguished the islands of Japan, he no longer doubted with respect to the vicinity of the countries which he had discovered to the remote parts of Asia; and, in full expectation of reaching foon those regions which had been the object of his voyage, he directed his course towards the east. He put into a commodious harbour, which he called St. Thomas, and found that district to be under the government of a powerful cazique, named Guacanabari, who, as he afterwards learned, was one of the five fovereigns among whom the whole island was divided. He immediately fent messengers to Columbus, who, in his name, delivered to him the present of a mask curiously fashioned, with the ears, nose, and mouth of beaten gold, and invited him to the place of his residence, near the harbour now called Cape François, some leagues towards the east. Columbus dispatched some of his officers to visit this prince, who, as he behaved with greater dignity, feemed to

y Life of Columbus, c. 32. Herrera, dec. 1. lib. i. c. 15, &c.

claim

claim more attention. The returned, with fuch favourable accounts both of the country and of the people, as made Columbus impatient for that interview with Guacanahari to which he had been invited.

BOOK 1492.

He failed for this purpose from St. Thomas, on the twenty- One of his fourth of December, with a fair wind, and the fea perfectly calm; and as, amidst the multiplicity of his occupations, he had not that his eyes for two days, he retired at midnight, in order to take fome repose, having committed the helm to the pilot, with strict injunctions not to quit it for a moment. The pilot, dreading no danger, carelessly left the helm to an u..experienced cabin-boy, and the ship, carried away by a current, was dashed against a rock. The violence of the shock awakened Columbus. He ran up to the deck. There, all was confusion and despair. He alone retained presence of mind. He ordered fome of the failors to take a boat, and carry out an anchor aftern; but, instead of obeying, they made off towards the Nigna, which was about half a league distant. He then commanded the masts to be cut down, in order to lighten the ship; but all his endeavours were too late; the veffel opened near the keel, and filled fo fast with water, that its loss was inevitable. The smoothness of the sea, and the timely affistance of boats from the Nigna, enabled the crew to fave their lives. As foon as the islanders heard of this disaster, they crowded to the shore, with their prince Guacanahari at their head. Instead of taking advantage of the diffress in which they beheld the Spaniards, to attempt any thing to their detriment, they lamented their misfortune with tears of fincere condolance. Not fatisfied with this unavailing expression of their sympathy, they put to sea a vast number of canoes, and, under the direction of the O 2 .. Spaniards,

B O O K

Spaniards, affifted in faving whatever could be got out of the wreck; and by the united labour of fo many hands, almost every thing of value was carried ashore. As fast as the goods were landed, Guacanahari in person took charge of them. By his orders, they were all deposited in one place, and armed centinels were posted, who kept the multitude at a distance, in order to prevent them not only from embezzling, but from inspecting too curiously what belonged to their guests. Next morning this prince visited Columbus, who was now on board the Nigna, and endeavoured to console him for his loss, by offering all that he possessed to repair it.

Distress of Columbus.

THE condition of Columbus was such, that he stood in need of consolation. He had hitherto procured no intelligence of the Pinta, and no longer doubted but that his treacherous affociate had set sail for Europe, that he might have the merit of carrying the first tidings of the extraordinary discoveries which they had made, and might so far pre-occupy the ear of their sovereign, as to rob him of the glory and reward to which he was justly intitled. There remained but one vessel, and that the smallest and most crazy of the squadron, to traverse such a vast ocean, and carry so many men back to Europe. Each of those circumstances was alarming, and filled the mind of Columbus with the utmost solicitude. His desire of overtaking Pinzon, and of effacing the unfavourable impressions which his misrepresentations might make in Spain, made it necessary to return thither without delay. The difficulty of taking such a number of persons aboard the Nigna, confirmed him in an opinion, which the fertility of the country, and the gentle temper of the people, had already induced him to form. He resolved to leave a part

Refolves to leave a part of his crew in the island.

See NOTE XV.

a Herrera, dec. 1. lib. i c. 18.

of his crew in the island, that, by residing there, they might learn the language of the natives, study their disposition, examine the nature of the country, fearch for mines, prepare for the commodious fettlement of the colony, with which he proposed to return, and thus secure and facilitate the acquisition of those advantages which he expected from his discoveries. When he mentioned this to his men, all approved of the design; and from impatience under the fatigue of a long voyage, from the levity natural to failors, or from the hopes of amassing vast wealth in a country which afforded fuch promifing specimens of its riches, many offered voluntarily to be among the number of those who should remain.

BOOK II. 1492.

Nothing was now wanting towards the execution of this Obtains the scheme, but to obtain the consent of Guanacahari; and his unfuspicious simplicity soon presented to the admiral a favourable opportunity of proposing it. Columbus having, in the best manner he could, by broken words and figns, expressed some curiofity to know the cause which had moved the islanders to fly with such precipitation upon the approach of his ships, he informed him that the country was much infested by the incursions of certain people, whom he called Carribeans, who inhabited feveral islands to the fouth east. These he described as a fierce and warlike race of men, who delighted in blood, and devoured the flesh of the prisoners who were so unhappy as to fall into their hands; and as upon the first appearance of the Spaniards, they were supposed to be Carribeans, whom the natives, however numerous, durst not face in battle, they had recourse to their usual method of securing their safety, by flying into the thickest and most impenetrable woods. Guacanahari, while speaking of those dreadful invaders, discovered fuch

BOOK

fuch symptoms of terror, as well as such consciousness of the inability of his own people to refift them, as led Columbus to conclude that he would not be alarmed at the propolition of any scheme which afforded him the prospect of an additional fecurity against their attacks. He instantly offered him the affistance of the Spaniards to repel his enemies; he engaged to take him and his people under the protection of the powerful monarch whom he ferved, and offered to leave in the island fuch a number of his men, as should be sufficient, not only to defend the inhabitants from future incursions, but to avenge their past wrongs.

Builds a fort.

THE credulous prince closed eagerly with the proposal, and thought himself already safe under the patronage of beings forung from Heaven, and superior in power to mortal men. The ground was marked out for a small fort, which Columbus called Navidad, because he had landed there on Christmas day. A deep ditch was drawn around it. The ramparts were fortified with pallifades, and the great guns, faved out of the admiral's ship, were planted upon them. In ten days the work was finished; that simple race of men labouring with inconfiderate assiduity in erecting this first monument of their own fervitude. During this time Columbus, by his careffes and liberality, laboured to increase the high opinion which the natives entertained of the Spaniards. But while he endeavoured to inspire them with confidence in their disposition to do good, he wished likewise to give them some striking idea of their power to punish and destroy such as were the objects of their just indignation. With this view, in presence of a vast affembly, he drew up his men in order of battle, and made an ostentatious but innocent display of the sharpness of the Spanish fwords.

fwords, of the force of their spears, and the operation of their cross-bows. These rude people, strangers to the use of iron, and unacquainted with any hostile weapons, but arrows of reeds pointed with the bones of fishes, wooden fwords, and javelins hardened in the fire, wondered and trembled. Before this surprise or fear had time to abate, he ordered the great guns to be fired. The fudden explosion struck them with such terror, that they fell flat to the ground, covering their faces with their hands; and when they beheld the aftonishing effect of the bullets, they concluded that it was impossible to refift men, who had the command of fuch destructive instruments, and who came armed with thunder and lightning against their enemies.

BOOK 1492.

AFTER giving fuch impressions both of the beneficence and His instrucpower of the Spaniards, as might have rendered it easy to pre- he lest in it. ferve an ascendant over the minds of the natives, Columbus appointed thirty-eight of his people to remain in the island. He entrusted the command of these to Diego de Arada, a gentleman of Cordova, investing him with the same powers which he himself had received from their Catholic Majesties; and furnished him with every thing requisite for the subsistence or defence of this infant colony. He strictly enjoined them to maintain concord among themselves, to yield an unreserved obedience to their commander, to avoid giving offence to the natives by any violence or exaction, to cultivate the friendship of Guacanahari, but not to put themselves in his power by flraggling in small parties, or marching too far from the fort. He promifed to revisit them soon, with such a reinforcement of strength as might enable them to take full possession of the country, and to reap all the fruits of their discoveries. In the mean:

104

mean time, he engaged to mention their names to the king and queen, and to place their merit and services in the most advantageous light b.

£493.

HAVING thus taken every precaution for the fecurity of the Colony, he left Navidad on the fourth of January, one thousand four hundred and ninety-three, and steering towards the east, discovered, and gave names to most of the harbours on the northern coast of the island. On the fixth, he descried the Pinta, and soon came up with her, after a separation of more than fix weeks. Pinzon endeavoured to justify his conduct, by pretending that he had been driven from his course by stress of weather, and prevented from returning by contrary winds. The admiral, though no stranger to his perfidious intentions, or the frivolity as well as falsehood of what he urged in his defence, was so sensible that this was not a proper time for venturing upon any high strain of authority, and felt such satisfaction in this junction with his consort, which delivered him from many disquieting apprehensions, that lame as Pinzon's apology was, he admitted of it without difficulty, and restored him to favour. During his absence from the admiral, Pinzon had visited several harbours in the island, had acquired some gold by trafficking with the natives, but had made no discovery of any importance.

Refolves to return to Europe.

FROM the condition of his ships, as well as the temper of his men, Columbus now found it necessary to hasten his return to Europe. The former, having suffered much during a voyage of such unusual duration, were extremely leaky. The latter

expressed

b Oviedo ap. Ramusio, iii. p. 82. E. Herrera, dec. 1. lib. i. c. 20. Life of Columbus, c. 34.

expressed the utmost impatience to revisit their native country, from which they had been so long absent, and where they had things fo wonderful and unheard-of to relate. Accordingly, on the fixteenth of January, he directed his course towards the north east, and soon lost fight of land. He had on board some of the natives, whom he had taken from the different islands which he discovered; and besides the gold, which was the chief object of refearch, he had collected specimens of all the productions which were likely to become subjects of commerce in the feveral countries, as well as many unknown birds, and other natural curiofities, which might attract the attention and excite the wonder of the people. The voyage was profperous to the fourteenth of February, and they had advanced near five hundred leagues across the Atlantic Ocean, when the Aviolent wind began to rife, and continued to blow with increasing rage, which terminated in a furious hurricane. Every expedient that the naval skill and experience of Columbus could devise was employed, in order to fave the ships. But it was impossible to withstand the violence of the storm, and as they were still far from any land, destruction seemed inevitable. The sailors had recourse to prayers to Almighty God, to the invocation of faints, to vows and charms, to every thing that religion dictates, or superstition suggests to the affrighted mind of man. No prospect of deliverance appearing, they abandoned themfelves to despair, and expected every moment to be swallowed up in the waves. Besides the passions which naturally agitate and alarm the human mind in such awful situations, when certain death, in one of his most terrible forms, is before it, Columbus had to endure feelings of diffress peculiar to himself. He dreaded that all knowledge of the amazing discoveries The conduct which he had made was now to perish; mankind were to be Vol. I. deprived

воок

deprived of every benefit that might have been derived from the happy fuccess of his schemes, and his own name would descend to posterity as that of a rash deluded adventurer, instead of being transmitted with the honour due to the author and conductor of the most noble enterprise that had ever been undertaken. These reflections extinguished all sense of his own perfonal danger. Less affected with the loss of life, than folicitous to preferve the memory of what he had attempted and atchieved, he retired to his cabbin, and wrote, upon parchment, a fhort account of the voyage which he had made, of the course which he had taken, of the situation and riches of the countries. which he had discovered, and of the colony that he had left there. Having wrapt up this in an oiled cloth, which he inclosed in a cake of wax, he put it into a cask carefully stopped up, and threw it into the sea, in hopes that some fortunate accident might preserve a deposit of so much importance to the world '.

Takes theker in the Azores.

AT length Providence interpoled, to fave a life reserved for other fervices. The wind abated, the fea became calm, and on the evening of the fifteenth they discovered land; and though uncertain what it was, they made towards it. They foon knew it to be St. Mary, one of the Azores or western isles, subject to the crown of Portugal. There, after a violent contest with the governor, in which Columbus displayed no less spirit than prudence, he obtained a supply of fresh provisions, and whatever else he needed. One circumstance, however, greatly disquieted him. The Pinta, of which he had lost fight on the first day of the hurricane, did not appear; he dreaded for some time that she had foundered at sea, and that all her crew had

^{*} Life of Columbus, c. 37. Herrera, dec. 1. lib. ii. c. 1, 2. See NOTE XVI. perished:

perished: afterwards, his former suspicions recurred, and he became apprehensive that Pinzon had borne away for Spain, that he might reach it before him, and by giving the first account of his discoveries, might obtain some share of his same.

E O O K II.

In order to prevent this, he left the Azores as foon as the weather would permit. At no great distance from the coast of Spain, when almost at the end of his voyage, and beyond the reach of any disaster, another storm arose, little inferior to the former in violence; and after driving before it during two days and two nights, he was forced to take shelter in the river Tagus. Upon application to the king of Portugal, he was allowed to come into Lisbon; and, notwithstanding the envy which it was natural for the Portuguese to feel, when they beheld another nation entering upon that province of discovery which they had hitherto deemed peculiarly their own, and in its first essay, not only rivalling but eclipsing their fame, Columbus was received with all the marks of distinction due to a man who had performed things fo extraordinary and unexpected. The king admitted him into his presence, treated him with the highest respect, and listened to the account which he gave of his voyage with admiration mingled with regret. While Columbus, on his part, enjoyed the fatisfaction of describing the importance of his discoveries, and of being now able to prove the folidity of his schemes to those very persons, who, with an ignorance difgraceful to themselves, and fatal to their country, had lately rejected them as the projects of a visionary or defigning adventurer d.

BOOK II. 1493. Returns to Spain.

COLUMBUS was so impatient to return to Spain, that he remained only five days in Lifbon. On the fifteenth of March he arrived in the port of Palos, feven months and eleven days from the time when he fet out thence upon his voyage. As foon as his ship was discovered approaching the port, all the inhabitants of Palos ran eagerly to the shore, in order to welcome their relations and fellow-citizens, and to hear tidings of their voyage. When the prosperous issue of it was known, when they beheld the strange people, the unknown animals, and fingular productions brought from the countries which had been discovered, the effusion of joy was general and unbounded. The bells were rung, the cannon fired; Columbus was received at landing with royal honours, and all the people, in folemn procession, accompanied him and his crew to the church, where they returned thanks to Heaven, which had so wonderfully conducted and crowned with fuccefs, a voyage of greater length and of more importance, than had been attempted in any former age. On the evening of the same day, he had the satisfaction of feeing the Pinta, which the violence of the tempest had driven far to the north, enter the harbour.

His recep-

THE first care of Columbus was to inform the king and queen, who were then at Barcelona, of his arrival and success. Ferdinand and Isabella, no less astonished than delighted with this unexpected event, returned an answer in terms the most respectful and flattering to Columbus, requesting him to repair immediately to court, that from his own mouth, they might receive a full detail of his extraordinary services and discoveries. During his journey to Barcelona, the people crowded from the adjacent country, following him every where with admiration

B O O K

and applause. His entrance into the city was conducted, by order of Ferdinand and Isabella, with pomp suitable to the great event, which added fuch diftinguishing luftre to their reign. The people whom he brought along with him from the countries which he had discovered, marched first, and by their fingular complexion, the wild peculiarity of their features, and uncouth finery, appeared like men of another species. Next to them were carried the ornaments of gold, fashioned by the rude art of the natives, the grains of gold found in the mountains, and dust of the same metal gathered in the rivers. After these appeared the various commodities of the new discovered countries, together with their curious productions. Columbus himself closed the procession, and attracted the eyes of all the spectators, who gazed with admiration on the extraordinary man, whose superior sagacity and fortitude had conducted their countrymen, by a route concealed from past ages, to the knowledge of a new world. Ferdinand and Isabella received him clad in their royal robes, and feated upon a throne, under a magnificent canopy. When he approached they flood up, and raising him as he kneeled to kiss their hands, commanded him to take his feat upon a chair prepared for him, and to give a circumstantial account of his voyage. He delivered it with a gravity and composure no less suitable to the disposition of the Spanish nation, than to the dignity of the audience in which he spoke, and with that modest simplicity which characterises men of superior minds; who, satisfied with having performed great actions, court not vain applause by an ostentatious display of their exploits. When he had finished his narration, the king and queen, kneeling down, offered up folemn thanks to Almighty God for the discovery of those new regions, from which

f

1

đ

f

B O O K II. which they expected so many advantages to flow in upon the kingdoms subject to their government. Every mark of honour that gratitude or admiration could suggest was conferred upon Columbus. Letters patent were issued, confirming to him and to his heirs all the privileges contained in the capitulation concluded at Santa Fé; his family was ennobled; the king and queen, and, after their example, the courtiers, treated him, on every occasion, with all the ceremonious respect paid to perfons of the highest rank. But what pleased him most, as it gratified the enterprising activity of his mind, bent continually upon great objects, was an order to equip, without delay, an armament of such force, as might enable him not only to take possession of the countries which he had already discovered, but to go in search of those more opulent regions, which he still considently expected to find so

Association Associated
WHILE preparations were making for this expedition, the fame of Columbus's fuccessful voyage spread over Europe, and excited general attention. The multitude, struck with amazement when they heard that a new world had been found, could hardly believe an event so much above their conception. Men of science, capable of comprehending the nature, and of discerning the effects, of this great discovery, received the account of it with admiration and joy. They spoke of it with rapture, and congratulated one another upon their felicity, in having lived at the period when, by this extraordinary event, the boundaries of human knowledge were so much extended, and such a new field of inquiry

[.] See NOTE XVII.

Lise of Columbus, c. 42, 43. Herrera, dec. 1. lib. ii. c.3.

and observation opened, as would lead mankind to a perfect acquaintance with the structure and productions of the habitable globe 8. Various opinions and conjectures were formed concerning the new-found countries, and what division of the earth they belonged to. Columbus adhered tenaciously to his original opinion, that the should be reckoned a part of those vast regions in As combended under the general name of India. This fentiment was confirmed by the observations which he made concerning the productions of the countries which he had discovered. Gold was known to abound in India, and he had met with fuch promifing famples of it in the islands which he visited, as led him to believe that rich mines of it might be Cotton, another production of the East Indies, was common there. The pimento of the islands he imagined to be a species of the East-Indian pepper. He mistook a root, somewhat refembling rhuberb, for that valuable drug, which was then supposed to be a plant peculiar to the East Indies. The birds which he had brought home were adorned with the same rich plumage that distinguishes those of India. The alligator of the one country appeared to be the same with the crocodile of the other. After weighing all these circumstances, not only Distinguished the Spaniards, but the other nations of Europe, feem to have adopted the opinion of Columbus. The countries which Indies. he had discovered were considered as a part of India. In consequence of this notion, the name of Indies is given to them by Ferdinand and Isabella, in a ratification of their former agreement, which was granted to Columbus upon his return k. Even after the error which gave rife to this opinion was detected, and the true position of the New world was ascer-

Preparations for a fecond voyage.

THE name by which Columbus distinguished the countries which he had discovered was so inviting; the specimens of their riches and fertility, which he produced, were so considerable; and the reports of his companions, delivered frequently with the exaggeration natural to travellers, fo favourable; that they excited a wonderful spirit of enterprile among the Spaniards. Though little accustomed to naval expeditions, they were impatient to fet out upon another voyage. Volunteers of every rank folicited to be employed. Allured by the vast prospects which opened to their ambition and avarice, neither the length nor danger of the navigation intimidated them. Cautious as Ferdinand was, and averse to every thing new or adventurous, he feemed to have catched the fame spirit with his subjects. Under its influence, preparations for a fecond expedition were carried on with a rapidity unufual among the Spaniards, and to an extent that would be deemed not inconfiderable in the present age. The fleet consisted of seventeen ships, some of which were of good burden. It had on board fifteen hundred persons, among whom were many of noble families, who had ferved in honourable stations. The greater part of these being destined to remain in the country, they were furnished with every thing requifite for conquest or settlement, with all kinds of European domestic animals, with fuch feeds and plants as were most likely to thrive in the climate of the West Indies, with utenfils and instruments of every fort, and with such artificers as might be most useful in an infant colony 1.

¹ Herrera, dec. 1. lib. ii. c. 5. Life of Columbus, c. 45.

But, formidable and well provided as this fleet was, Ferdinand and Isabella did not rest their title to the possession of the newly-discovered countries upon its operations alone. The The right of example of the Portuguese, as well as the superstition of the Scain to the New World age, made it necessary to obtain from the Roman pontiff a confirmed by grant of those territories which they wished to occupy. Pope, as the vicar and representative of Jesus Christ, was supposed to have a right of dominion over all the kingdoms of the earth. Alexander VI. a pontiff infamous for every crime that difgraces humanity, filled the papal throne at that time. As he was born Ferdinand's subject, and very solicitous to secure the protection of that monarch, in order to facilitate the execution of his ambitious schemes in favour of his own family, he inflantly complied with his request. By an act of liberality which cost him nothing, and that served to establish the jurisdiction and pretentions of the papal fee, he bestowed on Ferdinand and Isabella all the countries inhabited by Infidels, which they had discovered, or should discover; and in virtue of that power which he derived from Jesus Christ, he vested in the crown of Castile a right to vast regions, to the possession of which he himself was so far from having any title, that he was unacquainted with their fituation, and even with their existence. As it was necessary to prevent this grant from interfering with that formerly made to the crown of Portugal, he appointed that a line, supposed to be drawn from pole to pole, a hundred leagues to the westward of the Azores, should serve as the limit between them; and, in the plenitude of his power, conferred all to the east of this imaginary line upon the Portuguese, and all to the west of it upon the Spaniards ". Zeal for propagating the Christian faith was the consideration employed by Ferdinand in

B O O K

foliciting this bull, and is mentioned by Alexander as his chief motive for issuing it. In order to manifest some concern for this laudable object, several friars, under the direction of Father Boyl, a Catalonian monk of great reputation, as apostolical vicar, were appointed to accompany Columbus, and to devote themselves to the instruction of the natives. The Indians whom Columbus had brought along with him, having received some tincture of Christian knowledge, were baptized with much solemnity, the king himself, the prince his son, and the chief persons of his court, standing as their godfathers. Those first fruits of the New World have not been followed by such an increase as pious men wished, and had reason to expect.

Second voyage of Columbus.

FERDINAND and Isabella having thus acquired a title, which was then deemed completely valid, to extend their discoveries, and to establish their dominion over such a vast portion of the globe, nothing now retarded the departure of the fleet. Columbus was extremely impatient to revisit the colony which he had left, and to purfue that career of glory upon which he had entered. He fet sail from the bay of Cadiz on the twentyfifth of September, and touching again at the island of Gomera, he steered farther towards the south than in his former voyage. By holding this course, he enjoyed more steadily the benefit of the regular winds, which reign within the tropics, and was carried towards a large cluster of islands, situated considerably to the east of those which he had already discovered. On the twenty-fixth day after his departure from Gomera, he made land". It was one of the Caribbee or Leeward islands, to which he gave the name of Deseada, on account of the impatience of his crew to discover some part of the New world.

Nov. 2.

n Oviedo ap. Ramuf. iii. 85. B.

After

After this he visited successively Dominica, Marigalante, Guadalupe, Antigua, St. John de Porto Rico, and several other islands, scattered in his way as he advanced towards the northwest. All these he found to be inhabited by that sierce race of people whom Guacanahari had painted in such frightful colours. His descriptions appeared not to have been exaggerated. The Spaniards, as often as they landed, met with such a reception as convinced them of their martial and daring spirit; and they discovered in their habitations the relics of those horrid feasts which they had made upon the bodies of their enemies taken in war.

BOOK 11. 1493.

But as Columbus was eager to know the flate of the colony Arrives at which he had planted, and to supply it with those neces- Nov. 22. faries of which he supposed it to be in want, he made no stay in any of those islands, and proceeded directly to Hispaniola °. When he arrived off Navidad, the station in which he had left the thirty-eight men under the command of Arada, he was assonished that none of them appeared, and expected every moment to fee them running with transports of joy to welcome their countrymen. Full of folicitude about their fafety, and foreboding in his mind what had befallen them, he rowed instantly to land. All the natives from whom he might have received information had fled. But the fort which he had built was entirely demolished, and the tattered garments, the broken arms and utenfils feattered about it, left no room to doubt concerning the unhappy fate of the garrison.

P. Martyr, dec. p. 15. 18. Herrera, der. 1. lib. ii. c. 7. Life of Columbus, c. 46, &c. P Hist. de Cura de los Palacios. MS.

1493.
The fate of the men whom he left there.

While the Spaniards were shedding tears over those sad memorials of their fellow-citizens, a brother of the cazique Guacanahari arrived. From him Columbus received a particular detail of what had happened after his departure from the island. The familiar intercourse of the Indians with the Spaniards tended gradually to diminish the superstitious veneration with which their first appearance had inspired that simple people. By their own indifcretion and ill conduct, the Spaniards speedily effaced those favourable impressions, and soon convinced the natives, that they had all the wants, and weaknesses, and passions of men. As soon as the powerful restraints which the presence and authority of Columbus imposed was withdrawn, the garrison threw off all regard for the officer whom he had invested with command. Regardless of the prudent instructions which he had given them, every man became independent, and gratified his defires without controul. The gold, the women, the provisions of the natives, were all the prey of those licentious oppressors. They roamed in small parties over the island, extending their rapacity and infolence to every corner of it. Gentle and timid as the people were, those unprovoked injuries at length exhausted their patience, and rouzed their courage. The cazique of Cibao, whose territories the Spaniards chiefly infested on account of the gold which they contained, surprised and cut off several of them, while they ftraggled in as perfect fecurity as if their conduct had been altogether inoffensive. He then affembled his subjects, and surrounding the fort, fet it on fire. Some of the Spaniards were killed in defending it, the rest perished in attempting to make their escape by crossing an arm of the sea. Guacanahari, whom all their exactions had not alienated from the Spaniards, took arms in their behalf, and in endeavouring to protect them, had received a wound, by which he was still confined 4.

BOOK 1493.

THOUGH this account was far from removing the suspicions His prodent which the Spaniards entertained with respect to the fidelity of Guacanahari, Columbus perceived fo clearly that this was not a proper juncture for inquiring into his conduct with fcrupulous accuracy, that he rejected the advice of several of his officers, who urged him to feize the person of that prince, and to revenge the death of their countrymen by attacking his subjects. He represented to them the necessity of securing the friendship of some potentate of the country, in order to facilitate the settlement which they intended, and the danger of driving the natives to unite in some desperate attempt against them, by such an ill-timed and unavailing exercise of rigour. Instead of wasting his time in punishing past wrongs, he took precautions for preventing any future injury. With this view, he made choice of a fituation more healthy and commodious than that of Navidad. He traced out the plan of a town in a large plain near a spacious bay, and obliging every person to put his hand to a work on which their common fafety depended, the houses and ramparts were foon fo far advanced by their united labour, as to afford them shelter and security. This rising city, the first that the Europeans founded in the New world, he named Isabella, in honour of his patroness the queen of Castile'.

In carrying on this necessary work, Columbus had not only Discontent of to fustain all the hardships, and to encounter all the difficulties,

⁹ P. Martyr, decad. p. 22, &c. Herrera, dec 1. lib. ii. c. 7. 9. Life of Columbus, c. 49, 50. Life of Columbus, c. 51. Herrera, dec. 1. lib. ii. c. 10.

B O O K

to which infant colonies are exposed when they fettle in an uncultivated country, but he had to contend with what was more insuperable, the laziness, the impatience, and mutinous disposition of his followers. By the enervating influence of a hot climate, the natural inactivity of the Spaniards seemed to increase. Many of them were gentlemen, unaccustomed to the fatigue of bodily labour, and all had engaged in the enterprife with the fanguine hopes excited by the splendid and exaggerated defcriptions of those who returned with Columbus from his first voyage, or by his own mistaken idea that the country which he had discovered was either the Cipango of Marco Polo, or the Ophir, from which Solomon imported those precious commodities which suddenly diffused such extraordinary riches through his kingdom. But when, instead of that golden harvest which they had expected to reap without toil or pains, the Spaniards faw that their prospect of wealth was remote as well as uncertain, and that it could not be attained but by the flow and persevering efforts of industry, the disappointment of those chimerical hopes occasioned such dejection of mind as bordered on despair, and led to general discontent. In vain did Columbus endeavour to revive their spirits by pointing out the fertility of the foil, and exhibiting the specimens of gold daily brought in from different parts of the island. They had not patience to wait for the gradual returns which the former might yield, and the latter they despised as scanty and inconsiderable. The spirit of disaffection spread, and a conspiracy was formed, which might have been fatal to Columbus and the colony. Happily he discovered it, and seizing the ringleaders, punished some of them, fent others prisoners into Spain, whither he dispatched

MEANWHILE, in order to banish that idleness which, by allowing his people leifure to broad over their disappointment, into the flate nourished the spirit of discontent, he planned several expeditions try. into the interior part of the country. He fent a detachment, under the command of Alonso de Ojeda, a vigilant and enterprising officer, to visit the district of Cibao, which was said to yield the greatest quantity of gold, and followed him in person March 12. with the main body of his troops. In this expedition, he difplayed all the pomp of military magnificence that he could exhibit, in order to strike the imagination of the natives. He marched with colours flying, with martial music, and with a fmall body of cavalry that paraded fometimes in the front and sometimes in the rear. As those were the first horses that appeared in the New World, they were objects of terror no less than admiration to the Indians, who having no tame animals themselves, were unacquainted with that vast accession of power, which man hath acquired by fubjecting them to his dominion. They imagined them to be rational creatures, that formed but one animal with their riders. They were aftonished at their speed, and considered their impetuosity and strength as irrefishible. But while Columbus endeavoured to inspire the natives with a dread of his power, he did not neglect the arts of gaining their love and confidence. He adhered fcrupuloufly to the principles of integrity and justice in all his transactions with them, and treated them, on every occasion, not only with hu-

manity,

BOOK II. manity, but with indulgence. The district of Cibao answered the description given of it by the natives. It was mountainous and uncultivated, but in every river and brook gold was gathered either in dust or in grains, some of which were of considerable fize. The Indians had never opened any mines in fearch of gold. To penetrate into the bowels of the earth, and to refine the rude ore, were operations too complicated for their talents and industry, and they had no such high value for gold as to put their ingenuity and invention upon the stretch in order to obtain it'. The fmall quantity of that precious metal which they possessed, was either picked up in the beds of the rivers, or washed from the mountains by the heavy rains which fell within the tropics. But, from those indications, the Spaniards could no longer doubt that the country contained rich treasures in its bowels, of which they hoped foon to be masters". In order to secure the command of this valuable province, Columbus erected a small fort, to which he gave the name of St. Thomas, by way of ridicule upon some of his incredulous followers, who would not believe that the country produced gold, until they saw it with their own eyes, and touched it with their hands ".

The diffress and disaffection of the colony increase. THE account of those promising appearances of wealth in the country of Cibao came very seasonably to comfort the desponding colony, which was affected with distresses of various kinds. The stock of provisions which had been brought from Europe was mostly consumed; what remained was so much corrupted by the heat and moisture of the climate, as to be almost unfit

for use; the natives cultivated so small a portion of ground, and with fo little skill, that it hardly yielded what was sufficient 1494. for their own subfistance; the Spaniards at Isabella had hitherto

BOOK

neither time nor leifure to clear the foil, fo as to reap any confiderable fruits of their own industry. On all these accounts, they became afraid of perifhing with hunger, and were reduced to live already at short allowance. At the same time, the diseases predominant in the torrid zone, and which rage chiefly in those uncultivated countries, where the hand of industry has not opened the woods, drained the marshes, and confined the rivers within a certain channel, began to fpread among them. Alarmed at their violence and unufual fymptoms, they exclaimed against Columbus and his companions in the former voyage, who, by their splendid but deceitful descriptions of Hispaniola, had allured them to quit their native country for a barbarous uncultivated land, where they must either be cut off by famine, or die of unknown distempers. Several of the officers and persons of note, instead of checking, joined in those feditious complaints. Father Boyl, the apostolical vicar, was one of the most turbulent and outrageous. It required all the authority and address of Columbus to re-establish subordination and tranquillity in the colony. Threats and promifes were alternately employed for this purpose; but nothing contributed more to footh the malcontents than the prospect of finding, in the mines of Cibao, such a rich store of treasure as would be a recompence for all their fufferings, and efface the memory of former disappointments.

WHEN, by his unwearied endeavours, concord and order Columbus were fo far restored, that he could venture to leave the island, attempts no discoveries, Columbus resolved to pursue his discoveries, that he might be VOL. I.

B O O K II.

able to ascertain whether those new countries with which he had opened a communication, were connected with any region of the earth already known, or whether they were to be considered as a separate portion of the globe, hitherto unvisited. He appointed his brother Don Diego, with the affiftance of a council of officers, to govern the island in his absence; and gave the command of a body of foldiers to Don Pedro Margarita, with which he was to visit the different parts of the island, and endeavour to establish the authority of the Spaniards among the inhabitants. Having left them very particular instructions with respect to their conduct, he weighed anchor on the twenty-fourth of April, with one ship and two small barks under his command. During a tedious voyage of full five months, he had a trial of almost all the numerous hardships to which persons of his profession are exposed, without making any difcovery of importance, except the island of Jamaica. As he ranged along the fouthern coast of Cuba , he was entangled in a labyrinth formed by an incredible number of small islands, to which he gave the name of the Queen's Garden. In this unknown courfe, among rocks and shelves, he was retarded by contrary winds, affaulted with furious florms, and alarmed with the terrible thunder and lightning which is often almost inceffant between the tropics. At length his provisions feli short: his crew, exhausted with fatigue as well as hunger, murmured and threatened, and were ready to proceed to the most desperate extremities against him. Beset with danger in such various forms, he was obliged to keep continual watch, to obferve every occurrence with his own eyes, to issue every order, and to superintend the execution of it. On no occasion, was the extent of his skill and experience as a navigator so much

* See NOTE XIX.

tried. To these the squadron owed its safety. But this unremitted fatigue of body and intense application of mind, overpowering his constitution, though naturally vigorous and robust, brought on a feverish disorder, which terminated in a lethargy, that deprived him of fense and memory, and had almost proved fatal to his life '.

BOOK 1494.

But, on his return to Hispaniola, the sudden emotion of joy which he felt upon meeting with his brother Bartholemew at turn, finds his Isabella, occasioned such a flow of spirits as contributed greatly to his recovery. It was now thirteen years fince the two brothers, whom similarity of talents united in close friendship, had separated from each other, and during that long period there had been no intercourse between them. Bartholemew, after finishing his negociation in the court of England, had fet out for Spain by the way of France. At Paris he received an account of the extraordinary discoveries which his brother had made in his first voyage, and that he was then preparing to embark on a fecond expedition. Though this naturally induced him to pursue his journey with the utmost dispatch, Columbus had failed for Hispaniola before he reached Spain. Ferdinand and Isabella received him with the respect due to the brother of a man whose merit and service rendered him so conspicuous; and as they knew what consolation his presence would afford to Columbus, they perfuaded him to take the command of three ships, which they had appointed to carry provisions to the colony at Isabella z.

II.

1494.
The Indians take arms againft the Spaniards.

He could not have arrived at any juncture when Columbus flood more in need of a friend capable of affifting him with his counsels, or of dividing with him the cares and burden of government. For although the provisions now brought from Europe, afforded a temporary relief to the Spaniards from the calamities of famine, the supply was not in such quantity as to support them long, and the island did not hitherto yield what was fufficient for their fuftenance. They were threatened with another danger, still more formidable than the return of fearcity, and which demanded more immediate attention. No fooner did Columbus leave the island on his voyage of discovery, than the foldiers under Margarita, as if they had been fet free from discipline and subordination, scorned all restraint. Inflead of conforming to the prudent inftructions of Columbus, they dispersed in straggling parties over the island, lived at discretion upon the natives, wasted their provisions, seized their women, and treated that inoffensive race of men with all the infolence of military oppression a.

As long as the Indians had any prospect that their sufferings might come to a period by the voluntary departure of the invaders, they submitted in silence, and dissembled their sorrow; but they now perceived that the yoke would be as permanent as it was intolerable. The Spaniards had built a town, and surrounded it with ramparts. They had erected forts in different places. They had inclosed and sown several fields. It was apparent that they came not to visit the country, but to settle in it. Though the number of those strangers was not considerable, the state of cultivation among

this rude people was fo imperfect, and in fuch exact proportion to their own confumption, that it was with difficulty they could afford subsistance to their new guests. Their own mode of life was fo indolent and inactive, the warmth of the climate fo enervating, the constitution of their bodies naturally so feeble, and fo unaccustomed to the laborious exertions of industry. that they were fatisfied with a proportion of food amazingly A handful of maize, or a little of the infipid bread made of the cassada-root, was sufficient to support men, whose strength and spirits were not exhausted by any vigorous efforts either of body or mind. The Spaniards, though the most abstemious of all the European nations, appeared to them exceffively voracious. One Spaniard confumed as much as feveral Indians. This keenness of appetite surprised them so much, and feemed to them to be so insatiable, that they supposed the Spaniards had left their own country, because it did not produce as much as was requifite to gratify their immoderate defire of food, and had come among them in quest of nourishment b. Self-preservation prompted them to wish for the departure of guests who wasted so fast their slender stock of provisions. The injuries which they suffered, added to their impatience for this They had long expected that the Spaniards would retire of their own accord. They now perceived that, in order to avert the destruction with which they were threatened, either by the flow confumption of famine, or by the violence of their oppressors, it was necessary to assume courage, to attack those formidable invaders with united force, and drive them from the fettlements of which they had violently taken poffeffion.

b Herrera, dec. 1. lib. ii. c. 17.

Such

BOOK II. 1494. War with

SUCH were the sentiments which universally prevailed among the Indians, when Columbus returned to Isabella. Inflamed by the unprovoked outrages of the Spaniards, with a degree of rage of which their gentle natures, formed to fuffer and fubmit, feemed hardly fusceptible, they waited only for a signal from their leaders to fall upon the coiony. Some of the caziques had already surprised and cut off several of the stragglers. The dread of this impending danger united the Spaniards, and reestablished the authority of Columbus, as they saw no prospect of safety but in committing themselves to his prudent guidance. It was now necessary to have recourse to arms, the employing of which against the Indians, Columbus had hitherto avoided with the greatest solicitude. Unequal as the conflict may seem, between the naked inhabitants of the New World, armed with clubs, sticks hardened in the fire, wooden fwords, and arrows pointed with bones or flints; and troops accustomed to the discipline, and provided with the instruments of destruction known in the European art of war, the situation of the Spaniards was far from being exempt from danger. The vast superiority of the natives in number, compensated many defects. An handful of men was about to encounter a whole nation. One adverse event, or even any unforeseen delay in determining the fate of the war, might prove fatal to the Spaniards. Conscious that fuccess depended on the vigour and rapidity of his operations, Columbus instantly assembled his forces. They were reduced to a very finall number. Diseases, engendered by the warmth and humidity of the country, had raged among them with much violence; experience had not yet taught them the art either of curing these, or the precautions requisite for guarding against them; two-thirds of the original adventurers were dead, and

and many of those who survived were incapable of service. The body which took the field confifted only of two hundred foot, twenty horse, and twenty large dogs; and how strange foever it may feem, to mention the last as composing part of a military force, they were not perhaps the least formidable and destructive of the whole, when employed against naked and timid Indians. All the caziques of the island, Guacanahari excepted, who retained an inviolable attachment to the Spaniards, were in arms to oppose Columbus, with forces amounting, if we may believe the Spanish historians, to a hundred thousand Instead of attempting to draw the Spaniards into the fastnesses of the woods and mountains, they were so imprudent as to take their station in the Vega Real, the most open plain in the country. Columbus did not allow them time to perceive their error, or to alter their polition. He attacked them during the night, when undisciplined troops are least capable of acting with union and concert, and obtained an easy and bloodless victory. The consternation with which the Indians were filled by the noise and havoc made by the fire-arms, by the impetuous force of the cavalry, and the fierce onfet of the dogs was fo great, that they threw down their weapons, and fled without attempting resistance. Many were slain; more were taken prisoners, and reduced to servitude ; and so thoroughly were the rest intimidated, that from that moment they abandoned themselves to despair, relinquishing all thoughts of contending with aggressors whom they deemed invincible.

COLUMBUS employed several months in marching through the A tax in. island, and in subjecting it to the Spanish government, with- them.

Life of Columbus, c. 61.

B O O K

out meeting with any opposition. He imposed a tribute upon all the inhabitants above the age of fourteen. Each person who lived in those districts where gold was found, was obliged to pay quarterly as much gold dust as filled a hawk's bell; from those in other parts of the country, twenty-five pounds of cotton were demanded. This was the first regular taxation of the Indians, and ferved as a precedent for exactions still more intolerable. Such an heavy imposition was extremely contrary to those maxims which Columbus had hitherto inculcated with respect to the mode of treating them. But intrigues were carrying on in the court of Spain at this juncture, in order to undermine his power and discredit his operations, which constrained him to depart from his own system of administration. Several unfavourable accounts of his conduct, as well as of the countries discovered by him, had been transmitted to Spain. Margarita and Father Boyl were now at court; and in order to justify their own conduct, or to gratify their resentment, watched with malevolent attention for every opportunity of fpreading infinuations to his detriment. Many of the courtiers viewed his growing reputation and power with envious eyes. Fonseca, the archdeacon of Seville who was intrusted with the chief direction of Indian affairs, had conceived fuch an unfavourable opinion of Columbus, for some reason which the contemporary writers have not mentioned, that he listened with partiality to every invective against him. It was not easy for an unfriended stranger, unpractised in courtly arts, to counteract the machinations of fo many enemies. Columbus faw that there was but one method of supporting his own credit, and of filencing all his adversaries. He must produce fuch a quantity of gold, as would not only justify what

what he had reported with respect to the richness of the country, but encourage Ferdinand and Isabella to persevere in profecuting his plans. The necessity of obtaining it, forced him not only to impose this heavy tax upon the Indians, but to exact payment of it with extreme rigour; and may be pleaded in excufe for his deviating on this occasion from the mildness and humanity with which he uniformly treated that unhappy people '.

BOOK 1495.

THE labour, attention, and forefight which the Indians were Fatal effects obliged to employ in procuring the tribute demanded of them, fire, appeared the most intolerable of all evils, to men accustomed to pass their days in a careless, improvident indolence. were incapable of fuch a regular and persevering exertion of industry, and felt it such a grievous restraint upon their liberty, that they had recourse to an expedient for obtaining deliverance from this yoke, which demonstrates the excess of their impatience and despair. They formed a scheme of starving those oppressors whom they durst not attempt to expel; and from the opinion which they entertained with respect to the voracious appetite of the Spaniards, they concluded the execution of it to be very practicable. With this view, they suspended all the operations of agriculture; they fowed no maize, they pulled up the roots of the manioc which were planted, and retiring to the most inaccessible parts of the mountains, left the uncultivated plains to their enemies. This desperate resolution produced some part of the effects which they expected. The Spaniards were reduced to extreme want; but they received fuch feasonable supplies of provisions from Europe, and found so many resources in their own ingenuity and industry, that they fuffered no great loss of men. The wretched Indians were the

· Herrera, dec. 1. lib. ii. c. 17.

BOOK

victims of their own ill-concerted policy. A vast multitude, thut up among barren mountains, without any food but the spontaneous productions of the earth, soon felt the utmost diffresses of famine. This brought on contagious difeases; and, in the course of a few months, more than a third part of the inhabitants of the island perished, after experiencing misery in all its various forms '.

Intrigues against Cocourt of Spain.

BUT while Columbus was thus fuccessfully establishing lumbus in the the foundations of the Spanish grandeur in the New World, his enemies laboured with unwearied affiduity to deprive him of the glory and rewards to which his fervices and fufferings intitled him. The hardships unavoidable in a new fettlement, the calamities occasioned by an unhealthy climate, the difasters attending a voyage in unknown seas, were all represented as the fruits of his restless and inconfiderate ambition. His prudent attention to preferve discipline and subordination was denominated excess of rigour; the punishments which he inflicted upon the mutinous and disorderly were imputed to cruelty. These accusations gained fuch credit in a jealous court, that a commissioner was appointed to repair to Hispaniola, and to inspect into the conduct of Columbus. By the recommendation of his enemies, Aguado, a groom of the bed-chamber, was the person to whom this important trust was committed. But in this choice they feem to have been more influenced by the obsequious attachment of the man to their interest, than by his capacity for the station. Puffed up with fuch sudden elevation, Aguado displayed, in the exercise of this office, all the frivolous self-importance,

Herrera, dec. 1. lib. xi. c. 18. Life of Columbus, c. 61. Oviedo, lib. iii. p. 93. D. Benzon Hift. Novi Orbis, lib. i. c. 9. P. Martyr, dec. p. 48.

and acted with all the disgusting insolence, which are natural

to little minds, when raifed to unexpected dignity, or employed in functions to which they are not equal. By liftening with eagerness to every accusation against Columbus, and encouraging not only the malcontent Spaniards, but even the Indians, to produce their grievances, real or imaginary, he fomented the spirit of dissention in the island, without establishing any regulation of public utility, or that tended to redress the many wrongs, with the odium of which he wished to load the admiral's administration. As Columbus felt sensibly how humiliating his fituation must be, if he should remain in the country while fuch a partial inspector observed his motions, and controuled his jurisdiction, he took the resolution of returning to Spain, in order to lay a full account of all his transactions, particularly with respect to the points in dispute between him and his adversaries, before Ferdinand and Isabella, from whose justice and discernment he expected an equal and a favourable

decision. He committed the administration of affairs, during his absence, to Don Bartholomew, his brother, with the title

of Adelantado, or Lieutenant-Governor. By a choice less fortunate, and which proved the fource of many calamities to the colony, he appointed Francis Roldan chief justice, with

very extensive powers 5.

BOOK 11. 1495.

1436.

In returning to Europe, Columbus held a course different Returns to from that which he had taken in his former voyage. He steered Spain. almost due east from Hispaniola, in the parallel of twenty-two degrees of latitude; as experience had not yet discovered the more certain and expeditious method of stretching to the north, in order to fall in with the fouth-west winds. By this ill-

advised

BOOK 11.

advited choice, which, in the infancy of navigation between the New and Old Worlds, can hardly be imputed to the admiral as a defect in naval skill, he was exposed to infinite fatigue and danger, in a perpetual struggle with the trade-winds, which blow without variation from the east between the tropics. Notwithstanding the almost insuperable difficulties of such a navigation, he persisted in his course with his usual patience and firmness, but made so little way, that he was three months without feeing land. At length, his provisions began to fail, the crew was reduced to the scanty allowance of six ounces of bread a-day for each person. The admiral fared no better than the meanest failor. But, even in this extreme distress, he retained the humanity which distinguishes his character, and refused to comply with the earnest folicitations of his crew, fome of whom proposed to feed upon the Indian prisoners whom they were carrying over, and others infifted to throw them over-board, in order to lessen the confumption of their fmall flock. He represented, that they were human beings, reduced by a common calamity to the fame condition with themselves, and intitled to share an equal fate. His authority and remonstrances diffipated those wild ideas suggested by despair. Nor had they time to recur, as he came soon within fight of the coast of Spain, and all their fears and sufferings ended 1.

His reception there.

COLUMBUS appeared at court with the modest but determined considence of a man conscious not only of integrity, but of having performed great services. Ferdinand and Isabella, ashamed of their own facility in lending too savourable an ear to frivolous or ill-founded accusations, received him with

Flerrera, dec. 1. lib. iii. c. 1. Lise of Columbus, c. 64.

fuch diffinguished marks of respect, as covered his enemies with shame. Their censures and calumnies were no more heard of at that juncture. The gold, the pearls, the cotton, and other commodities of value which Columbus produced, feemed fully to refute what the malcontents had propagated with respect to the poverty of the country. By reducing the Indians to obedience, and imposing a regular tax upon them, he had fecured to Spain a large accession of new subjects, and the establishment of a revenue that promised to be considerable. By the mines which he had found out and examined, a fource of, wealth still more copious was opened. Great and unexpected as those advantages were, Columbus represented them only as preludes to future acquisitions, and as the earnest of more important discoveries, which he still meditated, and to which those he had already made would conduct him with ease and certainty '.

THE attentive confideration of all those circumstances made A plan formfuch impression, not only upon Isabella, who was flattered with more regular the idea of being the patroness of all Columbus's enterprises, but establishment even upon Ferdinand, who having originally expressed his difapprobation of his schemes, was still more apt to doubt of their fuccess, that they resolved to supply the colony in Hispaniola with every thing that could render it a permanent establishment. and to furnish Columbus with fuch a fleet, that he might proceed to fearch for those new countries, of whose existence he feemed to be confident. The measures most proper for accomplishing both these designs were concerted with Columbus. Discovery had been the sole object of the first voyage to the New World; and though, in the fecond, fettlement had been

1 Life of Columbus, c. 65. Herrera, dec. 1. lib. iii. c. 1.

proposed,

B O O K II.

proposed, the precautions taken for that purpose had either been infufficient, or were rendered ineffectual by the mutinous spirit of the Spaniards, and the unforeseen calamities arising from various causes. Now a plan was to be formed of a regular colony, that might ferve as a model in all future establishments. Every particular was confidered with attention, and arranged with a scrupulous accuracy. The precise number of adventurers who should be permitted to embark was fixed. They were to be of different ranks and professions; and the proportion of each was established, according to their usefulness and the wants of the colony. A fuitable number of women was to be chosen to accompany these new settlers. As it was the first object to raise provisions in a country where scarcity of food had been the occasion of so much distress, a considerable body of husbandmen was to be carried over. As the Spaniards had then no conception of deriving any benefit from those productions of the New World which have fince yielded fuch large returns of wealth to Europe, but had formed magnificent ideas, and entertained fanguine hopes with respect to the riches contained in the mines which had been discovered, a band of workmen, skilled in the various arts employed in digging and refining the precious metals, was provided. All these emigrants were to receive pay and sublistence for some years, at the public expence k.

A defect init.

Thus far the regulations were prudent and well adapted to the end in view. But as it was foreseen that few would engage voluntarily to settle in a country, whose noxious climate had been fatal to so many of their countrymen, Columbus proposed to transport to Hispaniola such malefactors as had been con-

k Herrera, dec. 1. lib. iii, c. 2.

victed of crimes, which, though capital, were of a less atrocious nature; and that for the future a certain proportion of the offenders usually fent to the gallies, should be condemned to labour in the mines which were to be opened. This advice, given without due reflection, was as inconfiderately adopted. The prisons of Spain were drained, in order to collect membersfor the intended colony; and the judges were instructed to recruit it by their future fentences. It is not, however, withfuch materials, that the foundations of a fociety, destined to be permanent, should be laid. Industry, sobriety, patience, and mutual confidence are indispensably requisite in an infant settlement, where purity of morals must contribute more towards establishing order than the operation or authority of laws. But when such a mixture of what is corrupt is admitted into the original conflitution of the political body, the vices of those unfound and incurable members will probably infect the whole, and must certainly be productive of violent and unhappy effects. This the Spaniards fatally experienced; and the other European nations having fuccessively imitated their practice in this particular, pernicious consequences have followed in their settlements, which can be imputed to no other cause.

BOOK 1495.

THOUGH Columbus obtained, with great facility and dif- Exerted patch, the royal approbation of every measure and regulation that he proposed, his endeavours to carry them into execution were fo long retarded, as must have tired out the patience of any man, less accustomed to encounter difficulties and to furmount them. Those delays were occasioned partly by that tedious formality and spirit of procrassination, with which the

Herrera, dec. 1. lib. iii. c. 2. Touron Hift. Gener, de l'Amerique, i. p. 51.

Spaniards

воок

Spaniards conduct bufiness; and partly by the exhausted state of the treasury, which was drained by the expence of celebrating the marriage of Ferdinand and Isabella's only fon with Margaret of Austria, and that of Joanna, their second daughter, with Philip archduke of Austria"; but must be chiefly imputed to the malicious arts of Columbus's enemies. Aftonished at the reception which he met with upon his return, and overawed by his presence, they gave way, for some time, to a tide of favour too strong for them to oppose. Their enmity, however, was too inveterate to remain long inactive. They refumed their operations, and by the affishance of Fouseca, the minister for Indian affairs, who was now promoted to the bishopric of Badajos, they threw in so many obstacles to protract the preparations for Columbus's expedition, that a year elapsed before he " could procure two ships to carry over a part of the supplies destined for the colony, and almost two years were spent before the small squadron was equipped of which he himself was to take the command °.

Third voyage of Columbus.

This squadron consisted of six ships only, of no great burden, and but indifferently provided for a long or dangerous navigation. The voyage which he now meditated was in a course different from any he had undertaken. As he was fully perfuaded that the fertile regions of India lay to the fouth-west of those countries which he had discovered, he proposed, as the most certain method of finding out these, to stand directly fouth from the Canary or Cape de Verd islands, until he came under the equinoctial line, and then to stretch to the west before the favourable wind for fuch a courfe, which blows invari-May 30. 3 ably between the tropics. With this idea he fet fail, and

touched

m P. Martyr, epift, 168, " Life of Columbus, c. 65.

P Herrera, dec. 1. lib. iii. c. 9.

touched first at the Canary, and then at the Cape de Verd islands. From the former he dispatched three of his ships with a supply of provisions for the colony in Hispaniola: with the other three, he continued his voyage towards the fouth. No remarkable occurrence happened until they arrived within five degrees of the line. There they were becalmed, and at the same time the heat waxed so excessive, that many of their wine casks burst, the liquor in others sowered, and their provisions corrupted?. The Spaniards, who had never ventured fo far to the fouth, were afraid that the ships would take fire, and began to apprehend the reality of what the ancients had taught concerning the destructive qualities of that torrid region of the globe. They were relieved, in some measure, from their fears by a feafonable fall of rain. This, however, though fo heavy and unintermitting that the men could hardly keep the deck, did not greatly mitigate the intenseness of the heat. The admiral, who with his usual vigilance had directed every operation in person, from the beginning of the voyage, was so much exhausted by fatigue and want of sleep, that it brought on a violent fit of the gout, accompanied with a fever. All these circumstances constrained him to yield to the importunities of his crew, and to alter his course to the north west, in order to reach some of the Carribee islands, where he might resit, and be supplied with provisions.

Vol. I.

coast

B O O K II.

coast of Guiana, near the mouth of the Orinoco. This. though a river only of the third or fourth magnitude in the New World, far surpasses any of the streams that water our hemisphere. It rolls towards the ocean such a vast body of water, and rushes into it with such impetuous force, that when it meets the tide, which on that coast rifes to an uncommon height, their collision occasions a swell and agitation of the waves no less surprising than formidable. In this conflict, the irrefistible torrent of the river so far prevails, that it freshens the ocean many leagues with its flood . Columbus, before he could perceive the danger, was entangled among those adverse currents and tempeltuous waves, and it was with the utmost difficulty that he escaped through a narrow strait, which appeared fo tremendous, that he called it La Boca del Drago. As foon as the consternation which this occasioned permitted him to reflect upon the nature of an appearance fo extraordinary, he discerned in it a source of comfort and hope. He justly concluded, that fuch a vast body of water as this river contained, could not be supplied by any island, but must slow through a country of immense extent, and of consequence, that he was now arrived at that continent which it had long been the object of his wishes to discover. Full of this idea, he stood to the west along the coast of those provinces which are now known by the names of Paria and Cumana. He landed in feveral places, and had fome intercourse with the people, who refembled those of Hispaniola in their appearance and manner of life. They wore, as ornaments, small plates of gold, and pearls of confiderable value, which they willingly exchanged for European toys. They seemed to possess a better

⁹ Gumilla Hift. de l'Orencque, tom. i. p. 14.

understanding, and greater courage, than the inhabitants of the islands. The country produced four-footed animals of feveral kinds, as well as a great variety of fowls and fruits'. The admiral was so much delighted with its beauty and fertility, that with the warm enthusiasm of a discoverer, he imagined it to be the paradife described in Scripture, which the Almighty chose for the residence of man, while he retained innocence that rendered him worthy of fuch a habitation. Thus Columbus had the glory not only of discovering to mankind the existence of a New World, but made considerable progress towards a perfect knowledge of it; and was the first man who conducted the Spaniards to that vast continent which has been the chief feat of their empire, and the fource of their treasures in this quarter of the globe. The shattered condition of his ships, scarcity of provisions, his own infirmities, together with the impatience of his crew, prevented him from pursuing his discoveries any farther, and made it necessary to bear away for Hispaniola. In his way thither he discovered the islands of Cubagua and Margarita, which afterwards became remarkable for their pearl-fishery. When he arrived at Hispaniola, he was wasted to an extreme degree with fatigue and sickness; but found the affairs of the colony in such a situation, as afforded him no prospect of enjoying that repose of which he stood so much in need.

воок

Aug. 30.

MANY revolutions had happened in that country during his State of Hifabsence. His brother, the Adelantado, in consequence of an his arrival advice which the admiral gave before his departure, had removed the colony from Isabella to a more commodious station, on the opposite side of the island, and laid the foundation of

B O O K II. St. Domingo ", which was long the most considerable European town in the New World, and the seat of the supreme courts in the Spanish dominions there. As soon as the Spaniards were established in this new settlement, the adelantado, that they might neither languish in inactivity, nor have leisure to form new cabals, marched into those parts of the island which his brother had not yet visited or reduced to obedience. As the people were unable to resist, they submitted every where to the tribute which he imposed. But they soon found the burden to be so intolerable, that, overawed as they were by the superior power of their oppressors, they took arms against them. Those insurrections, however, were not formidable. A constict with timid and naked Indians was neither dangerous nor of doubtful issue.

Mutiny of Roldan. But while the adelantado was employed against them in the field, a mutiny, of an aspect far more alarming, broke out among the Spaniards. The ringleader of it was Francis Roldan, whom Columbus had placed in a station which required him to be the guardian of order and tranquillity in the colony. A turbulent and inconsiderate ambition precipitated him into this desperate measure, so unbecoming his rank. The arguments which he employed to seduce his countrymen were frivolous and ill-founded. He accused Columbus and his two brothers of arrogance and severity; he pretended that they aimed at establishing an independent dominion in the country; he taxed them with an intention of cutting off part of the Spaniards by hunger and satigue, that they might more easily reduce the remainder to subjection; he represented it as unworthy of Casti-

P. Martyr, dec. p. 56.

lians, to remain the tame and passive slaves of three Genoese adventurers. As men have always a propensity to impute the hardships of which they feel the pressure, to the misconduct of their rulers; as every nation views with a jealous eye the power and exaltation of foreigners, Roldan's infinuations made a deep impression on his countrymen. His character and rank added weight to them. A considerable number of the Spaniards made choice of him as their leader, and taking arms against the adelantado and his brother, seized the king's magazine of provisions, and endeavoured to surprise the fort at St. Domingo. This was preserved by the vigilance and courage of Don Diego Columbus. The mutineers were obliged to retire to the province of Xaragua, where they continued not only to disclaim the adelantado's authority themselves, but excited the Indians to throw off the yoke ".

H O O K H. 1498.

SUCH was the distracted state of the colony when Columbus landed at St. Domingo. He was astonished to find that the three ships which he had dispatched from the Canaries were not yet arrived. By the unskilfulness of the pilots, and the violence of currents, they had been carried a hundred and fixty miles to the west of St. Domingo, and forced to take shelter in a harbour of the province of Xaragua, where Roldan and his seditious followers were cantoned. Roldan carefully concealed from the commanders his insurrection against the adelantado, and employing his utmost address to gain their considence, persuaded them to set on shore a considerable part of the new settlers whom they brought over, that they might proceed by land to St. Domingo. It required but sew argu-

^{*} Herrera, dec. 1. lib. iii. c. 5-8. Life of Columbus, c. 74-77. Gomara, c. 23. P. Martyr, p. 78.

B O O K

ments to prevail with those men to espouse his cause. They were the reasse of the jails of Spain, to whom idleness, licentiousness, and deeds of violence were familiar; and they returned eagerly to a course of life nearly resembling that to which they had been accustomed. The commanders of the ships perceiving, when it was too late, their imprudence in disembarking so many of their men, stood away for St. Domingo, and got safe into the port a few days after the admiral; but their stock of provisions was so wasted during a voyage of such long continuance, that they brought little relief to the colony *.

Composed by the prudent conduct of Columbus.

By this junction with a band of fuch bold and desperate affociates, Roldan became extremely formidable, and no less extravagant in his demands. Columbus, though filled with refentment at his ingratitude, and highly exasperated by the infolence of his followers, made no haste to take the field. He trembled at the thoughts of kindling the flames of a civil war, in which, whatever party prevailed, the power and strength of both must be so much wasted, as might encourage the common enemy to unite and complete their destruction. At the same 'me, he observed, that the prejudices and passions which incited rebels to take arms, had so far infected those who still adnered to him, that many of them were adverse, and all cold to the fervice. From fuch fentiments, with respect to the public interest, as well as from this view of his own situation, he chose to negociate rather than to fight. By a seasonable proclamation, offering free pardon to fuch as should merit it by returning to their duty, he made impression upon some of the

malcontents.

^{*} Herrera, dec. 1. lib. iii. c. 12. Life of Columbus, c. 78, 79.

malcontents. By engaging to grant such as should defire it the liberty of returning to Spain, he allured all those unfortunate adventurers, who, from fickness and disappointment, were difgusted with the country. By promising to re-establish Roldan in his former office, he foothed his pride; and by complying with most of his demands in behalf of his followers, he fatisfied their avarice. Thus, gradually and without bloodshed, but after many tedious negociations, he dissolved this dangerous combination which threatened be colony with ruin; and restored the appearance of order, reg government, and tranquillity 7.

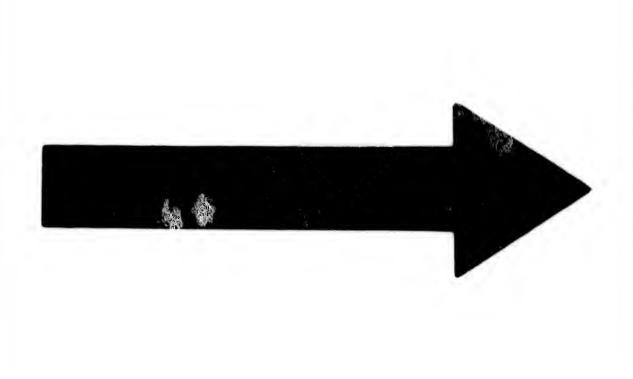

BOOK 1493.

In consequence of this agreement with the mutineers, lands A new mode were allotted them in different parts of the island, and the In- established. dians fettled in each diffrict were appointed to cultivate a certain portion of ground for the use of those new masters. The performance of this work was substituted in place of the tribute formerly imposed; and how necessary soever such a regulation might be in a fickly and feeble colony, it introduced among the Spaniards the Repartimientos, or distributions of Indians established by them in all their settlements, which brought numberless calamities upon that unhappy people, and subjected them to the most grievous oppression. This was not the only bad effect of the infurrection in Hispaniola; it prevented Columbus from profecuting his discoveries on the continent, as felf-preservation obliged him to keep near his person his brother the adelantado, and the failors whom he intended to have employed in that service. As soon as his affairs would permit, he fent some of his ships to Spain with a journal of the

STATE OF THE STATE

B O O K II. voyage which he had made, a description of the new countries which he had discovered, a chart of the coast along which he had failed, and specimens of the gold, the pearls, and other curious or valuable productions which he had acquired by trafficking with the natives. At the same time he transmitted an account of the insurrection in Hispaniola; he accused the mutineers not only of having thrown the colony into such violent convulsions as threatened its dissolution, but of having obflructed every attempt towards discovery and improvement, by their unprovoked rebellion against their superiors, and proposed several regulations for the better government of the island, as well as the extinction of that mutinous spirit, which, though suppressed at present, might soon burst out with additional rage. Roldan and his affociates did not neglect to convey to Spain, by the same ships, an apology for their own conduct, together with their recriminations upon the admiral and his brothers. Unfortunately for the honour of Spain, and the happiness of Columbus, the latter gained most credit in the court of Ferdinand and Isabella, and produced unexpected effects .

The voyage of Vasco de Gama to the East Indies, by the Cape of Good Hope. But, previous to these, events had happened which merit attention, both on account of their own importance, and their connection with the history of the New World. While Columbus was engaged in his successive voyages to the west, the spirit of discovery did not languish in Portugal, the kingdom where it first acquired vigour, and became enterprising. Self-condemnation and regret were not the only sentiments to which the success of Columbus, and reslection upon their own impru-

dence

⁴ Herrera, dec. 1. lib. iii. c. 14. Benzon, Hist. Nov. Orb. lib. i. c. 2.

dence in rejecting his proposals, gave rise among the Portuguese. They excited a generous emulation to surpass his performances, and an ardent defire to make some reparation to their country for their own error. With this view, Emmanuel, who inherited the enterprising genius of his predecessors, persisted in their grand scheme of opening a passage to the East Indies by the Cape of Good Hope; and foon after his accession to the throne, equipped a fquadron for that important voyage. He gave the command of it to Vasco de Gama, a man of noble birth, pollessed of virtue, prudence, and courage, equal to the station. The squadron, like all those sitted out for discovery in the infancy of navigation, was extremely feeble, confisting only of three vessels, of neither burden nor force adequate to the service. As the Europeans were at that time altogether unacquainted with the course of the trade-winds and periodical monfoons, which render navigation in the Atlantic ocean, as well as in the sea that separates Africa from India, at fome feafons easy, and at others not only dangerous, but almost impracticable, the time chosen for Gama's departure was the most improper during the whole year. He set sail from Lisbon on the ninth of July, and standing towards the south, had to struggle for four months with contrary winds, before he could reach the Cape of Good Hope. Here their violence began to abate; and during an interval of calm weather, Gama doubled that formidable promontory, which had fo long been the boundary of navigation, and directed his course towards the northeast, along the African coast. He touched at several ports; and after various adventures, which the Portuguese historians relate with high but just encomiums upon his conduct and intrepidity, he came to anchor before the city of Melinda. Throughout all the vast countries which extend along the coast of Africa, Vol. I. from

1497.

