If I gathered rightly, these would be the criticisms I have to offer. In the first place, no one seems to know where we are going and what we want, and no one knows how to arrange our man-power so as to get what we want. Furthermore, there is lack of organization. The farmers, I find, do not know—

Mr. GARDINER: They have produced what we have asked for every year since the war began, and they are doing it this year.

Mr. BLACKMORE: The average farmer is figuring this way. He is trying to keep his head above water, and whatever looks as though it might give him a little more income he will produce. Naturally he depends upon what the minister says, with regard to the production which he needs, as to what he should produce. In many instances, however, as someone said this afternoon, the farmer does not know whether he will make a five-cent piece from his production after he has accomplished it. He simply makes the attempt reaching out like a drowning man; and that is true respecting a good many types of production. As to flax, I have not gone into the matter, but I have seen plenty of flax produced in my area. Whether it is the kind the minister wants I do not know, but certainly we can produce flax here. Perhaps it is just for seed, but it is not conceivable to me why we could not produce all the flax needed in Canada, or all the soya beans we need, if we went about it properly, paying such a price to get the flax or the beans that the farmers will feel safe in devoting themselves to the production of these commodities. I would say, therefore, in spite of what the minister said, that there is not enough coordination and not enough certainty as to what we want, where we want our man-power, to what extent we want it replaced by woman-power, how we shall organize our woman-power in order to bring the forces of that power to bear where we want it to be effective. The Department of Agriculture is likely to be one of the great sufferers. The first thing we know, we shall have gone too far and we shall be short of agricultural products in Canada, one of the richest countries in the world in agricultural capacity.

One other thing is important in summing up. The minister's statement that we can sell all that we have of certain commodities does not show the right attitude. I say that the attitude should be to produce all we can sell. One further observation. From what I hear across the floor of the house, the government seems to have too much anxiety as to what it will do with a little extra agricultural production if it gets it. The whole Department of Agriculture seems to be terrified for fear it will have a little too much honey or sugar or wool or some other product —apples, for instance. It does not know what to do with any extra product if it cannot sell it abroad. That thinking is Rip Van Winkle thinking.

An hon. MEMBER: There is certainly a lot of it in Alberta.

Mr. BLACKMORE: It is high time the minister gathered round him a number of men who have the capacity to see to-morrow instead of the day before yesterday. There must be a reorganization. The minister must be listening to the Prime Minister quite often indulging in those beautiful outbursts of his about the new order. Does the minister believe in a new order? If he does, what does he conceive that order to be like?

Mr. GARDINER: Not Social Credit.

Mr. BLACKMORE: That is exactly why the minister is a Rip Van Winkle. He will sit in the presence of a solution of his problems; he will sit with the remedy before him, and die from the disease rather than take the medicine. I have seen people just as simple as that. There has to be a new order, and in the new order we are not going to be worrying very much about having more of a certain commodity than we need. Our only anxiety will be to be sure that we have enough. So I say that the whole attitude of the Department of Agriculture must be changed. It must stop worrying about having too much and having the capacity to produce too much. I think the minister should advise his advisers to keep that in mind. If they do not, they will be faced with a situation similar to the one with which we are confronted with regard to sugar, and they will be doing it over a wide area. It looks impossible; people say it cannot happen here. Well, the first thing we know it will have happened here; but what to do about it the government will not know. Let the minister be wise and look into the future. Let him not be afraid of producing too much.

The secret of getting plenty of production is to be found in the application of four principles. The first is a fair price, one at which a man can make a profit, and that price should apply to every single needed agricultural product in this country. If we do not want any more eggs, let us forbid people to produce eggs; let us refuse to buy them. But if we want eggs, then let us pay for them a proper price so that men can afford to produce them.

The same is true of butter and honey and each of the other commodities we want. Let us determine the price at which a man can produce goods, live by his labour and pay his debts and his obligations, and then let us pay him that price. If we cannot sell the product, never mind; it can be paid for. All we have to do is to look into the future a bit. We can see how it can be done.

Some hon. MEMBERS: Oh, oh.

Mr. BLACKMORE: Rip Van Winkles again. We are afflicted with the Rip Van Winkle mentality in this country and in this parliament. After we have a fair price, the next important thing is a sure market. A sure market has to be guaranteed by the government. You are never sure that you will be able to sell to England or to Ireland, but you are sure that the dominion government can take the product. New Zealand is doing it. New Zealand is not as strong economically as Canada, and if she can do it there is no reason why Canada cannot. The next thing is the guarantee of stability for two or three years. If a man is to put his money into dairy cows, for instance, he must have some guarantee of prices for two or three years; otherwise, how has he the assurance that he will not lose his money? The fourth important thing is a line of credit with which he may buy the means of production. If a man is in a good position to produce dairy products, for example, he should be enabled to get dairy cows and establish a dairy farm. Those four principles will guarantee production, and anything short of them will not.

First, the government must find out just where it is, to learn what it wants, when it wants it and how to get it, in agriculture, industry and the army; work the problem out in an accurate way. Second, it must not be afraid of overproduction. Third, it should set up such conditions in this country as will bring about maximum production. Men are prattling in this house and in the country, over the radio and through the press all the time about mobilizing Canada's resources; we have not scratched the surface of Canada's resources, and while we follow the policy being followed at present we never shall. It is possible, however, to organize for complete mobilization if we follow the right method. Let us determine what that method is and apply it.

I shall reserve what else I have to say until a future time.

Mr. CASTLEDEN: When the minister is making his statement will he include, among the information to be given, a statement as to the extent to which the government is controlling the packing industry to see that there is no undue exploitation of those who produce? We understood from the minister this afternoon that he was supplying machinery to companies throughout the country to carry on the process of drying eggs; are the prices paid to the processors in line with the prices they are paying to the producers?

The whole matter of agriculture, as has been said several times this evening, requires the very best thought that can be given to it. Coming from Saskatchewan where we know the dire condition of the farmers with regard to the debt situation, one is alarmed to find that in the eastern provinces, as in practically every province across the dominion, even in the heart of some of the finest agricultural areas, for example the Niagara peninsula, farmers are still labouring under a load of debt which makes it almost impossible for them to carry on. This nation is failing its agricultural people, and a nation that is doing that is heading in the wrong direction. We are beginning now to see evidence of a great and world-wide scarcity of agricultural products; and unless we prepare our house now, we shall be found very much wanting in the days immediately ahead.

Mr. HARRIS (Danforth): Would the minister include in his answer a statement of what progress has been made with regard to sunflower seed and sunflower seed oil?

Mr. GARDINER: As members of the committe will recall, we agreed earlier in the discussion to deal with all matters that come under the last five items. The questions which have been asked come under one or another. The questions asked by the hon. member for Yorkton come under the special products board, which is the third item. If we could pass the $5,477,760, all the other matters come under the last five items. We could discuss those to-morrow.

Mr. HARRIS (Danforth): This item would come under the special products board?

Mr. GARDINER: Yes.

Mr. HARRIS (Danforth): Perhaps the same statement would include flax seed.

The CHAIRMAN: It is agreed that the discussion will be closed as far as the agricultural expenditures detailed by the Minister of Finance yesterday with respect to the first series are concerned.

Mr. GARDINER: Down to the five and a half million item.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, June 3, 1942

The house met at three o'clock.

DEFENCE OF CANADA REGULATIONS

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Hon. J. E. MICHAUD (Minister of Fisheries) presented the first report of the special committee on the defence of Canada regulations, and moved that the report be concurred in.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN FORCES—PARTICIPATION IN PATRIOTIC CAMPAIGNS

Mr. CHURCH:

1. What is the direct loss in man-hours and petrol in requiring soldiers, men and women's army, munitions workers and others to be used in patriotic campaigns?

2. Are any steps being taken to prevent this further cost and added expense to the victory and other loan campaigns?

Mr. RALSTON: It would be quite impossible to provide an intelligent answer to this question. In order to attempt an answer we would have to consider the Red Cross campaigns, war loan campaigns, war savings certificate campaigns, recruiting campaigns and all sorts of special occasions on which the army are asked to furnish personnel and equipment.

Mr. CHURCH: The practice referred to in the question is being carried out in England to save the expenses of these loans. An estimate was given to parliament.

Mr. RALSTON: The practice has been carried out here. This is being done at the insistent request of representatives of these organizations. I remember particularly a delegation that came down from my hon. friend's city in connection with the war loan committee and made representations that what was being proposed was not sufficient, that we should do a good deal more in providing personnel and equipment, which we did. To estimate the number of gallons of petrol and the number of man-hours used in connection with these matters would be quite impossible.

Mr. CHURCH: Cut out these Hollywood methods of selling bonds, and save expense.

Question dropped.

CANADIAN FORCES—EXPORTS OF BEER AND LIQUOR TO FORCES OVERSEAS

Mr. CASTLEDEN:

1. Have any permits been granted to navy, army and air force institute to export beer and spirituous liquor to Canadian forces overseas?

2. If so, what are the amounts of each shipment so permitted during 1940 and 1941, respectively?

Mr. MacKINNON (Edmonton West):

1. The Navy, Army and Air Force Institute is the canteen organization of the United Kingdom armed forces. No information available as to what extent the Canadian forces use their facilities, and no permits have been issued to them for the exportation of beer and spirituous liquors for the use of Canadian forces.

2. Answered by No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

LEAGUE OF NATIONS

Mr. CHURCH:

1. What has been the yearly cost to Canada of the League of Nations since its inception to date?

2. Where are its head offices and who are the officers in charge?

3. Does it still function, and how was the vote for 1941 spent?

MILITARY SERVICE—CANADIANS IN UNITED STATES

Mr. MacKINNON (Kootenay East):

1. How many Canadians resident in the United States have been made subject to the draft laws of that nation?

2. How many Canadians resident in the United States have been actually drafted for service in the armed forces of that nation?

3. Are such persons given the right to elect to return to Canada and enter the armed forces of Canada?

4. If so, how many have done so?

5. Are those who do return to Canada automatically enlisted in the active armed forces of Canada and thus liable to service overseas or in any theatre of war?

PLEBISCITE—COST OF TAKING VOTE

Mr. BLACK (Cumberland):

What were the costs of taking the plebiscite vote, (a) printing, (b) advertising, (c) other head office expenses, (d) expenses in constituencies, (e) total payments to date, (f) estimate accounts not paid, (g) total estimated costs?

CANADIAN ARMY—SUMMER CLOTHING

Mr. CHURCH:

1. When will summer clothing be issued to the men of the army in training at (a) Camp Borden, (b) Toronto exhibition grounds, (c) Petawawa, (d) other army camps in military districts 1, 2 and 3?

2. How many are now without the same in each of these districts?

3. What does the summer issue consist of?

R.C.A.F.—SUMMER CLOTHING

Mr. CHURCH:

1. How many members of the Royal Canadian Air Force at Toronto, Trenton, Camp Borden, Ottawa and other camps in Ontario, have been issued summer clothing and uniforms?

2. How many have yet to be issued such summer clothing?

ONTARIO MILITARY TRAINING CENTRES—C.O'S AND DEPARTMENTAL HEADS

Mr. WINKLER:

1. At the R.C.C. signals training centre at Barriefield, at the R.C. ordnance corps training depot at Long Branch, and at the army trade school at Hamilton, who are the commanding officers and departmental heads?

2. What are the technical qualifications of each?

3. What were their pre-war occupations in each case?

MOTIONS FOR PAPERS

EMPIRE WAR CABINET

Mr. CHURCH:

For a copy of all correspondence, letters, cables, telegrams, orders in council, reports, other documents, between the government of Canada, or any officer thereof, and the government of Great Britain, or any officer thereof, or any other dominion, regarding the setting up of an empire war cabinet, similar to that in the last war, in relation to joint action, and a united front in the conduct and strategy of this war, by Great Britain and the dominions

Mr. MACKENZIE KING: Mr. Speaker, to comply with this request would necessitate obtaining the consent of all the commonwealth governments concerned to table the correspondence, which is of a highly confidential character, and I do not think the request would be met if it were made. In the circumstances I do not think it would be in the public interest even to make the request at the present time.

Mr. CHURCH: May I respectfully suggest to the Prime Minister that he reconsider this? Australia's Prime Minister has asked for it for a year. Recently he has complained with respect to conditions in the far east, that decisions have been made against her interests without Australia or the other dominions being consulted. Unless there is an empire war cabinet there is no joint consultation for united action in this war.

Motion dropped.

CANADIAN FORCES—ENLISTMENTS IN FIRST FIVE MONTHS OF 1942

Mr. HAZEN:

For a return showing the number of men who have enlisted in, (a) the navy, (b) the army, (c) the air force, during each of the first five months of 1942.

LABOUR CONDITIONS

ALASKA HIGHWAY—WAGES PAID TO ALIEN LABOURERS

On the orders of the day:

Mr. GEORGE BLACK (Yukon): Mr. Speaker, I would like to ask a question of the government, and particularly the Minister of Labour, and in order that the minister and the government and the house may understand how important the matter is, I should like to say a word or two in advance, not to make a speech at all, but to explain why I ask the question. It has to do with the labour situation which has arisen in connection with the construction of the Alaska highway. The Alaska highway is being built primarily for the defence of Alaska, but it is really a much more important project than that because it will serve in the defence of the whole northern American continent. The United States is building the road and paying the cost. Canada is cooperating with the United States in every way in hastening the completion of that project. The Canadian customs laws, for example, have been set aside and goods even remotely connected with this enterprise are allowed to enter Canada duty free. The Canadian immigration laws have also been suspended to allow alien labour to come in to work on that road, and I have no objection to that.

The United States army engineers are in process of building and have to some extent completed a pioneer road over the selected route. They are now being followed by United States contractors who are constructing a permanent highway along the same route, and they are bringing into Canada alien labourers to work on the road. I do not object to that. But at the request of Canadian employers of labour in the Yukon the national war labour board raised the rate of pay for common labour in Yukon to 75 cents per hour, plus cost-of-living bonus. The alien contractors in the Yukon, ignoring that, and in violation of Canadian law, are employing common labour, including

labourers from the United States, and paying them 96½ cents per hour plus 10 per cent exchange on Canadian money, which means over $1.05 per hour. The consequence is that employees of Canadian employers are leaving them and going to work for these alien contractors, who are paying no attention to our Canadian law, while Canadian employers are bound to observe it. Certainly Canadian employers of labour would not be allowed to do such a thing, and I submit that it is the duty of the government and of the Minister of Labour to see that these alien contractors obey our Canadian law.

Hon. HUMPHREY MITCHELL (Minister of Labour): The Alaska highway, of course, is being built by the United States government, and according to the information at hand the greater portion of the work to be done this year will be done by the United States army. However, as some civilians will be employed, the Department of Labour is naturally interested in this project. As a matter of fact I have just left a conference with United States officials who have within the last few hours arrived from Washington, with a view to evolving some rational policy to deal with the situation, and we are hoping we shall be successful.

May I suggest to my hon. friend that in view of his very intimate knowledge of the Yukon we should be very glad indeed of any suggestions he might make that would be helpful in the work we have in hand.

I think it should be said in fairness, with respect to the wage rate there, that while it might seem out of line with the wage rate in the southern part of British Columbia, and probably in Alberta, my hon. friend will appreciate that there are many things entering into the wage rate structure for what is referred to as common labour as well as other grades of labour, because living costs are so much higher in Yukon than in other parts of this dominion. That accounts to some extent for what appears to be the high wage rate structure for common labour there. I trust that answers my hon. friend's question.

Mr. BLACK (Yukon): Since the minister has done me the honour of asking whether I could make a suggestion, I will, if I may. Just about a week ago we had a similar difficulty up there in regard to transportation. The American gentleman in charge of transportation there objected to anything being brought up by steamers on the west coast or by rail, mining machinery and even food for the inhabitants of that part of the country. Accordingly the superintendent or manager of transportation for Canada in Montreal appointed the controller of the Yukon as his agent, with power to deal with that matter on the spot, and it was quickly and satisfactorily adjusted. I suggest that the Minister of Labour or the war labour board appoint the controller of the Yukon as their agent to deal with the wage situation there. We are four thousand miles away, and you cannot settle this question by correspondence or by communications passing between Ottawa and Washington. The trouble should be handled right there where it arises, and a Canadian official should be given authority to settle it. That is my suggestion.

PRIVILEGE—MR. CHURCH

REFERENCE TO STATEMENT OF MINISTER OF NATIONAL WAR SERVICES IN COMMITTEE ON JUNE 1

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I rise to a question of privilege. I wish to refer to three lines on page 2961 of *Hansard* of Monday last, in which the Minister of National War Services (Mr. Thorson) referred to me in these words:

> But time and time again he has sought to make a differentiation between Canadians of British origin and Canadians who are not of British origin.

That is both incorrect and untrue. I have never made any such comparisons or differentiations. What I had reference to was the reflection on the British born that is made in this book, "Canadians All", issued by the minister's department. I wanted equality of treatment. Not one word can the minister point to that I have ever uttered in the twenty years I have been in this parliament which made any such differentiation as he speaks of. The assertion I have just quoted from *Hansard* is ridiculous.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 2, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

The ACTING CHAIRMAN (Mr. Bradette): When the committee rose last night it was discussing the items of the Department of Agriculture.

Mr. GARDINER: Yes, Mr. Chairman. The first item for discussion is $71,300 for the bacon board. Administration costs in connection with the British bacon board are covered by that item, which includes all the costs of running the board itself.

Mr. WRIGHT: I have a suggestion to make to the minister with regard to the enlargement of the work of the bacon board. I think the board has done a reasonably good job in stabilizing prices of pork products in Canada. Anyone who remembers the days before the bacon board was formed knows that in the fall of the year, when there was a large number of hogs going to market, the price invariably fell, and that when there was scarcity the price rose. There has been a much more stabilized market since, and I believe that a certain amount of credit is coming to the bacon board because of that. I believe that another board should be appointed, a live stock marketing board, which would have control of the marketing of all live stock in Canada at this time. There has been a certain amount of trouble with regard to the marketing of beef, and in this respect a live stock marketing board would have been of great assistance to the minister. Various producers' organizations in Canada have been asking that such a board be formed. I have before me a resolution passed by the various cooperative marketing associations of western Canada at their annual meeting this spring. The resolution states:

> That this meeting of representatives of Alberta Live Stock Cooperative Limited, Saskatchewan Cooperative Live Stock Producers Limited, and Manitoba Cooperative Live Stock Producers Limited, are agreed that it is necessary that a board of live stock commissioners of Canada be appointed upon which there shall be equitable representation of live stock producers.

I believe that such a board, upon which producers would be represented, would be of tremendous value at this time, be of assistance to the minister, and give to the live stock producers confidence that their rights were being recognized, and that as a result we would get a greater production of live stock, especially beef, than we have at the present time. We need that increased production.

It seems to me that the minister has appointed to most of these boards technical agriculturists to represent agriculture rather than representatives of the actual producers themselves. I think the producers themselves through their cooperatives or through their farm organizations, such as the Canadian federation of agriculture, should appoint their own representatives on these boards. This would give greater confidence to the producers, and if we are to have the increased production which we need at this time that is one of the best ways to secure it. One evidence of that fact is the increased production of pork products which has occurred since the formation of the bacon board. The producers have had more confidence that there would be a stabilized price throughout the year, and they have increased production. I believe that the minister could very well take under consideration at this time the forming of a board of live stock producers to organize the marketing of all live stock products in Canada to-day.

Mr. FAIR: I support the stand taken by the hon. member for Melfort. One condition I should like to make is that the representative of agriculture should be a man named by organized agriculture, because we sometimes find that some broken-down farmer, or one who has become bankrupt farming, receives the appointment. He is more of a detriment than anything else, but because he is there, the farmers are considered as being represented on the board.

Mr. GARDINER: I understand that the resolution passed at the meeting of live stock representatives on the prairies was to the effect that a board of live stock commissioners should be appointed. I think that is the follow-up of the resolution which has been presented to the government by the federation during the last two or three years. The suggestion of the federation is not for a board similar to the one that is now handling pork products under the name of the bacon board; it is for a board to have powers similar to those of the board of grain commissioners, and the resolution has always contained a suggestion to that effect. Each time that resolution has been presented to the government we have stated to the delegation presenting it that the government could not raise any particular objection to setting up a board of that kind, but that we hoped that any one who was bringing the resolution before organizations representative of live stock producers would explain fully what it means.

All of the costs of grading cattle, hogs, or dairy products are borne to-day by the treasury of Canada; we appoint the inspectors and we pay for them out of the dominion treasury. That is not true in connection with grain.

The product itself bears the cost of all inspections, grading and everything of that kind that are carried on under the board of grain commissioners in connection with wheat. Naturally the government would have much less expense if a live stock board were set up to deal with live stock in a similar way; in other words, to have control of all grading and marketing activities such as are under the control of the board of grain commissioners, the cost to be taken directly out of the product. It would, of course, be a much higher cost to the actual producers of the product than they are bearing at the present time.

As long as those who are passing the resolutions fully understand the position they are taking, we shall be quite prepared to give consideration to their representations when they come to us.

Mr. QUELCH: Would the minister give the committee information to show the effect of rail grading of hogs in western Canada—as a matter of fact, for all Canada? I know there has been a good deal of criticism of rail grading. Personally I am a strong supporter of it; I believe it is a method which would benefit producers in the long run. It would be interesting if the minister could supply a table showing what the effect should be.

Mr. GARDINER: I have not before me at the moment figures which would indicate—what I assume the hon. member has in mind—the extent to which the quality of hogs has been improved in the different gradings. I have not figures here to bear out what I am going to say, but I know that figures exist. While there was, as has been stated, a great deal of criticism of the rail grading of hogs at the time it was inaugurated, that criticism has almost entirely ceased. Just before coming into the chamber to-day I saw a letter sent to the department as the result of a discussion which took place outside Canada, following an address which was delivered before a farm organization in Minneapolis. The letter asked for information with regard to the nature of our grading in this country. The person who wrote the letter was not an official of this government but an official of the government of a province in which there was considerable criticism of rail grading at the time it was inaugurated. In his letter to the department he expresses himself as a strong advocate of rail grading, and says it has created a very much better condition among hog raisers in that province. I believe that has been the experience right across Canada.

We get very little criticism now of the system; we do get suggestions such as were made yesterday afternoon by the hon. member for Dufferin-Simcoe (Mr. Rowe), that we should accept higher weights as satisfactory under the system of grading. It is also suggested that we should not be quite so hard upon those who are bringing light hogs to market. So far, however, as the light hogs are concerned it is found difficult to justify the purchase of half-developed hogs at a time when we are requiring the greatest possible production of pork products in order to supply the British market. I think, therefore, that little attention has been paid to the criticisms with regard to light hogs, but considerable attention has been paid to the suggestion that we should allow heavier hogs. There is only one answer I can make to that. We have been attempting, in addition to supplying the needs of the British market, to satisfy the tastes of the British people. It is well known that the British people have been accustomed to eating bacon the greater part of which has been produced in Denmark, and the Danish producers have made a specialty of producing long Danish hogs with streaks of lean all the way through and a comparatively small proportion of fat.

We had an experience recently with regard to fat bacon. We had a strong protest from Great Britain, on the part of the troops, as to the type of bacon with which they were being supplied, and their criticism was directed against much the same organizations as are criticized in this house and outside. The complaint was made that a packing plant in Canada was sending them bacon that was too fat. We had a full inquiry made on the other side, and the report we received was that the bacon was all a United States product and not Canadian. The criticism was that the bacon was too fat, and I suggest to those who are advocating a higher weight of hog that is the sort of criticism we run into not only among the British themselves but among our own troops overseas. They say they do not want that type of bacon.

We are attempting to meet British requirements for bacon and at the same time to supply them with the type of bacon desired, so that when the war ends we shall be in a position to meet some of the problems mentioned last night by the member for Lethbridge (Mr. Blackmore). Eventually we are going to come to the point where we may have to decide that we are endangering the future of our own agriculture by increasing production along certain lines—the point where men

will probably lose in the few years following the war all the profits which they thought they were making during the war period. In watching that particular situation, we are attempting to supply the needs of Britain with the type of pork product they wish to have, in order that we may maintain as large a percentage of that market as possible after the war is over. We would hesitate, therefore, to increase weights even to satisfy those who still make complaints with regard to our grading on the ground that we do not allow weights to run high enough, because to do so would disappoint people to whom we are supplying these pork products.

Mr. ROWE: Would the minister not give more consideration to the establishment of a live stock commission instead of merely a bacon board, in view of the suggestion, which was reported in last night's press, that we may have to have meatless weekends. If it is necessary for war purposes that we should have meatless weekends, we shall have to have them, but I submit that we can produce a great deal more. Much was said last night by the minister as to the amount of increased production. We can increase production considerably on our farms even with our present help. After all, when a man has to feed twenty hogs he can feed thirty almost as easily. It takes help to feed twenty, and he can feed thirty in the same process. If he is fattening hogs to 225 pounds, he can make them 250 pounds as easily, and he can put the last twenty-five pounds on cheaper than any other part of the 225. It would be a chance to give our farmers a break. Moreover, it would afford an opportunity for the consumption of some of the surplus grains of the country, converting that surplus into animal fats that are so greatly required by the troops. I do not think that the minister should allow some slight criticism from certain quarters, from some officers' mess, as to not having bacon properly streaked, to interfere with his plans.

I think we need more foodstuffs, and we shall need more immediately following the war. Is there one branch of the minister's department which will say that Denmark will come into the picture immediately following the war? It will take Denmark years to get back to the position she formerly occupied. We watched the penetration of Denmark into the British market. In 1921 we sold Great Britain 250,000,000 pounds of bacon, but by 1930 that market had practically disappeared as far as we were concerned. Much was said last night about losing markets. The bacon market of Britain was lost to us definitely between 1921 and 1930. We were supplying Britain with 12 per cent of her requirements and Denmark was supplying Britain with the remainder, but by 1930 we had lost the market, so that we were supplying England with one per cent of her requirements while Denmark was supplying her with over 60 per cent—over 600,000,000 pounds—and we were importing more meats into Canada than we were exporting in 1930.

I agree that probably we failed at that time in giving to Britain the type of products she required. Perhaps we failed as producers to keep pace with the skilful, well-organized producers of Denmark. But that condition has entirely changed. The reason why we are selling to Britain now is not to be found in any magic type of policy. We have produced better bacon, it is true, but we were getting only the fringe of that market between 1930 and 1939. With Denmark overrun by the Hun, and since Germany has been consuming not only the bacon produced in Denmark but the breeding stock of that country as well, none of that bacon is going to Britain. We do not now have that competition in the British market, but we have a challenge and a demand for more bacon foodstuffs in Britain. I submit again—and no one knows this better than the minister—that you can produce volume faster by increasing the weight per hog than by any other single method. The next means by which we could reach the point of producing even as much as Denmark was producing before she was overrun would be to give the farmer some assurance that, no matter what his wages or his feed costs may be, his price will be flexible to some extent so that at least he may expect costs plus 10 per cent on his investment.

The first means, however, is to increase the unit weight. I believe the bacon board might be enlarged into a live stock commission, because for many years the consumption of beef and pork has been relative. If pork rises in price, beef consumption automatically rises if the price is satisfactory; and if beef prices are high, pork consumption rises under similar conditions as to price. That has been the situation for years locally. Beef and pork are definitely tied together as meats. I therefore urge the minister that he reconsider his refusal to allow the regulations to be a little elastic during the war. This war may not last long; it may last only another year or two, and we are thinking of post-war conditions. But the immediate challenge before any of us here or on the farms is production of quantity foodstuffs.

We can easily restrain and restrict the rates immediately following the war when other competition looms up. But I hope the department may be able to hold the British market for many years to come. I hope the present necessity for production going to Britain may develop into a more stable market. If we hope to hold that market after the war, we must produce what the British people want, not what we want. At the present time they want quantity rather than quality. We have no competition in quality; we have a challenge for quantity, and I urge the minister to reconsider extending the maximum weight. Perhaps fifty pounds a hog is too much; it might affect the quality too suddenly, but as a hog producer I know that one can produce fifty pounds more a hog and still have what is reasonably good pork, better than we had twenty years ago. If, however, fifty pounds is too much, at least give the producers some leeway; do not allow a farmer, who is trying to pay off a mortgage on his farm, to be discouraged by the reduction of a dollar a hog because it is a pound overweight; increase the maximum by at least twenty-five pounds, which will bring a tremendous increase in quantity. I again urge the minister to reconsider his refusal in that regard.

Mr. COLDWELL: I should like to follow what the last speaker has said, and of course to support the idea of widening the basis of the meat supervision and export from this country through the establishment of a commission. I see the hon. member for Parry Sound (Mr. Slaght) in his place; I think he will recollect one or two incidents that occurred when we were in Britain last autumn. I remember one time when we were served bacon I remarked to the waitress that the bacon was salt, and received the reply, "Yes; that is Canadian bacon." On another occasion we made the same observation and again were told, "Canadian bacon". We made some inquiries regarding Canadian bacon from the food controller, Lord Woolton. He told us that the Canadian bacon we were sending over was in every respect of very high quality, but was being oversalted because of the shortage of refrigeration space. Something should be done by the British authorities to let the British people know that the Canadian bacon they are getting to-day, which is of good quality, good texture, and the type of bacon that they usually like, is salt because it has to be oversalted on account of shortage of refrigeration space.

Another factor in the situation is that most of the smoke-houses in Great Britain—I suppose hon. gentlemen know that the bacon coming in from Denmark was smoked not in Denmark but in Britain—were located along the river Thames and certain east coast ports of Britain, and when the blitz came most of those smoke-houses were destroyed, with the result that still further difficulty was caused in relation to the flavouring of our bacon.

I believe that in addition to supplying the British people with the type of bacon they like, even in spite of the war, we should make an attempt to enter into a longer term agreement with them than we have had, for I am convinced from my knowledge of the British trader and of British business practice generally that if and when Denmark comes back into the bacon industry—it may not be for two or three or four years after the war—we shall again be confronted with keen competition. Those of us who come from western Canada know that as lately as 1938 our live stock and hog population was at a very low level on account of shortage of feed, but in about four years we were able not only to increase our live stock population in every respect, but to increase our hog production enormously, and we can continue to do so indefinitely. When we are rendering this service by upsetting our economy as we are at the present time—and I had an opportunity of saying that when I was in Great Britain—in order to feed Britain in her dire need, some attempt ought to be made by the government to enter into a longer term agreement so that when the war ends we shall not have within a year or two a sudden stoppage of the bulk of our exports of these goods to Great Britain, thereby involving our farmers perhaps in a loss of gains they may have made during the war. When I speak of gains during the war, I know, and everyone knows who is in touch with the farming community in this country, that farmers are to-day not making profits; they are getting something nearer the cost of production, but are still in many cases not recovering that cost, with the higher price of labour on the farm and of supplies.

It is quite reasonable that a commission should be established to deal with live stock products generally, and some attempt should be made to enter into a longer term agreement regarding the taking of our meat and other products by Britain after the war.

But one thing we must do; it may be possible to increase the weight of a hog by twenty or twenty-five pounds and still keep the quality of bacon up; I do not know, but if we cannot do that then we should maintain the quality.

Mr. GARDINER: We have increased the weight by twenty-five pounds already.

Mr. COLDWELL: Yes; but I mean beyond that. We should do everything we can to keep up the quality.

Another thing that should be done is, as far as possible, to keep the distinction clear in Britain between our bacon and United States bacon. We saw United States bacon being landed in Liverpool. Some cases had been broken in unloading, and they contained huge thick slabs of obviously corn-fed lard type bacon from the middle west.

I wanted to make just those two or three points, particularly to indicate the reason for the saltiness of our bacon, and to suggest that some attempt be made to enter into a longer term agreement for bacon and other such products that Britain needs, in order that we may not find ourselves out on the end of a limb two or three years after the war ends.

Mr. HOWDEN: Have steps been taken to prevent Canadian abattoirs from making further shipments of United States bacon? That bacon came in here a year or two ago I believe, when the tariff on bacon was lowered, and I know a good many of our abattoirs disposed of the stores of Canadian bacon that they had and loaded up with United States bacon. No doubt that is the reason why they got it in England.

Mr. GARDINER: No United States bacon is shipped to Britain under the contracts made with Canada; nothing but Canadian bacon is shipped. Even the bacon which came in from the United States during the first year of the contract, because of the fact, which I stated last night, that hogs were on an average 3 cents a pound higher in Canada than in the United States, did not go to Britain. Anyone could buy hog products in the United States much cheaper than he could here. As I remember the figures, the packers shipped in somewhere in the neighbourhood of thirty million pounds in a few weeks time.

Mr. HOWDEN: On the hoof?

Mr. GARDINER: No; in the form of pork products. We made an arrangement for a quota on what they could ship in, and the shipment of United States pork into this country was largely prevented during that period. There are special regulations in effect as a result of our desire not to have our hogs go to the United States. These restrictions have been imposed as a result of negotiations with the United States and by the action of our own bacon board and the Department of Trade and Commerce.

So that that matter is fully regulated in reference to dealings between Americans and Canadians, as far as pork products are concerned. There need be no confusion as between pork products shipped from Canada and those shipped from the United States. These products are shipped to Britain as American pork products direct from the United States; but when they are served at the table, having passed through the various distribution centres, it is difficult for the consumer to know whether they were Canadian or American. I presume the same thing would happen at the table in the barracks as probably happened at the hotel where the hon. member for Rosetown-Biggar made inquiry. Over there the natural thing is to classify everything coming from America as American; but because of the advertising we have put on about Canadian bacon they probably would say that the bacon in question came from Canada. All the complaints were with regard to fat bacon and salt, and all the charges were made against one particular packing company in Canada. Those charges were not from an officers' mess, as was suggested a few moments ago; they were from the rank and file of the men in the army, complaining against the type of bacon which was being sent over. To make an investigation it was necessary that the product be followed right back to the kitchen; they had to get the actual rind taken from the bacon, and they found it was stamped American. So that they were able to prove that this was a complaint with regard not to a Canadian product but an American product.

I am sorry the hon. member for Dufferin-Simcoe (Mr. Rowe) has gone out; I do not think he was in the chamber when the hon. member for Melfort (Mr. Wright) made a suggestion with regard to a board of live stock commissioners, but I hope he will read in *Hansard* the comment I had to offer in that regard. That comment was not to the effect that we were not prepared to consider a proposal along that line. Rather it was to the effect that we were prepared to give consideration to such representations provided that they came from stock producers right across Canada, who understood that they were asking the government to forgo the payment of costs which are now being borne by the treasury of Canada, which costs would be placed upon the product itself. That is what is involved in the resolutions which have come forward from time to time.

There was another question, as to whether our contracts should be for longer periods of time. Ever since the war started I have been of the opinion that we should have long-term contracts with Great Britain covering all farm products. I based that opinion on the experiences of Australia and New Zealand during the last war. As I recall it their contracts extended for the period of the war and one year thereafter, and we have attempted

continuously to make that type of contract with the British food ministry to cover our food products. Up to the present time, however, we have been unsuccessful. Last year we came within two shillings of succeeding in making a contract covering two years, a contract which would be reconsidered and re-signed at the end of each twelve-month period, in about August of each year. The idea was that this would have the same effect, of continuing the contract until one year after the war. Presumably we would enter into it just before the end of the war; it would cover a two-year period, and if part or even all of the first year passed before the war was ended, the contract would still continue for a year thereafter.

I say there was only two shillings between us in coming to an agreement last year. When we were discussing the price upon which the agreement was to be based the British food ministry intimated to us that they were prepared to sign a two-year contract on the basis of 98 shillings, but that if we required 100 shillings in order to get the production which was thought necessary, then they did not wish to sign a contract for more than one year. We finally decided on the one-year contract at 100 shillings, because we felt that in order to get the production we wished, hogs should average somewhere around ten cents live weight at Winnipeg, and in order to get that price we required the 100 shillings. They suggested at that time as an alternative, and the matter is now under consideration, that they would be prepared to sign the agreement earlier this year, which would probably have the effect of making the agreement cover a period of about eighteen months. That agreement has not yet been signed, but information is being gathered and negotiations are under way which will make possible an agreement for the succeeding year.

Mr. WRIGHT: I appreciate the minister's answer to my question, but I cannot agree that the cost of inspection should be a factor in connection with the appointment of a live stock commission in Canada. If the minister has the figures now I should like him to bring them down, or if not he may give them in connection with his estimates, as to what the cost for the inspection of pork products and cattle has been in Canada in the past. As a shipper of cattle for the past twenty-five years, I do not think there is any inspection of live cattle to-day. There is a grading of beef, into the red and blue label classes, after it is killed; but you can ship a live animal one week and have it graded No. 1 whereas perhaps two weeks later, when there is a surplus on the market, that same animal might fall into a lower grade. In that case you will not only lose the difference between the prices paid for the two grades; you will also lose the grade itself, and since this is often a matter of a cent and a half per pound, it makes a tremendous difference in shipping.

There is another matter I should like to mention in connection with the marketing of cattle. During the last few years the packers have brought a larger percentage of their cattle direct from the farmers, without having them go through the public markets. I do not know just how greatly that percentage has increased; I placed a question on the order paper in that connection which was passed as an order for return, but as yet the return has not been brought down. I do know, however, that there has been a considerable increase in the percentage of the packers' requirements now being bought direct from the farmers; yet the price paid by the packers of course is established by the price on the public market. Naturally if a packer can secure from 25 to 50 per cent of his requirements direct from the farmers, so that he has to go to the public market only for the remaining 50 per cent, it follows that there is not the same competition in the open market, and as a result the price is lower. A board of live stock commissioners would serve a useful purpose in restoring confidence to the producers of live stock and live stock products.

Mr. SHAW: Before we leave the question of the desirability of increasing the maximum weight of the bacon hog for export to Great Britain, I feel that I should place on record a resolution recently passed by the Red Deer board of trade. Many hon. members realize, I presume, that the city of Red Deer is located in the centre of one of the greater hog producing areas of western Canada, and a decision either for or against any increase in the maximum weight will have a definite effect upon a great many farmers of that area. The resolution is as follows:

Whereas the present weight for Canadian bacon hogs for the British market is two hundred and twenty pounds maximum,

And whereas the American producer is shipping hogs to the British market at two hundred and twenty pounds basis.

And whereas after a hog reaches two hundred to two hundred and twenty pounds, it is easier to increase the weight to two hundred and fifty pounds without additional bone weight increase, and the extra weight will help our quota and help feed the British citizens with still a good bacon hog, and a reasonable increase in the revenue to our hog producers of Canada. We are not unmindful that our present standard of bacon hog should possibly be maintained after the war, but this may be a long war, and the British public need the food. We can revert back to the lighter hog after the war is over with little trouble and in the meantime we

have increased a desirable food supply with advantage to the British consumer as well as increasing revenues for the hog producers of Canada.

Therefore, be it resolved that this board endorse the raising of the bacon hog weight to two hundred and fifty pounds maximum for the British market for the duration of the war.

I think that view is representative of the view held by the hog raisers of that area. I feel no reluctance in associating myself with those who advocate that further consideration should be given to increasing the maximum weight of the hogs we are exporting to Great Britain.

Mr. FAIR: Are the Canadian hog producers going to be able to supply the 600,000,000 pounds of bacon that are required this year? A couple of weeks ago I noticed the following article in the press:

In the weeks the contract has to run, a good increase in marketings is anticipated in western Canada. Higher marketings also are expected in eastern Canada, although they have been running lower than last year. In the weeks already elapsed western hog marketings were 17 per cent above last year while eastern Canada was down 12 per cent, a net increase of 3·7 per cent.

In that same paper it is reported that hog gradings in Alberta were 34 per cent higher than last year. How do the other provinces stand?

Mr. GARDINER: In the first twenty-five weeks of the year beginning October 1 last, 52 per cent of the 600,000,000 pounds had been either shipped or was in storage in Canada. A number of weeks have gone by since the end of that period. In other words, with still a week to go before we were half through the year we had 52 per cent of the amount necessary to fill the contract. Of course there would be a few weeks following the end of the period when there might be some difficulty in keeping production up to the previous levels.

Mr. SENN: And shipments.

Mr. GARDINER: And deliveries in Canada; it is a short delivery period. While we have done considerable advertising in an effort to get production up during those months, we are not in position at the moment to state whether deliveries will come through in as great volume as we have been expecting, but we think they will. We have added twenty-five pounds to the weight of the hog which is acceptable in order to increase the volume and thus make it more certain that we will fill the 600,000,000 pounds contract this year. The advice I am receiving from the bacon board and others who have the information is to the effect that we will approximately meet the 600,000,000 pounds. We may be a little under or a little over, but that is the position.

Mr. SENN: The minister referred to permitting an additional twenty-five pounds in the weight of the hog. Hogs are paid for on a bacon basis, and a hog of that increased weight would not get the select premium.

Mr. GARDINER: Grade B-1 takes in up to 185 pounds dressed.

Mr. SENN: But they would get no select premium.

Mr. GARDINER: That would be paid on 176 pounds dressed; it would be nine pounds out in the dressed weight.

Mr. SENN: No matter how select the hog may be, it would not receive the select premium if it were that weight.

Mr. GARDINER: No premium is paid on hogs over 176 pounds.

Mr. ROSS (Souris): This adding of weight to our hogs is a matter that should be considered. I received a return last week in connection with hogs which states that the A weight runs from 140 to 170 pounds. As the hon. member for Haldimand (Mr. Senn) has pointed out, a heavier hog would not get into the A bacon class. When you have this extra weight you are taking a cut on your hog and losing at least $1 in addition. That loss might run to $1.50, because B-1 is 50 cents and B-3 is $1.50. The hog raiser is penalized for that extra weight. As has been pointed out, that extra twenty-five pounds can be added much more cheaply than any other part of the weight. The minister and his department should consider allowing extra weight to come into the A class.

The suggested live stock commission would be of more value to the cattle producers than it would be to the hog raisers. The bacon board is doing a pretty fair job in connection with the marketing of hogs, but in certain seasons of the year there is a definite discrimination in the marketing of cattle at our stockyards. There is a great need for a live stock commission, which could render useful service, especially to the cattle producers.

Mr. GARDINER: There is one thing I think should be said to the committee in view of the remarks that have been made. It is perfectly true that when the hog goes over the 176 pounds dressed weight there will be $1 less taken. Since we have allowed hogs to go up to 185 pounds in the B-1 classification we have found that the increase in second grade bacon has been out of all proportion to

what we had expected. Under the British agreement we are expected to send a certain proportion of A's, and they accept a certain proportion of other grades. But we are just a little concerned about having gone as far as we have in view of the effect it is having upon the gradings up to date. If we cannot get better results I am afraid the agitation will be to go back to where we were previously rather than to go in the opposite direction. Probably that agitation will be made by the hog producers themselves.

I was interested in the resolution sent from Red Deer, because I discussed this whole question with the live stock people of northern Alberta in Edmonton last January. At that time the suggestion was made from the body of the hall that we should increase weights, and a lively discussion followed. This happened before the weights had been increased even to where they are now. Prominent hog raisers in Alberta took the position that quality was more important to them, probably not at the moment but from the long time point of view, than increased weights which might bring a little more profit for the time being. That was pretty much the consensus at that time. In most groups in the country you can sit in with the producers and place the whole question before them. I had with me at that time—I am sorry I do not have them here—all the figures with regard to gradings and the effects of those gradings. But I shall have these figures when we are discussing the regular estimates of the department, and I think we can discuss this whole question then to better advantage than we can at the moment.

Mr. ROSS (Souris): I would not ask the department to increase the weight of hogs if it was going to create an inferior grade of bacon, because our first aim should be to produce bacon of A-1 quality. But I still feel that with careful feeding we could increase the weight to some extent and still produce A-1 bacon.

Mr. GARDINER: We have been talking about a 225-pound hog, but it takes a 240-pound hog to produce 185 pounds of Wiltshire sides. So that we are really talking now about a 240-pound hog. Everyone will agree with me when I say that for the last twenty years we have been advocating in this country a 200-pound hog as the proper weight for a farmer to deliver, and if we advocate now that a farmer should deliver a hog around 225 pounds I think we have gone quite a long way towards accepting the views of those who think we should provide a heavier hog. Hon. members have probably noticed that we have agreed with the United States government—it was announced only this past week—that we are prepared to consider along with them certain arrangements with regard to the weight of hogs, and with regard to potatoes. Those discussions will take place, although there are no commitments in connection with them.

Mr. PERLEY: Is there any way in which you could control the packer? He takes a certain quantity of first-class bacon out of a hog of any weight, out of say a 250-pound hog, which would dress in the neighbourhood of 200 pounds. Could not the packer by trimming, get a certain amount of A-1 bacon out of the heaviest carcass? I remember coming to Ottawa on one occasion and meeting on the train a number of packers who were on their way here to attend a meeting. They showed me samples of bacon that had been produced in different packing houses. There was not much difference between them that could be observed by looking at them. They told me that they could get a certain amount of A-1 bacon out of a hog of almost any weight, even one over 250 pounds.

I do think there is some merit in the argument for a heavier hog for the duration of the war, when we need fats so badly. The minister stated on one occasion that fat could be trimmed off the carcass in the processing plant. I have had some experience in hog raising. I have what I consider a good hog house on my farm in the west, equipped with steam cooking plant, root cellar and every other convenience. You can feed 50 or 100 hogs in that hog house as easily as 50. Even from the labour point of view we should encourage a little extra weight on the hog, as well as from the point of view of making use of coarse grains for feed. The surplus fat could be taken off in the processing operation.

Mr. GARDINER: I attended the meeting these packers were coming to. They brought down their sides and hung them up at the experimental farm. I went down that row of sides where they were hung up and laid out, and while I am not an expert at examining hogs, when you have an expert along with you, you can very soon see exactly what is meant by the grading of hogs. While it is possible to take a hog of a certain weight and trim it down, if it has been properly fed, so as to get out of it a very good product in the form of side bacon, anyone who buys a hog of such a weight must take a considerably lower price for what he trims off than he gets for what he delivers as side bacon.

Mr. PERLEY: The packer could convert the fat into lard.

Mr. GARDINER: They might when lard is at a good price and vegetable oils are short. But what we are talking about now is supplying the present demand and at the same time keeping ourselves in such a position that we can hold something of what we have got after this war is over. After all, only a very small percentage of our hogs, even under our present grading, are of the high type that Denmark and Britain produce. Even with all the care we have taken in breeding and everything else we have not nearly reached the standard they have reached in Denmark and which they will enjoy when the war is over. It has been pointed out to us that we must continue to keep our standard as high as we can, in order that when the war is over we shall not have to fight too big a battle to get back into the same classification as our competitors. I agree that no one knows at the moment how long the war is going to last. We are unable to guess, and no one knows at the moment what position Denmark will be in after the war. But I think we should take it for granted that the people who are in control of Europe to-day are just as wise in connection with the production of food as they are in connection with other operations having to do with the war, and I should be very much surprised if there are not more hogs being produced in Denmark to-day than there were before the war. There has been no war in Denmark. The nazis simply walked in and took possession of everything, and I venture to say that they are producing as much food in Denmark to-day as they were when the war started.

Mr. HANSON (York-Sunbury): The theory was that the nazis were taking away the breeding stock.

Mr. GARDINER: They may take them away, but I imagine they will feed them where it is to their best advantage. Denmark is one of the best agricultural areas in Europe and one of the most highly organized. The people understand agriculture and how to carry on farming operations and the raising of hogs, and there is no fighting going on in Denmark.

Mr. SENN: They always had to import grain.

Mr. GARDINER: Yes, but I think we had better figure that Denmark at the end of the war will have the same high grades she had before, and that we shall not have an interval of two or three years in which to build up our product; therefore we should keep our own products in a position to meet any competition that may offer.

Mr. PERLEY: I only want to make sure that the packer has not the opportunity, from the extra weight hog, to convert into lard the product he trims off, and still takes the average quantity of A class bacon out of the carcass. I venture to say that most of those who have taken part in this afternoon's discussion, if they were served bacon from the three sides that I saw of first class bacon that the men on the train told me had been taken from different weights of hogs, would not be able to tell whether it came from a 175- or a 250-pound hog.

Mr. GARDINER: The principle in connection with the whole system is this—I should have explained it when I was speaking earlier. A packer, when he buys a grade A hog, pays a premium of a dollar. That dollar is assumed to be a dollar more than he can actually get for the product. The basis of the whole system is the B-1, and they get a dollar over the B-1 price if it is a grade A. If it is under the B-1, in some of the grades where there are discounts, a discount is taken. The discounts are presumed to balance the premiums.

An hon. MEMBER: They don't.

Mr. GARDINER: Somebody says they don't. Sometimes the premiums are greater than the discounts.

Mr. SENN: Very often.

Mr. GARDINER: They were last year. If the premiums are greater than the discounts what really happens is that the man who produces the type of hog we really want gets something at the expense of the man who produces the type of hog we do not want. It is not a matter of the packer getting something or the packer not getting something; the system is supposed to work to take the money from the man who produces what we do not want and give it to the man who produces what we do want. That is the principle of the system, and it has operated to improve the standard of our hogs across the country.

Mr. WOOD: If I understood the hon. member for Melfort aright, he made a comment to the effect that when there was an over-supply of beef on the market the farmer lost in consequence of the grading. If that is so it carries an unfortunate implication, because after all, the graders who grade the carcasses, not only beef but pork, are government graders, civil servants who are engaged by the people of the dominion. It seems to me that their integrity

must be at stake, and I marvel that the minister did not rise to the occasion and defend those public servants. I might add that I have heard that remark on many other occasions. I listened to a statement in a speech in my own riding that the confidence of the farmer was absolutely destroyed because the government graders worked in collusion with the packers to secure for them additional profit. If that is so, and it becomes generally known, the confidence of the farmer will be undermined. Also a remark of this kind is rather dangerous to those who are called upon to discharge their duties to the farmer in grading carcasses and securing for them the grade to which the product is entitled. Their integrity as government inspectors is more or less at stake. I should like to have the opinion of the minister in this matter. I believe I have correctly interpreted what the hon. member for Melfort said.

Mr. WRIGHT: No, I did not say that.

Mr. WOOD: Further, I think the minister is wise in guarding jealously our reputation in Canada for the production of bacon hogs. The records prove that last year practically 80 per cent of all the hogs marketed in Canada went into the basic and the premium grades.

With regard to the question of increasing the amount of weight to each hog, the records of our experimental farms show that it costs more to produce one pound of meat the older and the larger the animal gets. Therefore by increasing the size you sacrifice a certain amount of profit. To the men in the west who have an abundance of coarse grain that may not mean so much, but so far as I am concerned I am anxious that my hogs should leave the farm as early as possible after they have reached 220 pounds. I think it is fairly safe to follow that line. When you get past it the cost of production goes up. Not only that, but you are apt to sacrifice quality.

Mr. WRIGHT: I think the hon. member for Brant misinterpreted my remarks. I was not speaking of the grading of pork but of the grading of beef. I believe that in the case of beef there is not nearly as strict grading as there is of pork. I still maintain that what I said with regard to beef is what actually takes place. I do not believe that it is a reflection on the integrity of the inspectors; it is probably a reflection on the methods used in buying from the farmers.

Mr. HOWDEN: But the beef is graded in the abattoir after the animal is killed.

Mr. WRIGHT: A certain amount of it.

Mr. GARDINER: That is exactly the reason I did not comment on the statement of the hon. member for Melfort: I understood he was dealing with beef, and we do not grade beef under the same type of organization as we do hogs. There is a voluntary grading of beef, and only a certain proportion of it is graded. There is, I understand, some compulsory grading in British Columbia, but there is no general compulsory grading across Canada.

One reason why I should like to feel that live stock organizations really know what they are doing when they are passing resolutions such as the one which has been read is that there would be costs of grading. You could not operate the sale of beef in the United States, under a board similar to our bacon board or to the board of grain commissioners, under any other system than a system of grading, and that grading would have to be very carefully done. And of course, while we do get advantages out of grading, there are costs in connection with it as well. As to what those costs might amount to, I have not the figures in front of me. I did have a table prepared which I presented to this house three or four years ago, because of a discussion which was then going on as to whether the grain grower or the live stock producer was getting most out of the treasury of Canada. I was able to show at that time, which was before we started paying the amounts we are now disbursing in connection with acreage and wheat prices, that the live stock producer was receiving a great deal more out of the treasury than the grain producer was, just because of this very service, which amounts over a period of time to millions of dollars paid out in grading live stock products; and to-day we have a much more highly developed system than we had at the time I filed the figures. Over no very long period of time the cost runs into figures between twenty and thirty million dollars. If all of the facts are placed before the organizations which are considering the subject, and they then pass a resolution asking the government to do certain things about it, the government would be justified, I believe, in saying, "The live stock producers want us to do that; it is going to cost the treasury of Canada a lot less money if we do it the way they are suggesting; then let us proceed to do it". I do not believe there is any great objection to doing it so far as the government is concerned.

Mr. HOWDEN: What is the function of the beef graders? Every now and again the

civil service commission calls for beef graders, to grade beef in the abattoirs. If it is not to grade beef, what is it?

Mr. GARDINER: We established two top grades of beef. On a Canadian Pacific train or a Canadian National train you will see on an order a certain grade of beef at $1.50 a cut. We do establish those, those top grades. It is entirely voluntary. Anyone can have that grading done who wishes to have it done. The system results in only a very small percentage of the beef which is going into the market being graded, and it requires only a very small staff as compared with our general inspection staffs in connection with pork and other products.

Mr. HOWDEN: Grading takes place with regard to slaughtered beef, does it not?

Mr. GARDINER: In the abattoir.

Mr. HOWDEN: Then it cannot have any connection with the sale of beef.

Mr. GARDINER: Not the sale of cattle.

Mr. RICKARD: This question has produced more controversy among farmers than any other question in regard to the products of the farm. As the hon. member for Brant has said, many farmers declare that we are not satisfied with the grading we get. We have graders appointed; a man sends a number of hogs one day to be graded and—I have heard farmers say this—he might send the same hogs the next day and get a different grading. There is a good deal of trouble about the grading of hogs.

I am glad to hear the minister say that 220 pounds is about the right weight for hogs. I have been in the business for some time, not as a specialist in hog raising, though I have produced a good many hogs, and I find that 200 or 220 pounds is about the weight at which it is most profitable to dispose of hogs. In olden times we used to grow what was called the thick fat hog, and anyone will tell you that is the easiest type of hog to produce. You can grow it cheaper than the lean hog. But we were educated away from that ideal for the simple reason that we could not sell fat bacon. We have therefore been growing thin hogs so as to have a better quality. I think it would be a great mistake to go back to anything approximating the old standard and to increase the weight of hogs to 250 pounds. It is recognized of course that the British market wants the leaner hogs, from 200 to 220 pounds, and if we are to maintain the market which we have already established there we must be careful not to exceed the requirements they stipulate. We may need fat and I realize that perhaps the last twenty-five pounds is the easiest to put on; nevertheless I think we should consider very carefully just where we are going if we attempt to increase the weight of hogs.

Mr. WEIR: Along the lines suggested by the hon. member who has just spoken, we should bear in mind, in considering this question of the hog policy for the future, what has been our experience in the past. This question has been before us for twenty years, since grading was instituted, and it has taken a good deal of effort to bring the present type up to the present standard. As the minister has intimated, our success in that regard has not equalled that attained in Denmark with their type of hogs, and it seems to me that to alter our standard or to make any drastic change might have far-reaching effects which it would be more difficult for us to overcome afterwards than many of us may think. After all, the farmer who is feeding his hogs is a shrewd man, and he knows what to do. I have not checked up carefully the figures with regard to the grading of hogs, but I may tell of an experience we had a few years ago at a time when there was a good deal of complaint with respect to the grading of hogs. The reason was that too many hogs were coming to the market overfinished and overdone, and the reason for that in turn was that it was during a period when grains were cheap and people were feeding their hogs to the very limit, with the result that they were getting top weights and a little above. So that if we are inclined to think that the farmers are not paying close attention to these questions we are mistaken.

There is something else in regard to which I have felt that many producers do not realize the significance of grading. If anyone looks at the special hog, the first-grade hog, he will understand that it is the ambition of every farmer to produce that type. But after all, in our grading system, the A grade hog is not our standard; it is the grade B bacon at which we have always aimed. The special was something extra, as the minister mentioned, being an incentive to the farmer to try to produce what might be regarded as the ideal. But it is not the standard so far as our hog policy is concerned. We have had a good deal of experience in the grading of hogs. We had some experience when grading was first instituted and there was a good deal of complaint about it. It was difficult to get people to understand what the objective was, but gradually it became more and more acceptable. We had the same experience again when

rail grading was instituted. The minister will remember there was a good deal of discussion and much pointed criticism of the department when rail grading was instituted, but that system has been generally accepted, and I believe that members who have paid close attention to the development of our agricultural products will agree that we have always aimed at standardizing products. For my own part, and I believe this is generally accepted, I think you can grade a hog more accurately and much more carefully on the rail than on the hoof as a live hog. We have made progress in that regard, and watching the grading of hogs on the rail I think the policy arrived at is the most accurate that has been developed so far in that direction.

There is one question which in my mind remains to be answered with regard to the hog grading policy. It is not so much a matter of the top grade hogs as it is with regard to the lower grades; and what bothers most people, the thing that is most difficult to explain, is the number of discounted hogs. It does not seem to me, and I think a good many others agree with me, that it is necessary to have as many grades of hogs as we have at the present time. That is the only comment I make at this time on this aspect of the question. I should like to know from the minister whether he thinks it is necessary to have all these grades of hogs in carrying out the present policy.

Mr. AYLESWORTH: With a good deal of what the minister has said I agree so far as weights are concerned. But as to what he has said in reference to the change in weight resulting in the production of a great many more hogs of the heavy type, while I cannot speak for western Canada, I believe that the production of the heavy hog is in part attributable to present conditions inasmuch as the farmers of Ontario find it very difficult to get enough young hogs to carry on and to use up their feed, and are therefore almost compelled to keep their hogs until they are too heavy. I believe that will be cleared up in the near future.

If I understood the minister rightly he suggested that the dollar premium paid on hogs is supposed to be offset by the dollar cut on off-grades. I wonder if that is the reason why, in a shipment of say 400 hogs, you have 90 odd selects, which means $90 premium, while in that same shipment you will have $90 or $100 or $105 of a cut. Is that a sort of understanding between the grader and the packer, that it is in the nature of a balancing up? I have found in my own experience that this has occurred, when knowing and seeing the hogs one felt that it should not be that way. I was wondering whether that was the reason.

So far as rail grading and live grading are concerned, I believe the understanding is that after your hogs have been graded by one grader no other grader is allowed to be called in to re-grade them. But there was an experience a few years ago in the stockyards; some ninety hogs were graded and the grader took out ten selects. The remaining eighty were brought back under another name and he took out nine selects from those eighty. Again the remaining seventy-one were brought back under a different name and the same grader took eight selects out of them. That continued until there were only some nine hogs left out of the ninety and they had got seventy-two selects. The mark on these seventy-two hogs was washed off; they were brought back and graded by the same grader, and he then graded ten selects. I was wondering whether there is a sort of guessing to offset the premiums that are paid. As I understand it, so far as the British market is concerned B-1 bacon is rather more desirable than even our select bacon.

I agree with the last speaker that there are too many grades. I would reduce the number of grades by having say the select grade A class; then the B-1 class, and then the heavies after that, doing away with the other grades in between. There should be one cut on hogs over a certain live weight, say 240 or 250 or whatever may be decided upon, and all hogs under that should be on the basic price. I think that would be far more satisfactory to the farmer.

Mr. GARDINER: In regard to the number of grades, I have been a sort of crank on that myself ever since we have had rail grading. As I go out to gatherings here and there across Canada I find that is one of the main criticisms, that there are too many grades. I have been driving at the bacon board and our own men in the department to see if we cannot get the number of grades cut down. On making inquiry recently I find that in Canada we have eleven grades and on the Chicago market there are twenty-six. We were examining Chicago trying to find a better system than our own, but they have more than twice as many grades. That may be due in part to the fact that they take a heavier hog than we do, and the grading system is on a different basis in the matter of weight. They rather encourage the heavier hogs because of the market they have for them.

On the question of balancing I do not want to be understood as saying that the balancing takes place in the delivery of any particular group of hogs or any particular individual's hogs. The last slip of my own that I looked at—and no one knew they were mine when they were being graded—showed five selects on which I got an extra dollar each, and none of them were docked at all; the rest were B-1. The averaging up is done not on any particular group of hogs; it is on all the hogs delivered during the year. A farmer who continuously brings in lights gets continuously docked, and the farmer who continuously brings heavies is continuously docked, while a man who always brings hogs around 200 pounds probably gets a premium on 90 per cent, under the system which has been encouraged to take money away from the man who brings in hogs that are not properly finished and pay it to the man who brings in hogs that are at the top of the list.

I hope the committee will permit me to leave the remainder of this discussion until we come to the general estimates, when I shall have all the information here. Statistics show that there has been a marked improvement in the type of hog that is delivered to the market as a result of the system we are following.

As to that story of the group of hogs, I do not know how closely it was followed through but I imagine that if a man brought in three or four hundred hogs and 50 per cent were perhaps only some ten pounds light, anyone could take them out of the market and feed them a few days and bring them back and have them converted into selects. It is not the fault of the hog that he is not a select; it is the fault of the man who feeds him. If one man brought him into the market light and someone gets him and takes him out and finishes him properly, he will be a much better hog when he is brought back.

Mr. AYLESWORTH: I am not talking of hogs of that kind. This group I referred to were all done in one day.

Mr. GARDINER: Well, I would want to know more about that. I hope we have no inspectors who are dumb enough to have that put over them; if we have, they should not be there. Many stories of that kind go round regarding grading activities, but one has to follow them through in order to be certain about them.

I think we have pretty well discussed this item. Could we call it carried and go on to the next, the dairy products board?

Mr. GRAYDON: When I was discussing agriculture generally on another item last night the minister intervened to say that anything I might have to say with respect to the milk situation might be said on another item, and this appears to be an appropriate one. I think it is essential that the committee make as much progress as possible, and while I was intending to make some extended remarks I shall content myself this afternoon, in order to hasten proceedings, by simply asking the minister a question. I think in December last a bonus was given to the whole milk producers in the Toronto milk area of 30 cents a hundredweight. On May 1 the bonus was withdrawn, if my information is correct. On May 15 in the *Globe and Mail* I noticed a report of a meeting of the executive of the Ontario milk producers association which dealt with the matter. They were very firm in their request that the bonus be restored. Would the minister care to comment upon that situation?

Mr. GARDINER: The position in connection with whole milk is that we have really had no set-up; it is a provincial matter. I am sorry the hon. member for Fraser Valley is not in his place—that is what I was trying to say last night, trying to put the responsibility where I think it belongs in connection with milk. The milk supply comes from round about the cities, so that in most instances it is limited to one province. That would not be altogether true in connection with Montreal, but it is of Toronto and most of the Ontario cities. The provincial governments have had boards established and there have also been boards in those cities that have been controlling milk supplies.

The activities in connection with the price of milk so far as this government is concerned have been under the prices board, which in this matter has been dealing not with us but with the provincial boards. The order given out from Toronto yesterday was an order of the Ontario board. I am not able to say what discussion the prices board had with them, or what all the discussions were in connection with the subsidies that were paid for a time and finally cut off. I only know that, judging from what came to our office in regard to it, there were communities in which there were very wide differences resulting from the paying of those subsidies. They were put on a basis under which a control was exercised if increases had been made within a certain period of time. It was presumed that if an increase had been made within a certain period of time, the price had been put up as high as was considered necessary, and that therefore it should not be further increased by the payment of a subsidy. In one case that I have in mind that resulted in one town paying, I think, $2.55

for milk and another, a smaller place not far away, paying as little as $1.80, while another place paid something like $1.95.

Mr. GRAYDON: That was a general bonus?

Mr. GARDINER: The bonus had that result. The one man who was very high in the beginning got a thirty-cent bonus, because he had not increased his price within a certain period of time. With all these discrepancies in view the board worked out a new plan, and announced that by May 1 they would be prepared to put it in operation. All these discussions took place with provincial organizations. I am certain that any of our officials who were invited to give assistance or information did so and cooperated in every way possible, but this was an arrangement entered into by the wartime prices and trade board after taking up the matter with provincial organizations, which have always controlled the milk trade.

Mr. GRAYDON: The minister mentioned a decision which was reached yesterday. Is he in a position to give any information on the situation which has developed?

Mr. GARDINER: I just referred to the announcement made yesterday in Toronto, to the effect that a price of $1.95 had been set for 3·5 per cent milk. I have no further information except what I saw in the newspapers.

Mr. GRAYDON: I have not seen the press announcement yet.

Mr. TUSTIN: Did the Ontario milk board not act as a board of arbitration in that case?

Mr. GARDINER: I think perhaps they did.

Mr. McNEVIN: My purpose in taking part in this debate is to urge upon the Minister of Agriculture the necessity of authorizing an increase in the price of butter, and of course my remarks will also be directed to the Minister of Finance, under whose jurisdiction the wartime prices and trade board operates. I believe the Minister of Agriculture and the officers of his department are fully aware of the necessity of increasing the return to the butter producers of Canada. The importance of the dairy industry in the commercial life of this country is well known. Perhaps I may emphasize it by saying that the total gross annual production of agricultural commodities in Canada is somewhere in the neighbourhood of $1,000,000,000, of which almost one-quarter is dairy production. Something like 15 per cent of the population of Canada derives the major portion of its income from the dairy industry, including, of course, those engaged as farmers in the production of dairy products, and the various other agencies having to do with the manufacture and distribution of these products.

I think I am correct in saying that butter was one of the first commodities on which a ceiling was established. At the time the price of cheese was fixed last year, that price was considered fair. But there has been a substantial increase in the price of cheese since then, and I think also in the price of milk for manufacturing purposes, so it will be seen that the return of the farmer engaged in the production of butter fat has not similarly increased. Then, when we realize that about one-half of the dairy farmers of Canada are engaged in the production of butter fat we get some idea of the number of people who are being discriminated against, to a certain extent, in connection with the production of their portion of our dairy products.

I believe it was the hon. member for Fraser Valley (Mr. Cruickshank)—and perhaps there were others as well—who referred to the shipment of dairy cattle to the United States and spoke of the resulting depletion of Canadian herds. This has some bearing on the matter. As a breeder of dairy cattle I wish to say emphatically that I do not believe we should take any action that would tend greatly to disturb that market. For many years the breed associations of Canada have spent a great deal of time, money and effort in fostering and developing a remunerative market in the United States for surplus dairy cattle, and anyone who is breeding dairy cattle knows that each year there is a surplus to be disposed of in some manner. Dairy farmers do not sell all their best cattle. They sell a few good ones, mixed with a few ordinary ones to balance up; and no wide-awake dairy farmer is going to break down the general level of his herd, even if the price is attractive. He will protect himself in any event.

In order to support my suggestion that we should increase the price of butter, I want to refer to the depletion of butter stocks and the decrease in the production of butter. I have before me the storage figures as of the end of May for the years 1940, 1941 and 1942. According to figures released by the dairy branch of the department, we had in store as of the end of May, 1940, some 10,337,000 pounds of butter. As of the same date in 1941 we had 9,580,000 pounds of butter in store, and on the same date in 1942 we had 5,838,000 pounds. So there has been a decrease of about 4,000,000 pounds in the amount of butter in storage. But that does not tell the full story. With the normal increase

in population in Canada, amounting to about 180,000 persons annually, at 30½ pounds of butter per year per person we have a normal increase in the consumption of butter amounting to about 5,000,000 pounds. Therefore, presuming that this year we have a normal increase in population, we have a prospective decrease in the available supply of butter amounting to between nine and ten million pounds, which is likely to lead to a serious situation if this trend continues. Then, according to a report covering the nine principal cities of Canada, as of June 1, 1941, there were available in those cities some 9,000,000 pounds of butter. At the same date this year there were available only 3,000,000 pounds of butter, which indicates a definite trend in the butter situation. Since we produce perhaps five-sixths of our butter during seven or eight months of the year, it is essential that we build up a substantial surplus during the months of high production, or we are going to face a very great shortage later on in the year.

The increase in the price of cheese had the effect of substantially increasing the production of that commodity during the first four months of this year. In the first four months of last year we produced approximately 7,000,000 pounds of cheese, but with the increased price prevailing this year the production in the first four months was about 26,000,000 pounds.

In the province of Quebec they have what are known as whole milk creameries which buy the whole milk and separate it. No less than forty-five of these creameries switched over from the production of butter to the production of cheese. While that situation does not prevail in Ontario, it indicates the trend. The lack of equality between the price of butter as compared with the price of cheese is due in a large measure to an increase in the price of cheese this year of approximately four cents a pound, along with the continuance of the government bonuses of last year. On cheese scoring 93, which represents an average score, the bonus amounts to approximately 3 cents a pound of cheese. One pound of fat produces 2·6 pounds of cheese, and therefore such assistance represents 7·8 cents a pound on fat if it were manufactured into butter. I am aware also that the government absorbs a portion of the 20 cents a pound cheese price.

With prices of butter and cheese at present levels, prices received per pound of fat by the primary producers are approximately 36 cents and 51 cents respectively, an advantage of 15 cents a pound of fat to the cheese patron. This would amount to 52½ cents per 100 pounds for 3·5 per cent milk. Of course the butter producer keeps his skim milk on the farm, and some question might arise as to the value of that skim milk. Some put this at 15 cents per 100 pounds, some at 20 cents and others at 25 cents, but if we take 30 cents, which would be the top price for skim milk, there is still an advantage accruing to the cheese patron of approximately 22½ cents per 100 pounds for 3·5 per cent milk.

I see no reason why one half of the dairy farmers in Canada should have to carry this heavy burden as far as their price returns are concerned. We must keep in mind that there is an unlimited export market for cheese, but the market for butter is domestic. According to the figures I have given, without question we are facing a butter shortage in the Dominion of Canada. The only logical remedy is to increase the price of butter in order to give the producers added encouragement. I do not see why there should be such a great difference in the return received by a farmer producing a commodity that is to be sent overseas and the farmer who is producing a commodity that is kept in this country. The general level of wages and employment in Canada is at a high point at the present time, and there is no reason why a fair price should not be paid to butter producers.

I urge that consideration be given to increasing the price of butter fat by at least five cents a pound. This increased price would not bring the return of the butter producer up to that of cheese or manufactured milk producers, or those who are commonly termed fluid milk producers, but it would provide an incentive to increase production. We should take strong measures to prevent the possibility of the rationing of butter in Canada which might bring about an agitation for the manufacture of oleomargarine or some other substitute. Butter is a nourishing, health sustaining food, and we should recognize the needs of the Canadian butter producer and give him a fair deal.

Mr. GARDINER: Before there are any further remarks, perhaps I should explain that the break-down of this vote of $1,514,950 is $14,950 for administration and $1,500,000 for the purchase of butter. The only time at which butter would be purchased would be when the price falls below 32 cents a pound at Montreal. In other words, $1,500,000 of this vote may or may not be used. The ceiling price on butter is 35 cents a pound and the floor is 32 cents a pound. Even with the present ceiling price, the price of butter is dropping at the present time. If it goes down as low as 32 cents a pound the board has power to go into the market to buy butter in order to prevent the price from going lower. We are taking protection against the running down of the price. The floor is

set by the Department of Agriculture; but, as has been said, the ceiling price is under the control of the prices board.

Mr. WARREN: I should like to say a word or two in connection with one feature of the remarks of the hon. member for Victoria, Ontario (Mr. McNevin), that is, the sale of dairy cows in the United States. I do not think that business ought to be interfered with at all. There is no more treacherous or risky business than the handling of dairy cattle. I know of one man who has been coming here from the United States since 1917 in order to purchase dairy cows. He takes them to his farm near Watertown, and other United States dairymen come here to purchase cows. Last year this man spent $100,000 in one district. The cows he purchased were not necessarily all raised in that particular district. The dairymen may deal in cows on the side. Some of these men will go perhaps one or two hundred miles out of the district in order to buy cows to increase their herds or to have some for sale. The United States buyers come in, and they generally know where they can get a truck load of cows to take back. We have had this amount of money coming in to help relieve a surplus of dairy cows. If there were no market for these dairy cows, many farmers would not raise their heifer calves. They know they have a chance of getting rid of any good dairy cows that they might have. Every year they are raising heifer calves, and in that way not only keeping up their own herds but having a surplus for sale. I think that market should not be interfered with but rather encouraged because it has been of considerable benefit to the dairymen of the whole district.

The ACTING CHAIRMAN (Mr. Bradette): The next item is $978,271 for the special products board.

Mr. HANSON (York-Sunbury): I wish to ask the minister some questions with respect to the dehydration of potatoes and to show how it affects us in New Brunswick. I am aware that two orders in council were passed, one in December of last year and another one more recently, making an appropriation, I presume out of this vote, to extend the policy of providing additional dehydration equipment. During the last war a substantial amount of dehydration was carried on in New Brunswick, and it was associated with the manufacture of starch. I am told that that is the only economic way in which the dehydration of potatoes can be carried on, because the peelings of the potatoes and the washings contain all the elements that are required in the manufacture of starch, and I am told further that the manufacture of the starch will cover the whole cost of the dehydration process.

We are desirous of having a couple of plants established in New Brunswick. The advantages would be obvious. Ninety per cent of the weight of a potato is water. Therefore a freight on three dollar potatoes shipped to a point in Nova Scotia means a considerable loss entailed in freight, and if the dehydration plant is not run in connection with the manufacture of starch, that specific part of the product which would make starch, the peelings and the washings, goes down the sewer. That is not a profitable proposition; it is not an economic method.

There are people in New Brunswick who are willing to operate a dehydration plant for potatoes in conjunction with the starch industry, and I ask the minister if he will not see that arrangements are made for the establishment of two plants in that province for the dehydration of potatoes. There is no such plant in Prince Edward Island, and perhaps consideration might be given to establishing one there too.

I am satisfied from what I have learned, that if one or two dehydration plants were established in New Brunswick in connection with the starch factories at present established there, all that freight would be saved, and it would be the economic way to handle the product. I am told that during the last war there was a plant in Carleton county, New Brunswick, employing 150 hands. It is said that the product was not perhaps as good as it ought to have been, but scientific processes have advanced a long way since then, and I understand that a product of the proper quality can now be produced.

The provincial department of agriculture of New Brunswick has been in communication with the minister and is asking for this. It would not be a large expenditure, and since we have had very little war work down in New Brunswick I would urge the minister to give serious consideration to appropriating $50,000 to establish two plants in New Brunswick for the dehydration of potatoes. There are men there who are willing to erect the buildings and do everything else that is necessary if this grant be made, and it might be returned to the department out of the profits.

I am making this plea on behalf of the New Brunswick potato producers. They have at times a surplus of potatoes. There may not be a surplus this year, but in three out of four years they have a surplus and this is one way in which they could utilize their surplus product. The suggestion I am making is the economic way of handling the situation

with respect to potatoes. I am not speaking with regard to other vegetables at all. I have no plea to make for them. They can continue to be dehydrated in the plants already established in Nova Scotia; but with respect to potatoes I think plants ought to be established near starch factories, because this would not only mean a substantial saving in freight rates but a saving in the peelings and washings which could be converted into starch and which now go down the sewer. That is the way in which the matter is represented to me, and it seems to me to be a reasonable proposal. I hope the minister will give it his favourable consideration. Is it not true that the provincial department of agriculture have asked for this? Is it not true that they have pointed out the economic value of such a proposal? If they have, I just wish to supplement their representations to the minister with my own.

Mr. GARDINER: The committee will realize, of course, that the discussion in connection with dehydration should properly take place under one of the previous items, but I think it is quite proper that I should answer now the question put by the leader of the opposition.

The matter does not come under the special products board, which was set up for the purpose of making arrangements with Britain with regard to any products other than those which come under the dairy products board or the bacon board. It has to do with eggs, for example, and other products of that kind.

It is true that the government of New Brunswick have made representations along the lines just stated by the leader of the opposition. One of the members of that government, as the leader of the opposition knows, is one of the big producers in that province and probably knows as much about the matter as anyone else there. The hon. member for Victoria-Carleton (Mr. Hatfield) is also quite a producer in that area, and I think he too will agree with everything that has just been said by the leader of the opposition.

The representations made are as has just been stated by the leader of the opposition, that if the dehydration process is carried on at a place where there is not a plant which is producing starch, this adds greatly to the cost of the dehydration. In other words, one has to be more careful about the peelings in order to get the full value out of the potato. But when the dehydration is done in conjunction with the making of starch, the peelings can be of any thickness desired, in order to make sure that the rest of the product is pure potato for making the dehydrated product.

[Mr. R. B. Hanson.]

Mr. HANSON (York-Sunbury): And the washings are not wasted, as well as the peelings.

Mr. GARDINER: Yes; that also is involved. In other words, the cost is pretty well taken care of by using the outer part of the potato for starch. That is the representation made to us, and any investigations and inquiries we are making with regard to the placing of any dehydration plant for vegetables in New Brunswick are in relation to establishing a plant for dehydrating potatoes in relation to the plants already there. If anything is done, I can assure the leader of the opposition that an effort will be made to have the first developments take place where there are starch-producing plants in order to get exactly the results which he has indicated.

I would point out, however, what was pointed out by the hon. member for Yale (Mr. Stirling), last night, and what I emphasized later, that this plan is still in the experimental stage. We have had discussions with the representative of the British food ministry with regard to the whole matter. The British government are establishing dehydration plants on the same plan in Great Britain and hope to make use of them before coming to us for our products. We are following along the line which the hon. member for Lethbridge suggested last night, of trying to see ahead to what might be expected from this country in potatoes and other products that might require dehydration. Up to the moment we have no orders, and we have no assurance from Britain that we shall have orders; but we are confident that the establishment of some of these dehydration plants, particularly those that can be operated in association with other plants such as the starch plants in New Brunswick, is required and would be of assistance in connection with the war, and if not, that they would still be of benefit in dealing with the surpluses which we have occasionally in times of peace. Any assistance we give in that direction in that area, if the development leads to an increase in the number of plants, will be made just along the lines suggested.

Mr. HANSON (York-Sunbury): I am content with that.

Mr. HATFIELD: I am glad to have the assurance of the minister that New Brunswick is receiving attention with regard to dehydration plants. During the last war I had a lot of experience in the dehydration of vegetables, both potatoes and turnips. I was interested in a company which dehydrated practically 90 per cent of the potatoes and turnips which were dehydrated during the last war. For the most part the quality of the goods proved

satisfactory, especially to the French government, for whom we manufactured a vegetable soup mixture.

What has been done to meet the shortage of milk cans? We have in my constituency a cheese factory, but we cannot secure milk cans for conveying milk to the factory. Has anything been done toward the securing of cans?

Mr. GARDINER: With regard to the manufacture of milk cans, it is, of course, a priority matter which has to be dealt with by the priorities people. They have given to the production of milk cans what we think is a liberal amount of the requisite materials. It may not be as much as could be used, but still, as compared with other uses that are made of the same materials, we consider it is a liberal provision.

Some attempts were made to bring old cans back into use for the purposes for which they were intended. It has been found that milk cans are piled up almost anywhere and used for almost any purpose. Hundreds of them were brought back in compliance with a regulation which compelled people to return cans which were owned by the people who were presumed to be using them, and many cans were uncovered in various places. One official told me the other day that dozens of cans were found piled up behind one building last winter, and frozen in the ice. They had to chop the ice away in order to get the cans out for use at a time when there was a shortage of cans in many parts of the country. Efforts are being made to utilize all of the old cans which can be found and put into condition to be used. An effort through priorities is also being made to have a proper number of cans manufactured.

Mr. HATFIELD: We have had cans on order for over four months, and have not received a can, and the manufacturers tell us that they cannot secure any material.

Mr. GILLIS: I should like to make an inquiry of the minister with respect to the regulations being administered for the marketing of wool. This is about the only item under which I can make that inquiry .

Mr. GARDINER: It really does not come under this. Properly it would come under my general estimates.

Mr. COLDWELL: Perhaps the minister will be good enough to answer the question.

Mr. GARDINER: Yes, if it is not too long.

Mr. BLACKMORE: Will the minister tell us what does come under this item.

Mr. GARDINER: Eggs, principally.

Mr. GILLIS: I have received several complaints from Nova Scotia with respect to the regulations laid down a year ago with regard to the marketing of wool. I made inquiries from Mr. Dick, the wool administrator, who referred me to the wool board, and I have not heard anything from them, but he did advise me that the regulations came under the purview of the Department of Agriculture. The complaint is that prior to the enactment of these regulations the wool was gathered by agents from the farmers, and that all of the wool was marketed in that way. In addition to that, the farmer had the privilege of selling direct to the factories. Since the regulations were enacted, all of the wool has to be marketed through regular grading centres. The farmers complain that they are receiving less money now for their wool graded in that way than they were prior to these centres being set up, when it was taken direct from the farmer. It is necessary at times to ship the farmers' wool as far as three hundred miles, and the result is going to be that probably 50 per cent of the wool will be left on the farms. I do not know anything about the matter; that is the information I get from men who are engaged in this work. Would the minister enlighten us as to what the regulations are, how many centres are set up in that province, and what is the price now compared with the price prior to the enactment of the regulations?

Mr. GARDINER: As regards the last question, I think I can answer it by saying that there is very little comparison between the price now and the price previously, because the price previously was pretty much a pre-war price, and of course the price of wool jumped rapidly after war was declared. I believe it was the first product which was put under control by the government, because of the demand for it for making uniforms and other clothing necessary for war purposes, which resulted in a rapid rise in price.

As far as the other matter is concerned, I think it could be much more effectively discussed under my general estimates, because of the fact that I have not the information here with regard to it. It is an item in the estimates having to do with grading, and really comes under the regular estimates, and if the suggestion meets with the approval of the hon. member I would prefer to leave the matter until that time.

The ACTING CHAIRMAN: The next item is: "Freight assistance on western feed grain, $2,000,000."

Mr. COLDWELL: Would the minister explain just what is being done with regard to assistance in the movement of grain both east and west?

Mr. GARDINER: The arrangement relates to grains that are used for feed, and it includes wheat as well as coarse grains, and corn going west, not going east; corn going west from Manitoba to British Columbia, for example, but not corn coming east. All mill feeds are included as well. We are paying the freight from Fort William east to points in all of the provinces east; and on grains going west we are paying freight from Calgary and Edmonton west into British Columbia to be used for feeding purposes. Those payments up to date amount to about $5,000,000. We estimated that they would cost us about $6,000,000 throughout the year, but up to date we have paid out about $5,000,000. In short that is what is happening.

Mr. COLDWELL: Well, it is mill feeds, coarse grains going west? What grades are included? Is anything being paid on low grade wheat?

Mr. GARDINER: It is being paid on all grain, on everything declared to be feed. We pay freight.

Mr. COLDWELL: Has the minister had complaints from poultry feeders and others in British Columbia regarding the prices they are paying for this grain, as to whether they are getting the advantage of this bonus or not? When I was out west in December I heard complaints, but I did not receive any specific proposals or suggestions. I wondered if complaints had been made; if so, what was in them, and what had been done.

Mr. GARDINER: We have had no complaints at all of just the nature that is suggested. We have had complaints arising from misunderstandings with regard to what freight rate was going to be deducted. There is a special order known as tariff 145 under the transport board, the old railway board, which by reason of representations made by the hon. member for New Westminster (Mr. Reid) over quite a number of years resulted in a reduction in the rate on grains that were being sold for feeding purposes in British Columbia. When we put the regulations into effect covering British Columbia we provided that that was the freight rate we were to pay wherever it was applicable. The suggestion has been made that some people have been preventing that from going into operation, as was intended, to the disadvantage of some others, and we have been correcting the situation from time to time. I think it is working satisfactorily now.

[The Acting Chairman.]

Mr. HANSON (York-Sunbury): As I understand the position in reference to fertilizers, this is for the production of fats, to which the minister has referred, to be devoted to the war effort, and it has no relation whatever to assistance to farmers in the production of other crops.

Mr. GARDINER: No. The intention is to assist farmers to produce coarse grains for feeding purposes in order that they might be fed to live stock to produce fats or dairy products or pork or beef products.

FINANCE

The ACTING CHAIRMAN: The next item is "auditor general's office".

Mr. ILSLEY: The items of the finance estimates are: first, the auditor general—

The ACTING CHAIRMAN: Shall we take them seriatim?

Mr. ILSLEY: I think that would be best.

Mr. CHURCH: In regard to the auditor general, the most important quality in management in war time is decision; indecision is fatal, and we should have some explanation of this item with regard to the auditor general's office. The first essential in that office as well as in that of the minister is the formulation of a definite policy from the point of view of objectives we have here. I wish to call attention to section 50 of the Consolidated Revenue and Audit Act, 1931. This item before us relates to the auditing and checking of war accounts, the amount involved being $146,000,000 overdraft in civilian accounts of departments. There has been a great deal of complaint ever since the war started about the very large expenditures that have been made both in the main estimates, which have not yet even been discussed, and in special appropriations. There has not been one day calling of supply in seventy-eight days. In my opinion this particular item should not have been enlarged without the consent of the house. I raised this question last year on a vote for the auditor general's office, because many of these votes, I suggest, are illegal. Subsection 2 of section 50 of the audit act reads:

> In reporting the result of his examination and audit to the House of Commons—

He is not an officer or official of the government; he has nothing to do per se with the government. He is directly responsible to the

House of Commons for every dollar expended. I contend—and I think I can prove the point to the satisfaction of the committee—that half the money being voted is not for the war at all or the defeat of Hitler, but for purposes that will not materially assist in winning the war. I continue the quotation from section 50:

In reporting the result of his examination and audit to the House of Commons, the Auditor General shall call attention to every case in which

(a) a grant has been exceeded.

May I point out that by a minute the treasury board can overrule the auditor general and spend any money it likes. The treasury board consists of a certain number of ministers, and if they are not present the minister himself can authorize payments by order in council during the period of the war, with the result that hundreds of millions of dollars have been expended in this way. These items added together come to $146,000,000, and the house has not been in committee of supply to pass on any of these votes. The act provides that the auditor general shall call attention to:

(b) moneys received from sources other than the grants for the year to which the account relates have not been applied or accounted for according to the direction of parliament; or

(c) a sum charged against a grant is not supported by proof of payment; or

(d) a payment so charged did not occur within the period of the account, or was, for any other reason, not properly chargeable against the grant, or was in any way irregular; or

(e) a special warrant authorized the payment of any money; or

(f) an objection of the auditor general was overruled by the governor in council of the treasury board; or

(g) a refund or remission of any tax, duty or toll has been made on the authority of any act of parliament; or to any other case which the auditor general considers should be brought to the notice of parliament.

My objection is that the whole procedure of parliamentary government in Canada has been upset. Money is being spent illegally, and the situation is getting out of hand. There was a civil war for 100 years in England for the purpose of obtaining control over expenditures, and yet millions, indeed billions, are being expended without proper supervision on the part of parliament. We are heading for national bankruptcy. This vote is part of a total of $146,000,000 all told, an overdraft run up since the last estimates, over our heads. When the Tupper government went out of office in 1896, Canada's total estimates three years before the South African war amounted to $36,000,000. Our civil departments now run up over our heads a total overdraft of $146,000,000 largely not for war at all, and without one dollar coming before the committee of supply, and are only postmortems. Surely we should have a better system than this. If the war goes on for two or three years more the country will be bankrupt, because we have never had committee of supply or ways and means to veto these expenditures, or any say at all, and there is no means of bringing these matters to the attention of the house because the house will not even listen to what is said. We need an auditor general like auditor general McDougall to tell the heads of the departments and ministers who are spending a mint of money like water, illegally over our heads, exactly what the act requires of them. What control has the auditor general over the great Pooh-Bah, Donald Gordon, for example? We found none at all. He is in parliament himself. Just before Easter I asked the minister what the new corporation of price fixers and ceilings would cost. He did not even know. He said he would find out and let me know later. Then during the Easter recess Mr. Gordon announced with a great flourish at Canadian and empire clubs it would be a vote of $2,000,000, directly against this section of the audit act which requires it to be reported to the House of Commons by the auditor general, and submitted to the committee of supply. Such a farce! What a system!

I should like to find out what is the present audit system as applied to our finances. I raised this just before we closed last June and the Minister of Finance did not know what it would cost or was all about. I said each department had its own auditors. Take one department, munitions and supply and the three defence forces. Almost everyone has an auditor; different departments audit their own accounts. I want to know what central controller check or control parliament has. The auditor general is responsible to us here, not to the government; what control has he over our heads of war expenditures, as they have in England?

Mr. ILSLEY: The auditor general conducts post audits, not pre-audits. He has a comparatively small staff, between three and four hundred. I think to be exact it is 357. That staff of course does not compare in size with the staff of the comptroller of the treasury. The comptroller of the treasury pays the bills that are due from the government. The staff there is very large. I could not say the number offhand, but I think the temporary staff is between 3,000 and 4,000.

The auditors that the hon. gentleman has spoken of as being in the various departments are employees of the comptroller of the treasury. His responsibility is very great; for it is he who makes sure that the amounts are due and payable, that they are authorized by some statute or vote of this parliament, and that the proper allotment has been made. All that must be ascertained before the accounts are paid.

There are no auditors so far as I know who are responsible to the various ministers other than the Minister of Finance. There may be some exceptions to that; I think one is that the Department of Munitions and Supply act as agent for the United Kingdom government in purchasing and making payments in this country, and that department has a certain financial staff of its own which is engaged in this work which it has undertaken on behalf of the United Kingdom government. I do not think there are any other exceptions, but if so they are insignificant. The cost accountants and auditors and so forth are members of the staff of the comptroller of the treasury.

The auditor general as an officer of this parliament, responsible to this parliament, comes along afterwards and makes test audits here and there, checking three things: first, that there is a vote that is authority for the payment of the money; second, that there is a proper allocation out of which the money can be applied to the purpose to which it has been applied; and third, that the facts justify the payment. That is the system of audit of payments in this country, putting it very generally.

Mr. HANSON (York-Sunbury): I think I raised this question once when I discovered a certain order in council. The minister will agree with me in this general statement, that the underlying principles of the Consolidated Revenue and Audit Act have been largely set aside for war purposes, owing to the exigencies of the occasion. A new system has to a degree supplanted what was intended by the audit act passed in the early thirties, and which was intended to be a safeguard of public expenditure. The audit act was modelled with great care. The present auditor general was then, I think, the comptroller of the treasury. I remember the matter being referred to the banking and commerce committee, and we went into it with great care. It was intended to plug up some of the holes that had been found in the old system with respect to expenditures by departments without a vote of parliament. The minister has explained that it was necessary to set up a new system to take care of the present situation. I have been content with that all along, but I should like to have his assurance that the greatest care is being exercised in the checking of accounts before they are paid.

There is the question of cost-plus contracts. Per se I have no objection to cost-plus contracts. They operate well if everyone is honest. The danger is that all people are not honest in working out cost-plus contracts. I am content for my own part—I am not speaking for anyone else—to let it go without any further discussion, on the theory that the minister and his officials are watching the matter carefully. If we find that the system does not work, or if there are abuses, then I think the position will have to be reviewed.

Mr. ILSLEY: Yes. The section of the Consolidated Revenue and Audit Act to which the hon. gentleman refers—I am not sure of the number—is a very important section. But it proved to be unworkable under war conditions. In the fall of 1940 the Department of Finance did considerable work in devising a change in the system which would enable war business to be proceeded with. There is an order in council—

Mr. HANSON (York-Sunbury): Passed under the War Measures Act.

Mr. ILSLEY: Yes, passed I think on November 19, 1940, effecting an amendment to that vital and important section. But I think that no exception can be taken to the order in council on the merits. The exception that was taken on one occasion was that we should have come to parliament for such an important change; that was debated here.

Mr. HANSON (York-Sunbury): Parliament was in session then, in November, 1940.

Mr. ILSLEY: Yes. The new plan was worked out in September and October. The order was drawn and redrawn, suggestions made and further changes, and a tremendous amount of work put on it. I think it is a very workable order and that it adequately protects the treasury. The objections that I get are not that amounts are paid without adequate investigation, but the reverse—that accounts are delayed; that the comptroller of the treasury is obliged to make such careful investigation that persons dealing with the government do not get their money as soon as they should.

Mr. HANSON (York-Sunbury): That is because of congestion of business, I expect.

Mr. ILSLEY: Yes, very largely.

Mr. CHURCH: I want to place this responsibility. There are twenty-five of these

boards expending money without the authority of parliament, ultra vires. I read from the auditor general's report, for year ended March 31, 1941, page 541:

There are approximately twenty-five statutory or corporate bodies performing administrative functions.

He includes as corporations the Department of Munitions and Supply and several others. He says:

In some instances the exercise of financial control is similar to that applied to expenditures of a department under a minister. . . .

But notice these words:

. . . but the terms of some acts are of such a nature as to vest final responsibility in the corporate management. The various acts stipulate whether the audit of accounts is to be by the auditor general or by commercial auditors. With the growth of this means of administration, it may be in the public interest to establish a practice whereby any qualification in an audit certificate may be promptly investigated and a procedure provided whereby expenditures may be recovered when an ultra vires payment is established.

That is the practice in New Zealand in connection with corporations and boards corresponding to our Department of Munitions and Supply, for example. In New Zealand it is provided by legislation that these corporations have to account to parliament for their expenditures; and if payments are made ultra vires of their authority a great deal of the money can be recovered. That is what should be done here, where we are paying out hundreds of millions of dollars.

I should like to refer to the travelling expenses of these non-salaried officers, the dollar-a-year men, which are referred to at page 540 of the auditor general's report. He directs attention to the fact that many of these payments are illegal. That places an onus on me as a member of parliament; but now, having done my duty in bringing the matter to the attention of the house, I am absolved of any responsibility. We have hundreds of these men whose travelling expenses are being paid. They are running all over the continent of north America, giving lectures and all the rest of it. In this regard the auditor general states:

The status of those who serve without remuneration is indefinite for executive travel regulations purposes. The audit disclosed cases of travel expenses being paid, although the records do not establish that the individual holds any public appointment.

They have no authority at all; they are not acting as agents of parliament, and the auditor general calls the situation to our attention. Here we are in the seventy-eighth day of the session, yet we have never had a chance to say a word about it.

The trend of policy now is to have such individuals certified as appointed without remuneration. More generally, appointments without salary are made by an executive order which stipulates, as a rule, a per diem allowance which may be claimed in lieu of a detailed accounting for subsistence and shelter. But cases were noted of accountings being made without employing the permissive per diem rates. Neither departments nor the treasury insisted on non-salaried officers submitting claims in the detail required from salaried officers. Likewise, the standards of travel to be observed by salaried officers were not strictly applied to those who serve without remuneration.

Then he goes on to refer to some matters in detail. No doubt we have a good auditor general; he has served under very fine ministers, but there is no public control over the great amount of money we are spending and we refuse to back him up and veto it. I can tell you that money is being wasted all over Canada, with absolutely no control and no report made to parliament. I am dealing with an important matter, which directly affects the navy department, and I think I should have the attention of the minister of that department, as well as the attention of others in the committee, to whom I am speaking. I should like to have order. I am not raising this question for fun, and I do not wish to be interrupted. I have brought up matters in the house relating to the navy, with regard to expenditures, and I have been unable to get proper replies from the minister. I object to this being treated as a trivial matter. We have appointed an auditor general, a good man who has done his duty. Would that we had an auditor general like Mr. McDougall; such is needed to-day.

I object to the way the business of the country is being conducted. I can only add this, that now I have brought the report of the auditor general, and the illegal expenditures that have been made, to the attention of parliament, I have done my duty. The last time the estimates were under consideration I also raised this question, and pointed out that we have no control over these expenditures. I can tell you this, that in many cases we have no audit at all. Even if we have an audit which is not satisfactory, the taxpayer is not protected. Some of these contracts are not carried out properly, and in my opinion something should be done about it. We have in the house many hon. members representing the farmers. Do they know of any private corporation that could vote money

like this, and stay in business? Here we are spending a mint of money without proper control; the country is suffering; the minister is proposing to impose income taxes and various other taxes on the poor people; the men running our retail stores are being put out of business. The other day the chairman of one of our boards said the competitive end of any business was through for the duration of the war, and after the war is over these bureaucratic boards will continue to spend money like water and just snap their fingers at the high court of parliament. We might just as well go home if we are to have this expenditure of public money in this way, without any public control. How are the war expenditures dealt with? Well, we have the report of the auditor general; we know how that is done. I object to these expenditures, Mr. Chairman. I have raised the question, as I did last session, and having done so I have done my duty.

Progress reported.

At six o'clock the house adjourned without question put, pursuant to standing order.

Thursday, June 4, 1942

The house met at three o'clock.

REPORTS OF COMMITTEES

Second report of standing committee on banking and commerce.—Mr. Moore.

Second report of standing committee on standing orders.—Mr. Golding.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*SHIPPING LOSSES—LIQUOR CARGOES

Mr. NICHOLSON:

1. Were there cargoes of liquor on the boats which were recently torpedoed in the St. Lawrence?
2. If so, who were the shippers and what were the quantities carried?

Mr. GIBSON: The answer to the first part of the question is no, but I should like to make it clear that in replying as to liquor I include beer and wine as well as spirits.

AIR FORCE—ORDER AS TO PLAYING OF "O CANADA"

Mr. LaCROIX (Quebec-Montmorency):

1. Has the headquarters staff for air issued an order that men of all ranks in the air force shall not come to attention when the national anthem, O Canada, is played?
2. If so, why has such an order been issued?
3. Is it the intention to rescind such order?

Mr. POWER: The status of "O Canada" is at present being discussed at defence council.

[Mr. Church.]

JOHN A. GREEN

Mr. ISNOR:

1. Is John A. Green employed by any branch of the government in connection with work being carried on at the port of Halifax, Nova Scotia?
2. If so, when was he appointed?
3. Is he a Canadian?
4. What are his duties?
5. What salary is he receiving?
6. In addition to his salary is he allowed any other expenses?
7. What was he doing prior to his appointment?
8. What experience or special qualifications has he for his present duties?

Mr. MITCHELL:

1. Yes, Mr. John A. Green, Department of Labour.
2. Effective from April 20, 1942.
3. No, American citizen.
4. Port loading superintendent.
5. None.
6. Living allowance of $300 per month.
7. In the employ of the Eastern Canadian Stevedoring Company, Montreal, P.Q.
8. Many years experience in eastern Canadian ports in the organizing of labour for the loading and unloading of ships.

HALIFAX WARTIME ADMINISTRATOR

Mr. ISNOR:

1. Has a wartime administrator been appointed for the port of Halifax?
2. If so, what is the name of said administrator?
3. What are his duties?
4. What are his special qualifications for such work?
5. Where was he employed before his appointment to his present position and what was his salary?
6. What salary will he receive as wartime administrator at Halifax?
7. Will he receive any allowances such as living or expense allowances? If so, what?
8. Was he allowed any transportation expenses to Halifax? If so, what amount?
9. What were the reasons for the appointment of such a person to the port of Halifax, (a) was there a lack of proper supervision of harbour facilities; (b) was there a loss of time in the docking of ships; (c) was there inefficiency in the directing of traffic through the port?
10. Will the administrator's authority rank higher than that of the navy in respect to control and direction of traffic?
11. What, if any, experience has he had in shipbuilding and ship repairs?

Mr. MITCHELL:

1. Yes, controller of loading operations at the port of Halifax, N.S.
2. Vincent C. MacDonald.
3. Indicated in detail in order in council P.C. 3511, of April 30, 1942, copy attached.
4. Experience as arbitrator for the port of Halifax under the Department of Labour. He

also made a complete investigation of ship-loading conditions at Halifax at the request of the Minister of Labour.

5. Dalhousie university, dean of the faculty of law; salary not known.

6. $300 per month for period May 1 to August 31, 1942, and at such salary thereafter as the governor in council may fix.

7. Actual travelling expenses when absent from place of residence in connection with his work as controller.

8. No.

9. Appointed because of constant demands that loading operations should be speeded up. In particular, the reasons for the appointment were not those implied in question 9 (a), (b) and (c). Investigation revealed (1) the need of greater effort to regularize the volume of ocean traffic in order to secure better adjustment of the demand for and supply of longshore labour, (2) insufficient advance notice of ship arrivals to permit securing the numbers and categories of workers required in time, (3) lack of a proper system of call and hiring, (4) insufficient supply of longshore labour at various times, (5) various defects in working practices, (6) lack of coordination of the loading and unloading operations throughout the port as a whole, (7) priority of union members over non-union employees in employment.

10. The controller is concerned with the loading and unloading of ships and not with the direction of traffic.

11. None. His duties are not concerned with shipbuilding and ship repairs.

P.C. 3511

At the Government House at Ottawa
Thursday, the 30th day of April, 1942.

Present:

His Excellency the Governor General in Council:

Whereas the Minister of Labour reports that as directed by Order in Council P.C. 1758 of 9th March, 1942, and after consultation with representatives of the shipping and stevedoring companies and the longshoremen's union of the port of Halifax, he has prepared a wartime plan for the reorganization of ship loading and unloading operations in that port embodying in substance the basic elements set forth in said order in council with such variations as now seem expedient to him and that it is desirable that this wartime plan be incorporated in a new order in council;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under authority of the War Measures Act (Chapter 206 of the Revised Statutes of Canada, 1927) and of the National Resources Mobilization Act, 1940 (Chapter 13 of the Statutes of Canada, 1940), is pleased to make and doth hereby make the following order:

Order

1. There shall be a controller of loading operations; a port loading superintendent; and a chief dispatcher for the port of Halifax, Nova Scotia, to be appointed by the governor in council.

2. It shall be the duty of the controller of loading operations (hereinafter referred to as the controller) to coordinate the activities of all persons, companies, organizations, associations and agencies directly or indirectly engaged or concerned in ship loading and unloading operations in the port of Halifax, and to carry out all duties assigned to him by the governor in council by this or subsequent orders for the purpose of improving the wartime efficiency of such operations.

3. The controller shall have, exercise and enjoy all powers and authority necessary for the effective execution of the duties and the attainment of the objects in this order mentioned; and in particular (but not so as to restrict the generality of the foregoing) the controller shall have power and authority:

(a) To give directions to, and to make orders, and decisions binding upon, all persons, companies, organizations, associations and agencies engaged or concerned in ship loading or unloading at the port of Halifax with respect to all matters, whether general or special, other than wage rates, affecting working and hiring conditions, practices and methods in connection with ship loading and unloading operations.

(b) To decide any dispute arising in connection with such conditions, practices and methods, or generally concerning any matters arising out of the provisions of this order or any direction, order, or decision given or made by the controller, his decision thereon shall be final and conclusive.

(c) To supervise and control the establishment, operation and administration of the central dispatching agency and to give directions, make orders and decide questions relating to same.

(d) To require applicants for employment as longshoremen to register in such manner as he may prescribe and to classify such applicants and determine their eligibility for employment; to prescribe what shall constitute an active longshoreman for hiring purposes; from time to time to prescribe the eligibility for employment of different classes of longshoremen; to determine the total number of

longshoremen of all classes required from time to time for the efficient operation of the port and to arrange for their recruitment and orderly employment through the central dispatching agency.

(e) When he deems it necessary, to require the longshoremen's association of Halifax to admit to temporary membership such classes of men and in such numbers and for such periods as he may direct or order; provided that men so admitted to temporary membership shall have no right to be regarded as union members beyond the period for which they were so admitted; and also provided that during such period such men shall have no share in or right to benefit from the funds of the association.

(f) To give directions and make orders as to when and under what circumstances ships shall be worked at night or upon holidays.

(g) To appoint such advisory committees as he may deem desirable to advise him upon any general or special phases of loading operations.

(h) To recommend to the Minister of Labour any major changes or improvements in ship loading methods and facilities which may seem expedient.

(i) Subject to the approval of the governor in council, to appoint such other officers, clerks, and other assistants and acquire such office facilities as may be necessary to carry out the duties assigned to him.

4. In the exercise of his powers and authority under this order the controller shall not be restricted by the terms of any contract or agreement made between the shipping and stevedoring companies and the Halifax longshoremen's union other than as the same may relate to wage rates.

5. The controller shall appoint a personnel committee composed of the port loading superintendent, the chief dispatching officer and representatives of the shipping and stevedoring companies and of the Halifax longshoremen's union to divide the present active working personnel of the port into gangs, and to allot bosses to such gangs; and from time to time as directed by the controller to revise such division and allocation.

6. The port loading superintendent shall inspect and supervise the loading operations of the port as a whole, advise the controller and other loading agencies upon technical loading problems, and generally perform such duties as the controller may assign to him.

7. The chief dispatcher, under the supervision and control of the controller, shall administer the central dispatching agency and generally perform such duties as the controller may assign to him.

[Mr. Mitchell.]

8. The present practice popularly known as "have-a-look" is hereby abolished and longshoremen shall be called out only at regular calling hours (except in the case of emergency) and in all cases when men have reported for work upon proper call they shall be paid as from the regular hour of call.

9. Whenever a stevedoring or shipping company is loading a number of ships simultaneously it shall have the loading operations of the same under the general supervision of an experienced man of the rank of assistant marine superintendent so far as practicable, in the ratio of one for every three ships.

10. All longshoremen who have heretofore been admitted to temporary membership in the Halifax longshoremen's union under order in council P.C. 744 of 13th January, 1941, and all longshoremen who may hereafter be admitted to temporary membership in the union pursuant to the direction or order of the controller, shall enjoy complete equality with permanent members of the union as to hiring and working privileges.

11. The controller may extend the period of the temporary membership in the union now enjoyed by the longshoremen who have heretofore been admitted into the union pursuant to said order in council P.C. 744 provided the controller deems this desirable as preliminary to the establishment of the central dispatching agency and the new method of hiring referred to in Section 12 of this Order.

12. The present system of daily hiring of individuals working at the site of the work is hereby abolished and there shall be substituted therefor a new system of hiring which, subject to such alterations as the controller may deem expedient, shall embody the following principles.

(a) A central dispatching agency shall be established and shall be administered by the chief dispatcher;

(b) The present active working personnel of the port shall be divided into fixed gangs with named gang bosses;

(c) Longshoremen shall hereafter be hired in gangs and exclusively through the dispatching agency;

(d) Companies desiring gangs shall notify the dispatching agency at certain fixed hours of the number of gangs required;

(e) The dispatching agency shall keep a roster of gang bosses and shall be responsible for notifying the requisite number of gang bosses upon receipt of such notification from any company.

(f) Upon receipt of such notice from the dispatching agency each gang boss shall be

responsible for producing his gang at the required time and place; and the members of each gang when notified of work by their gang boss must appear for the work in question under penalty of loss of their dock permits, unless within three days of such failure to appear they give to the chief dispatcher a satisfactory explanation therefor.

(g) The dispatching agency shall call out gangs by some system of rotation designed to ensure equality of work; provided that if the controller considers it feasible the stevedoring companies shall each be given the privilege of calling for a certain number of specified gangs.

(h) Gangs shall be required to work at night when called upon through their bosses by the dispatching agency to do so; but the dispatching agency shall adopt some system of rotation of day and night work designed to ensure the equitable distribution of day and night work so far as practicable.

13. The controller and any person acting for or under his authority shall not be liable to any person for anything done or omitted in the exercise or purported exercise of any power or authority from time to time vested in the controller.

14. All persons, companies, organizations, associations, or agencies directly or indirectly engaged or concerned in ship-loading operations in the port shall in all matters act upon and in accordance with the directions, orders and decisions given or made by the controller under this order.

15. It shall be the duty of the controller to maintain a record of the suspension pursuant to this order of any existing condition of work established by practice or agreement, and such condition shall be fully restored, if the employees so desire, on the termination of the present war.

16. Any person, company, organization, association or agency as aforesaid who, or which, contravenes or fails to comply with any provision of this order or with any direction, order or decision given or made by the controller under this order shall be guilty of an offence and shall be liable on summary conviction to a fine not exceeding $500 or to imprisonment for a term not exceeding three months or to both such fine and such imprisonment.

17. The controller, the port loading superintendent, the chief dispatcher and such other officers, clerks and assistants as may be appointed hereunder shall receive such remuneration as the governor in council may fix.

18. Order in council P.C. 1758 of 9th March, 1942, and order in council P.C. 744 of 13th January, 1941, are hereby revoked; and order in council P.C. 1706 of 10th March, 1941, so far as it refers to the appointment of an arbitrator is hereby revoked.

19. This order shall be effective on the first day of May, 1942, except section 1 hereof which shall be effective as of April 13, 1942, and section 12 hereof which shall be effective upon written notice by the controller to the longshoremen's association of Halifax and the chairman of the shipping committee of the Halifax board of trade.

A. D. P. Heeney,
Clerk of the Privy Council.

44561—192½

C. W. TRAIN

Mr. ISNOR:

1. Is C. W. Train employed by any branch of the government in connection with work being carried on at the port of Halifax, Nova Scotia?
2. If so, when was he appointed?
3. Where was he employed prior to his appointment?
4. What are his present duties?
5. What salary is he receiving?
6. In addition to his salary is he allowed any other expenses?
7. Did he receive any travelling transportation or accommodation expenses from the time he accepted position and up to the present time?

Mr. MITCHELL:

1. Mr. C. W. Train, V.C., is employed by the Department of Labour in connection with the reorganization of loading and unloading operations at the port of Halifax, N.S.
2. Effective from April 11, 1942.
3. Employed with the Shipping Federation of Canada in Vancouver, B.C.
4. Consultant to the Minister of Labour in connection with the reorganization of ship-loading and unloading operations at the port of Halifax.
5. $235.00 per month.
6. $5.00 per day living allowance plus transportation expenses.
7. Yes, from date of appointment to April 30, 1942, $296.60.

BRITISH COLUMBIA SHIPYARDS

Mr. MacINNIS:

1. Are the shipyards in British Columbia operating on a continuous production programme?
2. If so, how many yards are operating on the continuous production plan?
3. What percentage of the total employees are working on, (a) 1st, or day shift, (b) 2nd, or afternoon shift, (c) 3rd, or "graveyard" shift?
4. Who proposed the continuous production plan, employers, employees or government?

5. Was the continuous production plan put into effect by an agreement negotiated by employers and employees, or by order in council?

6. If by order in council, (a) what is the number and date of said order; (b) was the order printed in the *Canada Gazette*?

Mr. MITCHELL:

1. Yes.

2. Six.

3. (a) 60 per cent; (b) 30 per cent; (c) 10 per cent.

4 and 5. The production plan was put into effect by agreements between the managements and the different unions concerned, these being supplementary to existing agreements.

6. (a) The agreements were confirmed by order in council P.C. 3636 dated May 1, 1942, (b) the order has not been printed in the *Canada Gazette*.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SERVICES RENDERED BY FRANCOIS LEDUC AND ASSOCIATES

Mr. LACOMBE:

1. Have the professional services of Mr. Francois Leduc, C.E., of Montreal, and his associates, been employed by the government in connection with analyses of certain chemical products?

2. If so, when and for what period?

3. What payments have meen made to date for such services?

CONTROL OF TRANSPORT

Mr. LACOMBE:

1. Does the wartime prices and trade board control transportation in Canada?

2. Has a controller general of transport been appointed? If so, what is his name?

3. Have any regional controllers been named? If so, for what provinces?

4. Has a regional controller been named for the province of Quebec?

5. If so, what is his name, residence and occupation, and is he a French Canadian by origin?

6. Have representations been made to the authorities by any public bodies, urging the appointment of a French Canadian as regional controller of transport for the province of Quebec?

7. If so, has any attention been paid to such representations?

8. Does the government propose to give further consideration to them?

MILITARY CAMPS—FACILITIES FOR WORSHIP

Mr. CHURCH:

1. Are chapels or other facilities of worship provided in each of Canada's military camps, and what is the custom in relation thereto?

2. Are there such chapels in the larger air force camps and depots?

3. Will a survey be made in Canada on this matter with a view to providing facilities for worship in each camp?

[Mr. MacInnis.]

BUSINESS OF THE HOUSE

MOBILIZATION ACT AMENDMENT BILL

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Prime Minister when he proposes to proceed with the second reading of Bill No. 80. I ask this question notwithstanding the fact that the $2,000,000,000 war appropriation resolution is still under discussion. According to the opinion I expressed here last week that discussion should have been well over by this time, but I am not attributing blame to anyone. I do think, however, that we ought to get on with this very important mobilization measure immediately.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say to my hon. friend that it is entirely in the hands of the house as to how rapidly we shall get on with the different government orders. My hon. friend the leader of the opposition I think agreed with me that it was desirable to have the war appropriation measure disposed of in this house before taking up another measure.

Mr. HANSON (York-Sunbury): Yes, but I had no idea then that we would spend another week on it.

Mr. MACKENZIE KING: I know, but I think in the long run the time of parliament will be saved by concluding at once the war appropriation measure rather than having the whole matter opened up again at a later stage. I share my hon. friend's desire to get on with the measure that he has referred to relating to the amendment of the National Resources Mobilization Act, and personally I would very much hope that this discussion on the present bill might conclude this week and that there would be opportunity to go on with the other measure on Monday or Tuesday next. But until to-morrow night I cannot say just when. However, I feel that we should conclude this present discussion as rapidly as possible.

THE BUDGET

INQUIRY AS TO PROBABLE DATE OF PRESENTATION

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): A report came over the broadcasting corporation's news service, I think last Tuesday, to the effect that the budget would probably be brought down before we proceeded with the amendment to the National Resources Mobilization Act. Has the minister any statement to make on this matter?

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, that is not the plan.

MILITARY SERVICE

CALLING UP OF TRAINEES DAILY INSTEAD OF MONTHLY

On the orders of the day:

Mr. N. J. M. LOCKHART (Lincoln): A press dispatch which was released to-day indicates that trainees are now to be called daily instead of monthly. Seven centres are excluded, and military district No. 2 is not included. I have already had inquiries in this connection. Would the Minister of National Defence make a brief statement to clarify this matter for the sake of those who are inquiring? There seems to be some confusion.

Hon. J. L. RALSTON (Minister of National Defence): In the matter of calling up trainees, what we are doing is to call them up in shorter periods in order that we may have an opportunity of better medical examination than occurs if we call them all up at once and if they go to the training centre at one time only, once a month. What we are doing now is calling them up and having them report on successive days at depots. From the depots they are sent every two weeks instead of every month to the training centres after having had the benefit of perhaps the more thorough medical examination made possible by less congestion and more time.

Mr. LOCKHART: In that connection, it was noted by one of my correspondents that military district No. 2 is deleted from that list and other military districts were included. They were rather upset about that.

Mr. RALSTON: I had forgotten that military district No. 2 was excepted. As a matter of fact I have not seen the exact list. There are some cases in which, on account of the very long distances to be travelled and the remoteness of the training centres from the depot, it might be a serious inconvenience, for instance, to have a man travel from the northern part of Ontario to the depot in Toronto and back to a northern Ontario camp.

Mr. LOCKHART: That is not so with military district No. 2.

Mr. RALSTON: I shall be glad to look into the matter.

DUTCH HARBOUR

JAPANESE AIR RAID ON ALASKA—DISPOSITION OF CANADIAN AND UNITED STATES WEST COAST FORCES

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, the house may be interested in having a brief—I am sorry it cannot be a very detailed—statement with regard to the reported raids on Dutch Harbour.

As already indicated in the press, two aerial raids were made on Dutch Harbour which were participated in by a number of Japanese fighter and bomber planes. No further details have been received as to the extent of damage except those already published in the press.

The reports received indicate that there were some casualties, but few, and that a few warehouses were set on fire but no serious damage was suffered.

A further report received indicates that there was a third aerial attack last night. No further details are yet available as to this attack.

Raids of this kind were not unexpected, and plans previously made by Canada and the United States for such a contingency are in actual operation. Certain additional dispositions have been made. The Canadian commander in chief, west coast defences, is operating in conjunction with the commander of the United States forces on the west coast in accordance with the joint plans.

I might add regarding the army that the chief of the general staff has been for some days on the west coast and is supervising army dispositions on the ground.

[*Later:*]

Mr. RALSTON: I should like to make a statement with regard to what I said earlier this afternoon respecting raids on Dutch Harbour. A message has been received from the Pacific command—and hon. members will be glad to know this—to the effect that a further report or further message which they have received indicates that the reports which came, purporting to be from official sources, regarding the second and third raids on Dutch Harbour, are unfounded, and that there was only one attack.

CANADIAN FORCES

PERSONNEL LISTED IN DEFENCE TELEPHONE DIRECTORY

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Referring to *Hansard*, pages 2292, 2806 and 2919, where I inquired if it is possible to get from the government the number of men who are listed in the telephone directory of the Department of National Defence, naval services and army, the number who have been in this country for more than five years, and the number who are bilingual in the Department of National Defence: I already have the information from the Department of National Defence for Naval Services, and I wonder

whether it is not possible to get it for the Department of National Defence, and how long it will take.

Mr. HOMUTH: It is not necessary to have that information.

Hon. J. L. RALSTON (Minister of National Defence): On my return to the house on Tuesday I found that my hon. friend had referred to the matter when I was away. The question was raised when my colleague the Minister of National Defence for Naval Services (Mr. Macdonald) was dealing with his portion of the war appropriation resolution. I gave instructions immediately on my return to have this information obtained as soon as possible. I learned just before I came in that returns have yet to be made by seventeen directorates in the department. I hope that the information will be available very shortly.

HONG KONG COMMISSION

INQUIRY AS TO PRESENTATION OF REPORT

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I should like to ask the Minister of National Defence a question I have asked several times before. Is there any possibility of expediting the presentation of the Hong Kong report to this house? I have all respect for the chief justice, but I feel that we have waited a very long time for this report. Perhaps some steps could be taken to expedite it.

Hon. J. L. RALSTON (Minister of National Defence): I may say to my hon. friend that I know of no way from the point of view of the government of expediting the presentation of the report. I have indicated my anticipation and expectation that it would be received in due course after what I understood to be the final hearing, I think last week or the week before, but I have not heard anything with regard to the matter. I have no doubt that there is voluminous evidence to be gone over and probably considerable time has been taken in connection with the preparation of the report. I again assure my hon. friend that the government is just as desirous as he or anybody else is to have the report presented as soon as the chief justice finds it convenient to complete it.

Hon. R. B. HANSON (Leader of the Opposition): With regard to this very important matter, I think that certain other facts could be pointed out to the public which account in part at least for the delay. A certain portion of the evidence was taken, I understand, in England under commission, and that delayed the submission of arguments by counsel. Had that evidence been on hand—and I am blaming no one; it was not physically possible, I suppose, to have it here—the argument would have been over long ago and before Colonel Drew was taken ill.

The submission of counsel in writing was filed at a time anterior to the middle of May, and the oral argument was concluded on May 22. That is not a very long time having regard to the volume of evidence that was taken and the multitudinous number of questions of fact that had to be decided. I think that explanation may help to keep some people quiet for a little while.

JAPANESE NATIONALS

EVACUATION FROM BRITISH COLUMBIA COASTAL AREA

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): For the information of hon. members, and particularly for the information of the members for British Columbia who are, I know, much interested in the progress in connection with evacuation of Japanese from the British Columbia coastal area, I thought I should make a short announcement.

Through the good offices of my colleague, the Minister of Mines and Resources (Mr. Crerar), and through the cooperation of the Indian Affairs branch, a very satisfactory arrangement has been made for housing of Japanese, particularly women and children, in a number of the residential schools which have been used for Indian children.

The plan is to have the same staff, as far as possible, which has been employed at the schools, operate them for occupancy of the Japanese. Conferences have been held with the various church organizations which have been conducting a number of the schools under consideration, and at the request of the department it has been indicated to us that the church organizations will continue to maintain the institutions for the use of the Japanese.

It has been practically decided to take over the Edmonton residential school which is owned by the Department of Indian Affairs; the school operated at St. Albert by the Sisters of Charity, known as the Youville school; a school at Elkhorn, Manitoba, and one in the province of British Columbia. It will be seen to that the education of the Indian children will not be neglected, and, if necessary, additional day schools will be provided for the continuance of their education.

This arrangement will enable a more rapid movement of the Japanese women and children from Vancouver, including those housed in Hastings park, and will also avoid the necessity of a large expenditure for buildings, which would be necessary under any other plan contemplated.

I might say for the further information of hon. members that the total moved to date is somewhat over 12,000.

Mr. GREEN: How many women and children will be accommodated in these schools?

Mr. MITCHELL: About 6,000.

Mr. STIRLING: What is the name of the Indian school in British Columbia that will be so used?

Mr. MITCHELL: I thought the hon. member would ask that question. I cannot say at the moment.

Mr. HOMUTH: Can't you pronounce it?

Mr. MITCHELL: There may be something in that.

Mr. GREEN: The minister says that he does not know the name of the Indian school in British Columbia. Does he know the district in which the school is situated?

Mr. MITCHELL: I am not as well acquainted with the province as my hon. friend, but he can rest assured it will be outside a vulnerable area.

SCARCITY OF BEEF

INQUIRY RESPECTING OPERATION OF PRICE CEILING POLICY

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Has the minister any statement to make to-day on the beef situation and the collapse of ceilings in Toronto? Surely the government has had time to make up a policy. This is a very serious matter and I should like to have a reply.

Hon. J. L. ILSLEY (Minister of Finance): If the hon. member is directing his question to me—he did not make himself clear—I have no statement to make to-day.

Mr. CHURCH: It is like the housing situation, you have it in cold storage.

[Mr. Mitchell.]

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 3, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

FINANCE

Mr. MacNICOL: When the house rose at 6 o'clock yesterday I was about to ask one or two questions, and I will now put them briefly. I believe it was the member for Témiscouata (Mr. Pouliot) who first brought up the question of the auditor general's report, and he was supported by the leader of the opposition and myself. I want to ask two or three questions in reference to the item that we are now discussing, amounting to $196,000 having to do with the auditing and checking of war accounts. I should like to have a break-down of the item when the minister replies and at the same time the amount of the similar item for 1941-42, because we have not yet received the auditor general's statement for 1941-42. Comparing this amount with the amount for 1940-41 I notice that in 1940-41 the similar item was $52,202.61. Therefore the present item is $143,707.39 more than the amount for 1940-41. Of course, it is natural to expect that it should be larger because the work of the auditor general's department has vastly increased over the last two years. In the auditor general's report of 1941 I notice at page 430 a statement from the auditor general, preceding his report on the Department of Agriculture, in which he writes:

> These accounts have been examined and audited under my direction, in accordance with the provisions of the Consolidated Revenue and Audit Act, and subject to the observations in this report, I certify that in my opinion they are correct.

At page 435, referring to the travelling expenses of P. Dupuy, $1,693.20, these words follow: "Advances not accounted for, $465.70." I have been wondering how the auditor general can certify that the amount is correct if he has not the vouchers for this amount, and how many more amounts there are for which vouchers have not been presented. I often wonder if it is not possible to apply to government business the methods that county and township councils use in the conduct of their business. I am not speaking politically, because all governments have been the same so far as checking and inquiring into public accounts is concerned. But the

ordinary township council could never conduct its affairs if its business were done the way we conduct ours. I know township councils that not only have no debt but have substantial amounts in the bank and large assets. They have to conduct their affairs in a business manner. I often look at these public accounts rather hopelessly. They are so hard to dig into, one reason being that they are always a year late. For instance, we have not yet the accounts for 1941-42, and yet the heading of this item we are now considering is, war appropriation 1942-43. Not much wonder the hon. member for Témiscouata has so persistently brought up the question of the public accounts; he deserves credit for it. The same is true of the leader of the opposition; he has been a very good second—perhaps I should say first, but I know that the hon. member for Témiscouata brought the matter up first. The leader of the opposition probably went him one better; at any rate between them they deserve credit.

I invite the minister to give a break-down of this amount of $196,000 and to tell us why the amount referred to on page 435 of the auditor general's report was paid without the vouchers being submitted, at any rate without their having been submitted in time. Let me give an example of something which I think the auditor general should refer to very strongly in a recommendation to the government as to how business should be conducted. I am not blaming the government; I am not saying this by way of criticism of the minister's department. On page 438-39 there are complete details of a transaction which took place a couple of years ago—I believe it was referred to on a previous occasion by the leader of the opposition, and I am not sure that I did not refer to it myself. I refer to the purchase by the government of 5,365 cases of lobsters. If one examines the figures in the auditor general's statement pertaining to this transaction he cannot help being amazed. If this is an example of how government business is conducted, then something should be done about it. I have no complaint to make as to what the fishermen got for their lobsters; if there is one class of people who deserve good returns for their hard and dangerous work it is the fishermen. I hope they really got more than they are entitled to, if anything—it would suit me just as well; but I am sure they did not. This transaction concerned 5,365 cases of lobsters. I believe the cases contain 48 one-pound tins. The total cost, including the lobsters and all expenses associated with their disposal, was $168,379.18, made up as follows:

Purchase of lobsters	$ 88,043 83
Governmental salaries and wages	9,794 38
Travelling expenses	3,782 42
Advertising	50,244 73
Sundries	16,513 82
	$168,379 18

I am not making any comment on those expenses, nor would I say that anyone got a cent more than he was entitled to. But the returns received by the government for the lobsters totalled $97,137.02, making a loss of $71,242.16, if my figures are correct. If this is representative of government transactions it is no wonder the country is in the financial boat that it is. I am wondering what the complete duties of the auditor general are. Should he have made a report to parliament, not only in connection with a case like this but in connection with many others, directing parliament's attention to an apparently improvident transaction?

There is another item that I checked. It has to do with a motor car used in a government department—it does not matter which—and indicates what the country is up against. In 1935 $154.94 was spent on repairs on a small car, a Ford or a Chevrolet; then immediately the car was turned in on another, plus an additional cash payment of $488.85. Then in 1936, $44.85 was spent on that car in repairs; $116.72 in 1937; $333.07 in 1938, and $175.82 in 1939, a total for repairs in those four years of $670.46. The car was then turned in for another with an additional amount of $610.22. The bank of Montreal could not afford to carry on business in that way. I should think it is the duty of the auditor general, no matter how much time it takes, to notify parliament of all such improvident transactions. That is what an auditor does in business concerns. The auditor of the company I was associated with would advise the directors of such matters. It may not be an auditor's duty, but we had a very excellent auditor and if he found anything that he thought was not as it should be he would inquire into it and notify us. He would look into every voucher submitted to him that he thought was too high.

Is that the procedure followed by the auditor general's department? Does his staff inquire into every single voucher before they pass it? I know it takes competent men to do this, but there are competent men in the department. I look upon the minister as the

watch-dog of the treasury, and I know that so far as he is concerned he will do his duty. Yesterday someone said something about cost-plus contracts. Personally I am wholly opposed to such contracts. There are cases in which contracts have to be let on a cost-plus basis; but I have had a great deal to do with contracting, and I can say without fear of contradiction that by far the greater proportion of contracts let on a cost-plus basis generally cost much more than they would if they were let on a regular contract bid basis.