Nov. 20.

from the river Senegal to the confines of Zanguebar, the Portuguese had found a race of men rude and uncultivated, strangers to letters, to arts and commerce, and differing from the inhabitants of Europe no less in their features and complexion, than in their manners and institutions. As they advanced from this, they observed, to their inexpressible joy, that the human form gradually altered and improved, the Asiatic features began to predominate, marks of civilization appeared, letters were known, the Mahometan religion was established, and a commerce, far from being inconsiderable, was carried on. At that time several vessels from India were in the port of Melinda. Gama now purfued his voyage with almost absolute certainty of fuccess, and, under the conduct of a Mahometan pilot, arrived at Calecut, upon the coast of Malabar, on the twentyfecond of May one thousand four hundred and ninety-eight. What he belield of the wealth, the populousness, the cultivation, the industry and arts of this highly civilized country, far furpassed any idea that he had formed, from the imperfect accounts which the Europeans had hitherto received of it. But as he possessed neither sufficient force to attempt a settlement, nor proper commodities with which he could carry on commerce of any consequence, he hastened back to Portugal, with an account of his fuccess in performing a voyage the longest, as well as most difficult, that had ever been made fince the first invention of navigation. He landed at Lisbon on the fourteenth of September one thousand four hundred and ninety-nine, two years, two months, and five days, from the time he left that port'.

Thus, during the course of the fifteenth century, mankind made greater progress in exploring the state of the habitable

* Ramusio, vol. i. \$19, D.

globe, than in all the ages which had elapfed previous to that period. The spirit of discovery, feeble at first and cautious, moved within a very narrow sphere, and made its efforts with hesitation and timidity. Encouraged by success, it became adventurous, and boldly extended its operations. In the courfe of its progression, it continued to acquire vigour, and advanced at length with a rapidity and force which burst through all the limits within which ignorance and fear had hitherto circumfcribed the activity of the human race. Almost fifty years were employed by the Portuguese in creeping along the coast of Africa from Cape Non to Cape de Verd, the latter of which lies only twelve degrees to the fouth of the former. In less than thirty years, they ventured beyond the equinoctial line into another hemitphere, and penetrated to the fouthern extremity of Africa, at the distance of forty-nine degrees from Cape de Verd. During the last seven years, a New World was difcovered in the west, not inferior in extent to all the parts of the earth with which mankind were at that time acquainted. In the east, unknown seas and countries were found out, and a communication, long defired, but hitherto concealed, was opened between Europe and the opulent regions of India. In comparison with events so wonderful and unexpected, all that had hitherto been deemed great or splendid, faded away and disappeared. Vast objects now presented themselves. The human mind, rouzed and interested by the prospect, engaged with ardour in pursuit of them, and exerted its active powers in a new direction.

BOOK 1490.

This spirit of enterprise, though but newly awakened in Discoveries Spain, began foon to operate extensively. All the attempts carried on in Spain by pritowards discovery made in that kingdom, had hitherto been vate adven-

turers.

carried on by Columbus alone, and at the expence of the fovereign. But now private adventurers, allured by the magnificent descriptions he gave of the regions which he had visited, as well as by the specimens of their wealth which he produced, offered to fit out fquadrons at their own risk, and to go in quest of new countries. The Spanish court, whose scanty revenues were exhausted by the charge of its expeditions to the New World, which, though they opened vast prospects of future benefit, yielded a very sparing return of present profit, was extremely willing to devolve the burden of discovery upon its subjects. It seized with joy an opportunity of rendering the avarice, the ingenuity, and efforts of projectors, instrumental in promoting defigns of certain advantage to the public, though of doubtful fuccess with respect to themselves. One of the first propositions of this kind was made by Alonso de Ojeda, a gallant and active officer, who had accompanied Columbus in his fecond voyage. His rank and character procured him fuch credit with the merchants of Seville, that they undertook to equip four ships, provided he could obtain the royal licence, authorifing the voyage. The powerful patronage of the bishop of Badajos casily secured success in a suit so agreeable to the court. Without confulting Columbus, or regarding the rights and jurisdiction which he had acquired by the capitulation in one thousand four hundred and ninety-two, Ojeda was permitted to set out for the New World. In order to direct his course, the bishop communicated to him the admiral's journal of his last voyage, and his charts of the countries which he had discovered. Ojeda struck out into no new path of navigation, but adhering fervilely to the route which Columbus had taken. arrived on the coast of Paria. He traded with the natives, and flanding to the west, proceeded as far as Cape de Vela, and ranged

Ojeda the first of these.

May.

ranged along a confiderable extent of coast beyond that on which Columbus had touched. Having thus afcertained the opinion of Columbus, that this country was a part of the continent, Ojeda returned by way of Hispaniola to Spain, with some reputation as a discoverer, but with little benefit to those who had raised the funds for the expedition.

BOOK 1499. October.

AMERIGO VESPUCCI, a Florentine gentleman, accompanied 1. accompa-Ojeda in this voyage. In what station he served, is uncertain; med by named to be median by named to be not be but as he was an experienced failor, and eminently skilful in pucci. all the sciences subservient to navigation, he seems to have acquired fuch authority among his companions, that they willingly allowed him to have a chief share in directing their operations during the voyage. Soon after his return, he transmitted an account of his adventures and discoveries to one of his countrymen; and labouring with the vanity of a traveller to magnify his own exploits, he had the address and confidence to frame his narrative, fo as to make it appear that he had the glory of having first discovered the continent in the New World. Amerigo's account was drawn up not only with art, but with fome elegance. It contained an amusing history of his voyage, and judicious observations upon the natural productions, the inhabitants, and the customs of the countries which he had visited. As it was the first description of any part of the New World that was published, a performance so well calculated to gratify the passion of mankind for what is new and marvellous, circulated rapidly, and was read with admiration. The country of which Amerigo was supposed to be the discoverer, came From whom gradually to be called by his name. The caprice of mankind, the name of America is often as unaccountable as unjust, has perpetuated this error, given to the New World,

BOOK II. By the universal consent of nations, AMERICA is the name bestowed on this new quarter of the globe. The bold pretenfions of a fortunate impostor have robbed the discoverer of the New World of a distinction which belonged to him. The name of Amerigo has supplanted that of Columbus; and mankind may regret an act of injustice, which, having received the function of time, it is now too late to redress.

Voyage of Alonio NigDURING the fame year, another voyage of discovery was undertaken. Columbus not only introduced the spirit of naval enterprise into Spain, but all the first adventurers who distinguished themselves in this new career, were formed by his instructions, and acquired in his voyages the skill and information which qualified them to imitate his example. Alonso Nigno, who had served under the admiral in his last expedition, sitted out, in conjunction with Christopher Guerra, a merchant of Seville, a single ship, and sailed to the coast of Paria. This voyage seems to have been conducted with greater attention to private emolument, than to any general or national object. Nigno and Guerra made no discoveries of any importance; but they brought home such a return of gold and pearls, as inflamed their countrymen with the desire of engaging in similar adventures.

January 13. Of Vincent Yanez Pinzon. Soon after, Vincent Yanez Pinzon, one of the admiral's companions in his first voyage, sailed from Palos with four ships. He stood boldly towards the south, and was the first Spaniard who ventured to cross the equinoctial line; but he seems to have landed on no part of the coast beyond the mouth

[·] Sce NOTE XXII.

⁴ P. Martyr, dec. p. 87. Herrera, dec. 1. lib. iv. c. 5.

of the Maragnon, or river of the Amazons. All these navigators adopted the erroneous theory of Columbus, and believed that the countries which they had discovered were part of the vast continent of India .

BOOK 1500.

DURING this first year of the sixteenth century, that fertile The Portudistrict of America, on the confines of which Pinzon had stopt ver Brasil. short, was more fully discovered. The successful voyage of Gama to the East Indies, having encouraged the king of Portugal to fit out a fleet so powerful, as not only to carry on trade, but to attempt conquest, he gave the command of it to Pedro Alvarez Cabral. In order to avoid the coast of Africa, where he was certain of meeting with variable breezes, or frequent calms, to retard his voyage, Cabral stood out to sea, and kept so far to the west, that, to his surprise, he found himself upon the shore of an unknown country, in the tenth degree beyond the line. He imagined, at first, that it was some island in the Atlantic ocean hitherto unobserved; but, proceeding along its coast for several days, he was led gradually to believe, that a country so extensive formed a part of some great continent. This latter opinion was well founded. The country with which he fell in belongs to that province in South America now known by the name of Brasil. He landed; and having formed a very high idea of the fertility of the foil, and agreeableness of the climate, he took possession of it for the crown of Portugal, and dispatched a ship to Lisbon with an account of this event, which appeared to be no less important than it was unexpected f. Columbus's discovery of the New World was the effort of an active genius, enlightened by science, guided by experience,

[.] Herrera, dec. 1. lib. iv. c. 6. P. Martyr, dec. p. 95.

Heirera, dec. 1. lib. iv. c. 7.

and acting upon a regular plan, executed with no less courage than perseverance. But from this adventure of the Portuguese, it appears that chance might have accomplished that great design, which it is now the pride of human reason to have formed and persected. If the sagacity of Columbus had not conducted mankind to America, Cabral, by a fortunate accident, might have led them, a few years later, to the knowledge of that extensive continent.

Machinations against Columbus.

WHILE the Spaniards and Portuguese, by those successive voyages, were daily acquiring more enlarged ideas of the extent and opulence of that quarter of the globe which Columbus had made known to them, he himself, far from enjoying the tranquillity and honours with which his fervices should have been recompensed, was struggling with every distress in which the envy and malevolence of the people under his command, or the ingratitude of the court which he ferved, could involve him. Though the pacification with Roldan broke the union and weakened the force of the mutineers, it did not extirpate the feeds of discord out of the island. Several of the malcontents continued in arms, refusing to submit to the admiral. He and his brothers were obliged to take the field alternately, in order to check their incursions, or to punish their crimes. The perpetual occupation and disquiet which this created, prevented him from giving due attention to the dangerous machinations of his enemies in the court of Spain. A good number of those who were most distatisfied with his administration, had embraced the opportunity of returning to Europe with the ships which he dispatched from St. Domingo. The final disappointment of all their hopes inflamed the rage of these unfortunate

E Herrera, dec. 1. lib. vii. c. 5.

adventurers

adventurers against Columbus to the utmost pitch. Their poverty and diffres, by exciting compassion, rendered their accusations credible, and their complaints interesting. teazed Ferdinand and Isabella incessantly with memorials, containing the detail of their own grievances, and the articles of their charge against Columbus. Whenever either the king or queen appeared in public, they furrounded them in a tumultuary manner, infifting with importunate clamours for payment of the arrears due to them, and demanding vengeance upon the author of their fufferings. They infulted the admiral's fons wherever they met them, reproaching them as the offfpring of the projector, whose fatal curiosity had discovered those pernicious regions which drained Spain of its wealth, and would prove the grave of its people. Those avowed endeavours of the malcontents from America to ruin Columbus, were feconded by the fecret, but more dangerous infinuations of that party among the courtiers, who had always thwarted his schemes, and envied his success and credit h.

BOOK 1500.

FERDINAND was disposed to listen, not only with a willing, Their inbut with a partial ear, to these accusations. Notwithstanding Ferdinand the flattering accounts which Columbus had given of the and Isabella. riches of America, the remittances from it had hitherto been fo scanty, that they fell far short of defraying the expence of the armaments fitted out. The glory of the discovery, together with the prospect of remote commercial advantages, was all that Spain had yet received in return for the efforts which she had made. But time had already diminished the first senfations of joy which the discovery of a New World occasioned, and fame alone was not an object to fatisfy the cold interested

h Life of Columbus, c. 85.

mind of Ferdinand. The nature of commerce was then so little understood, that, where immediate gain was not acquired, the hope of distant benefit, or of slow and moderate returns, was totally difregarded. Ferdinand considered Spain, on this account, as a loser by the enterprise of Columbus, and imputed it to his misconduct and incapacity for government, that a country abounding in gold had yielded nothing of value to its conquerors. Even Isabella, who, from the favourable opinion which she entertained of Columbus, had uniformly protected him, was shaken at length by the number and boldness of his accusers, and began to suspect that a disaffection so general must have been occasioned by real grievances, which called for redress. The bishop of Badajos, with his usual animosity against Columbus, encouraged these suspections, and confirmed them.

Fatal effects of this.

As foon as the queen began to give way to the torrent of calumny, a resolution fatal to Columbus was taken. Francis de Bovadilla, a knight of Calatrava, was appointed to repair to Hispaniola, with full powers to inquire into the conduct of Columbus, and, if he found the charge of mal-administration proved, to superfede him, and assume the government of the island. It was impossible to escape condemnation, when this preposterous commission made it the interest of the judge to find the person whom he was sent to try, guilty. Though Columbus had now composed all the diffentions in the island; though he had brought both Spaniards and Indians to submit peaceably to his government; though he had made fuch effectual provifion for working the mines, and cultivating the country, as would have fecured a confiderable revenue to the king, as well as large profits to individuals, Bovadilla, without deigning to attend

attend to the nature or merit of those services, discovered, from the moment that he landed in Hispaniola, a determined purpose of treating him as a criminal. He took possession of the admiral's house in St. Domingo, from which he happened at that time to be absent, and seized his effects, as if he had been already convicted; he rendered himself master of the fort and of the king's stores by violence; he required all persons to acknowledge him as supreme governor; he set at liberty the prisoners confined by the admiral, and summoned him to appear before his tribunal, in order to answer for his conduct; transmitting to him, together with the summons, a copy of the royal mandate, by which Columbus was enjoined to yield implicit obedience to his commands.

BOOK 1500.

COLUMBUS, though deeply affected with the ingratitude Columbus and injustice of Ferdinand and Isabella, did not hesitate a moment about his own conduct. He submitted to the will of his fovereigns with a respectful filence, and repaired directly to the court of that violent and partial judge whom they had authorised to try him. Bovadilla, without admitting him into his presence, ordered him instantly to be arrested, to be loaded with chains, and hurried on board a ship. Even under this humiliating reverse of fortune, the firmness of mind which distinguishes the character of Columbus, did not forsake him. Conscious of his own integrity, and solacing himself with reslecting upon the great things which he had atchieved, he endured this infult offered to his character, not only with composure, but with dignity. Nor had he the confolation of sympathy to mitigate his fufferings. Bovadilla had already rendered himfelf so extremely popular, by granting various immunities to the colony, by liberal donations of Indians to all who applied

Oftober.

BOOK II.

for them, and by relaxing the reins of discipline and government, that the Spaniards, who were mostly adventurers, whom their indigence or crimes had impelled to abandon their native country, expressed the most indecent satisfaction with the disgrace and imprisonment of Columbus. They flattered themfelves, that now they should enjoy an uncontrouled liberty, more suitable to their disposition and former habits of life. Among persons thus prepared to censure the proceedings, and to asperse the character of Columbus, Bovadilla collected materials for a charge against him. All accusations, the most improbable as well as inconfistent, were received. No informer, however infamous, was rejected. The result of this inquest, no less indecent than partial, he transmitted to Spain. At the same time, he ordered Columbus, with his two brothers, to be carried thither in fetters; and, adding cruelty to infult, he confined them in different ships, and excluded them from the comfort of that friendly intercourse which might have foothed their common distress. But while the Spaniards in Hispaniola viewed the arbitrary and insolent proceedings of Boyadilla with a general approbation, which reflects dishonour upon their name and country, one man still retained the methory of the great actions which Columbus had performed, and was touched with the fentiments of veneration and pity due to his rank, his age, and his merit. Alonfo de Vallejo, the captain of the vessel on board which the admiral was confined, as foon as he was clear of the island, approached his prisoner with great respect, and offered to release him from the fetters with which he was unjustly loaded. "No," replied Columbus, with a generous indignation, "I wear these irons in consequence of an order from my sovereigns. They shall find me as obedient to this as to their other injunctions. By their command I have

have been confined, and their command alone shall set me at liberty '."

B O O K

FORTUNATELY, the voyage to Spain was extremely short. As foon as Ferdinand and Isabella were informed that Columbus was brought home a prisoner, and in chains, they perceived at once what universal astonishment this event must occasion, and what an impression to their disadvantage it must make. All Europe, they forefaw, would be filled with indignation at this ungenerous requital of a man who had performed actions worthy of the highest recompence, and would exclaim against the injustice of the nation, to which he had been such an eminent benefactor, as well as against the ingratitude of the princes whose reign he had rendered illustrious. Ashamed of their own conduct, and eager not only to make some reparation for this injury, but to efface the stain which it might fix upon their character, they instantly issued orders to set Columbus at liberty, invited him to court, and remitted money to enable him to appear there in a manner suitable to his rank. When he entered the royal presence, Columbus threw himself at the feet of his fovereigns. He remained for some time filent; the various passions which agitated his mind suppressing his power of utterance. At length he recovered himself, and vindicated his conduct in a long discourse, producing the most satisfying proofs of his own integrity as well as good intention, and evidence, no less clear, of the malevolence of his enemies, who, not fatisfied with having ruined his fortune, laboured to deprive him of what alone was now left, his honour and his fame. Ferdinand received him with decent civility, and Isabella with

Nov. 23. Set at liberty, but deprived of all authority.

tenderness.

i Lise of Columbus, c. 86. Herrera, dec. 1. lib. iv. c. 8.-11. Gomara Hist. c. 23. Oviedo, lib. iii. c. 6.

tenderness and respect. They both expressed their forrow for what had happened, disavowed their knowledge of it, and joined in promising him protection and future favour. But though they instantly degraded Bovadilla, in order to remove from themselves any suspicion of having authorised his violent proceedings, they did not restore to Columbus his jurisdiction and privileges as viceroy of those countries which he had discovered. Though willing to appear the avengers of Columbus's wrongs, that illiberal jealousy which prompted them to invest Bovadilla with such authority as put it in his power to treat the admiral with indignity, still subsisted. They were afraid to trust a man to whom they were so highly indebted, and retaining him at court under various pretexts, they appointed Nicholas de Ovando, a knight of the military order of Alcantara, governor of Hispaniola *.

Columbus was deeply affected with this new injury, which came from hands that feemed to be employed in making reparation for his past sufferings. The sensibility with which great minds feel every thing that implies any suspicion of their integrity, or that wears the aspect of an affront, is exquisite. Columbus had experienced both from the Spaniards; and their ungenerous conduct exasperated him to such a degree, that he could no longer conceal the sentiments which it excited. Wherever he went, he carried about with him, as a memorial of their ingratitude, those fetters with which he had been loaded. They were constantly hung up in his chamber, and he gave orders that when he died they should be buried in his grave.

prejudices..

prejudices. With this view, he established regulations, in every point the reverse of those which Columbus deemed essential to the prosperity of the colony. Instead of the severe discipline, necessary in order to habituate the dissolute and corrupted members of which the fociety was composed, to the restraints of law and subordination, he suffered them to enjoy fuch uncontrouled licence, as encouraged the wildest excesses. Instead of protecting the Indians, he gave a legal fanction to the oppression of that unhappy people. He took the exact number of fuch as survived their past calamities, divided them into distinct classes, distributed them in property among his adherents, and reduced the whole island to a state of complete fervitude. As the avarice of the Spaniards was too rapacious and impatient to try any method of acquiring wealth but that of searching for gold, this servitude became as grievous as it was unjust. The Indians were driven in crowds to the mountains, and compelled to work in the mines by masters, who imposed their tasks without mercy or discretion. Labour, so disproportioned to their strength and former habits of life, wasted that feeble race of men, with such rapid consumption, as must have soon terminated in the utter extinction of the ancient inhabitants of the island ".

New regulations established. THE necessity of applying a speedy remedy to those disorders, hastened Ovando's departure. He had the command of the most respectable armament hitherto sitted out for the New World. It consisted of thirty-two ships, on board of which two thousand sive hundred persons embarked, with an intention of settling in the country. Upon the arrival of the new governor

with

with this powerful reinforcement to the colony, Bovadilla refigned his charge, and was commanded to return infantly to Spain, in order to answer for his conduct. Roldan, and the other ringleaders of the mutineers who had been most active in opposing Columbus, were required to leave the island at the fame time. A proclamation was iffued, declaring the natives to be free subjects of Spain, of whom no service was to be exacted contrary to their own inclination, and without paying them an adequate price for their labour. With respect to the Spaniards themselves, various regulations were made, tending to suppress the licentious spirit which had been so fatal to the colony, and to establish that reverence for law and order on which society is founded, and to which it is indebted for its increase and stability. In order to limit the exorbitant gain which private persons were supposed to make by working the mines, an ordinance was published, directing all the gold to be brought to a public fmelting-house, and declaring one half of it to be the property of the crown o.

воок 1502.

WHILE these steps were taking for securing the tranquillity and welfare of the colony which Columbus had planted, he ation of Cohimself was engaged in the unpleasant employment of soliciting the favour of an ungrateful court, and, notwithstanding all his merit and fervices, he folicited in vain. manded, in terms of the original capitulation in one thousand four hundred and ninety-two, to be reinstated in his office of viceroy over the countries which he had discovered. By a strange fatality, the circumstance which he urged in support of his claim, determined a jealous monarch to reject it. The

BOOK

greatness of his discoveries, and the prospect of their increasing value, made Ferdinand confider the concessions in the capitulation as extravagant and impolitic. He was afraid of entrusting a subject with the exercise of a jurisdiction that now appeared to be so extremely extensive, and might grow to be no less formidable. He inspired Isabella with the same suspicions; and under various pretexts, equally frivolous and unjust, they eluded all Columbus's requisitions to perform that which a solemn treaty bound them to accomplish. After attending the court of Spain for near two years, as an humble fuitor, he found it impossible to remove Ferdinand's prejudices and apprehensions; and perceived, at length, that he laboured in vain, when he urged a claim of justice or merit with an interested and unfeeling prince.

He forms new schemes of difcovery.

But even this ungenerous return did not discourage him from pursuing the great object which first called forth his inventive genius, and excited him to attempt discovery. new passage to the East Indies was his original and favourite scheme. This still engrossed his thoughts; and either from his own observations in his voyage to Paria, or from some obscure hint of the natives, or from the accounts given by Bastidas and de la Cosa, of their expedition, he conceived an opinion that, beyond the continent of America, there was a fea which extended to the East Indies, and hoped to find some strait or narrow neck of land, by which a communication might be opened with it and the part of the ocean already known. By a very fortunate conjecture, he supposed this strait or isthmus to be fituated near the gulf of Darien. Full of this idea, though he was now of an advanced age, worn out with fatigue, and broken with infirmities, he offered, with the alacrity of a youthful

BOOK II.

youthful adventurer, to undertake a voyage which would afcertain this important point, and perfect the grand scheme which from the beginning he proposed to accomplish. Several circumstances concurred in disposing Ferdinand and Isabella to lend a favourable ear to this propofal. They were glad to have the pretext of any honourable employment for removing from court a man with whose demands they deemed it impolitic to comply, and whose services it was indecent to neglect. Though unwilling to reward Columbus, they were not insenfible of his merit, and from their experience of his skill and conduct, had reason to give credit to his conjectures, and to confide in his fuccess. To these considerations, a third must be added of still more powerful influence. About this time the Portuguese fleet, under Cabral, arrived from the Indies; and, by the richness of its cargo, gave the people of Europe a more perfect idea, than they had hitherto been able to form, of the opulence and fertility of the east. The Portuguese had been more fortunate in their discoveries than the Spaniards. They had opened a communication with countries where industry, arts, and elegance flourished; and where commerce had been longer established, and carried to greater extent than in any region of the earth. Their first voyages thither yielded immediate, as well as vast returns of profit, in commodities extremely precious and in great request. Lisbon became immediately the feat of commerce and of wealth; while Spain had only the expectation of remote benefit, and of future gain, from the western world. Nothing, then, could be more acceptable to the Spaniards than Columbus's offer to conduct them to the east, by a route which he expected to be shorter, as well as less dangerous, than that which the Portuguese had taken.

Y 2

Even

164

Even Ferdinand was roused by such a prospect, and warmly approved of the undertaking.

His fourth

BUT, interesting as the object of this voyage was to the nation, Columbus could procure only four small barks, the largest of which did not exceed feventy tons in burden, for performing Accustomed to brave danger, and to engage in arduous undertakings with inadequate force, he did not helitate to accept the command of this pitiful squadron. His brother Bartholomew, and his fecond fon Ferdinand, the historian of his actions, accompanied him. He failed from Cadiz on the ninth of May, and touched, as usual, at the Canary Islands; from thence he purposed to have stood directly for the continent; but his largest vessel was so clumfy and unfit for service, as constrained him to bear away for Hispaniola, in hopes of exchanging her for some ship of the fleet that had carried over Ovando. When he arrived off St. Domingo, he found eighteen of these ships ready loaded, and on the point of departing for Spain. Columbus immediately acquainted the governor with the destination of his voyage, and the accident which had obliged him to alter his route. He requested permission to enter the harbour, not only that he might negociate the exchange of his ship, but that he might take melter during a violent hurricane, of which he discerned the approach from various prognoftics, which his experience and fagacity had taught him to observe. On that account, he advised him likewife to put off for some days the departure of the fleet bound for Spain. But Ovando refused his request, and despised his counsel. Under circumstances in which humanity would have afforded refuge to a stranger, Columbus was denied admittance

June 29.

into a country of which he had discovered the existence, and acquired the possession. His falutary warning, which might have been attended to without any inconveniency, was regarded as the dream of a visionary prophet, who arrogantly pretended to predict an event beyond the reach of human forefight. The fleet set sail for Spain. Next night the hurricane came on with dreadful impetuolity. Columbus, aware of the danger, took precautions against it, and faved his little squadron. The fleet destined for Spain met with the fate which the rashness and obstinacy of its commanders merited. Of eighteen ships two or three only escaped: In this general wreck perished Bovadilla, Roldan, and the greater part of those who had been the most active in persecuting Columbus, and oppressing the Indians. Together with themselves, all the wealth which they had acquired by their injuffice and cruelty was fwallowed up. It exceeded in value two hundred thousand pe/o's; an immense fum at that period, and fufficient not only to have screened them from any fevere ferutiny into their conduct, but to have fecured them a gracious reception in the Spanish court. Among the ships that escaped, one had on board all the essects of Golumbus which had been recovered from the wreck of his fortune. Historians, struck with the exact discrimination of characters, as well as the just distribution of rewards and punishments, conspicuous in those events, universally attribute them to an immediate interpolition of divine Providence, in order to avenge the wrongs of an injured man, and to punish the oppressors of an innocent people. Upon the ignorant and superstitious race of men, who were witnesses of this occurrence, it made a different impression. From an opinion, which vulgar admiration is apt to entertain with respect to persons who have diffinguished themselves by their fagacity and inventions, they believed

believed Columbus to be possessed of supernatural powers, and imagined that he had conjured up this dreadful storm by magical art, and incantations, in order to be revenged of his enemies?

July 14. Searches in vain for a paffage to the Indian ocean.

COLUMBUS foon left Hispaniola, where he had met with such an inhospitable reception, and stood towards the continent. After a tedious and dangerous voyage, he discovered Guanaia, an island not far distant from the coast of Honduras. There he had an interview with some inhabitants of the continent. who arrived in a large canoe. They appeared to be a people more civilized, and who had made greater progress in the knowledge of useful arts, than any whom he had hitherto discovered. In return to the inquiries which the Spaniards made, with their usual eagerness, concerning the places where they got the gold which they wore by way of ornament, they directed them to countries situated to the west, in which, according to their description, gold was found in such profusion. that it was applied to the most common uses. Instead of steering in quest of a country so inviting, which would have conducted them along the coast of Yucatan to the rich empire of Mexico, Columbus was so bent upon his favourite scheme of finding out that strait which communicated with the Indian ocean, that he bore away to the east towards the gulf of Darien. In this navigation he discovered all the coast of the continent, from Cape Gracias a Dios, to a harbour which, on account of its beauty and fecurity, he called Porto Bello. He fearched, in vain, for the imaginary strait, through which he expected to make his way into an unknown fea; and though he went on shore several times, and advanced into the country,

P Oviedo, lib. iii. c. 7. 9. Herrers, dec. 1. lib. v. c. 1, 2. Life of Columbus, c. 88.

he did not penetrate so far as to cross the narrow isthmus which separates the gulf of Mexico from the great southern ocean. He was so much delighted, however, with the fertility of the country, and conceived such an idea of its wealth, from the specimens of gold produced by the natives, that he resolved to leave a finall colony upon the river Belem, in the province of Veragua, under the command of his brother, and to return himself to Spain, in order to procure what was requisite for rendering the establishment permanent. But the ungovernable spirit of the people under his command, deprived Columbus of the glory of planting the first colony on the continent of Ame-Their infolence and rapaciousness provoked the natives to take arms, and as they were a more hardy and warlike race of men than the inhabitants of the islands, they cut off part of the Spaniards, and obliged the rest to abandon a station which they were unable to maintain 4.

awaited him in this voyage. He was driven back by a violent tempell from the coast of Cuba, his ships fell foul of one another, and were fo much shattered by the shock, that with the utmost difficulty they reached Jamaica, where he was obliged to run them aground, to prevent them from finking. The measure of his calamities feemed now to be full. He was cast ashore upon an island at a considerable distance from the only settlement of the Spaniards in America. His ships were ruined beyond the possibility of being repaired. To convey an account of his fituation to Hispaniola, appeared impracticable; and without this it was vain to expect relief. His genius, fertile in refources, and most vigorous in those perilous extremities when feeble minds abandon themselves to despair, discovered the only expedient which afforded any prospect of deliverance. He had recourse to the hospitable kindness of the natives, who considering the Spaniards as beings of a superior nature, were eager, on every occasion, to minister to their wants. From them he obtained two of their canoes, each formed out of the trunk of a fingle tree, hollowed with fire, and fo mif-shapen and aukward as hardly to merit the name of boats. In these, which were fit only for creeping along the coast, or crossing from one bay to another, Mendez, a Spaniard, and Fieschi, a Genocse, two gentlemen particularly attached to Columbus, gallantly offered to set out for Hispaniola, upon a voyage of above thirty leagues'. This they accomplished in ten days, after surmounting incredible dangers, and enduring fuch fatigue, that feveral of the Indians who accompanied them funk under it, and died. 'The attention paid to them by the governor of Hispaniola was neither such as their courage merited, nor the distress of the persons from whom they came, required. Ovando, from a

Oviedo, lib. iii. c. 9.

mean jealoufy of Columbus, was afraid of allowing him to fet his foot in the island under his government. This ungenerous passion hardened his heart against every tender sentiment, which reflection upon the fervices and misfortunes of that great man, or compassion for his own fellow-citizens, involved in the same calamities, must have excited. Mendez and Fieschi spent eight months in foliciting relief for their commander and affociates, without any prospect of obtaining it.

n

воок 1503.

DURING this period, various passions agitated the mind of His distress Columbus, and his companions in advertity. At first the ex- and sufferings there. pectation of speedy deliverance, from the success of Mendez and Fieschi's voyage, cheered the spirits of the most desponding. After some time the more timorous began to suspect that they had miscarried in their daring attempt. At length, all concluded that they had perished. The ray of hope which had broke in upon them, made their condition appear now more Despair, heightened by disappointment, settled in difmal. every breast. Their last resource had failed, and nothing remained but to end their miserable days among naked savages, far from their country and their friends. The scamen, in a transport of rage, rose in open mutiny, threatened the life of Columbus, whom they reproached as the author of all their calamities, feized ten canoes, which he had purchased from the Indians, and despising his remonstrances and entreaties, made off with them to a distant part of the island. At the same time, the natives murmured at the long refidence of the Spaniards in their country. As their industry was not greater than that of their neighbours in Hispaniola, like them, they found the burden of supporting so many strangers to be altogether intolerable. They began to bring in provisions with reluctance, they fur-Vol. I. \mathbf{Z} nished

1504.

BOOK II. nished them with a sparing hand, and threatened to withdraw those supplies altogether. Such a resolution must quickly have been fatal to the Spaniards. Their fafety depended upon the good-will of the Indians; and unless they could revive the admiration and reverence with which that fimple people had at first beheld them, destruction was unavoidable. Though the licentious proceedings of the mutineers had, in a great measure, effaced those impressions which had been so favourable to the Spaniards, the ingenuity of Columbus fuggested a happy artifice, that not only restored but heightened the high opinion which the Indians had originally entertained of them. By his fkill in aftronomy, he knew that there was shortly to be a total eclipse of the moon. He assembled all the principal persons of the diffrict around him on the day before it happened, and, after reproaching them for their fickleness in withdrawing their affection and affiftance from men whom they had lately revered, he told them, that the Spaniards were servants of the Great Spirit who dwells in heaven, who made and governs the world; that he, offended at their refusing to support men who were the objects of his peculiar favour, was preparing to punish. this crime with exemplary feverity, and that very night the moon should withhold her light, and appear of a bloody hue, as a fign of the divine wrath, and an emblem of the vengeance ready to fall upon them. To this marvellous prediction fome of them liftened with the careless indifference peculiar to the people of America; others, with the credulous aftonishment natural to barbarians. But when the moon began gradually to be darkened, and at length appeared of a red colour, all were flruck with terror. They run with consternation to their houses, and returning inflantly to Columbus loaded with provisions, threw them at his feet, conjuring him to intercede with the Great

Great Spirit to avert the destruction with which they were threatened. Columbus, feeming to be moved by their entreaties, promifed to comply with their defire. The eclipse went off, the moon recovered its splendour, and from that day the Spaniards were not only furnished profusely with provisions, but the natives, with superstitious attention, avoided every thing that could give them offence '.

BOOK 11. 1504.

DURING those transactions, the mutineers had made repeated A cruel addiattempts to pass over to Hispaniola in the canoes which they had feized. But, from their own misconduct, or the violence of the winds and currents, their efforts were all unfuccefsful. Enraged at this disappointment, they marched towards that part of the island where Columbus remained, threatening him with new danger and infults. While they were advancing, an event happened, more cruel and afflicting than any calamity which he dreaded from them. The governor of Hispaniola, whose mind was still filled with some dark suspicions of Columbus, fent a fmall bark to Jamaica, not to deliver his diffressed countrymen, but to fpy out their condition. Left the sympathy of those whom he employed should afford them relief, contrary to his intention, he gave the command of this veffel to Escobar, an inveterate enemy of Columbus, who adhering to his inftructions with malignant accuracy, cast anchor at some distance from the island, approached the shore in a small boat, observed the wretched plight of the Spaniards, delivered a letter of empty compliment to the admiral, received his answer, and departed. When the Spaniards first descried the vessel standing towards the illand, every heart exulted, as if the long-expected hour of

Life of Columbus, c. 103. Herrera, dec. 1. lib. vi. c. 5, 6. Benzon, Hift. lib. i. c. 14.

their deliverance had at length arrived; but when it disappeared so suddenly, they sunk into the deepest dejection, and all their hopes died away. Columbus alone, though he felt most sensibly this wanton insult which Ovando added to his past neglect, retained such composure of mind, as to be able to cheer his followers. He assured them, that Mendez and Fieschi had reached Hispaniola in safety; that they would speedily procure ships to carry them off; and as Escobar's vessel could not take them all on board, that he had refused to go with her, because he was determined never to abandon the faithful companions of his distress. Soothed with the expectation of speedy deliverance, and delighted with his apparent generosity in attending more to their preservation than to his own safety, their spirits revived, and he regained their considence ".

WITHOUT this confidence, he could not have refifted the mutineers, who were now at hand. All his endeavours to reclaim those desperate men had no effect but to increase their frenzy. Their demands became every day more extravagant, and their intentions more violent and bloody. The common safety rendered it necessary to oppose them with open force. Columbus, who had been long afflicted with the gout, could not take the field. His brother, the Adelantado, marched against them. They quickly met. The mutineers rejected with scorn terms of accommodation, which he once more offered them, and rushed on boldly to the attack. They fell not upon an enemy unprepared to receive them. In the first shock, several of their most daring leaders were slain. The Adelantado, whose strength was equal to his courage, closed with their

captain, wounded, disarmed, and took him prisoner *. At fight of this, the rest sled with a dastardly sear, suitable to their former insolence. Soon after, they submitted in a body to Columbus, and bound themselves by the most solemn oaths to obey all his commands. Hardly was tranquillity re-established, when the ships appeared, whose arrival Columbus had promised with great address, though he could foresee it with little certainty. With transports of joy, the Spaniards quitted an island in which the unfeeling jealousy of Ovando had suffered them to languish above a year, exposed to misery in all its various forms.

B ○ ○ K 11. 1504.

WHEN they arrived at St. Domingo, the governor, with the mean artifice of a vulgar mind, that labours to atone for insolence by fervility, fawned on the man whom he envied, and had attempted to ruin. He received Columbus with the most studied respect, lodged him in his own house, and distinguished him with every mark of honour. But, amidst those over-acted demonstrations of regard, he could not conceal the hatred and malignity latent in his heart. He fet at liberty the captain of the mutineers, whom Columbus had brought over, in chains, to be tried for his crimes, and threatened such as had adhered to the admiral with proceeding to a judicial inquiry into their conduct. Columbus submitted in filence to what he could not redress; but discovered an extreme impatience to quit a country under the jurisdiction of a man who had treated him, on every occasion, with inhumanity and injustice. His preparations were foon finished, and he set sail for Spain with two ships. Difasters similar to those which had accompanied him through

life continued to pursue him to the end of his career. One of his vessels being disabled, was soon forced back to St. Domingo; the other, stattered by violent storms, sailed seven hundred leagues with jury-masts, and reached with difficulty the port of St. Lucar,

Death of Isabelia. Nov. 9.

THERE he received the account of an event the most fatal that could have befallen him, and which completed his miffortunes. This was the death of his patroness queen Isabella, in whose justice, humanity, and favour, he consided as his last resource. None now remained to redress his wrongs, or to reward him for his fervices and fufferings, but Ferdinand, who had fo long opposed and so often injured him. To solicit a prince thus prejudiced against him, was an occupation no less irksome than hopeless. In this, however, was Columbus doomed to employ the close of his days. As foon as his health was in fome degree re-established, he repaired to court; and though he was received there with civility barely decent, he plied Ferdinand with petition after petition, demanding the punishment of his oppressors, and the restitution of all the privileges bestowed upon him by the capitulation of one thousand four hundred and ninety-two. Ferdinand amused him with fair words and unmeaning promifes. Inflead of granting his claims, he proposed expedients in order to elude them, and fpun out the affair with fuch apparent art, as plainly discovered his intention that it flould never be terminated. The declining health of Columbus flattered Ferdinand with the hopes of being foon delivered from an importunate fuitor, and encouraged him to perfevere in this illiberal plan. HISTORY

O F

A M E R I C A.

BOOK III.

THILE Columbus was employed in his last voyage, feveral events worthy of notice happened in Hispa-The colony there, the parent and nurse of all the subsequent establishments of Spain in the New World, gradually acquired the form of a regular and prosperous society. The humane solicitude of Isabella to protect the Indians from oppression, and particularly the proclamation, by which the Spaniards were prohibited to compel them to work, retarded, it is true, for some time, the progress of improvement. The natives, who confidered exemption from toil as supreme felicity, fcorned every allurement and reward by which they were invited to labour. The Spaniards had not a sufficient number of hands either to work the mines or to cultivate the foil. Several of the first colonists, who had been accustomed to the service of the Indians, quitted the island, when deprived of those instruments without which they knew not how to carry on any ope-Vol. I. ration. A a

BOOK III.

1505.

ration. Many of those who came over with Ovando, were feized with the distempers peculiar to the climate, and in a short space above a thousand of them died. At the same time, the demand of one half of the product of the mines as the royal share, was found to be an exaction so exorbitant, that no adventurers would engage to work them upon such terms. In order to fave the colony from ruin, Ovando ventured to relax the rigour of the royal edicts. He made a new distribution of the Indians among the Spaniards, compelling them to labour, for a stated time, in digging the mines, or in cultivating the ground; but, in order to screen himself from the imputation of having subjected them again to servitude, he enjoined their masters to pay them a certain sum, as the price of their work. He reduced the royal share of the gold found in the mines from the half to the third part, and foon after lowered it to a fifth, at which it long remained. Notwithstanding Isabella's tender concern for the good treatment of the Indians, and Ferdinand's eagerness to improve the royal revenue, Ovando perfuaded the court to approve of both these regulations.

War with the Indians.

But the Indians, after enjoying respite from oppression, though during a short interval, now felt the yoke of bondage to be so galling, that they made several attempts to vindicate their own liberty. This the Spaniards considered as rebellion, and took arms in order to reduce them to subjection. When war is carried on between nations whose state of improvement is in any degree similar, the means of defence bear some proportion to those employed in the attack; and in this equal contest such efforts must be made, such talents are displayed,

^{*} Herrera, dec. 1. lib. v. c. 3.

BOOK 1;05.

and fuch passions roused, as exhibit mankind to view in a situation no less striking than interesting. It is one of the noblest functions of history, to observe and to delineate men at a juncture when their minds are most violently agitated, and all their powers and passions are called forth. Hence the operations of war, and the struggles between contending states, have been deemed by historians, ancient as well as modern, a capital and important article in the annals of human actions. But in a contest between naked favages, and one of the most warlike of the European nations, where science, courage, and discipline on one fide, were opposed by timidity, ignorance, and disorder on the other, a particular detail of events would be as unpleasant as uninstructive. If the simplicity and innocence of the Indians had inspired the Spaniards with humanity, had softened the pride of superiority into compassion, and had induced them to improve the inhabitants of the New World, instead of oppressing them, some sudden acts of violence, like the too rigorous chastisements of impatient instructors, might have been related without horror. But, unfortunately, this consciousness of superiority operated in a different manner. The Spaniards were advanced so far beyond the natives of America in improvement of every kind, that they viewed them with contempt. They conceived the Americans to be beings of an inferior nature, who were not intitled to the rights and privileges of men. In peace, they subjected them to servitude. In war, they paid no regard to those laws, which, by a tacit convention between contending nations, regulate hostility, and set some bounds to They confidered them not as men fighting in defence of their liberty, but as flaves, who had revolted against their masters. Their caziques, when taken, were condemned, like the leaders of banditti, to the most cruel and ignominious pu-

nishments:

B O O K 111. punishments; and all their subjects, without regarding the diffinction of ranks established among them, were reduced to the same state of abject slavery. With such a spirit and sentiments were hostilities carried on against the cazique of Higuey, a province at the eastern extremity of the island. This war was occasioned by the persidy of the Spaniards, in violating a treaty which they had made with the natives, and it was terminated by hanging up the cazique, who defended his people with bravery so far superior to that of his countrymen, as intitled him to a better sate b.

The cruel and treacherous conduct of Ovando.

THE conduct of Ovando, in another part of the island, was fill more treacherous and cruel. The province anciently named Xaragua, which extends from the fertile plain where Leogane is now fituated, to the western extremity of the island, was subject to a female cazique, named Anacoana, highly respected by the natives. She, from that partial fondness with which the women of America were attached to the Europeans, (the cause of which shall be afterwards explained) had always courted the friendship of the Spaniards, and loaded them with good offices. But some of the adherents of Roldan having fettled in her country, were fo much exasperated at her endeavouring to restrain their excesses, that they accused her of having formed a plan to throw off the yoke, and to exterminate the Spaniards. Ovando, though he knew well how little credit was due to such profligate men, marched, without further inquiry, towards Xaragua, with three hundred foot and feventy horsemen. To prevent the Indians from taking alarm at this hostile appearance, he gave out that his fole intention was to

b Herrera, dcc. 1. lib. vi. c. 9, 10.

B O O K

visit Anacoana, to whom his countrymen had been so much indebted, in the most respectful manner, and to regulate with her the mode of levying the tribute payable to the king of Spain. Anacoana, in order to receive this illustrious guest with due honour, affembled the principal men in her dominions, to the number of three hundred, and advancing at the head of these, accompanied by a vast croud of persons of inferior rank, she welcomed Ovando with fongs and dances, according to the mode of the country, and conducted him to the place of her residence. There he was feasted, for some days, with all the kindness of simple hospitality, and amused with the games and fpectacles usual among the Americans upon occasions of mirth and festivity. But, amidst the security which this inspired, Ovando was meditating the destruction of his unsuspicious entertainer and her subjects; and the mean persidy with which he executed this scheme, equalled his barbarity in forming it. Under colour of exhibiting to the Indians the parade of an European tournament, he advanced with his troops, in battle array, towards the house in which Anacoana and the chiefs who attended her were affembled. The infantry took possesfion of all the avenues which led to the village. The horsemen encompassed the house. These movements were the object of admiration without any mixture of fear, until, upon a fignal which had been concerted, the Spaniards suddenly drew their fwords, and rushed upon the Indians, defenceless, and astonished at an act of treachery which exceeded the conception of undefigning men. In a moment Anacoana was fecured. All her attendants were feized and bound. Fire was fet to the house; and, without examination or conviction, all these unhappy persons, the most illustrious in their own country, were confumed in the flames. Anacoana was referved for a more ignominious.

B O O K

ignominious fate. She was carried in chains to Saint Domingo, and, after the formality of a trial before Spanish judges, she was condemned upon the evidence of those very men who had betrayed her, to be publicly hanged '.

Reduction of the Indies, and its effects.

1505.

OVERAWED and humbled by this atrocious treatment of their princes and nobles, who were objects of their highest reverence, the people in all the provinces of Hispaniola submitted, without farther resistance, to the Spanish yoke. Upon the death of Isabella, all the regulations tending to mitigate the rigour of their fervitude were forgotten. The small gratuity paid to them as the price of their labour was withdrawn; and at the same time the tasks imposed upon them were increafed. Ovando, without any restraint, distributed Indians among his friends in the island. Ferdinand, to whom the queen had left by will one half of the revenue arising from the fettlements in the New World, conferred grants of a similar nature upon his courtiers, as the least expensive mode of rewarding their fervices. They farmed out the Indians, of whom they were rendered proprietors, to their countrymen fettled in Hispaniola; and that wretched people, being compelled to labour in order to fatisfy the rapacity of both, the exactions of their oppressors no longer knew any bounds. But, barbarous as their policy was, and fatal to the inhabitants of Hispaniola, it produced, for some time, very considerable effects. By calling forth the force of a whole nation, and exerting it in one direction, the working of the mines was carried on with amazing rapidity and fuccess. During several years, the gold brought into the royal fmelting-houses in Hispaniola

^{*} Oviedo, lib. iii. c. 12. Herrera, dec. 1. lib. vi. c. 4. Oviedo, lib. iii. c. 12. Relacion de destruye. de las Indias, par Bart. de las Casas, p. 8.

amounted annually to four hundred and fixty thousand pelos, above a hundred thousand pounds sterling; which, if we attend to the great change in the value of money fince the beginning of the fixteenth century to the present times, must appear an immense sum. Vast fortunes were created, of a sudden, by some. Others dissipated in ostentatious profusion, what they acquired with facility. Dazzled by both, new adventurers crouded to America, with the most eager impatience, to share in those treasures which had enriched their countrymen; and, notwithstanding the mortality occasioned by the unhealthiness of the climate, the colony continued to increase 4.

BOOK 1;06.

OVANDO governed the Spaniards with wisdom and justice, Progress of not inferior to the rigour with which he treated the Indians. He established equal laws, and, by executing them with impartiality, accustomed the people of the colony to reverence them. He founded several new towns in different parts of the island, and allured inhabitants to them, by the concession of various immunities. He endeavoured to turn the attention of the Spaniards to some branch of industry more useful than that of fearching for gold in the mines. Some flips of the fugar-cane having been brought from the Canary islands by way of experiment, they were found to thrive with fuch increase in the rich foil and warm climate to which they were transplanted; that the cultivation of them foon became an object of commerce. Extensive plantations were begun; sugar-works, which the Spaniards called ingenio's, from the various machinery employed in them, were erected, and in a few years the manufacture of this commodity was the great occupation of the

inhabitants

B O O K III. inhabitants of Hispaniola, and the most considerable source of their wealth.

Political regulations of Ferdinand.

1507.

THE prudent endeavours of Ovando, to promote the welfare of the colony, were powerfully feconded by Ferdinand. The large remittances which he received from the New World, opened his eyes, at length, with respect to the importance of those discoveries, which he had hitherto affected to undervalue. Fortune, and his own address, having now extricated him out of those difficulties in which he had been involved by the death of his queen, and by his disputes with his son-in-law about the government of her dominions, he had full leifure to turn his attention to the affairs of America. To his provident fagacity, Spain is indebted for many of those regulations which gradually formed that fystem of profound, but jealous policy, by which she governs her dominions in the New World. He erected a court, distinguished by the title of the Casa de Contratacion, or Board of Trade, composed of persons eminent for rank and abilities, to whom he committed the administration of American affairs. This board affembled regularly in Seville, and was invested with a distinct and extensive jurisdiction. He gave a regular form to ecclefiaftical government in America, by nominating archbishops, bishops, deans, together with clergymen of subordinate ranks, to take charge of the Spaniards established there, as well as of the natives, who should embrace the Chriflian faith. But, notwithstanding the obsequious devotion of the Spanish court to the Papal See, such was Ferdinand's folicitude to prevent any foreign power from claiming jurisdiction, or acquiring influence, in his new dominions, that he

Coviedo, lib. iv. c. 8.

f Hist, of the Reign of Charles V. vol. ii.]

p. 6, &c.

referved to the crown of Spain the fole right of patronage to the benefices in America, and stipulated that no papal bull or mandate should be promulgated there, until it was previously examined and approved of by his council. With the same spirit of jealousy, he prohibited any goods to be exported to America, or any person to settle there, without a special licence from that council s.

B O O K III.

dissolution. The original inhabitants, on whose labour the fast. Spaniards in Hispaniola depended for their prosperity, and even their existence, wasted so fast, that the extinction of the whole race seemed to be inevitable. When Columbus discovered Hispaniola, the number of its inhabitants was computed to be at least a million h. They were now reduced to fixty thousand in the space of sisten years. This consumption of the human species, no less amazing than rapid, was the effect of several concurring causes. The natives of the American islands were of a more seeble constitution than the inhabitants of the other hemisphere. They could neither perform the same work, nor endure the same fatigue with men whose organs were of a more

vigorous conformation. The inactive indolence in which they delighted to pass their days, as it was the effect of their debility, contributed likewise to increase it, and rendered them, from habit as well as constitution, incapable of hard labour. The food on which they subsisted, afforded little nourishment, and they were accustomed to take it in small quantities, not sufficient to invigorate a languid frame, and render it equal to

But, notwithstanding this attention to the police and welfare of the colony, a calamity impended which threatened its distribution. The principal intuitions are subject to be an expected at the fall.

BOOK

the efforts of industry. The Spaniards, without attending to those peculiarities in the constitution of the Americans, imposed tasks upon them so disproportioned to their strength, that many funk under the fatigue, and ended their wretched days. Others, prompted by impatience and despair, cut short their own lives with a violent hand. Famine, brought on by compelling fuch numbers to abandon the culture of their lands, in order to labour in the mines, proved fatal to many. Difeases of various kinds, fome occasioned by the hardships to which they were exposed, and others by their intercourse with the Europeans, completed the desolation of the island. thus deprived of the instruments which they were accustomed to employ, the Spaniards found it impossible to extend their improvements, or even to carry on the works which they had already begun. In order to provide an immediate remedy for an evil fo alarming, Ovando proposed to transport the inhabitants of the Lucayo islands to Hispaniola, under pretence that they might be civilized with more facility, and instructed to greater advantage in the Christian religion, if they were united to the Spanish colony, and under the immediate inspection of the missionaries settled there. Ferdinand, deceived by this artifice, or willing to connive at an act of violence which policy represented as necessary, gave his affent to the proposal, Several vessels were fitted out for the Lucayos, the commanders of which informed the natives, with whose language they were now well acquainted, that they came from a delicious country, in which their departed ancestors resided, by whom they were fent to invite them to refort thither, to partake of the blifs which they enjoyed. That fimple people listened with wonder and credulity; and, fond of visiting their relations and friends in that happy region, followed the Spaniards with

1508.

with eagerness. By this artifice, above forty thousand were decoyed into Hispaniola, to share in the sufferings which were the lot of the inhabitants of that island, and to mingle their groans and tears with those of that wretched race of men '.

воок 1508.

THE Spaniards had, for some time, carried on their opera- New discotions in the mines of Hispaniola with such ardour as well as settlements. fuccess, that they seemed to have engrossed their whole attention. The spirit of discovery languished; and, since the last voyage of Columbus, no enterprize of any moment had been undertaken. But as the decrease of the Indians rendered it impossible to acquire wealth in that island with the same rapidity as formerly, this urged them to fearch for new countries, where their avarice might be gratified with more facility. Juan Ponce de Leon, who commanded under Ovando in the eastern district of Hispaniola, passed over to the island of St. John de Porto Rico, which Columbus had discovered in his fecond voyage, and penetrated into the interior part of the country. As he found the foil to be fertile, and expected, from some symptoms, as well as from the information of the inhabitants, to discover mines of gold in the mountains, Ovando permitted him to attempt making a fettlement in the island. This was easily effected by an officer eminent for conduct no less than for courage. In a few years Porto Rico was fubjected to the Spanish government, the natives were reduced to fervitude; and, being treated with the fame inconsiderate rigour as their neighbours in Hispaniola, the race of original inhabitants, worn out with fatigue and fufferings, was foon exterminated k.

ABOUT

¹ Herrera, dec. 1. lib. vii. c. 3. Oviedo, lib. iii. c. 6. Gomara Hist. c. 41. k Herrera, dec. 1. lib. vii. c. 1-4. Gomara Hist. c. 44. Relacion de B. de las Casas, p. 10.

B O O K III. ABOUT the same time, Juan Diaz de Solis, in conjunction with Vincent Yanez Pinzon, one of Columbus's original companions, made a voyage to the continent. They held the same course which Columbus had taken, as far as to the island of Guanaios; but, standing from thence to the west, they discovered a new and extensive province, afterwards known by the name of Yucatan, and proceeded a considerable way along the coast of that country. Though nothing memorable occurred in this voyage, it deserves notice, because it led to discoveries of greater importance. For the same reason, the voyage of Sebastian de Ocampo must be mentioned. By the command of Ovando, he sailed round Cuba, and first discovered, with certainty, that this country, which Columbus once supposed to be a part of the continent, was a large island."

Diego Columbus appointed governor of Hispaniola. This voyage round Cuba was one of the last occurrences under the administration of Ovando. Ever since the death of Columbus, his son Don Diego had been employed in soliciting Ferdinand to grant him the offices of viceroy and admiral in the New World, together with all the other immunities and profits which descended to him by inheritance, in consequence of the original capitulation with his father. But if these dignities and revenues appeared so considerable to Ferdinand, that, at the expence of being deemed unjust as well as ungrateful, he had wrested them from Columbus, it is not surprising that he should be unwilling to confer them on his son. Accordingly, Don Diego wasted two years in incessant but fruitless importunity. Weary of this, he endeavoured at length to obtain by a legal sentence, what he could not procure from the favour of

¹ Herrera, dec. 1. lib. vi. c. 17.

m Ibid. lib. vii. c. 1.

an interested monarch. He commenced a fuit against Ferdinand before the council that man- ,..d Indian affairs, and that court, with integrity which reflects honour upon its proceedings, decided against the king, and sustained Don Diego's claim of the vice-royalty, and all the other privileges stipulated in the capitulation. Even after this decree, Ferdinand's repugnance to put a subject in possession of such extensive rights, might have thrown in new obstacles, if Don Diego had not taken a step which interested very powerful persons in the success of his claims. The sentence of the council of the Indies gave him a title to a rank fo elevated, and a fortune fo opulent, that he found no difficulty in concluding a marriage with Donna Maria, daughter of Don Ferdinand de Toledo, great commendator of Leon, and brother of the duke of Alva, a grandee of the first rank, and nearly related to the king. duke and his family espoused so warmly the cause of their new ally, that Ferdinand could not refift their folicitations. recalled Ovando, and appointed Don Diego his fuccessor, though, even in conferring this favour, he could not conceal his jealoufy; for he allowed him to assume only the title of governor, not that of viceroy, which had been adjudged to belong to him ".

ВООК III. 1508.

HE soon repaired to Hispaniola, attended by his brother, his He repairs to uncles, his wife, whom the courtefy of the Spaniards honoured with the title of vice-queen, and a numerous retinue of persons of both fexes, born of good families. He lived with a fplendour and magnificence hitherto unknown in the New World; and the family of Columbus feemed now to enjoy the honours and rewards due to his inventive genius, of which he himself had been cruelly defrauded. The colony itself acquired new

Hispaniola.

lustre

BOOK III. lustre by the accession of so many inhabitants, of a different rank and character from most of those who had hitherto migrated to America, and many of the most illustrious families in the Spanish settlements are descended from the persons who at that time accompanied Don Diego Columbus.

No benefit accrued to the unhappy natives from this change of governors. Don Diego was not only authorifed by a royal edict to continue the *repartimientos*, or distribution of Indians, but the particular number which he might grant to every perfon, according to his rank in the colony, was specified. He availed himself of that permission; and soon after he landed at St. Domingo, he divided such Indians as were still unappropriated, among his relations and attendants.

Pearl fishery of Cubagua.

The next care of the new governor was to comply with an instruction which he received from the king, about settling a colony in Cubagua, a small island which Columbus had discovered in his third voyage. Though this barren spot hardly yielded subsistence to its wretched inhabitants, such quantities of those oisters which produce pearls were found on its coast, that it did not long escape the inquisitive avarice of the Spaniards, and became a place of considerable resort. Large fortunes were acquired by the sistery of pearls, which was carried on with extraordinary ardour. The Indians, especially those from the Lucayo islands, were compelled to dive for them; and this dangerous and unhealthy employment was an additional calamity, which contributed not a little to the extinction of that devoted race?

They were aftonished to find that the continent of America stretched, on their right hand, through all this vast extent of ocean. They landed in different places, to take possession in name of their sovereign; but though the country appeared to be extremely fertile and inviting, their force was fo small, having been sitted out rather for discovery than making fettlements, that they left no colony behind them. Their voyage ferved, however, to give the Spaniards more exalted and adequate ideas with respect to the dimensions of this new quarter of the globe '.

BOOK

Thought it was above ten years fince Columbus had dif- A settlement covered the main land of America, the Spaniards had hitherto nent attempt. made no fettlement in any part of it. What had been fo long ed. neglected was now feriously attempted, and with considerable vigour, though the plan for this purpose was neither formed by the crown, nor executed at the expence of the nation, but carried on by the enterprising spirit of private adventurers. This scheme took its rise from Alonso de Ojeda, who had already made two voyages as a discoverer, by which he acquired confiderable reputation, but no wealth. But his character for intrepidity and conduct eafily procured him affociates, who advanced the money requifite to defray the charges of the expedition. About the fame time, Diego de Nicuessa, who had acquired a large fortune in Hispaniola, formed a similar design. Ferdinand encouraged both; and though he refused to advance

BOOK III. the finallest fum, was extremely liberal of titles and patents. He erected two governments on the continent, one extending from Cape de Vela to the gulf of Darien, and the other from that to Cape Gracias a Dios. The former was given to Ojeda, the latter to Nicuessa. Ojeda fitted out a ship and two brigantines, with three hundred men; Nicuessa, fix vessels, with feven hundred and eighty men. They failed about the same time from St. Domingo for their respective governments. In order to give their title to those countries some appearance of validity, feveral of the most eminent divines and lawyers in Spain were employed to prescribe the mode in which they should take possession of them. There is not in the history of mankind any thing more fingular or extravagant than the form which they devited for this purpose. They instructed those invaders, as foon as they landed on the continent, to declare to the natives the principal articles of the Christian faith; to acquaint them, in particular, with the supreme jurisdiction of the Pope over all the kingdoms of the earth; to inform them of the grant which this holy pontiff had made of their country to the king of Spain; to require them to embrace the doctrines of that religion which they made known to them; and to fubmit to the fovereign whose authority they proclaimed. If they refused to comply with this requisition, the terms of which must have been utterly incomprehensible to an uninstructed Indian, then Ojeda and Nicuessa were authorised to attack them with fword and fire; to reduce them, their wives and children, to a state of servitude; and to compel them by force to recognize the jurisdiction of the church, and the authority of the monarch, to which they would not voluntarily subject themselves '.

¹ Iferrera, dec. 1. lib. vii. c. 15.

^{&#}x27; See NOTE XXIII.

As the inhabitants of the continent could not at once yield affent to doctrines too refined for their uneultivated understandings, and explained to them by interpreters imperfectly ac- The diffilers quainted with their language; as they did not conceive how a foreign prieft, of whom they had never heard, could have any right to dispose of their country, or how an unknown prince should claim jurisdiction over them as his subjects; they siercely opposed the new invaders of their territories. Ojeda and Nicuessa endeavoured to effect by force what they could not accomplish by persuasion. The contemporary writers enter into a very minute detail in relating their transactions; but as they made no discovery of importance, nor established any permanent fettlement, their adventures are not intitled to any confiderable place in the general history of a period, where romantic valour, struggling with incredible hardships, distinguish every effort of the Spanish arms. They found the natives in those countries of which they went to assume the government, to be of a character very different from that of their countrymen in the islands. They were fierce and warlike. Their arrows were dipped in a poifon fo noxious, that every wound was followed with certain death. In one encounter they cut off above feventy of Ojeda's followers, and the Spaniards, for the first time, were taught to dread the inhabitants of the New World. Nicuessa was opposed by people equally resolute in defence of their possessions. Nothing could foften their ferocity. Though the Spaniards employed every art to foothe them, and to gain their confidence, they refused to hold any intercourse, or to exchange any friendly office, with men whose residence among them they considered as fatal to their liberty and independence. This implacable enmity of the natives, though it rendered it extremely difficult as well as Vol. I. Cc dangerous

BOOK

1510.

BOOK III.

dangerous to establish a settlement in their country, might have been furmounted at length by the perseverance of the Spaniards, by the superiority of their arms, and their skill in the art of war. But every difafter which can be accumulated upon the unfortunate, combined to complete their ruin. The loss of their ships by various accidents upon an unknown coast, the diseases peculiar to a climate the most noxious in all America, the want of provisions, unavoidable in a country imperfectly cultivated, diffention among themselves, and the incessant hostilities of the natives, involved them in a fuccession of calamities. the bare recital of which firikes one with horror. Though they received two confiderable reinforcements from Hispaniola, the greater part of those who had engaged in this unhappy expedition, perished, in less than a year, in the most extreme misery. A few who furvived, settled as a feeble colony at Santa Maria el Antigua, on the gulf of Darien, under the command of Vasco Nugnez de Balboa, who, in the most desperate exigencies, displayed such courage and conduct, as first gained the considence of his countrymen, and marked him out as their leader in more splendid and successful undertakings. Nor was he the only adventurer in this expedition who will appear with luftre in more important scenes. Francis Pizarro was one of Ojeda's companions, and in this school of adversity acquired or improved the talents which fitted him for the extraordinary actions. which he afterwards performed. Ferdinand Cortes, whose name became still more famous, had engaged early in this enterprise, which rouzed all the active youth of Hispaniola to arms; but the good fortune which accompanied him in his subsequent adventures, interposed to save him from the disasters. to which his companions were exposed. He was taken ill at St.

St. Domingo before the departure of the fleet, and detained there by that indisposition ".

the Spaniards were not deterred from engaging in new schemes

NOTWITHSTANDING the unfortunate iffue of this expedition, Conquest of

B O O K

of a fimilar nature. When wealth is acquired gradually by the persevering hand of industry, or accumulated by the slow operations of regular commerce, the means employed are fo proportioned to the end attained, that there is nothing to strike the imagination, and little to urge on the active powers of the mind to uncommon efforts. But when large fortunes were created almost instantaneously; when gold and pearls were procured in exchange for baubles; when the countries which produced these rich commodities, defended only by naked savages, might be feized by the first bold invader; objects so singular and alluring rouzed a wonderful spirit of enterprise among the Spaniards, who rushed with ardour into this new path that was opened to wealth and distinction. While this spirit continued warm and vigorous, every attempt either towards discovery or conquest was applauded, and adventurers engaged in it with emulation. The passion for new undertakings, which characterifes the age of discovery in the latter part of the fitteenth

and beginning of the fixtcenth century, would alone have been fufficient to prevent the Spaniards from stopping short in their career. But circumstances peculiar to Hispaniola at this juncture concurred with it in extending their navigation and conquests. The rigorous treatment of the inhabitants of that island having almost extirpated the race, many of the Spanish planters, as I have already observed, find-

[&]quot; Herrers, dec. 1. lib. vii. c. 11, &c. Gomara Hist. c. 57, 58, 59. Benzon, Hist. lib. i. c. 19.-23. P. Martyr, decad. 122.

B O O K III. ing it impossible to carry on their works with the same vigour and profit, were obliged to look out for fettlements in fome country whose people were not yet wasted by oppression. Others, with the inconfiderate levity natural to men upon whom wealth pours in with a fudden flow, had fquandered, in thoughtless prodigality, what they acquired with ease, and were driven by necessity to embark in the most desperate schemes, in order to retrieve their affairs. From all these causes, when Don Diego Columbus proposed to conquer the island of Cuba, and to establish a colony there, many persons of chief distinction in Hispaniola engaged with alacrity in the measure. He gave the command of the troops destined for that service to Diego Velasquez, one of his father's companions in his second voyage, and who, having been long fettled in Hifpaniola, had acquired an ample fortune, with fuch reputation for probity and prudence, that he seemed to be well qualified for conducting anexpedition of importance. Three hundred men were deemed: fufficient for the conquest of an island above seven hundred. miles in length, and filled with inhabitants. But they were of the same unwarlike character with the people of Hispaniola. They were not only intimidated by the appearance of their new enemies, but unprepared to resist them. For though, from the time that the Spaniards took possession of the adjacent island, there was reason to expect a descent on their territories, none of the small communities into which Cuba was divided, had either made any provision for its own defence, or had formed any concert for their common fafety. The only obstruction the Spaniards met with was from Hatuey, a cazique, who had fled from Hispaniola, and taken possession of the eastern extremity of Cuba. He stood upon the defensive at their first landing, and endeavoured to drive them back to their fhips.

1511.

His feeble troops, however, were foon broken and dispersed; and he himself being taken prisoner, Velasquez, according to the barbarous maxim of the Spaniards, confidered him as a flave who had taken arms against his master, and condemned him to the flames. When Hatuey was fastened to the stake, a Franciscan friar labouring to convert him, promised him immediate admittance into the joys of heaven, if he would embrace the Christian faith. "Are there any Spaniards," says he, after some pause, "in that region of bliss which you defcribe?" "Yes," replied the monk, "but only fuch as are worthy and good." "The best of them," returned the indignant cazique, " have neither worth nor goodness; I will not go to a place where I may meet with one of that accurfed race. "" This dreadful example of vengeance struck the people of Cuba with furbarror, that they scarcely gave any opposition to the progress of their invaders; and Velasquez, without the loss of a man, annexed this extensive and fertile island to the Spanish monarchy y.

воок 1511.

THE facility with which this important conquest was com- Discovery of pleted, ferved as an incitement to other undertakings. Juan Ponce de Leon, having acquired both fame and wealth by the reduction of Porto Rico, was impatient to engage in some new enterprise. He fitted out three ships at his own expence, for a voyage of discovery, and his reputation soon drew together a respectable body of followers. He directed his course towards the Lucayo islands; and after touching at several of them, as well as of the Bahama isles, he stood to the south-west, and discovered a country hitherto unknown to the Spaniards,

1512.

y Herrera, dec. 1. lib. ix. c. 2, 3, &c. Oviedo, lib.

which

BOOK III. 1512. which he called Florida, either because he fell in with it on Palm Sunday, or on account of its gay and beautiful appearance. He attempted to land in different places, but met with such vigorous opposition from the natives, who were fierce and warlike, as convinced him that an increase of force was requisite to effect a settlement. Satisfied with having opened a communication with a new country, of whose value and importance he conceived very sanguine hopes, he returned to Porto Rico, through the channel now known by the name of the Gulf of Florida.

IT was not merely the passion of searching for new countries that prompted Ponce de Leon to undertake this voyage, he was influenced by one of those visionary ideas, which at that time often mingled with the spirit of discovery, and rendered it more enterprifing. A tradition prevailed among the natives of Porto Rico, that in the isle of Bimini, one of the Lucayos, there was a fountain of fuch wonderful virtue as to renew the youth, and recal the vigour of every person who bathed in its falutary waters. In hopes of finding this grand restorative, Ponce de Leon and his followers ranged through the islands, fearching, with fruitless solicitude and labour for the fountain, which was the chief object of their expedition. That a tale fo fabulous should gain credit among simple uninstructed Indians is not furprifing. That it should make any impression upon an enlightened people appears, in the prefent age, altogether incredible. The fact, however, is certain; and the most authentic Spanish historians mention this extravagant fally of their credulous countrymen. The Spaniards, at that period, were engaged in a career of activity which gave a romantic turn to their imagination, and daily prefented to them strange and marvel-

lous objects. A New World was opened to their view. They vifited illands and continents of whose existence mankind in former ages had no conception. In those delightful countries nature feemed to assume another form; every tree and plant and animal was different from those of the ancient hemisphere. They seemed to be transported to enchanted ground; and, after the wonders which they had feen, in the warmth and novelty of their admiration, nothing appeared to them fo extraordinary as to be beyond belief. If the rapid fuccession of new and striking scenes. made fuch impression even upon the found understanding of Columbus, that he boasted of having found the feat of Paradife, it will not appear strange that Ponce de Leon should dream of discovering the fountain of youth *.

BOOK 1512.

Soon after the expedition to Florida, a discovery of much Progress of greater importance was made in another part of America. Bal- Darien. boa having been raifed to the government of the imall colony at Santa Maria in Daricn, by the voluntary fuffrage of his affociates, was fo extremely defirous to obtain from the crown a confirmation of their election, that he dispatched one of his officers to Spain, in order to folicit a royal commission, which might invest him with a legal title to the supreme command. Conscious, however, that he could not expect success from the patronage of Ferdinand's ministers, with whom he was unconnected, or from negociating in a court to the arts of which he was a stranger, he endeavoured to merit the dignity to which he aspired, and aimed at performing some signal service that would fecure him the preference to every competitor. Full of

B O O K

this idea, he made frequent inroads into the adjacent country, subdued several of the caziques, and collected a considerable quantity of gold, which abounded more in that part of the continent than in the islands. In one of those excursions, the Spaniards contended with such eagerness about the division of fome gold, that they were at the point of proceeding to acls of violence against one another. A young cazique, who was prefent, astonished at the high value which they set upon a thing of which he did not discern the use, tumbled the gold out of the balance with indignation; and, turning to the Spaniards, "Why do you quarrel (fays he) about fuch a trifle? If you are so passionately fond of gold, as to abandon your own country, and to disturb the tranquillity of distant nations for its fake, I will conduct you to a region where the metal which feems to be the chief object of your admiration and defire, is so common that the meanest utenfils are formed of it." Transported with what they heard, Balboa and his companions inquired eagerly where this happy country lay, and how they might arrive at it. He informed them that at the distance of fix funs, that is of fix days journey towards the fouth, they should discover another ocean, near to which this wealthy kingdom was fituated; but if they intended to attack that powerful state, they must assemble forces far superior in number and strength to those with which they now appeared .

The schemes which he forms. This was the first information which the Spaniards received concerning the great southern ocean, or the opulent and extensive country known afterwards by the name of Peru. Balboa had now before him objects suited to his boundless ambition,

111.

1512.

and the enterprifing ardour of his genius. He immediately concluded the ocean which the Cazique mentioned, to be that for which Columbus had fearched without fuccefs in this part of America, in hopes of opening a more direct communication with the East Indies; and he conjectured that the rich territory which had been described to him, must be part of that vast and what so great a man had attempted in vain; and eager to accomplish a discovery which he knew would be no less acceptable to the king than beneficial to his country, he was impatient until he could fet out upon this enterprize, in comparison of which all his former exploits appeared inconfiderable. But previous arrangement and preparation were requifite to ensure success. He began with courting and fecuring the friendship of the neighbouring Caziques. He fent some of his officers to Hispaniola with a large quantity of gold, as a proof of his past success, and an earnest of his future hopes. By a proper distribution of this, they fecured the favour of the governor, and allured volunteers into the service. A considerable reinforcement from that island joined him, and he thought himself in a condition to attempt the discovery.

THE isthmus of Darien is not above fixty miles in Difficulty of breadth, but this neck of land, which binds together the continents of North and South America, is strengthened by a chain of lofty mountains stretching through its whole extent, which render it a barrier of folidity fufficient to refift the impulse of two opposite oceans. The mountains are covered with forests almost inaccessible. The valleys in that moist climate, where it rains during two thirds of the year, are marshy, and so frequently overflowed, that the inhabitants find it necessary, Vol. 1. D d in

BOOK

1;1;.

in many places, to build their houses upon trees, in order to be elevated at some distance from the damp soil, and the odious reptiles ingendered in the putrid waters. Large rivers rush down with an impetuous current from the high grounds. In a region thinly inhabited by wandering favages, the hand of industry had done nothing to mitigate or correct those natural disadvantages. To march across this unexplored country, with no other guides but Indians, whose sidelity could be little trusted, was, on all these accounts, the boldest enterprise on which the Spaniards had hitherto ventured in the New World. But the intrepidity of Balboa was fuch as distinguished him among his countrymen, at a period when every adventurer was confpicuous for daring courage. Nor was bravery his only merit, he was prudent in conduct, generous, affable, and possessed of those popular talents which, in the most desperate undertakings, inspire confidence and secure attachment. Even after the junction of the volunteers from Hispaniola, he was able to muster only an hundred and ninety men for his expedition. But they were hardy veterans, inured to the climate of America, and ready to follow him through every danger. A thoufand Indians attended them to carry their provisions; and to complete their warlike array, they took with them feveral of those fierce dogs, which were no less formidable than destructive to their naked enemies.

Discovers the South Sea.

BALBOA fet out upon this important expedition on the first of September, about the time that the periodical rains began to abate. He proceeded by sea, and without any difficulty, to the territories of a cazique whose friendship he had gained; but no sooner did he begin to advance into the interior part of

b P. Martyr, decad. p. 158.

8

the

the country, than he was retarded by every obstacle, which he had reason to apprehend, from the nature of the territory, or the disposition of its inhabitants. Some of the caziques, at his approach, fled to the mountains with all their people, and carried off or destroyed whatever could afford sublistence to his troops. Others collected their subjects, in order to oppose his progress, and he quickly perceived what an arduous undertaking it was, to conduct such a body of men through hostile nations, across swamps and rivers, and woods, which had never been passed but by straggling Indians. But by sharing in every hardship with the meanest foldier, by appearing the foremost to meet every danger, by promising confidently to his troops the enjoyment of honour and riches superior to the most successful of their countrymen, he inspired them with fuch enthusiallic resolution, that they followed him without murmuring. When they had penetrated a good way into the mountains, a powerful cazique appeared in a narrow pass, with a numerous body of his subjects to obstruct their progress. But men who had surmounted so many obstacles, despised the opposition of such feeble enemies. They attacked them with impetuofity, and having dispersed them with much ease and great slaughter, continued their march. Though their guides had represented the breadth of the ishmus to be only a journey of fix days, they had already spent twenty-five in forcing their way through the woods and mountains. Many of them were ready to fink under fuch uninterrupted fatigue in that fultry climate, feveral were feized with the difeases peculiar to the country, and all became impatient to reach the period of their labours and fufferings. At length the Indians affured them, that from the Dd 2

воок 1513.

top

2 0 0 K

top of the next mountain they should discover the ocean which was the object of their wishes. When, with infinite toil, they had climbed up the greater part of that steep ascent, Balboa commanded his men to halt, and advanced alone to the fummit, that he might be the first who should enjoy a spectacle which he had fo long defired. As foon as he beheld the South Sea stretching in endless prospect below him, he fell on his knees, and lifting up his hands to Heaven, returned thanks to God, who had conducted him to a discovery so beneficial to his country, and so honourable to himself. His followers, observing his transports of joy, rushed forward to join in his wonder, exultation and gratitude. They held on their course to the shore with great alacrity, when Balboa advancing up to the middle in the waves with his buckler and fword, took possession of that ocean in the name of the king his master, and vowed to defend it, with these arms, against all his enemies '.

THAT part of the great Pacific or Southern ocean, which Balboa first discovered, still retains the name of the Gulf of St. Michael, which he gave to it, and is situated to the east of Panama. From several of the petty princes, who governed in the districts adjacent to that gulf, he extorted provisions and gold by sorce of arms. Others sent them to him voluntarily. To these acceptable presents, some of the caziques added a considerable quantity of pearls; and he learned from them, with much satisfaction, that pearl oysters abounded in the sea which he had newly discovered.

TOGETHER

^c Herrera, dec. 1. lib. x. c. 1, &c. Gomara, c. 62, &c. P. Martyr, decadi p. 205, &c.

TOGETHER with the acquisition of this wealth, which served to foothe and encourage his followers, he received accounts which confirmed his fanguine hopes of future and more exten- He receives five benefits from the expedition. All the people on the coast information concerning a of the South Sea, concurred in informing him that there was a more opulent mighty and opulent kingdom fituated at a confiderable diffance towards the east, the inhabitants of which had tame animals to carry their burdens. In order to give him an idea of thefe, they drew upon the fand the figure of the Llamas or sheep, afterwards found in Peru, which the Peruvians had taught to perform such services as they described. As the Llama, in its form, nearly resembles a camel, a beast of burden deemed peculiar to Asia, this circumstance, in conjunction with the discovery of the pearls, another noted production of that country, tended to confirm the Spaniards in their mistaken theory with respect to the vicinity of the New World to the East Indies 4.

BOOK 1513.

But though the information which Balboa received from the Obliged to people on the coast, as well as his own conjectures and hopes, rendered him extremely impatient to vifit this unknown country, his prudence restrained him from attempting to invade it with an handful of men, exhausted by fatigue, and weakened by diseases. He determined to lead back his followers, at present, to their settlement at Santa Maria in Darien, and to return next feason with a force more adequate to such an arduous enterprize. In order to acquire a more extensive knowledge of the isthmus, he marched back by a different route, which he found to be no less dangerous and difficult than that which he had formerly taken. But to men elated with success, and ani-

mated:

В О О К III.

1514.

mated with hope, nothing is unfurmountable. Balboa returned to Santa Maria, from which he had been absent four months, with greater glory and more treasure than the Spaniards had acquired in any expedition in the New World. None of Balboa's officers distinguished himself more in this service than Francisco Pizarro, or assisted with greater courage and ardour in opening a communication with those countries, in which he afterwards acted such an illustrious part.

Pedrarias appointed goversor of Darien.

BALBOA's first care was to send information to Spain of the important discovery which he had made; and to demand a reinforcement of a thousand men, in order to attempt the conquest of that opulent country, concerning which he had received fuch inviting intelligence. The first account of the discovery of the New World hardly occasioned greater joy than the unexpected tidings, that a passage was at last found to the great fouthern occan. The communication with the East Indies, by a course to the westward of the line of demarkation, drawn by the Pope, seemed now to be certain. The vast wealth which flowed into Portugal from its fettlements and conquests in that country, excited the envy and called forth the emulation of other states. Ferdinand hoped now to come in for a share in this lucrative commerce, and in his eagerness to obtain it, was willing to make an effort beyond what Balboa required. But even in this exertion, his jealous policy, as well as the fatal antipathy of Fouseca, now bishop of Burgos, to every man of merit who diffinguished himself in the New World, were conspicuous. Notwithstanding Balboa's recent services, which marked him out as the most proper person to finish that great

F Herrera, dec. 1. lib. x. c. 3-6. Gomara, c. 64. P. Martyr, dec. p. 229, &c. undertaking

as to overlook these, and to appoint Pedrarias Davila governor of Darien. He gave him the command of sifteen stout vessels, and twelve hundred soldiers. These were sitted out at the public expence, with a liberality which Ferdinand had never displayed in any former armament destined for the New World; and such was the ardour of the Spanish gentlemen to sollow a leader who was about to conduct them to a country, where, as fame reported, they had only to throw their nets into the sea and draw out gold, that sifteen hundred embarked on board the sleet, and if they had not been restrained, a much greater number would have engaged in the service.

B O O K JII.

PEDRARIAS reached the gulf of Darien without any remarkable accident, and immediately fent some of his principal officers afliore, to inform Balboa of his arrival, with the king's commission, to be governor of the colony. To their astonishment, they found Balboa, of whose great exploits they had heard fo much, and of whose opulence they had formed such high ideas, clad in a canvas jacket, with shoes made of packthread, employed, together with some Indians, in thatching his own hut with recds. Even in this simple garb, which corresponded so ill with the expectations and wishes of his new guests, Balboa received them with dignity. The fame of his discoveries had drawn so many adventurers from the islands, that he could now muster four hundred and lifty men. At the head of those daring veterans, he was more than a match for the forces which Pedrarias brought with him. But though his troops murmured loudly at the injustice of the king in super-

B O O K

feding their commander, and complained that strangers would now reap the fruits of their toil and success, Balboa submitted with implicit obedience to the will of his sovereign, and received Pedrarias with all the deference due to his character.

Diffention between him and Balboa.

Ju'y.

NOTWITHSTANDING this moderation of Balboa, to which Pedrarias owed the peaceable possession of his government, he appointed a judicial inquiry to be made into his conduct, while under the command of Nicuessa and Enciso, and imposed a confiderable fine upon him, on account of the irregularities of which he had then been guilty. Balboa felt fenfibly the mortification of being subjected to trial and to punishment in a place where he had so lately occupied the first station. Pedrarias could not conceal his jealoufy of his superior merit; so that the resentment of the one, and the envy of the other, gave rise to diffentions extremely detrimental to the colony. It was threatened with a calamity still more fatal. Pedrarias had landed in Darien at a most unlucky time of the year, about the middle of the rainy feason, in that part of the torrid zone where the clouds pour down fuch torrents as are unknown in more temperate climates k. The village of Santa Maria was feated in a rich plain, environed with marshes and woods. The constitution of Europeans was unable to withstand the pestilential influence of fuch a fituation, in a climate naturally fo noxious, and at a feafon fo peculiarly anhealthy. A violent and deflructive malady carried off many of the foldiers who accompanied Pedrarias. An extreme fcarcity of provisions augmented this diffress, as it rendered it impossible to find proper refresh-

1514.

ment for the fick, or the necessary sustenance for the healthy 1. In the space of a month, above fix hundred persons perished in the utmost misery. Dejection and despair spread through the colony. Many principal persons solicited their dismission, and were glad to relinquish all their hopes of wealth, in order to escape from that pernicious region. Pedrarias endeavoured to divert those who remained from brooding over their misfortunes, by finding them employment. With this view, he fent feveral detachments into the interior parts of the country, to levy gold among the natives, and to fearch for the mines in which it was produced. Those rapacious adventurers, more attentive to present gain than to the means of facilitating their future progress, plundered without distinction wherever they marched. Regardless of the alliances which Balboa had made with several of the caziques, they stripped them of every thing valuable, and treated them, as well as their subjects, with the utmost insolence and cruelty. By their tyranny and exactions, which Pedrarias, either from want of authority or of inclination, did not restrain, all the country from the gulf of Darien to the lake of Nicaragua was desolated, and the Spaniards were inconfiderately deprived of the advantages which they might have derived from the friendship of the natives, in extending their conquests to the South Sea. Balboa, who saw with concern that fuch ill-judged proceedings retarded the execution of his favourite scheme, sent violent remonstrances to Spain against the imprudent government of Pedrarias, which had ruined a happy and flourishing colony. Pedrarias, on the other hand, accused him of having deceived the king, by mag-

B O O K III. nifying his own exploits, as well as by a false representation of the opulence and value of the country ...

Violent proceedings against Balboa.

1515.

1516.

FERDINAND became fensible at length of his imprudence in fuperfeding the most active and experienced officer he had in the New World, and, by way of compensation to Balboa, appointed him Adelantado, or Lieutenant-governor of the countries upon the South Sea, with very extensive privileges and authority. At the same time he enjoined Pedrarias to support Balboa in all his enterprises, and to consult with him concerning every measure which he himself pursued. But to effect such a fudden transition from inveterate enmity to perfect confidence, exceeded Ferdinand's power. Pedrarias continued to treat his rival with neglect; and Balboa's fortune being exhausted by the payment of his fine, and other exactions of Pedrarias, he could not make fuitable preparations for taking possession of his new government. At length, by the interposition and exhortations of the bishop of Darien, they were brought to a reconciliation; and, in order to cement this union more firmly, Pedrarias agreed to give his daughter in marriage to Balboa. The first effect of their concord was, that Balboa was permitted to make several small incursions into the country. These he conducted with fuch prudence, as added to the reputation which he had already acquired. Many adventurers reforted to him, and, with the countenance and support of Pedrarias, he began to prepare for his expedition to the South Sea. In order to accomplish. this, it was necessary to build vessels capable of conveying his troops to those provinces which he purposed to invade. After

furmounting many obstacles, and enduring a variety of those hardships which were the portion of the conquerors of America, he at length finished four small brigantines. In these, with three hundred chosen men (a force superior to that with which Pizarro afterwards undertook the fame expedition), he was ready to fail towards Peru, when he received an unexpected message from Pedrarias ". As his reconciliation with Balboa had never been cordial, the progress which he made revived his ancient enmity, and added to its rancour. He dreaded the prosperity and elevation of a man whom he had injured so deeply. He fuspected that success would encourage him to aim at independence upon his jurisdiction; and so violently did the pasfions of hatred, fear, and jealoufy, operate upon his mind, that, in order to gratify his vengeance, he scrupled not to defeat an enterprise of the greatest moment to his country. Under pretexts which were falle, but plaufible, he defired Balboa to postpone his voyage for a short time, and to repair to Acla, in order that he might have an interview with him. Balboa, with the unfuspicious confidence of a man conscious of no crime, instantly obeyed the fummons; but as foon as he entered the place, he was arrested by order of Pedrarias, whose impatience to satiate his revenge did not fuffer him to languish long in confinement. Judges were immediately appointed to proceed to his trial. An accufation of difloyalty to the king, and of an intention to revolt against the governor, was preferred against him. Sentence of death was pronounced; and though the judges who passed it, feconded by the whole colony, interceded warmly for his pardon, Pedrarias continued inexorable; and, to their aftonishment and forrow, the Spaniards beheld the public execution

ⁿ Herrera, dec. z. lib. i. c. 3. Lib. ii. c. 11. 13. 21.

B O O K III. of a man whom they univerfally deemed more capable than any who had borne command in America, of forming and accomplishing great defigns °. Upon his death, the expedition which he had planned was relinquished. Pedrarias, notwithstanding the violence and injustice of his proceedings, was not only screened from punishment by the powerful patronage of the bishop of Burgos and other courtiers, but continued in power. Soon after, he obtained permission to remove the colony from its unhealthy station at Santa Maria to Panama, on the opposite side of the isthmus; and though it did not gain much in point of healthfulness by the change, the commodious situation of this new settlement contributed greatly to facilitate the subsequent conquests of the Spaniards in the vast countries situated upon the Southern Ocean P.

New difco-

During these transactions in Darien, the history of which it was proper to carry on in an uninterrupted tenour, several important events occurred with respect to the discovery, the conquest, and government of other provinces in the New World. Ferdinand was so intent upon opening a communication with the Molucca or Spice Islands by the west, that, in the year one thousand five hundred and fisteen, he fitted out two ships at his own expence, in order to attempt such a voyage, and gave the command of them to Juan Diaz de Solis, who was deemed the most skilful navigator in Spain. He stood along the coast of South America, and on the first of January one thousand five hundred and sixteen, entered a river, which he called Janeiro, where an extensive commerce is now carried on. From thence he proceeded to a spacious bay, which he supposed to be the entrance into a strait that communicated with the Indian ocean;

[•] Herrera, dec. 2. lib. ii. c. 21, 22.

but upon advancing farther, he found it to be the mouth of Rio de Plata, one of the vast rivers by which the southern continent of America is watered. In endeavouring to make a descent in this country, De Solis and feveral of his crew were flain by the natives, who, in fight of the ships, cut their bodies in pieces, roasted and devoured them. Discouraged with the loss of their commander, and terrified at this shocking spectacle, the surviving Spaniards fet fail for Europe, without aiming at any farther discovery 5. Though this attempt proved abortive, it was not without benefit. It turned the attention of ingenious men to this course of navigation, and prepared the way for a more fortunate voyage, in which, a few years posterior to this period, the great defign that Ferdinand had in view was accomplished.

воок 1517.

Though the Spaniards were thus actively employed in ex- State of the tending their discoveries and settlements in America, they still confidered Hispaniola as their principal colony, and the feat of government. Don Diego Columbus wanted neither inclination nor abilities to have rendered the members of this colony, who were most immediately under his jurisdiction, prosperous and happy. But he was circumfcribed in all his operations by the fuspicious policy of Ferdinand, who on every occasion, and under pretexts the most frivolous, retrenched his privileges, and encouraged the treasurer, the judges, and other subordinate officers, to counteract his measures, and to dispute his authority. The most valuable prerogative which the governor possessed, was that of distributing Indians among the Spaniards fettled in the island. The rigorous fervitude of those unhappy men having been but little mitigated by all the regulations in

B O O K

their favour, the power of parcelling out such necessary instruments of labour at pleafure, fecured to the governor great influence in the colony. In order to strip him of this, Ferdinand created a new office, with the power of distributing the Indians, and bestowed it upon Rodrigo Albuquerque, a relation of Zapata, his confidential minister. Mortified with the injustice, as well as indignity, of this invafion upon his rights, in a point fo effential, Don Diego could no longer remain in a place where his power and confequence were almost annihilated. He repaired to Spain with the vain hopes of obtaining redress. Albuquerque entered upon his office with all the rapacity of an indigent adventurer, impatient to amass wealth. He began with taking the exact number of Indians in the island, and found, that from fixty thouland, who, in the year one thouland five hundred and eight, furvived after all their fufferings, they were now reduced to fourteen thousand. These he threw into feparate divisions or lots, and bestowed them upon such as were willing to purchase them at the highest price. By this arbitrary distribution, several of the natives were removed from their original habitations, many were taken from their ancient masters, and all of them subjected to heavier burdens, and to more intolerable labour, in order to reimburse their new proprietors. Those additional calamities completed the misery, and hastened on the extinction of this wretched and innocent race of men '.

Controverfy with resp. ct to the treatment of the Indians. THE violence of those proceedings, together with the fatal consequences which attended them, not only excited complaints among such as thought themselves aggreed, but touched

^{*} Herreia, dec. 1. lib. ix. c. 5. lib. x. c. 12.

^{*} Ibid. dec. 1. lib. x. c. 12.

B O O K

the hearts of all who retained any fentiments of humanity. From the time that Ecclefiaftics were fent into America to inflruct and convert the natives, they perceived that the rigour with which the Spaniards treated them, rendered their ministry altogether fruitless. The missionaries, in conformity to the mild spirit of that religion which they were employed to publift, early remonstrated against the maxims of their countrymen with respect to the Americans, and condemned the repartimientos, or distributions, by which they were given up as flaves to their conquerors, as no less contrary to natural justice and the precepts of Christianity, than to found policy. The Dominicans, to whom the instruction of the Americans was originally committed, were most vehement in testifying against the repartimientos. In the year one thousand five hundred and eleven, Montesino, one of their most eminent preachers, inveighed against this practice in the great church at St. Domingo, with all the impetuofity of popular eloquence. Don Diego Columbus, the principal officers of the colony, and all the laymen who had been his hearers, complained of the monk to his superiors; but they, instead of condemning, applauded his doctrine, as equally pious and feafonable. The Franciscans, influenced by the spirit of opposition and rivalship which subfifts between the two orders, discovered some inclination to take part with the laity, and to espouse the desence of the repartimientos. But as they could not with decency give their avowed approbation to a system of oppression, so repugnant to the spirit of religion, they endeavoured to palliate what they could not justify, and alleged, in excuse for the conduct of their countrymen, that it was impossible to carry on any improvement in the colony, unless the Spaniards possessed such dominion

BOOK minion over the natives, that they could compel them to labour.

Contrary decisions concerning this point.

THE Dominicans, regardless of such political and interested confiderations, would not relax in any degree the rigour of their fentiments, and even refused to absolve, or admit to the facraments, such of their countrymen as held the natives in fervitude". Both parties applied to the king for his decision in a matter of fuch importance. Ferdinand empowered a committee of his privy-council, affifted by some of the most eminent civilians and divines in Spain, to hear the deputies fent from Hispaniola, in support of their respective opinions. After a long discussion, the speculative point in controversy was determined in favour of the Dominicans, the Indians were declared to be a free people, intitled to all the natural rights of men; but, notwithstanding this decision, the repartimientos were continued upon their ancient footing ". As this determination admitted the principle upon which the Dominicans founded their opinion, it was not calculated either to filence or to convince them. At length, in order to quiet the colony, which was alarmed by their remonstrances and censures, Ferdinand issued a decree of his privy-council, declaring, that after mature confideration of the Apostolic Bull, and other titles by which the crown of Castile claimed a right to its possessions in the New World, the servitude of the Indians was warranted both by the laws of God and of man; that unless they were subjected to the dominion of the Spaniards, and compelled to reside under their inspection, it would be impossible to reclaim

III.

them from idolatry, or to instruct them in the principles of the Christian faith; that no farther scruple ought to be entertained concerning the lawfulness of the repartimientos, as the king and council were willing to take the charge of that upon their own consciences; and that therefore the Dominicans, and monks of other religious orders, should abstain, for the future, from those invectives, which, from an excess of charitable, but illformed zeal, they had uttered against that practice '.

THAT his intention of adhering to this decree might be fully understood, Ferdinand conferred new grants of Indians upon several of his courtiers 2. But, in order that he might not seem altogether inattentive to the rights of humanity, he published an edict, in which he endeavoured to provide for the mild treatment of the Indians under the yoke to which he subjected them; he regulated the nature of the work which they should be required to perform, he prescribed the mode in which they should be clothed and fed, and gave directions with respect to their instruction in the principles of Christianity *.

But the Dominicans, who, from their experience of what Effect of was past, judged concerning the future, soon perceived the inefficacy of those provisions, and foretold, that as long as it was the interest of individuals to treat the Indians with rigour, no public regulations could render their fervitude mild or tolerable. They considered it as vain to waste their own time and strength in attempting to communicate the sublime truths of religion to men, whose spirits were broken, and their facul-

ties impaired by oppression. Some of them, in despair, requested the permission of their superiors to remove to the continent, and to pursue the object of their mission, among such of the natives as were not hitherto corrupted by the example of the Spaniards, or alienated by their cruelty from the Christian faith. Such as remained in Hispaniola continued to remonstrate, with decent sirmness, against the servitude of the Indians.

Barth flomew de las Cafas appears in defence of the Indians.

THE violent operations of Albuquerque, the new diffributor of Indians, revived the zeal of the Dominicans against the repartimientos, and called forth an advocate for that oppressed people, who possessed all the courage, the talents, and activity requifite in supporting such a desperate cause. This was Bartholomew de las Casas, a native of Seville, and one of the clergymen fent out with Columbus in his fecond voyage to Hispaniola, in order to settle in that island. He early adopted the opinion prevalent among ecclefiaftics, with respect to the unlawfulness of reducing the natives to servitude; and that he might demonstrate the sincerity of his conviction, he relinquished all the Indians who had fallen to his own share in the division of the inhabitants among their conquerors, declaring that he should ever bewail his own misfortune and guilt, in having exercifed. for a moment this impious dominion over his fellow-creatures. From that time, he was the avowed patron of the Indians: and by his bold interpolitions in their behalf, as well as by the respect due to his abilities and character, he had often the merit of fetting some bounds to the excesses of his countrymen.

b Herrera, dec. 1. lib. ix. c. 14. Touron. Hist. Gener. de l'Amelique, tom. i. p. 252.

He did not fail to remonstrate warmly against the proceedings of Albuquerque, and, though he foon found that attention to his own interest rendered him deaf to admonition, he did not abandon the wretched people whose cause he had espoused. He inflantly fet out for Spain, with the most sanguine hopes of opening the eyes and foftening the heart of Ferdinand, by that striking picture of the oppression of his new subjects, which he would exhibit to his view 4.

воок 111. 1517.

HE casily obtained admittance to the king, whom he found in a declining state of health. With much freedom, and no cause in the less eloquence, he represented to him all the fatal effects of the Spain. repartimientos in the New World, boldly charging him with the guilt of having authorifed this impious measure, which had brought mifery and destruction upon a numerous and innocent race of men, whom Providence had placed under his protection. Ferdinand, whose mind as well as body was much enfeebled by his distemper, was greatly alarmed at this charge of impiety, which at another juncture he would have despised. He listened with deep compunction to the discourse of Las Casas, and promifed to take into attentive confideration the means of redressing the evil of which he complained. But death prevented him from executing his resolution. Charles of Auftria, to whom all his crowns devolved, refided at that time in his paternal dominions in the Low Countries. Las Casas, with his usual ardour, prepared immediately to set out for Flanders, in order to occupy the ear of the young monarch, when cardinal Ximenes, who, as regent, affumed the reins of government in Castile, commanded him to defist from the journey, and engaged to hear his complaints in person.

BOOK III. 1517. The regulations of cardical Ximenes.

He accordingly weighed the matter with attention equal to its importance; and as his impetuous mind delighted in schemes bold and uncommon, he soon fixed upon a plant which aftonished the ministers, trained up under the formal and cautious administration of Ferdinand. Without regarding either the rights of Don Diego Columbus, or the regulations established by the late king, he resolved to send three persons to America as superintendents of all the colonies there, with authority, after examining all circumstances on the spot, to decide finally with respect to the point in question. It was a matter of deliberation and delicacy to chuse men qualified for such an important station. As all the laymen settled in America, or who had been confulted in the administration of that department, had given their opinion that the Spaniards. could not keep possession of their new settlements, unless they were allowed to retain their dominion over the Indians, he faw that he could not rely on their impartiality, and determined to commit the trust to ecclesiastics. As the Dominicans and Franciscans had already espoused opposite sides in the controversy, he, from the same principle, excluded both these fraternities from the commission. He confined his choice to the monks of St. Jerome, a fmall, but respectable order in Spain. With the affistance of their general, and in concert with Las Casas, he foon pitched upon three persons whom he deemed equal to the charge. To them he joined Zuazo, a private lawyer of diftinguished probity, with unbounded power to regulate all judicial proceedings in the colonies. Las Casas was appointed to accompany them with the title of Protector of the Indians.

[·] Herrera, dec. 2. lib. ii. c. 3.

To vest such extraordinary powers, as might at once overturn the fystem of government established in the New World, in four persons, who, from their humble condition in life, The manner were little intitled to possess this high authority, appeared to Zapata, and other ministers of the late king, a measure so wild cuted. and dangerous, that they refused to issue the dispatches necesfary for carrying it into execution. But Ximenes was not of a temper patiently to brook opposition to any of his schemes. He sent for the refractory ministers, and addressed them in such a tone, that in the utmost consternation they obeyed his orders'. The superintendents, with their affociate Zuazo, and Las Casas, sailed for St. Domingo. Upon their arrival, the first act of their authority was to set at liberty all the Indians who had been granted to the Spanish courtiers, or to any perfon not refiding in America. This, together with the information which had been received from Spain concerning the object of the commission, spread a general alarm. The colonies concluded that they were to be deprived at once of the hands with which they carried on their labour, and that, of confequence, ruin was unavoidable. But the fathers of St. Jerome proceeded with fuch caution and prudence, as foon diffipated all their fears. They discovered, in every step of their conduct, a knowledge of the world, and of affairs which is feldom acquired in a cloifter; and displayed a moderation and gentleness still more rare, among persons trained up in the solitude and aufterity of monastic life. Their ears were open to information from every quarter, they compared the different accounts which they received, and, after a mature confideration of the whole, they were fully fatisfied that the state of the

BOOK

Herrera, dec. 2. lib. ii. c. 6.

BOOK III.

colony rendered it impossible to adopt the plan proposed by Las Cafas, and recommended by the cardinal. They plainly perceived that the Spaniards fettled in America were fo few in number, that they could neither work the mines which had been opened, nor cultivate the country; that they depended for both upon the labour of the natives, and if deprived of it, they must instantly relinquish their conquests, or give up all the advantages which they derived from them; that no allurement was fo powerful as to furmount the natural aversion of the Indians to any laborious effort, and that nothing but the authority of a master could compel them to work; and if they were not kept constantly under the eye and discipline of a superior, fo great was their natural liftlessness and indifference, that they would neither attend to religious instruction, nor observe those rites of Christianity which they had been already taught. Upon all mose accounts, they found it necessary to tolerate the repartimientos, and to fuffer the Indians to remain under subjection to their Spanish masters. They used their utmost endeayours, however, to prevent the fatal effects of this establishment, and to fecure the Indians the confolation of the best treatment compatible with a state of servitude. For this purpole, they revived former regulations, they prescribed new ones, they neglected no circumstance that tended to mitigate the rigour of the yoke; and by their authority, their example, and their exhortations, they laboured to inspire their countrymen with fentiments of equity and gentleness towards the unhappy people upon whose industry they depended. Zuazo, in his department, feconded the endeavours of the superintendents. He reformed the courts of justice, in such a manner as to render their decisions equitable as well as expeditious, and introduced various regulations which greatly improved the interior police

police of the colony. The fatisfaction with his conduct, and that of the superintendents, was now universal among the Spaniards fettled in the New World, and all admired the boldness of Ximenes, in having departed from the ordinary path of bufiness in forming his plan, as well as his fagacity in pitching upon persons, whose wisdom, moderation, and disinterestedness rendered them worthy of this high trust 8.

воок III. 1517.

LAS CASAS alone was diffatisfied. The prudential confider- Las Cafas ations which influenced the fuperintendents, made no impref- with themfion upon him. He regarded their idea of accommodating their conduct to the flate of the colony, as the maxim of an unhallowed timid policy, which tolerated what was unjust, because it was beneficial. He contended, that the Indians were by nature free, and, as their protector, he required the superintendents not to bereave them of the common privilege of They received his most virulent remonstrances without emotion, but adhered firmly to their own fystem. The Spanish planters did not bear with him so patiently, and were ready to tear him in pieces for infifting in a requisition so odious to them. Las Casas, in order to screen himself from their rage, found it necessary to take shelter in a convent; and perceiving that all his efforts in America were fruitless, he foon fet out for Europe, with a fixed resolution not to abandon the protection of a people whom he deemed to be cruelly oppressed h.

HAD Ximenes retained that vigour of mind with which he Uis negociausually applied to business, Las Casas must have met with no minuters of

B O O K III.

very gracious reception upon his return to Spain. But he found the cardinal languishing under a mortal distemper, and preparing to refign his authority to the young king, who was daily expected from the Low Countries. Charles arrived, took possession of the government, and, by the death of Ximenes, lost a minister, whose abilities and integrity intitled him to direct his affairs. Many of the Flemish nobility had accompanied their fovereign to Spain. From that warm predilection to his countrymen, which was natural at his age, he consulted them with respect to all the transactions in his new kingdom, and they, with an indifcreet eagerness, intruded themselves into every business, and seized almost every department of administration b. The direction of American affairs was an object too alluring to escape their attention. Las Casas observed their growing influence, and though projectors are usually too fanguine, to conduct their schemes with much dexterity, he possessed a bustling indefatigable activity, which sometimes accomplishes its purposes with greater success, than the most exquifite discernment and address. He courted the Flemish ministers with assiduity. He represented to them the absurdity of all the maxims hitherto adopted with respect to the government of America, and particularly the defects of that arrangement which Ximenes had introduced. The memory of Ferdinand was odious to the Flemings. The superior virtue and abilities of Ximenes had long been the object of their envy. They fondly wished to have a plausible pretext for condemning the measures, both of the monarch and of the minister, and of reflecting some discredit on their political wisdom. The friends of Don Diego Columbus, as well as the Spanish courtiers, who

h Hist. of Charles V. vol. ii. p. 43.

had been diffatisfied with the cardinal's administration, joined Las Cafas in centuring the scheme of sending superintendants to America. This union of fo many interests and passions was irresistible; and, in correquence of it, the fathers of St. Jerome, and their affociate Zuazo, were recalled. Roderigo de Figueroa, a lawyer of some eminence, was appointed chief judge of the island, and received inftructions, in compliance with the request of Las Cafas, to examine once more, with the utmost attention, the point in controverfy between him and the people of the colony, with respect to the treatment of the natives; and in the mean time to do every thing in his power to alleviate their fufferings, and prevent the extinction of the race i.

воок

This was all that the zeal of Las Casas could procure, at Scheme of that juncture, in favour of the Indians. The impossibility of colonies with carrying on any improvement in America, unless the Spanish negroes. planters could command the labour of the natives, was an insuperable objection to his plan of treating them as free subiects. In order to provide some remedy for this, without which he found it was vain to mention his scheme, Las Casas proposed to purchase a sufficient number of negroes from the Portuguese settlements on the coast of Africa, and to transport them to America, in order that they raight be employed as flaves in working the mines and cultivating the ground. One of the first advantages which the Portuguese had derived from their discoveries in Africa, arose from the trade in flaves. Various circumstances concurred in reviving this odious commerce, which had been long abolished in Europe, and which is no less repugnant to the feelings of humanity, than to the principles of religion. As early as the year one thousand five hundred and three, a few negro flaves

1 Herrera, dec. 2. lib. ii. c. 16. 19. 21. lib. iii. c. 7, 8.

VOL. I.

G g

had

B O O K III. had been fent into the New World k. In the year one thousand five hundred and eleven, Ferdinand permitted the importation of them in greater numbers. They were found to be a more robust and hardy race than the natives of America. They were more capable of enduring fatigue, more patient under fervitude, and the labour of one negro was computed to be equal to that of four Indians ". Cardinal Ximenes, however, when folicited to encourage this commerce, peremptorily rejected the proposition, because he perceived the iniquity of reducing one race of men to flavery, while he was confulting about the means of restoring liberty to another". But Las Casas, from the inconfiftency natural to men who hurry with headlong impetuofity towards a favourite point, was incapable of making this diffinction. While he contended earnestly for the liberty of the people born in one quarter of the globe, he laboured to enflave the inhabitants of another region; and in the warmth of his zeal to fave the Americans from the yoke, pronounced it to be lawful and expedient to impose one still heavier upon the Africans. Unfortunately for the latter, Las Cafas's plan was adopted. Charles granted a patent to one of his Flemish favourites, containing an exclusive right of importing four thousand negroes into America. He sold his patent to some Genoese merchants for twenty-five thousand ducats, and they were the first who brought into a regular form that commerce for flaves between Africa and America, which has fince been carried on to fuch an amazing extent ".

price for negroes, that the number imported into Hispaniola made no great change upon the flate of the colony. Las Cafas, whose zeal was no less inventive than indefatigable, had recourse to another expedient for the relief of the Indians. He observed, that most of the persons who had settled hitherto in America, were foldiers and failors employed in the discovery or conquest of the country; the younger fons of noble families, allured by the prospect of acquiring sudden wealth; or desperate adventurers, whom their indigence or crimes forced to abandon their native land. Instead of such men, who were dissolute, rapacious, and incapable of that fober persevering industry which is requifite in forming new colonies, he proposed to supply the new fettlements in Hispaniola and the other islands with a fufficient number of labourers and husbandmen, who should be allured by fuitable premiums to remove thither. These, as they were accustomed to fatigue, would be able to perform the work, to which the Indians, from the feebleness of their constitution, were unequal, and might foon become useful and opulent citizens. But though Hispaniola stood much in need of a recruit of inhabitants, having been visited at this time with the small-pox, which swept off many of the natives, and though Las Casas had the countenance of the Flemish ministers, this scheme was defeated by the bishop of Burgos, who thwarted all his projects ".

LAS CASAS now despaired of procuring any relief for the Forms the Indians in those places where the Spaniards were already settled. colony. The evil was become fo inveterate there, as not to admit of a cure. But fuch discoveries were daily making in the continent, as gave an high idea both of its extent and populousness. In

P Herrera, dec. 2. lib. ii. c. 21.

all

B O O K III.

all those vast regions there was but one feeble colony planted; and except a finall fpot on the ishmus of Darien, the natives still occupied the whole country. This opened a new and more ample field for the humanity and zeal of Las Cafas, who flattered himself that he might prevent a pernicious system from being introduced there, though he had failed of fuccess in his attempts to overturn it, where it was already established. Full of this idea, he applied for a grant of the unoccupied country, firetching along the fea-coast from the gulf of Paria to the western frontier of that province now known by the name of Santa Maril a. He proposed to settle there with a colony coinposed of husbandmen, labourers, and ecclesiastics. He engaged, in the space of two years, to civilize ten thousand of the natives, and to instruct them so thoroughly in the arts of social life, that, from the fruits of their industry, an annual revenue of fifteen thousand ducats should arise to the king. In ten years, he expected that his improvements would be fo far advanced, as to yield annually fixty thousand ducats. He slipulated, that no failor or foldier should ever be permitted to settle in this diffrict; and that no Spaniard should enter it without his permission. He even projected to clothe the people whom he took along with him in fome peculiar garment, which did not refemble the Spanish dress, that they might appear to the natives to be a different race of men from those who had brought fo many calamities upon their country . From this scheme, of which I have traced only the great lines, it is manifest that Las Cafas had formed ideas concerning the method of treating the Indians, fimilar to those by which the Jesuits afterwards carried on their great operations in another part of the same continent. He supposed that the Europeans, by availing themselves of that

9 Herrera, dec. z. lib. iv. c. z.

afcendant

ascendant which they possessed in consequence of their superior progress in science and improvement, might gradually form the minds of the Americans to relish those comforts of which they were destitute, might train them to the arts of civil life, and render them capable of its functions.

воок 111. 1517

But to the bishop of Burgos and the council of the Indies Favourally this project appeared not only chimerical, but dangerous in a high degree. They deemed the faculties of the Americans to be naturally fo limited, and their indolence fo excessive, that any attempt to instruct or improve them would be fruitless. They contended, that it would be extremely imprudent to give the command of a country extending above a thousand miles along the coast, to a fanciful, presumptuous enthusiast, a stranger to the affairs of the world, and unacquainted with the arts of government. Las Cafas, far from being difcouraged with a repulse, which he had reason to expect, had recourse once more to the Flemish favourites, who zealously patronized his scheme, merely because it had been rejected by the Spanish ministers. They prevailed with their mafter, who had lately been raifed to the Imperial dignity, to refer the confideration of this measure to a felect number of his privy-counfellors; and as Las Cafas excepted against the members of the council of the Indies, as partial and interested, all of them were excluded. The decition of men chofen by recommendation of the Flemings, was perfectly conformable to their fentiments. They warmly approved of Las Cafas's plan; and gave orders for carrying it into execution, but restricted the territory allotted him to three hundred miles along the coast of Cumana, allowing him, however, to extend it as far as he pleased towards the interior part of the country '.

F Gomara Hist. Gener. c. 77. Heirera, dec. z. lib. iv. c. 3. Cviedo, lib. xi .. c. 5. THIS

A folemn deliberation concerning the mode of

treating the

Indians.

BOOK

This determination did not pass uncensured. Almost every person who had been in the West Indies exclaimed against it, and supported their opinion so considently, and with such plaufible reasons, as made it advisable to pause and to review the fubject more deliberately. Charles himfelf, though accustomed, at this early period of his life, to adopt the fentiments of his ministers, with such submission and deference as did not promife that decifive vigour of mind which diffinguished his riper years, began to suspect that the eagerness with which the Flemings took part in every affair relating to America, flowed from fome improper motive, and discovered an inclination to examine in person into the state of the question concerning the character of the Americans, and the proper manner of treating them. An opportunity of making this inquiry, with great advantage, foon occurred. Quevedo, the bishop of Darien, who had accompanied Pedrarias to the continent in the year one thousand five hundred and thirteen, happened to land at Barcelona, where the court then refided. It was foon known, that his fentiments concerning the talents and disposition of the Indians differed from those of Las Casas; and Charles naturally concluded, that by confronting two respectable persons, who, during their long residence in America, had full leisure to obferve the manners of the people whom they pretended to defcribe, he might be able to discover which of them had formed his opinion with the greatest discernment and accuracy.

A DAY for this folemn audience was appointed. The emperor appeared with extraordinary pomp, and took his feat on a throne in the great hall of the palace. His principal courtiers attended. Don Diego Columbus, admiral of the Indies, was fummoned to be present. The bishop of Darien was called

upon

June 20.

ВООК 1517.

upon first to deliver his opinion. He, in a short discourse, lamented the fatal defolation of America, by the extinction of fo many of its inhabitants; he acknowledged that this must be imputed, in fome degree, to the excessive rigour and inconfiderate proceedings of the Spaniards; but declared, that all the people of the New World, whom he had feen either in the continent or in the islands, appeared to him to be a race of men marked out, by the inferiority of their talents, for fervitude, and whom it would be impossible to instruct or improve, unless they were kept under the continual inspection of a master. Las Cafas, at greater length, and with more fervour, defended his own fystem. He rejected with indignation the idea that any race of men was born to fervitude, as irreligious and inhumane. He afferted, that the faculties of the Americans were not naturally defpicable, but unimproved; that they were capable of receiving instruction in the principles of religion, as well as of acquiring the industry and arts which would qualify them for the various offices of focial life; that the mildness and timidity of their nature rendered them so submissive and docile, that they might be led and formed with a gentle hand. He professed, that his intentions in proposing the scheme now under consideration were pure and difinterested; and though, from the accomplishment of his defigns, inestimable benefits would refult to the crown of Castile, he never had claimed, nor ever would receive any recompence upon that account.

CHARLES, after hearing both, and confulting with his mi- The fiheme nisters, did not think himself sufficiently informed to establish of Las Cafa; any general arrangement with respect to the state of the Indians; but as he had perfect confidence in the integrity of Las Casas, and as even the bishop of Darien admitted his scheme

B O O K 11. to be of f ch importance, that a trial flould be made of its effects, he issued a patent, granting him the district in Cumana formerly mentioned, with full power to establish a colony there according to his own plan.

His preparations for extcuting it.

LAS CASAS pushed on the preparations for his voyage with his usual ardour. But, either from his own inexperience in the conduct of affairs, or from the secret opposition of the Spanish nobility, who universally dreaded the success of an institution that might rob them of the industrious and useful hands which cultivated their estates, his progress in engaging husbandmen and labourers was extremely flow, and he could prevail on no more than two hundred to accompany him to Cumana.

Departs for America, and meets with forn iduble ubflacles. Nothing, however, could damp his zeal. With this flender train, hardly fufficient to take possession of such a vast territory, and altogether unequal to any attempt towards civilizing its inhabitants, he set sail. The first place at which he touched was the island of Porto-Rico. There he received an account of a new obstacle to the execution of his scheme, more insuperable than any he had hitherto encountered. When he lest America in the year one thousand five hundred and seventeen, the Spaniards had little intercourse with any part of the continent, except the countries adjacent to the gulf of Darien. But as every species of internal industry began to stagnate in Hispaniola, when, by the rapid decrease of the natives, the Spaniards were deprived of those hands with which they had hitherto carried on their operations, this prompted them to try

Q

⁶ Herrera, dec. 2. lib. iv. c. 3, 4, 5. Argenfola Annales dé Aragon, 74. 97. Re-mifal Hist. Gener. lib. ii. c. 19, 20.

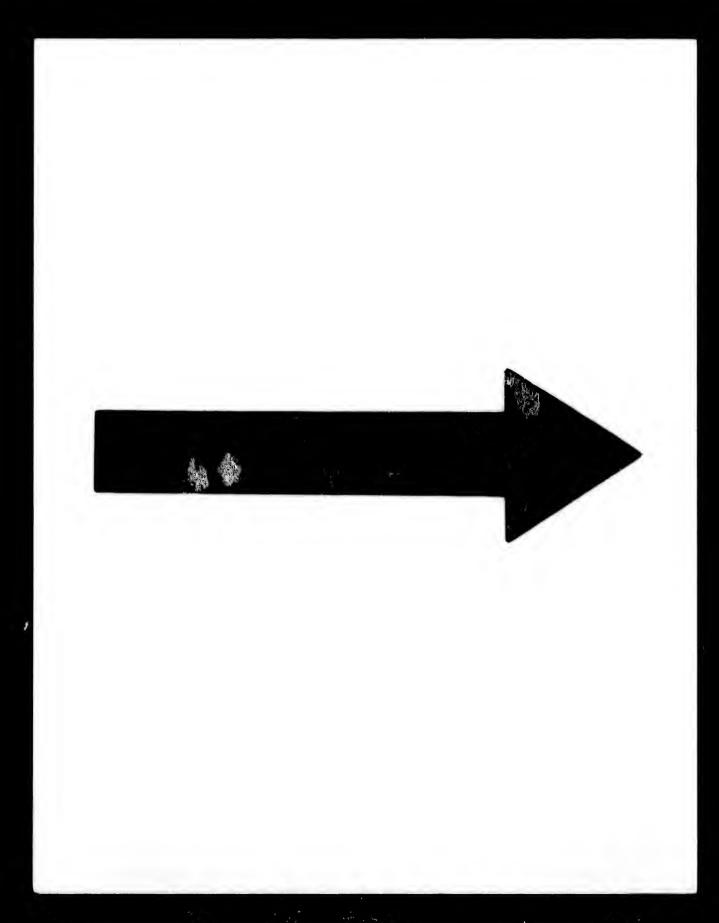

B O O K

various expedients for supplying that loss. Considerable numbers of negroes were imported; but, on account of their exorbitant price, many of the planters could not afford to purchase them. In order to procure flaves at an eafier rate, some of these fitted out vessels to cruize along the coast of the continent. In places where they found themselves inferior in strength, they traded with the natives, and gave European toys in exchange for the plates of gold which they wore as ornaments; but, wherever they could surprise or overpower the Indians, they carried them off by force, and fold them laves in Hispaniola. In those predatory excursions the most atrocious acts of violence and cruelty were committed. The Spanish name was held in detestation all over the continent. Whenever any ships appeared, the inhabitants either fled to the woods, or rushed down to the shore in arms, to repel those hated disturbers of their tranquillity. They forced some parties of the Spaniards to retreat with precipitation; they cut off others; and in the violence of their refentment against the whole nation, they murdered two Dominican missionaries, whose zeal had prompted them to fettle in the province of Cumana ". This outrage against persons revered for their fanctity, excited such indignation among the people of Hispaniola, who, notwithstanding all their licentious and cruel proceedings, were possessed with a wonderful zeal for religion, and a superstitious respect for its ministers, that they determined to inflict exemplary punishment, not only upon the perpetrators of that crime, but upon the whole nation. With this view, they gave the command of five ships and three hundred men to Diego Ocampo, with orders to lay waste the country of Cumana with fire and sword, and to transport all the inhabitants as slaves to Hispaniola.

STATE OF THE STATE

B O O K I·I. This armament Las Casas found at Porto-Rico, in its way to the continent; and as Ocampo refused to deser his voyage, he immediately perceived that it would be impossible to attempt the execution of his pacific plan in a country which was the seat of war and desolation *.

12th April. Lebours to furmount them.

In order to provide against the effects of this unfortunate incident, he set sail directly for St. Domingo, leaving his followers cantoned out among the planters in Porto-Rico. From many concurring causes, the reception which Las Casas met with in Hispaniola was very unfavourable. In his negociations for the relief of the Indians, he had censured the conduct of his countrymen fettled there with fuch honest severity, as rendered him univerfally odious to them. They confidered their own ruin as the inevitable consequence of his success. They were now elated with hope of receiving a large recruit of flaves from Cumana, which must be relinquished if Las Casas were affifted in fettling his projected colony there. Figueroa, in consequence of the instructions he had received in Spain, had made an experiment concerning the capacity of the Indians, which was represented as decisive against the system of Las Casas. He collected in Hispaniola a good number of the natives, and fettled them in two villages, leaving them at perfect liberty, and with the uncontrouled direction of their own actions. But that people, accustomed to a mode of life extremely different, incapable of affuming new habits at once, and dejected too with their own misfortunes as well as those of their country, exerted fo little industry in cultivating the ground, appeared so devoid of folicitude or forefight in providing for their own wants, and were fuch strangers to arrangement in conducting their affairs, that the Spaniards pronounced them incapable of being formed to live like men in focial life, and confidered them as children, who should be kept under the perpetual tutelage of persons superior to themselves in wisdom and sagacity y.

C

воок 1517.

NOTWITHSTANDING all those circumstances, which alie- Final miscarnated the people to whom he applied from himself and from scheme. his measures, Las Casas, by his activity and perseverance, by fome concessions, and many threats, obtained at length a small body of troops to protect him and his colony at their first landing. But upon his return to Porto-Rico, he found that the diseases of the climate had been fatal to several of his people; and that others having got employment in that island, refused to follow him. With the handful that remained, he fet fail and landed in Cumana. Ocampo had executed his commission in that province with fuch barbarous rage, having maffacred many of the inhabitants, fent others in chains to Hispaniola, and forced the rest to fly for shelter to the woods, that the people of a fmall colony, which he had planted at a place which he named Toledo, were ready to perish for want in a desolated country. There, however, Las Casas was obliged to fix his residence, though deferted both by the troops appointed to protect him, and by those under the command of Ocampo, who foresaw and dreaded the calamities to which he must be exposed in that wretched station. He made the best provision in his power for the fafety and subfishence of his followers; but as his utmost efforts availed little towards fecuring either the one or the other, he returned to Hispaniola, in order to solicit more effectual aid for the preservation of men, who from confidence in him had

y Herrers, dec. 2. lib. x. c. 5.

Hh 2

venturcd

B O O K

ventured into a post of so much danger. Soon after his departure, the natives, having discovered the feeble and defenceless state of the Spaniards, assembled secretly, attacked them with the fury natural to men exasperated by many injuries, cut off a good number, and compelled the rest to fly in the utmost consternation to the island of Cubagua. The small colony settled there, on account of the pearl sishery, catching the panic with which they had been seized, abandoned the island, and not a Spaniard remained in any part of the continent, or adjacent islands, from the gulf of Pacia to the borders of Darien. Astonished at such a succession of disasters, Las Casas was assamed to shew his face after this satal termination of all his splendid schemes. He shut himself up in the convent of the Dominicans at St. Domingo, and soon after assumed the habit of that order z.

THOUGH the expulsion of the colony from Cumana happened in the year one thousand five hundred and twenty-one, I have chosen to trace the progress of Las Casas negociations from their first rise to their final issue without interruption. His system was the object of long and attentive discussion; and though his efforts in behalf of the oppressed Americans, partly from his own rashness and imprudence, and partly from the malevolent opposition of his adversaries, were not attended with that success which he promised with too sanguine considence, they gave rise to various regulations which were of some benefit to that unhappy people. I return now to the history of the Spanish discoveries, as they occur in the order of time *.

DIEGO VELASQUEZ, who conquered Cuba in the year one thousand five hundred and eleven, still retained the government of that island, as the deputy of Don Diego Columbus, though he feldom acknowledged his superior, and aimed at rendering veries towards the wellhis own authority altogether independent. Under his prudent administration Cuba became one of the most flourishing of the Spanish settlements. The fame of this allured many perfons from the other colonies, in hopes of finding there either fome permanent establishment, or some employment for their activity. As Cuba lay to the west of all the islands occupied by the Spaniards, and as the ocean, which stretches beyond it towards that quarter, had not hitherto been explored, these circumstances naturally invited the inhabitants to attempt new difcoveries. An expedition for this purpose, in which activity and resolution might conduct to sudden wealth, was more fuited to the genius of the age, than the patient industry requifite in clearing ground, and manufacturing fugar. Infligated by this spirit, several officers, who had served under Pedrarias in Darien, entered into an affociation to undertake a voyage of discovery. They perfuaded Francisco Hernandez Cordova, an opulent planter in Cuba, and a man of distinguished courage, to join with them in the adventure, and chose him to be their commander. Velasquez not only approved of the defign, but affifted in carrying it on. As the veterans from Darien were extremely indigent, he and Cordova advanced money for purchasing three small vessels, and furnishing them with every thing requisite either for traffic or for war, a hundred and ten men embarked on board of them, and failed from St. Jago de Cuba on the eighth of February one

BOOK Ш.

b Herrera, dec. 2. lib, ii. c. 19.

thousand

B O O K III. thousand five hundred and seventeen. By the advice of their chief pilot, Antonio Alaminos, who had served under the first admiral Columbus, they stood directly west, relying on the opinion of that great navigator, who uniformly maintained that a westerly course would lead to the most important discoveries.

Yucatan.

On the twenty-first day after their departure from St. Jago, they faw land, which proved to be Cape Cotoche, the eastern point of that large peninsula projecting from the continent of America, which still retains its original name of Ywatan. As they approached the shore, five canoes came off full of people decently clad in cotton garments; an aftonishing spectacle to the Spaniards, who had found every other part of America possessed by naked savages. Cordova endeavoured by small presents to gain the good will of these people. They, though amazed at the strange objects now presented for the first time to their view, invited the Spaniards to visit their habitations, with an appearance of cordiality. They landed accordingly, and as they advanced into the country, they observed with new wonder some large houses built with stone. But they soon found that, if the people of Yucatan had made progress in improvement beyond their countrymen, they were likewise more artful and warlike. For though the Cazique received Cordova with many tokens of friendship, he had posted a considerable body of his fubjects in ambush behind a thicket, who upon a fignal given by him, rushed out and attacked the Spaniards with great boldness, and some degree of martial order. At the first flight of their arrows, fifteen of the Spaniards were wounded; but the Indians were struck with such terror by the sudden explosion of the fire arms, and so surprised at the execution done by them, by the cross-bows, and by the other weapons of their new enemies, that they fled precipitately, and Cordova quitted a country where he had met with such a sierce reception, carrying off two prisoners, together with the ornaments of a small temple, which he plundered in his retreat.

B O O K 111.

HE continued his course towards the west without losing sight of the coast, and on the sixteenth day arrived at Campeachy. There the natives received them more hospitably; but the Spaniards were much surprised that on all the extensive coast along which they had sailed, and which they imagined to be a large island, they had not observed any river. As their water began to fail, they advanced, in hopes of sinding a supply; and at length they discovered the mouth of a river at Potonchan, some leagues beyond Campeachy.

Campeachy.

CORDOVA landed all his troops in order to protect the failors while employed in filling the casks; but notwithstanding this precaution, the natives rushed down upon them with such sury, and in such numbers, that forty-seven of the Spaniards were killed upon the spot, and one man only of the whole body escaped unhurt. Their commander, though wounded in twelve different places, directed the retreat with presence of mind equal to the courage with which he had led them on in the engagement, and with much difficulty they regained their ships. After this fatal repulse, nothing remained but to hasten back to Cuba with their shattered forces. In their passage thither they suffered the most exquisite distress for want of water, that men wounded and sickly, shut up in small vessels,

240

B O O K

and exposed to the heat of the torrid zone, can be supposed to endure. Some of them, finking under these calamities, died by the way; Cordova, their commander, expired soon after they landed in Cuba ^d.

Voyage of Grijalva.

NOTWITHSTANDING the disastrous conclusion of this expedition, it contributed rather to animate than to damp a spirit of enterprize among the Spaniards. They had discovered an extensive country, situated at no great distance from Cuba, fertile in appearance, and possessed by a people far superior in improvement to any hitherto known in America. Though they had carried on little commercial intercourse with the natives, they had brought off some ornaments of gold, not considerable in value, but of fingular fabric. These circumstances, related with the exaggeration natural to men defirous of heightening the merit of their own exploits, were more than fufficient to excite romantic hopes and expectations. Great numbers offered to engage in a new expedition. Velasquez, solicitous to distinguish himself by some service so meritorious, as might entitle him to claim the government of Cuba independent of the admiral, not only encouraged their ardour, but at his own expence fitted out four ships for the voyage. Two hundred and forty volunteers, among whom were several persons of rank and fortune, embarked in this enterprise. The command of it was given to Juan de Grijalva, a young man of known merit and courage, with instructions to observe with attention the nature of the countries which he should discover, to barter for gold, and if circumstances were inviting, to settle a colony

d Herrera, dec. 2. lib. ii. c. 17, 18. Histor. Verdadera dela Conquista de la Nueva Espana por Bernal Diaz del Castillo, cap. 1-7. Oviedo, lib. xvii. c. 3. Go.nara, c. 52. P. Martyr de insulis nuper inventis, p. 329.

in some proper station. He failed from St. Jago de Cuba on the eighth of April one thousand five hundred and eighteen. The pilot Alaminos held the same course as in the former voyage, but the violence of the currents carrying the ships to the fouth, the first land which they made was the island of Cozumel, to the east of Yucatan. As all the inhabitants fled to the woods and mountains at their approach, they made no long flay there, and without any remarkable occurrence they reached Potonchan on the opposite side of the peninsula. The desire of avenging their countrymen who had been flain there, concurred with their ideas of good policy, in prompting them to land, that they might chassise the Indians of that district with fuch exemplary rigour, as might strike terror into all the people around them. But though they difembarked all their troops, and carried ashore some field-pieces, the Indians fought with fuch courage, that the Spaniards gained the victory with difficulty, and were confirmed in their opinion that the inhabitants of this country would prove more formidable enemies than any they had met with in other parts of America. From Potonchan, they continued their voyage towards the west, keeping as near as possible to the shore, and casting anchor every evening, from dread of the dangerous accidents to which they might be exposed in an unknown sea. During the day, their eyes were turned continually towards land, with a mixture of surprise and wonder at the beauty of the country, and the novelty of the objects which they beheld. Many villages were fcattered along the coast, in which they could diffinguish houses of stone that appeared white and lofty at a distance. In the warmth of their admiration, they fancied thefe to be cities adorned with towers and pinacles; and one of the foldiers happening to remark that this country re-Vol. I. Ιi fembled

tembled Spain in its appearance, Grijalva, with universal applause, called it New Spain, the name which still distinguishes this extensive and opulent province of the Spanish empire in America. They landed in a river which the natives called Tabasco, and the same of their victory at Potonchan having reached this place, the Cazique not only received them amicably, but bestowed presents upon them of such value, as confirmed the high ideas which the Spaniards had formed with respect to the wealth and fertility of the country. These ideas were raifed still higher by what occurred at the place where they next touched. This was confiderably to the west of Tabasco, in the province since known by the name of Guaxaca. There they were received with the respect paid to superior beings. The people perfumed them as they landed with incense of gum copal, and presented to them as offerings the most choice delicacies of their country. They were extremely fond of trading with them, and in fix days the Spaniards obtained ornaments of gold, of curious workmanship, to the value of fifteen thousand pelos, in exchange for European toys of small price. The two prisoners whom Cordova had brought from Yucatan, had hitherto ferved as interpreters; but as they did not understand the language of this country, the Spaniards learned from the natives by figns, that they were subjects of a great monarch called Montezuma, whose dominion extended over that and many other provinces. Leaving this place, with which he had fo much reason to be pleased, Grijalva continued his course towards the west. He landed on a small island, which he named the Isle of Sacrifices, because there the Spaniards beheld, for the first time, the horrid spectacle of human victims, which the barbarous superstition of the natives offered to their gods. He touched at another small island. which

which he called St. John de Ulua. From this place he difpatched Pedro de Alvarado, one of his officers, to Velasquez, with a full account of the important discoveries which he had made, and with all the treasure that he had acquired by trafficking with the natives. After the departure of Alvarado, he himself, with the remaining vessels, proceeded along the coast as far as the river Panuco, the country still appearing to be well peopled, fertile, and opulent.

BOOK 111. 1518.

SEVERAL of Grijalva's officers contended, that it was not Reasons for enough to have discovered those delightful regions, or to have net leaving a performed, at their different landing-places, the empty ceremony of taking possession of them for the crown of Castile, and that their glory was incomplete, unless they planted a colony in some proper station, which might not only secure the Spanish nation a footing in the country, but, with the reinforcements which they were certain of receiving, might gradually subject the whole to the dominion of their sovereign. But the squadron had now been above five months at sea; the greatest part of their provisions was exhausted, and what remained of their flores fo much corrupted by the heat of the climate, as to be almost unfit for use; they had lost some men by death; others were fickly; the country was crowded with people who feemed to be intelligent as well as brave; and they were under the government of one powerful monarch, who could bring them to act against their invaders with united force. To plant a colony under so many circumstances of disadvantage, was to expose it to inevitable destruction. Grijalva, though possessed both of ambition and courage, was deftitute of the superior talents capable of forming or executing fuch a great plan. He judged it more prudent to return to I i. 2. Cuba,

B O O K 111. Cuba, having fulfilled the purpose of his voyage, and accomplished all that the armament which he commanded enabled him to perform. He returned to St. Jago de Cuba, on the twenty-sixth of October, from which he had taken his departure about six months before ".

Preparations for another expedition.

This was the longest as well as the most successful voyage which the Spaniards had hitherto made in the New World. They had discovered that Yucatan was not an island as they had supposed, but part of the great continent of America. From Potonchan they had purfued their course for many hundred miles along a coast formerly unexplored, stretching at first towards the west, and then turning to the north; all the country which they had discovered appeared to be no less valuable than extensive. As soon as Alvarado reached Cuba, Velasquez, transported with success so far beyond his most sanguine expectations, immediately dispatched a person of confidence to carry this important intelligence to Spain, to exhibit the rich productions of the countries which had been discovered by his means, and to folicit fuch an increase of authority as might enable and encourage him to attempt the conquest of them. Without waiting for the return of his messenger, or for the arrival of Grijalva, of whom he was become so jealous or distrustful, that he resolved no longer to employ him, he began to prepare fuch a powerful armament, as might prove equal to an enterprise of so much danger and importance.