Mr. POULIOT: Mr. Chairman—

Mr. ILSLEY: If the hon. member for Témiscouata will permit me, the hon. member for Davenport asked a few questions which he requested me to answer immediately. First he asked for a break-down of the sum required, $196,000. That is made up as follows:

Temporary assistance	$160,000
Cost of living bonus	8,000
Stationery and equipment	10,000
Travelling expenses	18,000
	$196,000

The item of $160,000 for temporary assistance is made up as follows:

1 unclassified	$ 1,620
1 audit accountant grade 2	3,000
1 audit accountant grade 1	1,920
27 war audit accountants	72,400
14 clerks grade 4	22,680
1 clerk grade 3	1,380
22 clerks grade 2	23,760
21 clerks grade 1	16,290
1 stenographer grade 2	1,080
2 stenographers grade 1	1,560
1 typist grade 1	720
2 office boys	885
	$147,295

To this has been added for proposed additional assistance the sum of $12,705, making $160,000 in all. This amount is larger than the amount required for 1940-41 because of the expanding requirements of the war. The amount estimated for 1941-42 was $151,000. The exact amount spent is not available; the accounts are not all closed.

With regard to the item of $465.70, which appears to have been the amount of an advance to an employee or official of the government not accounted for, as I gather it, I have no knowledge of the individual transaction, but I presume that was an accountable advance made near the end of the fiscal year which would be accounted for in the next fiscal year and which therefore has to be reported in the manner in which the auditor general reported it. In reporting that transaction in that manner there would be nothing inconsistent with the general words of the auditor general's report, because he made it subject to the qualifying words which appear in the report. It would not be possible for him to do anything more than he did with regard to checking that transaction, if the facts are as I assume them to be.

Now with regard to the lobster transaction, if the merits are to be considered that is a matter for the Minister of Fisheries; but with regard to the question, which was whether it ought not to be the duty of the auditor general to express opinions as to whether or not transactions are improvident, I can only say that the duties of the auditor general in this regard are set forth in section 60 of the Consolidated Revenue and Audit Act. The specific duties are numerous, and then at the end there are general words to this effect, that the auditor general shall call attention to every case which he considers should be brought to the notice of parliament. Whether the auditor general should project himself into the operation of departments in such a way as to pass upon the providence or improvidence of the agreements they enter into and the policies they adopt, is very questionable. Personally I have no reason for thinking that there was anything improvident about this transaction. I cannot argue the matter, except that I know in a general way that the Department of Fisheries saved the market for Canadian lobsters, at a time when the English market had disappeared, by an extensive advertising campaign. That, of course, is a matter for the Department of Fisheries. But once the government by order in council, on the recommendation of the minister, who acts on the advice of the competent officials of his department, passes an order in council adopting a certain policy, I question whether the auditor general should review that question from the point of view of whether or not it is a provident transaction. He may do so in some cases, but in this case I do not think there was anything even prima facie improvident about it.

Mr. MacNICOL: I did not mean necessarily that there was anything wrong, but that perhaps it was not good business.

Mr. ILSLEY: The word "improvident" is moderate, and whether or not a transaction is improvident is a matter on which people have differences of opinion. I have knowledge of transactions in which there was far greater loss than in this case, in connection with other natural products, but those transactions had to be entered into in order to serve certain situations.

I believe the last item had to do with the automobile, and I think that is a case in regard to which a person should say nothing

without having special knowledge. It is an individual transaction, and naturally I cannot answer it at all. I admit that it looks as though there were a great many repairs to that car, but I am convinced that the manner in which the government handle the purchase and sale of automobiles, the turning in of second-hand cars and the purchase of new ones, is pretty efficient. There is a committee of civil servants who keep very close watch and very tight rein on these automobile transactions.

Mr. MICHAUD: Lest a wrong impression should go abroad with regard to the transaction referred to by the hon. member for Davenport, and mentioned in the auditor general's report, with respect to the steps taken to aid the lobster fishermen of the Atlantic coast, I think it well that I should bring to the attention of the committee what I believe was placed on record last year also.

The venture of 1940 into the lobster purchase and disposal operations was not intended to be an ordinary business transaction with a view to making a profit, or with a view even to breaking even. The committee will recall that shortly after the declaration of war the British government prohibited the importation of canned or tinned lobster into Great Britain, by making the declaration that canned lobster was classed among luxuries the importation of which was forbidden.

Up to the autumn of 1940 Great Britain took about 85 per cent of our annual packs of canned lobster. Over night this market, which had been built up over a hundred years, and which had well taken care of the output of the Canadian canned lobster industry, was wiped out. A large portion of our population had depended on that industry for its livelihood, and as a result of that stoppage there was a real panic among lobster fishermen. They appealed to the government, pointing out that 85 per cent of their market had disappeared, and emphasizing the fact that there was no possibility or reasonable expectation that the Canadian market could absorb the high percentage which had heretofore gone to the British market.

The department availed itself of the best brains possible. We consulted those who were interested in the business and it was decided that rather than abandon the industry the government would encourage lobster fishermen and packers by assuring them that the government would make it its duty to find a market for the spring pack of 1941.

Mr. MacNICOL: I think the government was right in doing that, too.

[Mr. Ilsley.]

Mr. MICHAUD: We explored the possibilities of developing the domestic market to the limit, and considered an advertising campaign the best possible method of appealing to the sentiment of Canadian consumers. It was felt that at the same time we would educate the Canadian housewife and consumer concerning the quality of Canadian canned lobster. The sum of $50,000 was spent as a contribution to help develop the home market for this commodity. It was found however that the home market could not possibly absorb the whole pack, with the result that we had to develop a market in the United States which heretofore had been held by the producers of Russian and Japanese crab meats. We had to displace those products, or fight them in the United States market; and I must say that through the cooperation of good Canadian citizens who were in the business, and who established relations with large chain store distributors in the United States, we succeeded in establishing a market for the whole output of 1941.

This however necessitated organization. We had to convince the fishermen that they should continue to fish rather than ask for relief. We undertook to merchandise and market their output, and for that purpose had to hire help, establish an organization and the necessary machinery. We established an inspection board, because United States buyers would not accept any of our catch unless a guarantee of inspection was given by the government.

We purchased from the fishermen lobster to the value of $88,043.83, making it a condition that the packers should pay the primary producer a reasonable price. We considered it advisable to step up the price considerably, and felt that we had carried out that principle by establishing a minimum price of 5½ cents per pound for live lobster. Prices had previously ranged between 2½ and 4 cents, the latter price being the maximum which in very special cases had been paid to fishermen supplying lobsters sold for canning. Before the year was over the price had risen considerably above 5 cents. We had no difficulty therefore in this respect. The price to the primary producer was doubled at the start, and before the season was over it had increased considerably. Through the difference between the amount we paid the canner and the price we received in the market, we derived a profit of about $9,000. The amounts we actually expended went for inspection, administration, machinery, labels, and a labelling machine we had to buy to label the cans with the government certificate. Those operations had to be carried on in the following year.

The actual deficit in the whole transaction during the year was $27,000; but the inventory showed that we had to carry an over-supply of labels and a certain amount of machinery, and we had to pay rent for a warehouse. We thought it was not fair to make that charge to the producers, because this was in the nature of an experiment, something which was undertaken for the first time, and should not be charged to the primary producer or the packer, who has shown a willingness to cooperate. It was not felt that in the first year they should be asked to absorb the whole of the overhead and cost of establishing the industry. It is not altogether fair, therefore, to say that this was an improvident transaction.

Mr. MacNICOL: Had the auditor general's report included what the minister has said it would not have looked so bad.

Mr. MICHAUD: It was found to be a profitable venture. We have succeeded in establishing on this continent a market for the product of a Canadian industry. For a hundred years prior to 1940 producers as well as processors never thought that was possible of accomplishment. This year it was found necessary to buy scarcely any canned lobster from the packers, because the invasion of the United States market was continued. The government continued its assistance in improving the market situation, and, as hon. members know, the whole of last year's pack was sold at a high price.

I will give some figures which will enable the committee to understand the situation. In the spring of 1941 we established a minimum price of 5¼ cents a pound to the fishermen for the raw material. Before the season was over last year, the price was up to 10 cents a pound, and this year the opening price is 12 cents a pound. Now they are complaining that the price is too high. We set a price for canned lobster in 1941 of $18 per forty-eight pounds net weight of lobster, and $16 for a lower grade. Last year the price went from $20 to $30, and this year the price control board has established a maximum price of $28. But already American buyers are offering more to the packers than the ceiling price, although the packing season has been open for only one month. So that at the present time fishermen are getting from 12 to 13 cents a pound for their raw material and the packers are being offered from $28 to $30 a case for lobster.

The $100,000 which the government has invested within the last two years to help create a home market and a north American market for this valuable industry has been a good investment, and it is one that will not have to be repeated this year. I think it is the best thing that has ever been done for the lobster industry.

Mr. BLACK (Yukon): We have just been listening to observations on the lobster industry and lobster cans, and on methods of government expenditure. I am going to call the minister's attention to an item which he will probably never find in the auditor general's report and which he and the auditor general will probably never hear about, but it is really too good not to be told.

At the magnificent airport at White Horse in Yukon, the government has established, very properly, a meteorological station. There has been some delay in getting the necessary instruments for that station, but a short time ago a big package arrived at the airport by air express, which is probably the most expensive method of transportation known. The manager called in the staff to see these wonderful instruments unpacked. Mind you, they were sent by air express from eastern Canada away up to northern Yukon. What do you suppose was in that package?

Some hon. MEMBERS: Lobsters.

Mr. BLACK (Yukon): No. Two perfectly good garbage cans! Can you imagine that? Two garbage cans which could have been bought up there at that village for an infinitesimal fraction of the cost of transporting them there by air express. I say this to the minister and to the government: if the officials responsible for that have not been liquidated, as they would have been so efficiently in Russia, they ought at least to be consigned to one of those garbage cans.

Mr. POULIOT: Mr. Chairman, first I must express my sympathy with the minister. I am sorry for him over what is going on now. At the present time it seems that everything is cooked in the Rideau club, that the council room in the east block is just a pantry, and that this chamber is a cafeteria for the queer ideas of our intelligentsia. Everything that was done in years past has changed. Now we have a different kind of government. A decision is very seldom made nowadays by the government. It is made before the matter ever reaches the government. The decision is made by experts.

Last winter the door of my office was open and I heard a queer noise downstairs. I did not know at all what it was, so I went down there and discovered that it was being made by the intelligentsia of our country, professors of economics from our Canadian universities who had gathered down there to draft a financial policy. Judging by the size of their

heads I thought I was in a vegetable garden. They were all there, taking themselves so seriously. Members may laugh, but they cannot realize how grieved I was to think that these people had been asked to assume such responsibility.

Of course the duty of the government is just to act as a pendulum between consumers and producers, and to try to redress all wrongs so that the social life of our Canadian citizens may be as good as possible. When we discuss matters the way they were discussed in years gone by, people who are for the newer fashion in government business find it strange and consider us out of date. I am amongst those who are thus out of date, as are other members both on this side and on the other side of the house.

I take this opportunity to congratulate very warmly the hon. member for Broadview (Mr. Church) upon the excellent remarks he made yesterday afternoon. I have met several of our colleagues who said that he expressed views that were very generally held by his colleagues. I thank my hon. friend the member for Davenport (Mr. MacNicol) for his kind remarks this afternoon, and I also congratulate him. I do not pretend to take any credit for having brought that matter up several times. It seems to be of no use, and yet these are most important matters. In a democratic system the people are told that they are the ones who govern; in fact, once every four or five years they are called upon to express their views about candidates and to vote for one or the other. That is the only opportunity they have to speak. True, they have representatives; they elect members of parliament who are supposed to check government expenditures, and of course the checking of government expenditures by members of parliament is one of their main duties. But how is it possible for us to check expenditures when the auditor general says that there is no record? It is impossible to check the expenditure because at times there are no records and no vouchers of expenditure, and the personnel of the auditor general's branch is numerically less than one-tenth that of the treasury board. It is pretty hard for one person in the auditor general's branch to check expenditures for all cheques prepared and made by ten officials.

When I think of all this I recall what happened when the branch of comptroller of the treasury was created by no less a genius than R. B. Bennett. He is the one who changed the whole picture, not for the public good, not for improving the accounting of dominion finances, but just on the spur of the moment because he was displeased at not having got some information right away. He said in one of his outbursts, "I will change the whole system because one employee did not answer me as soon as I asked him for some information." And then the change was made not by legislation, but by order in council. That was done by Mr. Bennett, with the agreement of most of his supporters. About the same time, perhaps a little earlier, he saw someone who had come from the United States and who said to him, "Mr. Bennett, you are a very great man. What is to be regretted is that you are not recognized as you should be by American universities; they should confer degrees *honoris causa* upon you." Mr. Bennett said, "What a bright idea," and he began to have a kind of soft spot for that fellow. He said, "Here is one who appreciates my great personality and my great genius. I will make him my deputy minister of finance." It happened that afterwards Mr. Bennett left the house very often to go to the United States to receive these degrees which were being conferred upon him by universities that had ignored him—all of them—until they were told by that person that he was a great man. And now, sir, we are in the hands of this very same official. I have been told often that it is a bad thing for us to complain of certain officials when they are not here. This was his opportunity to be here, so that hon. members could have another opportunity to see him. Hon. members who are listening to me now will understand why for years I have been fighting a junta of the Department of Finance, those who have been installed there by Mr. Bennett when he decided to change the face of dominion politics. It will take a very long time to forget all the evil that R. B. Bennett did to the Canadian people just on account of his ill-temper and his vanity.

I wonder whether it is of any use to remember the errors of the past now, when they cannot be corrected. It is impossible to alter the state of things which existed during that dark period when R. B. Bennett was leader of the government and when the present leader of the opposition was one of his colleagues. It was a very dark period. All these people were put into high functions by this gentleman, and those who supported him have the responsibility for it. I except the hon. member for Broadview, who was not sitting in the house all the time during that period, and I admit that many other hon. members acted in good faith, believing that the thing was done for the best. But now we see where we are. Is it possible to have any reform made? I doubt it; but it is time to apply the brake.

I have complained many a time about those who are professors of economics, social science, political science and who have no experience of the world. They know nothing

of applied psychology. They do not meet the people, they do not see the effects of their schemes on the people. They are here in their offices and they think all the time of new schemes, most of the time to improve their own positions.

Who are those who work in the public interest in the civil service? There are some, but they are fewer and fewer compared to what there were when I entered politics years ago. At that time when we had the other audit, we had Mr. Fraser, we had Mr. Gonthier, we had others; things were not so bad. There were civil servants who had been trained under the fathers of confederation, who had taught young men to use their time for the benefit of the state, and they were doing an excellent work. They were quiet, unassuming, trustworthy, modest, sincere. They were not thinking of themselves at all; they considered that it was an honour to occupy a position in the federal government and they served their country to the best of their ability. Of course they took advantage of raises in salary and other improvements which are legitimate, but they were not thinking only of that. Now it is very sad to think that there is not the same spirit among all high officials in the service. There are exceptions, I admit. There are some civil servants who still have that spirit, but it is not as general as it was. What is the result? The result is that the little fellow tries to find a scheme that will give him an opportunity to have two maids instead of one, and, when it was not so difficult to exchange automobiles, to have a new car each year. Then he had great ideas.

Now how does it work in having new legislation introduced? Everyone knows. The Prime Minister meets his colleagues and tells them that the session will open on such a day. He says, "If you have suggestions to offer for the speech from the throne, please let me have them." And then the minister meets his deputy and says the same thing to him. He says, "My dear deputy, the session will start on such a day; have you any suggestions for a new policy?" Then the deputy calls all the chiefs of branches and makes the same little speech. Who of them has an idea? But the chiefs of branches may ask the little fellows, promising young men, bright graduates from universities, whether they have anything to offer. They say, "Have you not something to suggest to us as an idea for the next speech from the throne?" Then some young man scratches his head and says, "Yes, I have an idea. I have been thinking of it." And the idea is to surround himself with a staff; because, as you know, sir, and as everybody knows, in the civil service, and according to the principles of the civil service commission, a man is not paid according to his worth; he is paid according to the size of his staff. Therefore what is important to a young man who gets into the service is to have a large staff around him, and when he has it, he becomes himself the chief of a branch with a chance of promotion. Therefore there may be a slight amendment to a statute or the suggestion is made that there should be created a new organism which will give this bright, promising young man an opportunity to show his ability by being surrounded by a larger staff and getting a higher salary, which will permit him to have two maids instead of one, and, if not to change his car for a new one, at least to make a nice trip to British Columbia or Halifax or somewhere else.

The CHAIRMAN: I have listened to the hon. member and given a great deal of latitude, but I cannot link up the subject which he is now discussing with any part of the resolution which is now before the committee. The appropriation of two billion dollars for war purposes is separate and distinct from ordinary administration and particularly from the routine work of the various departments. I would direct the hon. member's attention to the fact that we are now discussing an item that appears at page 2920 of *Hansard* under the head of auditor general's office, for $196,000. There is an additional sum to be voted for the auditor general for war purposes.

Mr. POULIOT: Yes, sir. It may seem strange in a certain respect, but I understand that the $2,000,000,000 appropriation is for war departments and it seems that this is altogether different. It is the overdraft of departments that are not war departments and it is in excess of the estimates that have been voted for the year 1941-42.

The CHAIRMAN: The hon. member will find it at page 2920.

Mr. POULIOT: Yes, I have it.

The CHAIRMAN: He will see that the war appropriation is for the period 1942-43 and is to cover expenditures of various departments connected with the war effort. There will be the ordinary current budget for the year 1942-43, but we are now dealing with the appropriation for war purposes for 1942-43.

Mr. POULIOT: Yes, sir; but in this appropriation departments are mentioned that are not war departments.

The CHAIRMAN: There is a break-down and we are now on the item relating to the auditor general's office.

Mr. POULIOT: Yes, sir; and of course the duty of the auditor general's office is to check expenditures in all departments. I have the report of the auditor general for the year ended March, 1941. It is the last report I have, and, as I say, the duty of the auditor general is to check the expenditures of all departments. If there is an item under which it should be permissible for a member of parliament to discuss matters such as those I have mentioned, it should be the auditor general's report, especially when, at page 540, the auditor general has this to say:

> The status of those who serve without remuneration is indefinite for executive travel regulations purposes. The audit disclosed cases of travel expenses being paid, although the records do not establish that the individual holds any public appointment. The trend of policy now is to have such individuals certified as appointed without remuneration. More generally, appointments without salary are made by an executive order which stipulates, as a rule, a per diem allowance which may be claimed in lieu of a detailed accounting for subsistence and shelter. But cases were noted of accountings being made without employing the permissive per diem rates. Neither departments nor the treasury insisted on non-salaried officers submitting claims in the detail required from salaried officers. Likewise, the standards of travel to be observed by salaried officers were not strictly applied to those who serve without remuneration.

When you called me to order, Mr. Chairman, I was talking of young men who tried to improve their condition in order to travel around. I wonder if they do not fall into that category. As you know, the auditor general's report covers the expenses of all departments, and it covers expenses in the war departments. However, I will summarize what I have to say and try and make it as brief as possible.

This is one of the most important matters we may have to discuss during any session, and when taxes increase, the constituents of any one of us will have the right to ask us why they are paying more in taxes. It is a legitimate question for any of them to ask. This is a most serious matter, and it cannot be treated with indifference. I have exposed some cases of intrigue, but they are not important; it is the whole system that is important. And the whole system of government responsibility to parliament and parliament's responsibility to the people we cannot cut out. At any meeting held by a member of parliament or a candidate during an election campaign, or at other than election times, the electors have a right to ask the speakers, or any speaker: "What have you done or what has been done with the money you have gathered in taxes?" In years gone by it was possible to answer that question by referring to the auditor general's report. Now in many cases—in most cases—it is impossible. It is impossible for two reasons. We have no estimates for the war departments; what is called an estimate is a very broad headline for hundreds of millions of dollars. Besides, we have no public accounts for less than $35,000, which means that as to those who are clever enough to have many contracts, even several hundred, of less than $35,000 each, nothing will appear in the auditor general's report. That is bad. It is bad for the reason that it is the people who give us the authority to sit here as their representatives. The government is a committee of parliament, a little different from the committees which are appointed each year; nevertheless it is a committee of parliament to which parliament delegates part of its powers, under this proviso, that a check be made by the members of parliament, who are representatives of the people. When we have no information before the expenditure is made and no information after it is made, unfortunately but inevitably it leads to abuse. I am not in a bitterly critical mood; I am trying to offer constructive criticism. When a traveller is on the wrong road, going the wrong way, the thing for him to do is not to go further on the wrong way, but to return to the right way and then proceed in that way.

Why should we be afraid and ashamed to go back to an honourable past when there was less abuse than there is to-day, for the very reason that parliament and governments respected British parliamentary traditions more than we do now? Mr. Churchill, who has a high respect for parliament, would not stand for it for five minutes; neither would Mr. Roosevelt. The other day I had in my hand the budget of the United States, containing the report of Mr. Roosevelt to the congress. Opinions are free. One might think that affairs of expenditure for our war effort should not be disclosed to the public. Mr. Roosevelt thinks differently. So does Mr. Churchill; so does Mr. Hepburn; so does Mr. Godbout; so do premiers of all the other provinces of Canada.

Many times I have made the suggestion that civil servants should have respect for parliament. I was unsuccessful most of the time. But in my humble view all those who are in the employ of the dominion government should have respect for parliament. They may not care about this and that hon. member; that is of no importance, but

they must respect parliament as an institution. And parliament can be respected only to the extent that it remains true to the honourable traditions of the past.

One may say: Well, it is pretty hard to do something unpleasant to one or two or four or five or ten high officials; it would hurt them; it would be embarrassing to them. But what is one man in a crowd of a hundred thousand?

Mr. MARTIN: Why a hundred thousand?

Mr. POULIOT: Or ten in a hundred thousand; perhaps my hon. friend is right. What is said is that a man shall be allowed to stay in office because he is such a nice fellow, or it would be hard for his family if he were not. No one thinks of the hundreds of thousands, perhaps millions of Canadian citizens who suffer perhaps on account of that very individual, who suffer on account of the weakness that is shown in not firing him at once. I name nobody in particular. But it is rather hard to discharge one you work with, because you know him, you know his family, you know his past—

The CHAIRMAN: Order. I must again draw the attention of the hon. member to the fact that he is wandering too far afield. The item before the committee is the special vote for the expenditures incurred by the auditor general's office on account of war. The hon. member is not addressing the committee on that point at all.

Mr. COLDWELL: Mr. Chairman—

Mr. ILSLEY: I should like to say something if the hon. gentleman is finished.

The hon. member for Témiscouata seems to object to the form of the public accounts. I wish to make a distinction clear. The statement of the public accounts is one document; the auditor general's report is another. The public accounts are published on October 31, the same day as that on which the auditor general's report must be issued. The public accounts are presented to the Minister of Finance by the deputy minister of finance, for issue and publication. The auditor general's report is tabled through the Minister of Finance. The deputy minister of finance is the permanent head of the Department of Finance; he is a civil servant, an official of the government, in the employ of the government. The auditor general on the other hand is an officer of this parliament and answerable to this parliament.

I have made inquiries as to the form of the public accounts. I find that the public accounts are in the same form and practically of the same dimensions as they have been for a great many years. I think when hon. gentlemen talk about the public accounts, in many instances they have in mind the auditor general's report. That certainly was true of the remarks of the hon. member for Davenport this afternoon. He referred several times to the volume which he held in his hands, as the "public accounts." That volume was the auditor general's report. If hon. members of the house are criticizing the form of the auditor general's report, it is something they have a right to do. I think it is true that in the auditor general's report he does not give a detailed statement of individual expenditures of less than $25,000. I also believe it to be true that he does give a statement of civilian expenditures in greater detail. At the present time the question whether the form, the amount of detail, in both the public accounts and the auditor general's report should not be changed is under active consideration, and it may be that we can make changes which will be beneficial. It may be that parts of the material now published in the auditor general's report should be incorporated in the public accounts, to let the Minister of Finance take direct responsibility for it as head of the Department of Finance. That is under consideration at the present time, and a little later I think I may be able to make some recommendations to the house in that regard, which the house may debate if it wishes to do so. I do not mean within a week or so, or even within a few weeks, but I just want to tell the committee that this matter is under active consideration.

I do not want to say very much more about the speech of the hon. member for Témiscouata, but I do think I ought to say something about the deputy minister of finance. I do not need to do this for the sake of the general public or the great mass of people who deal with the Department of Finance. I am not saying this out of any sense of loyalty or sentiment, or anything like that; but if hon. members of this house are interested in my views I want to give it as my opinion that in respect of ability, in respect of character and in respect of devotion to duty I have never met anyone who ranked higher, and I have met very few who ranked as high. I want to say that about the deputy minister of finance. I have no personal knowledge as to the circumstances of his coming here, but I believe he was sought after, and almost anxiously sought after, because of his high reputation. I did not work with him, of course, when the previous

government was in power, when the Bank of Canada was established, when the housing legislation was launched, or when any of those important measures—and they were important measures, which have proved beneficial during the course of the years—were gotten under way. I know that he had a great deal to do in assisting, and probably in suggesting, that those measures be undertaken. But in recent years, since the outbreak of war, both as acting Minister of Finance and as Minister of Finance, naturally I have worked in very close association with my deputy. We have gone through some very serious times; we have undertaken some very large and comprehensive measures. You cannot set up a great organization such as the national war finance committee, or the foreign exchange control board, or the wartime prices and trade board, without doing an enormous amount of work, when you must have good advice and when you must have with you a clear thinker, a hard worker and a patriotic citizen. The deputy minister of finance is all of that.

Consider some of the things that have been done by the Department of Finance—and I am not saying this to pat that department on the back but rather to give hon. members of the committee some idea of the magnitude of the work. In our financial arrangements with Britain we broke entirely new ground and did an unprecedented thing which I feel sure has the approval of this and other countries. We undertook a comprehensive programme of getting foreign exchange into this country and of conserving foreign exchange by making scores of agreements, some of them involving very large sums of money, under the War Exchange Conservation Act—a most trying kind of work; meeting individuals and companies from all over the dominion and making agreements with them for amortization, depreciation, and so on. We have been dealing with the provinces for the last year, negotiating agreements with them resulting in the provinces vacating the income and corporation tax fields, something in which a sister dominion is now attempting to follow us, as the United States followed us in regard to our price ceiling policy. You cannot do things like these without the help of a person who is a good man. I am willing to give some scope to hon. members of this house in what they say about civil servants, but in regard to this particular civil servant, even though it may not be strictly in order I feel that I owe it to him to state what I have stated, for what my opinion is worth.

I do not think any comment is necessary with regard to the other things mentioned by the hon. member for Témiscouata, such as the passage of the Consolidated Revenue and Audit Act, and so on.

The CHAIRMAN: At this stage I should like to point out to hon. members paragraph 305 of Beauchesne's Parliamentary Rules and Forms, which states:

> All references to judges and courts of justice and to personages of high official station, of the nature of personal attack and censure, have always been considered unparliamentary, and the Speakers of the British and Canadian houses have always treated them as breaches of order.

In the remarks of the hon. member for Témiscouata I did not find any direct attack, but certainly there were indirect insinuations affecting the character of these high officials. I should like to draw the attention of the committee to the fact that attacks of this kind are out of order.

Mr. COLDWELL: I do not propose to break the rules, Mr. Chairman, though I think some of the criticisms offered this afternoon by the hon. member for Témiscouata with regard to the public accounts were well taken. The public accounts committee should be functioning; there should be a thorough investigation by parliament of the expenditures made by the government. I do not think we are doing our duty in this parliament when we fail to examine the public accounts in committee. May I say, too, that if this procedure were followed I believe we would facilitate the business of this house. I think we all feel that the business of the house has been dragging along during the last couple of weeks in a way that is a reflection upon all of us, and I should like to see a speeding up of the business. Therefore, Mr. Chairman, with your permission I am going to say everything I have to say on this matter at the present time.

I rose primarily this afternoon to speak of the staff in the auditor general's office and of the personnel under the civil service commission, which is covered in the next item. I have been greatly alarmed by the influx of young people from western Canada into Ottawa, and the lack of accommodation for them. I have before me at this time—and I will not give the authority, although I shall be glad to give it to the minister—a report which has been prepared by a reputable social service organization in this city, outlining some of the conditions found here. The war has brought a very large number of people into this city. I suppose each one of us, irrespective of where he sits in the house, knows a number of young men and young girls who have come in from his own constituency, many of them from rural communities, and have found work in

the various government departments under the civil service commission. Most hon. members know that the conditions under which many of these girls have to live at the present time are deplorable. For example, we hear about the high prices charged for board and room, about the overcrowding and even in some instances about the poor board these girls are getting.

I shall give only one or two examples of many I have before me. Let us first take the case of three girls—and may I say that each one of these I am about to mention can be thoroughly substantiated. These three girls share a bedroom, and each pays $35 a month for room and board. The landlady is thus getting $105 a month for one room, and board for the three girls.

Mr. HANSON (York-Sunbury): Disgraceful.

Mr. COLDWELL: Another woman has a room for which she wants $55 a month, without meals, if one person occupies it. If two girls take it she will give them breakfast and evening dinner if they pay her $45 a month each. It will be realized at once that with the salaries paid in this city at the present time neither the auditor general's office nor the civil service generally can be doing other than exploiting these girls. I will not say the officials are exploiting them, but they are being exploited jointly by ourselves and by the landladies. In some instances girls are not permitted even to entertain friends in rooms for which they have paid these high prices. I repeat that these cases are authentic. Some girls have been taken to places which were not fit for girls to live in. Something needs to be done by the government immediately to cope with this situation in Ottawa. A few days ago I noticed in a local paper a report of a discussion in the local council. This newspaper, dated May 22, 1942—

The CHAIRMAN: Would the hon. member indicate to what item he refers?

Mr. COLDWELL: I am talking about the staff of the auditor general's office, and about the personnel under the civil service commission, which is next. I was directing my remarks to the two items, but if you wish me to make two speeches, Mr. Chairman, I will do so.

The CHAIRMAN: The item which comes next is "supply of personnel for war services." The hon. member is now discussing the housing accommodation for that personnel?

Mr. COLDWELL: I am discussing the supply of personnel for war services, with special reference to the housing accommodation in this city for that personnel. And may I say to you, Mr. Chairman, with all due respect, that unless these girls are provided with proper remuneration and proper accommodation we shall not be able to get girls to come to this city to form part of the personnel of the civil service. Therefore I suggest I am within the bounds of these items.

This matter has been before the council of the city of Ottawa. The city has made representations to the government asking that it provide accommodation for the lower paid female help, which is included in the personnel mentioned in the item. The reply from the Prime Minister to the approach by the controllers of the city was most unsatisfactory. This letter, from Mr. Henry, Mr. King's private secretary, states:

> Mr. King wishes me to say that the government is not unmindful of the need in this respect, and has been giving a great deal of consideration to the matter. There are of course a number of circumstances which must be taken into consideration. One difficulty has been that some of the controllers of war materials and building supplies have found it very difficult, if not impossible, to release certain supplies at this time which are required for war purposes.

Yet at the same council meeting it was reported that a brewers' warehouse is being erected on Catherine street, that a permit therefor has been issued, and that the necessary building materials had been released for the purpose. I submit if materials can be found for a brewers' warehouse we ought to be able to find materials to provide decent accommodation in Ottawa for our employees.

As I have said, many of the girls come from constituencies far away. Some come from my own constituency in western Canada. I know that many of them are suffering in health, and the loss in days by the departments is really a reflection of the conditions under which they live. I am not going to give figures, but if the Minister of Finance and the Minister of Munitions and Supply will look into the health records in their departments they will find that an enormous number of days are being lost because of ill health among young girls working in Ottawa.

If we are to appropriate the large sum of money mentioned in the item to the supply of personnel for war services, and if we are bringing into this city girls from outside points, then it is our bounden duty to see to it that proper accommodation is afforded.

The same condition existed in Washington. In that city the government is erecting hostels for the girls. Under date line of May 12 a dispatch from Washington states that the girls working there for the government, who will live in a new federally-financed hostel for

women, will pay $34.50 a month for a single room, without bath. However, they may entertain. That rate of course is too high for the girls employed in Ottawa under the present salary schedule.

Mr. MACDONALD (Brantford City): And that is also without meals.

Mr. COLDWELL: Yes. But it does show that in Washington, where they are paying higher salaries, some attempt is being made by the government to deal with a similar situation. When we look around the city and see huge temporary office buildings going up, we must realize that if we are going to bring people to this city to work in government offices we ought to make provision whereby they may have decent accommodation during the hours they are not employed.

I know how difficult it is to find accommodation. I have in mind at the moment a gentleman who for over a week has been looking for a single room in which he may sleep. In some places landladies exact conditions which are neither right nor just. For example, a case I have before me indicates that girls who were paying a high price for a room were told, "You may sleep there, but you must be out of this room all day."

It seems to me it is the duty of the government and of parliament—because after all parliament is the expression of the will of the people, or ought to be—to do their utmost to remedy this situation. I have taken this opportunity to bring the matter to the attention of the Minister of Finance and the committee. I do not know whether he is aware of it or not, but I may say to the minister that quite often it is said, "Not only can we not get building supplies, but even if we could get them the Minister of Finance or the treasury board would not let us erect these buildings." Indeed the Minister of Finance and the treasury board sometimes have to bear the brunt of criticism of the lack of social services and social amenities in this dominion. The stumbling block, we are told is, that the Minister of Finance or the treasury board is not seized of the need for improvements, but that is no excuse for parliament, and it is, I think, a bad excuse for the government. I urge the minister and the government to give consideration to this problem which so nearly affects the lives of a large number of young people in this city, particularly those who may in after years be the wives of the men who will return from overseas and become the mothers of the future generations of Canadians.

Mr. HANSON (York-Sunbury): I desire to say a word about this problem. The condition of the young girls who have arrived in Ottawa to take war-time positions was called to my attention very soon after I had assumed the responsibility of this position. On that occasion the question was the rate of salary paid to these young girls, and I felt it incumbent upon me to urge upon the treasury board or the civil service commission or whoever was seized with authority a revision of their salaries. I am glad to be able to say that that has been done. As to whether or not it has been done adequately, I do not at the moment desire to express any opinion.

Recently there has been borne in upon me other aspects of their conditions, as presented by the hon. gentleman who has just taken his seat. I do not know whether the experience of other hon. members is the same as mine, but frequently some young girl whom perhaps I know personally from my own community calls upon me for assistance in this respect. I certainly know that my colleague the hon. member for Victoria-Carleton (Mr. Hatfield) is called upon every week to go out and find a boarding place for some young girl who has come to the city to take war work, and he is often driven to his wit's end to accomplish that which he desires to do. I have had the same experience of being appealed to, but fortunately I have had the cooperation of a good staff, which has, to a large extent, relieved me of responsibility.

There is a distinct governmental responsibility in this matter. The government has centralized war services in Ottawa, and when it does that it must assume responsibility for the housing of these young girls, and not leave the responsibility to the community. The government may say: "That is all very well, but the city of Ottawa is reaping some benefit from having these government employees here." That just begs the question. We are inviting these young people to come to Ottawa to help carry on the national war effort, and we are centralizing all these war services in this city. But we do not do a thing to provide decent accommodation for these employees, especially for these young girls, many of whom are away from home for the first time. The same problem with respect to war workers moving from one state to another has arisen in the United States. I recall reading last winter an article in the *Atlantic Monthly* which put the case very fairly for the municipalities, saying that since the government had created the condition, the government must assume the responsibility, not only for the housing of these people but for sanitary services, for school services, and for their hospitalization if these services became beyond the capacity of the local community.

We ask these people to come to Ottawa. They come, many of them not knowing what the situation is here. When they get here they find themselves at the mercy of a lot of people who make their living by this means—and I am casting no aspersions on the landlords or landladies of Ottawa because I do not know enough about the circumstances. But I do know that there is a responsibility on the government to deal with this problem.

I do not think the letter of the Prime Minister's secretary to the municipal officials is satisfactory. I think the government has to grapple with this problem, and the sooner it grapples with it, the better. I make this concrete suggestion. I ask the government to set up a representative committee of civil servants to meet with the council of the city of Ottawa with a view to coming to a conclusion as to what shall be done. Let there be cooperation on both sides.

I think the suggestion of a women's hostel is perhaps the most satisfactory suggestion that can be made. Of this I am certain, that something must be done to relieve the shortage of accommodation. The government must deal with the situation, and my suggestion is that they appoint a committee to meet with the city council and grapple with the situation with a view to building a hostel. The government can build offices on Wellington street and furnish them at the rate of $600 a room, as we have heard has been done. I have heard of a man wanting to move in his own mahogany furniture, but that was stopped as likely to give rise to great scandal. Some man was furnishing his room with an $800 carpet, but in that case the government was not paying for the carpet but the man himself.

To allow these girls just to look after themselves is not good enough. Let us deal with the situation with humanity, even if we are at war. I do not want it to be thought that the socialist party has any monopoly in the consideration of the humanitarian aspects of this problem. Other people are thinking about it too. The government can put up two buildings at great expense on Cartier square to house the navy. I am not critical of that, but they are just temporary buildings to be torn down after the war. Is not the welfare of these young girls who are brought to Ottawa a matter of paramount importance to us all and to the future welfare of this nation? Then let the government set up a committee right away and get in touch with the city council with a view to building hostels and providing other necessary services too. They will be doing a good job for which they will be acclaimed, I believe, by the people of Canada.

Mr. ILSLEY: I will see that that suggestion is given most respectful and serious consideration. It is not primarily my responsibility; I am not the minister, to see to the housing of civil servants, but naturally I take an interest in the matter. Although I do not know too much about it I have some idea of what the situation has been, and I think the appointment of a committee or board or commission is a good idea. I believe that will have to be done. I think the composition of that board, its representative nature, will have to be given serious consideration, because the operation by the government of a girls' hostel will be a difficult and responsible task. I know that when the question was discussed last fall as to whether a hostel should not be built then to accommodate five or six hundred girls, the very suggestion almost was getting us into trouble because this interest and that interest were starting out to insist that they must have representation on any board that had charge of an enterpise of that kind. So far as the time to do this is concerned, we should pursue the same rule that we try to observe with our war effort generally; that is, that so long as persons coming here can find accommodation in the houses which are available at the present time, they should do so, even at some considerable inconvenience. If anyone thinks the people of this country in the next two or three years are going to escape inconvenience in housing, he is entirely wrong.

The construction programme of the government this year for military purposes, I am told is larger—I was going to say twice as large, but I may be wrong in my proportions—than in any previous year. That may be surprising to members of this committee, but that is what I was told by my colleague the Minister of Munitions and Supply the other day. There is going to be the most terrific scramble for materials for housing in all parts of Canada, and we must keep it down to the very minimum.

Mr. HANSON (York-Sunbury): Well, the same crowd gave priority for a beer warehouse.

Mr. ILSLEY: All right, now. Every hon. member will be able to think of something for which he would not have given a permit if he had been director of construction. Certainly anyone is able to do that. The controller of construction is in the Department of Munitions and Supply. He has a very difficult task to perform, and, no doubt, is discharging it as best he can. He has certain rules applicable to residential construction, certain rules applicable to industrial construction, and so forth. He has kept construction down much better than private construction would have

been restrained had there been no control. There must be rigid and severe control over construction, which will entail a considerable amount of inconvenience. Of course, that inconvenience cannot pass a certain stage. All I want hon. members to understand is that there is likely to be some, and that the government is keeping an eye on that situation and will give it serious consideration. My understanding—and here I may simply be provoking controversy, for I do not know very much about the matter—is that the situation in Ottawa eases in the spring and becomes a little harder in the fall, because in the spring people move out to various country cottages in the vicinity; and I do not think there will be an impossible situation or a very inconvenient situation during the summer and early fall months.

Mr. HANSON (York-Sunbury): That possibility is going to be wiped out on account of the gasoline restrictions.

An hon. MEMBER: What about next fall?

Mr. ILSLEY: I understand that; the obvious answer is that we should be thinking of the situation next fall, and I may say that we are thinking of it. The suggestion of a board or a commission is a very good one.

Mr. BLACK (Yukon): As regards these temporary buildings which are being erected in Ottawa: Canada is growing; the public service of Canada is growing; accommodation is needed to house government employees. Canada has now been at war for nearly three years, and there has been plenty of opportunity and time to build a few more permanent buildings. I believe the government would have been better advised to construct a few permanent buildings, instead of temporary buildings, at a great expense, which will have to be destroyed after the war. Take the Lord Elgin hotel: it was built inside a year. There is no reason why the government cannot erect permanent office buildings right here in the city. They will be available for all time to come, and the expense in the long run will be less than the cost of putting up these mushroom buildings and afterwards tearing them down.

Mr. HANSON (York-Sunbury): And it would avoid the fire risk.

Mr. ROY (Translation): Mr. Chairman, in reply to certain remarks made earlier, I believe, by the hon. member for Davenport (Mr. MacNicol), the Minister of Fisheries (Mr. Michaud) gave us the trade history of that delicious seafood known as the lobster. This statement interested me very much, although there remain a great many things to be said on the subject, for my constituency and more particularly the Magdalen islands produce a great deal of lobster, in fact, a large percentage of our entire Canadian output.

The CHAIRMAN: I wish to remind the hon. member that we are now considering the auditor general's report. No one has objected to the hon. member's remarks, but it is incumbent upon me to direct the debate according to the rules of the house. I merely wish to draw the hon. member's attention to the item now under consideration, and to say that I do not believe there is a sufficiently close connection between it and the situation with regard to fisheries in Gaspé or the lower St. Lawrence, to warrant the latter's discussion.

Mr. ROY: Begging your pardon, Mr. Chairman, I was under the impression that the $3,000 item which I notice here had brought about, earlier in the day, a discussion on this subject, and the remarks I have to make are directly related to the state of war.

The CHAIRMAN: If I am not mistaken, the hon. Minister of Fisheries' remarks were intended to correct an unfair criticism of the auditor general's report. It had been alleged that in his report, the auditor general might have been more explicit with regard to the expenditures incurred by the fisheries department. The minister then explained the scope of the auditor general's report with regard to fisheries. Any remarks made in this connection must be directly related to the report under consideration.

Mr. ROY: Can I not make certain observations at the moment, Mr. Chairman, provided they are directly concerned with the state of war?

The CHAIRMAN: No, not unless they are related to the auditor general's report.

Mr. ROY: Very well.

Mr. CHURCH: May I briefly supplement the remarks I made last evening to offer some suggestions to the minister about what I think should be done with regard to auditing and checking these war accounts, the item of $196,000.

In the first place I want to point out to the minister that it is not an audit at all; it is just a checking system. Those of us who have come up from the municipalities have had some experience in this work. The system we have to-day of auditing and checking with relation to war expenditures

is just a village system; it is not and never was designed for such a great war as this, where in one year we are going to spend $2,200 millions. There are twenty-five of these various bodies which are called corporate instrumentalities. Many of these bodies are themselves spending bodies, and they have their own auditors. I contend that we should have a new consolidated revenue and audit act; there should be a committee of the house which would be known as the audit committee, and they might be a ways and means or finance committee. It would greatly help the minister, who is bearing a very heavy burden at this time. I regret to have to bring this matter up, but I believe the discussion will do a great deal of good and strengthen the government in the end. As one goes about the country he finds that everybody is aware of this or that condition of waste or duplication, and there is nobody to stop it. The auditor general is responsible to parliament. All he does is get out a great big book, the auditor general's annual report, which I doubt if anybody ever reads; I know I have not read it since 1926 or 1927, till last year. For the auditing and checking of war work, there should be a standard system of audit to apply to the government and all outside boards. No bank or insurance company could keep open its doors a month if it were to run on the kind of village system of checking accounts we have. No county council could discharge its duties and no public utility could carry on with such an antiquated system.

I suggest that we should adopt the practice which prevails in England. First, there should be a standard form of audit; second, there should be a committee of the house known as the ways and means and audit committee to which the minister could send the auditor general's report for revision.

I looked over some of the work here. I may say that I was told away back in 1926-27 that the audit system was all right, when I first had the matter up with the late Mr. Robb who was then Minister of Finance. Mr. Robb was an able minister who knew a great deal about business, and competitive business too. At that time I took exception to the audit system, but everyone said that the audit was all right. Of course, every audit is all right until there is an explosion and it is discovered that money has been squandered. There are a good many business men both in this house and in the other place who have impressive financial names, and they know that one of the greatest necessities to-day, at Washington, in London and in Canada, in connection with our various large institutions, is the conservation of money and capital through a proper up-to-date system of checking and auditing and retrenchment, concentration, and the elimination of waste and duplication. But what have we here? There is no system at all, as far as I can see. In the first place, what is an audit? A modern, up-to-date audit must recommend changes; it must eliminate waste, and it must find out if there is coordination and cooperation among the various departments that go to make up the minister's budget. Here we have, according to page 541 of the auditor general's report, twenty-five of these outside boards under the department, and yet there is no control over most of them. Apart from two or three cases, what the government should do is to take over all these various outside boards, the whole twenty-five of them and audit the whole system. Toronto had to do that very thing with its outside boards. Toronto's financial affairs are much larger than the finances of the province of Ontario, with its outside boards, and the city had to adopt a new audit system and a new system for the sale of bonds and for capital levies. There had been no protection in the old days for the taxpayers from duplicate systems of handling loans, and the city decided to appoint Mr. Bradshaw to look after all the work, to make provision in connection with bonds, capital charges, and so on, dealing with thousands of employees and very large public utilities engaged in the handling of money running into a hundred million dollars and more. The result of that new system was a great economy, coupled with efficiency. There could be a great deal of saving to-day if the minister would adopt a new audit system, with a veto power.

When I first came into this house in 1926 and 1927, I was told that, for instance, the banks were solvent, that no bank had failed. But what happened? The Home bank closed its doors because the system of inspection was a myth. Some of the directors and others took millions of dollars out of the till, and invested the money in the United States, putting it into other pockets. Yet we were told at the time that the bank inspection and audit and checking system were all right. We were told that it could not happen here, but it did. When Mr. Robb was Minister of Finance I brought this whole question up in the house because I could foresee the explosion. I knew there was going to be trouble in connection with the insurance companies, and I brought in a bill in relation to audit and checking in reference to the large insurance companies, to provide that no insurance company should be allowed to invest trust

funds, that is insurance funds, extra-territorially in common stocks. An investigation by the auditor general and others, disclosed in the insurance report submitted by the inspector of insurance, showed that hundreds of millions of trust funds were taken out of the country and invested in South Sea bubbles the world over, in what are known as common stocks of these companies, with the result that the money was lost. My bill to prevent these investments in such common stocks outside Canada went before the banking and commerce committee, but the proposed amendment was defeated and millions and millions were lost and squandered at that time. But they said that the system was perfect. Well, no system is perfect, and certainly we have not a proper system. It is all very well to check up a pay sheet with 181 names on it, but nobody knows how they got there.

I can tell the committee something about these outside federal government boards. In Toronto I see a good deal of waste about the streets in war expenditures, and anyone who travels over the country on our trains, visiting different places, will observe war waste all along the line. Of course there will be waste. There was waste in the days of Napoleon and in the days of Pitt, and it is only to be expected that there will be waste in the conduct of a war like this. But when the government is expending two billion dollars, when it is dealing with astronomical figures, it should put on the brakes and see that the money is well spent. In England the war expenditures committee has recommended changes, according to the report which has arrived to-day and which I have seen. It has recommended changes in auditing and checking of accounts, coordination, revision and veto power, with the result that in the old country they have saved hundreds of thousands of pounds by means of their up-to-date system. They have had a house-cleaning, and we should have the same. That is one thing that can be said to the credit of the late auditor-general, Mr. McDougall, whose name was an influence in the Victorian era here, and an influence with those that came after him. He vetoed hundreds of items.

But what do we find here? Here I can find only one item vetoed last year from the treasury board. I contend that the auditor-general, who has to report to parliament, should have power to veto any expenditure he sees fit. Look at the five or six departments in which there is so much duplication and waste at the present time. There is utter waste in these departments, for the simple reason that five different bodies have been spending money like water. They have been putting up duplicate billboards such as the one that says "No loyal citizen hoards". They have put out billboards, advertisements, booklets, the height of the parliament building; there has been no equal to it since the tower of Babel in waste paper and talk. There would be no place in which to house the billboards and publicity material if we wanted to.

The tax-payers are getting sick and tired of this sort of thing. The government is all the time taking more money from the taxpayer than he can afford to pay. We are supposed to have a comptroller of the treasury, but all he does is to have a few clerks look up and check accounts. As for the checking system we have, I would not give five cents for it. I have seen some of these accounts, and I know there is duplication and waste. For example, there are two bodies in Toronto, one military and the other under the civil service commission, and for two years now there has been conflict between the civil body and the air force. The commission claim the power to appoint bookkeepers, stenographers, clerks, checkers and so on, and yet there is the Royal Air Force over their head with a duplicate staff spending more money, and making these appointments illegally.

Again, there is the Department of Munitions and Supply. I admire the minister, and I am fair enough to admit that he has done splendid work. There is, however, some waste in the department in the camp established. It cannot continue much longer. Take these outside boards; we have pages and pages of publicity material in the newspapers every day coming from these various boards. There is hardly a small retailer who can carry on with the interference of those bureaucrats, mostly untrained in business. One the other day said at a meeting that the small retailer may have to close up for lack of materials.

I submit that we shall have to change our way of doing business; otherwise this high court of parliament may as well be abolished for all the control we have over these war expenditures and over outside commissions and boards after the money is spent, and they are all postmortems. You have here, largely for civil government, an amount of $146,000,000, some overdraft, and there are draft estimates that came out a few days after parliament met, but the committee of supply has not yet sat one day. There has never been any committee of supply to pass upon one dollar of these estimates. We are supposed to have a break-down here. Well, it is a break-down because you cannot get any detailed information on each item from the minister. There are no details of expenditures, no details of these large items running into millions of dollars. I repeat, we shall have to change the whole system.

I suggest that the Minister of Finance should have a fixed day for bringing down his budget; there should be a fixed day for the annual submission of his budget and for audits and accounting. How can you provide a proper audit and checking system when one person, the Minister of Finance, can say, "I will produce my budget, if I choose, in June." The accounts should be balanced up to the end of December and a proper audit made at that time and the financial year end with the calendar year. The date for the submission of the auditor general's report is fixed by statute, and there should be a similar provision applying to the Minister of Finance in the bringing down of his budget. Here we have two-thirds of the budget before us in connection with war expenditures nearly spent. It means that the budget speech is brought down afterwards as a sort of postmortem. Now are we going to have half a dozen budget speeches instead of coordinating them into one? The country is heading for national bankruptcy. These are strenuous days for the poor retailer and wholesaler; they are driven to the wall with artificial controls. I do not wish to embarrass the minister, far from it, but I believe that this discussion will strengthen his hands and do a great deal of good, and that it will be discussed in the country. It will not be possible to increase the income tax or obtain any further money unless we retrench and get value for our money—either income taxes or death duties or anything else, and the government may never collect any proposed increases.

Mr. ILSLEY: The next item is "comptroller of the treasury."

Mr. MICHAUD: After external affairs.

Mr. ILSLEY: We will skip external affairs for the moment.

Mr. NOSEWORTHY: Are we including the item mentioned in the same line, "dependents' allowance office"?

Mr. ILSLEY: Yes; the item is:

Comptroller of the treasury, dependents' allowance office and outside establishments, $4,979,617.

Mr. NOSEWORTHY: When the Minister of National Defence for Air (Mr. Power) brought his estimates before the house I called attention to the condition of the dependents of our men in the forces as I had observed them in the riding from which I come. The Minister of National Defence for Air then informed us that he would discuss with his colleagues the question of granting a cost of living bonus to these dependents. I understand that this dependents' board was set up on November 14 last. Four days before that board was set up a deputation came to the Minister of Finance from Toronto representing certain organizations interested in our men in the forces and overseas. It was the considered opinion of those representatives that the cost of living bonus was a much more satisfactory solution of this problem than that proposed by the minister at the time. I am further informed that the minister asked that deputation to give his plan a fair trial. I have here correspondence from the ladies auxiliary of the Royal Canadian Engineers, and am assured by that organization that after having given the minister's plan a trial they are convinced that this board and the granting of dependents' allowances to the wives and families of men in the forces do not constitute a solution of the problem.

In the first place it has the appearance of charity. These wives must admit to their homes social service workers, who are required to check the family budget to discover whether they can advise the soldier's wife where and how she can make her budget go further. Then application is made through the social service representative; if approved, it is sent on to Ottawa, and, if it is approved by Ottawa, the dependents in the course of two or three months receive a cheque. While this board was set up in November, I understand that the first payments did not reach the families in Toronto until the winter months had passed; it was along some time in March or April before many of the dependents were receiving any allowances from this board.

I understand that the stock argument in favour of this board and against the cost of living bonus is that some of these wives are unable to manage their own affairs, unable to manage their budget economically. That may be true of a small percentage of them. Social service workers have estimated that it is true of probably two per cent of the dependents. The fact remains that these families managed their own affairs while their husbands were in Canada. They are asking to-day why it is that they should be the one class of citizens to be discriminated against in this respect. Practically every other group of citizens below certain wage levels are granted the cost of living bonus. In the great majority of these cases if the men had remained at home and gone to work in war or other industries the families would be receiving cost of living bonus to-day. They and their families are being penalized because they showed sufficient patriotism to enlist in the forces. I maintain that one of the great deterrents to enlistment to-day is the sight across the road of a

soldier's wife and family who have to depend upon what to all intents and purposes is charity to secure sufficient money to get by.

I should like to read to the committee one or two short extracts from letters from the officials of the ladies auxiliary to the Royal Canadian Engineers on this question. It is pointed out here that social service workers came into twelve typical homes in Toronto and tried to find ways and means whereby these wives could do better than they were doing with the income at their disposal. Matters came to such a strait that a number of these wives offered to turn over their homes, their children, the management of their homes to social service workers in order that the wives themselves might work out and earn something for their own subsistence. There is a standing offer made to these social service workers to come in and manage a dozen of these homes to see if it can be done any better than it is being done by the women in charge. So far no offer of that kind has been accepted.

I have one paragraph here which expresses the feeling of those people. They say:

> Just because possibly 2 per cent of dependents are indiscreet, poor managers, unable to handle funds to the best advantage, does that mean that we must all be "assisted" by social service workers or starve and freeze; failing that we can "make application" humbly I suppose for "assistance"—they don't like it called "charity", and if the committee gives favourable consideration the "award is recommended." Do the powers that be feel that all dependents are unable to manage their own affairs? Do they feel that all dependents should be shoved and bandied about in this way? Is their contribution to the war effort not great enough without being subjected to this indignity?

I am sure this matter has been taken up with the minister on a number of occasions, but I should like to direct his attention also to one case history which has been brought to my notice. It is pointed out here that in many of these families there is a sickness allowance. The regional committee in Toronto has on record cases of sickness, particularly of children, caused through nothing but insufficient food of the proper kind, or in fact food of any kind; lack of warmth in the home because of insufficient coal, and so on. One woman with four children had seven cases of measles in the home last summer and two cases of tonsilitis. During the winter the children were continually ill with colds. At the present time three children in that family are so underweight that the authorities have put them in the open-air school, while the fourth is being given extra milk at school in order to provide the child with sufficient strength to carry on the school work. I made the statement formerly that there were families in my riding worse off to-day than they were when the father was at home on relief. Since making that statement I have received letters from social workers in that riding assuring me that this is an actual fact. I have here a statement signed by certain teachers in a school in a district adjoining Toronto. They say:

> It has been brought to our attention through charity organizations that there are instances in York township where a soldier's pay is inadequate to keep the family. It has been stated there are cases where the family received more on relief than it now receives in the armed forces.
>
> We, the undersigned, as citizens in your riding, feel that the wives of the armed forces and the children, regardless of their number, should receive adequate financial compensation to relieve them from accepting charity. It is the least that can be done for families of men standing between the enemy and ourselves.

That is signed by thirty teachers in one of the schools attended by some of these children. I think it is generally agreed that the dependents' allowance serves a good purpose, in cases of sickness, where hospitalization is needed, and in the case of families with more than four children, since the government grants allowance for only four. But the point about which these dependents are concerned, the question they are asking, is why the family of the industrial worker should get a cost of living bonus while the family of the soldier cannot get it. I have been told by social workers in that district that they have great difficulty in restraining these women from mass demonstrations of their indignation against the government for its refusal to grant them this cost of living bonus. So I would seriously ask the Minister of Finance to consider the possibility of giving the soldier's dependents a cost of living bonus similar to that being given others in this country.

Mr. ILSLEY: I believe this matter was taken up on the defence estimates; at least I am so informed. At any rate that is the place where it should be taken up. The only reason why the dependents' allowance office appears in here is because part of the vote of $4,979,617 is for the expenses of the officers of the comptroller of the treasury who pay the accounts that are payable through that office.

Mr. HANSON (York-Sunbury): Administration.

Mr. ILSLEY: Yes. Any matter of policy, so far as the amount that should be paid is concerned, is for another department, not for the Department of Finance. Probably the hon. gentleman has in mind that last November, when dealing with a large number of demands on the government for cost of living

bonuses, it fell to my lot to deal with those demands because a statement could not be made by each of a number of ministers. It was essentially one matter, and I dealt with all the demands. Last fall we were confronted with demands for cost of living bonuses from old age pensioners, from those receiving war veterans' allowances, from superannuated civil servants and others whom I do not seem to remember. Some hon. member says "mothers' allowances." I do not think they applied to this government, because mothers' allowances are paid by the provincial governments. At any rate, at that time we had to decide what policy we were going to follow in reference to the payment of cost of living allowances; whether everyone in the country whose position was worsened by the increased cost of living was to receive a cost of living allowance, or whether we were to stick to the original intention of our cost of living allowance policy, which was part of our wage policy and nothing else. We decided we would do that. In regard to these dependents' allowances, I do not understand that the hon. gentleman wishes to drop our present system and turn to the cost of living allowance system.

Mr. NOSEWORTHY: No.

Mr. ILSLEY: The hon. member wants both systems; he says that this system is of value in case of sickness, where there are more than four children in the family, and so on. We do not think both systems are necessary.

With regard to dependents' allowances, it must be remembered that the experience we had to go on was the experience of the last war, when wives received a separation allowance of $25, during a period such as this, and at the end received a separation allowance of $30, at a time when the cost of living was far higher than it is at the present time. That is, it was only at the end of the war that it went up to $30. There was no allowance at all for the children. They were provided for out of what was called the Patriotic fund, which fund was administered by public-spirited citizens who voluntarily contributed money. At the beginning of this war what was normally to be expected was an increase in the cost of living, so at the outset we made the wife's allowance $35, which was $5 more than it was at the end of the last war, when the cost of living was much higher. We also provided allowances for children as of right, and in November we increased those allowances to cover up to four instead of only two children. There is a group—I will not say it is entirely confined to Toronto, but it centres in that city—which has written a great many letters, has come to see us several times, and has conducted a very earnest agitation—and I do not say that in any invidious sense—for the extension of the cost of living bonus to these dependents' allowances on principle, and that has been joined in by several members of this house. I was in the house one day when the hon. member for Peel (Mr. Graydon) was making a very earnest plea to the government to add to this cost of living bonus; that is, since it was $35 at the beginning of the war, and the cost of living had gone up 15 per cent, it should be $40 now. Apparently his argument was that, once having set the amount at $35, the government was—I will not say "hooked"—but committed to that amount, and that it should increase according to the increased cost of living.

I am not the one to whom the agitation was directed, although I received the delegation on one or two occasions. In addition, I have received many letters from the delegation in language very much like the language the hon. member has just used. But I am sure that in many parts of the country the system we have adopted is regarded as, if not completely, at least reasonably satisfactory. This perpetual harping on what they call charity—and the hon. member has identified himself with that group—is entirely unwarranted and entirely unjustifiable. There is no charity about the matter at all.

The government has come into this, very much the same as the Patriotic fund came in. But after making much wider and more binding provisions as of right for the wives and children, the government has put up a fund, where money is needed. In some localities the cost of living is much higher than in others. Rents may be higher in one place than another.

However, I have talked to people around the country who think the present provision is reasonably satisfactory. Of course that will not satisfy those hon. members who think money does not make any difference at all, and that we can pay unlimited amounts. But I do suggest that the government ought not to be accused of being indifferent, careless or unintelligent in the way it has handled this problem.

Mr. HANSON (York-Sunbury): I was rather startled to hear the hon. member make the assertion that the amount paid to the wife and children of a man on service was less than would have been received had he been on relief. I can scarcely credit that. From memory I have put down some figures respecting the amount paid to a soldier with a wife and four children, and if my premises are correct that amounts to $113 a month, made

up as follows: pay, $39; allowances, $35; $12 for the first child, $12 for the second, $9 for the third and $6 for the fourth. Twelve times that amount would be $1,356. I wonder if any municipality in this country ever paid that much in relief. If it did not, then that just shows an exaggeration which is not justified by the facts.

Further than that, my understanding of the policy of the government was that it would make the allowance from the very beginning, thereby doing away with a patriotic fund such as we had in the last war, under which some people gave a great deal and others gave very little. I understood the purpose was to spread it among the taxpayers of the country, where it belonged as a matter of business and not as a matter of charity.

Is there anything to the suggestion that the family to which reference has been made received more by way of relief than under present circumstances?

Mr. NOSEWORTHY: That statement was made to me by reliable social service workers, and I believe it applied to the case of very large families. In York South men, with eight or ten children at home, have joined the army. I can well believe they would be worse off under the allowance they are getting now—or were getting a few months ago, because I do not know what arrangements have been made since—than they were when they were on relief.

Mr. HANSON (York-Sunbury): Did the hon. member check up, or is this hearsay?

Mr. NOSEWORTHY: As to charity, may I point out that these women object strenuously to having social service workers come into their homes, checking their budgets and checking their outlay in connection with home management, and then making applications for allowances. To them this looks like charity—whether it is or not. That is one objectionable feature.

Mr. CHURCH: This is an item of about $21,000 less than $5,000,000, to the comptroller of the treasury for dependents' allowance, and it is made available to the dependents' allowance board. I am reminded of the provision made last fall with respect to men having more than two children. The minister surprises me very much, because all the time he seems to be offering special pleading against benefits for soldiers. For instance, there was the high cost of living bonus I supported, with an allowance for those with more than two children; then there was the matter of soldiers' insurance, free fares, and other matters of that kind.

This department is spending vast sums of money, but I have never seen anything in my

[Mr. R. B. Hanson.]

life like the way it is using returned soldiers, their wives and children. I believe if the minister had attached to his department a few soldiers who had served in the great war, it would be a much better department, and they would give the soldier and his dependents a break.

The public is not objecting to these war expenditures, if they are made in an all-out war effort and the soldiers given better treatment. But when we look at this list of payments we immediately see one for $50,000,000 to pay for subsidies under the price-ceiling order. While this large sum is made available for that purpose, there is not a cent for the soldier who is fighting our battles and his dependents. History will deal with those who have been responsible for that kind of work. I ask the minister to come down out of the clouds, and let something be done for our soldiers who are fighting our battles. I am sick and tired of hearing special pleading by the government when any matter of this kind comes up. Despite all the boards there are around the country, the soldier is getting little or nothing. Not many of them are even remembered in connection with the amendment the minister made of a small insignificant grant, just charity, instead of a real cost of living bonus.

The provision made for those with more than two children was just a sop; it did not amount to a snap of the fingers. Very few benefited by going before a board. All over the country the government is setting up these new boards, but very few of the soldiers, if any, get one red cent out of it.

I am not going to vote for any more of these things until we have a fair and square deal for the soldier who is fighting our battles and his dependents. He is not getting it at the present time.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POULIOT: I have in my hand Beauchesne's "Parliamentary Rules and Forms, Second Edition", and I find that citation 502 reads:

> The estimates for the year are submitted to the committee of supply by the finance minister bringing them down in the house with a message from the governor general which is read in English and French, the house standing, by the Speaker or by the clerk at the table. The minister then moves "that the said message, together with the estimates, be referred to the committee of supply." The estimates are afterwards taken up at any time the government thinks proper.

According to the explanation that was given by the minister this afternoon, these estimates are part of the $2,000,000,000 appropriation for war purposes, and so I ask, why is the procedure different in this case?

Mr. ILSLEY: Because this money is not to be voted item by item. This appropriation is part of a bill, and this is the procedure that is followed by parliament in all appropriations of money by bills. If, for instance, we were to pass a bill, as we are doing, to set up a scheme of war risk insurance, and the bill provides that $5,000,000 shall be appropriated and placed in the hands of an insurance organization to be set up by the government for the purpose, the consideration of that appropriation of $5,000,000 goes, not to the committee of supply but to the committee of the whole house. That is the uniform rule applied to appropriations provided by statute. When we have estimates, which are submitted to the House of Commons by His Excellency the Governor General, the committee of supply procedure applies, the procedure which the hon. gentleman has just mentioned, and the committee of supply deals with those estimates item by item. But we do not go to the committee of supply with a bill of this kind.

Mr. POULIOT: I am sorry I cannot agree with the minister. There is, of course, a difference between estimates and grants; they are not the same thing at all. The kind of expenditure we are now discussing is called an appropriation, but simply because it is called an appropriation I do not believe that the procedure should be changed. The procedure should be the same as when the appropriations are just the ordinary estimates. A grant is something special, something out of the ordinary. But when we come to consider the expenditures of a department, even if there is some increase, they still remain estimates, and so I submit that the procedure should be the same and that this appropriation should come before the house in the usual way that estimates come. I know very well that if Mr. Bennett or Mr. Meighen or Mr. King or Sir Wilfrid Laurier or Sir Robert Borden had been the leader of the opposition at this time, he would have protested strongly against this procedure.

Mr. HANSON (York-Sunbury): I am to blame, I suppose.

Mr. POULIOT: My hon. friend the leader of the opposition may strike his bosom; nevertheless he has a responsibility in this matter—

Mr. HANSON (York-Sunbury): *Mea culpa.*

Mr. POULIOT: I cannot understand this procedure at all. This appropriation should have been brought before the committee of supply in the usual way, with a message from the governor general.

The CHAIRMAN: Does the hon. gentleman raise a point of order?

Mr. POULIOT: I am just submitting a question, Mr. Chairman.

The CHAIRMAN: The resolution was introduced into the house by the minister, and the minister stated that it had received the approval of the governor general and that it was recommended by his excellency to the house. That is the usual procedure with money bills. The resolution has been referred by the house to the committee of the whole. The point raised by the hon. member might have been raised and discussed in the house at the time when the motion was made to refer the resolution. I do not believe it is within the jurisdiction of the committee now to discuss the question on a point of order.

Mr. POULIOT: If you will permit me, Mr. Chairman, in the first place the whole matter was put on record by the Minister of Finance when nobody knew what was involved. Of course, the minister made a few preliminary remarks, and it was just because the members were not at all familiar with what had been put on *Hansard* that discussion was postponed. What the minister put on record was not submitted by way of a special motion.

It was just put on record when the Chairman was in the Chair, not yourself, Mr. Chairman, but an acting chairman, and I had just started to ask a question of the Minister of National War Services when I was told that we were going to proceed with finance.

The CHAIRMAN: Order. The resolution was placed on the order paper. When it had been on the order paper for the prescribed period, it was taken up by the house, with His Honour the Speaker in the Chair. A motion was made that this resolution be read a first time, and, then, that it be referred to the committee of the whole. If some hon. members did not notice it, the matter can no longer be discussed here. This committee has been properly seized, without protest, of this resolution, and the action taken by the house is not subject to review by this committee at this stage.

Mr. WRIGHT: I do not know, Mr. Chairman, whether I am in order after your ruling in raising a question respecting the administration of the dependents' allowance legislation which I wish to bring to the attention of the minister. Am I in order in doing that?

Mr. ILSLEY: May I say a word on that? If the hon. gentleman is proposing to discuss a decision of the dependents' allowance board, that should have been discussed under national defence. If he has in mind some administrative action of the comptroller of the treasury, who is merely in this case a cheque-signing and sending officer, it is in order under this. But I think it is important to keep that distinction in mind, because this is an item to pay the expenses of the comptroller of the treasury for sending out money for various war departments, and this is one of them. I would ask hon. members, having fully discussed the subject of dependents' allowances when national defence was before the committee, to refrain from discussing it under this finance item.

Mr. HANSON (York-Sunbury): As a matter of expediency and convenience, what the minister is suggesting is correct, but under an administrative item I think a member of the House of Commons has the right to discuss any matter that requires redress of grievances.

Mr. ILSLEY: I would just point out that if the position taken by the leader of the opposition is correct, there is no limit whatever to any part of our war expenditure that can be discussed now, because the comptroller of the treasury pays all the bills—

Mr. HANSON (York-Sunbury): I expect that is true.

Mr. ILSLEY: —and under this item the whole field can be ranged over. For the sake of expediency, if for no other reason, I do not think we should go over these matters time after time. There would be no need to call in any other minister if this could be done.

Mr. WRIGHT: The matter I wish to discuss is directly connected with the administration as it applies to outlying districts in our province. At the present time apparently the dependents' allowance board have no way of deciding—

The CHAIRMAN: Order. Does the hon. gentleman address his remarks to a special item relative to the war, or is he discussing the general administration of the dependents' allowance legislation?

Mr. WRIGHT: No, it all has to do with the war, and this has to do particularly with the administration of this legislation in the outlying districts of Canada where the dependents' allowance board have no representative to interview people who are coming under the legislation, and therefore send out to postmasters or to various parties who hold government positions in those parts, asking them to convene boards to interview people to see whether they come under the legislation. That is the point I wished to discuss.

Mr. ILSLEY: From my point of view that is purely a national defence matter. The Minister of National Defence, not the Minister of Finance, is the minister responsible for the operation of the dependents' allowance board, and I submit that the matter should not be taken up under finance estimates.

Mr. MacINNIS: Am I right in assuming that this item has to do with accounting only?

Mr. ILSLEY: That is correct.

Mr. ROSS (St. Paul's): I was going to say something about this dependents' allowance, but I do not see any reason for kicking a dead horse. The point is, I was here last year in connection with this matter; a delegation came from Toronto, and we had a nice hearing, but we did not get any place on the question of a bonus to dependents. The government will do nothing. What I do wish to discuss is a question in connection with the administration, not only under this one item, but regarding the hiring of clerical help by the government at the present time. What have we? We have at the present time private enterprise, large institutions of one kind and another which are not war industries but are essential to the country even in time of war. The salaries which have been paid to clerical help, mostly women, may be considered in this way: take a girl earning $70 a month; she is allowed a cost of living bonus; but we cannot go any higher; we may not give her more than that.

Mr. ILSLEY: On a point of order, can we not keep to some rule of discussion here? Otherwise, I again say, there will be no end to this discussion. The hon. gentleman is apparently discussing the matter of salaries of civil servants as compared with salaries paid outside, salary restrictions, and so forth. That does not come under this item, whatever other item the hon. gentleman can discuss it under. I suppose it would be under the salary ceiling order of the Minister of National Defence; he has the administration of that order. Unless we are going to cast all system to the winds, the matter should not be discussed under this item.

Mr. ROSS (St. Paul's): Surely the people of this country, who are putting up the money—

The CHAIRMAN: Is the hon. gentleman speaking to the point of order?

Mr. ROSS (St. Paul's): Yes. Surely the people of this country are putting up the money to pay these people and they have the right to say something about how it is paid. If we are to vote the money, we certainly have the right to know what will be done with it, how it is going to be expended, and we are entitled to express our views with respect to what we think are grievances on the part of people whom we represent.

The CHAIRMAN: That is not a point of order.

Mr. ROSS (St. Paul's): Just at the present time when this—

The CHAIRMAN: Just a moment, please. Does any hon. member desire to speak on the point of order raised by the Minister of Finance?

Mr. ROSS (St. Paul's): Mr. Chairman, I should like to finish my discussion—

The CHAIRMAN: The hon. member was not addressing himself to the point of order; he was addressing himself to the merits of a question that he raised. There is a point of order raised by the minister, and I must dispose of it.

Mr. ROSS (St. Paul's): Mr. Chairman, I suggest that on the point of order I, as a member of this house, have a right to discuss just what I am saying.

The CHAIRMAN: The minister did not challenge the right of any hon. member to discuss public expenditures. The point of order is that we are not in committee of supply, but in committee of the whole house on a special resolution, for war appropriations, and the general administration of the dependents' allowances legislation does not come under the resolution now before the committee. I must rule that the committee must limit its discussion strictly to the matter now before us. The general administration of the legislation will be a proper subject of discussion on the estimates, in committee of supply.

Mr. HANSON (York-Sunbury): On a point of order, Mr. Chairman, if any hon. member is not allowed under this $4,979,000 item to discuss the operation of outside establishments, "dependents' allowance office and outside establishments," which is under the control of the treasury, I fail to see where he will have an opportunity to do so at all hereafter, having regard to the fact that the defence estimates are through. This is not part of the defence estimates, but the fact that the minister chose to go into a discussion at that time under that, does not wipe out the opportunity hon. members have of discussing the administration of the "dependents' allowance office and outside establishments." That means the whole service, because they are all paid out of this vote, this administration, and surely we can discuss under this item anything relevant to the operations of the dependents' allowance board.

The CHAIRMAN: I shall quote May on "Parliamentary Practice," at page 521:

> The committee of supply controls the public expenditure by considering the grants of money that will be required for the army, navy, air force, and civil services (including revenue departments) during the current year.

That is to say, the proposed expenditures submitted in the annual budget. The item now before us covers special expenses attributed to the war and to be incurred by the comptroller of the treasury, in checking certain expenditures. I repeat that we are not in committee of supply but in committee of the whole. Any question with respect to the expenditure of this sum of $4,979,000 is in order. Any question with reference to general administration and other proposed expenses submitted with the annual budget is outside the scope of this resolution.

Mr. HANSON (York-Sunbury): The annual budget, to which the Chairman refers, is not in the estimates submitted; it is in the war appropriation measure for the dependents' allowance. There is nothing in the annual budget to pay dependents' allowance. It is all under this two billion dollars, is it not? If I am correct in that premise, then I submit with great respect that the Chair is wrong.

Mr. MACKENZIE (Vancouver Centre): Surely the question of dependents' allowance was discussed by the Minister of National Defence (Mr. Ralston).

Mr. HANSON (York-Sunbury): I am discussing the technical aspect of it.

The CHAIRMAN: In the first place, we are not in committee of supply, and in the second place we are concerned only with an item of $4,979,000. Questions regarding this expenditure of $4,979,000 are in order. Questions with reference to other expenditures are outside the scope of this resolution. I so rule. Of course, my ruling is subject to appeal.

Mr. ROSS (St. Paul's): May I submit, on a point of order—

The CHAIRMAN: No; my ruling has been given and is not debatable.

Mr. ROSS (St. Paul's): Surely I have the right—

Mr. HANSON (York-Sunbury): The hon. member for Melfort would be in order if he wanted to talk about outside staff.

The CHAIRMAN: Any information sought with respect to the expenditure of $4,979,000 is in order. Anything outside is not in order.

Mr. ILSLEY: I will give the items making up the $4,979,617 and perhaps the hon. gentleman can bring his remarks under one of these. If he can, I have no objection, but I would ask members to confine their remarks to the items as we take them up; otherwise we shall ramble all over the whole field. This amount is made up as follows: Salaries, temporary, $3,901,752; cost of living bonus, $217,865; travelling expenses and subsistence allowance, $200,000; printing and stationery, $350,000; rental of equipment, $135,000; sundries, $175,000. This makes a total of $4,979,617. It will be remembered that the salaries to which I have referred are salaries of employees and officials of the comptroller of the treasury.

Mr. ROSS (St. Paul's): Salaries are what I wish to discuss, and I want to compare the situation. I can do it within the department itself or within any one of many departments. In the earlier days of the war we had people coming to Ottawa and offering their services, and they got into one position so that the only increases in salaries they can get now are increases which are due to promotion. In the city of Ottawa to-day a young woman getting only $70 a month and having to pay her board is having a pretty tough time, and the next thing she knows, a new and inexperienced girl is taken on. She is taken on because they cannot get them at less than $90 or $100 or $120. We know this is so. Moreover, they have not the experience of the girls who have been in for some time, but because of the wage ceiling these older girls cannot get anything but the cost of living bonus. The same situation exists in private enterprise. We must preserve certain of these essential industries, and we find all over the place that girls are leaving because the company itself cannot raise salaries to the level being paid for girls in the service. There exist therefore these two classes: girls who have been in the service for some time who cannot get an increase, and girls in private industry who also are unable to get any increase. All I have to say is this. There never was anything in the world that called so much for compulsory national selective service as this very situation.

The CHAIRMAN: The hon. gentleman is discussing the classification of civil servants and the salaries attached to various employments under the Civil Service Act. I must rule such discussion out of order as not covered by this item.

Mr. HANSON (York-Sunbury): What the hon. member is complaining of, if I apprehend it rightly, is that the government is competing against private industry and paying wages which private industry cannot pay, and that of course is true all over the country. The government is draining away from private industry some of their best employees because it is competing for them. The government is going into the professions and taking lawyers and so on. That is what the hon. member is arguing against. Certainly that is relevant.

Mr. REID: What are the duties of officials of the treasury board? Can they override decisions and judgments handed down by the dependents' allowance board? When one applies for dependents' allowance investigators are sent out, and a complete investigation is made of every individual case, both in regard to the papers sent in and on the ground by an investigator. A decision is made, and the treasury board officials have in some instances, I believe, overridden the decision of the board. We did not always have treasury board officials. All auditing used to be done by the auditor general's department, but from 1933 on we have had these officials, and there are many of them. I do not know whether they are double-checking, but I should like the minister to give an explanation. Can these officials or can that board override decisions of the dependents' allowance board?

Mr. ILSLEY: Let me make this clear: many hon. members, I am sure, confuse the treasury board and its organization with the comptroller of the treasury. We are discussing now the comptroller of the treasury and his officials.

Waiving the point of order with the consent of the committee, may I say that there is a section of the dependents' allowance regulations, No. 119, which allows certain discretionary grants to be made with the approval of the treasury board, and the treasury board sometimes refuses that approval.

Mr. MacINNIS: Will the minister explain the item, "premium for the purchase of Dominion of Canada registered stock"?

Mr. ILSLEY: The Canadian government agreed to the redemption of certain securities held abroad. We refer to it often as repatriation of securities held in the United Kingdom. The procedure is as follows: The United Kingdom government obtained these securities, paying the market price for them. Some of those securities—I am talking about Dominion of Canada bonds—were at a premium; the United Kingdom government had to pay more than par for them. We paid to the United Kingdom government what it paid for them. There is no authority under any of our war loan acts or appropriation acts to pay a premium in that way, so we had to use the War Appropriation Act. And the premium up to a certain date was $725,000.

Mr. MacINNIS: In other words, this transaction would not be on a purely business basis?

Mr. ILSLEY: Yes; we paid the market price that the United Kingdom had paid to the holders.

Mr. HANSON (York-Sunbury): The government is carrying out an obligation?

Mr. ILSLEY: Yes.

Mr. MACDONALD (Brantford City): On the item "wartime prices and trade board", on Monday and Tuesday when the estimates of the Minister of Finance were before the committee certain hon. members made reference to the so-called price-ceiling regulations. The Minister of Finance is responsible to the house for the administration of those regulations. I have been wondering if hon. members realize what a great responsibility is on the shoulders of the Minister of Finance at this time. It has been necessary for him to arrange the financial structure of this dominion so that the war can be carried on successfully so far as money is required for that purpose. Canada has had many great ministers of finance, but I do not think there has been any minister who has had a clearer understanding of our financial structure, or who has been better informed on finance generally, or who has been more industrious and capable, than the present Minister of Finance.

Some hon. MEMBERS: Order.

Mr. MACDONALD (Brantford City): I am satisfied that all hon. members will agree with me when I say that in the long line of great ministers of finance Canada has had the present minister stands with the greatest of those great ministers.

Mr. HANSON (York-Sunbury): I suppose this is all in order under the Chairman's ruling?

Mr. GRAYDON: What item is this on?

Mr. HANSON (York-Sunbury): This eulogy of the Minister of Finance I am sure must be obnoxious to him, and I think it is contrary to the ruling you, sir, have just given.

The CHAIRMAN: No; I do not see that there is any conflict between the ruling given and what the hon. member is now saying. We are on the wartime prices and trade board administration, and any hon. member has the right either to eulogize or criticize that administration.

Mr. ROSS (St. Paul's): I was ruled out of order because I criticized the administration.

Some hon. MEMBERS: No, no.

The CHAIRMAN: In the first place the hon. gentleman cannot at this time discuss a former ruling. Further, the hon. gentleman was called to order because he was discussing something which was not before the committee. We are now discussing the administration of the wartime prices and trade board. The hon. gentleman who has the floor is saying that he finds it very much to his liking.

Mr. GRAYDON: Is there a subsidy on molasses?

Mr. MACDONALD (Brantford City): I would point out that in former wars the enormous sums of money involved in this war were not then involved. Where previous ministers of finance dealt with thousands of dollars, our present minister is dealing with hundreds of thousands; where they dealt with hundreds of thousands, he is dealing with millions; and where they dealt with millions, he is dealing with billions. I would remind hon. members that it was his department that arranged the gift of a billion dollars to Great Britain.

Mr. DOUGLAS (Weyburn): Is that included in this item?

Mr. MACDONALD (Brantford City): Not only did he arrange that gift to Great Britain, but he also arranged a loan of $700,000,000 to that country.

Mr. DOUGLAS (Weyburn): Has that anything to do with this item?

Mr. HANSON (York-Sunbury): Nothing whatever. According to the Chairman's ruling it is entirely unwarranted.

Mr. MACDONALD (Brantford City): If hon. members will bear with me, I shall soon come to the item under discussion.

The CHAIRMAN: There is a point of order. It is that the gift of a billion dollars to Great Britain is not related to the item before the committee. I must rule that it is not; and further, that item of a billion dollars to Britain was the subject of a previous debate during the present session.

Mr. HANSON (York-Sunbury): It is only the debate that cannot be referred to, not the item. Let us have a little consistency.

The CHAIRMAN: For the purpose of the point of order, there is no difference between the debate and the item. The debate arises out of the item.

Mr. MACDONALD (Brantford City): I shall not refer further either to the item or the debate. I bow to your ruling, Mr. Chairman, I always do. As far as my memory serves me, I have always found your rulings to be correct.

I am further satisfied that all hon. members agree with me when I say that our present Minister of Finance has had a very heavy burden to bear, that he has borne it well, and that he has given Canada great service during the time he has been Minister of Finance.

Among the various boards administered by this department is the wartime prices and trade board. In another place I said there were three great problems facing Canada at this time. There was the problem of supplying armaments of all kinds to our armed forces. There was the problem of securing men to produce those armaments and also to maintain, reinforce and increase our armed forces. There was also the problem of preventing a devastating period of inflation in this country. I will deal only with the last-mentioned problem to-night. To me, inflation is a cancerous growth gnawing at the body politic which, if not checked, will develop into a galloping disease that will leave only misery and disaster in its train. Inflation affects injuriously all classes of our citizens. First, it affects the poor. It affects the workingman and the farmer, bringing misery to all. For that reason this government should do all in its power to prevent a devastating period of inflation from taking place either at the present time or when this war is concluded. I believe all members of this house are opposed to inflation, though a number of hon. members have opposed the method chosen to control our money and credit. The hon. member for Ontario (Mr. Moore), who is one of the outstanding economists of this continent, has opposed the method which was adopted by the government in bringing in that legislation. Speaking in this house in a previous debate—

Mr. DOUGLAS (Weyburn): What date?

Mr. MACDONALD (Brantford City): Perhaps I am not absolutely in order; it was in a debate which was in progress on February 9 of this year. I need not quote his words, but he referred to inflation as illusive. During the present debate the leader of the opposition said, as reported at page 2925 of *Hansard:*

> I am in favour of control in war time to prevent inflation, if it can be done by any kind of decent method.

It was the method to which the hon. gentleman objected, not the control of inflation itself. Then on Monday of this week the hon. member for Rosetown-Biggar (Mr. Coldwell) said, as appears at page 2926 of *Hansard:*

> I am not complaining that the government did attempt to control prices. I think it was the proper thing to do under the existing circumstances.

So, Mr. Chairman, practically all hon. members are in accord with the policy of the government in its attempt to control prices. What has the government attempted to do? It has endeavoured to keep prices within reasonable bounds. In his speech on September 20, 1941, the Prime Minister said:

> By its policy the government hopes to avoid the fears, the sense of insecurity, the suffering and the profiteering which the inflation of price inevitably brings in its train. The measures now announced should help in winning the war, facilitate recovery and reconstruction.

I ask, was the government properly alarmed with respect to the rise in prices? Already there has been placed upon *Hansard* a record of the cost of living index. I propose to place it upon *Hansard* again, in order to impress upon hon. members the serious situation toward which this country was drifting in October last. The base figure is 100, being the average from 1935 to 1939, and the rise is shown as follows:

August, 1939	100·8
November, 1939	103·8
February, 1940	103·8
August, 1940	105·9
February, 1941	108·2
March, 1941	108·2
April, 1941	108·6
May, 1941	109·4
June, 1941	110·5
July, 1941	111·9
August, 1941	113·7
September, 1941	114·7
October, 1941	115·5

Hon. members will see that there was a rise of almost six points in the first year of the war and that within a little over two years the

cost of living index had risen by more than fifteen points. At that time the government, in a masterly stroke, passed regulations which it hoped would stabilize prices, wages and salaries. Never before had such drastic legislation been attempted in this or any other democratic country. In making the announcement the Prime Minister stated:

> The action I am about to explain represents an experiment hitherto untried on this continent, and perhaps, having regard to its breadth and variety, hitherto untried . . . by any free country anywhere.

Then Mr. James S. Duncan, who for some time was deputy minister of national defence for air, which position he held when the commonwealth air training plan was established in Canada; a man who gave freely of his ability in the establishment of that plan in Canada, speaking before a meeting in the city of Toronto, is reported as follows:

> Mr. Duncan congratulated Mr. Ilsley "for the courage and vision you have shown" in introducing price and wage ceilings legislation —"the boldest economic measures which have ever been taken under similar circumstances in any country throughout the world."

If Canada has stopped an undue rise in prices; if Canada has prevented inflation, the credit for that belongs to those who have been responsible for bringing in and administering this legislation. I should refer to Mr. Donald Gordon, who is head of the wartime prices and trade board which, as we know, administers the regulations. Some hon. members may consider that he has too much power. Nevertheless I think we must all agree that he has had a difficult task, and that he has done it very well indeed. Also credit for what success has been attained is to a large extent due to the people of Canada who have been willing to accept the drastic regulations which have been imposed upon them.

I would refer particularly to the women of this country. They have accepted the regulations and have endeavoured to prevent a rise in prices. As hon. members have heard before, the women do 80 per cent of the retail purchasing in this dominion. The regulations could not be a success unless they had the support and endorsation of the people.

In making his announcement the Prime Minister further stated:

> In a democratic country price control cannot succeed without the active support and co-operation of the masses of the people. It will require the cooperation and the support of all. Its success will depend not alone upon the government but equally upon the willingness of all who are affected to accept, and to accept cheerfully, the limitations imposed upon them as a necessary contribution to Canada's war effort.

I asked a moment ago if these regulations had succeeded. My answer to that question is that they definitely have succeeded, and that the imposition of these regulations has prevented inflation and has maintained price stability. It was never intended that these regulations should be a panacea or a cure-all for all the evils of rapidly rising prices. The Prime Minister himself stated it was not hoped that they would be such a panacea.

According to the cost of living index, six months prior to the bringing in of the regulations the cost of living had risen approximately seven points. Six months have now passed since the regulations were brought in, and I am happy to say that the cost of living index has not risen even one point. That is indeed a great credit to those who conceived and to those who are carrying out the regulations.

We have heard a great deal about what is being done in the United States. I, along with all other hon. members in the committee, am indeed happy to know that the United States is doing such great things toward successfully prosecuting the war. However, in the house from time to time we have heard of the lack of what should be done by this country, and in many instances we have heard nothing but fault-finding with what has been done here. Indeed at times I feel that we are developing an inferiority complex with respect to our great war effort.

I am not going to quote further at this time from what people in Canada think about our price-fixing regulations. I would, however, draw the attention of the committee to a leading article which appears in this week's issue of the *Saturday Evening Post*, a magazine published in the United States. By the way, while this magazine sells for ten cents in the United States, due to price regulations in Canada it sells for only seven cents here.

The article is headed "Canada Did It." That is something new to hear in this committee. It is written by Congressman Albert Gore, and with the indulgence of the committee I should like to read these extracts from the article which I believe hon. members will find most refreshing. The opening paragraph is in these words:

> One crisp Sunday morning last October, quite early, three men in a flurry boarded a Washington plane for Ottawa, Canada. The night before, Prime Minister Mackenzie King had announced the Canadian government's adoption of an over-all ceiling over prices, wages, salaries, services and rents—practically everything. And this was positively disturbing to the three agitated gentlemen and their chief, U.S. price boss Leon Henderson, for it came at a time when Mr. Henderson was marshalling arguments and strength to prevent a congressional committee from adopting a similar over-all-price-control bill.

Then the article goes on to state that a certain time intervened, following which representatives of the United States came to Canada. The article continues:

In recent weeks, aides of price administrator Henderson had been shuttling back and forth between Washington and Ottawa. This time, it has not been to find reasons why the over-all plan should not be adopted, but to decide how much of Canada's plan the United States can copy.

The reason for this shift in attitude can be told in a few figures. In Canada, the cost of living index has remained constant since last November. In the United States, living costs have continued their relentless rise. The official Canadian cost-of-living index actually shows a slight decrease from a high of 115·4 in November to 115 in February. In the United States, despite all piecemeal—selective—controls, it rose 2·4 points from November to February.

Canada stopped prices from rising. Her composite index of wholesale prices remained virtually fixed from November to February, rising only eight-tenths of one point in this time. During the same period wholesale prices in the United States rose 4·3 points. But more significant than index figures, the United States plan had failed.

Mr. DOUGLAS (Weyburn): What is that published in?

Mr. MACDONALD (Brantford City): In the *Saturday Evening Post* of June 6, 1942, and it is written by Congressman Albert Gore.

Mr. DOUGLAS (Weyburn): Is that not an anti-British, isolationist paper?

Mr. MACDONALD (Brantford City): I would say that this article is anything but anti-Canadian. It is a boost for Canada, and I think we should all be happy to hear a boost for Canada, from the United States, read in this chamber.

Mr. MacINNIS: Even though the *Saturday Evening Post* wrote it?

Mr. MACDONALD (Brantford City): The article continues:

In adopting over-all controls, Canadians fully realized they were attempting a difficult undertaking. Prime Minister Mackenzie King called it an "experiment hitherto untried on this continent and perhaps . . . hitherto untried by the will and consent of free people anywhere."

Then the article refers to the reluctance and misgivings we had with respect to bringing these regulations into effect. The article then goes on to say:

The official Canadian cost-of-living index had risen 7 points in the 21 months from August, 1939, to April, 1941. It jumped approximately 8 points higher in the 7 months from April to November. Price rises were coming thick and fast. Wholesale prices rose approximately 12 per cent in the 7 months from March to October, 1941.

[Mr. W. R. Macdonald.]

I would ask hon. members to mark these words:

Bold and effective action was necessary if Canada was to be saved from a wild runaway inflation. It was a hard choice, but Canada chose action—daring, adequate action.

That is what the United States thinks of the action which this country took to avoid inflation.

Mr. HANSON (York-Sunbury): That is the opinion of only one man. That is not the United States.

Mr. MACDONALD (Brantford City): It is the opinion of a congressman in the United States, which appears in a magazine read widely throughout the whole United States.

Mr. HANSON (York-Sunbury): And which has been extremely antagonistic to this country.

Mr. MACDONALD (Brantford City): The article goes on—

Mr. JOHNSTON (Bow River): Put it on *Hansard*.

Mr. MACDONALD (Brantford City): I am taking the liberty of reading part of the article to hon. members because I feel it should be good for the morale of the members of the committee to know what other countries are thinking about Canada. I will read one more sentence:

Now, despite its well-nigh incredible success to date, the programme has some hard tests in the months immediately ahead.

Yes; this legislation has hard tests in the months immediately ahead. During the last few days members from every part of this house have asked for increased prices. So far as I am concerned my sympathy is with those who are asking for increased prices. I would like to see all the farmers of this country get increased prices for their products where the price is not now adequate, and I would like to see all men who are working and receiving inadequate pay receive adequate pay. I am satisfied, I can say with confidence, that our government and our Minister of Finance are just as anxious as anyone else in this house that fair prices, fair wages and fair salaries should be given to all. But I would remind hon. members that if prices are increased and salaries and wages are increased, it serves little if the prices of the commodities they have to buy are also proportionately increased. There would be little gain for them in that. We cannot afford to have inflation in this country, even as we had it in the last war. It would not benefit the working man or the farmer to have increased wages and increased prices, if he at the same time had to pay

such prices as 25 cents a pound for sugar as he had to do in the last war. It must be the object of our government and of parliament—and I think we should help the government in doing so—to keep prices down.

Every time there is an increase in prices it is a string on the present effort of the government to prevent inflation and to keep prices on a reasonable basis. We cannot stand too great a strain. If the Minister of Finance granted increases on all the products which have been mentioned in this house in the last few days, I am satisfied that our whole price structure would break down and we would start on that terrible course of inflation which in the end would bring only misery to all. My plea, Mr. Chairman, to members of this house is to support the Minister of Finance in his great effort to prevent inflation, to stabilize prices, wages and salaries. Let us try to make adjustments as soon as possible where adjustments must be made. Let us do what we can to provide labour for the farm at reasonable prices. But let us keep in mind that we must maintain our ceiling; we must not let it get out of bounds, and if we will give the Minister of Finance the support he deserves in this great undertaking, I am satisfied that when peace dawns it will bring prosperity and happiness to all.

Mr. HANSON (York-Sunbury): We have just listened to a paean of praise from the hon. member for Brantford City for the policy of the government and to some fulsome flattery for the person of the Minister of Finance himself which I am sure he, with all his modesty, would have wished the member had not given utterance to, and incidentally thereby saved the time of the house.

At the risk of detaining the committee I wish to deal with this policy, which is a very important matter to the taxpayers of this country who are to be invited to pay to certain importers and producers next year in the way of subsidies in connection with the administration of this policy no less a sum than $50,000,000.

I should like to review a little the history of war finance in Canada, and then come back to discuss this policy. It will be recalled that in the first war budget which was brought down in September, 1939, the present Minister of Finance, then Minister of National Revenue, who delivered the war budget, laid down the broad principle of the government's policy of war finance, which was briefly the principle of "pay as you go". He elaborated that policy as consisting of two things: (1) An initial period of quietness and hesitation. Well, there was quietness and hesitation in the government's war effort; there is no doubt about that, and anybody who doubts it need only cast his mind back over the history of the first nine months of the war. There was quietness and hesitation not only in the government's financial effort, but in every effort of this government. Then (2) there would be a second period in which rising business activity and expanding income had acquired momentum. The minister laid down the principles which were in his judgment suitable for these two periods. I am not going to recapitulate them, save and except to say that the question of freezing wages and the question of a price ceiling on commodities was not part of the programme.

Then in the budget speech of 1940 the Minister of National Defence, then Minister of Finance, in a discussion of national income and financial policy laid down the principle that by far the greater portion of the increase of the national income should be used for war purposes, and I think we are all in agreement with that. That policy has been extended from time to time, and if I read the signs of the times aright it will be still further extended in the forthcoming budget. The Minister of Finance of that day went on to make the following statement, as reported at page 1014 of *Hansard* of 1940:

> If an appropriate financial policy is not followed the ultimate result will inevitably be that the government will be frustrated in its attempt to procure goods for war purposes by the competition of consumers who seek to spend their increased buying power to satisfy civilian wants. In that event, also, the familiar spiral of rising prices, then rising wages and costs, and then prices rising still further would begin to work. Prices would rise more rapidly than wages and salaries, and, by this indirect, hidden and most inequitable process the civilian population, and particularly the wage and salary earners and the receivers of fixed incomes, would be forced to curtail their consumption not only of luxuries but of comforts and necessaries as well. Eventually in such a process our entire economic life would be disorganized; a hectic period characterized by feverish speculation, waste and extravagance would develop; and a collapse of the inflationary structure would be as inevitable as it was at the close of the last war.

There he was picturing the spiral of rising prices and of wages and a collapse at the end of the inflationary period. That picture is not a pretty one. It is a condition that we should seek, if possible, to avoid. But the method of avoiding that situation visualized at that time was taxation and a transfer of the buying power of the consuming public to the war effort, which is a perfectly proper method and has been resorted to in this country, in England, and in other places where this question has been uppermost in the minds of those who have these responsibilities.

That was the method, one of the main methods adopted to prevent this inflationary tendency. There was always the consciousness, of course, that the old economic law of supply and demand was difficult to counteract or defeat. I have never understood that you can ever beat the law of supply and demand even if you have 100 per cent cooperation of the public. There is such a thing as scarcity and there is such a thing as plenty; when there is scarcity and there is a buying power, inevitably there will be a rise in prices, and we have it to-day in this country. No government can control this underlying law of supply and demand except by setting up new controls day in and day out, involving regimentation of the people. Even then you cannot fully control it. That is a condition which attaches to war time, and you cannot possibly wholly escape it. I will say that you can do this, you can escape it in large measure, not so much by a system of control alone, but by a system of control plus the cooperation of the people. Without that cooperation of the people you cannot make it effective.

As I tried to indicate a moment ago, after painting that picture of inflation the then Minister of Finance said that the government's financial and economic policies had been designed to try to safeguard against that type of situation, mainly by taxation; adding that that had been evolved with the aim of avoiding unjustifiable price increases or speculative excesses. Clearly the then Minister of Finance at that date, June, 1940, visualized a period of inflation in the price of consumer goods as well as in other lines of business activity. What was his remedy then? It was, as I have said not only once but twice, taxation, and that is the orthodox manner, as I understand it, of preventing this sort of thing. That was the position which the then Minister of Finance took in June, 1940.

We now come to the opening of parliament in the fall of 1940, after the mantle of the Minister of Finance had fallen on the shoulders of my hon. friend opposite. He took part in the discussion on the debate on the address, and his speech was delivered on November 21, 1940. At pages 316 and 317 of *Hansard* of that date he was answering a speech in this chamber of the leader of the Social Credit group, who had challenged the principle upon which the government's monetary policy had been based, and if I recollect aright, had moved a subamendment reflecting upon the monetary policy of the administration. In the course of his speech the present Minister of Finance discussed the policy of the Social Credit system, and contrasted it with the government policy (a) of taxation and (b) of borrowing, which he was defending. He also referred to the dangers of inflation and the methods of controlling inflation, dealing, as I remember from reading his speech, with the Social Credit proposals for credit restriction, universal bonusing, and other suggested monetary policies. The minister than referred, as reported at page 317 of *Hansard* of that date, to the method of counteracting inflation by means—

Mr. BLACKMORE: I wonder whether the leader of the opposition did not use "credit restriction" where it should be "credit expansion".

Mr. HANSON (York-Sunbury): Possibly I did.

Mr. BLACKMORE: Credit restriction is so contrary to our ideas.

Mr. HANSON (York-Sunbury): Maybe that is my misinterpretation of the hon. member's position. I must say that I really do not understand what his position is, and I have to give the best interpretation I can.

Mr. BLACKMORE: It is expansion.

Mr. HANSON (York-Sunbury): It is *mea culpa* if I do not understand him. I am not going to blame him. The minister then referred, as reported at page 317, to the method of counteracting inflation by means of price-fixing on a universal scale as being the only alternative to taxation or borrowing out of savings, which was the government's announced policy. I propose to read at some length from what the minister said at that time. He said that if price-fixing on a universal scale were adopted, it would have to be accompanied by rationing and regimentation also on a universal scale. He gave the reasons. He said it was obvious that to fix prices without limiting the amount that any one person could buy would mean that only the first comers would be served. He was right in his reasoning. Therefore there would be rationing as a corollary of price fixing. In his mind—and I agree with him—the one is the complement of the other. If that method of control were to be adopted without the corollary, the first method would fall to the ground. What was the attitude of the minister then toward the entire policy of price fixing? I am reminded of a story told of the late President Coolidge. As hon. members all know, he was a man of few words. He went to church one day; as the story goes, his wife asked him what the minister preached about, and he said: "sin". "What did he say about it?" "Well, he is against it." The minister was against price fixing on the 21st day of November, 1940; there is no doubt about that.

Mr. JOHNSTON (Bow River): He has been converted since then.

Mr. HANSON (York-Sunbury): Well, I do not know what has happened.

An hon. MEMBER: He was "against sin".

Mr. HANSON (York-Sunbury): He was definitely against it, and he gave then the reasons for the faith that was in him. First, that there would have to be rationing along with price fixing, and that price fixing would fail without rationing. Price fixing of a few commodities and rationing of those few commodities was possible and would be fairly easy and need not have a very serious effect. But he said this, and I call the attention of members of this committee to this statement:

But price fixing and rationing on a general scale—

Mark you; he couples the two together; one could not succeed without the other.

—have at least two disadvantages.

I give you the minister's own words:

In the first place, this would call for bureaucratic interference in the private affairs of all Canadian citizens. . . .

And he was against that.

Perhaps I am speaking a little bit figuratively here, but generally speaking there would have to be a government spy in every grocery store. The Germans did this with some success, but the Germans are experts as spies.

These are the minister's own words, and then he proceeded:

The second objection is that—

He was dealing, hon. members will recall, with monetary theories; that was the basis of his whole statement.

—to issue quantities of money and then sterilize a large part of it by rendering it useless for buying purposes so that it will not come into competition with the money used by the government in its buying, and thereby cause prices to rise, leaves the holder of the money no better off than if he did not have it. This is equivalent to taxation or a forced loan.

I agree with the reasoning of the minister, but the hon. member for Lethbridge may not agree with it.

Mr. BLACKMORE: Hear, hear.

Mr. HANSON (York-Sunbury): I expected that.

Mr. BLACKMORE: The hon. member has several things to learn yet.

Mr. HANSON (York-Sunbury): Well, we all learn. The older we get, the more we know we have to learn; but for heaven's sake, if anybody is to teach us let it be intelligent teaching, so that the man in the street can understand it. I would observe this. The older we get, the more sensible we are, and we are not apt to take up new isms and fads. At least I am not, in my old age.

Mr. MacINNIS: That does not necessarily indicate sense.

Mr. HANSON (York-Sunbury): I want the committee to note this reference, and I want the hon. member for Lethbridge to note it.

Mr. BLACKMORE: I am listening.

Mr. HANSON (York-Sunbury): I quote.

It is true that the nazis in Germany have gone nearly as far as this with their price fixing and rationing, but even they with a dictatorship and with years of experience before the war, have had to combine this price fixing with very heavy war taxation and with borrowing enormous sums at interest rates higher than we pay in Canada.

This will be found at page 287, the second column of *Hansard* of November 21, 1940. The minister adds this testimony against the policy of price fixing:

Furthermore, if we did succeed, by price fixing in preventing inflation resulting from the financing of the war by creating new money, we would in the end only reach the same result that we shall reach by sounder methods.

I put emphasis on the words "sounder methods", for the benefit of both the minister and the member for Lethbridge.

Mr. ILSLEY: Sounder than the creation of unlimited sums of new money.

Mr. HANSON (York-Sunbury): The minister is just reversing the statement here. I have quoted correctly, have I not?

Mr. ILSLEY: Absolutely, yes.

Mr. HANSON (York-Sunbury):

—we would in the end only reach the same result that we shall reach by sounder methods; for if war production is to be the same in each case there will only be the same remainder of resources left over for civilian purposes. The new money dammed up in the public's pockets would be useless to it during the war, and after the war it would come bursting forth in a flood that would create inflation as soon as the rigid wartime price controls were once relaxed.

I am in more or less agreement with that. He is answering the hon. member for Lethbridge, but it is one argument against price fixing.

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): I put my own interpretation on the minister's words.

I suggest, however, that the crowning position taken by the minister is that found in the same speech:

There is another, and, from a war point of view,—

This was an argument against price ceilings.

—more fundamental point.

Mr. ILSLEY: If the hon. member will permit me, let me make clear what I was arguing. I was arguing against the financing of the war by the unlimited creation of money, and I said that under those conditions general price ceilings or price fixing would be virtually impossible and would have tremendous disadvantages. Those two things must be taken together. I was answering the hon. member for Lethbridge.

Mr. HANSON (York-Sunbury): The minister can make his argument. I am putting my interpretation on his words. In part he is correct.

Mr. BLACKMORE: May I interpose for a moment—

Mr. HANSON (York-Sunbury): I know the hon. member is going to make a long speech after I have finished, so I say to him, please let me proceed.

Mr. BLACKMORE: Just a moment—

Mr. HANSON (York-Sunbury): I hope we can avoid such interruptions. I object to the hon. member making a speech in my speech. I am not agreeable. If it is a question I do not mind.

Mr. BLACKMORE: Courtesy would allow me to make a statement.

Mr. HANSON (York-Sunbury): I think I am pretty courteous to most people, and I find most people courteous to me; but if the hon. member wants to make a speech while I am making my speech, I object. The minister said he was only answering one point of view. I submit that the whole reasoning of his speech was an argument against price fixing, and at times he was directing his attention against inflation by the issue of new money. That is only one feature of it, but his speech is directly against price ceilings and fixings by regimentation, and he admitted right off that you could not have stabilization unless you had the two factors—not only the ceiling but the rationing system as well. Yes, and as I am reminded, by the spy system, which is nauseating to the Canadian people. They may do it in Germany, but the Canadian people do not like it, and the minister was cognizant of that fact.

An hon. MEMBER: We have control.

Mr. HANSON (York-Sunbury): We have control, and I am not surprised at the list of employees that this board is setting up. It is setting up a number of young lawyers all over the country and a number of inspectors, and before this system is through we may get right down to the spy system. I am like the late President of the United States—I am "agin" the method. I am opposed to the method. I am going to say something about the objective in a moment, but I should like to continue. The minister can interpret it as he likes. I read the whole speech together:

There is another, and, from a war point of view, more fundamental point. It is suggested that we should finance by issuing new money so that we can bring all useful resources into production and avoid curtailing civilian demand. But if we are really to put forth the maximum effort in the war we must not only bring all our resources into use, but, in addition, restrict as far as possible civilian use of all those resources which can be used for war.

I am in agreement with the minister, on that point and against the hon. member for Lethbridge, on that specific point.

Mr. BLACKMORE: The hon. member for Lethbridge never stood for that point.

Mr. HANSON (York-Sunbury): I admit that I made a dogmatic statement, perhaps without proper premises.

What does the hon. member for Lethbridge stand for? Is there anyone in this house outside of himself who knows? Nobody knows. The minister, I think, thought he knew what he was standing for. This was a prepared speech made in answer to the hon. member for Lethbridge, and I am sure the minister thought he knew what the hon. member for Lethbridge meant. Possibly, like myself, he was mistaken. Possibly his intellect is not sufficiently developed to understand what the hon. member for Lethbridge does mean. That may be my fault; it may be the minister's fault, but that seems to be the position.

Mr. BLACKMORE: He is improving all the time anyway.

Mr. HANSON (York-Sunbury): I do not know whether he is. I do not think he will make any admissions along that line.

As I emphasized in the budget speech in the first week of war, it is necessary to increase employment and production to the maximum; but that is only part of our task; we must also divert all we can from civilian to war use.

We agree with that. But we certainly shall not be doing so if we refrain from borrowing and taxation. There the minister was coming back to the orthodox method of meeting this situation. That was the declared policy of

this government. Such was the attitude of the Minister of Finance and of the government towards price fixing as a policy to control inflation on November 21, 1940; such was the fiscal policy of the government. The minister opposed the policy advocated by the Social Credit party as being wrong from every point of view, not only from the point of view of monetary inflation, but on the basis of sound reason and sound business principles. He opposed it as being odious to the habits and thoughts and ideas of freedom of the Canadian people, and it is just as odious to-day.

Mr. BLACKMORE: Does the leader of the opposition oppose price fixing?

Mr. HANSON (York-Sunbury): I oppose the method. I am coming to what I propose in a moment. The minister condemned the regimentation of the people. He said that every detail of our economic life would have to be controlled by someone sitting here in Ottawa. He condemned it not only on the grounds that I have indicated but on the ground that the public policy which he advocated was sounder and better adapted to the purpose the government had in view.

That was the position of the minister and his party in the autumn of 1940. That was the position which obtained when the next budget was delivered. In the budget of 1941 we got our tremendous first dose of heavy taxation, and when we witnessed some of the largest loans ever issued by a government to the Canadian people that was a continuation of that policy.

Then, because prices began to rise, because there was a period of scarcity, the government suddenly, overnight, in the face of parliament meeting within a few days, brought into effect this policy and "froze" commodity prices on an uneven level. They have been tinkering with that level ever since.

Mr. McLARTY: Do prices ever get even?

Mr. HANSON (York-Sunbury): Well, I think the government could have used the powers it had to put them on an even level. They could have established even prices. But what did they do? They took a given period of time, between September 15 and October 11 and froze everything at that point.

Mr. McLARTY: Do you not have to have some basic period in which to fix prices, or would the hon. member never fix them unless they did the impossible and became even all along the line?

Mr. HANSON (York-Sunbury): I agree that you must have a base, but it does not necessarily have to be fixed overnight by order in council. The price-ceiling level can be related back to a given period of time. That is what should have been done.

Mr. ILSLEY: That is what was done.

Mr. HANSON (York-Sunbury): I am not going to elaborate this much further; I do not want to hold up this resolution. This is the longest speech I have made on this resolution since it came before the committee. Other hon. members have spoken at length. The hon. member for Témiscouata occupied more time than any other three members of the committee—I might say any five.

Mr. MACDONALD (Brantford City): Is the leader of the opposition trying to beat that record?

Mr. HANSON (York-Sunbury): No; I am not, and I am not making any fulsome eulogy to constitute myself the official back-scratcher of the administration.

Mr. MACDONALD (Brantford City): I have to say that I can look across at the opposition and see no one sitting there whose back is worthy of being scratched.

Mr. HANSON (York-Sunbury): That is a cheap remark. That does not let the hon. member out. If he has a question to ask I am willing to answer, but, if not, he had better contain himself, because, after all, he is through as I understand.

Mr. MACDONALD (Brantford City): The future will show that.

Mr. HANSON (York-Sunbury): The evils following inflation I am willing to admit. It is not the principle of inflation itself that is so bad, it is the results that follow in the deflationary period. That is what I think most of us fear. That is what we experienced in 1929. The minister's party were in power at that time, but they refused to read the signs of the times. That is what this country experienced after the last war when we had not much experience regarding the matter to guide us. I have said on more than one occasion that I do not want to see the evils of inflation come upon this country. But we want some plan or system adopted. There has never been a plan.

Mr. MACDONALD (Brantford City): Let us have your plan.

Mr. HANSON (York-Sunbury): It is not my responsibility. It is the responsibility of the government that put this policy into force; let them produce a plan. We have a system of

hit-or-miss, hit-and-run, trial-and-error. That is what it has been all the way through. Let me give a concrete illustration.

An hon. MEMBER: Oh, now!

Mr. HANSON (York-Sunbury): I would not go to the back-benchers over there to get anything, because I do not think the hon. gentleman who interrupted me has a thought in the world about the matter.

Mr. MACDONALD (Brantford City): Then there are two in the house in that position.

Mr. HANSON (York-Sunbury): The hon. member can speak for himself. I do not want to criticize the hon. member. If I said anything that hurt his feelings, I will take it back. I do not want to hurt anyone's feelings.

Let me give an illustration of this hit-and-run, trial-and-error system. We all know that instalment buying in times of rising wages, increasing national income, especially among the wage-earning population, rapidly develops into a very bad situation. I personally have always been against this system of instalment buying. But it has been encouraged, and it is legal. There is a way to cure it absolutely; just put an order through under the War Measures Act declaring that no conditional sale of chattels shall be legal, and you will not have any more instalment buying. The people who do the selling will not sell under those circumstances; such a sale would not be enforceable.

What happened when this ceiling was put on? Very properly, I thought, they insisted upon one-third down as the initial payment, one-third in so many months, and the other one-third in so many more months. Payments were required within three periods. If the board had adhered to that, a great many of the evils resulting from instalment buying would have been avoided. Instalment buying, of course, is inflationary; it is part and parcel of the whole inflationary system of the buying of consumer goods. If the board had adhered to that system of three payments, much of the danger and many of the improper things that go with instalment buying would have been avoided. I assumed that the order had been brought into effect after consultation with the large instalment houses. I do not know whether that was true. But one day I received a letter from three firms in my city who deal in these consumer goods and who have to compete with some of the bigger houses from upper Canada, who have branches in my city. This letter protested against a change in the system of instalment buying. Apparently we were back to the old 10 per cent initial payment on furniture. In other words the board had gone back on what I thought was a salutary proposal; and these three firms in my city, all substantial firms, protested and asked that the situation be put back where it was before. I wrote a courteous letter to the head of the board pointing out their arguments and making them my own. I received in reply a letter which, according to my interpretation, though I may be wrong, was to the effect that I did not know what I was talking about.

Mr. MacINNIS: Did you?

Mr. HANSON (York-Sunbury): I thought I did. One should know his own limitations, and perhaps I know mine better than anyone else could know them. I thought I knew what I was talking about. Well, I gave it up. The chairman of the board was in the driver's seat; I was just a lone champion of the people. That position is maintained to-day. I could go on and illustrate it in a dozen different spheres. There are constant changes of rules and policies; and I say to the minister that this programme cannot be 100 per cent complete unless, in addition to the freezing of prices, we also have the rationing method. I am not going to oppose the policy; the objective I have always thought was good, but I am dead against the method adopted.

Before I sit down I should like to say this. Here we have $50,000,000 in subsidies, which may be only a starter. That is a very substantial sum of money to be taken out of the people by taxation. This is not fiat money, I would have the hon. member for Lethbridge understand. This is not printing press money. This is real, good, hard cash paid by the taxpayers of Canada, and it is going to be paid to certain persons. In due course the minister will tell us what the proposals are.

Mr. ILSLEY: I have done so.

Mr. HANSON (York-Sunbury): Possibly the minister has done so, but in any event we are informed or are to be informed to whom this $50,000,000 is to be paid. This is a policy of robbing Peter to pay Paul.

Mr. MARTIN: And Paul should be paid.

Mr. HANSON (York-Sunbury): Well, I should say that Paul should not be paid any subsidy. Oh, I did not appreciate for a moment from whom that interruption had come. Well, I hope I will get a little support from Paul; but I am rather doubtful about it because apparently, if I judge appearances correctly, he is in the same category as the hon. member for Brantford City; he is looking for something.

Mr. MACDONALD (Brantford City): Mr. Chairman, I resent that.

Mr. HANSON (York-Sunbury): Well, I will take that back. I do not want to hurt the hon. member's feelings.

Mr. MACDONALD (Brantford City): I do not mind my feelings being hurt, but it is not true.

Mr. HANSON (York-Sunbury): If it is not true, I accept the hon. member's statement. I may be mistaken. It would not be the first time I have been mistaken, and I do not suppose it will be the last. Have I made the *amende honorable*?

Mr. GRAYDON: It is no crime to be ambitious.

Mr. HANSON (York-Sunbury): No; it is not. When the hon. member for Brantford City made his speech in seconding the address in reply, I commended the manner of the speech, though not all the matter. I suggested to the Prime Minister that the speech was at least worthy of consideration for a seat in the cabinet or, if that was too high a reward for the hon. member for Brantford City, then at least—

Mr. MACDONALD (Brantford City): Order. I do not think the hon. member should refer to a debate which took place this session.

Mr. HANSON (York-Sunbury): I am not quoting from the debate. I suggested that if that was too high a reward for him, then certainly he was entitled to consideration for a judgeship, or, at the very least, a senatorship.

Now let us be serious. I should like the minister to justify this vote of $50,000,000. Are we to pay any more subsidies on grapefruit juice brought in from the United States? We have provided that as a part of the diet of our armed forces, while the humble tomato, which contains many more vitamins than grapefruit juice, is not even prescribed for our men.

An hon. MEMBER: Potatoes.

Mr. HANSON (York-Sunbury): Well, potatoes are a great food, a great energy food, beyond any question. I will tell the hon. member for Brantford City that I would recommend a potato diet for him. If he were on a potato diet, he would not be so slim; he would have a little more fat on his frame, because it is a starchy food. Perhaps I am a good example of it myself. Potatoes are an energy producing food, and so is Manitoba hard wheat.

I think we should have some justification for this expenditure of $50,000,000. We must have that justification. I tell the committee that this is just another corollary of this whole question of a price ceiling. It may go even to $100,000,000 in another year, before we know where we are going. I have spoken much longer than I had intended. I thank the committee for a courteous hearing, and I hope I have made some contribution to the debate.

Mr. ILSLEY: I am afraid that I cannot answer the leader of the opposition in the vein in which he has addressed the committee to-night. Members of the wartime prices and trade board and their organization are working day and night to prevent what they think would be a terrible evil, that is, inflation; and in that belief I think they have the concurrence of the people of this country and the members of this house. To-night I was most interested in the attitude of the leader of the opposition. He placed himself, if not his party, unequivocally against the price-ceiling policy of the Dominion of Canada.

Mr. HANSON (York-Sunbury): The methods adopted; I was careful to distinguish between objectives and methods. You cannot put words in my mouth.

Mr. ILSLEY: Let us get this straight. The hon. member said to-night that he was against inflation. He was in favour of the objective of preventing inflation. Then he took up the method of preventing inflation which the government had adopted as its policy, a universal or general price-ceiling policy, and said that he was against that method. Am I wrong about that? I think that is correct.

I would not like any better issue, if we were talking about an issue at the present time, than that issue. I would like the people of the Dominion of Canada to know that the Conservative opposition is opposed to this policy of the federal government to prevent inflation. I would be prepared to go before the people of this country or of any other country—the people of any country with intelligent citizens, and defend what we have done.

Just consider the position—and if members of this committee do not remember anything else I say, I want them to remember these simple figures. During the first twenty-six months of the last war, known as world war No. 1, the cost of living rose 15 per cent. During the first twenty-six months of this war, world war No. 2, the cost of living

in the Dominion of Canada rose by 15 per cent. During the next seven months of the first war the cost of living rose by 13 per cent.

Mr. McLARTY: Additional.

Mr. ILSLEY: Thirteen points over and above the first fifteen points, making a 28 per cent increase in the total period of twenty-six plus seven months. But during the next seven months of this war the price level has risen less than one per cent. I want to say that in the last war—

Mr. ROSS (Souris): At whose expense?

Mr. HANSON (York-Sunbury): The expense of the producer, of course.

An hon. MEMBER: The farmer.

Mr. ILSLEY: Oh, on every side we hear that. We knew that when we brought it in anybody who was hurt or who could get a better price than the price he would get under the control would complain. We knew that. We expected that, and we doubted whether a policy such as this, a thorough-going policy such as this, was within the capacity of democracy. But nevertheless we put it in, tried it, and we have been amazed at the response of the Canadian people. We have been amazed at their willingness to assume sacrifices for a common end. Of course it would be easy for members of this house—any member of the house—to listen to a constituent who would say, "If it were not for this vicious, unjust, bureaucratic board I would be getting a little more for my goods." Oh, you will hear that on every side. But you cannot control prices without keeping prices below what they would otherwise be, and you cannot fight a painless or costless war, and win it.

The leader of the opposition has no policy. He has no alternative policy to offer. I have said in this house that in a time like this it is not good enough to do what would have been all right a few years ago, or probably before the war. It is not good enough merely to indulge in destructive criticism. It is not enough to say that the government has no policy, or that its policy is defective in this respect, or that it is defective in that respect. It is not enough to say, "If you ask me what my policy is, I say it is not my responsibility to say anything about it."

That is old-fashioned politics. That is not the kind of cooperation an opposition should give the government in a time of war, and the hon. gentleman knows that. I think we are entitled to something better than that. Criticism—yes; but not this negative, destructive criticism of the type we have heard to-night.

The leader of the opposition said something about a speech I made in 1940, and he made a very good argument, on the face of it, for the proposition that I have changed my mind. Well, if I have changed my mind, that is not a very great crime. No; it is not a very great crime.

Mrs. NIELSEN: It shows you have a mind to change.

Mr. ILSLEY: But I do want to point out exactly what I was arguing on that occasion. The hon. member for Lethbridge, as the leader of the Social Credit party, had introduced an amendment to the address in reply to the speech from the throne. His amendment was in these words:

> And this house further regrets the failure of the government to adopt a monetary policy that would permit a maximum war effort without either increasing debt or reducing the standards of living below that necessary for maintaining maximum efficiency;
>
> Furthermore this house is of the opinion that a continuation of the present financial policy will further destroy the precious liberties so essential to, and recognized as being inherent in a true democracy.

And in part of his speech, he said:

> Social Credit proposes to use the national credit to provide money without additional debt, without additional taxation.

I interpreted that to mean—and I think it could mean only this—that he would have financed our war expenditures, which that year were estimated to be one billion dollars—this year they will be three billion dollars or more, but that year they were only one billion dollars—not by borrowing, not by taxation, but by the creation of new money. I interpreted his speech in that way. That is how I interpreted it, and that is what he said. I argued that if we were to issue a billion dollars of new money or credit with the Bank of Canada, or to issue Bank of Canada notes, that we would have wild inflation. I said that nothing in the world could stop inflation under those circumstances. In considering the remedies which the hon. member himself had proposed, I pointed out that one of the remedies was price fixing—universal price fixing. It was in that connection, in connection with price fixing under those circumstances, and not under present circumstances at all, when we are taxing and when we are borrowing to a terrific level, that I said that you could not have these conditions. If the hon. member will read my speech particularly in that situation, and in the light of those facts, he will find that an entirely different complexion will be put upon it.

I say that if we were now to try to finance this war, not by borrowing $150,000,000 a month, as we shall probably have to do, not

by taxing to the extent of seventeen or eighteen hundred million a year, as we shall probably have to do, but by placing three billions of money to our credit in the Bank of Canada, or by the issue of that much money in notes, so that everybody in the country would have a great big bank account, or their pockets full of money, and if then we were to try to enforce a price ceiling to keep prices down—I say we would not do it without a spy in every grocery store, a spy on every corner. It would be impossible to do it, because of the pressure of purchasing power, and prices would be terrific.

It is for this reason that we have taken, not one method to prevent inflation, but two methods to prevent inflation. During the first year or two of the war we resorted to both remedies. We tried to relieve the pressure on prices by taxation and borrowing. In the summer of 1941 the price level was jumping from one to two points a month. It was going up so much that every month I was almost afraid to look at the cost of living index. It was terrifying to see how that cost of living index was jumping. That showed that our fiscal remedies were not sufficient. The only kind of fiscal remedy which would be sufficient would be the kind they resorted to in the middle ages, when they went into people's houses and searched their mattresses and their cellars and took nearly all the money they had. You cannot do that in a democracy. You cannot impose taxes so heavy that a great many people will not accumulate money. You cannot pile them on sufficiently so that people will not still have left a lot of purchasing power, and so you have to supplement your financial remedies with direct control. Therefore we instituted the price-fixing system.

What I was arguing against in that speech was against price fixing alone. But with the two lines of approach, marching against inflation on two fronts, we can beat inflation—if we do not tear the effort to pieces, if we do not bring up small individual cases, if we do not have to listen sympathetically to every person who says, "I could make more money if it were not for this price-fixing policy." If you are going to sympathize with everybody who has a complaint and at the same time attack the policy of the government, never advancing any alternative policy, you are not helping much. Bear in mind that our policy has worked and has been copied by the greatest democracy in the world. We are taking a course which we believe will prevent inflation. Hon. gentlemen may say: "Give them enough rope and they will hang themselves," so that my hon. friends will then be in a position later on to say: "I told you so."

I said that the law of supply and demand could not be defeated, that it was all a matter of scarcity. My hon. friend may think that is going to happen. It may happen. But I have been amazed at the success of this policy so far. It has succeeded so far. Compare conditions to-day with conditions in the last war, when we were spending on the war only 10 per cent of our national income as compared with 40 per cent to-day and when there was, therefore, far less severe pressure on prices than there is to-day. When one compares the two periods and what took place in the last war, I am confident that this is immeasurably the better policy.

The leader of the opposition said something about subsidies and that I would have to justify the payment of this $50,000,000. About a week ago I made a speech forty or fifty or sixty minutes long on subsidies, a most carefully prepared speech, in which I argued the whole matter out. I said that the total might not be limited to $50,000,000 but might be much higher, and I gave facts and figures which I think are sufficient to show that the expenditure of that money is a good investment. The hon. member for Rosetown-Biggar (Mr. Coldwell) interjected at the time, "an insurance premium," and I said, "exactly," —an insurance premium against evils which otherwise would overtake us. I am not going to say anything more to-night. I am going to listen to others if they have anything to say. I do not think the burden is on me to justify this policy any further.

Mr. MacINNIS: I am not going to take up the time of the committee in going over the past policy of the Minister of Finance and his party. I believe that every hon. member of this house is agreed that the Minister of Finance is doing a very good job in a very difficult time, and there is no reason why any hon. member, no matter which side of the house he is on, should not make that statement. It is a plain statement of fact, but again that is no reason why we should not criticize the minister on points where we feel there is room for criticism. After all, criticism must of necessity be a matter of difference of opinion.

It is a rather strange trick of fate that the advocates of laissez-faire should have been put into the position where they have been compelled to use controls to meet a crisis. We were in a crisis in this country from 1930

to 1939, a crisis in which hundreds of thousands, almost millions, of the people of Canada were starving.

Mr. McLARTY: No.

Mr. MITCHELL: That is not true, and you know it.

Mr. MacINNIS: It is true, and if my hon. friend does not know it he ought to know it, because in 1936, 1937 and 1938 he was in control of the slave camps in British Columbia where the unemployed were congregated. There were at one time in that period 1,500,000 people on relief in Canada. Will anyone tell me that people on relief are not starving? They are not starving outright so that they drop on their feet, but over a period of time they die of malnutrition. Everyone knows that.

Mr. MITCHELL: That is not fair. Point to one case where a person died of malnutrition during the depression.

Mr. MacINNIS: That question is not worthy of an answer. Does my hon. friend maintain that the allowance received by those on relief between 1930 and 1939 was sufficient to provide them with an adequate diet that would build up health?

Mr. MITCHELL: That is not what my hon. friend said. Let us be fair.

Mr. MacINNIS: Will my hon. friend sit down?