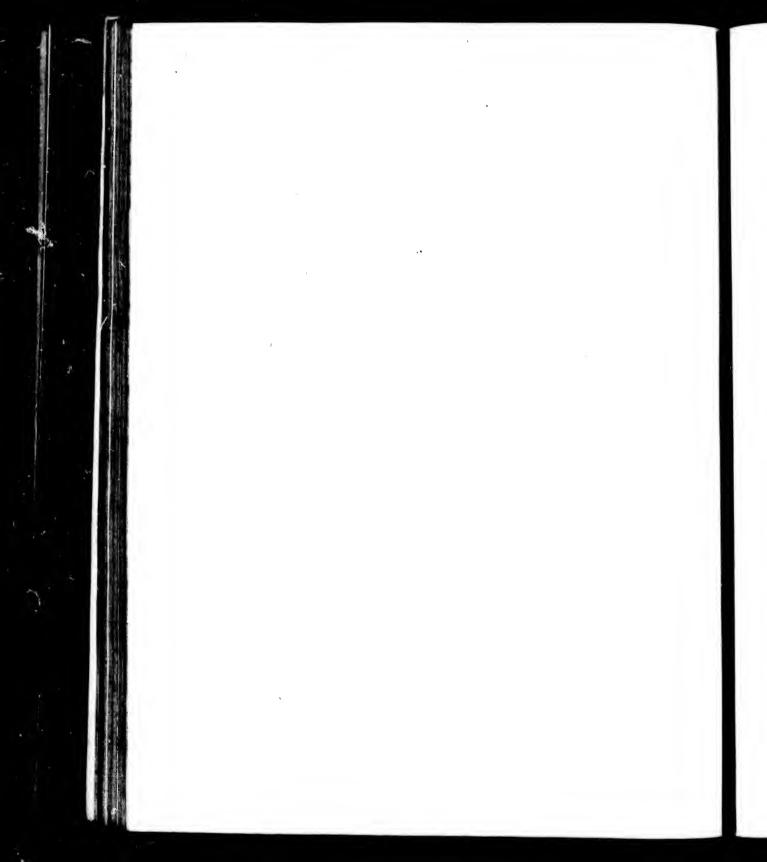

But as the expedition upon which Velasquez was now intent, terminated in conquests of greater moment than what the

OOK IV.

WENTY-SIX years had now elapsed fince Columbus BOOK conducted the people of Europe to the New World. During that period the Spaniards had made great progress in exploring its various regions. They had visited all the islands fcattered in different clusters through that part of the ocean which flows in between North and South America. They had failed along the eastern coast of the continent from the river De la Plata to the bottom of the Mexican gulf, and had found that it stretched without interruption through this vast portion of the globe. They had discovered the great Southern Ocean, which opened new prospects in that quarter. They had acquired some knowledge of the coast of Florida, which led them to observe the continent as it extended in an opposite direction; and though they pushed their discoveries no farther towards the north,

then known.

В О О К IV. north, other nations had visited those parts which they neglected. The English, in a voyage, the motives and success of which shall be related in another part of this History, had sailed along the coast of America from Labrador to the consines of Florida; and the Portuguese, in quest of a shorter passage to the East Indies, had ventured into the northern seas, and viewed the same regions. Thus, at the period where I have chosen to take a view of the state of the New World, its extent was known almost from its northern extremity to thirty-sive degrees south of the equator. The countries which stretch from thence to the southern boundary of America, the great empire of Peru, and the extensive dominions subject to the sovereigns of Mexico, were still undiscovered.

The vaft extent of the New World. WHEN we contemplate the New World, the first circumstance that strikes us is its immense extent. It was not a small portion of the earth, so inconsiderable that it might have escaped the observation or research of former ages, which Columbus discovered. He made known a new hemisphere, of greater extent than either Europe, or Asia, or Africa, the three noted divisions of the ancient continent, and not much inferior in dimensions to a third part of the habitable globe.

AMERICA is remarkable not only for its magnitude, but for its position. It stretches from the northern polar circle to a high southern latitude, above sifteen hundred miles beyond the farthest extremity of the old continent on that side of the line. A country of such extent passes through all the climates capable of becoming the habitation of man, and sit for yielding the

^{*} Herrera, dec. 1. lib. vi. c. 16.

various productions peculiar either to the temperate or to the BOOK torrid regions of the earth.

NEXT to the extent of the New World, the grandeur of the Grand objects objects which it prefents to view is most apt to strike the eye of view. an observer. Nature seems here to have carried on her operations with a bolder hand, and to have diffinguished the features of this country by a peculiar magnificence. The mountains of Its moun-America are much superior in height to those in the other divifions of the globe. Even the plain of Quito, which may be confidered as the base of the Andes, is elevated farther above the sea than the top of the Pyrenees. This stupendous ridge of the Andes, no less remarkable for extent than elevation, rifes in different places more than one third above the Pike of Teneriffe, the highest land in the ancient hemisphere. The Andes may literally be faid to hide their heads in the clouds; the storms often roll, and the thunder bursts below their summits, which, though exposed to the rays of the fun in the centre of the torrid zone, are covered with everlasting snows b.

FROM those lofty mountains descend rivers proportionally rivers, large, with which the streams in the ancient continent are not to be compared, either for length of course, or the vast body of water which they rell towards the ocean. The Maragnon, the Orinoco, the Plata, in South America, the Missifippi and St. Laurence in North America, flow in fuch spacious channels, that, long before they feel the influence of the tide, they resemble arms of the sea rather than rivers of fresh water '.

b See NOTE XXVII.

c See NOTE XXVIII.

Vol. I.

K k

THE

THE lakes of the New World are no less conspicuous for grandeur than its mountains and rivers. There is nothing in other parts of the globe which resembles the prodigious chain of lakes in North America. They may properly be termed inland seas of fresh water; and even those of the second or third class in magnitude, are of larger circuit than the greatest lake of the ancient continent.

Its form favourable to commerce.

THE New World is of a form extremely favourable to commercial intercourse. When a continent, like Africa, is composed of one vast solid mass, unbroken by arms of the sea penetrating into its interior parts, with few large rivers, and those at a considerable distance from each other, the greater part of it feems destined to remain for ever uncivilized, and to be debarred from any active or enlarged communication with the rest of mankind. When, like Europe, a continent is opened by inlets of the ocean of vast extent, such as the Mediterranean and Baltic; or when, like Asia, its coast is broken by deep bays advancing far into the country, fuch as the Black Sea, the gulfs of Arabia, of Persia, of Bengal, of Siam, and of Leotang; when the furrounding feas are filled with large and fertile islands, and the continent itself watered with a variety of navigable rivers, those regions may be faid to possess whatever can facilitate the progress of their inhabitants in commerce and improvement. In all these respects America may bear a comparison with the other quarters of the globe. The gulf of Mexico, which flows in between North and South America. may be confidered as a Mediterranean fea, which opens a maritime commerce with all the fertile countries by which it is encircled. The islands scattered in it are inferior only to those

BOOK IV.

in the Indian Archipelago, in number, in magnitude, and in value. As we stretch along the northern division of the American hemisphere, the Bay of Chesapeak presents a spacious inlet, which conducts the navigator far into the interior parts of provinces no less fertile than extensive; and if ever the progress of culture and population shall mitigate the extreme rigour of the climate in the more northern districts of America, Hudson's Bay may become as subservient to commercial intercourse in that quarter of the globe, as the Baltic is in Europe. The other great portion of the New World is encompassed on every fide by the fea, except one narrow neck, which feparates the Atlantic from the Pacific Ocean; and though it be not opened by spacious bays or arms of the sea, its interior parts are rendered accessible by a number of large rivers, fed by so many auxiliary streams, flowing in such various directions, that, without any aid from the hand of industry and art, an inland navigation may be carried on through all the provinces from the river De la Plata to the gulf of Paria. Nor is this bounty of nature confined to the fouthern division of America; its northern continent abounds no less in rivers which are navigable almost to their fources, and by its immense chain of lakes provision is made for an inland communication, more extensive and commodious than in any quarter of the globe. The countries stretching from the gulf of Darien on one side. to that of California on the other, which form the chain that binds the two parts of the American continent together, are not destitute of peculiar advantages. Their coast on one side is washed by the Atlantic Ocean, on the other by the Pacific. Some of their rivers flow into the former, some into the latter, and fecure to them all the commercial benefits that may refult from a communication with both.

K k 2

But

BOOK

Temperature of its chamaie.

But what most distinguishes America from other parts of the earth, is the peculiar temperature of its climate, and the different laws to which it is subject with respect to the distribution of heat and cold. We cannot determine precisely the portion of heat felt in any part of the globe, merely by meafuring its distance from the equator. The climate of a country is affected, in some degree, by its elevation above the sea, by the extent of continent, by the nature of the soil, the height of adjacent mountains, and many other circumstances. The influence of these, however, is, from various causes, less considerable in the greater part of the ancient continent; and from knowing the position of any country there, we can pronounce with more certainty what will be the warmth of its climate, and the nature of its productions.

Predo n2nance of cold. THE maxims which are founded upon observation of our hemisphere will not apply to the other. There, cold predominates. The rigour of the frigid zone extends over half of that which should be temperate by its position. Countries where the grape and the fig should ripen, are buried under snow one half of the year; and lands situated in the same parallel with the most fertile and best cultivated provinces in Europe, are chilled with perpetual frosts, which almost destroy the power of vegetation d. As we advance to those parts of America which lie in the same parallel with provinces of Asia and Africa, blessed with an uniform enjoyment of such genial warmth as is most friendly to life and vegetation, the dominion of cold continues to be felt, and winter, though during a short period, often reigns with extreme severity. If we proceed along the American continent into the torrid zone, we shall

Ьf

y

١t

ıe

m

ce

ıf

28

r

f

a

find the cold prevalent in the New World extending itself also BOOK to this region of the globe, and mitigating the excess of its fervour. While the negro on the coast of Africa is fcorched with unremitting heat, the inhabitant of Peru breathes an air equally mild and temperate, and is perpetually shaded under a canopy of grey clouds, which intercepts the fierce beams of the fun, without obstructing his friendly influence. Along the eastern coast of America, the climate, though more fimilar to that of the torrid zone in other parts of the earth, is nevertheless considerably milder than in those countries of Asia and Africa which lie in the same latitude. If from the fouthern tropic we continue our progress to the extremity of the American continent, we meet with frozen feas, and countries horrid, barren, and fearcely habitable for cold, fooner than in the north f.

VARIOUS causes combine in rendering the climate of Ame- Causes of this. rica so extremely different from that of the ancient continent. Though the utmost extent of America towards the north be not yet discovered, we know that it advances nearer to the pole than either Europe or Asia. The latter have large seas to the north, which are open during part of the year; and even when covered with ice, the wind that blows over them is less intenfely cold than that which blows over land in the fame high latitudes. But in America the land stretches from the river St. Laurence towards the pole, and spreads out immensely to the west. A chain of enormous mountains, covered with snow

e Voyage de Ulloa, tom. i. p. 453. Anson's Voyage, p. 184.

Anson's Voyage, p. 74.; and Voyage de Quiros, chez Hist. Gen. des Voyages, tom. xiv. p. 83. Richard Hist. Natur. de l'Air, ii. 305, &c.

and ice, runs through all this dreary region. The wind, in passing over such an extent of high and frozen land, becomes so impregnated with cold, that it acquires a piercing keenness, which it retains in its progress through warmer climates, and is not entirely mitigated until it reach the Gulf of Mexico. Over all the continent of North America, a north-westerly wind and excessive cold are synonymous terms. Even in the most sultry weather, the moment that the wind veers to that quarter, its penetrating influence is felt in a transition from heat to cold, no less violent than sudden. To this powerful cause we may ascribe the extraordinary dominion of cold, and its violent inroads into the southern provinces in that part of the globe s.

OTHER causes, no less remarkable, diminish the active power of heat in those parts of the American continent which lie between the tropics. In all that portion of the globe, the wind blows in an invariable direction from east to west. As this wind holds its course across the ancient continent, it arrives at the countries which stretch along the western shore of Africa, inflamed with all the fiery particles which it hath collected from the fultry plains of Asia, and the burning fands in the African defarts. The coast of Africa is, accordingly, the region of the earth which feels the most ferent heat, and is exposed to the unmitigated ardour of the torrid zone. But this same wind which brings fuch an accession of warmth to the countries lying between the river of Senegal and Cafraria, traverses the Atlantic Ocean before it reaches the American shore. It is cooled in its passage over this vast body of water, and is felt as a refreshing gale along the coasts of Brasil b, and Guiana, rendering

B Charlevoix Hist. de Nov. Fr. iii. 165. Hist. generale Voyages, tom. xv. 215, &c.

^{*} See NOTE XXX.

воок IV.

these countries, though among the warmest in America, temperate, when compared with those which lie opposite to them in Africa'. As this wind advances in its course across America, it meets with immense plains, covered with impenetrable forefts, or occupied by large rivers, marthes, and flagnating waters, where it can recover no confiderable degree of heat. At length it arrives at the Andes, which run from north to fouth through the whole continent. In passing over their elevated and frozen fummits, it is fo thoroughly cooled, that the greater part of the countries beyond them hardly feel the ardour to which they feem exposed by their fituation k. In the other provinces of America, from Tierra Firme westward to the Mexican empire, the heat of the climate is tempered, in some places, by the elevation of the land above the sea, in others, by their extraordinary humidity, and in all, by the enormous mountains scattered over this tract. The islands of America in the Torrid Zone are either fmall or mountainous, and are fanned alternately by refreshing sea and land breezes.

The causes of the extraordinary cold towards the southern limits of America, and in the seas beyond it, cannot be ascertained in a manner equally satisfying. It was long supposed that a vast continent, distinguished by the name of Terra Australis Incognita, lay between the southern extremity of America and the Antarctic pole. The same principles which account for the extraordinary degree of cold in the northern regions of America, were employed in order to explain that which is selt at Cape Horn and the adjacent countries. The immense extent of the southern continent, and the large

¹ See NOTE XXXI. k Acosa Hist. Novi Orbis, lib. ii. c. 11. Buston Hist. Naturelle, &c. tom. ii. 512, &c. ix. 107, &c. Osborn's Collect. of Voyages, ii. p. 868.

rivers which it poured into the ocean, were mentioned and admitted by philosophers as causes sufficient to oceasion the unusual sensation of cold, and the still more uncommon appearances of frozen seas in that region of the globe. But the imaginary continent to which such instruces was ascribed having been searched for in vain, and the space which it was supposed to occupy having been found to be an open sea, new conjectures must be formed with respect to the causes of a temperature of climate, so extremely different from that which we experience in countries removed at the same distance from the opposite pole.

Condition when firth

AFTER contemplating those permanent and characteristic qualities of the American continent, which arise from the peculiarity of its fituation, and the disposition of its parts, the next object that merits attention is its condition when first discovered, as far as that depended upon the industry and operations of man. The effects of human ingenuity and labour are more extensive and considerable, than even our own vanity is apt at first to imagine. When we survey the face of the habitable globe, no small part of that fertility and beauty, which we ascribe to the hand of Nature, is the work of man. His efforts, when continued through a fuccession of ages, change the appearance and improve the qualities of the earth. As a great part of the ancient continent has long been occupied by nations far advanced in arts and industry, our eye is accustomed to view the earth in that form which it assumes when rendered fit to be the residence of a numerous race of men, and to supply them with nourishment.

See NOTE XXXII.

d

v

But in the New World, the state of mankind was ruder, and the aspect of Nature extremely different. Throughout all its vast regions, there were only two monarchies remarkable for cultivated. extent of territory, or diffinguished by any progress in improvement. The rest of this continent was possessed by small independent tribes, destitute of arts and industry, and neither capable to correct the defects, nor desirous to meliorate the condition of that part of the earth allotted to them for their habitation. Countries, occupied by fuch people, were almost in the fame state as if they had been without inhabitants. Immense forests covered a great part of the uncultivated earth; and as the hand of industry had not taught the rivers to run in a proper channel, or drained off the stagnating water, many of the most fertile plains were overflowed with inundations, or converted into marshes. In the southern provinces, where the warmth of the fun, the moisture of the climate, and the fertility of the foil, combine in calling forth the most vigorous powers of vegetation, the woods are so choked with its rank luxuriance, as to be almost impervious, and the surface of the ground is hid from the eye under a thick covering of shrubs and herbs and weeds. In this state of wild unassisted nature, a great part of the large provinces in South America, which extend from the bottom of the Andes to the sea, still remain. The European colonies have cleared and cultivated a few spots along the coast, but the original inhabitants, as rude and indolent as ever, have done nothing to open or improve a country, possessing almost every advantage of situation and climate. As we advance towards the northern provinces of America, Nature continues to wear the same uncultivated aspect, and in proportion as the rigour of the climate increases, appears more desolate and horrid. There, the forests, though not encumbered with the same Vol. I. Ll exuberance

BOOK

exuberance of vegetation, are of equal extent; prodigious marshes overspread the plains, and sew marks appear of human activity in any attempt to cultivate or embellish the earth. No wonder that the colonics sent from Europe were assonished at their sirst entrance into the New World. It appeared to them waste, solitary, and uninviting. When the English began to settle in America, they termed the countries of which they took possession, The Wilderness. Nothing but their eager expectation of sinding mines of gold, could have induced the Spaniards to penetrate through the woods and marshes of America, where, at every step, they observed the extreme difference between the uncultivated face of Nature, and that which it acquires under the forming hand of industry and art ".

Unwholefome.

THE labour and operations of man not only improve and embellish the earth, but render it more wholesome, and friendly. to life. When any region lies neglected and destitute of cultivation, the air stagnates in the woods, putrid exhalations. arise from the waters; the surface of the earth, loaded with rank vegetation, feels not the purifying influence of the fun; the malignity of the distempers natural to the climate increases, and new maladies no less noxious are engendered. Accordingly, all the provinces of America, when first discovered. were found to be remarkably unhealthy. This the Spaniards experienced in every expedition into the New World, whether destined for conquest or settlement. Though by the natural constitution of their bodies, their habitual temperance, and the perfevering vigour of their minds, they, were as much formed as any people, in Europe for active,

" See NOTE XXXIII.

fervice

fervice in a fultry climate, they felt severely the fatal and pernicious qualities of those uncultivated regions through which they marched, or where they endeavoured to plant colonies. Great numbers were cut off by the unknown and violent diteases with which they were infected. Such as survived the destructive rage of those maladies, were not exempted from the noxious effects of the climate. They returned to Europe, according to the description of the early Spanish historians, feeble, emaciated, with languid looks, and complexions of such a sickly yellow colour, as indicated the unwholesome temperature of the countries where they had resided.

the temperature of the air, but the qualities of its productions. The principle of life feems to have been less active and vigorous there, than in the ancient continent. Notwithstanding the vast extent of America, and the variety of its climates, the different species of animals peculiar to it are much fewer in proportion, than those of the other hemisphere. In the islands, there were only four kinds of quadrupeds known, the largest of which did not exceed the size of a rabbit. On the continent, the variety was greater, and though the individuals of each kind could not fail of multiplying exceedingly, when almost unmolested by men, who were neither so numerous, nor so united in society, as to be formidable enemies to the animal creation, the number of distinct species must still be considered

THE uncultivated state of the New World affected not only Its animals.

as extremely small. Of two hundred different kinds of animals spread over the face of the earth, only about one third

A Gomara Hist. c. 20. 22. Oviedo Hist. lib. ii. c. 13. lib. v. c. 10. P. Mart. Epist. 545. Decad. p. 176.

BOOK . IV.

existed in America, at the time of its discovery o. Nature was not only less prolific in the New World, but she appears likewife to have been less vigorous in her productions. The animals originally belonging to this quarter of the globe appear to be of an inferior race, neither fo robust, nor so herce, as those of the other continent. America gives birth to no creature of fuch bulk as to be compared with the elephant or rhinoceros, or that equals the lion and tyger in strength and ferocity . The Tapyr of Brasil, the quadruped of the first magnitude in the New World, is not larger than a calf of fix months old. The Puma and Jaguar, its fiercest beasts of prey, which the Europeans have innacurately denominated lions and tygers, possess neither the undaunted courage of the former, nor the ravenous cruelty of the latter 4. They are inactive and timid, hardly formidable to man, and often turn their backs upon the least appearance of resistance. The same qualities in the climate of America which stinted the growth, and enfeebled the spirit, of its native animals, have proved pernicious to such as have migrated into it voluntarily from the other continent, or have been transported thither by the Europeans'. The bears. the wolves, the deer of America, are not equal in fize to those of the Old World'. Most of the domestic animals, with which the Europeans stored the provinces wherein they settled, have degenerated with respect either to bulk or quality, in a coun-

THE same causes, which checked the growth and the vi- Insects and gour of the more noble animals, were friendly to the propagation and increase of reptiles and insects. Though this is not peculiar to the New World, and those odious tribes, the offspring of heat, moisture, and corruption, infest every part of the torrid zone; they multiply faster, perhaps, in America, and grow to a more monstrous bulk. As this country is, on the whole, less cultivated, and less peopled, than the other quarters of the earth, the active principle of life wastes its force in productions of this inferior form. The air is often darkened with clouds of infects, and the ground covered with shocking and noxious reptiles. The country around Porto-Bello fwarms with toads in fuch multitudes, as hide the furface of the earth. At Guyaquil, fnakes and vipers are hardly less numerous. Carthagena is infested with numerous flocks of bats, which annoy not only the cattle but inhabitants". In the islands, legions of ants have, at different times, confumed every vegetable production, and left the earth entirely bare, as if it had been burnt with fire. The damp forests, and rank soil of the countries on the banks of the Orinoco and Maragnon, teem with almost every offensive and poisonous creature, which the power of a sultry fun can quicken into life 2.

THE

THE birds of the New World are not distinguished by qualities fo conspicuous and characteristical, as those which we have observed in its quadrupeds. Birds are more independent of man, and less affected by the changes which his industry and labour make upon the state of the earth. They have a greater propenfity to migrate from one country to another, and can gratify this instinct of their nature without difficulty or danger. Hence the number of birds common to both continents is muchgreater than that of quadrupeds; and even such as are peculiar to America nearly resemble those with which mankind were acquainted in fimilar regions of the ancient hemisphere. The American birds of the torrid zone, like those of the same climate in Asia and Africa, are decked in plumage, which dazzles the eye with the vivid beauty of its colours, but nature, fatiffied with clothing them in this gay dress, has denied most of them that melody of found, and variety of notes, which catches and delights the ear. The birds of the temperate climates there, in the fame manner as in our continent, are less splendid in their appearance, but, in compensation for that defect, have all the power and fweetness of music in their voice. In fome districts of America, the unwholesome temperature of the air feems to be unfavourable even to this part of the creation. The number of birds is less than in other countries, and the traveller is thruck with the amazing folitude and filence of its forests . It is remarkable, however, that America, where the quadrupeds are fo dwarfish and dastardly, should produce the Condor,

B O O K IV.

THE foil, in a continent so extensive as America, must of soil. course be extremely various. In each of its provinces, we shall find some distinguishing peculiarity, the description of which belongs to those who write their particular history. In general, we may observe, that the moisture and cold, which predominate so remarkably in all parts of America, must have great influence upon the nature of its foil; countries lying in the fame parallel with those regions which never feel the extreme rigour of winter in the ancient continent, are frozen over in America during a great part of the year. Chilledby this intense cold, the ground never acquires warmth sufficient to ripen the fruits, which are found in the corresponding parts of the other continent. If we would rear in America the productions which abound in any particular diffrict of the world, we must advance several degrees nearer to the line, than in the other hemisphere, as it requires such an in-· crease of heat to counterbalance the natural frigidity of the soil and climate . At the Cape of Good Hope, several of the plants, and fruits peculiar to the countries within the tropics, are cultivated with success; whereas, at St. Augustine, in Florida, and Charles-Town, in South-Carolina, though confiderably nearer the line; they cannot be brought to thrive with equal certainty . But, if allowance be made for this diversity, the soil of America. is naturally as rich and fertile as in any part of the earth. As the country was thinly inhabited, and by a people of little

Voyage de Ulloa, i. 363. Voyage de Condamine, 175. Buffon Hist. Nat. 2vi. 184. Voyage du Des Marchais, iii. 320.

See NOTE XXXVII.

See NOTE XXXVIII.

industry, who had none of the domestic animals, which civilized nations rear in such vast numbers, the earth was not exhausted by their confumption. The vegetable productions, to which its fertility gave birth, often remained untouched, and being fuffered to corrupt on its furface, returned with increase into its bosom '. As trees and plants derive a great part of their nourishment from air and water, if they were not destroyed by man and other animals, they would render to the earth more, perhaps, than they take from it, and feed rather than impoverish Thus the unoccupied foil of America might go on enriching for many ages. The vast number as well as enormous fize of the trees in America, indicate the extraordinary vigour of the foil in its native state. When the Europeans first began to cultivate the New World, they were astonished at the luxuriant power of vegetation in its virgin mould; and in feveral places the ingenuity of the planter is still employed in diminishing and wasting its superfluous fertility, in order to bring it down to a state fit for useful culture f.

How was America peopled? HAVING thus surveyed the state of the New World at the time of its discovery, and considered the peculiar features and qualities which distinguish and characterise it, the next inquiry that merits attention is, How was America peopled? By what course did mankind migrate from the one continent to the other? and in what quarter is it most probable that a communication was opened between them?

Buffon, Hift. Natur. i. 242. Kalm, i. 151.

Charlevoix, Hist. de Nouv. Fran. iii. 405. Voyage du Des Marchais. iii. 229. Lery ap De Bry, part iii. p. 174. See NOTE XXXIX.

WE know, with infallible certainty, that all the human race fpring from the same source, and that the descendants of one man, under the protection as well as in obedience to the command of Heaven, multiplied and replenished the earth. But felves, neither the annals nor the traditions of nations reach back to those remote ages, in which they took possession of the different countries where they are now fettled. We cannot trace the branches of this first family, or point out with certainty the time and manner in which they divided and spread over the face of the globe. Even among the most enlightened people, the period of authentic history is extremely short, and every thing prior to that is fabulous or obscure. It is not furprising, then, that the unlettered inhabitants of America, who have no folicitude about futurity, and little curiofity concerning what is past, should be altogether unacquainted with their own original. The Californians and Eskimaux, in particular, who occupy those countries in America which approach nearest to the ancient continent, are fo remarkably rude, that it is altogether vain to fearch among them for fuch information as might discover the place from whence they came, or the ancestors of whom they are descended '. Whatever light has been thrown on this subject, is derived, not from the natives of America, but from the inquisitive genius of their conquerors.

воок No tradition among them-

WHEN the people of Europe unexpectedly discovered a New Various the-World, removed at a vast distance from every part of the ancient continent which was then known, and filled with inhabitants whose appearance and manners differed remarkably from the rest of the laman species, the question concerning their

original

original became naturally an object of curiofity and attention. The theories and speculations of ingenious men with respect to this subject, would fill many volumes; but are often so wild and chimerical, that I should offer an insult to the understanding of my readers, if I attempted either to enumerate or to refute them. Some have prefumptuously imagined, that the people of America were not the offspring of the fame common parent with the rest of mankind, but that they formed a separate race of men, distinguishable by peculiar features in the constitution of their bodies, as well as in the characteristic qualities of their minds. Others contend, that they are descended from some remnant of the antediluvian inhabitants of the earth. who furvived the deluge, which swept away the greatest part of the human species in the days of Noah; and preposterously fuppose rude, uncivilized tribes, scattered over an uncultivated continent, to be the most ancient race of people on the earth. There is hardly any nation from the north to the fouth pole, to which some antiquary, in the extravagance of conjecture, has not ascribed the honour of peopling America. The Jews, the Canaanites, the Phænicians, the Carthaginians, the Greeks, the Scythians in ancient times, are supposed to have settled in this western world. The Chinese, the Swedes, the Norwegians, the Welsh, the Spaniards, are said to have sent colonies thither in later ages, at different periods, and on various occafions. Zealous advocates stand forth to support the respective claims of those people; and though they rest upon no better foundation than the casual resemblance of some customs, or the supposed affinity between a few words in their different languages, much erudition and more zeal have been employed, to little purpole, in defence of the opposite systems. Those regions of conjecture and controversy belong not to the historian. His

His is a more limited province, confined to what is established by certain or highly probable evidence. Beyond this I shall not venture, in offering a few observations, which may contribute to throw fome light upon this curious and much agitated question.

BOOK

1. THERE are authors who have endeavoured by mere con- Ought not to iectures to account for the peopling of America. Some have on mere coasupposed that it was originally united to the ancient con-jecture, tinent, and disjoined from it by the shock of an earthquake, or the irruption of a deluge. Others have imagined, that some veffel being forced from its course by the violence of a westerly wind, might be driven by accident towards the American coast, and have given a beginning to population in that desolate continent. But with respect to all those systems, it is vain either to reason or inquire, because it is impossible to come to any decision. Such events as they suppose are barely possible, and may have happened. That they ever did happen, we have no evidence, either from the clear testimony of history, or from the obscure intimations of tradition.

2. NOTHING can be more frivolous or uncertain than the or on resemattempts to discover the original of the Americans, merely by manners, tracing the resemblance between their manners and those of any particular people in the ancient continent. If we suppose two bodies of men, though in the most remote regions of the globe, to be placed in a state of society similar in its degree of im-

M m 2

provement,

Parson's Remains of Japhet, p. 240. Ancient Univers. Hist, vol. xx. p. 164. P. Feyjoo Teatro Critico, tom. v. p. 304, &c. Acosta Hist. Moral. Novi Orbis, lib. i. c. 16. 19.

provement, they must feel the same wants, and exert the same endeavours to supply them. The same objects will allure, the fame passions will animate them, and the same ideas and sentiments will arise in their minds. The character and occupations of the hunter in America must be little different from those of an Asiatic, who depends for subsistence on the chace. A tribe of favages on the banks of the Danube must nearly resemble one upon the plains washed by the Missisppi. Instead then of prefuming, from this fimilarity, that there is any affinity between them, we should only conclude, that the dispofition and manners of men are formed by their fituation, and arise from the state of society in which they live. The moment that begins to vary, the character of a people must change. In proportion as it advances in improvement, their manners refine, their powers and talents are called forth. In every part of the earth the progress of man hath been nearly the same, and we can trace him in his career from the rude simplicity of favage life, until he attains the industry, the arts, and the elegance of polished society. There is nothing wonderful then in the similitude between the Americans and the barbarous nations of our continent. Had Lafitau, Garcia, and many other authors, attended to this, they would not have perplexed a fubject which they pretend to illustrate, by their fruitless endeavours to establish an affinity between various races of people in the old and new continents, upon no other evidence than fuch a refemblance in their manners as necessarily arises from the similarity of their condition. There are, it is true, among every people fome customs, which, as they do not flow from any natural want or defire peculiar to their fituation, may be denominated usages of arbitrary institution. If between two nations settled in remote parts

parts of the earth, a perfect agreement with respect to any of there should be discovered, one might be led to suspect that they were connected by some affinity. If a nation were found in America that confecrated the seventh day to religious rest, if in another the first appearance of the new moon was celebrated with festivity, we might justly suppose that the former had derived its knowledge of this usage of arbitrary institution from the Jews, while the latter might be confidered as nothing more than an expression of joy natural to man on the return of the planet which guides and cheers him in the night. The instances of customs, merely arbitrary, common to the inhabitants of both hemispheres, are, indeed, so few and so equivocal, that no theory concerning the population of the New World ought to be founded upon them.

BOOK

3. THE theories which have been formed with respect to or of religious the original of the Americans, from observation of their religious rites and practices, are no less fanciful, and destitute of folid foundation. When the religious opinions of any people are neither the refult of rational inquiry, nor derived from the instructions of revelation, they must needs be wild and extravagant. Barbarous nations are incapable of the former, and have not been bleffed with the advantages arifing from the latter. Still, however, the human mind, even where its operations appear most wild and capricious, holds a course so regular, that in every age and country the dominion of particular passions will be attended with similar esfects. The savage of Europe or America, when filled with superstitious dread of invisible beings, or with inquisitive solicitude to penetrate into the events of futurity, trembles alike with fear, or glows with impatience. He has recourse to rites and practices.

of the same kind, in order to avert the vengeance which he supposes to be impending over him, or to divine the secret which is the object of his curiosity. Accordingly, the ritual of superstition, in one continent, seems, in many particulars, to be a transcript of that established in the other, and both authorise similar institutions, sometimes so frivolous as to excite pity, sometimes so bloody and barbarous as to create horror. But without supposing any consanguinity between such distant nations, or imagining that their religious ceremonies were conveyed by tradition from the one to the other, we may ascribe this uniformity, which in many instances seems very amazing, to the natural operation of superstition and enthusiasm upon the weakness of the human mind.

Not peopled by any nation highly civilized,

4. We may lay it down as a certain principle in this inquiry, that America was not peopled by any nation of the ancient continent, which had made confiderable progress in civilization. The inhabitants of the New World were in a state of fociety fo extremely rude, as to be unacquainted with those arts which are the first essays of human ingenuity in its advance towards improvement. Even the most cultivated nations of America were strangers to many of those simple inventions, which were almost coeval with society in other parts of the world, and were known in the earliest periods of civil life. From this it is manifest, that the tribes which originally migrated to America, came off from nations which must have been no less barbarous than their posterity, at the time when they were first discovered by the Europeans. For, although the elegant and refined arts may decline or perish, amidst the violent shocks of those revolutions and disasters to which nations are exposed, the necessary arts of life, when once they have been introduced among any people,

people, are never loft. None of the vicissitudes in human affairs affect these, and they continue to be practised as long as the race of men exists. If ever the use of iron had been known to the favages of America, or to their progenitors, if ever they had employed a plough, a loom, or a forge, the utility of these inventions would have preserved them, and it is impossible that they should have been abandoned or forgotten. We may conclude then, that the Americans sprung from some people, who were themselves in such an early and unimproved stage of fociety, as to be unacquainted with all the necessary arts, which remained unknown among their posterity.

BOOK

5. It appears no less evident, that America was not peopled nor from the by any colony from the more fouthern nations of the ancient fouthern recontinent. None of the rude tribes fettled in that part of our continent. hemisphere can be supposed to have visited a country so remote. They possessed neither enterprise, nor ingenuity, nor power, that could prompt them to undertake, or enable them to perform, such a distant voyage. That the more civilized nations in Asia or Africa are not the progenitors of the Americans is manifest, not only from the observations which I have already made concerning their ignorance of the most simple and necesfary arts, but from an additional circumstance. Whenever any people have experienced the advantages which men enjoy, by their dominion over the inferior animals, they can neither subfift without the nourishment which they afford, nor carry on their operations independent of their ministry and labour. Accordingly, the first care of the Spaniards when they settled in America, was to flock it with all the domestic animals of Europe, and if prior to them, the Tyrians, the Carthaginians, the Chinese, or any other polished people, had taken possession of

of that continent, we should have found there the animals peculiar to those regions of the globe where they were originally scated. In all America, however, there is not one animal, tame or wild, which properly belongs to the warm, or even the more temperate countries of the ancient continent. The camel, the dromedary, the horse, the cow, were as much unknown in America, as the elephant or the lion. From which it is obvious, that the people who first settled in the western world did not issue from the countries where those animals abound, and where men, from having been long accustomed to their aid, would naturally consider it, not only as beneficial, but as indispensably necessary to the improvement, and even the preservation, of civil society.

The two continents feem to be molt contiguous towards the north. 6. From considering the animals with which America is stored, we may conclude that the nearest point of contact between the old and new continents is towards the northern extremity of both, and that there the communication was opened, and the intercourse carried on between them. All the extensive countries in America which lie within the tropics, or approach near to them, are filled with indigenous animals of various kinds, entirely different from those in the corresponding regions of the ancient continent. But the northern provinces of the New World abound with many of the wild animals which are common in such parts of our hemisphere as lie in a similar situation. The bear, the wolf, the fox, the hare, the deer, the roebuck, the elk, and several other species frequent the forests of North America, no less than those in the north of Europe and Asia. It seems to be evident then, that

the two continents approach each other in this quarter, and are either united, or fo nearly adjacent, that these animals might pals from the one to the other.

7. THE actual vicinity of the two continents is so clearly This afterestablished by modern discoveries, as removes the chief difficulty with respect to the peopling of America. While those immense regions, which stretched eastward from the river Oby to the sea of Kamchatka were unknown, or imperfectly explored, the north cast extremities of our hemisphere were suppoled to be so far distant from any part of the New World, that it was not easy to conceive how any communication should have been carried on between them. But the Russians, having fubjected the western part of Siberia to their empire, gradually extended their knowledge of that vast country, by advancing towards the east into unknown provinces. These were discovered by hunters in their excursions after game, or by foldiers employed in levying the taxes, and the court of Moscow estimated the importance of those countries only by the small addition which they made to its revenue. At length, Peter the Great ascended the Russian throne. His enlightened, comprehensive mind, intent upon every circumstance that could aggrandize his empire, or render his reign illustrious, discerned consequences of those discoveries, which had escaped the observation of his ignorant predecessors. He perceived, that in proportion as the regions of Asia extended towards the east, they must approach nearer to America; that the communication between the two continents, which had long been fearched for in vain, would probably be found in this quarter, and that by opening this intercourse, some part of the wealth and commerce of the western world might be made to flow into his dominions by a Nn Vol. I.

new channel. Such an object fuited a genius that delighted in grand schemes. Peter drew up instructions with his own hand for prosecuting this design, and gave orders for carrying it into execution.

His fuccessors adopted his ideas, and pursued his plan. The officers whom the Russian court employed in this service, had to struggle with fo many difficulties, that their progress Encouraged by some faint traditions was extremely flow. among the people of Siberia, concerning a fuccessful voyage in the year one thousand fix hundred and forty-eight, round the north-east promontory of Asia, they attempted to follow the fame course. Vessels were fitted out, with this view, at different times, from the rivers Lena and Kolyma; but in a frozen ocean, which nature feems not to have destined for navigation, they were exposed to many disasters, without being able to accomplish their purpose. No vessel fitted out by the Russian court ever doubled this formidable Cape ; we are indebted for what is known of those extreme regions of Asia, to the discoveries made in excursions by land. In all those provinces, an opinion prevails, that countries of great extent and fertility lie at no confiderable distance from their own coasts. These the Ruffians imagined to be part of America; and feveral circumflances concurred not only in confirming them in this belief, but in persuading them that some portion of that continent could not be very remote. Trees of various kinds, unknown in those naked regions of Asia, are driven upon the coast by an eafterly wind. By the same wind, floating ice is brought thither in a few days; flights of birds arrive annually from the

ВООК IV.

AFTER weighing all these particulars, and comparing the position of the countries in Asia which they had discovered. with fuch parts in the north-west of America as were already known, the Russian court formed a plan, which would have hardly occurred to any nation less accustomed to engage in arduous undertakings, and to contend with great difficulties. Orders were issued to build two vessels at Ochotz, in the sea of Kamchatka, to fail on a voyage of discovery. Though that dreary uncultivated region furnished nothing that could be of use in constructing them, but some larch trees; though not only the iron, the cordage, the fails, and all the numerous articles requisite for their equipment, but the provisions for victualling them, were to be carried through the immense deferts of Siberia, along rivers of difficult navigation, and roads almost impassable, the mandate of the sovereign, and the perfeverance of the people, at last surmounted every obstacle. Two veffels were finished, and, under the command of the captains Behring and Tschirikow, sailed from Kamchatka in quest of the New World, in a quarter where it had never been approached. They shaped their course towards the east; and though a storm soon separated the vessels, which never rejoined, and many disasters befel them, the expectations from the voyage were not altogether frustrated. Each of the commanders discovered land, which to them appeared to be part of the American continent; and, according to their observations, it seems to be fituated within a few degrees of the north-west coast of California. Each set some of his people assore; but in one Nn 2 place

1741. June 4:

place the inhabitants fied as the Russians approached; in another, they carried off those who landed, and destroyed their boats. The violence of the weather, and the distress of their crews, obliged both to quit this inhospitable coast. In their return they touched at several islands, which stretch in a chain from east to west between the country which they had discovered and the coast of Asia. They had some intercourse with the natives, who seemed to them to resemble the North Americans. They presented to the Russians the calumet, or pipe of peace, which is a symbol of friendship universal among the people of North America, and an usage of arbitrary institution, peculiar to them.

THE islands of this new Archipelago have been frequented by the Russian hunters fince that time; but the court feemed to have relinquished its scheme of prosecuting discoveries in this quarter. It was unexpectedly refumed in the year one thousand seven hundred and fixty-eight, and captain Krenitzin had the command of two small vessels fitted out for that purpose. In his voyage outward he held nearly the same course with the former navigators, he touched at the same islands, observed their situation and productions more carefully, and discovered several new islands, with which they had not fallen Though he did not proceed so far to the east as to revisit the country which Behring and Tschirikow supposed to be part of the American continent, yet, by returning in a course confiderably to the north of theirs, he corrected fome capital mistakes into which they had fallen, and has contributed to facilitate the progress of future navigators in those seas '.

Thus the possibility of a communication between the continents in this quarter rests no longer upon mere conjecture, but is established by undoubted evidence ... Some tribe, or some families of wandering Tartars, from the reftless spirit peculiar to their race, might migrate to the nearest islands, and, rude as their knowledge of navigation was, might, by passing from one to the other, reach at length the coast of America, and give a beginning to population in that continent. The distance between the Marian or Ladrone islands and the nearest land in Asia, is greater than that between the part of America which the Russians discovered, and the coast of Kamchatka; and yet the inhabitants of those islands are manifestly of Asiatic extract. If, notwithstanding their remote situation, we admit that the Marian islands were peopled from our continent, distance alone is no reason why we should hesitate about admitting that the original of the Americans may be from the same source. It is probable that future navigators in those seas, by steering farther to the north, may find that the continent of America approaches still nearer to Asia. According to the information of the barbarous people, who inhabit the country about the north-east promontory of Asia, there lies, off the coast, a small island, to which they sail in less than a day. From that, they can descry a large continent, which, according to their description, is covered with forests, and possessed by people whose language they do not understand ". By them they are fupplied with the skins of martens, an animal unknown in the northern parts of Siberia, and which is never found but in countries abounding with trees. If we could rely on this account, we might conclude, that the American continent is fe-

parated

m Muller's Voyages, tom. i. 248, &c. 267. 276.

[&]quot; Muller's Voy. et Decouv. i, 166.

воок

parated from ours only by a narrow strait, and all the difficulties with respect to the communication between them would vanish. Perhaps the merit of ascertaining this is reserved for the sovereign now feated on the throne of Peter the Great, who, by perfecting his plan, may add this splendid event to those which already distinguish her reign.

Another communication by the northwest.

IT is likewise evident from recent discoveries, that an intercourse between our continent and America might be carried on with no less facility from the north-west extremities of Europe. A. D. 830. As early as the ninth century, the Norwegians discovered Greenland, and planted colonies there. The communication with that country, after a long interruption, was renewed in the last century. Some Lutheran and Moravian missionaries, prompted by zeal for propagating the Christian faith, have ventured to fettle in this frozen and uncultivated region o. To them we are indebted for much curious information with respect to its nature and inhabitants. We learn, that the northwest coast of Greenland is separated from America by a very narrow strait; that, at the bottom of the bay into which this ftrait conducts, it is highly probable that they are united P; that the inhabitants of the two countries have some intercourse with one another; that the Esquimaux of America perfectly resemble the Greenlanders in their aspect, dress, and mode of living; that some failors, who had acquired the knowledge of a few words in the Greenlandish language, reported that these were A. D. 1764. understood by the Esquimaux; that, at length, a Moravian missionary, well acquainted with the language of Greenland, having visited the country of the Esquimaux, found, to his

astonishment,

Crantz Hift. of Greenl. i. 242. 244. Prevot Hift. Gen. des Voyages, tom. xv. P Eggede, p. 2, 3. 152, not. (96).

astonishment, that they spoke the same language with the BOOK Greenlanders, and were in every respect the same people, and he was accordingly received and entertained by them as a friend and a brother 9.

By these decisive facts, not only the confanguinity of the Esquimaux and Greenlanders is established, but the possibility of peopling America from the north of Europe is demonstrated. If the Norwegians, in a barbarous age, when science had not begun to dawn in the north of Europe, possessed such naval skill as to open a communication with Greenland, their anceftors, as much addicted to roving by sea, as the Tartars are towandering by land, might at some more remote period, accomplish the same voyage, and settle a colony there, whose defcendents might, in progress of time, migrate into America. But if, instead of venturing to fail directly from their own coast to Greenland, we suppose that the Norwegians held a more cautious course, and advanced from Shetland to the Feroe Islands, and from them to Iceland, in all which they had planted colonies, their progress may have been so gradual, that this navigation cannot be confidered as either longer or more hazardous, than those voyages which that hardy and enterprifing race of men is known to have performed in every age.

8. THOUGH it be possible that America may have received Probable its first inhabitants from our continent, either by the north-west the north east. of Europe or the north-east of Asia, there seems to be good reason for supposing that the progenitors of all the American nations, from Cape Horn to the fouthern confines of Labrador,

d

n

y

8

⁹ Crantz' Hift. of Greenl. p. 261, 252.

BOOK

migrated from the latter rather than the former. The Efquimaux are the only people in America, who, in their aspect or character, bear any refemblance to the northern Europeans. They are manifestly a separate species of men, distinct from all the nations of that continent, in language, in disposition, and in habits of life. Their original, then, may warrantably be traced up to that fource, which I have pointed out. But, among all the other inhabitants of America, there is fuch a striking similitude in the form of their bodies, and the qualities of their minds, that, notwithstanding the diversities occasioned by the influence of climate, or unequal progress in improvement, we must pronounce them to be descended from one fource. There may be a variety in the shades, but we can every where trace the fame original colour. Each tribe has fomething peculiar which diffinguishes it, but in all of them we discern certain features common to the whole race. It is remarkable, that in every peculiarity, whether in their persons or dispositions, which characterise the Americans, they have some resemblance to the rude tribes scattered over the north-east of Asia, but almost none to the nations settled in the northern extremities of Europe. We may, therefore, refer them to the former origin, and conclude that their Afiatic progenitors, having fettled in those parts of America, where the Russians have discovered the proximity of the two continents, spread gradually over its various regions. This account of the progress of population in America, coincides with the traditions of the Mexicans concerning their own origin, which, imperfect as they are, were preferved with more accuracy, and merit greater credit, than those of any people in the New World. According to them, their ancestors came from a remote country, situated to the north-east of Mexico. They point out their various stations

as they advanced from this, into the interior provinces, and it is precifely the same route which they must have held, if they had been emigrants from Asia. The Mexicans, in describing the appearance of their progenitors, their manners, and habits of life at that period, exactly delineate those of the rude Tartars, from whom I suppose them to have sprung'.

BOOK

Thus have I finished a disquisition which has been deemed of fo much importance, that it would have been improper to omit it in writing the history of America. I have ventured to inquire, but without prefuming to decide. Satisfied with offering conjectures, I pretend not to establish any system. When an investigation is, from its nature, so intricate and obscure, that it is impossible to arrive at conclusions which are certain, there may be fome merit in pointing out fuch as are probable '.

THE condition and character of the American nations, at the Condition time when they became known to the Europeans, deserve more of the Ameriattentive confideration, than the inquiry concerning their ori- cans. ginal. The latter is merely an object of curiofity, the former is one of the most important as well as instructive researches, which can occupy the philosopher or historian. In order to complete the history of the human mind, and attain to a perfect knowledge of its nature and operations, we must contemplate man in all those various situations wherein he has been placed. We must follow him in his progress through the different stages

of fociety, as he gradually advances from the infant state of civil life towards its maturity and decline. We must obferve, at each period, how the faculties of his understanding unfold, we must attend to the efforts of his active powers, watch the motions of affection as they rife in his breaft, and mark whither they tend, and with what ardour they are exerted. The philosophers and historians of ancient Greece and Rome, our guides in this as well as every other disquisition, had only a limited view of this subject, as they had hardly any opportunity of furveying man in his rudest and most early state. In all those regions of the earth with which they were acquainted, civil fociety had made confiderable advances, and nations had finished a good part of their career before they began to observe them. The Scythians and Germans, the rudest people of whom any ancient author has transmitted to us an authentic account, possessed flocks and herds, had acquired property of various kinds, and, when compared with mankind in their primitive state, may be reckoned to have attained to a great degree of civilization.

Less improved than in any part of the earth.

But the discovery of the New World enlarged the sphere of contemplation, and presented nations to our view, in stages of their progress, much less advanced than those wherein they have been observed in our continent. In America, man appears under the rudest form in which we can conceive him to subsist. We behold communities just beginning to unite, and may examine the sentiments and actions of human beings in the infancy of social life, while they feel but impersectly the force of its ties, and have scarcely relinquished their native liberty. That state of primæval simplicity, which was known in our continent only by the fanciful description of poets, really existed

isted in the other. The greater part of its inhabitants were strangers to indust, and labour, ignorant of arts, and almost unacquainted with property, enjoying in common the bleffings which flowed spontaneously from the bounty of nature. There were only two nations in this vast continent which had emerged from this rude state, and had made any considerable progress in acquiring the ideas, and adopting the institutions, which belong to polished societies. Their government and manners will fall naturally under our review in relating the discovery and conquest of the Mexican and Peruvian empires; and we shall have there an opportunity of contemplating the Americans in the state of highest improvement to which they ever attained.

AT present, our attention and researches shall be turned to This inquir, the small independent tribes which occupied every other part of the rudest America. Among these, though with some diversity in their tribes. character, their manners and inflitutions, the state of society was nearly fimilar, and so extremely rude, that the denomination of Savage may be applied to them all. history of America, it would be highly improper to describe the condition of each petty community, or to investigate every minute circumstance which contributes to form the character of its members. Such an inquiry would lead to details of immeasurable and tiresome extent. The qualities belonging to the people of all the different tribes have such a near resemblance, that they may be painted with the same features. Where any circumstances feem to constitute a diversity in their character and manners worthy of attention, it will be fufficient to point these out as they occur, and to inquire into the causes of fuch peculiarities.

O 0 2

ĬΤ

BOOK IV. Difficulty of obtaining information,

IT is extremely difficult to procure fatisfying and authentic information concerning nations while they remain uncivil-To discover their true character under this rude form. and to collect the features by which they are distinguished, requires an observer possessed of no less impartiality than discernment. For, in every stage of society, the faculties, the fentiments and defires of men are fo accommodated to their own state, that they become standards of excellence to themfelves, they affix the idea of perfection and happiness to those attainments which refemble their own, and wherever the objects and enjoyments to which they have been accustomed are wanting, confidently pronounce a people barbarous and miferable. Hence the mutual contempt with which the members of communities, unequal in their degrees of improvement, regard each other. Polished nations, conscious of the advantages which they derive from their knowledge and arts, are apt to view rude nations with peculiar fcorn, and, in the pride of superiority, will hardly allow either their occupations, their feelings, or their pleasures, to be worthy of men. It has seldom been the lot of communities, in their early and unpolished state, to fall under the observation of persons, endowed with force of mind superior to vulgar prejudices, and capable of contemplating man, under whatever aspect he appears, with a candid and discerning eye.

from the incapacity of the first obfervers, THE Spaniards, who first visited America, and who had an opportunity of beholding its various tribes, while entire and unsubdued, were far from possessing the qualities requisite for observing the striking spectacle presented to their view. Neither the age in which they lived, nor the nation to which they belonged, had made such progress in true science, as inspires

воок

fpires enlarged and liberal fentiments. The conquerors of the New World were mostly illiterate adventurers, destitute of all the ideas which should have directed them in contemplating objects, so extremely different from those with which they were acquainted. Surrounded continually with danger, or struggling with hardships, they had little leifure, and less capacity for any speculative inquiry. Eager to take possession of a country of fuch vast extent and opulence, and happy in finding it occupied by inhabitants fo incapable to defend it, they hastily pronounced them to be a wretched order of men, formed merely for fervitude; and were more employed in computing the profits of their labour, than in inquiring into the operations of their minds, or the reasons of their customs and inflitutions. The perfons who penetrated at subsequent periods into the interior provinces, to which the knowledge and devastations of the first conquerors did not reach, were generally of a fimilar character; brave and enterprifing in an high degree, but so uninformed as to be little qualified either for observing or describing what they beheld.

Not only the incapacity, but the prejudices of the Spa- and their preniards, render their accounts of the people of America extremely defective. Soon after they planted colonies in their new conquests, a difference in opinion arose with respect to the treatment of the natives. One party, folicitous to render their fervitude perpetual, represented them as a brutish, obstinate race, incapable either of acquiring religious knowledge, or of being trained to the functions of focial life. The other, full of pious concern for their conversion, contended that, though rude and ignorant, they were gentle, affectionate, docile, and by proper instructions and regulations might be formed gradually

into good Christians and useful citizens. This controversy, as I have already related, was carried on with all the warmth which is natural, when attention to interest on the one hand, and religious zeal on the other, animate the disputants. Most of the laity espoused the former opinion; all the ecclesiastics were advocates for the latter; and we shall uniformly find that, accordingly as an author belonged to either of these parties, he is apt to magnify the virtues or aggravate the desects of the Americans beyond measure. Those repugnant accounts increase the difficulty of attaining a perfect knowledge of their character, and render it necessary to peruse all the descriptions of them by Spanish writers with distrust, and to receive their information with some allowance.

and from the fythems of philosophers.

Almost two centuries elapsed after the discovery of America, before the manners of its inhabitants attracted, in any considerable degree, the attention of philosophers. At length, they discovered that the knowledge of their condition and character might enable them to fill up a considerable chasm in the history of the human species, and lead to speculations no less curious than important. They entered upon this new field of study with great ardour; but, instead of throwing light upon the subject, they have contributed, in some degree, to involve it in additional obscurity. Too impatient to inquire, they hastened to decide; and began to erect systems, when they should have been fearthing for facts on which to establish their foundations. Struck with the appearance of degeneracy in the human species throughout the New World, and astonished at beholding a vast continent occupied by a naked, feeble, and ignorant race of men, some authors of great name have maintained, that this part of the globe had but lately emerged from the

the sea, and become fit for the residence of man; that every thing in it bore marks of a recent original; and that its inhabitants, lately called into existence, and still at the beginning of their career, were unworthy to be compared with the people of a more ancient and improved continent. Others have imagined, that, under the influence of an unkindly climate, which checks and enervates the principle of life, man never attained in America the perfection which belongs to his nature, but remained an animal of an inferior order, defective in the vigour of his bodily frame, and destitute of sensibility, as well as of force, in the operations of his mind ". In opposition to both these, other philosophers have supposed that man arrives at his highest dignity and excellence long before he reaches a state of refinement; and, in the rude simplicity of savage life, displays an elevation of sentiment, an independence of mind, and a warmth of attachment, for which it is vain to fearch among the members of polished societies *. They seem to confider that as the most perfect state of man which is the least civilized. They describe the manners of the rude Americans with fuch rapture, as if they proposed them for models to the rest of the species. These contradictory theories have been proposed with equal confidence, and uncommon powers of genius and eloquence have been exerted in order to clothe them with an appearance of truth.

As all those circumstances concur in rendering an inquiry into the state of the rude nations in America intricate and obscure, it is necessary to carry it on with caution. When guided in our researches by the intelligent observations of the few phi-

[.] M. de P. Recherches Philof. fur les Americ. paffim.

M. Rouffeau.

losophers who have visited this part of the globe, we my venture to decide. When obliged to have recourse to the superficial remarks of vulgar travellers, of sailors, traders, buccaneers, and missionaries, we must often pause, and comparing detached sacts, endeavour to discover what they wanted sagacity to observe. Without indulging conjecture, or betraying a propensity to either system, we must study with equal care to avoid the extremes of extravagant admiration, or of supercilious contempt for those manners which we describe.

Method obferved in the inquiry.

In order to conduct this inquiry with greater accuracy, it should be rendered as simple as possible. Man existed as an individual before he became the member of a community; and the qualities which belong to him under his former capacity should be known, before we proceed to examine those which arise from the latter relation. This is peculiarly necessary in investigating the manners of rude nations. Their political union is fo incomplete, their civil inflitutions and regulations fo few, fo fimple, and of fuch fmall authority, that they ought to be viewed rather as independent agents, than as members of a regular fociety. The character of a favage refults almost entirely from his fentiments or feelings as an individual, and is but little influenced by his imperfect subjection to government and order. I shall conduct my researches concerning the manners of the Americans in this natural order, proceeding gradually from what is fimple to what is more complicated.

I SHALL consider, I. The bodily constitution of the Americans in those regions now under review. II. The qualities of their minds. III. Their domestic state. IV. Their political state and institutions. V. Their system of war, and public security.

fecurity. VI. The arts with which they were acquainted. VII. Their religious ideas and institutions. VIII. Such fingular detached customs as are not reducible to any of the former heads. IX. I shall conclude with a general review and estimate of their virtues and defects.

I. THE bodily constitution of the Americans.—The human The constitubody is less affected by climate than that of any other animal. too or bodies. Some animals are confined to a particular region of the globe, and cannot exist beyond it; others, though they may be brought to bear the injuries of a climate foreign to them, cease to multiply when carried out of that district, which Nature destined to be their mansion. Even such as seem capable of being naturalized in various climates, feel the effect of every remove from their proper station, and gradually dwindle and degenerate from the vigour and perfection peculiar to their species. Man is the only living creature whose frame is at once so hardy and so flexible, that he can spread over the whole earth, become the inhabitant of every region, and thrive and multiply under every climate. Subject, however, to the general law of Nature, the human body is not entirely exempt from the operation of climate, and when exposed to the extremes either of heat or cold, its fize or vigour diminishes.

THE first appearance of the inhabitants of the New World, Complexion, filled the discoverers with such astonishment, that they were apt to imagine them a race of men different from those of the other hemisphere. Their complexion is of a reddish brown, nearly resembling the colour of copper '. The hair of their

VOL. I.

heads

воок

More feeble.

heads is always black, long, coarfe, and lank. They have no beard, and every part of their body is perfectly smooth. Their persons are of a full size, extremely straight, and well proportioned. Their features are regular, though often distorted by absurd endeavours to improve the beauty of their natural form, or to render their aspect more dreadful to their enemies. In the islands, where four-footed animals were both few and small, and the earth yielded her productions almost spontaneously, the constitution of the natives, neither braced by the active exercifes of the chace, nor invigorated by the labour of cultivation, was extremely feeble and languid. On the continent, where the forests abound with game of various kinds, and the chief occupation of many tribes was to pursue it, their frame acquired greater firmness. Still, however, the Americans were more remarkable for agility than strength. They resembled beafts of prey, rather than animals formed for labour. They were not only averse to toil, but incapable of it; and when rouzed by force from their native indolence, and compelled to work, they funk under talks which the people of the other continent would have performed with ease. This feebleness of constitution was universal among the inhabitants of those regions in America which we are furveying, and may be confidered as characteristic of the species there '.

THE beardless countenance and smooth skin of the American seems to indicate a defect of vigour, occasioned by some vice in his frame. He is destitute of one sign of manhood and

of strength. This peculiarity, by which the inhabitants of the New World are distinguished from the people of all other nations, cannot be attributed, as some travellers have supposed, to their mode of sublistence '. For though the food of many Americans be so extremely insipid, that they are altogether unacquainted with the use of salt, rude tribes in other parts of the earth have subsisted on aliments equally simple without this mark of degradation, or any apparent symptom of a diminution in their vigour.

As the external form of the Americans leads us to fuf- Less appepect that there is some natural debility in their frame, the fmallness of their appetite for food has been mentioned by many authors as a confirmation of this suspicion. The quanfity of food which men confume varies according to the temperature of the climate in which they live, the degree of activity which they exert, and the natural vigour of their constitutions. Under the enervating heat of the torrid zone. and when men pass their days in indolence and ease, they require less nourishment than the active inhabitants of temperate or cold countries. But neither the warmth of their climate, nor their extreme laziness, will account for the uncommon defect of appetite among the Americans. The Spaniards were astonished with observing this, not only in the islands, but in several parts of the continent. The constitutional temperance of the natives far exceeded, in their opinion, the abstinence of the most mortified hermits'; while, on the other hand, the appetite of the Spaniards appeared to the Americans infatiably voracious; and they affirmed, that one Spa-

d Charlev. Hist. de Nouv. Fr. iii. 310. e Ramusio, iii. 304, F. 306, A. Simon Conquista, &c. p. 39. Hakluyt, iii. 468. 508.

B O O K niard devoured more food in a day than was sufficient for ten Americans.

Less vehemence of desire.

A proof of some feebleness in their frame still more striking, is the infensibility of the Americans to the charms of beauty. and the power of love. That passion which was destined to perpetuate life, to be the bond of focial union, and the fource of tenderness and joy, is the most ardent in the human breast; and though the perils and hardships of the savage state. though excessive fatigue, on some occasions, and the difficulty at all times of procuring subfishence, may seem to be adverse to this passion, and to have a tendency to abate its vigour, yet the rudest nations in every other part of the globe feem to feel its influence more powerfully than the inhabitants of the New World. The negro glows with all the warmth of defire natural to his climate; and the most uncultivated Afiatics discover that sensibility, which, from their situation, we should expect them to have felt. But the Americans are, in an amazing degree, strangers to the force of this first instinct of nature. In every part of the New World the natives treat their women with coldness and indifference. They are neither the objects of that tender attachment which takes place in civilized fociety, nor of that ardent defire conspicuous among rude nations. Even in climates where this passion usually acquires its greatest vigour, the favage of America views his female with disdain, as an animal of a less noble species. He is at no pains to win her favour by the assiduity of courtship, and still less solicitous to preferve it by indulgence and gentleness s. Missionaries

themselves, notwithstanding the austerity of monastic ideas, cannot refrain from expressing their assonishment at the dispasfionate coldness of the American young men in their intercourse with the other fex h. Nor is this referve to be ascribed to any opinion which they entertain with respect to the merit of female chastity. That is an idea too refined for a savage, and fuggested by a delicacy of sentiment and affection to which he is a stranger.

BUT in inquiries concerning either the bodily or mental Reflections qualities of particular races of men, there is not a more common or more feducing error, than that of ascribing to a fingle cause, those characteristic peculiarities, which are the effect of the combined operation of many causes. The climate and soil of America differ, in so many respects, from those of the other hemisphere, and this difference is so obvious and striking, that philosophers of great eminence have laid hold on this as sufficient to account for what is peculiar in the constitution of its inhabitants. They rest on physical causes alone, and consider the feeble frame and languid defire of the Americans, as confequences of the temperament of that portion of the globe which they inhabit. But the influences of political and moral causes ought not to have been overlooked. These operate with no less effect than that on which they rest as a full explanation of the fingular appearances which have been mentioned. Wherever the state of society is such as to create many wants and defires, which cannot be fatisfied without regular exertions of industry, the body accustomed to labour be-

h Chanvalon. p. 51. Lettr. Edif. tom. xxiv. 318. Tertre, ii. 377. Venegaf. i. 81. Ribas Hift. de los Triumf. p. 11.

BOOK comes robust and patient of fatigue. In a more simple state. where the demands of men are so few and so moderate, that they may be gratified, almost without any effort, by the spontaneous productions of nature, the powers of the body are not called forth, nor can they attain their proper strength. The natives of Chili and of North-America, the two temperate regions in the New World, who live by hunting, may be deemed an active and vigorous race, when compared with the inhabitants of the isles, or of those parts of the continent where hardly any labour is requifite to procure subfistence. exertions of a hunter are not, however, so regular, or so continued, as those of persons employed in the culture of the earth, or in the various arts of civilized life, and though his agility may be greater than theirs, his strength is on the whole inferior. If another direction were given to the active powers of man in the New World, and his force augmented by exercise, he might acquire a degree of vigour which he does not in his present state possess. The truth of this is confirmed by experience. Wherever the Americans have been gradually accustomed to hard labour, their constitutions become robust, and they have been found capable of performing such tasks, as feemed not only to exceed the powers of fuch a feeble frame as has been deemed peculiar to their country, but to equal any effort of the natives, either of Africa or of Europe'.

> THE same reasoning will apply to what has been observed concerning their slender demand for food. As a proof that this should be ascribed, as much to their extreme indolence, and often total want of occupation, as to any thing peculiar in the

> > 1 See NOTE XLIV.

physical

physical structure of their bodies, it has been observed, that in those districts, where the people of America are obliged to exert any unusual effort of activity, in order to procure sub-fistence, or wherever they are employed in severe labour, their appetite is not inserior to that of other men, and, in some places, it has struct observers as remarkably voracious.

bt

d

e

e

8

THE operation or political and mean causes is still more conspicuous, in modifying the degree of attachment between the sexes. In a state of high civilization, this passion, inflamed by restraint, refined by delicacy, and cherished by fashion, occupies and engrosses the heart. It is no longer a simple instinct of nature; fentiment heightens the ardour of defire, and the most tender emotions of which our frame is susceptible, soothe and agitate the foul. This description, however, applies only to those, who, by their situation, are exempted from the cares and labours of life. Among persons of inferior order, who are doomed by their condition to incessant toil, the dominion of this passion is less violent, and their solicitude to procure subsistence, and to provide for the first demand of nature, leaves little leifure for attending to its second call. But if the nature of the intercourse between the sexes varies so much in persons of different rank in polished societies, the condition of man, while he remains uncivilized, must occasion a variation still more apparent. We may well suppose, that amidst the hardships, the dangers, and the simplicity of savage life, where subsistence is always precarious, and often fcanty, where men are almost continually engaged in the pursuit of their enemies, or in guarding against their attacks, and where neither dress nor

referve are employed as arts of female allurement, that the at-

296

BOOK IV. tention of the Americans to their women would be extremely feeble, without imputing this folely to any physical defect or degradation in their frame.

IT is accordingly observed, that in those countries of America, where, from the fertility of the foil, the mildness of the climate, or fome farther advances which the natives have made in improvement, the means of subsistence are more abundant, and the hardships of savage life are less severely felt, the animal passion of the sexes becomes more ardent. Striking examples of this occur among some tribes seated on the banks of great rivers well stored with food, among others who are masters of hunting-grounds abounding so much with game, that they have a regular and plentiful supply of nourishment with little labour. The fuperior degree of fecurity and affluence which they enjoy, is followed by their natural effects. The passions implanted in the human frame by the hand of nature acquire additional force; new tastes and desires are formed; the women, as they are more valued and admired, become more attentive to dress and ornament; the men, beginning to feel how much of their own happiness depends upon them, no longer disdain the arts of winning their favour and affection. The intercourse of the sexes becomes very different from that which takes place among their ruder countrymen; and as hardly any restraint is imposed on the gratification of defire, either by religion, or laws, or decency, the dissolution of their manners is excessive '.

None of them deformed. . Notwithstanding the feeble make of the Americans, almost none of them are deformed, or mutilated, or defective in any of their senses. All travellers have been struck

with this circumstance, and have celebrated the uniform BOOK fymmetry and perfection of their external figure. Some authors fearch for the cause of this appearance in their phyfical condition. As the parents are not exhausted or overfatigued with hard labour, they suppose that their children are born vigorous and found. They imagine, that in the liberty of favage life, the human body, naked and unconfined from its earliest age, preserves its natural form; and that all its limbs and members acquire a juster proportion, than when fettered with artificial restraints, which stint its growth, and diffort its shape ". Something, without doubt, may be ascribed to the operation of these causes; but the true reasons of this apparent advantage, which is common to all favage nations, lie deeper, and are closely interwoven with the nature and genius of that state. The infancy of man is so long and fo helpless, that it is extremely difficult to rear children among rude nations. Their means of subsistence are not only scanty, but precarious. Such as live by hunting must range over extensive countries, and shift often from place to place. The care of children, as well as every other laborious task, is devolved upon the women. The distresses and hardships of the favage life, which are often fuch as can hardly be supported by persons in full vigour, must be fatal to those of more tender age. Afraid of undertaking a task so laborious, and of such long duration, the women, in some parts of America, extinguish the first sparks of that life which they are unable to cherish, and by the use of certain herbs procure frequent abortions. Senfible that only flout and well-formed children have force of constitution to struggle through such an hard

m Pifo, p..6. P Ellis's Voyage to Hudson's Bay, 198. Herrera, dec. 7. lib. ix. c. 4. Vol. I. Qq infancy, BOOK

infancy, other nations abandon or deftroy such of their progeny as appear feeble or defective, as unworthy of attention °. Even when they endeavour to rear all their children without distinction, so great a proportion of the whole number perishes under the rigorous treatment which must be their lot in the savage state, that few of those who laboured under any original frailty attain the age of manhood?. Thus, in polished societies, where the means of subsistence are secured. with certainty, and acquired with ease; where the talents of. the mind are often of more importance than the powers of the body; children are preserved notwithstanding their defects or. deformity, and grow up to be useful citizens. In rude nations, fuch persons are either cut off as soon as they are born, or becoming a burden to themselves and to the community, cannot long protract their lives. But in those provinces of the New World. where, by the establishment of the Europeans, more regular. provision has been made for the subsistence of its inhabitants, and they are restrained from laying violent hands on their children, the Americans are fo far from being eminent for any fuperior perfection in their form, that one should rather suspect. fome peculiar imbecillity in the race, from the extraordinary number of individuals who are deformed, dwarfish, mutilated, blind, or deaf 9.

Uniformity of their appearance. However feeble the constitution of the Americans may be, it is remarkable, that there is less variety in the human form: throughout the New World, than in the ancient continent. When Columbus and the other discoverers first visited the dif-

воок iV.

ferent countries of America which lie within the torrid zone, they naturally expected to find people of the fame complexion with those in the corresponding regions of the other hemisphere. To their amazement, however, they discovered that America contained no negroes'; and the cause of this singular appearance became as much the object of curiofity, as the fact itself was of wonder. In what part or membrane of the body that humour refides which tinges the complexion of the negro with a deep black, it is the business of anatomists to inquire and describe. The powerful operation of heat appears manifelly to be the cause which produces this striking variety in the human species. All Europe, almost the whole of Asia, and the temperate parts of Africa, are occupied by men of a fair complexion. All the torrid zone in Africa, some of the warmer regions adjacent to it, and a few countries in Asia, are filled with people of a deep black colour. If we trace the nations of our continent, making our progress from cold and temperate countries towards those parts which are exposed to the influence of vehement and unremitting heat, we shall find, that the extreme whiteness of their skin soon begins to diminish; that its colour deepens gradually as we advance; and after passing through all the successive gradations of shade, terminates in an uniform unvarying black. But in America, where the agency of heat is checked and abated by various causes, which I have already explained, the climate feems to be destitute of that force which produces such wonderful effects on the human frame. The colour of the natives of the torrid zone, in America, can hardly be faid to be of a deeper hue than that of the people in the more temperate parts of their continent. Accurate observers, who had an opportunity of viewing the Americans in very different

f.

P. Martyr, dec. p. 71.

climates, and in countries far removed from each other, have been firuck with the amazing fimilarity of their figure and aspect.

Bur though the hand of Nature has deviated so little from one standard in fashioning the human form in America, the creation of fancy hath been various and extravagant. The fame fables that were current in the ancient continent, have been revived with respect to the New World, and America too has been peopled with human beings of monstrous and fantastic appearance. The inhabitants of certain provinces were defcribed to be pigmies of three feet high; those of others to be giants of an enormous fize. Some travellers published accounts of people with only one eye, others pretended to have discovered men without heads, whose eyes and mouths were planted in their breasts. The variety of Nature in her productions is, indeed, fo great, that it is presumptuous to set bounds to her fertility, and to reject indifcriminately every relation that is not perfectly confonant to our own limited observation and experience. But the other extreme, of yielding an hasty assent, on the flightest evidence, to whatever has the appearance of being strange and marvellous, is no less unbecoming a philosophical inquirer, as, in every period, men are more apt to be betrayed into error, by their weakness in believing too much, than by their arrogance in believing too little. In proportion as science extends, and nature is examined with a differning eye, the wonders that amused ages of ignorance disappear. The tales of credulous travellers concerning America are forgotten; the monsters which they describe have been scarched for in vain;

and those provinces where they pretend to have found inhabitants of singular forms, are now known to be possessed by people no wise different from the other Americans'.

BOOK IV.

THOUGH these relations may, without discussion, be rejected as fabulous, there are other accounts of such varieties in the human species in some parts of the New World, which rest upon better evidence, and merit more attentive examination. This variety has been particularly observed in three different districts. The first of these is situated in the isthmus of Darien, near the centre of America. Lionel Wafer, a traveller possessed of more curiosity and intelligence than we should have expected to find in an affociate of Buccaneers, discovered there a small, but singular race of men. They are of low stature, according to his description, of a feeble make, incapable of enduring fatigue. Their colour is a dead milk white; not refembling that of fair people among Europeans, but without any tincture of a blush or sanguine complexion. Their skin is covered with a fine hairy down of a chalky white, the hair of their heads, their eye-brows, and eye-lashes, are of the same hue. Their eyes are of a fingular form, and so weak, that they can hardly bear the light of the fun; but they fee clearly by moon-light, and are most active and gay in the night". No race similar to this has been discovered in any other part of America. Cortes, indeed, found some persons exactly resembling the white people of Darien, among the rare and monstrous animals which Montezuma had collected ". But as the power of the Mexican empire extended to the provinces bordering on the ishmus of Darien, they were probably brought

d

^{*} See NOTE XLVI. " Waser Descript, of Isth. ap. Dampier, iii. p. 346.

[&]quot; Cortes ap. Ramuf. iii. p. 241, E.

from thence. Singular as the appearance of those people may be, they cannot be confidered as conflituting a distinct species. Among the negroes of Africa, as well as the natives of the Indian islands, nature sometimes produces a small number of individuals, with all the characteristic features and qualities of the white people of Darien. The former are called Albinos by the Portuguese, the latter Kackerlakes by the Duton. In Darien the parents of those Whites are of the same colour with the other natives of the country; and this observation applies equally to the anomalous progeny of the negroes and Indians. The fame mother who produces some children of a colour that does not belong to the race, brings forth the rest of the complexion peculiar to her country . One conclusion may then be formed with respect to the people described by Wafer, the Albinos and the Kackerlakes; they are a degenerated breed, not a separate class of men; and from some disease or defect of their parents, the peculiar colour and debility which mark their degradation is transmitted to them. As a decifive proof of this, it has been observed, that neither the white people of Darien, nor the Albinos of Africa. propagate their race: their children are of the colour and temperament peculiar to the natives of their respective countries.

The fecond district that is occupied by inhabitants differing in appearance from the other people of America, is situated in a high norther latitude, extending from the coast of Labrador towards the pole, as far as the country is habitable. The people scattered over those dreary regions, are known to the Europeans by the name of Esquimaux. They themselves, with that idea of their own superiority, which consoles the rudest and

mest

^{*} Margrav. Hist. Rer. Nat. Bras. lib. viii. c. 4. Y Waser, p. 348. Demanet. Hist. de l'Afrique, ii. 234. Recherch. Philos. sur les Amer. ii. 1, &c.

most wretched nations, assume the name of Keralit or Men. BOOK They are of a middle fize and robust, with heads of a disproportioned bulk, and feet as remarkably fmall. Their complexion, though fwarthy, by being continually exposed to the rigour of a cold climate, inclines to the European white, rather than to the copper colour of America, and the men have beards which are fometimes bufly and long 2. From these marks of distinction, as well as from one still less equivocal, the affinity of their language to that of the Greenlanders, which I have already mentioned, we may conclude, with fome degree of confidence, that the Esquimaux are a race different from the rest of the Americans.

We cannot decide with equal certainty concerning the inhabitants of the third diffrict, fituated at the fouthern extremity of America. These are the famous Patagonians, who, during two centuries and a half, have afforded a subject of controversy to the learned, and an object of wonder to the vulgar. They are supposed to be one of the wandering tribes, which occupy that vast, but least known region of America, which extends from the river De la Plata to the Straits of Magellan. Their proper station is in that part of the interior country, which lies on the banks of the river Negro; but in the hunting feafon they often roam as far as the straits which separate Terra del Fuego from the main-land. The first accounts of this people were brought to Europe by the companions of Magellan , who described them as a gigantic race, above eight feet high, and of strength in proportion to their

Ellis Voy. to Huds. Bay, p. 131. 139. De la Potherie, tom. i. p. 79. Wales' Journ, of a Voy. to Churchill River. Phil. Trans. vol. lx. 109.

³ Falkner's Description of Patagonia, p. 102.

enormous fize. Among feveral tribes of animals, a disparity in bulk, as confiderable, may be observed. Some large breeds of horses and dogs exceed the more diminutive races in stature and strength, as far as the Patagonian is supposed to rise above the usual standard of the human body. But animals attain the highest perfection of their species, only in mild climates, or where they find the most nutritive food in greatest abundance. It is not then in the uncultivated waste of the Magellanic regions, and among a tribe of unprovident favages, that we should expect to find man, possessing the highest honours of his race, and distinguished by a superiority of size and vigour, far beyond what he has reached in any other part of the earth. The most explicit and unexceptionable evidence is requisite, in order to establish a fact, repugnant to those general principles and laws, which feem to affect the human frame in every other instance, and to decide with respect to its nature and qualities. Such evidence has not hitherto been produced. Though feveral persons, to whose testimony great respect is due, have visited this part of America since the time of Magellan, and have had interviews with the natives; though fome have affirmed, that fuch as they faw were of gigantic stature, and others have formed the same conclusion from measuring their footsteps, or the skeletons of their dead; yet their accounts vary from each other in fo many effential points, and are mingled with fo many circumstances manifestly false or fabulous, as detract much from their credit. On the other hand, some navigators, and those among the most eminent of their order for discernment and accuracy, have afferted that the natives of Patagonia, with whom they had intercourse, though stout

and well made, are not of fuch extraordinary fize as to be diffinguished from the rest of the human species. The existence of this gigantic race of men, feems, then, to be one of those points in natural history, with respect to which a cautious inquirer will hefitate, and will chuse to suspend his assent until more complete evidence shall decide, whether he ought to admit a fact, feemingly inconfillent with what reason and experience have discovered concerning the structure and condition of man, in all the various fituations in which he has been obferved.

BOOK

In order to form a complete idea with respect to the consti- Their state of tution of the inhabitants of this and the other hemisphere, we should attend not only to the make and vigour of their bodies, but confider what degree of health they enjoy, and to what period of longevity they usually arrive. In the simplicity of the savage flate, when man is not oppressed with labour, or enervated by luxury, or disquieted with care, we are apt to imagine that his life will flow on almost untroubled by disease or suffering, until his days be terminated, in extreme old age, by the gradual decays of nature. We find, accordingly, among the Americans, as well as among other rude people, persons, whose decrepit and shrivelled form seems to indicate an extraordinary length of But as most of them are unacquainted with the art of numbering, and all of them as forgetful of what is past, as they are improvident for what is to come, it is impossible to ascertain their age with any degree of precision b. It is evident, that the period of their longevity must vary considerably, according to the diversity of climates, and their different modes of

b Ulloa Notic. Americ. 323. Bancrost Nat. Hist. of Guiana, 334.

Vol. I.

Rr

fubfistence.

fublishence. They seem, however, to be every where exempt from many of the distempers which afflict polished nations. None of the maladies, which are the immediate offspring of luxury, or sloth, ever visited them; and they have no names in their languages by which to distinguish this numerous train of adventitious evils.

Difeases.

But, whatever be the fituation in which man is placed, he is born to fusfer; and his diseases, in the savage state, though fewer in number, are, like those of the animals whom he nearly resembles in his mode of life, more violent, and more fatal. If luxury engenders and nourishes distempers of one species, the rigour and distresses of savage life bring on those of another. As men, in this state, are wonderfully improvident, and their means of subsistence precarious, they often pass from extreme want to exuberant plenty, according to the viciflitudes of fortune in the chace, or to the variety in the productions of the feafons. Their inconsiderate gluttony in the one situation, and their severe abstinence in the other, are equally pernicious. For, though the human constitution may be accustomed by habit, like that of animals of prey, to tolerate long famine, and then to gorge voraciously, it is not a little affected by fuch fudden and violent transitions. The strength and vigour of favages are, at some seasons, impaired by what they suffer from scarcity of food; at others, they are afflicted with disorders arising from indigestion and a superfluity These last are so common, that they may of gross aliment. be considered as the unavoidable consequence of their mode of subsisting, and cut off considerable numbers in the prime of life. They are likewise extremely subject to consumptions,

to pleuretic, asthmatic, and paralytic disorders c, brought on by the immoderate hardships and fatigue which they endure in hunting and in war; or owing to the inclemency of the seafons to which they are continually exposed. In the savage state, hardships and fatigue violently assault the constitution. In polished societies, intemperance undermines it. It is not easy to determine which of them operates with most fatal effect, or tends most to abridge human life. The influence of the former is certainly most extensive. The pernicious consequences of luxury reach only a few members in any community, the distresses of savage life are felt by all. As far as I can judge, after very minute inquiry, the general period of human life is shorter among savages, than in well-regulated and industrious societies.

One dreadful malady, the severest scourge, with which, in this life, offended Heaven chastens the indulgence of criminal desire, seems to have been peculiar to the Americans. By communicating it to their conquerors, they have not only amply avenged their own wrongs, but by adding this calamity to those which formerly embittered human life, they have, perhaps, more than counterbalanced all the benefits which Europe has derived from the discovery of the New World. This distemper, from the country in which it first raged, or from the people by whom it was supposed to have been spread over Europe, has been sometimes called the Neapolitan, and sometimes the French disease. At its first appearance, the infection

Charlev. N. Fr. iii. 364. Lasitau, ii. 360. De la Potherie, ii. 37.

was fo malignant, its fymptoms so violent, its operation so rapid and fatal, as to bassle all the efforts of medical skill. Assonishment and terror accompanied this unknown assistion in its progress, and men began to dread the extinction of the human race by such a cruel visitation. Experience, and the ingenuity of physicians gradually discovered remedies of such virtue as to cure or mitigate the evil. During the course of two centuries and a half, its virulence seems to have abated considerably. At length, in the same manner with the leprosy, which raged in Europe for some centuries, it may waste its force and disappear; and in some happier age, this western insection, like that from the East, may be known only by description.

Power and qualities of their minds.

II. AFTER confidering what appears to be peculiar in the bodily conflitution of the Americans, our attention is naturally turned towards the powers and qualities of their minds. As the individual advances from the ignorance and imbecillity of the infant state, to vigour and maturity of understanding, something similar to this may be observed in the progress of the species. With respect to it, too, there is a period of infancy, during which several powers of the mind are not unfolded, and all are feeble and defective in their operation. In the early ages of society, while the condition of man is simple and rude, his reason is but little exercised, and his desires move within a very narrow sphere. Hence arise two remarkable characteristics of the human mind, in this state. Its intellectual powers are extremely limited; its emotions and efforts are few and lan-

See NOTE XLVIII.

guid.

guid. Both these distinctions are conspicuous among the rudest and most unimproved of the American tribes, and constitute a firiking part in their description.

BOOK

WHAT, among polished nations, is called speculative rea- Intellectual Soning or research, is altogether unknown in the rude state of faculties very limited, fociety, and never becomes the occupation or amusement of the human faculties, until man be fo har improved as to have fecured, with certainty, the means of fubfiftence, as well as the possession of leifure and tranquillity. The thoughts and attention of a favage are confined within the small circle of objects, immediately conducive to his prefervation or enjoyment. Every thing beyond that, escapes his observation, or is perfectly indifferent to him. Like a mere animal, what is before his eyes interests and affects him; what is out of fight, or at a distance, makes no impression. There are several people in America whose limited understandings seem not to be capable of forming an arrangement for futurity; neither their folicitude nor their forelight extend to far. They follow blindly the impulse of the appetite which they feel, but are entirely regardless of distant consequences, and even of those removed in the least degree from immediate apprehension: While they highly prize fuch things as ferve prefent use, or minister to prefent enjoyment, they fet no value upon those which are not the object of some immediate want'. When, on the approach of the evening, a Caribbee feels himself-disposed to go to rest, no confideration will tempt him to fell his hammoc. But, in the morning, when he is fallying out to the business or passime of

[.] Venegas Hift, of Ca'if. i. 66. Sepp. Ulloa Noticias Americ. 222. Church Coll. v. 693. Borde Descr. des Caraibes, p. 16. Ellis Voy. 194.

the day, he will part with it for the flightest toy that catches his fancy. At the close of winter, while the impression of what he has suffered from the rigour of the climate is fresh in the mind of the North American, he sets himself with vigour to prepare materials for erecting a comfortable hut to protect him against the inclemency of the succeeding season; but as soon as the weather becomes mild, he forgets what is past, abandons his work, and never thinks of it more, until the return of cold compels him, when too late, to resume it.

If in concerns the most interesting, and seemingly the most simple, the reason of man, while rude and destitute of culture, differs so little from the thoughtless levity of children, or the improvident instinct of animals, its exertions in other directions cannot be very considerable. The objects towards which reason turns, and the disquisitions in which it engages, must depend upon the state in which man is placed, and are suggested by his necessities and desires. Disquisitions, which appear the most necessary and important to men in one state of fociety, never occur to those in another. Among civilized nations, arithmetic, or the art of numbering, is deemed an effential and elementary science, and in our continent, the invention and use of it reaches back to a period so remote as is beyond the knowledge of history. But among favages, who have no property to estimate, no hoarded treasures to count, no variety of objects or multiplicity of ideas to enumerate, arithmetic is a superfluous and useless art. Accordingly, among some tribes in America it seems to be quite unknown. There are many

Labat Voyages, ii. 114, 115. Tertre, ii. 385. Adair Hist. of Amer. Indians, 417.

n

r

ł

f

BOOK

who cannot reckon farther than three; and have no denomination to diffinguish any number above it '. Several can proceed as far as ten, others to twenty. When they would convey an idea of any number beyond these, they point to the hair of their head, intimating that it is equal to them, or with wonder declare it to be fo great that it cannot be reckoned. Not only the Americans, but all nations, while extremely rude, feem to be unacquainted with the art of computation *. As foon, however, as they acquire fuch acquaintance or connection with a variety of objects, that there is frequent occasion to combine or divide them, their knowledge of numbers increases, so that the state of this art among any people may be considered as one flandard, by which to estimate the degree of their improvement. The Iroquois, in North America, as they are much more civilized than the rude inhabitants of Brasil, Paraguay, or Guiana, have likewise made greater advances in this respect; though even their arithmetic does not extend beyond a thoufand, as in their petty transactions they have no occasion for any higher number . The Cherokee, a less considerable nation on the fame continent, can reckon only as far as a hundred, and to that extent have names for the feveral numbers; the fmaller tribes in their neighbourhood can rife no higher than ten b.

In other respects, the exercise of the understanding among No abstract rude nations is still more limited. The first ideas of every

" Condam, p. 67. Stadius up. de Bry, ix. 128. Lery. ibid. 251. Biet. 362. Lettr. Edif. 23. 314. Dumont Louis. i. 187. Herrera, dec. 1. lib. iii. c. 3. Biet. 396. See NOTE XLIX.

human

BOOK

human being must be such as he receives by the senses. But, in the mind of man, while in the favage flate, there feem to be hardly any ideas but what enter by this avenue. The objects around him are prefented to his eye. Such as may be fubservient to his use, or can gratify any of his appetites, attract his notice; he views the rest without curiofity or attention. Satisfied with confidering them under that fimple mode, in which they appear to him, as separate and detached, he neither combines them so as to form general classes, nor contemplates their qualities apart, nor beliews a thought upon the operations of his own mind concerning them. Thus, he is unacquainted with all the ideas which have been denominated universal, or abstract, or of reflection. The range of his understanding must, of course, be very confined, and his reasoning powers be employed merely on what is fenfible. This is fo remarkably the case with the ruder nations of America, that their languages, (as we shall afterwards find) have not a word to express any thing but what is material or corporeal. space, substance, and a thousand other terms which represent abiliract and universal ideas, are altogether unknown to them '. A naked favage, cowering near the fire in his miferable cabbin, or stretched under a few branches which afford him a temporary shelter, has as little inclination as capacity for useless fpeculation. His thoughts extend not beyond what relates to animal life; and when they are not directed towards some of its concerns, his mind is totally inactive. In figuations where no extraordinary effort, either of ingenuity or labour is requifite, in order to fatisfy the fimple demands of nature, the powers of the mind are so seldom roused to any exertion, that

the rational faculties continue almost dormant and unexercised. The numerous tribes scattered over the rich plains of South-America, the inhabitants of some of the islands, and of several fertile plains on the continent, come under this description. Their vacant countenance, their staring unexpressive eye, their lifeless inattention, and total ignorance of subjects, which seem to be the first which should occupy the thoughts of rational beings, made fuch impression upon the Spaniards, when they first beheld those rude people, that they considered them as animals of an inferior order, and could not believe that they belonged to the human species . It required the authority of a papal bull to counteract this opinion, and to convince them that the Americans were capable of the functions, and intitled to the privileges, of humanity. Since that time, persons more enlightened and impartial than the discoverers or conquerors of America, have had an opportunity of contemplating the most favage of its inhabitants, and they have been aftonished and humbled, with observing how nearly man, in this condition, approaches to the brute creation. But in severer climates, where sublistence cannot be procured with the same ease, where men must unite more closely, and act with greater concert, necessity calls forth their talents, and sharpens their invention, fo that the intelligent powers are more exercised and improved. The North-Americans and natives of Chili, who inhabit the temperate regions in the two great districts of America, are people of cultivated and enlarged understandings, when viewed in comparison with some of those seated in the islands, or on the banks of the Maragnon and Orinoco. Their occupations are more various, their system of policy, as well as of war, more

complex,

complex, their arts more numerous. But, even among them, the intellectual powers are extremely limited in their operations, and unless when turned directly to those objects which interest a savage, are held in no estimation. Both the North-Americans and Chilese, when not engaged in some of the functions belonging to a warrior or hunter, loiter away their time in thoughtless indolence, unacquainted with any other subject worthy of their attention, or capable of occupying their minds. If even among them, reason is so much circumscribed in its exertions, and never arrives, in its highest attainments, at the knowledge of those general principles and maxims, which serve as the soundation of science, we may conclude, that the intellectual powers of man in the savage state are destitute of their proper object, and cannot acquire any considerable degree of vigour and enlargement.

Active efforts of the mind few and languid.

FROM the same causes, the active efforts of the mind are few, and, on most occasions, languid. If we examine into the motives which rouze men to activity in civilized life, and prompt them to persevere in fatiguing exertions of their ingenuity or strength, we shall find that they arise chiefly from acquired wants and appetites. These are numerous and importunate, they keep the mind in perpetual agitation, and, in order to gratify them, invention must be always on the stretch, and industry must be incessantly employed. But the desires of simple nature are few, and where a favourable climate yields almost spontaneously what suffices them, they scarcely stir the soul, or excite any violent emotion. Hence the people of several tribes in America waste their life in a listless indolence.

To be free from occupation, feems to be all the enjoyment towards which they aspire. They will continue whole days stretched out in their hammocs, or feated on the earth, in perfect idleness, without changing their posture, or raising their eyes from the ground, or uttering a fingle word '.

BOOK

Such is their aversion to labour, that neither the hope of Improvident. future good, nor the apprehension of future evil, can furmount it. They appear equally indifferent to both, discovering little folicitude, and taking no precautions to avoid the one, or to fecure the other. The cravings of hunger may rouse them; but as they devour, with little diffinction, whatever will appeafe its inflinctive demands, the exertions which these occafion are of short duration. Destitute of ardour, as well as variety of desire, they feel not the force of those powerful fprings which give vigour to the movements of the mind, and urge the patient hand of industry to persevere in its efforts. Man, in some parts of America, appears in a form so rude, that we can discover no effects of his activity, and the principle of understanding which should direct it, scems hardly to be unfolded. Like the other animals, he has no fixed refidence; he has erected no habitation to shelter him from the inclemency of the weather; he has taken no measures for fecuring a certain fubfishence; he neither fows nor reaps; but roams about as led in fearch of the plants and fruits which the earth brings forth in succession; and in quest of the game which he kills in the forests, or of the fish which he catches in the rivers.

This description, however, applies only to some tribes. Some variety Man cannot continue long in this state of feeble and unin- to all these.

Bouguer Voy. au Perou, 102. Borde, 15.

BOOK.

formed infancy. He was made for industry and action, and the powers of his nature, as well as the necessity of his condition, urge him to fulfil his defliny. Accordingly, among most of the American nations, especially those seated in rigorous climates, some efforts are employed, and some previous precautions are taken, for securing subsistence. The career of regular industry is begun, and the laborious arm has made the first essays of its power. Still, however, the improvident and flothful genius of the favage state predominates. Even among those more improved tribes, labour is deemed ignominious and degrading. It is only to work of a certain kind that a man will deign to put his hand. The greater part is devolved entirely upon the women. One half of the community remains inactive, while the other is oppressed with the multitude and variety of its occupations. Thus their industry is partial, and the forefight which regulates it, is no lefs limited. A remarkable inflance of this occurs in the chief arrangement with respect to their manner of living. They depend for their fubfistence, during one part of the year, on fishing; during another, on hunting; during a third, on the produce of their agriculture. Though experience has taught them to foresee the return of those various seasons, and to make some provision for their respective exigencies, they either want sagacity to proportion this provision to their confumption, or are so incapable of any command over their appetites, that, from their inconfiderate waste, they often feel the calamities of famine as severely as the rudest of the savage tribes. What they suffer one year does not augment their industry, or render them more provident to prevent fimilar distresses h. This inconsiderate thoughtleffness about futurity, the effect of ignorance and the

BOOK

III. AFTER viewing the bodily constitution of the Ameri- Their social cans, and contemplating the powers of their minds, we are led, in the natural order of inquiry, to consider them as united together in fociety. Hitherto our refearches have been confined to the operations of understanding respecting themselves, as individuals, now they will extend to the degree of their fenfibility and affection towards their species.

THE domestic state is the first and most simple form of hu- Domestic man affociation. The union of the fexes, among different animals, is of longer or shorter duration in proportion to the ease or difficulty of rearing their offspring. Among those tribes where the feafon of infancy is short, and the young foon acquire vigour or agility, no permanent union is formed. Nature commits the care of training up the offspring to the mother alone, and her tenderness, without any other affishance, is equal to the task. But where the state of infancy is long and helpless, and the joint affiduity of both parents is requisite in tending their feeble brood, there a more intimate connection takes place, and continues until the purpose of nature be accomplished, and the new race grow up to full maturity. As the infancy of man is more feeble and helpless than that of any other animal, and he is dependent, during a much longer period, on the care and forefight of his parents, the union between

k See NOTE L.

воо к IV. husband and wife came early to be confidered, not only as a folemn, but as a permanent contract. A general state of promiscuous intercourse between the sexes never existed but in the imagination of poets. In the infancy of fociety, when men, destitute of arts and industry, lead a hard precarious life, the rearing of their progeny demands the attention and efforts of both parents; and if their union had not been formed and continued with this view, the race could not have been preferved. Accordingly, in America, even among the rudest tribes, a regular union between hufband and wife was univerfal, and the rights of marriage were underflood and recognized. In those diffricts where subfishence was scanty, and the difficulty of maintaining a family was great, the man confined himfelf to one wife. In warmer or more fertile provinces, the facility of procuring food concurred with the influence of climate, in inducing the inhabitants to increase the number of their wives '. In some countries the marriage union fubfifted during life; in others, the impatience of the Americans under restraint of any species, together with their natural levity and caprice, prompted them to dissolve it on very slight pretexts, and often without assigning any cause m.

Condition of women.

But whether they considered the obligation of this contract as perpetual, or only temporary, the condition of women was equally humiliating and miserable. Whether man has been improved by the progress of arts and civilization in society, is a question, which, in the wantonness of disputation, has been agitated among philosophers. That women are indebted to

the refinements of polished manners for a happy change in their state, is a point which can admit of no doubt. To despise and to degrade the female fex, is the characteristic of the favage flate in every part of the globe. Man, proud of excelling in fireigth and in courage, the chief marks of pre-eminence among rude people, treats woman, as an inferior, with difdain. The Americans, perhaps from that coldness and insensibility which has been confidered as peculiar to their conflitution, add neglect and harshness to contempt. The most intelligent travellers have been struck with this inattention of the Americans to their women. It is not, as I have already observed, by a studied difplay of tenderness and attachment, that the American endeavours to gain the heart of the woman whom he wishes to marry. Marriage itself, instead of being an union of affection and interest between equals, becomes, among them, the unnatural conjunction of a master with his slave. It is the observation of an author, whose opinions are deservedly of great weight, that wherever wives are purchased, their condition is extremely depressed. They become the property and the slaves of those who buy them. In whatever part of the globe this custom prevails, the observation holds. In countries where refinement has made fome progrefs, women, excluded from fociety, and shut up in sequestered apartments, are kept under the vigilant guard of their masters. In auder nations, they are degraded to the meanest functions. Among many people of America the marriage-contract is properly a purchase. The man buys his wife of her parents. Though unacquainted with the use of money, or with such commercial transactions as take place in more improved fociety, he knows how to give an equivalent for any object which he defires to possess. In some

[&]quot; Sketches of Hist. of Man, i. 184.

places the fuitor devotes his fervice for a certain time to the parents of the maid whom he courts; in others, he hunts for them occasionally, or affists in cultivating their fields, and forming their canoes; in others, he offers presents of such things as are deemed most valuable on account of their usefulness or rarity . In return for these, he receives his wife; and this circumstance, added to the low estimation of women among favages, leads him to confider her as a female fervant whom he has acquired, and whom he has a title to treat as an inferior. In all unpolished nations, it is true, the functions in domestic occonomy, which fall naturally to the share of women, are so many, that they are subjected to hard labour, and must bear more than their full portion of the common burden. in America their condition is fo peculiarly grievous, and their depression so complete, that servitude is a name too mild to defcribe their wretched state. A wife, among most tribes, is no better than a beast of burden, destined to every office of labour and fatigue. While the men loiter out the day in floth, or fpend it in amusement, the women are condemned to inceffant toil. Tasks are imposed upon them without pity, and services are received without complacence or gratitude?. Every circumstance reminds women of this mortifying inferiority. They must approach their lords with reverence; they must regard them as more exalted beings, and are not permitted to eat in their presence q. There are districts in America where this dominion is fo grievous, and fo feafibly felt, that some women, in a wild emotion of maternal tenderness, have destroyed their

female children in their infancy, in order to deliver them from that intolerable bondage to which they knew they were doomed'. Thus the first institution of social life is perverted. That state of domestic union towards which nature leads the human species, in order to foften the heart to gentleness and humanity, is rendered fo unequal, as to establish a cruel distinction between the fexes, which forms the one to be harsh and unfeeling, and humbles the other to fervility and subjection.

It is owing, perhaps, in some measure, to this state of de- Their women pression, that women in rude nations are far from being prolific'. The vigour of their constitution is exhausted by excesfive fatigue, and the wants and diffresses of savage life are so numerous, as to force them to take various precautions in order to prevent too rapid an increase of their progeny. Among wandering tribes, or fuch as depend chiefly upon hunting for fublistence, the mother cannot attempt to rear a second child, until the first has attained such a degree of vigour as to be in fome measure independent of her care. From this motive, it is the universal practice of the American women to nurse their children during feveral years'; and as they feldom marry early, the period of their fertility is over, before they can finish the long but necessary attendance upon two or three successive children". Among some of the least polished tribes, whose industry and forelight does not extend fo far as to make any regular

den.

den themselves with rearing more than two children , and no such numerous families, as are frequent in civilized societies, are to be found among men in this state. When twins are born, one of them commonly is abandoned, because the mother is not equal to the task of educating both. When a mother dies while she is nursing a child, all hope of preserving its life sails, and it is buried together with her in the same grave. As the parents are frequently exposed to want by their own improvident indolence, the difficulty of sustaining their children becomes so great, that it is not uncommon to abandon or destroy them. Thus their experience of the difficulty of training up an infant to maturity, amidst the hardships of savage life, often this the voice of nature among the Americans, and suppresses the strong emotions of parental tenderness.

Parental arfection and filial duty.

But, though necessity compels the inhabitants of America thus to set bounds to the increase of their families, they are not deficient in affection and attachment to their offspring. They feel the power of this instinct in its full force, and as long as their progeny continue feeble and helpless, no people exceed them in tenderness and care. But in rude nations, the dependence of children upon their parents is of shorter continuance than in polished societies. When men must be trained to the various sunctions of civil life by previous discipline and education, when the knowledge of abstructe sciences must be taught, and dexterity in intricate arts must be acquired, before a young man is prepared to begin his career of

action, the attentive feelings of a parent are not confined to the years of infancy, but extend to the establishment of his child in the world. Even then, his folicitude does not terminate. His protection may still be requisite, and his wisdom and experience still prove useful guides. Thus a permanent connection is formed; parental tenderness is exercised, and filial respect returned, throughour the whole course of life. But in the simplicity of the savage state, the affection of parents, like the instinctive fonduess of animals, ceases almost entirely as soon as their offfpring attain maturity. Little instruction sits them for that mode of life to which they are destined. The parents, as if their duty were accomplished, when they have conducted their children through the helpless years of infancy, leave them afterwards at entire liberty. They feldom advise or admonish, they never chide or chastise them. They suffer them to be absolute masters of their own actions. In an American hut, a father, a mother, and their posterity, live together like persons affembled by accident, without seeming to feel the obligation of the duties mutually arising from this connection. As filial love is not cherished by the continuance of attention or good offices, the recollection of benefits received in early infancy is too faint to excite it. Conscious of their own liberty, and impatient of restraint, the youth of America are accustomed to act as if they were totally independent. Their parents are not objects of greater regard than other persons. They treat them always with neglect, and often with fuch harshness and insolence, as to fill those who have been wit-

BOOK nesses of their conduct with horror 4. Thus the ideas which feem to be natural to man in his favage state, as they result from his circumstances and condition in that period of his progress, affect the two capital relations in domestic life. render the union between husband and wife unequal. They shorten the duration, and weaken the force, of the connection between parents and children.

Political infitutions.

IV. FROM the domestic state of the Americans, the transition is natural to the consideration of their civil government and political inflitutions. In every inquiry concerning the operations of men when united together in fociety, the first object of attention should be their mode of subsistence. cordingly as that varies, their laws and policy must be different. The institutions suited to the ideas and exigencies of tribes, which fubfift chiefly by fishing or hunting, and which have hardly formed a conception of any species of property, will be much more simple than those which must take place when the earth is cultivated with regular industry, and a right of property, not only in its productions, but in the foil itself, is completely ascertained.

Mode of fubfiftence.

ALL the people of America, now under review, belong to the former class. But though they may all be comprehended under the general denomination of favage, the advances which they had made in the art of procuring to themselves a certain and plentiful subfistence, were very unequal. On the vast

d Gumilla, i. 212. Tertre, ii. 376. Charlev. Hift. de N. France, iii. 309. Charlev. Hift, de Parag. i. 115. Lezano, Descrip, del Gran Chaco, p. 68. 100. 101. Fernand. Relac. Histor. de los Chiquit. 426.

plains of South-America, man appears in one of the rudest states in which he has been ever observed, or, perhaps, can exist. Several tribes depend entirely upon the bounty of nature for sublistence. They discover no solicitude, they employ little forefight, they scarcely exert any industry, to secure what is necessary for their support. The Topayers of Brasil, the Guaxeros of Tierra-Firme, the Caiguas, the Moxos, and feveral other people of Paraguay, are unacquainted with every species of cultivation. They neither sow nor plant. Even the culture of the manioc, of which cassada bread is made, is an art too intricate for their ingenuity, or too fatiguing to their indolence. The roots which the earth produces spontaneously, the fruits, the berries, and feeds, which they gather in the woods together with lizards and other reptiles, which the heat engenders in a fat foil, moistened by frequent rains, supply them with food during some part of the year. At other By fishing. times they subsist by fishing; and nature seems to have indulged the laziness of the people, by the liberality with which she ministers, in this way, to their wants. The vast rivers of South-America abound with an infinite variety of the most delicate fish. The lakes and marshes, formed by the annual overflowing of the waters, are filled with all the different species, where they remain thut up, as in natural refervoirs, for the use of the inhabitants. They swarm in such shoals, that in fome places they are catched without art or industry. In others, the natives have discovered a method of infecting the water with the juice of certain plants, by which the fish are so

BOOF IV. intoxicated, that they float on the surface, and are taken with the hand. Some tribes have ingenuity enough to preferve them without falt, by drying or fmoking them upon hurdles over a flow fire b. The prolific quality of the rivers in South-America induces many of the natives to refort to their banks, and to depend almost entirely for nourishment on what their waters supply with such profusion. In this part of the globe, hunting feems not to have been the first employment of men, or the first effort of their invention and labour to obtain food. They were fishers before they became hunters; and as the occupations of the former do not call for equal exertions of activity, or talents, with those of the latter, people in that flate appear to possess neither the same degree of enterprise, nor of ingenuity. The petty nations, adjacent to the Maragnon and Orinoco, are manifestly the most inactive and least intelligent of all the Americans.

By hunting.

None but tribes contiguous to great rivers can sustain themfelves in this manner. The greater part of the American nations, dispersed over the forests with which their country is covered, do not procure subsistence with the same facility. For although these forests, especially in the southern continent of America, are stored plentifully with game *, considerable essorts of activity and ingenuity are requisite in pursuit of it. Necessity incited them to the one, and taught them the other. Hunting became their principal occupation; and as it called forth strenuous exertions of courage, of force, and of inven-

tion, it was deemed a function no less honourable than necessa-This was peculiar to the men. They were trained to it from their earliest youth. A bold and dextrous hunter ranked next in fame to the diffinguished warrior, and an alliance with the former is often courted in preference to one with the latter. Hardly any device, which the ingenuity of man has discovered for enfnaring or destroying wild animals, was unknown to the Americans. While engaged in this favourite exercise, they shake off the indolence peculiar to their nature, the latent powers and vigour of their minds are ro , and they become active, persevering, and indefatigable. Their fagacity in finding their prey, and their address in killing it, are equal. Their reason and their fenfes, being constantly directed towards this one object, the former displays such fertility of invention, and the latter acquire such a degree of acuteness, as appear almost incredible. They discern the footsteps of a wild beast, which escape every other eye, and can follow them with certainty through the pathless forest. If they attack their game openly, their arrow seldom errs from the mark "; if they endeavour to circumvent it by art, it is almost impossible to avoid their toils. Among feveral tribes, their young men were not permitted to marry, until they had given such proofs of their skill in hunting as put it beyond doubt that they were capable of providing for a family. Their ingenuity always on the stretch, and sharpened by emulation, as well as necessity, has struck out many inventions, which greatly facilitate success in the chase. most fingular of these is the discovery of a poison in which they dip the arrows employed in hunting. The flightest wound

TO THE STATE OF THE PARTY OF TH

BOOK with those envenomed shafts is mortal. If they only pierce the Ikin, the blood fixes and congeals in a moment, and the strongest animal falls motionless to the ground. Nor does this poison, notwithstanding its violence and subtlety, infect the slesh of the animal which it kills. That may be eaten with perfect fafety, and retains its native relish and qualities. All the nations along the Maragnon and Orinoco are acquainted with this composition, the chief ingredient in which is the juice extracted from the root of the curare, a species of withe". In other parts of America, they employ the juice of the manchenille for the fame purpose, and it operates with a no less fatal activity. To people possessed of those secrets, the bow is a more destructive weapon than the musket, and, in their skilful hands, does great execution among the birds and beafts which abound in the forests of America.

By agricul-

But the life of a hunter gradually leads man to a state more advanced. The chase, even where prey is abundant, and the dexterity of the hunter much improved, affords but an uncertain maintenance, and at some seasons it must be suspended altogether. If a favage trusts to his bow alone for food, he and his family will be often reduced to extreme distress. Hardly any region of the earth furnishes man spontaneously with what his wants require. In the mildest climates, and most fertile soils, his own industry and forefight must be exerted, in some degree, to fecure a regular supply of food. Their experience of this furmounts the abhorrence of labour natural to favage nations, and compels them to have recourse to culture, as subsidiary to hunting. In particular fituations, some small tribes may sublist

[&]quot; Gumilla, ii. 1. &c. Condam. 208. Recherc'a. Philos. ii. 239. Bancroft Nat. Hift, of Guiana, 281, &c. . See NOTE LIV.

by fishing, independent of any production of the earth, raised by BOOK their own industry. But throughout all America, we scarcely meet with any nation of hunters, which does not practife fome species of cultivation.

THEIR agriculture, however, is neither extensive nor labo- The various rious. As game and fish are their principal food, all they aim culture. at by cultivation, is to supply any occasional defect of these. In the fouthern continent of America, the natives confined their industry to rearing a few plants, which, in a rich soil and warm climate, were easily trained to maturity. The chief of these is Maize, well known in Europe by the name of Turkey or Indian wheat, a grain extremely prolific, of fimple culture, agreeable to the tafte, and affording a strong hearty nourishment. The fecond is the manioc, which grows to the fize of a large shrub. or small tree, and produces roots somewhat resembling parsnips. After carefully squeezing out the juice, these roots are grated down to a fine powder, and formed into thin cakes, called Cassada bread, which, though insipid to the taste, proves no contemptible food P. As the juice of the manioc is a deadly poison, some authors have celebrated the ingenuity of the Americans, in converting a noxious plant into wholesome nourishment. But it should rather be considered as one of the desperate expedients for procuring subsistence, to which necessity reduces rude nations; or, perhaps, men were led to the use of it by a progress, in which there is nothing marvellous. One species of manioc is altogether free of any poisonous quality, and may be eaten without any preparation but that of roafting it in the embers. This, it is probable, was

P Sloane Hift, of Jam. Introd. p. 18. Labat, i. 394. Acofta Hift, Ind. Occid. Na. tur. lib. iv. c. 17. Ulloa, i. 62. Aublet Mem. fur le Magniec. Hill. des Plantes, tom. ii. p. 65, &c.

first used by the Americans as food; and necessity having gradually taught them the art of separating its pernicious juice from the other species, they have by experience found it to be the most prolific as well as the most nourishing plant of the two. The third is the plantain, which though it rises to the height of a tree, is of such quick growth, that in less than a year it rewards the industry of the cultivator with its fruit. This, when roasted, supplies the place of bread, and is both palatable and nourishing. The fourth is the potatoe, whose culture and qualities are too well known to need any description. The fifth is pimento, a small tree, yielding a strong aromatic spice. The Americans, who, like other inhabitants of warm climates, delight in whatever is hot and of poignant slavour, deem this seasoning a necessary of life, and mingle it copiously with every kind of food they take.

SUCH are the various productions, which were the chief object of culture among the hunting tribes on the continent of America, and with a moderate exertion of active and provident industry, these might have yielded a full supply to the wants of a numerous people. But men, accustomed to the free and vagrant life of hunters, are incapable of regular application to labour; and consider agriculture as a secondary and inferior occupation. Accordingly, the provision for subsistence, arising from cultivation, was so limited and scanty among the Americans, that, upon any accidental failure of their usual success in hunting, they were often reduced to extreme distress.

⁹ Martyr Decad. 301. Labat. i. 411. Gumilla, iii. 192. Maehuca Milie Indiana, 164. See NOTE LV. See NOTE LVI.

⁴ Gumilla, iii. 171. Acosta, lib. iv. c. 20.

In the islands, the mode of subsisting was considerably different. None of the large animals which abound on the continent were known there. Only four species of quadrupeds, besides a kind of small dumb dog, existed in the islands, the biggest of which did not exceed the fize of a rabbit ". To hunt fuch diminutive prey, was an occupation which required no effort either of activity or courage. The chief employment of a hunter in the isles was to kill birds, which on the continent are deemed ignoble game, and left chiefly to the pursuit of boys *. This want of animals, as well as their peculiar fituation, led the islanders to depend principally upon fishing for their subfistence '. Their rivers, and the sea with which they are surrounded, supplied them with this species of food. At some particular feasons, turtle, crabs, and other shell-fish, abounded in fuch numbers, that they could support themselves with a facility in which their indolence delighted . At other times, they ate lizards, and various reptiles of odious forms. To fishing, the inhabitants of the illands added some degree of agriculture. Maize, manioc, and other plants, were cultivated in the same manner as on the continent. But all the fruits of their industry, Their agritogether with what their foil and climate produced sponta- culture very limited. neously, afforded them but a scanty maintenance. Though their demands for food were very sparing, they hardly raised what was sufficient for their own consumption. If a few Spaniards fettled in any district, such a small addition of supernumerary mouths foon exhausted their scanty stores, and brought on a famine.

BOOK
IV.
Two causes
of its imperfection.

Two circumstances, common to all the savage nations of America, concurred with those which I have already mentioned, not only in rendering their agriculture imperfect, but in circumscribing their power in all their operations. They had no tame animals; and they were unacquainted with the use of metals.

The want of tame animals.

In other parts of the globe, man, in his rudest state, appears as lord of the creation, giving law to various tribes of animals. which he has tamed and reduced to subjection. The Tartar follows his prey on the horse which he has reared; or tends his numerous herds, which furnish him both with food and clothing: the Arab has rendered the camel docile, and avails himself of its persevering strength; the Laplander has formed the reindeer to be subservient to his will; and even the people of Kamchatka have trained their dogs to labour. This command over the inferior creatures is one of the noblest prerogatives of man, and among the greatest efforts of his wisdom and power. Without this, his dominion is incomplete. He is a monarch. who has no subjects; a master, without servants, and must perform every operation by the strength of his own arm. Such was the condition of all the rude nations in America. reason was so little improved, or their union so incomplete, that they feem not to have been conscious of the superiority of their nature, and fuffered all the animal creation to retain its liberty, without establishing their own authority over any one species. Most of the animals, indeed, which have been rendered domestic in our continent, do not exist in the New World; but those peculiar to it are neither so fierce, nor so formidable, as to have exempted them from fervitude. There are some animals of the fame species in both continents. But the rein-deer, which

has been tamed and broken to the yoke in the one hemisphere, runs wild in the other. The bison of America is manifestly of the same species with the horned cattle of the other hemisphere. These, even among the rudest nations in our continent, have been rendered domestic; and in consequence of his dominion over them, man can accomplish works of labour with greater facility, and has made a vast addition to his means of subsistence. The inhabitants of many regions in the New World, where the bison abounds, might have derived the same advantages from it. It is not of a nature so indocile, but that it might have been trained to be as subservient to man as our cattle. But a savage, in that uncultivated state wherein the Americans were discovered, is the enemy of the other animals, not their superior. He wastes and destroys, but knows not how to multiply or to govern them.

This, perhaps, is the most notable distinction between the inhabitants of the Ancient and New Worlds, and a high pre-eminence of civilized men above such as continue rude. The greatest operations of man in changing and improving the face of nature, as well as his most considerable efforts in cultivating the earth, are accomplished by means of the aid which he receives from the animals whom he has tamed and employs in labour. It is by their strength that he subdues the stubborn soil, and converts the desert or marsh into a struitful field. But man, in his civilized state, is so accustomed to the service of the domestic animals, that he seldom reslects upon the vast benefits which he derives from it. If we were to suppose him, even when

most improved, to be deprived of their useful ministry, his empire over nature must in some measure cease, and he would remain a feeble animal, at a loss how to subsist, and incapable of attempting such arduous undertakings as their assistance enables him to execute with ease.

Want of the useful metals.

IT is a doubtful point, whether the dominion of man over the animal creation, or his acquiring the use of metals, has contributed most to extend his power. The æra of this important discovery is unknown, and in our hemisphere very remote. It is only by tradition, or by digging up some rude instruments of our forefathers, that we learn that mankind were originally unacquainted with the use of metals, and endeavoured to supply the want of them by employing flints, shells, bones, and other hard substances, for the same purposes which metals serve among polished nations. Nature completes the formation of some metals. Gold, silver, and copper, are found in their perfect state, in the clefts of rocks, in the sides of mountains, or the channels of rivers. These were accordingly the metals first known, and first applied to use. But iron, the most serviceable of all, and to which man is most indebted, is never discovered in its perfect form; its gross and stubborn ore must feel twice the force of fire, and go through two laborious processes, before it become fit for use. Man was long acquainted with the other metals, before he acquired the art of fabricating iron, or attained fuch ingenuity as to perfect an invention, to which he is indebted for those instruments wherewith he subdues the earth, and commands all its inhabitants. But in this, as well as in many other respects, the inferiority of the Americans was conspicuous. All the savage tribes, scattered over the continent and islands, were totally unacquainted with

with the metals which the foil produces in great abundance, if we except some trifling quantity of gold, which they picked up in the torrents that descended from their mountains, and formed into ornaments. Their devices, to supply this want of the serviceable metals, were extremely rude and aukward. The most simple operation was to them an undertaking of immense difficulty and labour. To fell a tree with no other instruments than hatchets of stone, was employment for a month '. To form a canoe into shape, and to hollow it, confumed years; and it frequently began to rot before they were able to finish it . Their operations in agriculture were equally flow and defective. In a country covered with woods of the hardest timber, the clearing of a small field destined for culture required the united efforts of a tribe, and was a work of much time and great toil. This was the business of the men, and their indolence was fatisfied with performing it in a very flovenly manner. The labour of cultivation was left to the women, who, after digging, or rather stirring the field, with wooden mattocks, and stakes hardened in the fire, sowed or planted it; but were more indebted for the increase to the fertility of the foil, than to their own rude industry b.

AGRICULTURE, even when the strength of man is seconded by that of the animals which he has subjected to the yoke, and his power augmented by the use of the various instruments with which the discovery of metals has surnished him, is still a work of great labour; and it is with the sweat of his brow that he renders the earth sertile. It is not wonderful, then, that people

destitute of both these advantages should have made so little progress in cultivation, that they must be considered as depending for subsistence on sishing and hunting, rather than on the fruits of their own labour.

Political inflications aciting from this flate. From this description of the mode of subsisting among the rude American tribes, the form and genius of their political institutions may be deduced, and we are enabled to trace various circumstances of distinction between them and more civilized nations.

nto fmall communities.

I. THEY were divided into small independent communities. While hunting is the chief source of sublistence, a vast extent of territory is requisite for supporting a small number of people. In proportion as men multiply and unite, the wild animals, on which they prey, diminish, or fly at a greater distance from the haunts of their enemy. The increase of a society in this state is limited by its own nature, and the members of it must either disperse, like the game which they pursue, or fall upon some better method of procuring food, than by hunting. Beafts of prey are by nature folitary and unfocial, they go not forth to the chase in herds, but delight in those recesses of the forest where they can roam and destroy undisturbed. A nation of hunters refembles them, both in occupation and in genius. They cannot form into large communities, because it would be impossible to find subsistence, and they must drive to a distance every rival who may encroach on those domains, which they consider as their own. This was the state of all the American tribes, the numbers in each were small, though scattered over vast countries; they were far removed from one another, and

and engaged in perpetual hostilities or rivalship'. In America, the word nation is not of the same import as in other parts of the globe. It is applied to small societies, not exceeding, perhaps, two or three hundred persons, but occupying provinces larger than fome kingdoms in Europe. The country of Guiana, though of larger extent than the kingdom of France, and divided among a great number of nations, did not contain above twenty-five thousand inhabitants k. In the provinces which border on the Orinoco, one may travel several hundred miles in different directions, without finding a fingle hut, or observing the footsteps of a human creature '. In North-America, where the climate is more rigorous, and the foil less fertile, the desolation is still greater. There, vast journeys of some hundred leagues have been made through uninhabited plains and forests. As long as hunting continues to be the chief employment of man to which he trusts for subsistence, he can hardly be faid to have occupied the earth ".

2. NATIONS which depend upon hunting are strangers to Unacquainted the idea of property. As the animals on which the hunter of property. feeds are not bred under his inspection, nor nourished by his care, he can claim no right to them, while they run wild in the forest. Where game is fo plentiful that it may be catched with little trouble, men never dream of appropriating what is of small value, or of easy acquisition. Where it is so rare, that the labour or danger of the chase requires the united efforts

of a tribe, or village, what is killed is a common flock, belonging equally to all, who, by their skill or their courage, have contributed to the success of the excursion. The forest, or hunting-grounds, are deemed the property of the tribe. from which it has a title to exclude every rival nation. But no individual arrogates a right to any district of these, in preference to his fellow-citizens. They belong alike to all; and thither, as to a general and undivided store, all repair in quest of fusienance. The same principles, by which they regulate their chief occupation, extend to that which is subordinate. Even agriculture has not introduced among them a complete idea of property. As the men hunt, the women labour together, and after they have shared the toils of the seed-time, they enjoy the harvest in common °. Among some tribes, the increase of their cultivated lands is deposited in a public granary, and divided among them, at stated times, according to their wants'. Among others, though they lay up separate stores, they do not acquire such an exclusive right of property, that they can enjoy superfluity, while those around them suffer want?. This the distinctions arising from the inequality of possessions are unknown. The terms rich or poor enter not into their language, and being frangers to property, they are unacquainted with that, which is the great object of laws and policy, as well as the chief motive which induced mankind to establish the various arrangements of regular government '.

High fense of equality and independence.

3. PEOPLE in this state retain a high sense of equality and independence. Wherever the idea of property is not established,

there

there can be no distinction among men, but what arises from BOOK personal qualities. These can be conspicuous only on such occasions as call them forth into exertion. In times of danger, or in affairs of intricacy, the wildom and experience of age are consulted, and prescribe the measures which ought to be purfued. When they take the field against the enemies of their country, the warrior of most approved courage leads the youth to the combat'. If they go forth in a body to the chase, the most expert and adventurous hunter is foremost, and directs their motions. But during seasons of tranquillity and inaction, when there is no occasion to display those talents, all pre-eminence ceases. Every circumstance indicates, that all the members of the community are on a level. They are clothed in the same simple garb. They feed on the same plain fare. Their houses and furniture are exactly similar. No distinction can arise from the inequality of possessions. Whatever forms dependence on one part, or constitutes superiority on the other, is unknown. All are freemen, all feel themselves to be such, and affert with firmness the rights which belong to that condition '. This fentiment of independence is imprinted so deeply in their nature, that no change of condition can eradicate it and bend their minds to scrvitude. Accustomed to be absolute masters of their own conduct, they disdain to execute the orders of another, and, having never known control, will not submit to correction". Many of the Americans, when they found that they were treated as flaves by Spaniards, died of grief; many destroyed themselves in despair *.

BOOK

Sense of subordination imperfect.

4. Among people in this state, government can assume little authority, and the fense of civil subordination must remain very imperfect. While the idea of property is unknown, or incompletely conceived, and the spontaneous productions of the earth, as well as the fruits of industry, are considered as belonging to the public flock, there can hardly be any fuch subject of difference or discussion among the members of the some community, as will require the hand of authority to interpose in order to adjust it. Where the right of separate and exclusive possession is not introduced, the great object of law and jurisdiction does not exist. When called into the field, either in their own defence, or to invade the territories of their enemies, when engaged in the toil and dangers of the chase, the members of a tribe perceive that they are part of a political body. They are conscious of their own connection with the companions in conjunction with whom they act; and they follow and reverence fuch as excel in conduct and valour. But, during the intervals between fuch common efforts, they are scarcely conscious of the ties of political union *. No vifible form of government is established. The names of magistrate and subject are not in use. Every one seems to enjoy his natural independence almost entire. If a scheme of public utility be proposed, the members of the community are left at liberty to chuse whether they will affist or not in carrying it into execution. No statute imposes any service as a duty, no compulsory laws oblige them to perform it. All their resolutions are voluntary, and flow from the impulse of their own minds. The first step towards establishing a public jurisdic-

^{*} Lozano, Descr. del Gran Chaco, 93. Melendez Tesoros Verdaderos, ii. 23. See NOTE LXII. , Charley. Hist, Nov. France, iii. 266, 268.

tion has not been taken in those rude societies. The right of revenge is left in private hands?: If violence is committed, or blood is shed, the community does not assume the power either of inflicting or of moderating the punishment. It belongs to the family and friends of the person injured or slain to avenge the wrong, or to accept of the reparation offered by the aggressor. If the elders interpose, it is to advise, not to decide, and it is feldom their counsels are listened to; for as it is deemed pusillanimous to fuffer an offender to escape with impunity, resentment is implacable and everlasting. The object of government among favages is rather foreign than domestic. They do not aim at maintaining interior order and police by public regulations, or the exertions of any permanent authority, but labour to preserve such union among the members of their

tribe, that they may watch the motions of their enemies, and

act against them with concert and vigour.

BOOK

SUCH was the form of political order established among the To what pecgreater part of the American nations. In this state were most feriptions apof the tribes, spread over the vast provinces extending eastward ply. of the Mississipi, from the mouth of the St. Laurence to the confines of Florida. In a fimilar condition were the people of Brasil, the inhabitants of Chili, and several tribes in Paraguay and Guiana, and in the countries which stretch from the mouth of the Orinoco to the peninfula of Yucatan. Among fuch an infinite number of petty affociations, there may be peculiarities which constitute a distinction, and mark the various.

degrees.

a Charlev. Hift. N. France, iii. 271, 2 Herrera, dec. 8, lib. iv. c. 8. 272. Last. i 486. Cassani Hist. de Nuevo Reyno de Granada, 226.

BOOK

degrees of their civilization and improvement. But an attempt to trace and enumerate these would be vain, as they have not been observed by persons, capable of discerning the minute and delicate circumstances, which serve to discriminate nations resembling one another in their general character and seatures. The description which I have given will apply, with little variation, to the policy of every people in America, which to sishing and hunting had added some degree of agriculture.

Rude and imperfect as those institutions may appear, several tribes were not so far advanced in their political progress. Among all those petty nations which trusted for sub-stiftence entirely to fishing and hunting without any species of cultivation, the union was so incomplete, and their sense of mutual dependence so feeble, that hardly any appearance of government or order can be discerned in their proceedings. Their wants are few, their objects of pursuit simple, they form into separate tribes, and act together, from instinct, habit, or conveniency, rather than from any formal concert and affociation. To this class belong the Californians, several of the small nations in the extensive country of Paraguay, some of the people on the banks of the Orinoco, and on the river St. Magdalene, in the new kingdom of Granada.

Some irregular appearances. But though among these last-mentioned tribes there was hardly any shadow of regular government, and even among those which I first described, its authority is slender and confined within narrow bounds, there were some places in Ame-

b Venegas, i. 68. Lettr. Edif. ii. 176. Techo. Hist. of Parag. Churchill, vi. 78. Hist. Gen. des Voyages, xiv. 74.

rica where it was carried far beyond the degree which feems natural to rude nations. In furveying the political operations of man, either in his favage or civilized flate, we discover fingular and excentric institutions, which start as it were from their station, and fly off so wide that we labour in vain to bring them within the general laws of any fystem, or to account for them by those principles which influence other communities in a fimilar fituation. Some instances of this occur among those people of America, whc.n I have included under the common denomination of favage. These are so curious and important that I shall describe them, and attempt to explain their origin.

BOOK

In the New World, as well as in other parts of the globe, Particularly cold or temperate countries appear to be the favourite feat of warmer refreedom and independence. There the mind, like the body, is firm and vigorous. Conscious of their own dignity, and capable of the greatest efforts in afferting it, men aspire to independence, and their stubborn spirits stoop with reluctance to the yoke of fervitude. In warmer climates, by whose influence the whole frame is so much enervated, that present pleasure is the supreme felicity, and mere repose is enjoyment, men acquiesce, almost without a struggle, in the dominion of a superior. Accordingly, if we proceed from north to fouth along the continent of America, we shall find the power of those vefted with authority gradually increasing, and the spirit of the people becoming more tame and passive. In Florida, the authority of the fachems, caziques, or chiefs, was not only permanent, but hereditary. They were distinguished by peculiar ornaments, they enjoyed prerogatives of various kinds, and were treated by their subjects with that reverence, which people accustomed

Natchez.

accustomed to subjection, pay to a master '. Among the nation of the Natchez, fituated on the banks of the Miffiffippi, a difference of rank took place, with which the northern tribes were altogether unacquainted. Some families were reputed noble, and enjoyed hereditary dignity. The body of the people was confidered as vile, and formed only for subjection. This diftinction was marked by appellations which intimated the high elevation of the one state, and the ignominious depression of The former were called Respectable; the latter, the the other. Stinkards. The great Chief, in whom the supreme authority was vested, is reputed to be a being of superior nature, the brother of the Sun, the fole object of their worship. They approach him with religious veneration, and honour him as the representative of their deity. His will is a law, to which all fubmit with implicit obedience. The lives of his fubjects are fo absolutely at his disposal, that if any one has incurred his displeafure, he comes with profound humility and offers him his head. Nor does their dominion end with their lives; their principal officers, their favourite wives, together with many domestics of inferior rank, are facrificed at their tombs, that they may be attended in the next world by the same persons who served them in this; and fuch is the reverence in which they are held, that those victims welcome death with exultation, deeming it a recompence of their fidelity and a mark of distinction, to be selected to accompany their deceased master. Thus a perfect despotism, with its full train of superstition, arrogance, and cruelty, is established among the Natchez, and by a singular

fatality, that people has tasted of the worst calamities incident to polished nations, though they themselves are not far advanced beyond the tribes around them in civility and improve-In Hispaniola, Cuba, and the larger islands, their Inthe islands caziques or chiefs possessed extensive power. The dignity was transmitted by hereditary right from father to son. Its honours and prerogatives were confiderable. Their fubjects paid great respect to the caziques, and executed their orders without hesitation or reserve. They were distinguished by peculiar ornaments, and in order to preferve or augment the veneration of the people, they had the address to call in the aid of superstition to uphold their authority. They delivered their mandates as the oracles of heaven, and pretended to possess the power of regulating the feafons, and of dispensing rain or sun-

shine, according as their subjects stood in need of them.

воок

In some parts of the continent, the power of the caziques in Bogota. feems to have been as extensive as in the isles. In Bogota, which is now a province of the New kingdom of Granada, there was fettled a nation, more confiderable in number and more improved in the various arts of life, than any people in America except the Mexicans and Peruvians. They subsisted chiefly by agriculture. The idea of property was introduced among them, and its rights fecured by laws, handed down by tradition, and observed with great care . They lived in large towns. They were clothed in a decent manner, and their houses may be termed commodious, when compared with those

BOOK

The effects of this uncommon of the people around them. civilization were conspicuous. Government had assumed a re-A jurisdiction was established, which took coggular form. nizance of different crimes, and punished them with rigour. A distinction of ranks was known; their chief, to whom the Spaniards gave the title of monarch, and who merited that name on account of his fplendor as well as power, reigned with absolute authority. He was attended by officers of various conditions; he never appeared in public without a numerous retinue; he was carried in a fort of palanquin with much pomp, and harbingers went before him to fweep the road and strew it with flowers. This uncommon pomp was supported by presents or taxes received from his subjects, to whom their prince was such an object of veneration, that none of them prefumed to look him directly in the face, or ever approached him but with an averted countenance. There were other tribes on the same continent, among which, though far less advanced than the people of Bogota in their progress towards refinement, the freedom and independence, natural to man in his favage state, was much abridged, and their caziques had affumed extensive authority.

Causes of those irregular appearances.

It is not easy to point out the circumstances, or to discover the causes which contributed to introduce and establish among each of those people a form of government so different from that of the tribes around them, and so repugnant to the genius of rude nations. If the persons who had an opportunity of obferving them, in their original state, had been more attentive

⁸ Herrera, dec. 6. lib. i. c. 2. lib. v. c. 56. Piedrahita, c. 5. p. 25, &c. Gomara Ilift, c. 72.

and more differning, we might have received information from them fufficient to guide us in this inquiry. If the transactions of people, unacquainted with the use of letters, were not involved in impenetrable obscurity, we might have derived some information from that fource. But as nothing fatisfactory can be gathered, either from the accounts of the Spaniards, or from their own traditions, we must have recourse to conjectures, in order to explain the irregular appearances in the political state of the people whom I have mentioned. As all those tribes which had lost their native liberty and independence were feated in the Torrid Zone, or in countries approaching to it, the climate may be supposed to have had some influence in forming their minds to that servitude, which feems to be the deftiny of man in those regions of the globe. But though the influence of climate, more powerful than that of any other natural cause, is not to be overlooked: that alone cannot be admitted as a folution of the point in question. The operations of men are so complex, that we must not attribute the form which they assume, to the force of a fingle principle or cause. Although despotisin be confined in America to the Torrid Zone, and to the warm regions bordering upon it, I have already observed that these countries contain various tribes, some of which possess an high degree of freedom, and others are altogether unacquainted with the restraints of government. The indolence and timidity peculiar to the inhabitants of the islands, rendered them so incapable of the sentiments or efforts necessary for maintaining independence, that there is no occasion to search for any other cause of their tame submission to the will of a superior. The subjection of the Natchez, and of the people of Bogota, seems to have been the Y y 2 confequence

consequence of a difference in their state from that of the other Americans. They were fettled nations, reliding constantly in one place. Hunting was not the chief occupation of the former, and the latter feem hardly to have trusted to it for any part of their sublistence. Both had made such progress in agriculture and arts, that the idea of property was introduced in fome degree in the one community, and fully established in the other. Among people in this state, avarice and ambition have acquired objects, and have begun to exert their power; views of interest allure the selfish; the defire of pre-eminence excites the enterprifing; dominion is courted by both; and passions unknown to man in his favage state prompt the interested and ambitious to encroach on the rights of their fellow-citizens. Motives, with which rude nations are equally unacquainted, induce the people to submit tamely to the usurped authority of their superiors. But even among nations in this state, the spirit of subjects could not have been rendered so obsequious, or the power of rulers fo unbounded, without the intervention of superstition. By its fatal influence, the human mind, in every stage of its progress, is depressed, and its native vigour and independence subdued. Whoever can acquire the direction of this formidable engine, is secure of dominion over his species. Unfortunately for the people whose institutions are the subject of inquiry. this power was in the hands of their chiefs. The caziques of the isles could put what responses they pleased into the mouths of their Cemis or gods; and it was by their interpolition, and in their name, that they imposed any tribute or burden on their people h. The great chief of the Natchez was the principal minister as well as the representative of the Sun, their deity.

h Herrera dec. 1. lib. iii. c. 3.