Mr. MITCHELL: My hon. friend said that people in this country died of malnutrition.

Mr. MacINNIS: I still say that.

Mr. MITCHELL: Name a person who died of malnutrition.

Mr. MacINNIS: They were starving.

The ACTING CHAIRMAN (Mr. Roebuck): Order. Please understand that this is a debate in the House of Commons, and hon. members should address the Chair. The hon. member for Vancouver East has the floor, and if he does not wish to allow a question he does not need to.

Mr. MacINNIS: I have no objection to a question, Mr. Chairman, but I do not want to be interrupted by what is merely an expression of opinion which is no better than my opinion. I made a statement of fact, and anyone who disagrees with it takes the position that the relief allowance of the people of Canada during that period was sufficient to provide an adequate diet.

Mr. MITCHELL: I did not say that.

[Mr. MacInnis.]

Mr. MacINNIS: Well, then, the hon. member said that they were not dying of malnutrition. Read what the doctors are saying about the recruits examined for military service. I think the leader of the opposition stated that because of the poor conditions in New Brunswick during that period a large number of men were being rejected to-day for military service. Everyone knows that is true.

Mr. DOUGLAS (Weyburn): To-day's Montreal *Gazette* says that an epidemic of malnutrition exists in Montreal.

Mr. MacINNIS: Yes.

Mr. GRANT: Everybody is not starving that looks that way.

Mr. MacINNIS: What I was going on to say was that we could have used controls in that period just as well as now. The Minister of Finance says that he is amazed at how the people of Canada are cooperating, but the government would never allow the people of Canada to cooperate with the government at the time I mentioned. I remember listening to the Minister of Finance addressing a gathering in the depression days and his slogan was: "Retrenchment before reform." I am satisfied that when this war is over he will no more think of a return to that policy than he would to-day accept the policy of no controls advocated in 1941.

My objection to the wartime prices and trade board is that its administration is put in the hands of big business, as is every other phase of Canada's war effort, and that in my opinion it is being used to crush the small merchant. The people who have control of the board have not the slightest sympathy with the small business man. On this subject I would like to read an item from *Saturday Night,* a good Canadian paper, comparable anyway with the *Saturday Evening Post.* In its issue of April 4, 1942, after referring to how the economy of Canada was being drastically made over by Mr. Donald Gordon, it said this:

> We are merely noting a tendency in our current political life and wondering where it will land us before it stops. Mr. Gordon, no doubt with the approval of the government, has adopted the principle—

Note this.

> —of letting industry regiment itself through the agency of top men in the various particular industries, each functioning for his own industry; and he expresses himself as being very well pleased with the results. He is no doubt animated in this decision by the desire to interfere as little as possible with the existing set-up in the industries, and so far he is probably right in thinking that the method has

worked well. But it is putting too much faith in human nature to believe that it will work perfectly in every instance; and if it leads to serious trouble in certain industries and in certain aspects the government will not be able to transfer any of its responsibility to the elected representatives of the people. It will have to shoulder the whole blame itself. And there may be a lot.

In that regard I think the editor of *Saturday Night* is right. The statement has been made in this chamber on numerous occasions, and was made by the Prime Minister in his radio broadcasts, that this was the greatest experiment ever attempted with the will and consent of the people. But the people had nothing at all to say about instituting these controls. The first they heard about them was when they were imposed on the people by order in council which they heard through their radios. The editor of *Saturday Night* continues:

It must be remembered that the men in charge of Canadian industry, from whom these self-regimenters are picked, do not include any representatives of, and do not owe any responsibility to, the workers employed in those industries. They do not include any representatives of, and do not owe any responsibility to, the consuming public, but this is less serious, because the government itself may be assumed to hold at least a watching brief for that public.

He goes on to mention what parliament has to do with it:

As for the Conservative party, with its more than 40 per cent of the electorate, the C.C.F. party and the New Democracy they have as little responsibility in these matters as the pages in the House of Commons or the animals in the Toronto zoo.

That would be bad enough; but when the whole of this control, the whole of this regimentation, is placed in the hands of the top business men of this country, without any representatives of organized labour, or of the smaller business men, it can have only one end, the complete domination of the people of Canada by big business.

An hon. MEMBER: That is politics.

Mr. MacINNIS: Who said "politics"? If it is politics, let it be politics. If it is politics to speak for the common people of Canada, for the working people of Canada, I am proud of being accused of playing politics.

The leader of the opposition referred to the orders made with regard to instalment buying. Earlier in the session I put some questions on the order paper on this subject. They were these:

1. On what grounds was the minimum down payment on the purchase of furniture and household goods reduced from 33⅓ per cent to 10 per cent?

2. Was the retail trade throughout Canada consulted before the change was made?

3. If so, is there statistical information available to show, (a) the number of retailers favouring the minimum cash down payment of 33⅓ per cent; (b) the number of retailers favouring the minimum cash down payment of 10 per cent; (c) the number of retailers favouring the minimum cash down payment of more than 10 per cent but less than 33⅓ per cent?

4. Why was the interest on deferred payments raised from 6 per cent to 9 per cent?

The answers were these, and they are most peculiar:

1. The minimum down payment on the purchase of furniture, bed-springs and mattresses was reduced from 33⅓ per cent to 10 per cent but no change was made in the requirement that the balance of the purchase price must be paid in full in twelve monthly instalments. The reduction in the down payment with consequent increase in monthly instalment payments was made because the former requirement had resulted in a substantial reduction in total sales.

It is my opinion that the purpose of raising the down payment to 33⅓ per cent was to bring about a reduction in sales. Continuing the answer to question 1:

It seemed to be operating to prevent people of small incomes from furnishing their households and with particular severity in respect of newly established homes. The cost of furnishing a home represents a heavy capital expenditure which many people are unable to finance on the basis of a down payment of one-third of the total sum. In addition, the reduction in total sales reduced the operating margins of retailers and manufacturers and coincided with an increase in costs amounting to as much as 12 per cent which was being shared equally by retailers and manufacturers. The decision to reduce the down payment was made with a view to these circumstances and for an experimental period pending further investigation and reconsideration in the light of its results.

We come to the next answer:

2. Individual retailers throughout Canada were not circularized or otherwise consulted before the change was made. The decision was made by the board after discussion with board officials administering these matters and representatives of retailers and manufacturers.

I have here excerpts from *Furniture and Furnishings*, February, 1942, issued in Toronto. The magazine states:

Prior to the announcement of the original order restricting credit last Thanksgiving, the Ontario Retail Furniture Dealers' Association polled its members to secure their opinion on down payments. The answers were as follows: a total of 87½ per cent voted for down payments of 20 per cent or more; 72 per cent went further and proposed 25 per cent payments and 24½ per cent favoured payments of at least one-third down. Only 10 per cent favoured down payments of 10 per cent.

I imagine that was the 10 per cent who were consulted, along with those administering the board.

The "Retailer", a trade paper published in Vancouver, in its issue of February, 1942, goes on record to the same effect:

A questionnaire was sent out to the retail furniture dealers throughout the province, and the returns reveal that retailers are not in sympathy with such a move,—

That is, a reduction from 33⅓ to 10 per cent.

—and strongly object to the amendment having been made without the retail trade having been given any opportunity of expressing its opinion. Many retailers say that such a move is not consistent with the regulations that were drawn for the purpose of discouraging spending.

At a joint meeting held in the Georgia Hotel, Vancouver, of various classifications selling commodities on the deferred payment, it was unanimously agreed to request the wartime prices and trade board to make the minimum down payment on furniture and other articles in class 2, subect to a minimum down payment of 25 per cent.

We come now to the the answer to question No. 4:

Why was the interest on deferred payments raised from 6 per cent to 9 per cent?

The answer was:

The interest on deferred payments was not increased from 6 per cent to 9 per cent. A minimum rate of three-quarters of 1 per cent per month or 9 per cent per annum was fixed by the board as a reasonable estimate of the cost of doing instalment business.

They tell me in the first sentence that the rate was not increased from 6 per cent to 9 per cent, and in the second sentence they tell me that the "minimum rate of three-quarters of 1 per cent per month or 9 per cent per annum was fixed by the board as a reasonable estimate of the cost of doing instalment business, and primarily to ensure to the consumer a definite and reasonable spread between cash prices and time prices with a view to encouraging cash sales." They first increased minimum instalment buying to reduce sales, and when the thing they set out to do was accomplished, they reduced it in order to increase sales. Then they increased the interest rate in order to encourage cash payments. Can anyone justify or explain that sort of manipulation; far-reaching changes made, not only without consultation with the retailers, but against the wish of 75 per cent or more of the retailers; perhaps against the wish of 90 per cent of the retailers?

I have a letter from a merchant in Vancouver who sells on the instalment plan. Referring to this change, raising the minimum to 33⅓ per cent, he says it had certain objectives:

1. It, to a large extent, curtailed indiscriminate buying, which was the government's prime objective.

2. It permitted smaller traders to compete with large transcontinental companies who had previously sold on terms that the smaller trader could not possibly meet on account of his limited capital.

3. It taught the public that in making a purchase a reasonable sum of money was necessary and only a limited space of time would be allowed for completing payment.

The writer then gives an example of the way in which the system worked after the reduction to 10 per cent:

By taking a concrete example of a very composite furniture sale of $300 under the original government terms, the buyer was obligated to pay $100 down, leaving a balance of $200 which had to be paid within twelve months, with an addition of 6 per cent, or $12 for interest. Now, for the same sale, the down payment is $30, leaving a balance of $270 to be paid in one year, with an addition of 9 per cent, or $24.30. The result is that the purchaser pays more than twice the interest to obtain ownership and loses his buying power for merchandise and other necessities in the same period, and the financier of the transaction receives $12.30 more in revenue.

Let me tell the minister that such things are creating lack of confidence in the minds of the people. I think it was Ernest Bevin who said: "Let doubt enter into the minds of my workers, and, my God, we have lost the war." Let doubt enter into the minds of the people, that they are being fleeced for the benefit of a few large industrialists or chain stores or department stores in this country, and we are preparing for trouble.

I was told—I do not know whether it is true or not—that another reason, that is, for lowering the minimum payment from 33⅓ to 10 per cent, besides the one I have already stated—that is, putting the big transcontinental stores in a better position—is this. The curtailment of the sale of automobile and other metal appliances, due to war needs, had drastically reduced their sale. The sales of such commodities being reduced, the finance corporations that used to finance these purchases, corporations which had existed by lending money, found themselves in the position where they had considerable money on hand and no one to whom to lend it because people were no longer buying in that way.

An hon. MEMBER: Victory bonds.

Mr. MacINNIS: You cannot get 9 per cent on victory bonds, so that in order to enable these people to find a place where they could profitably lend their money, the sale of goods was encouraged by the reduction of the instalment payment from 33⅓ to 10 per cent.

I have enough material, from people who feel that they are being gypped in this way, people who feel that this government have sold them out to big business, that I could keep the committee going for days. I am not

going to do that. I thought I would bring this one glaring example to the attention of the committee and of the minister because I think something should be done to give the consumers, the common ordinary people of the country, representation on these boards.

I had a letter from Vancouver a few days ago complaining that in an outlying business part of the city, a large wholesale hardware firm was building a new retail hardware store. I wrote to the chairman of the wartime prices and trade board for an explanation of this, and as to the policy of the board, and he told me that the board had as yet no policy in the matter.

A person cannot get material to build a house without the greatest difficulty. But evidently another person can build a store where no store is needed and can stock it. Mr. Gordon also told me they were sending their representative out there, E. J. Burton, I think, of the Robert Simpson Company Limited, who would look into the matter and report. I am not so sure that any investigation Mr. Burton may make will be accepted with much confidence by the people concerned. I was in Montreal in November, and I saw people working in a big department store putting in a $400,000 escalator system when the material used was needed for war work. An escalator at this time is about as needful as a fifth wheel on an automobile. But these people have been making so much money since the war began that they have to cover it up somewhere. That is something for the wartime prices and trade board to look into, if they are going to get the confidence and build the morale of the people of this country.

Mr. ILSLEY: With regard to the controller of construction, that is not within the jurisdiction of the wartime prices and trade board. There is a controller of construction. He is in another department. I am not responsible. I presume, if I were, there would be some explanation for the incident the hon. member mentions. I am disposed to agree that there should not be large expenditures of that kind at a time like this if they can be avoided.

With regard to the other main points the hon. member made, first the complaint that the 33⅓ per cent requirement had been relaxed in the case of furniture and reduced to 10 per cent, the hon. member has picked out the only instance in the whole range of commodities where there has been any relaxation.

Mr. MacINNIS: If that is the only one, certainly I could not take any other, could I?

Mr. ILSLEY: No; I do not blame the hon. gentleman; but I want to make that clear, otherwise the committee might think that was just representative of many relaxations, especially as my hon. friend in the latter part of his speech seemed to be building up a serious superstructure on that foundation that the war was already lost, or something of that kind.

Mr. MacINNIS: I do not think the minister has any reason to say that.

Mr. MacNICOL: That escalator would be installed for the saving of fuel in any event and would be a proper investment for that purpose.

Mr. MacINNIS: We should not be thinking of profitable investments at this time.

Mr. MacNICOL: More money for the government.

Mr. ILSLEY: I do not think we should be going on that basis at this time.

With regard to what the hon. member for Vancouver East said about furniture, as I say he has taken the one instance in the whole range of commodities where the requirement of a down payment of one-third was relaxed. The reason for that—it may have been a mistake—was that the board was most anxious to see that the price of furniture was held at the level at which it was during the base period, and also to avoid paying subsidies. Costs had increased approximately 12 per cent. The board asked the retail trade to assume 6 per cent of that and the manufacturers to assume 6 per cent. The answer of one or both was that under normal conditions and volume they would be able to take the squeeze, but a reduction in the volume would increase their overhead and increase rather than decrease the necessity for margins. Whether rightly or wrongly, the board then said to them that for a temporary period the requirement would be reduced to 10 per cent and they take the squeeze of 12 per cent and divide it. I do not think there was anything sinister about that; I know there was not. It was not done in regard to any other commodity. There may be arguments against doing it, but that is the reason why it was done in that instance.

With regard to the other point, what the hon. gentleman referred to as the raising of the interest rate from one-half to three-quarters of one per cent a month, there was no such raise. The original order provided that the cash price should be lower than the time price by a reasonable amount. I am informed that the usual amount for carrying charges and interest on these instalment purchases is about one per cent a month. In this case the board fixed three-quarters of one per cent a

month as a reasonable amount to cover carrying charges and interest. What there is wrong with that I do not yet know.

Mr. MacINNIS: If the minister will allow me, the answer is that the rate in the first place was set at 6 per cent a year. When the down payment was reduced from one-third to 10 per cent the interest rate was raised. There is no doubt about that; it is in the answer to the question that I received. I imagine that answer was formulated by the wartime prices and trade board.

Mr. ILSLEY: Would the hon. gentleman read it again? I must say I understood it as he says it, but I am told that is not what it says, nor is that what happened.

Mr. MacINNIS: I cannot find it at the moment.

Mr. ILSLEY: We can come back to that.

Mr. McNEVIN: I rise to supplement my remarks of yesterday in connection with an item in that portion of the war appropriation bill relating to the Minister of Agriculture under the heading of the dairy boards when I raised the question of the necessity of providing for some increase in the price of butter. I gave two reasons: first, to bring the butter producer to a more equitable position in relation to the other three branches of the dairy industry, namely, fluid milk, cheese, and milk for manufacturing purposes; second, to avert an extreme shortage of butter next winter.

To-night I want to preface my remarks by stating that I believe the general price level of agricultural products is on a satisfactory basis. I do not think much complaint could be offered with respect to the present set-up for beef, cheese, fluid milk, manufactured milk, bacon and so forth. Butter is an exception. I want to commend the wartime prices and trade board for the recent regulations, which were designed to correct a difficult situation as regards beef. I raise this question in order that provision may be made before the butter situation becomes difficult. The arrangement with regard to beef has revealed the flexibility in the set-up as far as the price ceiling is concerned. It has been suggested in some quarters that there is a possibility of the cheese quota being filled late this summer and that, therefore, large quantities of milk could be released for butter production. I cannot visualize that situation becoming a reality.

In the first five months of this year we produced about 26,000,000 pounds of cheese, and I would estimate that in December we produced about 10,000,000 pounds, so that thus far we have about 36,000,000 pounds toward a quota of 125,000,000 pounds for overseas and perhaps forty or fifty million pounds for Canadian consumption. It would appear to me that it will take the rest of the season to fill that cheese quota, and I think I am correct in stating that the British food import board have agreed to take even more than the 125,000,000 pounds contracted for.

The next three months are those in which large quantities of butter go into storage. The figures for last year show that in May 9,000,000 pounds were in storage; in June, which is the heaviest month of production, that figure rose to 17,000,000 pounds. In July it almost held its own, at 15,000,000 pounds, but in August it dropped to 11,000,000 pounds and in September to 6,000,000 pounds, after which it became necessary to run on an even keel before beginning to use up the butter held in storage to supply the need during the short season. Recently, as was pointed out yesterday by the Minister of Agriculture, there has been a slight decrease in the price of butter. That is to be expected; it is a seasonal decline almost impossible to avoid during June, when production is at the very highest point of the year. But I would point out that had it not been for the price ceiling, butter would have gone substantially above the thirty-five cent limit. Therefore a seasonal decline would not have brought it down to the present level. The government is giving substantial aid to the cheese industry. I am not saying that is wrong; I think it is necessary to encourage the cheese industry in order that we may obtain the very large quantity of cheese required. But I maintain that there is discrimination as far as the butter producer is concerned; and if we are to avoid an extreme shortage next winter, I think action should be taken now to encourage the butter producer to increase his output.

I do not want to labour this point at any great length. I want to renew my request that provision be made to increase the price of butter by about five cents a pound, in order to put the butter producer on a more equitable basis in comparison with other branches of the dairy industry, as I said yesterday. The producers of butter represent about half of the dairy farmers in Canada, and I think that is too large a section of the agricultural industry to leave in a position where they are not receiving returns on a comparable basis with the other branches of that industry. All I ask is equality of treatment and a fair deal for the butter producers of Canada, and I believe the circumstances warrant most serious consideration of this very important matter by the wartime prices and trade board.

Mr. BLACKMORE: I am sorry I was unable to get the floor immediately after the leader of the opposition and the Minister of Finance had made some remarks with regard to what I had advocated. I will grant that a new system may be difficult for orthodox minds to comprehend, but that is no evidence, by any means, that the new system is wrong. It was very difficult for men to understand the radio, but the radio was right. It was next to impossible for Edison to understand alternating current, but alternating current was right. This new system is right, too; there is no doubt about that.

I am sorry the leader of the opposition has left the chamber. I suppose he is weary, but I should have liked to ask him whether or not during the last war $26,000,000 of money was printed by the dominion treasury and used as part of the revenues of Canada. He would have to acknowledge that this was done. He sneered about fiat money. That was fiat money, but that money could have been used to give a fair price for wheat; that money could have been used for any kind of war work that was necessary in Canada during the first world war. The leader of the opposition, and the minister as well, would do well to look at the report of the royal commission on banking and currency in Canada, published in 1933. Let them turn to page 22 and read paragraph 47, and then stop making fun of the people who know this thing can be done.

The minister said he favoured taxation and borrowing. I should like to tell the minister that I never, under any circumstances, said that taxation and borrowing were not sound. I do not oppose taxation and borrowing, as the minister will find if he turns up my speech and every other speech I have made. I have never suggested we should not follow those methods, in moderation. The minister said he needed a third measure in addition to borrowing and taxation. When the war started he thought he could run the war successfully with just taxation and borrowing. He discovered he was wrong, that he had to have a third measure, namely price control, and in addition to price control he has used price subsidies. That is completely sound. Now I want to tell the minister and the members of this committee that as sure as he is in this house, he will have to adopt a fourth measure, if he is to succeed; and that fourth measure is going to be the power of the state to create money based on the real credit of the country. There is a great deal of nonsensical talk about state money, even though the most enlightened men are advocating it. When a person advocates this creation of money, one would think he was advocating nonsense. I know the minister is a busy man, but I would mention a book that he really should get and read; it would do him good. The book is "Economic Tribulation"—

Mr. ILSLEY: I have all I need of that.

Mr. BLACKMORE: —by Vincent C. Vickers. I am going to read three or four short quotations from this book, and I am going to ask the friends of the leader of the opposition to tell him to read the book and then "laugh that off". First I turn to page 74, and read No. 1:

1. State control and state issue of currency and credit through a central organization managed and controlled by the state.

The minister may say he has that now in the Bank of Canada. If he has, let him use it. I shall have something more to say about that later on, but I doubt very much that in the Bank of Canada he has such an instrument as is envisaged by Vincent Vickers in this statement. Now I come to No. 2, and this is the point to which I was referring:

2. Stabilization of the wholesale price level of commodities. That is to say, a fixed and constant internal purchasing power of money; so that a pound will buy to-morrow what it bought yesterday; an honest pound, not a fluctuating pound.

Note these words:

And this can be done by so issuing and regulating the volume of available credit and currency that it shall at all times be adequate to permit of the purchasing power of the consumer being equated with the volume of production; not by limiting the purchasing power—

That is what taxation does, or borrowing.

—but by firstly increasing purchasing power more in proportion to the productive capacity of industry.

I do not hope that the leader of the opposition will understand that. Bless his heart; he has become too old to learn new tricks. Now may I read No. 4:

4. Any additional supply of money should be issued as a clear asset to the state; so that the money will be spent into existence, and not lent into existence.

And now, No. 7:

The abolition of the debt system, where all credit is created by the banks and hired out at interest to the country.

Those four points alone line this man up, with all his experience, prestige and reputation, right along with the Social Crediters.

An hon. MEMBER: Who is he?

Mr. BLACKMORE: Mr. Vincent Cartwright Vickers, of Vickers-Armstrong, the great

munitions manufacturers, and director for years of the Bank of England. He is one of the best authorities in the world.

Mr. MacINNIS: Because he was a director of the Bank of England?

Mr. BLACKMORE: I am not saying the fact that he was a director of the Bank of England makes him an authority, but a man who is a director of the Bank of England is likely to know as much as you do, and just about as much as the minister does, or the leader of the opposition.

Mr. MacINNIS: Evidently he did not know it; otherwise he would not be a director of the Bank of England—because that was not the policy of the Bank of England.

Mr. BLACKMORE: He withdrew from his directorship in the Bank of England when he became convinced that there had to be a change in the system. And I declare before this committee that there must be a change in the system in this country—and a change which is a change!

The minister spoke as though I advocated creating the whole billion dollars. I did no such thing. If social credit is so palpably wrong, it is not necessary to misrepresent it in order to condemn it. The minister will find, if he reads my speech on that occasion, that I never said the whole billion dollars had been created.

Mr. ILSLEY: This was what the hon. member said in his speech:

> Social credit proposes to use the national credit to provide money without additional debt, without additional taxation.

There would be no more borrowing and no more taxation, would there?

Mr. BLACKMORE: But the minister at that time was freely borrowing and freely taxing.

Mr. McLARTY: That is not an answer.

Mr. BLACKMORE: He has increased the revenue of this country tremendously since the war broke out. He has come before us each budget speech and pointed out how greatly the revenues have increased. Those revenues have increased largely because of the increased income of the dominion; the increased income has developed as the result of increased production of the dominion; increased production in the dominion has come as the result of increased investments in the dominion; in many instances those investments have come from loans, and in many instances they have been loans from the dominion government. The loans have resulted in greater production, the greater production has resulted in greater income; and the greater income has resulted in greater revenue, without unnecessarily raising the rate of taxation.

Mr. CRERAR: Will the hon. member permit a question? If he would neither tax the people nor borrow from them—

Mr. BLACKMORE: I did not say I would not tax. I said, "without additional borrowing".*

Mr. CRERAR: But, Mr. Chairman, the extract from the hon. member's speech, quoted by the Minister of Finance, if I understood it correctly definitely opposed taxation and opposed borrowing. If taxation and borrowing are ruled out, how will my hon. friend finance the war?

Mr. BLACKMORE: I was just explaining, if the minister had listened. Perhaps he was listening attentively, but I know this is new to him. I pointed out that since this war broke out, the national income of Canada has increased tremendously, and that the income has increased because of the increased production in Canada.

An hon. MEMBER: The production of what?

Mr. BLACKMORE: A wide variety of things. Mr. Chairman, I am going to finish these few remarks to-night, and I shall reopen the question to-morrow, when hon. members may ask me any questions they wish in the matter. There is not time to-night. This social credit is no fly-by-night idea; this is a sound and scientific system.

The minister spoke as though I had intended to issue the whole billion from the government. That is not so. If the minister had borrowed a certain amount, taxed what was reasonable, and then in addition to that had created what could be created, and used without causing inflation, then his economy in Canada would have been in a far sounder condition than it is to-day, and people would have been far happier.

Here is what he could have done. He could have used new money, like the $26,000,000 created in the last war, to subsidize the prices of primary products. That is, he could have given higher prices for wheat; he could have given higher prices for wool; he could have given higher prices for meat, and for any and every primary product.

The leader of the opposition's sneer as to fiat money would not have applied. You could have bought wool, or meat, or anything else, with the $26,000,000 created in the last war—fiat money, pure and simple. And it was just as good money as any money in the Dominion

(*See also page 3105.)

of Canada. That kind of money could have been used up to the point at which there would be danger of inflation through scarcity of goods. That could have been used to pay fair and just prices on all primary products. The difference that would have made to the agricultural population throughout this dominion is next to inconceivable, had it been applied for two or three years in this war. You would have had a contented and happy people who were getting out of debt, whereas to-day in Saskatchewan the doleful story is that they have gone into debt $50,000,000 deeper since the war broke out.

The ACTING CHAIRMAN (Mr. Roebuck): May I point out that it is now eleven o'clock?

Progress reported.

BUSINESS OF THE HOUSE

Mr. McNIVEN: May I ask the Minister of Mines and Resources if it is the intention of the government to sit to-morrow night and, if not, why not? There are some of us who come from distant points, who are getting pretty tired of staying around here with comparatively little to do. The other day the Minister of Finance stated that there was something wrong with the House of Commons. The other afternoon he further stated that it was high time we were having some regard for the time. I suggest to the minister he might well consider sitting on Friday nights—

An hon. MEMBER: Saturday mornings.

Mr. McNIVEN: Yes, Saturday mornings, and Wednesday nights; yes, and even Sundays. I say that for this reason: The House of Commons is sitting only twenty-four hours a week. We are asking labour in this country, in munitions, shipyards and aeroplane factories, to work seven days a week. Some of those men are working as long as sixty hours a week, and some, sixty-five hours. No attempt has been made to go into supply; the estimates have not been considered as yet. There is no reason in the world why some of the ministers should not be able to sit on Wednesday and Friday evenings, Saturday morning and possibly Saturday afternoons as well. Let us try to make some progress. We would be advancing the war effort by expediting the business of the house and bringing the session to a close, permitting the government to get on with its war work and the members to go back to their homes.

Mr. ROSS (Souris): It is all a matter of government procedure.

Mr. CRERAR: The house has been adjourning on Friday evening at six o'clock by common agreement this session, and I do not think that arrangement should be disturbed without the leader of the opposition, the Prime Minister and the leader of the Co-operative Commonwealth Federation party being present. There is a good deal of merit in the suggestion of my hon. friend the member for Regina City, and I would suggest that if he still feels the same way about it he might bring the matter up in the early part of next week so that we might consider sitting on Friday nights. At any rate it would allow the feeling of the house to be ascertained.

Mr. McNIVEN (Regina City): Can it be brought up to-morrow on the orders of the day?

Mr. CRERAR: My hon. friend might bring it up to-morrow on the orders of the day.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, June 5, 1942

The house met at three o'clock.

HONG KONG COMMISSION

TABLING OF REPORT TRANSMITTED BY RIGHT. HON. SIR LYMAN POORE DUFF—MOTION FOR PRINTING

On the order for motions:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I received yesterday afternoon from the Chief Justice, Sir Lyman Duff, who had been appointed the commissioner to inquire into the Hong Kong expeditionary force, a copy of the commissioner's report. I now desire to lay on the table of the house a copy of the letter from the commissioner transmitting his report which was made pursuant to order in council P.C. 1160 relating to the Hong Kong expedition, also a certified copy of a minute of the meeting of the committee of the privy council approved by His Excellency the Governor General, to-day, which minute records the submission of the report to his excellency for his excellency's information. I also wish to table a copy of the report itself.

The report is divided into two parts. There is the report proper, stating the principal conclusions and some ancillary matters, and an appendix in which the facts are fully stated and the evidence is fully discussed. The report and appendix combined cover in typewritten form some 115 pages of foolscap: the report proper is contained in twelve pages. Having regard to the importance and interest attaching to the report and the frequently expressed desire of hon. members to have its contents made known just as

soon as possible, it would, I believe, be meeting the wish of the house if I were to give hon. members at once the principal conclusions of the commissioner. They are contained in the report proper, which is as follows:

Your Excellency:

The order of Your Excellency, P.C. 1160, authorizing this inquiry is attached to this report. By it, I am directed to inquire into the organization, authorization and despatch of the Canadian expeditionary force to Hong Kong in October, 1941. I am instructed particularly to examine the selection and composition of that force, the training of its personnel, the provision and maintenance of its supplies, equipment and ammunition and the provision of transportation therefor. The order in council states that the purpose of the investigation is to determine whether there occurred any dereliction of duty or error in judgment by those whose duty it was to arrange for the authorization, organization and dispatch of the force that resulted in detriment or injury to the expedition or its members. My duty is to determine whether there occurred any dereliction of duty or error in judgment "on the part of any of the personnel or of any of the departments of the government whose duty it was to arrange for the authorization and dispatch of the expeditionary force" and whether, if such dereliction or error occurred, there resulted detriment or injury to the expedition or the troops comprising it. If it is found that such dereliction of duty or error in judgment occurred, it is my duty to fix the responsibility therefor .

In this, my report proper, I am stating my principal conclusions touching these matters, together with some salient facts. A full statement of the facts and a full discussion of the evidence appear in the appendix hereto which is to be considered as part of my report.

First, of the authorization of the expedition. The principal considerations prompting the invitation by the government of the United Kingdom to the government of Canada to send reinforcements to Hong Kong (two battalions of infantry with first reinforcements, and by subsequent communications a modified headquarters staff) are set forth in the telegram containing that invitation, dated the 19th of September, 1941. These considerations were largely those which influenced the Canadian government in accepting the invitation. I have been unable to obtain the consent of the government of the United Kingdom to the textual reproduction of this telegram.

The chief of the general staff having expressed to the government his opinion that there was no military objection to the acceptance of the proposal and that the reinforcements ought to be dispatched, the view of the war committee, as disclosed in the evidence of three ministers of the crown, the Minister of National Defence, the Associate Minister of National Defence, and the Minister of National Defence for Naval Services, was that in the circumstances the only possible answer to the invitation was an affirmative one. The invitation was accordingly accepted and the expedition left Canada on the 27th of October.

The evidence discloses various reasons which appear to have actuated the war committee. In view of what other dominions had done in Abyssinia and Libya it was Canada's turn to help; Canada ought to share in the responsibility for garrisoning the Pacific area; just as Australia was assisting in Malaya; the military value of the reinforcement would be out of all proportion to the numbers involved; the arrival of the contingent in Hong Kong would have a great moral effect in the whole of the far east and would reassure the Chinese as to the British intention to hold Hong Kong; the moral effect of the expedition might operate as a sensible influence for the preservation of peace there; at that juncture, in September, to gain time was beyond measure important; such an appeal from the predominant partner in the common cause could not be rejected.

I am permitted to reproduce a telegram from the War Office, of the 30th of October, after the expedition had left:

> "We are very grateful to you for despatching your contingent to Hong Kong at such short notice. We fully realize the difficulties of mobilization and of distance which have had to be overcome. The moral effect of their arrival in November will be much greater than it would have been two months later."

The terms of this telegram assist us in forming an idea of the hopes and expectations with which the request of September was sent.

It would perhaps be a possible view that the propriety of this decision by the government is exclusively matter for consideration and discussion by parliament. Since, however, I am required to pass upon the question, it is my duty to say that I have no doubt the course taken by the government was the only course open to them in the circumstances.

It was urged by Mr. Drew that the change of government in Japan on the 16th of October, by which a cabinet notoriously sympathetic with the axis powers came into office, ought to have led the Canadian government to reexamine the question of policy raised by the invitation of the United Kingdom. I had the advantage of reading a number of dispatches from the government of the United Kingdom, which I am not at liberty to reproduce, as well as a dispatch from the Canadian military authorities in England, which is reproduced in part, dealing with the probabilities concerning war with Japan, and my conclusion is that, having regard to the information of which the government was in possession, derived from the best sources of information open to them, nothing emerged before the departure of the expeditionary force on the 27th of October which could have been considered to be a justification for the withdrawal by Canada from the responsibility she had undertaken. On the contrary, the reasons which prompted the acceptance of the proposal continued to operate with possibly increasing force up to the sailing of the expedition.

Second, of the selection of the units for the expeditionary force. The responsibility for advising the Minister of National Defence with respect to the composition of the expeditionary force devolved upon General Crerar, the chief of the general staff. In a communication to the minister, in which his reasons for his recommendation are stated at large, he recommended that the Royal Rifles of Canada from Quebec and the Winnipeg Grenadiers from Manitoba should be designated. In this communication he said that a primary consideration in making the selection was "that the units selected should

be efficient, well-trained battalions, capable of upholding the credit of the dominion in any circumstances". He adds, "both" battalions designed "are units of proven efficiency".

So long as the minister's confidence in the chief of the general staff remained unimpaired, the minister would not overrule such a recommendation upon a purely military matter; and he cannot be justly criticized for acting upon it.

It is my duty, however, to consider whether there was any error of judgment in General Crerar's recommendation. Nobody, of course, was in as good a position as General Crerar for arriving at a sound judgment upon the selection of the units. His decision, moreover, was not a mere expression of opinion; it was the basis of his recommendation, made upon his responsibility as the professional adviser of the minister, upon which he expected the minister to act and knew almost at once that he was acting. The evidence, which is discussed in the appendix, satisfies me that General Crerar's recommendation was made upon sound grounds and that he is not chargeable with any error in judgment, still less with any dereliction of duty in relation to it.

The principal criticism directed against this selection concerns certain platoon weapons which are included in the establishment of a Canadian infantry battalion, but which, before October, 1941, were not available generally for training purposes to the Canadian active army. General Crerar says:—

> "There were, however, in Canada at the time in question a number of battalions (among which were Royal Rifles and Winnipeg Grenadiers) which, although somewhat handicapped by lack of supplies of certain platoon weapons (mortars and anti-tank rifles), in my opinion were generally adequately trained to undertake defensive responsibilities such as those in prospect in Hong Kong."

He adds:

> "The short supply of mortars and anti-tank rifles was general in all units of the Canadian Army and not peculiar to the Royal Rifles and the Winnipeg Grenadiers."

This, he adds, is the natural and inevitable handicap of a country which is unprepared for war and has war brought upon it.

If this handicap, as General Crerar describes it, from the "short supply of mortars and anti-tank rifles", was to be a reason for exclusion from the expeditionary force in the case of the two battalions in question, then that reason was based upon a condition that, to repeat General Crerar's words, "was general in all units of the Canadian Army and not peculiar to the Royal Rifles and the Winnipeg Grenadiers" and must have applied equally to all such units; with the logical result of excluding all.

This ground of exclusion indeed, if a proper one, was (as is fully explained in the appendix) applicable with still greater force to Canadian battalions generally than to the two battalions in question. In point of fact, these battalions were in a more advantageous position in respect of these weapons than the units of the army generally. The Royal Rifles had the three-inch mortar for training purposes at least as early as April, 1941. Although they had no ammunition, the mortar platoon was trained in its mechanism and use, tactically as well as otherwise. The mortar platoon of the Winnipeg Grenadiers was also trained in the mechanism and use of the same weapon; and further enjoyed the advantage of having, even before leaving for the West Indies, a number of anti-tank rifles (without ammunition) for training.

There were, moreover, solid reasons for believing that any deficiencies in training in such platoon weapons (with which General Crerar declares he was fully acquainted) could be made good before any encounter with the enemy. The evidence lends support to the expressed conviction of General Crerar and General Stuart (the present chief of the general staff) that this was done.

General Crerar adds:

> "With information at my disposal concerning units of Force C and knowing professional ability and character of Commanding Officer Brigadier Lawson, I would say that Force C was certainly fit to meet an attacking force, even in superior numbers, and to give a fine account of itself by December 8th."

General Crerar says:

> "Information at my disposal during latter part of September, 1941, indicated that outbreak of hostilities with Japan was not imminent and that time would, in all probability, be available to carry out intensive, adequate and possible extensive training of Canadian forces at Hong Kong after their arrival."

General Stuart agrees with this.

The evidence relating to the training, equipment and personnel of the two battalions is fully examined in the appendix. For reasons which there appear, I am satisfied that in respect of weapon training, as in respect of other matters, this selection cannot be justly impeached as affected by any error in judgment.

Third, of the steps taken to bring the units up to strength, including first reinforcements. The selection of the units made, it became necessary to provide "first reinforcements" for both battalions and to bring the Winnipeg Grenadiers up to strength. Both battallions were warned for service on October 9th and the ship which had been provided by the British government to take the expedition to Hong Kong was to sail before the end of the month. In an interval of not more than two weeks it was necessary to obtain the required additions, as well as to attend to the multifarious tasks involved in equipping the expedition. It must be remembered that all these preparations had to go forward, not only with urgency, but also with extreme secrecy. It was decided to obtain the men needed for the Royal Rifles in military district No. 2, with headquarters in Toronto, and those for the Winnipeg Grenadiers in military district No. 10, with headquarters in Winnipeg.

All men who were added to the two battalions prior to the departure for Hong Kong volunteered for service overseas with the battalion to which they went. They were, in the case of each battalion, accepted as satisfactory by the officer commanding, or by officers designated by him. The steps taken by the battalion and district officers were taken under the direction of and were approved by National Defence headquarters at Ottawa and, in particular, of and by Colonel P. Henessy, the director of organization in the adjutant-general's department, upon whom devolved the immediate

direction and responsibility for the task of bringing the units up to strength and providing first reinforcements, and who became the senior administrative officer of the expeditionary force.

There were added to the Royal Rifles 154 men from military district No. 2, of whom 52 came from the Midland regiment and 102 from advanced training centres at Camp Borden. There were added to the Winnipeg Grenadiers, 282 men and 12 officers from military district No. 10. In the appendix I have examined in detail the training and qualifications of each group of the men added.

A period of sixteen weeks has been laid down as the standard period to be devoted to the training of an infantry recruit before sending his overseas. In individual cases and by reason of the exigencies of shipping, this standard has on occasion not been enforced. Of the men added to the strength of the Hong Kong expedition, all but six per cent had undergone more than sixteen weeks' military training after enlistment in the active army. As I have already said, all these men volunteered for service with the expedition and all were accepted as suitable by officers of the battalion to which they were going.

A number of officers gave evidence of the great value of the personal selection of men for a unit by competent officers of that unit. For example, Lieutenant-General McNaughton said (and with him General Crerar and General Stuart agreed):

> "If I were the commanding officer and had had the chance to select the men and know them individually—see that they were all right—I would not have worried very much whether they had completed the basic training or not, because character is the thing we lay most stress on, and, if they were people who were suitable in my judgment to incorporate in the battalion, I would have been perfectly happy to have had them. . . . I would not have worried from the point of view of military efficiency one iota, because, if they are the right type of men, even on the voyage over I would have completed their individual training."

I accept this evidence of Generals McNaughton, Crerar and Stuart and of other officers to the like effect as of great weight in deciding upon the propriety of the steps taken to bring the force up to strength and to provide it with first reinforcements.

A considerable amount of evidence was directed to show the effect of adding to two well-trained battalions groups of lesser trained men numbering about 6 per cent of the strength of the two units. That evidence conclusively establishes that an efficient battalion is, and must be, capable of absorbing recruits, who have not fully completed their training, up to a much greater proportion of its strength than 6 per cent, without at all detracting from the efficiency of the battalion as a whole.

From the whole of the evidence (which is fully discussed in the appendix) I have reached the conclusion that there was no unfairness either to the battalions, or to the expedition as a whole, from the addition of this small percentage of men who had not fully completed the standard period of training at the time they were accepted by the battalion officers. Nor have I any doubt that these men who volunteered for the expedition in order to enter upon active service would be quickly absorbed into their new units, or that in accepting them there was not any unfairness to the men themselves; and I am satisfied that the acceptance of these men had no detrimental effect upon the efficiency of either battalion. I have found no dereliction of duty or error in judgment in connection with the additions made to the strength of the two units.

In the course of my examination of the evidence I found that the inclusion of this small percentage of men was not the result of any shortage of fully trained men in Canada. It arose from the necessity of obtaining the men with great speed and secrecy and the impracticability in the time available of selecting them from a larger number of training centres.

Four, of the general organization and dispatch of the force, apart from the subject of mechanical transport. The facts are stated in the appendix and they require no comment here.

Five, of mechanical transport. With regard to the mechanical transport of the force, consisting of 212 vehicles, the troopship, the *Awatea*, provided by the British authorities had not sufficient cargo space to take them. The war office was most anxious that the troops should go on this ship, as another opportunity to sail was not likely to occur for two months. Shortly before the expedition sailed, space for the vehicles unexpectedly became available in an Amercian ship and that ship sailed with the vehicles on November 4, but did not reach its destination before the outbreak of hostilities, as she was diverted by the United States naval authorities. Had she been allowed to follow her normal route, she would have reached Hong Kong before the Japanese forces or before the Japanese attack opened. This miscarriage was not in any way due to any fault or mistake of any officer of the Canadian forces or of any official of the Canadian government.

There was a small amount of free cargo space in the ship carrying the force and some twenty vehicles were sent to Vancouver to fill it. These, however, did not arrive before the ship sailed. Had more energy and initiative been shown by the quartermaster-general's branch, charged with the movement of the equipment for the force, the availability of this space would have been ascertained earlier and the vehicles would have arrived in time for loading on October 24; and there is, in my opinion, no good reason for thinking that, had they arrived at that time, they would not have been taken on board. There is no evidence, however, that the troops suffered through lack of them, or that they were not supplied at Hong Kong. The facts are fully examined in the appendix.

After an exhaustive inquiry at the hearings and a lengthy study of the evidence in the appendix of this report, I am able to add a general conclusion about the Hong Kong expedition as a whole.

In October, 1941, the Canadian military authorities undertook a task of considerable difficulty. Subject only to my observation concerning twenty of the two hundred and twelve vehicles of the mechanical transport, they performed that task well. Canada sent forward, in response to the British request, an expedition that was well-trained and (subject as aforesaid, in so far as shipping facilities allowed) well provided with equipment. In spite of the disaster that overtook it soon after its arrival in Hong Kong, it was an expedition of which Canada can and should be proud.

The war came upon us when we were unprepared for it. In such circumstances, recalling military history, one would perhaps not be greatly surprised to discover that even two years after its commencement some military enterprise had been undertaken which had proved to be ill conceived, or badly managed. The Hong Kong expedition falls under neither description.

All of which is most humbly submitted by
Your Excellency's most humble
obedient servant
L. P. Duff.

His Excellency,
The Governor General in Council,
Ottawa,
4th June, 1942.

With the consent of the house, Mr. Speaker, I would move:

That 1,500 copies in English and 500 copies in French of the report made by Right Hon. Sir Lyman P. Duff, G.C.M.G., a commissioner appointed to inquire into all matters respecting the dispatch of a Canadian expeditionary force to the crown colony of Hong Kong, be printed in blue book form and that standing order 64 be suspended in relation thereto.

Hon. R. B. HANSON (Leader of the Opposition): As this is to be on the record, I hardly see the point in printing it, although I have no great objection. I rise primarily to ask if the evidence will be tabled and made available. I have not had a copy of it, but I do not know that I am entitled to it.

Mr. MACKENZIE KING: There will probably be a demand for copies of the commissioner's report outside of the house as well as by members of parliament. The report and the appendix could be distributed in a more acceptable form if they were put out as a blue book. The report proper, which contains the conclusions I have read, will be printed in *Hansard,* and the report together with the appendix would be printed as a blue book. As to the evidence, I should have to inquire of the chief justice as to whether the evidence would be available to anyone. I assume that if it had been intended that it should be available, it would have been presented with the report. I believe it will not be available.

Mr. HANSON (York-Sunbury): I was surprised that it was not tendered with the report, because that is the usual practice with all royal commissions. I think it should be tabled.

Mr. MACKENZIE KING: Of necessity this particular inquiry conducted by the Chief Justice of Canada was in the nature of a secret inquiry. Any publication of the evidence would certainly disclose many military secrets which should not be disclosed.

Motion agreed to.

AIR TRAINING PLAN

ANNOUNCEMENT OF NEW AGREEMENT FOLLOWING OTTAWA CONFERENCES

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the Ottawa air training conference has now concluded its deliberations. It was in reality two conferences. The first conference embraced fourteen of the united nations and was primarily concerned with the coordination of air training in north America. Immediately following this conference the delegations of the United Kingdom, Australia and New Zealand joined with representatives of the Canadian government in a conference to negotiate a renewal of the British commonwealth air training agreement of 1939.

Although the existing agreement does not expire until March 31, 1943, it had been considered desirable to lose no time in making adequate provision for its extension. A new agreement was concluded this morning by the heads of the four delegations; the United Kingdom government being represented by the Right Hon. Harold Balfour; Canada, by my colleague, the Minister of National Defence for Air; Australia, by the Hon. Sir William Glasgow; New Zealand, by the Hon. Frank Langstone.

I should like now to read to the house the formal announcement of the new agreement which will replace the agreement signed on December 17, 1939. A similar announcement is being made in all four countries participating in the British commonwealth air training plan.

A new agreement for the renewal and expansion of the British commonwealth air training plan was reached this morning in Ottawa. This brings to a successful conclusion the deliberations of delegations from Canada, the United Kingdom, Australia and New Zealand, the four partners in the plan.

The new agreement replaces that which established the original British commonwealth air training plan on December 17, 1939.

Aircrews by the thousands, the product of that plan, now man the planes which in increasing numbers are carrying the war to the enemy. The plan has undergone changes and modifications. To meet changing war conditions its original scope was greatly increased during 1940. Moreover, because of the increased difficulty in training in combat areas, and because more and more aerodrome space has been required for operational squadrons, a considerable part of the Royal Air Force training organization previously functioning in England, has been transferred to this country by agreement with Canada.

The original British commonwealth air training plan agreement was timed to expire on March 31, 1943. The success of the plan, the necessity of adapting it to new developments, and the need for long-term planning, led the four participating governments to undertake the discussions for renewal of the agreement which has just been concluded.

The United Kingdom has been represented by the Right Honourable Harold Balfour, M.P., Parliamentary Under-Secretary of State for Air, and the Right Honourable Malcolm MacDonald, M.P., High Commissioner to Canada; Australia by the Honourable Sir William Glasgow, High Commissioner to Canada; New Zealand by the Honourable Frank Langstone, High Commissioner to Canada; and Canada by the Honourable C. G. Power, M.P., Minister of National Defence for Air and the Honourable J. L. Ralston, M.P., Minister of National Defence.

The new agreement will take effect on July 1, 1942, and will terminate on March 31, 1945. Basically the plan remains the same. The original objective, of training in the speediest and most effective manner, the maximum number of aircrews to meet the demands of war, is still its goal. On a greatly expanded scale the extensive facilities in Canada will continue to be used by all four parties to the agreement. Australia and New Zealand, whose domestic air training has been increased because of the extension of the war to the Pacific area, will endeavour to participate in the expanded plan much the same as before. Canada will continue to supply a substantial proportion of the trainees, whilst the total number of pupils sent under the United Kingdom quota, including men drawn from various parts of the empire and from the European members of the united nations, will be augmented. In sum, many more men will be trained in Canada under the new agreement than were provided for in the original plan, as expanded from time to time.

Under the new agreement, there will be complete coordination of air training in Canada. The existing schools of the Royal Air Force in Canada, already organized, will retain their identity, but will for purposes of administration continue to be integrated with those of the air training plan under the control of the Royal Canadian Air Force. Further Royal Air Force units subsequently established in the dominion, will come under the plan. As a result there will be a single pool of trained personnel ready to be drawn upon as needed.

The new agreement provides moreover that there will be an increase in the number of Royal Canadian Air Force squadrons overseas. In Canada, training on operational types will be on a scale much greater than hitherto. This is a notable development. It will mean that pupils will be trained in Canada, from the very beginning to the point where they will be ready to join Canadian squadrons, in action, against the enemy.

The new agreement provides for a redefinition of inter-governmental policy on many points relating to air training. Within the limitations of security these may be summarized as follows:

Finance: The costs of air training under the new agreement from July 1, 1942, to March 31, 1945, are estimated at almost one and one-half billion dollars. This will include all air training within Canada administered by the Dominion of Canada under the British commonwealth air training plan as expanded, including operational training units and R.A.F. transferred units.

The governments of Australia and New Zealand will each bear the cost of training of their respective pupils received into the plan. The United Kingdom will assume 50 per cent of the estimated cost less payments made by Australia and New Zealand. Canada will assume the remaining 50 per cent of the total as its share.

The United Kingdom's share of the costs will as far as practicable be in the form of a contribution of certain aircraft, engines, spare parts, technical equipment, bombs and ammunition and other supplies as required by the administrator of the plan.

Provisioning of aircraft and equipment. While the liability for providing equipment of the types referred to rests with the United Kingdom, the task of determining the nature of the equipment and the quantities required for agreed establishments will be the responsibility of Canada as administrator of the plan. In the past, this responsibility has, of course, rested largely with the United Kingdom in respect of the Royal Air Force schools and the change is, therefore, an indication of the greater degree of coordination of these schools to which reference has already been made. The willingness of the United Kingdom to entrust the Royal Canadian Air Force with increased responsibility in this important field of provisioning is a tribute to the Royal Canadian Air Force made by those best able to judge its efficiency in this regard.

Home war needs. Full allowance has been made, under the new agreement, to supply aircrews as necessary for the maintenance of any additional numbers of operational squadrons which may be retained in Canada for home defence.

Royal Air Force units in Canada. Royal Air Force units in Canada will be administered by the Royal Canadian Air Force in the same manner as units constituted under the British commonwealth air training plan. Units now established, will preserve their Royal Air Force identity; all new training capacity created at the request of the United Kingdom will come under the British commonwealth air training plan. Present arrangements for consultation with the United Kingdom air liaison mission will be retained.

Royal Air Force elementary flying training schools, now established in Canada will be civilianized on similar lines to British commonwealth air training plan elementary schools, except that the flying instructional staff and certain specialist ground instructional posts will normally be filled by Royal Air Force personnel in uniform.

Including the trainees from the United Nations and various parts of the empire, the number of trainees sent to Canada by the United Kingdom will be greatly increased.

Control and administration of Royal Canadian Air Force overseas. The agreement provides for important changes in the administration and control of Royal Canadian Air Force personnel overseas. Provision had already existed for consultation on major operational questions. There will now also be a much closer liaison with regard to all other questions affecting the employment of Canadian personnel.

Royal Canadian Air Force overseas headquarters is given general supervision over Royal Canadian Air Force personnel attached to the Royal Air Force, and, subject to operational expediency, may recall any officer or airman so attached to serve with the Royal Canadian Air Force. Also subject to operational expediency the concurrence of Royal Canadian Air Force overseas headquarters is to be obtained in the selection of commanding officers for Royal Canadian Air Force squadrons and in posting of Royal Canadian Air Force officers of the rank of wing commander and above.

The Royal Canadian Air Force personnel reception centre in the United Kingdom is to be functionally controlled by Royal Canadian Air Force overseas headquarters. A Royal Canadian Air Force establishment will be formed in England to which Royal Canadian Air Force officers and airmen awaiting disposal, or convalescing after illness, may be sent.

National Identification. Under both the original and the new agreement, the United Kingdom government undertakes that pupils of Canada, Australia and New Zealand, after training is completed, and so far as is practicable, shall be identified with their respective dominions. So far as Canada is concerned, the new agreement proposes to implement this purpose, as operational considerations permit, through the constitution overseas of squadrons and higher formations with all-Canadian personnel, commanded by Canadian officers; and through the policy of posting Canadian personnel to squadrons in which Canadians already are serving. At present, Canadian personnel is scattered in over 600 Royal Air Force units.

(1) Bomber Squadrons. A Canadian bomber group to consist of R.C.A.F. bomber squadrons is to be formed and will be under the command of R.C.A.F. officers. Canada will furnish the ground crews for these formations. In preparation for the formation of the Canadian bomber group, and in order that they may gain the necessary experience of group control, a number of R.C.A.F. officers will be appointed supernumerary to posts at group headquarters. In order to keep the implementation of this policy to form a Canadian bomber group under constant review, a Canadian bomber group progress committee will be set up by air ministry. There will be Canadian representation in this committee.

(2) Fighter Squadrons. It has been recognized that by reason of operational requirements, fighter squadrons must necessarily remain under the control of the commander-in-chief, R.A.F., fighter command. In pursuance, however, of the objective of national identification, R.C.A.F. fighter squadrons, so far as possible, will operate from stations which will be made R.C.A.F. stations, manned by Canadian staffs.

(3) Coastal Command Squadrons and Army Cooperation Squadrons Overseas. Canadian coastal command squadrons overseas are to be manned as far as possible with Canadian personnel. Army cooperation squadrons allotted to Canadian army formations will be Canadian squadrons.

Commissioning of Aircrew. The general principle is established that all pilots, observers, air bombers, and navigators, considered suitable according to the standards of their own countries, and who are recommended for commissions, will in fact be commissioned. The existing percentages governing the number of commissions given to wireless operator (air gunners) and air gunners will be maintained, but some flexibility will be permitted

to ensure that airmen in these categories with the necessary qualifications are not excluded from commissions on account of the quota.

Transfers Between Air Forces. The partners in the agreement will consider applications of individuals for transfer to the air forces of their own nationality.

The new agreement reaffirms and reinforces the determination and capacity of the nations of the British commonwealth to maintain the training of aircrews on a vast and increasing scale. It emphasises the role of Canada, as "the airdrome of democracy", in this task.

The original training agreement was conceived in a spirit of vigorous enterprise. The agreement concluded this morning will be carried through in the same spirit and will play its part in building up with certainty and with speed air forces of overwhelming and terrifying strength.

Here the agreed statement ends.

My colleague, the Minister of National Defence for Air, expects to be able to table in the house next week the report of the Ottawa air training conference, at which representatives of the united nations were present, and also the agreement for renewal of the British commonwealth air training plan, which was signed this morning.

I believe hon. members would wish me, on their behalf and on behalf of the Canadian people, to express a word of appreciation to the delegations from our sister nations of the British commonwealth upon the speedy and businesslike conclusion of the new agreement. Their fine achievement is the result of the frankest and most cordial deliberations. It was particularly appropriate that the United Kingdom delegation should have been presided over by the Right Honourable Harold Balfour, Parliamentary Under-Secretary of State for Air, who shared in the negotiation of the original agreement, and whose special knowledge and continuous association with the enterprise were of exceptional value to the conference.

The wisdom of establishing the gigantic British commonwealth air training plan in Canada has been abundantly demonstrated. The most severe test came quite early; it was in the spring and summer of 1940 when the prospect of immediate danger might well have discouraged long range planning for ultimate victory. But Canada never wavered in her belief in British courage and British resolution, and in ultimate victory. This belief found its expression in our determination not only to go ahead with the plan, but also to speed up and expand its development. This supreme act of faith was shared to the full by the United Kingdom, Australia and New Zealand, the other partners in the plan.

To-day, the governments of Australia and New Zealand find themselves in a position very similar to that of Britain in the summer of 1940. They have displayed like courage and resolution, and have made the same decision. The fact that, despite the approach of war to their own shores, Australia and New Zealand have decided to continue as active partners is another striking proof of the soundness of the original project. It is also a further earnest of the determination of their peoples to let nothing divert them from the main objective: the achievement of victory.

Hon. members will, I am sure, join with me in an expression of sincere and wholehearted appreciation of the part taken by the Minister of National Defence for Air as head of the Canadian delegation, and chairman of the conference. We all know how close, almost from its inception, the British commonwealth air training plan has been to his heart. He and his able civilian and service advisers have borne the brunt of Canada's share in negotiating the new agreement.

The gigantic and devastating raids over Germany, of the past few days, particularly those upon Cologne and Essen, have stirred the hearts of the peoples of the united nations. A very large proportion of the gallant young airmen from the United Kingdom, Canada, Australia and New Zealand, who took part in these raids, received their training in Canada in schools of the British commonwealth air training plan. There could be no more dramatic or convincing evidence of the magnitude and effectiveness of the plan.

I shall be availing myself of a particularly appropriate moment, if in concluding these remarks, I express on behalf of the parliament of Canada the unbounded admiration and appreciation of all its members of the gallant and important role which Canadian airmen so prominently played in the recent raids. Not only members of parliament but the Canadian people as a whole are filled with admiration of their achievements. We shall ever remember with gratitude what our brave young airmen are so valiantly doing to defend the security of their own Canadian homeland, and to preserve freedom in all parts of the world.

WAR RISK INSURANCE

APPOINTMENT OF JAMES MATSON AS SUPERVISOR

On the orders of the day:

Hon. J. L. ILSLEY (Minister of Finance): I wish to announce that the government has approved the appointment of Mr. James Matson, Montreal, manager of the Royal Insurance company in Canada and of the Liverpool, London and Globe Insurance company and associated companies in Canada, to act as supervisor of war damage insurance. This appointment cannot be confirmed until Bill 56, at present before the House of Commons, has been passed, but in the meantime no time is being lost to organize the scheme of war damage insurance and arrange for its being put into effect as soon as possible after the passage of the bill.

In view of recent events emphasizing the possibility of enemy attack, the government is taking all necessary steps to provide the facilities whereby war damage insurance may be written by the established fire insurance companies and their agents throughout Canada, as soon as possible after the enactment by parliament of the pending legislation. It should be pointed out that any steps taken at the present time, including the appointment of Mr. Matson, and any other personnel, is purely tentative at the moment, and it is hoped that the public will not hamper their organizational work by besieging them with applications for war damage insurance. No war damage insurance can be written under the scheme until the pending legislation has been passed, and after allowing a short period thereafter for completion of the organizational work. The government will announce in advance when the scheme is ready and applications for war damage insurance can be received. In the meantime, until the legislation is passed and the scheme is fully organized there is the promise of protection by the government to the extent indicated by clause 6 of Bill 56, namely:

> If any person, during the period between the twenty-fourth day of December, one thousand nine hundred and forty-one, and the thirtieth day after the commencement of this act, both inclusive, has sustained or sustains loss from war damage, and if he makes application to the minister on or before such thirtieth day aforesaid, to enter into a contract of insurance in respect of such property, the minister may enter into a contract of insurance in respect of such property effective from the beginning of the twenty-fourth day of December, one thousand nine hundred and forty-one, but the amount of the indemnity payable under any such contract in respect of war damage to such property during such period shall not exceed fifty thousand dollars.

LABOUR CONDITIONS

LAYING OFF OF MEN AT CANADIAN PACIFIC ANGUS SHOPS

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I have given the Minister of Munitions and Supply (Mr. Howe) notice of a question, but as he is not in the house I will state my question and it may be called to his attention. It arises out of a telegram received from John Thomson, secretary of the Canadian Pacific Railway System Federation, and has reference to what is described as a serious situation developing in the Canadian Pacific Railroad Angus shop at Montreal where Valentine tanks are being manufactured. The telegram indicates that 175 men will be laid off as from to-day and that more are to follow. The official reason given for the lay-off is the lack of necessary material and parts. I should like to have this drawn to the attention of the minister so that he may give the house an explanation on Monday.

CLOSING OF CANADIAN ASSOCIATED AIRCRAFT—DISCHARGE OF WORKERS

On the orders of the day:

Mr. J. W. NOSEWORTHY (York South): I sent to the Minister of Munitions and Supply notice of a question which I wish to ask, and probably the Minister of Labour would care to answer it. Have any steps been taken by the government to secure placement for the aircraft workers already discharged and about to be discharged by reason of the closing of Canadian Associated Aircraft Limited?

Mr. SPEAKER: That is a question that should be placed on the order paper.

HOUSE OF COMMONS

EXPEDITING OF BUSINESS—EXTENSION OF SITTINGS

On the orders of the day:

Mr. D. A. McNIVEN (Regina City): Last evening I referred to a matter which the Minister of Mines and Resources (Mr. Crerar), who was leading the house, was good enough to assure me that I might bring up to-day on the orders of the day. The rules of the house provide for the adjournment of the house at six o'clock on Wednesday evening, and early in this session a motion was passed providing for adjournment at six o'clock on Friday evening until the following Monday at three o'clock. This is the eightieth day of the session and the amount of business that remains on the order paper which has yet to

be considered is such that, in my opinion, we should now consider the advisability of a motion suspending the rule for the adjournment on Wednesday evenings at six o'clock so that we may sit on Wednesday evening as on other evenings, and further that we should at the same time rescind the motion that was passed at an earlier date in the session with respect to Friday evenings.

When speaking last evening I suggested that the house might sit on certain mornings, including Sundays, but I am willing to withdraw the suggestion so far as Sundays are concerned, out of consideration for your Scottish principles, Mr. Speaker, and likewise in consideration of the opinion of my spiritual adviser, the member for Fort William (Mr. McIvor). However, in making that withdrawal I am going to ask the government to consider favourably the making of provision for sittings on Monday mornings, Friday mornings and Saturday mornings at eleven o'clock. At the present time the house sits twenty-four hours a week; and it should be added that on Tuesdays, Wednesdays and Thursdays committees sit for a couple of hours in the morning. Hon. members have in addition to that their mail and departmental work to attend to.

The British House of Commons sits from 2.45 in the afternoon continuously until 11.45 in the evening on Mondays, Tuesdays, Wednesdays and Thursdays; on Friday it sits continuously from 11 in the morning until 4.30 in the afternoon. The House of Representatives in the United States sits from 12 noon I think until 6 in the evening, although the records indicate that the hour of adjournment is at the discretion of the Speaker, and that the Speaker may name the hour on the following day at which the house will again convene. This means that the British House of Commons is sitting 40½ hours a week, and the House of Representatives in the United States approximately 30 hours. We in this country ask labour in the munitions plants, in shipyards, in all kinds of war industries, to work anywhere from 55 to 70 hours a week. It seems to me that we as members of the House of Commons could well work a little longer, put in a few more hours in actual sittings, in order to provide the wherewithal for these men whom we expect to work as I have indicated.

The other day the Minister of Finance made reference to this matter during one of the committee meetings. He said: "It is high time that we had some regard for time. If we do not take it into consideration we shall be sitting here all summer." I appreciate fully that the Prime Minister and the members of the war cabinet are exceedingly busy men, and I would not for a moment make this suggestion if I thought it would require the continuous attendance in the house of the Prime Minister and members of the cabinet. But there are other members of the government whose estimates have not yet been considered, and during these extended hours of the session one minister after another could bring his estimates forward for discussion. It would expedite the business of the house; it would enable the war cabinet ministers to advance Canada's war effort, and it would permit members of the house to proceed to their homes at the earliest possible date.

I again refer to the Minister of Finance who the other day said: "There is something wrong with the House of Commons, and I am not able to tell what it is."

Custom, usage and tradition over a matter of seventy-five years have established the practice that there shall be no vote on Mondays or Fridays, and that committees, with the odd exception, shall not meet on either Mondays or Fridays. This practice has grown up with a view to the convenience of hon. members who find it possible to go home over the week-end.

I suggest that some of the things the Minister of Finance had in mind as being wrong with the House of Commons could be remedied if we were given to understand that there will be votes on Mondays and Fridays if necessary, and that committees will meet on Mondays and Fridays if necessary. And there should be some organization of the debates in the house. I believe that the senior whips and the whips of each group, if they were to meet, could so arrange future debates as largely to eliminate much of what the hon. member for Wellington North (Mr. Blair) spoke of the other afternoon.

As an alternative to the suggestion of morning sittings, possibly the Prime Minister would consider doing as they do in the British House of Commons—sit continuously through, and eliminate the dinner recess.

This institution, Mr. Speaker, the House of Commons, is one of the institutions of democracy for which this war is being fought, and we here are, for the time being, the custodians of its rights and its duties and its responsibilities. It becomes our immediate duty, our immediate responsibility, so to conduct this institution as to make it work, and work hard, for the people for whom it was created and designed.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am sure there will be general appreciation of what the hon. member for Regina City (Mr. McNiven) has said with respect to the desirability of expediting the work of the session so that hon. members will not be kept here for the greater part of the year. But there are some matters of which perhaps he has not taken as full an account as might be desirable. One is the fact that the business done by parliament is not to be considered as comprised simply in the time hon. members spend in the House of Commons. My hon. friend's remarks would seem to imply that most of the work we do, is done while sitting here. Work mostly lies in effective preparation in advance of what is reported here. My feeling is rather that the work of the session would be greatly shortened if hon. members came here well prepared on the subjects to be discussed and sought to confine their remarks to the relevant and most important points which should be developed.

But certainly it would be impossible for members of the government, and I think also for most members of the house, to do the kind of work that is expected of them, to have in their minds the information which is essential for purposes of debate without some time for preparation. Nor do I see how they could manage other duties, if they do not have the forenoons, at least, for purposes of conference, and to deal with correspondence. As far as the government is concerned, ministers must have opportunity to confer with the members of their own staffs, some chance to take up with them the different questions that are likely to come, if they are to be prepared to discuss them when they come to the house. They must have some opportunity as well to see members of the house on different matters. All this and much else is a part of the business of parliament and time must be found for it.

My hon. friend spoke about sitting on Wednesday and Friday nights. Towards the end of the session it is customary to sit on Wednesday evenings as well as Friday evenings, and also to begin sittings in the mornings and to sit on Saturdays. But the right time to begin extra sittings is when the committees of the house are through with their work and when we see the end of the session in sight. The only effect of starting morning sittings too soon and of sitting every day until eleven at night would be that hon. members would become so fatigued that the sittings almost certainly would tend to become more protracted than ever. The little break on a Wednesday and Friday evenings, the knowledge that the house will only be sitting in the afternoon on those days, enables most members so to adjust matters as to be more regular in their attendance upon the proceedings of the house and to come to the house more or less refreshed and with a feeling that they are able to concentrate on the business during the time the house is actually sitting.

I think my hon. friend is in error about the time taken by the British house in actual sittings. As a matter of fact I would cite the example of the British house as a reason why we should continue the practice we follow at the present time. The British house, as a matter of fact, since the war commenced, has very much abbreviated the time of its sittings. It has done so for the reason that there is so much more of very great importance that has to be considered that more time is required for study, reflection and preparation. Moreover the intensity of the strain on everyone is so much greater. The war itself, apart from ordinary business, puts a strain on all hon. members; the happenings from day to day are something which has to be taken into consideration, but the greatest strain of all is the exceptional importance of the questions which are being discussed, and the care that has to be taken in dealing precisely with every phase of important matters.

Since the war commenced the British house has been sitting on an average three days a week. I have the particulars here as to the length of the sittings in Britain since the war commenced. I gave them in part to the house once before; I repeat them now, since they may be of added interest to hon. members. I noticed my hon. friend's question of last night in *Hansard,* and therefore came prepared to answer him on this particular point this afternoon. I shall take the period after the 1940 election in this country, and the time taken by our sittings and compare it with that of the British house over a corresponding period. From May 21, 1940, to November 20, 1940, the British parliament had in all sixty-two sitting days. Our parliament in the complete session from May 16, 1940, to November 5, 1940, had sixty-one sitting days. The British parliament in a like period of time took one day longer than this parliament to transact its business; I think my hon. friend and all hon. members will agree that the British parliament has a much vaster

programme to cover, that the questions coming up from day to day are in degree at least, if not in kind, very much more significant than some we have to consider here. For the year following, during the complete session from November 21, 1940, to November 11, 1941, the British parliament sat 113 days in all. Here, in the complete session from November 7, 1940, to January 21, 1942, the Canadian parliament sat during 105 days. Let me give those figures again. For the first year there were sixty-two sitting days in England as against sixty-one here. The following year, which was last year, there were 113 sitting days in Britain, as against 105 in Canada. Now I come to this year. Since November 12, 1941, up to the present, the British parliament has sat for seventy-seven days. Our parliament, beginning only on January 22, not on November 12 as the British parliament did, has up to to-day sat for eighty days. In other words, we have in this time of war thus far sat this year three days longer than has the British House of Commons.

That, I think, affords a key as to how this existing situation may properly be met. It can only be met by what my hon. friend really has suggested, some organized effort; an arrangement made between the whips in the first instance and between the leaders of the parties, where that is also required, to have discussion in some way so limited that it will not take up an indefinite period of time. Take the present debate on the war appropriation bill. I am sure there might have been on the part of every group in the house an agreement that certain members would speak to certain questions, and all combined occupy a certain length of time. If there were an arrangement of that kind we should certainly get through with the business of this house in the same expeditious manner in which the business is dealt with in Britain. I see some hon. members smiling, but if it can be done in Britain certainly it ought to be possible here. I have no desire to limit anyone in regard to discussion, but I do suggest that some arrangement within the groups themselves as to the time that should be devoted to the discussion of different questions would materially shorten the time necessary to deal with the business of the session.

Mr. DOUGLAS (Weyburn): We could organize our members, but could the government organize the hon. member for Témiscouata (Mr. Pouliot)?

[Mr. Mackenzie King.]

Mr. MACKENZIE KING: I do not think my hon. friend ought to lay that task upon the government; it will have to be taken in hand by the entire house. I am very glad the hon. member for Regina City has brought up this question, because I know it is in the minds of all hon. members and will become increasingly so as we get on into the summer months. There is a large programme still ahead of us, but in my own mind I am perfectly satisfied that we would not be facilitating the business of the house if at this stage of the session we sat in the mornings, or if we altered our present arrangements, at least until after further progress has been made.

Hon. R. B. HANSON (Leader of the Opposition): I do not intend to enter into any extended discussion of this question, but there are some observations which I desire to make. The Prime Minister (Mr. Mackenzie King) has in some respects presented my own point of view. I do not, however, quite agree with him with respect to the debate on the war appropriation resolution when I think of the time taken by the Minister of National War Services (Mr. Thorson), for instance, in defeating and delaying the passage of his own estimates, and that without giving us the information requested. I suggest to the Prime Minister that he talk to that hon. gentleman. I have seen other ministers in this house delay their own estimates. I recall with a good deal of amusement a gentleman who in days gone by occupied the position of Minister of Agriculture, who required only an invitation to give the House of Commons a real lecture. I am not saying that in any malicious spirit at all; I just call attention to the situation and to the fact that all the delay has not been occasioned by those on this side of the house.

With respect to the observations made by the hon. member for Regina City (Mr. McNiven), I do not think it is quite fair to publish to the country the statement that we work only twenty-four hours a week while people in factories are asked to work sixty and sixty-five hours a week. That statement is definitely calculated to mislead the Canadian people. I wonder what the hon. gentleman knows about my working week.

Mr. McNIVEN: I rise to a point of order. The leader of the opposition (Mr. Hanson) has said that my statement was deliberately calculated to mislead. What I said was that the House of Commons sits twenty-four hours a week, and I enlarged upon that

by pointing out that members had to attend meetings of committees and perform other duties.

Mr. HANSON (York-Sunbury): I could not follow the hon. member's point of order, but if he takes exception to any imputation of motives against himself certainly I shall withdraw. But I will say this, that the statement which went forth from this house last night is calculated to lead the people of Canada to think that members of this House of Commons work only twenty-four hours a week, while we are calling upon labour in this country to work sixty, sixty-five and seventy hours a week.

Mr. McNIVEN: On a point of order, Mr. Speaker, the hon. gentleman has repeated exactly what he said before, that my statement last night was calculated to create a wrong impression. If he would only quote what I said, he would see that my statement was that the House of Commons sits for twenty-four hours each week.

Mr. SPEAKER: I think the leader of the opposition is entitled to draw his conclusions from what the hon. member said.

Mr. HANSON (York-Sunbury): I was giving an interpretation which I think was justified and which I believe will be the interpretation placed upon the words by most people in this country, namely, that we work only twenty-four hours a week in this house. Nothing could be worse than to send out to the people of Canada an impression of that kind. Everyone in this house, everyone in the press gallery, knows that for the most part members of this house work long, weary hours. I do not mind saying that when 6 o'clock comes on Friday evening I welcome the release. I work at least fifty-four hours a week, not to mention the work I may find myself obliged to do on an occasional Sunday. I have had to work on Sunday, and I do not want to do that unless it is really necessary. To convey the impression that we only work twenty-four hours a week is, in my humble opinion, calculated to bring this institution into disrepute, and the statement is not based on the facts. What is the working day? We get here at 9 o'clock in the morning and, with the exception of a limited lunch period and an hour or so for the dinner recess, we are here until 11 o'clock at night.

I try to slip away at 10.30 p.m. I go home, and go to bed, tired out, and many hon. members do the same. I agree we ought to get along with our business. Of course the solution of our difficulty is a better organization of the work in the House of Commons and of the committee of the whole. After all, however, we are dealing with important problems here. The people of the country expect us to do this work, and to analyse situations. They expect us to investigate the country's operations, especially in relation to the war.

I should hope there may be some better organization of the work. But I do say this, that if we are to be asked to come here in the morning, and to sit morning, afternoon and evening for six days in the week, how in the world are we going to do the other duties which of necessity devolve upon members of the House of Commons, and especially, I should think, upon members of the government? We just cannot do it, and it is not quite reasonable to expect it of us.

I sympathize with the hon. member who is a long way from home, and who does not get home often. Geography is against him as, perhaps to a more limited degree, it is against me. I am not sympathizing with hon. members from Quebec and Ontario, who live nearby and who slip away on Friday afternoons, so that we do not see them again until Monday night. This is no handicap for them.

An hon. MEMBER: And some of them Thursday night.

Mr. HANSON (York-Sunbury): Some of them Thursday night.

Mr. MacNICOL: Not I.

Mr. HANSON (York-Sunbury): No; that does not include my hon. friend the member for Davenport, because he sits here steadily. But I do suggest that we could, I believe, if we put our minds to it, limit the time in which we are engaged in the discussion of specific matters. I do not know what the government is going to do with the hon. member for Témiscouata (Mr. Pouliot); he is not my trouble or worry.

I shall endeavour to cooperate in every possible way with the government to expedite the business of the house, always having due regard to the public interest. I do not think I should go further than that. But I am not willing to work twelve hours a day for six days of the week, and then perhaps have to work on Sunday, too. I just cannot stand it, physically.

Mr. ANGUS MacINNIS (Vancouver East): Mr. Speaker, this group will be willing to cooperate with other hon. members in expediting the work of the house in every way possible. But if we look at the clock, and consider what we have done to-day, we shall have some idea

of how well we can kill time. It seems to me that for an hour—other hon. members may think differently—we have listened to the reading of a report which might as well have been tabled, printed, and distributed to the members. Then we have had this discussion, which has taken another half hour or so.

An hon MEMBER: An hour.

Mr. MacINNIS: No, not quite. So that almost two of the three hours we are to sit to-day have, in my opinion, been pretty well frittered away on non-essentials.

I am glad that both the Prime Minister (Mr. Mackenzie King) and the leader of the opposition (Mr. Hanson) referred to the statement made in the house yesterday evening by the hon. member for Regina City (Mr. McNiven). I believe his was a most unfortunate statement. As it appeared in the press this morning and as it was broadcast over the radio, it was made to appear that members were working only twenty-four hours a week. The hon. member for Regina City may have been speaking for himself, but certainly he was not speaking either for me or for members of this group. We are here at or before nine o'clock every morning, and we cannot find enough hours between that, and eleven o'clock at night when we leave, to attend to the work we have to do.

I believe it was the Prime Minister who said, and rightly, that the work an hon. member does is not all done in this chamber. This is where we either talk for a few hours, or are bored for five or six hours. But the largest part of a member's work is done in his office, in the departments or in committees, and every minute of our time is taken up.

We shall be glad to meet with representatives of the government, the opposition and the group to my left to do everything possible to carry out our work expeditiously and efficiently. But we should not forget that we are paid to come here to do the work for which we were elected.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, I think it is a good thing for us to express faith in parliament and in parliamentary institutions. There is altogether too much of a tendency on the part of people throughout the country and in the press to disparage the work of parliament. My impression, since coming here in the spring of 1936, is that this parliament does a difficult job, and does it well. That fact ought to be known throughout the country.

I do not believe the people realize the difficulties connected with governing this country. They do not appreciate the extent of our dominion, the widely varying conditions, and the fact that we are treading over unknown ways. Members have to cope with these conditions and struggle to reach some sort of unity. That takes time, and a great deal of energy.

I have all confidence in this parliament, and all confidence in democratic institutions. We ought to stop talking down, and start talking up.

With respect to the length of our day's work, I sympathize with what has been said by the hon. member for Vancouver East (Mr. MacInnis). I get here about eight o'clock in the morning, and I leave about eleven-twenty at night. I hardly have time to eat. Very few people realize how many problems come before a member of parliament in the course of a week. I have spent as much as twenty-five hours dealing with the problems of one man, and I am sure every hon. member has had similar experiences. Problems arise which simply have to be dealt with. Many of them require a great deal of thought, study, sympathy and care on the part of members and ministers.

As to the ministers, Mr. Speaker, I have found the ministers of the government sympathetic, earnest and willing to do the very best they can to govern well. That has been my experience. I believe if hon. members do their duty, they will be working with those ministers to help them govern well. If an hon. member does that, he will work much more than twenty-four hours a week.

We are passing through a time of transition. We are in an age of abundance, when all our experience has been in an age of scarcity. The result is that we do not know just exactly how to gauge ourselves. But we will find out how to carry on, and we will make this parliament everything we desire it to be.

I am prepared to cooperate with other members in expediting business.

FEED GRAINS

FREIGHT RATES FROM MIDDLE WEST TO EASTERN CANADA AND BRITISH COLUMBIA

On the orders of the day:

Mr. J. G. ROSS (Moose Jaw): I should like to ask a question of the Minister of Agriculture. When speaking the other day he intimated that the government was considering the continuance of the payment of freight rates on feed from the middle west to eastern Canada and to British Columbia. Has the

government made a decision on the point, and if so, is the minister ready to acquaint the house with that decision?

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, the government has made a decision in the matter, and has decided to continue for an indefinite period the freight rates paid on grain moving east, and moving west.

CANADIAN FORCES

PERSONNEL LISTED IN DEFENCE TELEPHONE DIRECTORY

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, may I put on *Hansard* the answers to two questions to which reference was made yesterday by the hon. member for Témiscouata (Mr. Pouliot) at page 3045 of *Hansard*. His first question, as reported at page 2292 of *Hansard*, was: "Of the total number of men enlisted from the thirteen hundred whose names appeared in the directory he held in his hand, how many were bilingual?" His second question was: "Out of that total number, how many officials both civil and military have been living in this country for the last five years?"

So far as the army is concerned, there are 871 names listed in the directory. Of these, 737 have resided in Canada during the past five years, and of these, 140 are bilingual and 597 are not bilingual. Three persons listed have not resided in Canada for the past five years, and of that number two are bilingual and one is not. One hundred and thirty-one persons whose names appear in the directory have been moved away from headquarters since the directory was prepared, and therefore details are not available.

Mr. NEILL: How much time was wasted collecting that information?

Mr. RALSTON: The calculation was that fifty hours' time would be taken in getting that information.

MAN-POWER ACCORDING TO AGE CLASSES—ENLISTMENTS, POSTPONEMENTS, REJECTIONS, ETC.

Mr. J. G. DIEFENBAKER (Lake Centre): Following up the answers that have just been given, I should like to ask the Minister of National War Services whether he is now in position to answer the several questions that appear at page 2967 of *Hansard* in connection with the mobilization of man-power and the survey of man-power according to age classes.

The understanding was that this information would be given before the debate on the mobilization act amendment next week. Is the minister in position to give that information, as well as that asked for in question No. 26 standing in my name on to-day's order paper, which has to do with the subject matter?

Hon. J. T. THORSON (Minister of National War Services): I do not recall having given any undertaking to obtain the information. I indicated the difficulties involved in getting it. I do not think I have anything to add to what I said on that occasion.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, June 4, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

Mr. BLACKMORE: Mr. Chairman, last evening the leader of the opposition (Mr. Hanson) made some adverse comment on the price ceiling which the minister had applied, criticizing it considerably. In the course of his remarks he involved social credit ideas and myself. When the minister answered him, he also involved our ideas and myself. At about fifteen minutes to eleven o'clock I rose and made such comments as I had time to make in defence of our views. I think it fitting that I say a little more this afternoon.

The belief was expressed by the minister and by the leader of the opposition that my group were not in favour of taxation or borrowing. I should like to place our position squarely and fairly before the members of the committee.

I did not say that we could carry on this war without borrowing and without taxation, and I have never said that. There is an error on page 3090 of *Hansard* which I think I should correct before it goes any further. It was probably due to a slip in my language. In answering the Minister of Mines and Resources (Mr. Crerar) I am reported as saying:

> I did not say I would not tax. I said, "without additional borrowing."

That should be, "without additional debt." Hon. members will find that that is exactly what I had said; I was just repeating. What I did say was that the new money could be got without debt or taxation.

I said that social credit proposes to use the national credit to provide money without additional debt, without additional taxation. That puts an entirely different meaning on the expression used. Hon. members will find that my interpretation is correct. I can understand how the minister interpreted it as he did, but he will find that that is the meaning. In the same passage as reported on page 68 of *Hansard* of November 13, 1940, I went on to say:

> Social Crediters maintain that in any well-organized and well-managed state with rich and varied resources, such as we have in Canada, the national credit can and should be used to provide fair prices and adequate home markets for all essential industries.

There are other passages which I believe ought to be read in this connection. I am doing this in order that the minister may realize that we are not so widely at variance in some respects. It is well that men do not misunderstand each other; in a time like this we need all the cooperation we can get. On page 70 of that same *Hansard* I quoted the remarks of Professor A. F. W. Plumptre, as they appeared in the October 5, 1940, *Financial Post*. I quote these words:

> The government can always "get money" because it may, as an alternative to borrowing or even to taxation, create the required funds. This it can easily do nowadays through the leadership of the central bank and the co-operation of the chartered banks. In this way 200 millions were created in this fashion last autumn.

Mr. ILSLEY: The amendment of the Social Credit party to the resolution reads—*Hansard*, 1940, page 68:

> And this house further regrets the failure of the government to adopt a monetary policy that would permit a maximum war effort without either increasing debt or reducing the standards of living below that necessary for maintaining maximum efficiency.

Does that not indicate that at that time the policy of my hon. friend's party was to conduct the war effort without increasing debt?

Mr. BLACKMORE: The minister's observation is quite logical, and it will require some explanation in order to make clear the meaning. May I just use an illustration to show the minister that that is not the exact interpretation that should be placed on the amendment. The minister will understand that if he had used the national credit to give the western farmer, we will say $1.15 a bushel for his wheat, the western farmer would have been able to buy a great deal more. He would have bought more goods, which would have yielded the government more income from taxation, from the tariff and from other means. He would have been better able to pay taxes to his own province, and he would have been in a better psoition to pay his machinery debts, his grocery debts and his other debts. In this way if the income of the people throughout the country were improved, as the amendment clearly indicates the social crediters conceive it should be improved, then the country would move progressively out of debt. It is not easy in a short time to explain in detail this matter to the minister. In the minds of social crediters it is perfectly feasible. The minister knows, without looking the matter up, that by refunding debts, he has paid off vast sums of money on the national debt in Canada while the war has been going on. He has paid those debts with more money which he has collected by taxation, and money that he has borrowed. If he had been using the technique of creating money, as far as he could do so safely, he would have been able to pay more of these debts with such money. I am sure he would have found out in other ways, as the great billion dollar gift which we made to Britain will indicate, if carefully studied and fully understood and interpreted, that the debt of the country could be progressively decreased while the war is going on without in any way interfering with the progress of the war. Whether we should be able to get through this titanic conflict with less debt than we started with, even under a social credit technique, I cannot just tell, but I should be quite sure that the debt would be far less than it will be under the system which the minister is following. Do I answer the minister sufficiently?

Mr. ILSLEY: Yes.

Mr. BLACKMORE: To explain fully, I would have to go into a great deal of detail. One simply cannot expound in a few words a whole monetary system and a new system of economics. May I read another passage, which I think has a bearing in this connection, from the same speech which I gave. As reported on page 71 of *Hansard* of the same date I stated:

> Inflation may be controlled, and there are several ways of doing this. We must remember first of all that inflation is a rise in prices which results from having more money in circulation than there are goods to be purchased. Inflation can be controlled by employing credit restriction. That is what this government has been doing for years and years. Another way is by taxing the people until they have no money to spend.

The minister will notice that in some respects I agree completely with his ideas with respect to warding off inflation.

This is a way very dear to the heart of the present government. Another way is by price fixing. This can be done by setting a point beyond which a commodity price cannot rise. It can be done by the government paying part of the cost of the article.

That brings in the principle of the subsidies which the minister is using.

Great Britain is spending £60,000,000 annually in order to keep down the prices of staple foods to the poor. This will be found on page 304 of *The Economist* of September 7. Great Britain is commencing to use the principle of the just price which was condemned when it was advocated by Social Crediters. And the degree to which Britain safely solves her economic problem will be the degree to which she accepts other principles of the Social Credit doctrine, just as sure as we are in this house.

I wish to put this before the minister so that it will help him to get a conception of the attitude we have toward his whole scheme of price control and his scheme of conducting the economy of Canada for fighting the war.

I endeavoured to illustrate to the leader of the opposition last evening the principle of the creation of money. Professor A. F. W. Plumptre points out it can be done. It was pointed out definitely in the meetings of the banking and commerce committee in 1939 that it can be done. I have, for instance, on page 29 of the report of these hearings this statement of Mr. Towers:

A government can find money in three ways. They may find it by taxation, or they may find it by borrowing the savings of the people, or they may find it by action which is allied with an expansive monetary policy,—

He goes on to say:

that is borrowing which creates additional money in the process.

That, from the bankers' point of view, is the way to do it. From the social crediters' point of view new money should not be borrowed. If the money can be created, social crediters urge it is a real asset to the state and should be regarded as such and be a clear addition to the revenues of the state to the extent that that creation can be carried on without causing inflation.

I endeavoured to illustrate to the leader of the opposition this power to create money by reference to the $26,000,000 which were created definitely in the last war by the Department of Finance under the Finance Act of 1914. This amount of $26,000,000 was used definitely for carrying on government business, probably paying expenses of the Canadian National Railways and other business just as ordinary revenue would be used. Those $26,000,000 were bills, from the printing press.

Social credit, as its name implies, deals with credit. It conceives that most of the money that is created should be created not as bills but as credit; only enough bills should be created to facilitate the ordinary hand-to-hand business of the country in carrying on its affairs. I want to point out to the leader of the opposition that created money is sound. I do not know whether he knows this or not, but he does not act as though he understood it. As reported in *Hansard* at page 3080 he spoke in a somewhat disparaging way of the idea of creating money. This is what he said:

This is not fiat money, I would have the hon. member for Lethbridge understand. This is not printing-press money. This is real, good, hard cash paid by the taxpayers of Canada, and it is going to be paid to certain persons.

The leader of the opposition seems to think that money which was created by the state could not be real, good, hard cash. If the leader of the opposition thinks that, he is completely in error.

I wish to go on with several other matters. I believe I have made quite clear the social credit concept; if I have not, I would appreciate it if the minister would ask me questions. The social credit concept is that in any country of rich resources there can be created a certain amount of money depending upon the goods-and-services-producing-and-consuming-power of the country. Either that money can be created by the banking system as a debt and be borrowed by the government, or it can be created by the government as a sheer asset of the state, as the quotation I read last night from Vickers' "Economic Tribulation" clearly shows the writer believed.

May I read a passage from another source which perhaps has escaped the minister's attention. This passage comes from the London *Times* of recent date and is quoted by the Montreal *Daily Herald* of June 4 in an editorial, "Will Protective Tariffs Disappear?" I am going to read the words from the editorial. I said last night, rather sternly I believe, that all progressive men everywhere are beginning to see the possibility of creating money. This passage will help to show that even the very orthodox and conservative London *Times* is beginning to see that possibility. The words are:

We are not likely to solve our post-war problems unless we make up our minds to treat money as a bookkeeping technique to facilitate the production and exchange of goods and services, not as something the supply of which sets a fixed upper limit to our productive activities.

May I digress for a moment to point this out. Social credit, as I will develop it if my time permits, conceives that the credit of the state may be used greatly to increase the productive capacity and production of the state—which is an idea that is conveyed definitely by the words I have just read. To continue the quotation:

> It plays much the same part in the economic life as railway tickets play in transportation. It is dishonesty, akin to inflation, to issue tickets for more trains than can be run. It is absurd to cut down the railway service because the ticket office has run short of tickets.

That is precisely the concept of social credit.

When we were talking in 1939 there was a vast amount of productive capacity and actual production in Canada which was not being used. We could have created enough tickets, enough money to have caused these productive capacities to come into use and all of these idle goods to be used. As an illustration of what might have been done, just think of the lumber which we were not having very much use for during six, eight or ten months; imagine what would have been achieved by means of a credit expansion which would have resulted in houses being built all over Canada and would have kept the lumber mills busy nine months of that year before they were brought into operation by the demand of war. What a change there would have been in the social conditions among the Canadian people! How much stronger we would have been to fight the war! Such credit expansion would have been an example of tickets created for the goods that were already in Canadian lumber yards—not enough tickets to bring about a scarcity of goods, but merely to stimulate, to motivate production to the highest degree possible. If at any time I do not make myself clear, I shall appreciate it if the minister will let me know.

I have never advocated a limitless creation of money. I hope that never again in this house will the minister or the leader of the opposition or anyone else accuse us even by implication of advocating any such thing. It was the favourite device of Mr. Dunning to say that sort of thing, apparently side-stepping the issue and getting people off on the wrong track. But that is not fair; it is not in the interests of the country. Reference was made last night in two places to unlimited creation of money. As reported at page 3077 of *Hansard* the minister used these words:

> Sounder than the creation of unlimited sums of new money.

We have never advocated that, under any circumstances anywhere since we came to the house. Again as reported at page 3078 he spoke of "the unlimited creation of money." That is a misinterpretation of our ideas. This is the rule: The amount of money that can be created and used, as I have said over and over again, depends upon the goods-and-services producing-and-consuming power of the state. That is the simplest way in which it can be expressed in general terms. It is a fairly accurate way of determining the amount of money that can be created and used. The minister himself has that concept; only he has not our concept of "creating" money; he has the concept of the degree to which the "banks" can create money without causing inflation.

Mr. ILSLEY: May I say this for the sake of clarification. The hon. gentleman seems to argue part of the time that we should run the banks. That is the Cooperative Commonwealth Federation policy. He seems to object to the private banking system. Instead of allowing the banks a profit on the carrying on of banking activities, he suggests that the government should carry them on; and, as presumably he would say, that the government should have the profit themselves. Is that the position of social credit?

Mr. BLACKMORE: No; that is not quite correct. The social credit movement believes that the banks can work for the government. The banks do not necessarily belong to the government. It may be quite all right for the government to buy the whole banking system. We would certainly never favour having the government seize it or cause any harm to the bankers. We do believe in private enterprise. That, the minister will find, is the distinctive difference between our movement and the socialistic movement, which seems to favour government ownership and direction. We believe it is better for the country to have private ownership.

Mr. ILSLEY: I may become, I am afraid, a minister who delays his own estimates, but I should like to ask the hon. gentleman this question. If the private banks, the commercial banks, are to continue in private hands and continue lending money, are they not creating money in the sense which the hon. gentleman implies, and therefore perpetuating what he says should not be allowed to continue? Bear in mind that the hon. gentleman said a few minutes ago that the creation of money should be a state activity, that money is an asset to the country and should be created by the state. Is that position consistent with the position that the private banking system should be allowed to continue?

Mr. BLACKMORE: First, let me put it in this way. The Bank of Canada prints bills

to-day, and the government theoretically borrows those bills from the Bank of Canada, thereby creating a debt to the Bank of Canada, which is a debt to the government itself inasmuch as the Bank of Canada is a government institution, a branch of the minister's own department, as I understand. In that respect, the government can obtain bills and perhaps credit at a very low rate. It should be able to obtain it at cost of printing, cost of bookkeeping and cost of management.

Mr. ILSLEY: What about cost of interest on deposits?

Mr. BLACKMORE: We shall come to that.

Mr. ILSLEY: That is part of the costs.

Mr. BLACKMORE: I was dealing first of all with the central bank.

Mr. GILLIS: I make no pretence at being able to follow the hon. gentleman all the way through, but one thing strikes me. How will you control the issuing of currency or tickets when your productive capacity is in the hands of private enterprise, when it is in someone else's hands and someone else controls it? On what are you going to base the issuing of currency?

Mr. BLACKMORE: I do not want to keep anyone from asking any questions, and perhaps the minister will allow me to answer the hon. member's question first. It would be better, however, if all questions could be deferred until I get through.

Mr. GILLIS: I asked only one question.

Mr. BLACKMORE: It would be better if the hon. member would bring that up at the end, because to answer the minister's searching questions is enough for any hon. member, if the situation is to be made clear for the record. Perhaps my hon. friend will bring it up later.

Answering the minister's question, I would point out in the first place that I was dealing with the central banking function, and theoretically the primary business of the central bank is not paying interest on deposits.

Mr. ILSLEY: No.

Mr. BLACKMORE: When you come to the secondary or chartered banks you are dealing with another problem. The chartered bank has to pay interest on deposits. This causes the private or chartered bank to incur definite costs. Perhaps it costs them 3 per cent.

Mr. MacNICOL: They pay only one and a half.

Mr. BLACKMORE: I said "perhaps", for the reason that there is a good deal of discussion about the matter. If hon. members will read the proceedings of the banking and commerce committee of 1939, they will see how difficult the question was then, and we in this house can hardly hope to settle it if that committee were unable to. But take 3 per cent as the rate and assume that it costs the Bank of Montreal 3 per cent to lend money to the people, taking into consideration what it pays for its own deposits. The social credit position would be something like this. Farmers are producing the very sinews of war, such as milk, honey, beef, wool and so on, and surely they should never be called upon to pay 6 and 7 per cent. That is adding to their costs; it is adding to the costs both to the community and to the government. It is unsound. Social credit would say that probably 2 per cent or even less is all that the farmer should ever have to pay for production loans. The question would be raised, how would the difference be made up to the bank? How would the bank of Montreal be saved from loss?

Mr. MacNICOL: It would be the difference between three and two.

Mr. BLACKMORE: Yes, a loss of one per cent. I think it will come to be realized as the years go by that the people can afford to have the government subsidize the bank on that loan. If it costs the bank 3 per cent and the government wants the farmer to have it at 2 per cent, the government can afford to pay the 1 per cent; that is, provided the loan is for bona fide production. The increased business will rapidly increase the profits of the bank, which again is an important item. The minister as he realizes has opened up a highly technical question. That is perfectly all right, but it is one which it is difficult to deal with on the floor of the house, one which could be much better dealt with in the banking and commerce committee.

Mr. ILSLEY: That is an additional subsidy for agriculture; that is all.

Mr. BLACKMORE: That is right.

Mr. ILSLEY: There is nothing very difficult about that.

Mr. BLACKMORE: That is true. But it is a new idea that I find people do not apprehend quickly.

Mr. ILSLEY: We are familiar with it.

Mr. BLACKMORE: The minister has raised an important point After all is said and done, if the production of wool, which is

disturbing people greatly to-day in Canada, is so vital to the welfare of Canada, why should the producers of wool be penalized by high interest rates? Looked at logically it never can be sound economics.

I think I have said enough on that point. If the minister has no further questions, I shall now turn aside to deal with the question of the hon. member for Cape Breton South before we lose track of him. The hon. member asked in effect: If the government creates through the Bank of Canada a one dollar bill which gives a claim to a bushel of wheat, how can the government create the one dollar bill giving that claim when the government does not possess the bushel of wheat?

Well, the bank of Montreal and every other chartered bank in Canada were doing that thing for scores of years. They were able to do it; they are able to do it now. When the dominion government created a one dollar bill under the Finance Act of 1914 the dominion did it; they do it now through the Bank of Canada, and that bill is a claim to a dollar's worth of fish, or a dollar's worth of coal—

Mr. GILLIS: Then there is no necessity to change, if they are already doing it.

Mr. BLACKMORE: I am merely answering the hon. member's question.

Mr. GILLIS: That is not answering it. The hon. member's argument is they are doing it and have been doing it. My understanding of his argument was that he desires a change whereby the government would take over the control of the currency of the country, based on the productive capacity of the country, and issue sufficient credit to keep things moving, as it were.

Mr. BLACKMORE: To effect exchanges.

Mr. GILLIS: My question is, if your tickets are based on the productive capacity of the country, you still have no power to move those who control private enterprise as it is now; they are still in a position to keep the people at poverty level and keep the government in the position where they do not have anything to issue tickets against. As I see it, you must take out of the hands of private enterprise the machinery of production so that you can work your credits and the machinery of production in coordination; you must have control over that.

Mr. BLACKMORE: No. You exercise a certain amount of control over industry in this way: In the first place the power of legal tender which the government possesses enables the government to create a credit instrument which is a claim to the production of any productive enterprise under the jurisdiction of that government. That is a principle which cannot be gainsaid. That is point No. 1. It matters not who owns the productive enterprise.

Point No. 2 is: Any industry is in business for a profit. It does not do an industry, say a coal-mining company, any good to own a coal mine if it cannot produce coal and sell it. The result is that the all-important matters to the coal business are markets and price. When the government creates a dollar bill it creates the means of buying the coal, providing a market, also the means of establishing price.

An hon. MEMBER: Will the—

Mr. BLACKMORE: May I ask hon. members not to divert me from my discussion any more at the present time. I will go into this with the greatest detail, but I should like to finish the speech I am giving and then answer questions. It is not that I have any doubt of the soundness of what I advocate—

Mr. MacNICOL: You are thoroughly convinced yourself.

Mr. BLACKMORE: Utterly, and I think by reference to the principles and practice to-day I can establish the soundness of what I have said.

I was saying that the amount of money that the government can create depends on the goods-and-services-producing-and-consuming-power of the country over which the government has jurisdiction.

Mr. ILSLEY: That is a pretty indefinite criterion.

Mr. BLACKMORE: You cannot put it any other way; it is a general principle. If you had opportunity to go into details you would find it completely sound. I held that in the speech which I gave on March 8, 1938, when I moved a vote of want of confidence in the government. I merely recall that to show that our concept is permanent and stable. We have never advocated and are not advocating the creation of more money than the goods and services of the country justify; not enough to cause inflation.

Mr. ILSLEY: If the social credit party is not against borrowing and is not against taxing and is not against private ownership, then the difference between the social credit party and the government comes down to this, just a difference in judgment as to how much money should be issued from time to time.

Mr. BLACKMORE: The minister is coming very close to it. The first great difference between the social credit concept and the gov-

ernment concept is this: social credit says that all the money in the state, all that it is possible to create, fundamentally is the property of the people in the state and should be owned by the government to be used for the welfare of the state.

Mr. ILSLEY: So do we. Of course the monetary policy should be the policy that is in the interest of the welfare of the state. There is no difference between the social credit party and the government there.

Mr. BLACKMORE: Only that the social credit party says that new money should be issued as a clear asset to the state, should be a definite addition to the revenues of the state.

Mr. NOSEWORTHY: Even the Conservatives did that.

Mr. BLACKMORE: I am not saying they did not.

Mr. ILSLEY: What does that mean?

Mr. BLACKMORE: Take as an illustration the $26,000,000 we talked of last night. In the last war $26,000,000 of new money was created outright by the Department of Finance, and spent, just as though it had been borrowed or as though it had been taxed. The result was the $26,000,000 was definitely added to the revenue of the country, but it was revenue which did not entail a tax on the people and did not create a debt which would go on through generations.

Mr. ILSLEY: The reason why the hon. gentleman takes that $26,000,000 is that at that time there was a gold standard, which was departed from to the extent that that $26,000,000 was created. To-day there is no gold standard, and to the extent that we borrow from the Bank of Canada, as we do to a limited extent, are we not doing exactly what that government did when it issued the $26,000,000?

Mr. BLACKMORE: I think you are going into debt.

Mr. ILSLEY: We are not going into debt when we borrow from the Bank of Canada because we are the Bank of Canada. Therefore, the difference between the hon. gentleman and myself comes down to this, does it not, merely a matter of judgment as to how far we should go in borrowing from the Bank of Canada?

Mr. BLACKMORE: I think so.

Mr. ILSLEY: I think the hon. gentleman does not say we should go the whole length. He does not say we should have borrowed $1,000,000,000 in 1940 and $2,000,000,000 in 1941 and $3,000,000,000 in 1942. He says now he does not mean that, and his party does not mean that. He believes we should go on borrowing otherwise than from the Bank of Canada, which is not borrowing at all but which is the creation of money. He says some money should be created, so the issue seems to have become just a matter of judgment as to degree. That is a very small issue, is it not?

Mr. BLACKMORE: The minister really should be on the other side of the house.

Mr. ILSLEY: I was going to suggest that perhaps we could isolate these other people a little more, and the hon. gentleman might join us.

Mr. BLACKMORE: There is just one point that needs to be stressed right here. Of course this is just on the first fundamental principle of social credit. There are three great principles. The first is the creation of money. The second is the just price, and the government is far, far away from us on that. The third is a policy of financing consumption, and the government is a considerable distance from us on that; in fact it is far away from us on that.

Mr. ILSLEY: What was the first one?

Mr. BLACKMORE: The first one is the creation of money.

Mr. ILSLEY: I think that is reduced to a difference of opinion as to amount. The second one was the just price. That is a matter of a difference of opinion as to what is a just price. The hon. gentleman is advocating high prices all the time. There is nothing very difficult about that. He has a great many friends outside his own party on that. Then the third one was a subsidy to consumers. Well, there again there is nothing very fundamental about that, unless he means that there should be a general subsidy of so much to all consumers, regardless of their need, which I do not believe would be a rational policy.

Mr. BLACKMORE: It may come ultimately. Just to keep the record straight, let us put it in this way. The government's policy, if I interpret it aright as I have listened to it, has been to raise all that can be raised by taxation.

Mr. ILSLEY: Absolutely.

Mr. BLACKMORE: And all that is possible by borrowing.

Mr. ILSLEY: Yes.

Mr. BLACKMORE: Whether or not the government creates any money in addition, I do not know. Social credit goes at it from the other angle. Social credit will say, create all that it is safe to create, and then—

Mr. MacNICOL: Is that not a matter of judgment, too?

Mr. BLACKMORE: Yes.

Mr. ILSLEY: We believe it would be quite unsafe to go any further than we have gone, in view of the danger of inflation. We do not believe we could control inflation by our price-ceiling policy if we went much further in the issue of money, because it would burst the price ceiling. If the price ceiling, by some miracle, should hold, then it would mean the indefinite continuance of the price ceiling after the war, because there would be such a volume of bank credit or currency or both that the removal of the price ceiling would be impossible, because prices would soar so desperately.

Mr. HANSON (York-Sunbury): The whole theory means inflation; it cannot mean anything else.

Mr. ILSLEY: The hon. gentleman denies that his policy means inflation. We argue and believe that it does, if it goes much beyond what we are doing anyway, or probably if it goes at all beyond what we are doing anyway. That is what we believe. We get the best advice we can; we exercise the best judgment we can, and our judgment tells us that we want to withdraw purchasing power from the consumers of this country. We want desperately to do that, because of the terrific upward pressure on the price level if we do not.

Mr. BLACKMORE: I appreciate the minister's position, and I sympathize with him.

Mr. ILSLEY: Excuse me; there is just one more thing. We think the importance of the objective is so great that it is worth paying a price for it, a price we do not like; that is, the increase of internal debt and the increased interest burden on the people. While that does not impoverish the country, because it is merely the payment of money from one set of Canadians to another set of Canadians, either in this generation or in future generations, we do not think that is a desirable thing to do. But we are so much impressed with the dangers of inflation, and with the inevitability of inflation if we depart from the policy that we are following, that we are prepared to pay the price by increasing the interest burden.

Mr. BLACKMORE: I think the minister has put it very well.

I wish to go and discuss the question of inflation. It is quite clear, is it not that the whole discussion is going to centre round what constitutes inflation?

Mr. ILSLEY: No.

Mr. BLACKMORE: We have pretty well reached that point, have we not?

Mr. NOSEWORTHY: That also is a matter of opinion.

Mr. ILSLEY: What constitutes inflation is one point as to which there should not be any disagreement.

Mr. BLACKMORE: The minister would agree, I think, that it comes about as a result of the scarcity of goods as compared with the amount of money in circulation?

Mr. ILSLEY: I mean an increase in prices due to the issuance of money.

Mr. BLACKMORE: Would it not be just as true to say inflation is an increase in price due to the fact that there are less goods than there is money?

Mr. ILSLEY: The hon. gentleman is not logical there; he is ascribing a reason which may be contentious. I thought he was dealing with a definition. I thought he was attempting to describe inflation. I do not think there is any difference between us on that.

Mr. BLACKMORE: There is just this difference. There has been, for a considerable length of time, propaganda going out through the banks in an effort to convey to people the idea that if the government should print a one dollar bill, that is inflation. It is not inflation at all unless there is a rise in price. What we need to do all over the continent of north America in this generation is to get definitely in mind the fact that there is no inflation unless there is a rise in price, and a rise in price does not necessarily occur unless there is a shortage of goods. Once that is granted we are on a basis from which we can reason, and we will go forward during the rest of the period on that basis.

The important thing in dealing with inflation is first of all to increase your production, both in amount and in variety. The next thing is to keep your price down, perhaps by means other than price ceilings, though the price ceiling is one way of keeping prices down. Do I make that quite clear, and does the minister agree with me there?

Mr. FURNISS: What if you have not enough men to create the goods?

The ACTING CHAIRMAN (Mr. Bradette): The hon. gentleman has now spoken for forty minutes, and in addition I have allowed him twenty-five minutes for answering questions and for interruptions.

Mr. DIEFENBAKER: I should like to ask the minister a few questions in connection with this item, because I believe no more important matter will come before the house this session. To-day we find ourselves in this position, that practically our entire economic life has become the monopoly of a board, more or less independent of parliament, with power to put through its own legislation without reference to parliament. The item with which we are dealing has to do with administration, as well as the payment of subsidies. I am not one of those who criticize what has been done. When the matter was first introduced in parliament I criticized the method of its introduction, namely by order in council, regimenting as it did and as it does now the economic life of this dominion. I felt then, and I feel now, that it should have been brought before parliament. But one part of it must be brought before parliament. that is the cost of the subsidies that are being paid in connection with the operation of the plan, and the cost of administration of the price ceiling. Recently I endeavoured to secure some information with regard to these costs. The estimate for the coming year is $50,000,000. That estimate must be based upon the experience that has been gained since the inception of the scheme. On May 28 I asked this question:

What is the total amount that has been disbursed for (a) domestic subsidies, (b) import subsidies since the commencement of price ceiling operations?

The answer was given that the sum of approximately $4,000,000 had been expended to date. Then I asked a further question, and it is necessary to have the answer to that question in order to understand the extent of the expenditures which may be made in connection with the operation of this price ceiling. I asked:

2. What is the total amount as yet unpaid now due or accruing due and for which the government is liable, (a) for domestic subsidies, (b) for import subsidies?

I point out to the committee that while the answer given technically follows the question asked, it is not sufficient for the committee or for the people of Canada. It is as follows:

Importers or other claimants are allowed ninety days in which to file their claims. All claims are carefully examined, and in some cases disallowed, and in others substantially reduced. It is therefore impossible to state what amounts of subsidies are due or accrued at any given date.

That does not necessarily follow. I think we have a right to that information, and I am sure the minister is now in a position to give it. He must now be ready to answer the question: What is the total number of claims filed to date for domestic and import subsidies, and if those claims were allowed, how much would be disbursed? He should be in a position now to give that information. The estimate for the next year is $50,000,000; parliament has a right to that information.

Next I wish to ask the minister one or two questions in regard to enforcement. True enough, the patriotic element enters into the equation. I remember well, along with other hon. members, receiving a letter from the minister dated March 26, 1942, wherein he forwarded to us a copy of an address he had given in connection with the price ceiling. He added these words:

It always worries me when any hon. member makes slighting reference to something our boards have done in enforcing our ceiling policies. I do not want to discourage criticism, but I do want members making this criticism to do so with a deep sense of responsibility.

If the minister asked the members to take that position, he has a right to ask. At the same time, however, he owes a duty to the committee to give full information with respect to possible expenditures during the coming year in connection with subsidies, and also with respect to what expenditures would have been to date on the basis of the claims already filed.

Also, in connection with the $4,000,000 already expended I should like to know the total value of goods purchased in respect of which the operation of the price ceiling has necessitated the paying of subsidies to the amount of $4,000,000 to date. That information would give some indication as to what the expenditures will be during the coming year.

In connection with enforcement I would ask the minister how many prosecutions have taken place since the inception of the scheme. How many prosecutions are anticipated at the present time? How many investigations are now being proceeded with? I do not wish to delay the committee unduly, but I suggest we should have this information.

Mr. ILSLEY: With respect to value, does the hon. member mean the value to the importer or to the consumer?

Mr. DIEFENBAKER: To the importer. If the minister would answer the question I have already asked, I would ask two or three more arising from his answers. I suggest we ought to have that information now.

Mr. ILSLEY: I do not have it here. It would take until Monday to get all this information.

Mr. DIEFENBAKER: Surely the minister is in a position to inform the committee upon what he bases his expenditure for the next year at $50,000,000, in connection with subsidies?

Mr. ILSLEY: I made it clear that it was possible to make an estimate, but I also pointed out that this $50,000,000 is not a close estimate. There is no way of knowing.

Mr. DIEFENBAKER: That is just the point I am making. If you go into the United States you find that economists over there say that during the present year Canada will have to expend $150,000,000 or possibly more than that if it intends to uphold its price ceiling.

Mr. ILSLEY: How do they know?

Mr. DIEFENBAKER: The minister himself cannot give us any indication. He says the basis of experience up to the present time—

Mr. ILSLEY: Yes, I say that.

Mr. DIEFENBAKER: —is not sufficient to say to the house and to the country what the expenditures will be during the coming year.

Mr. ILSLEY: That is correct; I do not know.

Mr. DIEFENBAKER: Can the minister tell us now how much would be expended in settlement of the claims at present before the department?

Mr. ILSLEY: I can get it, but not in fifteen minutes.

Mr. DIEFENBAKER: I asked the question three or four days ago.

Mr. ILSLEY: Not that question.

Mr. DIEFENBAKER: Yes, on the order paper; and it was stood over. I asked the question on June 2, and the Minister of Finance said that it should stand over and is still unanswered. That is one piece of information which the committee has a right to expect, and which it must have if there is to be an intelligent discussion respecting the operation of subsidies.

Mr. BLACKMORE: Would the hon. member permit a question?

Mr. DIEFENBAKER: At the moment I am asking questions. This is one of the most important matters concerning which we must have information. Without it all the discussion respecting social credit and inflation has no purpose at all. This is information the committee wishes to get.

Then, speaking to the leader of the opposition yesterday the minister said the best recommendation for the scheme was the fact that it had been adopted by the United States. The inference was left that the scheme was something new, and that it had been inaugurated for the first time by the Minister of Finance in Canada. The fact is that this is Mr. Bernard Baruch's scheme. It was recommended a long time ago in the United States, and was never adopted. It preferred the Henderson scheme.

Mr. ILSLEY: I did not say I invented it.

Mr. DIEFENBAKER: But the minister left the impression that this was his own scheme, and that any criticism of it was answered by the fact that it had been adopted by the United States.

The Baruch scheme sets out certain things which must be done in order to make the scheme a success. He says that prices, rents, wages, commission fees and interest rates—in short the price of every item of goods or services should not be permitted to rise above the maximum of that date. They should fluctuate below this ceiling.

Mr. ILSLEY: Then our scheme is not the same as the Baruch scheme.

Mr. DIEFENBAKER: Just a moment; I was coming to that. Everything was adopted, with the exception of that part relating to interest rates. Would the minister explain why that particular part of the scheme was not followed?

Mr. ILSLEY: Does the hon. member want an answer now?

Mr. DIEFENBAKER: Yes.

Mr. ILSLEY: The reason is that the risk varies so greatly that we did not think we could put a price ceiling on it. Money is worth 6 per cent when it is lent on one class of risk and only 3 per cent when it is lent on another. You cannot do that unless you made it 10 per cent, 24 per cent or something like that. You could have a ceiling such as that, but it would completely prevent lending in many places where lending should take place. I may say that the matter was not overlooked.

Mr. DIEFENBAKER: Generally speaking, I think the discussion this afternoon has been far removed from the item before the committee. I believe it was suggested by the minister last November that managerial

and executive salaries, directors fees, et cetera, would be controlled. Have they been controlled?

Mr. ILSLEY: They certainly have.

Mr. DIEFENBAKER: Is there complete control in that regard?

Mr. ILSLEY: As complete as we can make it without a terrible upset. Nothing has given us more trouble in our ceiling policy than our determination to control salaries. The hon. member heard what was said last night by the hon. member for St. Paul's (Mr. Ross). We have set up a salary controller and provided a board headed by Mr. Justice Hyndman to advise him. We have put an enormous amount of work on drafting orders in council and amendments to orders in council for the purpose of controlling salaries.

Mr. DIEFENBAKER: What is the control over directors' fees?

Mr. ILSLEY: The order in council reads:

Unless otherwise permitted by paragraphs 3, 4 and 5 hereof, no employer shall, on or after November 7, 1941:

(c) pay fees to a director of a company at a rate in excess of the rate of fees paid to such director in the twelve months ending November 6, 1941, provided, however, that a newly appointed director of a company may be paid fees at the same rate as that paid to other directors of the said company during the twelve months ending November 6, 1941, and the payment thereof to such newly appointed director shall not be regarded as an increase in the salary of the said director for the purposes of this order.

Mr. DIEFENBAKER: Can the minister give an estimate of how much has been expended to date for subsidies, assuming that all claims that have been filed are paid in full? Surely that estimate could be given within one or two million dollars.

Mr. ILSLEY: The amount paid up to and including the week ended June 2, 1942, was $4,482,308.88. There were 9,039 claims filed, of which 7,746 were for milk. The secretary of the board tells me that claims are paid promptly. The hon. member wanted an estimate of the amounts that have not been paid to date?

Mr. DIEFENBAKER: Yes.

Mr. ILSLEY: It would be most unsatisfactory to make an estimate.

Mr. DIEFENBAKER: Can the minister give one within a million dollars?

Mr. ILSLEY: The secretary tells me that it would be less than a million dollars.

Mr. HANSON (York-Sunbury): Cotton goods are under the price ceiling, but we all know that the cotton companies are faced with having to replace their stocks of raw cotton at greatly increased prices. I am not certain, but I believe cotton has gone up to 18 cents a pound in the United States.

Mr. ILSLEY: That much at least.

Mr. HANSON (York-Sunbury): This means that the cost is doubled as compared with the cost of cotton that was fabricated before the ceiling went into effect. Subsidies on this will run into the millions.

Mr. ILSLEY: It depends upon the arrangements made with the cotton companies.

Mr. HANSON (York-Sunbury): These companies import millions of pounds every year, and the consumption of cotton textiles will certainly not decrease. The needs for the army may be decreased slightly if the summer uniforms have been. Will not this one item run into millions of dollars?

Mr. ILSLEY: If we had to pay the difference between the present cost of cotton and that paid for goods sold during the basic period, it would amount to a considerable amount of money. If the hon. gentleman will look up the speech I made on subsidies, which I mentioned last night, he will see that there is a limiting factor. We will not subsidize a company into the excess profits tax category. This means that the Canadian companies will have to bear a large part of the additional cost.

Mr. HANSON (York-Sunbury): The intention is to squeeze them. I do not know whether that is the right word to use.

Mr. ILSLEY: That is the word we use.

Mr. HANSON (York-Sunbury): That means they will have to reduce production.

Mr. ILSLEY: Oh, no; their profits will be reduced.

Mr. HANSON (York-Sunbury): This resolution has been before the committee for a long time, and I am going to suggest that the resolution be reported in order to permit the minister to introduce his bill. However, the minister should give us an undertaking that on the committee stage of the bill, or when any estimates are before us, full opportunity will be permitted hon. members to ask questions. This would be particularly necessary in connection with those departments which have not been covered fully, such as the Department of Labour which has just been touched upon in this series of interrogatories. I hope the committee will adopt this suggestion.

Mr. ILSLEY: I am much obliged for the suggestion, and I will give the undertaking asked for. If any member wishes to ask any question on the bill, he may.

Mr. MacNICOL: On any one of these departments?

Mr. ILSLEY: He is entitled to that privilege in any event.

Mr. MacINNIS: He is entitled to much more than that.

Mr. BLACKMORE: I should like to support the leader of the opposition's proposal, provided we are given complete liberty to discuss these matters. I think the matter we have been discussing is the most vital matter that has been discussed.

Mr. ILSLEY: If I understand the rules correctly, hon. members will have the right, under the section of the bill which grants $2,000,000,000—it is really $1,500,000,000—to enable the government to defray the expenses of the war, to discuss all the expenses of the war.

Mr. HANSON (York-Sunbury): The only limitation that there might be on that is the interpretation which the chairman of the committee of the whole might place upon it. The minister knows that at times he is rather restrictive. I think the minister ought to undertake that there will be full discussion on the committee stage of the bill.

Mr. ILSLEY: I will undertake that. I do not see how the chairman could rule otherwise under that section.

Mr. MacNICOL: Let me be clear. Later on, when a bill is before the house, if I want to ask a question under the item, surveys and engineering branch, shall I be at liberty to ask a question about any amount mentioned under aids?

Mr. ILSLEY: Is the hon. member talking about non-war estimates?

Mr. MacNICOL: On the war appropriation.

Mr. ILSLEY: On anything in the war appropriations, he may ask.

Mr. MacINNIS: I admire the generosity of the leader of the opposition and the leader of the New Democracy group. But my hon. friends monopolized most of the time available for discussion this afternoon. The hon. member for Cape Breton South has been waiting here for a number of days with something which he wishes to raise, and, being a man of polite instincts, he always allowed other people to get ahead of him. If we could continue for about ten minutes this afternoon and allow him to introduce the point he has in mind, we would be glad to let the matter go as was suggested by the leader of the opposition.

Mr. HANSON (York-Sunbury): Do not attribute to me any time killing. I have not killed any time this afternoon. I think the Prime Minister took up all the time on other matters. But if any hon. gentleman objects to this procedure, he certainly has the right to do so, in order to hold this up. I was not speaking for anybody but my own group.

Mr. ILSLEY: With regard to anyone getting ahead of the hon. member for Cape Breton South, I never heard of anyone that did. I am afraid that he may introduce something which requires some answer.

Mr. QUELCH: Some of us are supposed to leave at six o'clock to meet some people outside.

Mr. GILLIS: I do not wish to detain the committee. This matter which I have to bring to the attention of the minister has to do with the administration of the fuel control board, which comes under the wartime prices and trade board, and a portion of this appropriation is for their administration. I will be brief and explicit.

I think that organization, the fuel control board particularly, has wholly fallen down on the job and there is a serious situation developing in Canada as regards fuel. The Minister of Munitions and Supply (Mr. Howe) made the statement to the house that oil for domestic purposes is to be curtailed and that consumers of oil have to tighten their belts.

Mr. HANSON (York-Sunbury): That was a little premature, was it not?

Mr. GILLIS: Then Mr. Stewart, in a statement on June 3, points out that the coal situation in the United States is serious and that Canada depends for 60 per cent of her consumption on the United States. There is a long statement in the Ottawa *Journal* of May 4, to the effect that possibly coal will have to be rationed. Coal is an essential war commodity. The situation has become so serious in Britain that they have nationalized the industry and taken it over. In the face of the fuel controller making such statements, and the Minister of Munitions and Supply stressing the seriousness of the situation with respect to oil, we find in the east and in the west coal mines being closed or put on short time. The public is wondering about this.

What I should like to bring specifically to the minister's attention is this statement released from Nanaimo, British Columbia, and printed in the *Canadian Tribune* of this week. I am going to read it for the minister's information, because in the back of my mind for the past two years I have had the definite belief that most of the trouble we have experienced in the mining industry was organized behind the scenes by an unseen influence, and the miners have suffered the consequences:

Declaring he had uncovered a situation that was "unbelievable until he investigated," John Stokaluk, District 18 vice-president of the U.M.W.A., charged at a meeting of several hundred coal miners here that oil interests were trying to slow production in Vancouver island coal mines.

Stokaluk flew to Nanaimo following walkouts of workers in two mines. The miners' action was taken after crude unsigned pencilled notices had been posted up and Stokaluk made the direct charge that certain members of the union local were being paid to stir up trouble.

I believe that, because I have gone through similar situations.

"There is plenty of coal," he said, "but the oil interests are trying to show the people of Canada and the government that this coming winter there will be a shortage of coal and miners.

"The more strikes and shortages we have the better for the oil interests," he added.

Stokaluk told the meeting that provided the miners' legitimate grievances were properly adjusted, Vancouver island mines can supply 800,000 tons of coal a year, sufficient to meet market requirements.

Demanding immediate action to settle these legitimate grievances, he declared "that the union would fight any unpatriotic efforts, oil or other interests might make to interfere with coal production.

I know that during the past two years there have been serious upheavals in the mining industry in Nova Scotia; and, knowing that situation very well, I have time and time again come to the conclusion that interests other than the miners were the cause of 75 per cent of the trouble which has taken place since the outbreak of war. I bring this to the minister's attention specifically. I believe that the charges made by Stokaluk in Nanaimo, should be examined by this government, and examined immediately, either through the fuel control board or through someone else. If it is true that the oil interests of this country, thinking in terms of after the war, are deliberately sabotaging the coal industry and preventing its expansion at this time in order that they may build up in Canada a market for oil in the aftermath of this war, and a continuation and expansion of their own industry, it is time that we found out.

These are specific charges as carried in the public press. If they are true in respect of British Columbia, they are true of other parts of Canada. A few days ago the executive board of the miners of Nova Scotia was notified by the heads of the coal companies that from now on the mines of Nova Scotia would be on short time. It is only a few months ago that the press carried full-page statements from the same coal company, when there was an upheaval there which was not, in my opinion, organized by the men, characterizing these men as saboteurs. To-day the companies themselves are sabotaging the industry, and it is time that the people of Canada, through the medium of their responsible elected officials, came to an understanding as far as this industry is concerned.

Mr. ILSLEY: Well, Mr. Chairman, the hon. gentleman says that the companies are sabotaging the industry, and, he fears, at the instance of their competitors, the oil people.

Mr. HANSON (York-Sunbury): I do not think that follows.

Mr. GILLIS: That is the direct charge made by district 18 vice-president of the United Mine Workers' Association in British Columbia. He said that after investigation "he had uncovered a situation that was unbelievable", and he charged directly that the oil interests of Canada are sabotaging the mines. John Stokaluk has information of that kind at his disposal; that information should come to the government and something should be done about it.

Mr. ILSLEY: May I say right now that if he will forward his information, it certainly will be investigated. I am doubtful whether there is anything definite about that. On what occasion did he make his speech, or in what form?

Mr. GILLIS: Apparently, according to this statement, he was summoned to Nanaimo, where the mines are on short time or idle. He flew there and, addressing a mass meeting of the miners, he makes these charges. But what I am concerned about is the possibility of rationing fuel this winter. There is no oil available. The mines east and west are on short time, while the fuel controller, Mr. Stewart, is warning the people of central Canada that coal will have to be rationed. It is about time we found out why mines should be idle in such a situation.

Mr. ILSLEY: I will bring the remarks of my hon. friend to the attention of the coal administrator, and if the gentleman in Vancouver has definite information, the matter will be taken account of, if the charges and

statements are definite enough, and are based on anything except hearsay or surmise. I do not know much about the coal situation, but I am told there is a transportation bottleneck in regard to coal. That may or may not be so. I shall have to get further information.

Mr. BLACKMORE: I should like to know whether such matters as these, which affect inflation and price ceiling, may be discussed later on. Will it be in order to deal with these questions when we come to the discussion which the leader of the opposition has indicated?

Mr. ILSLEY: Yes. I want to make it clear that the resolution about to be reported is the resolution as amended. There was a $500,000,000 reduction carried one night.

Resolution as amended reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 95, for granting to his majesty aid for national defence and security.

Motion agreed to and bill read the first time.

On motion of Mr. Crerar the house adjourned at 6.16 p.m.

Monday, June 8, 1942

The house met at three o'clock.

THE KING'S BIRTHDAY

RESOLUTION EXTENDING GREETINGS AND GOOD WISHES TO HIS MAJESTY

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, to-day having been set apart as the day for the official celebration of the birthday of His Majesty the King, I feel sure that hon. members would welcome an opportunity to extend their greetings and good wishes to His Majesty in the form of a resolution of the House of Commons. I have prepared a resolution and have shown it to my hon. friend the leader of the opposition (Mr. Hanson), who has kindly consented to second it as worded. I would therefore move, seconded by Mr. Hanson:

That, on this, the occasion of the official celebration in Canada of the birthday of His Majesty, King George VI, a humble address be sent to His Majesty in the following words:

"To the King's Most Excellent Majesty:

Most Gracious Sovereign:

We, the members of the House of Commons of Canada, in parliament assembled, desire respectfully to extend our loyal and heartfelt greetings to Your Majesty on this day set apart for the official celebration in Canada of Your Majesty's birthday.

[Mr. Ilsley.]

At this time when, throughout the world, freedom itself is at stake. Your Majesty's calm courage, steadfast faith and active service have been an inspiration to your own peoples and to those of other nations joined in the common struggle.

It is our united prayer that, throughout these days of supreme trial, Divine Providence may continue to protect and guide Your Majesty, and that until the day of ultimate triumph and for many years thereafter, you may be given the strength to bear the great burdens which war has already created and may continue to impose.

With one voice we join to-day, as never before, in the words:

God save our gracious King,
Long live our noble King,
God save the King:
Send him victorious,
Happy and glorious,
Long to reign over us:
God save the King."

I would suggest that this resolution might be supported by the singing of the national anthem.

Hon. R. B. HANSON (Leader of the Opposition): I have the greatest possible pleasure in seconding the resolution, which I am sure will be carried unanimously with one single voice in this house, and will reecho from shore to shore in Canada from all loyal people of this country.

Motion agreed to.

Whereupon the members of the house rose and sang

God Save the King

PRIVATE BILLS COMMITTEE

First, second and third reports of standing committee on miscellaneous private bills.—Mr. Donnelly.

ALBERTA NATURAL RESOURCES

AMENDMENT OF TRANSFER AGREEMENT RESPECTING ROYALTIES ON OIL PRODUCTION—CORRESPONDENCE

Hon. T. A. CRERAR (Minister of Mines and Resources): When the bill for the amendment of the Alberta Natural Resources Act was before the house some little time ago it was suggested that any correspondence relating to it should be brought down. I table now as a return all the correspondence that is available. There is nothing very much new in the correspondence beyond what I stated when the measure was under consideration in the house.

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the minister what he means by "available". Are there any limitations?

Mr. CRERAR: Certain representations did reach me not directly but through second hands. These are not included in the return, because the consent of the person who originally sent the correspondence would have to be obtained.

Mr. HANSON (York-Sunbury): By letter?

Mr. CRERAR: By letter. But practically the same thing is contained in the correspondence that reached our office through the oil controller, Mr. Cottrelle.

Mr. HANSON (York-Sunbury): That is a different matter.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

GASOLINE RATIONING—BRITISH COLUMBIA—BOND SALESMEN

Mr. CRUICKSHANK:

1. How many category C gasoline licences have been issued to bond salesmen by the British Columbia regional control office?

2. What are the names of any bond salesmen now holding category C licences in British Columbia and what firms do they represent?

Mr. HOWE: It is very difficult to answer this question. The regional offices have a very small staff, and it would be practically impossible to copy the data and file it here without considerable additional staff. Another difficulty is that it is not easy to know from the records which men are bond salesmen and which are not. The records of course do not disclose whom they represent. I ask that the question be dropped.

Mr. SPEAKER: Dropped.

PRICE CEILING SUBSIDIES—APPLE AND TOMATO JUICE

Mr. CRUICKSHANK:

1. Under what terms is the subsidy being paid on the domestic production of, (a) apple juice, (b) tomato juice?

2. What amounts have been paid in each month since the subsidy began on, (a) apple juice, (b) tomato juice?

Mr. ILSLEY:

1. (a) and (b). Under administrator's order A-44 of the wartime prices and trade board which affects canners' inventories of certain domestic canned fruits and vegetables 1941 pack on hand at the close of business on March 31, 1942, including apple juice and tomato juice, the maximum price at which any canner may sell these products, excluding goods invoiced but not delivered, on and after April 1, 1942, is the lowest f.o.b. cannery price actually charged by the canner in 1941 prior to October 12. Subsidy is paid to such canner to the extent of 80 per cent of the amount by which his lawfully established ceiling price during the basic period exceeds his revised maximum selling price. Subsidy will be paid to the wholesalers in respect of their inventories of such products at the close of business on March 31, 1942, on the basis of the amount by which the canner's selling price of such products to the manufacturer exceeds such canner's revised maximum selling price of such products.

2. (a) and (b). No claims have been finally settled to date.

BRAN, SHORTS AND SCREENINGS

Mr. CRUICKSHANK:

1. What was the price, f.o.b. Vancouver, at September 30, 1939, of, (a) bran, (b) shorts, (c) screeenings?

2. What was the price of No. 1 wheat, f.o.b. Vancouver, at September 30, 1939?

3. What was the price, f.o.b. Vancouver on May 30, 1942, of, (a) bran, (b) shorts, (c) screenings?

4. What was the price of No. 1 wheat, f.o.b. Vancouver, at May 30, 1942?

Mr. MacKINNON (Edmonton West):

1. Prices of feed per ton, f.o.b. Vancouver, September, 30, 1939: Bran, $23.30; shorts, $25.30; elevator screenings, $5.

2. Publication of wheat prices at Vancouver ceased after the outbreak of war and has not been resumed.

No. 1 Manitoba northern wheat, per bushel, Fort William and Port Arthur cash basis, September 30, 1939, 71 cents.

3. Prices of feed per ton, f.o.b. Vancouver, May 30, 1942: Bran, $29.80 (a); shorts, $30.80 (a); elevator screenings, $5.

(a) Includes $6 per ton freight subsidy.

4. No. 1 Manitoba northern wheat, per bushel, Fort William and Port Arthur cash basis, May 30, 1942. 79½ cents.

TRANSPORT CONTROL—QUEBEC PROVINCE

Mr. RAYMOND:

1. What is the name of the regional controller of transport for the province of Quebec?

2. When was he appointed and by whom?

3. Is he familiar with both languages?

4. In the province of Quebec what are the relative proportions of French-Canadian and English-Canadian truck drivers, respectively?

Mr. HOWE: I think this question is wrongly worded. There is no regional controller of transport for the province of Quebec. Perhaps it refers to an administrator in the wartime prices and trade board. I would ask that the hon. member reword the question.

Mr. SPEAKER: Dropped.

DUFFERIN CONSTRUCTION COMPANY CONTRACT

Mr. FRASER (Peterborough West):

1. Was a contract let to the Dufferin Construction Company for paving the yard of the Dufferin Shipbuilding Company?
2. If so, what class of pavement was used?
3. What was the price paid per yard?
4. What was the contract price?
5. Were tenders called for the work?
6. If so, was the contract let to the lowest tenderer?

Mr. HOWE:

1. Yes, a contract was awarded by Toronto Shipbuilding Company Limited (ex. Dufferin Shipbuliding Company) to the Dufferin Construction Company.

2. Bituminous pavement on stone base.

3. The contract was placed on a cost per ton basis, laid, rolled and completed the contractor to supply all material. It is not the policy of the department to give unit prices.

4. Payment is to be made on a quantity-used basis. The amount payable is not yet determinable because the job is not completed.

5. Yes.

6. Yes.

CANADIAN ARMY—INFANTRY—BATTLE AND WALKING-OUT DRESS

Mr. GAUTHIER:

1. Does the Department of National Defence issue two battle dress uniforms to each man in the infantry?
2. If so, at what cost?
3. Is a walking-out dress supplied to each man in the infantry?
4. If so, what is the cost of such uniform?
5. Does the department issue a summer uniform to each infantryman?
6. If so, at what cost?

Mr. RALSTON:

1. At the present time two suits of battle dress are issued to each infantryman. One of these is new and the other a part worn suit.

2. The cost of one new suit of battle dress is $11.18.

3. A walking-out uniform will be issued to each infantryman at the close of the summer season when the wearing of the summer uniform is discontinued. At such time, one suit of battle dress will be withdrawn from personnel.

4. The cost of a walking-out uniform is $14.39.

5. Yes.

6. The cost of a summer uniform is $5.56.

[Mr. Speaker.]

GASOLINE RATIONING—MARITIME PROVINCES—RAILWAY SERVICES

Mr. PURDY:

In view of the gasoline situation in the maritime provinces, will the government take immediate steps towards having the railway passenger services discontinued in these provinces during the past few years, reinstated at once?

Mr. HOWE: This question refers to a matter of internal management of the railway, over which the government does not exercise control.

Mr. SPEAKER: Dropped.

DEFENCE OF CANADA REGULATIONS—NEWSPAPER CENSORSHIP

Mr. DENIS:

1. What are the names and places of issue of the newspapers, magazines and other Canadian publications which have been convicted since the beginning of the war under the defence of Canada regulations bearing on censorship?
2. What was the sentence in each case?

Mr. ST. LAURENT:

1. (a) The *Citzen,* Ottawa; (b) *Le Droit,* Ottawa; (c) The *Vancouver Sun,* Vancouver.
2. (a) Case dismissed; (b) Guilty on two charges. Fine of $200 imposed; (c) Guilty on one charge. Fine of $300 imposed.

OTTAWA NAVAL SERVICE BUILDING

Mr. SENN:

1. Who was awarded the contract for the construction of the naval service building on Cartier square in the city of Ottawa?
2. What is the estimated cost of this building?
3. Were tenders called for the construction of this building?
4. If so, what are the names of each tenderer and the amount of each tender?
5. When is it anticipated that this building will be completed?

Mr. HOWE:

1. Hill-Clark-Francis, New Liskard, Ontario.
2. $723,677.
3. Yes.
4. Four tenders were received and the lowest tenderer was awarded the contract. Other tenderers and their quotations are: A. I. Garvock, Ottawa, $745,000; Pigott Construction Co., Hamilton, $751,000; Johnson Bros. Co., Ltd., Brantford, $763,888.
5. August 23, 1942.

KENNETH ZINCK

Mr. SENN:

1. Has Kenneth Zinck been appointed to a position in connection with the purchase of horses in the maritime provinces, or has he been granted a commissioned rank for this or other purposes?

2. If the latter, what rank does he hold, and have any assurances been given to him of an early promotion?
3. What salary and/or pay and allowances does he receive?
4. What are his qualifications and past experience?
5. What are the particular duties for which he has been appointed or granted a commissioned rank?

Mr. RALSTON:

1. No.

2, 3, 4 and 5. Answered by No. 1.

ADVISORY COMMITTEE ON DEMOBILIZATION AND REHABILITATION

Mr. FAIR:

1. What are the names of the members of the general advisory committee on rehabilitation?
2. By whom was each member recommended?

Mr. MACKENZIE (Vancouver Centre):

1. Interdepartmental general advisory committee on demobilization and rehabilitation:

Chairman, Brig.-General H. F. McDonald, C.M.G., D.S.O., Chairman of the Canadian Pension Commission.

Vice-Chairman, W. S. Woods, Esq., associate deputy Minister of Pensions and National Health.

C. H. Bland, Esq., Chairman of the Civil Service Commission.

Dr. Bryce Stewart, Deputy Minister of Labour; or alternate.

K. M. Cameron, Esq., Chief Engineer, Department of Public Works.

Colonel E. A. Deacon, Director of Auiliary Services, Department of National Defence.

Major-General H. F. G. Letson, M.C., E.D., Adjutant-General, Department of National Defence.

Air Commodore A. Sully, Department of National Defence for Air.

Paymaster Captain J. O. Cossette, Department of National Defence for Naval Affairs.

Dr. R. E. Wodehouse, Deputy Minister of Pensions and National Health.

Dr. W. C. Clark, Deputy Minister of Finance, or alternate.

Dr. G. S. H. Barton, Deputy Minister of Agriculture, or alternate.

Dr. S. A. Cudmore, Dominion Statistician.

2. Recommended by respective ministers of departments concerned.

QUESTIONS PASSED AS ORDERS FOR RETURNS

ACADIA SUGAR REFINING PLANT, DARTMOUTH, N.S.

Mr. ISNOR:

1. What action has the government taken with regard to the closing of the plant, Acadia Sugar Refining Company at Dartmouth, Nova Scotia?
2. What steps has the government taken in respect to the men, numbering about 200, who will be thrown out of work?
3. Will the government take steps to investigate the cause of the closing of this plant?

Mr. HANSON (York-Sunbury): Why is this question made an order for return? It seems to me a simple matter. It applies I assume to the minister's department.

Mr. ILSLEY: If it does I can answer it, but I do not know that it does. It makes necessary a canvass of the departments to see what action was taken, if any.

USE OF CANADIAN CEREALS IN PRODUCTION OF SYNTHETIC RUBBER

Mr. FAUTEUX:

1. Have scientific investigations been carried on by the Department of Trade and Commerce as to the possibility of utilizing Canadian grown cereals to produce butadiene which is used in manufacturing synthetic rubber?
2. Has the Department of Trade and Commerce made scientific research into the possibility of producing alcohol, rubber, starch and other commodities from certain farm products?
3. If such research has been carried out, was a report made to the Department of Munitions and Supply thereon?
4. Has the department caused research to be made into the possibility of converting certain Canadian grown cereals into products necessary to our war effort by, (a) companies engaged in distributing petroleum and rubber in Canada, (b) the Department of Munitions and Supply, (c) the National Research Council?

UNEMPLOYMENT INSURANCE COMMISSION

Mr. RAYMOND:

1. When was the unemployment insurance commission appointed?
2. What is the proportion of French-Canadian employees contributing to the unemployment insurance fund?
3. How many contributors has the commission in, (a) Ontario, (b) Quebec, (c) maritimes, (d) prairie provinces, (e) British Columbia?
4. What is the total of the contributions collected in each of the districts named?
5. How many inspectors of unemployment insurance are there in each district and what are their names?
6. How many employees, permanent and otherwise, are there in the head office at Ottawa, including the commissioners, whose salaries exceed $3,000 per annum?
7. How many persons constitute the advisory committee and what are their names?
8. How many members compose the national committee on employment, and what are their names?
9. How many compose the committee on the holdings of the insurance investment fund and what are their names?
10. Is the English minority of Quebec represented on the district bureau of the province of Quebec by a deputy assistant district superintendent?
11. If so, who is he and what are his duties?
12. Have French Canadians in the other districts similar representatives? If so, what are their names?

MILITARY SERVICE—REGISTRATION CARDS

Mr. CASTLEDEN:

1. What steps have been taken prior to May 15, 1942, to ascertain that the cards of all single persons, widowers, divorced and legally separated male persons, without dependents, between the ages of 19 and 45 at the time of registration, are in the hands of the divisional registrars?

2. Has any check relative to these cards been made between the central registry at Ottawa and the duplicates which were forwarded to the divisional registrars?

MAN-POWER ACCORDING TO AGE CLASSES—ENLISTMENTS, POSTPONEMENTS, REJECTIONS, ETC.

Mr. DIEFENBAKER:

1. How many, (i) single men or widowers without children, (ii) married men or widowers with children, of the following inclusive age-groups, (a) 18-20, (b) 21-24, (c) 25-30, (d) 31-35, (e) 36-40, (f) 41-45, were there in, (1) each province, (2) each military district, (3) each administrative division, at the time of the national registration?

2. How many men, by (a) provinces, (b) military districts, (c) administrative divisions, have attained the age of 21 years since the national registration?

3. How many men in the said groups, by provinces, military districts and/or administrative divisions, have (a) enlisted voluntarily in (1) the navy, (2) the army, (3) the air force; (b) been called up for service under the National Resources Mobilization Act; (c) been found unfit after medical examination; (d) applied for postponement of military training; (e) been granted postponement of military training; (f) actually been accepted for service at basic training centres; (g) are engaged in industry, agriculture or are otherwise gainfully employed?

4. Has a survey been made by the government with a view to ascertaining how many men are still available for military service in each of the foregoing classes?

5. If so, who made the survey, and when was it made?

6. How many men were estimated to be still available for military service by provinces, military districts and/or administrative divisions in each of the said age-groups?

Mr. THORSON: Some of this information is not available. It may not be possible to give some of it by military districts, because the boundaries of the military districts do not coincide with those of the provinces or of the administrative divisions. With regard to subquestion 3 (a), it would take a great deal of time to get the information as to voluntary enlistments by age groups. As to 3 (c), I am not sure that it will be possible to obtain the information with regard to persons who have offered themselves for service and have been rejected. With regard to 3 (g), so far as I can gather, that information is not available in the form requested. Subject to these observations the question might stand as an order for return.

[Mr. Raymond.]

BILLBOARD ADVERTISING BY GOVERNMENT AGENCIES

Mr. MacINNIS:

1. How many departments, boards or other agencies of the government have made use of billboard advertising in the past twelve months?

2. What was the nature of each of these advertising campaigns, the dates for which billboards were used, the amount of money expended for the rent of the boards and production of the posters, and the total number of billboards rented?

3. Through what advertising agencies have these campaigns been placed?

4. Is there any administrative control to avoid overlapping of billboard advertising campaigns by government departments?

5. If so, what is the name of the official responsible?

MERCHANT MARINE—WAGES, PENSIONS AND DEPENDENTS' ALLOWANCES

Mr. MacLEAN (Cape Breton North-Victoria):

1. Are pensions being paid to the widows and dependents of men who lost their lives while serving in the merchant marine, (a) on ships of Canadian and British registry; (b) on ships of foreign registry engaged in taking supplies to the united nations?

2. What is the monthly wage paid to an ordinary seaman on ships of Canadian registry?

3. Is any dependents' allowance paid to the wives or dependents of said seamen?

GASOLINE AND TIRE RATIONING—BREWERS AND DISTILLERS

Mr. DOUGLAS (Weyburn):

1. In what classification do brewers' and distillers' trucks and trailers come, under the regulations governing the supply of gasoline and tires?

2. What restrictions, if any, have been placed on the transportation of alcoholic liquors by truck, up to the present time?

3. What materials used by the brewing and distilling interests have been rationed and to what extent?

PURCHASE OR CHARTER OF GREAT LAKES VESSELS

Mr. MacNICOL:

1. What is the name and tonnage of each of the steamers, ships, boats or other vessels operating, or which have operated, on the great lakes which have been (a) purchased, (b) chartered by or for the government of Canada from the outbreak of war to date?

2. From what persons, firms or companies was each of the said vessels, (a) purchased, (b) chartered?

3. In the case of vessels, (a) purchased, (b) chartered from companies, what is the name of the president, the general manager and/or managing director of each such company?

4. What was the total purchase price paid by the government for each such vessel purchased?

5. What were the terms of payment contained in the charter party of each such vessel chartered?

6. What was the purchase price paid by the owner of such vessel for such vessel on the last transfer of ownership prior to its acquisition by the government?
7. Were any agents employed in connection with the (a) purchase, (b) chartering of any of the said vessels?
8. If so, what are the names of such agents and what was the total commission or other remuneration paid to each such agent in respect of the purchase or chartering of each vessel?

GASOLINE

REDUCTION IN VALUE OF RATION COUPONS IN MARITIME PROVINCES

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): In view of the gasoline situation in the maritime provinces; in view of the number of questions on the order paper with regard to this matter; in view of the agitation which is still going on in those provinces, and especially in view of a statement issued by the premier of New Brunswick, a copy of which I sent to the Minister of Munitions and Supply this morning, is the minister in a position to make any statement that will allay the anxiety, if that is the proper term to use, of the people in that part of the country, and give them some reassurance that the so-called discrimination—that is not my term, but it is the expression used by friends of hon. gentlemen opposite—against the maritime provinces will be removed? Personally I think I understand the situation, but I should like the people of the maritime provinces to be convinced. They are not being reassured by certain persons both in New Brunswick and in Nova Scotia, and this ought to be done as soon as possible. I understand the old game down there, which is to stir up antipathy toward the central part of Canada, and it is not a creditable performance. I know that is a dangerous thing for me to say, coming from the province of New Brunswick. If the minister and the oil controller will give the people of eastern Canada a little more factual information, the maritime provinces will loyally accept the situation; but they have to be shown.

Hon. C. D. HOWE (Minister of Munitions and Supply): My hon. friend will appreciate that I cannot state the stocks of fuel oil for the navy and air force; that certainly would be information of value to the enemy. I can say, in reference to gasoline, that the cracking at the Halifax refinery necessarily must be for the maximum recovery of fuel oil. With regard to gasoline under the two-gallon ration, up to June 1 we actually slipped behind on our stock position; in other words we did not make or import as much gasoline as was consumed under the two-gallon ration. However, the outlook for the future has improved considerably. We have been given some help in the matter of tankers by the maritime commission, and I can say that the situation certainly will not get worse and I believe will improve. Just as soon as the position warrants, of course we will increase the coupon value. As I have said many times, the purpose of coupon rationing is simply to distribute available supplies of gasoline fairly, and rationing will continue to be used for that purpose.

Mr. HANSON (York-Sunbury): Is the minister able to give any indication as to when the full coupon value will be restored? An assurance on that point would be well received. While I am on my feet I should like to add something I intended to say previously. The whole position down there has been stirred up by one big dealer, who apparently found himself in possession of very large supplies of gasoline. He is stirring up all this agitation, and the minister knows to whom I refer.

Mr. HOWE: Well, Mr. Speaker, of course I cannot say whether the coupon ever will be restored to its original value, but I do think the situation will improve, and if it is possible to restore the full value, certainly we shall do so. I think there will be an improvement before the end of the current month.

Mr. J. J. KINLEY (Queens-Lunenburg): With regard to the matter of gasoline and oil, may I say to the minister that there is an impression in well-informed circles on the coast that the supply of oil may be restricted because of the freight rates on the product with respect to which the price is controlled. Is there anything in that impression?

Hon. C. D. HOWE (Minister of Munitions and Supply): No, the excess cost of moving gasoline to the maritime provinces is being borne by the government. The movement to date has involved excess costs, which are being absorbed at the present time by the government, and the cost of the movement is not curtailing the supply in any way.

HONG KONG COMMISSION

OPPORTUNITY FOR DISCUSSION OF REPORT—REQUEST FOR TABLING OF EVIDENCE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): In view of the presentation of the report on the Hong Kong expedition; in view of statements made by the counsel engaged by the official opposition to present the case to the

commission, and in view of the statements appearing in the public press, will the Prime Minister set aside an early date when this report may be discussed in this house, and in the meantime table the evidence taken before the commission?

Right Hon. W. L. MACKENZIE KING (Prime Minister): First with respect to the evidence taken before the commission, on Friday last the leader of the opposition (Mr. Hanson) asked if it would be possible to have that evidence tabled. At the time I replied that I did not think it would be possible, for the reason that the hearing was held in private in order, as my hon. friend and others will understand, that matters which would be of real interest to the enemy should not be publicly disclosed. If it had been the intention to have the evidence made public, the commissioner, the Right Honourable the Chief Justice, would without doubt have sent copies of the evidence along with his report. The report itself has been tabled and of course is now before the house. As hon. members are aware, the report itself is being printed, and hon. members will wish to have it in their hands before any discussion takes place. As to setting apart a day for the consideration of the report, I shall be pleased to see that some arrangement is made; but first of all I would wish to consider some other matters relating to the question of an immediate discussion of the report. I am going to say a word in a moment with regard to business already before the house. I must take some account of the order in which matters are discussed in parliament. Before we begin the discussion of any new subject I feel we should if possible conclude the discussion of two subjects in particular. One is the bill relating to national defence and security, the resolution preceding which was before the house for some time. The other is Bill No. 80, which has to do with the amendment of the National Resources Mobilization Act.

BUSINESS OF THE HOUSE

MOBILIZATION ACT AMENDMENT—ORDER OF PROCEEDINGS

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to say just a word in regard to the order of proceedings. I noticed that at the time of adjournment on Friday last a question was raised as to exactly when the government would proceed with the second reading of Bill No. 80. Questions on this point have been addressed to me at two or three previous sittings, and each time I have replied that the government would wish to conclude with the measure which was then before the house, the resolution dealing with the war appropriation, before taking up Bill No. 80. I had in mind three considerations in particular in stating that we would proceed in that order. The first was the advisability of not confusing the discussions, by having debates a part of the time on the amendment to the National Resources Mobilization Act and a part of the time on the war appropriation measure. Another was the desirability of conserving the time of the house as much as possible by concluding the discussion on the national defence and security measure before taking up another measure, the house having already devoted some five weeks to a discussion of the resolution on which the bill is based. As I have said two or three times, if we were to postpone or delay final disposition of that measure, we would open up afresh much of the discussion that has already taken place upon the resolution. The government is desirous therefore of concluding the discussion of that bill before taking up Bill No. 80.

There is another reason, and hon. members will quickly see the significance of it. There have been frequent references both in the house and in the public press to the fact that the senate has not been occupied, as much as some had expected it would be, with public matters at this time. There is an obvious reason for that. Most of the legislation of this particular session—and this is true of all sessions during a time of war—relates to finance. Of necessity financial measures are initiated in this house, and cannot be initiated in the senate. The most important of the financial measures is the measure relating to national defence and security.

The senate is meeting to-morrow night. The government had hoped that before the reassembling of the senate this particular measure would have been concluded in this house and would have gone to the senate for the immediate consideration of their honours. Since the adjournment of the senate I believe one or two other measures have gone to that house. We should like to have this bill with respect to defence and security in the hands of the senate just as soon as deliberations upon its provisions can be concluded in this house.

In the interchange which has taken place between my hon. friend the leader of the opposition and myself, and possibly between some other hon. members and myself, there may have been one thing in their minds, and another in my mind, which will be apparent from the reading of *Hansard*. Some may have thought when reference was made to war appropriation that it was a reference simply

to the resolution. I believe if one looks at my remarks it will be seen that at each time I spoke on the subject my reference was to a measure or a bill. I had in my mind of course the legislation itself—the bill itself—and not the resolution on which the bill was based. Not only that, but I think my references make it very clear that it was the disposition of the bill by this house that the government hoped for. In that connection I refer hon. members to my observations on May 26, as reported at page 2757 of *Hansard*. On that occasion the leader of the opposition asked me when I proposed to move the second reading of Bill No. 80. I replied:

> That depends upon the progress which the house makes with the legislation which is before it at the present time.

I was using the word "legislation" then in the general sense of the term, and referred to such bills as might be on the order paper. I then proceeded, referring to Bill No. 80:

> It is our wish to proceed with it at any early day. But it will not be proceeded with until the present war appropriation bill has been completed.

It was the war appropriation resolution which was before the committee at the time. I clearly had in mind the war appropriation bill, and later in my observations I referred also to one or two other small measures which made it clear that by "measure" I meant bills, not the resolution.

A little later on the leader of the opposition, speaking to me, said:

> With respect to the war appropriation bill I would point out that this is the largest money bill which has come before parliament.

And later:

> The whole matter is in the hands of the government. . . . The order of business of the day is as the government directs.

Evidently my hon. friend at that time was using the expression "bill" in the same way as that in which I had used it.

On June 4, as reported at page 3044 of *Hansard*, the leader of the opposition again asked when I proposed to proceed with the second reading of Bill No. 80. In reply I said:

> My hon. friend the leader of the opposition I think agreed with me that it was desirable to have the war appropriation measure disposed of in this house before taking up another measure.

That makes perfectly clear, I should say, the intention and purpose of the government. I said further:

> I think in the long run the time of parliament will be saved by concluding at once the war appropriation measure rather than having the whole matter opened up again at a later stage.

I am sure if hon. members will ask themselves how the business of parliament can best be expedited or carried on most satisfactorily to all concerned—and the term "parliament" includes of course both houses—they will see that it should serve the interests of all to conclude with the bill respecting defence and security in this house, and allow it to go to the senate before taking up other measures. After a discussion of five weeks on the resolution I should hope it would not take very much more of the time of this house before all discussion on the war appropriation measure might be concluded.

[*Later:*]

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): May I ask the Prime Minister for definite assurance that as soon as the war appropriation bill is through the house he will call Bill No. 80?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Yes. I was going to ask my hon. friend if he would be prepared to proceed with Bill No. 95 this afternoon.

Mr. HANSON (York-Sunbury): I am.

Mr. MACKENZIE KING: Bill No. 95 was not announced on Friday, but if the house is ready to go on with it, the government is prepared to call it. As soon as that bill is out of the way there are just the two items of the Minister of Finance.

Mr. HANSON (York-Sunbury): What about the war risk insurance bill? Will that be proceeded with before Bill 80 is taken up?

Mr. MACKENZIE KING: It has been announced that we shall go on with the two other measures that are on the order paper but with respect to those I would undertake to say that if they take more than one day they will be allowed to stand until later. As soon as the national defence and security bill has passed this house, the government will take up the next measure.

Mr. HANSON (York-Sunbury): Mr. Speaker, if I may say a word or two I would point out that I have been pressing for the second reading of Bill No. 80, and I shall continue to do so. If there has been a distinction in the minds of some people between the resolution and the measure itself, I believe the Prime Minister has all along, as I read his words now, meant the completed legislation. I may have fallen into some error by loose use of the terms "resolution," "measure" and "bill." I say at once that we will facilitate the second reading of the bill, so far as we are concerned, so that we may reach Bill No. 80

at the earliest possible day. I did facilitate the passing of the resolution, as hon. members know. On two different occasions I appealed to the house to pass the resolution, first a week ago Friday and again last Friday at six o'clock. I do not think it would have gone through if I had not made that appeal. Let us pass this bill at the earliest possible moment, because the country is eagerly awaiting the debate on Bill No. 80, and I want to get on with it. No one will be able to say that we, at least, have delayed the reaching of this measure.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I do not propose to sit quietly and listen to the leader of the opposition placing the responsibility upon others in the house. I believe if the time occupied in the discussion of the bill or the resolution were measured, and the pages of *Hansard* tabulated, it would be found that the leader of the opposition himself took a very considerable proportion of the time.

Mr. HANSON (York-Sunbury): And why should I not? I leave it to the judgment of the house whether as leader of the opposition I should not do so. I am not apologizing for anything I said in respect to it, or the time I occupied.

LABOUR CONDITIONS

LAYING OFF OF MEN AT CANADIAN PACIFIC ANGUS SHOPS

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): May I reply to a question asked on June 5 by the hon. member for Vancouver East (Mr. MacInnis), and recorded at page 3099 of *Hansard*. In his question the hon. member called attention to the laying off of 175 men at the Angus shops in Montreal. I have made inquiries about this matter and I find it has nothing to do with the tank or any other government programme. It is a seasonal lay-off in the car repair shop.

NOVA SCOTIA COAL MINES OPERATING ON HALF TIME—FUEL SHORTAGE

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): I should like to direct a question to the Minister of Labour, based upon a telegram received from one of the mine workers' executives in Nova Scotia, a copy of which I sent to the minister. This telegram states that at the present time mines in Nova Scotia are on half time, and these men cannot understand the reason for it. Is the minister in a position to give the house a statement as to why the mines in Cape Breton are working half time, and what steps are being taken to remedy the situation in view of the serious shortage of fuel in Canada?

Hon. HUMPHREY MITCHELL (Minister of Labour): There must have been some delay in the transmission of my hon. friend's communication, because I received it only as I entered the house. If I remember correctly, my hon. friend raised this question on Friday of last week and the Minister of Finance said he would make inquiries of the coal controller. I believe the matter was referred to in a previous telegram. I had one of our conciliation officers go there to look over the situation. My hon. friend will understand that there are certain technical aspects of the mining industry which may not be apparent to one outside the industry. If my memory serves me correctly, the main cause for the slow-down in production at the mines in Nova Scotia is the lack of ships to transport coal up the St. Lawrence and to other points.

Mr. GILLIS: The Minister of Labour has only partly answered my question. He stated that the cause of the 50 per cent curtailment in the operation of Nova Scotia coal mines was lack of shipping. I think that is generally understood. What I asked him was whether the government were taking any steps to remedy that situation. I should also like to ask whether there is not a possibility of routing eastern Canadian coal into eastern United States markets and vice versa.

Mr. SPEAKER: Order. The question should be placed on the order paper. Questions asked on the orders of the day should not, as I pointed out about three weeks ago, become the subject of debate at this stage.

ALASKA HIGHWAY—WAGES OF LABOUR IN YUKON—AGREEMENT WITH UNITED STATES AS TO WAGES AND WORKING CONDITIONS

On the orders of the day:

Mr. GEORGE BLACK (Yukon): I should like to ask the Minister of Labour a question. I have informed him that I intended to ask this question, and with your indulgence, Mr. Speaker, and the indulgence of the house I will divide it into three inquiries. I am confident the minister's reply will embrace all three. Is the order recently made by the national war labour board of Canada fixing the wages of common labour in the Yukon at 75 cents per hour plus cost of living bonus being enforced against all employers of common labour in Yukon? If not, why is the order not enforced against all employers of labourers of all nationalities? Are foreign

employers allowed to employ foreign labourers on work done in the Yukon at wages greatly in excess of the wages fixed by the national war labour board and in excess of wages Canadian labourers are allowed to receive?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, the answer to the first question of the hon. member is yes. The national war labour board is at present considering placing someone in the Yukon district who will have charge of the enforcement of orders with respect to wages and working conditions there. I can assure my hon. friend that sympathetic consideration is being given to the suggestion he made in this house last Thursday.

It might be of interest to the house if I gave a summary of the arrangements that have been made between the United States and Canadian governments with respect to wages and working conditions, not only in the Yukon but in British Columbia and Alberta in connection with the building of the Alaska highway and other works that are being carried on.

By arrangement with the Department of External Affairs conferences were held with the representatives sent from Washington by the United States government with the object of agreeing on certain basic conditions.

The notes exchanged between the government of Canada and the government of the United States concerning the construction of a highway to Alaska provide that the United States government shall:

> Arrange for the highway's completion under contracts made by the United States Public Roads administration and awarded with a view to insuring the execution of all contracts in the shortest possible time without regard to whether the contractors are Canadian or American.

In order to give effect to this agreement it has been arranged with the United States authorities that if contracts are let to United States contractors those contractors shall recruit their labour in the United States and shall not include persons normally resident in Canada. The labour so recruited will be paid at United States wage rates, which include a premium for work done abroad. The wages will be exempt, in accordance with the terms of the notes, from Canada taxation, and such matters as social insurance and workmen's compensation will be dealt with in accordance with United States law. United States rules as to working conditions will apply.

In the case of contracts awarded to Canadian contractors labour will be recruited exclusively in Canada. Canadian wage rates and working conditions will prevail. The wages will be subject to Canadian taxation; unemployment insurance and workmen's compensation will be governed by Canadian law.

It is, of course, possible that in an emergency it may be necessary for United States contractors to engage some Canadian labour on the spot. It has been agreed that they will do so only through the Canadian employment service and that the labour so engaged will be paid at Canadian wage rates; that the wages will be subject to Canadian taxation and that Canadian law will govern unemployment insurance and workmen's compensation.

The reason for these arrangements is clear. The speedy completion of the road is necessary for the defence of Canada and of the United States. In order that the road may be completed as soon as possible, both United States labour and Canadian labour must be employed. United States labour can be recruited only if United States wages are paid and United States conditions of work apply. Consideration had to be given to our policy involving price and wage control, because it has been the practice in the United States to give extra pay for employment abroad. On the other hand, it is essential for the maintenance of the price and wage structure in Canada, which has been carefully devised to avoid the peril of inflation, that the wages paid to Canadian labour employed on the road should not be out of line with wages paid on other Canadian enterprises of a comparable character. By confining American contractors to recruitment of labour in the United States and Canadian contractors to the recruitment of labour in Canada, it is hoped to avoid the friction and the misunderstandings which are bound to arise if the same employer were employing two sets of men to do precisely similar work at different rates of pay. It is realized that this difference cannot be entirely eliminated, but it is hoped that a frank explanation of the circumstances will make it possible for the men concerned to understand what is being done and why it is being done, and to realize that the whole arrangement is designed to expedite the completion of the road without distorting the Canadian price and wage structure.

As a further precaution, United States employees are to be urged to assign a considerable part of their wages in the United States so that the cash payments which they receive in Canada will not, in most cases, exceed the cash payments received by Canadian labour.

FUEL OIL

INQUIRY WITH RESPECT TO DISTRIBUTION OF OIL AND GAS FOR HEATING PURPOSES

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): I should like to ask the Minister of Munitions and Supply a question arising out of many inquiries which are being made. Can he give the house some indication as to when a definite policy will be laid down with respect to gas and oil heating systems? The people are worried about this matter.

Hon. C. D. HOWE (Minister of Munitions and Supply): I expect to be able to make a statement within the next day or two with respect to heating with oil. We have made a careful analysis of the oil position and are hopeful that the situation will not require such drastic action as I suggested in the house. With respect to gas, of course that is a matter over which this government has very little control. We strongly recommend that all furnaces that can be converted to coal should be so converted, because we doubt very much whether adequate supplies of gas can be furnished for the coming winter.

WHEAT

AGREEMENT FOR FURTHER PURCHASES BY GREAT BRITAIN—ANSWERS TO QUESTIONS OF MEMBER FOR QU'APPELLE

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker on June 1, the hon. member for Qu'Appelle (Mr. Perley) asked two questions with reference to the sale of 120 million bushels of wheat to the British Ministry of Food. At that time I stated that I would endeavour to obtain answers to both questions. The first question was:

How could a sale have been made on the basis of October and December futures when they have not been opened yet on the Winnipeg exchange?

There is no reason why sales cannot be made on the basis of futures which are not as yet posted for trading purposes, and this sale of 120 million bushels was made on May 22 last, and is subject to all contractual requirements, just as if the futures were trading in the market. I would call the hon. member's attention to the fact that the next few months are very important in the grain trade. In view of the increased price which will be paid on the 1942-43 crop, a proper adjustment of the price of wheat to new and higher levels is necessary. In order that no one may gain from this adjustment, the posting of the October and December futures has been delayed. In due course these futures will be posted and as cash wheat is purchased by the cereals import board at the seaboard, these futures will be given up to the exporter on the instructions of the cereals import board against the cash wheat purchased.

The second question asked by the hon. member for Qu'Appelle was:

Will the minister read to the house the cables which have passed between his department or the Canadian wheat board and the British Ministry of Food with respect to the request that he be authorized to announce the price, even if the price is not mentioned?

I may say that Mr. McIvor sent a cable on May 27 last to the Canadian wheat board representative in the United Kingdom, Mr. R. V. Biddulph, from which I quote as follows:

. . . At recent agricultural committee hearings some members of committee pressed for announcement of price on previous contracts. We informed them we were not in position to announce price as British Ministry of Food had expressly asked us not to disclose prices. We would now appreciate very much if cereals would authorize us to announce price of this sale as well as prices of former recent sales.

To this Mr. Biddulph replied:

Ministers cannot give decision for a day or so.

A further cable was sent through the Secretary of State for External Affairs, directed to the High Commissioner for Canada in London, on June 2, 1942. This cable read as follows:

When the announcement was made in the House of Commons by Minister of Trade and Commerce of recent purchase by United Kingdom ministry of food of 120 million bushels of wheat futures, opposition members renewed requests that price be disclosed. Canadian government have no objection to disclosure of price and unless United Kingdom government have substantial reason for withholding the information we would appreciate their concurrence, not only the disclosure of price of recent sale but also of prices at which former bulk sales were concluded. We request you to take up this question with United Kingdom authorities and to advise us as soon as possible if they are agreeable to disclosure by us of prices at which Canadian wheat board have been selling to United Kingdom Ministry of Food.

No reply has been received to this telegram.

Mr. E. E. PERLEY (Qu'Appelle): There must be a contract or an agreement of some kind. Will the minister table any cables that have passed between his department or the wheat board and the British Ministry of Food? There must be some agreement in connection with a sale of 120 million bushels

of wheat. There must be some paper or some cable. Will the minister table the cable, or the agreement, or the contract, even if he must omit the price?

Mr. MacKINNON (Edmonton West): My understanding is that this sale was arranged by cable between the cereals import board and the Canadian wheat board at Winnipeg. I do not know what previous telegrams there were, but the telegrams I have read are all that are in my possession.

Mr. PERLEY: Will the minister table them? I am not asking for the price; I am simply asking that the minister table the cables between the two governments or the British Ministry of Food and the wheat board with respect to this sale of wheat.

[*Later:*]

Mr. PERLEY: Will the Minister of Trade and Commerce furnish to the house the offers and acceptance cables which are always the basis of contracts between the wheat board and the British government?

Mr. SPEAKER: I think that is a question which might properly be placed on the order paper.

WHEAT ACREAGE REDUCTION BONUS—PRESS REPORTS AS TO FILING OF ACREAGE STATEMENTS

Mr. J. A. ROSS (Souris): I should like to ask a question of the Minister of Agriculture with reference to the acreage reduction bonus, based on a press dispatch appearing in the Winnipeg *Tribune* of Thursday, June 4, 1942, headed "Bonus Red Tape Angers Farmers," and which quotes Hon. D. L. Campbell, minister of agriculture for Manitoba, as commenting on the confusion and duplication caused by the filing of acreage statements where there is no change in the operator's acreage from 1941. During April and May the press carried articles pointing out that where there was not a change in acreage it would be unnecessary to file a fresh statement for 1942, but apparently this has recently been altered.

Mr. SPEAKER: I am afraid that question will have to be placed on the order paper.

Mr. ROSS (Souris): Is it not in order for me to mention that there is great confusion amongst the farmers who have not filed an application by May 31, 1942? Are they not eligible for the bonus?

Mr. SPEAKER: The question should be placed on the order paper.

OIL AND GAS

POSSIBILITY OF DEVELOPMENT OF GASPÉ AND TURNER VALLEY FIELDS

On the orders of the day:

Mr. J. S. ROY (Gaspé): In view of the gravity of the problem brought about by the shortage of oil and gas, I would ask whether the government will not make a serious attempt to explore the possibilities of oil that are offered by the Gaspé oil fields.

Hon. C. D. HOWE (Minister of Munitions and Supply): The government itself is not drilling for oil, and it is not the policy to do so at the moment. The Gaspé oil fields are not a proven field, and in the circumstances the government would not be warranted in itself attempting their development.

Mr. BLACKMORE: Is the government dependent entirely on private enterprise and private initiative for exploring oil fields and opening new wells? Is the government not directing this activity in any way?

Mr. HOWE: The government is certainly directing the activity. The experts of the natural resources department are active in all areas where it is known that the prospects for oil are favourable. Of course private enterprise has exploited wild cat wells, as we say, in a great many areas, including Gaspé. I think that we could waste a great deal of effort in areas of that kind—areas that have not been proven—without greatly increasing the supply of oil. We are encouraging drilling in areas that are considered to be favourable.

Mr. BLACKMORE: By what means would the minister encourage them? Suppose the minister discovered what looked like a good potential oil field; what measures would the government take to induce oil companies to go in there?

Mr. HOWE: We would try to make it attractive for oil companies to drill there. We have passed legislation to that end during the present session. We would allow people competent to do development work to go in and develop that area.

Mr. ROY: Has the government asked for any report from the geologist, Doctor Jones, who has made a survey of the Gaspé oil fields? This engineer has been working in that area for twenty years, and I believe could give the government valuable information with respect to it.

Mr. HOWE: I shall be glad to make inquiries.

Mr. NOSEWORTHY: What steps is the government taking to secure a maximum production of oil from the Turner Valley fields?

Mr. SPEAKER: Obviously that is a question that should be placed on the order paper.

LOAN OF $750,000,000

TO MEET LOANS OR OBLIGATIONS, TO PURCHASE UNMATURED SECURITIES, AND FOR PUBLIC WORKS AND GENERAL PURPOSES

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee to consider the following resolution:

That the governor in council be authorized to raise by way of loan under the provisions of The Consolidated Revenue and Audit Act, 1931, an amount not to exceed in the whole the sum of seven hundred and fifty million dollars for paying or redeeming the whole or any portion of loans or obligations of Canada and also for purchasing unmatured securities of Canada and for public works and general purposes.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. HANSON (York-Sunbury): Would the minister desire to make a statement now? I do not think this resolution should take very long, but I suggest that he should give us information as to what it will cover in the way of maturing obligations and the like.

Mr. ILSLEY: If this resolution passes, the bill based upon it will authorize the governor in council to borrow a sum not exceeding $750,000,000 through the issue, sale or pledge of securities of Canada. The purposes for which money so borrowed may be used will be set out in the bill. Those purposes are: (1) To pay or redeem the whole or any portion of any loans or obligations of Canada; (2) to purchase unmatured securities of Canada; (3) for public works; (4) for general purposes. The main purpose for which it is intended to use moneys to be borrowed under the bill is to pay off securities of Canada which mature or are callable within the next year or two. I will give to the committee a table showing the loans which are maturing or are callable prior to the end of 1943. Maturing in 1942, $73,951,470.85.

Mr. HANSON (York-Sunbury): When was that issued? Is that a treasury bill or bond issue?

Mr. ILSLEY: Bonds. I shall come back to that. Maturing in 1943, $677,000,100; callable prior to the end of 1943, $294,337,500.

Mr. HANSON (York-Sunbury): That is a one billion dollar total.

[Mr. Howe.]

Mr. ILSLEY: Yes. It makes altogether $1,045,289,070.85. In addition there are treasury bills of $270,000,000, making a total of $1,315,289,070.85.

Mr. HANSON (York-Sunbury): Is that the total amount of outstanding treasury bills?

Mr. ILSLEY: The total amount of outstanding treasury bills is $270,000,000.

Mr. HANSON (York-Sunbury): Is that what is currently called floating debt, in England, for instance?

Mr. ILSLEY: I do not know.

Mr. HANSON (York-Sunbury): It is unfunded debt, anyway.

Mr. ILSLEY: I am not sure about the use of the terms. They are treasury bills, whatever adjective you apply.

Mr. HANSON (York-Sunbury): They are short-dated bills that are issued from time to time to take care of government necessities, at a very low rate of interest, and usually snapped up, I understand, by banks and insurance companies for the purpose of employing their current funds without being tied up for a long time.

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): And that is the total amount of our treasury bill commitments?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): It is considered, I suppose, that it will have to be refunded in a long term commitment. Is that the idea?

Mr. ILSLEY: When treasury bills come due there are new treasury bills to take their place.

Mr. HANSON (York-Sunbury): Sometimes they are absorbed by a bond issue.

Mr. ILSLEY: Yes. I do not know whether that has happened recently.

Mr. HANSON (York-Sunbury): Is this a rolling snowball, the floating debt which is represented by these treasury bills? Is it intended never to refund them, or is it intended to pay them out of current revenue, or what? The government must have some plan with respect to the retirement of these obligations, either by payment in cash or by funding them in long term securities. They are of very short terms.

Mr. ILSLEY: The amount of treasury bills outstanding has been increasing over the last few years.

Mr. HANSON (York-Sunbury): I imagine that is true.

Mr. ILSLEY: I should think it might be desirable not to have any plans for converting them into a long term debt. The money is borrowed at a low rate of interest, almost a non-existent rate of interest, and there is no reason why there should not be a substantial amount outstanding continuously.

Mr. HANSON (York-Sunbury): It may be good business, I do not know; but it is a very limited form of financing. That is to say, it has to be taken care of immediately, and I suppose as long as conditions are as they are there is no doubt these will be taken care of by renewals.

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): In ordinary times of peace, when these are issued they would generally speaking be taken up in the form of a funded debt on a long term basis. I am not quarrelling with the plan. I think the government is saving money by the issuing of short-dated treasury bills, but I should not like to see it go on indefinitely, reaching huge proportions, because something might happen when the holders would not want to renew them. There has to be some policy behind it.

Did the minister complete his statement? He was to put on *Hansard* the whole of the maturities.

Mr. ILSLEY: What the hon. gentleman asked for was the date of issue of the securities maturing in 1942 and 1943.

Mr. HANSON (York-Sunbury): Yes, and I should like to have that supplemented by the rates, and split into the amounts. It could be put on *Hansard* in the form of a table.

Mr. ILSLEY: It will take two or three minutes to get the dates. I may say with regard to the bill to be based on this resolution that the moneys borrowed under the authority given by the bill may also be used for public works and general purposes of the government of Canada. It is to be noted however that the proceeds of the sale of securities issued under this authority have to be paid into the consolidated revenue fund and can only be paid out of the consolidated revenue fund under parliamentary authority. This means that moneys borrowed under it can be used for public works and general purposes only if moneys for this purpose have been voted or authorized by parliament. The bill is not itself an authorization for the expenditure of the money. It is merely authority for the borrowing of the money, and once it is borrowed it can be used for these general purposes if subsequently authorized.

Mr. HANSON (York-Sunbury): I think it is wise to make that clear.

Mr. ILSLEY: Yes, that point has always come up when these loan bills came before the house. Previous loan acts all provided that the moneys borrowed could be used for public works and general purposes. There is thus no change in principle with regard to this matter.

The amount to be authorized is $750,000,000. The loan act of 1931 and subsequent loan acts passed in 1933, 1935, 1936, 1939 and 1940 have all authorized the borrowing of $750,000,000. That is the amount that is put in. There is no particular magic in that amount. In fact it would appear to me that probably another loan act will be required next year, although we have been able to go two years since the last loan act of $750,000,000 in 1940.

I suppose hon. members understand that the purpose of these loan acts is to vote money to meet maturing obligations, whereas the purpose of our estimates is to meet current obligations of the government. The war appropriation bill is to meet war expenditures, as a separate function.

Mr. HANSON (York-Sunbury): The purpose of this resolution is really threefold, as I understand it and as I recall the previous ones. First it is to take care of maturing loans or obligations. These include, as the minister has stated, a relatively small portion for the fiscal year 1942-43, and a substantial portion for the following year. The portion for this year includes the treasury bills. Second, it is for the purchase of unmatured securities of Canada. The minister has not said whether he proposes to purchase unmatured securities, but this is an enabling authority. I assume he means by that callable loans; or it is even wide enough for the government to go out in the market here or elsewhere and buy unmatured securities of Canada. Third, it is for public works and general purposes. I recall discussing this third feature on a prior occasion and having it made clear at the time by the minister that while this form was being used and had been used on previous occasions, in itself it was not sufficient to authorize the government to spend any part of this

$750,000,000 on public works or for general governmental purposes beyond the retirement of loans or purchase of unmatured securities, without a special vote.

Mr. ILSLEY: That is correct.

Mr. HANSON (York-Sunbury): I think that is clear and satisfactory. The minister might say what the government's intention is with respect to purchasing unmatured securities. What is the policy? Is there anything in view? Is the government calling any further maturities in London, or would that be paid out of some other vote, or perhaps out of the $2,000,000,000 appropriation?

Mr. ILSLEY: This would give authority to repatriate, but there is no intention to use the authority for that purpose. I do not say we would not, but—

Mr. HANSON (York-Sunbury): But you want the authority?

Mr. ILSLEY: It authorizes the calling of the securities that are callable. Many of them are callable. It goes further and authorizes the purchase of unmatured securities if we wish to do that. It might be desirable.

Mr. HANSON (York-Sunbury): Has the government any intention of so using it?

Mr. ILSLEY: We have no intention of using it. By that I do not mean that I am giving a commitment that it will not be used for this purpose.

Mr. HANSON (York-Sunbury): At the present time it is not the intention to use it, but you want the authority.

Mr. ILSLEY: That is correct.

Mr. HANSON (York-Sunbury): I am agreeable.

Mr. ILSLEY: As to the details of maturities, I could put this table on *Hansard*, but perhaps the committee would like to hear it: Issued May 1, 1922, callable May 1, 1942, due May 1, 1952, interest rate 5 per cent, payable in New York, $100,000,000.

Mr. NICHOLSON: Payable in New York funds?

Mr. ILSLEY: That is right.

Mr. COLDWELL: What is the present market value of that security?

Mr. ILSLEY: It is around par in New York.

Mr. COLDWELL: That I take it would be the type of security that it would be advantageous to call at the present time?

Mr. HANSON (York-Sunbury): You would have to pay an exchange premium.

Mr. COLDWELL: Even at that, you are paying interest at 5 per cent plus 10 per cent on 5 per cent in New York. If you could borrow at the rate at which we have been borrowing here, it would seem to be good business to call it.

Mr. ILSLEY: It takes a great deal of foreign exchange.

Mr. COLDWELL: That may be a hurdle to surmount, but from the point of view of a commercial transaction it looks good.

Mr. ILSLEY: The next is $249,000, issued June 1, 1937, maturing June 1, 1942; interest 2 per cent, payable in Canada. The remainder are as follows:

Date of issue	Date of maturity	Interest rate	Where payable	Amount outstanding
July 1, 1941	July 1, 1942	4	Canada	$ 33,293,470 85
Oct. 15, 1934	Oct. 15, 1942	3	Canada	40,409,000 00
Jan. 15, 1937	Callable Jan. 15, 1943 Due Jan. 15, 1944	2¼	New York	30,000,000 00
Apr. 15, 1942	Apr. 15, 1943	1	Canada	250,000,000 00
May 1, 1941	May 1, 1943	2¼	New York	10,000,000 00
June 1, 1935	June 1, 1943	2½	Canada	20,000,000 00
Jan. 2, 1941	July 2, 1943	1½	Canada	250,000,000 00
Aug. 15, 1935	Callable Aug. 15, 1943 Due Aug. 15, 1945	2½	New York	76,000,000 00
Oct. 15, 1923	Oct. 15, 1943	5	Canada	147,000,100 00
Oct. 15, 1933	Callable Oct. 15, 1943 Due Oct. 15, 1945	4	Canada	88,337,500 00

That makes a total of $1,045,289,070.85.

Mr. HANSON (York-Sunbury): In the case of these loans payable in New York, it might not be abvisable to pay them off.

Mr. COLDWELL: It would not be.

[Mr. R. B. Hanson.]

Mr. ILSLEY: I do not see how anyone could tell whether it would be unless they knew something about the price. However, I do not need to go into that. The treasury bills outstanding, as I said, amount to $270,000,000. Treasury bills are renewable

under the appropriation acts, but if the amount were funded into long term debt, the necessary authority would have to be provided. This bill would be the authority. For instance, treasury bills are issued so often for the refunding of previous treasury bills that if we had to rely on these loan acts as authority for the issuing of treasury bills, we would rapidly exhaust our authority.

Mr. HANSON (York-Sunbury): They are revolving debts, not revolving funds.

Mr. ILSLEY: Yes, so that we do not have to rely on our loan acts for the issuing of treasury bills. If we did we would need loan acts all the time, or very big ones.

Mr. HANSON (York-Sunbury): The treasury bills are listed there, are they, and will be placed on *Hansard*?

Mr. ILSLEY: I have not the list here, but I can get it.

Mr. HANSON (York-Sunbury): I do not know that it is important and I do not want to hold up the minister. The bond issues are important.

Mr. ILSLEY: I have the list here.

Mr. HANSON (York-Sunbury): I would not ask the minister to read it but it might go on *Hansard* with the other lists.

Mr. ILSLEY: The list of treasury bills outstanding at April 30, 1942, is as follows:

Date of issue	Date of maturity	Interest rate	Where payable	Amount outstanding
Feb. 13, 1942	May 15, 1942	·545	Canada	$ 45,000,000
Feb. 27, 1942	May 29, 1942	·547	Canada	45,000,000
Mar. 13, 1942	June 12, 1942	·552	Canada	45,000,000
Apr. 1, 1942	July 3, 1942	·550	Canada	45,000,000
Apr. 17, 1942	July 17, 1942	·544	Canada	45,000,000
Apr. 29, 1942	July 31, 1942	·545	Canada	45,000,000

Mr. NICHOLSON: Has the minister the figures in connection with the appropriation bill of two years ago, showing the unmatured securities which were retired?

Mr. ILSLEY: Yes. The table is as follows:

Loans issued under the authority of the Loan Act, 1940

Issue date	Maturity date	Interest rate per cent	Description	Amount
....	....	3	War Savings Certificates	$150,000,000
Oct. 1, 1941	Oct. 1, 1952	3	Second War Loan	24,945,700
....	June 15, 1945	..	Non-Interest Bearing Certificates, Series B	1,000,000
Jan. 2, 1941	July 2, 1943	2½	Two and One-Half Year Notes	50,000,000
May 1, 1941	May 1, 1942	1	One Year Note	250,000,000
May 1, 1941	May 1, 1943	2¼	Two Year Note (N.Y.)	11,100,000
June 15, 1941	Dec. 15, 1946	2	1941 Victory Loan	106,444,000
	June 15, 1951	3	1941 Victory Loan	....
Mar. 1, 1942	Sept. 1, 1944	1½	Second Victory Loan (1942)	156,510,300
	Mar. 1, 1948	2¼		
	Mar. 1, 1951	3		
				$750,000,000

It will be noted that $150,000,000 of war savings certificates were issued under the authority of that last loan act, as well as certain bonds in the second war loan, the first victory loan and the second victory loan. The bonds issued under the authority of that loan act were bonds issued for refunding purposes, not for cash. Persons who bought them turned in their old bonds and got these in their place.

Mr. COLDWELL: Do I understand that non-interest bonds were issued under that authority?

Mr. ILSLEY: Yes, a million dollars' worth.

Mr. COLDWELL: Was there not something issued in New York?

Mr. ILSLEY: I should correct what I said about the million dollars being issued. An order in council has been passed, under

the authority of this act, authorizing the issue of a million dollars' worth of non-interest bearing security, series B. However, that amount has not been issued. They are issued from time to time as applications come in.

Mr. COLDWELL: What is the total of that non-interest bearing loan?

Mr. ILSLEY: It is not very great. Up to April 30 the amount was $9,144,694.99.

Mr. MacNICOL: Payable in New York?

Mr. ILSLEY: No, these are non-interest bearing certificates.

Mr. WRIGHT: The minister said $11,000,000 was borrowed in New York in 1941. Are we borrowing money there at the present time?

Mr. ILSLEY: Only to renew existing obligations.

Mr. HANSON (York-Sunbury): It would be interesting to know the amount of the total funded debt of Canada held in the United States, and the annual cost (a) without exchange, and (b) with exchange. I should like to know, too, when the original debt was incurred. If I do not miss my guess it will be found that most of this indebtedness arose originally between 1922 and 1930. Those were the halcyon days when everything was going beautifully, and when New York was the mecca for all borrowers, particularly the treasury of Canada, and the provinces—not to speak of corporations in this country. I recall a certain warning given out in 1927, I believe it was, by a gentleman who then occupied this seat, against this kind of borrowing. No heed was paid to the warning we gave, and we are paying for it to-day, right through the nose. I hope this will be a salutary warning to all governments, no matter what their political complexion may be, that the debt of the country should be held within the country. If held in Canada no very appreciable difficulties will arise in handling it. It is the debt we owe to the stranger which may cause us great anxiety in days to come.

A short time ago I discussed this matter with a man who knows what he is talking about, and he told me that, taking the war and all other factors into consideration, the size of Canada's debt need not cause us much anxiety, so long as we owe it to ourselves. But when we go outside the country to borrow we must be prepared for the worst, if the worst should come. That was sound reasoning. If we owe to ourselves we can take care of our debts by taxation, but we cannot tax foreigners. The man in another country expects to be paid according to the terms of his contract. Attempts have been made to do that, but they have always met with tremendous reaction and resistance, and there have been reflections on the credit of the country. So long as we have this system we have to keep our conscience.

If the minister cannot give complete information to-day, he may do so at a later stage. I should like to have, in some detail, information as to the origin of the debt. I should like to have included the debt of the Canadian National Railways, because between 1924 and 1930 I believe this country borrowed on its credit in the New York market, through the medium of the Canadian National Railways, the sum of about $400,000,000. We are paying through the nose for that policy. I should like to know both the direct debt and the guaranteed obligations, so that the country will be apprised of the total burden upon which we have to pay principal, interest and exchange.

Mr. ILSLEY: I can give at once Canada's direct debt payable in New York. It stands at $459,000,000, with annual interest charges of $16,210,000. These are the figures as of April 30, 1942.

Mr. HANSON (York-Sunbury): What is the exchange? It is part of the burden.

Mr. ILSLEY: Eleven per cent on the interest, amounting to $1,783,100. I have not before me figures showing the Canadian National Railways' guaranteed debt payable in New York.

Mr. HANSON (York-Sunbury): Could the minister give us some idea? Is it as much more, or an amount in excess of that? I should like also to know the origin of the debt, and how old it is. I am not referring to renewals.

Mr. ILSLEY: I could go through a list I now have and pick out the dates of issue of bonds payable in New York, making up the $459,000,000.

Mr. HANSON (York-Sunbury): I am not asking the minister to do that. Perhaps he would have his staff put this information in the form of a table which would be available when we are discussing the bill. I believe the guarantee branch of the Department of Finance could give us the same detail with respect to the indirect obligations of the Canadian National Railways, and particularly the date of origin of these obligations.

Mr. ILSLEY: That would involve tracing them back.

Mr. HANSON (York-Sunbury): Yes, it would involve some work, but if possible I should like to have it. If the information cannot be obtained quickly I should like to know how much of these two sums, the direct obligation of $450,000,000 and that of the Canadian National Railways, was incurred between 1922 and 1930, when this country went on a big spending and borrowing spree in the New York markets. The same thing was true of the provinces.

Mr. ILSLEY: The hon. gentleman wants the particulars of the $459,000,000—when the debt was incurred?

Mr. HANSON (York-Sunbury): Yes, when the first borrowing occurred.

Mr. ILSLEY: It will not be sufficient merely to give the date of issue of the present bonds, because they may have been issued for the purpose of refunding previous bonds, and that procedure may have occurred two or three times. Does the hon. gentleman want similar information with regard to the Canadian National debt payable in the United States and guaranteed by the dominion government, and also the unguaranteed Canadian National debt?

Mr. HANSON (York-Sunbury): Is that in the form of certificates for rolling stock issued under the Philadelphia plan? There is a specific term that is used but I have just forgotten it. When I was on the railway committee in the old days we used to inquire about that. I thought they were all guaranteed by the government, although secured by a specific mortgage and subject to a trust.

Mr. HOWE: No, they are not guaranteed by the government.

Mr. HANSON (York-Sunbury): The minister might include the obligations that are payable in New York, whether guaranteed or not.

Mr. GRAHAM: When an issue matures in New York and you arrange for a new loan to retire the old one, do you have to retire the old one in terms of the previous amount plus the exchange?

Mr. ILSLEY: If a loan is payable in New York funds, so many dollars must be paid. We must obtain those New York dollars in some way.

Mr. GRAHAM: You do not get the holders of the bonds to accept the new issue? I realize that that might not be possible.

Mr. ILSLEY: That is not the course followed.

Mr. GRAHAM: I assume the new purchasers might not be the same as the old holders?

Mr. ILSLEY: That is right.

Mr. NICHOLSON: The minister gave a figure of $459,000,000 as being the amount outstanding in the United States as at the end of April, 1942. Has he the figure as at the end of the previous fiscal year, so that we may see whether the picture has changed since the beginning of the war?

Mr. ILSLEY: I have not the figures, but it has decreased $10,000,000 since the outbreak of the war.

Mr. HANSON (York-Sunbury): Does that mean that $10,000,000 has been paid off in that time?

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): More would have been paid off if it had been considered the best thing to do.

Mr. ILSLEY: When bonds fall due, just what the government should do is considered carefully and arguments pro and con are weighed. I forget what maturity it was, but there was one where we finally decided that the best thing to do was to pay part and renew part.

Mr. QUELCH: Would it be possible to get a statement showing the total of Canadian securities, dominion, provincial, municipal and private, held abroad; also the dates of issue, the dates of maturity and the rates of interest?

Mr. ILSLEY: I am informed that it would be impossible to get that. The bureau of statistics makes an estimate, but as there is a certain movement in securities there is no way of finding that out with any exactness.

Mr. QUELCH: Could you not compel the owners of securities to register them by a certain date and thus get that information?

Mr. ILSLEY: The holders abroad?

Mr. QUELCH: Yes.

Mr. ILSLEY: I do not see how that could be enforced.

Mr. HANSON (York-Sunbury): There is one thing of which the hon. member can be certain. Holders of corporation securities, whether residing in the United States or in Canada, insist on being paid in New York funds when the securities are payable in New York funds. I have often wondered about the patriotism of those people. Perhaps I should withdraw that. If everybody were to give up his exchange it would be a wonderful

thing, but one man will not do it unless everybody does. It is a terrible drain upon this country and upon the foreign exchange control board. I have been in that position myself. I am quite willing to give up to the state part of, shall I say, my unearned increment. If they want it all, they may have it so far as I am concerned.

Mr. QUELCH: Suppose the federal government desired to pay off its indebtedness in England and to call in all debts held in that country in the form of Canadian securities before making an additional gift of money; would it not be possible to find out what dominion, provincial, municipal and private securities were held there?

Mr. ILSLEY: We have repatriated all dominion government and Canadian National securities held by residents of the United Kingdom. The hon. member is probably referring to provincial, municipal and industrial securities.

Mr. QUELCH: Yes.

Mr. ILSLEY: The United Kingdom government probably could obtain exact information with reference to the securities in the hands of residents of the United Kingdom by compelling a registration. They would have the authority to do that. However, that would have to be a programme carried out by co-operation between the dominion and United Kingdom governments.

Mr. QUELCH: Have there been any conversations with that end in view?

Mr. ILSLEY: No. Our programme did not involve the repatriation of industrial securities held by residents of the United Kingdom.

Mr. QUELCH: I am very much in favour of the billion dollar gift, but I do think attempts should be made to pay off whatever we owe in Great Britain, whether it is in the form of federal, provincial, municipal or industrial debts. In the long run it means that goods have to be shipped from this country to pay those government and private debts. I was just wondering whether we are going to get some of those securities.

Mr. ILSLEY: The matter was gone into pretty thoroughly in the debate on the billion dollar gift, and a good argument was advanced for not denuding residents of the United Kingdom of their Canadian securities. I do not want a repetition of the arguments advanced then, but so long as they have a substantial investment in this country they will have a financial interest in purchasing goods from this government and developing trade with us. If all these securities were brought home there would be a strong tendency on their part to purchase wheat from the Argentine and cattle from other countries in whose properties and industries they had an interest.

Mr. QUELCH: I was reading through the debate the other day and it seems to me that that was the main argument advanced. An effort is being made to guarantee a foreign market for our products after the war, whereas we should try to develop our internal economy so that we will have a home market for our own products, or for the products for which our own products may be exchanged, rather than depend upon a favourable balance of trade. By this means an internal economy would be developed under which other countries could buy the production of Canada that was not required for our own consuming. You would be giving goods for goods.

Mr. ILSLEY: I have always taken it for granted that it would be impossible in the lifetime of any of us to develop an economy in Canada that would supply a market for the whole wheat production of Canada.

Mr. QUELCH: But the goods for which wheat could be exchanged.

Mr. ILSLEY: You mean goods such as British goods?

Mr. QUELCH: Tropical goods.

Mr. GRAHAM: Is not that argument also applicable to the United States, that Canada might be wise to go there to a reasonable extent for the very reason the minister gives?

Mr. ILSLEY: That might be, but the question is not as acute with the United States as it is with Great Britain, because Great Britain purchases an enormous volume of goods from us, and the balance of trade is favourable to us as between Canada and Great Britain. All sorts of considerations come in there, questions of fairness, whether that is the right way to cooperate in carrying on a war, whether it is sensible from the point of view of postwar trade, and so forth. I realize that persons may have different opinions about it. This whole subject was pretty well threshed out in the debate on the billion dollar gift.

Mr. GRAHAM: When Canada negotiates a new loan on the New York market to retire a loan, does the minister explore the possibility of raising a loan payable in Canadian funds rather than in United States funds?

Mr. ILSLEY: I think that the floating of a loan in New York payable in Canadian funds is impracticable. Some people in the

United States used to accumulate Canadian bonds payable in Canadian funds, and they had reasons for doing so. But when you go into a market like the New York market to borrow money it is understood that you agree to repay the money they lend you, which is United States money.

Mr. NICHOLSON: A few years ago some Canadian companies bought securities which were to be paid in New York funds. If I remember correctly, the city of Calgary had some legal troubles over an issue of that sort some years ago. Are any of the amounts in the list which the minister has given us payable in New York funds to Canadian companies?

Mr. ILSLEY: We do not know the holders or where they are. Some of these holders may be Canadians.

Mr. QUELCH: I can appreciate that there is the difficulty of obtaining foreign exchange in the United States and that we desire to export gold for that purpose, but I understand that the great bulk of the gold we export to the United States is held in that country and therefore to that extent it does not in any way help the war effort of the United States and Canada taken together. To that extent it is an absolute loss so far as our combined war effort is concerned. I see that some of the gold mines are advertising in western Canada for men who are needed in other industries. The minister of munitions has told us that he could use right away five thousand mechanics at Arvida and a thousand miners at Sudbury. That makes six thousand men that he needs right way, and whom he could get if the gold mines in Canada ceased operating. The gold mines of Canada are not making any real contribution to the joint war effort of the United States and Canada. Does not the minister feel that the production of gold could well be stopped for the duration of the war? After the war it would provide employment. We could have an agreement with the United States whereby the goods we require from her could be obtained under the lease-lend law, and then after the war we could repay our indebtedness to the United States in gold, if the United States desired to take gold. Our gold cannot be regarded as any help to the joint war effort of the United States and Canada. It is a help to Canada, but the war effort must be regarded as one joint effort by Canada and the United States, and the production of gold does not help that joint effort. On the contrary it is a complete loss of labour to the war effort.

Mr. ILSLEY: Sooner or later the subject to which the hon. gentleman refers will probably come up for debate in some way. The hon. member has brought up this question two or three times before. He has suggested that we should close up the gold mines. He has asked me two or three times if I did not think that would be a very good idea, and I cannot remember having said that I did. I should not like to express an opinion on it at the moment. I doubt whether this is the proper time to bring up the subject.

Mr. HANSON (York-Sunbury): The minister could at least say that the export of gold helps our foreign exchange.

Mr. ILSLEY: Yes, if we are to go on buying from the United States and not be thrown into a relationship which is undesirable from our point of view, that of being a debtor, whether merely a debtor having obligations under the lease-lend law or otherwise. We ought to be in a position to pay for what we get. It makes for smooth delivery of goods, parts and materials to Canada, and gold is just what we need for that purpose. The hon. gentleman suggests that we should work out an entirely new arrangement, an arrangement which would be very hard on communities which rely on the production of gold, and very hard on the large number of persons employed in the industry. These social problems are of great importance, and these are all matters which would have to be taken into consideration if we were to adopt a policy such as the hon. gentleman has several times advocated.

Mr. ESLING: We already know of one community in the far north which is becoming entirely deserted. When the mines cease operation the business community that is dependent upon the mines has to fold its tent and move out, just as the miners do. They find another locality and start business, and the men must look for other employment.

Mr. HANSON (York-Sunbury): The minister mentioned the policy of lease-lend. This may not be the proper time or place to inquire with regard to that, but it would be interesting to know whether the policy is in operation, the extent to which it has been put into operation, the obligations that have been incurred both ways, and the balance for or against this

country. If he could give that information it would be interesting. I do not assume he has it before him at the moment.

Mr. ILSLEY: We do not avail ourselves of lease-lend.

Mr. HANSON (York-Sunbury): But the minister suggested possibilities. It is definite that we have not yet taken on anything under lease-lend?

Mr. ILSLEY: That is correct.

Mr. HANSON (York-Sunbury): Has the offer been extended to Canada?

Mr. ILSLEY: I always understood it was available to Canada if Canada wished it.

Mr. HANSON (York-Sunbury): But we have not got it so far?

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): I am glad to hear it.

Mr. NICHOLSON: I have been interested in the remarks of the hon. member for Acadia. I noticed in the evening paper that Mr. Little, speaking over the week-end, mentioned that Canada was near an extreme labour shortage. In Saskatchewan the gold fields will become ghost towns, and while it is perfectly true that some of these towns were built up for the production of gold, they will suffer hardship if we discontinue production. The present may not be the time for the discussion of this important subject, but some minister of the crown should indicate whether any lead has been given by the government with a view to negotiation between the two governments to see whether the large number of men engaged exclusively in gold production and the amount of available equipment might not be used to better advantage. While there are hardships in moving people from a town in which they have been living for some years, there are greater hardships which they might have to contemplate. The point made by the hon. member for Acadia is well taken. We cannot afford at this stage to have highly trained men and valuable equipment producing goods that are not essential in the present conflict, and I cannot think of large quantities of gold as being produced in the best interests of Canada and the United States, taking everything into consideration. I wish the minister would indicate whether consideration might be given in the house to the whole question.

Mr. QUELCH: Would the minister also give us information regarding the action that is taken in Russia, Australia and South Africa? I understand that in Russia production has been discontinued, and, to a large extent it has been discontinued also in Australia. If he could give that information it would be a lead on the question.

Resolution reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 96, to authorize the raising, by way of loan, of certain sums of money for the public service.

Motion agreed to and bill read the first time.

Mr. SPEAKER: When shall the bill be read the second time?

Mr. HANSON (York-Sunbury): I think it would be a good idea to read the bill a second time now. I should like to have a look at it. I believe the minister was to give me some information about foreign loans and guarantees. If I can get that information on *Hansard,* I am willing to have the bill go through. It is in the standard form of previous years?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): I should like to look at it a moment. So far as I am concerned we could have the second reading and there would then be the committee stage.

Mr. ILSLEY: I move that the bill be now read the second time.

Motion agreed to and bill read the second time.

Mr. SPEAKER: Mr. Ilsley moves that I do now leave the chair for the house to go into committee on the said bill.

Mr. POULIOT: In past years the second reading of a bill has been postponed just because the bill had not been printed in one of the official languages. Here we have absolutely nothing before us. There must be a stop to this.

Mr. NEILL: The bill has already been read the second time.

Mr. SPEAKER: When shall the house go into committee on the bill?

Mr. ILSLEY: Next sitting.

BUSINESS OF THE HOUSE

Hon. J. L. ILSLEY (Minister of Finance): The next order of business mentioned was the war risk insurance bill, but that presents new difficulties every day and I am not prepared to go on with it to-day. I am trying to work out with the Minister of Fisheries an arrangement which will meet the wishes expressed by some hon. members the other day; other questions have arisen as to whether the

bill should apply to ships on inland waters or not, and certain information which is not in the possession of the government will have to be obtained. I cannot have that for two or three days, and it makes an awkward situation so far as this bill is concerned. I am proceeding to set up the organization just as if the bill had gone through, because I have to do it. I am getting committees together, and as soon as I have these preliminary matters settled, as far as they can be settled by the government, I shall have to bring this bill into the house again, but I cannot do so to-day or to-morrow.

Hon. R. B. HANSON (Leader of the Opposition): I realize that the minister has difficulties on his hands, but his colleague said distinctly that this would be among the orders of business to-day. Apparently there is no team-work between members of the administration with regard to these matters. However, I am not going to refer to that further. If the minister cannot go on and if there is a hope that he will be able to work out a solution for the fishermen, I would say we should let the bill stand over. As a matter of fact, all he has to do is to go into committee and then move the committee out; he has the remedy in his own hands. But I hope a solution will be found with respect to the fishermen.

He mentioned another difficulty with regard to shipping on inland waters. There was also a sharp division of opinion in the committee on another point which may occasion some debate here. So perhaps it is just as well to let the matter stand. But I want it understood that as far as we are concerned we were prepared to go on with the bill.

Mr. ILSLEY: We might revert to government notices of motion. There is a most urgent matter which my colleague the Minister of National Revenue would like to take up, the resolution standing in his name. When we are through with that we might proceed with the second reading of the war appropriation bill. The resolution of the Minister of National Revenue may take some little time.

Mr. HANSON (York-Sunbury): I have no objection to accommodating the administration. But this was not on the orders of the day for to-day, and therefore I did not give any study to it, although in odd moments I have been trying to give some attention to these matters. I am quite willing that we should revert. The minister can make a statement and if we find it is a complicated matter, I think he should not proceed beyond that stage.

Mr. SPEAKER: By unanimous consent.

INCOME AND CORPORATION TAX

CONVENTION BETWEEN CANADA AND THE UNITED STATES SIGNED AT WASHINGTON MARCH 4

Hon. C. W. G. GIBSON (Minister of National Revenue) moved that the house go into committee to consider the following resolution:

That it is expedient that the houses of parliament do approve of the convention and protocol entered into at Washington on the 4th day of March, 1942, by the government of Canada and the government of the United States of America concerning rates of income tax upon non-resident individuals and corporations, the avoidance of double taxation, the prevention of fiscal evasion in the case of income tax and the exchange of certain fiscal information, and that this house do approve of the same.

Motion agreed to and the house went into committee, Mr. Bradette in the Chair.

Mr. GIBSON: This convention was signed on March 4. On the following day I made a statement in the house outlining the terms, or the chief terms, of the convention, and so probably it is not necessary to give a lengthy explanation to-day. It might, however, be advisable to give a brief review of the deductions at the source as between Canada and the United States as they have existed and been modified by a prior convention and as they are modified by the present convention.

In 1933, for the first time Canada imposed a 5 per cent tax deduction at the source in respect of dividends and certain interest leaving Canada. It was not until three years later that the United States first imposed a tax deduction at the source in respect of certain periodic payments made to persons resident outside of the United States. In 1936, when the United States imposed a 10 per cent tax deduction at the source it was felt that representations should be made to reduce that to 5 per cent so that there would be parity of deduction between the two countries with respect to these periodic payments. As a result, the convention of 1936 was entered into, and from that time until April 29, 1941, the deduction at the source of each country remained at 5 per cent.

In April, 1941, Canada raised its rate of tax deduction to 15 per cent, and in so doing automatically abrogated the existing convention. As a result, the then existing law in the United States pertaining to deduction at the source applied equally to Canada, as it did to all other parts of the world. The law of the United States required a deduction of 16½ per cent, and thereafter 16½ per cent was deducted in the United States.

However, the United States government then raised the tax deduction rate from 16½ to 27½ per cent, so that during the last three

months of 1941, 27½ per cent was deducted at the source from periodic payments originating in the United States and payable to Canadian resident holders of United States securities, as compared with the deduction at the source in Canada of 15 per cent.

Mr. HANSON (York-Sunbury): If this convention goes through, will it operate to revert to the former rate, and will there be refunds covering that period?

Mr. GIBSON: Yes, it will give us refunds not only of the difference between 15 per cent and 27½ per cent, but also of the 16½ per cent rate that existed from April, 1941, when we changed our rate from 5 to 15 per cent. When we did that, the United States rate automatically applied to Canada.

Mr. HANSON (York-Sunbury) When we abrogated the convention.

Mr. GIBSON: Yes, in April, 1941.

This discrepancy in the amount of the deduction at the source again became the subject of negotiations with a view to parity of deduction. The negotiations culminated in the convention which has been tabled, and which was signed on March 4, 1942, by our minister at Washington, Mr. Leighton McCarthy, and the acting under-secretary of the treasury, Mr. Sumner Welles.

This convention, as my previous statement indicated, is wider than the prior convention of 1936. Broadly speaking, it does the following:

1. It reduces the United States tax deduction at the source from 27½ per cent to 15 per cent, and is retroactive, so that parity of deduction as between the two countries has been restored.

Mr. MacNICOL: From what date?

Mr. GIBSON: From April, 1941, the date when we abrogated the prior treaty.

2. Certain extraterritorial features of the United States law as they impinged on the Canadian taxpayer are eliminated. By way of example, the United States law imposed a tax on any Canadian company, 50 per cent or more of the revenue of which was derived from sources within the United States, if the income was accumulated by a recipient Canadian company. Or again, if a Canadian company had 50 per cent of its revenue from the United States, then any Canadian indivdual resident who received dividends from that company was liable to taxation under the United States extraterritorial law. These extraterritorial features have been eliminated.

Mr. HANSON (York-Sunbury): All of them?

[Mr. Gibson.]

Mr. GIBSON: All of them as applicable to Canadians.

3. For the years prior to 1936, the United States revenue officials have been seeking to collect taxes on gains said to have been made by Canadian individuals and companies transacting business through Canadian brokers on the exchanges in the United States.

Many of these claims antedated 1929. Many of our Canadian residents, if they did make some profits prior to 1929, suffered substantial losses thereafter, and I am informed, were called upon to pay their United States obligations; so that in the result, in some instances more money was paid into the United States than ever came out.

Mr. HANSON (York-Sunbury): Do I understand that heretofore the United States treasury has sought to impose on Canadian nationals taxes in respect of capital gains made by Canadians operating through United States brokers on the stock exchanges in New York or elsewhere?

Mr. GIBSON: Yes.

Mr. HANSON (York-Sunbury): On the theory that capital gains and capital losses are taken into consideration under their income tax law, while in Canada they are not. Has Canada at any time ever acceded to that position, and what was the result? Did these people have to pay? I had not known that the United States government had actually taxed Canadian nationals resident in Canada on capital gains.

Mr. GIBSON: There have been a great many claims, some of which have been settled, others of which have not been disposed of. As a result, Canadian taxpayers have not been sure whether the United States government was going to endeavour to collect from them or not. With this convention these claims are being dropped, and the only claim now being made by the United States government is with respect to the tax on any dividends or interest received on moneys invested in the United States.

Mr. HANSON (York-Sunbury): Does this cover taxes that were paid by some Canadian nationals prior to the settlement? Will such taxes be refunded? It seems to me they should be, in justice.

Mr. GIBSON: No; there is nothing in the tax convention providing for the refund of moneys already paid. Perhaps I might continue with my statement, which deals with these matters.

Representations were made to the United States government that such claims be not made, and for some time they were in fact not

made. However, after 1932 the United States revenue officials actively sought to collect taxes in respect of these old transactions. These claims were resisted by Canadian taxpayers on the ground that they were not carrying on business in the United States, that they were not subject to the revenue laws of the United States, that they had been informed that the claims would not be made, and in fact they were not made for many years but were, as stated, subsequently revived. Now by the convention these claims are settled on the basis of the 1936 law as modified by the 1936 convention; that is, in general, 5 per cent in respect of any dividends or interest received from United States securities, and no claim in respect of any capital gains on stock market transactions. Any person in Canada who wishes to take advantage of this convention must, within two years from the date of this convention, apply to Washington for a settlement on the basis outlined. Therefore all persons concerned should take note of this requirement. Otherwise the law as formerly asserted by the United States might now be imposed as against those who fail to make such a settlement.

Mr. HANSON (York-Sunbury): Why should that be necessary? Why should not the government deal with it?

Mr. GIBSON: Those cases are still outstanding; there was a liability under United States law, and they can still proceed against the taxpayer if they desire to do so.

Mr. HANSON (York-Sunbury): If the cases are going to be dropped, why should that not be done by express arrangement under this convention?

Mr. GIBSON: Under the terms of the convention the taxpayer who is liable under the earlier laws must file returns so that they will know he has made a disclosure of the interest he received during that period.

4. If there is any case of double taxation arising by reason of a United States company doing business in Canada, or vice versa, and the company by reason of the apportionment of profits is being taxed on more than 100 per cent of its profits, it can ask for a conference between representatives of the two governments with a view to securing an adjustment.

5. The convention also provides for an exchange of information pertaining to the payment of dividends, interest and other fixed periodic payments. This provision does not require Canada to give information respecting the income of residents of Canada.

6. If the authorities of one of the contracting states are under the belief that the other country is being used as a basis of perpetrating fiscal fraud, a request for special information may be made pertaining to the activities of any such person, and after consultation the information may be exchanged. This is designed to preclude evasion and fiscal fraud.

There are other minor features in the convention which are self-explanatory on reading, and require no special mention at this time. This convention was ratified by the senate of the United States on the 28th day of May, 1942, and it only remains for parliament to pass this resolution. The convention, it will be observed, is beneficial to all Canadians who receive income from sources within the United States by way of interest, dividends, rentals, royalties, salary, and other periodic payments, by returning to them such deductions above the rate of 15 per cent as have been made from the moneys coming to them since April 29, 1941. It is also beneficial to the revenues of Canada, inasmuch as the tax deducted at the source in the United States is allowed as a deduction from the tax otherwise payable in Canada on the same income, and the smaller the amount deducted in the United States, the greater the tax payable in Canada.

Mr. HANSON (York-Sunbury): That last statement is very interesting. Will the minister apply that principle in the case of succession duties paid as between the provinces and the dominion? I just throw out that thought, that if this is a good principle as between national governments it is also a good principle as between the dominion and the provinces in respect of succession duties. I do not expect the minister to answer that question immediately, but certainly I wish he would give some thought to it.

Mr. GIBSON: Of course there is no change in the law in that connection. That is already the case; we already permit the deduction of taxes.

Mr. HANSON (York-Sunbury): But the minister laid emphasis on it, and that thought passed through my mind as he made the statement.

I understand the reason for desiring to get this resolution through to-day if possible, because on May 28 the United States senate ratified this treaty or convention, and unless we also ratify it they will continue to charge our nationals 27½ per cent. I think it would be less than just if we were to delay the passing

of the resolution. I have tried to give it some thought, and I believe we have made a fair bargain. I am just wondering how serious is the position with respect to what I might call tax dodgers. I have in mind those people who claim a domicile, we will say, in Bermuda or in the Bahamas, but who spend the summer in Canada and the winter at Pinehurst or in Florida, who do not pay anything to anybody if they can help it. How effective is this going to be with respect to those who do not claim a Canadian domicile but who spend, let us say, 183 days here and 183 days in Florida, who flit back and forth in the expectation and hope that they will not have to pay anything? We have people of that kind, I am sorry to say, and I dare say they have them in the United States also. How effective is this going to be with respect to that class of citizen?

Mr. GIBSON: The exchange of information will undoubtedly be of assistance; and in cases where they have reason to suspect that some action has been taken for the purpose of escaping taxation, specific questions will be asked and specific information requested.

Mr. HANSON (York-Sunbury): That is back and forth, as between the officials?

Mr. GIBSON: Yes, between the governments.

Mr. HANSON (York-Sunbury): What about the man who spends 183 days in Canada and then goes to Florida for 182 days, and who does not file a return in either country? How do you deal with that man?

Mr. GIBSON: As a Canadian resident he is liable to income tax. We deal with that man by deduction at the source for national defence tax wherever the income arises in Canada.

Mr. HANSON (York-Sunbury): That would be effective to the extent that you could deduct from his income at the source, I suppose, but what about bearer bonds?

Mr. GIBSON: The same thing applies there; he cannot cash his coupons without filing the ownership certificate with the bank.

Mr. HANSON (York-Sunbury): That is just the ownership certificate; but is the bank now authorized to deduct any income tax on the presentation of a coupon with an ownership certificate? Does the law go that far at the moment?

Mr. GIBSON: No, not at the present time.

[Mr. R. B. Hanson.]

Mr. HANSON (York-Sunbury): So you have not complete machinery to deal with the tax-dodgers?

Mr. GIBSON: Well, we secure the information through those ownership certificates, so that we know who is liable for tax. Then it is up to the department to follow it up.

Mr. MacNICOL: My income tax returns were filed making allowance for a deduction of 27½ per cent on bonds which I hold in the United States. If the difference between 27½ per cent and 15 per cent is returned to me, as I presume it will be as from the date mentioned by the minister in April, 1941, then I presume the amount I receive as a rebate will have to appear in my returns for 1942, and it will have no reference to 1941?

Mr. GIBSON: That question was asked some time ago by the hon. member for Peterborough West, and at that time he was told that the department would give the taxpayer the option either of including the rebate in the year it should have been received by the taxpayer, namely in 1941, or of including it in the year in which he actually received the rebate.

Mr. CASTLEDEN: Could the minister make a statement as to how much in Canadian funds leaves this country annually in the form of interest and dividends on bonds, shares and securities, and give us the comparative amount of income from such capital coming into Canada from the United States?

Mr. GIBSON: I have not the figures showing the amount of income leaving this country. However, I have the amount coming into this country from the United States. An estimate has been prepared by the foreign exchange control board for 1941, and the incomes which would be affected include profits from subsidiary companies, taxed at the rate of 5 per cent, and amounting to 8·9 million dollars. The amount of dividend is 15·7 million dollars, and interest from bonds and other sources amounts to 6·4 million dollars. Other periodic payments, such as annuities, rents and royalties are estimated at 4 million dollars, making a total of about 35 million dollars in interest, dividends and profits coming to this country.

Mr. HANSON (York-Sunbury): Has the minister the reverse figures?

Mr. GIBSON: I have not the reverse figures, but I may be able to get them from the foreign exchange control board.

Mr. HANSON (York-Sunbury): Is it not a fact that this is really advantageous to Canada?

Mr. GIBSON: I have worked out the saving to the Canadian taxpayer, and I find that the saving from the tax on profits from subsidiary companies being reduced from 27½ per cent to 5 per cent amounts to 2·4 million dollars. The saving in tax on dividends being reduced from 27½ per cent to 15 per cent is a saving of 3·2 million dollars, or a total of 5·6 million dollars in taxes saved to the Canadian taxpayer.

Mr. GRAHAM: I understand the convention does not become operative until it is ratified by this parliament.

Mr. GIBSON: No, it does not become operative until it is ratified, but it is retroactive to January 1, 1941. The figures respecting income are on the basis of the convention operating over a full year, and also on the income figures for 1941.

Mr. CASTELDEN: Would the relative figures for 1938, 1939 and 1940 be available?

Mr. GIBSON: We could get them, I believe, from the foreign exchange control board.

Mr. NICHOLSON: The minister stated that the amount of income coming to Canadian citizens would not be disclosed. I understand that in the United States that information is published. It seems to me the time has now arrived when consideration might be given to following a similar procedure in Canada. A few days ago I had a question on the order paper respecting Major Hahn of the John Inglis company. This is a company which has received over $35,000,000 from the Canadian treasury, and yet members of parliament are not permitted to know the extent of Major Hahn's annual income from that company. If we are to decide as to a fair rate of taxation, we ought to know how much the officials of some of these companies receiving government contracts are making. It seems to me that provision might have been included in the agreement. Has the minister's department given consideration to following the policy adopted in the United States?

Mr. GIBSON: It is not a matter for my department to take into consideration. There is a provision in the Income Tax Act that secrecy shall prevail, and members in the department take oaths of secrecy every four months. If we were to give the information obtained in the department, a change in the act would be necessary.

Mr. HANSON (York-Sunbury): Has a new order in council been passed authorizing the Minister of Finance, upon application having been made to him, in a given case to lift the price ceiling on salaries? I have just learned about this matter, and I wonder if that is the condition. This sacrosanct price-ceiling policy of the governnment apparently is to be punctured in a few new places. I understand that the new order in council was passed on Saturday, and that under it it is possible to break the ceiling.

Mr. GIBSON: I know an order in council was passed with respect to employees taken on in a new war industry, who had been receiving a probationary rate of salary.

Mr. KINLEY: By permission of the minister?

Mr. GIBSON: Yes.

Mr. HANSON (York-Sunbury): In other words, we have a policy of salary-fixing by the will of the minister. But the salaries of labour and of executives are to remain frozen. However, if a man is a dollar-a-year man and becomes a salaried official, the minister may break the rule in favour of such man. It is just a matter of trial and error.

An hon. MEMBER: Worse than that.

Mr. HANSON (York-Sunbury): Yes, worse than that. It may leave itself open to all kinds of abuses and favouritism. The whole thing is wrong.

Mr. KINLEY: I think it is just the opposite.

Mr. HANSON (York-Sunbury): I say the principle of being at the mercy of the Minister of Finance is wrong. I do not say the minister will abuse the privilege; I believe he is a conscientious man. However, the whole position is wrong, and to leave the breaking of a policy to the discretion of an individual minister is not a proper procedure. Again we are being governed by order in council, and an attempt is being made to preserve a position which from the very beginning has been more or less untenable.

Mr. MacINNIS: Unless there is a very recent order in council fixing salaries, then my information, from the one I read, was that the order in council did not really fix salaries. That is, the first paragraph or two fixed the salaries, and then the remaining four or five paragraphs went on to say that notwithstanding anything set out in the earlier paragraphs the Minister of National Revenue could give increases, almost at will. That is what one must expect when there is a salaried class dealing with this matter. I am not finding fault with the Minister of Finance or the Minister of National Revenue

because, even if they were supermen, it would be impossible for them to keep within their grasp all the details with which they must deal in the course of a day. If the minister has time to read what passes, not necessarily by order in council, but by orders passed pursuant to orders in council, he would find that an individual would say "By virtue of the powers vested in me by order in council number so-and-so, I, So-and-so, order such-and-such a thing".

This is approved by superior officers, and usually their signatures are printed thereon. It states it is issued with the approval of the minister concerned. Obviously the minister concerned has not the time to go over these orders carefully and know what they mean. I imagine that what happens is that the order is brought in and laid before the minister. He asks what it means, and it is explained to him. He then says, "all right; let it go." He cannot do anything else. Wages are not only fixed by being frozen by a general order in council; they are now being fixed by an order in council issued on the express recommendation of the Minister of Labour after commissions and conciliation boards have allowed different rates of wages.

Mr. MITCHELL: That is wrong.

Mr. HANSON (York-Sunbury): Is it the statement that is wrong, or is it the facts that are wrong?

Mr. MITCHELL: The statement is wrong.

Mr. KINLEY: What has this to do with the agreement?

Mr. ILSLEY: It is out of order, but the hon. member is wrong.

The ACTING CHAIRMAN (Mr. Bradette): The hon. member has raised a point of order, but it has always been the practice to permit rather wide latitude in discussion in committee of the whole. However, I ask hon. members to keep fairly well to the resolution before the committee.

Mr. MacINNIS: I am quite willing to admit that what we are discussing has no relation whatsoever to the resolution before the committee.

Mr. ILSLEY: I just want to correct one statement.

Mr. MacINNIS: It will be out of order.

Mr. ILSLEY: What I am about to say may be out of order, but only to the same extent as the hon. gentleman has been out of order. He has been sowing the seeds of class antagonism by his reference to the fact that the salaried class would tend to favour itself when drawing up these orders. If he will examine the order setting up the national war labour board and the order setting up the salary ceiling, he will find that there is certainly no more latitude allowed to permit raises under the salaries ceiling order than there is in the other order. In fact, I think there is not nearly as much.

Mr. MacINNIS: I shall be willing to prove what I say, to my own satisfaction at least.

Mr. ILSLEY: That it was done by the salary classes who are theoretically supposed to be working for their own interests and against the interests of the labouring classes? That is not the case. The statement the hon. gentleman has made is just a mischievous accusation without any basis in fact.

Mr. MacINNIS: I agree that this subject matter is out of order, but if the minister is going to make a statement of this kind that reflects on me, I certainly must be allowed to reply. I can prove everything I said from the order in council, and I propose to do so at the proper time.

Mr. ILSLEY: The hon. member can try to do that at the proper time. When the hon. member says that care is not taken with these orders, that the ministers let them go by without knowing what they are doing, he is wrong again. Every one of these things is examined and debated and argued over. Nothing has taken more time than these orders in council, having in mind the danger of the kind of charge the hon. gentleman has made to-day. Time after time we have said, "If you do this for the salaried people, you have to do it for labour; if you put restrictions on labour, you have to put them on the salaried people." Those advocating a change in the salary-ceiling order always put it on the ground that this right was given to the workingman under the other order. If the workingman gets a promotion, he receives higher pay. If he is undergoing probationary training and he gets through that period, once he enters the period where he would normally get a higher rate of pay, he is given that pay. It was argued that a similar provision should be included in the salary-ceiling order, under which there could be a probationary rate followed by a higher rate. The salary-ceiling order is every bit as strict as the labour order. In fact, for a long time it was more strict, and I think an excellent case could be made out for its being more strict at the present time. I knew perfectly well, and the government knew that there would be certain members of this house who would say that we were favouring the salaried class, that we were favouring

directors and those in managerial positions while we kept the lid on labour. The government kept that in mind, and were careful to have an answer for every one of these charges, and those answers will be given when the time comes.

Mr. HANSON (York-Sunbury): You brought in the wages order first. Then a clamour arose, and you brought in the salaried order.

Mr. MITCHELL: When I was chairman of the national war labour board we started out to administer both salaries and wages. Then the Minister of Finance made a statement, and salaries were taken away from the board and put under the Minister of National Revenue.

Mr. CASTLEDEN: The resolution refers to the exchange of certain fiscal information, and I was wondering if the minister could give us some specific information about what is intended.

Mr. GIBSON: That is covered by article XX, which reads:

> The competent authorities of the United States of America shall forward to the competent authorities of Canada as soon as practicable after the close of each calendar year the following information relating to such calendar year:
>
> The names and addresses of all persons whose addresses are within Canada and who derive from sources within the United States of America, dividends, interest, rents, royalties, salaries, wages, pensions, annuities, or other fixed or determinable annual or periodical profits and income, showing the amount of such profits and income in the case of each addressee.

Mr. CASTLEDEN: Where will the minister get that information? Will it be deposited with the income tax branch?

Mr. GIBSON: That would be obtained from the different companies and from the banks when ownership certificates are filled out. The returns by the companies would show to whom dividends are paid.

Mr. CASTLEDEN: Those returns are available to the department?

Mr. GIBSON: They are available at all times.

Mr. COLDWELL: What is the basis of computing income tax of high officials? For example, the vice-president of the International Nickel company reports an income—I am speaking from memory—in excess of $200,000 a year. Is the place of his residence or the place from which he derives his income taken as the basis for working out the income tax?

Mr. GIBSON: I would not want to give an answer to any one particular case, but generally speaking, the basis for taxation of salaries is the place where the person resides. If the salary, however, is over $14,000, any amount in excess of that sum is not allowed as an expense to the company in computing its tax.

Resolution reported, read the second time and concurred in.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of Bill No. 95, for granting to his majesty aid for national defence and security.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Ross (Calgary East) in the Chair.

On section 1—Short title.

Mr. STIRLING: Is there any significance in this bill being called the national defence and security bill? Was that the title given to the bill brought down in previous sessions generally known as the war appropriation bill?

Mr. ILSLEY: I believe so. I do not recollect what the long title of the other act was, but there has been no change.

Mr. STIRLING: Is it similar?

Mr. ILSLEY: Yes; it is supposed to be the same.

Mr. STIRLING: When the 1941 bill was before the house providing for the requirements for the fiscal year ending March 31, 1942, there was a supplementary bill for the fiscal year ending March 31, 1941, running concurrently in the house, the supplementary bill being required to balance the expenditures of the previous fiscal year. Is there such a bill this year?

Mr. ILSLEY: A supplementary bill for $135,000,000, called the Supplementary 1941 War Appropriation Act, was brought down this session. That was required to supplement the $1,300 million that was voted for the year 1941-42.

Mr. ROSS (St. Paul's): Mr. Chairman, the other night when I tried to speak on this measure I was ruled out of order. I do not know whether I shall be in order to-night or not. I see the Minister of Pensions and National Health (Mr. Mackenzie) smiling. I like to see him smile at me when I speak in this house because his smile is encouraging.

What I wanted to speak on was equality of service and equality of payment. We have a very difficult situation in Canada to-day with respect to clerical help. I do not say that each individual clerk in the house or each individual clerk in the country should not be paid what he or she is worth; but after all, we are trying to put a ceiling upon wages, and we are trying not to compete among each other for clerical help. Take, for instance, the girls who came to work in the civil service in Ottawa in the early stages of the war. Many of them came from patriotic motives and started in at a salary of approximately $70 a month. The next batch that came in got perhaps $90 a month, and the next batch, $120 a month or whatever it was. The result is that the large institutions in this country are finding it very difficult to keep their clerical help. I am not complaining about that. We will give our clerical help to the government if they need clerical help. But let us get together on a cooperative basis. As it is now, the government comes to the insurance companies, for example, the Sun Life, the Canada Life, the London Life, the the Dominion Life, the London Life, the Confederation Life, and so on, and says to them, "We need clerical help". I say: Do not come along and take our clerical help away from us, because the insurance companies are in this position, that we cannot pay our help any more than they are getting because their wages are frozen. What we have to do is to create new positions for these people. I suppose the various companies could get together and say, "We will trade you this crowd for that crowd, and we will adjust their wages." That is the only thing to do; but let the government come along to the insurance companies and say, "We need clerical help; what can you do for us?" That is what should be done instead of having the government go throughout the country taking this one and that one and raising wages. Moreover, it is an incentive to inflation. We will pay our clerical help the same as anyone else, but we should get together on a cooperative basis so that there will not be chaos, because it will come to that unless we do something. We are all in the same boat.

Mr. REID: What about the United States government? They are coming here, offering people $150 a month and taking them across.

Mr. ROSS (St. Paul's): Many young girls have gone from our institutions to Washington at $150 a month, but they have come back because the cost of living is so high that they are not as well off there as they are here. I think $70 a month is pretty low for a girl who is brought to Ottawa and has to get along in this city, with the rent and board she has to pay. I suggest that without very much trouble the government could get together with the institutions that are employing labour. Many people might take the view that life or casualty insurance is not essential to the war effort. I contend that it is essential in a sense. When one considers that a great many of the men who are overseas and others who are engaged in the war effort are protected by life insurance, it is an essential business. Not only that, but the life insurance companies have been the greatest source of our war loans. The companies collect money from the people and lend it to the government. I do not think we should have any more competition if we can avoid it. Let us get away from it. I do not begrudge these girls or men the wages they are getting, but unless we get rid of this competition I do not know where it will lead us. We shall have chaos. I should like to have an answer.

Mr. ILSLEY: If the hon. gentleman will put in a word or two the point he wants answered, I will try to answer it. I understood from him that there was some movement of employees from one concern to another. Is that the problem?

Mr. ROSS (St. Paul's): The point is that the government is competing against essential industries or businesses for clerical help.

Mr. ILSLEY: The salary rates in the civil service have been kept pretty well in line with what they have been in previous years. The classifications have not been changed. There has been a slight change with regard to those who have just come into the service or have been in for six months. The clerk grade 1, or stenographer grade 1, or typist grade 1, gets $65 after six months, and another grade was created, grade 1A, carrying a salary of $75, but that classification applied only to stenographers with two years' experience. These are not excessive salaries, and the only other concession the government has made to the changed situation, the great

demand for labour, is the cost of living bonus to civil servants. That has been kept within carefully defined limits. I believe that in some localities where it is impossible to get clerks or stenographers without raising these salary rates somewhat, the rates have been raised; but if I remember correctly, they have not been raised beyond the maximum of the classes in any case, and I am surprised to hear that the government has been offering salaries that were excessive or greater than those paid by business. I do not think that is the situation. It might happen in a few individual cases, but as a general rule the government has not outbid business at all. Business is continually making offers to those employed in the government, and we are receiving representations to the effect that unless we raise salaries we shall lose our employees. The hon. gentleman may have seen the insurance companies' end of the problem, but I do not think he has seen the government's end of it. I do not think there has been any great bidding for help either by business or by the government. We have certainly tried to keep everything under control, so that there would not be.

Mr. ROSS (St. Paul's): There is one further point about this. The minister says there is no bidding. I could give him dozens of instances where girls with no experience whatever have been taken into the services, not through the civil service commission but in other parts—

Mr. ILSLEY: Such as?

Mr. ROSS (St. Paul's): Some of the national defence services.

Mr. ILSLEY: Does the hon. member mean enlisted girls?

Mr. ROSS (St. Paul's): I know they have been taken on. If we are to have a contented community, the government cannot take on a girl who has no more experience than an ordinary filing clerk and put her in a position where she gets $40 or $50 more than another girl who has experience. I am bringing this to the attention of the government because it is important that we get this down to brass tacks. If the government want girls or men let us get together with the government and let the government say, "We want so many from you and so many from you" and so on, and we will say to the government, "All right; you take these people; we will take them back after the war, but in the meantime we will try to train some more people for you." That is logical, but at present the situation is chaotic.

Section agreed to.

On section 2—Appropriation $2,000,000,000 less $500,000,000 voted under 1942 c.9.

Mr. STIRLING: Would the Minister of Labour state the policy of the government with regard to work being done by the Japanese in the road camps?

This is the setting for my question. The minister will remember that after the California gold rush, the royal engineers sent a company round the Horn to what was then British Columbia, because it was feared that there might be rioting and insurrection among the gold miners who came up from the south. That rioting did not come to pass, and the royal engineers were put to work building roads. They built through that jungle country of the lower Fraser mainland; they built up the Cariboo and they started to build a road through the southern part of British Columbia from Hope in the direction of Princeton. This was largely for the reason that gold was being discovered in all the creeks in that southern section. All this took place something like eighty years ago. Ever since then, attempts have been made from time to time, years apart, to make a join in that road between what was started on the east end and what was started on the west end of it. Now that the government's policy is to use certain Japanese males in road camps, certain camps have been erected and are being used at both ends of that gap, which is variously described as being from thirteen to twenty miles long. As far as I am aware, they have not reached the actual gap itself, but have been repairing and improving the roads approaching the gap.

The reason why I make these few introductory remarks is that all the people through the southern part of British Columbia as far as the Alberta boundary are looking forward with great hope once more to the prospect that that road may be finished, because it would considerably shorten the distance for all that traffic. When the Japanese first entered those camps at the east end of the gap, that is forty-three miles west of Princeton, the onlookers were disappointed to find that very little work was being done. There was no machinery. They were afraid that once more they were going to look on at certain scratching of the earth without any result.

I am informed that a certain amount of improvement has taken place and that some road machinery has appeared on the spot. The minister of public works of British Columbia has all along taken a considerable interest in the matter and has stated that he has induced Ottawa to take rather a different view from that which Ottawa had taken of the value of that link from the point of view

of defence. Whether that be so or not I do not know, but he has been endeavouring to put at the disposal of those camps certain pieces of road machinery. Unfortunately, however, all such machinery is in process of wearing out, and with the difficulties of getting more machinery the department of public works of the province does not want to see that machinery worn out too rapidly. Consequently, the people are once more becoming dispirited with regard to how the progress of the work will be kept up. So I ask the minister if he will be good enough to explain the policy of the government with regard to the Japanese in those camps, the facilities which will be provided for them to carry out the work, and the quantity and quality of the work which will be required of them.

Mr. MITCHELL: First I would say we are going to press with vigour the road-building policy that is in operation at the present time.

Mr. HANSON (York-Sunbury): What is that?

Mr. MITCHELL: The building of roads. Second, there is a limit to the machinery available. In the next three or four months there will probably be going on in British Columbia more work of that kind that has for its purpose the successful prosecution of the war in that part of the dominion. However, it may be difficult to get the amount of road machinery we may require for these roads. My hon. friend can rest assured that all the machinery that can be got will be obtained.

With respect to the Japanese, personally I would rather see them employed for the relief of what one might call the acute labour shortage in certain other parts of the dominion; for instance, cultivation of sugar beets, cutting of pulpwood, and those lines of endeavour where there is an acute shortage of labour at the present time. But the slack will be taken up in these road camps. Take, for example, the transcontinental highway at Schreiber. I think that should be used as a reservoir for Japanese labour from which we can move them into pulpwood camps and sugar beet fields in western Ontario, as we are doing at the moment.

I am well acquainted with the district of which the hon. member speaks, and from my point of view I should like to see that road completed because of the quicker access it would give between the section to the east thereof and Vancouver.

Mr. STIRLING: It would be a valuable addition to the road communication in the west. It was pointed out by the hon. member for Fraser Valley (Mr. Cruickshank) on more than one occasion that the road and two railways are located very close together in the Fraser canyon, and that sabotage might produce an unpleasant situation there. This at least would be an alternative and additional road. Is there machinery available from any other source than borrowing from British Columbia?

Mr. MITCHELL: I do not know. The general machinery situation is difficult right across the dominion. That must be admitted. While we have some machinery that belongs to the Department of Mines and Resources, the procurement of other machinery at this time is not easy, particularly in view of the work on the Alaska highway. However, the hon. member may rest assured that whatever machinery we can get will be obtained in order to complete the road to which the hon. member refers.

Mr. DOUGLAS (Weyburn): When this bill was in the resolution stage the hon. member for Mackenzie (Mr. Nicholson) made an exhaustive statement in regard to the increased consumption of liquor in Canada. Nothing has been said by anyone on the treasury benches as to government policy in that regard. I do not propose to-night to go fully into the cogent arguments so well advanced by the hon. member for Mackenzie; it is hardly necessary to do so. He pointed out then that the increase in liquor consumption in Canada during the past year has been alarming. In one province that increase was as high as 35 per cent in 1941, as compared with 1940. Bodies of Canadians from the Atlantic to the Pacific have become somewhat concerned about the matter. The wartime prices and trade board, which operates under the Minister of Finance, has had to call upon the people of Canada to accept rationing of sugar, tea, coffee and many other commodities in daily use; yet here is a traffic which requires sugar, honey, cereal grains, equipment, labour and so on, the use of which is bound to take away from Canada's war effort at least to some extent. The Minister of Munitions and Supply tells us constantly of the difficulties in regard to shipping; yet, as the hon. member for Mackenzie pointed out, one firm alone in Canada exported 400,000 cases of beer.

This is a difficult thing for the people of Canada to understand. It has often been stated that the reason why more military equipment was not available at Hong Kong and the Malay peninsula was lack of shipping space; yet Mr. Philip Guest, British United Press correspondent in the far east, in his reports from the scene of conflict made the

statement that before Hong Kong was captured 600,000 bottles of whisky were destroyed, and that before Singapore fell 800,000 bottles of whisky were destroyed. Apparently shipping space had been found at some time or another for the shipment of supplies of this kind into what were potential danger zones. It is difficult for the people of Canada, who are being called upon to make sacrifices; for the children of Canada, who are being asked to do with less candy and sugar, to understand why there should be a privileged group who so far seem to have been completely excluded from the necessity of accepting any sort of rationing. Even now, when one goes into a restaurant and orders milk, he gets a glass of milk instead of a bottle, because the glass is no longer available for bottles of milk in certain circumstances. There appears to be no suggestion, however, of rationing the glass that is used for the bottles necessary for the liquor industry. When I was in western Canada a short time ago I noticed in one of our newspapers an advertisement inserted by the breweries, suggesting that people should buy a bottle of whisky and give the bottle to the Red Cross. They did not suggest to whom the whisky should be given.

I think the government ought to make some statement on this matter. I am not suggesting now that advantage should be taken of the war in order to try to introduce prohibition. That is not the question at issue at all. The point is that here we have a lucrative trade, which has grown by leaps and bounds during the period of the war and which so far has not been made subject to any form of restriction whatever, as far as we are aware; which is using materials, labour, machinery, shipping space and all the rest of it, while other commodities which are required by the great majority of the Canadian people, and some of which are essential to the welfare of the people, are being rationed and curtailed.

It seems to me that before this debate concludes, we ought to have some statement from the government, particularly from the Minister of Finance, under whom the wartime prices and trade board operates, as to just what is the government's policy. Does it propose to allow this traffic to continue, in spite of the fact that other commodities are rationed, or has it some policy with reference to the brewing and distilling interests in Canada? I wish that at some time during the debate the minister would give us such a statement.

Mr. ILSLEY: Well, Mr. Chairman, I was hoping that we might finish this bill to-night. I am not prepared to make a statement on the question raised by the hon. gentleman. As he was speaking I was wondering why he was bringing up this subject under this section. Apparently he is arguing that because there is some rationing of commodities such as tea, coffee, sugar and so on, which have to be transported long distances over water, therefore a commodity which is manufactured in Canada and of which there is no shortage—perhaps there should be a shortage of it, but there is not—should also be rationed.

I have received quite a number of letters from persons who argue in the same way, and a great many of their arguments are extremely unfair. For instance, there is the argument that the government could find space to send beer to Libya but could not find space to send equipment to Hong Kong. That argument is going the rounds in certain circles; it has an interesting sound and is being rather widely circulated. As far as finding space to send equipment to Hong Kong is concerned, of course we did find space to send equipment there.

Mr. HANSON (York-Sunbury): Too little, too late.

Mr. ILSLEY: Well, we had every reason to think the equipment would reach there in time, but unfortunately, because of certain developments, it did not. Reference has been made to beer being sent to Libya. The beer in that instance was purchased by a British government agency, not by the Canadian government at all, and the British government found space for it. As I understand the situation, there is not a shortage of space in ships going in one direction.

The same argument is used with regard to whisky coming here from England; the same thing is said about that. We did not have anything to do with arranging for the shipment of beer to Libya; that was a matter looked after by the British government. I suppose they thought it would be a good idea to get some beer to the soldiers in Libya; and while I know my statement will not meet with universal approval, I think the attitude of a great many people who think it is a crime to send beer to soldiers in Libya is wholly reprehensible. When one considers what the forces of the empire are going through in Libya, a tropical country where it is very hard to get the right kind of water, or any water; when one considers the deaths that men die who are taking part in tank warfare, I think a good many persons here in Canada who are making sarcastic remarks about the sending of beer to soldiers in Libya could be better employed.

As far as the regulation of the sale of liquor is concerned, no one comes out and says we should have national prohibition. I did not hear the remarks of the hon. member for Mackenzie the other night, but I do not think he advocated national prohibition, nor do I think anyone in any province is advocating provincial prohibition. Hon. members know that if we were to begin to interfere with the hours and conditions of sale, we would be up against certain problems. They know, too, that there is a different problem in every province. They know there is public sentiment in one province for one kind of regulation, and public sentiment in another province supporting another kind of regulation. After tremendous difficulties, tremendous heartburnings, and troubles of every kind, we finally, in this dominion, got the control of liquor on a basis of regulation by provinces, and by provincial governments, and we are going to leave it there—as long as we possibly can, anyway—because if the provinces cannot assume and discharge the responsibility of regulating the sale of liquor, then they are incapable of taking that share in the war effort which I think they are capable of taking.

I presume the reason why the provinces are not more rigid in their regulations respecting the sale of liquor is that they find that public sentiment in those provinces is not in favour of it. The point I do not understand is why persons are converging their attack on the dominion government when, in fact, the provincial governments have the responsibility. I do not know whether provincial governments wish to assume that responsibility—but I think they do. That is where those persons who are advocating a more rigid curtailment of the sale of liquor should go.

When we come to the matter of rationing I would point out that liquor is not comparable with commodities concerning which there are shortages. With regard to the use of Canada's resources—well, some grain is used, and I suppose there is some machine capacity. Practically all of it is now in those plants. It is very much limited in its use of labour, and is in an entirely different position from the manufacture of refrigerators, automobiles or other manufactured articles which directly take steel and other commodities from our war effort.

I do not say that the sale of liquor should not be curtailed. I do not say that the government should not do anything in that direction. But let us put it on the correct ground, the ground that the consumption of a large quantity of liquor by the people of the nation is bad for the nation. Do not get it on the specious ground that we should treat the sale of liquor the same as we do tea, or the same as we do coffee, or the same as we do sugar. That is a specious ground, and it is not sound reasoning. Do not put it on a ground of that kind; and do not put it on the ground that it is taking steel, machinery and one thing or another away from the war effort, because in fact it does not take nearly as much away from the war effort as a great many other things which hon. members would not argue should be stopped at all.

I am not talking in favour of the liquor interests. A favourite tune played is that the government is under the control of the distillers and brewers, and that we are repaying some kind of debt, or something like that. I do not know anything about any debt to the distillers or brewers. Their interests are the last which concern me—or concern the government, so far as I know. I do not believe that those are considerations at all; I know they are not considerations which govern.

It is a common thing to pick up a letter which says, "You have taxed everything else, but you have not taxed liquor." As a matter of fact, at the beginning of the war the duty on spirits was four dollars a gallon, and now it is seven dollars a gallon, an increase of 75 per cent. At the beginning of the war the tax on malt was six cents a pound, and it is now twelve cents, representing an increase of 100 per cent. At the beginning of the war the tax on wine was fifteen cents a gallon, and it is now forty cents, or an increase of more than 100 per cent. A charge frequently made, and about which I have patiently to write a denial, is that we have kept our hands off the liquor people, and that we have not imposed taxes on them at all. A year ago, when the budget was being prepared, I looked into the matter respecting the consumption of spirits and I found that the consumption of spirits had risen very little in 1940 over 1939. It will be remembered that the budget was brought down in the spring of 1941. I found that the consumption of beer had risen about 20 per cent, I believe it was, in 1940 over 1939, and we increased the tax on malt from ten cents to twelve cents a pound. What it will be possible or necessary to do in the future I do not know; and certainly I am in no position to make any statement to-night on the matter.

I would advise hon. members who are directing their attention to this matter to address themselves to the provinces, whose prime responsibility it is to regulate and control the liquor traffic.

Mr. HANSON (York-Sunbury): Did the premier of Ontario not suggest that this government had some responsibility in the premises?

Mr. ILSLEY: Not as I read his statement.

Mr. HANSON (York-Sunbury): What was the minister's reaction to the suggestion of the Hon. Mitchell Hepburn?

Mr. ILSLEY: I do not think Mr. Hepburn suggested that we had any responsibility. As I read his statement, it was that if the dominion were to do the regulating, probably the people would pay more attention to the regulations than if it were done by the provinces—or something of that sort. That was a sentence among some other sentences. I did not gather, and I should be very much surprised if the premier of Ontario would suggest, request or intimate that this government should step into the field of the regulation of liquor. He has taken the contrary stand repeatedly and frequently, and very recently.

Mr. HANSON (York-Sunbury): My impression was he was trying to pass the buck.

Mr. ILSLEY: I do not think he did.

Mr. HANSON (York-Sunbury): He did not pass it, but he tried to.

Mr. DOUGLAS (Weyburn): The minister questioned the propriety of raising this matter under this section. I would remind him that this section provides for the payment of this large sum of money for (a) security and defence and (b) the peace, order and welfare of Canada. I think the section is sufficiently general to warrant this discussion.

Mr. HANSON (York-Sunbury): Absolutely.

Mr. DOUGLAS (Weyburn): The minister has said that the responsibility lies with the provinces. The cold facts are, of course, that the regulation and sale of gasoline were in the same position; but when the federal government felt that the sale of gasoline ought to be curtailed, in the interests of Canada's war effort, it has no hesitation in taking action to prevent the sale of that product after seven o'clock at night—

Mr. ILSLEY: We had to have the gasoline.

Mr. DOUGLAS (Weyburn): —and the sale of it on Sundays.

Mr. ILSLEY: We had to have the gasoline to operate our aeroplanes.

Mr. DOUGLAS (Weyburn): My point is that when the federal government believes curtailment of the sale of any product is in the interests of Canada's war effort, the fact that the commodity comes within provincial jurisdiction is not permitted to interfere. The fact of the matter is that if the curtailment of the consumption of liquor is something which ought to be done, the federal government has all necessary power to do it. The minister cannot shelve the responsibility simply by saying that this is a provincial matter. This is a federal matter, in view of the fact that this country is at war. If it is in the interests of Canada's war effort to take this step, the federal government ought to take it. To avoid the whole question and to say that those who are interested should approach the provinces is just begging the question. I was surprised to hear the minister use that argument.

Then he proceeded to build up a straw man and to knock him down again, by referring to what people have said about sending beer to Libya. I was not talking about sending beer to Libya.

Mr. HOMUTH: Is the hon. member against it?

Mr. DOUGLAS (Weyburn): Then the minister referred to what he called the specious ground, that since we have curtailed tea and coffee we ought to curtail the sale of alcoholic beverages. That was not the point. The fact of the matter is that there are commodities going into the manufacture of alcoholic beverages which are required in Canada's war effort.

Mr. ILSLEY: The hon. member mentioned sugar.

Mr. DOUGLAS (Weyburn): Yes.

Mr. ILSLEY: That is used only in wines. The amount used in the making of beer is insignificant, and the amount used in manufacturing spirits is nil, so far as I can find out. Then, sugar used in wines has been rationed, as it has been in every other industry.

Mr. DOUGLAS (Weyburn): Large quantities of honey are used in making wines, and I am informed that many of the wineries have been getting under the regulations and securing large quantities of honey from the honey producers. Barley and other cereal grains required for the feeding of live stock and for the people of Great Britain are also going into the manufacture of this product. Every effort is being made to save glass; yet huge quantities are used to manufacture the bottles required for this article. It is not only a question of the shipping space that is used. The Minister of Munitions and Supply referred to the difference in the gasoline quota for central Canada and for the maritimes. He said that it was not possible to get ships to send gasoline to the maritimes and that they would have to get along with what they could produce from their own

cracking plant. The same difficulty applies here in connection with the question of rolling stock. The argument put forth is not specious at all. The minister can hardly wonder why a great many people in Canada are asking themselves why this group should be so privileged.

Mr. ILSLEY: They are not.

Mr. DOUGLAS (Weyburn): They constitute practically the only business in Canada upon which the government has not laid a heavy hand.

Mr. ILSLEY: That is not correct.

Mr. DOUGLAS (Weyburn): The government has not made out a very good case, and some statement ought to be forthcoming as to what it is proposed to do in this regard.

Mr. ROSS (St. Paul's): I am not in favour of taking away the soldier's beer. The whole thing is a matter of government policy. The hon. member for Weyburn (Mr. Douglas) has been telling us how much of this and how much of that goes into the manufacture of this product. I do not know, but if it is necessary for us to cut down the manufacture of spirituous liquors, beer, wine and everything like that, then we will do it. The men most capable of deciding whether this should be done are the commander in chief of the Canadian forces and the other commanding officers. They know more about this matter than anybody else. If they make representations to the ministers of national defence that this should be done, then the government will see that it is done. As I say, I am not in favour of taking away the soldier's beer as long as it is used within reason. However, this government should watch carefully what the provincial governments are doing and be sure that they are looking after the situation to see that this privilege is not abused.

Mr. NEILL: I have not taken any part in this debate which has lasted for some six weeks. I had determined that I would not because I thought I could best serve the country by keeping quiet and letting the session come to an end in order that the government might go on with the war work. I also had some feeling of sympathy for the tired, overworked, half-dozen members of the government who had to bear the brunt of the attack that has been made upon them. At first I thought this was a good thing because the attacks that were made were circulated through the press, and then the ministers rose in their places and explained the whole thing away, showed that what had been said was absolutely untrue or capable of suitable explanation. I thought that was the best business at the time.

But conditions are changing. As hon. members all know, I do not speak in this house for any one but the people I represent. That is to say, I speak for no party, either as the leader of it or as a member. But I do speak for the people I represent and have done so for many years. I know what they are saying; I know what they are feeling; I know what they are doing, and I know what they are hoping. I know that this all sums up to a profound dissatisfaction with the conduct of the government. No doubt in many instances this feeling is unjustified, but that is the consensus. This applies also in some measure to the opposite side of the house. The feeling in Comox-Alberni is, "for God's sake, quit talking and get on and do something."

The bickering and the talking that went on in connection with the plebiscite, the delay in taking the necessary action, incensed the people. Still they sat and they listened and they looked. When the plebiscite passed in a most decided manner they expected quick and prompt action. But they have not got it. If any country, if any body of men expected that something would happen this week, it was that Bill No. 80, to amend the mobilization act, would be brought down either to-day or to-morrow. We now find that that is not to be done because of what appears to be a misinterpretation on our part of the Prime Minister's statement. But I think we were led into it. We understood that this bill would be brought on when the appropriation resolution went through the committee. However, we are now confronted with the explanation that what was said was with reference to the passage of the complete bill, perhaps weeks hence. There was a profound disappointment among hon. members here, and I am sure there will also be profound disappointment throughout the country.

The people are demanding action now, and nothing else will suffice. This feeling is being concentrated in ill will toward the government or toward the leader of the government. But it is spreading also to a feeling of general contempt for constitutional government. The people are asking, "What are those fellows in Ottawa doing? They have done nothing for six months; they are leaving us in the lurch when we want action." This feeling is perhaps stronger in British Columbia because of our greater expectation of enemy action. I leave that thought with the government. Speaking for the people whom I represent, I urge the government to bring on Bill No. 80 and a bold, forward-looking policy at once.

As it has been mentioned to-night, I should like to say a few words about the Japanese situation. A number of these people have been moved, much less quickly than we

expected and hoped, to areas outside of the so-called restricted area, which is along the coast. But they have been located in such a way and in such a manner that the people are justifiably incensed and alarmed. I understand the idea has been to put the women in some of the ghost towns. That is all right, provided there is a guard around them. However, the able-bodied men are being put in road-building camps. Generally these roads are located along the railroad because the railroad naturally chose the best route, and the road is bound to follow. I am not blaming the government for this, but several camps have been set up in British Columbia, with two or three hundred Japanese in each. My information, which I consider is most reliable, is that these three hundred Japanese are provided with picks and saws and axes. An axe can be a very dangerous weapon if one wants so to use it. To guard these men there are three white men, each with a rifle.

If you had three guards in the penitentiary, one of them located on a balcony such as we have here, if anyone down below moved he could threaten to shoot. If he did shoot he would bring the whole penitentiary guard to his assistance. But at these camps it is simply Tom, Bill and Harry who are doing the guarding. It is true that each man has a rifle, but there is nothing to hinder the Japanese from crowding around and asking what time it is or if he would give a match. Then when the guard is surrounded a Jap could stick a knife in him. If the guards are working in three shifts, the other two men would be sleeping. If they are not working in three shifts, then things are worse; the three men would go to bed at night and leave the Japanese to do anything they liked.

It may be said that these camps are located where they could not do much harm, but wait until the right moment comes and it will be too late. I have tried to find out—but so far I have not been able to get any information—but I understand that no check is made of express parcels being sent to these Japanese. These parcels might contain dynamite or anything like that. Most of these camps are within short distances of the railroad. There is one camp in particular within a quarter of a mile of two railroads and a bridge. If one particular bridge were put out of business, the whole traffic to eastern Canada would be cut off. A Japanese with a few sticks of dynamite which had been shipped in to him by express could go down and blow up that bridge, and British Columbia would be cut off absolutely from the east. It may be said, "Oh, well, they would let us know and we would get people to them," but how would we know? The Japanese would overawe the white men and sweep down the valley taking everything in front of them.

There is another feature. The bridges are supposed to be guarded, but that is being done in the same sort of happy-go-lucky fashion. You know, Mr. Chairman, we are at war with a bitter and brutal enemy, and a vital bridge should be properly guarded. We kept a guard outside this building last summer. Air force men did guard in front of this parliament building. That was a spectacular thing, and it was all right. But guarding a bridge in war time is different. A man may be walking up and down a railway bridge, and it may be 150 feet down to the water. All that would be needed would be for someone to pick him off with a rifle, and that would be the end of him. Then his assailant could easily blow up the bridge or touch off a charge of dynamite and destroy a vital connection. This is war, real, bloody war, and we must have an effective guarding of vital bridges.

The people out there are getting all wrought up, and naturally so, and if you had a wife or daughter of the teen-age in those districts you would be concerned too. Do not have any illusions that the enemy will adhere to the rules of the Geneva convention or anything of that kind. Get that out of your head entirely, and at least make this attempt to meet the situation. Have these camps connected by telephone. Possibly they are now. If not, it could be done very easily, and there should be a telephone system connecting the men who are guarding the bridges with some central office. Of course, the blowing-up of a little culvert would not do very much harm, but a vital bridge is a different matter, and any money spent to protect these bridges would not amount to anything like what it would cost us if the bridge were destroyed. Have all the important bridges connected by telephone, and have the guards telephone to the central office—it does not matter where it may be—at fixed hours. Then, if a guard does not telephone in at the appointed hour, say eleven o'clock, you would know there was something wrong, and you could get hold of a ranger unit and ship them out to that spot. That is the way we do things in war. If the guard did not telephone from the camp or bridge at eleven o'clock or one o'clock, or whatever hours were agreed upon, the central office would know that the man had been attacked or murdered and that it would be necessary to stop the trains and turn out the troops. The expense would be a mere bagatelle, and it certainly would relieve people's minds, the wives and mothers of men who are fighting overseas for us to-day. It is their women and children whom we must

protect. It is up to us to be especially careful, and we are not being especially careful. We are having these vital spots guarded in a perfunctory fashion, like turning out a guard of honour for the lieutenant-governor. What we want is to do it as it should be done in war time. In India, where there used to be occasional raids from the hills, we had double sentries, one man marching east and another west, so that everything was always in plain view of one or the other. Let us do this thing in real war fashion and really protect these vital connections, as they are not being protected to-day.

Mr. MacNICOL: Mr. Chairman, what remarks I have to make on Bill No. 95 I can make on paragraph (a) of section 2, which reads:

2. (a) the security, defence, peace, order and welfare of Canada.