BOOK

The respect which the people of Bogota paid to their monarchs, was inspired by religion, and the heir apparent of the kingdom was educated in the innermost recess of their principal temple, under such austere discipline, and with such peculiar rites, as tended to fill his subjects with high sentiments concerning the fanctity of his character, and the dignity of his station '. Thus superstition, which, in the rudest period of society, is either altogether unknown, or wastes its force in childish unmeaning practices, had acquired such an ascendant over those people of America, who had made some little progress towards refinement, that it became the chief instrument of bending their minds to an untimely fervitude, and subjected them, in the beginning of their political career, to a despotism hardly less rigorous, than that which awaits nations in the last stage of their corruption and decline.

V. After examining the political inflitutions of the rude na- Therart of tions in America, the next object of attention is their art of war, or their provision for public security and defence. fmall tribes dispersed over America are not only independent and unconnected, but engaged in perpetual hostilities with one another k. Though strangers to the idea of separate property vested in any individual, the rudest of the American nations are well acquainted with the rights of each community to its own domains. This right they hold to be perfect and exclusive, entitling the possession to oppose the encroachment of neighbouring tribes. As it is of the utmost consequence to prevent them from destroying or disturbing the game in their hunting grounds, they guard this national property with a jealous attention. But

i Piedrahita, p. 27.

k Ribas Hist. de los triump. p. g.

as their territories are extensive, and the boundaries of them not exactly ascertained, innumerable subjects of dispute arise, which seldom terminate without bloodshed. Even in this simple and primitive state of society, interest is a source of discord, and often prompts savage tribes to take arms, in order to repel or punish such as encroach on the forests or plains, to which they trust for subsistence.

Their motives for engaging in war.

But interest is not either the most frequent or the most powerful motive of the incessant hostilities among rude nations. These must be imputed to the passion of revenge, which rages with fuch violence in the breast of savages, that eagerness to gratify it may be confidered as the diftinguishing characteristic of men, in their uncivilized state. Circumstances of powerful influence, both in the interior government of rude tribes, and in their external operations against foreign enemics, concur in cherishing and adding strength to a passion fatal to the general tranquillity. When the right of redressing his own wrongs is left in the hands of every individual, injuries are felt with exquisite sensibility, and vengeance exercised with unrelenting rancour. No time can obliterate the memory of an offence, and it is feldom that it can be expiated but by the blood of the offender. In carrying on their public wars, favage nations are influenced by the same ideas, and animated with the fame spirit, as in prosecuting private vengeance. In small communities, every man is touched with the injury or affront offered to the body of which he is a member, as if it were a personal attack upon his own honour or fafety. The defire of revenge is communicated from breast to breast, and soon kindles into rage. As feeble focieties can take the field only in small parties, each warrior is conscious of the importance of his own

arm,

From the spirit of vengeance.

arm, and feels that to it is committed a confiderable portion of BOOK the public vengeance. War, which between extensive kingdoms is carried on with little animofity, is profecuted by fmall tribes with all the rancour of a private quarrel. The refentment of nations is as implacable as that of individuals. It may Hence the febe diffembled or suppressed, but is never extinguished; and wars, often, when least expected or dreaded, it bursts out with redoubled fury 1. When polifhed nations have obtained the glory of victory, or have acquired an addition of territory, they may terminate a war with honour. But favages are not fatisfied until they extirpate the community, which is the object of their rage. They fight not to conquer, but to destroy. If they engage in hostilities, it is with a resolution never to see the face of the enemy in peace, but to profecute the quarrel with immortal enmity ". The defire of vengeance is the first, and almost the only principle, which a savage instils into the minds of his children." This grows up with him as he advances in life; and as his attention is directed to few objects, it acquires a degree of force unknown among men whose passions are disfipated and weakened by the variety of their occupations and pursuits. The desire of vengeance, which takes possession of the heart of favages, resembles the instinctive rage of an animal, rather than the passion of a man. It turns, with undiscerning fury, even against inanimate objects. If hurt accidentally by a stone, they often seize it in a transport of anger, and endeavour to wreak their vengeance upon it ". If ftruck

with an arrow in battle, they will tear it from the wound, break and bite it with their teeth, and dash it on the ground? With respect to their enemies, the rage of vengeance knows no bounds. When under the dominion of this passion, man becomes the most cruel of all animals. He neither pities, nor forgives, nor spares.

THE force of this passion is so well understood by the Americans themselves, that they always apply to it, in order to excite their people to take arms. If the elders of any tribe attempt to rouze their youth from sloth, if a chief wishes to allure a band of warriors to follow him in invading an enemy's country, the most persuasive topics of their martial eloquence are drawn from revenge. "The bones of our countrymen," say they, "lie uncovered; their bloody bed has not been washed clean. Their spirits cry against us; they must be appeased. Let us go and devour the people by whom they were slain. Sit no longer inactive upon your mats; lift the hatchet, console the spirits of the dead, and tell them that they shall be avenged "."

and their per-

Animated with fuch exhortations, the youth fnatch their arms in a transport of fury, raise the song of war, and burn with impatience to embrue their hands in the blood of their enemies. Private chiefs often assemble small parties, and invade a hostile tribe, without consulting the rulers of the community. A single warrior, prompted by caprice or revenge, will take the sield alone, and march several hundred miles, to surprise and cut off a straggling enemy. The exploits of a noted war-

rior, in such folitary excursions, often form the chief part of the history of an American campaign'; and their elders connive at fuch irregular fallies, as they tend to cherish a martial fpirit, and accustom their people to enterprise and danger'. But when a war is national, and undertaken by public authority, the deliberations are formal and flow. The elders affemble, they deliver their opinions in folemn speeches, they weigh with maturity the nature of the enterprise, and balance its beneficial or difadvantageous confequences with no inconfiderable portion of political discernment and sagacity. Their priests and foothfayers are confulted, and fometimes they ask the advice even of their women ". If the determination be for war, they prepare for it with much ceremony. A leader offers to conduct the expedition, and is accepted. But no man is constrained to follow him; the resolution of the community to commence hostilities imposes no obligation upon any member to take part in the war. Each individual is still master of his own conduct, and his engagement in the fervice is perfectly voluntary .

See NOTE LXIV. 1 Boffu, i. 140. Lery ap De Bry. 215. Hennepin Moeurs des Sauv. 41. Lafitau, ii. 169. " Charley, Hift, N. Fr. iii. 215. 268. Biet, 367. 380. * Charlev. Hift. N. Fr. 217, 218.

a long voyage upon their lakes and rivers. Their armies are not encumbered with baggage or military stores. Each warrior, besides his arms, carries a mat and a small bag of pounded maize, and with these is completely equipped for any service. While at a distance from the enemies frontier, they disperse through the woods, and support themselves with the game which they kill, or the fish which they catch. As they approach nearer to the territories of the nation, which they intend to attack, they collect their troops, and advance with greater caution. Even then they proceed wholly by stratagem and ambuscade. They place not their glory in attacking their enemies with open force. To furprise and destroy is the greatest merit of a commander, and the highest pride of his followers. War and hunting are their only occupations, and they conduct both with the same spirit and the same arts. They follow the track of their enemies through the forest. They endeavour to discover their haunts, they lurk in some thicket near to these, and with the patience of a sportsman lying in wait for game, will continue in their station day after day, until they can rush upon their prey when most secure, and least able to resist them. If they meet no straggling party of the enemy, they advance towards their villages, but with fuch folicitude to conceal their approach, that they often creep on their hands and feet through the woods, and paint their skins of the same colour with the withered leaves, in order to avoid detection. If so fortunate as to remain unobserved, they set on fire their huts in the dead of night, and massacre the inhabitants, as they fly naked and defenceless from the flames. If they hope to effect a retreat without being purfued, they carry off fome prisoners, whom

Y Charlev. Hist. N. Fr. iii. 237, 238. Hennip. Mœurs des Sauv. p. 59.

they referve for a more dreadful fate. But if, notwithstanding all their address and precautions, they find that their motions are discovered, that the enemy has taken the alarm, and is prepared to oppose them, they usually deem it most prudent to re-They regard it as extreme folly to meet an enemy who is on his guard, upon equal terms, or to give battle in an open field. The most distinguished success is a disgrace to a leader, if purchased with any considerable loss of his followers *; and they never boast of a victory if stained with the blood of their own countrymen. To fall in battle, instead of being reckoned an honourable death, is a misfortune which subjects the memory of a warrior to the imputation of rashness or imprudence b.

BOOK

THIS fystem of war was universal in America, and the small Not swing to uncivilized tribes, dispersed through all its different regions any detection courage. and climates, display more craft than boldness in carrying on their hostilities. Struck with this conduct, so opposite to the ideas and maxims of Europeans, feveral authors contend that it flows from a feeble and dastardly spirit peculiar to the Americans, which is incapable of any generous or manly exertion. But when we reflect that many of these tribes, on occasions which call for extraordinary efforts, not only defend themselves with obstinate resolution, but attack their enemies with the most daring courage, and that they possess fortitude of mind superior to the sense of danger or the fear of death, we must ascribe their habitual caution to some other cause than constitutional timidity d. The number of men in each tribe is

² See NOTE LXV. a Charlev. Hist. N. Fr. iii. 238, 307. Biet. 381. Lafitau Mœurs des Sauv. ii. 248. b Charlev. iii. 376. See NOTE Recherches Philof. fur les Americ. 1, 115. Voyage de March. iv. LXVI. d Lafitau Mœurs des Sauv. ii. 248, 249. Charlev. N. F. iii. 307. 410.

fo fmall, the difficulty of rearing new members, amidst the hardships and dangers of savage life, so great, that the life of a citizen is extremely precious, and the prefervation of it becomes a capital object in their policy. Had the point of honour been the fame among the feeble American tribes, as among the powerful nations of Europe, had they been taught, in contempt of danger and death, to court fame or victory, they must have been ruined by maxims, so ill adapted to their condition. But wherever their communities are more populous, so that they can act with confiderable force, and can fustain the loss of several of their members, without being fenfibly weakened, the military operations of the Americans more nearly refemble those of other nations. The Brafilians, as well as the tribes fituated upon the banks of the river De la Plata, often take the field in fuch numerous bodies, as deferve the name of armies. They defy their enemies to the combat, engage in regular battles, and maintain the conflict with that desperate ferocity, which is natural to men, who have no idea of war but that of exterminating their enemies, and who never give or take quarter. In the powerful empires of Mexico and Peru, great armies were affembled, frequent battles were fought, and the theory as well as practice of war were different from what took place in those petty focieties which assume the name of nations.

Incapable of order or difcipline. Bur though vigilance and attention are the qualities chiefly requifite, where the object of war is to deceive and to furprife; and though the Americans, when acting fingly, display an amazing degree of address in concealing their own motions, and discovering those of an enemy, yet it is remarkable

º Fabri Veriss. Descrip. Indiæ ap de Bry, vii. p. 42.

f See NOTE LXVII.

that, when they take the field in parties, they can feldom be brought to observe the precautions most effential to their own fecurity. Such is the difficulty of accustoming favages to fubordination, or to act in concert; fuch is their impatience under restraint, and such their caprice and presumption, that it is rarely they can be brought to conform themselves to the counsels and directions of their leaders. They never flation centinels around the place where they rest at night, and after marching fome hundred miles to furprise an enemy, are: often surprised themselves, and cut off, while sunk in as profound fleep as if they were not within reach of danger s.

IF notwithstanding this negligence and security, which oftenfrustrate their most artful schemes, they catch the enemy unprepared, they rush upon them with the utmost ferocity, and tearing off the scalps of all those who fall victims to their rage h, they carry home those strange trophies in triumph. they preserve as monuments, not only of their own prowess, but of the vengeance which their arm has inflicted upon the people who were objects of public refentment. They are still more folicitous to feize prisoners. During their retreat, if they hope to affect it unmolefted, these are commonly exempt from any infult, and treated with some degree of humanity, though guarded with the most strict attention.

But after this temporary suspension, their rage rekindles with Treatment of new fury. As foon as they approach their own frontier, fome of prifoners. their number are dispatched to inform their countrymen with respect to the success of the expedition. Then the prisoners

B Charlev. N. Fr. iii. 236, 237. Lettr. Edif. 17. 308. 20. 130. Lafit. Mours, ii. 247. Lahontan, ii. 176. h See NOTE LXVIII.

Lafitau Mœurs, ii. 256 ..

воок

begin to feel the wretchedness of their condition. The women of the village, together with the youth who have not attained to the age of bearing arms, affemble, and forming themselves into two lines, through which the prisoners must pass, beat and bruise them with sticks or stones in a cruel manner k. After this first gratification of their rage against their enemies, follow lamentations for the loss of such of their own countrymen as have fallen in the fervice, accompanied with words and actions which feem to express the utmost anguish of grief. But, in a moment, upon a fignal given, their tears ceafe, they pass, with a sudden and unaccountable transition, from the depths of forrow to transports of joy, and begin to celebrate their victory with all the wild exultation of a barbarous triumph. The fate of the prisoners remains still undecided. The old men deliberate concerning it. Some are destined to be tortured to death, in order to fatiate the revenge of the conquerors; fome to replace the members which the community has lost in that or former They who are referved for this milder fate, are led to the huts of those whose friends have been killed. The women meet them at the door, and if they receive them, their fufferings are at an end. They are adopted into the family, and, according to their phrase, are seated upon the mat of the deceased. They assume his name, they hold the same rank, are treated thenceforward with all the tenderness due to a father, a brother, a husband, or a friend. But if, either from caprice, or an unrelenting defire of revenge, the women of any family refuse to accept of the prisoner who is offered to them, his doom is fixed. No power can then fave him form torture and death,

Their indifference concerning their fate.

WHILE their lot is in suspense, the prisoners themselves appear altogether unconcerned about what may befal them. They

Lahontan, ii. 184. 1 Charley, Hift. N. Fr. i i. 241. Lafttau Mœurs, ii. 264. talk, 3

BOOK

talk, they eat, they fleep, as if they were perfectly at eafe, and no danger impending. When the fatal fentence is intimated to them, they receive it with an unaltered countenance, raife their death-fong, and prepare to fuffer like men. Their conquerors and fortitude affemble as to a folemn festival, resolved to put their courage to the utmost proof. A scene ensues, the bare description of which is enough to chill the heart with horror, wherever men have been accustomed, by milder institutions, to respect their species, and to melt into tenderness at the sight of human sufferings. The prisoners are tied naked to a stake, but so as to be at liberty to move around it. All who are present, men, women, and children, rush upon them like furies. Every species of torture is applied that the rancour of revenge can invent. Some burn their limbs with redhot irons, fome mangle their bodies with knives, others tear their flesh from their bones, pluck out their nails by the roots, and rend and twist their sinews. They vie with one another in refinements of torture. Nothing fets bounds to their rage, but the dread of abridging the duration of their vengeance by hastening the death of the sufferers; and such is their cruel ingenuity in tormenting, that by avoiding industriously to hurt any vital part, they often prolong this scene of anguish for feveral days. In spite of all that they suffer, the victims continue to chant their death-fong with a firm voice, they boaft of their own exploits, they infult their tormentors for their want of skill in avenging their friends and relations, they warn them of the vengeance which awaits them, on account of their death, and excite their ferocity by the most provoking reproaches and threats To display undaunted fortitude in such dreadful fituations is the noblest triumph of a warrior. To avoid the trial by a voluntary death, or to shrink under it, is deemed

BOOK

deemed infamous and cowardly. If any one betray fymptoms of timidity, they often dispatch him at once with contempt, as unworthy of being treated like a man . Animated with those ideas, they endure, without a groan, what it feems almost impossible that human nature should sustain. They appear to be not only insensible of pain, but to court it. " Forbear, said an aged chief of the Iroquois, when his infults had provoked one of his tormentors to wound him with a knife, forbear these stabs of your knife, and rather let me die by fire, that those dogs, your allies, from beyond the fea, may learn by my example to fuffer like men "." This magnanimity, of which there are frequent instances among the American warriors, instead of exciting admiration, or calling forth sympathy, exasperates the fierce spirits of their torturers to fresh acts of cruelty . Weary at length of contending with men, whose constancy of mind they cannot vanquish, some chief in a rage puts a period to their fufferings, by dispatching them with his dagger or club P.

Sometimes eat their prifeners. This barbarous fcene is often fucceeded by one no lefs fhocking. As it is impossible to appeale the fell spirit of revenge which rages in the heart of a savage, this frequently prompts the Americans to devour those unhappy persons, who have been the victims of their cruelty. In the ancient world, tradition has preserved the memory of barbarous nations of cannibals, who fed on human flesh. But in every part of the New World, there were people to whom this custom was fa-

miliar. It prevailed in the fouthern continent, in several of the islands', and in various districts of North-America'. Even in those parts, where circumstances, with which we are unacquainted, had in a great measure abolished this practice, it feems to have been so well known, that it is incorporated into the idiom of their language. Among the Iroquois, the phrase by which they express their resolution of making war against an enemy is, "Let us go and eat that nation." If they folicit the aid of a neighbouring tribe, they invite it to " eat broth made of the flesh of their enemies "." Nor, was the practice peculiar to rude unpolifhed tribes, the principle from which it took rife, is fo deeply rooted in the minds of the Americans, that it subsisted in Mexico, one of the civilized empires in the New World, and relics of it may be discovered among the more mild inhabitants of Peru. It was not scarcity of food, as fome authors imagine, and the importunate cravings of hunger, that forced the Americans to those horrid repasts on their fellow-creatures. Human flesh was never used as common food in any country, and the various relations concerning people, who reckoned it among the stated means of sublistence, slow from the credulity and mistakes of travellers. The rancour of revenge first prompted men to this barbarous action". The fiercest tribes devoured none but prisoners taken in war, or fuch as they regarded as enemies *. Women and children who

BOOK

were not the objects of enmity, if not cut off in the fury of their first inroad into an hostile country, seldom suffered by the deliberate effects of their revenge.

THE people of South-America gratify their revenge in a manner fomewhat different, but with no less unrelenting ran-Their prisoners, after meeting at their first entrance, with the fame rough reception as among the North-Americans 2, are not only exempt from injury, but treated with the greatest kindness. They are feasted and caressed, and some beautiful young women are appointed to attend and folace them. It is not easy to account for this part of their conduct, unless we impute it to a refinement in cruelty. For, while they feem studious to attach their prisoners to life, by supplying them with every enjoyment that can render it agreeable, their doom is irrevocably fixed. On a day appointed, the victorious tribe affembles, the captive is brought forth with great folemnity, he views the preparations for the facrifice with as much indifference, as if he himself were not the victim, and meeting his fate with undaunted firmness, is dispatched with a single blow. The moment he falls, the women seize the body, and dress it for the feast. They besmear their children with the blood, in order to kindle in their bosoms a hatred of their enemies, which is never extinguished, and all join in feeding upon the flesh with amazing greediness and exultation. To devour the body of a flaughte ed enemy, they deem the most complete and exquifite gratification of revenge. Wherever this practice prevails,

captives never escape death, but they are not tortured with the same cruelty as among the tribes which are less accustomed to such horrid feasts.

BOOK IV.

As the constancy of every American warrior may be put to such. fevere proof, the great object of education and discipline in the New World is to form the mind to fustain it. When nations carry. on war with open force, defy their enemies to the combat, and vanguish them by the superiority of their skill or courage, soldiers are trained to be active, vigorous, and enterprising. But in America, where the genius and maxims of war are extremely different, passive fortitude is the quality in highest estimation. Accordingly, it is early the study of the Americans to acquire a talent, which will enable them to behave like men, when their resolution shall be put to the proof. As the youth of other nations exercise themselves in feats of activity and force. those of America vie with one another in exhibitions of their patience under fufferings. They harden their nerves by those voluntary trials, and gradually accustom themselves to endure the sharpest pain, without complaining. A boy and girl will bind their naked arms together, and place a burning coal between them, in order to try who first discovers such impatience as to shake it off . All the trials, customary in America, when a youth is admitted into the class of warriors, or when a warrior is promoted to the dignity of captain or chief, are accommodated to this idea of manliness. They are not displays of valour, but of patience; they are not exhibitions of their ability to offend, but of their capacity to fuffer. Among the tribes on the banks of the Orinoco, if a warrior aspires to the rank of

See NOTE LXXI.

Charlev. Hift. N. Fr. iii. 307.

captain, his probation begins with a long fast, more rigid than any ever observed by the most abstenious hermit. At the close of this, the chiefs affemble, each gives him three lashes with a large whip, applied so vigorously, that his body is almost flayed, and if he betrays the least symptom of impatience or even sensibility, he is disgraced for ever, and rejected as unworthy of the honour. After some interval, the constancy of the candidate is proved by a more excruciating trial. He is laid in a hammor with his hands bound fast, an innumerable multitude of venomous ants, whose bite occasions exquisite pain, and produces a violent inflammation, are thrown upon The judges of his merit stand around the hammoe, and, while these cruel insects fasten upon the most sensible parts of his body, a figh, a groan, an involuntary motion expressive of what he fuffers, would exclude him from the dignity which he is ambitious to obtain. Even after this evidence of his fortitude, it is not deemed to be completely afcertained, but must fland another test more dreadful than any he has hitherto undergone. He is again fuspended in his hammoc, and covered with leaves of the palmetto. A fire of stinking herbs is kindled underneath, so as he may feel its heat, and be involved in smoke. Though scorched and almost suffocated, he must continue to endure with the same patient insensibility. Many perish in this rude essay of their firmness and courage, but fuch as go through it with applause, receive the ensigns of their new dignity with much folemnity, and are ever after regarded as leaders of approved resolution, whose behaviour, in the most trying fituations, will do honour to their country 4. In North-

d Gumilla, ii. 286, &c. Biet, 376, &c.

America, the previous trial of a warrior is neither so formal, nor so severe. Though even there, before a youth is permitted to bear arms, his patience and fortitude are proved by blows, by fire, and by insults, more intolerable to a haughty spirit than both.

BOOK IV.

THE amazing steadiness, with which the Americans endure the most exquisite torments, has induced some authors to suppose that, from the peculiar feebleness of their frame, their fensibility is not so acute as that of other people; as women, and persons of a relaxed habit, are observed to be less affected with pain than robust men, whose nerves are more firmly braced. But the constitution of the Americans is not so different, in its texture, from that of the rest of the human species, as to account for this diversity in their behaviour. It slows from a principle of honour, instilled early and cultivated with such care, as to inspire man in his rudest state with an heroic magnanimity, to which philosophy hath endeavoured, in vain, to form him, when more highly improved and polished. This invincible constancy he has been taught to consider as the chief distinction of man, and the highest attainment of a warrior. The ideas which influence his conduct, and the passions which take possession of his heart, are few. They operate of course with more decifive effect, than when the mind is crowded with a multiplicity of objects, or distracted by the variety of its purfuits; and when every motive that operates with force on the mind of a savage, prompts them to suffer with dignity, they will bear what might feem to be impossible for human patience

to sustain. But wherever the fortitude of the Americans is not roused to exertion by their ideas of honour, their feelings of pain are the same with those of the rest of mankind. Nor is that patience under sufferings for which the Americans have been so justly celebrated an universal attainment. The constancy of many of the victims is overcome by the agonies of torture. Their weakness and lamentations complete the triumph of their enemies, and restect disgrace upon their country.

Wasted by their perpetual wars.

THE perpetual hostilities carried on among the American tribes are productive of very fatal effects. As their imperfect industry does not supply them with any superfluous store of provisions, even in seasons of tranquillity, when the irruption of an enemy desolates their cultivated lands, or disturbs them in their hunting excursions, such a calamity reduces a community, naturally unprovident and destitute of resources, to extreme want. All the people of the district that is invaded, are frequently forced to take refuge in woods or mountains, which can afford them no sublistence, and where many of them perish. Notwithstanding their excessive caution in conducting their military operations, and the folicitude of every leader to preferve the lives of his followers, as they feldom enjoy any interval of peace, the loss of men among the Americans is considerable in proportion to the degree of population. Thus famine and the fword combine in thinning their numbers. All their tribes are feeble, and many which were once powerful have gradually wasted away and at last disappeared. Nothing now

remains

f See NOTE LXXII.

Charlev. Hift. N. Fr. iii. 248. 385. De la Potherie, iii. 48.

remains of feveral nations, which were once confiderable, but the name h.

BOOK

SENSIBLE of this continual decay, there are tribes which Recruit their endeavour to recruit their national force when exhausted, by adopting prisoners taken in war, and by this expedient prevent their total extinction. The practice, however, is not univerfally received. Refentment operates more powerfully among favages, than considerations of policy. Far the greater part of their captives was anciently facrificed to their vengeance, and it is only fince their numbers began to decline fast, that they have adopted milder maxims. But fuch as they do naturalize renounce for ever their native tribe, and assume the manners as well as passions of the people by whom they are adopted ', so entirely, that they often join them in their expeditions against their own countrymen. Such a fudden transition, and so repugnant to one of the most powerful instincts implanted by nature, would appear strange among any people; but, among the members of fmall communities, where national enmity is violent and deeprooted, it is more unaccountable. It feems, however, to refult naturally from the principles upon which war is carried on in America. When nations aim at exterminating their enemies, no exchange of prisoners can ever take place. From the moment one is made a prisoner, his country and his friends consider him as dead ". He has incurred indelible difgrace by fuffering himfelf to be surprised or to be taken by an enemy; and were he toreturn home, after fuch a stain upon his honour, his nearest re-

adopting prifoners.

lations.

h Charley, Hist. N. Fr. iii, 202, 203, 429. Gumilla, ii. 227; &c.

^{*} See NOTE LXXIII. 1 Charlev. Hist. N. Fr. iii. 245, &c. Last. ii. 308.

lations would not receive or even acknowledge that they knew him. Some tribes were still more rigid, and if a prifoner returned, the infamy which he had brought on his country was expiated, by putting him instantly to death. As the unfortunate captive is thus an outcast from his own country, and the ties which bound him to it are irreparably broken, he feels less reluctance in forming a new connection with people, who, as an evidence of their friendly sentiments, not only deliver him from a cruel death, but offer to admit him to all the rights of a fellow-citizen. The perfect similarity of manners among savage nations facilitates and completes the union, and induces a captive to transfer not only his allegiance, but his affection, to the community into the bosom of which he is received.

Their inferiority in war to polished nasious. But though war be the chief occupation of men in their rude state, and to excel in it, their highest distinction and pride, their inferiority is always manifest when they engage in competition with polished nations. Destitute of that foresight which discerns and provides for remote events, strangers to the union and mutual confidence requisite in forming any extensive plan of operations, and incapable of the subordination no less requisite in carrying into execution such plans, savage nations may astonish a disciplined enemy by their valour, but seldom prove formidable to him by their conduct, and whenever the contest is of long continuance, must yield to superior art. The empires of Peru and Mexico, though their progress in civilifation, when measured by the European or Asiatic standards,

¹ Lahont. ii. 185, 186.

[.] See NOTE LXXIV.

was inconfiderable, acquired fuch an afcendency over the rude tribes around them, that they subjected most of them with great facility to their power. When the people of Europe over-ran the various provinces of America, this superiority was still more conspicuous. Neither the courage nor number of the natives could repel a handful of invaders. The alienation and enmity, prevalent among barbarians, prevented them from uniting in any common scheme of defence, and while each tribe fought separately, all were subdued.

BOOK

VI. THE arts of rude nations unacquainted with the use of Their arts. metals, hardly merit any attention on their own account, but are worthy of some notice, as far as they serve to display the genius and manners of a people. The first distress a savage Dress and ormust feel, will arise from the manner in which his body is affected, by the heat, or cold, or moisture, of the climate under which he lives; and his first care will be, to provide some covering for his own defence. In the warmer and more mild climates of America, none of the rude tribes were clothed. To most of them Nature had not even suggested any idea of impropriety in being altogether uncovered d. As under a mild climate there was little need of any defence from the injuries of the air, and their extreme indolence shunned every species of labour to which it was not urged by absolute necesfity, all the inhabitants of the isles, and a considerable part of the people on the continent, remained in this state of naked fimplicity. Others were fatisfied with fome flight covering, fuch as decency required. But though naked, they were not unadorned. They dreffed their hair in many different forms.

d Lery Navigat. ap. De Bry, iii. p. 164. Lise of Columbus, c. 24. Venegas Hist. of Californ, p. 70.

They fastened bits of gold, or shells, or shining stones, in their ears, their nofes, and cheeks. They stained their skins with a great variety of figures; and they spent much time, and submitted to great pain, in ornamenting their, persons in this fantastic manner. Vanity, however, which finds endless occupation for its ingenuity and invention, in nations where dress has become a complex and intricate art, is circumscribed within so narrow bounds, and confined to fo few articles among naked favages, that they are not fatisfied with those simple decorations, and have a wonderful propenfity to alter the natural form of their bodies. This practice was univerfal among the rudest of the American tribes. Their operations for that purpose begin as soon as an infant is born. By compressing the bones of the skull, while still soft and flexible, some flatten the crown of their heads; some squeeze them into the shape of a cone; others mould them as much as possible into a square figure'; and they often endanger the lives of their posterity by their violent and abfurd efforts to derange the plan of Nature, or to improve upon her defigns. But in all their attempts either to adorn or to new-model their persons, it seems to have been less the object of the Americans to please, or to appear beautiful, than to give an air of dignity and terror to their aspect. Their attention to dress had more reference to war than to gallantry. The difference in rank and estimation between the two fexes was fo great, as extinguished, in some measure, their folicitude to appear mutually amiable. man deemed it beneath him to adorn his person, for the sake of one on whom he was accustomed to look down as a slave.

Lery ap. De Bry, iii. 165. Lettr. Edifiantes. 20. 223.

It was when the warrior had in view to enter the council of his nation, or take the field against its enemies, that he assumed his choicest ornaments, and decked his person with the nicest care '. The decorations of the women were few and simple; whatever was precious or splendid was reserved for the men. In feveral tribes the women were obliged to fpend a confiderable part of their time every day in adorning and painting their husbands, and could bestow little attention upon ornamenting themselves. Among a race of men so haughty as to despise, or fo cold as to neglect them, the women naturally became careless and slovenly, and the love of finery and shew, which has been deemed their favourite passion, was confined chiefly to the other fex. To deck his person was the distinction of a warrior, as well as one of his most serious occupations '. In one part of their dress, which, at first fight, appears the most fingular and capricious, the Americans have discovered confiderable fagacity in providing against the chief inconveniencies of their climate, which is often fultry and moist to excefs. All the different tribes, which remain unclothed, are accustomed to anoint and rub their bodies with the grease of animals, with viscous gums, and with oils of different kinds. By this they check that profuse perspiration, which, in the torrid zone, wastes the vigour of the frame, and abridges the period of human life. By this too, they provide a defence against the extreme moisture during the rainy season k. They likewise, at certain feafons, temper paint of different colours with those unctuous fubstances, and bedaub themselves plentifully with that composi-Sheathed with this impenetrable varnish, their skins are

B O O K

not only protected from the penetrating heat of the fun, but, as all the innumerable tribes of infects have an antinathy to the smell or taste of that mixture, they are delivered from their teazing persecution, which, amidst forests and marshes, especially in the warmer regions, must have been altogether into-lerable in their state of nakedness.

Habitations.

THE next object to dress that will engage the attention of a savage, is to prepare some habitation that may afford him shelter by day, and a retreat at night. Whatever is connected with his ideas of personal dignity, whatever bears any reference to his military character, the favage warrior deems an object of importance. Whatever relates only to peaceable and inactive life, he views with perfect indifference. Hence, though finically attentive to dress, he is little folicitous about the elegance or disposition of his habitation. Savage nations, far from that state of improvement, in which the mode of living is considered as a mark of diffinction, and unacquainted with those wants, which require a variety of accommodation, regulate the construction of their houses according to their limited ideas of necessity. Some of the American tribes were so extremely rude, and had advanced so little beyond the primeval simplicity of nature, that they had no houses at all. During the day, they take shelter from the scorching rays of the sun under thick trees; at night they form a shed with their branches and leaves". In the rainy season they retire into covers, formed by the hand of Nature, or hollowed out by their own industry". Others, who have no fixed abode, and roam through the forests in quest of game, sojourn

in temporary huts, which they erect with little labour, and abandon without any concern. The inhabitants of those vast plains, which are deluged by the overflowing of the rivers during the heavy rains that fall periodically between the tropics, raife houses upon piles fastened in the ground, or place them among the boughs of trees, and are thus fafe amidst that wide extended inundation which furrounds them°. Such were the first essays of the rudest Americans towards providing themfelves with habitations. But even among tribes which were more improved, and whose residence was become altogether fixed, the structure of their houses was extremely mean and fimple. They were wretched huts, fometimes of an oblong and fometimes of a circular form; intended merely for shelter, with no view to elegance, and little attention to conveniency. The doors were so low, that it was necessary to bend or to creep on the hands and feet in order to enter them. They were without windows, and had a large hole in the middle of the roof, to convey out the smoke. To follow travellers in other minute circumstances of their description, is not only beneath the dignity of history, but would be foreign to the object of my researches. One circumstance merits attention, as it is fingular, and illustrates the character of the people. Some of their houses were so large as to contain accommodation for fourscore or a hundred persons. These were built for the reception of different families, which dwelt together under the same roof?, and often around a common fire, without separate apartments, or any kind of screen or partition between the spaces which they respectively occupied. As soon as men have acquired distinct ideas of property; or when they are so much attached to their females, as to watch them with care and jealousy; fami-

º Gumilla, i. 225. Herrera, dec. 1. lib. ix. c. 6. Oviedo Sommar, p. 53, C.

[▶] See NOTE /XXVIII.

lies of course divide and settle in separate houses, where they can fecure and guard whatever they wish to preserve. This fingular mode of habitation may therefore be confidered not only as the effect of that community of goods which subsisted among the feveral people in America, but as a proof of inattention and indifference towards their women. If they had not been accustomed to perfect equality, such an arrangement could not have taken place. If their fensibility had been apt to have taken alarm, they would not have trusted the virtue of their women amidst the temptations and opportunities of such a promiscuous intercourse. At the same time, the perpetual concord, which reigns in habitations where fo many families are crowded together, is furprising, and affords a striking evidence that they must be people of either a very gentle, or of a very phlegmatic temper, who, in fuch a fituation, are unacquainted with animofity, brawling, and discord 4.

Their arms.

AFTER making some provision for his dress and habitation, a savage will perceive the necessity of preparing proper arms with which to affault or repel an enemy. This, accordingly, has early exercised the ingenuity and invention of all rude nations. The first offensive weapons were doubtless such as chance presented, and the first efforts of art to improve upon these, were extremely aukward and simple. Clubs made of some heavy wood, stakes hardened in the fire, lances whose heads were armed with slint or the bones of some animal, are weapons known to the rudest nations. All these, however, were of use only in close encoun-

ВООК

But men wished to annoy their enemies while at a distance, and the bow and arrow is the most early invention for this purpose. This weapon is in the hands of people, whose advances in improvement are extremely inconfiderable, and is familiar to the inhabitants of every quarter of the globe. It is remarkable, however, that some tribes in America were so destitute of art and ingenuity, that they had not attained to the discovery of this simple invention, and seem to have been unacquainted with the use of any missive weapon. The sling, though in its conftruction not more complex than the bow, and among many nations of equal antiquity, was little known to the people of North America or the islands, but appears to have been used by a few tribes in the southern continent. The people in fome provinces of Chili, and those of Patagonia, towards the fouthern extremity of America, use a weapon peculiar to themselves. They fasten stones about the size of a fift to each end of a leather thong of eight feet in length, and fwinging these round their heads, throw them with such dexterity that they feldom miss the object at which they aim '.

Among people who had hard! any occupation but war or Their domefhunting, the chief exertions of their invention', as well as in- tic utenfils. dustry, were naturally directed towards these objects. With respect to every thing else, their wants and desires were so limited, that their invention was not upon the stretch. As their food and habitations were perfectly simple, their domestic utenfils were few and rude. Some of the fouthern tribes had difcovered the art of forming vessels of earthen ware, and baking

BOOK IV. Dr. fling their food.

Construction of their ca-

them in the fun, so as they could endure the fire. In North America, they hollowed a piece of hard wood into the form of a kettle, and filling it with water, brought it to boil by throwing red-hot stones into it'. These vessels they used in preparing part of their provisions; and this may be considered as a step towards refinement and luxury, for men in their rudest state were not acquainted with any method of dreffing their victuals, but by roasting them on the fire; and among several tribes in America, this is the only species of cookery yet known". But the master-piece of art, among the savages of America, is the construction of their canoes. An Eskimaux, shut up in his boat of whale-bone, covered with the skins of seals, can brave that stormy ocean, on which the barrenness of his country compels him to depend for the chief part of his subsistence. The people of Canada venture upon their rivers and lakes, in boats made of the bark of trees, and so light that two men can carry them, wherever shallows or cataracts obstruct the navigation. In these frail vessels they undertake and accomplish long voyages? The inhabitants of the isles and of the southern continent form their canoes by hollowing the trunk of a large tree, with infinite labour, and though in appearance extremely aukward and unwieldy, they paddle and steer them with such dexterity, that Europeans, well acquainted with all the improvements in the science of navigation, have been astonished at the rapidity of their motion, and the quickness of their evolutions. Their pirogues, or war-boats, are so large as to carry forty or fifty men; their canoes employed in fishing and in short voyages

Charlev, Hift, of N. Fr. iii. 332.

are less capacious. T' form as well as materials of all these various species of vessels is well adapted to the service for which they are destined; and the more minutely they are examined, the mechanism of their structure, as well as neatness of their fabric, will appear the more admirable.

воок

But, in every attempt towards industry among the Ame- Listlessness ricans, one striking quality in their character is conspicuous. with which they apply to They apply to work without ardour, carry it on with little labour. activity, and, like children, are eafily diverted from it. Even in operations which feem the most interesting, and where the most powerful motives urge them to vigorous exertions, they labour with a languid liftlefinefs. Their work advances under their hand with such slowness, that an eye-witness compares it to the imperceptible progress of vegetation '. They will spend so many years in forming a canoe, that it often begins to rot with age before they finish it. They will suffer one part of a roof to decay and perish, before they complete the other d. The flightest manual operation consumes a vast length of time, and what in polished nations would hardly be an effort of industry, is among favages an arduous undertaking. This flowness of the Americans in executing works of every kind may be imputed to various causes. Among favages, who do not depend for subsistence upon the efforts of regular industry, time is of fo little importance, that they fet no value upon it; and provided they can finish a design, they never regard how long they are employed about it. The tools which they employ are fo aukward and defective, that every work in which they engage must necessarily be tedious. The hand of the most in-

dustrious and skilful artist, were it furnished with no better instrument than a stone hatchet, a shell, or the bone of some animal, could hardly perfect the most simple work. It is by length of labour, that he must endeavour to supply his defect of power. But, above all, the cold phlegmatic temper peculiar to the Americans renders their operations languid. It is almost impossible to rouze them from that habitual indolence in which they are funk; and unless when engaged in war or hunting, they feem incapable of exerting any vigorous effort. Their ardour of application is not so great as to call forth that inventive spirit which suggests expedients for facilitating and abridging labour. They will return to a task day after day, but all their methods of executing it are tedious and operofe '. Even fince the Europeans have communicated to them the knowledge of their instruments, and taught them to imitate their arts, the peculiar genius of the Americans is conspicuous in all their attempts. They may be patient and assiduous in labour, they can copy with a fervile and minute accuracy, but discover little invention, and no talents for dispatch. In spite of instruction and example, the spirit of the race predominates; their motions are naturally tardy, and it is vain to urge them to quicken their pace. Among the Spaniards in America, the work of an Indian is a phrase by which they describe any thing, in the execution of which an immense time has been employed. and much labour wasted f.

Their religion.

VII. No circumstance respecting rude nations has been the object of greater curiofity than their religious tenets and rites; and none, perhaps, has been so imperfectly understood, or re-

Voyage de Ulloz, i. 335. Lettr. Edif. &c. . See NOTE LXXXIII. 15. 348. presented

Peculiar difficulties in this inquiry.

presented with so little fidelity. Priests and missionaries are the persons who have had the best opportunities of carrying on this inquiry, among the most uncivilized of the American tribes. Their minds, engrossed by the doctrines of their own religion, and habituated to its institutions, are apt to discover something that resembles those objects of their veneration, in the opinions and rites of every people. Whatever they contemplate, they view through one medium, and draw and accommodate it to their own fystem. They study to reconcile the institutions, which fall under their observation, to their own creed, not to explain them according to the rude notions of the people themselves. They ascribe to them ideas which they are incapable of forming, and suppose them to be acquainted with principles and facts, which it is impossible that they should know. Hence, even among the most barbarous nations in America, some missionaries have been induced to believe, that they had discovered traces, no less distinct than amazing, of their acquaintance with the fublime mysteries and peculiar inflitutions of Christianity. From their own interpretation of certain expressions and ceremonies, they concluded that these people had some knowledge of the doctrine of the Trinity, of the incarnation of the Son of God, of his expiatory facrifice, of the virtue of the cross, and of the efficacy of the sacraments. In fuch unintelligent and credulous guides as thefe, we can place little confidence.

But, even when we make our choice of conductors with the greatest care, we must not follow them with implicit faith. An inquiry into the religious notions of rude nations is in-

BOOK

volved in peculiar intricacies, and we must often pause in order to separate the facts which our informers relate, from the reafonings with which they are accompanied, or the theories which they build upon them. Several pious writers, more attentive to the importance of the subject than to the condition of the people whose sentiments they were endeavouring to discover, have bestowed much unprofitable labour in researches of this nature h.

Confined to two articles.

THERE are two fundamental doctrines, upon which the whole fystem of religion, as far as it can be discovered by the light of nature, is established. The one respects the being of a God, the other the immortality of the foul. To discover the ideas of the uncultivated nations under our review with regard to these important points, is not only an object of curiosity, but may afford instruction. To these two articles I shall confine my refearches, leaving subordinate opinions, and the detail of The being of local fuperstitions, to more minute inquirers. Whoever has had any opportunity of examining into the religious opinions of persons in the inferior ranks of life, even in the most enlightened and civilized nations, will find that their system of belief is derived from instruction, not discovered by inquiry. That numerous part of the human species whose lot is labour. whose principal and almost sole occupation is to secure subsistence, views the arrangement and operations of nature with little reflection, and has neither leifure nor capacity for entering into that path of refined and intricate speculation which conducts to the knowledge of the principles of natural religion. In the early and most rude periods of savage life, such disquisitions are altogether unknown. When the intellectual powers are just beginning to unfold, and their first feeble exertions are directed

God.

* See NOTE LXXXIV.

towards

towards a few objects of primary necessity and use; when the faculties of the mind are so limited, as not to have formed abstract or general ideas; when language is so barren, as to be destitute of names to distinguish any thing that is not perceived by some of the senses; it is preposterous to expect that man should be capable of tracing with accuracy the relation between cause and effect; or to suppose that he should rise from the contemplation of the one to the knowledge of the other, and form just conceptions of a Deity, as the Creator and Governor of the universe. The idea of creation is so familiar, wherever the mind is enlarged by science, and illuminated with revelation, that we feldom reflect how profound and abstrufe this idea is, or confider what progress man must have made in observation and refearch, before he could arrive at any knowledge of this elementary principle in religion. Accordingly, feveral tribes have been discovered in America, which have no idea whatever of a Supreme Being, and no rites of religious worship. Inattentive to that magnificent spectacle of beauty and order presented to their view, unaccustomed to reflect either upon what they themselves are, or to inquire who is the author of their existence, men, in their savage state, pass their days, like the animals around them, without knowledge or veneration of any fuperior power. They have not in their languages any name for the Deity, nor have the most accurate observers been able to discover any practice or inflitution which seemed to imply that they recognized his authority, or were folicitous to obtain his favour 1. It is only among men in the most uncultivated

i Biet, 539. Lery ap De Bry, iii. 221. Nieuhoff, Church. Coll. ii. 132. Lettr. Edif. 2. 177. Id. 12. 13. Venegas, i. 87. Lozano Descript. del Gran Chaco, 59. Fernand. Mission. de Chiquit. 39. state of nature, and while their intellectual faculties are so feeble and limited as hardly to elevate them above the irrational creation, that we discover this total insensibility to the impressions of any invisible power. But the human mind, formed for religion, foon opens to the reception of ideas, which are deflined, when corrected and refined, to be the great fource of confolation amidst the calamities of life. Among some of the American tribes, still in the infancy of improvement, we discern apprehensions of some invisible and powerful beings. These apprehensions are originally indistinct and perplexed, and seem to be fuggested rather by the dread of impending evils, than to flow from gratitude for bleffings received. While Nature holds on her course with uniform and undisturbed regularity, men enjoy the benefits refulting from it, without inquiring concerning its cause. But every deviation from this regular course rouzes and astonishes them. When they behold events to which they are not accustomed, they search for the reasons of them with eager curiofity. Their understanding is unable to penetrate into these; but imagination, a more forward and ardent faculty of the mind, decides without hesitation. ascribes the extraordinary occurrences in nature to the influence of invisible beings, and supposes that the thunder, the hurricane, and the earthquake, are effects of their interpolition. Some fuch confused notion of spiritual or invisible power, fuperintending over those natural calamities which frequently desolate the earth, and terrify its inhabitants, may be traced among many rude nations k. But befides this, the difafters and dangers of favage life are fo many, and men often find themselves in situations so formidable, that the mind, sensible of its own weakness, has no resource but in the guidance and

protection of wisdom and power superior to what is human. Dejected with calamities which oppress him, and exposed to dangers which he cannot repel, the favage no longer relies upon himself; he feels his own impotence, and sees no prospect of being extricated, but by the interpolition of some invisible arm. Hence, in all unenlightened nations, the first rites or practices which bear any resemblance to acts of religion, have it for their object to avert evils which men suffer or dread. The Manitous or Okkis of the North Americans were amulets or charms, which they imagined to be of such virtue, as to preserve the persons who reposed confidence in them from every disastrous event, or they were considered as tutelary spirits. whose aid they might implore in circumstances of distress '. The Cemis of the islanders were reputed by them the authors of every calamity that afflicts the human race; they were represented under the most frightful forms, and religious homage was paid to them with no other view than to appeafe these furious deities. Even among those tribes whose religious system was more enlarged, and who had formed some conception of benevolent beings, delighted with conferring benefits, as well as of malicious powers prone to inflict evil; fuperstition still appears as the offspring of fear, and all its efforts were employed to avert calamities. They were persuaded that their good deities, prompted by the beneficence of their nature, would bestow every blessing in their power, without folicitation or acknowledgment; and their only anxiety was to soothe and deprecate the wrath of the powers whom they regarded as the enemies of mankind ".

1ib. iii. c. 1. p. 111. P. Martyr, decad. p. 102, &c. Tertre, ii. 365. Borde, p. 14. State of Virginia, by a Native, book iii. p. 32, 33. Dumont, i. 165. Bancroft Nat. Hist. of Guiana, 309.

SUCH

SUCH were the imperfect conceptions of the greater part of the Americans with respect to the interpositions of invisible agents, and such, almost universally, was the mean and illiberal object of their superstitions. Were we to trace back the ideas of other nations to that rude state in which history first presents them to our view, we should discover a surprising resemblance in their tenets and practices; and should be convinced, that, in similar circumstances, the faculties of the human mind hold nearly the same course in their progress, and arrive at almost the same conclusions. The impressions of sear are conspicuous in all the systems of superstition formed in this situation. And the most exalted notions of men rise no higher than to a perplexed apprehension of certain beings, whose power, though supernatural, is limited as well as partial.

Remarkable diverfity in their religious notions.

But, among other tribes, which have been longer united, or have made greater progress in improvement, we discern some feeble pointing towards more just and adequate conceptions of the power that presides in nature. They seem to perceive that there must be some universal cause to whom all things are indebted for their being. If we may judge by some of their expressions, they appear to acknowledge a divine power as the maker of the world, and the disposer of all events. They denominate him the Great Spirit. But these ideas are faint and confused, and when they attempt to explain them, it is manifest, that among them the word spirit has a meaning very different from that in which we employ it, and that they have no conception of any deity but what is corporeal. They believe their gods to be of the human form, though of a nature more excellent than man, and retail such wild incoherent

fables concerning their functions and operations, as are altogether unworthy of a place in history. Even among these tribes, there is no established form of public worship; there are no temples erected in honour of their deities; and no ministers peculiarly confecrated to their service. They have the knowledge, however, of feveral superstitious ceremonies and practices handed down to them by tradition, and to these they have recourse with a childish credulity, when rouzed by any emergence from their usual insensibility, and excited to acknowledge the power, and to implore the protection of superior beings P.

THE tribe of the Natchez, and the people of Bogota had ad- system of the ranced beyond the other uncultivated nations of America in a dir ideas of religion, as well as in their political institutions; and it is no less difficult to explain the cause of this distinction than of that which we have already confidered. The Sun was the chief object of religious worship among the Natchez. In their temples, which were constructed with some magnificence, and decorated with various ornaments, according to their mode of architecture, they preserved a perpetual fire, as the purest emblem of their divinity. Ministers were appointed to watch and feed this facred flame. The first function of the great chief of the nation, every morning, was an act of obeyfance to the fun; and festivals returned at stated feafons which were celebrated by the whole community with folemn but unbloody rites 4. This is the most refined species

BOOK

of superstition known in America, and, perhaps, one of the most natural as well as most seducing. The sun is the apparent fource of the joy, fertility, and life, diffused through nature, and while the human mind, in its early essays towards inquiry, contemplates and admires his universal and animating energy, its admiration is apt to stop short at what is visible, without reaching to the unseen cause; and pays that adoration to the most glorious and beneficial work of God, which is due only to him who formed it. As fire is the purest and most active of the elements, and in some of its qualities and effects refembles the fun, it was, not improperly, chosen to be the emblem of his powerful operation. The ancient Persians, a people far superior, in every respect, to that rude tribe whose rites I am describing, founded their religious system on similar principles, and established a form of public worship, less gross and exceptionable than that of any people destitute of guidance This furprifing co-incidence in fentiment from revelation. between two nations, in such different states of improvement, is one of the many fingular and unaccountable circumstances which occur in the history of human affairs.

Among the people of Bogota, the fun and moon were, likewife, the chief objects of veneration. Their system of religion was more regular and complete, though less pure, than that of the Natchez. They had temples, altars, priests, sacrifices, and that long train of ceremonies, which superstition introduces wherever the has fully established her dominion over the minds of men. But the rites of their worship were cruel and bloody. They offered human victims to their deities, and many of their practices nearly refembled the barbarous institutions of the Mexicans.

4

Mexicans, the genius of which we shall have an opportunity of confidering more attentively in its proper place'.

воок

WITH respect to the other great doctrine of religion, con- Their ideas cerning the immortality of the foul, the fentiments of the Americans were more united: the human mind, even when least lity of the improved and invigorated by culture, shrinks from the thoughts of dissolution, and looks forward with hope and expectation to a state of future existence. This sentiment, resulting from a fecret consciousness of its own dignity, from an instinctive longing after immortality, is univerfal, and may be deemed natural. Upon this, are founded the most exalted hopes of man in his highest state of improvement; nor has nature withheld from him this foothing confolation, in the most early and rude period of his progress. We can trace this opinion from one extremity of America to the other. In some regions more faint and obscure, in others more perfectly developed, but no where unknown. The most uncivilized of its savage tribes do not apprehend death as the extinction of being. All hope for a future and more happy state, where they shall be for ever exempt from the calamities which embitter human life in its present condition. This they figure as a delightful country, bleffed with perpetual spring, whose forests abound with game, whose rivers swarm with fish, where famine is never felt, and uninterrupted plenty shall be enjoyed without labour or toil. But as men, in forming their first imperfect ideas concerning the invisible world, suppose that there they shall continue to feel the same defires, and to be engaged in the same occupations; they naturally ascribe eminence and distinction,

r Piedrahita, Conq. del N. Reyno, p. 17, &c. Herrera, dec. 6. lib. v. c. 6.

induce them to bury arms, Sec. with the dead.

in that state, to the same qualities and talents which are here the object of their efteem. The Americans, accordingly, allotted the highest place, in their country of spirits, to the skilful hunter, to the adventurous and successful warrior, to such as had furprised and slain the greatest number of enemies, who had tortured many of their captives, and devoured their flesh'. These notions were so prevalent, that they gave rise to an univerfal custom, which is, at once, the strongest evidence that the Americans believe in a future state, and the best illustration of what they expect there. As they imagine, that the dead begin their career anew in the world whither they are gone, that they may not enter upon it defenceless and unprovided, they bury with them their bow, their arrows, and other weapons used in hunting or war; they deposite in their tombs the ikins or stuffs of which they make garments, Indian corn, manioc, venison, domestic utenfils, and whatever is reckoned among the necessaries in their simple mode of life. In some provinces, upon the decease of a cazique or chief, a certain number of his wives, of his favourites, and of his flaves, were put to death, and interred together with him, that he might appear with the same dignity in his future station, and be waited upon by the same attendants". This persuasion is so deep-rooted, that many of their retainers offer themselves as voluntary victims, and court the privilege of accompanying

their departed master, as an high distinction. It has been found difficult, on some occasions, to set bounds to this enthufiaim of affectionate duty, and to reduce the train of a favourite leader to fuch a number as the tribe could afford to . fpare *.

AMONG :. Ame ans, as well as oth uncivilized nations, Superflition many of the rites and observances which bear some resemblance with devoto acts of religion, have no connection with devotion, but proceed from a fond defire of prying into futurity. The human mind is most apt to feel, and to discover this vain curiosity, when its own powers are most feeble and uninformed. Astonished with occurrences, of which it is unable to comprehend the cause, it naturally fancies that there is something mysterious and wonderful in their origin. Alarmed at events, of which it cannot difcern the iffue or the confequences, it has recourse to other means of discovering them, than the exercise of its own fagacity. Wherever superstition is so established as to form a regular fystem, this defire of penetrating into the fecrets of futurity is connected with it. Divination becomes a religious act. Priests, as the ministers of Heaven, pretend to deliver its oracles to men. They are the only foothfayers. augurs, and magicians, who possess the sacred and important art of disclosing what is hid from other eyes.

But, among rude nations, who pay no veneration to any This depart. fuperintending power, and who have no established rites or mi-ment belong nisters of religion, their curiosity to discover what is future and scians. unknown is cherished by a different principle, and derives

See NOTE LXXXVII.

firength

strength from another alliance. As the diseases of men, in the favage state, are like those of the animal creation, few but extremely violent, their impatience under what they fuffer, and folicitude for the recovery of health, foon inspired them with extraordinary reverence for fuch as pretended to understand the nature of their maladies, or to preserve them from their fudden and fatal effects. These ignorant pretenders, however, were fuch utter strangers to the structure of the human frame, as to be equally unacquainted with the causes of its disorders, and the manner in which they will terminate. Enthusiasm, mingled frequently with some portion of craft, supplied what they wanted in science. They imputed the origin of diseases to fupernatural influence, and prescribed or performed a variety of mysterious rites, which they gave out to be of power sufficient to remove them. The credulity and love of the marvellous, natural to uninformed men, favoured the deception, and prepared them to be the dupes of their imposture. Among favages, their first physicians are a kind of conjurers or wizards, who boast that they know what is past, and can foretell what is to come. Incantations, forcery, and mummeries of diverse kinds, no less strange than frivolous, are the means which they employ to expel the imaginary causes of malignity, and, relying upon the efficacy of these, they predict with confidence what will be the fate of their deluded patients. Thus superflition in its earliest form flowed from the solicitude of man to be delivered from present distress, not from his dread of evils awaiting him in a future life, and was originally ingrafted on medicine, not on religion. One of the first, and most intelligent historians of America was struck with this alliance

between

y P. Melch. Hernandez, Memorial de Cheriqui. Collect. Orig. Pap. i.

between the art of divination and that of physic, among the BOOK people of Hispaniola. But this was not peculiar to them. The Alexis, the Piayas, the Autmoins, or whatever was the distinguishing name of their diviners and charmers in other parts of America, were all the physicians of their respective tribes, in the same manner as the Bubitos of Hispaniola. As their function led them to apply to the human mind when enfeebled by fickness, and as they found it, in that season of dejection, prone to be alarmed with imaginary fears, or amused with vain hopes, they eafily induced it to rely with implicit confidence on the virtue of their spells, and the certainty of their predictions ".

WHENEVER men acknowledge the reality of supernatural Gradually power and discernment in one instance, they have a propenfity to admit it in others. The Americans did not long suppose the efficacy of conjuration to be confined to one subject. They had recourse to it in every situation of danger or distress. When the events of war were peculiarly difastrous, when they met with unforeseen disappointments in hunting, when inundations or drought threatened their crops with destruction, they called upon their conjurers to begin their incantations, in order to discover the causes of those calamities, or to foretell what would be their iffue b. Their confidence in this delusive art gradually increased, and manifested itself in all the occurrences of life. When involved in any difficulty, or about to

enter upon any transaction of moment, every individual regularly consulted the sorcerer, depended upon his instructions to extricate him from the former, and to direct his conduct in the latter. Even among the rudest tribes in America, supersition appears in this form, and divination is an art in high esteem. Long before man had acquired such knowledge of a deity as inspires reverence and leads to adoration, we observe him stretching out a presumptuous hand to draw aside that veil with which providence kindly conceals its purposes from human knowledge; and we find him labouring, with fruitless anxiety, to penetrate into the mysteries of the divine administration. To discern, and to worship a superintending power, is an evidence of the enlargement and maturity of the human understanding; a vain desire of prying into futurity, is the error of its infancy, and a proof of its weakness.

FROM this weakness proceeded, likewise, the faith of the Americans in dreams, their observation of omens, their attention to the chirping of birds and the cries of animals, all which they suppose to be indications of future events, and if any one of these prognostics is deemed unfavourable, they instantly abandon the pursuit of those measures on which they are most eagerly bent.

Detached

VIII. BUT if we would form a complete idea of the uncultivated nations of America, we must not pass unobserved some singular customs, which, though universal and characteristic, could not be reduced, with propriety, to any of the

articles into which I have divided my inquiry concerning their manners.

BOOK

Among favages, in every part of the globe, the love of Love of dancing is a favourite passion. As a great part of their time languishes away in liftless indolence, without any occupation to rouze or interest them, they delight universally in a pastime which calls forth the active powers of their nature into exercise. The Spaniards, when they first visited America, were aftonished at the fondness of the natives for dancing, and beheld with wonder a people, cold and unanimated in most of their other pursuits, kindle into life, and exert themselves with ardour, as often as this favourite amusement recurred. Among them, indeed, dancing ought not to be denominated an amusement. It is a serious and important occupation, which mingles in every occurrence of public or private life. If any intercourse be necessary between two American tribes, the ambaffadors of the one approach in a folemn dance, and present the calumet or emblem of peace; the fachems of the other receive it with the fame ceremony. If war is denounced against an enemy, it is by a dance, expressive of the resentment which they feel, and of the vengeance which they meditate b. If the wrath of their gods is to be appealed, or their beneficence to be celebrated; if they rejoice at the birth of a child, or mourn the death of a friend', they have dances appropriated to each of these situations, and suited to the different fentiments with which they are then animated. If a person

De la Potherie Hist. ii. 17, &c. Charlev. N. Fr. iii. 211. 297. La Hontan. i. 100. 137. Hennepin. Decou. 149, &c. Charlev. N. Fr. iii. 298, Lastiau, i. 523.

is indisposed, a dance is prescribed as the most effectual means of restoring him to health; and if he himself cannot endure the fatigue of such an exercise, the physician or conjurer performs it in his name, as if the virtue of his activity could be transferred to his patient 4.

ALL their dances are imitations of some action; and though the music by which they are regulated, is extremely simple and tirefome to the ear by its dull monotony, fome of their dances appear wonderfully expressive and animated. The wardance is, perhaps, the most striking. It is the representation of a complete American campaign. The departure of the warriors from their village, their march into the enemy's country, the caution with which they encamp, the address with which they station some of their party in ambush, the manner of furprising the enemy, the noise and ferocity of the combat, the scalping of those who are slain, the seizing of prisoners, the triumphant return of the conquerors, and the torture of the victims, are successively exhibited. The performers enter with fuch enthusiastic ardour into their feveral parts, their gestures, their countenance, their voice are so wild and so well adapted to their various fituations, that Europeans can hardly believe it to be a mimic scene, or view it without emotions of fear and horror.

But however expressive some of the American dances may be, there is one circumstance in them remarkable, and connected with the character of the race. The songs, the dances, the amusements of other nations, expressive of the sentiments

Denys Hist. Nat. 189. Brickell, 372. De la Potherie, ii. 36.

[.] De la Potherie, ii. 116. Charlev. N. Fr. iii. 297. Lastau, i. 523.

which animate their hearts, are often adapted to display or BOOK excite that fenfibility which mutually attaches the fexes. Among fome people, such is the ardour of this passion, that love is almost the sole object of festivity and joy; and as rude nations are strangers to delicacy, and unaccustomed to disguise any emotion of their minds, their dances are often extremely wanton and indecent. Such is the Calenda, of which the natives of Africa are so passionately fond; and such the feats of the dancing girls, which the Afiatics contemplate with fo much avidity of desire. But, among the Americans, more cold and indifferent to their females, from causes which I have already explained, this passion mingles but little with their festivals and pastimes. Their songs and dances are mostly folemn and martial, they are connected with some of the serious and important affairs of life', and having no relation to love or gallantry, are feldom common to the two fexes, but executed by the men and women aparts. If, on some occafions, the women are permitted to join in the festival, the character of the entertainment is still the same, and no movement or gesture is expressive of attachment, or encourages familiarity 1.

An immoderate love of play, especially at games of Passion for hazard, which feems to be natural to all people unaccustomed gaming, to the occupations of regular industry, is likewise universal

BOOK

The fame causes, which so often among the Americans. prompt persons at their case in civilized life to have recourse to this pastime, render it the delight of the savage. The former are independent of labour, the latter do not feel the neceffity of it, and as both are unemployed, they run with tranfport to whatever is of power to flir and agitate their minds. Hence the Americans, who at other times are so indifferent, fo phlegmatic, fo filent, and fo difinterested, as foon as they engage in play become rapacious, impatient, noify, and almost frantic with eagerness. Their furs, their domestic utenfils, their clothes, their arms, are staked at the gaming-table, and when all is loft, high as their fense of independence is, in a wild emotion of despair or of hope, they will often risk their personal liberty, upon a single cast. Among several tribes. fuch gaming parties frequently recur, and become their most acceptable entertainment at every great festival. Superstition, which is apt to take hold of those passions which are most vigorous, frequently lends its aid to confirm and strengthen this favourite inclination. Their conjurers are accustomed to prescribe a solemn match at play, as one of the most efficacious methods of appealing their gods, or of refloring the fick to health *.

and for drinking. FROM causes similar to those which render them fond of play, the Americans ar extremely addicted to drunkenness. It seems to have been one of the first exertions of human ingenuity to discover some composition of an intoxicating quality; and there is hardly any nation so rude, or so destitute of invention,

¹ Charlev, N. Fr. iii. 261. 318. Lafitau, ii. 338, &c. Ribas, Triumf. 13. Brickell, 335.

Laftau, ii. 338, &c. Ribas, Triumf. 13. Brickell, 335.

as not to have succeeded in this fatal research. The most bar- BOOK barous of the American tribes have been fo unfortunate as to attain this art; and even those who are so deficient in knowledge, as to be unacquainted with the method of giving an inebriating strength to liquors by fermentation, can accomplish the same end by other means. The people of the islands, of North America, and of California, used, for this purpose, the smoke of tobacco, drawn up with a certain instrument into the nostrils, the fumes of which ascending to the brain, they felt all the transports and frenzy of intoxication m. In almost every other part of the New World, the natives possessed the art of extracting an intoxicating liquor from maize or the manioc root, the same fubstances which they convert into bread. The operation by which they effect this, nearly refembles the common one of brewing, but with this difference, that in place of yest, they use a nauseous infusion of a certain quantity of maize or manioc chewed by their women. The faliva excites a vigorous fermentation, and in a few days the liquor becomes fit for drinking. It is not difagreeable to the taste, and when swallowed in large quantities, is of an intoxicating quality". This is the general beverage of the Americans, which they diftinguish by various names, and for which they feel such a violent and infatiable desire, as it is not easy either to conceive or describe. Among polished nations, where a succession of various functions. and amusements keep the mind in continual occupation, the defire for strong drink is regulated, in a great measure, by the: climate, and increases or diminishes according to the variations of its temperature. In warm regions, the delicate and sensible

m Oviedo Hist. ap Ramus. iii. 113. Venegas, i. 68. Naufrag de Cabeca de Vaca, cap. 26. See NOT LXXXIX. B Stadius ap de Bry, iii. 111. Lery, ibid. 175. frame.