I presume that the vote of $5,500,000, under the heading of surveys and engineering branch, in the statement put on *Hansard* by the minister at page 2922, giving details of the war appropriation for 1942-43, pertains to a roadway from Prince Rupert to Terrace and to Cedarvale. I have been wondering whether this vote goes far enough. I do not think it does. I am for this road, for the purpose is to build a roadway from Prince Rupert to Cedarvale, a distance of about one hundred miles. The route from Prince Rupert to Cedarvale continues on to Hazelton and to Vanderhoof, and thence down to Prince George in north central British Columbia. After the roadway from Prince Rupert to Prince George is complete, if connecting links east were also completed, it would be part of a connection with the Alaska highway; but it ends nowhere, as far as the Alaska highway is concerned, even if it is completed from Prince Rupert to Cedarvale, Hazelton, Vanderhoof and Prince George. Whoever is in charge of the engineering plans covered by this vote should suggest a further appropriation to enable this roadway to connect central British Columbia and east of the mountains.

The Alaska highway runs from Fort St. John northerly to Dease, and thence to White Horse. All that is intended to be done under this vote is to build a road from Prince Rupert to Cedarvale. What is gained is a through road from Vancouver to Prince Rupert—all very necessary and something with which I am in hearty accord. But it does not go far enough to give a connection with the Alaska highway. Whoever authorized the plans could have gone further and submitted plans for a roadway from Vanderhoof via Fort St. James to Manson Creek, and thence through the mountains to Finlay Forks, the source of the Peace river. From Manson Creek there is no connection east. A large part of the road from Vanderhoof to Manson Creek is largely passable, perhaps by motor cars. If the hon. member for Cariboo were here, he could tell us whether the roadway is passable for cars. It is only another thirty-five miles from Manson Creek to Finlay Forks; from there east, if the roadway is carried on to Hudson Hope and Fort St. John, is a distance of approximately one hundred and twenty miles, and at Fort St. John the road would connect with the Alaska highway.

To deal with this project as this vote does, is dealing with a very important connection in a piecemeal fashion. If the government intends by this vote to accomplish a real defence, where does Alaska and Yukon defence come in under these plans, when there is no connection with the road east of the mountains and the Alaska highway, which is being built by the United States government from Fort St. John to White Horse, and then on to Alaska? I cannot understand why this vote did not go further and really get us somewhere as far as the defence of the Yukon country is concerned. The vote should have been for twice this amount, and the road should be carried through the mountains to Fort St. John to connect with the Alaska highway. There is no road from Fort St. John east. The road is completed from Peace River to Hines Creek, but from Hines Creek to Fort St. John it is not completed.

While I support this vote, I want to impress on the minister that the vote is not sufficient, and the road should go farther to connect with the Alaska highway. I see the Minister of Labour nodding his head, and he is right in nodding his head. This road does not connect up with the Alaska highway, and therefore I should like the minister to get in contact with the engineers and suggest to them that they ask for another appropriation to connect this Prince Rupert roadway at Vanderhoof with one through the mountains as outlined in the plans and specifications that accompany this vote, to Hudson Hope and Fort St. John. In that way we would have a real defence road.

Mr. REID: It might have been better if the United States had kept to route A or route B.

Mr. MacNICOL: They are prepared, I believe, to support connection through the mountains, because their engineers realize that this does not get them anywhere as far as the

Alaska highway is concerned. I believe they are ready to connect the railway through the mountains so that the railway from Prince George would extend north in the direction of Hudson Hope to Fort St. John, up to White Horse.

Mr. REID: I believe they will have to come back to one of those surveys.

Mr. ILSLEY: All I can do with such a suggestion is to bring it to the attention of the Minister of National Defence. This is a defence expenditure. It has been very carefully considered, but we should not be called upon to explain to the committee just how our defence projects in British Columbia will be used under conditions like these, and I could not tell the committee if I wanted to. It is going to be difficult enough to get the men and machinery to do this amount of work, let alone twice as much. As Minister of Finance, I had this particular expenditure examined a second time to see whether it was considered to be absolutely essential, because it is expenditures like these that put a peculiarly heavy strain on the resources of the country at the present time. But this project was represented to be necessary, and just to the extent that it is proposed. All I can do is to bring the representations of the hon. member to the attention of the Minister of National Defence.

Mr. MacNICOL: One word further. I am supporting the vote because it will assist the Department of National Defence in permitting military traffic to carry on from Vancouver to Prince Rupert. But when you arrive at Prince Rupert under present conditions with the Pacific ocean and the traffic thereon subject to torpedo attack from the Japanese, it does not get you past Prince Rupert. You have to get up to the Yukon and Alaska. What I tried to point out is that there is no connection between the road which this vote is for and the road east of the mountains, and the Alaska highway. That could be connected up by projecting the roadway from Vanderhoof, which is partly constructed, I believe, as far as Manson Creek. All that remains to be done is to go through the mountains via Finlay Forks, Hudson Hope and Fort St. John, and it strikes me that that must be done before the road will be a defensive road for the Yukon. I know that country, and I am afraid as to how it will be defended unless these roads are connected. Five and a half million dollars goes a long way and will do a good job to complete that Prince Rupert road, and it should be completed. But let us get away from the plan of proceeding by a piecemeal fashion. Let us complete something. Let us complete from the central British Columbia highway, from Vanderhoof to the east of the mountains too, so as to connect with the Alaska highway.

Mr. GREEN: I hesitate to say anything that would detract from the argument of my good friend the hon. member for Davenport, but this particular road is of the utmost importance in the defence of the Pacific coast. Prince Rupert is probably the most exposed settlement on the west coast of Canada, and yet it has no highway connection with the interior of the province. There have been roads leading to within 100 miles or so of Prince Rupert, but there has been no road leading along the lower end of the Skeena river to the city. I presume that this vote is for that particular road. It is not meant as a connection with the Alaska highway at all, but as a road to connect Prince Rupert with the interior of British Columbia, and eventually with Edmonton. For the transport of troops, equipment and supplies, it is of the utmost importance, and therefore I hope the committee will not get the wrong idea about the vote and will not regard it as unnecessary. I am sure every hon. member from British Columbia will join with me in urging the government to go ahead with that road as quickly as possible; nothing should be done to hold up the work.

Mr. MacNICOL: Evidently my hon. friend is not familiar with the north end of British Columbia.

Mr. GREEN: I am a member from British Columbia, and the hon. member for Davenport is a member from Ontario.

Mr. MacNICOL: I do not speak about something of which I know nothing. I go to see these things. In the first place, I said emphatically that I was for the proposed road because it completed the highway from Vancouver to Prince Rupert. If the hon. member did not hear me, that is not my fault. The hon. member in the course of his remarks said that it would connect with Edmonton. How will it connect with Edmonton? I am in favour of a connection with Edmonton, but you have to get through the mountains to make that connection. This road does not call for going through the mountains east, and that is what I am suggesting.

Mr. GREEN: I do not mind being given pointers by someone from my own province; the actual fact is that the work being done by the Japanese from Yellowhead pass west is to finish the other end of the road so that there will be connection with Edmonton and the prairies while this work on the Prince

Rupert end will complete the far western end of the road. My good friend has not been in British Columbia for a year or two, and he is a little out of date.

Mr. HOMUTH: The peculiar thing about this debate is that we go from alcoholic beverages to Japanese and then to roads. I wanted to say a few words before the hon. member for Comox-Alberni rose, but he was a little ahead of me. I wished to refer to two matters mentioned after he had spoken, the question of alcoholic beverages and the Japanese. In the minds of some people the first is the more vicious of the two; to my mind the second is the more vicious.

On several occasions in the last two or three weeks we have heard a great deal of criticism from members of the Cooperative Commonwealth Federation with regard to the stand of the government on the question of curtailing the sale of alcoholic beverages. I think it is time that parties who question the government on certain policies should have a policy of their own. The question arises to-day, is the Cooperative Commonwealth Federation in favour of the curtailment of alcoholic beverages? If they are, let them say so. But what they say is, "Where does the government stand? What is the government going to do about it?" You cannot debate a question by evasions and questions. I am not so sure that we are not allowing to rise in this country the same old arguments we had in the last war, which resulted, after the war, in conditions of which none of us were very proud and which eventually every province in Canada but one repudiated. If members of the Cooperative Commonwealth Federation believe there should be curtailment of the sale of beer, wine and alcoholic beverages of all kinds, let them move an amendment to have that done. If they think that space is being used in ocean carriers to carry beer to the men in Libya, and that it should not be done, let them say so. These things cannot be done by innuendo. Most hon. members recall the campaign in the last war in every province of this dominion, the committee of one hundred in Toronto, committees that were organized in other provinces. I well remember a little skit that appeared in the papers at that time, written by a man who had spent three years in the trenches in France. As I recall the words it ran something like this:

> I read of these tea and coffee blighters
> Who rave about kingdom come.
> They want to stop our cigarettes,
> They want to stop our rum.
> Water, they say, would be better.
> Water! Great Scot! out here
> We are up to our necks in water,
> Do they think we are standing in beer?

[Mr. Green.]

I remember that, and I remember the agitation for the curtailment of beer and rum to the soldiers, closing the canteens throughout all the allied nations, and then the agitation to stop cigarettes. How far would these prohibitionists go? If the time has come that we are going to talk about the curtailment of alcoholic beverages and all these things that appear to be vices in the eyes of some people or some parties in this house, let hon. members come out and take a clear stand, put themselves on record so that it is known where every member of this house stands, instead of trying to throw the responsibility on someone else by innuendo and to gain a certain amount of kudos without taking any stand themselves. It is time we took a stand on this question.

Mr. CASTLEDEN: Where does the hon. member stand?

Mr. HOMUTH: I am against them.

An hon. MEMBER: Are you speaking for your party?

Mr. HOMUTH: Whom are you talking for?

Mr. MacINNIS: I am not going to reply to the hon. gentleman who has just taken his seat, because no reply is necessary. Every province in Canada has had laws curtailing the liquor traffic. Does my hon. friend suggest that those restrictions be removed? If that is what he is suggesting, why does he not rise in his place and say so? What is the use of saying things by innuendo? One ought to talk clearly.

Mr. HOMUTH: Well, you are not very distinct.

Mr. MacINNIS: Well, that answers you anyway.

Mr. HOMUTH: You just think so.

Mr. MacINNIS: Yes, I think so; that is, provided your head is clear enough to be answered.

Mr. HOMUTH: Do not worry about my head. If I were as worried as you are, I would think so.

Mr. MacINNIS: I am not muddled through beer anyway.

Mr. HOMUTH: What do you mean by that?

Mr. MacINNIS: Anything at all you like.

The ACTING CHAIRMAN: (Mr. Ross, Calgary East): Order.

Mr. MacINNIS: While we are on this matter, I mentioned this afternoon that royal

commissions and boards of arbitration had given awards in labour disputes and that these awards were set aside and the wage rates set by order in council. My understanding is that the Minister of Labour demurs to that statement, and I wish to put the facts on record so that there will be no misunderstanding.

I have in my hand sessional paper No. 116 (a) tabled in the house on Monday, February 23 last. This sessional paper is a return to a motion made by me for:

A copy of all letters, telegrams, orders in council and other documents in the possession of the government, relating to the appointment of the royal commission on shipbuilding in the provinces of Ontario and Quebec, as well as a copy of any recommendations made by the said royal commission, and any report or reports of boards of conciliation and investigation under the Industrial Disputes Investigation Act in relation to disputes between any or all of the companies mentioned in order in council P.C. 629, January 26, 1942, and the employees of such companies.

This royal commission was appointed on September 2, 1941, and the members of the commission were: Hon. Senator Leon Mercier Gouin, K.C., Montreal; Mr. Vincent C. MacDonald, K.C., Dean of the Faculty of Law, Dalhousie University, Halifax; and Mr. F. H. Barlow, Master of the Supreme Court of Ontario, Toronto.

As I have mentioned in the house before, the commission was appointed without any consultation with labour, and there was no labour member on it. It made its report, if my memory serves me aright, on November 24, 1941.

Mr. HANSON (York-Sunbury): Will the hon. member tell us what the terms of reference were.

Mr. MacINNIS: Yes, they are in the report, as follows:

The committee of the privy council have had before them a report dated August 29, 1941, from the acting Minister of Labour, representing—

(1) That demands for increased wages and other changes in labour conditions have been made by employees of certain shipbuilding firms in the province of Quebec;

(2) That such demands either directly or indirectly are of concern to all shipbuilding firms in the province of Quebec and especially in the following: Canadian Vickers, Limited, Montreal; the Davie Shipbuilding and Repairing Company, Limited, Lauzon; and George T. Davie and Sons, Lauzon;

(3) That the firms affected are occuped wholly or chiefly on work which is essential to the conduct of the war and that a cessation of work in this industry would be detrimental to Canada's war effort and cause serious injury to the public interest; and

(4) That with a view to ensuring harmonious and satisfactory relations between the employers and workmen and promoting stable labour conditions in the shipbuilding industry of the province of Quebec, an inquiry should be made into matters pertinent to these demands in the three firms above-mentioned and in any other firms that may be designated by the Minister of Labour.

The minister accordingly recommends that a commission be appointed, under the provisions of part 1 of the Inquiries Act. . . .

Then it states who are to be members of the commission.

The minister also recommends that the commissioners have the right to determine the manner of conducting the proceedings in respect to such inquiry and to make all necessary inquiries and investigation for the purpose of ascertaining what wage or other labour conditions should be established and whether or not such conditions should be uniform in the plants under inquiry, the commissioners to present their report on the matters investigated and their findings and recommendations to the Minister of Labour; in making their recommendations the commissioners to have full regard to the wartime wages policy prescribed in order in council P.C. 7440, dated December 16, 1940, as amended by order in council P.C. 4643, dated June 27, 1941.

The minister further recommends that all fees and expenses payable to the commissioners or to witnesses or other persons who may, under their authority, be concerned in the proceedings of the commission. . . .

Then follows the usual provision found in these orders in council. As I have already mentioned, this commission made a very full report, appended to which was a schedule of wages covering all the shipbuilding plants of Ontario and Quebec. I might add that a further order in council was passed giving the commission authority to investigate the shipbuilding plants of the province of Ontario, as well as those of the province of Quebec. On January 26, 1942, order in council P.C. 629 was passed, reading as follows:

Whereas the Minister of Labour reports that a plan for the stabilization of basic wage rates in certain shipyards has been developed on the basis of the recommendations of the royal commission on shipbuilding in the provinces of Quebec and Ontario, the reports of certain boards of conciliation and investigation under the Industrial Disputes Investigation Act and various submissions from employers and employees concerned;

And whereas the minister further reports that in the interests of industrial peace it is desirable that immediate effect should be given to the aforesaid plan;

Now, therefore, his excellency the governor general in council, on the recommendation of the Minister of Labour and under the authority of the War Measures Act (chapter 206, revised statutes of Canada, 1927), is pleased to order and doth hereby order as follows,—

1. The basic wage rates for mechanics and the cost of living bonus for all employees in the shipyards, specified in the statement attached hereto, shall be adjusted as of the dates and in the amounts indicated in each case;

2. The Minister of Labour is hereby authorized to adjust the basic wage rates for other classifications of employees of the aforesaid shipyards in such relationship to the basic wage rates specified for mechanics and in such amounts as in his opinion, have regard to all the circumstances, are fair and reasonable.

That order, in my opinion, puts into the hands of the Minister of Labour the power to decide what are fair and reasonable wage rates. I have before me the wage rates recommended by the royal commission for the various classifications, as well as those in the schedule attached to order in council P.C. 629. In the Kingston, Collingwood and Midland shipyards the royal commission recommended basic wage rates of eighty cents for mechanics. In the Kingston, Collingwood and Midland shipyards the order in council lays down a basic wage rate of seventy-five cents an hour. In the case of the other shipyards concerned the same differential exists; there is very little difference. There is a difference in the wage rates of Marine Industries Limited, where the scale recommended by the royal commission was seventy-two cents and sixty-seven cents, while under the order in council the basic wage rate established for mechanics was seventy cents.

Mr. MITCHELL: I have not that report before me, but if my memory serves me right the recommendation of the royal commission was about sixty-seven or sixty-eight cents at Sorel.

Mr. MacINNIS: That is Marine Industries Limited. The recommendation of the royal commission was seventy-two cents for loftmen and patternmakers and sixty-seven cents for others. This information, in my opinion, substantiates quite definitely the statement I made this afternoon. There are a great many matters I should like to deal with in this connection, but I do not want to hold up the measure to-night, so for the time being I will let it go at that.

Mr. MITCHELL: Just to keep the record straight, it is quite true that the order in council was passed, as my hon. friend has said. I do not think this is the first time that the recommendations of a royal commission have not been accepted by the government or by interested parties. There is nothing mandatory about it; it is like the report of a board of conciliation. We were in this difficult position. I think it fair to say that the rate structures in the shipyards across Canada, largely as a result of the rapid growth of the industry, were in a chaotic condition. Shortly before I assumed office, order in council P.C. 8253, which had for its purpose the control of wage structure throughout Canada,

was made law. Then we got the report of the royal commission respecting certain shipyards in Ontario and Quebec. Then there came a report of the board of conciliation in Quebec, and the report of the board of conciliation was at variance with that of the royal commission. Might I point out that the passage of the order in council was to allay what was termed by the representatives of the men a difficult situation in the shipyards.

As I said before, rates were established by order in council. I made it clear to the leaders of the men, however, that that would not deny them the right to appeal to the national war labour board for increases in those rates, if they so desired. They made that application. The board sat on an application from the Ontario shipyards at Midland, Collingwood and Kingston, and approved the rates established by me, through order in council.

Mr. MacINNIS: Was that the national war labour board?

Mr. MITCHELL: Yes.

Mr. MacINNIS: Who is chairman of it?

Mr. MITCHELL: I am chairman of it, and I think my hon. friend knows that. I believe all hon. members know it—and if any construction can be placed upon that fact, I should like to state clearly, with respect to the national war labour board and the regional labour boards, that they are composed of nominees appointed after consultation with the dominant organizations and the dominant employer organizations of the dominion. I would not describe the nominees as representative, because they are servants of the state.

May I say to their credit that they sat down and administered an order in council with fairness and with credit to themselves and the organizations which supplied their names to the government in connection with the choosing of the respective boards.

As I said, representatives of these men filed their case with the board, and the board substantiated the wage structure mentioned in the order in council. May I add that in the Kingston and Collingwood yards the rates paid at the moment are from 50 to 100 per cent greater than what they were at the outbreak of war. The rates paid along the St. Lawrence are the highest ever paid for the grades of work done in those yards.

I know something about that because, when I was chairman of the industrial disputes inquiry commission, we went into the disputes at Mortons, of Quebec city, and in

order to justify what we thought was a fair rate we went back as far as 1914. The rates at that time were the highest that had ever been paid in the history of the yard. I am not suggesting, it will be understood, that they were fair or reasonable rates. But I think this might be fairly stated, that after setting these rates by order in council, and after seeing the written evidence from the national war labour board, the position taken by myself as Minister of Labour was vindicated. May I add that I did not cast a vote when the decision was made.

Mr. MacINNIS: Although I wanted to discuss this matter, I would not have raised it now if the minister had not suggested that what I said this afternoon was not correct.

I hold in my hand a copy of a telegram sent to the minister in connection with order in council P.C. 629 by a representative of one of the unions concerned in the Morton shipyard dispute. It is addressed to the Hon. Humphrey Mitchell, Minister of Labour, Ottawa, Ontario, and states:

On December twenty-second you requested vice-president Coyle and myself to come to Ottawa to discuss report of the board of conciliation in the Morton shipyards. After considerable discussion with deputy minister Stewart and director of industrial relations Crawford it was agreed and a proposition submitted to us in writing on December twenty-third that was to be submitted to the men with rates of wages based on report of the royal commission on shipyards and other provisions of the report of the board of conciliation would be accepted acting on your suggestion, and as a war measure this proposition was submitted to the men with our endorsement and adopted and notification was conveyed to you by telegram from myself under date of December twenty-ninth. I was considerably surprised to-day to receive word that Morton Company had posted notices repudiating our agreement. Vice-president Coyle informs me that deputy minister Stewart has informed him that the department had repudiated the conditions we agreed upon. If this is so without any recognition of our rights or consultation with us is an outrageous and unwarranted violation of our agreement and a breach of faith by a department of government and will warrant the disapproval of the workers throughout the whole dominion and bring the government into disrespect for repudiating a written agreement thereby placing myself and Coyle in a very unsatisfactory position as the men accepted our endorsation in good faith. We would appreciate some explanation of the situation.

This is signed by John W. Bruce. My information is that there was no satisfactory explanation given, and that after the department called Mr. Coyle and Mr. Bruce in and made a written agreement with them—which they asked for in writing, and which was put in writing—the Morton company refused to accept it. The next thing they knew, an altogether different proposal was put into effect by order in council P.C. 629. These are the kind of things which are disturbing the people in industry all across the country.

Mr. MITCHELL: All through my connection with the labour movement and since I have been minister I have taken the definite stand that one ought not to make a decision until all the evidence is in. At the time in question I was not feeling well—and it will be understood, of course, that I am not using that as a prop—but I am given to understand that this was the subject of consultation with the Department of Munitions and Supply which, in the final analysis, was paying the freight. I did take part subsequently in consultations between that department and the companies. I have also discussed the matter with representatives of the employees. That is about all I can say about it. I believe I have taken a fair position. The mere fact that some individual sends a telegram in which he states something, does not necessarily mean that it is based on fact.

Mr. MacINNIS: All right; if the minister says that the telegram is not based on fact, that does not concern me. That is the concern of John W. Bruce, who will no doubt be glad to hear that his telegram to the minister was not based on fact.

Mr. MITCHELL: It may be based on his understanding, but not on mine.

Mr. MacINNIS: But this whole dispute was not a question of misunderstanding among the parties concerned. The fact is that the Minister of Labour has, in the vernacular of the street, the bulge on John W. Bruce. The minister can pass an order in council making this mandatory on the organization Bruce represents.

Mr. MITCHELL: That order in council was not used as a club.

Mr. MacINNIS: Just tell that to the employees.

Mr. MITCHELL: I have told them, and they understand the situation. It is all very well for my hon. friend to rise in his place and say that I used the order in council as a club; I want to say that that is the last thing in the world I intended to do.

Mr. MacINNIS: I did not use those words.

Mr. MITCHELL: The hon. member used the word "club".

Mr. MacINNIS: No; I do not think I did.

Mr. COLDWELL: The hon. member said that the minister had the bulge.

Mr. MITCHELL: It means the same thing. There was a difficult situation existing at that time. Order in council P.C. 8253 had just been passed. The position taken by the national war labour board was that they would not make a decision until they had heard the evidence. The royal commission of which my hon. friend speaks took four or five months with its sittings and drafting its report.

Mr. MacINNIS: Three months.

Mr. MITCHELL: I felt that something had to be done immediately to allay the situation in the shipyards on the St. Lawrence and Ontario, and I took the responsibility of doing that, pointing out that these men still had the right to appeal to the national war labour board, which they did.

Mr. MacINNIS: Did the minister recommend the order in council before or after the recommendations of the royal commission were received?

Mr. MITCHELL: After.

Mr. MacINNIS: Two months after.

Mr. MITCHELL: I could not say.

Mr. MacINNIS: The date of the report of the royal commission is November 24 and the date of the order in council is January 26. It was not a matter of being held up by the royal commission; if there was any hold-up, it was after the report of the royal commission had been received in the Department of Labour.

Mr. GILLIS: If this is an Irishman's fight, I will get into it. I am prompted to rise this evening because of a question I asked the Minister of Labour this afternoon, with respect to the marketing of coal in Nova Scotia. The answers I received from him and from the Minister of Munitions and Supply were anything but satisfactory. In view of the fact that the Minister of Labour, as chairman of the national war labour board, took upon himself by means of an order in council the functions of negotiator between the unions and the employers, I am going to go into this situation a little more fully to-night. I think the whole matter has been badly handled. First, there has been a lack of a national fuel policy and, second, the negotiations carried on by the national war labour board with the miners have not been of the best.

Almost two years ago I brought up in the house the marketing of Nova Scotia coal and the necessity of that fuel as an essential war commodity. I pointed out to the Minister of Munitions and Supply that the time was coming when ships would not be available for the transportation of coal up the St. Lawrence and that the facilities on Cape Breton island for the shipment of coal to the mainland needed considerable improvement. The strait of Canso is a bottle-neck that should have been remedied some fifty years ago. The assembling yards needed considerable extension two years ago, but nothing has been done. I have written the Minister of Munitions and Supply on two or three occasions to ask if something could not be done to improve the shipping facilities across this strait in order to accelerate the transportation of coal and other necessary war materials—there are a lot of them being produced on the island—but his last communication was to the effect that because of the large expenditures being made it was not considered economical to make this expenditure at this time. The strait is only a mile wide, and it could be bridged or tunnelled. Much money has been spent in Canada in the extension of plants and so forth which were not as badly needed as is improved transportation along this particular line.

There is no excuse for the coal situation that exists in Canada at the present time after three years of war. The fuel controller broadcast that fuel would be rationed, and the Minister of Munitions and Supply stresses the fact that those using oil for domestic purposes will have to use some other fuel. The fuel board is perhaps doing the best it can as a strictly administrative body, but it is subject to orders from the department of government under which it functions. It administers regulations only, and I do not think there is sufficient latitude in the regulations to enable it to do the job it should be doing.

There is no excuse for the mines in Nova Scotia working on a three day a week basis. A short-sighted policy has placed us in the position where we have no other transportation facilities available. From time to time we eulogize our relationship with the United States. There is a market in the eastern states for Nova Scotia coal, and there is a market in central Canada to Quebec for Pennsylvania coal. Surely this situation that has now developed must have been seen months ago. I cannot understand why the fuel control board or the minister or someone else who had access to the facts and was in a position to judge the road ahead could not have arrived at some understanding whereby coal could have been marketed in the places I mentioned. Nova Scotia coal could be marketed in the New England states right into the Boston market and United States coal could be shipped by rail to Ontario and Quebec. This arrangement could last for the duration of the war. It should have been done, but it has not been done.

I am led to believe from discussion with at least one of the officials of the fuel control board that they have some plan in mind. We are, however, facing a serious situation at the present time as far as fuel is concerned. I should like to amplify the statement I made that the minister and his department through the national war labour board have usurped the normal bargaining powers of the trade union movement and that as such they must accept the whole responsibility for the negotiations that are carried on. They have taken over the functions of a union dealing with an employer. Orders in council 7440 and 8253 have definitely wedded the unions to the national war labour board instead of to the employer. Unfortunately, since that has taken place, the experience of the miners' unions in Nova Scotia has not been very happy. They had their difficulties in the past with the operators, but their difficulties have been considerably increased since they started to deal with the national war labour board. There has never been a contract signed with any degree of satisfaction since the government took over that function.

In 1940, the McTague board, appointed under order in council 7440, made certain awards. While they were not all they should be, those awards have never been lived up to. The McTague board recognized the fact that miners' wages in Nova Scotia were 7·1 per cent below the 1926-29 levels, and in accordance with the terms of reference set out in the order in council those wages should have been increased, but during the negotiations the company proved to somebody's satisfaction that they did not have the money. They have been broke ever since they came into Nova Scotia. The award made by the McTague board was a cost-of-living bonus of thirty cents a day. The board set out in their report that the company could not pay the thirty cents at that time, but that they would pay fifteen cents a day and that as their financial condition improved, the additional fifteen cents would be paid. One of the arguments which the mine-workers' union are having with the war labour board now is that the company should be forced to live up to the award made by the McTague board in 1940. The miners have been patient and long suffering, but the company now takes the position that they do not have to pay that addtiional fifteen cents and that they are not going to pay it.

Just a few weeks ago the miners' union presented a brief here which sets out their case clearly. I am not going to read it. No doubt the minister is familiar with it. What I am saying now is said from memory with reference to the McTague board award. The company owes the miners of Nova Scotia, if the McTague award means anything, a bonus of fifteen cents a day retroactive to February, 1940.

As I understand order in council P.C. 8253, the national war labour board is given no power to determine wages or bonuses based upon a company's ability to pay. It is a straight matter of fixing a cost-of-living bonus in keeping with the index as laid down by the government. That is my interpretation of the order in council. But when the miners' union met the national war labour board, the board took the position, after an examination of the books of the company by some auditors—

Mr. MITCHELL: At the request of the miners and the operators.

Mr. GILLIS: That is right. They asked for an impartial examination of the affairs of Dominion Steel and Coal Corporation and its subsidiaries and the ability of that entire organization to pay the rates asked for by the miners of Nova Scotia. The auditors made a partial examination of the coal industry, but make no mistake about this, you cannot examine coal without examining steel because they are interlocked. There were timber lands, wire-nail companies, and so forth —altogether twenty-six subsidiaries owned and controlled across Canada by the Dominion Steel and Coal Corporation, and so I say that the analysis made of the company's books was only a partial one and certainly does not give a true picture of the affairs of the company. On the surface the figures presented to the national war labour board might indicate that the company had no money, but I would call the minister's attention to what is said by a standard authority on Canadian and international affairs, a booklet called "Trend," issued on April 17, 1942, from 231 Jesse James—or St. James street, Montreal, and in it I find this observation on the financial page, "Splendid progress of Dominion Steel and Coal". This was in April. They go on to say:

> The management of this corporation was sufficiently far-sighted to rebuild and improve plants and properties very extensively before the war.

Mr. MITCHELL: You would not object to that, would you?

Mr. GILLIS: Not at all, but wait until I come to their financial position, and remember, the company maintain they are broke. It goes on:

The result of this policy has been that more than $20,000,000 has been ploughed back into the business, from earnings, since 1935. Thus Dominion Steel and Coal is well equipped to take a prominent part in Canada's war effort.

The point I make there for the benefit of the chairman of the national war labour board and the Minister of Labour is this, that you cannot examine coal in Nova Scotia without examining steel and the other twenty-six subsidiaries of this corporation. Where did they make their improvements? Did they plough back any of this $20,000,000 into coal, or did it go into industrial plants in some other part of Canada, and was it charged back to their coal operations? Is that why they are broke? That angle was not probed at all. Only coal was probed, and the decision of the board was based on figures presented by the company that they were not able to pay. If the company has ploughed back $20,000,000 it certainly did not go into the coal industry, and yet it might have been produced by the coal industry. That is something which the minister should endeavour to find out. This controversy over wages will never be satisfactorily settled until somebody is big enough to examine the financial structure of this whole organization.

I quote still further from this standard authority on Canadian and international affairs:

What this means to shareholders—there are 1,039,083 shares of no par value outstanding—is revealed by the following salient points:

1. In past five years—1937 to 1941 inclusive . . .

Do not forget that they were broke in 1941 and could not pay 15 cents a day bonus. It goes on:

1. In past five years—1937 to 1941 inclusive—net profits have averaged $1,241,000 or $1.24 a share.

2. During the same period, working capital has improved by over $7,000,000, to the current figure of $13,349,317. This is equivalent to approximately $13 a share.

3. Earned surplus amounted to $6,028,059, or nearly $6 a share.

That picture certainly does not coincide with the figures presented to the national war labour board by the auditors who made the examination and said that the company was not in a position at that time to bring the wages paid in Nova Scotia up to the 1926-29 levels as required by the order in council. So much for that controversy with respect to wages.

[Mr. Mitchell.]

I understand that the door is still open, that the mine workers' union are still negotiating with the minister, and I am merely jogging his memory on this question of the company being broke and unable to pay. I should like to know where that $20,000,000 went and where it came from. Was it ploughed back into industrial plants in Ontario and Quebec? Did any of it go back into coal? Again, if this earned surplus of $6,028,059 was earned in the five years including 1941, certainly the company could not have been as poor in 1940-41 as they made out to the McTague board and the national war labour board. I expect that the mine workers' union will be meeting with the board again, and I would ask the minister to consider whether under order in council P.C. 8253 the board have authority to determine wages and bonus on the basis of the company's ability to pay. As I read the order in council, they have not that power. They may interpret it differently. That point certainly needs clarification.

There is another point I would bring to the minister's attention, and I am doing this, not for the purpose of criticizing but because I want to be helpful and to avoid friction. I know the miners of Nova Scotia have contributed their full share in the war effort. They led the province in the last war loan. They are making the full contribution they are permitted to make to the armed forces. They are not allowed to enlist. You would get many recruits from these Nova Scotia mines if you would let the men join the army. They are a class of people who have been badly abused. Only last summer they were black-guarded over this dominion in full-page ads which stigmatized them as saboteurs, sabotaging the industry, when they were accused of sitting down on the job. But I am absolutely certain that other factors were involved there.

In the face of the situation facing us to-day, these mines are working only three days a week. There was a full-page ad in the Halifax *Herald* of April 8, 1942—I have it here, and it must have cost a lot of money—put out by the Dominion Coal company to try to prove to the public, to the government and to anyone who was ignorant of the facts that the miners of Nova Scotia were curtailing production by absenteeism and all that kind of thing.

That was in April, 1942, and here they are, a few weeks later, with 50 per cent less time being worked. There are no full-page advertisements as to the reason. They met the

miners' executive board and all they told them was, "From now on we shall be on short time", but the reasons are not made known. The people of Nova Scotia and the public of Canada are not children, and they are not going to take very kindly being treated as such. If there is a reason for curtailing production in the fuel industry and people have to tighten their belts and make sacrifices, then the cards should be laid on the table face up, and the people should know about the situation. If you can tell them that lack of shipping facilities is responsible, very well; they will take their share of the sacrifices that are necessary. But they want to be told.

In the past two or three days I have received dozens of telegrams asking me to find out from the government why mines should be working half time. What is the reason? The people there say they can get no information. Talking the matter over with some officials who have to do with the movement of coal, I find they take the attitude that either the company, or the government, or somebody in the know, should make a statement. There is no reason why the people should not be told.

With respect to the steel industry there is another thing which is militating against progress. This is a national industry which is necessary for the war effort, and instead of its being set up as a national industry under the jurisdiction of the national war labour board, who have the steel controller in Ottawa and are in possession of all the facts and figures with regard to wages and so on pertaining to steel, and where difficulties could be ironed out expeditiously with the heads of the union, the position is taken that steel is a secondary organization, and regional boards are set up across the country. In each province there is a regional board, and steel comes under these boards. These boards are dealing with matters in connection with which there are great difficulties in getting the facts. The thing should be coordinated. It is a national industry, and it should be taken under the wing of the national war labour board.

To show how silly these regulations are, or how silly somebody is who lays them down, let me mention this. Steel, a national industry, is handled by regional boards; but when we come to a little isolated salt mine in one corner of Nova Scotia, making application to the regional board for an adjustment of grievances at Malagash, the minister of labour of the province, or one of his officials, advises these people that salt mining is a national industry and comes under the national war labour board. One lone little salt mine has to come to Ottawa for redress, but a great national industry stretching across the country and essential to the war effort has to be taken apart piecemeal in the different provinces, with considerable loss of time, confusion and friction. I suggest to the minister that he should consider bringing that organization under the national war labour board.

Another thing I would express my opposition to is the manner in which the cost of living bonus has been handled. Bad as it is, it was some compensation to workers in the war industries. Under order in council P.C. 7440 they were given something to compensate them for the rise in the cost of living, and at least they held their own. They were not worse off than when the war broke out, as far as the basic rates were concerned, and in the war industries wages are to some extent higher than in the non-essential industries. Take truck drivers, clerks for your department stores, and so on—a large group of people making up a considerable percentage of the wage-earners of Canada. Their wages have always been very low. They received no cost of living bonus, and many of them have received absolutely nothing in the basic rates. When order in council P.C. 8253 was passed there was a proviso in it that led these workers to believe that they were being brought in and were to be given the equivalent of a cost of living bonus, equal to what the workers in war industries were receiving. Then there was a lot of happiness on their part. But after P.C. 8253 was passed, another order was passed that added a clause which completely wiped out any benefits that might accrue to the workers in the categories I have mentioned.

Mr. MITCHELL: I should correct that at once. It is not right.

Mr. GILLIS: It is correct.

Mr. MITCHELL: Take my word for it; it is not correct.

Mr. GILLIS: They were included to this extent, that they would receive whatever increase there was in the cost of living from the last base period. But there was no increase from the last base period.

Mr. ILSLEY: But that was all in P.C. 8253.

Mr. GILLIS: Yes, but there was an amendment—I do not have it here, and I am speaking from memory—whereby they would not receive it except in the first terms of P.C. 8253. One could read into that order in council or infer from it that these other industries would get whatever cost of living bonus was awarded to the workers who came

in under the original order, P.C. 601, I believe. I am not sure whether the last order was P.C. 601 or P.C. 609, but the point I make is that these very low-paid workers in non-essential industries, as they are now classified, have suffered the same increase in the cost of living in the last three years as other workers have suffered and they have received nothing by way of compensation to offset it. In many instances, they are working for lower wages than the wages paid workers who have been receiving the bonus. That is a rank piece of injustice. In Canada the cost of living has affected practically everyone, and it seems to me that everyone in the country should be treated on the same basis. Old age pensioners and those receiving mothers' allowances, with fixed incomes in the low income brackets, who have suffered through the increase in the cost of living, should have been compensated in exactly the same way as those who have been receiving the cost of living bonus.

Mr. ILSLEY: Those receiving bond interest?

Mr. GILLIS: If the income is sufficiently low, I would have no hesitation in saying that. If someone has an income of $1,000 or $600 in that group, received from bond interest, that person should certainly get the cost of living bonus. There should be no discrimination on that basis if that is all they take in. I have no hesitation in making that statement.

There is another matter in regard to which I would ask the Minister of Labour to tell me something. I wish he would interest himself in it. I have tried the Minister of Munitions and Supply for the last eighteen months but have not been successful. He has been very nice about it and I am not going to quarrel with him, but I have received no satisfaction. There is a machine-shop in Glace Bay. It is owned by the Dominion Coal company and employes from 300 to 400 mechanics, trained, skilled men as good as will be found in the country. In the last war that shop was engaged in producing war machinery, turning out bomb casings for one thing. It has not been utilized for that purpose in this war. The other day I made representations to the minister, pointing out that it is working on short time. The men are prohibited from taking employment in any other essential industries unless they are released. They requested, and I requested the Minister of Munitions and Supply, if it were possible, that he look into the shop and find out what use could be made of it. I made that request a considerable time ago. The minister wrote stating that an inspector was being sent for the purpose, but I never received the report. A few days ago I wrote again, and the minister said he would have the inspector go and see what could be done. At the present time the minister, or his department, is trying to adjust the grievances of the men on slack time, who are also petitioning for a release from that plant so that if they cannot be used there, they can go to another.

Mr. MITCHELL: A man can quit if he wants to; there is no prohibition.

Mr. GILLIS: He cannot go into another industry unless he can show a release from the one he is in.

Mr. MITCHELL: No; that is not so.

Mr. GILLIS: Well, I distinctly remember at Windsor at the Chrysler plant a number of skilled men were laid off due to a strike, and these men were on the road for months and months trying to get their registration changed so that they could get employment in some other industry. There must be a regulation to that effect. As I read Mr. Little's speeches, he makes that statement distinctly.

Mr. MITCHELL: I assure my hon. friend that there is no regulation to the effect he has stated.

Mr. GILLIS: Have I the minister's word that I can write to these men, some 300 to 400 trained skilled men, and tell them that they are free to leave that shop, come to central Canada and take work here?

Mr. MITCHELL: As long as they are in a war industry, there is at the moment no law or regulation that prevents a man moving around.

Mr. GILLIS: Well, they have that impression, and I had, too, that before they changed their employment they had to make application to their unemployment insurance office and get a permit to leave that industry and go into another. That is not a war industry. What I have stated is my understanding anyway, and the understanding of the men. They have appealed time and time again to the company for a release and cannot get it.

In any event I do not think it is good business. When we endeavour to lay down regulations and organize our man-power, we should know where they are going and should be prepared to place them and have a record of where they are. If they are allowed to

drift from one part of the country to another and take employment where they can get it, the registration will not be much good.

Mr. MITCHELL: My hon. friend would not object if we did that? He would think that is in the national interest?

Mr. GILLIS: I certainly would. It would be in the national interest. I want the minister to take under consideration the possibility of using these men somewhere else, or using that plant. It is well equipped and is certainly not doing much war work, no work which could not be replaced very easily, the repair of cars and some locomotive repairs. There is a large body of men there, well trained, who could take their place in war industry anywhere in Canada.

I am sorry to have occupied so much time. There is much more I could say, but I will reserve it for another time.

Mr. MITCHELL: I will endeavour to cover most of the points mentioned by my hon. friend in his informative remarks. Of course he will appreciate that with the vast amount of work being done by the national war labour board and the regional boards it is impossible to carry in one's head all the details of the complicated negotiations beween the Nova Scotia miners and employers. I would say, however, that both the miners and operators requested that the books of the firm be gone into by an independent firm of chartered accountants. I do not know of any objection being raised by either side to the firm selected, McDonald, Currie and Co., of Montreal, one of the outstanding firms of chartered accountants in the dominion. Frankly, what they found was that there was no money in the till. My hon. friend has read from another publication. It might be the advertising medium of some bond house. It must be clearly understood that nothing I would say about coal miners would be anything but to their credit, because the men who go into the bowels of the earth have a hard job. Very few people would care to undertake it, although miners get it in their blood, and men who come from the old country drift into the mines again even when there is opportunity to get employment elsewhere. I am not saying that their wages are high enough, but they are the highest ever paid in the history of the industry, and the full cost of living bonus is being paid. There are two exceptions, two subsidiaries where there is some back pay coming. That was made possible by an increase in the price of coal to the consumer.

That is the picture as we saw it. I have no brief for the kind of advertisements issued by the company. I think they are unnecessary under present conditions. The most important thing in Nova Scotia is, to my mind, to get the negotiations based on what I think is the only basis on which trade union negotiations can be successful; that is, on character and good faith on both sides. If the national war labour board has done anything to assist in that direction, I believe its institution has been well worth while.

My hon. friend knows of the trials and tribulations that have existed between employers and employees in the coal mines of Nova Scotia. He can rest assured that if in my small way I can assist in having negotiations carried on in a more friendly manner than in the past, I will do everything I can.

I was very much impressed with his suggestion as to the possibility of shipping some of this coal to the United States. If my hon. friend had the information that the government has, he would see the difficulties, matters over which we have absolutely no control, due to lack of certain transportation that existed in past years. We hope that difficulty will pass away, but at the moment it is a problem that neither I, nor he if he were in my place, could overcome.

The hon. member also brought up the question of steel being a national employer under the national war labour board. I played some part in drafting the order in council and the regulations that set this, what I consider a courageous policy, in motion. We had to decide what would be national organizations and what would be regional organizations. We came to the conclusion that certain dominant trades or callings that in years prior to the outbreak of the war had come within the jurisdiction of the Industrial Disputes Investigation Act were probably about as much as the national board could handle. I feel that after the war the provinces will demand their constitutional rights and prerogatives, and wages and hours of labour being generally understood to be within the jurisdiction of the provinces, we considered that it was much better to let the provinces work in their own field rather than that the federal government should invade it. I might say also that the attitude adopted by the provinces, their willingness without exception to cooperate, is an exemplification of the will of the Canadian people to give every aid possible to the successful prosecution of the war and the formulation and undertaking of such policies as we think necessary in that regard.

Might I also pay tribute to the employees' organizations as well as the employers'

organizations? I never thought I would live to see the day when the three dominant labour organizations of this country would even sit down together in a room, let alone sit round a table and carry out the arduous duties arising out of decisions on applications from labour organizations and employers' organizations in connection with the very difficult problem of wage negotiation. I may add this, that up to date the national and regional boards have rendered decisions in over five thousand cases; and I think this should be said in favour of the employers, for goodness knows they are hammered enough, that, strange to say, the great majority of the applications have come from employers who want to increase the wages of their employees.

May I add this, incidentally. I believe that on the basis of trial and error we can fashion, through the instrumentality of the national and regional boards, a wage policy which will reflect credit on our good sense and lay the basis of what one might term a permanent institution of wage negotiation in this dominion. I might say also—and I think history will judge us in this regard—that the launching of the price and wage policy of the federal government was the most courageous legislative act on the home front in the history of this or any other democratic country. Let us not forget that we can lose a war by inflation just as easily as we can lose it through lack of equipment with which to fight the war.

Mr. GILLIS: If the minister would answer one question, what does he mean by inflation? Does he mean that increasing wages would cause inflation?

Mr. MITCHELL: I know many people are afraid of the word "inflation". From the viewpoint of the working class, inflation is the high cost of living; that is how I would express it.

Mr. GILLIS: What would bring it about?

Mr. MITCHELL: Perhaps the hon. member will wait until I have finished. I am trying to give an extemporaneous talk, and I do not want to lose the thread of it. The price and wage policy treats everybody alike; it is based on equality. I belong to a powerful trade union, as the hon. member for Vancouver East does. It is no great trick for my organization—

Mr. MacINNIS: Yours is far more powerful than mine.

Mr. MITCHELL: Certainly it is; and I am speaking about a trade union, not the labour department.

Mr. MacINNIS: The wages are higher.

[Mr. Mitchell.]

Mr. MITCHELL: Certainly they are, and that is why I am going to make this point. It would be no great trick for my organization, when the cost of living began to rise, to go to the employers and say, "Stand and deliver."

Mr. COLDWELL: Is that the cabinet?

Mr. MITCHELL: No; it is the engineers. This policy treats everybody alike. It treats the lowest paid and the highest paid worker in the same way. I think that is equality of treatment, based on the fundamental practice which we regard as one of the corner-stones of our civilization; that is, that you cannot have different laws for the rich and the poor dealing with the same subject. I think it can be fairly said that some people are inclined to be disappointed if a policy works. I believe this policy is working on all six cylinders to-day. During the same period in the last war the cost of living increased by something over 12 per cent. Since last October the cost of living has increased by ·4 per cent, which in effect is an increase of 12 per cent in the purchasing value of real money.

Mr. MacINNIS: If the cost of living remains stationary, and wages remain stationary, does the minister say there is an increase of 12 per cent in purchasing power?

Mr. MITCHELL: In comparison with the last war.

Mr. MacINNIS: But we are not dealing in comparisons with the last war.

Mr. MITCHELL: That was what I said.

Mr. MacINNIS: The fellow who was only getting 30 cents an hour is still getting only 30 cents an hour.

Mr. MITCHELL: He would not be getting 30 cents in purchasing power if the cost of living had gone up 12 per cent.

Mr. MacINNIS: But his wages might have increased also.

Mr. MITCHELL: That is so.

Mr. DOUGLAS (Weyburn): The cost of living did go up between the outbreak of war and the introduction of the government's policy.

Mr. MITCHELL: Yes, by fifteen points.

Mr. DOUGLAS (Weyburn): And the poorly paid man received no compensation.

Mr. MITCHELL: That is what I want to develop. I want to be very frank about this. I would not support this if I did not think it was going to benefit the chap who cannot help himself. That was why the policy appealed to me. Take the people on old age

pensions, the people receiving mothers' allowances, the men and women receiving workmen's compensation benefits, the dependents of soldiers, sailors and airmen, the soldiers, sailors and airmen themselves, and that great class in the country who live on fixed incomes—I am not talking about incomes in the higher brackets—those people who are almost defenceless when there is an increase in the cost of living index. I sincerely believe that through this policy we have maintained the morale of those people at a level which did not exist in the last war.

Mr. NOSEWORTHY: On the basis of the minister's reasoning, should these people not be entitled to the cost of living bonus that industrial workers are paid, at the initial stages?

Mr. MITCHELL: It is permissible under the order, but not mandatory.

Mr. COLDWELL: But the government has not implemented it.

Mr. MITCHELL: Oh, absolutely.

Mr. COLDWELL: Not for old age pensioners, soldiers' dependents and the other people of whom the minister was speaking.

Mr. MITCHELL: I agree with that, but the hon. member will see the force of my argument, and he will appreciate the effect on the morale of the people. Just suppose we let the cost of living go, as we did in the last war, when it increased something like 97 per cent between 1914 and 1920. I have a very clear recollection of that; and even the most powerful trade unions on the north American continent never caught up with the cost of living. I think it is far better to stabilize conditions, as we are trying to do, than to permit a condition similar to that which existed during the last war. After all is said and done, if you see a thing in operation it is much more vivid than any idea you get from reading a book. I have a very clear recollection of some of the conditions created in Germany after the last war by the inflationary movement.

Mr. COLDWELL: In 1924.

Mr. MITCHELL: Yes. I want to say also that when the Dawes commission went to Germany and asked the opinion of the trade union leaders on the subject matter of their discussion, those leaders said, "We will suffer anything but a return to inflation." I am not suggesting for a moment that we would have an inflationary movement similar to that which took place in Germany. I would say, however, that if inflation could be controlled anywhere in the world, it should have been controlled in Germany, because the German people lend themselves to discipline and regimentation more than do the people on the north American continent.

Mr. BLACKMORE: They lacked goods.

Mr. MITCHELL: I am not going to get into that argument; some other night.

Mr. BLACKMORE: I will be ready for you.

Mr. MITCHELL: I will be ready for you, too. I can tell you a good story about the inflationary movement in Germany. Do not forget this, that money is not money unless it is hard to get.

Mr. BLACKMORE: And money is no good without goods behind it.

Mr. MacINNIS: Some people get it quite easily, and get along very well.

Mr. MITCHELL: That is quite true. Perhaps some would say that my hon. friend and I get it too easily.

Mr. MacINNIS: Perhaps we do, relatively.

Mr. MITCHELL: I just leave that thought with hon. members. I think I have covered all the points raised by my hon. friend, and later I shall be glad to take up the question of the shipment of this coal. If I have missed anything, I shall be glad to endeavour to answer it.

Mr. MacINNIS: Before the section passes—

The ACTING CHAIRMAN (Mr. Ross, Calgary East): Order. The hon. member for Queens-Lunenburg has the floor.

Mr. KINLEY: I was interested in the remarks of the hon. member for Cape Breton South, who comes as I do from Nova Scotia. I was particularly interested in that part of his remarks which suggested that he had foreseen the difficulty of getting Nova Scotia coal into central Canada, and that under present conditions it would be a good thing if we permitted the United States coal to come into this part of Canada, and find a market in the New England states for part of the Nova Scotia product.

For many years I have heard about the New England market for Nova Scotia coal, but I never saw it realized.

Mr. GILLIS: We had it until the last war.

Mr. KINLEY: I was interested in provincial government, and I heard many controversies about the coal situation in Cape Breton. I never believed that the Boston market was very good for Nova Scotia coal.

Mr. HANSON (York-Sunbury): I saw it going from Springhill, when I was a boy.

Mr. KINLEY: In the days of wooden ships. One way to allow United States coal to come into this part of the country is to stop the subvention on Nova Scotia coal. Every ton of coal which comes here from Nova Scotia is paid for, to some extent, by the government of Canada. It is a national policy in connection with coal, in order to bring coal to this part of the country. It seems to me that the people of Cape Breton would be loath to have any arrangements which would stop any of the subvention on coal coming into this market.

We are told that the difficulty is connected with shipping. It is said that there is a lack of floating bottoms to take the coal. If we are to get the Boston market now, we must move the coal by rail to Boston, and naturally that would require a subvention. Anyone who knows anything about the difficulties in connection with customs, trade agreements and that sort of thing would hardly suggest that we could give a subvention on coal going into the United States market.

My opinion as to the success of the Nova Scotia coal fields is that as far as possible we should procure the upper Canadian market, and that involves water-borne transportation. It may be that some of our lake shipping that is not subject to the hazards of the Atlantic could now be used for the purpose of bringing that coal to central Canada in the summer time.

The hon. member also speaks about the bridge across the strait of Canso. That is an old subject, too. I think members of this house have asked for a bridge, and I have heard the matter discussed in the legislature of Nova Scotia. The gut of Canso is a rather deep waterway. Ice conditions in the spring are considered to present an engineering difficulty. While I believe everybody in Nova Scotia would like to see a bridge across the gut of Canso, in order to serve Cape Breton, I think the difficulties were such that engineers were slow to move. Our Canadian National Railways were so burdened with debt in the last decade that no one would suggest that they should take on more obligations by way of capital expenditure.

The hon. member speaks about the release of men. He suggests that the government should release men from a certain plant to work in another. In so far as I know, labour moves freely in Nova Scotia from one plant to another.

Mr. GILLIS: You do not know much about it, then.

Mr. KINLEY: They move freely when they can get better wages. While there is a wage ceiling in Nova Scotia, as in the rest of Canada, it must be realized that the wage ceiling to which the employer and employee are tied is the wage ceiling of the locality in which the employee lives, and the wages paid in that locality during a certain period. So it may be seen that when other industries are at a higher wage level they can entice men. As far as steel and coal are concerned, I believe there is a wage scale at least as high as almost any other in Nova Scotia, with the exception of a restricted area round Halifax, where many of us do have a complaint in that the government through the naval department breaks its wage ceiling and entices men who are repairing ships in private plants to come to the government's service. They are or were not restricted to the price ceiling.

Mr. HANSON (York-Sunbury): That is all through the government service.

Mr. KINLEY: My hon. friend has complained about the cost of living bonus. That was a difficulty, but I do not think it depends on a man's prosperity or his salary. I think it was 25 cents a week for each point that the cost of living index went up, and a company that paid before a certain time had to raise their index. Companies which paid nothing must justify their position before the regional wage board, because either the men or the company can apply to the regional board for the purpose of fixing the cost of living bonus. The man who receives $2,000 a year gets the same cost of living bonus as the man who receives $1,000.

My hon. friend said that the salt mines were considered a national industry, and that steel was under regional labour boards in Nova Scotia. He may be right in that. I know that the regional labour board is composed of men representing employers and employees in Nova Scotia. If you take the steel industry out of the industrial life of Nova Scotia, you are taking out a big part and you would scarcely have a representative board, or one which would be representative of the activities of Nova Scotia.

Mr. GILLIS: I should like to correct the hon. member, if I may.

Mr. KINLEY: All right; I do not know what the hon. member wishes to correct, but—

Mr. GILLIS: If I wanted to, I could tell him a lot.

Mr. KINLEY: Well, if the hon. member wishes to ask a question, all right.

Mr. GILLIS: I would like to have a chance to reply to him, when he has finished.

Mr. KINLEY: I was speaking about the steel industry—and I do not know what my hon. friend should take exception to. I had said that if you take the steel industry away from the regional boards in Nova Scotia—

Mr. GILLIS: I will tell you, when you have finished, what you do not know about it.

Mr. KINLEY: When you take away the steel industry you are taking away a big percentage of the industry of Nova Scotia. There may be some point in what the hon. member has said with respect to salt, and that steel is as much a national industry as is salt. That may be true.

In so far as steel and coal are concerned, I was always led to believe that coal did carry steel. That was the story in Nova Scotia many years ago. But we must all realize that the steel industry was a hard industry to start in this country. Years ago this government bonused steel, to a great extent. I think the people of Cape Breton felt that with the natural resources of coal they would build up a secondary industry with steel, and the reason they could build it up was that they had the coal.

I am not for one moment saying a word in defence of the corporations in charge of steel and coal in Nova Scotia. I had to deal with their problems many years ago when I was in the Nova Scotia legislature. Many changes were made from time to time, and it may be that the repairs they say they are putting on their plants, to show a loss, are the result of present-day auditing methods which have become so important and so specialized in these days. At the same time the hon. member's remarks relate to the regional boards in Nova Scotia. I believe both steel and coal are represented. With a local knowledge of conditions and with men on it who represent the industry, I believe the miners of Nova Scotia will get a better deal from their own people than they would from the outside.

I cannot think of anything else the hon. gentleman said in so far as Nova Scotia is concerned with which I cannot agree. He was rather reasonable in his presentation. He has spoken from the point of view of those he represents, and it is commendable that he should do so. At the same time there are economic problems that do not always appear on the surface, and it seems to me that before a discussion of this sort goes out to the public we should be careful that the thing is analysed in an intelligent way that is representative of the true idea of what the people want.

Mr. GILLIS: It is no surprise to me, after listening to the hon. gentleman, to find out exactly why Nova Scotia ends at Halifax. It is also not surprising that everything east of Halifax is back about fifty years in comparison with the rest of Canada. The hon. member makes the observation that he has heard this question of bridging the strait of Canso raised in this house for a number of years. I raised it two years ago, and it would be very handy to-day as a war measure. I think the hon. gentleman either misunderstood what I said or has attempted deliberately to put another construction on my words. He seldom speaks in the house until someone else bases an argument for him. I notice he is touchy when one begins to analyse Dominion Iron and Steel and Coal. Perhaps he is closer to them than I am.

Mr. KINLEY: No; I am not.

Mr. GILLIS: When he sets himself up as their defender with respect to the marketing of coal in the United States I say that he deliberately misconstrued what I said.

Some hon. MEMBERS: Order.

Mr. KINLEY: The hon. member cannot say that I deliberately misconstrued what he said. I did not intend to misconstrue anything.

Some hon. MEMBERS: Withdraw.

Mr. GILLIS: What is the matter? Withdraw what?

The ACTING CHAIRMAN (Mr. Ross, Calgary East): The hon. member should withdraw his charge that the hon. member deliberately misconstrued his remarks.

Mr. GILLIS: I will withdraw. When the hon. member tries to ring in the question of subventions, which he knows is a touchy one in Nova Scotia, he does it for political purposes. I did not mention subventions in any way, shape or form. I realize that the fuel situation in Canada was an emergency, but apparently he does not. When I suggested the transfer of markets I did so in order to facilitate Canada's war effort. I was not thinking in terms of after the war or profits for corporations or subventions or anything along those lines. Some of my hon. friends who preach a good-neighbour policy seem to have very little faith in that policy. They say that we may not be able to do this after the war; that we may not be able to do that after the war. If we do not get busy and do something about the war, we shall not have anything to say about what we shall or shall not do when the war is over.

I mentioned the transfer of markets as something that would take care of what I considered was an emergency fuel situation.

I have no criticism to make of the audit that was made except to say that one cannot examine Dominion Iron and Steel and Coal and determine the wages of coal by simply making a partial examination of the coal end.

Mr. MITCHELL: I might say to my hon. friend—and this is not said in any spirit of criticism—that there was no objection by the miners. They did not raise the contention he has raised. They asked for the audit, and there was general agreement that the company that was employed was a fair company. The thought the hon. gentleman has brought into the discussion was never raised before the national war labour board.

Mr. GILLIS: The workers representatives are far from satisfied with the decision of the board. The argument I am making to-night is my own, based upon my knowledge of the situation. My criticism of the audit was not that the auditors were incompetent—

Mr. KINLEY: I did not say that.

Mr. GILLIS: The minister implied it. My criticism was not that they did not do the job they were sent to do. I simply observed that one cannot determine the ability of the Dominion Coal Company to pay without considering their twenty-six subsidiary organizations across the country. They can transfer capital from one to the other; they can plough back money from coal into steel, into wire nails, into timberlands, into railroads and shipping or into anything else that they control and show it as operating costs against coal. If you do not probe coal and steel and consider their relationship to the subsidiary organizations, you do not get a true picture of the financial standing.

I think it is a small job for a member from Nova Scotia to sit down with his pencil and attempt to pick flaws in anything I may have said with reference to the interests of the province. Dominion Iron and Steel and Coal has a large staff of experts who are quite capable of taking care of their interests without that kind of cooperation from a member from Nova Scotia. I do not care where a member sits in this house or to what party he belongs; if he is advocating something in the interests of Canada, I am with him.

Mr. KINLEY: Does the hon. member not believe in free discussion? I was most courteous to him and simply pointed out that the subventions had enabled us to get coal into these markets. I suggested that if we wanted to get United States coal into this country, all we needed to do was to take off the subvention.

I said that I did not think the people of Nova Scotia wanted the subventions taken off.

Mr. GILLIS: The hon. member fails to recognize the fact that the mines in Nova Scotia are working only three days a week.

Mr. KINLEY: Take away the subvention and how many will they work?

Mr. GILLIS: The hon. member has not the slightest idea of what he is talking about. You are subsidizing United States coal right now into those two markets and you are rationing your fuel.

Section stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, June 9, 1942

The house met at three o'clock.

STANDING ORDERS

CONCURRENCE IN SECOND REPORT OF STANDING COMMITTEE

Mr. W. H. GOLDING (Huron-Perth) moved:

That the second report of the standing committee on standing orders, presented on June 4, be concurred in.

Motion agreed to.

FOREIGN EXCHANGE

AGREEMENTS WITH FRASER COMPANIES AND BELGO-CANADIAN IMPORT COMPANY

Hon. J. L. ILSLEY (Minister of Finance): I table copy of agreement made under the War Exchange Conservation Act between His Majesty the King in the right of Canada and the Fraser Companies Limited; also copy of agreement made under the War Exchange Conservation Act between His Majesty the King in the right of Canada and Belgo-Canadian Import Company Limited.

ALBERTA NATURAL RESOURCES

AMENDMENT OF TRANSFER AGREEMENT RESPECTING ROYALTIES ON OIL PRODUCTION—OPINION OF DEPARTMENT OF JUSTICE

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I desire to ask the hon. gentleman who is leading the house (Mr. Crerar) whether as a result of the discussion which took place here in committee on previous occasions with respect to the Alberta Natural

Resources bill, he has requested the Department of Justice to give an opinion on the legal question raised, for which I asked, and which so far has not been brought down with the correspondence?

Hon. T. A. CRERAR (Minister of Mines and Resources): The question mentioned by my hon. friend was referred to the Department of Justice. I hope to have their opinion to-day. We have been pressing for it for the last five or six days.

HONG KONG COMMISSION

PRESS REPORTS OF STATEMENT OF COLONEL DREW WITH REGARD TO COMMISSIONER'S FINDINGS

On the orders of the day:

Mr. THOMAS REID (New Westminster): I should like to direct a question to the Minister of Justice. What steps do the government intend to take in view of the serious attack which has been made by Colonel Drew upon Sir Lyman Duff, Chief Justice of Canada, whose findings on the Hong Kong expedition were made public in the house on Friday last. It is not my intention to read the dastardly statements appearing in the press, but the attack upon the judiciary of Canada, especially that upon the chief justice, to my mind should not be allowed to go unchallenged. Therefore I ask the government what they intend to do to protect one of the chief bulwarks of our democratic institutions against attacks of this kind.

Mr. DOUGLAS (Weyburn): In this case he is not the chief justice; he is a commissioner.

Hon. L. S. ST. LAURENT (Minister of Justice): I am afraid I am not in a position to give a complete answer to the hon. member this afternoon. My attention was attracted to a press dispatch purporting to contain certain extracts from a statement made by Mr. Drew. I asked the officers of the department to secure if possible the complete statement and to examine it and give me a report. As yet I have not received such report.

Mr. HANSON (York-Sunbury): There was no attack on the Chief Justice of Canada.

Some hon. MEMBERS: Yes, there was.

Mr. HANSON (York-Sunbury): No. Sir Lyman Duff is an old friend of mine, and I say advisedly that there was no attack on the Chief Justice of Canada. There may have been an attack on the royal commission and the report of a royal commissioner, which is an entirely different matter.

44561—200½

Some hon. MEMBERS: No.

Mr. HANSON (York-Sunbury): Absolutely, yes.

Mr. POULIOT: The commissioner and the chief justice are two different persons.

CANADIANS IN JAPAN

PRESS REPORT AS TO ARRANGEMENTS FOR EXCHANGE OF UNITED STATES-CANADIAN AND JAPANESE NATIONALS

On the orders of the day:

Mr. H. C. GREEN (Vancouver South): I should like to direct a question to the Prime Minister. In view of the fact that he is not in the house at present perhaps the Minister of Mines and Resources will bring it to his attention.

In yesterday afternoon's press there appeared an Associated Press dispatch from Tokyo to this effect:

> The Italian liner *Conte Verde* is expected to sail from Shanghai about June 15 with 650 Americans and Canadians being repatriated in exchange for Japanese nationals interned in North America, Domei reported to-day.
>
> The news agency said previous announcements that a second ship, the *Asama Maru*, would accompany the *Conte Verde* with other British and American citizens was in error.
>
> The transfer of nationals will take place at Lourenço Marques, Portuguese East Africa.

I should like to ask the Prime Minister whether this is an exchange of diplomatic and other officials only, or is it the beginning of the exchange of nationals without official status, referred to by the Prime Minister on March 18 at page 1413 of *Hansard*, when he used these words—

Mr. SPEAKER: Order. I think the hon. gentleman has stated his question.

Mr. GREEN: I want to quote just two lines from *Hansard* to clarify the question.

Mr. SPEAKER: I was rather in doubt as to whether the question should not be placed on the order paper, but as I had some doubt I thought the hon. member should be allowed to continue. Now that the sense of the question has been indicated I would ask the hon. member not to elaborate upon it.

Mr. GREEN: Then I should like to know also how many Canadians are included in this group of 650.

Hon. T. A. CRERAR (Minister of Mines and Resources): I shall see that the hon. member's question is drawn to the attention of the Prime Minister, and probably he will be able to make a reply to-morrow.

LABOUR CONDITIONS

REQUEST FOR APPOINTMENT OF GOVERNMENT CONTROLLER AT DUMART PLANT, KITCHENER

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I wish to direct a question to the Prime Minister. Perhaps the Minister of Mines and Resources would draw it to his attention, or the Minister of Labour may be able to answer it now. Has the Prime Minister received a submission from the employees of the Dumart plant in Kitchener requesting that a government controller be put in charge, in order that operations at that plant may be resumed immediately; and, if so, what decision has been reached?

Hon. HUMPHREY MITCHELL (Minister of Labour): I have received a copy of the submission, and the answer is that there will not be a government controller placed in the Dumart plant in Kitchener.

PRIVILEGE

MR. ROSS (MOOSE JAW)—CBC NEWS BROADCAST RESPECTING WAR APPROPRIATION BILL

On the orders of the day:

Mr. J. G. ROSS (Moose Jaw): On a matter of privilege, Mr. Speaker, last evening at ten o'clock the Canadian Broadcasting Corporation carried a news item to the effect that the war appropriation bill had been given first and second readings in this house while less than twenty-five members were present in the chamber. I was present at that time, Mr. Speaker, and that statement is incorrect. There were many more than twenty-five members in this chamber at that time. In giving news reports in regard to this House of Commons, the Canadian Broadcasting Corporation and all others who distribute news throughout this country should be very careful to give correct reports. Whoever prepared that report should have known that an important ceremony was taking place in front of these buildings at which His Excellency the Governor General was present; that on the platform with His Excellency were the Prime Minister, the Leader of the Opposition, several of the cabinet ministers and many members of the House of Commons, and that it would have been a matter of discourtesy for them to leave the scene before His Excellency left. I believe a report of that kind should be corrected, and that those responsible for such reports should be reprimanded by whatever minister of this government has the right to reprimand the Canadian Broadcasting Corporation.

[Mr. Crerar.]

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 8, consideration in committee of Bill No. 95, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

On section 2—Appropriation $2,000,000,000 less $500,000,000 voted under 1942 c.9.

Mr. ROY: Mr. Chairman, with my limitations in the English language it might have been better if I had addressed the committee in my maternal tongue, but in order that all hon. members may follow what I have to say I shall try to express myself in English. I should like to offer a few short comments under this bill which provides $2,000,000,000 for the defence, security and welfare of Canada. For the benefit of the members of the war cabinet may I recall what I said in this house on May 6, 1941, with regard to oil possibilities in the Gaspe district. I quote from page 2822 of *Hansard* of that date:

I have already referred to the possibilities of oil bearing areas in the Gaspe bay surroundings. From 1860 up to 1901, with rudimentary machinery, fifty wells have been drilled at a relatively small depth. One can read with profit and interest the records on each of these drillings and their oil output in the annual report of the Quebec bureau of mines for 1929 by Mr. William A. Sparks. Oil occurrences can be found to-day on the surface of the soil in many places over an area of six hundred square miles. In his 1929 report, Mr. William Sparks writes this on page 7:

"The occurrence of oil in small quantity has been fully established, with the result that the district has continued to attract attention and it must still be regarded as a possible source of oil on a commercial scale."

And here is what we read in a recent report by the joint engineers, Doctor I. W. Jones and Mr. H. W. McGerrigle, for the year 1937 at pages 36 and 37:

"There is some oil of good quality in this region, as has long been known. . . . The region is recommended to the serious consideration of those in search for oil."

By reason of the imperative necessity imposed by actual events of attempting to discover new sources of oil, and, by recalling the past policy of Great Britain in investing large capital to develop oil wells in Roumania, Iraq and many other well known countries, I deem it is the government's duty to undertake forthwith the drilling of such areas in Gaspe as are recommended by these engineers.

According to quotations I have lately received from Robert McMaster and Sons, of Onondaga, Ontario, the drilling of a 7,000 foot well—the probable oil bearing depth—could be undertaken at a cost of $78,000. The investment of $500,000 would then permit the drilling of seven wells which could be concurrently done

and completed in eight months time to supply, thereafter, at Gaspe seaport, the navy and the air force, with oil which at that time might have become scarce elsewhere.

As a matter of fact I believe oil has become quite scarce since that time. On many occasions since last May I have tried to call to the attention of the government the necessity of making some search for oil in that region. I turn now to sessional paper No. 140, in which appear certain questions and replies in connection with this matter. The following question appeared in issue No. 21 of *Votes and Proceedings*:

1. In view of recent military developments, has the government given any consideration to the fuel oil problem?

2. If so, what consideration has been given to the possibilities of exploiting the petroleum deposits of Gaspe?

To these questions the following answer was given by Mr. G. K. Sheils, deputy minister:

2. No special geological or geophysical work has been done in the Gaspe peninsula of recent date. The reports on record, which are reasonably complete, and the drilling which was carried on, are not encouraging for large production of oil. It has been deemed advisable to give first attention to other areas in Canada which give better promise.

Following this answer, which was published in the press, I received some letters from oil experts, men well acquainted with the oil possibilities of Gaspe. The following is a letter from Mr. L. J. McKenzie of Gaspe, Quebec, addressed to the editor of the *Herald*. This letter, published in the latter part of January, 1942, is as follows:

To the Editor of the *Herald:*

Sir,—There is much of vital public interest in a recent article in your paper "Minerals to Win the War"—extracts from Mr. Claud M. Johnston's letter.

In the course of his letter Mr. Johnston mentions the lead and zinc possibilities of the Gaspe peninsula, but he appears to have overlooked Gaspe's petroleum possibilities.

In these most critical times when democracy is fighting for her very life and future existence, on oil and for oil, it seems to us that our leaders should be brought to realize more fully the necessity of an unstinted, all-out effort towards the proper drilling and thorough testing of the Gaspe oil-bearing strata.

Canada now imports practically all the petroleum she uses, and here we have a proven oil prospect of 250 square miles, situated at the mouth of the St. Lawrence; 300 miles nearer Europe than any other point in America (Labrador excepted), with petroleum seeping out of the rocks in dozens of places from the very shores of the gulf to thirty miles inland, and not one really serious effort being made towards determining what quantity exists at depth. Opposed interests must not be considered, and, as Mr. Johnston says, "there is a way to find out."

It does not take an over-vivid imagination to picture what petroleum in quantities here at the mouth of the St. Lawrence would mean to our dominion and our allies.

I will not go into details of our reasons for confidence in the prospect more than to say that I have personally seen one well flow thousands of barrels in this region, and I am convinced.

Yes we have iron ore, copper and other base metals for the building of ships and planes and we believe we also have the oil to propel those ships and fly the planes as well.

Following the publication in the press of the answers tabled in the house in February I received the following letter from an oil expert associated with Cecil Carpenter and Company, Limited:

I read with much interest your remarks at Ottawa regarding the last drilling results for oil in Gaspe. . . . My name as identified with the past exploration for oil in Gaspe possibly may not be known to you. I lived in Gaspe for many years operating as general manager of the Petroleum Oil Trust of London, England; subsequently manager for other companies operating there. At the closing of these operations I promoted, organized and built the A.Q. and W. Railway, now the Canadian National, from New Carlisle to Gaspe harbour.

The New Canadian Company Limited held the construction contract for the railway of which I was the managing director. Under these circumstances I have been much interested in the latest exploration to try for oil in quantity.

My oil companies retained excellent oil experts, both Russian and French; likewise the late Mr. Obalski, Quebec government engineer, kept in close touch with developments. It does not appear feasible that oil should be found in 80 per cent of my wells drilled and the stratification refuse to produce more. The consensus of opinion then was that once we could increase the width of porous strata we were on the road to success.

The letter concludes with this paragraph:

I would always be pleased to cooperate with you for the betterment and development of any enterprise in Gaspesia, because I put in so many years there and think the people in that country are the best in Canada.

C. B. K. Carpenter

Then, I received another interesting letter, dated at Hawkesbury, Ontario, March 2, 1942, as follows:

Dear Sir:

According to a press report before me, a report on the production of oil in the Gaspe peninsula has been tabled in the House of Commons.

I wish to say I have been and still am in the position of investigator of fraudulent work carried on to suppress the oils of Canada. I have been so for twenty-one years, not employed by any firm, group or government. I was requested by the British government through their British trade commission to take up the work in 1922, and found it so interesting that after taking five years in geology and field work I continued at my own expense.

There is no reason why one dollar's worth of oil should be brought into Canada, if such fraudulent work were suppressed by the government; and now in our war effort surely something can be done.

An early reply will be appreciated, and I may add that I may this year spend a month in your district if time permits.

This letter is signed by Mr. A. C. McIntosh, Box 145, Hawkesbury.

Yesterday I asked the government if it was the intention to give some thought to the possibilities of oil production in Gaspé, in view of the fact that the oil and fuel problem is becoming so acute. We all know that the shortage of oil and gasoline seriously affect the whole of our population, and bring upon us many difficulties.

May I draw to the attention of the committee a further consequence of gasoline rationing. I have no doubt all hon. members have heard about Gaspésia—its beautiful scenery, its boundless sea, its vast mountains, its wide rivers, and its delicious fish. In past years Gaspé has been known as one of the most beautiful spots in Canada, and its beauties have been a strong inducement to tourists. The tourist traffic in that part of Canada has been a source of revenue from which the whole of the dominion has benefited. Under a system of rationing of gasoline however it will not be possible for the duration of the war to travel extensively through Gaspé.

There is a fine chain of hotels along the coast which provides very good accommodation for tourists. There is no railroad on the north side of the Gaspe peninsula and if we are unable to get gasoline these hotel owners will fail. There is nothing else to support them but the tourist trade. The tourist industry is very important to Canada. This bill is to provide for the defence and welfare of Canada and also for the payment of indemnity to those who suffer war damages. If the government are not willing to ease the gas restrictions for a month or two to permit tourists to come into this country, perhaps they would be willing to pay an indemnity to these hotel owners. I think something should be done, particularly in view of the fact that provision has been made for other classes of industry in Canada in the matter of war damage.

There are great possibilities on the Gaspe coast for assistance to our war effort. I have mentioned the metals that are to be found there. There are three mining companies which own properties on the Gaspe peninsula. Some thirty-five or forty miles from Ste. Anne des Monts the Federal Zinc Mining company have properties from which they extract hundreds of tons of zinc and lead. These metals are lying there because of lack of transportation facilities. We are facing a shortage of metals and I think the government should do something to exploit these mines and permit the movement of these metals. The mountains of the Gaspe peninsula are covered with all types of hardwoods which could be used to build ships. There is a shortage of shipping in Canada and there are a number of fine inlets along the coast where skilled labour is available for the construction of wooden ships from one hundred tons to five hundred tons in size. I think the government should consider this proposition.

Another matter which should be considered in connection with this bill is the lack of transportation facilities to take the fish produced in the Magdalen islands to the West Indies and south American ports. The main production is smoked herring and salt mackerel. These fish are not suitable for home consumption and if they are to be sold it is necessary that they be transported to these foreign ports. The fish exporters in Halifax say that they will not be able to move this fish this fall because of a shortage of vessels. The Minister of Fisheries told me a few days ago that it was quite certain that ships could not be obtained for the transporting of this fish. If these fishermen are unable to sell their product they will have nothing to take them through the winter. This bill provides for the payment of indemnities to those suffering from war damages, and I think the government should take immediate steps to either provide ships or to pay indemnities to these producers.

A word or two as to the defence of Canada. If Canada is threatened, if there is a chance of our being conquered, we should take every possible step to save ourselves from attack. Much has been said about the defence of the Atlantic coast. Halifax is situated close to that entrance formed by Newfoundland on the one side and Cape Breton island on the other. There is no doubt that Halifax is in the attack zone, but the Gaspe coast and the St. Lawrence river provide the real entrance to Canada and they are inside this barrier. Engineers have said that from the defence point of view Gaspe harbour is most important to Canada. There are some defence works there but they are not adequate to protect the Gaspe coast and the St. Lawrence. Hon. members will recall that only a short time ago two ships were sunk in the St. Lawrence. One was sunk

almost 250 miles above Gaspe, which is nearly half way between Gaspe cape and Montreal. The other one was a little further down the river. These torpedoings show the dangers of attack.

At Mont Joli, some ten miles below Rimouski, there is an air training school, but there are almost 250 miles of coast which are absolutely unprotected. The north shore of the St. Lawrence has no defence of any kind; there are no guns and there are no soldiers. Along that route to Quebec, Montreal and the upper lakes there is no defence at all until you get to Quebec. Some of the money provided by this bill could be used to good advantage in providing some defence works down there.

Perhaps if more ships were sunk it would be realized that the facilities of Gaspe should be properly organized. We should be able to take care of these ships that are damaged. There is no dry dock in that part of the country and there are only a few guns and defence works. That is not enough to prevent the Germans from attacking. I take advantage of this opportunity to offer my thanks to the government and congratulate them upon what has been done so far, but it is not sufficient. We want and we need more defence in case of attack. If there is no danger at all of attack, and no danger of losing our country, we do not need any defence; but if there is danger we need the proper defence works, and it is time to provide them.

I would ask the Minister of National Defence or any other of the ministers concerned if they would assure the committee that something will be done to develop the oil resources of Gaspe and to take advantage of our ability to build ships. The material is right there. All it needs is proper organization and communications to develop these resources. We have proven mines there of lead and zinc. What is the government going to do about these things? What is the government going to do about the tourist traffic, which is hampered by gas rationing? What is the government going to do for better defence of the St. Lawrence?

The ACTING CHAIRMAN (Mr. Bradette): I would be the last person to dictate the lines of discussion and how members should speak. I know that some latitude may be allowed on this clause, but the Minister of Labour has two of his officials here with him, and I believe that if hon. members would concentrate on a discussion of labour matters it would meet with the general approval of the committee.

Mr. LECLERC: I wish to say a few words about the wages paid in war industry in the county of Shefford. I am afraid that the war plants in my constituency are paying the smallest wages of any war plants in Canada. I am sure that the wages paid there are much lower than the wages paid, for example, at Valleyfield, Bouchard and Cherrier. It will be remembered that an explosion occurred at one of these war plants in my constituency, resulting in the deaths of six or eight persons.

Some time ago I asked a question in the house as to the scale of wages paid but, as often happens, I received a negative answer. It was to the effect that they were paying the average rate of wages paid in the locality. I maintain that there should be a uniform scale of wages in all war plants, throughout the same province at least. I would not expect the government to pay as high wages in war plants as they are paying in the shipbuilding industry in Vancouver, where the rate I understand is around $1 an hour. But certainly female labour should be remunerated in munitions plants at a higher rate than 25 to 27 cents an hour, and men at a higher rate than 35 cents an hour.

A lot of small munitions plants are to be started in Granby, and I hope that before they get started the government will see that the employees are paid a fair wage. I am asking the government to see that these employees get paid as much as employees of other war plants in the province of Quebec. I am sorry to say that in my own community, the city of Granby, the wages are not as high as they should be. I am told—I do not know whether it is correct or not—that some men who hold high positions in the town of Granby used their influence to prevent a new industry from paying higher wages. I do know that we have some sweat shops where female labour is paid 15 cents an hour, and while this is not perhaps a federal government matter I want to impress upon the government, which has control of munitions plants, the importance of paying a fair and reasonable wage. The Minister of Labour may say: We do not want to interfere with the labour laws of the province. But I can assure him and this government that if you pay labour 10 cents an hour more than the provincial scale of wages there will be no reproaches from anybody.

Mr. MITCHELL: I thank the hon. member for bringing this matter to my attention, and I want to say at once that I agree with him. As no doubt he is aware, we have a minimum wage order for all government work. Order in council P.C. 7679 lays down a minimum

wage of 25 cents an hour for women, and 35 for men exclusive of cost-of-living bonus. I am sure that my hon. friend appreciates the fact that we have no jurisdiction at the moment over the wages paid in the province of Quebec, or in any other province for that matter, in what might be termed private employment or non-war industry, and no doubt some of the employees to whom my hon. friend refers are engaged in non-war industry. I have received complaints, as I am sure the former minister did, that the wage rates that have been established through the federal Department of Labour have to some extent interfered with the wage structure in non-war industry. I might add that conversations are going on between the provinces and the dominion with respect to this whole matter of minimum wages.

Mr. McCANN: What does the minister consider a war industry and what a non-war industry? Is a firm which is carrying on its private industrial operations and at the same time filling war orders as part of its operations classed as a war industry or as a non-war industry? I am afraid that some industrial organizations are taking advantage of the fact that they are carrying on their peace-time operations to designate themselves as a non-war industry even though they are filling war orders.

Mr. MITCHELL: Any war contract let by the dominion government goes to a war industry. With respect to companies doing both war work and non-war work, that is a subject of discussion at the moment between the provinces and the dominion.

Mr. CHURCH: Mr. Chairman, I should like to deal with a matter which has not been taken up yet, but is under this bill, and it is one of the most important matters of all, being related to external affairs. Never since the war started have we had an adequate opportunity to discuss this department or its functions or even Canada's foreign policy—because Canada has never yet had a foreign policy. I should like to say a few words on external affairs in connection with this item on page 2921 of *Hansard* showing a total of $456,000 for external affairs, divided as follows: Administration and passport office, $265,000; representation abroad, $100,000—our representatives in Japan, Holland, Belgium, France and one or two other places have been washed out; consular services, $5,500; evacuation of staff from abroad, $5,000; Canada-United States permanent joint board on defence—very largely board and very little defence—$22,500; Canadian section of joint economic committee, $53,000—a total, Mr. Chairman, under one department of civil estimates of $456,000, and we have no adequate details as to how it is made up or anything about it.

I can tell you this: in time of war these separate Canadian legations and representations abroad have caused Britain's influence to be divided. They are bad enough during peace, let alone in war, and some of them have had a purely mischievous effect so far as defence and foreign affairs are concerned.

Canada has never yet had a foreign policy. No one can tell what it is—it is negative. At the last imperial conference, in 1937, when we knew of the danger to the empire, and Australia specifically pointed out the grave conditions in the Pacific, Canada took the position, "We have no commitments; parliament will decide," and things remained that way until war was declared. We would not even take part in or aid an empire shipbuilding policy at that 1937 conference.

I wish again to raise this matter of an empire war cabinet. It is the most important thing that we can consider at the present time. The coordination of the efforts of the dominions is the most important duty of the hour. The peril is at the gate, and it is possible that three of the dominions, namely Australia, New Zealand, and south Africa, will be invaded. One of the northern islands of Australia has already been invaded, and New Zealand is in grave danger. Both of these fine dominions have had to appeal to the United States. The supremacy of the Pacific has been lost, and Japan is moving around the Pacific like a circus through 15,000 miles of islands, menacing the coasts of Madagascar, the islands of the Indian ocean and the very eastern shores of south Africa, in the Indian ocean, where the prime minister of the union, General Smuts, has appealed for support to the very native races from whom his people took the franchise in 1854.

As I have said, Australia pointed out over a year ago the dangers which threatened her in the far east, and asked the British government to reestablish the empire war cabinet. During the last war this cabinet functioned. It consisted of the prime ministers of the five dominions, New Zealand, Australia, South Africa, Canada and Newfoundland. Our Prime Minister remarked one day recently in this chamber that he could not attend such a conference or support such a war cabinet, and that it was not necessary.

During the last war a war cabinet did wonderful work to win the war. The principle was established that the Prime Minister or his dominion representative could be there. For example, the late General Botha, when

prime minister of South Africa, nominated as his representative Lieutenant-General Smuts, now Field Marshal Smuts, the present premier of the union. The empire war cabinet did a great deal of good, increased dominion aid wonderfully and to its absence must be attributed many of the unhappy conditions which have developed in the far east in the last two years. Right Hon. Robert Menzies, the able statesman who, when prime minister of Australia, addressed this house last fall, and the present prime minister, Mr. Curtin, have referred to the absence of coordination, especially in the domain of joint policy in the far east, and the great need of an empire war cabinet. Recently they have complained that decisions have been made adverse to their interests without consultation with the Australasian or other dominions. Unless there is a war cabinet—which Canada, for some reason has opposed—there can be no joint consultation or cooperation or united action by the dominions in the present war. It is too bad that Canada has taken this stand, because our country is dependent on the mother country in this war as she was in the last for all our protection from invasion. It is a grave responsibility to refuse a war cabinet.

In view of the loss of the command of the sea in the Pacific, the disaster at Pearl Harbour, and the fall of Singapore, Hong Kong, Malaya and Burma and other strongholds, the need of an imperial war cabinet was never more apparent than now. It is a tragedy which will soon be costly to Canada. Since the Victorian era the imperial conference system has been a useful method of communication and consultation between the dominions and the mother country. The first colonial conference took place in 1887 and was continued every five years. Conferences have been held periodically, as in 1907, 1917, 1937 and other times. There were memorable meetings—at the time of the diamond jubilee of Queen Victoria, in 1897, following the accession of King Edward VII, in the closing years of the war, and at the time of the coronation of our present king in 1937. Although these assemblies have no legislative powers, they are valuable in peace time as a means of expression of the views of the dominions concerning imperial policies. They are even more necessary in time of war, because of the vastness of our empire and its manifold relations with foreign states. I have urged this matter repeatedly upon the government since the war started. It is discouraging to see this separatist stand taken and the plea of Australia ignored and our sister dominions, Australia and New Zealand have been, as a result, compelled to appeal for help to the United States. The help which our United States friends have given has been magnificent. True it is that the United States has been able as yet to provide only about 50 per cent of her expected allotment for 1942 to Russia and Great Britain or to Australia, but the will is there, and before six months is over this provision will have been greatly increased.

I raised this subject of the relationship of the dominions to Great Britain in connection with empire day, on the 22nd of last month. It was surprising to me that on a day like that, remembering all that we owe to the mother country in this war because she bore the whole brunt of it for two years alone, that this parliament did not see fit to say anything about it as I suggested on empire day or Victoria day, and to pay her tribute and thanks. Hon. Walter Nash, the very able minister of New Zealand, who addressed us recently, paid a great tribute to the old country. He said:

> That little spot called Britain, when we understand what she has done, though some of what she has done have been mistakes, we must see that she has on the credit side an amazing balance. We are out to help her win because we want her to win. Unless the old country wins all that we cherish will disappear.

The non-cooperative attitude of Canada has been criticized elsewhere than in this country. That well known publisher and empire builder, the very able Sir Keith Murdoch, who owns a number of newspapers in Australia, including the Melbourne *Herald*, referring to the situation in the far east, remarked that not only our difficulties there and the trouble in the far east but also the fact that we have a war at all, must be largely attributed to the fact that the empire not only threw away her defences on land, sea and in the air, but threw away her friends as well. In a letter, urging a war cabinet, to the London *Times* after the disaster at Pearl Harbour, he stated:

> . . . The entry of stout dominion minds into the war council, and of oversea service men and business men into the army, navy, air and supply councils has become of great importance for the two reasons that the dominions will not stand grave decisions going against them unless they are in those decisions, and that something must be done to improve the war management. . . .

He went on to criticize the weaknesses of our fighting services and emphasized lack of coordination as largely responsible for the disasters which have befallen us in the far east.

Mr. Menzies, the former prime minister of Australia who addressed this house, Mr. Chairman, from where you are sitting, stated that

he had known for a long time of the inadequacy of the empire's defences in the Pacific, and that they revealed a very dangerous condition of weakness. These views are practically identical with those expressed by Prime Minister Fraser of New Zealand and by Mr. Curtin, successor to Mr. Menzies as Prime Minister of Australia, and it is charged in England and Australia that Canada knew all about it also and did nothing about it, and in none of these dominions were the people aware of the danger, or the facts disclosed.

The empire is worth fighting for in this emergency, because if it passes, freedom and liberty and civilization and religion will vanish from the earth. But for the glorious stand of the mother country after Dunkirk we on this continent, including the United States, would long ago have had to seek peace with the axis powers. It was a very grave mistake for our country, when asked by Mr. Churchill what our views were, to give the refusal we did. The two decades between 1918 and 1939 were the most disastrous years in the whole history of the world. Canada did not show up any too well in the discussion at the imperial conference in 1937 although Canada was one of the world's chief traders. We had no foreign policy; this external affairs vote showed that. The two decades I named above were full of mistakes and errors since the last war, and now this war threatens the freedom and liberty and religion of the world, and if we do not bestir ourselves it means the end also of civilization. It is too bad that we keep up in the clouds, dreaming yet about isolation and status. The upheaval brought about by this war was not occasioned by anything that happened before 1918. It arose out of what happened since, largely out of the desire for greater prosperity, and reliance on peace pacts and agreements, Kellogg pacts, Locarno, the status quo, the Monroe doctrine, and collective security—which is only security when we have an armed Britain. That is one of the reasons for this disastrous condition. We have forgotten to listen to the lessons of experience and history, namely, in peace to prepare for what may come after. Without a war cabinet we see the result in Hong Kong and Singapore. Most important matters have been settled and given against us, and we have not been consulted or had a word to say about it.

To-day is the eighty-second day of this session, and we have not had one word since we started on estimates on foreign affairs outside of the Prime Minister's statement last year about two or three new embassies. This country was the chief drifter from the British empire before the war started. It is bad enough in peace time to have this drifting, but in war time it is fatal. Three of the dominions are on the border of disaster. If we lose, they may not belong to the empire much longer; they have had to appeal to the United States for help. While our neighbours to the south are a great people, they were not a military power at the start, and for a couple of years they cannot do a great deal to help in the present struggle because it will take two years to be fully armed. With the enemy at the front door and the back door and the side door and every other door, we have to get on with the total war for which the people voted on April 27.

Mr. SLAGHT: Before this important bill passes I desire to refer to a matter which I regard as of supreme importance. I have not in the last six weeks troubled the house by occupying any time in the discussion of this measure, and I make no apology for bringing to the attention of the committee and the government the matter with which I shall now deal very briefly.

I quote from section 2 of the bill, paragraphs (a) and (d):

> (a) the security, defence, peace, order and welfare of Canada;
>
> (d) The carying out of any measure deemed necessary or advisable by the governor in council in consequence of the existence of a state of war.

In this connection I suggest to the government that it is of immediate and major importance that at least three strategic points in Canada should be protected with barrage balloons. I am not making this appeal without having submitted my views to the authorities, who I thought should first have them brought to their attention; and among those authorities is our division of the joint defence board. I found on their part no sympathy concerning the matters that I brought forward. Notwithstanding that, and notwithstanding the lapse of some time, I wish it to be understood that I make these suggestions in an absolutely constructive and friendly spirit and not as a critic.

I had the privilege, with five associates in this house, of visiting the mother country a few short months ago. Portsmouth, Liverpool, Glasgow, Hull, Newcastle—every important port in the British empire was provided with thorough and efficient barrage balloon protection. Men in the air force over there told me that they feared nothing so much in an attack upon enemy objectives across the channel as to be obliged to attempt to dive-bomb any objective which was protected by barrage balloons. They extend to between

3,000 and 4,000 feet in height, entirely surrounding a port or city or war plant, and any enemy dive-bomber seeking to come within that area and get within 4,000 feet of his objective might just as well sign on with the suicide squad before attempting it. They are the greatest means of protection to-day.

Halifax has no barrage balloon protection. Esquimalt, the only dry dock under the control of the British empire on the Pacific ocean, has no barrage balloon protection. Patricia Bay, the great airport on the Pacific coast, has no barrage balloon protection. Halifax is a tinder town in this respect; it has a great many inflammable wooden buildings, which are so susceptible to incendiary bombs that the very thought of it almost makes one shudder. Ammunition dumps are located there, as well as docks for the repair of vessels. We all know it is the centre for the convoys which are made up to go to the motherland. The destruction of Liverpool to-morrow morning would not be as great a blow at the British empire, to say nothing of Canada, as any enemy action would be which would make a rubble heap of Halifax. There is no port, no strategic war industry on the whole north American continent the destruction of which would mean such a terrific loss to the British empire and the united nations as the destruction of Halifax overnight would mean to our war effort.

Some one may say: "Don't be an alarmist; it can't happen here." That phrase is long outmoded. If an enemy aeroplane carrier crept up under favourable weather conditions, fog and so forth, within 100 miles of Halifax, and released thirty or forty bombers which could drop incendiary and explosive bombs on Halifax, I hate to think what the result might be.

Now that we are appropriating $2,000,000,000 for national defence and security I make this suggestion in all seriousness to the government, to the authorities, to the joint defence board for north America. I feel sure that the United States members of that board, if asked what one spot in north America we could least spare, would be bound to say without a dissenting voice, the city of Halifax. I am making no appeal for the protection of the residents of that city. They are a game people. They are willing to take all the chances that war imposes upon them. But even leaving that aside, from the empire standpoint; from the standpoint of the war effort; from every standpoint from which a reasonable man who will examine the subject as I have examined it can reach a conclusion, I do suggest that we must at once provide barrage balloon protection for Halifax, Esquimalt and Patricia Bay.

Mr. HANSON (York-Sunbury): I am interested in the subject matter brought up by the hon. member for Parry Sound (Mr. Slaght), and I have wondered why the suggestion was not made before. One reason why I have not made it previously was this. I too had the honour of visiting Britain last year, when I had a long discussion with the commander of the Dover area, as well as with officers at Portsmouth, with respect to this subject of barrage balloons. During the course of a tour down the Thames, covering a good many miles, we saw a long line of barrage balloons protecting that area. I questioned the officers with respect to both the expediency and the desirability of having this system of barrage balloons over strategic points. On balance they advocated their retention, but I was told some very curious stories. One officer told me that when the balloons were first installed over Dover the Germans were greatly intrigued. They would come over each morning and shoot down the balloons just about as soon as they were raised; when they were raised again they would come back and shoot them down again, and this happened on a number of occasions. Of course the balloons are very vulnerable and can be punctured by a bullet. After that the Germans left them alone, but the British are still of the opinion that these balloons form a valuable auxiliary to the defence of a given position. That is so for the very reason that has been explained to this committee by the hon. member for Parry Sound, namely, that they are a deterrent to dive bombing, and prevent those operating by air against a given point from coming too close. That is why they are being retained. I assume that our general staff, our defence officials, studied this position long ago, and it does seem to me they might state their opinion with respect to a port like Halifax, which I suppose is the most vulnerable of all.

Just in passing, I have often wondered why there should be so much concentration at Halifax. There are a great many important works for which there is not very much defence. I do not think the hon. member need apologize or give any excuse for raising this question. It is a matter of importance in the defence of some of the vulnerable places in Canada, and I commend his remarks to the Minister of National Defence.

Mr. BLACKMORE: Much as I should like to see the discussion of labour problems proceed, and much as I am interested in the question raised by the hon. member for Parry Sound, yet I do think that before our discussion goes too far afield, following the discussion we had on the night of June 5, I

should direct the attention of the committee once more to the all-important question of inflation, and how inflation might reasonably be met and guarded against. There is no more important question facing the peoples of the British empire and the United States to-day than the question of inflation, and I venture to say there is no question which is less understood. In my brief and limited experience there is no question less understood than the all-important question of money, yet there is nothing which has come closer to causing war, both international and civil, than that question. So if hon. members of the committee will bear with me, I will revert to the matter we were discussing on Friday afternoon.

The Minister of Finance was kind enough to make some remarks which I thought indicated a great deal of progressiveness on his part. I should like to read to the committee several of his statements, and I should like the minister to elaborate on those statements a little more fully so that I may see just how nearly I can come to agreeing with him. I turn first to page 3110 of *Hansard,* where I find this statement:

> Mr. Ilsley: If the Social Credit party is not against borrowing and is not against taxing and is not against private ownership, then the difference between the Social Credit party and the government comes down to this, just a difference in judgment as to how much money should be issued from time to time.

I was startled when the minister made that remark, because I had been led to suspect that he was much further removed from us than his words indicated. Now, before beginning to develop my subject, may I just comment briefly on that passage. We were discussing the question of war financing; and let me repeat that social credit does believe that it is necessary to tax during war. Ordinarily the attitude of social credit toward taxation is this, that for the major portion of the population it is not good to tax. Generally there is a shortage of purchasing power which renders the people unable to buy the goods which industry is able to produce. Consequently any measure which will decrease that purchasing power tends to aggravate the evil from which the community in modern times suffers, namely inadequate buying power. In time of war, however, we realize that in order to withdraw some of the surplus purchasing power which might embarrass the government by causing too great a buying pressure, it is necessary to use taxation discreetly.

With respect to borrowing, our general attitude is this, that it is inadvisable for a government to borrow. We believe that the bane of existence of the modern state is debt. We believe that debt should be guarded against

by every means at the disposal of an administration. Yet again we grant that in time of war a measure of borrowing is necessary.

Now with respect to the private ownership of industry, it is an essential characteristic of the social credit concept, as opposed to the socialistic concept, that industry will be much better taken care of, it will be much more efficient, the people engaged in industry will be much happier, and the state will be much more democratic if individuals own the industries. We therefore favour, to the fullest possible extent, individual ownership. So that thus far the minister's statement stands just as he made it, and it meets with my approval.

I should like some clarification of the minister's stand with respect to state-created money, and its use. The social credit stand, as I said on that earlier occasion, is that money which it is possible for the state to have created within it, ought to belong to the people of the state, and should be issued by the government as a clear asset to the government, free of debt. It should be administered by the government in the interests of all the people of the state. The other night the minister entirely agreed with that proposition. He and I may not agree as to just what the best disposition of the money would be, but it is good to know that our hearts are in the same place so far as the desire to use money for the welfare of the people is concerned.

The matter of state-created money is of great importance. One must consider how much can be used, and whether the state issue of money will cause inflation. The observations last night of the Minister of Labour (Mr. Mitchell), addressed to hon. members of the Cooperative Commonwealth Federation, in which he referred to Germany, brought to my attention more vividly the importance of discussing this whole question of inflation. There exists in the world some of the most grotesque distortions imaginable with respect to the whole German story. Men hold opinions so far from the truth as completely to astonish anyone who knows the story of the German inflation in detail. There are similar distortions respecting the assignats of France. The result is that most people are terrified at the mere mention of Germany or of assignats. As a matter of fact there is much for our generation to learn from both those experiments, and what is to be learned from them is entirely in favour of and not against the social credit proposals, strange as that may seem.

Mr. MITCHELL: The Germans got Hitler out of their experiment.

Mr. BLACKMORE: As I have said, I should be pleased to take on the Minister of Labour, when he is ready, in a discussion respecting Germany. However it would be better to discuss Germany alone, and not mix it up with this matter, if the minister does not mind.

May I read one more quotation from the same page? The Minister of Finance said:

> The reason why the hon. gentleman takes that $26,000,000 is that at that time there was a gold standard, which was departed from to the extent that that $26,000,000 was created. To-day there is no gold standard, and to the extent that we b rrow from the Bank of Canada, as we do to a limited extent, are we not doing exactly what that government did when it issued the $26,000,000?

May I congratulate the minister, after thinking it over, on that statement. It was a brave and progressive thing to say. It acknowledged the truth—truth upon which we can build a good deal of constructive thought.

In the light of that remark I wish to read from *Hansard* of March 20, 1941, page 1724 the answer given by the minister to a question asked by the hon. member for Acadia. I should like the minister to clarify the situation, bearing in mind what is contained in the following question and answer:

> Mr. Quelch: Up to the present time the government have not used the Bank of Canada for the purpose of obtaining money to meet current expenditures, apart from refunding and the purchase of gold? That is really what I wish to know.
>
> Mr. Ilsley: No.

Mr. ILSLEY: That was last year some time?

Mr. BLACKMORE: Yes. Has the minister now departed from the policy which he indicated he had followed up to that time? That is, has he issued from the Bank of Canada money to be used for purposes other than the purchase of gold or the refunding of debt? In other words has money actually been issued from the Bank of Canada and used for the defraying of government expenses, as were the $26,000,000 to which we have referred? Would the minister care to tell us that?

Mr. ILSLEY: I shall have to look into that. It is difficult to answer a question in this fashion. The hon. member goes away and digs out some answers I made a year ago. Then he comes back and asks if there has been any change in that time. I suggest that he make his speech. I may make an answer which he will produce the next day if I am not careful.

Mr. BLACKMORE: I realize a question like that is a difficult one for the minister to deal with, because of the tremendous complexity and immensity of the work he has in his mind. But we are vitally concerned as to whether or not the government does issue money from the Bank of Canada and does use that money for ordinary governmental purposes. For example, would the minister consider it sound to issue money from the Bank of Canada to the extent of, say $100,000,000, to buy gold from the refineries, so that the money so issued would go out directly into circulation in Canada? It is obvious that a distinct difference in policy would be involved. In one case the money never leaves the Bank of Canada; it is merely transferred from one drawer or one room to another. In the other case the money would go right out into circulation, as did the $26,000,000 at the time of the last war. That would establish an entirely different policy. I am not going to ask the minister to make a statement on it now, because he will need to look into the matter. But in order that there may be the similarity between the social credit concept and the government concept which the minister's words and my words would tend to indicate, it is necessary that the government be ready to issue money from the Bank of Canada, and buy gold right out in the country, wherever it can be obtained, direct from the mine. There would follow this conclusion, that if the government could issue notes of the Bank of Canada and buy gold in Canada from the refineries, it ought to be equally sound for the government to issue such money and buy wheat. The only difference would be that the gold, in one case, could be put into the vaults of the government or of the bank, and held as a sort of guarantee for the money issued. In the other case there would be wheat in possession of the government.

As the minister recognizes, this is a most important matter, because if the Bank of Canada could issue money to buy wheat, and the government could obtain that money without debt and without taxing the people, then there would be a way open for a possible solution of many problems troubling us to-day. I have raised this question so that everyone may see the difference between the concept of the social crediters, if there is a difference, and the concept of the government.

Another passage from the minister's remarks, to be found on page 3111 of *Hansard,* is as follows:

> We are not going into debt when we borrow from the Bank of Canada because we are the Bank of Canada.

With that I entirely agree.

Therefore, the difference between the hon. gentleman and myself comes down to this, does it not, merely a matter of judgment as to how far we should go in borrowing from the Bank of Canada?

Mr. Blackmore: I think so.

I had to be careful about what words I used, because I lacked the knowledge which the minister could give me as a result of the questions I have asked to-day. The question as to how far we should go being merely a matter of judgment is a sound question; I should like to comment briefly on it before going on to other aspects of the whole question.

As I said the other day, the idea has got abroad—by the way, I have a statement from a bank manager contained in a bank letter this year which conveys the idea that if the government were to create a dollar bill, that dollar bill would be inflation. That is an utter fallacy; it is one of the most dangerous concepts that could be foisted upon mankind at the present stage of our affairs. The issue of new money would not be inflation. Inflation is the rise of prices only. Until the new money, even if it were hundreds of millions, began to cause a rise in prices, it would not be inflation. If the members of this house could agree to that truth, a great amount of the anxiety which now prevails in this country from shore to shore, and a great many of the anxieties of the government, would be allayed. I laid down this principle the other day and I wish to lay it down to-day: The amount of money which can be issued by the government and used depends upon the goods-and-services-producing-and-consuming-power of the country.

May I revert briefly to the German situation. The reason why Germany came into financial disaster was largely this: that Germany as a country was relatively poor and small, while her population was relatively large. The goods-and-services-producing-and-consuming-power of Germany did not justify the creation of as much money as was created in Germany. I shall discuss this at greater length when the Minister of Labour and I have our little friendly discussion.

It is not entirely a matter of judgment; at least in forming judgment one is not entirely without realities to go by. One knows that the amount of money which could be issued in Canada depends, for example, on the amount of milk that Canada can produce and consume, on the amount of butter, the amount of lumber, the amount of sugar, the amount of honey, the amount of vegetables and fruit, the amount of coal and gasoline and all other things which Canada can produce and consume. Production and consumption are vitally bound up in the whole question of inflation. The minister indicated that he understood this in a speech which he made—a fine speech, upon which I would commend him—on March 17, 1942, to the Ontario federation of agriculture. He indicated quite clearly in that speech that he understood that agriculture and the productive power of agriculture were vital to the monetary situation in Canada; that is, that agriculture had much to do with whether or not Canada was in danger of inflation. That is what I gathered from the minister's speech. May I quote again from page 3112 of *Hansard:*

Mr. Ilsley: We believe it would be quite unsafe to go any further than we have gone, in view of the danger of inflation. We do not believe we could control inflation by our price ceiling policy if we went much further in the issue of money, because it would burst the price ceiling. If the price ceiling, by some miracle, should hold, then it would mean the indefinite continuance of the price ceiling after the war, because there would be such a volume of bank credit or currency or both that the removal of the price ceiling would be impossible because prices would soar so desperately.

Mr. Hanson (York-Sunbury): The whole theory means inflation; it cannot mean anything else.

By which remark the leader of the opposition indicated that he has a lot more to learn about money. The minister's remarks were quite sound. I should like to draw something to the minister's attention and to the attention of those who are worrying about this problem. After the war there will be a tremendous amount of productive capacity available, productive capacity which is now devoted to the fabrication of war goods. This capacity will be without further employment and will of necessity be diverted immediately or as soon as possible to the production of goods for consumption within the country. If the minister does not have at that time a substantial accumulation of purchasing power in the hands of the people throughout Canada, there will be a serious deficiency of buying power. The result will be that the new production which would be the result of the transfer of the war producing machinery to the production of peace-time goods will not be disposed of and there will be precipitated a most appalling condition of unemployment.

Such a condition would be deflation. I know the minister realizes that there are two serious problems facing any government. The one is to prevent inflation, and the other, equally important, is to prevent deflation. The government must guard against both, and also be prepared to take such measures as are neces-

sary to ensure the stability of the employment situation after the war. This question is troubling the rank and file of Canadians far more than the danger of inflation. While I recognize that there is a danger of inflation, I believe it could be controlled to a greater extent than it is at the present time, although the government and the minister are doing a commendable work in their efforts to control it.

I wish the leader of the opposition were in the chamber, because I should like to ask him right to his face what he thinks he would do with all the tremendous amount of post-war production if he had an impoverished population. For example, I should like to ask him how he imagines the Canadian people would be able to consume the butter and cheese, particularly the cheese which we are now manufacturing and shipping to Great Britain, and the beef and the pork, unless they had savings. What will happen to the men who are engaged in the production of pork—just as a concrete everyday illustration—if the British market is in some measure closed to us or if we no longer have the tremendous number of sinkings on the seas? What would happen to the men whose money is now or will be invested in pork production? All these are matters of vital concern to the Canadian people, but they are matters which the leader of the opposition has evidently been too busy to consider.

I wish to read one more statement made by the minister. He said, at page 3112 of *Hansard:*

> The hon. gentleman denies that his policy means inflation.

I certainly do; for I say that the social credit proposals are the only means by which inflation can be fully controlled. He goes on:

> We argue and believe that it does, if it goes much beyond what we are doing anyway, or probably if it goes at all beyond what we are doing anyway. That is what we believe. We get the best advice we can; we exercise the best judgment we can, and our judgment tells us that we want to withdraw purchasing power from the consumers of this country. We want desperately to do that, because of the terrific upward pressure on the price level if we do not.

I believe I have been quite fair to the minister. I have tried to select statements he made to show his point of view so that there can be no misunderstanding. I sympathize with the minister in this statement of his. I urge upon the minister that the social credit proposals could be of great assistance to him, as I propose to demonstrate in the course of my remarks.

The first all-important question is, what is inflation? May I give a definition which I believe is absolutely sound? Inflation is a rise in price which results from having more money in circulation that there are goods in the market to buy with the money; putting it in another way one might say that inflation is a rise of price resulting from a scarcity of goods. In other words, the stress should be placed not only upon money but upon goods. I made the remark to the Minister of Labour last night that the difficulty that Germany faced was that she lacked goods, and the more you examine the story of Germany the more you will realize that that is true. It was fundamentally the shortage of goods in Germany that caused her inflation. We cannot bear in upon our minds too emphatically this fact, that inflation can be controlled by having more goods, more production. That was the great thought which the minister gave in his speech of March 17 to which I have referred.

As an illustration of how state money or any kind of money can be used to prevent inflation, to prevent a rise in price, to increase production, may I elaborate on what the minister is already doing? He is subsidizing prices. Some members of the opposition have been inclined to criticize the minister for spending the amount of money he is spending in subsidizing prices. But in this the minister is wholly sound. He can spend many times the amount of money he is spending on subsidizing and still be doing a work of very great value for the people of Canada. He does not need to be afraid of subsidies, or afraid of his critics; when he said the other day that he would fight an election on that issue he was certainly taking very sound ground. It is possible to spend a large amount of money in a way which according to orthodox principles would seem unsound and yet obtain a result which is of such tremendous value to the state as a whole that the money must appear very well spent.

To illustrate; Great Britain in 1941, I found when I was overseas and talking to a prominent member of the British house, spent 100 million pounds in keeping down the cost of goods to the people. Great Britain in that same year spent 30 million pounds, I was told, in subsidizing the prices of the primary producers. As an illustration, I gathered this from an article I was reading not long ago. The British government are paying the egg producer 75 cents a dozen for eggs and then selling those eggs to the consumer for 50 cents a dozen, which means that on every dozen of eggs the British government is paying out 25 cents; and still that is good business, and for two reasons. In the first place it is a stimulation of the production of a vital necessity, and in the next place it is

making it possible for the consumer to buy without causing inflation. Some people would say that that kind of procedure, paying 75 cents a dozen for eggs and then selling them for 50 cents, is bound to lead to inflation. Not at all; for on the consumer market, where you judge the impact of inflation, prices have been brought down. If the government had not given 75 cents a dozen for eggs, egg production would have greatly fallen off, and prices would have risen to perhaps $1 a dozen. That would mean inflation.

Mr. GILLIS: Why not call it profiteering? That is what it is.

Mr. BLACKMORE: It is not profiteering at all. I think I shall have to stop for just a minute to deal with the hon. member's question. In western Canada to-day the farmers are paying for the 147 things they buy 152 per cent of what they were paying for those same articles in 1914. Now if their costs increase by 52·2 per cent, how in the world can they continue to produce if their prices are not increased? And yet the price of their commodity on the market is lower to-day than it was in 1914. How are you going to bridge that gap? When you get down to reasoning it out, you will be so close to the social credit concept of adjusting the price to the consumer and subsidizing the price to the producer that you will not be able to tell the difference.

Mr. GILLIS: And the taxpayer would have to pay for it.

Mr. BLACKMORE: The taxpayer would not be paying for it if the money were being created. That is the important principle of state-created money, that prices can be adjusted without taxation or borrowing.

An hon. MEMBER: I cannot understand that.

Mr. BLACKMORE: There will be those who cannot understand it, but it can be understood. It is the truth and it is understood by the best thinkers to-day all over the world.

Mr. TUSTIN: How would you produce state money?

Mr. BLACKMORE: As I said the other night, you created it during the last war, when the government printed $26,000,000 of new money. They just printed it; they could have created it as credit. The principle in both cases is sound. The printing of that $26,000,000 certainly did not cause inflation. If there was an inflationary tendency it would have been overcome by the application of a price ceiling such as the minister has applied.

[Mr. Blackmore.]

Mr. TUSTIN: Yes, but $26,000,000, comparatively speaking, would not be anything at all.

Mr. BLACKMORE: The principle is established. I was asked where the money would come from, and I have said where it would come from.

Mr. MacNICOL: That is a pretty easy way to get it, is it not?

Mr. BLACKMORE: It is just like anything else; you have to know how and to what extent to do it, and exercise the power with wisdom.

Mr. GRAYDON: Who knows?

Mr. BLACKMORE: That must be discovered. It depends on the goods-and-services-producing-and-consuming-power of the country. Obviously, if Canada were a desert you could not have any money without having inflation. And the more completely Canada becomes removed from a desert condition the more money she can have. That is obvious.

I wish to go on and finish what I have to say, and after that I shall be delighted to answer questions. I am pleased with the interruption. I have been through these questions a good many times.

Mr. MacNICOL: But we never know any more.

Mr. BLACKMORE: I have known students in classes to go through the subject a dozen times, and yet not know the grammar or the advanced algebra; but there was nothing wrong with the grammar or the advanced algebra.

Mr. GRAYDON: Perhaps, with the teacher.

Mr. BLACKMORE: Or with the teacher either. I have illustrated the need for subsidies and discounts. I just want to point out to the committee something which is contained in the May 20 issue of the Searle index, to show the conditions now existing in western Canada. I quote:

> The present price of wheat is now 43 per cent below the 1913-14 parity price and when the new 90 cent price is established for this new crop it will be 31 per cent below parity. The price of hogs is now 14 per cent below parity and steers 10 per cent below the 1913-14 parity, with lambs 7 per cent above the 1913-14 parity. But the average hourly rates of wages received by industrial labour working at munitions and other war industries is 44 per cent above the 1913-14 parity.

I submit, Mr. Chairman, that in that little statement is pictured a set of economic conditions which is threatening and which will ruin this country unless measures are

adopted to offset it. It challenges every thoughtful man in this country. It is a situation which must be overcome. I turn now to the back page of the same document and read what is stated regarding prices:

The Searle Index of the cost of things farmers buy (147 items) now stands at 152·4 (1913-14 equals 100).

Mr. ILSLEY: Are those consumer goods?

Mr. BLACKMORE: Yes, they are mainly consumer goods. But they include such capital goods as, we will say, certain kinds of machines. There is a long list of them which I can give the minister. There are such things as post hole diggers, mittens, and other articles farmers buy for use in their ordinary work.

Mr. ILSLEY: How does the cost of production compare?

Mr. BLACKMORE: Obviously every increase in the cost of articles used by a farmer, is going to increase the cost of producing, let us say, milk.

Mr. ILSLEY: What about his tractors?

Mr. BLACKMORE: They all add to his cost of production.

Mr. ILSLEY: And what about the cost of a bushel of wheat?

Mr. BLACKMORE: The costs of producing wheat have all gone up.

Mr. ILSLEY: Is the hon. gentleman sure of that?

Mr. BLACKMORE: I am sure of it. I can produce a number of figures; in fact the Searle figures are in point. I believe there are hon. members here—the hon. member for Souris and the hon. member for Moose Jaw—who could give them right off. All these costs have gone up astoundingly.

The ACTING CHAIRMAN (Mr. Bradette): The hon. member has spoken for forty minutes.

Mr. MacNICOL: It does not sound over five.

Mr. ROSS (Souris): Dealing with the argument as it affects agriculture, and seeing that we have with us the Minister of Labour, I might point out that the other evening I tried to get some information from the Minister of Agriculture, which the Minister of Labour may be able to supply. I believe it is generally realized that prices of agricultural products have been frozen at a very unfair level and have caused us certain difficulties, especially in the harvest months. These difficulties will be multiplied this fall, and harvest is less than two months away. There are men travelling through the country to-day who do not care to work and who are not much interested in the war effort; they ask rates of pay for harvest work which create great difficulties to the farmers. I believe the man who assists in the harvest field or elsewhere on the farm is entitled to fair remuneration, but I should like to know from the Minister of Labour, under whose jurisdiction this matter comes, whether in his opinion some equitable basis of pay could be worked out and set in operation before harvest time which will be fair both to the farmer and to the labourer.

Mr. MITCHELL: I believe my hon. friend knows, perhaps better than I do, that no attempt has ever been made in this country to regulate harvest wages.

Mr. ROSS (Souris): No attempt was ever made before to set price ceilings for produce such as have now been put into effect.

Mr. MITCHELL: Just a minute; listen to me. I should be very glad if my hon. friend could make any suggestions along this line. If he can, he is just the man I am looking for, and he can rest assured that my office is open to him every day in the week, twenty-four hours a day.

Mr. NOSEWORTHY: I think first of all I should congratulate the Minister of Finance on the success with which he has imbibed the social credit philosophy. We here are beginning to wonder whether the government will be moving over to this side or whether the social credit section of the house will be moving across to the government benches.

There are two or three questions I wanted to bring before the minister in connection with this bill. When it was under discussion before I raised a question with regard to the closing down of the Canadian Associated Aircraft plant. At that time 40 per cent of the employees had already been discharged, and the remainder had received notice that they would be discharged in two weeks' time. The Minister of Munitions and Supply said at that time that these men would be absorbed by the adjoining plant, the National Steel Car company. Word has come that National Steel Car management, in correspondence with the management of Canadian Associated Aircraft, indicates that there is no place whatever in their plant for the personnel of Canadian Associated Aircraft. Can the Minister of Labour tell us whether any provision is made under which these

aircraft workers, some of them partly and some of them expertly trained, can procure other employment within a few days' time when that plant closes down? I understand that National Steel Car is only in the stage of tuning up for the new bomber which it will produce later.

Mr. MITCHELL: My department is already in touch with the situation, and if the men have the skill that my hon. friend says they have, I do not think there should be any great difficulty in their being placed through the employment service.

Mr. NOSEWORTHY: The second question I wished to raise is this. I have received representations from a number of de Havilland workers who were discharged the latter part of last week. As the minister probably knows, in each case the discharged workers were trade unionists, all taking a prominent part in organizing their trade union in that plant in competition with the company union that the company was fostering. Is there nothing the minister or his department can do to facilitate cooperation between trade union organizations and management within these plants? I have noticed again and again in the plants of which I have some knowledge that just as soon as a group of trade unionists begin to organize a union in a plant, the management immediately sets to work organizing a company union to offset the influence of the trade union, with the result that there is conflict between the employers and employees and production is interrupted. Are there no steps the government can take to prevent that conflict, which arises in nearly every industrial plant in this country? It seems to me it is a matter in respect to which something could be done.

We have heard a great deal of the importance and necessity of oil; and I am sorry the Minister of Munitions and Supply is not here. I believe the government have announced during this session that they are not interested in financing the production of oil in any field—I think that is their policy—but they are willing to promote the production of oil in any field in any way short of actual financing of it. If I am wrong in that I should like to be corrected. I have figures showing that the oil production in the Turner Valley field last year was almost 10,000,000 barrels. Forty-one new wells were brought into production. Of that number twenty-five were private or independent wells financed by the sale of royalties. I am informed that 40 per cent of the present production in that field is produced by these independently financed wells. The sixteen new wells brought into production by the oil companies which control large areas there are all, I am told, offsetting wells brought into production only to prevent the independent companies from drawing the oil from their properties. They all adjoin wells which had already been brought into production by independent companies.

It seems to me that the government should facilitate in every possible way the development of oil wells. I am told that there are only two methods by which the opening of these wells can be financed: one by the sale of royalties to the public, and the other by the big oil companies. Apparently at the present time it is not the policy of the big oil companies to bring their wells into production. My information is—and again if the minister has more recent or more accurate information we should have it—that the big oil companies have more than a hundred proven wells in that valley that are capped at the present time and not producing, and that they are producing only where it is necessary to offset some well brought into production by the independent producers.

It has been called to my attention that the salesmen interested in the financing of these independent wells, twenty-five of which were brought into production last year, are prevented from carrying on further work by reason of the fact that the oil controller allows them only an A category gasoline ration. I have a report here of the negotiations carried on with the oil controller, showing that he changed his mind at least a half a dozen times on this subject. At first he granted these salesmen a higher category; then the books were called in, or some of them, and some were left with category A, others with category E, and final decision was reached that no one interested in the sale of oil royalities should have anything more than A category. In view of the fact that by that means twenty-five wells were brought into production in 1941 it seems reasonable that the government should encourage further opening of wells by that means.

Another matter that I should like to call to the minister's attention is a suggestion concerning our rubber supply, particularly salvage rubber. A number of dealers interested in preserving our rubber supply have made to me the following representations, which I pass on to the proper authorities.

My attention has been called to the fact that there are thousands of tons of salvage rubber at the present time left exposed to sun and weather. No attempt has been made by the government to see that these thousands of tons are protected in any way from the elements. There is no regulation under which

the usable part of that salvage rubber, consisting of tires many of which can be vulcanized and used, is separated from the scrap. My information is that at present large quantities of tires which could be vulcanized and used again are in the junk piles and no effort is being made to separate them. So far as I can discover, there is nothing in the regulations to prevent second-hand dealers from hoarding all the second-hand tires they can acquire. It is true the government has a record of these, but I am informed that there are second-hand rubber dealers who are hoarding large quantities of this material. On the same subject of leaving tires exposed, if you look at the second-hand car lots of this country you will find thousands of tons of tires exposed to the weather, deteriorating, on cars which, in view of the gasoline situation, probably will not be used for years. I seriously believe that if rubber is so scarce, some steps should be taken to save these thousands of tires from deterioration.

Mr. MITCHELL: I think the first question asked by the hon. member was with regard to discrimination at the de Havilland plant at Montreal, was it not?

Mr. NOSEWORTHY: No; at Toronto.

Mr. MITCHELL: Very well. I do not know whether my hon. friend is aware of the fact, but order in council P.C. 4020 gives the Minister of Labour power to send in a commissioner and to act upon the recommendations of that commissioner, and the action of the minister is final and binding on both parties. I would say to my hon. friend that almost from day to day we hear of cases of alleged discrimination on both sides. At the moment we have five permanent commissioners, one located in the west, one in the middle west, one in Ontario, one in Montreal, and one for the maritimes. I remember quite vividly that when I was chairman of the industrial disputes inquiry commission we dealt with a number of cases of the nature of the one to which my hon. friend referred, and in every case we were able to arrange a satisfactory settlement. I am sure my hon. friend appreciates that in the process of organization tempers sometimes become frayed on both sides, and that order in council has been of great service not only to the employees but also to the employers. If my hon. friend cares to look up that order in council, he will find the provision to which I have referred in section 5.

Mr. GILLIS: This afternoon the hon. member for Rosetown-Biggar brought up the question of the Dumart plant and asked the Minister of Labour if it was the intention of the government to place a controller in that plant in accordance with the wishes of the employees. The minister categorically replied that it was not. That plant has been closed for some four weeks. It is an essential industry. Bacon is practically under government control; the bacon board demands a certain quota from each plant each month, and there is no doubt that the attitude of the operator of that plant is interfering with the war effort.

This dispute had its origin in a trivial matter; two employees were dismissed over a slight argument, and as a result there was a walk-out of the employees. The same evening a representative of the Department of Labour arrived on the scene, and, after negotiation, felt he had the matter settled. He went to bed that night in the belief that the dispute had been satisfactorily settled, as far as the workers were concerned and, as he thought, also to the satisfaction of the employer. The employees reported for work at seven o'clock the following morning, and were notified that the plant was not open; evidently the employer changed his mind overnight. The situation at present is that this is an illegal lock-out. That is not my version of it; the representative of the Department of Labour, who was sent to negotiate the dispute, made that declaration publicly. For some four weeks the employers have refused to open that plant. The union which functions there is of the government's own brand; it is an employees' committee, and the employees are under contract with the plant. One of the provisions of the contract is that all disputes must be taken up with the local superintendent. The man who dismissed the two employees was not the local but the general superintendent, which placed the local superintendent in a position where he could not very well settle the matter in accordance with the terms of the contract without going over the head of his superior. The situation is in quite a tangle now, and I think it is time someone took hold of it and tried to do something about it. Some three weeks ago I had the privilege of meeting a committee from that plant, just a couple of boys and a couple of girls who had not very much of an idea what it was all about, who came here to see me.

I am not going to elaborate the matter further. I say it is absolute neglect on the part of someone. I should like to direct the attention of the Minister of Labour, however, to an editorial appearing in this afternoon's Ottawa *Journal*, dealing with a speech delivered by the director of national selective service to the Canadian Manufacturers' Association. It is well worth reading by anyone interested in relations between employer

and employee. He makes an observation which I think is pertinent, having in mind the attitude of the management at the Dumart plant:

> To those who don't want good relations or don't appreciate their value, I say: The country cannot afford to have you as an employer at any time, particularly in war time. You must change your ways. . . .
>
> Waving a flag in a workman's face and calling on his patriotism cannot be a substitute for decent treatment. You cannot write a memo about it, and accomplish it. . . . It must be an attitude, a frame of mind, a recognition of existing facts and conditions which can be turned to mutual advantage for an employer and employee—and for the country.

I believe that statement is absolutely pertinent to this case. The employer is wrong. He is interfering with an essential industry. The matter was settled by arbitration. There is nothing in the dispute to-day that should keep this plant idle, except stubbornness on the part of the employer. The employees want to return to work one hundred per cent, including the two men who were dismissed, and then they are willing to have the matter arbitrated. They are prepared to go before any board of arbitration and negotiate what may be in the mind of the employer or any grievances they may have. Their contract has been violated. The general superintendent, in precipitating this trouble, placed the management, the local superintendent and the employees in a position where they are deadlocked, and the plant is closed. I think it is time the Minister of Labour or someone demonstrated the attitude of mind which Mr. Little mentioned in the remarks I quoted.

Mr. JACKMAN: Will they go back to work without the two men who were dismissed?

Mr. GILLIS: There is no reason why they should. The plant has been idle for a month now. The dispute was over nothing in the first place; it had to do with a short period they had at the noon hour. The two men dismissed were working at the far end of the line, and when the dinner hour arrived, as I understand it, they got away five or ten minutes later than the other employees, but they came back at the same time. As a result they were not getting sufficient time to complete their meal, and they merely requested that they be allowed the extra time they had to stay on the line after the other workers left. For that they were dismissed. I just happened to come across a parallel case which occurred in Britain, and perhaps it is worth while putting it on record. This concerned the dismissal of a woman in a plant. The union presented their case; the management presented their case, exactly as was done in the present instance. The matter went to a court, which found that while the employees did not do right in walking out, nevertheless it was the only way they had to demonstrate in order to assist the woman who was dismissed for a reason which was found insufficient to tie up a plant. The matter was straightened out in that way. The court of arbitration in Great Britain decided in that manner, and for four weeks the employers in the plant have sat back and refused either to recognize common sense or loss, or the seriousness of the war situation, or the essentiality of their plant in that setting.

On the basis of the Kirkland Lake dispute, and many other disputes which have taken place across Canada I say it is high time somebody got down to business, and set up a court with a man like Elliott M. Little at the head of it. My opinion is that it is a disgrace to have a plant of that kind tied up for four weeks—and to all intents and purposes the same situation is going to continue. I myself cannot understand what the trouble is. Through one of its officials the Department of Labour have declared this an illegal lock-out. If to-morrow there is an illegal strike, what happens? The Minister of Labour immediately places the responsibility on the Department of Justice, and those responsible for fomenting and carrying on the illegal strike are tried and interned. For example, C. S. Jackson was interned.

Mr. MITCHELL: Not for an illegal strike, was he?

Mr. GILLIS: Jackson was interned for that strike in Toronto at the General Electric plant.

Mr. JACKMAN: And for lesser allegations than that.

Mr. GILLIS: I would not argue the point, but that is the way I feel about the matter. If one of the minister's officials publicly states that this is an illegal lock-out, and it is carried on for four weeks, is it not about time that it was passed on to somebody else for some action? Certainly that plant should be working.

I have no intention of labouring the matter further. I spoke this afternoon because the matter had been discussed by the hon. member for Rosetown-Biggar. I had the privilege of sitting in on the committee. I saw a couple of boys and girls who are willing to work, but who are certainly not in a position themselves, with their knowledge of affairs, to arbitrate and to get a fair settlement in the matter.

If the Minister of Labour and his department, who are experienced in these matters, are not prepared to take hold and see that matters are settled to the satisfaction of all concerned, then something else will have to be done. The trouble can spread.

The Burns packing plant is a big organization. Packing plant workers in Canada belong to a powerful trade union, and they have powerful international affiliations. I do not think they are going to sit back much longer and allow a certain portion of their workers to starve in the street, in the present circumstances, without some justification. The natural procedure is to support those people.

Mr. MITCHELL: As my hon. friend is well aware, I have never taken the position, and do not now intend to do so, that it is in the public interest immediately to take over a plant because a group of workers or employers act in opposition to government policy. I should like that to be clearly understood.

I am not going to discuss with my hon. friend whether this was a lock-out or an illegal strike. As he knows, since I have been Minister of Labour I have decentralized the conciliation service of the dominion and placed it under the jurisdiction of provincial governments. That was done primarily because there had been some delay in facing up to industrial disputes. The settlement of the dispute in question was under the jurisdiction of a provincial department of labour. I believe that is a fact which may readily be agreed upon. May I add that there has been considerable trouble at Dumarts, ever since the place was organized. I believe that can be freely admitted. There was ample provision under some of the orders in council which have received criticism from certain people in the dominion to take care of the situation which arose there. The people at Dumarts knew it. Let us keep the record straight on that point.

It should be stated that the strike took place when the business agent was having a discussion with the management. The management claimed that the language used by the two people discharged was not the kind of language which should be used. Possibly it was the language of the slaughterhouse—because we know that miners, electricians and engineers do not always use the most pleasant language at times.

Mr. GILLIS: Very expressive, though.

Mr. MITCHELL: Hon. members will see the difficult position in which it places a minister of labour, whether he be a minister in the Ontario government, or myself. When people go on an illegal strike a minister's hands are immediately tied.

Mr. GILLIS: But it lasted only about four hours.

Mr. MITCHELL: That is not important.

Mr. GILLIS: Your official settled it.

Mr. MITCHELL: There must be discipline in these matters; let us be fair. As I said this afternoon, when I was chairman of the industrial disputes inquiry commission I looked into disputes of this kind on many occasions. I could have sent a commissioner in within twenty-four hours, and got back his report, as we have done on many occasions. But the company claimed that these people left their employ, rightly or wrongly, and they contend that a good deal of business had been lost through this dispute.

I have always felt that there was a grave risk in putting people out on the street. My hon. friend will agree with me that that is one of the easiest things in the world—to have men and women on the street. But sometimes it is not so easy to get them back to work. Industrial leadership is the fly-wheel. There must be leadership on both sides; sometimes it breaks one way, and sometimes the other way. But if we took that leadership away, whether it be among the employers or the employees, I am afraid industrial conditions in this country would be in a very grave state.

I suppose for many years I have been as close to the rank and file as most people in the labour movement of Canada. I have found on every occasion that if people are given the right kind of leadership, one can take them out or leave them in—as long as one is frank with them. For instance, in my own trade, in my own city, we were among the highest paid in the dominion. Yet we never had a strike, during the whole of our existence. That is why we were among the highest paid in the dominion.

Mr. GILLIS: But you had good wages and good conditions; there was no necessity to call the men out.

Mr. MITCHELL: Not always.

Mr. GILLIS: These things were not all handed to you on a platter.

Mr. MITCHELL: I appreciate that.

May I say with regard to Kirkland Lake that I am quite prepared to discuss the whole matter at another time. As I said, however, at the moment the Dumart dispute is in the hands of a provincial government—and I am not saying that to get out from under any responsibility in the matter.

Mr. JACKMAN: Where does the angle of war production come in? Do you turn over

all these disputes to provincial governments, or are matters affecting materials essential to the war not handled from the dominion department?

Mr. MITCHELL: The plant is not closed.

Mr. JACKMAN: It is operating?

Mr. MITCHELL: Yes.

Mr. JACKMAN: Then what are the employees doing?

Mr. MITCHELL: Half of them are at work, and half have left. I do not know a great deal about the slaughterhouse business, but my information is that as soon as this trouble was encountered the company stopped buying, because their private business was in danger. It created a problem for the employers as well as for the employees, who resented it very much. Had I been with the employers I would have taken those people back to work. That, of course, is only my own view.

Mr. JACKMAN: On a question of general principle, if a business is engaged in producing essential war goods, and a labour trouble develops, does the Department of Labour at Ottawa ask the department in the province in which the business is located to look after the dispute?

Mr. MITCHELL: They do so automatically.

Mr. JACKMAN: So that we are not likely to have a situation such as arose in connection with the National Steel Car company at Hamilton, where the Department of Labour at Ottawa appointed a manager or supervisor? Do I understand that system no longer obtains?

Mr. MITCHELL: He was not appointed by the Department of Labour; he was appointed by the Department of Munitions and Supply.

Mr. JACKMAN: Was the decision of the government arrived at without bringing in the provinces?

Mr. MITCHELL: If the employer or the employee is in difficulties it is necessary that something should be done. This is one of the fly-wheels, one of the governors in what might be called industrial statesmanship. The reason why I did not do a certain thing was the consequences that might follow to employer and employee alike.

Mr. HANSON (York-Sunbury): Was not the taking over of the plant by the government really a last resort?

[Mr. Jackman.]

Mr. HARRIS (Danforth): Those who were put in charge of the plant did not know how to operate it. They had not been nurtured in that particular business, and they could not operate to the same degree of efficiency as the management, on the one hand, and the employees, on the other, if both the management and the employees were brought to their senses.

Mr. BLACK (Yukon): Yesterday I asked the minister a question as reported on page 3126 of *Hansard*. The question was:

> Is the order recently made by the national war labour board of Canada fixing the wages of common labour in the Yukon at 75 cents per hour plus cost of living bonus being enforced against all employers of common labour in Yukon?

The minister's answer was an unequivocal yes, but he went on to give certain facts which showed that his answer was a conditional yes. The fact is that the order is being enforced against Canadian employers and Canadian employees and not against foreign employers and foreign employees working in that part of Canada. The minister explained the necessity of hastening the construction of the Alaska highway for the defence of Canada and the United States. I say to him and to this committee that if the immediate defence of the United States and Alaska and Canada are dependent upon the completion of the Alaska highway, it is too late. At the present moment great numbers of fighting men and large quantities of mechanical equipment and weapons can be moved from the United States and Canada into Alaska without the use of the Alaska highway. These goods and men can be taken in by boat and by rail, and there is no limit upon what can be carried. I contend that to enforce the order of the Canadian wartime labour board as to wages for work in Yukon, wages paid by all employers and earned by all employees, would not hinder or delay the construction of that highway, the use of which is not immediately necessary because other and better means of transportation are available. I say that it is manifestly unfair to the Canadian wage-earners to limit the Canadian wartime labour board's order to the wages paid to them. I maintain that that order should be applied to all employers and employees in Yukon, Canada, regardless of nationality. It is not correct to say that the foreigner must pay and receive higher wages than the Canadian in order to hasten the completion of that highway. If the minister were a Canadian labourer working on that highway job, I am sure that he would not approve his own policy or the policy of his government. I ask him and I ask the government to

enforce that wartime labour board's order without favouritism and without exception. It is the only fair and proper thing to do.

Mr. MITCHELL: First of all, I am not going into matters of high strategy with my hon. friend. I am not going to discuss whether troops should be moved to Alaska or to the Yukon by ship or by rail. I am one of those who think that this war is going to last another ten years, although I hope I am wrong. We may be very glad to have that road before the war is over. The other day my hon. friend drew to my attention the fact that wage rates in northern British Columbia were getting out of control. Agents of United States contractors were going through the west recruiting labour for the Alaska highway. We acted with about as much expedition as we could and arranged a conference through external affairs with United States government representatives in an effort to overcome some of the disagreeable conditions that some think exist to-day in Newfoundland.

My hon. friend knows as well as I about the tremendous shortage of labour that will follow the building of this Alaska highway up through British Columbia and Alberta and also the highway from Prince Rupert to a point to the east. It will be necessary to recruit thousands of men, many of them skilled men, in the United States. In order to do that, it will be necessary to pay the going rates in the different communities in the United States where the men may be recruited. It is a general practice of law that when United States citizens work abroad they shall be paid a bonus of 25 per cent for foreign service. Then there is the matter of the exchange on the United States dollar. I do not need to tell my hon. friend what bearing this will have upon wages and prices in British Columbia when these men come to work during the ensuing summer months.

It was agreed between the representatives of the governments that the Canadian contractors should employ Canadians and that the United States contractors would have the right to bring in labour from the other side. As far as the Canadians were concerned the workmen's compensation and the unemployment insurance benefits would prevail. United States conditions would prevail for the United States workmen. It was suggested also that the United States workmen should be advised to remit as much of their wages to the United States as they possibly could. I do not know of a more practicable way of dealing with the matter.

I appreciate that to some the rates of wages for unskilled labour in that part of the country may seem high, but I know something about board costs there. I think we all know something about the climatic conditions that prevail, the mosquitoes and the black flies. I think my hon. friend will agree that this thing should be given a trial in order that we may try to overcome some of the difficulties that may exist at the moment in Newfoundland. Our wage policy in northern British Columbia and Alberta must be such as to meet the tremendous demands for labour to build the Alaska highway.

Mr. BLACK (Yukon): I can only repeat that I think Canadian laws should prevail, that the foreigner should be subject to them just as must as we are.

Mr. MITCHELL: That is a lovely theory, but it does not always work, and I do not say that in any critical way. In connection with unemployment insurance and social security measures, there is already an arrangement between the United States government and our own which permits certain persons, particularly those who work on the railroads, to retain pension rights, social security rights, workmen's compensation rights and so on in the United States. The same condition prevails with respect to certain Canadians. From my point of view that is all to the good. If this exchange of opinions and services that has existed as between the dominion and the United States had existed in Europe, I do not think we would be fighting this war to-day. I cannot imagine, for instance, the French government owning a railroad to Berlin in the same way as the Canadian government owns that prosperous piece of track running from Port Huron to Chicago. In all these matters we find there is a necessity for the interchange of regulations and prohibitions between the two countries. Do not forget that the United States is paying for the Alaska highway, and we are not.

Mr. BLACK (Yukon): True, the United States is paying for it, and Canada is letting the United States build it through Canada, but I say again that it is not fair to the Canadian workmen to make them work for 75 cents an hour, while an American working alongside him and doing the same work gets $1.05 an hour.

Mr. HANSON (York-Sunbury): Does the minister not think we shall have to come to the higher level, or have endless confusion?

Mr. MITCHELL: I am not objecting to the higher rate.

Mr. HANSON (York-Sunbury): Neither am I, if they are entitled to it.

Mr. MITCHELL: But the understanding is that United States contractors will employ United States labour and they will be in their own camps. Canadians and Americans will not be working alongside one another as is generally understood of work on a construction gang, but there will be United States camps and Canadian camps, miles apart. If the Americans are going to recruit shovel runners, truck operators, what they call operating engineers in construction engineering—and I understand they will need about three thousand of them—I imagine that it will be necessary to get them from the places where these men can be found in the United States. I think I know something of the wage structure in that industry, and the only way you can get those men to go to Alaska is to pay them the proper rate, just as Canadian contractors will pay the prevailing rates for that part of the country.

Mr. ROSS (Souris): I did not get a chance to ask the minister about farm labour. He said that no government had ever attempted to handle that problem before.

Mr. MITCHELL: I said no Canadian government.

Mr. ROSS (Souris): And no Canadian government has ever handled the price ceiling before. The minister asked what I would suggest. I would remind him that last fall, on November 10, I appealed to the government to introduce national selective service at that time for industry, agriculture and the armed forces, and I pointed out that there were many good men in industry and agriculture who were worth ever so much more there than they could be in the armed forces. I know a young foreman in my own neighbourhood who was operating a very large farm. He did not want to go into the armed forces, but on the other hand he did not want people to say that he had not offered his services. He could render many times the service to this nation in managing that farm that he could in the armed forces; nevertheless he joined up.

The Prime Minister of this country delivered his man-power speech on March 24 of this year, but notwithstanding that speech nothing has been done to this day with respect to applying national selective service to agriculture. Great inequities prevail. Organized labour has been guaranteed a fixed price for its labour, using 1926-29 as the base period. Later on it was guaranteed a cost of living bonus, and there was a guarantee of salaries in industry. I think it would only be just if the government set a ceiling price for agricultural products, taking the same base period, and guaranteed the farm labourers the same rate of pay, plus a cost of living bonus. Farming is essential in carrying on the war, and I cannot see why the government should not guarantee a rate of wages to both farm labour and organized labour on exactly the same basis. There is a great disparity in the price ceiling, for instance, on butter fat, with a price of 50 cents a pound when it is used in making cheese and 35 cents a pound when it is used in making butter—a product that comes from the very same cow. There are many inequities to-day, and I think it would be reasonable to guarantee a ceiling price for agricultural products and to guarantee wages for the farm labourer, all on the same base period.

Mr. MITCHELL: My hon. friend mentions selective service. If I remember correctly, the first thing which the department did after the Prime Minister's speech was to freeze labour on the farms. That was the first industry we attacked.

Mr. ROSS (Souris): In what respect?

Mr. MITCHELL: No man working on the farm could leave it and go into industry without a permit. With respect to farm labour this summer, I might say that last year we had an agreement with Ontario, which felt there was going to be a shortage of labour in agriculture; the dominion government matched dollar for dollar with the province, up to an expenditure of $60,000 by the dominion, to provide farm labour, and under this scheme 23,000 persons were recruited for farms in Ontario. I think it is agreed that while there may have been difficulties, there was no acute shortage of labour in Ontario to harvest the crops. I discussed the very question my hon. friend now raises with the Minister of Agriculture last February, and we immediately set in motion a policy somewhat similar to that which we adopted with respect to Ontario last year. This year we are prepared to match dollar for dollar with Ontario up to an amount of $100,000, and we are hopeful that with the same enthusiasm and ingenuity the farm labour problem will be solved in Ontario again this year. I have enough faith in the vim and vigour of the Ontario government, working in cooperation with our own, to believe that we shall be able to meet the farm labour problem in Ontario satisfactorily this summer. Similar offers have been made to all the other provincial governments, but apparently they wish to handle the matter themselves, and after all, that is sound policy, for the best kind of government in some things is the one which is closest to the people.

Up to date we have had no request for similar assistance to that which we are giving to Ontario.

My hon. friend speaks of a cost of living bonus for farm labourers. It has been my good fortune or otherwise to be concerned with a good deal of labour and social legislation in this country, both federal and provincial, and unfortunately much of it exempts agriculture just as it exempts fishing and, to some degree, logging. In certain countries of the British commonwealth, in Britain, in New Zealand, and to a lesser degree in Australia, established rates have been set for farm workers. In this country our problem is a seasonal one created by conditions over which we have no control. I am a comparatively young man, but I hope to live to see the day when we shall set up in this dominion for the employment of men and women on the farm a scheme similar to that prevailing to-day in New Zealand or Britain or Australia. So far as the farm labour problem this year is concerned, I am hopeful that with the assistance of the Employment Service of Canada and the cooperation of the provincial governments, and, more important still, the cooperation of the people most vitally affected, the farmers, themselves, we shall be able to face up to the labour problem in every province during the coming year, notwithstanding the apparent shortage of labour particularly for war industries.

Mr. ROSS (Souris): Just to follow up the minister's answer about freezing labour on the farms: I do not think that is definite enough. I would remind him of the example I gave of the young man, thirty-five years of age, who is an efficient tractor mechanic, and who has the faculty of handling men. I suggest we ought to be in a position to tell that man where he can give the best service. He does not want to be in a position where, in spite of his efficiency, he will have to meet his pals who have come back from overseas, while he has stayed at home in a machine shop or on a farm. That sort of thing would be avoided if we had a national selective service system under which the government would have authority to say to that chap, "You will be rendering a greater service by remaining where you are; that is where you belong." He would be more than pleased. We have been too haphazard about the whole matter. We cannot get action with regard to it.

Mr. MITCHELL: I may tell my hon. friend, with regard to what he has mentioned, that is the purpose of the whole order, and this question is receiving consideration at this very moment, because, next perhaps to price regulation and wage stabilization, it is the biggest job which has been tackled during the war. He can rest assured that we are working, with all the speed that health and strength will permit, to launch a policy which we think will receive the approval of the Canadian people in the not too distant future.

Mr. POULIOT: This is a unique opportunity for members of parliament to discuss each of the departments, whether military or civilian. There is a main difference between the legislation that is before the committee and the estimates, in this sense, that when the estimates are brought up each minister must come in turn to answer the questions of the members, but in this case all ministers should be present to answer any questions from any hon. member on any item in their departments. Therefore, sir, it is my privilege and pleasure to congratulate the Minister of Finance upon his assiduity, and also his colleagues who have been here to answer questions from members, and I pay due compliment to the Minister of Labour, who has done fairly well in spite of the difficulties of the present time. I extend the same compliments and pay the same tributes to his colleagues who are here. But I shall have just a few questions to submit.

In the first place I would remind the members of the cabinet of a question which was asked of me at the meeting of the federation of mayors and municipalities here in Ottawa a couple of years ago, when the mayor of a city in beautiful Prince Edward Island, after I had been speaking of the work of the works progress administration in the United States, said, "Do you mean that we should imitate everything that is done in the United States?" My answer was, "No; we should imitate only what we think is the very best, because when we imitate everything it is not imitation; it is just aping." In that connection what strikes me is the reference to what is done in other countries, and the suggestion, which follows, that a thing is good provided we can say that it is done in any other dominion, in the United States, or in any other friendly country. This afternoon one of our colleagues went further and quoted to us the example of Germany with regard to monetary matters. Of course, we shall always benefit from the experience and wisdom of others. On the other hand, however, judicious selection should be made between what suits and what cannot suit this country. Therefore, sir, what I deeply regret is a complete lack of

imagination in the adoption of everything that is done outside Canada and that is known to us.

The second thing I have to bring before this committee is the apt remark which was made by the Minister of National Defence—some time in May, if I am not mistaken—when he said that one of the troubles of his department was that his officials could hardly make a distinction between what was essential and what was non-essential. It is very easy for any man or woman working in the office of a cabinet minister to deceive him, if that man or woman is unworthy, by putting on top of the files letters of no consequence at all and matters which unduly distract the minister's attention, and thus prevent him from reaching the essential and crucial points which he has to decide for the solution of any important problem.

I am in full sympathy with the Minister of Finance, the Minister of Labour and their colleagues, and, with all my colleagues of the house who are now sitting in committee I pledge my support to them inasmuch and just as generously as I can give it. But they should not be under the false impression that criticism is hostile. Criticism may be hostile, but no one has the right to forget that most of the time criticism is constructive, and criticism from members of parliament is the more constructive because they have the opportunity of seeing things which ministers will never see, on account of the fact that the treatment given to ministers and to members of parliament by this dominion bureaucracy is altogether different, and that when a minister tells his secretary, "Telephone Mr. So-and-so for such a thing," the answer is always, "yes"; but when a member of parliament does the same thing, the answer is, most of the time, "We regret very much that it is impossible to do what you ask."

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POULIOT: This bill introduces a new set-up in legislation. As has been pointed out, it is altogether different from the customary practice. It would be interesting to know what could be suggested to be done by all departments other than the war departments to cooperate with the war departments so that we might have the most complete war effort in this country. What struck me was to read not long ago that in the United States the war effort so far as the steel industry was concerned was not considered complete although it was said to be 98 per cent. In this country the same question could be put with regard to each phase of our war effort. In the first place, in my humble view, the first country to consider is our own. We should never forget the particular interest of Canada in dealing with any other country. Patriotism is more than an ordinary quality; it is the virtue *par excellence* of citizenship; it is love of the land on which one is born or which one has adopted as his own country.

After the last war there was the treaty of Versailles and the establishment of the League of Nations at Geneva, which seemed to broaden the scope of patriotism but, in fact, deformed it. It is very sad to think that a good Canadian by birth or by heart is not given as much consideration in this country as a migratory bird who comes here only for the duration, and who is considered *ipso facto* as an expert, endowed with all knowledge and exempt from all criticism.

What I want in each branch of each department of this government is a real Canadian spirit which will serve as an inspiration and guide to all those who have to give their utmost cooperation to the head of the department, who is the minister. It seems that after the complete failure of the League of Nations, a failure that was acknowledged by two prime ministers of Britain, Mr. Chamberlain and Mr. Baldwin, before the beginning of this war, we should put utopias aside and come back to the old tradition which has been the strength of this country in years past.

I will take the list of the various departments that we read in this bill. I put in the first place the Department of Justice, because it is the department that interests us, the lawmakers of this country, most. Our statute book has been revised time and time again. We have been told that there are too many legislative bodies in Canada. There was too much legislation in this country even before this war began. We need think only of the statute books coming out yearly from our legislative bodies, from this parliament and the legislatures of the nine provinces. Who is the lawyer, however eminent he may be, who has made himself familiar with each one of those pieces of legislation?

Now, since the start of this war, conditions have completely changed, and it is impossible for us lawmakers, not only to be familiar with, but to follow the legislation by order in council, which is tremendously large and which comes, I would say, by the dozen. I will not

ask my colleagues if they are familiar with the statutes of all the provinces. I would ask them if they know anything of the 24,000 orders in council which I am told have been passed since the beginning of this war. I would draw the attention of the Minister of Justice to the fact that a distinction should be made between orders in council of a strictly legislative nature and those of an administrative nature, so that members of parliament may be informed, and in turn may inform their electors, as to the so-called progress of legislation by order in council. As was suggested the other day, it would be helpful to have a sort of loose-leaf system, so that very little time would be required to find what was needed. In reply to that suggestion we may be told that these orders in council are published in book form; that five of these books already have been issued, and that we are to have another in the near future. Here again, however, my complaint is that these books containing orders in council are not complete. We have evidence of that fact in the statement made by the Prime Minister the other day in reply to the hon. member for Lake Centre, when the Prime Minister said that it was most difficult to give a complete enumeration of the orders in council of a legislative nature; and, if my memory serves me aright, he added that such a distinction was not made in the office of the privy council, and suggested that my hon. friend get in touch with the clerk of the privy council and discuss the matter with him.

Sometimes members of parliament are told that their questions are long, or that it would be expensive to answer them. But many times members of parliament have asked for facts or information supposed to be before the minister, if the minister was familiar with his department. Many times during sittings of committees I noticed that people did not know how to work. They had to be told how to do their work; they did not know at which end to start. They had to be told what to do, step by step, and then when it was all done they were proud of themselves. But mark you, sir, many questions which are termed extravagant should not be called such without knowing their background, and very often a question asked by a private member is of great assistance to the minister who secures the information from his officials. So my suggestion in regard to the Department of Justice, with all due deference to the minister, is to ask him kindly to come to the help of members of parliament by making information as to legislation easier of access and more available to them, and therefore more available to the people of Canada.

The second department in importance is naturally the Department of Finance. This year we legislate almost entirely in regard to finance, and therefore we must be interested in the financial structure of this country. I remember the electoral propaganda of the province of Ontario at the time when it had leaders like Blake, Cartwright, Mills, Alexander Mackenzie, Mowat and many others who were fighting for provincial rights, as Mercier in the province of Quebec was fighting for equal rights. I remember the discussions carried on by Sir Lomer Gouin and the then Conservative premier of Ontario in regard to increased provincial subsidies, discussions that remind us of those which took place not long ago. We want a sound financial structure for this dominion. At times the minister must find it hard to say no when a request is made of him, and I am sure he is greatly pleased when it is possible for him to say yes. But he will never be mistaken if he takes with a grain of salt all extravagant suggestions that are made outside of the regular lines of logic, because there must be logic in finance as in any other science. While large sums are required at the present time for the prosecution of this war, the minister will realize that in the long run the dominion government will benefit by respecting provincial autonomy. At present there are officials in the employ of the treasury of each province who have shown themselves to be men of experience, who know their business. It would be most unfortunate if they should be ignored or put aside, so that they would not exercise the same responsibilities they have discharged for so many years, during which time they gained experience not only in the collection of taxes but also in the distribution of public money.

My further suggestion to the Minister of Finance is to give an opportunity to members of parliament to submit their views to him, not only with regard to taxation but with regard to the general policy of his department. After having heard all they have to say he would be in a better position to make decisions. I am not complaining about the minister. He is most accessible, and I know he is open-minded. But I should like him to give members of parliament an opportunity to discuss his policies before they are enacted, rather than after they are enforced.

The third civilian department in importance is, naturally, the Department of Labour. There are two things with which that department is not familiar enough. One of them is the fact that there is still unemployment in Canada. Those who deal with the subject are satisfied with what they read in the

papers, and are under the impression that there is not a man in this country who is willing to work who does not have that opportunity.

I congratulate the hon. member for Cape Breton South upon what he said yesterday and to-day. His manner of speaking reminded me of an able debater whose memory still survives in this chamber; I refer to the Hon. H. H. Stevens. I do not want the Minister of Labour to think that because the hon. member for Cape Breton South made some apt suggestions he was at all antagonistic. I am sure he was not. But he did want to bring the case of miners in his constituency to the attention of the minister, and in doing so he served them very well.

The minister knows that a man whose condition of health is good, but who has passed the military age, cannot get into the army. He knows, too, that there are many young men who have been declared physically unfit, and who cannot secure work. It seems to me that the Department of Labour should have a thorough investigation made by the officers in the unemployment insurance branch, and that the facts gathered thereby should be submitted by the Minister of Labour to the Minister of Agriculture, the Minister of Transport and the Minister of Public Works so that it may be seen what can be done to relieve unemployment and to contribute in a high degree toward increasing the war effort by distributing useful work among those at present unemployed.

Is it not possible to improve our highways, our links of communication between the various provinces, between Canada and the Yukon on the Pacific side or between the St. Lawrence river basin and the United States on the eastern side. This is a policy I have advocated for a long time. I have pointed out that our means of communication should be improved, and the men who are now unemployed are precisely those who could do that work. It would be a most useful work, one which would be necessary and, in fact, indispensable in the event of attack from an enemy. This is what should be done: How long and how often must we repeat it to have it understood? This is not a matter of patronage; it is a matter of protecting the country against any invader, and it is essential to our very lives. These things could be done easily, and without disturbing the war effort or the technicians, because it is done by manual labour.

I warmly congratulate my dear friend the former speaker, the hon. member for Yukon, upon the stand he took this afternoon when he refreshed the memory of the government about the road to the Yukon. What has been done about this road? We have heard about it for a long time. For some time we were told that we were not to build a highway, but that a railway was to be built connecting the boundary line between Canada and the United States with the Yukon. What progress has been made? Something may have been done which it is believed should be kept as a military secret; but if that is so, why do we not have a secret sitting to explain the whole matter to members who are eager for the information.

Besides that, we are not so sure that the enemy will invade this country along the coast; he may decide to invade this side of the Rockies, and Edmonton may be exposed. We know nothing about that, but we shall protect ourselves by having good roads which will facilitate communications and the transport of troops, munitions and supplies from one point to another in Canada, and between points in Canada and the United States. Those are things which could be done easily.

How much would it cost? Here we have a bill providing for the expenditure of two billions of dollars. I understand that it includes all expenditures for the army, navy and air force, and for some work of civilian departments. Certainly the building of good roads should be one of the first things done. It was done by the Romans two thousand years ago in Great Britain, and in many places those roads still exist. We see in England roads cemented by Caesar's men, and they have defied the centuries. We want roads in Canada which will afford the greatest opportunity of movement to Canadian troops, and give them the best possible chance to defend this country.

My second point in connection with the Department of Labour is this. The minister is a union man, and I regret to have to say to him that I have been disappointed with the unions. I will ask him to corroborate what I have to say. It is unfortunate, but the fact is that quite often the leader of a union represents himself, his immediate associates, his relatives and friends rather than the general membership. I have known of cases in the Canadian National Railways where the men did not get the support they expected from the leaders of the brotherhoods. I say that without any rancour; I say it just to put my case before this committee. I am just representing my electors. Quite often when a man gets to the top of the brotherhood he does not seem to be the same as when he was taking his first step upwards. It is difficult for the men to lodge complaints with

the department when they cannot secure the approval of the head of their union. That is why they come to the members of parliament. They explain their cases in all confidence and ask us to defend them on the floor of the House of Commons. I hope the minister will be able to do something along the lines that have been suggested.

The Department of Transport has to do with the Canadian National Railways. I do not want to see an amalgamation of our railways because competition is necessary in this country. I would fear an exploitation by gangsters in an effort to make money by an undue increase in the price of the stocks of either one of the railway companies. I want competition, but I also want fair play for the men. I want a complete exposure of what has happened in connection with the financial structure of both railways.

I should like to say a word about the Department of External Affairs. Most of the agitation that has taken place with regard to Free France has been coming from civil servants. They are canvassing this one and that one and using intrigue in an effort to cause trouble in this country. I suggest that instructions should be given by each of the ministers that civil servants should mind their own business, especially in connection with external relations.

The ACTING CHAIRMAN (Mr. Bradette): The hon. member has spoken for forty minutes.

Mr. MITCHELL: I think everyone in this house and in this country will get comfort from the fact that on May 1 the number of unemployed registered at the Enployment Service of Canada was the lowest in the history of the dominion.

Mr. HANSON (York-Sunbury): It should be.

Mr. MITCHELL: I agree with my hon. friend the leader of the opposition. I would say to the hon. member for Témiscouata (Mr. Pouliot) that I have knowledge of vacancies for 4,000 men who could be put to work tomorrow in his own province. The unemployed figure is 26,000, which includes men and women. Many of those are in and out of employment. You often run across that class of person in the country, a very necessary class of persons who are willing to undertake what might be termed casual work. In our search for manpower, order in council P.C. 1445 was passed on May 1. This provides for the registration of everybody between the ages of sixteen and seventy years who is out of employment. We want to know those people who want to work and those who do not want to work.

I consider we have the most efficient employment service in the history of this dominion. What we are trying to do is to make it a living thing, something that will render service not only to the employee but to the employer. I hope, when this period of stress is over, we shall have an employment exchange in the truest sense of the word, an exchange where men and women can be placed in close contact with work irrespective of where that work may be. Where necessary, we have paid the railroad fares of those persons who we considered were necessary to the war industry of Canada.

Some mention has been made of the labour union officials. I have had some knowledge of the officials of the labour unions of this dominion, and I think they compare favourably with those in any other country in the world, and that covers a lot of territory. I believe this is exemplified by the situation that exists to-day in connection with strikes. At the moment there are 238 persons in Canada who are on strike. I do not think any country in the united nations, or probably in the dictator nations, can show a record like that. One strike is at a coca-cola plant, but I think we can get along without coca-cola. No one will suffer except people who are on a diet who drink a bottle of coca-cola and smoke a cigarette for lunch. Our future generations are likely to suffer because of that kind of thing. Then there is a window-cleaners' strike in Montreal, involving six people. We can get along without windows if necessary. Where the blitz is in operation in Europe, particularly in Germany, I imagine they are getting along without windows. Then there is a small strike at the Canadian Bridge company, involving twelve people. If my information is correct, these twelve men quit work to go somewhere else to work. All this I think demonstrates the good work being done by the trades union leaders and employers in this country. All parties in this parliament and the public in general should be encouraged by reason of that state of affairs. It is something of which we should be proud. I trust I have answered some of the questions raised by my hon. friend.

Mr. McIVOR: I should like to ask the Minister of Labour a question which I think has something to do with our war effort. It has bothered me for some time, especially when I hear and see the ability of hon. members to represent just causes in this house. Some of us were privileged to visit the magnificent plant in Montreal of the Canadian Car and Foundry company. We were interested in what they were turning out, but I must admit that I was more interested in the men and women who toiled there than I was

in the output. Repeatedly I asked how much the men were being paid, and I found that they were receiving the same rate of wages as was paid at the head of the lakes less the higher cost of living there.

I found, too, that in aeroplane works all across Canada wages were pretty much on the same level, but it was forcibly brought home to me when I was at home during the Easter holidays that persons engaged in the pulp and paper industry are paid much higher hourly wages at the head of the lakes than for similar work in the province of Quebec. I know the cost of living is higher at the head of the lakes because perhaps the food is better and of a higher quality, but a man who does a job has a right to the same rate of wages wherever the job may be done. The minimum wage in the union at the head of the lakes is about 57 cents an hour. In the province of Quebec the rate is very much lower. This makes for unrest among the workers of Quebec and among the manufacturers of pulp and paper in other places. That is perhaps the reason why at the head of the lakes there is more lay-off than in paper mills in the province of Quebec. I would ask the Minister of Labour whether it would not be possible through the cooperation of the provinces to have a uniform scale of wages applicable to every industry throughout the length and breadth of this dominion. I think that would make for a more united Canada. I understand that an administrator is to be appointed for the pulp and paper industry, and I am sure that a uniform rate of wages is one of the things that he will take up. I am sure the hon. member for Témiscouata would say that an employee in the province of Quebec should have the same rate of wages as an employee in the city of Fort William. I am sure he would say that the French Canadian can do as big a day's work as a man anywhere else, and I say to the members from the province of Quebec that this is one of the outstanding problems they must face in the future, namely, a standard wage level throughout the length and breadth of Canada, for a man is a man no matter where his employment may be.

Moreover, I think a lady, because she is a lady whether she toils or not, who does the same kind of work as a man should receive the same wage as a man. Here is one place where man should step down and recognize the ability of woman to work as well as he can. That is seen in this House of Commons where the lady members rival the best of men.

[Mr. McIvor.]

Mr. JACKMAN: Earlier in the afternoon a question was asked of the Minister of Labour concerning the capping of certain wells in Alberta. An answer should be given by the government because the question implied a serious charge against the owners of certain oil properties in that field. If the wells were capped in peace time for a good, rational purpose, the government should explain why they are still being capped, if they are, and what is the intention of the government in this regard. I do not consider that such an allegation—for there was an allegation contained in the question—should go unanswered in this house. The hon. member who made it was sincere. If it is not answered it will appear that the government is unable to answer it, and that is likely to cause a certain amount of ill feeling throughout the country if the allegation contained in the question is true. I would therefore ask someone in the government to give an answer to the question.

Mr. MITCHELL: Since the hon. member addresses his question to me, may I say that I have enough misery on my doorstep—and lots of pleasure too—without intruding into the affairs of another department, but I can say that the hon. member may rest assured that there must be an answer to the question and that an answer will be forthcoming as soon as the responsible minister has an opportunity to look into the matter.

Mr. FRASER (Peterborough West): The minister has been talking about strikes. It is not only strikes that interrupt work. There is sickness. It was brought to my attention on Saturday that in some plants in the United States a doctor goes up and down the aisles among the workers two or three times a month to check on their health. A good doctor can tell at a glance whether a man or woman is sick or whether there is anything wrong. If he sees somebody needing attention he will say to him: "You go into the office." One doctor I know has three plants to look after in this way, and he has other doctors to help him. By this method these plants have cut their lay-offs by more than one half. Would the minister take something like that under consideration?

Mr. MITCHELL: If my hon. friend had been around industry to the extent that some of us have—

Mr. FRASER (Peterborough West): I have.

Mr. MITCHELL: —he would be amazed at the strides which have been taken in that direction during the last generation. This dominion takes second place to no other

country in that regard. While this is a matter that comes almost exclusively within the jurisdiction of the provincial governments a tremendous improvement has been made in the last generation in looking after the health of the workers. That improvement is not static; it is dynamic; progress is being made all the time. We have seen the development of workmen's compensation, which in itself has given a tremendous impetus to reducing the industrial accident rate in every province. My hon. friend may rest assured that the provinces and the dominion government itself are not unmindful of the important contribution that can be and has been made by accident prevention and by looking after the health of employees engaged in industry.

Mr. FRASER (Peterborough West): I quite agree with the minister that great strides forward have been taken. Most factories have a nurse on the staff, but a nurse as a rule lacks the necessary training to check up on the workers as a doctor can do. That is why in some plants they are engaging a doctor to look after the health of their workers.

Mr. MITCHELL: Only two weeks ago I was at a plant which had two doctors to look after 4,500 employees. Of course, however, there may be difficulty to-day in obtaining doctors in view of the demands of the armed forces. I was a member of the hospital board in my own city of Hamilton for fifteen years, and I know something of the interest that is taken, particularly by the larger industrial organizations, in the health of their employees. When I spoke a moment ago of the tremendous strides forward that have been taken in the last generation I spoke of what I know, having been engaged in industry myself twenty-five years ago, and I know what a different approach there is to-day, largely brought about through the efforts of public-spirited citizens and the adoption of measures such as unemployment insurance and workmen's compensation in the various provinces and the dominion.

Mr. FRASER (Peterborough West): But instead of there being a doctor in just one plant here and there, that practice should be general throughout the country. The minister mentioned Hamilton. There was brought to my attention yesterday the case of one plant in Hamilton where a doctor was engaged to look after the health of the workers, and there was another plant in Toronto, and two in Peterborough, but the system should be general.

Mr. MACKENZIE (Vancouver Centre): Under order in council P.C. 1550 of March 2, 1942, paragraph 2, my hon. friend will find ample authority for the inspection of all such premises throughout the dominion, and that is now being done, exactly with the purpose in view that he suggests, that is, studying the question of industrial fatigue and making recommendations for improvements in all our industrial war plants.

Mr. HANSON (York-Sunbury): Is that mandatory, and is it being carried out?

Mr. MACKENZIE (Vancouver Centre): Yes; it is being carried out by arrangements in our department, the Department of Pensions and National Health, also the Department of Munitions and Supply and the Department of Labour.

Mr. HANSON (York-Sunbury): Just before this section carries—and I hope it will carry very soon—I want to ask the Minister of Finance a question with respect to the interpolation of the phrase in clause 2, "subject to allotment by treasury board." I believe that is a new provision. Would the Minister of Finance be good enough to explain just what has caused the government to include this in the substantive part of clause 2, and what circumstances dictated this change? I am inquiring just for information.

Mr. ILSLEY: It was suggested by the auditor general. He was doubtful whether the practice being followed, which is that allotments are made by treasury board after the programme or project is authorized by the governor general in council, was within the powers of treasury board, but he suggested that it should be put beyond doubt by the insertion of this provision in the bill.

Mr. HANSON (York-Sunbury): In other words, this is for certain.

Mr. ILSLEY: Yes.

Mr. POULIOT: The Minister of Labour is surely familiar with the road policy of the dominion government during these past years. For a time grants were made under the Minister of Railways and Canals. At that time the Department of Railways and Canals were building parts of roads with subsidies which were spent under that department; afterwards the Department of Labour was associated with the provinces and the municipalities in the building and upkeeping of roads; and finally the contributions were sent by the Department of Labour to the provinces for certain particular roads which were described in the requests from the provinces. Afterwards roads and parts of roads were built by the Department of Mines and Resources and the Department of Public Works. But that was

done before the war. Since the war started, I do not know of any roads that have been built by this government. I draw the minister's attention to the fact that the money spent for the trans-Canada highway has been much greater in Ontario than in the province of Quebec. In Ontario the expenditure for that purpose was $14,000,000, while in Quebec it was only about $400,000.

That being said, I ask the minister if it is not the policy of the government to build good military roads in this country, particularly between the shores of the St. Lawrence river and the boundary line of the United States. There are three highways there: the King Edward highway, which perhaps is now called the Laurier highway, between Rouse's Point and Montreal; the Levis-Jackman highway; and also the Rivière du Loup highway, which is a section of route No. 2, trans-Canada highway, and an old military route which was rebuilt at the time of the Fenian war. Work on this road, particularly because of our close relations with the United States, should be expedited. In fact it is now used by the army, in spite of some curves which should be reduced; and the pavement of that section of No. 2 highway should be put in the best possible condition. I ask the minister whether the government is not disposed to proceed with this work at the earliest available opportunity, so as to provide the greatest possible mobility for our troops in the event of an attack in that part of the country.

The ACTING CHAIRMAN (Mr. Bradette): Clause 2 carried.

Mr. POULIOT: I know that the clause has been carried, but I would ask the minister to be kind enough to say whether it is the policy of the government or not. If it is, I will congratulate them; if it is not, I shall continue my efforts to try to get them to do something.

Mr. MITCHELL: As my hon. friend, no doubt, well knows, the federal government stopped contributing to relief roads last year, and I understand that any roads which are now being built are built at the instigation of the Department of National Defence and for military purposes. The matter is completely outside the sphere of my department, and I think the appropriate department should answer for itself, if the question is to be answered.

Mr. POULIOT: I thank the minister for his answer, and I will ask him if the Department of National Defence has adopted the policy of building roads required for military purposes. That is what I want to elucidate.

[Mr. Pouliot.]

Mr. ILSLEY: The only one that I remember is the Terrace-Prince Rupert highway, but there may be others. These are important defence projects for specific purposes, and if there is no other way to get the roads built, the dominion government does it as a matter of defence. Like my colleague, the Minister of Labour, however, I do not pretend to keep these projects in my mind; it is within the realm of another department.

Mr. HANSON (York-Sunbury): May I call the minister's attention to another road coming within that category, to which I think the government should give attention. It is on the east coast, between Bathurst and the Miramichi river, commonly known as the Bathurst road, which would be an important road if it were necessary to remove any body of troops quickly along that area. I know there have been negotiations between the Department of National Defence and the province of New Brunswick. The province simply will not surface that road. I suggest that this ought to be called again to the attention of the Minister of National Defence with a view to reviewing the position.

Mr. POULIOT: I agree with what the leader of the opposition has said. It is a vital problem. We cannot insist too much upon it. Look at the size of this country. In the east there are only three railway lines; the transcontinental; the Canadian Pacific Railway, which passes through United States territory for a certain distance; and the Intercolonial. If a bridge is blown up, the traffic stops; and it is necessary not only to protect bridges but also to improve the highways to provide against any deficiency with regard to railway traffic. At the present time railway traffic, both passenger and freight, is jammed, and of course the roads are most necessary for transportation by truck and car. Many military convoys pass over the route I have already mentioned.

I admit that the Prince Rupert highway or the British Columbia-Yukon highway may be very important. I do not discuss it at all; I agree with it. It is not, however, the only highway that is necessary in Canada from a military point of view; there are many others. They are the more necessary because we have not as many railways as have other countries, for the reason that our population is more scattered. Therefore it is most important to do that highway work at the earliest possible opportunity. Whether it is done by the Department of National Defence or the Department of Public Works or the Department of Labour or any other department does not matter, provided it is done. It should

be done in case of emergency, or in case of any bridge being blown up and the traffic being blocked at any point. Under present circumstances it is most urgent to have it done. For instance, what would happen if the bridges on the Miramichi were blown up, if the bridge near Moncton where the transcontinental joins the intercolonial were blown up. Anything might happen. I do not need to say more; the maps and the timetables are there, and hon. members know the geography of our country. It is one of the most urgent things to be done, independently of any party consideration. It is vital to cut red tape at this point.

There are some guards, most of them returned men, on bridges; all right, give the returned men a chance; but the guards should be able-bodied men, familiar with handling a gun, to protect those vital arteries, the railways and highways. We cannot do too much in order to have that work done just as soon as possible, the same as it is done in any other country that is preparing itself for defence. I am told that the preparation has started. It is the very best thing to do, not only in the view of military experts but for the purpose of giving security to the population.

It is also very important to decentralize industry, particularly with regard to the railways. If a bridge is blown up and locomotives cannot cross to the shops where they are repaired or rebuilt, is it not vital that there shall be the largest number of shops available for urgent repairs in such cases? At the present time the policy of the Canadian National Railways is wrong in that respect. It is a policy of centralization at five or six points in Canada, to the detriment of smaller places. For instance, centralization is going on at Moncton, Montreal, Point St. Charles; at Stratford in Ontario; at Transcona near Winnipeg, and so on. At Rivière du Loup there are very fine shops. There is an erecting shop, one of the six or seven mechanical erecting shops, and there is a roundhouse. They can repair locomotives very well, and they do excellent work. At present many men there are laid off because there is not enough work, while at the same time at Moncton they cannot do all the work they have, and from Montreal they send their locomotives to Transcona for repairs. Think of the mileage cost. One must come down to common sense and not forget that what is done in smaller centres is probably more important than what is done in large centres.

I insist again on that policy of military roads, arteries. For commerce they may be used incidentally; after the war they may be used for tourist traffic, but now they are essential from the military point of view. I hope that the government will consider the matter, and that what I have said has not fallen on deaf ears.

Mr. O'BRIEN: Earlier in the day the hon. member for Parry Sound and the leader of the opposition, speaking of the defence of Halifax, brought to my mind the situation just mentioned by the hon. member for Témiscouata. I wanted to refer to the matter at that time but the opportunity was not available.

The Miramichi river in my constituency, is one of the largest rivers in eastern Canada, having direct access to the sea. Some thirty miles from the sea we have a depth of water as much as forty-five feet. It is my belief that because of the knowledge the Germans have of that part of the country, from information gathered during their two or three years there carrying on shipping, they know every foot of ground probably much better than those of us who live in that community. For that reason I believe it is a strategic point in the defences of the eastern coast, particularly of Halifax.

The Canadian National railway crosses the two large branches of the Miramichi over very heavy steel bridges; and while we often hear the saying, "It can't happen here," it would not surprise me if any morning we learned that a submarine had come into the Miramichi and proceeded to damage or blow up these bridges. If that happened, Halifax would eventually starve to death, because the main line of the railway from upper Canada through Halifax to Great Britain would be cut. Halifax is reasonably well defended except for lack of the barrage balloons which the hon. member for Parry Sound mentioned and which I think is a worth-while recommendation. But it seems to me that if any attempt were made to damage Halifax, it could be readily done through the Miramichi. Some time ago I wrote to the Minister of National Defence pointing this out. I believe it is a most important and critical point in the defences of eastern Canada, and at present there is no protection whatever. A reasonably small net across the mouth of the Miramichi bay would, I think, afford adequate protection against the danger which I foresee, but which I very much hope may not happen.

Mr. QUELCH: There is a question I should like to ask the Minister of Finance. Earlier in the session I addressed my question to the Minister of Trade and Commerce, but he quite properly stated it was a matter for the Minister of Finance to decide. Farmers in western Canada, while not criticizing the policy

of maintaining price control, do feel critical of the government for having established a price ceiling without first establishing parity of prices. The Searle Grain company in their letter of May 20 last established that fact quite well. They show that the present price of wheat is now 43 per cent below the 1913-14 parity price, and the 90 cent price established for the new crop is 31 per cent below parity. The price of hogs is now 14 per cent below parity, and steers 10 per cent below, but I understand the latter has now been adjusted. In any event this shows clearly that as far as agricultural products are concerned parity of prices has not been established.

It is interesting to note that when the matter was raised in the house the Minister of Agriculture stated: "We are taking every last dollar out of the treasury of Canada to deal with these problems which we feel it is safe to take at the present time." I do not think anyone would suggest that by this statement the minister meant that there was no more money available to the government wherewith they could pay a parity price to agriculture. I take it what the minister meant and what the Minister of Finance would mean is that if the government were to increase the price of agricultural products, they would thereby increase the purchasing power of the farmers, which would increase the demand for goods, and the result would be inflationary. I take it that this is really what the Minister of Agriculture was referring to at that time. I noticed a statement made by Mr. Donald Gordon some time ago in Winnipeg, and quoted in *The Western Producer* of April 23, as follows:

> I do not want to leave the impression that in this question of the farmer's relation to the price ceiling I dismiss the farmer's case and say: Take it or leave it.

Then he goes on:

> What I do say is that if the price-ceiling policy is going to be successful it cannot be subject to qualification. Increases in agricultural prices would start the inflationary spiral in motion again . . . and the farmer has as much to lose as anyone in that event.

First of all he states that it is not a question of saying that the farmers must either take it or leave it, but later on he says that if prices of agricultural products were increased, the result would be inflation, and that, therefore, such increases cannot be allowed. I have a suggestion to offer to the Minister of Finance. Surely that difficulty could be overcome if the government would make up the difference between the parity price and the present price the farmers are receiving by a payment in the form of a certificate that could not be cashed until so many months after the end of the war.

That would absolutely obviate the danger of inflation and at the same time make it possible for the farmer to establish a sinking fund for the purpose of paying his debts at the end of the war. I wonder if the minister could explain why such a policy could not be adopted. I think he will have to admit that it would avoid any danger of inflation, so long as these certificates could not be cashed until after the war, and at the same time it would guarantee the farmer a parity price and put him on the same level as other industries.

Mr. ILSLEY: Well, Mr. Chairman, I was hoping that the debate would end some time—

Mr. QUELCH: This debate has gone on for five or six weeks—

Mr. MITCHELL: Seven weeks.

Mr. QUELCH: —and up to the present I have taken only one-half hour during the entire debate. So I do not think I need ask the indulgence of the committee when I submit one question at this time.

Mr. ILSLEY: The hon. gentleman has asked what would be the disadvantage in issuing war savings certificates to a number of people, I presume a large number of people, in this country. The disadvantage would be the great increase which would result in the national debt, and which we try to avoid if we possibly can. That is why we tax as heavily as we can instead of borrowing all the money we need; we do not want to increase the national debt any more than is absolutely necessary.

With regard to the question of parity in farm prices, surely we have debated that over and over again. I personally have made several speeches about it both inside and outside the house; and when I have been in this chamber while my colleague the Minister of Agriculture was addressing the house, I have been made very conscious of the fact that the debate on agricultural prices was going on not only hour after hour but day after day. I would respectfully suggest that after the tremendous length of time we have been on this bill, after having discussed the resolution for a great number of weeks and taken up these very questions, we should try to conclude the discussion to-night without opening up these matters all over again.

Mr. CLAXTON: Before we finish with the Minister of Labour there is just one matter I should like to bring to his attention, which I am sure he can deal with very quickly. It is a matter which is causing a good deal of concern, and it is of some urgency. I refer to the question of the children of married

women employed in war industries, which I understand comes under the jurisdiction of the Minister of Labour.

The extent of this problem may not be fully recognized by the house or by the country, though it is beginning to receive some attention in the press. In Montreal, in one plant alone, it is said there are employed 1,717 married women with children. In another plant it is said that of the 2,100 employees, 25 per cent are married women, while in a third plant out of 1,300 employees, 27 per cent are married women. In Montreal there are only three institutions equipped and qualified to look after the children of married women who go out to work. In Toronto a survey was conducted of five schools, and it was found that the mothers of 25 per cent of the children were out working, principally in war industries; and it has been stated in one magazine that 20 per cent of the children attending school have their mothers out at work. In Toronto there are only seven institutions equipped to look after these children. The facilities are hopelessly inadequate, and a single agency is said to have turned away 1,500 mothers who wanted to place their children regularly with it. I have no doubt that the same problem exists in other cities throughout Canada, such as Hamilton, Oshawa, Peterborough and so forth.

We can easily see what this leads to. In the first place it leads to malnutrition, and already there are alarming reports of increases in infant mortality in Ontario. It leads to truancy from school. It leads to a considerable increase in juvenile delinquency, an increase estimated at as much as from 50 to 100 per cent in the ages from eight to twelve. If we want married women working in war industries—and I think we do—then we need to look after them and their children, and this is a responsibility of the federal government, which is responsible for carrying on the war and providing the munitions necessary for that purpose. On the other hand, the problem is a complicated one, by reason of our relations with the provinces. Speaking in this house on March 24 of this year the Prime Minister said, as appears at page 1565 of *Hansard:*

> The series of measures being undertaken to bring women into industries include:
> 6. The provision of nurseries and other means of caring for children.

Since then I understand the Minister of Labour has had this matter under consideration, but there is a great deal of concern being felt, and I think it would be exceedingly useful if at this time he gave a short statement indicating that the problem is being attended to and that a solution will soon be found. It seems to me, if I may offer the suggestion, that three measures should be undertaken in this connection. First there is the problem of the children below school age, who do not go to school because they are too young. For them day nurseries should be provided near their homes, to take children in groups of fifty or sixty. These might be conducted in unoccupied schools, churches or other buildings, and trained personnel would have to be provided to look after these children. Then there are the children of school age, and that problem is becoming particularly important now that the summer is coming on. In this connection I suggest that the recreational facilities of the schools be made available during the summer months, so that the children may not be turned loose on the streets. This would continue the advantages of school life during the summer, and that is why this matter has become urgent. Then there is the whole question of the utilization of married women in war industries, and in this connection I suggest that we might well follow the practice which has been adopted in Britain; that is, as far as humanly possible limiting the employment of married women in war industries to employment on the day shifts.

This matter has already received some attention in Ontario, where there was passed, I think at the last session of the legislature, a statute providing for cooperation. The matter has received attention in the province of Quebec, where Hon. Edgar Rochette, provincial minister of labour, had an exchange of correspondence with various trade unions and labour organizations. It has also received attention in the press. In view of the urgency of the question and the concern that is felt, I think it would be interesting to learn from the minister what is being done in this connection.

Mr. MITCHELL: My hon. friend and I have discusesd this matter before. Hon. members may rest assured that it is receiving the earnest consideration of the Department of Labour. As the hon. member has indicated, the question comes under the jurisdiction of the director of selective service. What we have in mind is setting up standards and, if necessary, making some contribution to the establishment of these important services, if women are to go into war industries on the scale that we anticipate may be required in the not too distant future. I think he will probably agree with me it will be far better

first of all to start off in the large metropolitan centres, where they have had some experience in this regard. I agree with him that in a measure it falls within the jurisdiction of the provincial government, municipal organizations and voluntary organizations which have taken a great interest in this important function in connection with our war effort. He can rest assured that the agency under the director of selective service has a deep appreciation of the necessity for protecting the children about whom he has spoken so eloquently this evening. I believe the committee may safely leave this matter with the Department of Labour, particularly to the selective service branch, and rest assured that every move will be made with expedition to see to it that these good people are protected.

Mr. HANSON (York-Sunbury): That, of course, is a reassuring statement.

Mr. MITCHELL: It is intended to be.

Mr. HANSON (York-Sunbury): Yes; it is intended to say, "We are going to do very well; leave us alone." What plan has been devised, if any, or are they just thinking about it? I was in a plant on Saturday which engages several thousand women working in three different shifts. Among them are a great many married women. Many of those married women work at night, and they travel long distances to get to their work. On that lovely June afternoon I just wondered to myself where their children were. More than that, as I watched them changing shifts I wondered to myself what was going to become of those people after the plant finished operation. That matter was discussed among ourselves. Those of us from the smaller provinces may not appreciate the full magnitude of the problem. A woman has to go out to work by the day, possibly, and somebody looks after her children. But here is a case where thousands are in these munitions plants, and there must be many hundreds of children who are not being looked after. It is not enough to say, "Oh, just leave it to us; we are thinking about it and talking about it." That is not quite good enough.

Having given this admonition to the minister, I shall ask the Minister of Finance a question which, I hope, will help us to get this measure through. If anyone examines the bill he will observe there is a new provision in it this year. I try to analyse these measures as they come along, in the light of past experience, and I now call attention to the fact that subsection 2, of section 3 is new. I believe I am correct in that.

Mr. ILSLEY: Yes.

[Mr. Mitchell.]

Mr. HANSON (York-Sunbury): This subsection has not been in earlier war appropriation bills. It provides:

> Any expenditure required to be made by the government of Canada under any contract for munitions of war and supplies entered into by the government of Canada for the purpose of enabling any company wholly owned by the government of Canada to fulfil its obligations in respect of orders received by such company from the government of any British or foreign country allied with his majesty may be paid out of any unappropriated moneys in the consolidated revenue fund.

I assume the procedure set up in connection with these wholly owned government companies, partly owned government companies or companies partly owned by this government and partly by the British government is that they have to be financed.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): There is no question about that. So far as I know they are doing good work. Some of the best brains in the country are operating them; I believe I may pay that tribute. They are operating them in some instances at a dollar a year. I know the head of one of these companies, and he is working like a galley slave for this government for a dollar a year, without even any expenses. I do not think any of his own companies are getting any government contracts, either. It would seem, therefore, that he is the perfect dollar-a-year man. I had not intended to eulogize him, and I shall not mention his name. But I should like to know what control parliament has over these moneys?

This has introduced a new principle. We vote money, but what responsibility is there to parliament? That may be a purely academic question, but this is public money which has been taxed or borrowed from the people of Canada, and I should like to know what reports we have from any of these companies. Does this information appear in the auditor general's report? Do we learn in that report how the money is spent?

I will not go over the whole gamut of the operation of these companies, but I would ask the minister whether or not a principle is at stake. This is public money—and I say this, always keeping in mind the hon. member for Témiscouata, because what I say may serve as a text for another speech from the hon. member. I hesitate very much providing him with that; perhaps he does not need it.

However, I have been thinking about this matter ever since the announcement respecting the establishment of these wholly owned

government corporations. Some huge corporations have been set up under this plan. Canadian Car Munitions Limited is a plant in connection with which $18,000,000 have been spent, and they are operating on what might be described as a fee basis. From what I can judge, I believe it is a well operated plant. I have great confidence in the management of it, and they are doing wonderful work for the country. But that is not the point I have in mind. What control has parliament over the operation of that kind of plant? I am sure the minister will say there is adequate treasury control, and I would be astonished if there were not. In fact, I take it for granted that the treasury are looking after the operation of that plant, and endeavouring to see that the government get adequate returns for the moneys expended, not only in connection with capital expenditures, which were made hurriedly and quickly, owing to pressure, but also in connection with the operation of the plant.

I suggest to the minister that a principle is involved which should be explained to the Canadian people. How are these companies to be made accountable to parliament? Are these to be ordinary government expenditures, or are we just to let the matter go? I do not know whether I have put the matter very well, because my ideas have not been well crystallized. I have made no inquiries; I suppose, had I called up some of the officers in the Department of Finance, they would have made an explanation. But I think this is the place where the explanation should be made.

Mr. MACDONALD (Brantford City): We would not have had the explanation if it had been sought privately.

Mr. HANSON (York-Sunbury): That is so. I suggest that it should be made here so that the public and the membership of this committee will understand the position. Here is a situation involving many millions of dollars not only in capital but also in operational costs.

Mr. ILSLEY: These crown companies are not comparable with the Canadian National Railways, for example, which has a separate set of auditors, and which is separate from the government. These companies are financed just as if they were government departments or branches.

Mr. HANSON (York-Sunbury): Therefore they are closer to the crown?

Mr. ILSLEY: Yes. The auditor general is the auditor, and the comptroller of the treasury keeps his officers in close touch with these companies at all times. I do not know just why they were incorporated. That would be a question which would have to be answered by the Minister of Munitions and Supply. However, no doubt there were reasons for their incorporation.

Mr. HANSON (York-Sunbury): I think one reason was connected with the buying of supplies. I have rubber in mind, particularly. I remember that at the time I thought incorporation was a proper procedure. If it got to be known that the crown was a bidder in a certain market the price would go up quickly. That was a perfectly proper business procedure, and on the whole I would say to the minister that it was considered by those advising the government that the question of service was uppermost in the minds of those who advocated this theory. I am not controverting the principle.

Mr. ILSLEY: Two or three companies were incorporated without any one knowing that they were owned by the crown, but just what companies they were I forget at the moment.

Mr. HANSON (York-Sunbury): That was in the beginning.

Mr. ILSLEY: There were excellent reasons from the public point of view why that was done, but there were other companies to which those considerations did not apply.

Mr. HANSON (York-Sunbury): Possibly it was to obviate the provisions of the Civil Service Act. I think that was a controlling factor why the companies were made autonomous and could hire and fire as they pleased. I think probably they were right, because they could not go through the whole civil service procedure of advertising positions and so on. This is no reflection upon the civil service. The fact is that this thing grew so large that they just could not cope with the conditions. I want to know about the responsibility to parliament for expenditures.

Mr. ILSLEY: There is exactly the same check as there is on any government expenditure. Advances to these crown companies are provided by the usual machinery. There is either an order in council or an allocation by the treasury board of so much money for the purpose stated to the company in question. My recollection is that some of the companies borrowed money from the banks on a government guarantee, but I believe those were retired although I am not just certain. Ordinarily that is not the way in which they are financed; it is done by government funds directly just as though they were a branch of some department of the government. I do

not know exactly the stage, but the comptroller of the treasury keeps very closely in touch with them, because frequently he speaks to me about some of the expenditures being made. They are also subject to audit by the auditor general.

Mr. HANSON (York-Sunbury): That is a post-audit.

Mr. ILSLEY: That is a post-audit, but the auditor general is responsible to parliament for watching the expenditure of public funds voted by parliament. He does not regard these companies as being outside his jurisdiction simply because they have been incorporated.

Mr. DOUGLAS (Weyburn): What is the total amount of money invested in these government-owned companies?

Mr. ILSLEY: I cannot say at the moment, but I could get that information.

Mr. HANSON (York-Sunbury): The reply of the minister is hardly satisfactory. He has a theory that such and such is the case, and I think by and large he is right, but he has not answered my question. When will the accounts of these wholly owned crown companies be laid before parliament in the form of a blue book or in some other form? I think the answer will be "never." So far we have had nothing about them. I call that to the minister's attention in the hope that he will give it consideration.

Mr. ILSLEY: I shall look into it and report later. It is an important matter.

Mr. FAIR: A few moments ago reference was made to providing for the children of mothers who might be working in industry. There are a number of parasites in Canada at the present time who could be put to work before homes are broken up. The war has already broken up sufficient homes without any more being broken up unnecessarily. If the Minister of National War Services (Mr. Thorson) wants to know one instance, I can give him one to which reference has been made on several occasions.

I have particular reference to a gambling den which is authorized and legalized by this government and by other governments in the past. I understand there are thousands of employees in this den who are paid at the expense, directly or indirectly, of the farmers of western Canada. These farmers are now asked to go without the cost of production of a number of their products. If anyone should make a mistake as to the organization to which I have reference, it is the Winnipeg grain exchange. On different occasions we have tried to have this exchange closed and have pointed out that the grain exchange in the old country was closed at the beginning of the war. Some of us are convinced that the government of the old country would be quite satisfied to have the exchange here closed if some of our friends in the government were willing. Apparently that is not the situation. Before any more homes are broken up, I would suggest that all the parasites in this gambling den in Winnipeg be put to work in some profitable manner. Let them get out and make an honest living for a change.

A short while ago the hon. member for Acadia (Mr. Quelch) asked the Minister of Finance about the payment of parity prices for farm products and outlined the method by which that could be done. Because there was some sense to the question the minister immediately wanted to close off the debate and get this bill through. Some of my hon. friends to my right have suggested on two or three occasions that the debate has gone on long enough and should be closed, but some of us who want to say a few words find that we cannot because they are still talking, in a number of instances, nonsense. The Minister of Finance said that it would increase the national debt, but I ask him if the national debt is not being increased in order to pay several manufacturers of war commodities far in excess of that to which they are entitled. I have no objection to their receiving the cost of production plus a reasonable profit, but I cannot see why they should be paid exorbitant profits when growers of food are asked to go without their cost of production.

Before sitting down—I may have quite a time having an opportunity to speak again because it took me a long time to get the floor on this occasion—I should like to say that I support the hon. member for Souris (Mr. Ross) in his remarks about labour. I believe something should be done, and done in a hurry, along that line. It has been suggested that farm help be trained, but I want to say that help cannot be trained in a week or two, or a month or two, to do the work that must be done on a farm to-day. Tractors, in some instances costing as much as $2,500, binders and other machines are used, and they might not be operated efficiently by someone who has lived in a city or town all his life. Some of them might act like the city man on the farm who was sent out one morning to put the harness on a horse. When the farmer went out later he found this man had put the harness on a milch cow. Because the cow happened to have horns, the so-called farmhand found it impossible to get the collar on. I think a lot of damage would be done, I admit not intentionally, by using untrained labour.

Mr. DOUGLAS (Weyburn): An important principle has been touched upon by the leader of the opposition. I do not want to delay the passage of this bill by asking a number of questions, but the minister has promised to bring down, at some time during the session, a statement as to government controls and parliamentary controls over these government-owned companies. I think we should also have a list of these companies—I believe there are eight of them—the total amount of money which the government has invested in each, and their directorates. That information ought to be available to hon. members.

Mr. ILSLEY: I shall see that it is supplied just as soon as possible.

Mr. POULIOT: Mr. Chairman, I am not going to follow the text that has been indicated to me by my hon. friend the leader of the opposition. At times he makes a good speech. He makes a good speech when he accompanies it with a broad smile. Then he is himself. To-night he spoke very well, and so did my hon. friend the member for Weyburn and the Minister of Finance.

It is easy to come to an understanding; but what the government must not forget is this, that centralization does not come from the ministers but comes from underneath. It comes from those in the civil service—call them civil servants or officials, it is of no importance—who are greedy for power. It is in virtue of this principle of centralization that men are paid, not according to their worth, but according to the size of their staff. The more staff they have, the more important they are; the more power they have, and the bigger the salary they get. That is the reason why we have centralization in Ottawa. It is just because of the greed of high officials who want to become more and more powerful, at the expense of old-established traditions and rights, at the expense of the constitution, and perhaps at the expense of unity in Canada.

Some hon. MEMBERS: Carried.

Mr. POULIOT: No; it is not carried, and the more "carried" is said, the less likely the section is to carry. I am not here to cause obstruction. I am here to express my views and deep convictions. We have heard a great deal about unity in this country, and the conclusion of what was said was that the province of Quebec was a reserve and that the people of that province were entirely different from the people of the rest of Canada. We have had sermons on unity which gave the impression that we are asking the majority in this country to be lenient and kind toward the minority of the province of Quebec. That is not the way for us to deal together as free citizens in this great land. No, sir. We both, English-speaking and French-speaking, have our qualities and our defects, but we must come together just as we are to try to solve our problems. How can that be done? It can be done if we have the truth about the French-Canadian war effort. We do not have it. I wrote to the minister on January 14, asking his help in securing some information about French Canadians who had enlisted in English-speaking Canadian units. I had received no answer by March. Then I put the letter on *Hansard*. Still I had no answer. I sent a copy of *Hansard* to the hon. gentleman concerned, accompanied by another letter. Still no answer. Afterwards I met his secretary, who showed me a letter that had been signed three weeks before by the minister, and that letter was not handed to me because it was not permitted by the Department of National Defence and other departments. Then I wrote another letter. The secretary of the minister telephoned me that the minister had put a note on my letter saying that according to him I was perfectly right in asking for that information. But I have not yet received an acknowledgment of my first letter. Is that reasonable?

What I want are the complete figures about the French-Canadian war effort. When we have them we shall be able to discuss the matter with anyone. If we are wrong, so much the worse for us; if we are right, so much the better for us. We shall not be afraid to tell the truth, and we shall not be influenced by any propaganda published by those who have a personal interest in slandering the province of Quebec.

I want to defend my own people because they are worthy of being defended. I have the utmost respect for the farmers, the sailors, the airmen and the soldiers and all the citizens of my province, who are equal to anybody in this country. We must not be considered a reserve in the province of Quebec. That is most insulting. We want to be treated exactly as others are treated. We do not want any unfairness or injustice. We want to be treated fairly and squarely.

Some people speak on our behalf. They have no right to do it because when they speak they do not think of the common people, and they do not interpret the views of the common people. They express views that are not ours, and it is for their own selfish purposes that they do that.

In this war effort the people of the province of Quebec cannot be ignored. There

must be a complete knowledge of what has happened in the past so that we can be fair in judging the present and the future. Let us have the figures. How is it that we cannot get them? How is it that they are not accessible to all members of parliament and to all citizens of this dominion? That information would mean more for national unity than any eloquent speeches uttered by gifted speakers in this country, or speeches delivered by some one but written by others. It is time that we speak face to face, say what we have to say, and not be afraid of any kind of propaganda. The most disastrous propaganda was that used in the last plebiscite campaign in which all those who were not seeing eye-to-eye with the government were branded as traitors. Even in this chamber there were members who were making the worst insinuations against their colleagues who did not see eye-to-eye with their views, however absurd they were.

I hope, sir, that in the future, the errors of the past will not be repeated; that a broad outlook will be taken, and that all Canadians, whether English-speaking or French-speaking, will understand that this is our common country; that we are all in the same boat and that we have an interest in coming closer together for a common purpose. Let us not make anyone out worse than he is. Let not any French Canadian think the English-speaking Canadian is otherwise than he is, and let not the reverse occur either. There are no angels in this country. There are guardian angels over every citizen, but they are invisible. Those we see are not angels, although they may be very good citizens.

Is it not possible, sir, to come back to the love and defence and protection of our land? I have been advocating it. If this argument is not accepted, let us try another one with those who are not Canadians at heart, with those who are imperialists. Let us say to them: "We want immediately the roads that are necessary for the war effort. If you will not build them for the defence of this country, build them at least for the transportation of supplies to Great Britain and our friendly allies overseas." If the defence of our country is not enough in the eyes of those who do not consider Canada worth defending, let us use the other argument and ask that roads be built for the transportation of supplies to Great Britain and our friendly allies. Let us also have mobile units for the defence of this country, not only trains but trucks for the transportation of our soldiers. We should have

[Mr. Pouliot.]

automobiles, tanks and all the mobile equipment that is required for an army in a country the size of ours. These things should be provided.

Besides that, let us have in each branch of the Department of National Defence the direction in the hands of Canadians, not outsiders. We should have Canadians to decide the policy of this government. We should not be in the hands of outsiders. The reason why our defence is neglected is that everything is suggested by outsiders and is done on their advice. We want Canadians at heart, whether born in this country or not, but people who are to live in this country after the war is over, and who are not to go away like migratory birds.

Section agreed to.

Section 3 agreed to.

On Section 4—loans authorized.

Mr. QUELCH: This is the section under which we would naturally discuss the question of the financial policy of the government; but, in view of the fact that it is desired that we get through with this bill as rapidly as possible, I will defer the discussion to a later time.

The minister on several occasions has pointed out that the government's policy of taxation and of issuing bonds is to restrict the spending power of the public. We have asked why he does not make use of the services of the Bank of Canada, but he has never given a satisfactory answer to that question. At a later stage I shall be prepared to discuss the matter at some length and ask the minister to give a satisfactory explanation of why we are not using the Bank of Canada instead of the chartered banks. Since the declaration of war, we have borrowed directly or indirectly from the chartered banks close to one thousand million dollars—to be exact, I believe $950 million. We consider that when it is necessary to expand the amount of money in circulation, that should be done through the Bank of Canada and not through private moneyed institutions.

Mr. ILSLEY: I have already given the reason. I will give it again, though.

Section agreed to.

Sections 5 and 6 agreed to.

Preamble agreed to.

Bill reported, read the third time and passed.

LOAN OF $750,000,000

TO MEET LOANS OR OBLIGATIONS, TO PURCHASE UNMATURED SECURITIES, AND FOR PUBLIC WORKS AND GENERAL PURPOSES

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee on Bill No. 96, to authorize the raising, by way of loan, of certain sums of money for the public service.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

Section 1 agreed to.

On section 2—loan authorized.

Mr. ILSLEY: The leader of the opposition asked me yesterday to place on record a statement showing the borrowings in New York and the times when such borrowings took place. He asked me to prepare and put on record a statement of the borrowings by the dominion government and also those of the Canadian National Railways. I have a statement relating to the dominion government, and with the permission of the committee I will have it printed in the proceedings at this stage. This is the statement:

Particulars of the Issue of Dominion of Canada Bonds Outstanding which are Payable in New York Funds

1. Thirty-year 5 per cent bonds dated May 1, 1922, due May 1, 1952—$100,000,000.

This issue was sold in 1922 to provide cash for various general purposes of the government.

2. Thirty-year 4 per cent bonds dated October 1, 1930, due October 1, 1960—$100,000,000.

One hundred million dollars issued for cash in October, 1930, of which $25,000,000 was used for the redemption on April 1, 1931, of 5 per cent bonds dated April 1, 1916. This latter issue was part of a $75,000,000 loan issued for the refunding of maturing loans and general purposes.

3. Ten-year 2½ per cent bonds dated August 15, 1935, due August 15, 1945—$76,000,000.

The proceeds of this issue were used for the following purposes:

(a) Redemption of $50,000,000 Dominion of Canada 2 per cent promissory notes dated September 1, 1934 and due September 1, 1935, which, in turn had been issued to redeem $50,000,000 of a $60,000,000 issue of fifteen months' notes on September 1, 1934. This latter issue had been sold on July 1, 1933, for the refunding of an issue of $60,000,000 dated October 1, 1932. The issue of $60,000,000 notes dated October 1, 1932, had been sold to provide cash to redeem in part $40,000,000 two-year 4 per cent notes dated December 1, 1930, and $13,000,000 treasury notes dated September 19, 1932, and maturing December 17, 1932. This latter issue was the balance outstanding of an issue sold in September, 1931, in the amount of $19,000,000 for the general requirements of the government and the Canadian National Railways. The $40,000,000 two-year 4 per cent notes referred to in this paragraph were the renewal of a note issue sold in 1927 to obtain funds to pay off part of the 1917-27 victory loan.

(b) Redemption of $26,000,000 Canadian National Railway Company 4½ per cent dominion guaranteed bonds due September 15, 1954, called for redemption on September 15, 1935. This issue had been sold in 1924 for various railway requirements.

4. Twenty-five year 3¼ per cent bonds dated January 15, 1936, due January 15, 1961—$48,000,000.

The proceeds of this issue were used for the following purposes:

(a) Redemption of $40,000,000 4½ per cent bonds dated February 1, 1926, due February 1, 1936. This issue in turn refunded part of $70,000,000 4 per cent one-year notes dated September 1, 1926, which, in turn, had refunded one-year notes dated September 15, 1925. This latter issue had been issued to refund in part an issue of treasury notes dated September 15, 1924, which had been issued to provide cash to refund in part treasury bills and the 1919-24 victory loan.

(b) Redemption of $2,737,986.67 2 per cent treasury bills due January 30, 1936, which had been issued to provide moneys to assist the Canadian National Railways in retiring certain maturing obligations.

(c) Redemption of $5,418,000 2 per cent Canadian National Railway Company dominion guaranteed bond due January 30, 1936, which had been issued to redeem part of Canadian Northern Railway Company dominion guaranteed bonds dated February 1, 1925, due February 1, 1935.

5. Seven-year 2¼ per cent bonds dated January 15, 1937, due January 15, 1944—$30,000,000; Thirty-year 3 per cent bonds dated January 15, 1937, due January 15, 1967—$55,000,000.

The proceeds of this issue were used in part to redeem at maturity $89,787,000 5 per cent war loan bonds dated March 1, 1917, due March 1, 1937, payable in Canadian and United States dollars.

6. Thirty-year 3 per cent bonds dated November 15, 1938, due November 15, 1968—$40,000,000.

The proceeds of this issue were used to redeem $40,000,000 three-year 2 per cent notes dated January 1, 1936, and due January 1, 1939. This latter issue had refunded two short-term note issues of $20,000,000 each which had been issued to provide in part cash to redeem at the call date, October 1, 1935, Grand Trunk Railway Company of Canada 7 per cent debentures dated October 1, 1920, and to redeem at the call date, December 1, 1935, Canadian Northern Railway Company 7 per cent debentures dated December 1, 1920.

7. Two-year 2¼ per cent notes dated May 1, 1941, due May 1, 1943—$10,000,000.

The proceeds of this issue were used in part to redeem part of $20,000,000 twenty-seven months' notes dated February 1, 1939, due May 1, 1941. This latter issue was sold to provide New York funds for general purposes of the government including loans to the Canadian

National Railways for the purposes of redeeming Canadian National Railway obligations payable in London and obligations payable optionally in New York, London and Canada.

N.B.—It will be noted that of the $459,000,000 outstanding at the present time, $306,000,000 represents loans or renewal of loans issued in the period 1922-1930. It should also be noted that $200,000,000 represents loans issued to refund obligations first issued during the last great war.

The Canadian National Railways' statement is not ready. It is a difficult one to make up and has to be made by the Canadian National Railways themselves. With the permission of the committee I will put that on record when the annual Canadian National Railways' financing bill is before the house. I have not the information at the moment. That would be the more appropriate place for it, anyway.

Mr. HANSON (York-Sunbury): I have had some communication with the minister's office to-day, and I understand the position. I would like him to make it clear just what the amount of our direct borrowings were.

Mr. ILSLEY: There is $459,000,000 outstanding now.

Mr. HANSON (York-Sunbury): But the borrowings between 1922 and 1930 were something over $300,000,000, were they not?

Mr. ILSLEY: Three hundred and six million dollars represents loans or renewals of loans issued in the period 1922-1930. It should also be noted that $200,000,000 represents loans issued to refund obligations first issued during the last great war.

Mr. HANSON (York-Sunbury): That will be satisfactory.

Section agreed to.

On section 3—Charge upon consolidated revenue fund.

Mr. DOUGLAS (Weyburn): Do I understand that this bill is for the redeeming of maturing securities? Would the minister give the committee a statement showing what interest these outstanding securities are carrying and what the new interest rate will be? Does the list which the minister has just tabled outline the interest rates that they bear?

Mr. ILSLEY: Yes. The statement I have just made relates only to securities payable in United States funds—payable in New York.

Mr. CHURCH: What is the meaning of the last seven words in section 2, "and for public works and general purposes?" Is public works under the estimate? How much is under war and how much under general purposes?

Mr. ILSLEY: This phrase has been contained in all the loan acts since 1930, and it is carried in here more for the purposes of uniformity than anything else. I cannot say what, if any, public works will be constructed under this bill, but at any rate they have to be subsequently and separately authorized. This bill is merely a borrowing bill; it does not authorize expenditure upon any particular public work.

Mr. CHURCH: Is this to pay for postmortem public works?

Mr. ILSLEY: Pardon?

Mr. CHURCH: Is part of it to pay for postmortem public works and money that has been spent for general purposes?

Mr. ILSLEY: No.

Section agreed to.

On section 4—Loans authorized.

Mr. HANSON (York-Sunbury): Has this been in the bills heretofore?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): What is the purpose of it? I must have asked an explanation before, but I do not recall what it was.

Mr. ILSLEY: All I can say is that my information is that this is just a copy of former bills.

Mr. HANSON (York-Sunbury): But what is its purpose? What use may be made of it? I realize that securities will have to be issued for refunding purposes. It may be that certain orders in council or other orders and regulations may be passed to give effect to the true intent and meaning of the bill.

Mr. ILSLEY: I can imagine regulations or orders in council that might be issued—

Mr. MICHAUD: Regarding denominations.

Mr. ILSLEY: Yes, and regarding the issue and sale or pledge of securities of Canada and the paying or redeeming in whole or part of loans or obligations of Canada.

Mr. HANSON (York-Sunbury): Governing methods.

Mr. JACKMAN: That would come under section 2.

Mr. HANSON (York-Sunbury): Section 2 gives the government wide-open powers to do anything. There must be some reason for section 4. I think we ought to know as a matter of record.

Mr. ILSLEY: Strictly speaking, any order in council passed under section 2 would be limited in scope to the authorities and powers contained in that section.

Mr. HANSON (York-Sunbury): They are very wide.

Mr. ILSLEY: But it might be necessary to state the procedure which would be followed in the United States or Great Britain or Canada for the purchasing of unmatured obligations for example, that they should be deposited in a certain place and all that kind of thing.

Mr. HANSON (York-Sunbury): I do not wish to delay the committee, but I make this suggestion: Would the minister ask his officers to draw up a memorandum, and in some proper place the minister could put it on the record.

Mr. ILSLEY: I shall be glad to do that.

Mr. SLAGHT: May I offer this suggestion. Section 2 deals with raising an amount by way of loans and with the sale or pledge of securities and so on. It deals only with that. But those moneys are to be used for paying or redeeming the whole or any portion of loans or obligations outstanding. Under section 4 you might have occasion in redeeming a loan to make a preliminary contract with some corporation or persons with respect to the terms under which you redeem. Under section 2 you would not have authority to do that; you have only borrowing authority. Therefore section 4 gives complete authority to ratify a redemption contract. It seems to me that section 4 is necessary.

Mr. POULIOT: I would remind the committee that last spring I asked the Minister of Finance if he thought that Sir Edward Peacock would come to Canada, and he said no. Since then I have been asking a question as to the coming of Sir Edward Peacock to Montreal on June 25 when Sir Arthur Salter was also at the Ritz-Carlton, and I asked if any minister had met him. I know the Minister of Finance was not in town; he was in his own beautiful province at the moment, but Sir Edward Peacock was met by the Minister of Munitions and Supply and also by the Minister of National Defence in the capacity of Acting Minister of Finance. I thought the work of Minister of National Defence was a full-time job, especially in view of the fact that the minister is seldom in his place here. I thought he was always very busy with his staff discussing the problems of his department. So I was greatly surprised when I learned that he was Acting Minister of Finance and acting so precisely when Sir Edward Peacock and Sir Arthur Salter came to Montreal. Sir Edward Peacock is a director of the bank of Montreal and the Canadian Pacific Railway company and is the gentleman supposed to come to America to sell the stock of the Canadian Pacific. Whether or not he was successful in the United States I do not know, but I know he was successful with the Bank of Canada. If he did not sell the Canadian Pacific stock to the Bank of Canada, it is held there under guarantee awaiting the action of the government, probably awaiting the enactment of this bill, and we shall have amalgamation of railways under that.

The committee and the house know that I have always been opposed to amalgamation of the railways, opposed from the point of view of the public and also from the point of view of the employees of the railways. It has been the traditional policy of the Liberal party to oppose the amalgamation of the railways and to condemn the Tories just on account of their railway policy during the last war. If we are to have amalgamation by this government, what difference would there be between the Liberal party and the Conservative party?

Mr. MacNICOL: The Conservative party would be better.

Mr. POULIOT: I do not know, but I am greatly disappointed. It is impossible to get anything definite in that regard. When I told the minister that my expectation was that Sir Edward Peacock would come to Canada, he replied, "I do not believe so; it is not my expectation that he will come." But two months afterwards he came just the same, and then it was the Minister of National Defence who met him. Did he meet him with Mr. Magee, president of Barclays Bank? I do not know. But in my humble view—

Mr. SLAGHT: Order.

Mr. POULIOT: I will ask my hon. friend to keep his voice for his own speeches.

Mr. SLAGHT: I rise to a point of order. This bill deals only with the purchase of obligations of the Dominion of Canada. It has nothing to do with Canadian Pacific railway stock, and the hon. gentleman, interesting as he always is, is quite out of order.

Mr. POULIOT: Mr. Chairman, you know very well that what my hon. friend has said is undoubtedly very clever; but at the present time we have a bill like this, which might be changed at any time by order in council under the War Measures Act, and what are at present securities of Canada no one knows. It may be securities or stock of the Canadian Pacific that has been held and guaranteed by the Bank of Canada and paid afterwards by the Dominion of Canada. I will not insist any more at this time; I shall have other opportunities to bring up the matter, but I warn the committee again against any scheme for the amalgamation of the railways. It would be a great mistake for this government and a very bad thing for the country, and I will oppose it on every occasion I have an opportunity to do so.

Section agreed to.

Preamble agreed to.

Bill reported, read the third time and passed.

SUPPLY

Hon. T. A. CRERAR (Minister of Mines and Resources) moved that the house go into committee of supply.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, during the last few days, and especially yesterday and to-day, I have endeavoured in every way to facilitate two very important government measures. We have now passed the $2,000,000,000 war appropriation bill and the $750,000,000 loan bill; we have given them third reading immediately, without any delay. I suggest that there is a limit to what we can stand in a day, and the government should call it eleven o'clock. As far as I am concerned, I cannot work all the time. If the government want to go on, well and good, but I am suggesting that we have made splendid progress to-day and that we ought to rise. That is my suggestion to the government, and I hope they will accept it.

Mr. T. C. DOUGLAS (Weyburn): As far as we are concerned we would like to go on and take up the agriculture estimates. Some of us have been waiting quite a while for them, and we have hurried through the other business in order that we might get on to the amendment to the National Resources Mobilization Act to-morrow. We should like to continue, unless the leader of the opposition is insistent.

Mr. HANSON (York-Sunbury): No, I am not insistent; it was just a suggestion. If you are going into the agriculture estimates, go ahead.

[Mr. Slaght.]

Mr. CRERAR: Well, Mr. Chairman, we certainly appreciate the progress we have made to-day, in having both these bills receive third reading, and I want to thank the leader of the opposition and other hon. members for their cooperation in helping us reach that very much desired goal. But there is still a great deal of work to be done, and we should like to have the estimates of the Department of Agriculture considered until eleven o'clock. If there are any items that are contentious they can stand, because notice was not given last night of our intention to take up this business. I think we might make some progress. We would like to call an item in fisheries and one in trade and commerce, if that is agreeable.

Mr. HANSON (York-Sunbury): It does not make any difference to us which department you take up. Go ahead with agriculture.

Motion agreed to and the house went into committee, Mr. McCann in the chair.

DEPARTMENT OF FISHERIES

71. Departmental administration, $132,340.

Mr. HANSON (York-Sunbury): What is this?

Mr. CRERAR: We have only four departments in so far. We want to call an item in fisheries, and have it stand, and then an item in trade and commerce and have that stand. Then we will proceed with agriculture.

Item stands.

DEPARTMENT OF TRADE AND COMMERCE

341. Departmental administration, $140,900.

Item stands.

DEPARTMENT OF AGRICULTURE

1. Departmental administration, $125,558.

Mr. PERLEY: Would the minister make a general statement on this item? Is that the way in which he intends to proceed? It would be interesting to have a general statement now, if he proposes to make one.

Hon. J. G. GARDINER (Minister of Agriculture): I have no objection to making a general statement, but within the last week I made one which I think covered practically everything in the estimates.

Mr. HANSON (York-Sunbury): That was a political statement.

Mr. GARDINER: Well, I imagine any statement I might make now would be called

a political speech too. I have no objection to dealing with any of the estimates or answering any questions with regard to them, but I think I would be only wasting the time of the committee if I made another speech on agriculture at this stage.

Mr. NICHOLSON: When the minister was before the committee some time ago some question was raised with regard to the policy followed in connection with the payment of inspectors who have been working under the Prairie Farm Assistance Act. I had some correspondence last year in connection with the amounts paid some of the inspectors in my constituency. It appeared to me that the accounts they submitted for expenses were quite out of line with what would be paid by men representing commercial firms, doing similar work and staying at hotels in that constituency where it would be impossible to engage a room costing more than $1.50 a day. Would the minister explain the policy which is followed and tell us what check there is in order to ascertain whether or not these accounts are being padded, whether the inspectors are required to send in itemized statements, and so on?

Mr. GARDINER: That really comes under item *30,* and we are dealing with item *1.* I would rather deal with that when we reach the proper item.

Mr. ROSS (Souris): I tried to get a question on the order paper yesterday, and perhaps the minister could answer it now. It was based on an article which appeared in the Winnipeg *Tribune* of Thursday, June 4, and had to do with the matter of filing preliminary applications for the acreage reduction bonus. Yesterday I received a copy of a letter addressed to the superintendent, wheat reduction plan, province of Manitoba, Union Trust building, Winnipeg, under date of June 5. That letter said, in part:

> Following our interview of yesterday, when you informed me that I was not eligible for a 1942 wheat reduction bonus because the date on my application would read June 4th instead of May 31st or earlier, I decided to write you and present you with evidence that farmers are not entirely to blame for the confusion that exists. . . .

Then follow three or four pages of this evidence, in which is pointed out the waste of gasoline and tires that would be entailed in driving to the office to file these applications. I should like to point out also that the press throughout the prairie provinces, during the months of April and May, carried information to the effect that where there was no change in acreage from 1941, it would not be necessary to file a preliminary application. According to the article in the *Tribune* and according to this letter, that policy must have been altered within the last few days, and there is great confusion among the farmers of my province, who are holding district meetings this week at which they are agitating about the matter. I suggest that the minister make a statement to clarify the situation, as to whether the policy has been changed or not, and say whether an operator who has not filed an application by May 31 is now barred from coming under the bonus.

Mr. GARDINER: That has to do with item *31.* There is no general ruling this year that a man must have his application in by May 31. However, the office did ask them to put in a return if there were any change in acreage, and also encouraged others to put in returns, even if there were no change in acreage. It is not compulsory under the regulations to do that this year, with the exception of those who did not put in applications last year.

Mr ROSS (Souris): Those people would not be barred.

Mr. GARDINER: No.

Mr. ROSS (Souris): Then, on March 23 I had a question on the order paper resulting from an article which appeared in the Ottawa *Journal* of March 21, stating that the armed Canadian forces were to use horses for transport. I took the matter up with the Minister of National Defence, and his secretary informed me at that time that they were making inquiries of the Department of Agriculture to see how many horses might be used for army transport purposes without seriously affecting agriculture. It was pointed out that they desired to use horses to some extent, if they were available.

My idea at that time was that it would not handicap agriculture, because I believe people are using tractors as much as possible, and I thought this would be a market in which surplus horses could be disposed of. While travelling on the train one of the controllers—I believe it was the coal controller, or someone connected with him—told me that the T. Eaton company in Winnipeg were changing their deliveries from trucks to horses, and that they were not allowed to obtain a permit to purchase horses. I thought that was rather far-fetched; but if there is anything to it, I should like to have the matter clarified by the minister.

Mr. GARDINER: I do not know of any regulation requiring anyone to have a permit to buy horses, or to substitute horses for other equipment. However, inquiries have

been made by the Department of National Defence with regard to the use of horses in substitution for some other equipment. Nothing final has yet been done. The matter is still in the exploratory stage.

Mr. ROSS (Souris): There would be quite a number of horses available without seriously affecting agricultural production.

Mr. GARDINER: Yes, in many sections of Canada.

Item agreed to.

2. Publicity and extension division, $108,715.

Mr. PERLEY: Would the minister explain the change?

Mr GARDINER: The details are found at page 53 of the estimates, and at the top of page 54. It will be found that total salaries and wages stand at $76,490, as against $75,650 in the previous year. Cost of living bonus stands at $5,755; express, freight and cartage is decreased by $800; printing and stationery shows a decrease of $3,200; supplies and materials show a decrease of $2,500; telephones, telegrams and postage show an increase of $1,800, and travelling expenses have been reduced by $1,200. When these figures are balanced they show a decrease from $109,650 to $108,715.

Mr. PERLEY: How many shared in the cost of living bonus?

Mr. GARDINER: There are thirty-five listed among those receiving salaries. I should imagine most of them would receive the cost of living bonus.

Mr. SENN: I understand publicity is carried on by the department in a number of ways. One is by the sending out of publications through mailing lists; another is through the press, where articles are sent to the press from time to time. Then there are exhibits at fairs. Is there any connection between the data accumulated by the Department of Agriculture and that accumulated by the bureau of statistics? Sometimes it is thought that the figures are not altogether reliable, and I should like to know whether there is any connection between the two branches, whether they collaborate in the gathering of data, and, if so, to what extent.

Then, what amount is spent on each class of publicity—that is, on exhibits at fairs, publications of articles in newspapers, and the like? How are mailing lists made up? Are they changed from year to year, or do they go on from one year to another? How are the newspapers, in which these articles are published. chosen? Are they chosen all across the dominion, regardless of size, circulation or political leanings?

Mr. GARDINER: The first question has to do with the manner of gathering statistics. The bureau of statistics, which is connected with the Department of Trade and Commerce, does consult with officials of the Department of Agriculture in the gathering of material. They have a service, and we have a service which checks on the different markets. Sometimes there is a variation in the figures obtained.

Mr. SENN: Quite a serious one.

Mr. GARDINER: The figures put out by the bureau of statistics are sometimes based upon estimates gathered by certain methods, and by comparisons with conditions existing previously. Some of our statistics are gathered directly from the markets, through our inspectors on those markets. A correction takes place as between the two branches. But it is just possible that between the time statistics are gathered and the time the correction is made, some figures available to officers in the Department of Agriculture may differ from those given out by the bureau of statistics.

Mr. SENN: That holds good not only with respect to markets but also with respect to the number of cattle and hogs throughout the country.

Mr. GARDINER: Yes; it might apply to any of those things. But usually before anything is given out to the country, the figures are corrected as between the two departments, and conform as nearly as possible.

Mr. SENN: How are mailing lists made up, and how are the newspapers, in which these articles are published chosen?

Mr. GARDINER: Certain articles appear only in farm papers. My understanding is that those articles appear in all farm papers across Canada. There are other articles which appear only in local papers, and the method followed there is, I believe, to get in touch with the secretary of the association, and to deal with all papers of certain classifications across the country.

No attention is paid to political leanings or anything of that kind. As was mentioned a moment ago, papers of a certain classification are taken right across Canada. I presume that is based largely upon the subscription lists of the papers or the community that they serve. For other articles we use the daily press. It all depends upon the importance of the article and the necessity of getting it out in a short space of time. Articles that have

to do with something that we want done within a week or two weeks would be of no value if published in a monthly agricultural paper, or possibly in a bi-weekly publication. In that case we would have to use the daily press in order to get the articles out to the public in time. Of course we supplement the publicity in the press with publicity over the radio and with information in pamphlet and other forms.

Mr. DOUGLAS (Weyburn): Does the department deal directly with the newspapers, or does it work through an advertising agency?

Mr. GARDINER: There is a press sheet made available weekly without any intermediary, but the advertising is done largely through the Canadian advertising agency with headquarters in Montreal.

Mr. SENN: Nothing is paid for the printing of those press sheets?

Mr. GARDINER: That is correct.

Mr. SENN: Exhibits are quite often put on at fall fairs, and I should like to know if it is intended to carry out this practice during this coming year. How are the fairs chosen? I have noticed bacon exhibits and other types of exhibits which are quite instructive. Are these fairs chosen on the basis of attendance, because they are class A or class B fairs, or is the selection made indiscriminately?

Mr. GARDINER: As hon. members know, during the last two years we have eliminated grants to fairs, and we have also limited our activities in connection with exhibits because of the cut made in the estimates. We follow the practice generally of having an exhibit in one zone in one year and then switching the exhibit in the following season. That makes it possible to have an exhibit shown generally throughout the country over a period of years. There will be some exhibits at class A fairs and there will be other exhibits at class B fairs; in each case, some of these fairs have ceased to operate during the war period. Generally speaking, we are carrying on the same activities as were carried on prior to the war, but at a lesser cost and in lesser volume.

Mr. SENN: I am interested in a fair which is neither class A nor class B, although it has a fairly good attendance. I have never understood how a board of directors or a secretary of a fair should go about getting an exhibit of this kind. I have been at fairs where these exhibits were shown, and they attracted a lot of attention. I think they are a good thing, and I should like to know how to go about making an application, particularly if a certain attendance is necessary before such application is considered.

Mr. GARDINER: It is not the practice to show exhibits at the smaller fairs, but that is done on occasion. Any fair board is at liberty to make application to the department for an exhibit, which application will be considered. It sometimes happens that an exhibit is being shown at a larger fair, and the necessary equipment can be moved to a smaller fair and the exhibit shown in about the same period of time. There are many details that enter into the matter.

Mr. PERLEY: What amounts are paid to the weekly, daily and monthly press?

Mr. GARDINER: Nothing is paid for the articles that go out from the department, but we do pay for advertising. A certain sum is paid to the advertising agency for the publication of advertising matter in a certain classification of publication. The agency makes the arrangements with the different papers.

Mr. PERLEY: What sort of advertising?

Mr. GARDINER: It is largely war projects. We may want more hogs, and we advertise accordingly. We may want certain things done in connection with apples, or we may try to boost the sale of apples. In that case advertising is issued right across the country. It is advertising to increase the sale of farm products or the production of farm products.

Mr. PERLEY: What amount was paid by the agency to the weekly press in the provinces?

Mr. GARDINER: The amounts of which I have been speaking really come under the war appropriation vote which was discussed last week. I refer to the advertising of pork products and other things of that kind. I have not the information with me as to what was paid to the different papers.

Mr. ROSS (Souris): Was that amount paid direct to the weekly newspaper association, which would divide it?

Mr. GARDINER: We indicate to the agency what we want done; a price is set, and the agency makes the distribution of the amounts.

Mr. PERLEY: What amounts were paid by the agency to the weekly and daily press?

Mr. GARDINER: I will bring the war estimates with me the next time I am before the committee and answer that question for the hon. member. I have only the general estimates before me.

Mr. PERLEY: This is an estimate of the department; it is not a war appropriation.

Mr. GARDINER: The money spent under this vote is largely to prepare the material that goes out to the press, for which we do not pay. Since the war we have cut advertising out of this vote, and it is now done under the war requirement.

Mr. COLDWELL: Is all the advertising under this vote done in Canada, or is any done in Great Britain?

Mr. GARDINER: There is no advertising under this vote. This covers publicity in the form of pamphlets and so forth, material for which we do not pay. We send it out to the newspapers, and it may or may not be published, although most of it is.

Mr. MARSHALL: What portion of the $109,650 voted last year has been expended?

Mr. GARDINER: There is no balance; it has all been spent.

Mr. PERLEY: How many publications are issued? Does the whole cost of printing, paper, and so forth come out of this vote?

Mr. GARDINER: The full cost does not come out of this vote. The cost of the staff that prepares the material comes out of this vote, but further down there is an item covering the printing and stationery.

Mr. SENN: I have often thought that the material which is being sent out by the department does not get enough publicity. By that I mean that a number of excellent pamphlets are issued by the department from time to time and kept in stock showing how different crops and different plants should be cultivated, soya beans, for example, and sometimes I think the public know little or nothing about these pamphlets being available. From the pamphlets the people would be able to learn how to produce these things, but do they know they are available? Is anything being done to acquaint the public with the fact that this great number of publications is available and that by asking for them the public can get them and study them with a view to producing to better advantage than perhaps they are doing at the present time?

Mr. GARDINER: All of the publications that go out from the department are reviewed in the press at the time they are published, and also reviewed over the radio. Then we have a long mailing list to which we send these publications. We try in every way to get the knowledge over to the public that the publications are in existence and can be had by people asking for them. A few of them have to be purchased. We do everything possible to make the public acquainted with the fact that the publications are available.

[Mr. Perley.]

Mr. DOUGLAS (Weyburn): I think the hon. member for Haldimand has raised a very good point. The department prepares a great deal of free literature about which the people know little. I know that one year I secured a large quantity of different pamphlets on various subjects, poultry raising, hog feeding and so forth, and sent them out to rural schools in my constituency. The teachers put them on a desk where the children had access to them, and I was surprised how many people wrote in asking where they could secure copies. They had not known they were available. Many people do not get the newspapers, and those who do might not see the review. I do not know whether it would be possible to make these publications available to rural schools. That might be too large a territory to cover, but certainly the agricultural clubs should receive them and perhaps school teachers might be circularized and told that this material was available, and that if they had an agricultural club in their community the department would send them the literature. I know that people who have received this literature were grateful to get it, and we ought to make it known that these publications are available.

Mr. GARDINER: The pamphlets are not sent out in bulk, not even to members of parliament, unless they make application that they require a large quantity for some special purpose, but the figures before me indicate that a very large number of publications do go out. These figures cover 1940-41:

Statistics covering 1940-41—

86,422	personal requests received for publications.
468,380	publications mailed on personal request.
593,720	publications mailed in bulk.
1,420,482	copies of market reports mailed on request.
499,285	copies of press notices.
86,108	clip sheets.
521,170	farm notes.
11,209,015	copies of miscellaneous articles.
8,084	stencils cut for mimeographing.
8,345,326	copies printed from mimeograph stencils.
1,118	jobs on multigraph and offset.
3,085,695	copies printed on multigraph and offset.
2,003,270	pieces of mail addressed.

Mr. COLDWELL: Some years ago I think the schools used to receive in the early fall a leaflet giving a list of the publications that could be applied for. I am thinking of twenty years ago. Has that practice been discontinued? I know I used to pick out a number of pamphlets from the list and send in for them. I can see the list in my mind's eye now. I do not know whether the list went out to all the schools, but I got one for several years.

Mr. GARDINER: There is such a list available to people who apply for it. I do not think it is customary to send it to all the schools, but it would be sent to a school if the teacher asked for it.

Mr. COLDWELL: Perhaps I wrote in for the list in the beginning, and my name was continued on the mailing list.

Mr. GARDINER: Yes. People send in for the list and then select what pamphlets they wish.

Mr. GRAYDON: Is the publication known as the "Agricultural Situation Outlook" still published?

Mr. GARDINER: It is not published in the form in which it was issued originally, but a monthly review is published.

Mr. GRAYDON: In the early part of this session I made inquiries of the department with regard to this pamphlet which was issued for a number of years in peace time. I find among the farmers I represent quite a demand for the "Agricultural Situation Outlook". It was an informative publication covering several branches of agriculture and contained many interesting articles on the farm situation generally. I was wondering why the publication was discontinued unless there was some good reason for that.

Mr. GARDINER: The reason was the expense of getting out a publication of that kind with our estimates cut down as they have been since the war started. I might add that it is much more difficult, I think the hon. member will agree, to publish such an outlook in war time than in peace time. The term "outlook" indicates the nature of a publication of that kind.

Mr. STOKES: How is the mailing list compiled and kept up to date?

Mr. GARDINER: It is a continuing list which has been built up over a long number of years, and we try to keep the list as up to date as we can. If you check the list tomorrow you might find the name of somebody on it who died last year, but even in that event the publication would not be wasted because there would no doubt be someone at that address who would get the mail. As close a check as possible is kept of the list, and names are struck off when persons have moved, but there is just the possibility that there may be some overlapping in a list of that kind.

Mr. PERLEY: I agree with the hon. member for Haldimand that a great many of these publications are very useful. Last year I carried some home with me in my car, and I would slip them out to farmers. One was on soya beans, I remember, and another on beef and how to select and cook it. I happened to leave one or two of these publications with a family in my town. Last week the Wolseley community war service organization put on a carnival, and this woman, who is one of the homemakers' group, wrote to me that they were conducting a booth at this carnival and asked if I would select a number of pamphlets such as I had left on this occasion, or any others, and send them to her. I selected eight or ten. One was entitled "Milk, the Perfect Food," and another was headed "Why Pasteurize Milk?" There were also two or three about canning and preserving fruits. I have received word that they went like hot cakes. The homemakers' group made over $100 at their booth. No doubt there will be a demand for some of these publications. I understand that the minister's department is putting out a pamphlet on how to can preserved fruits without sugar. I believe that if such a publication is intended, it would be a good thing to get a little publicity through the weekly press or advertise it in some way, because now that sugar is rationed it would be a fine thing to have this information in the hands of the people generally.

Mr. GARDINER: The only thing I can say with regard to the matter is that our department has a service which is working out plans of that kind. Many women have been canning certain fruits and vegetables without the use of very much sugar; and all information with regard to that sort of thing is gathered together, put into the form of publications and sent out for the benefit of others. That work is going on constantly and I am sure, is helpful.

Mr. CARDIFF: Does each agricultural representative get a quantity of this literature, or how is it distributed?

Mr. GARDINER: Yes; they are all on the mailing list and get quantities of it from time to time.

Mr. GRAYDON: Could the minister give the committee any idea of the number of hours per week on the average occupied by Canadian Broadcasting Corporation broadcasts sponsored by the Department of Agriculture?

Mr. GARDINER: There is half an hour every day in connection with giving market prices and that kind of thing. There is some time in addition, but I have not complete figures.

Mr. COLDWELL: Is that sponsored by the department, or is it Canadian Broadcasting Corporation activity?

Mr. GARDINER: These are Canadian Broadcasting Corporation broadcasts. I hope the hon. member is not confusing it with the agricultural forum which was sponsored by the federal and provincial authorities.

Mr. COLDWELL: No.

Mr. GARDINER: The department itself does not actually sponsor the agricultural programme. We supply the material; that is the basis for it. In that sense maybe we are responsible for it. I would not like to say that we are sponsoring it.

Mr. GRAYDON: From a practical point of view, when the Department of Agriculture decides that it is in the interests of the farmers of the dominion that a broadcast should be made over the Canadian Broadcasting Corporation, is that initiated by the Department of Agriculture and, if it does, what is the practical means whereby the broadcast goes on the air? Does the Department of Agriculture go to the Canadian Broadcasting Corporation and ask for a date and for the particular length of time during which it wishes to broadcast? Does that come direct from the Department of Agriculture to the Canadian Broadcasting Corporation?

Mr. GARDINER: Yes. Whenever any special programme is put on, or we desire to have any special broadcast, we go to the Canadian Broadcasting Corporation and arrange for the person who is to broadcast, and so on.

Mr. COLDWELL: Do you pay for it?

Mr. GARDINER: No, we are not required to pay for it. Where it is in the national interest we are not required to pay.

Mr. COLDWELL: Has the department paid for any programme over the Canadian Broadcasting Corporation in the last year?

Mr. GARDINER: No, not from my memory, excepting broadcasts which are put on in connection with a matter like our acreage reduction plan, advertising in the west. Some of that is paid for.

Mr. COLDWELL: When you pay for it, do you place it through an advertising agency or direct through the Canadian Broadcasting Corporation?

Mr. GARDINER: The last arrangements which were made—for example, for the putting on of the broadcasts with regard to acreage reduction last spring—were made through the J. J. Gibbons Company, whose office is at Regina. They made the arrangements for the radio, largely because they are the agency which does that kind of thing in that area.

[Mr. Coldwell.]

Mr. COLDWELL: Who paid the commission on the government advertising over the Canadian Broadcasting Corporation in connection with this particular matter?

Mr. GARDINER: That was not all over the Canadian Broadcasting Corporation. It was over local stations, a combination of local stations. The Canadian Broadcasting Corporation may have been in it as well, but much of it went over local stations.

Mr. COLDWELL: But if that was a network programme it would be placed with the Canadian Broadcasting Corporation. The point I am getting at is this. We were amazed this morning, in the radio committee, to find that the victory loan campaign and certain other campaigns were placed with the Canadian Broadcasting Corporation through advertising agencies, and that commissions were paid to the advertising agencies for radio time obtained by the government for these national campaigns. Yet we have been told in this chamber that the Canadian Broadcasting Corporation is an agency of the crown. It seemed extraordinary, and I wondered if the Department of Agriculture were doing the same thing.

Mr. GARDINER: Ordinarily we go direct to the Canadian Broadcasting Corporation and make our arrangements direct with them. The only case I can recall, which is an exception, is the one I have mentioned. I am quite sure that that agency did make some arrangements for our advertising in the west. It was largely because we were making arrangements for the general advertising put out by that agency, and I am quite certain that they arranged for that broadcasting as well.

Mr. GRAYDON: To hark back to the evidence which came out on the radio broadcasting commission: there is an interdepartmental committee headed by Mr. Justice Davis, deputy minister of national war services, a purely advisory committee, but one which apparently is working on the question of coordinating the matter of governmental official information which is to be relayed to the Canadian Broadcasting Corporation for dissemination throughout Canada. I was wondering whether the Department of Agriculture, before it initiates a broadcast over the Canadian Broadcasting Corporation, sends or has the informational scripts sent to the interdepartmental committee; whether arrangements are made direct with the Canadian Broadcasting Corporation itself, or through the interdepartmental committee which was set up.

Mr. GARDINER: I think I am correct in stating that that organization is not yet func-

tioning. It has been recommended, and it is up for consideration. When it does function, if it functions, it will operate in the way the hon. member has said.

Mr. GRAYDON: I hope that the minister is correct in what he says in this regard, because the evidence we have heard is not in entire agreement with his statement with respect to the setting up of the committee.

Mr. GARDINER: In what way?

Mr. GRAYDON: I understood that the committee was functioning, and had been for some considerable time.

Mr. GARDINER: Unless I am misunderstanding what is suggested, it is not yet functioning. Probably we are not talking about the same thing.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order

---

Wednesday, June 10, 1942

The house met at three o'clock.

PRIVILEGE

MR. DOUGLAS (WEYBURN)—EDITORIAL COMMENT IN MONTREAL "GAZETTE"

Mr. T. C. DOUGLAS (Weyburn): I rise to a question of privilege. An editorial appearing in this morning's Montreal *Gazette*, referring to a statement I made in the house a few days ago, reads:

Most amazing of all was his protest on Monday against large shipments of Canadian beer to Libya for the use of the troops who are defending him and his family and his congregation under the appalling conditions of desert warfare. It was this that roused Mr. Ilsley's ire and the minister would have been less than a man if he had held his punch.

I desire to invite the gentleman who wrote that editorial to examine the remarks I made last Monday, and he will find that at no time did I make any reference either to Libya or to the sending of beer to that battlefront; that as a matter of fact it was the minister himself who dealt with that question. In reply to the minister I said, as reported at page 3151 of *Hansard:*

Then he proceeded to build up a straw man and to knock him down again, by referring to what people have said about sending beer to Libya. I was not talking about sending beer to Libya.

I have no objection to accepting responsibility for what I have said, but I do not propose to accept responsibility for straw men set up by the Minister of Finance.

PRIVATE BILLS COMMITTEE

Mr. T. F. DONNELLY (Wood Mountain) moved:

That the second and third reports of the standing committee on miscellaneous private bills, presented on June 8, be now concurred in.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WARTIME HOUSING—GENERAL MANAGER

Mr. CARDIFF:

1. What salary is paid to Mr. G. L. Goggin as general manager of the Wartime Housing Limited?
2. What was the date of his appointment?
3. What is the amount of his travelling expenses up to and including April 30, 1942?

Mr. HOWE:

1. Mr. Victor T. Goggin is general manager of Wartime Housing Limited. Salary, $10,000 per annum.
2. March 12, 1941.
3. $2,304.19.

WARTIME MERCHANT SHIPPING LIMITED

Mr. MacINNIS:

1. What are the names of the members of Wartime Merchant Shipping Limited?
2. What is the occupation or profession of each member and with what companies is each connected?
3. What are the functions of Wartime Merchant Shipping Limited?

Mr. HOWE:

1 and 2. H. R. MacMillan, president, president, H. R. MacMillan Export Company Limited; C. R. Redfern, vice-president, engineer, president, Redfern Construction Company Limited; Austin C. Taylor, vice-president, president, Bralorne Mines Limited; C. L. Dewar, comptroller, engineer, The Bell Telephone Company of Canada; H. A. Stevenson, assistant to the president, vice-president, Canadian Transport Company Limited; G. D. Eccott, treasurer, chartered accountant; Wm. Mitchell, secretary, lawyer, Kearney, Duquet and Mackay; D. B. McCoy, manager, Purchasing Dept., assistant general manager, The Steel Company of Canada, Limited; C. C. Coull, manager, Engineering Division, engineer; H. T. Mitchell, manager, Labour Training and

Supply Division, president, Mitchell Printing and Publishing Company Limited; N. Beaton, manager, Plant and Yard Expansion Division, engineer; N. Dobson, manager, Shipbuilding Division, senior surveyor, Lloyd's Register of Shipping; G. O. Vogan, executive assistant to the general manager, engineer; J. Husband, manager, Steel Division, salesman; G. S. Burrows, liaison officer, Washington, D.C., engineer, United Steel Corporation Limited; L. J. R. Sanders, manager, Production Division, engineer.

3. (a) Supervision, direction and administration of all contracts entered into by His Majesty or the Minister of Munitions and Supply in respect of the construction and assembly of cargo vessels in Canada or the design, construction, equipment and operation of shipyards, plants, or other buildings or shipways for any such purposes, the whole in accordance with such general or specific instructions as the minister may give to the company from time to time.

(b) The conduct of negotiations looking to the making of contracts in respect of the construction and assembly of cargo vessels in Canada or the design, construction, equipment and operation of shipyards, plants, or other buildings or shipways for any such purposes and the preparation of drafts of such contracts for submission to the minister for his consideration, the whole in accordance with such general or specific instructions as the minister may give to the company from time to time and subject to his approval.

(c) The coordination and expedition, in cases in which the minister may so request, of the construction or assembly of cargo vessels in the Dominion of Canada under contracts, the performance of which is for the time being under administration by the company.

(d) The payment of accounts properly chargeable against the above-mentioned contracts.

NATIONAL REGISTRATION—SKILLED WORKERS

Mr. CASTLEDEN:

1. What use has been made by the government of the 1940 national registration to place experienced and preferred tradesmen into war industry?

2. How many skilled tradesmen, toolmakers, metal workers, machinists and engineers are still unemployed or in non-essential industry?

Mr. MITCHELL:

1. From the 1940 national registration lists were compiled of registrants who reported they were skilled in certain "specialized" occupations. These occupations were selected on a broad basis to determine the persons who, by training or experience, might be fitted for employment in industries or services essential to Canada's war effort. From these lists requests, from government departments, from the armed forces, and from firms and individuals for names and addresses of persons skilled in designated occupations, were answered. The names of unemployed mechanics in the metal and shipbuilding trades were selected from the lists, and these men were communicated with in respect to placement in war industries. The names of those still available for employment were supplied to the most convenient offices of the employment service of Canada so that placements could be effected.

2. Information in respect to the number of skilled tradesmen, toolmakers, metal workers, machinists and engineers still unemployed will not be available until the registration of unemployed male persons, presently in progress, is completed. Information in respect to the number of such persons in non-essential industries will not be available until completion of the tabulation of the unemployment insurance commission registration of April 1, 1942.

WOMEN'S VOLUNTARY SERVICES

Mrs. NIELSEN:

1. What organizational plans have been carried into effect by the director of women's voluntary services?

2. What plans have been made for coordination of voluntary services of women?

3. What are the names of the organizations within the scope of the branch of women's voluntary services in each province, district or community to which women desiring to volunteer their services may apply?

4. What channels of publicity, if any, are being used by this branch to inform women of the facilities of the women's voluntary services?

Mr. THORSON:

1. The plan of organization and development of the women's voluntary services division, which is hereto attached, has been mimeographed and mailed to all the women's organizations. Four cities have appointed local committees to study the need of coordination of voluntary services and a number of other communities have made inquiries. A western trip is being made in the near future in response to requests for discussion and advice.

2. The organization of central volunteer bureaux locally is being encouraged. These serve as manning pools for voluntary effort thereby functioning as the clearing house for volunteers serving existing local organizations and acting as a reservoir for organizations to secure additional volunteers for their increased activities.

3. National Organizations: Red Cross, St. John Ambulance, Navy League, Imperial Order Daughters of the Empire, National Council of Women, Canadian Federation of University Women, Canadian Business and Professional Women's Club, national professional organizations, Catholic Women's leagues, national minority groups, Women's Institutes, fraternal organizations.

Provincial Organizations: The provincial counterparts of the national organizations, provincial home and school clubs, provincial adult education, La Ligue de la Jeunesse Feminine.

Community: Auxiliary services (coordinating councils, citizens committees, volunteer bureaux), health and welfare services, home and school clubs, trades and labour councils, labour auxiliaries, cooperatives, church groups. Each community has a certain number of these organizations or may have additional organizations not listed.

4. Copies of the memorandum "Organization and Development of the Women's Voluntary Services" have been mailed to all the organizations named in the answer to question 3; speaking at provincial and national annual meetings of various women's organizations; press releases; radio—one radio talk; bulletin of set-up for volunteer bureaux is prepared; individual correspondence; many personal contacts with representatives of national, provincial and local organizations.

Organization and development of the women's voluntary services

World War One rallied to it a volunteer service that resulted in social service organizations being created in the period that followed. World War Two is rallying many volunteers who have had no previous volunteer experience but who are spurred on to give a maximum service in the war effort.

The women's voluntary services division gives impetus to this effort. Its objectives are:

1. To unite both voluntary war work and civilian services in such a way that the whole volunteer movement marches forward in a coordinated whole on a community basis.

2. To recognize the difference in community set-up so that the plan of coordination will vary as the structure of war work and civilian services varies.

3. To be of service in an advisory capacity so that duplication and waste of effort may be reduced to a minimum. This may be accomplished by

(a) Strengthening civilian morale by such volunteer activity as will provide satisfaction and a feeling of accomplishment to the volunteer.

(b) Stimulating women to understand total war so that organizations may be encouraged to give volunteer service that will adapt itself to the constantly changing war scene.

(c) Encouraging the development and extension of training and lecture courses so that volunteers may be more proficient in their performance; but more especially, that they may understand the reasons for changes and development in war and civilian activities.

4. To stimulate interest in needed war time projects by organizing and directing these on a demonstration basis.

5. To encourage the organizing of emergency squads to be called upon as necessary.

6. To help create a community volunteer structure that will continue as the nation passes from war to peace.

Keeping in mind communities have difference in tradition, geographic position, size, etc., each community must be studied as an entity, yet certain basic procedures apply to all. For general purposes communities may be classified into two groups.

1. The large urban community. These usually have a council of social agencies or a welfare council which sponsors a volunteer bureau and through it correlates volunteer effort and acts as a clearing house for volunteers.

In these communities the principle of cooperation and coordination is not new. The council of social agencies has for years been the planning body for welfare organizations and their civilian services while the welfare council, later in development, functions to coordinate all community endeavour for the general welfare of its citizens.

The volunteer bureau may be set up as a committee of either council. It surveys the need for volunteers and recruits them. It keeps records of their qualifications, capabilities and experience so they may be placed with the organization where they can give the most effective service.

Training courses and lectures of a specific nature given by experts in various fields should be a function of a well organized bureau.

Every community is developing auxiliary services or citizens committees to assist in the welfare, comfort and recreation of the men in training.

The volunteer effort is directed mainly through

(1) Welfare councils or councils of social agencies.

(2) Volunteer bureaux.

(3) Citizen committees and auxiliary services.

It is therefore most important that in order to prevent overlapping and wasted effort there should be coordination. This may be achieved through a coordinating council representative of councils of social agencies, national organizations and governmental bodies. The interrelation between civilian and war services might be strengthened by the secretary of the council of social agencies or welfare council acting as secretary to the coordinating council. In any event the person selected as secretary of the coordinating council should have intimate knowledge of the welfare set-up of the community.

2. The smaller community. These communities are not likely to have a council of social agencies or a welfare council, but there will be one or two social agencies such as the childrens aid society, Victorian Order of Nurses, the relief officer, or the medical officer of health or a unit of the women's institutes.

Where such is the case, it would seem possible to coordinate the volunteer effort through a volunteer bureau. As the war progresses, new committees will be set up to meet new war-time services such as consumer groups to assist in price control, salvage committees to organize the salvage of the community, rehabilitation committees to assist in the rehabilitation of the returned soldier. This effort will be most effectively directed if organized through a volunteer bureau.

The foregoing statement of the women's voluntary services division clearly indicates that its purpose is not to set up a national organization in Ottawa forcing a set plan of volunteer organization on local communities, but rather by studying a community, help it so to organize its effort that total war may be waged without waste or duplication of effort in the volunteer field.

WARTIME PRICES AND TRADE BOARD—MRS. MCLAWS

Mr. McGREGOR:

1. Is Mrs. McLaws employed in any position with the wartime prices and trade board?
2. If so, in what capacity?
3. What are the duties attached to such position?
4. What salary and/or allowance does she receive?
5. What is the amount of travelling expenses and/or living allowance which she has drawn since her appointment?
6. By whom and upon whose recommendation was she appointed?

Mr. ILSLEY:

1. No.

2, 3, 4, 5 and 6. Answered by 1.

[Mr. Thorson.]

WARTIME PRICES AND TRADE BOARD—JEAN BURNS

Mr. McGREGOR:

1. Is Miss Jean Burns employed in any position with the wartime prices and trade board?
2. If so, in what capacity?
3. What are the duties attached to such position?
4. What salary and/or allowance does she receive?
5. What is the amount of travelling expenses and/or living allowance which she has drawn since her appointment?
6. By whom and upon whose recommendation was she appointed?

Mr. ILSLEY:

1. Yes.
2. Clerk.
3. Supervising routines and procedures, female stenographic and clerical staff.
4. $1,380 per annum.
5. None.
6. Civil service commission.

JAMES FRANCESCHINI—CONSTRUCTION OF BUILDING AT LAC TREMBLANT, QUE.

Mr. FRASER (Peterborough West):

1. Was a permit issued to James Franceschini for the construction of a building at Lac Tremblant?
2. If so, what materials did the permit release?
3. Did the permit release any steel?
4. What was the cost of the materials released by the permit?

Mr. HOWE:

1. No. A permit No. 4604 was issued to the Quebec Paving Company Limited for construction of a residence at Lac Tremblant for the use of James Franceschini. This permit was issued on the basis of prior commitment, work having been started in November, 1941, before P.C. 660, January 30th, 1942, covering dwellings, came into effect. At this time all dwelling houses, on which work had started before January 30th, 1942, but had not been completed by that date, were issued licences.
2. As required for the work, subject to the conditions of the licence.
3. No.
4. Not known. The information required on the application for a building permit does not separate materials from labour.

SALMON FISHING REGULATIONS

Mr. ROY:

1. Has the dominion government passed a regulation compelling all holders of salmon fishing licences in the province of Quebec to limit their annual catch to 12,000 pounds?

2. If so, (a) upon what date was such order adopted; (b) does it apply only to the province of Quebec, or is the province of New Brunswick equally included?

3. Was such regulation requested by the government of the province of Quebec? If so, by what department?

Mr. POWER (for Mr. Michaud):

1. No.
2. Answered by No. 1.
3. Answered by No. 1.

WARTIME PRICES AND TRADE BOARD—CHAIRMAN

Mr. ROY:

1. What is the name of the head of the wartime prices and trade board?
2. When was he appointed?
3. What position did he occupy before he received his present appointment?
4. Where was he born?
5. How long has he lived in Canada?
6. Where did he live before taking up his residence in the dominion?

Mr. ILSLEY:

1. Donald Gordon.
2. November 19, 1941.
3. Deputy Governor, Bank of Canada.
4. Oldmeldrum, Scotland.
5. Twenty-eight years.
6. Oldmeldrum, Scotland.

CANADIAN ASSOCIATED AIRCRAFT LIMITED—PLACEMENT OF WORKERS ON CLOSING OF PLANT

Mr. NOSEWORTHY:

What steps have been taken by the government to secure placement for the aircraft workers already discharged and about to be discharged by reason of the closing of Canadian Associated Aircraft Limited?

Mr. MITCHELL: The matter of finding other essential jobs for the men released through the closing down of Canadian Associated Aircraft Limited has been taken up by the Department of Labour and through the employment service it is expected that men of the skilled classes required in other war industries will be placed without delay.

QUESTIONS PASSED AS ORDERS FOR RETURNS

FARM LOANS—BRITISH COLUMBIA

Mr. REID:

1. What was the number of applications for loans under the Canadian farm loan board in the province of British Columbia in each month since January 1, 1939, to May 30, 1942?
2. What number of such loans were granted and for what amount, during each of these months?
3. What amount was collected by the Canadian farm loan board in the province of British Columbia during each of the above months?

WARTIME PRICES AND TRADE BOARD—NEWSPAPER ADVERTISING

Mr. FRASER (Peterborough West):

1. How much has the wartime prices and trade board spent on newspaper advertising up to the 31st of May, 1942?
2. What amount was spent for newspaper advertising in each province?
3. What amount was spent for magazine advertising? In what magazines did the advertising appear?
4. Does this board give its advertising to an advertising agency or agencies?
5. If so, to what agency or agencies?
6. If it does not give the advertising to an agency, does the board employ advertising men?
7. If so, who are they?

WARTIME HOUSING—ONTARIO

Mr. CARDIFF:

1. To what firms have contracts for the erection of houses in the province of Ontario been awarded by the Wartime Housing Limited up to May 15, 1942?
2. At what places were such houses erected or now under contract for construction and how many at each place?
3. What was the actual amount paid or to be paid each building contractor under each contract for each of the several types of dwellings?
4. Were tenders called in all cases?
5. Was the tender extended in any case for additional houses in excess of the original contract? If so, in what cases and did the same prices prevail as in the original contract; if not, what differences existed in each case?
6. Has any amount been paid to any of the contractors over and above the original contract? If so, give details of each instance?

MOTIONS FOR PAPERS

PORT OF TORONTO—DUTY PAID ON COAL

Mr. NOSEWORTHY:

For a statement showing a day by day breakdown of the amount of duty paid on coal at the port of Toronto between April 1 and July 31, 1940.

CANADIAN OFFICERS' TRAINING CORPS

Mr. GREEN:

For a return showing the universities, colleges and schools which have an officers' training corps recognized by the Department of National Defence, the number enrolled in each corps and what grants are paid by the government in respect of each corps.

LABOUR CONDITIONS

ACTION TAKEN AGAINST MONTREAL INDUSTRIAL WORKERS FOR UNION MEMBERSHIP

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): Mr. Speaker, I should like to ask a question of the Minister of Labour, based on a telegram from Montreal received by a number of members to-day, signed by Paul Fournier. It reads as follows:

> Over the period of the last two months workers have been fired, intimidated and blacklisted for union membership in the Dominion Engineering Company, Marconi Company, Montreal Locomotive Company and Robert Mitchells. Repeated appeals to the Department of Labour for investigations and actions have failed to have those men and women who were fired reinstated. Intimidation still goes on. Unless these practises are immediately stopped we feel that serious consequences will result.

What has the government done in regard to these disputes, and what is its intention as to future action?

Hon. HUMPHREY MITCHELL (Minister of Labour): It is passing strange that these telegrams should be broadcast in this way. It is only fair to say that on every occasion on which a request of this nature has come to the Department of Labour it has been handled with expedition. We received a similar request from Mr. Fournier, asking for an appointment with me to meet a delegation on the 24th or 25th of this month. I have already answered Mr. Fournier's communication, stating that I would meet the delegation.

Mr. MacINNIS: Has this particular matter been investigated by the Department of Labour, or by someone from that department?

Mr. MITCHELL: My understanding is that this delegation wants to meet me to consider the whole question as to conditions in Montreal. I have some knowledge of the situation there, and I have replied to their request.

POOLING OF RESOURCES

ESTABLISHMENT OF JOINT UNITED STATES AND UNITED KINGDOM BOARDS ON PRODUCTION, RESOURCES AND FOOD

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I should like to ask a question of the Prime Minister. In to-day's issue of the Montreal *Gazette* under date of Washington, June 9, there is a statement to the effect that the factories and farms of the United States and the United Kingdom were pooled to-day by the establishment of two joint boards. One is a combined production and resources board, and the other a combined food board. President Roosevelt stated that Canada has no direct representation on either board, but would line up with the United States on the production board, and that for all practical purposes Canada was represented, because "Nelson will speak for North America as a result of the close integration of the Canadian-American production programmes already in effect." Does the Prime Minister consider it satisfactory that Canada should be represented by a United States official?