воок 1V.

frame of the inhabitants does not require the stimulation of fermented liquors. In colder countries, the constitution of the natives, more robust and more fluggish, stands in need of generous liquors to quicken and animate it. But among favages, the defire of fomething that is of power to intoxicate, is in every situation the same. All the people of America, whether natives of the torrid zone, or inhabitants of its more temperate regions, or placed by a harder fate in the severe climates towards its northern or fouthern extremity, appear to be equally under the dominion of this appetite. Such a fimilarity of tafte, among people in fuch different fituations, must be ascribed to the influence of some moral cause, and cannot be considered as the effect of any physical or constitutional want. engaged in war or in the chase, the savage is often in the most interesting situations, and all the powers of his nature are rouzed to the most vigorous exertions. But those animating scenes are succeeded by long intervals of repose, during which the warrior meets with nothing that he deems of fufficient dignity or importance to merit his attention. He languishes and mopes in this feason of indolence. The posture of his body is an emblem of the state of his mind. In one climate, cowering over the fire in his cabin; in another, stretched under the shade of some tree; he dozes away his time in sleep, or in an unthinking joyless inactivity, not far removed from it. As strong liquors awake him from this torpid state, give a brisker motion to his spirits, and enliven him more thoroughly than either dancing or gaming, his love of them is excessive. A favage, when not engaged in action, is a penfive melancholy animal;

[•] Gumilla, i. 257. Lezano Descrip. de Gran Chaco, 56. 103. Ribat, 8. Ulloa, i. 249. 337. Marchais, iv. 436. Fernandez Mission. de las Chiquit. 35. Barrere, p. 203. Blanco Convers. de Piritu, 31.

but as foon as he taftes, or has a prospect of tasting, the intoxicating draught, he becomes gay and frolicfome P. Whatever be the occasion, or pretext, on which the Americans affemble, the meeting always terminates in a debauch. Many of their festivals have no other object, and they welcome the return of them with transports of joy. As they are not accustomed to restrain any appetite, they set no bounds to this. riot often continues without intermission several days; and whatever be the fatal effects of their excess, they never cease from drinking as long as one drop of liquor remains. The persons of greatest eminence, the most distinguished warriors, and the chiefs most renowned for their wisdom, have no more command of themselves than the most obscure member of the community. Their eagerness for present enjoyment renders them-blind to its fatal consequences; and those very men, who, in other fituations, feem to possess a force of mind more than human, are in this instance inferior to children in foresight, as well as confideration, and mere flaves of brutal appetite 4. When their passions, naturally strong, are heightened and inflamed by drink, they are guilty of the most enormous outrages, and the festivity seldom concludes without deeds of violence, or bloodshed'.

But, amidst this wild debauch, there is one circumstance remarkable; the women, in most of the American tribes, are not permitted to partake of it. Their province is to prepare the liquor, to serve it about to the guests, and to take care of their husbands and friends, when their reason is overpowered.

Melendez Tesoros Verdad. iii. 369. Ribas, 9. Ulloa, i. 338.

Lettr. Edif. ii. 178. Torquemada Mon. Ind. i. 335. See NOTE XC.

This exclusion of the women from an enjoyment so highly valued by savages, may be justly considered as a mark of their inferiority, and as an additional evidence of that contempt with which they were treated in the New World. The people of North America, when first discovered, were not acquainted with any intoxicating drink; but as the Europeans early found it their interest to supply them with spirituous liquors, drunkenness soon became as universal among them as among their countrymen to the south; and their women having acquired this new taste, indulge it with as little decency and moderation as the men.

Put to death the aged and incurable.

IT were endless to enumerate all the detached customs which have excited the wonder of travellers in America; but I cannot omit one feemingly as fingular as any that has been mentioned. When their parents and other relations become old, or labour under any distemper which their slender knowledge of the healing art cannot remove, they cut short their days with a violent hand, in order to be relieved from the burden of supporting and tending them. This practice prevailed among the ruder tribes in every part of the continent, from Hudson's Bay to the river De la Plata; and however shocking it may be to those sentiments of tenderness and attachment, which, in civilized life, we are apt to confider as congenial with our frame, the condition of man in the favage state leads and reconciles him to it. fame hardships and difficulty of procuring subsistence, which deter favages, in some cases, from rearing their children, prompt them to destroy the aged and infirm. The declining state of

Hutchinson, Hift, of Massachus. 469. Lastau, ii. 125. Sagard, 146.

the one is as helpless as the infancy of the other. The former are no less unable than the latter to perform the functions that belong to a warrior or hunter, or to endure those various distreffes in which favages are fo often involved, by their own want of forelight and industry. Their relations feel this; and incapable of attending to the wants or weaknesses of others, their impatience under an additional burden prompts them to extinguish that life which they find it difficult to sustain. This is not regarded as a deed of cruelty, but as an act of mercy. An American, broken with years and infirmities, conscious that he can no longer depend on the aid of those around him, places himself contentedly in his grave; and it is by the hands of his children or nearest relations that the thong is pulled, or the blow inflicted, which releases him for ever from the forrows of life ".

B O O K

IX. AFTER contemplating the rude American tribes in such General estivarious lights, after taking a view of their customs and manners character. from fo many different stations, nothing remains but to form a general estimate of their character, compared with that of more polished nations. A human being, as he comes originally from the hand of nature, is every where the same. At his first appearance in the state of infancy, whether it be among the rudest favages, or in the most civilized fociety, we can discern no quality which marks any diffinction or superiority. The capacity of improvement feems to be the fame; and the talents he may afterwards acquire, as well as the virtues he may be rendered capable of exercising, depend entirely upon the state of fociety in which he is placed. To this state his mind naturally ac-

n Cassani Hist. de N. Reyno de Gran. p. 300. Piso, p. 6. Fliis Voy. 191. Gumilla, i. 333.

commodates itself, and from it receives its discipline and culture. In proportion to the wants which it accustoms a human being to feel, and the functions in which these engage him, his intellectual powers are called forth. According to the connections which it establishes between him and the rest of his species, the affections of his heart are exerted. It is only by attending to this great principle, that we can discover what is the character of man in every different period of his progress.

Intellectual

IF we apply it to favage life, and measure the attainments of the human mind in that state by this standard, we shall find, according to an observation which I have already made, that the intellectual powers of man must be extremely limited in their operations. They are confined within the narrow sphere of what he deems necessary for supplying his own wants. Whatever has not some relation to these, neither attracts his attention, nor is the object of his inquiries. But however narrow the bounds may be within which the knowledge of a favage is circumscribed, he possesses thoroughly that small portion of it which he has attained. It was not communicated to him by formal instruction; he does not attend to it as matter of mere speculation and curiofity; it is the result of his own observation, the fruit of his own experience, and accommodated to his condition and exigencies. While employed in the active occupations of war or hunting, he often finds himself in difficult and perilous fituations, from which the efforts of his own fagacity must extricate him. He is frequently engaged in measures where every step depends upon his own ability to decide, where he must rely solely upon his own penetration to discern the dangers to which he is exposed, and upon his own wisdom in providing against them.

ВООК

Political ta-

As the talents of individuals are exercised and improved by fuch exertions, much political wisdom is faid to be displayed in conducting the affairs of their small communities. The council lents. of old men in an American tribe, deliberating upon its interests, and determining with respect to peace or war, has been compared to the fenate in more polished republics. The proceedings of the former, we are told, are ten no less formal and fagacious than those of the latter. Great political wisdom is exhibited in pondering the various measures proposed, and in balancing their probable advantages, against the evils of which they may be productive. Much address and eloquence are employed by the leaders, who aspire at acquiring such confidence with their countrymen, as to have an ascendant in those assemblies ". But, among favage tribes, the field for displaying political talents cannot be extensive. Where the idea of private property is unknown, and no criminal jurisdiction is established, there is hardly any function of internal government to exercise. Where there is no commerce, and scarcely any intercourse among separate tribes; where enmity is implacable, and hostilities are carried on almost without intermission; there will be few points of public concern to adjust with their neighbours; and that department of their affairs which may be denominated foreign, cannot be fo intricate as to require any refined policy in conducting it. Where individuals are so thoughtless and improvident as feldom to take effectual precautions for felfpreservation, it is vain to expect that public measures and deliberations will be regulated by the contemplation of remote events. It is the genius of favages to act from the impulse of present passion. They have neither foresight nor temper to

^{*} Charley. N. Fr. iii. 269, &c.

form complicated arrangements with respect to their suture conduct. The consultations of the Americans, indeed, are so frequent, and their negociations are so many, and so long protracted, as to give their proceedings an extraordinary aspect of wisdom. But this is not owing so much to the depth of their schemes, as to the coldness and phlegm of their temper, which render them slow in determining. If we except the celebrated league, that united the Five Nations in Canada into a federal republic, which shall be considered in its proper place, we can discern sew such traces of political wisdom, among the rude American tribes, as discovers any great degree of foresight or extent of intellectual abilities. Even among them, we shall sind public measures more frequently directed by the impetuous-ferocity of their youth, than regulated by the experience and wisdom of their old men.

Degree of af-

As the condition of man in the favage state is unfavourable to the progress of the understanding, it has a tendency likewise, in some respects, to check the exercise of affection, and to render the heart contracted. The strongest feeling in the mind of a savage is a sense of his own independence. He has sacrificed so small a portion of his natural liberty by becoming a member of society, that he remains, in a great degree, the sole master of his own actions. He often takes his resolutions alone, without consulting, or feeling any connection with the persons around him. In many of his operations, he stands as much detached from the rest of his species, as if he had formed no union with them. Conscious how little he depends upon other men, he is apt to view them with a careless indif-

y See NOTE XCI.

² Charlev. N. Fr. iii. 271.

^{*} Fernandez Mission. de los Chiquit. 33.

ference. Even the force of his mind contributes to increase BOOK this unconcern, and as he looks not beyond himself in deliberating with respect to the part which he should act, his solicitude about the consequences of it seldom extends farther. He purfues his own career, and indulges his own fancy, without inquiring or regarding whether what he does be agreeable or offensive to others, whether they may derive benefit, or receive hurt from it. Hence the ungovernable caprice of favages, their impatience under any species of restraint, their inability to suppress or moderate any inclination, the scorn or neglect with which they receive advice, their high estimation of themfelves, and their contempt of other men. Among them, the pride of independence produces almost the same effects with interestedness in a more advanced state of society, it refers every thing to a man himself, and renders the gratification of his own wishes, the measure and end of conduct.

To the same cause may be imputed the hardness of heart, and insensibility, remarkable in all savage nations. Their minds, rouzed only by strong emotions, are little susceptible of gentle, delicate, or tender affections b. Their union is so incomplete, that each individual acts as if he retained all his natural rights entire and undiminished. If a favour is conferred upon him, or a service performed for his behoof, he receives it with much satisfaction, because it contributes to his enjoyment; but this sentiment extends not beyond himself, it excites no sense of obligation, he neither feels gratitude, nor thinks of making any return c. Even, among persons the most closely connected, there is little correspondence or ex-

b Charlev. N. Fr. iii. 309. C Oviedo Hist. lib. xvi. c. 2. See NOTE XCII.

change of those good offices which strengthen attachment, mollify the heart, and sweeten the intercourse of life. Their high ideas of independence nourish a sullen reserve, which keeps them at a distance from each other. The nearest relations are mutually asraid to make any demand, or to solicit any service d, less it should be considered by the other as imposing a burden, or laying a restraint upon his will.

Infensibility.

I HAVE already remarked the influence of this hard unfeeling temper upon domestic life, with respect to the connection between husband and wife, as well as that between parents and children. Its effects are no less conspicuous, in the performance of those mutual offices of tenderness which the infirmities of our nature frequently exact. Among some tribes, when any of their number are feized with a distemper, they are generally abandoned by all around them, who, careless of their recovery, fly in the utmost consternation from the supposed danger of infection. But even where they are not thus deserted, the cold indifference with which they are attended can afford them little confolation. No look of fympathy, no foothing expressions, no officious services contribute to alleviate or to make them forget their fufferings . Their nearest relations will often refuse to submit to the smallest inconveniency, or to part with the least trifle, however much it may tend to their accommodation or relief. So little is the breast of a favage susceptible of those sentiments which prompt men to that feeling attention which mitigates distress, that, in some provinces of America, the Spaniards have found it necessary to

BOOK

inforce the common duties of humanity by positive laws, and to oblige husbands and wives, parents and children, under severe penaltics, to take care of each other during their fickness h. The same harshness of temper is still more conspicuous in their treatment of the animal creation. Prior to their intercourse with the people of Europe, the North-Americans had some tame dogs, which accompanied them in their hunting excurfions, and ferved them with all the ardour and fidelity peculiar to their species. But, instead of that fond attachment, which the hunter naturally feels towards those useful companions of his toils, they requite their fervices with neglect, feldom feed, and never caress them '. In other provinces, the Americans have become acquainted with the domestic animals of Europe, and avail themselves of their service; but it is univerfally observed that they always treat them harshly k, and never employ any method either for breaking or managing them, but force and cruelty. In every part of the deportment of man in his favage state, whether towards his equals of the human species, or towards the animals below him, we recognize the same character, and trace the operations of a mind, intent on its own gratifications, and regulated by its own caprice, without much attention or fensibility to the fentiments and feelings of the beings around him.

AFTER explaining how unfavourable the favage state is to Tacitumity. the cultivation of the understanding, and to the improvement of the heart, I should not have thought it necessary to mention what may be deemed its leffer defects, if the character of na-

h Cogulludo Hist. de Yucathan. p. 300.

L Ulloa Notic. American. 312.

¹ Charley. N. Fr. iii, 119. 337.

tions as well as individuals, were not often more distinctly marked by circumstances apparently trivial, than by those of greater moment. A favage, frequently, placed in fituations of danger and diffress, depending on himself alone, and wrapt up in his own thoughts and schemes, is a serious melancholy animal. His attention to others is small. The range of his own ideas is narrow. Hence that taciturnity which is fo difgusting to men accustomed to the open intercourse of social conversation. When not engaged in action, the Americans often fit whole days in one posture, without opening their lips '. When they go forth to war, or to the chace, they usually march in a line at some distance from one another, and without exchanging a word. The same profound silence is observed when they row together in a canoe . It is only when they are animated by intoxicating liquors, or rouzed by the jollity of the festival and dance, that they become gay and converfible.

Cunning.

To the same causes may be imputed the refined cunning with which they form and execute their schemes. Men, who are not habituated to a liberal communication of their own sentiments and wishes, are apt to be so distrustful, as to place little considence in others, and to have recourse to an insidious craft, in accomplishing their own purposes. In civilized life, those persons, who, by their situation, have but a few objects of pursuit on which their minds incessantly dwell, are most remarkable for low artisce in carrying on their little projects. Among savages, whose views are equally confined, and their attention no less persevering, those circumstances must operate still more powerfully, and gradually accustom them to a disingenuous

¹ Voyage de Borguer, 102.

m Charlev. iii. 340.

fubtlety in all their transactions. The force of this is increased BOOK by habits which they acquire in carrying on the two most interesting operations wherein they are engaged. With them war is a system of craft, in which they trust for success to stratagem more than to open force, and have their invention continually on the stretch to circumvent and surprise their enemies. As hunters, it is their constant object to ensnare, in order that they may deftroy. Accordingly, art and cunning have been univerfally observed as distinguishing characteristics of all favages. The people of the rude tribes of America are remarkable for their address and duplicity. Impenetrably fecret in forming their measures, they pursue them with a patient undeviating attention, and there is no refinement of diffimulation which the yeannot employ, in order to infure their fuccess. The natives of Peru were engaged above thirty years, in concerting the plan of their infurrection, under the vice-royalty of the marquis de Villa-Garcia, and though communicated to a great number of all different ranks, no indication of it ever transpired during that long period; no man betrayed his trust, or by an unguarded look, or rash word, gave rise to any suspicion of what was intended". The diffimulation and craft of individuals is no less remarkable than that of nations. When fet upon deceiving, they wrap themselves up so artificially, that it is impossible to penetrate into their intentions, or to detect their designs °.

But if there be defects or vices peculiar to the favage state, Virtues. there are, likewise, virtues which it inspires, and good qualities,

to

BOOK IV. Independent frisit, to the exercise of which it is friendly. The bonds of society sit so loose upon the members of the more rude American tribes, that they hardly feel any restraint. Hence the spirit of independence, which is the pride of a savage, and which he considers as the unalienable prerogative of man. Incapable of controul, and distaining to acknowledge any superior, his mind, though limited in its powers, and erring in many of its pursuits, acquires such elevation by the consciousness of its own freedom, that he acts on some occasions with astonishing force, and perseverance, and dignity.

Fortitude.

As independence nourishes this high spirit among savages, the perpetual wars in which they are engaged call it forth into action. Such long intervals of tranquillity as are frequent in polished societies, are unknown in the savage state. Their enmities, as I have observed, are implacable and immortal. valour of the youth is never allowed to rust in inaction. hatchet is always in their hand, either for attack or defence. Even in their hunting excursions, they must be on their guard against surprise from the hostile tribes, by which they are surrounded. Accustomed to continual alarms, they grow familiar with danger, and courage becomes an habitual virtue, resulting naturally from their fituation, and strengthened by constant The mode of displaying fortitude may not be the fame in small and rude communities, as in more powerful and civilized states. Their system of war, and standard of valour may be formed upon different principles, but in no fituation does the human mind rife more superior to the sense of danger. or the dread of death, than in its most simple and uncultivated state.

ANOTHER

ANOTHER virtue remarkable among favages, is attachment

to the community of which they are members. From the nature of their political union, one might expect this tie to be to their coarextremely feeble. But there are circumstances which render munity. the influence, even of their loofe mode of affociation, very powerful. The American tribes are small; combined against their neighbours, in profecution of ancient enmities, or in avenging recent injuries, their interests and operations are neither numerous nor complex. These are objects, which the uncultivated understanding of a savage can comprehend. His heart is capable of forming connections, which are so little diffused. He affents with warmth to public measures, dictated by passions, similar to those which influence his own conduct. Hence the ardour with which individuals undertake the most perilous fervice, when the community deems it necessary.

Hence their fierce and deep-rooted antipathy to the public enemies. Hence their zeal for the honour of their tribe, and that love of their country, which prompts them to brave danger that it may triumph, and to endure the most exquisite tor-

ments without a groan, that it may not be difgraced.

BOOK

THUS, in every fituation where a human being can be placed, Satisfaction even the most unfavourable, there are virtues that peculiarly be- with their own condilong toit; there are affections which it calls forth; there is a species tion. of happiness which it yields. Nature, with most beneficent intention, conciliates and forms the mind to its condition, the ideas and wishes of man extend not beyond that state of society to which he is habituated. What it presents as objects of contemplation or enjoyment, fill and fatisfy his mind, and he can hardly conceive any other mode of life to be pleafant or even tolerable. The Tartar, accustomed to roam over ex-3 G 2 tenfive

BOOK

tensive plains, and to subsist on the product of his herds, imprecates upon his enemy, as the greatest of all curses, that he may be condemned to refide in one place, and to be nourished with the top of a weed. The rude Americans, fond of their own purfuits, and fatisfied with their own lot, are equally unable to comprehend the intention or utility of the various accommodations, which, in more polished society, are deemed effential to the comfort of life. Far from complaining of their own fituation, or viewing that of men in a more improved flate with admiration or envy, they regard themselves as the standard of excellence, as beings the best entitled, as well as the most perfectly qualified, to enjoy real happiness. Unaccustomed to any restraint upon their will or their actions. they behold with amazement the inequality of rank, and the subordination which take place in civilized life, and consider the voluntary submission of one man to another, as a renunciation, no less base than unaccountable, of the first distinction of humanity. Void of forelight, as well as free from care themselves, and delighted with that state of indolent security, they wonder at the anxious precautions, the unceasing industry, and complicated arangements of Europeans, in guarding against distant evils, or providing for future wants, and exclaim against their prepofterous folly, in thus multiplying the troubles. and increasing the labour of life o. This preference of their own manners is conspicuous on every occasion. names, by which the various nations wish to be distinguished, are affurned from this idea of their own pre-eminence. The appellation which the Iroquois give to themselves is, the chief of men?. Caraibe, the original name of the fierce inhabitants

of

º Charley. N. Fr. iii. 308. Lahontan, ii. 97.

P Colden, i. 3.

of the windward islands, fignifies the warlike people. The Cherokee, from an idea of their own superiority, call the Europeans Nothings, or the accursed race, and assume themselves the name of The beloved people. The same principle regulated the notions of the other Americans concerning the Europeans; for although, at first, they were filled with assonishment at their arts, and with dread of their power, they soon came to abate their estimation of men, whose maxims of life were so different from their own. Hence they called them the froth of the sea, men without father or mother. They supposed, that either they had no country of their own, and therefore invaded that which belonged to others; or, that, being destitute of the necessaries of life at home, they were obliged to roam over the ocean, in order to rob such as were more amply provided.

MEN, thus satisfied with their condition, are far from any inclination to relinquish their own habits, or to adopt those of civilized life. The transition is too violent to be suddenly made. Even where endeavours have been used to wean a savage from his own customs, and to render the accommodations of polished society familiar to him; even where he has been allowed to taste of those pleasures, and has been honoured with those distinctions, which are the chief objects of our desire, he droops and languishes under the restraint of laws and forms, he seizes the first opportunity of breaking loose from them, and returns with transport to the forest or the wild, where he can enjoy a careless and uncontrouled freedom'.

воок IV.

Thus I have finished a laborious delineation of the character and manners of the uncivilized tribes scattered over the vast continent of America. In this, I aspire not at rivalling the great masters who have painted and adorned savage life, either in boldness of design, or in the glow and beauty of their colouring. I am satisfied with the more humble merit of having persisted with patient industry, in viewing my subject in many various lights, and in collecting from the most accurate observers such detached and often minute features, as might enable me to exhibit a portrait that resembles the original.

General caution with reipect to this inquiry.

BEFORE I close this part of my work, one observation more is necessary, in order to justify the conclusions which I have formed, or to prevent the mistakes into which such as examine them may fall In contemplating the inhabitants of a country fo widely extended as America, great attention should be paid to the diversity of climates under which they are placed. The influence of this I have pointed out with respect to several important particulars, which have been the object of refearch; but even where it has not been mentioned, it ought not to be overlooked. The provinces of America are of fuch different temperament, that this alone is fufficient to constitute a diftinction between their inhabitants. In every part of the earth where man exists, the power of climate operates, with decisive influence, upon his condition and character. In those countries which approach near to the extremes of heat or cold, this influence is so conspicuous as to strike every eye. Whether we confider man merely as an animal, or as a being endowed with rational powers, which fit him for activity and speculation, we shall find that he has uniformly attained the greatest perfection

BOOK

perfection of which his nature is capable, in the temperate regions of the globe. There his conflitution is most vigorous, his organs most acute, and his form most beautiful. There, too, he possesses a superior extent of capacity, greater fertility of imagination, more enterprising courage, and a sensibility of heart which gives birth to passions, not only ardent, but perfevering. In this favourite situation he has displayed the utmost efforts of his genius, in literature, in policy, in commerce, in war, and in all the arts which improve or embellish life ".

This powerful operation of climate is felt most sensibly by rude nations, and produces greater effects than in societies more highly polished. The talents of civilized men are continually exerted in rendering their condition more comfortable; and by their ingenuity and inventions, they can, in a great measure, supply the defects, and guard against the inconveniencies, of any climate. But the improvident savage is affected by every circumstance peculiar to his situation. He takes no precaution either to mitigate or to improve it. Like a plant, or an animal, he is formed by the climate under which he is placed, and feels the full force of its influence.

In furveying the rude nations of America, this natural diftinction between the inhabitants of the temperate and torrid zones is very remarkable. They may, accordingly, be divided into two great classes. The one comprehends all the North-Americans, from the river St. Laurence to the Gulf of Mexico.

[&]quot; Dr. Ferguson's Essay on the Hist. of Civil Society, part iii. c. 1.

together with the people of Chili, and a few finall tribes towards the extremity of the fouthern continent. To the other belong all the inhabitants of the islands, and those settled in the various provinces which extend from the ifthmus of Darien almost to the fouthern confines of Brasil, along the east side of the Andes. In the former, the human species appears manifestly to be more perfect. The natives are more robust, more active, more intelligent, and more courageous. They possess, in the most eminent degree, that force of mind, and love of independence, which I have pointed out as the chief virtues of man in his favage flate. They have defended their liberty with persevering fortitude against the Europeans, who subdued the other rude nations of America with the greatest ease. The natives of the temperate zone are the only people in the New World who are indebted for their freedom to their own valour. The North-Americans, though long encompassed by three formidable European powers, still retain part of their original possesfions, and continue to exist as independent nations. The people of Chili, though early invaded, still maintain a gallant contest with the Spaniards, and have fet bounds to their encroachments; whereas, in the warmer regions, men are more feeble in their frame, less vigorous in the efforts of their mind, of a gentle but dastardly spirit, more enslaved by pleasure and funk in indolence. Accordingly, it is in the torrid zone that the Europeans have most completely established their dominion over America; the most fertile and desirable provinces in it are subjected to their yoke; and if feveral tribes there still enjoy independence, it is either because they have never been attacked by an enemy already fatiated with conquest, and possessed of larger territories than he was able to occupy, or because they

have

iii.

have been faved from oppression by their remote and inaccessible BOOK Atuation.

Conspicuous as this distinction may appear between the inhabitants of those different regions, it is not, however, univerfal. Moral and political causes, as I have formerly observed, affect the disposition and character of individuals as well as nations, still more powerfully than the influence of climate. There are, accordingly, some tribes, in various parts of the torrid. zone, possessed of courage, high spirit, and the love of independence, in a degree hardly inferior to the natives of more temperate climates. We are too little acquainted with the history of those people, to be able to trace the several circumstances in their progress and situation, to which they are indebted for this remarkable pre-eminence. The fact, nevertheless, is certain. As early as the first voyage of Columbus, he received information that several of the islands were inhabited by the Caribbees, a fierce race of men, nowife refembling their feeble and timid neighbours. In his fecond expedition to the New World, he found this information to be just, and was himself a witness of their intrepid valour. The same character they have maintained invariably in all subsequent contests with the people of our continent, and, even in our own times, we have feen them make a gallant stand in defence of the iast territory which the rapacity of the Europeans had left in their 'possession 2. Some nations in Brasil were no less eminent for vigour of mind, and bravery in war. The

BOOK IV. people of the ishmus of Darien boldly met the Spaniards in the field, and frequently repelled those formidable invaders. Other instances might be produced. It is not by attending to any single cause or principle, however powerful and extensive its influence may appear, that we can explain the actions, or account for the character, of men. Even the law of climate, more universal, perhaps, in its operation than any that affects the human species, cannot be applied, in judging of their conduct, without many exceptions.

NOTE I. p. 7.

TYRE was situated at such a distance from the Arabian Gulf or Red Sea, as made it impossible to convey commodities from thence to that city by land-carriage. This induced the Phenicians to render themselves masters of Rbinocrura, or Rbinocolura, the nearest port in the Mediterranean to the Red Sea. They landed the cargoes which they purchased in Arabia, Ethiopia, and India, at Elath, the safest harbour in the Red Sea towards the north. Thence they were carried by land to Rhinocolura, the distance not being very considerable; and being reshipped in that port, were transported to Tyre, and distributed over the world. Strabon. Geogr. Edit. Casaub. lib. xvi.p. 1128. Diodor. Sicul. Biblioth. Histor. Edit. Wesselingi, lib. i. p. 70.

NOTE II. p. 10.

THE Periplus Hannonis is the only authentic monument of the Carthaginian skill in naval affairs, and one of the most curious fragments transmitted to us by antiquity. The learned and industrious Mr. Dodwell, in a differtation prefixed to the Periplus of Hanno, in the edition of the Minor Geographers published at Oxford, endeavours to prove that this is a spurious work, the composition of some Greek.

Greek, who affumed Hanno's name. But M. de Montesquieu, in his l'Esprit des Loix, liv. xxi. c. 8. and M. de Bougainville, in a dissertation published tom. xxvi. of the Memoires de l'Academie des Inscriptions, &c. have established its authenticity by arguments which to me appear unanswerable. Ramusio has accompanied his translation of this curious voyage with a differtation tending to illustrate it. Racolte de Viaggi, vol. i. p. 112. M. de Bougainville has, with great learning and ability, treated the fame subjects. It appears that Hanno, according to the mode of ancient navigation, undertook this voyage in small yessels, so constructed that he could keep close in with the coast. He sailed from Gades to the island of Cerne in twelve days. This is probably what is known to the moderns by the name of the Isle of Arguim. It became the chief station of the Carthaginians on that coast; and M. de Bougainville contends, that the cifterns found there are monuments of the Carthaginian power and ingenuity. Proceeding from Cerne, and still following the winding of the coast, he arrived, in seventeen days, at a promontory which he called The West Horn, probably Cape Palmas. From this he advanced to another promontory, which he named The South Horn, and which is manifestly Cape de Tres Puntas, about five degrees north of the line. All the circumstances contained in the short abstract of his journal, which is handed down to us, concerning the appearance and state of the countries on the coast of Africa, are confirmed and illustrated by a comparison with the accounts of modern navigators. Even those circumstances, which, from their seeming improbability, have been produced to invalidate the credibility of his relation, tend to confirm it. He observes, that in the country to the south of Cerne, a profound filence reigned through the day; but during the night, innumerable fires were kindled along the banks of the rivers, and the air resounded with the noise of pipes and drums, and cries of joy. The fame thing, as Ramusio observes, still takes place. The excessive heat obliges the negroes to take shelter in the woods. or in their houses, during the day. As soon as the sun sets, they fally out, and by torch-light enjoy the pleasure of music and dancing, in which they

they spend the night. Ramus. i. 113, F. In another place, he mentions the sea as burning with torrents of fire. What occurred to M. Adanson, on the same coast, may explain this. "As soon," says he, "as the sun dipped beneath the horizon, and night overspread the earth with darkness, the sea lent us its friendly light. While the prow of our vessel ploughed the foaming surges, it seemed to set them all on fire. Thus we sailed in a luminous inclosure, which surrounded us like a large circle of rays, from whence darted in the wake of the ship a long stream of light." Voy. to Senegal, p. 176.

NOTE III. p. 11.

ONG after the navigation of the Phenicians and of Eudoxus round Africa, Polybius, the most intelligent and best informed historian of antiquity, affirms, that it was not known, in his time, whether Africa was a continued continent, firetching to the fouth, or whether it was encompassed by the sea. Polybii Hist, lib. iii. Pliny the naturalist afferts. that there can be no communication between the fouthern and northern temperatezones. Plinii Hift. Natur. Edit. in usum Delph. 4to, lib. ii. c. 68. If they had given full credit to the accounts of those voyages, the former could not have entertained fuch a doubt, the latter could not have delivered such an opinion. Strabo mentions the voyage of Eudoxus, but treats it as a fabulous tale, lib. ii. p. 155.; and, according to his account, no other judgment can be formed with respect to it. Strabo feems not to have known any thing with certainty concerning the form and state of the southern parts of Africa. Geogr. lib. xvii. p. 1180. Ptolemy, the most inquisitive and learned of all the ancient geographers, was equally unacquainted with any part of Africa fituited a few degrees beyond the equinoctial line; for he supposes that this great continent was not furrounded by the sea, but that it stretched, without interruption, towards the fouth pole: and he fo far mistakes its true figure, that he describes the continent as becoming broader and broader as it advanced towards the fouth. Ptolomæi Geogr. lib. iv. c. q. Brietii Parlallela Geogr. veteris et novæ, p. 86.

NOTE

NOTE IV. p. 16.

A FACT, recorded by Strabo, affords a very strong and singular proof of the ignorance of the ancients with respect to the situation of the various parts of the earth. When Alexander marched along the banks of the Hydaspes and Acesine, two of the rivers which fall into the Indus, he observed that there were many crocodiles in those rivers, and that the country produced beans of the same species with those which were common in Egypt. From these circumstances, he concluded that he had discovered the source of the Nile, and prepared a fleet to fail down the Hydaspes to Egypt. Strab. Geogr. lib. xv. p. 1020. This amazing error did not arise from any ignorance of geography peculiar to that monarch; for we are informed by Strabo. that Alexander applied with particular attention in order to acquire the knowledge of this science, and had accurate maps or descriptions of the countries through which he marched. Lib. ii. p. 120. But, in his age, the knowledge of the Greeks did not extend beyond the limits of the Mediterranean.

NOTE V. p. 17.

AS the flux and reflux of the sea is remarkably great at the mouth of the river Indus, this would render the phenomenon more formidable to the Greeks. Varen. Geogr. vol. i. p. 251.

NOTE VI. p. 20.

IT is probable that they were feldom induced to advance so far, either by motives of curiosity, or views of commercial advantage. In consequence of this, the idea of the ancients concerning the position of that great river was very erroneous. Ptolemy places that branch of the Ganges which he distinguishes by the name of the Great Mouth, in the hundred and forty-sixth degree of longitude from his first meridian in the Fortunate Islands. But its true longitude, computed from

from that meridian, is now determined by astronomical observations to be only a hundred and five degrees. A geographer so eminent must have been betrayed into an error of this magnitude by the impersection of the information which he had received concerning those distant regions; and this affords a striking proof of the intercourse with them being extremely rare. With respect to the countries of India beyond the Ganges, his intelligence was still more defective, and his errors more enormous. I shall have occasion to observe in another place, that he has placed the country of the Seres, or China, no less than fixty degrees farther east than its true position. M. d'Anville, one of the most learned and inquisitive of the modern geographers, has set this matter in a clear light, in two differtations published in Mem. de l'Academ. des Inscript. &c. tom. xxxii. p. 573.604.

NOTE VII. p. 20.

T is remarkable, that the discoveries of the ancients were made chiefly by land; those of the moderns are made chiefly by sea. The progress of conquest led to the former, that of commerce to the latter. It is a judicious observation of Strabo, that the conquests of Alexander the Great made known the East, those of the Romans opened the West, and those of Mithridates king of Pontus the North. Lib. i. p. 26. When discovery is carried on by land alone, its progress must be flow, and its operations confined. When it is carried on only by fea, its sphere may be more extensive, and its advances more rapid; but it labours under peculiar defects. Though it may make known the position of different countries, and ascertain their boundaries as far as these are determined by the ocean, it leaves us in ignorance with refpect to their interior state. Above two centuries and a half have elapsed fince the Europeans sailed round the southern promontory of Africa, and have traded in most of its ports; but, in a considerable part of that great continent, they have done little more than furvey its coasts, and mark its capes and harbours. Its interior regions are in a Vol. I. 3 I great

great measure unknown. The ancients, who had a very impersect knowledge of its coasts, except where they are washed by the Mediterranean or Red Sea, were accustomed to penetrate into its inland provinces, and, if we may rely on the testimony of Herodotus and Diodorus Siculus, had explored many parts of it now altogether unknown. Unless both modes of discovery be united, the geographical knowledge of the earth must remain incomplete and inaccurate.

NOTE VIII. p. 23.

THE notion of the ancients concerning such an excessive degree of heat in the torrid zone, as rendered it uninhabitable, and their persisting in this error long after they began to have some commercial intercourse with several parts of India lying within the tropics, must appear so singular and absurd, that it may not be unacceptable to some of my readers to produce evidence of their holding this opinion, and to account for the apparent inconsistence of their theory with their experience. Cicero, who had bestowed attention upon every part of philosophy known to the ancients, feems to have believed that the torrid zone was uninhabitable, and, of consequence, that there could be no intercourse between the northern and southern temperate zones. He introduces Africanus thus addressing the younger Scipio: "You fee this earth encompassed and bound in by certain girdles, of which, two, at the greatest distance from each other, and sustaining the oppolite poles of heaven, are frozen with perpetual cold; the middle one, and the largest of all, is burnt with the heat of the sun; two are habitable, the people in the fouthern one are antipodes to us, with whom we have no connection." Somnium Scipionis, c. 6. Geminus, a Greek philosopher, contemporary with Cicero, delivers the same doctrine, not in a popular work, but in his Εισαγωγη εις φαινφιενα, a treatife purely scientific. "When we speak," says he, "of the southern temperate zone, and its inhabitants, and concerning those who are called antipodes, it must be always understood, that we have no certain knowledge or information concerning the fouthern temperate zone, whether

whether it be inhabited or not. But from the spherical figure of the earth, and the course which the sun holds between the tropics, we conclude that there is another zone, situated to the south, which enjoys the same degree of temperature with the northern one which we inhabit." Cap. xiii. p. 31. ap. Petavii Opus de Doctr. Tempor. in quo Uranologium sive Systemata var. Auctorum. Amst. 1705. vol iii. The opinion of Pliny the naturalist, with respect to both these points, was the same: "There are five divisions of the earth, which are called zones. All that portion which lies near to the two opposite poles is oppressed with vehement cold, and eternal frost. There, unblest with the aspect of milder stars, perpetual darkness reigns, or at the utmost a feeble light reflected from surrounding fnows. The middle of the earth, in which is the orbit of the fun, is scorched and burnt up with flames and fiery vapour. Between these torrid and frozen districts lie two other portions of the earth, which are temperate; but, on account of the burning region interposed, there can be no communication between them. Thus Heaven has deprived us of three parts of the earth." Lib. ii. c. 68. Strabo delivers his opinion to the same effect, in terms no less explicit: "The portion of the earth which lies near the equator, in the torrid zone, is rendered uninhabitable by heat." Lib. ii. p. 154. To these I might add the authority of many other respectable philosophers and historians of antiquity.

In order to explain the sense in which this doctrine was generally received, we may observe, that Parmenides, as we are informed by Strabo, was the first who divided the earth into five zones, and he extended the limits of the zone, which he supposed to be uninhabitable on account of heat, beyond the tropics. Aristotle, as we learn likewise from Strabo, fixed the boundaries of the different zones in the same manner as they are defined by modern geographers. But the progress of discovery having gradually demonstrated that several regions of the earth which lay within the tropics were not only habitable, but populous and fertile, this induced later geographers to circum-

scribe the limits of the torrid zone. It is not easy to ascertain with precision the boundaries which they allotted to it. From a passage in Strabo, who, as far as I know, is the only author of antiquity from whom we receive any hint concerning this subject, I should conjecture, that those who calculated according to the measurement of the earth by Eratosthenes, supposed the torrid zone to comprehend near sixteen degrees, about eight on each side of the equator; whereas such as followed the computation of Posidonius allotted about twenty-four degrees, or somewhat more than twelve degrees on each side of the equator to the torrid zone. Strabo, lib. ii. p. 151. According to the former opinion, about two thirds of that portion of the earth which lies between the tropics was confidered as habitable; according to the latter, about one half of it. With this restriction, the doctrine of the ancients concerning the torrid zone appears less absurd; and we can conceive the reason of their afferting this zone to be uninhabitable, even after they had opened a communication with feveral places within the tropics. When men of science spoke of the torrid zone, they considered it as it was limited by the definition of geographers to fixteen, or at the utmost to twenty four degrees; and as they knew almost nothing of the countries nearer to the equator, they might still suppose them to be uninhabitable. In loose and popular discourse, the name of the torrid zone continued to be given to all that portion of the earth which lies within the tropics. Cicero feems to have been unacquainted with the ideas of later geographers, and according to the division of Parmenides, describes the torrid zone as the largest of the five. Some of the ancients rejected the notion concerning the intolerable heat of the torrid zone as a popular error. This, we are told by Plutarch, was the fentiment of Pythagoras, and we learn from Strabo, that Eratosthenes and Polybius had adopted the same opinion. lib. ii. 154. Ptolemy feems to have paid no regard to the ancient doctrine and opinions concerning the torrid zone.

NOTE IX. p. 42.

THE court of inquisition, which effectually checks a spirit of liberal inquiry, and of literary improvement, wherever it is established, was first introduced into Portugal by John III. who began his reign, A. D. 1521.

NOTE X. p. 49.

AN instance of this is related by Hackluyt, upon the authority of the Portugueze historian Garcia de Resende. Some English merchants having resolved to open a trade with the coast of Guinea, John II. of Portugal dispatched ambassadors to Edward IV., in order to lay before him the right which he had acquired by the Pope's bull to the dominion of that country, and to request of him to prohibit his subjects to prosecute their intended voyage. Edward was so much satisfied with the exclusive title of the Portugueze, that he issued his orders in the terms which they desired. Hackluyt, Navigations, Voyages, and Traffics of the English, vol. ii. part ii. p. 2.

NOTE XI. p. 59.

THE time of Columbus's birth may be nearly ascertained by the following circumstances. It appears from the fragment of a letter, addressed by him to Ferdinand and Isabella, A. D. 1501, that he had, at that time, been engaged forty years in a sea-faring life. In another letter, he informs them, that he went to sea at the age of fourteen; from those facts it follows, that he was born A. D. 1447. Life of Christ. Columbus, by his son Don Ferdinand. Churchill's Collection of Voyages, vol. ii. p. 484, 485.

NOTE XII. p. 65.

THE spherical figure of the earth was known to the ancient geographers. They invented the method, still in use, of computing the longitude and latitude of different places. According to their doctrine, the equator or imaginary line which encompasses the earth contained three hundred and fixty degrees; these they divided into twentyfour parts, or hours, each equal to fifteen degrees. The country of the Se or Sine, being the farthest part of India known to the ancients, was supposed, by Marinus Tyrius, the most eminent of the ancient geographers before Ptolemy, to be fifteen hours, or two hundred and twenty-five degrees to the east of the first meridian, passing through the Fortunate Islands. Ptolomæi Geogr. lib. i. c. 11. If this suppofition was well-founded, the country of the Seres, or China, was only nine hours, or one hundred and thirty five degrees west from the Fortunate, or Canary Islands; and the navigation, in that direction, was much shorter than by the course which the Portugueze were purfuing. Marco Polo, in his travels, had described countries, particularly the island of Cipango or Zipangri, supposed to be Japan, considerably to the east of any part of Asia, known to the ancients. Marcus Paulus de Region. Oriental. lib. ii. c. 70. lib. iii. c. 2. Cf course, this country, as it extended further to the east, was still nearer to the Canary The conclusions of Columbus, though drawn for innacurate observations, were just. If the suppositions of Marinus had been well founded, and if the countries, which Marco Polo visited, had been situated to the east of those whose longitude Marinus had ascertained, the proper and nearest course to the East Indies must have been to steer directly west. Herrera, dec. 1. lib. i. c. 2. A more extenfive knowledge of the globe has now discovered the great error of Marinus, in supposing China to be fifteen hours, or two hundred and twenty-five degrees east from the Canary Islands, and that even Ptolemy was mistaken, when he reduced the longitude of China to twelve hours, or one hundred and eighty degrees. The longitude

of the western frontier of that vast empire is seven hours, or one hundred and sisteen degrees from the meridian of the Canary Islands. But Columbus followed the light, which his age afforded, and relied upon the authority of writers, who were, at that time, regarded as the instructors and guides of mankind in the science of geography.

NOTE XIII. p. 86.

As the Portugueze, in making their discoveries, did not depart far from the coast of Africa, they concluded that birds, whose slight they observed with great attention, did not venture to any considerable distance from land. In the infancy of navigation, it was not known, that birds often stretch their slight at an immense distance from any land. In sailing rowards the West-Indian islands, birds are often seen at the distance of two hundred leagues from any land. Sloane's Nat. Hist. of Jamaica, vol. i. p. 30. Catesby saw an owl at sea, when the ship was six hundred leagues distant from land. Nat. Hist. of Carolina, pres. p. 7. Hist. Naturelle de M. de Busson, tom. xvi. p. 32. From which it appears, that this indication of land, on which Columbus seems to have relied with some considence, was extremely uncertain.

NOTE XIV. p. 96.

In a letter of the admiral's to Ferdinand and Isabella, he describes one of the harbours in Cuba, with all the enthusiastic admiration of a discoverer.—" I discovered a river which a galley might easily enter; the beauty of it induced me to sound, and I sound from five to eight fathoms of water. Having proceeded a considerable way up the river, every thing invited me to settle there. The beauty of the river, the clearness of the water, through which I could see the sandy bottom, the multitude of palm-trees of different kinds, the tallest and finest I had seen, and an infinite number of other large and flourishing trees, the birds, and the verdure of the plains, are so wonderfully

fully beautiful, that this country excels all others as far as the day furpasses the night in brightness and splendour, so that I often said, that it would be in vain for me to attempt to give your high-nesses a full account of it, for neither my tongue nor my pen could come up to the truth, and indeed I am so much amazed at the sight of such beauty, that I know not how to describe it." Life of Columb. c. 30.

NOTE XV. p. 100.

THE account which Columbus gives of the humanity and orderly behaviour of the natives on this occasion is very striking. "The king (fays he, in a letter to Ferdinand and Isabella) having been informed of our misfortune, expressed great grief for our loss, and immediately fent aboard all the people in the place in many large canoes; we foon unloaded the ship of every thing that was upon deck, as the king gave us great affistance, he himself, with his brothers and relations, took all possible care, that every thing should be properly done both aboard and on shore. And, from time to time, he fent some of his relations weeping, to beg of me not to be dejected, for he would give me all that he had. I can affure your highnesses, that there would not have been so much care taken in fecuring our effects in any part of Spain, as all our property was put together in one place near his palace, until the houses which he wanted to prepare for the custody of it, were emptied. He immediately placed a guard of armed men, who watched during the whole night, and those on shore lamented as if they had been much interested in our loss. The people are so affectionate, so tractable, and so peaceable, that I swear to your highnesses, that there is not a better race of men, nor a better country in the world. They love their neighbour as themselves; their conversation is the sweetest and mildest in the world, cheerful, and always accompanied with a smile. And although it is true that they go naked, yet your highnesses may be affured that they have many very commendable customs; the king is ferved

ferved with great state, and his behaviour is so decent, that it is pleasant to see him, as it is likewise to observe the wonderful memory which these people have, and their desire of knowing every thing, which leads them to inquire into its causes and effects. Life of Columbus, c. 32. It is probable that the Spaniards were indebted for this officious attention, to the opinion which the Indians entertained of them as a superior order of beings.

NOTE XVI. p. 106.

EVERY monument of fuch a man as Columbus is valuable. A letter which he wrote to Ferdinand and Isabella, describing what passed on this occasion, exhibits a most striking picture of his intrepidity, his humanity, his prudence, his public spirit, and courtly addreis. " I would have been less concerned for this misfortune, had I alone been in danger, both because my life is a debt that I owe to the Supreme Creator, and because I have at other times been exposed to the most imminent hazard. But what gave me infinite grief and vexation was, that after it had pleased our Lord to give me faith to undertake this enterprize, in which I had now been fo fucceisful, that my opponent would have been convinced, and the glory of your highnesses, and the extent of your territory increased by me; it should please the Divine Majesty to stop all by my death. All this would have been more tolerable, had it not been attended with the loss of those men whom I had carried with me, upon promife of the greatest prosperity, who seeing themselves in fuch diffress, cursed not only their coming along with me, but that fear and awe for me, which prevented them from returning as they often had resolved to have done. But besides all this, my forrow was greatly increased, by recollecting that I had left my two sons at school at Cordova, destitute of friends, in a foreign country, when it could not in all probability be known that I had done fuch fervices as might induce your highnesses to remember them. And though I comforted myself with the faith that our Lord would not permit that, Vol. I. which 3 K

which tended fo much to the glory of his church, and which I had brought about with so much trouble, to remain imperfect, yet I confidered that, on account of my lins, it was his will to deprive me of that glory, which I might have attained in this world. While in this confused state, I thought on the good fortune which accompanies your highnesses, and imagined, that although I should perish, and the vessel be lost, it was possible that you might somehow come to the knowledge of my voyage, and the success with which it was attended. For that reason I wrote upon parchment with the brevity which the fituation required, that I had discovered the lands which I promised, in how many days I had done it, and what course I had followed. I mentioned the goodness of the country, the character of the inhabitants, and that your highnesses subjects were left in posfession of all that I had discovered. Having sealed this writing, I addressed it to your highnesses, and promised a thousand ducats to any person who should deliver it sealed, so that if any foreigners found it, the promised reward might prevail on them not to give the information to another. I then caused a great calk to be brought to me, and wrapping up the parchment in an oiled cloth, and afterwards in a cake of wax, I put it into the cask, and having stopt it well, I cast it into the sea. All the men believed that it was some act of devotion. Imagining that this might never chance to be taken up, as the ships approached nearer to Spain, I made another packet like the first, and placed it at the top of the poop, so that if the ship sunk, the cask remaining above water might be committed to the guidance of fortune."

NOTE XVII. p. 110.

SOME Spanish authors, with the meanness of national jealousy, have endeavoured to detract from the glory of Columbus, by infinuating that he was led to the discovery of the New World, not by his own inventive, or enterprising genius, but by information which he had received. According to their account, a vessel having been driven

driven from its course by easterly winds, was carried before them far to the west, and landed on the coast of an unknown country, from which it returned with difficulty; the pilot, and three failors, being the only persons of the crew that survived the distresses which they fuffered, from want of provisions and fatigue in this long voyage. In a few days after their arrival, all the four died, but the pilot having been received into the house of Columbus, his intimate friend, disclosed to him, before his death, the secret of the discovery which he had accidentally made, and left him his papers containing a journal of the voyage, which ferved as a guide to Columbus in his undertaking. Gomara, as far as I know, is the first author who published this story, Hist. c. 13. Every circumstance is destitute of evidence to support it. Neither the name of the vessel nor its destination is known. Some pretend that it belonged to one of the fea-port towns in Andalusia, and was failing either to the Canaries, or to Madeira; others, that it was a Biscayner in its way to England; others, a Portuguese ship trading on the coast of Guinea. The name of the pilot is alike unknown, as well as that of the port in which he landed on his return. According to fome, it was in Portugal; according to others, in Madeira, or the Azores. The year in which this voyage was made is no less uncertain. Monson's Nav. Tracts. Churchill, iii. 271. No mention is made of this pilot, or his discoveries, by And. Bernaldes, or Pet. Martyr, the contemporaries of Columbus. Herrera, with his usual judgment, passes over it in filence. Oviedo takes notice of this report, but considers it as a tale fit only to amuse the vulgar. Hist. lib. ii. c. 2. As Columbus held his course directly west from the Canaries, and never varied it, some later authors have supposed, that this uniformity is a proof of his being guided by some previous information. But they do not recollect the principles on which he founded all his hopes of fuccess, that by holding a westerly course, he must certainly arrive at those regions of the east described by the ancients. His firm belief of his own fystem led him to take that course, and to pursue it without deviation.

3 K 2

OTHER

OTHER nations beside the Spaniards have called in question Columbus's claim to the honour of having discovered America. Some German authors ascribe it to Martin Behaim, whom they suppose to be their countryman. But they mention neither the year in which he made the discovery, nor the place from which he sailed, nor one circumstance of the voyage. Jo. Frid. Stuvenius, in a Differtation de vero Novi Orbis Inventore, published at Francfort in the year 1714, warmly afferts the title of Behaim, but without producing in confirmation of it, any thing that has even the shadow of evidence. was indeed a Martin de Boemia, a noted cosmographer in the fifteenth century, whom Herrera mentions as a friend to Columbus, dec. 1. lib. i. c. 2. but he affures us that he was a Portuguese, and born in the island of Fayal, one of the Azores. Ibid, and dec. 2. lib, ii. c. 10. Gomara informs us, that Magellan was possessed of a terrestrial globe, made by this Martin de Boemia, on which he demonstrated the course he purposed to hold, in searching for that strait which he afterwards discovered. Hist. c. 19. It seems probable, then, that the Germans have been induced, merely by the name of this artift, to suppose him a native of Bohemia, and on that supposition, have raised their imaginary pretentions.

THOSE of the Welsh seem not to rest on a soundation much more solid. In the twelsth century, according to Powell, a dispute having arisen among the sons of Owen Guyneth, king of North-Wales, concerning the succession to his crown, Madoc, one of their number, weary of this contention; betook himself to sea in quest of a more quiet settlement. He steered due west, leaving Ireland to the north, and arrived in an unknown country, which appeared to him so desirable, that he returned to Wales, and carried thither several of his adherents and companions. This is said to have happened about the year 1170, and after that, he and his colony were heard of no more. But it is to be observed, that Powell, on whose testimony the authenticity of this story rests, published his history above four centuries from the date of the event which he relates. Among a people so rude

rude and so illiterate as the Welsh, at that period, the memory of a transaction so remote must have been very imperfectly preserved, and would require to be confirmed by some author of greater credit, and nearer to the æra of Madoc's voyage than Powell. Later antiquaries have indeed appealed to the testimony of Meredith ap Rhees, a Welsh bard, who died A. D. 1477. But he too lived at fuch a distance of time from the event, that he cannot be confidered as a witness of much more credit than Powell. Besides his verses published by Hakluyt, vol. iii. p. 1. convey no information, but that Madoc, diffatisfied with his domestic situation, employed himself in searching the ocean for new possessions. But even if we admit the authenticity of Powell's story, it does not follow that the unknown country which Madoc discovered by steering west, in such a course as to leave Ireland to the north, was any part of America. The skill of the Welsh in the twelfth century was hardly equal to fuch a voyage. If he made any discovery at all, it more probably might be Madeira, or fome other of the western isles. The affinity of the Welsh language with some dialects spoken in America, has been mentioned as a circumstance which confirms the truth of Madoc's voyage. But that has been observed in so few instances, and in some of these the affinity is so obscure, or so fanciful, that no conclusion can be drawn from the casual resemblance of a small number of words. There is a bird, which as far as is yet known, is found only on the coasts of South America, from Port Desire to the Straits of Magellan. It is distinguished by the name of Penguin. This word in the Welsh language signifies White-bead. All the authors who favour the pretentions of the Welsh to the discovery of America, mention this as an irrefragable proof of the affinity of the Welsh language with that spoken in that region of America. But Mr. Pennant, who has given a scientific description of the Penguin, observes, that all the birds of that genus have black heads, " so that we must resign every hope (adds he) founded on this hypothesis of retrieving the Cambrian race in the New World." Philos. Transact. vol. lviii. p. 91, &c. Beside this, if the Welsh, towards the close of the twelfth century, had settled in any part of America,

America, some remains of the Christian doctrine and rites must have been found among their descendants, when they were discovered about three hundred years posterior to their migration, a period so short, that, in the course of it, we cannot well suppose that all European ideas and arts would be totally forgotten.

THE pretentions of the Norwegians to the discovery of America. seem to be better founded than those of the Germans or Welsh. The inhabitants of Scandinavia were remarkable in the middle ages for the boldness and extent of their maritime excursions. 874, the Norwegians discovered, and planted a colony in Iceland. In 982, they discovered Greenland, and established settlements there. From that, some of their navigators proceeded towards the west, and discovered a country more inviting than those horrid regions with which they are acquainted. According to their representation, this country was fandy on the coasts, but in the interior parts level and covered with wood, on which account they gave it the name of Helleland, and Mark-land, and having afterwards found some plants of the vine which bore grapes, they called it Win-land. The credit of this story rests, as far as I know, on the authority of the saga, or chronicle of king Olaus, composed by Snorro Sturlonides, or Sturlusons, published by Perinskiold at Stockholm A. D. 1697. As Snorro was born in the year 1179, his chronicle might be compiled about two centuries after the event which he relates. His account of the navigation and discoveries of Biorn, and his companion Lief, is a very rude confused tale, p. 104. 110. 326. It is impossible to discover from him, what part of America it was in which the Norwegians landed. According to his account of the length of the days and nights, it must have been as far north as the fifty-eighth degree of latitude, on some part of the coast of Labradore, approaching near to the entry of Hudson's Straits. Grapes, certainly, are not the production of that country. Torfeus supposes that there is an error in the text, by rectifying of which, the place where the Norwegians landed may be supposed to be situated in latitude 49°. But that is

not the region of the vine in America. From perusing Snorro's tale, I should think that the situation of Newfoundland corresponds best with that of the country discovered by the Norwegians. But grapes are not the production of that barren island. Other conjectures are mentioned by M. Mallet, Introd. a l'Hist. de Dannem. 175, &c. I am not sufficiently acquainted with the literature of the north, to examine them. It seems manifest, that if the Norwegians did discover any part of America at that period, their attempts to plant colonies proved unsuccessful, and all knowledge of it was soon lost.

NOTE XVIII. P. 111.

DETER MARTYR, ab Angleria, a Milanese gentleman, who refided at that time in the court of Spain, whose letters contain an account of the transactions of that period, in the order wherein they occurred, describes the sentiments with which he himself and his learned correspondents were affected, in very striking terms. " Præ letitia profiluisse te, vixque a lachrymis præ gaudio temperasse, quando literas adspexisti meas quibus, de antipodum orbe latenti hactenus, te certiorem feci, mi suavissime Pomponi, insinuasti. Ex tuis ipse literis colligo, quid senseris. Sensisti autem, rantique rem fecisti, quanti virum summa doctrina insignitum decuit. Quis namque cibus sublimibus præstari potest ingeniis, isto suavior? quod condimentum gratius? A me facio conjecturam. Beari sentio spiritus meos, quando accitos alloquor prudentes aliquos ex his qui ab ea redeunt provincia. Implicent animos pecuniarum cumulis augendis miseri avari, libidinibus obscœni; nostras nos mentes, postquam Deo pleni aliquando fuerimus, contemplando, hujuscemodi rerum notitia demulciamus." Epist. 152. Pomponio Læto.

NOTE XIX. p. 122.

SO firmly were men of science, in that age, persuaded that the countries which Columbus had discovered were connected with the East Indies, that Bernaldes, the curate of Los Palacios, who seems to have been

been no inconsiderable proficient in the knowledge of cosmography. contends that Cuba was not an island, but a part of the continent, and united to the dominions of the Great Khan. This he delivered as his opinion to Columbus himfelf, who was his guest for some time on his return from his fecond voyage; and he supports it by several arguments, mostly founded on the authority of Sir John Mandeville. MS. penes me. Antonio Gallo, who was fecretary to the magistracy of Genoa towards the close of the fifteenth century, published a short account of the navigations and discoveries of his countryman Columbus, annexed to his Opuscula Historica de rebus populi Genuensis; in which he informs us, from letters of Columbus which he himfelf had feen, that it was his opinion, founded upon nautical observations, that one of the islands he had discovered was distant only two hours or thirty degrees from Cattigara, which, in the charts of the geographers of that age, was laid down, upon the authority of Ptolemy, lib. vii. c. c. as the most easterly place in Asia. From this he concluded, that if some unknown continent did not obstruct the navigation, there must be a short and easy access, by holding a westerly course, to this extreme region of the East. Muratori Scriptores Rer. Italicarum, vol. xxiii. p. 304.

NOTE XX. p. 127.

BERNALDES, the curate de los Palacios, a contemporary writer, fays, that five hundred of these captives were sent to Spain, and sold publickly in Seville as slaves; but that, by the change of climate, and their inability to bear the fatigue of labour, they all died in a short time. MS. penes me.

NOTE XXI. p. 139.

COLUMBUS feems to have formed fome very singular opinions concerning the countries which he had now discovered. The violent swell and agitation of the waters on the coast of Trinidad led him

him to conclude, that this was the highest part of the terraqueous globe, and he imagined that various circumstances concurred in proving that the sea was here visibly elevated. Having adopted this erroneous principle, the apparent beauty of the country induced him to fall in with a notion of Sir John Mandeville, c. 102. that the terrestrial paradise was the highest land in the earth; and he believed that he had been so fortunate as to discover this happy abode. Nor ought we to think it strange that a person of so much sagacity should be influenced by the opinion or reports of such a fabulous author as Mandeville. Columbus and the other discoverers were obliged to follow such guides as they could find; and it appears from several passages in the manuscript of Andr. Bernaldes, the friend of Columbus, that no inconsiderable degree of credit was given to the testimony of Mandeville in that age. Bernaldes frequently quotes him, and always with respect.

NOTE XXII. p. 150.

TT is remarkable, that neither Gomara or Oviedo, the most ancient Spanish historians of America, nor Herrera, consider Hojeda, or his companion Vespucci, as the first discoverers of the continent of America. They uniformly ascribe this honour to Columbus. Some have supposed that national refentment against Vespucci, for deserting the fervice of Spain, and entering into that of Portugal, may have prompted these writers to conceal the actions which he performed. But Martyr and Benzoni, both Italians, could not be warped by the same prejudice. Martyr was a contemporary author; he refided in the court of Spain, and had the best opportunity to be exactly informed with respect to all public transactions; and yet, neither in his Decads, the first general history published of the New World, nor in his Epistles, which contain an account of all the remarkable events of his time, does he ascribe to Vespucci the honour of having first discovered the continent. Benzoni went as an adventurer to America in the year 1541, and refided there a confiderable time. He appears to have VOL. I. 3 L been

been animated with a warm zeal for the honour of Italy, his native country, and yet does not mention the exploits and discoveries of Vespucci. Herrera, who compiled his general history of America from the most authentic records, not only follows those early writers, but accuses Vespucci of fallifying the dates of both the voyages which he made to the New World, and of confounding the one with the other, in order that he might arrogate to himself the glory of having discovered the continent. Her. dec. 1. lib. iv. c. 2. He afferts. that in a judicial inquiry into this matter by the royal fiscal, it was proved by the testimony of Hojeda himself, that he touched at Hispaniola when returning to Spain from his first voyage; whereas Vespucci gave out that they returned directly to Cadiz from the coast of Paria, and touched at Hispaniola only in their second voyage; and that he had finished the voyage in five months; whereas, according to Vespucci's account, he had employed feventeen months in performing ic. Viaggio primo de Am. Vespucci, p. 36. Viag. secundo, p. 45. Herrera gives a more full account of this inquest in another part of his book, and to the same effect. Her. dec. 1. lib. vii. c. 5. Columbus was in Hispaniola when Hojeda arrived there, and had by that time come to an agreement with Roldan, who opposed Hojeda's attempt to excite a new infurrection, and, of consequence, his voyage must have been posterior to that of the admiral. Life of Columbus, c. 84. According to Vespucci's account, he set out on his first voyage May 10th, 1497. Viag. primo, p. 6. At that time Columbus was in the court of Spain preparing for his voyage, and feems to have enjoyed a considerable degree of favour. The affairs of the New World were at this juncture under the direction of Antonio Torres, a friend of Columbus. It is not probable, that at that period a commission would be granted to another person, to anticipate the admiral, by undertaking a voyage which he himself intended to perform. Fonseca, who patronized Hojeda, and granted the licence for his voyage, was not recalled to court, and reinstated in the direction of Indian affairs, until the death of prince John, which happened September 1497, P. Martyr, Ep. 182. several months posterior to the

the time at which Vespucci pretends to have set out upon his voyage. A life of Vespucci was published at Florence by the Abate Bandini, A. D. 1745, 4to. It is a work of no merit, written with little judgment, and less candour. He contends for his countryman's title to the discovery of the continent with all the blind zeal of national partiality, but produces no new evidence to support it. We learn from him, that Vespucci's account of his voyage was published as early as the year 1510, and probably sooner. Vita di Am. Vesp. p. 52. At what time the name of America came to be first given to the New World, is not certain.

NOTE XXIII. p. 192.

THE form employed on this occasion served as a model to the Spaniards in all their subsequent conquests in America. It is so extraordinary in its nature, and gives us fuch an idea of the proceedings of the Spaniards, and the principles upon which they founded their right to the extensive dominions which they acquired in the New World, that it well merits the attention of the reader. "I Alonso de Hojeda, fervant of the most high and powerful kings of Castile and Leon, the conquerors of barbarous nations, their messenger and captain, notify to you and declare, in as ample form as I am capable, that God our Lord, who is one and eternal, created the heaven and the earth, and one man and one woman, of whom you and we, and all the men who have been or shall be in the world, are descended. But as it has come to pass, through the number of generations during more than five thousand years, that they have been dispersed into different parts of the world, and are divided into various kingdoms and provinces, because one country was not able to contain them, nor could they have found in one the means of subsistence and preservation; therefore God our Lord gave the charge of all those people to one man, named St. Peter, whom he constituted the lord and head of all the human race, that all men, in whatever place they are born, or in whatever faith or place they are educated, might yield obedience unto him. He hath subjected the whole world to his jurisdiction, and commanded him to establish his residence in Rome, as the most proper place for the government of the world. He likewise promised and gave him power to establish his authority in every other part of the world, and to judge and govern all Christians, Moors, Jews, Gentiles, and all other people, of whatever sect or faith they may be. To him is given the name of *Pope*, which signifies admirable, great father and guardian, because he is the father and governor of all men. Those who lived in the time of this holy father obeyed and acknowledged him as their lord and king, and the superior of the universe. The same has been observed with respect to them who, since his time, have been chosen to the pontificate. Thus it now continues, and will continue to the end of the world.

"ONE of these pontiffs, as lord of the world, hath made a grant of these islands, and of the Terra Firma of the ocean sea, to the Catholic kings of Castile, Don Ferdinand and Donna Isabella, of glorious memory, and their fuccessors, our sovereigns, with all they contain, as is more fully expressed in certain deeds passed upon that occasion. which you may fee, if you defire it. Thus his majesty is king and lord of these islands, and of the Terra Firma, in virtue of this donation; and, as king and lord aforesaid, most of the islands to which his title hath been notified, have recognized his majesty, and now yield obedience and subjection to him as their lord, voluntarily and without refistance; and instantly, as soon as they received information, they obeyed the religious men fent by the king to preach to them, and to instruct them in our holy faith; and all these, of their own free-will, without any recompence or gratuity, became Christians, and continue to be fo; and his majesty having received them graciously under his protection, has commanded that they should be treated in the same manner as his other fubjects and vasfals. You are bound and obliged to act in the fame manner. Therefore I now entreat and require you to consider attentively what I have declared to you; and that you may more perfectly comprehend it, that you take such time as is reafonable,

fonable, in order that you may acknowledge the Church as the superior and guide of the universe, and likewise the holy father called the Pope, in his own right, and his majesty by his appointment, as king and fovereign lord of these islands, and of the Terra Firma; and that you consent that the foresaid holy fathers shall declare and preach to you the doctrines above mentioned. If you do this, you act well, and perform that to which you are bound and obliged; and his maiesty, and I in his name, will receive you with love and kindness, and will leave you, your wives and children, free and exempt from fervitude, and in the enjoyment of all you possess, in the same manner as the inhabitants of the islands. Besides this, his majesty will bestow upon you many privileges, exemptions, and rewards. But if you will not comply, or maliciously delay to obey my injunction, then, with the help of God, I will enter your country by force, I will carry on war against you with the utmost violence, I will subject you to the voke of obedience to the church and the king, I will take your wives and children, and will make them flaves, and fell or dispose of them according to his majesty's pleasure; I will seize your goods, and do you all the mischief in my power, as rebellious subjects, who will not acknowledge or submit to their lawful sovereign. And I protest, that all the bloodshed and calamities which shall follow are to be imputed to you, and not to his majesty, or to me, or the gentlemen who ferve under me; and as I have now made this declaration and requisition unto you, I require the notary here present to grant me a certificate of this, subscribed in proper form." Herrera, dec. 1. lib. vii. c. 14.

NOTE XXIV. p. 205.

BALBOA, in his letter to the king, observes, that of the hundred and ninety men whom he took with him, there were never above eighty fit for service at one time. So much did they suffer from hunger, fatigue, and sickness. Herrera, dec. 1. lib. x. c. 16. P. Mart. decad. p. 226.

NOTE.

NOTE XXV. p. 217.

FONSECA, bishop of Palencia, the principal director of American affairs, had eight hundred Indians in property; the commendator Lope de Conchillos, his chief affociate in that department, eleven hundred; and other favourites had different numbers. They sent overseers to the islands, and hired out those slaves to the planters. Herr. dec. 1. lib. ix. c. 14. p. 325.

NOTE XXVI. p. 239.