Mr. MACKENZIE KING: I shall give my hon. friend a statement in the matter to-morrow.

JAPANESE NATIONALS

REFERENCE IN KAMLOOPS PAPER TO CONDITIONS IN NORTH THOMPSON AREA CAMPS

On the orders of the day:

Mr. T. J. O'NEILL (Kamloops): Mr. Speaker, I wish to ask a question of the Minister of Labour arising out of an item appearing in a Kamloops paper. The item says that the foremen in the camps in the North Thompson area are only flunkies for the Japanese, that the Japanese are in full control of the rations; that the Japanese are not rationed for sugar; that the Japanese are being fed the best canned peaches, canned pears and canned plums, while the guards have only dried fruit. It states that the guards are laughed at by the Japanese, and that they have no backing at all. Has the Department of Labour any information as to the truth of these statements, and if there is any foundation for them, what action does the government propose to take?

Mr. MITCHELL: In the first place—

Mr. SPEAKER: I should have interrupted the hon. member when he began his observations, but I must point out now that this is certainly a question which should be placed on the order paper. It is improperly asked at this stage.

Mr. NEILL: On a point of order, this is a very urgent matter in British Columbia. The minister is ready to reply; could he not be allowed to give his answer?

HOUSE OF COMMONS

READING OF SPEECHES—FORTY MINUTE RULE—STATEMENT OF MR. SPEAKER

On the order:

Second reading of Bill No. 80, an act to amend the National Resources Mobilization Act, 1940.—The Prime Minister.

Mr. SPEAKER: Before proceeding with this order there is a matter I should like to draw to the attention of the house. At the conclusion of the debate on the address in reply to the speech from the throne, I called the attention of the house to serious infringements of the rules relating to forty-minute speeches, and the reading of speeches. Since that time hon. members have observed very faithfully the meaning and intent of those rules. This is, of course, a very important debate, and at the opening of it I should like to say that so far as I can I intend to apply those rules to all parties in the house. It is true that the Prime Minister and the leader of the opposition have the right to speak at length, and it has been the practice and has been acquiesced in by the house to extend this privilege to the leaders of two other groups, namely, the hon. member for Rosetown-Biggar (Mr. Coldwell) and the hon. member for Lethbridge (Mr. Blackmore). They have been permitted to speak longer than forty minutes, and also if necessary to read their speeches, on the principle, as I understand it, that they are speaking not only for themselves as individual members but also as the exponents of the policy of the groups of which they are the leaders.

MOBILIZATION ACT

AMENDMENT TO REPEAL SECTION 3 PROVIDING LIMITATION IN RESPECT OF SERVICE OVERSEAS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved the second reading of Bill No. 80, to amend the National Resources Mobilization Act, 1940.

He said: Mr. Speaker, in what I propose to say this afternoon I intend to make my remarks under two main divisions. The first division will relate to the amendment, and will also have reference to the plebiscite. The second part will deal particularly with the issue of conscription.

On Monday, May 11, I moved for leave to introduce the bill which is now before the house. Leave being granted, it was introduced and read the first time. As then explained, the bill seeks to amend the National Resources Mobilization Act, which was assented to on the 21st of June, 1940. There is but one amendment of significance. It is to repeal section 3 of the Act. Such further amendments as are sought are consequential upon the striking out of section 3. They do not go beyond deleting from section 2 of the Act, the words "subject to the provisions of section 3 hereof" in the first line of the section as it stands at present, and the renumbering of the sections affected.

Section 2 of the National Resources Mobilization Act reads as follows:

2. Subject to the provisions of section three hereof, the governor in council may do and authorize such acts and things, and make from time to time such orders and regulations, requiring persons to place themselves, their services and their property at the disposal of His Majesty in the right of Canada, as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community.

Section 3 of the Act reads:

3. The powers conferred by the next preceding section may not be exercised for the purpose of requiring persons to serve in the military, naval or air forces outside of Canada and the territorial waters thereof.

Let me immediately direct the attention of hon. members to the wording and exact meaning of these two clauses. They give expression to the law as it is at the present time. They help to make clear the precise effect of the proposed amendment.

By section 2, special powers are conferred upon the governor in council. By another section of the act, the powers conferred are to remain in force only during the continuance of the present war. There can be no doubt whatever as to what these powers are. The governor in council possesses and has possessed ever since June 21, 1940, power to require persons to place themselves, their services and their property at the disposal of His Majesty, as may be deemed necessary or expedient for the defence of Canada, or the efficient prosecution of the war.

Power to require persons to place themselves, their services and their property at the disposal of His Majesty—is nothing more or less than what is meant by conscription. The power here given is that of conscripting all persons, which, in law, include corporations, all their services, and all their property, for the defence of Canada, or the efficient prosecution of the war.

It is well that this fact should not only be made perfectly clear, but that it should be emphasized. Because ever since the act was passed, and even up to to-day, there are many who say, others who think, and yet others who believe, or who would have it appear, that conscription does not exist in

Canada. These people say that conscription is the right principle; that conscription is in force in other countries, and that we ought to have conscription in Canada. They say that it is wrong and unfair that, in any part of the country, men should not be conscripted for military or other service while the men in other parts give their services voluntarily. That, above all, "slackers" and "shirkers" should not be allowed to "go free," while others are left to do the fighting.

Extraordinary as it may seem, the persons who say or who would have others believe that we do not have conscription in Canada are not confined to citizens of other countries. If we are to judge by what we hear, and what we read in the press from time to time, they include a very large number of our own citizens. They certainly are among the number who are loudest in their utterances.

This demand for conscription in Canada has been made right along and continues to be made, notwithstanding the fact that, for all Canada, conscription has been the law of the land since June 21, 1940, and that, under the special powers conferred upon the governor in council by the National Resources Mobilization Act, compulsory military training, in other words "conscription", has been in operation since October, 1940, and compulsory service, for the duration of the war, since February, 1941.

Under the original plan, some 80,000 young men received thirty days military training. Under the revised plan, which provided for four months training to be followed by service for the duration, more than 30,000 young men are now in course of training or service. This number does not include the very considerable proportion of those called up who, subsequently, volunteered for the navy and the air force, or for service in the army anywhere in the world.

There are two methods by which most ends are attained by government. The one is the voluntary method, the other the compulsory method. Power to require persons to place themselves, their services and their property at the disposal of his majesty—is the power of government to employ the compulsory method. In other words it is the power to conscript. How then can there be any question as to there being conscription in Canada, or any doubt that the principle of conscription has been approved by the parliament of Canada? The principle is there. It is embodied in the National Resources Mobilization Act. It is part of the law of the land, and has been so by statute ever since June 21, 1940. The whole purpose of the National Resources Mobilization Act was to give to the governor in council power to conscript the property and services of individuals or corporations. That power, where it has been deemed necessary or expedient to do so, has been exercised ever since, and is being exercised by the government to-day.

There was, it is true, at the time the act was passed, a limitation placed upon the exercise of the special powers conferred upon the governor in council. That limitation still exists. It is set forth in section 3, which provides that the powers conferred may not be exercised for the purpose of requiring persons to serve in the military, naval or air forces outside of Canada and the territorial waters thereof. The meaning of the section is perfectly clear. Section 3 was not intended to deny the existence of the powers of compulsion or conscription conferred upon the governor in council, much less was it intended to take away any of those powers. Indeed, the section begins with the words "the powers conferred by the next preceding section", and thereby constitutes an affirmation of the existence of the powers. What the section does, and all it does, is to limit the exercise of those powers, and to limit them in one particular only. That limitation is in respect of their exercise "for the purpose of requiring persons to serve in the military, naval or air forces outside of Canada, and the territorial waters thereof".

This is the one and only limitation upon the exercise of the powers conferred on the governor in council, on June 21, 1940. The amendment proposes to remove this limitation. The adoption of the amendment clearly does not mean the adoption of any new principle with respect to the method of raising men for military service. It extends the area in which the powers of the governor in council may be exercised but does not change the character of those powers. In other words, the amendment is not related to the principle of conscription, but to the extent that its application may be deemed necessary or expedient for the defence of Canada or for the efficient prosecution of the war.

I come now to a most important fact with respect to the powers conferred upon the governor in council under the National Resources Mobilization Act. The act itself is enabling legislation. It does not necessarily contemplate the immediate, and certainly does not contemplate the total exercise of the powers conferred. Were those powers to be immediately and totally exercised we should have established at once a communist state. What the act does contemplate, as is expressed in the statute itself, is the exercise "from time

to time" of such of the powers conferred as may be deemed "necessary or expedient". While full and complete powers for the exercise of compulsion are given to the governor in council by the act, under its provisions, it is left to the governor in council to decide when, and to what extent, it may be necessary or expedient to exercise the powers thus conferred. This will be equally true of the powers of the governor in council under the act as amended. The discretion of the government will remain precisely what it is at the present time.

Perhaps I cannot do better, by way of illustration of the difference between the possession of unlimited powers of conscription by the government and the exercise of these powers in the manner deemed "necessary or expedient" at a particular stage of the war, than by quoting what I said in this house on February 25 last.

In *Hansard* at pages 831, 832, I am reported as follows:

> In order to carry on war, men are necessary, money is necessary. Both have to be raised, one in large numbers and the other in large quantities. With respect to the men that are being raised at the present time, we have two methods. They are not ends in themselves but methods, and we are taking the methods which we believe will be most effective and serviceable to Canada's war effort when we resort to the one or to the other. We have two methods of raising men for the army. Some of them are raised by compulsion; they are serving within the territorial limits of Canada. Others are being raised by voluntary enlistment, some of them also are serving in Canada. But all that are going overseas are being raised by the voluntary enlistment system, which has proved effective up to the present.
>
> Now with respect to the raising of money, we are using the same two methods. We are raising money by compulsion, under taxation in its different forms; and we are raising money voluntarily by the loan system which is in progress at the present time, and which the people of the country are supporting splendidly and, I believe, will continue to support. Supposing my hon. friend were to ask me: "What are you going to do if the voluntary system fails in the matter of the loan? Will you tell the people that now?" Could I tell them that? Would it be wise to tell them that? But a decision will have to be made if the voluntary system in the matter of loans should fail to produce the results which it is necessary should be produced in the securing of an amount of money requisite for the purpose. Under such circumstances, I think probably there would be resort to the conscription of wealth. I do not see any other alternative than for the government just to come along and take the wealth that exists, if the required sums cannot be raised voluntarily.
>
> . . . I wish to have that parallel kept in mind. What the government is going to do when the voluntary method fails in the matter of loans it will decide when the time comes; and it will do exactly the same thing as respects the matter of raising men. . . . And may I say this: I think the people of the country will see to it that both things are linked pretty closely together if one or the other becomes necessary.

I hope I have made it quite clear that the National Resources Mobilization Act, as it stands, is not mandatory but enabling legislation; and that, if amended as proposed, it will continue to be enabling legislation.

The extent of the use of the powers conferred upon the government by the provisions of the National Resources Mobilization Act is, and has been from the outset, a matter of government policy. Government policy has always to be decided in the light of all relevant circumstances. This will remain true of the unrestricted powers which the amendment, if enacted, will afford.

I come now to the plebiscite and its bearing upon the amendment before the house. I shall endeavour to anticipate the various questions that may arise in the course of debate, and to answer them in turn.

First of all, why was the plebiscite held? The answer to that question will be found in three paragraphs which appear in the speech from the throne:

> My advisers believe that the magnitude and balanced nature of Canada's war effort is being obscured and impaired by controversy concerning commitments with respect to the methods of raising men for military service which were made prior to the spread of the war to all parts of the world.
>
> The government is of the opinion that, at this time of gravest crisis in the world's history, the administration, subject only to its responsibility to parliament, should in this connection and irrespective of any previous commitments, possess complete freedom to act in accordance with its judgment of the needs of the situation as they may arise.
>
> My ministers accordingly will seek, from the people, by means of a plebiscite, release from any obligation arising out of any past commitments restricting the methods of raising men for military service.

You will observe that there were three purposes in holding the plebiscite. The first was that nothing should be allowed to obscure or impair the magnitude and balanced nature of Canada's war effort; the second, that the administration, subject only to its responsibility to parliament, should possess complete freedom to act in accordance with its judgment of the needs of the situation as they may arise in the prosecution of the war; and the third, which has a direct bearing upon the first two, that the government and parliament should not be bound by past commitments, but be free to discuss and to decide, on its merits, the extent of the use of conscription.

The real nature and extent of Canada's war effort has, for more than a year past, been obscured because of a persistent effort to make conscription for overseas service the symbol of a total war effort, regardless of whether or not the voluntary method was proving wholly adequate. For example, it was said that Canada's effort was not an all-out effort, and could not be an all-out effort because the possibility of conscripting men for service overseas was excluded by existing commitments. This was said regardless of the fact that it has been unnecessary to resort to compulsion, because volunteers in the required numbers have been available.

No one could deny that such commitments had been made. It was useless to argue that in reality, the commitments were not a limiting factor. So long as the government was held in honour bound by these commitments, it was next to impossible to demonstrate that this seeming restriction was not a limiting factor on an all-out effort.

A release from the moral obligation not to resort to conscription for overseas service was a necessary first step before Canada's war effort could be placed in its true light. Release, on that score, was sought by means of the plebiscite, and release has been obtained as a result of the plebiscite. The government and members of parliament are no longer bound by any moral obligation arising out of past commitments. There is now entire freedom to discuss and to decide upon its merits the question of the method to be employed in enlisting men for service overseas. The government is now free to propose without breach of faith, any extension of the application of conscription which may be thought desirable or necessary to a furtherance of Canada's war effort. In the consideration of the matter, both in parliament and in the country, controversy arising out of past commitments can no longer be used to obscure the magnitude and balanced nature of our war effort.

A release from the moral obligation not to resort to conscription for overseas service was equally a necessary first step before the government could seek from parliament freedom to act in accordance with its judgment of the needs of the situation, as they might arise in the prosecution of the war. That release the government obtained as a result of the plebiscite. Complete freedom to act in accordance with its best judgment will, however, not exist until parliament has removed section 3 of the mobilization act.

Let me now deal with the relationship of the plebiscite to conscription, and in particular, as to whether a "yes" or "no" vote was a vote for or against conscription. On this point, I should, first of all, remind hon. members of what was said in the course of the plebiscite campaign. Both in this house and throughout the country, it was made perfectly clear by myself as leader of the government, by the leader of the official opposition, and by the leader of the Cooperative Commonwealth Federation, and by members of their respective parties, that an affirmative vote was not a vote for conscription. I am afraid I cannot tell the house what stand the leader of the Social Credit party took. I have, however, found nothing in any of his utterances which would enable it to be said that he regarded an affirmative vote as a vote for conscription for service overseas.

The question on the ballot is, however, the best answer as to whether or not the plebiscite was a vote for or against conscription.

The question on which the people of Canada were asked to express an opinion was:

> Are you in favour of releasing the government from any obligation arising out of any past commitments restricting the methods of raising men for military service?

Clearly the plebiscite merely released the government from its obligation not to resort to conscription for service overseas. It did not commit the government to conscription for services overseas. The result of the plebiscite leaves no doubt as to the freedom of the government and of parliament to discuss the question of conscription for service overseas upon its merits. It equally leaves no doubt as to the freedom of the government and of parliament to decide, for or against conscription for service overseas, either conditionally or unconditionally.

The result of the plebiscite is no more to be construed as a vote for conscription for service overseas than it is to be construed as a vote of confidence in the present administration, or a vote for any political party. That, too, was stressed throughout the plebiscite campaign.

The people were not called upon to express any opinion on the merits of conscription, or on its desirability or necessity. In fact, the plebiscite was selected as the method of obtaining their views precisely because it afforded the best known means of obtaining an expression of opinion regardless of political affiliations, and regardless of military considerations.

Since conscription was not the question on which the vote was taken, the result of the plebiscite cannot be considered or construed as a mandate for conscription. It was not even in the category of a mandate. It was wholly and solely an expression of opinion.

The vast majority of the citizens of Canada indicated that in their opinion the government, in deciding upon the course to be pursued in the prosecution of Canada's war effort, should not be hampered by any restriction respecting the methods of raising men for military service.

Some, however, will say: Would the government have asked to be released from its commitments unless it envisaged the possibility, at some future time, of a need arising for conscription for service overseas? As I have just said, one of the purposes of the plebiscite was to give to the government freedom thereafter to recommend to parliament any measure respecting military service deemed essential to the security of our country and the effectiveness of an all-out war effort. We were thereby taking, in plenty of time, a precaution which would enable the government to meet, in the most effective manner without any possible breach of faith, any emergency that might arise in the future course of the war.

To sum up concisely the relationship of the plebiscite to the issue of conscription, I would say: (1) that the plebiscite cleared the deck for unrestricted discussion and debate; (2) that the amendment if adopted will clear the deck for unrestricted decision and action by the government, subject only to its constitutional responsibility to parliament.

The vote on the plebiscite was taken on Monday, April 27. On Friday, May 8, I informed the house of the government's intention to amend the National Resources Mobilization Act, and on Monday, the 11th of May, the bill containing the proposed amendment was introduced and given its first reading. In the interval, on Saturday the 9th of May, the Minister of Public Works (Mr. Cardin) tendered his resignation. I felt that the reasons given by the minister evidenced a mistaken view of the government's purpose and intention and therefore sought to have him reconsider his resignation. But the minister felt he could not change his views, so I had no alternative but to inform his excellency of the correspondence which had passed between us, and to advise the acceptance of the minister's resignation.

In the minister's letter of resignation, there will be found, I believe, not only the reasons which occasioned the resignation, but an explanation of the misgivings which lie at the root of the reasons themselves. Similar reasons and misgivings are naturally in the minds of some supporters of the government, not only from the province of which the minister was one of the representatives in the cabinet, but from other provinces as well. In the case of all but a few of the government's supporters, they account, I believe, for such objections as have been raised to the amendment. It is important, therefore, that the arguments set forth by the minister in justification of his resignation should be examined with the utmost care. In presenting these arguments, I cannot do better than quote from the words of the minister's letter.

The minister said:

> I feel that there is no necessity for repeating here the arguments which, I sincerely believe, justify my action. Suffice it to say at present that, as far as Canada is concerned, since the question of the plebiscite was first discussed and since the vote has been taken, nothing has been said nor anything established to indicate that the war situation has rendered necessary, just a few days after the vote, the introduction of a measure containing the principle of compulsory military service for overseas.

In this paragraph is set forth very clearly a circumstance which has greatly perplexed many of those who saw in the plebiscite simply a clearing of the decks for freedom of discussion and possible future action. They had not envisaged the immediate introduction of legislation; much less, as the minister said, "the introduction of a measure containing the principle of compulsory military service for overseas." The misunderstanding of the exact situation has been further aggravated by the fact that since the result of the plebiscite was known, a deliberate effort has been made to construe the result as a mandate for conscription. Not only has it been said that the result of the plebiscite constitutes a mandate —but what is still farther from the truth—a mandate that necessitates immediate resort to conscription for service overseas.

Had the government's action, in introducing the amendment, been due to any such interpretation, either of the purpose of the plebiscite, or of the result of the plebiscite, I would have been the first to support the minister in his protest. I can, however, find no justification for any such interpretation, either of the purpose of the plebiscite or of its results.

I have already said this afternoon that a "yes" or "no" in the plebiscite was not to be, and could not truthfully be construed as a "yes" or "no" for conscription for service overseas. I said precisely the same thing in the debate on the speech from the throne, and in the debate on the plebiscite bill. I said the same thing in my radio broadcasts. In interpreting, through the press and in this house, the results of the plebiscite, I also repeated what I had previously said.

The issue was not conscription but whether the government, subject to its responsibility to parliament, should have a free hand in the discharge of its duty in carrying on the war.

This free hand the government has still to secure from parliament. Prior to the plebiscite, because of past commitments, the government was precluded from coming to parliament to request a free hand. The government is no longer in that position. It is free to come to parliament, as it does to-day, because of the release as a result of the plebiscite from all such commitments.

In order to confirm what I have just said, allow me to read from the nation-wide broadcast I delivered on April 7, in an opening appeal to the Canadian electorate for an affirmative vote:

> The issue at present is not conscription; it is whether or not the government, subject to its responsibility to parliament, is to be free to decide that question itself, in the light of all national considerations. The government is not asking you to say whether or not conscription should be adopted. That responsibility the government is asking you to leave to itself, and to parliament, with entire freedom to decide the question on its merits.

Let me also read what I said on April 24 in a final appeal to the electorate for an affirmative vote. This appeal was also made in a broadcast which was nationwide:

> When the plebiscite was announced many did not understand what it was on which they were going to be asked to express an opinion. Many thought that conscription was the question to be decided. In other words, they believed that the government was placing on the people the responsibility of deciding the issue of conscription, instead of assuming that responsibility itself, and making its own recommendation to parliament.
>
> It has now ben made clear that conscription is not the issue. Let me emphasize that fact. Those who tell you that conscription is the issue are misleading you. The sole purpose of the plebiscite is to obtain for the government, and for parliament, a perfectly free hand in dealing with this, as with all other questions. All you are being asked to say is whether or not you are in favour of the government's hands being perfectly free at this time of war. That is the meaning of the question to which you are being asked to reply yes or no. If you reply yes, you will not be committing the government to conscription for service overseas; but you will be enabling the government and parliament to discuss and decide that question solely on its merits.

I have quoted from my own nation-wide broadcasts. Let me now quote a paragraph or two from the nation-wide broadcasts delivered by the leader of the opposition on April 20. I quote:

> This plebiscite is simply to give to the government and Mr. King release from a commitment not to enlist men for overseas service by compulsory methods. That, primarily, is the only issue involved. Emphatically, it is not, in this specific vote, an issue for or against compulsory service for overseas. It is merely a vote to release or refuse to release, Mr. King from a pre-electon pledge. . . . You are not called upon, by this plebiscite, to declare for or against conscription for overseas service. That may come; it does not follow from this plebiscite. . . . The only question involved is whether the government shall be free to follow any policy it may deem necessary in the future.

[Mr. Mackenzie King.]

Let me also quote from the nation-wide broadcast delivered by the leader of the Cooperative Commonwealth Federation, on April 21. I quote:

> The vote on Monday is not a vote for or against the conscription of man-power for overseas service. It is a vote to release members of parliament from their pledge not even to consider such conscription. Thus, while the Prime Minister in his radio address on April 7 quite properly stated the reasons why it is necessary to obtain a release from the pledges against conscription for overseas service, he made it quite clear that such conscription is not the issue which will be decided by the plebiscite. That issue will be decided by parliament when and if the government presents it for discussion.

From these quotations, it will be seen that the leader of the opposition and the leader of the Cooperative Commonwealth Federation expressed precisely the same view as myself of the issue in the plebiscite.

It cannot serve any useful purpose, indeed it can only do a great injustice to the Canadian electorate, to attempt to place upon the results of the plebiscite any interpretation other than that which, before the vote was taken, the electors were told would be placed upon the results. To interpret the results otherwise would be doing a cruel injustice to many members of this House of Commons who most certainly would never have advocated an affirmative vote had it not been made clear beyond all doubt that in so doing they were not endorsing conscription. I know of many members, some of them with sons serving in Canada's army overseas, who were themselves opposed to conscription, but who did all in their power, in their several constituencies, to secure an affirmative vote. This they did in order that they themselves and "the government and parliament should be wholly free to exercise their best judgment in dealing with every situation in the light of what is best for Canada, and for Canada's effort in the present war".

To claim that what had been sought or obtained by the plebiscite was a mandate for conscription is to assert that the plebiscite was a mere subterfuge. Such a claim goes further than that: it is equivalent to saying that those who stated that the issue was not conscription, did not mean what they said; that they were deliberately seeking to deceive the electorate.

Such a claim does a particular injustice to hon. members of this house, who knowing the importance of national unity at a time of war did their best to remove the prejudices which some others were doing their utmost to inflame. In the endeavour to bring home to the people of their province the truth of Canada's position in the present war, and the need in the interests of national security as well as of national unity for an affirmative vote, none fought more valiantly than the majority of the members of this house from the province of Quebec, including my former colleague, the then Minister of Public Works and of Transport.

Let me make this perfectly clear. If the government has brought in the amendment at the time it has, it is not because of any false interpretation of the results of the plebiscite, but for reasons that are in complete accord with the purpose for which the plebiscite was held.

I have said that the purposes of the plebiscite were to place the magnitude and balanced nature of Canada's war effort in its true light, and to secure for the government a free hand in the prosecution of the war. Both purposes, I believe, should be achieved as speedily as possible.

I made this abundantly clear in the words with which I concluded my final broadcast on April 24. I quote:

> Let me just say this, that if disaster should ever overtake us, it will certainly be said for generations to come that had the government's powers not been restricted, the disaster would never have occurred. Such is the responsibility that may come to rest upon those who, in the existing crisis, are unwilling to remove restrictions and give to the government a free hand in its war policies.
>
> To-day, the enemy is so strong that he can only be held at bay, and finally defeated, by the common action of all the united nations. For her own security, Canada should make it perfectly clear to the other united nations and, above all, to the United States, that Canada is as ready to help them as we know they will be ready to help us. An overwhelming affirmative vote on Monday next will serve to make that perfectly clear.
>
> To-day, despite the magnificence of Canada's war effort, the impression is being fostered among other nations that because of a restriction on the powers of the government, Canada's war effort is not an all-out effort. This impression is quite unfounded. Nevertheless, it is working a grave injustice to our country as a whole, and to every man and woman who is making any contribution towards the winning of the war. I want that injustice to end. And so I ask you, my fellow-countrymen—every one of you—to help give to our country complete freedom and strength for an utmost effort both in its own eyes, and in the eyes of the world. You can do this by voting "yes" on Monday next.

How very much to the point the words of that appeal were has been brought home to us all within the past few days, with surprising suddenness. For more than a fortnight past, the forces of the United States and Canada have been combining their strength to meet imminent attack by Japanese forces upon Canada and the United States.

May I say that only in to-day's papers and over the radio this morning we were informed that one of the United States ships just off the coast had been torpedoed. Some men were brought ashore alive, but unfortunately one of the number died before his raft could reach the shore. That is on the Pacific ocean—a ship torpedoed by a Japanese submarine.

The people of Canada, on Monday the 27th of April, made it unmistakably clear that they desired for Canada and for its war-time government "complete freedom and strength for an utmost effort both in its own eyes and in the eyes of the world."

In the eyes of some in our own land, and even more in the eyes of many in other countries, so long as clause 3 remains in the National Resources Mobilization Act, that "complete freedom and strength for an utmost effort" does not and cannot exist. Regardless altogether of whether the removal of clause 3 would make the difference of an additional man going overseas, so long as, in the statutes of Canada, any restriction remains it will continue to be cited as a bar to a total effort, and a bar, moreover, which finds its expression in the law of our land.

We have been released by the plebiscite from commitments which, up to the time of the plebiscite, had been pointed to as the bar to an all-out effort. Surely, every argument that could be urged in support of a release from a moral obligation, can be urged with equal force against a legal obligation, the effect of which, in so far as it may constitute a bar to a total effort, is exactly the same. If there be any wisdom in removing false impressions, surely the sooner they are removed the better.

It will be said that it may be perfectly true that there is need for some action as a consequence of the plebiscite, and need even for immediate action. But why, it is asked, go so far? Why seek to do everything at once? Why not proceed by stages? The people need educating. What they may not see to-day, they may come to understand to-morrow. It was difficult enough, in some quarters, to have them see the wisdom of trusting the government, and of giving to it, subject to its responsibility to parliament, a free hand at a time of war. Why arouse suspicions? Above all, why give to those who

said that the plebiscite was a mere subterfuge and that its real purpose was the immediate application of conscription for service overseas, the chance to say "we told you so; we are the real leaders; the rest have been deceiving you". Why should those who spoke otherwise be placed in a false light by the introduction of a measure containing the principle of compulsory military service for overseas, and that, as my former colleague said: "just a few days after the vote"?

These are pertinent questions. They are questions to the significance of which too careful attention cannot be paid by members of parliament, and, I might add, by all who have to do with the moulding of public opinion in Canada. They may seem difficult questions to answer, but if they cannot be answered, and answered to the satisfaction of an impartial listener, then I am prepared to say that I would be unworthy of the confidence placed in myself, and the government would be unworthy of the support it has received from those who so loyally supported us in our effort to obtain an affirmative vote on the plebiscite.

Let me first of all refer to what some would have regarded as a preferable way of proceeding. I do not think I need to say more about the mistake it would have been for the government, once the moral restriction was removed, to have delayed in seeking the removal of the legal restriction.

But, it is said, could not the removal of the legal restriction have been effected by two or more steps, instead of one? It has, for example, been said that if, in due course, the government had brought in an amendment which would have substituted "the northern half of the western hemisphere", or, for that matter, "the western hemisphere", for the words "Canada and the territorial waters thereof", where the latter words appear in section 3 of the mobilization act that in all probability such an amendment would have encountered little, if any, opposition.

That, I believe is true. As long ago as February 26, I stated that the government would, if necessary, not hesitate to use the War Measures Act to send troops called up under the provisions of the National Resources Mobilization Act, to "the panhandle or any place in the vicinity of the coast of Canada". No exception was taken to that statement at the time it was made, nor am I aware of any having been taken since. It is probably now apparent why, in speaking at the time, I related that possible action particularly to Alaska.

The question is: Would such an amendment have served to meet the purposes of the plebiscite as they were outlined in the speech from the throne? Would it have removed from clause 3 of the mobilization act everything that could be construed as a legal limitation upon Canada's war effort? Would it have given the government freedom of action? Would it not rather have been construed, by those who wished so to misrepresent the government's purpose and intention, as the substitution of another limitation for the one removed? Would this new legal limitation, just as has been the case with the existing one, not have continued to be pointed to as a restriction upon a total or utmost effort?

But that is not the only objection to proceeding by stages. To amend the act, in any particular, means a debate in both houses of parliament. It means a debate which, whatever the amendment proposed, would be a debate on the question of conscription. Should a second or third amendment become necessary later on, it would certainly mean as many subsequent debates, going over all the same ground again. Unnecessary discussion and prolonged debate in parliament at a time when our country is hourly being drawn into greater danger would not serve to place Canada's war effort in its true light, either before our own people or before the people of other countries, nor would it gain respect for parliament.

This brings me to a further reason why I feel the government is right in seeking, once and for all, to secure complete freedom to exercise its best judgment in dealing with every situation in the light of what is best for Canada and for Canada's effort in the present war, and that events will so prove.

In concluding my first appeal for an affirmative vote on the plebiscite, I said:

> Aggression has followed aggression with such speed in so many parts of the world that no one can now predict what new areas the war may reach next year, next month, or next week. Danger threatens us from the east and from the west. It is in the face of this peril that, for the defence of our freedom and of our country, the government asks you to give it a free hand.

For the same reason, we now ask the same from parliament.

I take no exception to the statement made by my former colleague in his letter of resignation when he says:

> As far as Canada is concerned, since the question of the plebiscite was first discussed, and since the vote has been taken, nothing has been said nor anything established to indicate that the war situation has rendered necessary just a few days after the vote, the introduction of a measure containing the principle of compulsory military service for overseas.

Were the element of surprise not an outstanding feature of enemy strategy; and were it not a fact that no one knows at what moment the war situation may take some wholly unexpected turn, there would be, at the present time, no practical need for the introduction of an amendment which contains the principle of compulsory military service for overseas. It is always well, however, to be prepared as far in advance as may be possible for any contingency.

If the reasons for having introduced the proposed amendment, just a few days after the vote on the plebiscite, were solely those of meeting some new war situation, or a war situation other than was envisaged when the question of the plebiscite was first discussed, I would be the first to say that such reasons were wholly insufficient to justify the deletion of clause 3 in its entirety at the present time. But such, as I have explained, are not the reasons either for the amendment being introduced so soon after the taking of the plebiscite, or for the government seeking, at the present time, to have the whole of section 3 deleted.

Up to the present, I have said nothing of the powers which, under the War Measures Act, the governor in council already possesses. Under that act, as interpreted by judicial decision and by the legal advisers of the government, the governor in council has authority, notwithstanding section 3, to send men enlisted under the National Resources Mobilization Act to points outside the boundaries of Canada and the territorial waters thereof. In other words, if, to-day, in the opinion of the government, the war situation demanded the dispatch overseas of men already called up under compulsion for military service, the government has the necessary legal power to order their dispatch.

Why then, it will be asked, does the government come to parliament for powers which it already possesses? The answer to this question is the sense the executive has of its responsibility to parliament.

To defeat the enemy overseas, and thereby lessen the possibility of the actual invasion of Canada itself, is the objective of Canada's armed forces overseas, whether they be upon the sea, in the air, or on land.

The government does not believe that, to serve that end, conscription for overseas service is necessary at the present time. Moreover, it may never become necessary. But, in case it should ever become necessary, it is surely the part of wisdom that there should be no doubt whatever of the power of the government to take the necessary action the moment the necessity to do so may arise. There should equally be no doubt that this power is derived from the present parliament rather than from a statute enacted in 1914.

There is nothing in the proposed amendment which could imply that the government's attitude towards conscription for service overseas, as set forth in parliament and as expressed from time to time in the plebiscite campaign, has been altered in the least, or that there is any intention of a change of government policy or attitude. The government's policy as to being given complete freedom to act in accordance with its judgment of the needs of the situation as they may arise was clearly stated in the speech from the throne at the opening of parliament in the following words:

> My advisers believe that the magnitude and balanced nature of Canada's war effort is being obscured and impaired by controversy concerning commitments with respect to the methods of raising men for military service which were made prior to the spread of the war to all parts of the world.
>
> The government is of the opinion that, at this time of gravest crisis in the world's history, the administration, subject only to its responsibility to parliament, should in this connection and irrespective of any previous commitments, possess complete freedom to act in accordance with its judgment of the needs of the situation as they may arise.

The words, "in this connection", in the paragraph I have just read, refer of course to the words "the methods of raising men for military service" in the preceding paragraph. I am, therefore, as I said in my reply to the former minister of public works, unable to agree that there has been any change of policy or attitude on the part of the government. No new policy has been adopted.

The government's policy with respect to the method of enlisting men for service in the army overseas was set forth clearly and unequivocally, on February 10, by my colleague the Minister of National Defence, in discussing the 1942-43 army programme. The minister of defence said that he wanted to see voluntary enlistments kept up, and that he believed it was better for our voluntary army if the men coming to reinforce it were also volunteers. After giving figures which clearly showed that, up to that time, the voluntary system had not failed, the minister added these words:

> I have faith in the success of the voluntary method if we all do our part. With the background and tradition which this country possesses and which it would be folly to ignore, I prefer the voluntary method if it works, and I shall do all I can to make it work.

This statement is by no means the only statement of the position of the government with respect to the method of enlistment for

service overseas. I desire particularly to draw attention to and to repeat the words I used in this house on February 25, in the debate on the second reading of the Plebiscite bill. After setting out the reasons why the government believed the request for a release from any commitments should be submitted to the people, I explained the position the government was then in with respect to the adoption of conscription for overseas service and, in plain and unequivocal language, why it was the government desired to have that position changed and to be given a free hand to act in accordance with its judgment of the needs of the situation as they might arise. Here are my words—and I am quoting from what I said on February 25:

> The position is that the government has full power with respect to everything, excepting one thing; and that one thing is that commitment, that obligation, with respect to the enlisting of men for overseas service. There the government is not free. You may ask why the government should come forward at the present time and ask to be made free. First of all, may I make it clear that it is not because of any situation that exists at the moment. The Minister of National Defence has made it perfectly clear that with respect to voluntary enlistment, we are obtaining men for overseas service at the present time as rapidly as we can train them.

And these are my words:

> For our programme this year, and up to March, 1943, there is an honest belief on the part of the government that we will be able to get the men by voluntary enlistment for service overseas, and will not have to resort to conscription. But no one can say how long this war is going to last. No one can say what particular turn it is going to take. None of us knows what the conditions are going to be in a few months hence, or several months hence, or a year or two hence. . . .

Nothing, I think, could be plainer than that. It was made perfectly clear that the government had no thought of resorting to conscription for overseas service so long as the voluntary system continued to produce the necessary recruits; also, that we honestly believed the voluntary system would suffice to secure the necessary enlistments for the 1942-43 programme. The government, however, wished to be free, without any breach of faith, to resort to conscription for overseas service should that become necessary to our national security and to the effectiveness of our war effort.

If the bill is amended as proposed, it is not the intention of the government to resort to conscription for service overseas unless circumstances should arise which would render the use of compulsion imperative, such, for example, as the maintenance of the necessary reinforcements for Canada's army overseas.

[Mr. Mackenzie King.]

In saying this, let me make it equally clear that, having regard to the stage the war has reached, the government is asking parliament now, just as it did at the time of the enactment of the National Resources Mobilization Act, in June, 1940, to give to it the powers it believes it should possess, quite independently of any powers the governor in council may possess under the War Measures Act. The power to which I refer is the power to decide if, when, and to what extent the use of compulsion may be necessary for military service outside Canada and to exercise that power accordingly.

The amendment before the house necessarily opens up the whole question of conscription for overseas service. The government welcomes this opportunity of having the subject debated. Now that the question can be discussed upon its merits, it is well that it should be so discussed. As I pointed out on January 26 in the debate on the address, and again on February 25, in the debate on the plebiscite bill, parliament is the place for that discussion.

With reference to the specific question of enlistment for service overseas, I said, on February 25:

> When we find that we cannot raise the required numbers of men for enlistment overseas by the voluntary method, and it is absolutely necessary to raise more men by other methods, then we will make our decision, present it to parliament and have it discussed on its merits.

Unless the question of conscription for overseas service is to be twice debated, that, as I see it, is the stage we have now reached. The government is making its policy with respect to the raising of men for service overseas, fully known. We are presenting that policy to parliament, and, as I have just said, we welcome the opportunity of having the whole question discussed upon its merits.

In order that the government may have the power if required to resort to the compulsory method of raising men for service overseas, if it is found that men in the numbers required cannot be raised by the voluntary method, as well as for the other reasons I have mentioned, the government has reached the decision that it should now ask parliament to amend the National Resources Mobilization Act by the deletion of section 3 of the act.

If the powers for this purpose are to be conferred upon the governor in council at all, it is well they should be given as long as possible in advance of the time at which it may become necessary to exercise them, should it ever become necessary so to do. Also, it will, I think, be generally agreed that discussion on so important a subject should

not be left to a time of crisis. As between debating the issue now or later on, obviously the wisdom and advantage is wholly in favour of the earlier moment.

What really is important is that the government's policy should be fully known, presented to parliament, and agreed to by parliament before any action is taken. In this way and in this way only, the people's representatives in parliament can be afforded a full opportunity to discuss the whole subject upon its merits.

While not seeking the deletion of section 3 because of any present need of applying conscription for service overseas, the government is desirous of having the power immediately to move some of the men who have been called up and trained under the National Resources Mobilization Act, to Newfoundland and possibly to other islands in the western hemisphere, and to territories adjacent to Canada, including the territory of the United States. If that power is to be exercised under authority of parliament, apart from the authority contained in the War Measures Act, the section would have to be immediately amended. The amending of the section to any extent would, in the light of discussions that have already taken place, open up the whole question of conscription, and we should have here and now a full debate thereon. As I already have said, I am certain that with war on every side, hon. members of parliament would not wish two debates upon the subject of conscription when one should suffice, and I am even more certain that the people of Canada would not view with patience any such action on the part of their representatives.

There remains the question as to how, should the necessity of resorting to compulsion for service overseas arise, the government proposes to proceed in exercising the powers which parliament may confer. Here, again, the government intends to continue the practice which it has followed under the powers it at present possesses under the National Resources Mobilization Act.

The decision of the governor in council will be communicated to parliament in exactly the same manner as orders and regulations are communicated to parliament under the act as it stands. The procedure, in this particular, is set forth in section 5 of the act, which reads:

> 5. Every order or regulation passed under the authority of this Act shall be tabled in parliament forthwith if parliament is in session and a copy thereof sent to every member of the House of Commons and of the Senate; and if parliament is not in session, then every such order or regulation shall be forthwith published in the *Canada Gazette* and copies thereof sent to every member of the House of Commons and of the Senate forthwith; provided that any of the steps specified in this section may be omitted or deferred if the governor in council considers such omission or deferment necessary in the national interest having regard to the special circumstances.

Clause 5 was inserted in the mobilization act only after very careful consideration of the situation as it existed at the time the act was passed. It must be apparent that the reasons which governed at that time, as to the procedure to be followed by the administration in exercising the powers given to the governor in council under its provisions, would obtain with equal, if not greater force as the war situation becomes more critical.

I notice that it has been said, that once the amendment is adopted, the decision respecting conscription for overseas service will rest solely with the military authorities. I wish, therefore, to make it wholly clear that action taken under the act as amended, must be authorized by order of the governor in council. In other words the decision will be the decision of the cabinet.

On February 25 I gave to parliament a very clear statement of the factors of which account would be taken by the government in reaching a decision. These were known to the people of Canada at the time they were being asked to give the government a free hand.

Replying to a question of the leader of the opposition as to what the government was going to do in certain eventualities, I said, as reported on page 830 of *Hansard* of February 25, 1942:

> Let me answer the question first of all in a broad way. The government is asking the people for a free hand in order that it may do in the circumstances as they may arise what is most in the interests of the people of Canada. We wish to make Canada's war effort as effective as it can possibly be made. What we shall do at any particular time will depend upon the course which we think at the time is necessary and advisable and most effective in Canada's war effort. That decision is not going to be made in the light of any one factor. It is going to be made in the light of all conditions as they exist and as they are known to the government at the time. . . .

And later:

> The government is going to do the thing that it believes is going to further to the uttermost Canada's war effort, all circumstances considered. May I say that when I say "all circumstances considered," I have in mind the conditions as they may exist in respect to the war in different theatres and the conditions that may exist in Canada itself.

As to the right thing being done at the right time and in the right way, it seems to

me that necessarily comes to be a matter of the degree of confidence which parliament and the people have in the administration charged with the responsibilities of carrying on the war.

In most controversies, there are those who take extreme views. They want everything their own way, and if not allowed to have their own way, they begin to threaten and abuse those who venture to hold an opinion contrary to their own. They become impatient even of a consideration of a question upon its merits, or the effect their attitude may have upon the well-being of others.

In national affairs, this sort of attitude is bad enough at any time. In times of war, however, where the preservation of national unity is of first importance to the war effort of the nation, and where the issue is the most controversial in a country's history, the insistence, by any considerable portion of the population, upon an extreme position is almost certain to be fraught with the gravest possible dangers to the state.

Surveying the field of public controversy on the issue of conscription for service overseas, as it has been reflected in the press, and as doubtless it will find expression in this House of Commons, there would appear to be three general views, two of them diametrically opposed. The first is that conscription for service overseas should be inaugurated at once, that nothing less will suffice; the second is that conscription for service overseas should not be inaugurated under any circumstances. In other words, there are some who want conscription for overseas service, and this at once even if it is not necessary; and some who say they won't support conscription for overseas service at any time no matter how necessary it might be to help to save our own country. Each of these is a very extreme view and attitude. Neither extreme, I believe, should be permitted to prevail.

There is, fortunately, a third view—a view which I believe, accords with the opinion most generally held throughout the dominion. It is that conscription for service overseas should be inaugurated only if and when, in the opinion of the government, it becomes necessary to the security of our country and to the maintenance of its war effort. That view is the one which is held by the government. It represents the government's policy with respect to conscription for service overseas. In a word, that policy may be described as not necessarily conscription but conscription if necessary. Considering all relevant circumstances, I submit that no other policy will serve to keep Canada united, or to further Canada's war effort in the manner which, at this time of war, will best serve the interests of Canada, the interests of the British commonwealth of nations, and of the other united nations which are linked together in the common cause of freedom.

Knowing the disastrous effect upon Canada's war effort which a controversy concerning conscription for service overseas would occasion in Canada, to say nothing of the problems to which the enforcement of such a policy might give rise, the government, I need hardly say, has done all in its power to prevent our country from becoming divided over the conscription issue. It has done so without sacrifice in the slightest particular, of any step essential to an all-out effort. It would have been fatal to the unity of Canada for the government to have done otherwise. It lies beyond the power of the government to prevent an issue from arising. But it would be equally fatal for the government not to continue to do all in its power to prevent the issue becoming one which could ever impair the efficiency of our war effort and the magnificent record our country has already achieved, and which every citizen of the dominion is justified in viewing with the utmost pride.

I cannot believe this parliament is going to permit that unity to be destroyed by a political quarrel over a question of the method by which men are to be raised for overseas service. Canada, and Canada's future, is far more vital than any question of conscription. It is not for me to tell any hon. member how he should proceed in presenting the issue to his constituents. I do believe, however, that the issue of conscription for overseas service would soon vanish from the realm of political controversy if those who prefer conscription for service overseas would say to their constituents: "There are thousands of patriotic Canadians who, for reasons that are readily understood, are opposed to conscription for service overseas and that we should be prepared, at this time, to take those reasons into account"; and if those who are opposed to conscription for overseas service would say to their constituents: "I prefer the voluntary system and I will do my utmost to make it work, and I appeal to you to do the same; but, if conscription is ever needed for Canada's sake and for Canada's future, I will not oppose its application."

Both might say to their constituents: "We are fighting this war as one free and united people against an enemy who seeks first to destroy our unity so that later he may take away our freedom and our country itself. In

the face of that terrible danger, we cannot afford to have any differences that it is at all possible to avoid."

In the whole history of the world, no two peoples have ever lived so long in such close association with so little friction as those of French and British descent in Canada. In a century of political union we have built a nation which stretches across half a continent. We have conquered the wilderness. We have achieved great material progress. We all have become deeply attached to one common homeland. We have accomplished miracles in order to help defend our homeland against a ruthless enemy. No one will ever make me believe that in the hour of testing, the achievement of a century is to be imperilled by permitting any issue to arise which might threaten our national unity, and that in the hour of its greatest danger and in the time of gravest crisis for all mankind.

I am sure I need not ask hon. members of this house of all shades of politics and from all parts of Canada to weigh and consider with the utmost wisdom and prudence all that is involved of Canada's present and future in the national aspect of the problem which is now before us. It may well prove to be the most critical of any the parliament of Canada has ever faced.

Lest words of mine might appear to be biased or exaggerated, I should like to quote from an editorial which appeared in the Montreal *Standard* of May 30, and which is entitled "Crisis in Canada." It is but one of a number of editorials which have recently appeared in publications throughout Canada, which sense with clearness the real danger to Canada, should the right attitude not be assumed at this time by all whose responsibility it is to guide our country's present course and help to shape its future destiny. It presents an appeal which I believe will meet with a ready response in this House of Commons, and which I also believe expresses the true spirit of Canada. The editorial reads as follows:

> The Dominion of Canada stands at the most critical hour of its history. Its future as a nation depends on understanding between English and French-speaking Canadians. One cannot make Canada without the other. At the present moment there is a grave danger of a cleft being driven between the two that would not close over for generations.
>
> It is not a political situation, a crisis of corridor and caucus. It is a crisis of feeling. And a nation's life depends on the feelings of its people.
>
> Only if there is a strong will for understanding on both sides can we come through the difficult times that have arrived. Canada must come first in thought, in action and in words.
>
> English-speaking Canadians must force their minds to understand the background of the thinking of their French-speaking compatriots. They must realize that their fellows in Quebec are intensely loyal to Canada, that they hate the enemy and his works as much as anybody, that they have contributed mightily to the country's war effort. English-speaking Canadians must realize that the hard fact that Canada is fighting for her own survival in this war has not been brought home to French-speaking Canadians and that the lack has been intensified by words and actions not truly Canadian from many individuals; that there is a long history behind the recently expressed opinion of French Canada. They must guard against giving too great weight to extreme elements in Quebec.
>
> French-speaking Canadians in their turn, must grasp that the mass of their fellow countrymen are thinking of Canada, its safety and its future, are not putting other considerations above that of their own nation. They must understand the perils that beset their country, and realize that it is better to keep those dangers as far away from our own shores as possible. They must have forbearance for those who are prejudice-bound on the other side, and see that the feelings of the majority of other Canadians are fundamentally as their own.
>
> If the will to understanding does not grow on both sides, Canada is heading into disaster. If the will swells on both sides, Canada will play her full part in beating back the enemy that seeks her life, and will be assured of a future as a nation worthy of the two great peoples, each retaining their own strengths, united to form a whole that will be an example to the world.

And this brings me, if I may be permitted to do so, to say just a word upon the duty which hon. members owe alike to their constituencies and to Canada as a whole. I know there are some who feel that as a majority in the constituencies they represent voted "Yes" or "No" on the plebiscite, they are under an obligation to take a particular stand in the present debate. I hope I made it sufficiently clear just exactly what it was on which the electors were asked to express and did express their opinion. It is not only the right but it is a duty of hon. members to interpret the view of their constituents, but it is equally a duty in so doing to see that a construction is not placed upon their views which was never, and could never have been intended. There is above all else a duty which every member owes to his constituency and to the country, once he is returned to parliament and that is to exercise all that is possible of reason and judgment in reaching a decision upon questions of supreme national interest and concern.

Here may I ask the house to permit me to cite the opinion of one whom the parliament at Westminster for more than a century and a half has been proud to acknowledge as not

less outstanding among its authorities on political obligation than as a leader in the art of parliamentary eloquence.

Addressing the electors of Bristol on November 3, 1774, Edmund Burke, in circumstances not dissimilar to those with which hon. members in our own parliament are faced at the present time, made the following declaration, the wisdom of which has been generally accepted by all democratic assemblies from that day to our own.

Certainly, gentlemen, it ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinion high respect; their business unremitted attention. It is his duty to sacrifice his repose, his pleasures, his satisfactions, to theirs; and above all, ever, and in all cases, to prefer their interest to his own. But, his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to you, to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the constitution. They are a trust from Providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion.

My worthy colleague says, his will ought to be subservient to yours. If that be all, the thing is innocent. If government were a matter of will upon any side, yours, without question, ought to be superior. But government and legislation are matters of reason and judgment, and not of inclination; and what sort of reason is that, in which the determination precedes the discussion; in which one set of men deliberate, and another decide; and where those who form the conclusion are perhaps three hundred miles distant from those who hear the arguments?

In our own country, it might need be three thousand miles.

To deliver an opinion, is the right of all men; that of constituents is a weighty and respectable opinion, which a representative ought always to rejoice to hear; and which he ought always most seriously to consider. But authoritative instructions; mandates issued, which the member is bound blindly and implicitly to obey, to vote, and to argue for, though contrary to the clearest conviction of his judgment and conscience—these are things utterly unknown to the laws or this land, and which arise from a fundamental mistake of the whole order and tenour of our constitution.

Parliament is not a congress of ambassadors from different and hostile interests; which interests each must maintain, as an agent and advocate, against other agents and advocates; but parliament is a deliberative assembly of one nation, with one interest, that of the whole; where, not local purposes, not local prejudices ought to guide, but the general good, resulting from the general reason of the whole. You choose a member indeed; but when you have chosen him, he is not a member of Bristol, but he is a member of parliament. If the local constituent should have an interest, or should form a hasty opinion, evidently opposite to the real good of the rest of the community, the member for that place ought to be as far, as any other, from any endeavour to give it effect.

That opinion never carried more weight in any assembly than should be attached to it by this House of Commons as we enter upon the present debate.

I turn now from a consideration of the amendment, as such, to a consideration of the question of conscription for overseas service which it raises. You will recall I stated that the plebiscite had three purposes. The first was that nothing should be allowed to obscure or impair the magnitude and balanced nature of Canada's war effort; the second, that the administration, subject only to its responsibility to parliament, should possess complete freedom to act in accordance with its judgment of the needs of the situation as they may arise in the prosecution of the war; and the third, which has a direct bearing upon the first two, that the government and parliament should not be bound by past commitments, but be free to discuss and decide on its merits the extent of the use of conscription.

The third purpose has already been achieved as a result of the holding of the plebiscite. The government and parliament are no longer bound by past commitments. We are, therefore, in a position to discuss the question of conscription from the point of view of the other two purposes of the plebiscite.

Controversy over the question of conscription has, I believe, obscured the magnitude and balanced nature of Canada's war effort. Unless the controversy can be ended, it will, I believe, impair the efficiency of our war effort.

The policy of the government is and has been the achievement of a total effort for total war.

Let me, therefore, outline briefly, so far only as the mobilization of man-power is concerned, some of the requirements that must be met in order to achieve a total war effort. Until the whole man-power picture is before us, we cannot see what effect the application of conscription for overseas service would have on the achievement of a total effort for total war.

The war programme for the period up to March 31, 1943, was outlined in all its aspects on January 26. That programme, in its objective, represents, in the opinion of the government, a total effort for Canada. By a total effort is meant the utmost effort of which the country is capable. On February 4, the Minister of Finance gave the reasons for believing that the government's war programme for

1942-43 would constitute the utmost effort of which the country is capable. The minister said:

> I believe that the programme which we plan should for the immediate future, the coming year, be a programme which will strain the human and material resources of this country to the limit. I have, therefore, agreed as Minister of Finance, to a war programme for the coming fiscal year which, in my opinion, and in the opinion of my advisers, is the extreme limit of what this country can do, having in mind its human and material resources.

By a total effort is also meant an effort so balanced in all its aspects that no essential task will be left undone because a disproportionate effort is devoted to some other task.

The achievement of a total effort involves much more than the raising of large numbers of men. It involves the most effective use of all the available resources of the nation, material as well as human.

The mobilization of human resources, of man-power and woman-power, for a total war effort is far more complicated than is yet generally realized. It is not merely a question of raising men for the army, which was the main problem in the last war.

It should not be forgotten that Canada has only 11½ million people, of whom a considerable proportion are children or old people who cannot engage in active war service. From our limited population we must provide:

1. Men and women to perform the essential services without which life could not go on: such as the manufacture and distribution of the necessaries of life, essential transportation over great distances, and the production of food for our own people.

2. Men and women to produce food, not only for our own people and our own armed forces, but also to help feed the people of Britain and other allied countries which cannot produce all the food they need for themselves.

3. Men and women to produce the machines and munitions of war for Canada, for Britain, and for the other united nations.

4. Men and women for service in all three of the armed forces.

All these man-power needs must be satisfied from one man-power pool. It is important always to remember that the total man-power is limited. If too many men are taken from one service there will not be enough left for some other service. All man-power demands must be kept in balance.

When asked in the House of Commons last November what was the ultimate objective of man-power which it was hoped Canada would contribute, the Minister of National Defence replied, quoting words of my own, that Canada was determined to contribute "to the utmost of her strength". The minister added these significant words: "By an all-out contribution, I am not talking about divisions alone; I am not talking merely of squadrons, of ships, of production, of finance; I am talking about a balanced programme which represents the very best and most that Canada can do. That is the ultimate objective." That, may I say, is the ultimate objective as I also understand it.

It should also be remembered that the demand for man-power is continuous. The armed forces require reinforcements, and will continue to require them until the war is ended. As still more war plants come into production there is a growing demand for labour to man them. Labour is also required for the construction of defence works, such as airports, coastal defences, military highways, et cetera, many of which on a wide scale have become increasingly urgent because of war in the Pacific. There is a limit to the numbers of men who can be drained from the farms and from essential services without paralyzing the life of the community. The government must take account of all these factors in planning and organizing the mobilization of man-power.

A vigorous effort, as I have pointed out, has been made to identify conscription for overseas service in the army with a total effort for total war. The fact that it is conscription for the army, rather than for the navy or for the air force, which is made the symbol of a total war effort shows clearly that its advocates continue to think more in terms of the last war than of the present war.

I should like, therefore, to indicate the proportions of the problem of mobilizing the men for the army enlisted for service anywhere in relation to the total problem of man-power mobilization.

On February 10, the Minister of National Defence stated that the estimated man-power requirements of the army, for service anywhere, from January 1, 1942, to March 31, 1943, a period of fifteen months, were 90,000 to 100,000 men. Of that number over 50,000 had enlisted by the end of May. That is in a period of only five months. These figures show clearly that, at the present time, the voluntary system of recruitment is functioning adequately.

In the same period of fifteen months it is estimated that 13,000 men will be required for the navy, and from 70,000 to 80,000 for the air force, a total roughly equal to the estimate

of the number required for the army for service anywhere overseas. There is, however, no suggestion that Canada is not making a total effort because the men for the navy and the air force are not raised by compulsion.

It is also estimated that, in the present year, at least 100,000 additional men and women will be needed in war industry. It is not suggested that these men and women must be recruited by compulsion in order to achieve a total war effort.

It is surely time that we began to call things by their right names. The total mobilization of man-power means the most effective use of all the men and women available: it has nothing whatever to do with the method by which that mobilization is achieved.

When it is realized that at the beginning of the present year some 600,000 men and women were directly engaged in war industry, and that by the end of the year the number will probably exceed 700,000; when it is realized that up to the end of May of the present year, over half a million men had already enlisted in the three armed forces for service anywhere in the world, and that enlistments in all three services are continuing at a satisfactory rate; when it is further realized that thousands more who have been recruited by the compulsory method are serving in home defence units and that their numbers are growing every month; when to these are added the hundreds of thousands of men who are necessarily employed in essential heavy industry, in construction, on the railways, on the farms and as merchant sailors, it is surely apparent that Canada is rapidly moving towards the total mobilization of man-power for a total war effort.

In order to assist in shifting the man-power and woman-power of the nation as largely as possible from civilian activities into the various forms of war service, the government instituted, some months ago a flexible and comprehensive scheme of national selective service. In this scheme voluntary and compulsory features have both been incorporated.

The government does not propose to resort to compulsion simply for the sake of compulsion. Compulsion has not been made an end in itself. It is only in the dictator states, and in the countries they have conquered, and which for the time being are under their control, that compulsion is made an end in itself, as well as a means to an end. Here, in Canada, we, thus far, have had resort to compulsion only where, all circumstances considered, it was believed that compulsory means would contribute to a greater total effort. There has, for example, been no need of compulsion to secure all the men who can be taken into the navy, or to secure all the men required for the air force. No one has suggested that the application of conscription would be desirable in order to raise men for either of these services. Compulsion has not been required to raise the men needed for the active army which is enlisted for service anywhere in the world. There has so far been no need of industrial conscription to provide the workmen required for war industry.

For the armed forces, compulsion is, of course, applied, and, since October, 1940, has been applied for service in the army for the territorial defence of Canada. The decision, announced on March 25, to mobilize the 7th and 8th divisions has considerably increased the demand for man-power for home defence service. This demand is being increasingly met by resort to compulsory training and service.

In a war for the preservation of freedom, it might well be asked how can the use of compulsion be justified in any aspects of the war effort

The reason for resorting to compulsion of any kind in the prosecution of the war is set out in formal language in section 2 of the National Resources Mobilization Act which empowers the governor in council to require "persons to place themselves, their services and their property at the disposal of his majesty in the right of Canada, as may be deemed necessary and expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community."

Translated into the language of the man in the street, that means that the government has the power to conscript any property, any wealth, or the services of any individual in Canada, whenever they are needed to make Canada stronger to resist attack, and to help Canada to do its full share to defeat the enemy.

Compulsion, in any form, should be used in the war effort only if it will make Canada stronger, and add to Canada's part in winning the war. Here let me repeat that compulsion is regarded by the government, not as an end in itself, but as a means to an end. That end is a total war effort.

As I pointed out to the house in my statement on national selective service:

> In those aspects of our war effort in which voluntary methods are working satisfactorily, voluntary selection including a measure of choice by the individual of the appropriate field of service, has been and will be continued. The more expensive and complicated methods of compulsion have been employed, only where

it is felt that compulsory selection is necessary in order to increase efficiency in the prosecution of the war. Compulsion, however, will be applied without fear or favour wherever in the opinion of the government its use will aid in the achievement of a maximum war effort.

The application of conscription to service in the army overseas is only one aspect of the far wider question of the use of compulsion to secure an all-out war effort.

The next question is: Would the application of conscription to military service overseas at the present time make Canada stronger, or add to Canada's war effort?

How could resort to conscription for overseas service add to our war effort? The one way, in which so far as I can see, it might add to our war effort, would be by securing more men for service in the army overseas than can be secured by voluntary means.

If the size of the overseas army was unlimited; if we did not require men urgently for other purposes as well as for the army; there might be a possibility of increasing the total war effort by conscripting men for the overseas army.

But the fact is we can only spare a limited proportion of our total man-power for the army overseas. In addition to our army overseas, we need men for a great and growing army which must be kept in Canada or in the adjacent territories for the defence of our home base, and for the joint defence of this continent in cooperation with the forces of the United States. The torpedoing in recent weeks, by German submarines, of ships in the waters of the St. Lawrence, and the destruction since the beginning of the year of many vessels off the coasts of Nova Scotia and New Brunswick, the attack upon the Aleutian islands by Japanese ships and planes, the growing submarine menace in the Pacific, should surely have made it plain to everyone that apart from our forces overseas we need men for a great and growing air force and navy and for a much larger army, to be employed in the immediate protection of our own coasts and territory. We need men for our war industries which are still expanding. Our farms and essential civilian services cannot be left without man-power. The total man-power of the nation must be divided up among all these services.

What is the position of the Canadian army in regard to man-power?

The units already overseas are up to strength and adequate reinforcements are available. The new units, destined for overseas service, are being rapidly recruited by voluntary enlistment. Additional volunteers, enlisting for service anywhere in the world, are adding steadily to the numbers available for reinforcements.

The units destined for home defence service, recently increased in number, are formed or are being formed partly of volunteers and partly of men called up for compulsory military service.

Men are being called up for compulsory training and service as fast as they can be trained and equipped. These men receive the same training, in the same camps, as volunteers.

Clearly there are no grounds for asserting that compulsion is needed at the present time to secure the men required for service in the army overseas. There is nothing to indicate that its application now would add anything to Canada's total contribution to the winning of the war.

Here may I quote a second significant statement made by the Minister of Finance, on February 4. It is equally relevant to-day:

> One issue between the government and its more sincere opponents seems to me to be this: Will the continuation of the voluntary system for overseas service, at least for the time being—we have the compulsory system in many other lines of the war activity—make for a greater success in our programme than would its abandonment? I wish to say that neither as a member of the government nor as a member of the war committee of the cabinet, nor otherwise, have I been able to find any evidence that the abandonment of the voluntary system and the substitution of the compulsory system in respect to that part of our war effort represented by overseas army service would help at this moment in our war effort.
>
> Surely no one can deny that the voluntary system to date has functioned magnificently. In what single respect has it fallen down? Any question as to the success of the voluntary system for overseas service is not as to its success at the moment but as to its success in the future.

There is, I know, a widespread feeling that the voluntary system is unfair because it is thought to mean that the willing men see their duty and do it, while the unwilling hang back and evade their share of the burden and sacrifice of war. This is a perfectly natural feeling.

To bring about greater equality of service at a time of war, there might be, there certainly would be, justification for the immediate introduction of a system of compulsory service, if such a system were not already in existence. Compulsory service for the whole of Canada, over the whole of Canada is already a part of the law of the land. And make no mistake about it, the government is determined, as far as is humanly possible, to make sure that every able-bodied man

undertakes some form of direct war service. It may be on the farm; it may be in the factory; it may be in the forest or the mine; or it may be in the armed forces. But all must serve somewhere, and to achieve that end compulsion, where needed, will be employed.

There are some, I know, who believe conscription should be applied universally whether it is needed or not. There are others who believe equally strongly and equally sincerely that Canada can achieve a greater total effort by reliance, as far as possible, upon voluntary methods.

The government has accepted neither view in its entirety. It is our policy to use whichever of the two methods we believe, all factors considered, will give the best results.

The government has encouraged and intends to continue to encourage voluntary service in the armed forces, as well as in a host of other voluntary activities which are contributing to Canada's all-out effort. The government intends also to use compulsory selective service measures to the utmost limit required to ensure not only an adequate supply of recruits for the army, but also to provide, as far as possible, an adequate supply of man-power for all phases of our total war effort.

But what conceivable object would be served by resorting to conscription for service overseas, not because men in sufficient numbers were not available under voluntary enlistment, but just in order to employ the compulsory rather than the voluntary method of enlistment? There are those who ask why the willing men should be sent, while the unwilling are allowed to stay at home. That is a question which should be answered. Because of our small population, Canada's army overseas can never be a very large army and every Canadian should want it to be the best army possible. It is no military secret that willing men make better soldiers, on the average, than those who are compelled to serve. Moreover, the army overseas is composed entirely of volunteers. Its spirit and morale will undoubtedly be higher if its reinforcements are also volunteers.

Why, some also ask, should volunteers be sent into danger while men called up for compulsory service remain in safety in Canada? From the beginning of the war, I have stressed both tasks of the Canadian army. On the one hand, it must help to defeat the enemy abroad; on the other it must defend our own and neighbouring territory. Events to-day are showing us clearly that the second task may in the course of time, and that in no distant future, become exceedingly dangerous. If there were no danger, there would be no need of any army in Canada!

[Mr. Mackenzie King.]

The army must employ the volunteers in some theatre; it must also employ the men called up for compulsory service. Surely it is only common sense to avoid any excuse for controversy, and consequent weakening of our total effort, by allowing those who volunteer for service anywhere to proceed overseas, so long as they are available. To reverse the process would certainly not increase our total effort.

Apart altogether from any consideration of the sharp cleavage of opinion in Canada on the question of actually resorting to conscription for service overseas, there can be no argument that Canada will have a better army overseas, if it can continue to be maintained and reinforced by volunteers.

There is one other observation I should like to make, and I make it because I know it is very much in the hearts and minds of many of those who have volunteered for service overseas. It is that an outstanding feature of Canada's war effort is that everyone who has contributed and is at present contributing his services overseas has done so voluntarily. That is something that should never be forgotten. It is a record which all Canada may well view with pride and, if at all possible, it should be maintained. It embodies all that is noblest and finest in the spirit of our young country. It is the particular pride of every man who has volunteered for service overseas whether he be in the army, the navy, the air force, or, in the latest of our volunteer forces, the Canadian corps of fire-fighters to Great Britain.

I doubt if we have yet begun to realize how much Canada's reputation has grown in other parts of the world because, at the outbreak of war, Canada decided of her own free will to participate in the struggle. I do not believe that we appreciate how much is added to Canada's strength in the eyes of the world by the fact that every man serving overseas in the armed forces of Canada is there of his own free will and at the dictates of his own conscience. It is the glory of Canada that we rallied freely and at once to the call of freedom. If we can, to the end, without aught of sacrifice to the common cause, maintain overseas our free participation in the common struggle for freedom, Canada and the gallant young men who have freely offered their lives will preserve that honour and that glory for all time. Surely, this is no unworthy ambition for the people of Canada.

It cannot be denied that the issue of conscription for service overseas is the most controversial issue that has arisen in Canada since confederation. That, I think, will be generally admitted. At any rate, if there is an issue that has occasioned more dissension

in Canada; that has left a greater legacy of suspicion and distrust; that has inflicted a deeper wound in the side of the nation, I should like to be told what it is, for I confess I do not know. The knowledge of this fact caused the leaders of all political parties and others who had the unity of the country at heart, before the outbreak of war, and when Canada entered the war, to see to it that this issue was kept in the background. On all sides, an honest effort was made to see that it should not be permitted to arise. That attitude was maintained in public discussions throughout the general elections of 1940, and I am happy to say up to just about a year ago.

I do not propose to go at this time into the reasons which have since occasioned a change of attitude on the part of some. I readily admit that it may have been due in part to the changed character and world-wide scope of the war. Indeed one of the purposes of the plebiscite, as I have so frequently said was to make the way clear for a consideration, on its merits, of the question of conscription, in the light of the changed conditions.

When Canada entered what, in September, 1939, most people believed was going to be "just another European war," it was recognized if the war were not successfully ended, our national security would be menaced. But very few contemplated a war which might come to threaten our national existence. That is the position Canada is in to-day. We are engaged with the other free nations of the world in a war of survival.

The fact that the war has reached world embracing proportions; that there is combat on every ocean; and that there is certain to be conflict on every continent; that Canada is by no means exempt from the possibility of attack, at any moment, and even of invasion, are not reasons why the government should abandon a policy based upon considerations of the preservation of national unity. It is the strongest of reasons why the government should give the most careful consideration to all possible consequences of any change of policy which might result in division and a weakening of national unity.

I doubt if any of us begin to realize how grave the responsibility has become of determining the disposition of the country's armed forces, as a consequence of the changed conditions resulting from the entry of Japan into the war. Immediate danger no longer threatens Canada only from the east. It threatens equally from the west. Let that danger assume formidable proportions, and I ask what will be said of a government, or for that matter, of a parliament, or of a press, that continues to look only across the Atlantic to one enemy against which this country has to be protected, and fails to recognize that the strategy of the combined enemy forces may well involve an attack at any moment from across the Pacific.

In deciding upon the disposition of the armed forces, the government has to consider from day to day, just what proportion of its forces our country is justified in sending overseas, and what proportion it is necessary to keep at home. That question has had to be considered from the outbreak of war but, until Japan entered the war, it did not begin to have the importance it has now come to have.

It is perfectly clear that the enemy will have to be destroyed overseas if this continent is not to be the field of the final conflict, or possibly even an immediate field of conflict, with Canada the scene of the first invasion. It is equally true that in the event of an attack, come when it may, and from whichever direction it may, unless we have forces adequately equipped, and trained in sufficient numbers to prevent the enemy from getting a foothold upon our soil, our entire national existence will be imperilled. While we must continue to do all we possibly can to assist in accomplishing the defeat of the enemy away from our shores, we must also be in constant readiness to meet and hold him at bay should he attempt an attack upon our shores. What guarantee have we that the enemy having begun to destroy shipping off the coasts of the maritime provinces, in the gulf of St. Lawrence and in the river itself, and having attempted to gain a base for operations against the Pacific coast, we may not witness at any moment bombing of our harbours and cities alike on the Atlantic and Pacific coasts, and attempts to destroy railway terminals and facilities, munition plants, aerodromes and other military targets in any part of the country.

With those possibilities before our very eyes, and let me tell this house as I have told the country time and again, they are possibilities which are by no means remote, can we afford to allow any question of conscription to become the occasion of a political battle in parliament, or of political warfare throughout the country; can we allow the country itself to become distracted by and divided over such an issue? Surely the only reasonable course to take in dealing with this question is to leave to the government, subject to its responsibility to parliament, to decide what disposition it may be best to make between the forces to be sent abroad and those that are

to be kept at home, and what means it may be necessary to take to keep up the strength of the armed forces which are already overseas.

The people of Canada have clearly indicated their desire that freedom to decide on these matters should be given to the government, subject only to its responsibility to parliament. It is that freedom which, by the amendment, the government asks should now be given to it by parliament.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, in the remarks I propose to make this afternoon I shall proceed in a manner contrary to the example set by the Prime Minister (Mr. Mackenzie King). I hope to be as brief as possible, and yet cover most of the aspects of the question now before parliament. However, since I cannot promise to conclude before six o'clock, and since I would desire to be relieved of the obligation imposed upon me of concluding before the adjournment, this being a short day, I would ask the indulgence of hon. members to be permitted to speak for a few minutes after six o'clock, if necessary. I should like to conclude to-day, rather than move the adjournment of the debate.

The speech of the Prime Minister this afternoon and the bill at present under discussion constitute the answer of the government and the Prime Minister to the overwhelming mandate given by the people of Canada in the plebiscite. I have listened with undivided attention to the speech of the right hon. gentleman this afternoon, and I confess at once that it left me cold, and will send a chill of disillusionment down the spine of all loyal Canadians who believed that once the moral limitation so strongly stressed by the Prime Minister in his speeches in this house during the debate on the plebiscite bill, and more particularly in his broadcast addresses, was lifted, the Prime Minister would practise total war in deed and in truth.

Instead, we are told that while the government is freed from its self-imposed vow, it has no present intention to put into immediate effect the objectives which the great mass of affirmative voters believed would be government policy. Indeed they may never be put into effect at all. We are told that should conscription be decided upon, the government will not return to parliament with any new measure, or for any new debate on the principle. That, I submit, is skilful political strategy—just such strategy as we should expect from the right hon. gentleman, who, above everything else, desires to preserve his political position.

[Mr. Mackenzie King.]

Such a position is based on the policy of political expediency which has been characteristic of government policy with respect to the principle of complete national selective service ever since war was declared. It is the same old policy of appeasement—a game which the Prime Minister has played to the limit, with the avowed purpose of maintaining national unity, but which, correctly interpreted in practice, means unity of the Liberal party, and nothing else.

At this time in our history I say that policy has failed, and to-day as a result of the Prime Minister's own political strategy, this nation is more divided than at any time in its history. The Prime Minister's speech, and the attitude which he has taken with respect to conscription remind me of those lines in Gilbert and Sullivan's comic opera, "Utopia Limited", in which the princess presented the distinguished barrister, Sir Bailey Barre, Q.C., M.P., to her father, the king, in these words:

A complicated gentleman allow me to present,
Of all the arts and faculties the terse embodiment,
He's a great arithmetician who can demonstrate with ease
That two and two are three, or five, or anything you please;
An eminent Logician who can make it clear to you
That black is white—when looked at from the proper point of view;
A marvellous philologist who'll undertake to show
That "yes" is but another and a neater form of "no".

Those eight lines describe the Prime Minister's attitude and action more accurately and aptly than any words of mine could do.

At the outset, I desire to make it plain that I do not intend to discuss the merits or demerits of conscription this afternoon beyond saying that I believe in the principle. However, I desire to make some observations with respect to the result of the plebiscite. By a vote of approximately two to one in the aggregate, and by eight provinces to one in terms of geographical subdivisions, the people of Canada have given release to the Prime Minister and his government from the commitment which he and they made to the electors in 1940.

Mr. GARDINER: And the opposition.

Mr. HANSON (York-Sunbury): I gave no commitment. The hon. gentleman can speak only for himself, not for me.

Mr. MACKENZIE (Vancouver Centre): Your leader did

Mr. HANSON (York-Sunbury): Eighty per cent of the voters in eight provinces voted in the affirmative.

The result achieved was by no manner of means accomplished solely through the efforts of the Prime Minister and his colleagues. It was brought about by the united effort of Canadian citizens of every shade of political opinion.

We, of the opposition, disliked and deplored the procedure of the plebiscite; we felt irked at the position into which we were thrust; but, recognizing a patriotic duty, we laboured unitedly to achieve an affirmative result. In assuming that attitude, I know we did the right thing—the patriotic thing; and I believe we contributed mightily to the result.

If ever there was an occasion upon which a political party placed the interests of the country before party, it was when the Conservative party—with, I am convinced, but few dissenters—went into the constituencies across Canada, and organized and counselled the people to rise above party considerations and make a decisive affirmative vote possible. The Conservative party, as a whole, will forever have that to its credit.

I do not propose to enter into any detailed analysis of the plebiscite vote. Much has been said and written as to its significance. One thing I shall say: I regret more deeply than I can express the action of certain portions of our fellow-countrymen in voting contrary to the decisive and overwhelming expression of public opinion registered in eight provinces of Canada. The causes for that action can be assessed at another time, I do not propose to enter into a discussion of that now. The regrettable fact, clearly apparent from the vote, is that we have not, at this most critical juncture, complete national unity in Canada. That fact cannot be avoided; nor should we flinch from it.

But in the result of the vote there is no implication that this country should not do its full duty at this time. On the contrary, there are unmistakable signs that the people of Canada want decisive and immediate affirmative action.

Let there be no mistake about the will of the people as reflected by the plebiscite. Any effort to make it appear that the affirmative vote was nothing more than a release of the government and of parliament is not facing the facts as expressed at the polls. When the government is freed from its pledges, which release has been secured on the terms which the government itself defined, the very act which frees the government makes compulsory service at home and abroad the law of the land. That law of the land must be given effect to—are we to have a law and leave it on the shelf?—if not by this government, then by some other government. The will of the people must be respected. It is not what we thought but what the people thought when they voted "yes". What justification is there for establishing a principle if the constituted authority does not give effect to it?

We live, thank God, in a democracy where it is recognized that the will of the majority, as expressed at the polls, must prevail. That is the democratic course; that is the course which is essential if this nation is to survive. And that is the course counselled and urged by the public men who were the predecessors of my hon. friends opposite, the leaders of the Liberal party in this house a generation ago.

Recently I have reviewed the debates in this house in 1917 on the Military Service Act. During the course of those debates, Sir Wilfrid Laurier pleaded that the Military Service Act should be submitted to the people by way of a referendum. Here are his words, as reported in *Hansard* of June 18, 1917:

> . . . in British countries there is only one way, and the sovereign way, of meeting all these differences. It is to appeal to the country and to appeal to the whole country, not to one section, but to all sections, and when the country has pronounced then the question is settled and all must submit to the law.

Then I call particular attention to this passage:

> When the consultation with the people has been had, when the verdict has been pronounced, I pledge my word, my reputation, that to the verdict, such as it is, every man will submit, and I claim to speak at least so far as is concerned the province from which I come.

On the same day, June 18, 1917, Hon. Charles Marcil, a gentleman whom I was glad to call my friend in former years, a previous Speaker of this house, is reported at page 2431 of the same *Hansard* as saying:

> . . . I am prepared to submit to the verdict of the people loyally no matter what that verdict is because in British governed countries when the people have spoken we must submit to their verdict.

Another former speaker of this house, a former cabinet minister, and a leader of the Liberal party in the province of Quebec, Hon. Rodolphe Lemieux, added his voice in these words, to be found at page 2497 of *Hansard* of that year:

> . . . If a referendum is taken, whether it goes for or against conscription, the French Canadians . . . will abide by the verdict of the majority . . . will obey the law and fight the battles of Canada as valiantly as their fellowmen of a different race and a different creed.

I have referred to these debates in the hope that public men of this day will take the same stand, and will give to the people the same counsel and guidance.

May I pause briefly to beseech my compatriots in this country who are of French ancestry not to occupy an isolationist position. I ask them this question, and I do it with the utmost good will: Have you thought this matter through to the end? I fear not. I beg them while there is yet time to pause and think this thing clear through.

I come now to consideration of the principle of the measure before the house. Right at the outset, let us, squarely and honestly, face the facts. If there be any member of this house, or if there be any person in this country, who ever believed that, on the passage of this bill, the principle of selective national service for overseas will be put into immediate practice or operation, let me at once hasten to undeceive him. Such was never the intention of the ministry opposite, and such is not apparent from the observations of the Prime Minister to-day.

From the correspondence between the Prime Minister and the hon. member for Richelieu-Vercheres (Mr. Cardin) it is abundantly clear that such is not the intention and may never become the fact. I confess that the whole situation fills me with a sense of futility and unreality, a feeling which has not disappeared with the Prime Minister's statement this afternoon. At each stage I have been puzzled and bewildered as to what were the government's real intentions. You will recall that there have been four stages in connection with this matter; since the Prime Minister introduced the mobilization bill in June, 1940, we have had four homeopathic doses of conscription. Anyone who understands what I mean by homeopathic will know how small and meagre the doses are.

In his letter of May 9 to the Prime Minister, the former Minister of Transport, the hon. member for Richelieu-Vercheres, speaks of the bill as being the "new policy of the government," and in his reply the Prime Minister states: "There has, however, been no change of policy. No new policy has been adopted." My interpretation is that it is one step further, a continuation of a policy that was started two years ago and has now reached fruition save and except for one step which can come any time by the will and whim of the Prime Minister and the ministry. It is an extension of policy if it is not a new policy. When I arrive at that conclusion I ask myself, What then are we confronted with, and at what conclusions can we arrive, when two men who have participated in all the secret discussions which preceded this bill, differ as to its meaning and significance?

If the Prime Minister is correct, can anyone assert that this bill is anything more than shadow-boxing or window-dressing, or worse—procrastination?

If there has been no change in government policy I ask this question: Why does a trusted colleague of the Prime Minister resign his position in the cabinet?

The policy of this government, the policy of the Liberal party over twenty-five years, has been that under no circumstances—and I emphasize that—under no circumstances whatsoever should men be compulsorily drafted for service overseas. I think everyone within sound of my voice will agree with that statement. Certainly the hon. member for Richelieu-Vercheres (Mr. Cardin) will agree. He has been one of the most outstanding proponents of that policy, and I am sure he will not deny it. I am sure he will assert it on the floor of this house when he comes to speak in this debate.

If you, sir, and the members of this house want any corroboration of the assertion I have just made, regarding the policy of this government and of the Liberal party under the leadership of the right hon. gentleman for nearly twenty-five years, I have only to refer to the letter written a few days ago by the hon. Minister of Justice (Mr. St. Laurent) to an officer of a political association in his own constituency, in which will be found this statement:

> There is no intention for the time being to bring in conscription for overseas service, and I am sure that the present government would bring in such a measure only if it were absolutely necessary for our own salvation.

Note the words "for our own salvation"—not for world salvation, not for the salvation of the united nations, not for the salvation of democracy and Christian civilization and all the ideals for which we are fighting—no, for our own salvation. What a narrow, limited—I was almost going to say unworthy vision is there, my countrymen!

Further on in the same letter the minister wrote:

> I stated that I would be true to Mr. King as long as he was true to himself and to his record.

Is there anyone in this house who will say that when the minister wrote those words he did not know what was in the Prime Minister's mind? Is there anyone who does not know what that record is, and that the letter is a true interpretation of that record? Well, the

record speaks for itself. True, the tragedy of events has driven the Prime Minister step by step a long way until to-day we are to have the full and complete principle of compulsory national service on the statute book—compulsion not only for service of man-power overseas but in every other sphere of human activity. When this bill passes, the full principle of compulsion for everything will be the law of this country—make no mistake about that.

I desire now to return to a consideration of the bill. The Prime Minister has sought and secured from the people of Canada release from the restrictive policy enunciated in June, 1940—two long years ago. He now seeks full freedom from parliament.

It is true that this bill merely repeals the limitations imposed by the restrictive clauses of the act itself. That is all. But in law it means much more than that. As amended—and I want hon. gentlemen to mark these words—the National Resources Mobilization Act will be, in express terms and as an instrument of war policy, complete authority to the government to draft men and all the material resources of the nation and to utilize them for prosecuting total war, without let, hindrance or restriction. That is what it will mean. In a word, by virtue of all the legislation on the statute books—the Militia Act, the War Measures Act, and, when this bill is enacted, the National Resources Mobilization Act—the government of this country will be free to wage total war by total effort without any limitations whatsoever and to carry out in practice what is advocated in theory.

Mr. FRASER (Northumberland, Ont.): You would agree with that.

Mr. HANSON (York-Sunbury): I am stating what the legal position is and what effects will flow from it. The government will be clothed with the most complete and plenary powers, that parliament can delegate. That is the legal position. No democratic government in the world will possess greater powers.

Mr. McNEVIN: What is wrong with that?

Mr. HANSON (York-Sunbury): I am not suggesting that there is anything wrong with it. I hope the hon. gentleman will keep quiet and allow me to proceed. The government will then have at its hand complete authority to draft the man-power of this country for service in any and every capacity and in any and every theatre of war or other activity relative to the war. There is no manner of doubt about that. So, after thirty-two months of war, this government, under the leadership of the right hon. the Prime Minister, will have clothed itself with the full power of conscription of man-power for service in any and every theatre of war. This government has espoused the policy of conscription of man-power for service anywhere. That is the fact.

But whether the government will put those powers into full operation at once is quite another matter. While the man-power of this country will then be subject to compulsory service in any theatre of war, it does not follow that they will be sent now—in fact, it is quite clear that that will not follow—or in the immediate future or indeed at any time to any theatre of war beyond the territorial limits of this continent. In other words, it is one thing to have the power, and it is quite another thing to exercise that power. The government has that power; but it has given no indication that it will exercise it. In fact, it has indicated that it will not exercise that power and really wage total war with total effort now or at any other time.

From the Prime Minister's statement that there has been no change of policy, we can only understand that once he has secured full freedom from parliament he proposes to hold fast to his old policy, and not to use that freedom under any circumstances. Undoubtedly it is not the intention of the government to exercise the power which will be conferred upon them in the national interest and in the interest of total war. If this be government policy—and I think it is—then I suggest to this house and to the country that this bill is meaningless, that it is a snare and a delusion.

Let us have from the Prime Minister, instead of this battle of words that we heard this afternoon, a full and frank statement of the future course of the government. Let them say they will or they won't. That is what the people of this country want to know. There will be a roar go up in this country from one end to the other at this policy of appeasement.

Do they propose—I ask this question direct—to exercise the powers which this bill will give them, or don't they—yes or no? Let us know where they stand, and not continue to straddle the fence after thirty-two months of war.

Mr. ROWE: Or have another plebiscite.

Mr. HANSON (York-Sunbury): Yes, or have another plebiscite. If then they propose to use them, when and under what circumstances and conditions do they propose to use them? What are the future prospects and potentialities? Without a complete and rounded statement from the Prime Minister

of Canada's future war policy in this regard this house is left completely in the dark, and we are voting a blind confidence in the government.

One of the most significant of the Prime Minister's statements in his reply to his former colleague is this:

> Already it is desirable to extend the scope of service under the National Resources Mobilization Act to other parts of this continent and adjacent islands.

This statement was not then expanded, but it would appear therefrom that the position with which we are confronted to-day is that as soon as this bill is passed, action will be taken to dispatch men drafted for service to parts of this continent outside Canada and to adjacent islands. Indeed under order in council P.C. 4105 passed on May 15, authority has been granted to use two units on prisoner-of-war duty in the United States. But apparently for the time being no action will be taken to utilize the full legal and moral powers of the government to dispatch men compulsorily drafted to battle positions outside this continent.

Here then is what the position appears to be. In June, 1940, we had local conscription, and for a limited period of time—thirty days. What a farce it was! Then we had local conscription for four months—that was the second step—and still later for an unlimited period of time. Now and for some indefinite period in the future we are to have continental conscription. And then, finally, some day—we are uncertain as to when it will be, if ever—we may have full compulsory selective service for any and every theatre of war. It is going to take five bites at this thing, five different homeopathic doses, before we arrive at total war under the right hon. gentleman. If that is not playing the game of expediency, I do not know what is.

Mr. ROWE: "Wait and see".

Mr. HANSON (York-Sunbury): If that is giving the lead to the people of Canada, then God forbid we should have any more leads of that kind. It is utter lack of leadership on a great principle at a time of national emergency. The government is only temporizing. Expediency, not principle, is still the guiding star of this administration.

In his reply to his former colleague the Prime Minister spoke again, as he did in his radio broadcasts, of the false impressions created in other nations by reason of the restrictions upon our man-power, and he gave this as a reason why the mobilization act should be amended. Undoubtedly he was referring particularly to the United States.

I ask this question: Does the Prime Minister intend to assert that the mere repeal of the limiting sections of the mobilization act, without the full utilization of the powers which such appeal will confer, will remove those so-called false impressions? He knows they will not.

The reason for the impressions which unfortunately do exist in the United States regarding our war effort is not found in any legal restrictions on our power to send draftees outside of Canada. These impressions exist because of the fact that we do not send men outside of Canada. The people of the United States are interested only in the facts of the situation; they are interested in what we do, not what we profess. The fact remains, apparently, that we will not dispatch outside this continent men raised by compulsory methods. Surely our position will become even more incomprehensible to the people of the United States. They know now that the people of Canada, by an overwhelming vote, have given the government freedom, absolute and full to send drafted men anywhere, and they are confronted with the spectacle of the government apparently refusing to utilize that freedom. How can any average citizen of the United States come to any other conclusion but that the people of Canada are ready enough for an all-out effort in every theatre of war, but that the government of Canada still holds back? That is a true statement of the position. Rather than removing this false impression to which the Prime Minister alluded, his actions are only intensifying and confirming those impressions in the United States and in the other united nations. If we are to place the weight and importance upon the opinions of the citizens of other nations which the Prime Minister urged us to do in his broadcasts, surely he himself does not by his actions carry out his argument.

I come now to another aspect of this matter. This measure, without any indication of action proposed thereunder, perpetuates the anomaly of two armies. At this most critical juncture can we afford the anomaly of two armies, one of which is free to serve in any theatre of war while the other may be sent only to positions on the North American continent or islands adjacent thereto? Can we afford the duplication which the existence of these two types of army recruits involves? Surely now, if ever, is the time to do away with the sham and hypocrisy raised by isolationist theories. Surely now is the time to create one powerful striking force capable of operating in any theatre of war in which it may best be utilized.

Back of the government's policy is the selective service programme announced by the Prime Minister on March 24 last. I have indicated to the house my views with respect to that programme, and I shall not reiterate my arguments here. In my view that programme is the back-door approach to selective service. It bears no resemblance to the true principles of selective service. It is unworthy of a proud nation. The whole basis is "enlist or starve". It is the indirect, the hesitant, the faltering method, not the open, clear-cut, direct method calculated and designed to bring into full operation the true principle of selective service, which means simply the allotment of each person to the task for which he is best fitted. That is the true principle of selective service.

I appeal to the government to adopt the direct method, boldly to take the honest course, not the back-door and indirect method, and to bring into operation a true and worthy system of compulsory selective service without limitation or restriction. I appeal to them to abandon, to cast aside these palliatives, these hesitant steps, these half measures, these appeasement policies—for that is all they are. I urge them in all earnestness to institute at once a firm, courageous straightforward policy, a policy designed to ensure that each citizen of this country shall render to the full that war service for which he or she is best qualified. The nation will support that. Surely in our progress to and attainment of full nationhood we have been led past the unsteady, creeping, faltering stages of our existence. Surely the Canadian people have given ample proof of their ability to stand firm, and of their willingness—yes, their eagerness—boldly and fearlessly to march forward to meet and overcome, wherever he may be found, the enemy who threatens to destroy not only their security but the security of all Christian civilization. What we need to-day, as we have needed all along, is courageous national leadership. We have never had it since the war began.

As in the past, my position to-day is that a full, all-out effort on the part of Canada is possible only if all the material resources and man-power of the nation are fully mobilized, without restrictions of any kind. I believe now, as I have believed from the outset, that the highest efficiency in carrying out such a programme can be guaranteed only by the establishment of a truly national government, a government composed of the best men in Canada, representative of all shades of opinion, but united by a common and single purpose—the waging of total war by total effort. I have urged this view many times in this house. I emphatically reiterate it to-day. More than ever am I convinced that unity of purpose and action will be achieved only under such a policy and position.

We are all agreed that we cannot win this war, that Canada cannot do her full share toward winning this war, without what is termed "total war effort". I say to the government now, and I say it with great sincerity, that all of us know in our hearts that we cannot have total war effort without unlimited selective national service. The terms are synonymous.

The mere drafting of men for military service because they happen to be of military age is not the only need of this country. It is only a portion of the need. If our war effort is to be effective and sincere, what we do need, and need urgently and desperately, is selective national service, without limitation, geographical or otherwise, with all its implications and ramifications in every sphere of human activity.

And what does selective national service imply? It implies, it means, simply and solely, the practical application of total war in a sensible, just, and effective manner. It means in a word, that every man among us shall be called upon to perform the right war job at the right time, in the right place, in the right way. It is "total war" in practice. And there can be no total war without it. To the government I say this: "It is your responsibility to recommend to parliament measures designed to achieve that end". And I say to them further: "Do not shirk that responsibility. Do not be afraid of your duty. You have a mandate from the people to wage 'total war!' The people have freed you from every restriction. Unless you deny that mandate; unless you are willing that your war professions become a mockery and a sham; and unless you do not fear to invite and deserve the reproach and condemnation of history, you must do your duty". On behalf of those of us who sit on this side, I say to the government: "We will support you in a selective national service programme which is unlimited in the area of its application or otherwise, and we will support you in any other measure you believe and we believe to be necessary at this hour".

We of this party, and those whom we represent, are anxious to avoid party or sectional strife over our war effort. We want and we shall strive for unity. We want and we shall strive for common purpose. To that

end I call upon the government, with all the earnestness I can summon, to accept its responsibility; to do its plain duty.

I do not shrink from the responsibilities which attach to and rest upon an opposition in time of grave national crisis. The government is responsible for giving effect to the will of the people as evidenced in the recent plebiscite—and, indeed, is responsible for all means adopted to meet the terrible and peremptory demands of this war. This fact does not, however, subtract in any degree from the responsibilities of those of us who constitute the opposition. We have positive duties, and never have those positive duties been clearer than they are at this present time.

What, then, is the position which we of the opposition take? When the speech from the throne which contained the proposal to hold the plebiscite was under debate I had the honour to move an amendment, which set forth the views and principles which we of the opposition held. The latter part of that amendment reads as follows:

> And this house regrets that Your Excellency's advisers have not seen fit to recommend to parliament without delay additional measures designed to—
>
> (a) completely mobilize the wealth and material resources and, on a selective basis, the full man and woman power of the nation, to the end that the nation may wage total war in any theatre of war;
>
> (b) supply the imperative needs of agriculture, industry, and the fighting forces of the nation; and
>
> (c) prepare for the post-war period.

By the principles enunciated in that amendment, we of the opposition stand. We believe to-day, as we believed then, that the urgency of the situation requires the complete and immediate—and I emphasize the word "immediate"—mobilization of the wealth, material resources, and, on a selective basis, the man and woman power of the nation, without geographical or other limitation. We believe that the hour has struck when that must be done if Canada is to play a worthy part in this world conflict.

In two sentences I give the position to which we adhere. We believe in the immediate and full application of the true principles of national selective service, administered in a direct, clear-cut, and straightforward manner, without geographical or other limitation. We believe that, hand in hand with national selective service of man-power must go full mobilization of material resources, so that the contribution of all citizens and all classes of citizens shall be equalized in so far as that is possible, and so that the nation may wage total or unlimited war in any and every theatre of war.

[Mr. R. B. Hanson.]

I do not propose at this stage to elaborate the question of mobilization of wealth and resources. The section of the mobilization act which this bill seeks to repeal imposes a limitation on the use of man-power only. There is in the act no limitation upon the utilization of material resources. In that respect the government has the most ample and plenary powers. Upon the government must rest the responsibility for failure to utilize fully the unrestricted powers which they possess in this respect. Consequently, until the principle of removing the limitation with respect to man-power has been approved by the adoption of second reading, I think we would be well advised to confine our discussion to that point. When we have approved the principle of removing the existing limitations in the act, we can then take up at once the question of the methods whereby all our resources, material as well as man-power, may be fully utilized without limitation.

Here, in this House of Commons, is the place and now is the time to discuss and determine whether, and by what methods, the resources and man-power of the nation shall be mobilized. Parliament, not the cabinet in the secrecy of the council chamber, is the proper body to determine the methods by and the conditions under which the principles of national selective service shall be enforced. Now is the time for parliament to determine, once and for all, that the immediate enforcement of compulsory selective service over the whole field of the war is urgently necessary. This is the time and this is the place to determine the methods and conditions under which it shall be enforced.

I call upon parliament, with all the emphasis and sincerity at my command, to assume that responsibility now. I call upon parliament to decide here and now that compulsory selective service is immediately necessary, and then to proceed to work out the details under which it shall operate. I am not content, nor do I think the people of Canada will be content, to leave these questions to the Prime Minister and his colleagues assembled in the secrecy of the cabinet chamber, or to come back to parliament six months hence and have this debate all over again. The time is now. I appeal to the government to incorporate in this bill, in the committee stage, mandatory provisions for the immediate enforcement of the principles of compulsory selective service, without geographical or other limitation. And I appeal to them to incorporate in the bill the full terms and conditions under which it shall be administered, rather than leave those terms and conditions for future determination by the governor in council.

That was done in 1917; the conditions under which men were to be drafted were brought to parliament, not left to the secrecy of the council chamber. Parliament passed upon them, and the only regulations that were left to order in council were those relating merely to matters of procedure.

It may be said that the whole framework of the National Resources Mobilization Act is an outright delegation of the powers of parliament to the governor in council, and in express terms that is true. But I have always looked upon the mobilization act as emergency legislation. God knows it was produced under an emergency. It never would have been produced if my trusted colleague and myself had not confronted the Prime Minister with the position after Dunkirk. Does anyone doubt that?

Mr. MACKENZIE KING: Certainly.

Mr. HANSON (York-Sunbury): Well, it never would have been done. The day we went to see the Prime Minister and demanded this legislation, he had not even read his dispatches from overseas after the fall of Dunkirk, or so he told us.

Mr. MACKENZIE KING: Yes, but I also told the hon. gentleman that the government was considering the very matter with which he was concerned, and were taking action on it.

Mr. HANSON (York-Sunbury): No, the Prime Minister did not tell us until the next day what the government was proposing to do. I have upstairs now a memorandum in the Prime Minister's own little handwriting.

Mr. MACKENZIE KING: My hon. friend has referred to a document which he says he has in his possession. I ask him to lay it on the table of the house.

Mr. HANSON (York-Sunbury): Well, I do not have it with me, but I think I can find it and I shall be glad to do so.

Mr. MACKENZIE KING: Do so tomorrow.

Mr. HANSON (York-Sunbury): If I can find the memorandum which the Prime Minister sent me I will be glad to do so. I hope it has not been destroyed; I think it is in my file. In any case the Prime Minister remembers that he sent me such a memorandum.

Mr. MACKENZIE KING: Yes, but my hon. friend is placing an interpretation on that memorandum for which there is no justification whatever. The memorandum was to the effect that the government intended to take the action which it has taken; I agree to that.

Mr. HANSON (York-Sunbury): Yes, twenty-four hours after I had made the demand. It was emergency legislation, there is no doubt about that; and when parliament is not in session of course the government must have power to act. But when parliament is in session I do not believe that the government should make use of that delegated power. That is the principle for which I am contending. I believe that in this, as in all other cases, the proper course is to ask parliament to pass legislation, if parliament be in session, specifying the manner in which those powers shall be used.

So that in this particular instance, the proper course for the government to pursue, and the one which I urge upon them with all the earnestness at my command, is to ask parliament now, by way of amendments incorporated in this bill, to prescribe the methods by which the power shall be utilized. I renew my plea that there be incorporated in this bill, in the committee stage, not only mandatory provisions imposing at once full compulsory selective service, but detailed provisions for the operation of that system, as was done in 1917. That is the democratic way, and the other is the fascist way. That is exactly the position that was taken by the Liberal party in 1917. They demanded that it be done, and it was done. I assert that we seek to have these provisions set forth now by parliament, rather than left for future determination in the secrecy of the cabinet council. Under no circumstances should the terms and principles of the administration of compulsory selective service for overseas, or for service in Canada, be delayed for future consideration, or considered behind the backs of the representatives of the people and without submitting them to the representatives of the people in parliament. That is a safe principle for every hon. member of this house to support.

Failure to do that which I have outlined will assuredly mean that we will not have the proper kind of compulsory selective service in any practical sense. Submit your principles to parliament. "Trust the people" is an old cry of the Prime Minister. He has never been willing to do that in connection with the conscription of man-power in this country. He has never been willing to trust the people. Yet there is no man in this country, no man in the whole history of Canada, who has played upon the principle of trusting the people more than has the present Prime Minister. In respect to one vital matter, which affects the liberty of the subject, he legislates in the secrecy of the council chamber; he is afraid to trust the people. If we pursue our present course we shall have only the theory of selective service on the statute books; we shall

not have its application. Statesmanship and national honour alike require the immediate determination of all questions relating to the fullest mobilization of man-power and material resources. Let parliament act now and, in acting, strike a great blow for victory. For myself, my course is clear. I shall vote for the second reading of this bill; but I shall insist that there be incorporated in the bill the necessary mandatory provisions to place at once at the dispoal of the state, without limitation and upon terms to be decided by parliament and not by the cabinet, the full resources of the nation in man-power, wealth and materials.

We have come now to the cross roads in our history. Two paths lie before us. The one is dark and uncertain, the other straight and direct. Which of the two will the Prime Minister and the government take? Shall he insist that we continue with interminable detours to victory? That is what we have had for thirty-two months. Shall he insist that we plod wearily along a winding and unlighted road, in the pious hope that somehow, some time, somewhere, we may grope, stumble and flounder into the open light of victory? Or will he, casting aside all fears and doubts, political and personal, boldly and confidently choose the open, the well-marked path along which the Canadian people, strong and united, will march forward to the goal we all seek to achieve, a well earned victory and an honourable peace?

On motion of Mr. Coldwell the debate was adjourned.

On motion of Mr. Mackenzie King the house adjourned at 6.10 p.m.

Thursday, June 11, 1942

The house met at three o'clock.

UNITED KINGDOM-U.S.S.R. TREATY

ALLIANCE IN WAR AGAINST HITLERITE GERMANY AND COLLABORATION AND MUTUAL ASSISTANCE THEREAFTER

Right Hon. W. L. MACKENZIE KING (Prime Minister): I wish to lay on the table a copy of the treaty between the U.S.S.R. and the United Kingdom of Great Britain and Northern Ireland of alliance in the war against Hitlerite Germany and her associates in Europe and of collaboration and mutual assistance thereafter.

A copy of this treaty was to-day, I believe, tabled in the House of Commons of the United Kingdom. The government of Canada has sent the following message, through myself, to Mr. Churchill, the Prime Minister of Great Britain:

[Mr. R. B. Hanson.]

The Canadian government are very much pleased that the negotiations which have been proceeding between the governments of the United Kingdom and the U.S.S.R. have reached a successful conclusion. We believe that the new treaty will greatly contribute to the successful prosecution of the war and to the realization after the war of the principles of the Atlantic charter.

POOLING OF RESOURCES

ESTABLISHMENT OF JOINT UNITED STATES AND UNITED KINGDOM BOARDS ON PRODUCTION, RESOURCES AND FOOD

Right Hon. W. L. MACKENZIE KING (Prime Minister): I promised my hon. friend the leader of the Cooperative Commonwealth Federation (Mr. Coldwell) that I would give him a brief statement to-day with respect to closer coordination of United Kingdom and United States production programmes, to which he made reference yesterday.

The Canadian government cordially welcomes the new arrangements for the closer coordination of the United Kingdom and United States production programmes, which were announced in Washington on June 9. The United Kingdom-United States combined production and resources board and combined food board should help greatly in the vitally important task of integrating, for war purposes, the productive capacities of both countries.

The Canadian food production programme has been geared to the needs of the war situation for two years now. From the outset of the war we have been proceeding on the policy that the entire food resources of Canada and the United Kingdom were in a common pool, about which the fullest information has been exchanged. We have, for example, been working for more than two years on a programme of increasing our bacon and cheese production to meet the United Kingdom's war requirements, and have been cutting down our domestic consumption of such essential products to make sure that the basic requirements of the United Kingdom were met. More recently, through the medium of the Canada-United States joint economic committees, the two governments have been working out a war-time agricultural programme under which each country can devote its energies to expanding the production of those farm products which it is best equipped to contribute to the common cause.

Similarly, in the field of industrial war production, Canadian capacity has been expanded and developed in the closest possible cooperation, first with the United Kingdom and now with the United States as well. Through the operations of the Canada-United

States joint war production committee and of War Supplies Limited, the efficient integration for war purposes of Canadian-American productive capacity has been making satisfactory progress. The new direct arrangements for formalizing a similar United Kingdom-United States relationship should help greatly in organizing the war effort of the united nations as a whole.

The task of working out suitable working arrangements for the effective cooperation of the united nations in the job of winning the war is still incomplete. The creation of the new boards announced this week marks a long step forward in the problem of organization. Through what agencies and representatives our existing cooperation with both the United Kingdom and the United States can most effectively be coordinated with the new United Kingdom-United States boards is receiving the consideration of the government.

Hon. R. B. HANSON (Leader of the Opposition): With the early part of the statement of the Prime Minister I am in agreement. But inasmuch as our food and munitions production in Canada has advanced from the low gear to the second gear stage—we hope that we are now working on all eight cylinders, and in high gear—are we to be left, with respect to these joint boards, with representation by a citizen of the United States, no matter how eminent or capable he may be? Surely Canada has arrived at the stature of a nation, and if there is to be representation it should be by a representative of this government. I am sure the Prime Minister will agree with that and insist upon that position.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I certainly do not take any exception to what my hon. friend the leader of the opposition has said. All I would point out is that the agreement just concluded between the United States and the United Kingdom was reached within the past day or two. I have no doubt, having regard to our position and to the relationships that we have had both with the British government and with the United States government, that we shall be able to effect some arrangement in connection with food production along the line indicated by my hon. friend.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

MALTON AIR FIELD—ROADWAY TO TORONTO

Mr. CHURCH:

1. What steps are being taken by the government to improve the roadway leading to Malton air plant?

2. What contribution did the city of Toronto and the government make to the erection of the air plants at (a) Malton, (b) Toronto island?

3. What use is being made of these plants in connection with the war?

Mr. HOWE:

1. The construction and maintenance of roads to Malton airport is not within the jurisdiction of the Dominion government. A grant of $25,000, however, was made towards the construction of better highway connections with the city of Toronto by the Department of Transport.

2. The total capital expenditures on the Malton and Island airports are as follows: Expenditure by the city, $986,000; grant from province of Ontario, $450,000; expenditure by Department of Transport, $690,345; expenditure by Trans-Canada Air Lines for hangar, $135,000.

3. The following use is made of Malton airport: 1. Normal civil air transport services by Trans-Canada Air Lines and American airlines; 2. No. 1, air observer school, and No. 2 elementary flying training school, under the joint air training plan; 3. Testing of aircraft manufactured in the adjoining factories.

The following use is made of Toronto Island airport:

1. The training activities of the Royal Norwegian Air Force.

2. The communications section of the Royal Canadian Air Force for transporting their own personnel.

3. Non-scheduled operations by seaplane and landplane operators.

SASKATCHEWAN COMMUNITY PASTURES

Mr. PERLEY:

1. How many community pastures were established in the province of Saskatchewan during the year 1941?

2. What was the cost of each, (a) acquiring of property or land, (b) fencing, showing average rate per mile?

3. Was any fencing done by contract?

4. If so, what are the names of the contractors and what was the average rate per mile?

Mr. GARDINER:

1. Nine.

2. (a) Nil.

(b) Masefield, L.I.D. No. 17, $16,295.55, average $388.00; Lone Tree, No. 18, $21,929.30, average $395.12; Lomond, No. 37, $14,270.85, average $328.07; Val Marie extension, $39,818.50, average $355.72; Shamrock, No. 134, $17,350.80, average $301.75; Big Stick, No. 141, $14,544.98, average $309.47; Spy Hill,

No. 152, $10,546.35, average $357.50; Beaver Hills, No. 152, $30,121.13, average $327.40; Monet, No. 257, No. 2, $13,850.75, average $364.49.

3. No.

4. Answered by No. 3.

SASKATCHEWAN WATER CONSERVATION PROJECTS

Mr. PERLEY:

1. How many dugouts were contracted for and completed in each constituency in the province of Saskatchewan during the year 1941, and what was the average cost of same?

2. How many water projects, other than small dams, were undertaken and completed during the year 1941 in the province of Saskatchewan?

3. What water conservation projects are contemplated in the province of Saskatchewan during the year 1942, other than small dams?

Mr. GARDINER:

1.

Constituency	Number	Average Cost
Assiniboia	77	$103 80
Weyburn	158	
Wood Mountain	25	
Maple Creek	19	
Qu'Appelle	188	
Moose Jaw	112	
Swift Current	91	
Melville	449	
Lake Centre	127	
Rosetown-Biggar	50	
Kindersley	55	
Yorkton	237	
McKenzie	335	
Rosthern	69	
The Battlefords	67	
North Battleford	45	
Prince Albert	2	
Humboldt	69	

2. Eight.

3. Six:

1. Completion of Duncairn dam and reservoir.

2. Completion of Highfield dam and reservoir.

3. Comletion of drainage canal from Rush lake to Reed lake.

4. Completion of Echo lake dam.

5. Completion of Last Mountain lake creek dredging.

6. Completion of Cypress lake inlet and outlet canal improvements.

NOVA SCOTIA DAIRY PRODUCTS

Mr. PURDY:

Have arrangements as yet been made adjusting the inequalities in the prices authorized for fluid milk and other dairy products in Nova Scotia?

[Mr. Gardiner.]

Mr. ILSLEY: Order 124 of the wartime prices and trade board, passed on the 7th day of April, established maximum prices which permit adjustment of inequalities upon recommendation of the provincial board. Whether inequalities exist, having regard to varying circumstances and conditions, is a matter of opinion, making a more definite answer to the question impossible.

COAL—JUBILEE COLLIERY, SYDNEY MINES, N.S.

Mr. MacLEAN (Cape Breton North-Victoria):

In view of the announcement that coal is to be rationed this winter, will the government endeavour to have the Nova Scotia Steel and Coal Company reopen the Jubilee colliery at Sydney Mines, Nova Scotia?

Mr. ILSLEY: No announcement has been made that coal will be rationed this winter. It was stated that if the United States decided to ration coal, Canada would probably find it advisable to do the same.

The problem is one of transportation rather than production, making the opening of additional collieries an inappropriate method of dealing with the situation. The question relates to a matter of future policy as to which no present statement can be made.

CANADIAN FORCES—MARITIME PROVINCES—PURCHASE OF GASOLINE, OIL AND GREASE

Mr. MacLEAN (Cape Breton North-Victoria):

1. Were tenders called for the supplying of gasoline, oil and grease, for army, navy and air force, at Saint John, New Brunswick; Halifax, Pictou, Mulgrave, Nova Scotia; St. John's, Newfoundland, and Cape Breton, Nova Scotia?

2. If so, what oil companies tendered, and who was awarded the contract?

3. Was any tender sent in by McColl-Frontenac Oil Company?

4. To whom are the requisitions made for gasoline, oil and grease in Sydney, North Sydney, Sydney Mines and Reserve?

5. Has anyone given instructions that all gasoline, oil and grease requisitioned is to be purchased from the Imperial Oil Company?

Mr. HOWE:

(a) Saint John, N.B.

Army requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.; Pennsylvania Oil Products Co.; Tidewater Oil Co., of Canada Ltd.

Contracts were awarded to Provincial Oils Limited, McColl-Frontenac Oil Company Ltd., and Canadian Oil Companies Ltd.

Navy requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.

The contract was awarded to British American Oil Company Ltd.

(b) Halifax, N.S.

Army requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.

The contract was awarded to Imperial Oil Limited.

Navy requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.

The contract was awarded to Provincial Oils Limited.

(c) Mulgrave, N.S.

Army requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.; Pennsylvania Oil Products Co.; Tidewater Oil Co., of Canada Ltd.

Contracts were awarded to McColl-Frontenac Oil Co., Ltd., and British American Oil Company Ltd.

Navy requirements

Tenders were received from the following companies: Irving Oil Limited; Provincial Oils Limited; Imperial Oil Limited; McColl-Frontenac Oil Co., Ltd.

The contract was awarded to Provincial Oils Limited.

(d) Pictou, N.S.

Navy requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; McColl-Frontenac Oil Co., Ltd.; Imperial Oil Limited; Irving Oil Limited.

The contract was awarded to British American Oil Company Ltd.

(e) St. John's, Nfld.

Navy requirements

Five firms were requested to tender. One tender only was received, from Imperial Oil Limited, to whom the contract was awarded.

Note.—Army requirements for this point are also being supplied by Imperial Oil Limited, no other firm being in a position to supply.

(f) Cape Breton, N.S.

Army requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.; Pennsylvania Oil Products Co.; Tidewater Oil Co., of Canada Ltd.

Contracts were awarded to the British American Oil Company Ltd. and Canadian Oil Companies Ltd.

Navy requirements

Tenders were received from the following companies: British American Oil Company Ltd.; Canadian Oil Companies Limited; Imperial Oil Limited; Irving Oil Limited; Provincial Oils Limited; McColl-Frontenac Oil Co., Ltd.

The contract was placed with the British American Oil Company Ltd.

4. Requisitions are made to the Department of Munitions and Supply for army requirements by the director of supply and transport, Department of National Defence, upon request from the district officer commanding, military district No. 6, Halifax, N.S.

Requisitions are made to the Department of Munitions and Supply for navy requirements by the director of naval stores and air force requirements, through the commanding officer, eastern air command.

5. No.

Note.—Requirements of the Department of National Defence for Air on the east coast are purchased by the local purchasing agents of the Department of Munitions and Supply, in order to ensure better control of deliveries and maintenance of supply. The business is being distributed equally among the six firms in a position to supply.

PORK PRODUCTS FROM UNITED STATES—DRAWBACK CLAIMS BY PACKERS

Mr. HATFIELD:

1. Have the meat packers filed claim for drawback on difference in price importation of pork products from United States and amount received by them under export agreement with Great Britain for the year 1940?

2. If so, what were the sums paid and to whom?

Mr. GIBSON:

1. No drawback claims have been filed on the basis of difference in price importation of pork products from United States and amount received by meat packers under export agreement with Great Britain for the year 1940.

2. Answered by No. 1.

GEORGE W. TINGLEY

Mr. DIEFENBAKER:

1. Is George W. Tingley of Halifax employed in the Department of Munitions and Supply?

2. If so, in what capacity?

3. What are his qualifications for this position and who recommended him?

4. What salary and expenses or other allowance does he receive?

Mr. HOWE:

1 and 2. Yes, for a probationary period of six months, as stores coordinator in the overhaul and repair division of the aircraft production branch.

3. (a) His qualifications for the position are: Graduate dentist—practised from 1906 to 1917; Canadian army—1917 to 1920; Cadillac franchise—1920 to 1924; Franklin franchise—1924 to 1930; General Motors' dealer—Manager of his own business; 1937—Appointed to dealer council of General Motors—This council to suggest procedures to be followed by General Motors' dealers in the United States and Canada. Member of advisory committee of federation of Canadian auto dealers; 1941—Director of Halifax aero club.

(b) Mr. H. J. Carmichael, director general gun production branch, Department of Munitions and Supply; Mr. Ralph P. Bell, director general aircraft production branch, Department of Munitions and Supply.

4. Salary at rate of $5,000 per annum plus the usual travelling expenses while on departmental business.

LABOUR CONDITIONS—FLORENCE, N.S., COLLIERY DISPUTE

Mr. MacLEAN (Cape Breton North-Victoria):

1. Has the Department of Labour taken any action to settle the dispute at the Florence colliery, Florence, Nova Scotia?

2. If so, has any decision been arrived at as to the cause of the trouble and where the blame should be placed?

[Mr. Howe.]

Mr. MITCHELL:

1. Yes. On May 7, the dispute as discussed in the Department of Labour with the international board member of the United Mine Workers of America and a resumption of work was expected on the following day. On May 8, another strike occurred at Sydney Mines nearby and the situation was discussed in the Department of Labour with the minister of mines and labour of Nova Scotia. A telegram was sent to the district president of the union that work should be resumed and the disputes referred to the miners' joint adjustment board for authoritative decision. A reply was received that the district president was confident that operations would be resumed on Monday, May 11, in order to permit adjustment board to consider disputes. This was done.

2. Reports received in the department indicated that the strike was against the suspension of nine miners who had quit work one day before closing time. The question as to blame is involved in the reference to the adjustment board. No report as to the decision has been received.

W. R. FISKE

Mr. MacLEAN (Cape Breton North-Victoria):

1. Is Mr. W. R. Fiske, Saint John, New Brunswick, employed in any capacity by the government?

2. If so, what are his duties?

Mr. HOWE:

1. Yes.

2. Regional officer of timber control office at Saint John, N.B. assistant timber controller for the maritimes and deputy administrator for lumber, millwork and woodenware which come under the authority of the timber controller.

PROPOSALS FOR ENTRY OF NEWFOUNDLAND INTO CANADIAN CONFEDERATION

Mr. WINKLER:

1. Have overtures been made either to or by Newfoundland regarding entering the confederation?

2. What would Newfoundland's representation in the House of Commons and the Senate be based on the representation of, (a) Nova Scotia or New Brunswick, (b) Prince Edward Island, (c) Quebec, (d) Manitoba or Saskatchewan, after revision?

Mr. MACKENZIE KING:

1. No.

2. In view of the answer to No. 1, the second question does not arise.

*STATUS OF "O CANADA"

Mr. LaCROIX (Quebec-Montmorency):

1. Has the defence council reached a decision regarding the status of the national anthem O Canada?

2. If so, what conclusion?

Mr. RALSTON:

1. No.

2. Answered by No. 1.

Mr. CHURCH: There is only one national anthem—God Save the King.

QUESTIONS PASSED AS ORDERS FOR RETURNS

PROSECUTIONS FOR VIOLATION OF REGULATIONS OF NON-LEGISLATIVE BODIES

Mr. CHURCH:

1. How many people, by provinces, have been prosecuted in the law courts for not carrying out the orders in council and instructions, rules and regulations and directions of various boards and controllers and dollar-a-year men, including the wartime prices and trade board, and various non-legislative bodies?

2. What lawyers, by provinces, have been retained, and what are their fees?

3. Does the Department of Justice provide counsel to enforce federal law for the wartime prices and trade board and other federal boards?

Mr. ST. LAURENT: I had expected that the hon. member would modify this question and perhaps make it clearer. I understood from him that he was particularly interested in the prosecutions in connection with the regulations of the wartime prices and trade board. If it is satisfactory to the hon. member, perhaps this question could stand as an order for return in respect to the wartime prices and trade board.

Mr. HANSON (York-Sunbury): It is a little wider than that.

Mr. ST. LAURENT: If the hon. member wishes more information, a further application can be made; but I understood from him that he was particularly interested in those prosecutions.

"CANADA'S BATTLE OF THE ATLANTIC"—"ROYAL CANADIAN NAVY"

Mr. HATFIELD:

1. How many copies of the publications, "Canada's Battle of the Atlantic" and "Royal Canadian Navy" were printed?

2. Was the printing done by contract? If so, who submitted tenders, stating amounts?

3. If not by tender, in what manner was the contract let and to whom?

4. What was the total cost and how were these publications distributed?

CANADIAN NATIONAL RAILWAYS

PROVISION TO MEET CERTAIN EXPENDITURES AND GUARANTEE OF SECURITIES AND INDEBTEDNESS

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to bring in a measure to authorize the Canadian National Railway Company to issue securities not exceeding $22,360,000 in principal amount to provide the moneys necessary to meet capital expenditures made or capital indebtedness incurred during the calendar year 1942; to make provision for the purchase or refunding of capital obligations of the company, or of any company comprised of the Canadian National Railways system, during the said calendar year and for the issue of substituted securities for such purpose; to authorize the governor in council to guarantee the principal, interest and sinking funds of securities issued by the company for the purpose aforesaid; to authorize the making of temporary loans to the said company secured by such securities and not exceeding $22,360,000 in principal amount to enable the said company to meet such expenditures and indebtedness; with authority to give financial aid and assistance to other companies of the said national system.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

ALASKA

REPORTED LANDING BY JAPANESE TROOPS ON ALEUTIAN ISLANDS

On the orders of the day:

Mr. J. G. TURGEON (Cariboo): I should like to ask a question of the Minister of National Defence, based upon a statement by the Japanese imperial command that Japanese soldiers have taken possession of some of the Aleutian islands. I know there will be much uneasiness in British Columbia, Alberta and other parts of Canada about this report and I should be glad to have the minister make a statement.

Hon. J. L. RALSTON (Minister of National Defence): No information whatever has been received by the Department of National Defence regarding an attempt to land troops on the Aleutian islands. We have had considerable information with regard to relevant matters, but nothing of that kind. I would direct my hon. friend's attention to the statement made yesterday by a United States naval spokesman to the effect that none of the Alaskan areas or rocks are troubled with

uninvited guests. The statement was again denied at ten o'clock last night in a CBC broadcast, when it was stated that no Japanese forces of any kind had landed on any rock or island of Alaskan territory.

FARM LOANS

BRITISH COLUMBIA—REFERENCE TO RETURN BROUGHT DOWN IN ANSWER TO QUESTIONS

On the orders of the day:

Mr. THOMAS REID (New Westminster): Mr. Speaker, I should like to direct a question to the Minister of Finance. Some few days ago I placed on the order paper three questions asking for information in connection with farm loans in British Columbia granted by the farm loan board. The return that was brought down by the minister yesterday in answer to those questions is, I think, an evasion of the questions I put on the order paper. My first question was:

What was the number of applications for loans under the Canadian farm loan board in the province of British Columbia in each month since January 1, 1939, to May 30, 1942?

And I asked two following questions. The answer that was brought down was given to the minister, I presume, by the chairman of the farm loan board. In connection with the figures given it is stated:

The statistical records of the board are kept on a yearly basis.

I claim that is a straight evasion of the questions I asked. I was not speaking of statistical records. I wanted the figures for each month since January 1, 1939, to May 30, 1942. I think a member of parliament is entitled to have that information, and I am asking the Minister of Finance now to have it brought down.

Hon. J. L. ILSLEY (Minister of Finance): I shall look into the matter and see whether the information is available on the basis asked for. I suggest to my hon. friend that if he had spoken to me first, instead of publicly accusing the officials of evasion, he would probably have achieved the same end.

CANADIANS IN JAPAN

PRESS REPORT AS TO ARRANGEMENTS FOR EXCHANGES OF UNITED STATES-CANADIAN AND JAPANESE NATIONALS

On the orders of the day:

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, on the orders of the day on June 9 I directed a question to the Prime Minister concerning a press report as to arrangements for exchanging Canadian and Japanese nationals. The Prime Minister was not in the house that afternoon, but the Minister of Mines and Resources undertook to bring the question to his attention. It will be found at page 3171 of *Hansard*. Would it be possible to have a reply to-day, or if not to-day, to-morrow?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I will try to give my hon. friend a reply to-morrow.

MOBILIZATION ACT

AMENDMENT TO REPEAL SECTION 3 PROVIDING LIMITATION IN RESPECT OF SERVICE OVERSEAS

The house resumed from Wednesday, June 10, consideration of the motion of Mr. Mackenzie King for the second reading of Bill No. 80, to amend the National Resources Mobilization Act, 1940.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I believe the people of this country are anxious for a total war effort, including the compulsory mobilization of all our resources, both human and material. But total war must mean total war for everything and not only for human life.

It is our view that political considerations have distorted the issues before the people and have unnecessarily divided our country. No section of our people, neither English nor French-speaking, has been told in clear and definite terms what we are fighting for, what the needs of the war are. Unreal and partisan political discussion has unfortunately made the question of conscription for overseas service the main issue. For some English-speaking Canadians it has become the symbol of total war; for most of our fellow-Canadians of the French language it has become the symbol of a surviving colonialism and an effort at domination to which they object. Thus, when unity in our country is a matter of life and death, we are rent by dissension and ill-will. More than that, not only the war but the post-war period is endangered by this disunity.

A large share of the responsibility for the present dissension lies squarely on the shoulders of the government. In time of acute crisis the Prime Minister (Mr. Mackenzie King) has been and still is pursuing his well known technique of procrastination in the hope that time will solve problems that cry for immediate solution. The result has been confusion and distrust, instead of understanding and confidence.

Even now the issue is being confused by the government. The people are being told that the amendment before us does not introduce

conscription but merely frees the government's hands. Of course, I realize that the mere amending of the act does not of itself automatically abolish the voluntary system, but of what importance is that as compared with the paramount fact that this is the last opportunity which parliament has of declaring itself on the subject? If this amendment is passed, every restriction on the government will have been removed and the government will be free to impose conscription for overseas service at any time, on any terms it sees fit, and without any further reference to parliament. This is contrary to all the assurances of the Prime Minister that parliament would decide this issue.

I submit that nothing is gained and much harm is done by this new confusion. For who is satisfied by the government's interpretation of this amendment? No one. Those who want conscription are incensed by this policy. Those who are opposed to conscription do not believe it. And the result is still further confusion, further argument and discussion, prolonged controversy and increasing bitterness. This lack of leadership, this policy of drift cannot be tolerated any longer. As I said in my broadcast during the plebiscite campaign, the "yes" vote was another indication that the people of Canada want a war policy which places all of the nation's resources at the service of the nation's cause—without profits, without special privilege, and without the evils of monopoly control. And, what is more, I am profoundly convinced that such a policy would greatly reduce the opposition to conscription for overseas service.

We deplore that conscription of man-power for overseas service has been allowed to take on such importance and to divide our people. For it is not the most vital issue facing this country to-day—and it certainly ought not to be a political issue. In our view, the problem of conscription for overseas service should not be dealt with on the basis of past prejudices and divisions. It is purely a question of strategy and should be considered exclusively on the basis of how we can make our best and most effective contribution to the defeat of the Hitler axis. We should think about it only in terms of our national interest and that of our allies, whose existence and freedom—as well as our own—depend upon the outcome of this war.

The Prime Minister yesterday asked parliament to free the government's hands so that it might by order in council adopt any policy which the war situation may make necessary. No man has more frequently assured this country that such policies would be decided by parliament than the Prime Minister. Surely the government realizes that at no time since the outbreak of war has the situation been more critical than now. Everyone agrees that the campaigns of this year will decide the war. What should be done ought to be done now, with and by the consent and approval of this parliament. We have no right to give a blank cheque to the government to do nothing, or to make regulations for the conscription of man-power, which may be no better understood or more equitably administered than the regulations already in effect and about the meaning of which there is no general agreement by the Department of National War Services which is charged with their administration. Under the circumstances my colleagues and I do not propose to give the government a blank cheque to do by order in council what this parliament alone should do.

In my broadcast of April 21, I said of the issue of conscription: "The issue will be decided by parliament when and if the government presents it for discussion", and I insist that parliament and not the governor general in council shall decide the issue. The significant thing we have to face is that the controversy over the narrow issue now before the house has deeply-rooted causes—causes much deeper than the mere question of conscription for overseas. The divisions in our country to-day are the result of twenty-five years of political manœuvring, and, added to this, the fact that throughout this period, in war as well as in peace, Canada has never pursued a foreign policy based on independent thought and judgment as befits a sovereign country. They arise from the fact that at no time has the government made clear to the people that we are in this war for our own survival and that we intend to play our proper part in the conduct of the war jointly with all other united nations, and not merely to be the appendix of any stronger power. They arise also from the fact that we have never stated clearly and unequivocally that so far as we are concerned and so far as the free peoples everywhere are concerned this is not an imperialist war, but on the contrary Canada stands now, and will stand when peace comes, to fight for freedom for all the subject peoples, whether it be in India, Asia, Africa, Europe or elsewhere. We should state clearly our determination, in the words of the Vice-President of the United States Mr. Henry R. Wallace, that "no nation will have the God-given right to exploit other nations". There must be neither military nor economic imperialism.

Finally I believe that the opposition to overseas conscription is due, in part at least, to the evidence everywhere of gross inequality of sacrifice, to the fact that the wide powers which were given the government in the National Resources Mobilization Act have so far been used mainly to conscript labour, to freeze agriculture, and to conscript man-power for home defence. They have not been used to impose equal sacrifices on the privileged and to harness industry and wealth to an all out war effort according to a national war production plan and without strengthening the hold of private monopoly over the life of our country.