THOUGH America is more plentifully supplied with water than the other regions of the globe, there is no river or stream of water in Yucatan. This peninsula projects from the continent a hundred leagues, but, where broadest, does not extend above twenty-five leagues. It is a flat plain, without mountains. The inhabitants are supplied with water from pits, and wherever they dig them, find it in abundance. It is probable, from all those circumstances, that this country was formerly covered by the sea. Herreræ Descriptio Indiæ Occidentalis, p. 14. Histoire Naturelle, par M. de Busson, tom. i. p. 593.

NOTE XXVII. p. 249.

THE height of the most elevated point in the Pyrenees is, according to M. Cassini, six thousand six hundred and forty-six seet. The height of the mountain Gemmi, in the canton of Berne, is ten thousand one hundred and ten seet. The height of the Pike of Tenerisse, according to the measurement of P. Feuillè, is thirteen thousand one hundred and seventy-eight seet. The height of Chimborazo, the most elevated point of the Andes, is twenty thousand two hundred and eighty seet. Voyage de D. Juan Ulloa, Observations Astron. et Physiq. tom. ii. p. 114. The height of that part of Chimborazo

Chimborazo which is covered perpetually with snow, is two thousand four hundred seet. Prevot. Hist. Gener. des Voyages, vol. xiii. p. 636.

NOTE XXVIII. p. 249.

A S a particular description makes a stronger impression than general affertions, I shall give one of Rio de la Plata by an eye-witness. P. Cattaneo, a Modenese jesuit, landed at Buenos Ayres in 1749, and thus represents what he felt when such new objects were first prefented to his view. "While I refided in Europe, and read in books of history or geography that the mouth of the river De la Plata was an hundred and fifty miles in breadth, I considered it as an exaggeration, because in this hemisphere we have no example of such vast rivers. When I approached its mouth, I had the most vehement desire to ascertain the truth with my own eyes, and I have found the matter to be exactly as it was represented. This I deduce particularly from one circumstance: When we took our departure from Monte-Video. a fort situated more than a hundred miles from the mouth of the river, and where its breadth is confiderably diminished, we sailed a complete day before we discovered the land on the opposite bank of the river; and when we were in the middle of the channel, we could not discern land on either side, and saw nothing but the sky and water, as if we had been in some great ocean. Indeed, we should have taken it to be sea, if the fresh water of the river, which was turbid like the Po, had not satisfied us that it was a river. Moreover, at Buenos Ayres, another hundred miles up the river, and where it is still much narrower, one cannot discern the opposite coast, which is indeed very low and flat; but one cannot perceive the houses or the tops of the steeples in the Portuguese settlement at Colonia on the other side of the river." Lettera prima, published by Muratori, Il Christianesimo: Felice, &c. i. p. 257.

NOTE XXIX. p. 252.

NEWFOUNDLAND, part of Nova Scotia and Canada, are the countries which lie in the fame parallel of latitude with the kingdom of France; and in all of them the water of the rivers is frozen during winter to the thickness of several seet; the earth is covered with snow as deep; almost all the birds fly, during that season, from a climate where they could not live. The country of the Eskimaux, part of Labrador, and the countries on the south of Hudson's Bay, are in the same parallel with Great Britain; and yet in all these the cold is so intense, that even the industry of Europeans has not attempted cultivation.

NOTE XXX. p. 254.

ACOSTA is the first philosopher, as far as I know, who endeavoured to account for the different degrees of heat in the old and new continents, by the agency of the winds which blow in each. Hist. Moral. &c. lib. ii. & iii. M. de Busson adopts this theory, and has not only improved it by new observations, but has employed his amazing powers of descriptive eloquence in embellishing and placing it in the most striking light. Some remarks may be added, which tend to illustrate more fully a doctrine of much importance in every inquiry concerning the temperature of various climates.

When a cold wind blows over land, it must in its passage rob the surface of some of its heat. By means of this, the coldness of the wind is abated. But if it continue to blow in the same direction, it will come, by degrees, to pass over a surface already cooled, and will suffer no longer any abatement of its own keenness. Thus, as it advances over a large tract of land, it brings on all the severity of intense frost.

LET the same wind blow over an extensive and deep sea; the superficial water must be immediately cooled to a certain degree, and the wind proportionally warmed. But the fuperficial and colder water becoming specifically heavier than the warmer water below it, defeends; what is warmer supplies its place, which, as it comes to be cooled in its turn, continues to warm the air which passes over it, or to diminish its cold. This change of the superficial water, and succesfive ascent of that which is warmer, and consequent successive abatement of coldness in the air, is aided by the agitation caused in the sea by the mechanical action of the wind, and also by the motion of the tides. This will go on, and the rigour of the wind will continue to diminish until the whole water is so far cooled, that the water on the furface is no longer removed from the action of the wind, fast enough to hinder it from being arrefted by frost. Whenever the furface freezes, the wind is no longer warmed by the water from below, and it goes on with undiminished cold.

FROM those principles may be explained the severity of winter frosts in extensive continents; their mildness in small islands; and the superior rigour of winter in those parts of North America with which we are best acquainted. In the north-west parts of Europe, the severity of winter is mitigated by the west winds, which usually blow in the months of November, December, and part of January.

On the other hand, when a warm wind blows over land, it heats the furface, which must therefore cease to abate the fervour of the wind. But the same wind blowing over water, agitates it, brings up the colder water from below, and thus is continually losing somewhat of its own heat.

But the great power of the sea to mitigate the heat of the wind or air passing over it, proceeds from the following circumstance, that on account of the transparency of the sea, its surface cannot be heated to a great degree by the sur's rays; whereas the ground, subjected to their in-Vol. I.

3 M fluence, fluence, very foon acquires great heat. When, therefore, the wind blows over a torrid continent, it is foon raifed to a heat almost intolerable; but during its passage over an extensive ocean, it is gradually cooled; fo that on its arrival at the farthest shore, it is again fit for respiration.

Those principles will account for the fultry heats of large continents in the torrid zone; for the mild climate of islands in the same latitude; and for the superior warmth in summer which large continents, situated in temperate or colder zones of the earth, enjoy, when compared with that of islands. The heat of a climate depends not only upon the immediate effect of the sun's rays, but on their continued operation, on the effect which they have formerly produced, and which remains for some time in the ground. This is the reason why the day is warmest about two in the afternoon, the summer warmest about the middle of July, and the winter coldest about the middle of January.

The forests which cover America, and hinder the sun beams from heating the ground, are a great cause of the temperate climate of the equatorial parts. The ground, not being heated, cannot heat the air; and the leaves, which receive the rays intercepted from the ground, have not a mass of matter sufficient to absorb heat enough for this purpose. Besides, it is a known fact, that the vegetative power of a plant occasions a perspiration from the leaves in proportion to the heat to which they are *xposed; and, from the nature of evaporation, this perspiration produces a cold in the leaf proportional to the perspiration. Thus the effect of the leaf in heating the air in contact with it, is prodigiously diminished. For those observations, which throw much additional light on this curious subject, I am indebted to my ingenious friend, Mr. Robison, professor of natural philosophy in the university of Edinburgh.

NOTE XXXI. p. 255.

THE climate of Brasil has been described by two eminent naturalists, Piso and Margrave, who observed it with a philosophical accuracy, which we defiderate in the accounts of many other provinces in America. Both represent it as temperate and mild, when compared with the climate of Africa. They ascribe this chiefly to the refreshing wind which blows continually from the sea. The air is not only cool, but chilly through the night, in fo much that the natives kindle fires every evening in their huts. Pifo de Medicina Brafiliensi, lib. i. p. 1, &c. Margravius Histor. Rerum Natural. Brasiliæ, lib. viii. c. 3. p. 264. Nieuhoff, who resided long in Brasil, confirms their description. Churchill's Collection, vol. ii. p. 26. Gumilla. who refided many years in the country, upon the river Orinoco. gives a similar description of the temperature of the climate there. Hist. de l'Orenoque, tom. i. p. 26. P. Acugna felt a very considerable degree of cold in the countries on the banks of the river Amazons. Relat. vol. ii. p. 56. M. Biet, who lived a confiderable time in Cayenne. gives a fimilar account of the temperature of that climate, and ascribes it to the same cause. Voyage de la France, Exquinox, p. 330. Nothing can be more different from these descriptions than that of the burning heat of the African coast given by M. Adanson. Voyage to Senegal, passim.

The most obvious and probable cause of this superior degree of cold, towards the southern extremity of America, seems to be the form of the continent there. Its breadth gradually decreases as it stretches from St. Antonio southwards, and from the bay of St. Julian to the Straits of Magellan its dimensions are much contracted. On the east and west sides, it is washed by the Atlantic and Pacific Oceans. From its southern point it is probable that an open sea stretches to the Antartic pole. In whichever of these directions the wind blows, it is cooled before it approaches the Magellanic regions, by passing over

a vast body of water, nor is the land there of such extent that it can recover any confiderable degree of heat in its progress over it. These circumstances concur in rendering the temperature of the air in this district of America, more similar to that of an insular, than to that of a continental climate, and hinder it from acquiring the same degree of fummer heat, with places in Europe and Asia, in a corresponding northern latitude. The north wind is the only one that reaches this. part of America, after blowing over a great continent. But from an attentive furvey of its polition, this will be found to have a tendency, rather to diminish than augment the degree of heat. The fouthern extremity of America is properly the termination of the immense ridge of the Andes, which stretches nearly in a direct line from north to fouth, through the whole extent of the continent. The most fultry regions in South-America, Guiana, Brasil, Paraguay, and Tucuman, lie many degrees to the east of the Magellanic regions. The level country of Peru, which enjoys the tropical heats, is situated confiderably to the west of them. The north wind then, though it blows over land, does not bring to the fouthern extremity of America, an increase of heat collected in its passage over torrid regions, but before it arrives there, it must have swept along the fummits of the Andes, and come impregnated with the cold of that frozen region.

NOTE XXXII. p. 256.

TWO French frigates were sent upon a voyage of discovery in the year 1739. In latitude 44° south, they began to seel a considerable degree of cold. In latitude 48°, they met with islands of sloating ice. Histoire des Navigations aux Terres Australes, tom. ii. 256, &c. Dr. Halley fell in with ice in latitude 59°. Id. tom. i. p. 47. Commodore Byron, when on the coast of Patagonia, latitude 50° 33' south, on the sistemath of December, which is midsummer in that part of the globe, the twenty-sirst of December being the longest day there, compares the climate to that of England in the

the middle of winter. Voyages by Hawkesworth, i. 25. Mr. Banks having landed on Terra del Fuego in the Bay of Good Success, latitude 55°, on the fixteenth of January, which corresponds to the month of July in our hemisphere, two of his attendants died in one night of extreme cold, and all the party were in the most imminent danger of perishing. Id. ii. 51, 52. By the fourteenth of March, corresponding to September in our hemisphere, winter was set in with rigour, and the mountains were covered with snow. Ibid. 72.

NOTE XXXIII. p. 258.

CONDAMINE is one of the latest and most accurate obfervers of the interior state of South-America. " After deicending from the Andes (fays he) one beholds a vast and uniform prospect of water and verdure, and nothing more. One treads upon the earth, but does not fee it; as it is so entirely covered with luxuriant plants, weeds, and shrubs, that it would require a considerable degree of labour to clear it, for the space of a foot. Relation abrege d'un Voyage, &c. p. 48. One of the fingularities in the forests is a fort of ofiers, or withs, called bejucos by the Spaniards, and lianes by the French, and nibbees by the Indians, which are usually employed as ropes in America. This plant twifts about the trees which it meets with, and rifing above their highest branches, its tendrils descend perpendicularly, strike into the ground, take root, rise up around another tree, and thus mount and descend alternately. Other, tendrils are carried obliquely by the wind, or fome accident, and form a confusion of interwoven cordage, which resembles the rigging of a ship. Bancroft, Nat. Hist. of Guiana, 99. These with are often as thick as the arm of a man. Ib. p. 75. M. Bouguer's account of the forests in Peru perfectly resembles this description. Voyage au Peru, p. 16. Oviedo gives a similar description of the forests in others parts of America. Hist. lib. ix. p. 144. D. The country of the Moxos is fo much overflowed, that they are obliged to refide on

the summit of some rising ground during some part of the year, and have no communication with their countrymen at any distance. Lettres Edisiantes, tom. x. p. 187. Garcia gives a full and just description of the rivers, lakes, woods, and marshes in those countries of America which lie between the tropics. Origen de los Indios, lib. ii. c. 5. § 4, 5. The incredible hardships to which Goncalez Pizarro was exposed in attempting to march into the country to the east of the Andes, gives a very striking idea of that part of America in its original uncultivated state. Garcil. de la Vega, Royal. Comment. of Peru, parc ii. book iii. c. 2—5.

NOTE XXXIV. p. 260.

THE animals of America seem not always to have been of a size inferior to those in other quarters of the globe. Near the banks of the Ohio, a confiderable number of bones of an immense magnitude have been found. The place where this discovery has been made lies about one hundred and ninety miles below the junction of the river Scioto with the Ohio. It is about four miles distant from the banks of the latter, on the fide of the marsh called the Great Salt Lick. The bones lie in vast quantities about five or fix feet under ground, and the stratum is visible in the bank on the edge of the Lick. Journal of Colonel George Croglan, MS. penes me. This fpot feems to be accurately laid down by Evans in his map. These bones must have belonged to animals of enormous bulk, and maturalists being acquainted with no living creature of such size, were at first inclined to think that they were mineral substances. Upon receiving a greater number of specimens from various parts of the earth, and after inspecting them more narrowly, they are now allowed to be the bones of an animal. As the elephant is the largest known quadruped, and the tusks which were found nearly resembled, both in form and quality, the tusks of an elephant, it was concluded that the carcases deposited on the Ohio were of that species. But Dr. Hunter, one

of the persons of our age best qualified to decide with respect to this point, having accurately examined feveral parcels of tufks, and grinders, and jaw-bones, fent from the Ohio to London, gives it as his opinion, that they did not belong to an elephant, but to some huge carnivorous animal of an unknown species. Phil. Transact. vol. lviii. p. 34. Bones of the same kind, and as remarkable for their size, have been found near the mouths of the great rivers Oby, Jeniseia, and Lena, in Siberia. Stralbrenberg, Descript. of north and east Parts of Europe and Asia, p. 402, &c. The elephant seems to be confined in his range to the torrid zone, and never multiplies beyond it. In such cold regions as those bordering on the frozen sea, he could not live. The existence of such large animals in America might open a wide field for conjecture. The more we contemplate the face of nature, and confider the variety of her productions, the more we must be fatisfied that aftonishing changes have been made in the terraqueous globe by convulsions and revolutions, of which no account is preferved in history.

NOTE XXXV. p. 261.

THIS degeneracy of the domestic European animals in America ought to be imputed partly to each of these causes. In the Spanish settlements, which are situated either within the torrid zone, or in countries bordering upon it, the increase of heat, and diversity of food, prevent sheep and horned cattle from attaining the same size as in Europe. They feldom become so fat, and their flesh is not so juicy, or of fuch delicate flavour. In North-America, where the climate is more favourable, and fimilar to that of Europe, the quality of the graffes which spring up naturally in their pasture-grounds. is not good. Mitchell, p. 151. Agriculture is still so much in its. infancy, that artificial food for cattle is not raifed in any quantity. During a winter, long in many provinces, and rigorous in all, noproper care is taken of their cattle. The general treatment of their horses and horned cattle is injudicious and harsh in all the English colonies,. 8

colonies. These circumstances contribute more, perhaps, than any thing peculiar in the quality of the climate, to the degeneracy of breed in the horses, cows, and sheep, of its provinces.

NOTE XXXVI. p. 261.

The year 1518, the island of Hispaniola was afflicted with a dreadful visitation of those destructive insects, the particulars of which Herrera describes, and mentions a singular instance of the superstition of the Spanish planters. After trying various methods of exterminating the ants, they resolved to implore protection of the saints, but as the calamity was new, they were at a loss to find out the saint who could give them the most effectual aid. They cast lots in order to discover the patron whom they should invoke. The lots decided in favour of St. Saturninus. They celebrated his sestival with great solemnity, and immediately, adds the historian, the calamity began to abase. Herrera, dec. 2. lib. iii. c. 15. p. 107.

NOTE XXXVII. p. 263.

THE author of Recherches Philosophiques sur les Americains supposes this difference in heat to be equal to twelve degrees, and that a place thirty degrees from the equator in the old continent, is as warm as one situated eighteen degrees from it in America. tom. i. p. 11. Dr. Mitchell, after observations carried on during thirty years, contends that the difference is equal to sourteen or sisteen degrees of latitude. Present State, &c. p. 257.

NOTE XXXVIII. p. 263.

JANUARY 3d, 1765, Mr. Bertram, near the head of St. John's river in East Florida, observed a frost so intense, that in one night, the ground was frozen an inch thick upon the banks of the river. The limes, citrons, and banana trees, at St. Augustine were defroyed.

stroyed. Bertram's Journal, p. 20. Other instances of the extraordinary operations of cold in the southern provinces of North-America are collected by Dr. Mitchell. Present State, p. 206, &c. February 7th, 1747, the frost at Charlestown was so intense, that a person having carried two quart bottles of hot water to bed, in the morning they were split to pieces, and the water solid lumps of icc. In a kitchen, where there was a fire, the water in a jar, in which there was a large live eel, was frozen to the bottom. Almost all the orange and olive trees were destroyed. Description of South-Carolina, 8vo. Lond. 1761.

NOTE XXXIX. p. 264.

A Remarkable instance of this occurs in Dutch Guiana, a country every where level, and so low, that during the rainy seasons, it is usually covered with water near two feet in height. This renders the soil so rich, that on the surface, for twelve inches in depth, it is a stratum of perfect manure, and as such has been transported to Barbadoes. On the banks of the Essequebo, thirty crops of rattoon canes have been raised successively, whereas in West-Indian islands more than two is never expected. The expedients by which the planters endeavour to diminish this excessive fertility of soil are various. Bancrost, Nat. Hist. of Guiana, p. 10, &c.

NOTE XL. p. 274.

MULLER seems to have believed, without sufficient evidence, that the Cape had been doubled, tom. i. p. 11, &c.; and the Imperial Academy of St. Petersburgh give some countenance to it, by the manner in which Tschukotskoi-noss is laid down in their charts. But I am affured, from undoubted authority, that no Russian vessel has ever sailed round that cape, and as the country of Tschutki is not subject to the Russian empire, it is very impersectly known.

NOTE XLI. p. 276.

TATERE this the place for entering into a long and intricate geographical disquisition, many curious observations might arise from comparing the accounts of the two Russian voyages, and the charts of their respective navigations. One remark is applicable to both. We cannot rely with absolute certainty on the position which they affign to feveral of the places which they visited. The weather was fo extremely foggy, that they feldom faw the fun or stars, and the polition of the illands and supposed continents was commonly determined by reckoning, not by observation. Beering and Tschirikow proceeded much farther towards the east than Krenitzin. discovered by Beering, which he imagined to be part of the American continent, is in the 236th degree of longitude from the first meridian in the isle of Ferro, and in 58° 28" of latitude. came upon the fame coast in longit. 241°, lat. 56°. Muller, i. 248, 249. The former must have advanced 60 degrees from the port of Petropawlowska, from which he took his departure, and the latter 65 degrees. But from the chart of Krenitzin's voyage, it appears that he did not fail farther towards the east than the 280th degree, and only 32 degrees from Petropawlowska. In 1741, Beering and Tschirikow, both in going and returning, held a course which was mostly to the fouth of that chain of islands which they discovered, and observing the mountainous and rugged aspect of the head-lands which they descried towards the north, they supposed them to be promontories belonging to some part of the American continent, which, as they fancied, stretched as far fouth as the latitude 56. In this manner they are laid down in the chart published by Muller, and likewise in a manuscript chart drawn by a mate of Beering's ship, communicated to me by Mr. Professor Robison. But in 1769, Krenitzin, after wintering in the island Alaxa, stood so far towards the north in his return, that his course lay through the middle of what they had supposed to be a continent, which he found to be an open

fea, and that they had mistaken rocky isles for the head-lands of a continent. It is probable, that the countries discovered in 1741, towards the cast, do not belong to the American continent, but are only a continuation of the chain of islands. From the extreme fummer cold of all those isles, one is led to conjecture that no large continent lies very near to them. The number of volcanos in this region of the globe is remarkable. There are feveral in Kamschatka, and not one of the islands, great or small, as far as the Russian navigation extends, is without them. Many are actually burning, and the mountains in all bear marks of having been once in a state of Were I disposed to admit such conjectures as have found place in other inquiries concerning the peopling of America, I might suppose that this part of the earth, having suffered violent convullions from earthquakes and volcanos, an ishmus, which may have formerly united Asia to America, has been broken, and formed into a cluster of islands by the shock.

It is singular, that at the very time the Russian navigators were attempting to make discoveries in the north-west of America, the Spaniards were prosecuting the same design from another quarter. In 1769, two small vessels sailed from Loretto in California to explore the coasts of the country to the north of that peninsula. They advanced no farther than the port of Monte-Rey in latitude 36. But, in several successive expeditions sitted out from the port of St. Blas in New Galicia, the Spaniards have advanced as far as the latitude 58. Gazeta de Madrid, March 19, and May 14, 1776. But as the journals of those voyages have not yet been published, I cannot compare their progress with that of the Russians, or shew how near the navigators of the two nations have approached to each other. It is to be hoped, that the enlightened minister, who has now the direction of American affairs in Spain, will not withhold this information from the public.

NOTE XLII. p. 290.

FEW travellers have had fuch opportunity of observing the natives of America, in its various districts, as Don Antonio Ulloa. In a work lately published by him, he thus describes the characteristical features of the race: " a very small forehead, covered with hair towards its extremities, as far as the middle of the eye-brows; little eyes; a thin nofe, small and bending towards the upper lip; the countenance broad; the ears large; the hair very black, lank, and coarse; the limbs well turned, the feet small, the body of just proportion; and altogether fmooth and free from hair, until old age, when they acquire fome beard, but never on the cheeks." Noticias Americanas, &c. p. 307. M. le Chevalier l'into, who resided several years in a part of America which Ulloa never visited, gives a sketch of the general aspect of the Indians there. "They are all of a copper colour, with some diversity of shade, not in proportion to their distance from the equator, but according to the degree of elevation of the territory which they inhabit. Those who live in a high country are fairer than those in the marshy low lands on the coast. Their face is round, farther removed, perhaps, than that of any people from an oval shape. Their forehead is small, the extremity of their cars far from the face, their lips thick, their nose flat, their eyes black, or of a chesnut colour, small, but capable of discerning objects at a great distance. Their hair is always thick and sleek, and without any tendency to curl. They have no hair on any part of their body but the head. At the first aspect, a southern American appears to be mild and innocent, but on a more attentive view, one discovers in his countenance fomething wild, distrustful, and fullen." MS. penes me. The two portraits, drawn by hands very different from those of common travellers, have a near resemblance.

NOTE XLIII. p. 290.

AMAZING accounts are given of the persevering speed of the Americans. Adair relates the adventures of a Chikkasah warrior, who run through woods and over mountains, three hundred computed miles in a day and a half and two nights. Hist. of Amer. Ind. 396.

NOTE XLIV. p. 294.

M. GODIN LE JEUNE, who resided fifteen years among the Indians of Peru and Quito, and twenty years in the French colony of Caycane, in which there is a constant intercourse with the Galibis and other tribes on the Orinoco, observes, that the vigour of constitution among the Americans is exactly in proportion to their habits of labour. The Indians, in warm climates, such as those on the coasts of the South Sea, on the river of Amazons, and the river Orinoco, are not to be compared for strength with those in cold countries; and yet, fays he, boats daily fet out from Para, a Portuguese settlement on the river Amazons, to ascend that river against the rapidity of the stream, and with the same crew they proceed to San Pablo, which is eight hundred leagues distant. crew of white people, or even of negroes, would be found equal to a talk of fuch persevering fatigue, as the Portuguese have experienced, and yet the Indians, being accustomed to this labour from their infancy, perform it. MS. penes me.

NOTE XLV. p. 300.

DON ANTONIO ULLOA, who visited a great part of Peru and Chili, the kingdom of New Granada, and several of the provinces bordering on the Mexican Gulf, while employed in the same service with the French mathematicians during the space of ten years, and who

who afterwards had an opportunity of viewing the North-Americans. afferts, "that if we have feen one American, we may be faid to have feen them all, their colour and make are so nearly the same." Notic. Americanas, p. 308. A more early observer, Pedro de Cieça de Leon, one of the conquerors of Peru, who had likewise traversed many provinces of America, affirms, that the people, men and women, although there is fuch a multitude of tribes or nations as to be almost innumerable, and fuch diversity of climates, appear nevertheless like the children of one father and mother. Chronica del' Peru, parte i. c. 10. There is, no doubt, a certain combination of features, and peculiarity of aspect, which forms what may be called a European or Afiatic countenance. There must likewise be one that may be denominated American, common to the whole race. This may be supposed to strike the traveller at first fight, while the various shades, which diftinguish people of different regions, escape his observation. But when persons who had resided so long among the Americans concur in bearing testimony to the similarity of their appearance in every climate, we may conclude that it is more remarkable than that of any other race. See likewise Garcia Origen de los Indies, p. 54. 242. Torquemada Monarch. Indiana, ii. 571.

NOTE XLVI. p. 301.

M. LE CHEVALIER DE PINTO observes, that in the interior parts of Brasil, he had been informed that some persons resembling the white people of Darien have been found; but that the breed did not continue, and their children became like other Americans. This race, however, is very impersectly known. MS. penes me.

NOTE XLVII. p. 304.

THE testimonies of different travellers, concerning the Patagonians, have been collected and stated with a considerable degree of accuracy by the author of Recherches Philosophiques, &c. tom. i. 281, &c.

iii. 181, &c. Since the publication of his work, feveral navigators have visited the Magellanic regions, and, like their predecessors, differ very widely in their accounts of its inhabitants. By Commodore Byron and his crew, who failed through the Straits in 1764, the common fize of the Patagonians was estimated to be eight feet, and many of them much taller. Phil. Transact. vol. lvii. p. 78. By Captains Wallis and Carteret, who actually measured them in 1766, they were found to be from fix feet to fix feet five and feven inches in height. Phil. Trans. vol. lx. p. 22. These seem to have been the very people whose size had been so much over-rated in the year 1764; for several of them had beads and red baize of the fame kind with what had been put aboard Captain Wallis's ship, and he naturally concluded that they had got these from Mr. Byron. Hawkesw. i. In 1767 they were again measured by M. Bougainville, whose account agrees nearly with that of Captain Wallis. Voy. 129. To these I shall add a testimony of great weight. In the year 1762, Don Bernardo Ibagnez de Echavarri accompanied the Marquis de Valdelirios to Buenos Ayres, and resided there several years. He is a very intelligent author, and his reputation for veracity unimpeached among his countrymen. fpeaking of the country towards the fouthern extremity of America, "By what Indians," fays he, "is it possessed? Not certainly by the fabulous Patagonians, who are supposed to occupy this district. I have from many eye-witnesses, who have lived among those Indians, and traded much with them, a true and accurate description of their persons. They are of the same stature with Spaniards. I never saw one who rose in height two varas and two or three inches," i. e. about 80 or 81.332 inches English, if Echavarri makes his computation according to the vara of Madrid. This agrees nearly with the meafurement of Captain Wallis. Reyno Jesuitico, 238. Mr. Falkner, who resided as a missionary forty years in the southern parts of America, fays, that "the Patagonians, or Puelches, are a large-bodied people; but I never heard of that gigantic race which others have mentioned, though I have feen perfons of all the different tribes of fouthern Indians." Introd. p. 26.

NOTE XLVIII. p. 308.

A NTONIO SANCHEZ RIBEIRO, a learned and ingenious physician, published a differtation in the year 1765, in which he endeavours to prove, that this difease was not introduced from America, but took its rise in Europe, and was brought on by an epidemical and malignant disorder. Did I chuse to enter into a disquisition on this subject, which I should not have mentioned, if it had not been intimately connected with this part of my inquiries, it would not be difficult to point out some mistakes with respect to the facts upon which he founds, as well as fome errors in the consequences which he draws from them. The rapid communication of this disease from Spain over Europe, seems to resemble the progress of an epidemic, rather than that of a disease transmitted by infection. The first mention of it is in the year 1493, and before the year 1497 it had made its appearance in most countries of Europe, with such alarming symptoms as rendered it necessary for the civil magistrate to interpose, in order to check its career.

NOTE XLIX. p. 311.

THE people of Otaheite have no denomination for any number above two hundred, which is sufficient for their transactions. Voyages, by Hawkesworth, ii. 228.

NOTE L. p. 317.

AS the view which I have given of rude nations is extremely different from that exhibited by very respectable authors, it may be proper to produce some of the many authorities on which I sound my description. The manners of the savage tribes in America have never been viewed by persons more capable of observing them with discernment, than the philosophers employed by France and Spain, in

the year 1735, to determine the figure of the earth. M. Bouguer d'Antonio Ulloa, and D. George Juan, resided long among the natives of the least civilized provinces in Peru. M. de la Condamine had not only this opportunity for observation, but, in his voyage down the Maragnon, he had access to inspect the state of the various nations feated on its banks, in its vast course across the continent of South America. There is a wonderful resemblance in their representation of the character of the Americans. "They are all extremely indolent," fays M. Bouguer, " they are stupid, they pass whole days fitting in the same place, without moving, or speaking a fingle word. It is not easy to describe the degree of their indifference for wealth, and all its advantages. One does not well know what motive to propose to them, when one would persuade them to perform any service. It is vain to offer them money; they answer, that they are not hungry." Voyage au Perou, p. 102. If one confiders them as men, the narrowness of their understanding seems to be incompatible with the excellence of the foul. Their imbecillity is so visible, that one can hardly form an idea of them different from what one has of the brutes. Nothing disturbs the tranquillity of their fouls, equally infensible to disasters and to prosperity. Though halfnaked, they are as contented as a monarch in his most splendid array. Riches do not attract them in the finallest degree, and the authority or dignities to which they may aspire, are so little the objects of their ambition, that an Indian will receive with the fame indifference the office of a judge (Alcalde) or that of a hangman, if deprived of the former and appointed to the latter. Nothing can move or change them. Interest has no power over them, and they often refuse to perform a small service, though certain of a great recompence. Fear makes no impression upon them, and respect as little. Their disposition is fo fingular, that there is no method of influencing them, no means of rouzing them from that indifference, which is proof against all the endeavours of the wifest persons; no expedient that can induce them to abandon that gross ignorance, or lay aside that careless negligence, which disconcert the prudence and disappoint the care of such VOL. I. 3 O

as are attentive to their welfare. Voyage de Ulloa, tom. i. 225, 356. Of those singular qualities he produces many extraordinary instances, p. 336-347. "Insensibility," fays M. de la Condamine; " is the basis of the American character. I leave others to determine, whether this should be dignified with the name of apathy, or disgraced with that of stupidity. It arises, without doubt, from the small number of their ideas, which do not extend beyond their wants. Glutton's even to voracity, when they have wherewithal to fatisfy their appetite. Temperate, when necessity obliges them, to such a degree that they can endure want without feeming to defire any thing. Pufillanimous and cowardly to excess, unless when they are rendered desperate by drunkenness. Averse to labour, indifferent to every motive of glory, honour, or gratitude; occupied entirely by the object that is present, and always determined by it alone, without any folicitude about futurity; incapable of forelight or of reflection; abandoning themfelves, when under no restraint, to a puerile joy, which they express by frifking about, and immoderate fits of laughter; without object or defign, they pass their life without thinking, and grow old without advancing beyond childhood, of which they retain all the defects. If this description were applicable only to the Indians in some provinces of Peru, who are slaves in every respect but the name, one might believe, that this degree of degeneracy was occasioned by the fervile dependence to which they are reduced; the example of the modern Greeks being proof how far servitude may degrade the human species. But the Indians in the missions of the Jesuits, and the savages who still enjoy unimpaired liberty, being as limited in their faculties, not to fay as stupid as the other; one cannot observe, without humiliation, that man, when abandoned to simple nature, and deprived of the advantages refulting from education and fociety, differs but little from the brute creation." Voyage de la Riv. de Amaz. 52, 53. de Chanvalon, an intelligent and philosophical observer, who visited Martinico in 1751, and refided there fix years, gives the following description of the Caraibs. "It is not the red colour of their complexion, it is not the fingularity of their features, which constitutes the

the chief difference between them and us. It is their excessive simplicity; it is the limited degree of their faculties. Their reason is not more enlightened or more provident than the instinct of brutes. The reason of the most gross peasants, that of the negroes brought up in the parts of Africa most remote from intercourse with Europeans, is fuch that we discover appearances of intelligence, which, though unfolded, is capable of increase. But of this the understanding of Caraibs feems to be hardly susceptible. If found philosophy and religion did not afford us their light, if we were to decide according to the first impression which the view of that people makes upon the mind, we should be disposed to believe that they do not belong to the same species with us. Their stupid eves are the true mirrour of their fouls; it appears to be without functions. Their indolence is extreme; they have never the least folicitude about the moment which is to fucceed that which is present." Voyage a la Martinique. p. 44, 45. 51. M. de la Borde, Tertre, and Rochefort, confirm this description. "The characteristics of the Californians," says P. Venegas, " as well as all of the other Indians, are stupidity and infensibility; want of knowledge and reflection; inconstancy, impetuofity, and blindness of appetite; an excessive sloth, and abhorrence of all labour and fatigue; an excessive love of pleasure and amusement of every kind, however trifling or brutal; pufillanimity; and, in fine, a most wretched want of every thing which constitutes the real man, and renders him rational, inventive, tractable, and useful to himself and society. It is not easy for Europeans, who never were out of their own country, to conceive an adequate idea of those people: for, even in the least frequented corners of the globe, there is not a nation fo stupid, of such contracted ideas, and so weak both in body and mind, as the unhappy Californians. Their understanding comprehends little more than what they fee; abstract ideas, and much less a chain of reasoning, being far beyond their power; so that they scarce ever improve their first ideas, and these are in general false, or at least inadequate. It is in vain to represent to them any future advantages which will refult to them from doing or abstaining 3 O 2 from

from this or that particular immediately prefent; the relation of means and ends being beyond the stretch of their faculties. Nor have they the least notion of pursuing such intentions as will procure themselves some future good, or guard them against future evils. Their will is proportional to their faculties, and all their passions move in a very narrow sphere. Ambition they have none, and are more desirous of being accounted strong than valiant. The objects of ambition with us, honour, fame, reputation, titles, posts, and distinctions of superiority, are unknown among them; so that this powerful spring of action, the cause of so much seeming good and real evil in the world, This disposition of mind, as it gives them up to has no power here. an amazing languor and lassitude, their lives sleeting away in a perpetual inactivity and detestation of labour, so it likewise induces them to be attracted by the first object which their own fancy, or the perfuafion of another, place before them; and at the fame time renders them as prone to alter their resolutions with the same facility. They look with indifference upon any kindness done them; nor is even the bare remembrance of it to be expected from them. In a word, the unhappy mortals may be compared to children, in whom the developement of reason is not completed. They may indeed be called a nation who never arrive at manhood. Hist. of Californ. Engl Transl. i. 64. 67. Mr. Ellis gives a fimilar account of the want of forefight and inconsiderate disposition of the people adjacent to Hudson's Bay, Voyage, p. 194, 195.

The incapacity of the Americans is so remarkable, that negroes from all the different provinces of Africa are observed to be more capable of improving by instruction. They acquire the knowledge of several particulars which the Americans cannot comprehend. Hence the negroes, though slaves, value themselves as a superior order of beings, and look down upon the Americans with contempt, as void of capacity and of rational discernment. Ulloa Notic. Americ. 322, 323.

NOTE LI. p. 322.

HAVE observed, p. 297. that, for the same reason, they neveratempt to rear children who are seeble, distorted, or desective in their make. So deeply were both those ideas imprinted in the minds of the Americans, that the Peruvians, a civilized people, when compared with the barbarous tribes whose manners I am describing, retained them; and even their intercourse with the Spaniards has not been able to root them out. When twins are born in any family, it is still considered as an ominous event, and the parents have recourse to rigorous acts of mortification, in order to avert the calamities with which they are threatened. When a child is born with any desormity, they will not, if they can possibly avoid it, bring it to be baptized, and it is with difficulty they can be brought to rear it. Arriaga Extirpac. de la Idolat. del Peru, p. 32, 33.

NOTE LII. p. 325.

THE number of the fish in the rivers of South America is so extraordinary, as to merit particular notice. "In the Maragnon," says P Acugna, "fish are so plentiful, that, without any art, they, may take them with their hands." p. 138. "In the Orinoco," says P. Gumilla, "besides an infinite variety of other fish, tortoises or turtle abound in such numbers, that I cannot find words to express it. I doubt not but that such as read my account will accuse me of exaggeration: but I can affirm, that it is as difficult to count them, as to count the sands on the banks of that river. One may judge of their number by the amazing consumption of them; for all the nations contiguous to the river, and even many who are at a distance, slock thither at the season of breeding, and not only finds sufference during that time, but carry off vast quantities both of the turtles and of their eggs, &c" Hist. de l'Orenoque, ii. c. 22. p. 59. M. de la Condamine confirms their accounts, p. 159.

NOTE

NOTE LIII. p. 326.

PISO describes two of these plants, the Cururuape, and the Guajana-Timbo. It is remarkable, that though they have this satal effect upon fishes, they are so far from being noxious to the human species, they are used in medicine with success. Piso, lib. iv. c. 88. Bancrost mentions another, the Hiarree, a small quantity of which is sufficient to inebriate all the fish to a considerable distance, so that in a few minutes they float motionless on the surface of the water, and are taken with ease. Nat. Hist. of Guiana, p. 106.

NOTE LIV. p. 328.

REMARKABLE instances occur of the calamities which rude nations fuffer by famine. Alvar Nugnez Cabeca de Vaca, one of the most gallant and virtuous of the Spanish adventurers, resided almost nine years among the favages of Florida. They were unacquainted with every species of agriculture. Their subsistence was poor and precarious. "They live chiefly," fays he, "upon roots of different plants, which they procure with great difficulty, wandering from place to place in fearch of them. Sometimes they kill fome game, fometimes they catch fish, but in such small quantities, that their hunger is so extreme as compels them to eat spiders, the eggs of ants, worms, lizards, ferpents, a kind of unctuous earth, and I am perfuaded, that if in this country there were any stones, they would fwallow these. They preserve the bones of fishes and serpents, which they grind into powder, and eat. The only season when they do not fuffer much from famine, is when a certain fruit, which he calls Tunas, is ripe. They are fometimes obliged to travel far from their usual place of residence, in order to find them. Naufragias, c. xviii. p. 20, 21, 22. In another place, he observes that they are frequently reduced to pass two or three days without food, c. xxiv. p. 27.

NOTE LV. p. 330.

M. FIRMIN has given an accurate description of the two species of manioc, with an account of its culture, to which he has added some experiments, in order to ascertain the poisonous qualities

of the juice extracted from that species which he calls the biter casfava. Among the Spaniards it is known of the name of Yuca brava. Descr. de Surin, tom. i. p. 66.

NOTE LVI. p. 330.

THE plantain is found in Asia and Africa, as well as in America. Oviedo contends, that it is not an indigenous plant of the New World, but was introduced into the island of Hispaniola, in the year 1516, by father Thomas de Berlanga, and that he transplanted it from the Canary islands, whither the original slips had been brought from the East Indies. Oviedo, lib. viii. c. 1. But the opinion of Acosta and other naturalists, who reckon it an American plant, seems to be better founded. Acosta Hist. Nat. lib. iv. 21. It was cultivated by rude tribes in America, who had little intercourse with the Spaniards, and who were destitute of that ingenuity which disposes men to borrow what is useful from foreign nations. Gumil. iii. 186. Waser's Voyage, p. 87.

NOTE LVII. p. 331.

T is remarkable, that Acosta, one of the most accurate and best informed writers concerning the West Indies, assirms, that maize, though cultivated in the continent, was not known in the islands, the inhabitants of which had none but cassada bread. Hist. Nat. lib. iv. c. 16. But P. Martyr, in the first book of his sirst Decad, which was written in the year 1493, upon the return of Columbus from his first voyage, expressly mentions maize as a plant which the islanders cultivated, and of which they made bread, p. 7. Gomara likewise asserts, that they were acquainted with the culture of maize. Histor. Gener. cap. 28. Oviedo describes maize without any intimation of its being a plant that was not natural to Hispaniola. Lib. vii. c. 1.

NOTE

NOTE LVIII. p. 337.

NEW HOLLAND, a country which formerly was only known, has lately been visited by intelligent observers. It lies in a region of the globe where it must enjoy a very favourable climate, as it stretches from the 10th to the 38th degree of northern latitude. It is of great extent, and from its square form must be much more than equal to all Europe. The people who inhabit the various parts of it appear to be of one race. They are evidently ruder than most of the Americans, and have made still less progress in improvement and the arts of life. There is not the least appearance of cultivation in any part of this vail region. The inhabitants are extremely few, so that the country appears almost desolate. Their tribes are still more inconsiderable than those of America. They depend for subsistence, almost entirely, on fishing. They do not settle in one place, but roam about in quest of food. Both sexes go stark-naked. Their habitations. utenfils, &c. are more simple and rude than those of the Americans. Voyages, by Hawkesworth, iii. 622, &c. This, perhaps, is the country where man has been discovered in the earliest stage of his progress, and it exhibits a miserable specimen of his condition and powers in that uncultivated state. If this country shall be more fully explored by future navigators, the comparison of the manners of its inhabitants with those of the Americans will prove an instructive article in the history of the human species.

NOTE LIX. p. 337.

P. Gabriel Marest, who travelled from his station among the Illinois to Machillimakinac, thus describes the face of the country: "We have marched twelve days without meeting a single human creature. Sometimes we found ourselves a vast meadows, of which we could not see the boundaries, through which there slowed many brooks and rivers, but without any path to conduct us. Sometimes we were obliged to open a passage across thick forests, through

bushes, and underwood filled with briars and thorns. Sometimes we had to pass through deep marshes, in which we sunk up to the middle. After being fatigued through the day, we had the earth for our bed, or a few leaves, exposed to the wind, the rain, and all the injuries of the air. Lettr. Edifiantes, ii. 360. Dr. Brickell, in an excursion from North Carolina towards the mountains, A. D. 1730, travelled fifteen days without meeting with a human creature. Nat. Hist. of North Carolina, 389. Diego de Ordas, in attempting to make a settlement in South America, A. D. 1532, marched fifty days through a country without one inhabitant. Herrera, dec. 5. lib. i. c. 11.

NOTE LX. p. 338.

I STRONGLY suspect that a community of goods, and an undivided store, are known only among the rudest tribes of hunters; and that as foon as any species of agriculture or regular industry is known, the idea of an exclusive right of property to the fruits of them is introduced. I am confirmed in this opinion by accounts which I have received concerning the state of property among the Indians in very different regions of America. "The idea of the natives of Brasil concerning property is, that if any person cultivate a field, he alone ought to enjoy the produce of it, and no other has a title to pretend to it. If an individual or a family go a-hunting or fishing, what is caught belongs to the individual or to the family, and they communicate no part of it to any but to their cazique, or to such of their kindred as happen to be indifposed. If any person in the village come to their hut, he may fit down freely, and eat without asking liberty. But this is the consequence of their general principle of hospitality; for I never observed any partition of the increase of their fields, or the produce of the chace, which I could consider as the result of any idea concerning a community of goods. On the contrary, they are fo much attached to what they deem to be their property, that it would be extremely dangerous to encroach upon it. As far as I have seen, or can learn, there is not one tribe of Indians in South America, Vol. I. 3 P among

among whom that community of goods which has been fo highly extolled is known. The circumstance in the government of the Jesuits. most irksome to the Indians of Paraguay, was the community of goods which they introduced. This was repugnant to their originalideas. They were acquainted with the rights of private exclusive property, and they submitted with impatience to regulations which destroyed them. M. le Cheval de Pinto, MS. penes me. Actual possession (fays a missionary who resided several years among the Indians of the Five Nations) gives a right to the foil, but whenever a possessior sees fit to quit it, another has as good right to take it as he who left it. This law, or custom, respects not only the particular spot on which he erects his house, but also his planting ground. If a manhas prepared a particular spot of ground, on which he designs in future to build or plant, no man has a right to incommode him, much less to the fruit of his labours, until it appears that he voluntarily gives up his views. But I never heard of any formal conveyance from one Indian to another in their natural state. The limits of every canton is circumscribed; that is, they are allowed to hunt as far as such a river on this hand, and fuch a mountain on the other. This area is occupied and improved by individuals and their families. Individuals, not the community, have the use and profit of their own labours, or fuccess in hunting. MS. of Mr. Gideon Hawley, penes me.

NOTE LXI. p. 339.

THIS difference of temper between the Americans and negroes is fo remarkable, that it is a proverbial faying in the French islands, "Regarder un sauvage de travers, c'est le battre; le battre, c'est le tuer; battre un negre, c'est le nourrir." Tertre ii. 490.

NOTE LXII. p. 340.

THE description of the political state of the people of Cinaloa, perfectly resembles that of the inhabitants of North America, "They have neither laws nor kings (says a missionary who resided long

long among among them), to punish any crime. Nor is there, among them, any species of authority, or political government, to restrain them in any part of their conduct. It is true, that they acknowledge certain Caziques, who are heads of their families or villages, but their authority appears chiefly in war, and the expeditions against their enemies. This authority the Caziques obtain not by hereditary right. but by their valour in war, or by the power and number of their families and relations. Sometimes they owe their pre-eminence to their eloquence in displaying their own exploits." Ribas Histor. de las Triumph. &c. p. 11. The state of the Chiquitos in South America is nearly the fame. "They have no regular form of government, or civil life, but in matters of public concern they liften to the advice of their old men, and usually follow it. The dignity of Cazique is not hereditary, but conferred according to merit, as the reward of valour in war. The union among them is imperfect. Their fociety refembles a republic without any head, in which every man is master of himself, and, upon the least difgust, separates from those with whom he seemed to be connected." Relacion Historical de las Missiones de los Chiquitos, por P. Juan Patr. Fernandez, p. 32, 33. Thus, under very different climates, when nations are in a fimilar state of society. their institutions and civil government assume the same form.

NOTE LXIII. p. 352.

Have known the Indians (fays a person well acquainted with their mode of life) to go a thousand miles for the purpose of revenge, in pathless woods, over hills and mountains, through huge cane swamps, exposed to the extremities of heat and cold, the vicifitude of seasons, to hunger and thirst. Such is their over-boiling revengeful temper, that they utterly contemn all those things as imaginary trisses, if they are so happy as to get the scalp of the murderer, or enemy, to satisfy the craving ghosts of their deceased relations." Adair's Hist. of Amer. Indians, p. 150.

NOTE LXIV. p. 353.

I N the account of the great war between the Algonquins and Iroquois, the atchievements of Piskaret, a famous chief of the Algonquins, performed mostly by himself alone, or with one or two companions, make a capital figure. De la Potheri, i. 297, &c. Colden's Hist. of Five Nations, 125, &c.

NOTE LXV. p. 355.

THE life of an unfortunate leader is often in danger, and he is always degraded from the rank which he had acquired by his former exploits. Adair, p. 388.

NOTE LXVI. p. 355.

A S the ideas of the North Americans with respect to the mode of carrying on war, are generally known; I have founded my obfervations chiefly upon the testimony of the authors who describe them. But the fame maxims took place among other nations. A judicious missionary has given a view of the military operations of the people in Gran Chaco, in South America, perfectly similar to those of the Iro-"They are much addicted to war (fays he), which they carry on frequently among themselves, but perpetually against the Spaniards. But they may rather be called thieves than foldiers, for they never make head against the Spaniards, unless when they can assault them by flealth, or have guarded against any mischance by spies, who may be called indefatigable; they will watch the fettlements of the Spaniards for one, two, or three years, observing by night every thing that paffes with the utmost folicitude, whether they may expect refistance or not, and until they are perfectly secure of the event, they will not venture upon an attack; fo that when they do give the affault, they are certain of fuccess, and free from all danger. These spies, in order

order that they may not be observed, will creep on all-four like cats in the night; but if they are discovered, make their escape with much dexterity. But, although they never chuse to face the Spaniards, if they be surrounded in any place, whence they cannot escape, they will fight with desperate valour, and sell their lives very dear." Lozano Descrip, del Gran Chaco, p. 78.

NOTE LXVII. p. 356.

TERY, who was an eye-witness of the proceedings of the Toupinambos, a Brasilian tribe, in a war against a powerful nation of their enemies, describes their courage and ferocity in very striking terms. Ego cum Gallo altero, paulo curiofius, magno nostro periculo (si enim ab hostibus capti aut lesi fuissemus, devorationi fuissemus devoti), barbaros nostros in militiam euntes comitari volui. Hi, numero 4000 capita, cum hostibus ad littus decertarunt, tanta ferocitate, ut vel rabidos & furiofos quoíque superarent. Cum primum hostes conspexere, in magnos atque editos ululatus perruperunt. Hæc gens adeo fera est & truculenta, ut tantisper dum virium vel tantillum restat, continuo dimicent, fugamque nunquam capessant. Quod a natura illis inditum effe reor. Testor interea me, qui non semel, tum peditum tum equitum copias ingentes, in aciem instructas hic conspexi, tanta numquam voluptate videndis peditum legionibus armis fulgentibus, quanta tum pugnantibus istis persussum fuisse. Lery Hist. Navigat. in Brasil. ap de Bry, iii. 207, 208,209.

NOTE LXVIII. p. 357.

THE Americans, like other fierce nations, originally cut off the heads of the enemies whom they flew in war, and carried them away as trophies. But, as they found these cumbersome in their retreat, which they always make very rapidly, and often through a vast

extent.

extent of country, they became fatisfied with tearing off their scalps. This custom, though most prevalent in North America, was not unknown among the southern tribes. Lozano, p. 79.

NOTE LXIX. p. 361.

THE terms of the war-fong feem to be dictated by the same sierce spirit of revenge. "I go to war to revenge the death of my brothers; I shall kill; I shall exterminate; I shall burn my enemies; I shall bring away slaves; I shall devour their heart, dry their slesh, drink their blood; I shall tear off their scalps, and make cups of their skulls." Bossu's Travels through Louisiana, vol. i. p. 102. I am informed, by persons on whose testimony I can rely, that as the number of people in the Indian tribes has decreased so much, almost none of their prisoners are put to death. It is considered as better policy to spare and to adopt them. Those dreadful scenes which I have described occur now so rarely, that missionaries and traders who have resided long among the Indians, never were witnesses to them.

NOTE LXX. p. 361.

A LL the travellers who have visited the most uncivilized of the American tribes, agree in this. It is confirmed by two remarkable circumstances, which occurred in the conquest of different provinces. In the expedition of Narvaez into Florida in the year 1528, the Spaniards were reduced to such extreme distress by famine, that in order to preserve their own lives, they eat such of their companions as happened to die. This appeared so shocking to the natives, who were accustomed to devour their prisoners, that it filled them with horror and indignation against the Spaniards. Torquemada Monarch. Ind. ii. p. 584. Naufragios de Alv. Nugnez Cabeca de Vaca, c. xiv. p. 15. During the siege of Mexico, though the Mexicans devoured

voured with greediness the Spaniards and Tlascalans, whom they took prisoners, the utmost rigour of the famine which they suffered could not induce them to touch the dead bodies of their own countrymen. Bern. Diaz. del Castillo Conquist. de la N. Espagna, p. 156.

NOTE LXXI. p. 363;

ANY singular circumstances concerning the treatment of prifoners among the people of Brasil, are contained in the narrative of Stadius, a German officer, in the service of the Portuguese, published in the year 1556. He was taken prisoner by the Toupinambos, and remained in captivity nine years. He was often present at those horrid sestivals which he describes, and was destined himself to the same cruel sate with other prisoners. But he saved his life by extraordinary storts of courage and address. De Bry, iii. p. 34, &c. M. De Art, who accompanied M. De Villegagnon in his expedition to Brasil, in the year 1556, and who resided a good time in that country, agrees with Stadius in every circumstance of importance. He was frequently an eye-witness of the manner in which the Brasilians treated their prisoners. De Bry, iii. 210. Several striking particulars omitted by them, are mentioned by a Portuguese author. Purch. Pilgr. iv. 1294, &c.

NOTE LXXII. p. 366.

THOUGH I have followed that opinion concerning the apathy of the Americans, which appeared to me most rational, and supported by the authority of the most respectable authors, other theories have been formed with regard to it, by writers of great eminence. D. Ant. Ulloa, in a late work, contends, that the texture of the skin and bodily habit of the Americans is such, that they are less sensible of pain than the rest of mankind. He produces several proofs of this, from the manner in which they endure the most cruel chirurgical operations,

operations, &c. Noticias Americanas, p. 313, 314. The fame obfervation has been made by furgeons in Brasil. An Indian, they say, never complains under pain, and will bear the amputation of a leg or arm without uttering a single groan. MS. penes me.

NOTE LXXIII. p. 367.

THIS is an idea natural to all rude nations. Among the Romans, in the early periods of their commonwealth, it was a maxim that a prisoner, "turn decessifie videtur cum captus est." Digest. lib. xlix. tit. 15. c. 18. and afterwards when the progress of refinement rendered them more indulgent with respect to this article, they were obliged to employ two sictions of law to secure the property, and permit the return of a captive, the one by the Lex Cornelia, and the other by the Jus Postliminii Heinec. Elem. Jur. Civ. sec. ord. Pand. ii. p. 294. Among the negroes the same ideas prevail. No ransom was ever accepted for a prisoner. As soon as one is taken in war, he is reputed to be dead; and he is so in effect to his country and his family. Voy. du Cheval. des Marchais, i. p. 369.

NOTE LXXIV. p. 368.

THE people of Chili, the most gallant and high-spirited of all the Americans, are the only exception to this observation. They attack their enemies in the open field; their troops are ranged in regular order; their battalions advance to the charge not only with courage, but with discipline. The North Americans, though many of them have substituted the European sire-arms in place of their own bows and arrows, still adhere to their ancient maxims of war, and carry it on according to their own peculiar system. But the Chilese nearly resemble the warlike nations of Europe and Asia in their military operations. Ovalle's Relation of Chili. Church's Coll. iii. p. 71. Lozano's Hist. Parag. i. 144, 145.

NOTE

NOTE LXXV. p. 371.

HERRERA gives a remarkable proof of this. In Yucutan, the men are so solicitous about their dress, that they carry about with them mirrors, probably made of stone, like those of the Mexicans, Dec. iv. lib. iii. c. 8. in which they delight to view themselves; but the women never use these. Dec. iv. lib. x. c. 3. He takes notice, that among the sierce tribe of the Panches, in the new kingdom of Granada, none but distinguished warriors were permitted either to pierce their lips, and to wear green stones in them, or to adorn their heads with plumes of seathers. Dec. vii. lib. ix. c. 4. In some provinces of Peru, though that empire had made considerable progress in civilization, the state of women was little improved. All the toil of cultivation and domestic work was devolved upon them, and they were not permitted to wear bracelets, or other ornaments, with which the men were fond of decking themselves. Zarate Hist. de Peru, i. p. 15, 16.

NOTE LXXVI. p. 371.

Have ventured to call this mode of anointing and painting their bodies, the *drefs* of the Americans. This is agreeable to their own idiom. As they never stir abroad if they are not completely anointed; they excuse themselves when in this situation, by saying, that they cannot appear because they are naked. Gumilla Hist. de l'Orenoque, i. 191.

NOTE LXXVII. P. 372.

SOME tribes in the province of Cinaloa, on the gulf of California, feem to be among the rudest people of America united in the social state. They neither cultivate nor sow; they have no houses in which they reside. Those in the inland country subsist by hunting; those on the sea-coast chiefly by fishing. Both depend upon the spontaneous productions of the earth, fruits, plants, and roots of various kinds. In the rainy season, as they have no habitations to afford them shelter, they gather Vol. I.

bundles of reeds, or strong grass, and binding them together at one end, they open them at the other, and fitting them to their heads, they are covered as with a large cap, which like a pent-house throws off the rain, and will keep them dry for several hours. During the warm season, they form a shed with the branches of trees, which protects them from the sultry rays of the sun. When exposed to cold they make large fires, round which they sleep in the open air. Historia de los triumsos de nuestra santa see entre gentes las mas barbaras, &c. por P. And. Perez de Ribas, p. 7, &c.

NOTE LXXVIII. p. 373.

THESE houses resemble barns. We have measured some which were a hundred and sifty paces long, and twenty paces broad. Above a hundred persons reside in some of them. Wilson's Account of Guiana. Purch. Pilgr. vol. iv. p. 1263. Ibid. 1291. The Indian houses, says M. Barrere, have a most wretched appearance, and are a striking image of the rudeness of early times. Their huts are commonly built on some rising ground, or on the banks of a river, husldled sometimes together, sometimes straggling, and always without any order. Their aspect is melancholy and disagreeable. One sees nothing but what is hideous and savage. The uncultivated fields have no gaiety. The silence which reigns there, unless when interrupted by the disagreeable notes of birds, or cries of wild beasts, is extremely dismal. Relat. de la France Equin. p. 146.

NOTE LXXIX. p. 375.

SOME tribes in South America can fend their arrows to a great distance, and with considerable force, without the aid of the bow. They make use of a hollow reed, about nine feet long, and an inch thick, which is called a Sarbacane. In it they lodge a small arrow, with some unspun cotton wound about its great end; this consines the air, so that they can blow it with astonishing rapidity, and a sure aim,

to the distance of above a hundred paces. These small arrows are always poisoned. Fermin. Descr. de Surin. i. 55. Bancrost's Hist. of Guiana, p. 281, &c. The Sarbacane is much used by the East Indians.

NOTE LXXX. p. 375.

Might produce many instances of s, but shall satisfy myself with one, taken from the Essaux. Their greatest ingenuty (says Mr. Ellis) is shewn in the structure of their bows, made commonly of three pieces of wood, each making part of the same arch, very nicely and exactly joined together. They are commonly of fir or larch; and as this wants strength and elasticity, they supply both by bracing the back of the bow, with a kind of thread, or line, made of the sinews of their deer, and the bow-string of the same materials. To make them draw more stiffly, they dip them into water, which causes both the back of the bow and the string to contract, and consequently gives it the greater force; and as they practise from their youth, they shoot with very great dexterity." Voyage to Hudson's Bay, p. 138.

NOTE LXXXI. p. 376.

NECESSITY is the great prompter and guide of mankind in their inventions. There is, however, such inequality in some parts of their progress, and some nations get so far the start of others in circumstances nearly similar, that we must ascribe this to some events in their story, or to some peculiarity in their situation with which we are unacquainted. The people in the island of Otaheite, lately discovered in the South Sea, far excel most of the Americans in the knowledge and practice of the arts of ingenuity, and yet they had not invented any method of boiling water, and having no vessel that would bear the fire, they had no more idea that water could be made hot, than that it could be made solid. Voyages by Hawkesworth, i. 466. 484.

NOTE LXXXII. p. 376.

NE of these boats, which could carry nine men, weighed only sixty pounds. Gosnoi Relat. des Voy. a la Virgin. Rec. de Voy. au Nord. tom. v. p. 403.

NOTE LXXXIII. p. 378.

A Remarkable proof of this is produced by Ulloa. In weaving hammocks, coverlets, and the other coarse cloaths, which they are accustomed to manufacture, their industry has discovered no more expeditious method, than to take up thread after thread, and after counting and forting them each time, to pass the woof between them, so that in finishing a small piece of these stuffs, they frequently spend more than two years. Voyage, i. 336. Bancrost gives the fame description of the Indians of Guiana, p. 255. According to Adair, the ingenuity and dispatch of the North American Indians are not greater, p. 422. From one of the engravings of the Mexican paintings in Purchas, vol. iii. p. 1106. I think it probable that the people of Mexico were unacquainted with any better or more expeditious mode of weaving. A loom was an invention beyond the ingenuity of the most improved Americans. In all their works they advance so flowly, that one of their artists is two months at a tobacco-pipe with his knife, before he finishes it. Ibid. p. 423.

NOTE LXXXIV. p. 380.

THE article of religion in P. Lafitau's Moeurs des Sauvages, extends to 347 tedious pages in quarto.

NOTE LXXXV. p. 381.

Have referred the reader to several of the authors who describe the most uncivilized nations in America. Their testimony is uniform. That of P. Ribas concerning the people of Cinaloa, coincides with the rest. "I was extremely attentive (says he), during the years I resided among them, to ascertain whether they were to be considered as idolaters;

idolaters; and it may be affirmed with the most perfect exactness, that though among some of them there may be traces of idolatry, yet others have not the least knowledge of God, or even of any false deity, nor pay any formal adoration to the Supreme Being, who exercises dominion over the world; nor have they any conception of the providence of a creator or governor, from whom they expect in the next life the reward of their good, or the punishment of their evil deeds. Neither do they publicly join in any act of divine worship. Ribas Triumphos, &c. p. 16.

NOTE LXXXVI. p. 382.

THE people of Brasil were so much affrightened by thunder, which is frequent and dreadful in their country, as well as in other parts of the torrid zone, that it was not only the object of religious respective, but the most expressive name in their language for the Deity, was Toupan, the same by which they distinguished thunder. Piso de Medec. Brasil, p. 8. Nieuhoss. Church-Coll. ii. p. 132.

NOTE LXXXVII. p. 389.

BY the account which M. Dumont, an eye-witness, gives of the funeral of the great chief of the Natchez, it appears, that the feelings of the persons who suffered on that occasion were very different. Some solicited the honour with eagerness; others laboured to avoid their doom, and several saved their lives by slying to the woods. As the Indian Bramins give an intoxicating draught to the women, who are to be burnt together with the bodies of their husbands, which render them insensible of their approaching sate, the Natchez obliged their victims to swallow several large pills of tobacco, which produce a similar effect. Mem. de Lous. i. 227.

NOTE LXXXVIII. p. 395.

N fome occasions, particularly in dances instituted for the recovery of persons who are indisposed, they are extremely licentious and indecent. De la Potherie Hist. &c. ii. p. 42. Charlev. N. Fr.

iii. p. 319. But the nature of their dances is commonly fuch as I have described.

NOTE LXXXIX. p. 397.

THE Otheraceas, a tribe seated on the banks of the Orinoco, employ for the same purpose a composition, which they call Yupa. It is formed of the seeds of an unknown plant, reduced to powder, and certain shells burnt and pulverized. The effects of this when drawn up into the nostrils are so violent, that they resemble madness rather than intoxication. Gumilla, i. 286.

NOTE XC. p. 399.

THOUGH this observation holds true among the greater part of the southern tribes, there are some in which the intemperance of the women is as excessive as that of the men. Bancrost's Nat. Hist. of Guiana, p. 275.

NOTE XCI. p. 404.

EVEN in the most intelligent writers concerning the manners of the Americans, one meets with inconsistent and inexplicable circumstances. P. Charlevoix, who, in consequence of the controversy between his order and that of the Franciscans, with respect to the talents and abilities of the North Americans, is disposed to represent both their intellectual and moral qualities in the most favourable light, afferts, that they are engaged in continual negociations with their neighbours, and conduct these with the most refined address. At the fame time, he adds, " that it becomes their envoys or plenipotentiaries to exert their abilities and eloquence, for if the terms which they offer are not accepted of, they had need to stand on their guard. It frequently happens, that a blow with a hatchet is the only return given to their propositions. He is not out of danger even if he is so fortunate as to avoid the stroke, he may expect to be pursued, and if taken, to be burnt." Hist. N. Fr. iii. 251. Men capable of such acts

acts of violence, seem to be unacquainted with the first principles upon which the intercourse between nations is founded; and instead of the perpetual negociations which Charlevoix mentions, it seems impossible that there should be any correspondence whatever among them.

NOTE XCII. p. 405.

I T is a remark of Tacitus concerning the Germans, "Gaudent muneribus, fed nec data imputant, nec acceptis obligantur." C. 21. An author who had a good opportunity of observing the principle which leads savages neither to express gratitude for favours which they had received, nor to expect any return for such as they bestowed; thus explains their ideas: "If, say they, you give me this, it is because you have no need of it yourself; and as for me, I never part with that which I think necessary to me." Memoir sur les Galibis; Hist. des plantes de la Guiane Francoise par M. Aublet, tom. ii. p. 110.

NOTE XCIII. p. 417.

AND. BERNALDES, the contemporary and friend of Columbus, hath preserved some circumstances concerning the bravery of the Caribbees, which are not mentioned by Don Ferdinand Columbus, or the other historians of that period, whose works have been published. A Caribbean canoe, with four men, two women, and a boy, fell in unexpectedly with the fleet of Columbus in his fecond voyage, as it was fleering through their islands. At first, they were struck almost stupid with aftonishment at such a strange spectacle, and hardly moved from the fpot for above an hour. A Spanish bark, with twenty-five men, advanced towards them, and the fleet gradually furrounded them, so as to cut off their communication with the shore. "When they saw that it was impossible to escape (fays the historian), they seized their arms with undaunted resolution, and began the attack. I use the expression, with undaunted resolution, for they were few, and beheld a vast number ready to assault then. They wounded several of the Spaniards,

Spaniards, although they had targets, as well as other defensive armour; and even after their canoe was overset, it was with no little difficulty and danger, that part of them were taken, as they continued to defend themselves, and to use their bows with great dexterity while swimming in the sea." Hist. de D. Fern. y D. Ysab. MSS. c. 119.

NOTE XCIV. p. 417.

A Probable conjecture may be formed with respect to the cause of the distinction in character between the Caribbees and the inhabitants of the larger islands. The former appear manifestly to be a separate race. Their language is totally different from that of their neighbours in the large islands. They themselves have a tradition, that their ancestors came originally from some part of the continent, and having conquered and exterminated the ancient inhabitants, took possession of their lands, and of their women. Rochefort 284. Tertre, 360. Hence they call themselves Banaree, which signifies a man come from beyond fea. Labat. vi. 131. Accordingly, the Caribbees still use two distinct languages, one peculiar to the men, and the other to the women. Tertre, 361. The language of the men has nothing common with that spoken in the large islands. The dialect of the women confiderably resembles it. Labat. 129. This ftrongly confirms the tradition which I have mentioned. The Caribbees themselves imagine, that they were a colony from the Galibis, a powerful nation of Guiana, in South America. Tertre, 361. Rochefort, 248. But as their fierce manners approach nearer to those of the people in the northern continent, than to those of the natives of South America; and as their language has likewife fome affinity to that spoken in Florida, their origin should be deduced rather from the former than from the latter. Labat. 128, &c. Herrera, Dec. i. lib. ix. c. 4. In their wars, they still observe their ancient practice of destroying all the males, and preferving the women either for servitude or for breeding.

END OF THE FIRST VOLUME.