These, I believe, are the real causes of the differences existing in Canada to-day. If we are to achieve unity, both for an effective war effort and for successful reconstruction afterwards, we must introduce now a new and dynamic policy along the lines I have just indicated. Conscription for overseas service alone will not meet the requirements of our contribution, nor, I must add, will mere opposition to conscription serve the cause of unity and freedom. Every experience in this war—our successes as well as our reverses—has underlined the correctness and, if I may say so, the far-sightedness of the position which we took in this regard at the beginning of the war. It has always been clear that Canada's vital contribution in this war must be the supplying of implements of war and of foodstuffs, in view of our small population, our industrial and agricultural resources, and the comparative safety of our manufacturing units from destruction by the enemy. This does not mean that I am suggesting that Canada should not make her proper contribution in man-power to meet the enemy wherever it is strategically important to fight him. On the contrary, we are convinced that Canada should make her proper contribution on the battle front in the same way as on the industrial front. But I condemn as thoughtless and irresponsible demagogues those people who speak of this war only or mainly in terms of soldiers and more soldiers. I would lay it down as an axiom for our country that any policy which would tend to increase our fighting services at the expense of our industrial effort, at the cost of reducing the production of war materials, would be a wrong policy. What we need, what we have lacked and still lack, is a comprehensive plan of selective service for our material resources as well as for our man-power.

Almost two years ago the people of Canada submitted to a national registration. But it is an open secret to-day that a new inventory of Canada's labour power must be taken. The director of national selective service is still at work gathering information upon which to base any positive system for the allocation of man-power. The registration of two years ago is apparently of no value whatever except for calling up men for military service. This is an outrageous example of the total lack of planning which has dogged our war effort at every step. To-day, after almost three years of war, there are still unemployed, and lay-offs in key industries. Only last Friday my colleagues the hon. member for Vancouver East (Mr. MacInnis) and for York South (Mr. Noseworthy) brought to the attention of the government lay-offs in a Montreal plant producing tanks, and in the Associated Aircraft plant at Malton. There are still instances of lack of equipment in our training camps. We are still in the dark as to the man-power capacity of Canada, and, at the same time that hundreds of trained and semi-trained mechanics are doing guard duty or drilling in the army, the director of national service warned us, on Monday, June 1, that we are already faced with a serious shortage of skilled labour.

I repeat what we of the Cooperative Commonwealth Federation have said many times in this house and elsewhere: a complete all-out war effort is essential to victory. This involves much more than conscription of man-power for military service, whether for home defence or for overseas. Not only justice but efficiency, not only morality but cold-blooded reality, demand conscription of war industry, of accumulated wealth and of financial institutions even more, much more urgently than the conscription of human life. The important thing to remember is that two years ago almost to a day the National Resources Mobilization Act, which the government now seeks to amend, was passed. At the insistence of the Prime Minister (Mr. Mackenzie King) parliament made dramatic haste and in three days the bill went through all its stages. Hon. members will remember that the Prime Minister scolded the house for taking even this short time to discuss a bill which gave the government sweeping, one might almost say dictatorial, powers. Listening to him at that time, a gullible person might have got the impression that one hour after the passage of the bill the whole machinery of the government would go into action to mobilize the country for total war. Such gullibility perhaps deserved the disappointment which it later suffered. For this act could more properly have been called the human resources mobilization act. Apparently only human life is considered a national resource. Industry and wealth remain private resources to be hired at a profit or borrowed at interest.

I want to make it clear that I do not desire for one moment to belittle what has been done. Obviously we are producing vast quantities of war supplies, and compared with the first months of the war we have made great strides, but it is my conviction that we can accomplish much more than we have done hitherto, and we cannot afford to lose any more time. It is our duty not only to help win the war some time but to help win it as soon as possible. Every month cut off the war means the saving of many thousands of human lives. From this point of view, therefore, what we have failed to do is scandalous, although what we have managed to do is substantial, and our failures have in my view been due to the fact that the powers given the government under the mobilization act have so far been used mainly for the regimentation of our human resources.

Look at the record. We have conscripted men for home defence. We have frozen wages without placing any floor under them, so that industrial wages as low as 30 cents or 35 cents an hour are still being paid in many parts of Canada, particularly in the province of Quebec, and frozen at that level for the duration of the war. We have frozen farm labour without providing the farmer with the means of paying his labourer a decent wage. We have introduced measures which in effect almost—note, I say almost—prohibit strikes; yet we have done nothing to guarantee the workers the right to organize and bargain collectively. We have frozen prices, which is in principle a very good thing; but we have done almost nothing to protect the primary producer under the scheme. We have set up machinery for the regimentation of labour under the National Resources Mobilization Act, but without prior consultation with the workers.

Against this record on the human side, set up the profits still being made by corporations, the extent to which the economic effort is controlled by representatives of monopoly interests, the great luxuries still possible to those with wealth, the increasing power and resources being concentrated in the hands of a few, and you have some of the fundamental reasons why there is so much discontent and suspicion in the country to-day. As I have already said, we need a new and comprehensive policy, a policy which would utilize every resource for victory, which would plan our war production with a view to achieving the greatest possible output, without any regard for private interests, and which would provide a minimum standard of living and a scheme of social security for all our people. Such a policy would inspire our people with a vision of the new world for which we are fighting this war. For this reason I move in amendment:

That all the words after "that" in the said motion, be struck out and the following substituted therefor:

"this bill be not now read a second time, but that it be resolved that provision for the introduction of conscription of man-power for overseas service without specific proposals for the immediate use of the power conferred by section 2 of the act, to conscript war industry, financial institutions and accumulated wealth, does not meet the urgent need for total war, imposes further inequality of sacrifice, and is, therefore, contrary to the peace, order and good government of Canada."

There has been a widespread demand that we define exactly what we mean when we speak of conscription of industry and wealth. I shall endeavour to give the house a detailed outline of the immediate proposals we have in mind. Before doing so, however, there are one or two preliminary observations I should like to make.

I know that in many instances the question of what we mean by conscription of industry and wealth is asked honestly by people who really want to know the concrete proposals intended by this policy; but I also know that in some cases the question is asked by agencies which know perfectly well what is meant and which are trying to belittle the policy by confusing the simple issue with which it deals. It is significant that in almost every one of the many editorials written by newspapers on the subject recently, they say first that they do not know what conscription of wealth means, and then immediately go on to state that wealth has already been conscripted. They do not know what it means but it is already being done. I do not think I need point out further the obvious dishonesty of such criticism. I should like to make it clear that the proposals I am about to discuss are not exhaustive. They are the main, immediate steps which in our view are essential to an all-out war effort and to any policy approaching equality of sacrifice. The proposals we place before the government, parliament and the people are half a dozen concrete measures which I outlined in my speech to this house on January 26 of this year. I will enumerate them first and then deal with each one in turn. They are as follows:

1. Nationalization of financial institutions, so that without inflation or accumulating debt we can finance our war effort.

2. Compulsory, interest-free loans levied according to ability to contribute, as one of the means of war financing.

3. Government ownership or complete control of all essential war industries so that every plant can take its place as a unit in a comprehensive national plan of war production.

4. Replacing all dollar-a-year men by full-time national administrators paid only by the state and working in conjunction with war boards on which labour and farm organizations are properly represented.

5. A 100 per cent tax on all profits in excess of 4 per cent on capital actually invested, as has been suggested in our sister dominion of Australia.

6. The establishment of a fair maximum-minimum income, a steeply graduated tax on incomes between the minimum and maximum, and a 100 per cent tax on all incomes above the maximum.

The proposals are complementary one to the other and should be taken as parts of a whole plan. In our view this is the only way in which we could in this country achieve the three simple objectives which the Hon. Walter Nash, former minister of finance of the New Zealand Labour government, placed before the select committee on reconstruction and re-establishment the other day. You will recall he emphasized three things:

1. That no one who goes away from his country to fight ought to be worse off because he goes away to fight.

2. That nobody ought to be better off because he stays at home.

3. That no one in the present world situation should at any time expect a profit from the supply of essential things associated with the war.

Since the government is seeking power for the final step in the conscription of man-power for overseas, now is the time to demand that these principles be put into effect. Moreover, the Prime Minister has lectured the house several times this session on the necessity of public men and political parties honouring their pledges and living up to their promises. On April 21 I appealed to the Canadian people to support the affirmative vote in the plebiscite. In making the plea I said:

> I want to make it clear beyond the slightest chance of misunderstanding that we of the C.C.F. will not only continue but will intensify our demand for the conscription of war industry, accumulated wealth and the financial institutions, on the same basis and at the same time as the compulsory mobilization of human power. To us, the value of the plebiscite lies only in the opportunity it gives our people of clearing away the underbrush of irrelevant argument. Once that is cleared away, the path to a total and just war policy will be open. We shall accept an overwhelming and united "yes" vote next Monday as another indication that the people of Canada are anxious for a war policy which places all the nation's resources at the service of the nation's cause—without profits, without special privilege, and without the evils of monopoly control.

[Mr. Coldwell.]

Now let me deal with the relevance and meaning of each one of the proposals I have enumerated.

The first deals with the nationalization of the chartered banks. We of the Cooperative Commonwealth Federation have always contended that the financial system should be publicly owned and operated for the common good. Hon. members will have noticed that one of the first controls which the government found it necessary to impose in this war was the control of foreign exchange. Banks are instruments of financial and investment policy. It is absurd to leave any portion of this policy in private hands during a crisis such as the present. I am not speaking of the profits made by the banks, although the nine chartered banks in 1941 recorded a total profit of over $13,000,000. The more important thing, however, is the control of policy, which should be exclusively in the hands of the government. Only in this way could we pursue a monetary policy which would be in harmony with the needs of war production and investment. In this way, too, we would have the full information about the monetary situation which is necessary for an intelligent policy.

But there is one additional reason why the public ownership of the chartered banks and government control of financial and investment policy is of great interest at the present time. Everyone is aware of the important part which these factors played in the pre-war years. These factors will be equally crucial in the reconstruction period after the war. It will be necessary for the country as a whole collectively to control and direct investment and to finance huge schemes of public enterprise.

Some time ago the Prime Minister correctly stated in a public address that unless we lay the foundations of the new world order during the war we may look for it in vain. The right hon. gentleman was right. I now call upon him to implement his words, since he and he alone has the full power to direct the policy.

One final word on the question of banks. I hope no one will raise the bogey about such a step as I am urging disrupting our war effort. Banks do not produce anything. They could not produce a contraption which would shoot a pea at Hitler, let alone a gun, a tank or a plane. They might however harm our war effort by anti-social policies.

The second proposal we make is that when it is necessary for the state to borrow money from individuals and corporations it should be by means of interest-free loans to be levied on a graduated scale according to ability to subscribe. This is of crucial importance. Hon. gentleman will recall during the twenty years between the two wars the public treasury paid millions of dollars in interest charges. According to the figures published in appendix "A" to the Sirois report, page 41, the net annual debt charges of the dominion grew from $12,213,000 in 1913 to $152,488,000 in 1921, an increase of more than 1,200 per cent as a result of loans made in the last war. The loans which we have made in this war are already tremendously larger than those of the last war, although the rate of interest is lower. And we are not finished yet. What will this mean when the war is won? The same thing that it meant in the past: public works, programmes of social service, the needs of our people for education, for homes, for safeguarding health and providing for their old age—all will suffer because the cry will be raised that contractual obligations are sacred. Consequently the major share of the national revenue will be paid out in interest.

I declare that this is immoral. Do we promise interest in perpetuity to our young men whom we send to give their lives for this country and for the cause of freedom? Early in this war the President of the United States had the wisdom and generosity to introduce the lease-lend arrangement so as to avoid crippling the post-war period through international debts. We ourselves have made a free gift of $1,000,000,000 to Britain. Yet when we need the financial resources lying unused in Canada we pay interest on them now and forever more. "Profitable patriotism," the late Mr. Lapointe called it. Unpatriotic extortion would be more nearly correct.

There is a bogey in connection with this proposal which should be laid immediately. We are asked: Are you threatening to take the savings of the poor widow and the orphan? I wish many of them had savings; I am certain they would be among the first to offer them to our cause in this war. No; we are threatening no such thing. You will have noticed that we say that compulsory interest-free loans should be levied on a graduated scale according to ability to subscribe. The small savings of individuals which are meant for a rainy day, for possible ill-health or similar needs, should be exempt.

Then we are asked: What about the subscriptions of such institutions as life insurance companies, whose earnings are widely distributed among small policyholders? I am certain every Canadian would gladly forego the small sum which he receives in dividends on his policy each year if by doing so he could be guaranteed social insurance against unemployment, bad housing and chaos after the war. This is precisely what in part the elimination of interest payments on war loans would mean.

The third proposal we make is either government ownership or, where that is not feasible, complete government control of all war industry. Tied in directly with this is the next proposal, that dollar-a-year men should be replaced by national administrators paid exclusively by the state, and that labour and farm organizations be given a proper share in the control of war production. I discuss these points together, since they concern one subject.

Production is still our main job in this war. Upon our success in this field depends our main contribution to victory. On many previous occasions my colleagues and I have pointed out the shortcomings in our war production and the utter lack of over-all planning. In fact it is true to say that the Department of Munitions and Supply has so far been merely a procurement department. It has sought to fill orders requisitioned by our own service departments or those of our allies. There has been no evidence of comprehensive planning to expand our war production to the maximum of our resources without affecting the health, efficiency and morale of our people. "Cost plus" contracts have been entered into. I understand that several hundred have been made. Private business has been allowed to bargain and haggle, to hinder necessary expansion, to continue to produce luxury articles requiring indispensable war materials, to influence our whole production policy by competitive considerations. Look at the record. Only a few months ago did we stop the production of pleasure automobiles, and it is not very much longer since we stopped production of other luxury articles, such as radios and refrigerators. Now we are short of rubber and steel and other materials which went into the manufacture of these articles during more than two years since the war began. In fact the years 1940 and 1941 were banner years for the automobile industry. Yet they were years during which France fell and Britain was on the brink of defeat, years during which the war became a world conflict and the cause of freedom became more and more dependent on contributions of this continent.

Some of the evils of the first two years have been corrected through the pressure of events. But we still have far too much "business as

usual," far too much tenderness towards private interests; still no plan based on a full inventory of our resources. I have already referred to layoffs which have occurred in Hamilton and Malton. The other day I drew the attention of the house to the possibility of oil deposits on Manitoulin island. These possible deposits of one of the most valuable resources needed for war are not even being investigated, because in 1909 a private lease was granted to an individual and corporation. In war at least such resources must belong to the people, to the nation, to the allied cause; private interests must not stand in the way of the national objective of victory.

As I speak, the Dumart packing plant in Kitchener is shut down. For almost four weeks the plant has kept the workers locked out, because they walked out for one hour in protest over the unfair dismissal of two of their fellow workers. The federal labour department and the provincial minister of labour have sought a settlement. The company says no; it will open the plant only on its own conditions, namely, that they take back whomsoever they like, and fire the most active unionists. The union has sent a brief to the Prime Minister asking him to send a controller to the plant, but that the government refuses to do. Think of it. In spite of the great need for bacon and similar meat products in Great Britain. In spite of the beef shortage at home, a private meat packing company is at liberty to shut down its plant for four weeks, to keep about three hundred men and women idle and in want—all because of the determination to block the union. The Minister of Labour (Mr. Mitchell) does not act.

Mr. MITCHELL: At the moment, as the hon. member speaks, a conference is going on in the Department of Labour. The plant is operating.

Mr. COLDWELL: But after four weeks, though.

Mr. MITCHELL: My hon. friend knows it is an illegal strike.

Mr. DOUGLAS (Weyburn): It was not an illegal lockout, though.

Mr. COLDWELL: Was it an illegal walkout?

Mr. MITCHELL: It was an illegal strike.

Mr. COLDWELL: I could cite many more examples of the past and present. It is a simple statement of fact that our conversion to war production has been slow and tardy; that it has been impeded by considerations of the competitive position of private monopolies both now and after the war; that private business has been and still is allowed to control the effort within wide limits; that we have not had any comprehesive plan of war production based on the compulsory selective use of all our resources. And this in a war in which supplies and equipment mean the difference between victory and defeat. The united nations do not lack men. They do need, and need urgently, more and ever more equipment and supplies. To the extent that any private consideration is allowed to stand in the way of war production, to that extent do we betray our sacred obligations to our country and to our allies in this war.

Therefore we say that all war industry should be fully conscripted immediately. It would probably be difficult to acquire immediate public ownership of some industries without interrupting production, and we recognize that production must not be interrupted. But it is possible, without any difficulty, to say to private industry that for the duration of the war, its plants, its policies, its management are completely at the disposal of the nation, precisely in the same way as we have, without hesitation, said to the men and women of Canada that certain of them must place their lives at the service of the country; that others must for the duration of the war work where they are told, at a wage which may not be increased.

Another reason why our economic controls have not worked satisfactorily is that they have been in the hands of men who exclusively represent big business and continue to draw their salary and incomes from the corporations in which they have an interest. It is an accepted principle, though sometimes evaded in practice, that one who becomes a minister of the crown should thereupon sever whatever connections he may have had with private corporations. But our dollar-a-year men have almost as much legal power and a great deal more economic power than members of the cabinet, and should be subject to the same rule. Even if our big industrialists and financiers were angels—and the social history of our country shows some of them to have been far removed from the incorruptible inhabitants of heaven—they would still be the victims of divided loyalties and of the pressures of long-established ties and habits. Therefore we say that dollar-a-year men should be replaced by administrators who are employed by the state at a salary, and who are forbidden to receive any remuneration from private corporations.

Finally, on this question of production and control, it is absolutely essential that labour and farm organizations be properly represented

on all war boards. This is a war for democracy. The workers have no axe to grind other than the one needed to destroy Hitler and Hitlerism. Their zeal, their intelligence, their daily experience should be harnessed through giving them a share in the responsibility of planning and controlling production. In this way greater efficiency could be achieved, a feeling of confidence, self-respect and responsibility instilled into our people, and a measure of democracy introduced into our war effort. Ernest Bevin has wisely said:

> This talk of winning the war means you have to call for the utmost ingenuity you can get from the people, for every ounce of ability they have, for the willingness and courage to take decisions, to make them indifferent to enemy action and carry on. I do not believe you can do that with orders from the top.

In Canada we have taken no account of this important fact. It is only after almost three years of continuous pressure by us and by the labour unions that the Minister of Munitions and Supply (Mr. Howe) has at last condescended to favour labour-management committees. Much more than that is needed. At the bottom there must be union recognition and collective bargaining, and then organized labour should be represented in the top councils as well as in plant committees.

The fifth proposal I enumerated earlier is to limit net profits to 4 per cent on capital actually invested. There is no reason why such a policy should not become immediately the law in Canada. It may well be argued that even 4 per cent is far too generous; that in a war such as the present, with so much at stake, no profits whatever should be made out of the production of war supplies. Again we are prepared to recognize the compromise which may be necessary in order to maintain continuous production. But 4 per cent is an adequate return. No business should demand more in this crisis.

An attempt has been made to foster the idea that the excess profits tax has really eliminated profits. I am quite prepared to admit that it has prevented the kind of profiteering which was known in the last war. But huge profits are still being made. The *Financial Post* for May 30 carries an analysis of the profits made by 146 selected companies. The final showing is that the 1941 net profits of these companies was 8·1 per cent higher than those of 1940 and 2·8 per cent higher than those of 1939. The *Financial Post*, as may be expected, draws the smug conclusion that this shows that profits are reasonable. Such a conclusion is without foundation. For any increase whatever over 1939 and 1940 is scandalous. The 1939 profits were for all industry, with the exception of the railways, among the highest since the last war. To allow in the second year of this war net profits—after all taxes greatly increased depreciation, inventory and other reserves—greater than those of one of the most profitable pre-war years is to make a mockery of the principle of equality of sacrifice. In fact, if the *Financial Post* had, as it should have, compared the 1941 profits with the average made in 1936-39—the basic period under the Excess Profits Tax Act—the 1941 increase would have been very substantially greater.

I have in my hand two tables: one of twenty-three companies which in 1941 made profits up to 30 per cent higher than the average made by the same companies for the basic period 1936-39; the other listing twenty-six companies whose 1941 increase over 1936-39 was 30 per cent or over. The aggregate increase in the first instance was 14 per cent over 1936-39 and 9 per cent over 1940. The aggregate increase in the second group was 62 per cent over 1936-39 and 29 per cent over 1940. I do not propose to take time to read them, but if it is desired, I shall be glad to place these tables on *Hansard*.

Mr. ILSLEY: The hon. member is proposing to limit the profit to 4 per cent. Would that carry a guarantee of profits of 4 per cent?

Mr. COLDWELL: No, it would not carry a guarantee of 4 per cent. I know it will be said that it would not be possible with a 4 per cent return for an industry to build up a reserve to meet post-war conditions, but if everybody was limited to 4 per cent after allowing fair depreciation for different types of industry, I think that would be fair.

The apologists for the monopoly interests and big business point to the increased production and increased capital investment as justification for the increased profits. But what is responsible for the present production and who laid out the added capital expenditure? What right has private monopoly to extort a return on production for which it does not even have to advertise, production which is caused by a world calamity? And do not let us forget that well over half a billion dollars have been invested by our government and that of Britain in the capital expansion made necessary by the war.

The important point in all this is not only the amount of money involved; it is the distortion of the purposes of this war which the situation reveals. It is the suspicion which

is engendered in people's minds. It is the principle of the thing, the injustice and inequality of sacrifice. If we ask young Canadians to submit to another step in the total conscription of their lives, then profits should at least be limited, if not eliminated.

Finally we propose the setting up of a minimum and maximum income and a tax beginning with the minimum and graduated steeply until it is 100 per cent for everything above the maximum. The minimum suggested is that of our present income tax law—$750 for a single man and $1,500 for a married person. As for the maximum I would suggest an amount between $12,000 and $15,000. The President of the United States suggested $25,000 for that country. In New Zealand they have established a maximum of $12,000. Fifteen thousand dollars would therefore seem to be a proportionate amount for Canada. I want to make it clear that the maximum would not be net, but would remain subject to income tax. Now that this parliament has exclusive powers in the income tax field, such a proposal can be conveniently carried out.

It is scandalous and inhuman that we should refuse to increase the miserly benefit now being paid the aged, that we should refuse even to give them the cost of living bonus. It is equally scandalous that we should, even now with maximum employment, have thousands of people living in slums and in bad health.

Our treatment of soldiers' dependents is equally deplorable. Many of them are partly dependent on the generosity of private organizations. Imagine the morale which can be instilled into these people whose breadwinners have gone to give their lives for their country; yet they must depend on private charity to live in decency. Faith in the war, unity among our people for victory, zeal in production—all these indispensable assets of a people at war in a righteous cause, depend upon just and humane treatment of the masses of the people. We must give them something to defend and fight for. And we must show them that in this war no one in the land is allowed an income of excessive luxury.

These are the concrete proposals which we have in mind under a policy of conscription of industry and wealth. I have dealt with them in considerable detail so that no one can hereafter say that they do not know what is meant. I appeal to hon. members to consider this policy on its merits. The time is overdue when we should attain a real total war effort and begin to lay the outlines of the just Canada which we should build after victory.

It is my conviction that such a policy would fire the imagination of all our people, would make clear our objectives in the war and would win the unqualified support of every section of our people for any and every service which may be necessary. Remember the profound homely truth which the Vice-President of the United States enunciated recently:

> The object of this war is to make sure that everybody in the world has the privilege of drinking a quart of milk a day.

Let us plan for this objective in our own country now. If an effective policy of conscription of industry and wealth were introduced now, we believe any restriction on military conscription could justly be removed and we would support it. But the government is not doing anything of the sort. In all respects it will continue the disastrous policy which it pursued until now. It only asks to be free to continue one step further the conscription of human life. The demands of the workers, the pleading of the farmers, the entreaties of the aged, the veterans, the sick and the dependents of the nation's heroes cannot move the government one inch towards greater democracy or justice or total economic conscription. But the shouts of reactionary super-patriotism for human conscription are immediately answered. We cannot and will not agree to giving of further powers for human conscription without concrete measures for the conscription of material resources.

This war, with everything which is at stake in it, with the heroism of whole peoples to inspire us, should have been the occasion for building a deeper unity in our own nation than we have ever known. That the contrary should face us now is a condemnation of the leadership and policies which have guided us since the outbreak of hostilities. I believe the policies which I have outlined could win back that unity, could build this nation into a powerful instrument for victory in the war and for a people's peace afterwards. That is why we urge them at this time.

Mr. SPEAKER: The question is on the amendment. If any hon. member wishes to speak to the relevancy of the amendment, he should do so at this time.

Mr. MACKENZIE (Vancouver Centre): I rise to discuss one point only. I refer Your Honour to page 391 of May, thirteenth edition, which reads:

> Nor may such an amendment deal with the provisions of the bill upon which it is moved, nor anticipate amendments thereto which may be moved in committee, nor attach conditions to the second reading of the bill.

I suggest that the amendment is out of order. There are other points also that could be raised.

Mr. COLDWELL: I would refer Your Honour to Beauchesne's Parliamentary Rules and Forms, page 217, standing order 75, citation 755, which reads:

It is also competent to a member who desires to place on record any special reasons for not agreeing to the second reading of a bill, to move as an amendment to the question, a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill, or expressing opinions as to any circumstances connected with its introduction, or prosecution; or otherwise opposed to its progress; or seeking further information in relation to the bill by committees, commissioners, the production of papers or other evidence or the opinion of judges.

I would submit that under the citation the amendment which I have just moved is clearly in order, because it expresses opinions as to the circumstances connected with the introduction of the bill, and it contains a resolution declaratory of some principle differing from the policy of the bill. I would also direct Your Honour's attention to page 321, where the second readings of bills and amendments thereto is discussed. I direct particular attention to the last paragraph, which reads:

The question being proposed "that Bill No. 133, the Wartime Elections Act, be now read a second time."

Sir Wilfrid Laurier moved in amendment thereto, seconded by Mr. Pugsley: "That this bill be not now read a second time but that it be resolved that the abridgement by this parliament of the electoral franchise now enjoyed in any province of the dominion by any class of His Majesty's subjects would be contrary to the peace, order and good government of Canada."

This refers specifically to the point raised by the Minister of Pensions and National Health. That was an amendment with a declaratory resolution referring specifically to the bill and it was voted upon by the house in 1917. I contend therefore that both under this precedent of the amendment of Sir Wilfrid Laurier—and who in this house will say that Sir Wilfrid Laurier did not set an example in parliamentary procedure which we might well follow?—and under the citation I have made, the amendment I have just moved is in order.

Mr. SPEAKER: What the hon. member quoted from Beauchesne, paragraph 755, is contained in May, thirteenth edition, at pages 390 and 391, and the hon. member has read the citation as contained in Beauchesne. But May at page 391 also states:

Nor may such an amendment deal with the provisions of the bill upon which it is moved, nor anticipate amendments thereto which may be moved in committee, nor attach conditions to the second reading of the bill.

It is upon this quotation I should like to have the observations of the hon. member.

Mr. COLDWELL: Mr. Speaker, I do not refer to the provisions of the bill, nor do I attach any conditions to the second reading of the bill. I suggest that in what I am actually doing I am entirely within my rights in doing as a member of this house—and that is, moving that the bill be not now read a second time; and then I go on to declare why the bill should not be read a second time, thus guiding the government and the house in their subsequent deliberations and actions. I suggest that both under the citation from May and the practice of this house, as indicated by my reference to the Wartime Elections Act of 1917 and Sir Wilfrid Laurier's amendment thereto, the amendment I have moved is in order.

Mr. MACKENZIE KING: The point to which I was going to draw Your Honour's attention arose out of a remark of my hon. friend that the amendment which had been moved by Sir Wilfrid Laurier to a certain bill paralleled his amendment or that his paralleled Sir Wilfrid Laurier's. May I say that the difference between the two is just that to which Your Honour has directed the attention of the hon. member. I do not think there will be found in Sir Wilfrid Laurier's amendment any words which could have been moved in committee as a possible amendment to a clause of the bill, and that is the point on which I think His Honour will rule the present motion of my hon. friend as being out of order. Sir Wilfrid Laurier's amendment was in the nature of a motion of want of confidence in the government, but it did not go the length of setting forth certain provisions which might be moved as amendments in committee, which is what my hon. friend's amendment does. He is anticipating amendments which might possibly be made to the bill when it is in committee. That he cannot do on the second reading of any bill.

Mr. COLDWELL: My allusion to what should be done under this bill had reference to the bill already enacted. The Prime Minister said yesterday that power was in the hands of the government to do all the things that I am suggesting, by the declaratory section of the amendment, ought to be done. It is not that something shall be done, or that the bill shall be amended in committee. There is no need to amend the bill in committee because the power I refer to is already in the act; consequently in my opinion the argument of the Prime Minister on that point falls to the ground.

Mr. MACKENZIE (Vancouver Centre): May I point out, Mr. Speaker, that the citation from May, at page 391, is referred to in "Beauchesne's Parliamentary Rules and Forms," in paragraph 760.

Mr. MacINNIS: I was going to ask the Prime Minister what particular proposals were in the amendment which could be moved when the bill was in committee. I submit that if any such proposals were moved in committee they would be declared out of order as not being within the competence of a private member to move. Such amendments would be to section 2 of the act. I submit that paragraph 755, under standing order 75, places this amendment in order. It reads in part:

It is also competent for a member who desires to place on record any special reasons—

All the hon. member for Rosetown-Biggar is doing in moving his amendment is to place on the record special reasons; therefore I submit that his amendment comes within this wording and is in order.

Mr. SPEAKER: May I also ask the hon. member to look at citation 760, dealing with an amendment.

Mr. MacINNIS: Paragraph 760 says:

The principle of relevancy in an amendment governs every proposed resolution, which must, therefore, "strictly relate to the bill which the house, by its order, has resolved upon considering," and must not include in its scope other bills then standing for consideration by the house.

I submit that the amendment does not include within its scope any other bill that is now standing for consideration. The paragraph goes on:

Nor may such an amendment deal with the provisions of the bill upon which it is moved—

My hon. friend's amendment does not do that.

—nor anticipate amendments thereto which may be moved in committee.

The proposals he makes could not be moved in committee. I am satisfied that his amendment does not anticipate any amendment which could possibly be moved in committee, and therefore I submit that the citation from May cannot be quoted in opposition to the moving of this amendment.

Mr. SLAGHT: The hon. member who proposes the amendment has just informed the house, as I understood him, that everything contained in his proposed amendment is already covered by section 2 of the existing law. If he is right in that, surely this parliament does not permit amendments merely to parrot and reiterate a section of the law in the bill he proposes to amend. It would seem to me that that is a complete answer, and makes his present amendment out of order.

Mr. COLDWELL: In fairness, may I be allowed to reply? I said nothing of the kind. What I did say was that the Prime Minister in his speech of yesterday contended that section 2 of the act, section 3 of which the present bill will amend, gave the government power to do these things. The declaratory portion of the resolution complains that the government has not used that power, if it exists, and in any event is not bringing before the house any proposal to implement any power it alleges it has, and therefore the amendment is moved in the terms in which it has been moved.

Mr. SPEAKER: I think that the question respecting the amendment requires some consideration, and I will give my opinion at eight o'clock.

Mr. HANSON (York-Sunbury): On a point of order, Mr. Speaker, I did not call attention to this during the course of the remarks of the hon. member for Rosetown-Biggar (Mr. Coldwell), but I now call Your Honour's attention to what are the strict rules of this house; and if they are departed from, there is no reason why the leaders of a half-a-dozen so-called parties in this house may not claim the privilege too.

Mr. MACKENZIE (Vancouver Centre): May I point out that if the amendment moved by the hon. member for Rosetown-Biggar was in order, he was entitled to speak as long as he desired; if it was not in order, he was not so entitled.

Mr. SPEAKER: I assume that the leader of the opposition refers to standing order 37, and also to what I said yesterday in regard to the reading of speeches and to the application of the forty-minute rule. It has been the sentiment of the house, whether actually stated or not, that the leaders of the different parties were entitled, or if not entitled were permitted to exceed forty minutes, for the reason that they were the exponents of the party whose policy they were putting before the house.

Mr. HANSON (York-Sunbury): Not a party in the legal sense.

Mr. SPEAKER: If that was the sense of the house and was agreed to unanimously, the leaders were permitted to speak beyond forty minutes. But where exception is taken to

the leaders of these parties exceeding forty minutes I must of course apply the rule as it stands. Standing order 37 states:

No member, except the Prime Minister and the Leader of the Opposition, or a minister moving a government order and the member speaking in reply immediately after such minister, or a member making a motion of "no confidence" in the government—

I am not aware that the terms of the amendment proposed by the hon. member for Rosetown-Biggar are to be considered a motion of "no confidence", but if the amendment is so considered he is entitled to speak at length.

—and a minister replying thereto, shall speak for more than forty minutes at a time in any debate.

If it is the sense of the house that the rule should be strictly applied, I of course shall have to apply it, and hon. members will have to follow it.

Mr. COLDWELL: May I just express my thanks to the house. I quite realize that I was transgressing the rule, but I think the house will agree that I seldom use even the forty minutes that is allowed to me. I want to thank the house for the great courtesy extended to me, and the leader of the opposition for not interrupting when I was speaking.

Mr. MACKENZIE KING: Simply in order that the house may understand exactly what the rule is, I had in my mind much the same intention as that to which the leader of the opposition has just given expression, namely, to direct Your Honour's attention to what was said by Your Honour yesterday which would suggest that the house had as a matter of practice allowed two leaders other than the leader of the opposition and myself, and members of the government, a longer period than forty minutes in which to speak. That question came up, as I recall it, at the first or second session of this parliament, and at the time attention was drawn to the fact that the leader of the opposition is in a very different position from leaders of other groups, in that he is an officer of parliament itself. His appointment is under statute; he is in the same position in many particulars as ministers of the crown, and has a special duty, and for that reason is entitled to a special privilege. But it is equally clear that no one other than ministers of the crown and the leader of the opposition has as a matter of right the privilege of speaking more than forty minutes.

I had not intended to raise the question until after the leader of the Cooperative Commonwealth Federation and the leader of the Social Credit party had spoken, not wishing to interrupt either of them in the course of their remarks. But I do not think, now that the question has been raised, that—

Mr. HANSON (York-Sunbury): What about the other two?

Mr. MACKENZIE KING: I have just been reminded that there are supposed to be two other parties. They are hardly sufficiently grown-up even to claim the recognition that might be claimed for the others. However, I do think it should be understood that the rule will be followed. If as a matter of privilege and courtesy some special wish is expressed, then the house might consider it in the light of the circumstances, but otherwise I think, if I may say so, Your Honour should direct hon. members to recognize the rule.

Mr. SPEAKER: I need hardly add that I assumed that consent was given by the house and that therefore the privilege was extended. But it has now been brought to a definite conclusion in the statements made by the Prime Minister and the Leader of the Opposition; there is objection to any hon. members other than the Prime Minister, ministers of the crown moving government orders, and the Leader of the Opposition exceeding the forty-minute period, and I shall therefore be obliged to apply the rule as it stands. All hon. members will obey the forty-minute rule.

Mr. J. H. BLACKMORE (Lethbridge): As a parliament we are in this debate especially confronted with the problem of how Canada should proceed in order most effectively to mobilize her resources, first, in order that she may win this war, and second, in order that she may win the ensuing peace.

Social credit since its inception has consistently advocated the complete mobilization of Canada's resources for the defence of the Canadian people whether in peace or in war.

This government has conspicuously failed to mobilize completely Canada's national resources, notwithstanding the sweeping and all-comprehensive powers which this parliament unreservedly conferred upon it by the National Resources Mobilization Act of 1940.

In the first place, land resources are far from being fully utilized. In 1941, 6,011,020 acres of wheat land lay idle in summer-fallow, under the wheat acreage reduction regulations of last year. $24,044,080 were paid from the dominion treasury to keep them idle. How could anyone possibly argue that this immense natural resource has been mobilized?

Again, the mineral resources of Canada are, in the light of this war situation, still tragically

idle. On April 12, according to a Canadian Press dispatch, Dr. E. H. Boomer of the university of Alberta, chemical department, said that he had discovered that an average of 150 gallons of gasoline could be extracted from one ton of Alberta coal. On this basis it was estimated that there could be extracted from coal in Alberta 160,894,110 million gallons of gasoline. The coal in Alberta is estimated at 1,072,627,400 thousand tons. In any country which is already regulating and restricting the use of gasoline and is now talking of a coal shortage, such a situation as this must appear to any thinking mind as grotesque. For any man to rise in this parliament and pretend that the resources of Canada have been mobilized is for him to make himself ridiculous in the eyes of any fact-facing person. There are vast resources of iron in Canada which have never been touched, great resources of many other minerals which can be exploited, mobilized and brought to bear on the problem of winning the war.

Not only are these material resources being neglected, but the human resources of Canada are being utilized in a most wasteful manner. There are tremendous spare-time energies of people which in large measure are being neglected. As an illustration of what could be done if the government set itself to do so with a correctly scientific technique, may I cite two cases which have been brought to my attention recently. In western Canada one man is working on the railroad regularly and is farming a three-quarter section farm on the side, and his wife is helping with the stock. Here is an example of what could be done with the spare-time energies of the Canadian people if those energies were mobilized. A teacher in western Canada is conducting his school successfully and on the side is taking care of a dairy farm, supplying his community with milk; he has a considerable flock of poultry and is also running a farm on which there is a substantial herd of swine. That is another illustration of the way in which spare-time energies could be used. The average farm woman could use her spare time and would do so, if she were properly motivated, in producing great quantities of honey, eggs, turkeys, butter, cheese and many other commodities. The main reason why at the present time such activities are not engaged in by our farm women is the low or uncertain price that prevails. Our ordinary office girls who have finished their day's work at five o'clock or thereabouts usually spend the remainder of their time either resting or entertaining themselves or in some pursuit which is not immediately contributing to the war effort of Canada. If the right sort of price structure were built up and the right sort of direction given these girls they would become producers of necessary commodities for the conduct of the war. I suggest the production of fur from chinchilla or mink or fox, especially where girls live on the outskirts of cities or towns. Such fur would supply a valuable commodity and would help obtain needed foreign exchange with which to purchase commodities in the United States and would greatly add to our national wealth and contribute to the strength of our war effort.

In the April 17, 1942, issue of the Ottawa *Citizen* I read:

> The Unemployment Insurance Commission reported last night that about 37,500 men and women were registered on March 31 at the commission's unemployment and claims offices across Canada. The March 31 figure was higher than the previous two months, "notwithstanding the fact that many classes of workers are in demand," the commission's statement said.

The January 31 figure, I am informed, was 31,930; the February 28 figure, 32,211 and the April 30 figure, 33,000, including male, 24,879 and female 8,142, while the May 31 figure was 31,249. These are figures of men and women in Canada who have registered themselves for claims under the Unemployment Insurance Act, clear evidence that these people have been employed and have been thrown out of employment, through some mishap or mismanagement in the conduct of the country's affairs. I am informed by men who are in a good position to make a dependable estimate that, were the real facts known concerning the unemployment in Canada of people who are or would be effective in every respect, we should have the astonishing figure of from 100,000 to 150,000.

In the face of palpable and obvious existing facts, the Prime Minister's fervent, enthusiastic, almost rapturous or even ecstatic effusions claiming that his government has accomplished complete mobilization of Canada's resources appear merely gaudy and flamboyant twaddle, hollow, insubstantial and deceptive.

Why this tragic failure? Is it because of lack of desire on the part of the Prime Minister, on the part of members of the cabinet, on the part of parliament, on the part of the people? A thousand times no. We hear much silly prattle in the country about the need for waking from complacency. The people of Canada are in deadly earnest about this war and are in no way complacent. If they appear so, it is due to mismanagement of the country's affairs. Nor is this failure of mobilization due to any lack of laws and

powers conferred upon the government. The Prime Minister himself, in remarks he made yesterday, indicated that under the National Resources Mobilization Act of 1940 the government possessed virtually all the power to do anything whatsoever it chose to do. Evidently it is not from lack of power or of law. Well, is this failure to mobilize due then to the lack of machines in this country, or to lack of physical organizations for the production and distribution of goods? I think virtually everyone will acknowledge that it is not so. We have sufficient machinery and sufficient organization. Neither is the failure to mobilize owing to lack of a need for the goods which we could produce. With that all will agree.

Then what is the reason why in two years this government has failed, in spite of all its earnest efforts, to mobilize the resources of Canada for this war? The government has failed and will continue to fail so long as it continues to worship at the shrine of our present debt-money financial system. The government must make finance the servant, not the master, in Canada's economic household.

There will be those, perhaps including the governor of the Bank of Canada, who will say that already the dominion government is making finance its servant. That will do for parlour talk but not for an expression of fact to hard-headed business men who know what is taking place. The government has already ceased to sacrifice at the altar of gold; let it now with equal wisdom, vision and courage renounce the worship of the false goddess of debt.

How can Canada's resources be mobilized? I maintain that every available man and woman in Canada can be mobilized and stimulated and motivated to any desirable kind or degree of activity and efficiency by three simple devices; by use of credit facilities; by the use of market facilities, which need not be foreign markets; and by the use of prices or wages.

If this can be proved to be the case, and it can, then to pass an amendment to the act of 1940 is idle and futile, and will result in disillusionment, as the passage of the act itself did. I recall how when we were discussing that measure I was accused of being a sort of public enemy number one because I had the temerity to ask that the discussion should be protracted one more day. Now we have had the act for two years, and still we long for adequate action!

As to what the credit facilities in Canada could achieve, may I speak briefly. Credit advanced to industry would encourage the production of gasoline immediately. Hon. members will recall, when the other day I rather pointedly asked the Minister of Munitions and Supply (Mr. Howe) what the government was doing to bring about an increase in the production of certain commodities in Canada, how helpless was his reply; how it indicated that the government simply drifted along and apparently prayed that some person would come forward and go into a field and develop the production of vital war needs of Canada. Laissez-faire with emphasis! But the advance of credit from this government to prospective companies that might develop the gasoline resources of this country would have almost a magic effect on the production of gasoline. A similar thing is true in respect of steel, coal, alcohol, sugar, fruit, lumber, and a great variety of commodities, of every one of which this country is in danger of experiencing a shortage.

Furthermore, if credit were advanced to farmers in order to produce, say sheep, granted inexpensively, say at a rate of 2 per cent or less, and for a long enough period of time, say two or three or four years, to enable the farmer to get into the business before he had to pay back the loan, an astonishing impetus would be given to the production of primary products, meat and animal products of all kinds, fish, and the like. And if credit facilities were made available to students or prospective students throughout Canada to enable them to prepare themselves for important work for their country's destiny, it would surprise the whole country to see how rapidly the youth of Canada would be mobilized in the class rooms to acquire important skills which might mean the very existence of Canada.

Let me turn to the question of markets as a means of mobilizing Canada's resources. If a market were assured to labour in this country so that, for example, a man would know that when he became a skilled mechanic he would forthwith be employed, in other words if he knew that as soon as he was qualified for a given kind of work he could get that work, the encouragement which would be extended to the preparation of youth for the tasks of life would be beyond measure. And the encouragement to added efficiency would produce a great improvement. The assurance which would be given immediately to large numbers of men who are to-day working in industry, who realize that perhaps in a year or two their work may disappear and they may be faced with a long period of desolating unemployment and therefore feel that they must strike in order to gain a little extra savings while there is a chance—I say the assurance which would be given to these men would

greatly decrease the tension which is observable throughout Canada to-day. If the government offered work to everyone who wished to work, regardless of his age, the government would again help to mobilize man-power.

When I was a boy we used to take great pride in seeing men of sixty-six to seventy or seventy-five years of age stack grain or give a hand pitching bundles on the rack or do any kind of work on the farm. I have seen men of sixty-nine or seventy who were able to stand up and do their full part in a grain field or hay field. But what happens now when they get to be sixty-five—yes, fifty-five? In a general way they are unable to find work, which means that they are not able to do anything for their country. They are not mobilized, but are being disregarded in the economic life of the country.

If markets were guaranteed for goods such as pork, milk, apples, wool, not only this year but next year and three years from now, with what added confidence would the farmers throughout this land equip themselves for the production of those various commodities, and what a tremendous addition to the production of this country would result. How much farther the government could go in mobilizing the human and material resources of the country! I maintain that two of the most potent means of mobilizing the country's natural resources are credit and markets.

I come now to the third means—prices. Prices in this land must be subsidized, if need be, to guarantee the cost of production plus a profit sufficient to enable producers to make a good living for a family. Also prices to the consumers must be discounted where necessary, in order to enable them to buy their needs without undue suffering or hardship.

The evening before last I illustrated this point by reference to the policy of the British government with respect to eggs. At that time I pointed out that that government is paying the producers 75 cents a dozen for eggs, and selling them to the consumer for 50 cents, thereby absorbing the 25 cents. The British government, hard pressed as it is in every way, is finding such policy excellent business. This instance illustrates the possibility of government management with respect to price. By the adoption of that simple device the British government is stimulating the maximum production of eggs in Great Britain, and is taking the precaution to prevent inflation in egg prices by keeping the price down, through subsidies.

Wages can be used to motivate a greater and greater effort by Canada in mobilizing her resources. Wages must be subsidized where necessary. I will grant that that involves an unorthodox principle, but I would point out that we are finding the need for the application of many unorthodox principles, because we are living, sir, in an unorthodox age. If need be, wages must be subsidized to guarantee a good living for a family, to guarantee the possibility of saving, and to ensure that any increase in wages will not necessarily produce an increase in the cost of goods and thereby tend toward inflation. Increases to wage earners may be given in the form of savings certificates, if that method is thought wise, or of bonds, or of credits for post-war use, wherever the increases are not immediately needed for the requirements of the family. Given in this form, they will not immediately add to the purchasing power of the country, thereby putting pressure on prices, but will be in the people's hands as a guarantee that when the war production machine is transformed to the production of consumer goods for home consumption there will be an adequate supply of buying power to absorb those goods.

The proposal of the Prime Minister has largely to do with getting more soldiers. Let us for the moment give some attention to this matter of getting more soldiers. I would point out to the house that only recently the United States has raised the pay of its soldiers to $50 a month. Is there any reason why Canada should not raise the pay of her soldiers to $50 a month? I believe that as the result of such a change the government would find a considerable influx of soldiers into the ranks. I suggest the government should find out why it is that while we have a waiting list for the navy and a waiting list for the air force, we have no waiting list for the army. Why is it that the condition which has grown up in our procedure with respect to soldiers, and which has created a hesitancy on the part of our youth to enter the ranks of the army, has not been removed? The cause should be discovered, and, with the greatest determination, removed, so that our boys will join the army just as gladly as they will join the air force or the navy.

I suggest another measure which would help bring the boys in. Why not guarantee to every soldier who enters our ranks that he will not only receive $50 a month for the duration of the war, but will from that time forward, to the end of his days, in case he needs it, receive $50 a month? Why should we not also tell the boys—and mean it—that the wife of each man in the forces will receive $50 a month, whether her husband lives or dies? Why should we not guarantee liberal allowances for each child?

The policy now pursued indicates that the government of Canada is not concerned about having an increase in population. It indicates

that the government has little thought about who is going to grow up, perhaps to fight the next war in another generation. Men who have raised considerable families are actually penalized, and I submit that that is a completely foolish policy. Why not grant a liberal allowance upon the birth of every child? Why should a soldier and his wife be penalized at the birth of a child—to the extent that they dread such birth? Why should they have to pay hospitalization, doctor's bills and other expenses incidental to the bringing into the world of a new Canadian? Why not agree that from this time forward such expenses will be met by the people of Canada as a whole—because the soldier's child is a precious heritage to this country. Why should not the child of a soldier be guaranteed a certain income per month until he reaches the age of sixteen years? Why should we not guarantee to every soldier and his dependents state hospitalization, state medicine and state dental care? Why should we not guarantee housing, fuel and lighting at reasonable rates?

It is all too well known how infamous is the condition in this country, when men and women having five or six children are unable to find places in which to live because the people who have accommodation to rent will not rent houses to families. Why should any man who takes up arms in defence of this country be confronted with a situation as humiliating and heartbreaking as that? Why should not the government guarantee to the men that if homes cannot be found the government will advance loans with which the soldiers may build their homes? Why should they not be guaranteed fuel and lighting? Why should we not guarantee them the education of each child until he or she is twenty-one years of age?

Some will say, "The proposal you are making would surely bankrupt the country." Well, Mr. Speaker, they are doing such things as that for virtually everyone in New Zealand, a country far less richly and extensively endowed in resources than Canada is. If Canada is not willing to guarantee as much for its family man, then I say, "Shame on the Dominion of Canada!" If it were determined that such guarantees were to be given to the men, and if such changes in our economic system were made as would render it possible to guarantee such things to them, we would find a tremendous acquisition to our fighting forces, and would need no conscription to fill our ranks.

I wish to refer briefly to the matter of industry, to which some references have been made. When war broke out in 1939 the members of the New Democracy party stood for the conscription of finance and industry before man-power. May I turn briefly to the matter of conscription of industry. I have not yet spoken about the conscription of finance, but I shall do so before I take my seat. I have, however, referred to some of the things which could be achieved if the government of this country had the courage, the determination and the vision to conscript finance.

How can we control our industries? We have several potent means of controlling any industry in this country, it matters not who owns it. The first one of these is through the price of its products, and the price of its raw materials. This government can manage so that the price of raw materials and products of any industries in this country can be placed at whatever figure the government chooses to place them, by the payment of subsidies and other devices.

This government can control freight rates to the advantage or disadvantage of any industry in this country. It can control markets; it can withhold or give contracts. It can control loans and credit; it can give bonuses or remit taxes. All these devices will successfully control industry within our gates. It is the contention of the members of this group that it is not necessary for the government to own any industry. It may be found advisable to own some industries, but in a general way this group conceives a state in which all industry and the means of production shall be individually owned.

Nevertheless this group conceives a state in which industry shall do what the state tells it to do. Why should such an outrage as has been referred to already, in the Dumart plant, continue unchecked? If an industry simply refuses to obey the directions of government, then the government without hesitation should force it to sell its shares to the government or to some other industry which would be prepared to obey the government's will and fall into cooperation. There are other forms of compulsion which could be used. As a result of the application of these devices it would be possible to conscript completely industry in this country, which means to bring it under control so that it will cooperate with the state for the people of the state.

The question will be asked, how can Canada afford to spend all the money necessary for all these purposes? I say that Canada must and can develop and use Canada's credit in such a manner and to such a degree as will enable her to do for her people those good things which everyone

agrees should be done and which her resources manifestly fit her to do. The question which really matters is this: can Canada produce enough milk, and will she be able to produce enough milk during the next fifty years to provide every returned man with all the milk which he and his family need? The answer is emphatically, "Yes. Of course she can!" Then why deny it to the people? Why not offer it to them? Can Canada not produce enough meat, fruits, lumber, fuel; can Canada not train sufficient doctors and teachers to provide her fighters and her people with a decent standard of living? The answer must be unquestionably that she can. Reason would dictate that she do so and then distribute the goods.

Canada can so develop her credit by use of a modern monetary technique. I should like to read several excerpts from an article by A. A. Berle, Jr., assistant United States secretary of state, which is reported to have appeared in October, 1941, *Fortune,* and which indicates that there are other people who are thinking along the lines that I am thinking along. I quote:

> There is no need for fear. Rather, we shall have an opportunity to create the most brilliant economic epoch the U.S. has yet seen. It is entirely feasible to make the country at once more prosperous and more free than it has ever been. We shall have in our hands the tools by which we can create a greater amount of economic justice, without sacrificing any of the essential freedoms.

May I pause to comment that if the government institutes a policy of owning the industries of this country, many freedoms of Canadians will be destroyed. But it is not necessary to organize on that basis. I quote again:

> We shall come out of this (war) with an enormous expansion of plant capacity. At once the problem will have to be faced of shifting over these plants into work that is of use in a healthy, peace-time world. That means changing factories, machinery, and the processes so that they will turn out something that you and I can actually want and can use in civilian life. Big as this problem appears, we are technically prepared to solve it.

Then he deals with the matter of money as follows:

> This raises the subject of finance. Finance is the easiest of the several problems we have to solve.

It must be remembered that here was a man speaking with his reputation at stake, a man who stands high in the United States government. Yet he says solemnly that finance is the easiest of the several problems we have to solve. I continue:

> Nevertheless, it is in this field we are going to have the greatest difficulty.

[Mr. Blackmore.]

I agree that that will be the situation as long as we have stupid mentalities in control, who insist on continuing as they have done in the past. I quote:

> The difficulty is not real. Technically, the solutions are sufficiently simple. The proper attitude towards dealing with a financial problem to-day is to consider finance as a job for a technical crew in the government. The specifications are relatively simple. So long as labour is available, materials are handy, and technical skill can be hired, the words "we cannot afford it" are absurd.

I maintain that such is the situation. Social credit and new democracy favour conscription of finance and industry before man-power. What do we mean by conscription of finance? Briefly, we mean that the government shall assume and exercise the function of creating and using new money which the goods-and-services-producing-and-consuming power of the country will support without inflation. I maintain that if the Prime Minister (Mr. Mackenzie King) will call his cabinet together and then call in some people who have vision to assist them, they will be able to devise the means whereby they could mobilize all the resources of Canada, both human and material, in so far as it is necessary, in so far as the man-power will permit, without conscripting man-power.

I suggest to them that they seriously consider this possibility. Especially is this needful now that an almost stupid policy has been followed in this country since the outbreak of the war with the result that great numbers of our citizens have been aroused against the government policy of conscription. I suggest that under these circumstances the government should seriously consider the proposal that they conscript and use the financial power of this dominion. That does not mean that they shall take away a man's bank balance; that does not mean that they shall put on such a tax structure as will be onerous and injurious to the country's economic life, but it does mean that they shall assume and exercise the power to create the community's new money and will use that power in the best interests of the state.

Hon. P. J. A. CARDIN (Richelieu-Verchères): Mr. Speaker, at the outset of my remarks I ask to be excused by you and by the hon. members of the house for my very imperfect English. I have not attempted to prepare in advance the observations that I propose to make, in order that I may read them now. I intend to express my views as I would in ordinary conversation without any idea of making any contribution to literature. Listening yesterday to the able and well prepared speech of the Prime Minister (Mr. Mackenzie

King), and also to the well prepared speech of the Leader of the Opposition (Mr. Hanson), and closing my eyes I could call to memory the words and arguments presented in parliament in 1917 when Sir Robert Borden and Mr. Meighen introduced their legislation for conscription. There was no difference. The same arguments that I heard in 1917 have been offered in this house by the Prime Minister and by the Leader of the Opposition. No difference—no change! History repeats itself. As in those days, not a scintilla of evidence has been produced to show the necessity of having recourse to such a measure at the present time —not one word. On the contrary we have still before us the declaration of the Prime Minister and of the Minister of National Defence (Mr. Ralston) that the voluntary system is working sufficiently well and meeting the needs of the present.

It reminded me also of something which is sadder to my soul. I remember having taken part in a by-election around 1916 or 1917 in which a Conservative candidate was offering himself to the electors in one of the Quebec district constituencies. Relying on the promises that had been made by the Prime Minister of the day, Sir Robert Borden, that he would not have recourse to conscription, that the voluntary system would be the only system he would adopt for prosecuting the war, this candidate said to his electors, "You see, gentlemen, in what position you are placed. You have the guarantee of the Prime Minister of to-day that you are not going to have conscription from the Conservative party. Beware," said he, "lest you might have conscription from the Liberal party if you turn your back on Sir Robert Borden at the present time."

It is to my sorrow that the principle of compulsory military service for overseas has been presented in this house by the Liberal party and by my leader. The bill that is now before the house embodies the principle of conscription for overseas service. We already have, we were told yesterday, the principle of conscription, in the mobilization act, except for service overseas. I remember very clearly the speeches that were delivered in this house when that law was being enacted. I remember what I said myself with the authority of all the members of the government. I remember very well what the late Right Hon. Ernest Lapointe said to those who were opposing the adoption of that law. He said that we would never resort to conscription for service overseas. But the amendment that is now being introduced has the effect of establishing conscription for overseas service, though there is no present necessity for such action. Not a particle of evidence has been given to indicate that it is necessary for parliament to adopt such a measure at the present time.

Let no one be mistaken as to the situation. When clause 3 of the bill is deleted we shall have on the statute books of Canada compulsory military service for anywhere in the world, or any theatre of war in the world. It is not to be put into effect by act of parliament, as it was in 1917, with the regulations attached to the bill and presented to parliament. No; it is to be done by order in council, and it may very well be that the order in council applying conscription, forcing the boys of Canada to fight anywhere in the world will be kept secret. That is provided for in the law, by section 5 of the mobilization act, as it now stands.

Let no hon. member be deceived as to the consequences of the vote that he will give on this measure. Let him not be led astray by what is being said. It is said, there is no necessity for conscription now; and that we do not need conscription at the present time; but only the power to apply it. That is the line of argument which is being very much used in the province of Quebec. They have been trying to appease public opinion there by saying during the past three weeks through the newspapers and radio: "Do not worry; do not be afraid; you are not going to be conscripted; the law which is going to be placed on the statute book is not going to be applied; it is only a gesture made for the purpose of appeasing certain people in other sections of the country."

This is the last opportunity, Mr. Speaker, that the parliament of Canada will have of expressing its will on the principle of conscription for overseas service. There will be no other opportunity for the representatives of the people in parliament to express their judgment or their opinion on this vital question.

It is suggested that the bill is the result of the plebiscite. But, Mr. Speaker, we were told that the plebiscite was not a vote on conscription. It was said, and repeated over and over again, that the plebiscite did not mean conscription. Then how is it that as soon as the votes are counted, as soon as the ballots are in, a bill embodying the principle of conscription for overseas service is presented to this house? Why were the electors of Canada told in the plebiscite campaign when we asked them to release the government

from a moral obligation, that there was no legal objection in the way. Why did we state that we wanted to be released from a moral obligation pure and simple? Why did we not tell them that the plebiscite meant conscription? I have no time to go to the record and quote from speeches which the Prime Minister made both in the House of Commons and outside the house stating that the government simply wanted to be released from a moral obligation. We never asked power to abrogate Section 3 of the Mobilization Act.

We are now faced with a measure of conscription for service overseas, resulting from an action which, according to the Prime Minister himself and all those who asked for a "yes" vote on the plebiscite of the 27th of April last, did not mean conscription.

When clause 3 is deleted from the mobilization act, it will stand deleted not only for this government but for any other government that may succeed the present one. It is going to be the law of the land, and any government succeeding the present one, any Prime Minister succeeding the present Prime Minister, will have the law in his hand and will be in a position to apply the principle by a simple order in council which he will have the right to keep in secret drawers in his office. That is the position.

There are those who say, "Well, what is the use of making so much noise? Conscription is not going to be applied and is not necessary." Well, Mr. Speaker, if conscription is not necessary at the present time, why, in the name of God, authorize it? Why interpret the vote on the plebiscite, which was not a vote on conscription, as if it had been a vote on the issue of conscription? If it was the intention why then have they not been frank enough to indicate it to the public? Why did we not ask the people of Canada whether they were in favour of conscription—yes or no? Trusting the people as we should have trusted them, we should not have been afraid of asking the question squarely and without, in any way, avoiding the issue. That is my view. We should have faced the issue squarely. If it was a question of releasing the government from a legal obligation, why not say that the government wanted to know if the people of Canada were ready to delete clause three of the mobilization act? No, it was too clear an issue. We had to adopt another way. After having argued that it was not a question of conscription, it is now desired to interpret the answer as being in favour of conscription. But there is more. It has been said all through the campaign on the plebiscite that parliament would be consulted, and that every decision of the government would be taken in the light of its responsibilities to parliament. We told the people that the government would adopt a policy according to the need of the moment, and come before parliament, explain it in black and white, and give the representatives of the country in this house, the advantage of judging the issue on its merit. After all that, what are we doing? We are not doing what we have told the people we would do. We are playing on words.

It was said yesterday that a full discussion of conscription was welcome, that it would give parliament the opportunity to express its will on that very important question. But that is not the question which was placed before the electors. We said to the electors, that in the light of a new situation that might arise we would later on adopt the required policy. That is what the Prime Minister said on February 25 last, "Later on, when the need is apparent, when the necessity is clear to everyone, in the light of the information that will be given to us by the military authorities, the government will take its stand and will come before parliament with the reasons justifying the attitude." "Later on" has become to-day.

I am told I used the wrong expression in my letter of resignation in saying that a new policy had been adopted. I am perfectly justified, I claim, in saying that this is a new policy. We have not respected the pledge which we gave to the electors during the campaign on the plebiscite. We said action would be taken when the necessity would have arisen later on, and now we are interpreting it as meaning "to-day". And legislation is presented to do away with a legal objection, when we told the electors that there was no legal objection. We have discovered an objection since the plebiscite, since the majority of the country has voted yes, and the province of Quebec alone voted no. The new legal objection, is clause three. That is not a great discovery. It has existed in our legislation for a very long time. We should have been frank enough to say to the electors of Canada, "After you have freed us from our pledges during the campaign, we propose to abolish and to delete clause three of the National Resources Mobilization Act." That is what we should have said, but we did not say it. We said to the electors, "The government is going to wait until a new situation arises, until new conditions prevail, to adopt the policy which should be adopted to meet the situation, and then we will come before parliament." There are many reasons, Mr. Speaker, which convince me that I was right in stating in my letter that the policy

of the government at the present time is a new policy if it is compared with the one which was enunciated by the Prime Minister on February 25 last, and in his two broadcasts over the Canadian network.

There is no necessity at the present time to impose conscription. There is no haste to proceed with such an important measure, which is likely, in the words of the Prime Minister, and in the words of the Leader of the Opposition as well, to destroy the good understanding which has been established between the two races in Canada for the last forty or fifty years, through troubled hours and difficult days, by the leaders of all parties and those who have taken part in the public life of Canada.

With the deepest feeling of sincerity I say now to the government, wait please, wait for the necessity to arise. Let us wait for the need to present itself, and then we shall be in a position to judge according to circumstances what course Canada should follow, what policy Canada should adopt.

It is no argument, as I see it, to say that such a course would involve delay and that the House of Commons and the Senate would require time to adopt the procedure for conscription if the need should come. That is no argument. Parliament can be summoned to Ottawa in seven days. In seven days we can be called here to decide on any emergency which may arise in Canada or elsewhere. In seven days conscripts are not going to be sent overseas. It will take more than seven days or ten days or fifteen days or a month to send the conscripts overseas. Nothing would prevent the government from preparing the machinery the moment they decide to have recourse to conscription. Nothing would prevent them from calling parliament together and ask for advice and support. It would be far better than trying now to delete Clause 3 and saying "that we have no intention of abiding by the result of our action in parliament." In the name of heaven, what is the use of having a dead principle in our statute books and destroying the good understanding that has existed throughout Canada.

Let us be frank. I am not ashamed to raise my voice in this parliament although I come from a minority—from the province of Quebec. I am not afraid and I am not ashamed. We have the right, as any other representative, to speak in this house in the name of the French minority; I have the right to speak in the name of those whom I am supposed to represent here. I take second place to no one, so far as Canadianism is concerned. I have done my duty.

I repeat, let us be frank. If we had asked the electors of Canada whether they were in favour of or against conscription for service overseas, the vote would have been different from that which was registered on April 27.

It is all very well to say that we have been released from our pledges. Yes; we have been released from these pledges by those to whom they had no meaning or no effect in the election. The pledges that were given in the election of 1940 were given by both parties, the opposition as well as the government. In those days the pledges were given to appease public opinion and to collect votes in the province of Quebec. Both parties did it at that time, and now it is said that we have been released. Yes, I repeat, released by those who were not interested at all in those pledges, and in constituencies where the pledges were not an issue during the election. It was easy for those gentlemen who had not spoken of these pledges during their election to ask for a yes vote in their constituencies. It was all right for them to go to their constituents and ask that freedom be given the government to impose conscription. That was an easy task, and it was a victory—let me say this without any implied insult to these hon. gentlemen—without any great honour, because it was a foregone conclusion. My position was different. When I appealed to my people in the province of Quebec, to whom the pledges had been given, in the most sacred and solemn manner that pledges could be given, by the Prime Minister, by the late Mr. Lapointe, by myself and by other members from the province of Quebec, my task was not the same as that which faced these other hon. gentlemen. We did not get the same answer that they received. That should surprise no one.

For fifty years, for sixty years, yes from the time of confederation up to the present time, arguments have been used to induce the people of Quebec to believe that they would never be forced to go to war outside the limits of the country which had been wrested from the wilderness and from savages and given to Christianity by their ancestors. The people of Quebec, the minority in Canada, as I have said, have no reason to be ashamed of the attitude its members are taking.

So far as I am concerned I have a quiet conscience as a result of the course I have taken in resigning the two portfolios which the Prime Minister was kind enough to bestow on me a few years ago. I feel that I have done my duty as a man who wishes to honour his word and respect his pledges and his declarations, who wishes to be able to walk with his head erect among the citizens

of his province. I have no excuse to offer. My conscience is at peace, whether I am understood or not in my province by proprietors of newspapers. I may have something to say later on in this debate in regard to propaganda that is being carried on in the province of Quebec in an endeavour to frustrate the effort that I have been making and the effort that other members from Quebec are trying to make. Some other day I may have something more to say.

Who can raise his voice in this house and say that the province of Quebec has been lacking in cooperation with the rest of Canada in every activity, in war as well as in any other line of endeavour? We have been doing our share every moment, in every crisis, in every difficult time that confronted Canada. We have measured up to the standard. But we have never been able, even to this moment, to know definitely how many French Canadians have enlisted in English-speaking regiments. A member of the administration of 1917, after he was out of politics, complained that even in his day, in 1917 and subsequently he could never get information as to the number of French Canadians who had enlisted in so-called English-speaking regiments. We cannot get that information. We have never been able to get it.

When you start to compare the enlistments in other sections of Canada with the enlistments in the province of Quebec, you should be sure of your figures. There are many factors that have to be taken into consideration before condemning the population of the province of Quebec or before we sustain the censure of certain military men who are mixing in politics instead of fulfilling their military duties. This is a point that needs to be emphasized, and a point upon which many details should be obtained before condemnation is passed on the race which was the first established on the land of Canada.

Mr. Speaker, yourself and most hon. members of this house belong to the British race. You are proud of it, and I compliment you upon it. You have many reasons to be proud of being descendants of the great British race. But it is not your fault; it is an accident of nature. I am a descendant of the founders of Canada, those who first discovered and established this land as a civilized country. I am proud of my race. It is not my fault; it is an accident of nature. But when we come to consider problems such as the one confronting us at the present time, immediately any man who has any elementary knowledge of psychology will understand that your response is going to be much quicker than mine. Why? Because I have to

reason in my mind why I have to support the British flag and spend my energies and my life for the defence of the British rule in this country or perhaps elsewhere. It is the result of thinking, the result of reasoning, if I come to that conclusion. With you it is the impulse of the heart. Your heart becomes inflamed as soon as the name of England, of the British empire, is mentioned. It is quite natural, it is in your blood; it is your blood that makes that impulse. It cannot be the same with me. It would be against nature. I have to reason why I should take that step or not take it. I hope that my position is understood from that point of view. My position being understood, the position of the French Canadian is also understood.

We are law-abiding citizens. But we have been left alone, outside of the economic field, for years and years. An hon. gentleman spoke of the conscription of wealth; there is no great wealth to be conscripted from the hands of French Canadians, because they have no great share in the economic development of Canada. They have been kept outside of that field, through circumstances, through conditions of which I have no time at present to give further explanation. But we have lived alone in our corner, in our little part of Canada. We have always been told by the representatives or the leaders of all parties in this house, when they wanted our votes, that we should not be forced to go and fight outside the limits of Canada. This is not new; it has been repeated over and over again since confederation. Is it surprising that to-day the same answer is not as readily obtained in my province as is found elsewhere?

The French Canadians, in order to maintain unity in this country have been making many and many concessions to the majority. We are a minority. It is true, it is the duty, unfortunately, of a minority to make concessions to the majority. We have been fulfilling that duty freely since confederation. I venture to say to the face of the country that we have made concessions upon concessions since confederation, in order to keep peace, harmony, good-will and good understanding between the two races in Canada.

But there comes a time when concession means betrayal of the people one is representing in parliament. I do not want to pass that limit.

It was not a pleasure for the late Mr. Lapointe and myself to leave our duties here when we were ministers of the crown and go into Quebec province to take part in a provincial election and turn the provincial issue into a federal issue in urging our people to approve the participation of Canada in the

war. This at the very beginning when the mind of the people was so agitated. We had the courage to go there and do our utmost to sustain good understanding between the two races and national unity. We reasoned with the people of Quebec in those days. But we had to tell them that our participation in the war would be limited to the voluntary system. That was not my word only, not the word of the late Mr. Lapointe only; it was the word of the Prime Minister. We carried with those pledges. When 1940 came, a year after we had entered the war, we went there again to urge the approval of the province of Quebec to the programme of the federal government and of the expenditures it demanded from the Canadian treasury. It took some courage then; I can boast about it without being ashamed. It took some courage to go there and preach the same doctrine and tell our people that they should continue participation in the war almost to the last dollar, even to the last dollar that we could borrow. We succeeded. We succeeded with the promise given that as far as man-power was concerned it was going to be voluntary and nothing else.

The plebiscite came. Mind you, Mr. Speaker, it came only two years after we had given, to use the words of the Prime Minister, those "solemn pledges" to the people of the province of Quebec. No wonder that we did not then get the response that I myself expected, although I may say I participated in that campaign at the risk of my own life. But we did not get that result. We accepted 1939; we accepted 1940; we accepted the plebiscite as a way between, in order to adjust our difficulties, and as compromise in order to preserve Canadian unity in Canada.

We said during the plebiscite that the supremacy of parliament would be preserved, that the representatives of parliament would be consulted before any policy of conscription for overseas would be adopted—not consulted in deleting clause 3, but consulted on a programme which would be adopted after representations had been made by the military authorities, and after the need had been shown for the application of conscription. That is not the programme which is now being considered. That is not what we said to the electors, that conscription would be decided on its merits. We are not deciding conscription on its merits. We are not by deleting clause 3, in the light of any new developments, in the light of any new demands, or in the light of new necessities. This is a mere expediency. There is no indication that any need is at present existing. We are playing on words.

We were to discuss what? Conscription in the light of new needs, new necessities, or a change of conditions justifying a change of policy, not a general or academic discussion of the principle. We were told by the Prime Minister that we would discuss the question on its merits, the facts being placed before parliament. Where are the facts? They are not before us. We have before us a declaration that conscription is not necessary and in all probability will never be necessary, unless something of a spectacular nature develops.

The province of Quebec deserves to be listened to in this house, because, although it is a minority, because of the promises made. When that province was asked if there would be a release from the promise made by the government, it said "no". I submit to the majority. I do not want to dictate to the majority in Canada what their policy should be. But there is nothing before us to indicate exactly that a majority of the electors of Canada ever said "yes" in favour of conscription. That is not the situation, because the question was not placed before them. Some people said to me not long ago, "I think your government was afraid of placing the question squarely before the electors on the plebiscite." Indeed, how can we say what the majority did want, when the Prime Minister himself said yesterday that there was no question of conscription when the plebiscite was before the electors? Well, if there was no question of conscription before the electors at the time of the plebiscite, where is the majority favouring this measure?

And if we want to analyse the votes it will be found that the votes in many English-speaking parts of Canada were fifty-fifty—fifty "no" and fifty "yes". I cannot mention any names, or give away any secrets, but I know that many of my English-speaking friends in this house—on both sides of the house—have in their minds that a very large section of their constituents are against conscription for overseas service. They have expressed that view to me, that if the vote had been taken on a straight "yes" or "no", either in favour of or against conscription, the result would have been different. I would not say there would have been a majority of "no" votes, but the "no" votes would have been increased, in very large measure.

The minority does not want to dictate to the majority. But I am afraid that at present the government is listening to a minority which is much less important than the French minority in Canada. It is as the result of rumblings which have been heard from certain corners of Canada that the government has

been pushed, step by step, to the last ditch, by making concession after concession, until it has now reached the point where it has to pass the law that it is striving now to place upon the statute books.

Mr. SPEAKER: May I point out that it is now almost ten minutes after six. Is it the pleasure of the house that the hon. member continue?

Some hon. MEMBERS: Yes.

Mr. CARDIN: I am sorry to be placed in this position, Mr. Speaker. I had intended concluding my speech before six o'clock, and I have only a few words more to say. When one speaks extemporaneously, it is not like making a set speech which can be timed before delivery. I thank hon. members for their kindness in my regard. They understand, I am sure, the difficult position in which I am placed, and the embarrassing situation which is mine at the present time.

There are many other features I should like to touch upon, but time does not permit. I wish only to repeat that no hon. member should be deceived as to what is going to happen after clause 3 is deleted. I can only refer hon. members to section 5 of the National Resources Mobilization Act, which provides the only source of information parliament is going to have in regard to conscription, if the government decides one day to apply it. We are going to be favoured with a copy of an order in council applying conscription. But it is only half a favour, because the proviso to section 5 reads:

> Provided that any of the steps specified in this section may be omitted or deferred if the governor in council considers such omission or deferment necessary in the national interest having regard to the special circumstances.

After section 3 has been deleted, conscription may be applied without parliament being informed, without the order in council being placed upon the table of the house even though parliament is sitting. Our boys will be sent overseas without anyone knowing that they have been sent; the order in council sending them can be kept secret, kept from parliament and from the public. That is the implication of what is here. One may say that that was the law. It was the law when I approved of it, but that law applied to the defence of my country only and to the territorial waters and possibly to adjacent territories. But when it comes to sending our boys anywhere in the world on the advice of the military authorities, I say it is not fair that this should be done without parliament being consulted or even advised.

That is the position in which we shall find ourselves when section 3 has been deleted.

When section 3 has been deleted the mobilization act will place trainees on the same footing as volunteers. There will be no difference; they will be in the same class, liable to be sent anywhere at the will of the military authorities, approved by an order in council which may be kept in a drawer for as long as the government may decide to keep it there. That will be the position in which we shall find ourselves after this legislation is enacted.

It is all very well to say that there should be no anxiety, because the principle is not going to be applied. We are amending legislation which is already in operation. We are amending legislation which called men to serve in Canada. When this section is deleted, the effect will be retroactive and will apply to the trainees who have been called already. They will be placed on the same footing as the volunteers, and a simple order in council can send them overseas, just as it takes an order in council to send any regiment of volunteers overseas. No regular regiment can be sent abroad without an order in council being passed, because we must provide for transportation and for many other things. When section 3 has been deleted we can just dispense with the voluntary system and proceed with conscription only.

It is all very well to say that it will not be applied. What is the use of arguing in that way? The trainees are scattered all over Canada among regiments composed of volunteers. We have English-speaking soldiers, in Montreal and French-Canadian soldiers are sent outside the province of Quebec to be trained. When there is a somewhat large number of French-Canadian soldiers they are divided among the regular units. When those regiments are called upon to go overseas to replace casualties or as reinforcements, the authorities are not going to choose David, James and Harry who came in under the National Resources Mobilization Act, and say, "You will not go overseas." That would be absurd; it would create chaos in the administration of our national defence. Once section 3 is deleted and those trainees are in a regiment, they will go with the regiment. The order in council sending the regiment overseas will cover them as well. It would be a disruption of our whole organization of national defence to do otherwise.

I want to thank you, Mr. Speaker, and members of the house, for your kindness and generosity. I conclude by saying that I want to respect the word I have given to my

electors. Some of you want to vote on this bill according to the vote that was given in your constituency on the plebiscite. You want to respect that vote; you want to say, "I am going to obey the will of these people and vote according to their wishes". Why would you deny me the same privilege of respecting the will of the population of my province after I have done all I could to have them see the question otherwise? I want to keep my word to these people. Despite what Burke has said, the only democratic system that is worthy of the name is the one that is based on respect for the will of the people. Burke never faced elections as we have them. If my memory serves me right, he was elected by one man instead of being elected by the majority of the citizens of his division.

But I have a still better authority. When the leader of the opposition asked the government to take the responsibility of proceeding without a plebiscite he was answered by the Prime Minister that we ought to respect the will of the people, that we have no mandate except the mandate that we received from the people who elected us to this House of Commons. That was the answer of the Prime Minister, and it is in black and white in the report of the speech which he delivered on February 25. The plebiscite was an absolute contradiction of the Prime Minister's new theory, because the plebiscite was an appeal to the people in order to know their views before any action was taken. It was not a case of the government and parliament acting according to their own best judgment. It was a case of our going to the people from whom we derive our power, and asking them what their wish was.

I believe that respect for one's word is more important in this parliament and is more helpful to the maintenance of democracy in Canada and to the world than the theory which was expounded by that great writer and historian, Burke. I want to respect not only my own word but the will of the people of the province of Quebec, and also the voice of the French Canadians of other sections of Canada. This bill is a flagrant contradiction to all that we have said both in parliament and outside of parliament on the plebiscite, and I maintain that the words "a new policy" I used in my letter of resignation, have been amply justified by what it is now proposed in contradiction to what we said in asking the people of Canada to answer "yes" on the plebiscite.

Once again I thank you, Mr. Speaker, for your indulgence. I know it is based more particularly upon the fact that my English may not be as good as it should be. Nevertheless I shall never forget your kindness and the generous and friendly reception which has been accorded to me this afternoon even by the members who do not share my views on this most important question.

Mr. MACKENZIE KING: I suggest, Mr. Speaker, that we resume at 8.30 p.m.

Mr. SPEAKER: With the consent of the house.

At 6.20 p.m. the house took recess.

After Recess

The house resumed at 8.30 p.m.

Mr. SPEAKER: During the dinner hour I have been considering the amendment moved by the hon. member for Rosetown-Biggar (Mr. Coldwell), and I should like to express to the house my appreciation of the observations of hon. members. The amendment reads:

> This bill be not now read a second time but that it be resolved that provision for the introduction of conscription of man-power for overseas service, without specific proposals for the immediate use of the power conferred by section 2 of the act, to conscript war industry, financial institutions and accumulated wealth, does not meet the urgent need for total war, imposes further inequality of sacrifice and is, therefore, contrary to the peace, order and good government of Canada.

In support of the amendment the hon. member for Rosetown-Biggar referred to an amendment of Sir Wilfrid Laurier which is set out on page 321 of Beauchesne's Parliamentary Rules and Forms. I think the hon. member will agree that that amendment is not parallel to the amendment which is now proposed. It was such an amendment as could not be moved in committee. It did not propose to amend; it sought to defeat the bill. This amendment in its terms does not so intend.

The hon. member also quoted from page 217, citation 755 of Beauchesne's Parliamentary Rules and Forms. I will read the citation:

> It is also competent to a member who desires to place on record any special reasons for not agreeing to the second reading of a bill, to move as an amendment to the question, a resolution declaratory of some principle adverse to, or differing from, the principles, policy, or provisions of the bill, or expressing opinions as to any circumstances connected with its introduction, or prosecution; or otherwise opposed to its progress; or seeking further information in relation to the bill by committees, commissioners, the production of papers or other evidence or the opinion of judges.

But in conjunction with that citation must also be read citation 760 which reads:

The principle of relevancy in an amendment governs every proposed resolution, which must, therefore, "strictly relate to the bill which the house, by its order, has resolved upon considering" and must not include in its scope other bills then standing for consideration by the house. Nor may such an amendment deal with the provisions of the bill upon which it is moved, nor anticipate amendments thereto which may be moved, in committee, nor attach conditions to the second reading of the bill.

The same issue was raised in a debate in this house on April 24, 1934, and is apropos of this amendment. It is referred to on pages 272 and 273 of the *Journals* of the house, volume 72, 1934. It dealt with a bill concerning the marketing of natural products in Canada. The present Prime Minister (Mr. Mackenzie King), then leader of the opposition, moved the following amendment:

That all the words after the first word "that" be struck out and the following substituted therefor:

"this house, while prepared to support legislation or assisting the orderly marketing of natural products, is unalterably opposed to the enactment of any compulsory measure which delegates to unnamed and undetermined individuals, groups or organizations, sweeping powers over the production and trade and commerce of the nation, and which confers upon a minister of the crown, and upon the governor in council unprecedented authority and unusual powers to restrict production, and interprovincial, interimperial and foreign trade as regards both exports and imports, as well as other autocratic powers."

The report in the *Journals* continues:

Hon. Mr. Stevens raised the point of order as to whether the said amendment is in order inasmuch as it constitutes what might be termed a declaration of policy instead of offering reasons why consideration of the bill should not be proceeded with or should be postponed or proposing something else germane to the actual motion before the house.

The then leader of the opposition referred, as was done to-day, to citation 755 of Beauchesne's Parliamentary Rules and Forms, and read it, as the hon. member for Rosetown-Biggar did this afternoon in the first instance.

The then Speaker, the Hon. Mr. Black, now member for Yukon, referred the leader of the opposition to citation 760, ruled the amendment out of order, and based his ruling on a decision in support as cited in May, thirteenth edition, page 390, and the precedent set forth there in support of this was 188 Parliamentary Debates, 4th series, column 76, the Education (Scotland) Act. The house divided on an appeal against the Speaker's ruling which was sustained.

The amendment moved by the hon. member for Rosetown-Biggar accepts in part the principle of the bill, but indicates that it does not go far enough. It anticipates amendments which may be moved in committee on the bill, but cannot be moved on second reading. But there is another, and, I think, a more serious objection to the relevancy of the amendment. That is, that this house has already decided, during the session, on the 18th day of February, on the principle which is now invoked in the amendment, as will be found in *Votes and Proceedings* of that day, page 57. The house divided on the following amendment which was moved by the hon. member for Rosetown-Biggar in the debate on the address in reply to the speech from the throne, and which was as follows:

That all the words after the words "This house regrets that Your Excellency's advisers" in the amendment be deleted and the following substituted therefor:

"have used the sweeping powers conferred by the National Resources Mobilization Act mainly for the conscription of men for home defence and in the opinion of this house no total effort adequate to meet the present needs of the war, domestic problems, and the preparation for post-war conditions is possible without total mobilization of wealth, industry and finance as well as human resources.

Therefore this house respectfully requests that the forthcoming plebiscite should seek the support of the people of Canada for the complete and effective conscription of war industries, accumulated wealth and financial institutions, at the same time and on the same basis of sacrifice as the suggested extension of the conscription of man-power."

This amendment was negatived on a recorded division.

In the amendment now before the house the hon. member for Rosetown-Biggar moved:

. . . that it be resolved that provision for the introduction of conscription of man-power for overseas service, without specific proposals for the immediate use of the power conferred by section two of the act, to conscript war industry, financial institutions and accumulated wealth, does not meet the urgent need for total war, imposes further inequality of sacrifice and is, therefore, contrary to the peace, order and good government of Canada.

In the amendment which the house have already decided upon, on February 18, are the words:

. . . without total mobilization of wealth, industry and finance as well as human resources.

The effect of the words used in the amendment under discussion is equivalent to and substantially the same as the words which have already been used in the amendment on the address in reply to the speech from the throne. In that connection, the authority which I shall quote to the house is citation 304 of Beauchesne's Parliamentary Rules and Forms:

It is a wholesome restraint upon members to prevent them from reviving a debate already concluded; and it would be little use in pre-

venting the same question from being offered twice in the same session if, without being offered, its merits might be discussed again and again.

As I have said, I think that is probably the greatest objection to the relevancy of this amendment, and in view of that and also of the precedent which I have already quoted, I must rule the amendment out of order.

Mr. T. C. DOUGLAS (Weyburn): The people of Canada generally are confused and bewildered as to the exact meaning of the measure now before the house. There has been such a torrent of words around the whole question of the conscription of man-power for overseas service that the people generally are not clear as to exactly what this measure means or exactly what principle is now at stake. Therefore I wish to outline three of what might be considered very elementary propositions with reference to this measure.

The first is that this measure will place the principle of conscription of man-power for overseas service on the statute books of Canada. The Prime Minister (Mr. Mackenzie King) has a strange belief in the efficacy of words. In his letter to the former Minister of Transport (Mr. Cardin), appearing in *Hansard* of May 11, the Prime Minister said:

> There has, however, been no change of policy. No new policy has been adopted.

In the last paragraph of the same letter he says:

> In view of the grounds on which you have tendered your resignation, I cannot but feel that you have given to the decision of the government a significance it was never intended to have.

In contrast with that may I draw attention to two of the statements made yesterday by the Prime Minister. He said, as reported in *Hansard*, page 3234:

> The power to which I refer is the power to decide if, when, and to what extent the use of compulsion may be necessary for military service outside Canada and to exercise that power accordingly.

In the same column, further down, he says:

> In order that the government may have the power if required to resort to the compulsory method of raising men for service overseas, if it is found that men in the numbers required cannot be raised by the voluntary method. . . .

The Prime Minister seems to feel that if you call an onion by some other name it will smell less odorous. The fact of the matter is that the measure now before the house does place on the statute books of Canada unlimited compulsory service. The Prime Minister, instead of going direct to the goal, apparently believes that if you approach that goal by a series of steps you can truthfully say at each step that that step does not mean conscription of man-power for overseas service. That is true, but each step which has been taken has moved in that direction. In 1940 we had the National Resources Mobilization Act, giving the government power to conscript men but not to send them outside Canada or the territorial waters thereof. National war service regulations were brought in to call men up for thirty days training. The Minister of National War Services at that time, now the Minister of Agriculture (Mr. Gardiner) was very careful to point out that this was not military service, that this was, in fact, only military training. That training was then increased from thirty days to four months; later, to military service for garrison duty in Canada for the duration of the war. Recently we have had a plebiscite asking the people of Canada to release the government from any past commitments, subject to its responsibility to parliament. Now we have before us a bill asking parliament to remove clause three from the National Resources Mobilization Act, thus giving the government power to send men conscripted under this act into any theatre of war.

The Prime Minister argues that of course it is only enabling legislation. That, Mr. Speaker, is exactly the point. When this measure is passed, the government has complete power to put the principle of compulsory service for overseas into effect. It has power, not to bring down a bill to this house for the conscription of man-power for overseas service, but by order in council to send men outside of Canada without any resort to this house whatsoever. It is a well-known fact that all over Canada to-day are army units whose personnel is partly made up of volunteers and partly of men conscripted under the National Resources Mobilization Act. What will happen? The Prime Minister says that this will be a decision of the cabinet; that it will not be a military decision. Technically that is correct. But in actual fact it will be a military decision. The general staff will decide that some of these units are needed overseas; an order in council will be passed, and some morning we shall pick up the paper and find that one of these units has landed in England or some other theatre of war, and that 20 or 30 per cent consisted of men conscripted under the National Resources Mobilization Act. Then someone will dig around and find an order in council which has been kept back because its earlier publication would have

revealed military secrets. Thus we shall find that surreptitiously, by the back-door, conscription for overseas service has been introduced in Canada.

The Prime Minister argues that he could have done this under the War Measures Act. Technically that may be true, though it is debatable. In reality, however, he could not have done that, because if the War Measures Act meant that he could set clause 3 aside, then clause 3 was meaningless when put there. But clause 3 was put there by the Prime Minister and his government as a pledge to certain parts of Canada that conscripted men would not be sent outside Canada.

Not only that, but the Prime Minister made a pledge to the people of Canada throughout the plebiscite campaign that this whole matter would be referred to parliament and would not be dealt with by order in council. Throughout the plebiscite campaign the Prime Minister said repeatedly that he was asking the people of Canada to free the government's hands, subject, as he always said, to his responsibility to parliament. Well, he is now discharging that responsibility. We are now at the stage where this parliament is having its last and only say as to whether or not the principle of conscription of man-power for overseas service shall be placed upon the statute books of Canada. From then on the decision will lie entirely with the cabinet.

I object most strenuously to requisitioning the life of the young men of Canada by order in council. The speech to which we listened before the dinner recess was just one of the chickens coming home to roost. There will be many more chickens coming home in the next few weeks and months, and I am afraid that among the things that will be hatched out will be distrust and disunity in this country for many a day. It is one of the ironies of history that a political party which for twenty-five years has been elected again and again and again by constant and repetitious reference to the Military Service Act of 1917 should now be proposing to conscript men for overseas service without any statute which hon. members can examine. Instead, men will continue to be called up under the national war service regulations, regulations of which I defy any hon. member to know the exact meaning, under machinery which has already been described and debated in this house, by semi-judicial boards set up in the respective military districts, not responsible to this parliament, and from whose rulings no appeal can be made. Already proof has been presented, if any were needed, that the decisions of these boards and their interpretation of the regulations have not been uniform across Canada. If I had no other reason for voting against this measure I would vote against it on this ground alone, that if men are to be conscripted in Canada for overseas service they should be conscripted under a statute passed by this parliament, a statute setting up the machinery for conscription, and that machinery subject to review by parliament. Therefore I say that the first point I have tried to establish is perfectly clear. Without any attempt to hoodwink the Canadian people, without sophistry that has been indulged in, we should say to them frankly: "This measure, if and when passed by this house, will place upon the statute books conscription of man-power for overseas service." It matters not whether the government implement it to-day or next week or next year; as far as this parliament is concerned that is the decision we are being asked to make.

The second proposition I should like to lay down with reference to this measure is that this is conscription of man-power and of man-power only. When the National Resources Mobilization Act was before the house in June, 1940, I made this observation as reported at page 879 of *Hansard*:

> Therefore, Mr. Speaker, before this house is asked to vote on this bill, to vote on the principle, I do not think it is too much to ask the Prime Minister to make a very clear statement, first, as to what forms of wealth will come within the term "mobilization of material resources"; as to whether or not this government is prepared to bring in a 100 per cent excess profits tax; as to whether or not large corporations are to be allowed to continue to make money while at the same time we propose to take boys off the farm, from the workshop, and off the streets and put them in uniform to go out to defend another group of men who, unless the government take drastic steps, are not making their fair contribution to the defence of Canada.

The Prime Minister in his speech referred to that, and said, as reported on page 902:

> The measure is intended to cover every resource that the country has, human and material. But, may I ask my hon. friends this question: "What justification is there for assuming that it is only going to be the provisions of the measure related to the human that will be invoked, and not the material? Is not any fair-minded man entitled to say that there is just as much reason to assume that this bill is introduced solely for the purpose of applying it to material things?
>
> Mr. Coldwell: Experience of the past.
>
> Mr. Mackenzie King: Not experience of the past. I absolutely deny that statement. Does

my hon. friend mean to say to me he believes that I place more value in material things than I do on human life?

Mr. Coldwell: No.

Mr. Mackenzie King: That is what it comes to.

Mr. Coldwell: I do not mean that at all.

Mr. Mackenzie King: I am glad my hon. friend does not, and on behalf of every member of the house I make this statement: Every hon. member, irrespective of party or group, is primarily concerned with preserving the human, and if there is any sacrifice to be made in a material way to help to save the human, that will be the first sacrifice made.

The record of the past two years speaks in accents that will not be denied. What have we conscripted under this legislation? Many thousands of men. What industry has been conscripted? What factory? What natural resources? We have given to over 300 contractors in Canada cost-plus contracts which state that the government will pay them whatever it costs them to produce plus a percentage of that cost. We have given to many others fixed price contracts; into that fixed price is estimated 5 per cent profit, but if the manufacturer is able to produce for less than the fixed price that is an added profit for him. Conscription of wealth! Why, the government has invested $500,000,000 of the money of the people of Canada in giving capital assistance to private industry. It has spent an amount well over half a billion dollars in building government-owned plants. These plants have then been turned over to private industry on a management basis. There has been no interference with private industry. What conscription of wealth is there? The selling of bonds at 2¼ per cent—is that to be the conscription of wealth?

An hon. MEMBER: Taxes.

Mr. DOUGLAS (Weyburn): My hon. friend says, "taxes." Well, everybody is taxed. People who get very little are taxed. How much taxation is there on the people who are making the money?

I notice in this morning's issue of the Montreal *Gazette* there is a report of Distillers Corporation Seagrams Limited. For the first quarter of this year they made a profit of $3,643,813 as compared with $1,948,557 in the same quarter of the preceding year. That is the amount after they paid the taxes to which my hon. friend referred. The same report shows that for the nine months ended April 30, 1942, after they had paid the increased taxes they made a profit of $9,315,860 as compared with $3,338,638 for the corresponding nine months of last year.

Mr. ILSLEY: Is not most of their business in the United States?

Mr. DOUGLAS (Weyburn): I do not know where their business is. The fact is that they are selling large amounts of their commodities in Canada, and making a good deal of their money in this country.

This afternoon the hon. member for Rosetown-Biggar (Mr. Coldwell) referred to lists of Canadian companies. I have before me a list of twenty-three companies in which profits are shown. If I may, with the consent of the house, I should like to place these tables on *Hansard*. I shall not have time to read them.

Mr. SPEAKER: With unanimous consent.

Mr. DOUGLAS (Weyburn): Thank you, Mr. Speaker. One of these lists is a group of twenty-three companies, and the table shows the profit increase up to 30 per cent over the 1936-39 average. The second table shows a list of twenty-six companies, and giving the same information. These tables show the profits in 1940 and 1941. They show that the aggregate profit increase in 1941 over the base period was, in group 1, 14 per cent; and the aggregate profit increase in 1941 over 1940 was 9 per cent.

Mr. MACKENZIE (Vancouver Centre): Where are these lists from?

Mr. DOUGLAS (Weyburn): These are compiled by the *Financial Post*.

Mr. MACKENZIE (Vancouver Centre): That is the last authority in Canada I would accept.

Mr. DOUGLAS (Weyburn): The list of twenty-six companies shows an aggregate profit increase in 1941 over the 1936-39 average of 62 per cent, and in 1941 over 1940 it was 29 per cent.

Mr. DUPUIS: Those figures were given yesterday by the hon. member for Rosetown-Biggar.

Mr. DOUGLAS (Weyburn): No; they were not. The tables expressed in round figures are as follows:

Group I

Profit increase up to 30 per cent over 1936-39 average

		Average, 1936-39	1940	1941
1.	B.C. Power	$ 1,876,000	$ 2,061,000	$ 2,073,000
2.	Gatineau Power	1,768,000	2,161,000	2,054,000
3.	Steel Co. of Canada	3,701,000	4,342,000	4,440,000
4.	National Breweries	1,813,000	1,495,000	2,029,000
5.	Canadian Celanese	1,581,000	1,464,000	1,975,000
6.	Howard Smith Paper	1,044,000	1,135,000	1,273,000
7.	Moore Corporation	1,710,000	1,787,000	1,800,000
8.	Page Hersey	909,000	942,000	917,000
9.	Canadian General Electric	2,064,000	2,308,000	2,480,000
10.	Canadian Westinghouse	1,089,000	1,203,000	1,418,000
11.	Canadian Industries Ltd	5,299,000	5,396,000	5,383,000
12.	Dominion Tar and Chemical	536,000	587,000	643,000
13.	B.C. Telephone	714,000	660,000	732,000
14.	Canadian Industrial Alcohol	351,000	220,000	379,000
15.	Dominion Oilcloth & Linoleum	1,097,000	1,130,000	1,309,000
16.	Hinde and Dauch (Paperboard)	416,000	416,000	497,000
17.	General Steel Wares	456,000	436,000	556,000
18.	Shawinigan Water and Power	2,209,000	2,065,000	2,321,000
19.	Bell Telephone	6,132,000	6,691,000	7,303,000
20.	Laura Secord	219,000	231,000	240,000
21.	Canada Malting	604,000	523,000	608,000
22.	Canadian Bronze	231,000	188,000	281,000
23.	Simpsons Ltd	837,000	928,000	1,027,000
		$36,656,000	$38,369,000	$41,738,000

Note: Aggregate profit increase in 1941 over 1936-39 average=14 per cent (just under). Aggregate profit increase in 1941 over 1940=9 per cent (just under).

Group II

Profit increase of 30 per cent or more over 1936-39 average

		Average, 1936-39	1940	1941
1.	Aluminium Ltd	$ 9,454,000	$12,462,000	$16,015,000
2.	Consolidated Mining & Smelting	9,294,000	9,062,000	12,199,000
3.	Montreal Cottons	396,000	344,000	615,000
4.	Ford of Canada (Canadian operations only)	949,000	2,584,000	3,279,000
5.	Canadian Westinghouse	1,089,000	1,203,000	1,418,000
6.	Famous Players, Canadian	817,000	999,000	1,162,000
7.	Canadian Breweries	425,000	559,000	603,000
8.	Belding Corticelli	108,000	135,000	154,000
9.	Brantford Cordage	142,000	227,000	213,000
10.	Brompton Pulp and Paper	247,000	632,000	832,000
11.	St. Lawrence Paper Mills	131,000	578,000	546,000
12.	Cockshutt Plow	69,000	236,000	471,000
13.	Ontario Steel Products	79,000	106,000	143,000
14.	Dominion Bridge	308,000	699,000	955,000
15.	National Steel Car (increased capital)	499,000	463,000	729,000
16.	Canadian Car & Foundry	441,000	478,000	702,000
17.	Canada Foundries & Forgings	81,000	105,000	147,000
18.	Beatty Bros. (Washing Machines, war work)	203,000	268,000	329,000
19.	Dominion Glass	503,000	568,000	687,000
20.	Canada Cement	1,175,000	1,332,000	1,631,000
21.	Building Products	357,000	414,000	476,000
22.	Sherwin-Williams, Canada	372,000	539,000	527,000
23.	Cosmos Imperial Mills	185,000	225,000	260,000
24.	Lake of the Woods Milling	260,000	477,000	479,000
25.	Crown Cork and Seal (Canada)	235,000	243,000	315,000
26.	Canada Wire and Cable	572,000	743,000	1,043,000
		$28,391,000	$35,681,000	$45,931,000

Note: Aggregate profit increase in 1941 over 1936-39 average=62 per cent (just under). Aggregate profit increase in 1941 over 1940=29 per cent (just under).

Mr. ROSS (St. Paul's): I should like to have these tables read.

Mr. SPEAKER: I understood there was unanimous consent that the hon. member should have permission to place them on *Hansard*. No one took exception, and consent was given.

Mr. DOUGLAS (Weyburn): During a previous debate in the house the Minister of Pensions and National Health (Mr. Mackenzie) taunted this group by saying that we were seeking to bring socialism into this country under the guise of winning the war. I shall not debate that question now, but I will say that the opposite is true. We in this group are convinced that unless the country is prepared to adopt some of the principles of socialism we cannot possibly win the war. The greatest obstacle to our winning the war has been the private competitive system—the same system which for years prior to the war caused us to have nearly a million people on relief, thousands of men walking the streets, farmers with their granaries filled, and yet not being able to get the necessaries of life. That same system which functioned so anti-socially before the war has kept us from producing an all-out war effort since the war.

We cannot fight a war if the profits and competitive system are to continue to be the dominant factor in the national economy.

Mr. ROSS (St. Paul's): Would the hon. member permit a question?

Mr. DOUGLAS (Weyburn): No; I should prefer to go on; I have not much time. Early in April, 1940, the Minister of Munitions and Supply (Mr. Howe) told us the reason we were not producing tanks was that it was impossible to get specifications. Why? One of the reasons we are short of oil to-day is that in days gone by it did not suit the interests which controlled the oil industry to develop the potential oil resources of this country. The Truman committee in the United States discovered that the Standard Oil company had the formula for the production of synthetic rubber in Canada and the United States, but that it sold the formula to the Farben Company of Berlin, so that Hitler's mechanized forces could roll across Europe on synthetic rubber at a time when we in this country had not yet got into production in that commodity.

We contend that not only must there be conscription of wealth and industry, because it is fair and just, but that without conscription of wealth and industry Canada cannot make its maximum contribution to the winning of the war.

Emphasis continues to be put in the wrong places. This is a war dependent upon the productive capacity of the nation engaged in it. If we were to conscript every man, woman and child in Canada and put them into uniform we could still lose this war. Unless we are able to produce the goods, the tanks and the planes which enable us to fight, and to fight effectively, the mere conscription of manpower, we contend, does not necessarily mean the winning of the war.

In June, 1940, I made the statement that the National Resources Mobilization Act was the poor man's conscription bill. On that occasion the Prime Minister chided me for making the statement. I made the statement then on the basis of my fears; I make the statement to-night on the basis of my experience, and the experience of the whole of the Dominion of Canada in the administration of the act in the last two years.

The third proposition I lay down is that we in this group are not opposed to the principle of compulsion, but we are opposed to the principle of discriminatory compulsion. We recognize that in war time the state has a right to expect that every citizen will make every contribution he or she can make in the national effort. But we do object to having that principle of compulsion apply, as it has applied, only to the human resources of the nation. There is an old saying, one worth repeating, that "the life is more than meat, and the body is more than raiment." In war time we are inclined to think cheaply of human life, when we hear of huge casualty lists. We speak in terms of hundreds of thousands of men, and we fail to recognize that when this or any other parliament undertakes to requisition human life it is requisitioning the dearest possession of mankind. When I asked a question of the Minister of National Defence (Mr. Ralston) with reference to taking over a large vacant building in the city in which I live to use as a barracks, he replied, "confiscation". You could give that building back, but when you take a man's life you take something from him which you can never give back. This house has a serious responsibility when it takes the step that it is prepared to take, to give this administration the power to conscript the lives of human beings. It has a responsibility to see to it that there is first conscripted those other resources which are far less vital and far less important.

The minister argued yesterday that the same reasoning which caused the people of Canada to relieve the government of their moral obligation ought to apply now to relieve them of this legal obligation. I maintain that that does not apply. We in this

group went out across the country and asked any people with whom we might exercise any influence to relieve the government of their responsibility. Why? Because the Prime Minister had definitely promised that this matter would come to parliament. The people of Canada were not asked to put the conscription of man-power for overseas service on the statute books of Canada; they were asked to relieve the government of all commitments in order that the matter might be discussed, to relieve all members of this house of any obligation in order that they might attack this subject on its merits. But that argument does not apply now.

Mr. MACKENZIE KING: What is my hon. friend talking about right now?

Mr. DOUGLAS (Weyburn): May I ask: are we discussing conscription?

Mr. MACKENZIE KING: Yes; the question of overseas service is now before parliament.

Mr. DOUGLAS (Weyburn): The moral obligation of the government was released in order that the matter might be discussed in parliament. To relieve the government of its legal responsibility without any assurance that it intends to conscript all the material resources of Canada is a totally different matter. Whereas we were willing, and did ask the people to relieve the government of its moral obligation, we are not prepared to relieve the government of its legal obligation unless the government is prepared to take some definite steps for the conscription of wealth, industry and the other material resources of this country.

In a few days the reserve unit to which I am attached is going into camp and I may not be here when the vote is taken. I should like to place my position before the house so that there may be no doubt as to exactly where I stand. Had the amendment moved by the hon. member for Rosetown-Biggar been accepted as being in order, naturally I would have voted for it. If the government is prepared to withdraw this bill and introduce mandatory clauses to section 2 of the mobilization act conscripting the wealth and industry of Canada, as outlined this afternoon by my leader, the hon. member for Rosetown-Biggar; if they are prepared to follow that policy with a conscription measure for the conscription of man-power for overseas service, then I am prepared to vote for it. But if the government fails to follow such a course, I say definitely to-night that I shall vote against this measure.

[Mr. T. C. Douglas.]

I do not intend to lend either my voice or my vote to giving the government power to conscript young men, many of whom have never owned a square foot of the soil of this country, many of whom for years did not know where to lay their heads, if at the same time the government proposes to leave those to whom this country has been good, those who own a large part of this country, go comparatively free. This is either everybody's war, or it is nobody's war. As long as the government fails to utilize the material resources of the country, I for one will not vote to give it the power to conscript human life.

Mr. A. W. ROEBUCK (Trinity): Mr. Speaker, the hon. member for Weyburn (Mr. Douglas) has just said that the public has been confused and bewildered by the bill now before the House of Commons. I think he has demonstrated the truth of the statement he made, demonstrated it in a personal way rather than by argument. The hon. gentleman said that he and his associates travelled across Canada asking that the government be relieved of its commitments against conscription. Yet he now says that he will not permit the passage of a bill, the plain object of which is to make possible the putting into effect of a conscriptive measure.

Mr. DOUGLAS (Weyburn): Is that what the plebiscite was for? That is not what the Prime Minister said. He said it was not.

Mr. REID: No one interrupted the hon. member. We gave him a fair hearing.

Mr. ROEBUCK: If the hon. member will hear me, I will tell him the whole story of the plebiscite and what was intended, in my humble judgment, by the question and answer. I know the hon. member is under some obligation to leave shortly, but if he will wait I am sure he will hear the whole story. The hon. gentleman has told us that he is prepared to vote for a conscriptive measure if it is brought before the house in sufficient detail. Yet he proposes to vote against the bill which has for its purpose the very thing which he proposes to support.

Mr. COLDWELL: Oh, no.

Mr. ROEBUCK: Practically. I suppose my hon. friend will say that the difference lies in the fact that some detail could be lined out in a bill brought before the house, detail which under the present measure must be regulated by order in council. I refer to the putting into effect of conscription by the government.

Mr. DOUGLAS (Weyburn): And preceded by the conscription of wealth.

Mr. ROEBUCK: That is the herring across the trail. If my hon. friend objects to the government having the power to take care of the details, how does he think a conscriptive measure can be enforced? How could it be administered even if it were passed by the house? In the very nature of things a statute can deal only with general details; it can determine the principle and little more; the remainder, that is, its administration must of necessity be left to the cabinet.

I must congratulate the hon. member for Weyburn upon the speech he has just delivered. We are discussing a definite measure, and at least he has directed his remarks to the measure itself. I listened this afternoon to a long discussion by the leaders of the two parties other than the official opposition, and I must confess that if that was what the public heard, I have no doubt they would be both confused and bewildered. Instead of addressing themselves to the measure before the house, the two leaders made this bill a vehicle for the expression of every possible idea they could think of, whether it was relevant or irrelevant to the measure before us. They turned it into a wheelbarrow, loaded it up with the entire platform of both political parties and dumped it on the floor of the house.

At least the member for Weyburn has discussed the question at issue, and I congratulate him upon doing so.

I listened, as did all the members of this house, of every party, and, I suppose, every division of thought, to the remarkably eloquent and appealing address of the hon. member for Richelieu-Verchères (Mr. Cardin), and I must say to my fellow members that my heart went out to him for the sincerity with which he spoke and the musical eloquence of his words. He said he was not ashamed to represent his French-Canadian compatriots. In reply I should like to say that his French-Canadian compatriots are honoured by his representation. I will go further than that and say that I am proud to call him a fellow-Canadian compatriot. Of course that does not mean that I must agree with all the hon. gentleman said with such force and eloquence.

He complained, for instance, of the form of the question that was placed upon the ballot, and I agree that something may be said with some force along that line. Unfortunately, however, the time for complaint has gone by. The time for the revision or the improvement of that question was when it was being formulated by the cabinet of which he was then a member, and he not only took responsibility for the form of the question and the fact of the plebiscite but actually approved it before the country. It is rather too late now to criticize the action for which he and the other members of the government were responsible.

As I understand it, the hon. member for Richelieu-Verchères says that the answer to the question does not warrant the government now introducing a measure which has for its purpose enabling legislation for the introduction of conscription. Surely we did not spend a million and a half dollars on a plebiscite to obtain from the Canadian people an answer that means nothing. The answer must surely mean something, not nothing. If the question and its answer are the innocuous pair that some people reason they are, and did not give the government power to introduce conscription if it is necessary, let me ask, what did it mean? If it did not mean that, why did the constituencies of the province of Quebec, or many of them, vote "no" in such overwhelming numbers? Was it simply because it was verbiage that they did not like? Certainly not. Those constituencies in the province of Quebec which voted "no" did so because they knew that this was a step in the direction of conscription. Equally, Mr. Speaker, in my judgment those constituencies which voted "yes" did so because in their view it was a step in the direction of conscription.

The hon. member for Richelieu-Verchères drew an eloquent and imaginative picture of the distinction between the British race and the race from which he springs. He says that when England is attacked, those of the British race rush to her defence because their deep racial emotions impel them to action, while with the French Canadians their enthusiasm has to be raised by the logic of the mind. That argument appealed to me. I can see the truth of what he says. It is perhaps a reason why we of British extraction should be most kindly in our attitude toward people of French extraction. But I think the error of his statement lies in this, that the heart of the French Canadian floods with emotion just as rapidly and just as strongly as that of the English race in this country when the name of Canada is mentioned. Who, Mr. Speaker, sings "O Canada" with greater fervour than my fellow-Canadian citizens of French extraction? The error of our position lies in our failure to realize that the boys who are fighting across the English channel, the Canadian young men who are bombing German cities, are fighting the battle of Canada. The error lies in a failure to realize that the armies of Canada which are now in England and standing guard on the chalk cliffs of Dover are in very

truth guarding the ramparts of Canada, and may I say to my hon. friend, guarding the entrance to the St. Lawrence.

I doubt if foreign service is actually possible in this war. I doubt the accuracy of the term because the armies of Canada, on the land, in the air and on the sea, no matter where they may be and no matter where they fight, if it is in north Africa, England, France, Germany or Russia, are defending Canada.

I can say with truth and enthusiasm that there is no class in our community to whom the freedom of this country, the liberty of its people, and the preservation of our ancestral lands are more dear than to my French-Canadian friends. So let us realize that we are all together in this war and that this little distinction of race is a very small matter in view of the danger that our country is facing and the tremendous responsibilities which we have undertaken.

There are periods in the life of a nation when the interests of the state become more important to the individual than his own ambitions and his own future. There are times when men's souls are stirred to enthusiasm and to self-sacrifice. This is one of those periods in the history of Canada. When Canada declared war against Germany in September, 1939, she staked her national existence on the success of her arms and on the fighting qualities of her associates, and instinctively our people everywhere—I do not care whether they came from the conscriptionist districts or the non-conscriptionist districts—recognized the national danger and offered themselves, their services and their property in defence of the state. In periods such as this and in the act that we are now performing, conscience should take command. I hope that it is with a full realization of the solemnity of this moment that we of the House of Commons approach the problems involved in and surrounding this bill. It is with a profound sense of responsibility that I attempt to discuss the measure in this house.

The bill itself, in my judgment, presents almost no problems, and for the simple reason that it has in substance already been approved by a nine-to-one vote of the Canadian electors of my own constituency, and by something like a million majority in the country at large. In courses of debate, it is important that we hold before us the very thing about which we talk. What was the question submitted to the people? "Are you in favour of releasing the government"—note the word—"from any obligations arising out of any past commitments restricting the methods of raising men for military service?" It does not say, are you in favour of releasing the House of Commons, the Liberal party, the Conservative party, or the individuals involved; it asks the people whether they are prepared to release the government. The government was the subject at issue. The people said "yes," specifically. I think they said much more than "yes," but to that question they answered "yes" by a vote of approximately two-to-one. Accordingly the government has introduced a measure to implement in substance the question which was asked. The bill which is now before the house is the practical counterpart of the question which was asked of the public. It proposes to strike out of the mobilization act these words:

> The powers conferred by the next preceding section may not be exercised for the purpose of requiring persons to serve in the military, naval or air forces outside of Canada and the territorial waters thereof.

Those who would criticize the assumption of powers by the government in the present bill should realize that all that is happening is the disappearance of certain words, and that the powers which the government will retain were already set out in the mobilization act. No new powers of administration are being given. The only distinction between the exercise of those powers after the bill is passed and their exercise before the bill is passed is that the powers may apply to foreign service, so-called, while at the present time they apply only to local service. So let us not, as the hon. member for Weyburn says, be confused and bewildered. The government is given no powers which it did not formerly possess. It only extends those powers to foreign service. It does seem to me that every hon. member who comes from a constituency which voted "yes" in the plebiscite must in the very nature of things, if he would obey the will of those who sent him here, vote "yes" on this bill. I see very little difficulty as far as the bill itself is concerned; I am satisfied that it will carry with an overwhelming majority in the house, and that majority will not be made up only of members of the party to which I belong. It hardly needs a defence as far as its literal words are concerned.

This bill, however, has implications much more far-reaching than the mere release of a government to do as it sees fit. Irrespective of amendments which may be offered, this bill raises the whole question of methods by which Canada will in the future raise her armed forces for service overseas, and it brings before this house in a formal way the vexed question of conscription. It is a question which, in my judgment, cries out for decision. It is a question which can no longer be evaded. It is a question which will not down.

One speaker has said that this is the last opportunity which we members will enjoy to discuss and to determine this question of conscription. Well, let us determine it now. This is the debate and now is the time. I noted with a great deal of pleasure the statement of the Prime Minister in his speech of yesterday that he invited a full discussion of conscription—an invitation which I propose to accept.

It would be easy for me to argue the question of conscription on its merits, because there are so many sound arguments on both sides. I suppose that one could list every possible relevant fact and argument in two opposing columns and, after a contemplation of the weight of both sides, could honestly come to either conclusion. But for me the time for argument has gone by. The decision on this question was taken out of my hands. It was made for me by an authority that I acknowledge to be my superior and to whom I owe a very willing obedience. It has been decided by the high court of the electors of the riding from which I come.

The pledge which was the subject of the plebiscite had a number of aspects. In the first instance, it bound the government in whose name it was given. In the second instance, it bound the Liberal and Conservative parties, perhaps others, whose leaders and many of whose members spoke on their behalf. Finally, it bound the individuals whose personal honour was involved in the keeping of the pledge. The pledge against conscription was an individual obligation on all those members of the house who adopted it by outright spoken declaration, or who tacitly became bound to it by acceptance of its benefits. The pledge was a matter of general and national concern and it was also a matter of private concern, between each individual member and his respective electors.

The request for release affected that personal relationship between myself and my own constituents; and yet the reference was made to the people for the release from the pledge without any prior consultation with the members of the house. It appeared in the speech from the throne which was prepared before the arrival of the members in Ottawa at the opening of the session. I am not complaining—do not misunderstand me—of the decision to hold a plebiscite. It is the right of the government to take the initiative and to stand or fall by the consequences. It is not only its right to take the initiative; at times it is its duty to do so. So I am not complaining of being presented with a *fait accompli* with respect to the request for release from the pledge. I am only pointing out that the plebiscite was a government measure pure and simple, and the government, having taken the responsibility of asking for an expression of the views of the electors whom I represent, no doubt will not be surprised—it will expect—that I follow the decision of my electors, as I understand it, that I heed what they say. This was the appeal to Caesar.

Now, then, what was it that my constituents said to me in the course of the plebiscite campaign? In the speech delivered in the house on the second reading of the bill by the Prime Minister on February 25, 1942, he made abundantly clear the meaning which would be attached to the answer by the government. The Prime Minister said, as reported at page 823 of *Hansard:*

> If the answer is in the affirmative it will mean that the government, according to the opinion expressed by the people, has been released from commitments that have been made; if it is in the negative, it will mean that the majority of the electors are of the opinion that the government should continue to be governed by the commitment that was made at the time of the last general election and on previous occasions, and on subsequent occasions as well.

That is to say, if the electors voted "no", there would be no conscription; if the electors voted "yes", there would be no conscription still, unless and until the government sees fit. However much that may resemble a proposition of "heads I win, tails you lose", that was the meaning attached to the question by the government. That was the construction which was placed upon it, and I submit now that neither the Prime Minister nor the government can be charged with inconsistency if the government now contends that "no" means "no" and that "yes" means "no" at its pleasure. That was the plain logic of the situation.

But, Mr. Speaker, I am troubled. I am troubled with this question: Is there any obligation on the part of the public to accept for themselves the interpretation placed by the government upon the question which they were asked to answer? The electors when called upon to vote are not civil servants to be instructed by a government; they are, in fact, its masters. They are not servants at all; they are masters. They are not confined in the expression of their opinions to any narrow formula that may be placed in print upon a bill. They can express any opinion they please by any method they care to adopt, and they, too, can announce in advance or afterwards the meaning which they place upon their vote. This they did in my constituency, and the meaning which

they gave to a "yes" vote, was not the meaning which was given to it by the Prime Minister. They told me by hundreds; they made it known to me in every way that masses can make their meaning clear, that they were voting "yes" on this plebiscite because they preferred the compulsory selective service system to the voluntary system. They were voting "yes" because they were in favour of conscription.

I am speaking only for myself. I am speaking only as member for Trinity. I would not presume to speak for other members or for other members' ridings. I know my people as well as most members know theirs, and I say that my electors did not vote in this plebiscite only and exclusively to set a government free from shackles of its own making, although I realize that that was an element in their thinking.

It has been contended that the government wished to be free from its commitments because it would then be in a better position to explain to the people of the United States why the United States has the draft and Canada has not. The importance of American relations is thoroughly understood, I think, by all well-informed Canadians, but I am safe in saying this to the house, that my electors of Trinity did not go to the polls by thousands in order to improve a speech or to sprinkle salt upon an argument. There were 26,295 electors in my riding who went to the polls—26,295 in my constituency alone —and they voted for the affirmative on the ballot by a vote of nine in ten.

Mr. FLEMING: Are you in favour of it, too?

Mr. ROEBUCK: Yes. Why did the people of my riding flock to the polls in such numbers? In my judgment they went for no other reason than to decide whether Canada should or should not have conscription. That may have been illogical on their part, in view of the form of the question as placed upon the ballot. But the electors were not the architects of that verbal structure; it was given to them; they had no choice but to accept it and make the best use they could of it in expressing their purpose. They may have been actually pig-headed in view of the speeches made by parliamentarians of all colours, but in my judgment that is what they did. And they are the masters. According to my intimate knowledge, they went to the polls to decide this question of conscription.

Mr. FLEMING: Did the hon. member advise them to vote for conscription?

Mr. ROEBUCK: I asked them to come out, and they came in great numbers. I am not saying whether they were wise or unwise, whether it was right or wrong. I am not defending my own position; I am simply saying what I think they did.

I wish the house would permit me to present the case and would sympathetically go along with me for a moment in trying to get the picture as it presents itself in my riding. Mine is a constituency of homes, thousands of them. The men and women whom I represent are home people. They love their families. No people in the world ever loved their families more than do the people of my constituency. Yet young men and women went to the polls and said, "Take our brothers and our fathers." Fathers and mothers went to the polls and said, "Take our sons." They hate war and they do not love compulsion; yet they said, "Take us; save Canada; beat Hitler." They said it with sore hearts, in no spirit of bravado. In sombre seriousness they said it. They are Canadians; they did their duty.

Mr. SPEAKER: I have to inform the hon. gentleman that his time has expired.

Mr. ROEBUCK: Unless I have the indulgence of the house I must bow to your ruling.

Mr. SPEAKER: There is some objection.

Mr. T. L. CHURCH (Broadview): The motion is for the second reading of Bill No. 80, a bill which has been a costly one for the taxpayers of this country. It is a pretty skimpy bill to cost $1,500,000 to release someone who says he gave a pledge. As far as I am concerned as a member of the House of Commons and of the party to which I belong I never gave a pledge on anything, and I can say that no leader had the right to pledge my political party on that question because the party was never consulted about it. That is what defeated our party in Ontario, the principle of "follow your leader" and "your leader is your policy". That policy is fatal in peace and still more so in time of war.

Every second, every minute, every hour, every day and every week between now and midsummer are big with fate for this country. As we approach the summer we do not know to whom this country is going to belong. The enemy is at our door, our front door, our back door and every other door. It has attacked three dominions; three of them have the enemy at their front doors. This is going to be the most fateful summer in our history; yet nearly six months have been wasted by a plebiscite which meant nothing from the start. All this bill does is to

permit overseas service if, as and when the governor in council thinks it necessary, which in my opinion will be never, as long as this government is in power. I have a great admiration and respect for the Prime Minister (Mr. Mackenzie King); I think I have known him longer than anyone else in the house, and anything I have to say is what I believe to be the truth and without offence to anybody, because I speak only of principle. I regret the results of the action taken by the government in regard to this legislation. My leader in the house and the whole Conservative party in the Toronto district supported the plebiscite and the "yes" vote. The leader of this group addressed a letter to the Conservatives in every constituency asking them to support the plebiscite and to vote "yes", although we on this side of the house opposed the plebiscite. I myself did not believe in the plebiscite because I believe that on the government of the day rests the responsibility to carry on the war. It is their function as long as they are the government; under the parliamentary system and the constitution the responsibility is theirs; it is something that they cannot evade notwithstanding pledges and that kind of thing.

As far as this particular pledge is concerned, when the trouble was on in 1922 and 1923 and one of the leaders of our party said that if war came he would like a referendum, I opposed my leader and told him that in this house and outside the house as long as I belonged to the party I would never see Mr. General Election become commander in chief of the British forces; I would never allow Mr. General Election to become admiral of the British fleet, because before Mr. General Election could open his ballot boxes the enemy could sail up the St. Lawrence and bomb the citadel at Quebec, blow up the public utilities in Montreal and blow down this building and the Chateau Laurier and all our institutions. For that reason I opposed it, and because I have always believed in the principle that when Britain is at war Canada is at war. Everything we in this country have we owe to the mother country. She bore the brunt of the whole war for the first two years. Had it not been for her the axis powers would have been in America, and Ottawa and Washington would long ago have had to make peace with them.

As I say, there is only one clause in the bill; it is merely enabling legislation giving the governor in council power to act if, as and when they consider it necessary. I regret that this action was taken at all, because I believe the Prime Minister and his cabinet have done a great deal of good work. I am not one who would say anything to the contrary, because I believe they worked hard—so hard, in fact, that it has affected the health of most of them. I believe they have done their best, and what they believed to be their duty. But I do say that the government was ill advised in having the plebiscite, and in acting the way in which it did at that time. I say that because in my opinion the plebiscite has led to wide disunity, from Vancouver to Halifax. It has fomented wide dissension from coast to coast, and has frustrated the ideals of the fathers of confederation.

The principle of the bill, as indicated by the hon. member for Trinity (Mr. Roebuck), is just enabling legislation. When addressing a meeting in my constituency at the time of the plebiscite I said that I did not believe in it. I had voted for a six months' hoist, because in my view a plebiscite was not the proper way to deal with the matter. When addressing my constituency on March 5 at the Masonic hall, I urged them to vote "yes" on the plebiscite, although I had said the night before I had voted for a six months' hoist.

My observations are reported in the Toronto papers of March 6, as follows:

> A lot Hitler and Japan care for plebiscites. The axis partners may arrive in Canada before the ballot boxes are open.

Then the article continues:

> Taking the plebiscite, he characterized as "War according to Hollywood, and not according to Hitler and Japan," and he predicted that "It will, when taken, like the national register, be consigned to the archives."
>
> "The people are fast losing all confidence in our free parliamentary institutions in Canada and in their public men," said Mr. Church, accusing the government of "several rounds of shadow boxing, such as the sham plebiscite route to glory. If the people vote Yes the government will take one pace forward and four paces backward in the war effort."
>
> "It is no time to belittle those who for five years before the war had predicted it. If I were one of those who had changed my views—like some in the house—I would have come to the House of Commons and taken the penitents' bench, and would have said that a change of opinion had been forced upon me by Hitler and Japan, and that I regretted my past actions in opposing rearmament and coordination and cooperation with Britain. But, No! They pose now as super-patriots, these pacifists in all parties. If Hitler and Japan come to Canada they will take the plebiscite and all connected with it, and hang them on the sour apple tree—like was done with John Brown's body. History always repeats itself."

Those were my views. They were honest views, and I had expressed them in the house before. I am sorry that my opinion differed from that of the citizens' committee during

that campaign. The Toronto members were invited by the Canadian corps and Canadian Legion to attend a meeting to boom the plebiscite. I would not have attended it otherwise, as I did not believe in the said citizens' committee or that a thing would be done on this vote. One of the members of the government was there. Our members were not allowed to take part in the meeting. I asked the chairman had he any word or undertaking from the government that if we voted "yes" we would get conscription, or a total war effort. He said "no", and now this celebrated committee find out they were fooled, and what they voted for was not carried out.

The Prime Minister has pointed out that one of the main principles of the bill is that parliament has to decide what part it will take in the war. There have been some differences of opinion, but they have been cropping up since the war started. It has been said that Canada did not enter the war for ten days —until September 10. After ten days of neutrality we did enter the war. Then there were some other election speeches which had been made against conscription, and the government got over that difficulty with the plebiscite.

We now have a bill which has for its purpose the striking out of section 3 of the act. As I say, this is merely permissive and enabling legislation. In connection with this matter of recruiting, we have been doing everything by fits and starts. It is a fact that this country should stop, look and listen, because the adoption of the amendment may not make any change in the law as it was, with the exception of section 3.

This measure will not help the overseas part of the war. It will not send any troops over there. It will not conscript troops at the present time, unless it is found necessary. It has strings, riders, and a number of jokers—what would be known by the laymen as "jokers". It has "ifs" and "whens" and "when necessaries", and all that kind of thing. If it is adopted, it is not intended to apply conscription until necessary.

That particular part of the bill is not very clear. It is no more clear than was the plebiscite, and I suggest that it needs some revision. As the Prime Minister said yesterday, it is perfectly clear that the enemy overseas will have to be destroyed, if this continent is not to be the field of final conflict, or the first scene of an invasion. Our provisions for home defence do not amount to the snap of a finger in the beating of Hitler. If we are beaten overseas the battle will be here in a very few hours.

[Mr. Church.]

The motion for second reading of the bill was not necessary, nor was there any necessity for the plebiscite. As I say, there has been too much interference with the war, instead of leaving it to our military leaders to conduct along lines of military strategy. It has been conducted from the political end, and that was the trouble in the far east. There has been interference from statesmen, some of whom have been called politicians. They interfered in the far east with the direction of the military campaign on land, on sea and in the air.

This war is different from the last one. In 1916 the Asquith government went out of office in England because it tried to conduct that war as a Liberal war. Since this war started, the government in Canada have been conducting it as a Liberal war. All along the line it is conducted from the political point of view. I should like to find out if this change in Bill No. 80 was considered by the defence council. Did the defence council advise the government about the situation in Europe? If they did, they did not know what they were talking about. They were not well advised if they said that an overseas army, in addition to what is in England, was not necessary.

I say that because there will have to be another peninsular war. Great British cannot win this war in the air, and we have lost command of the Pacific. I would repeat my question as to whether the defence council were consulted, and if they recommended this amendment. Will they take the responsibility for this bill if Canada is invaded, and any reverse is suffered by our forces. Australia had the same trouble. They wanted the formation of a war cabinet, because they found that political decisions were being given against them, and against the advice of their military leaders in the far east.

I do not see any necessity for this bill. The government was given authority, by a large majority, the largest majority since confederation, to carry on this war. The government has failed all along the line. It is a Liberal war, based on a half-way effort. As Napoleon said, when we gamble with the lives of men we lose the confidence of the troops. That is true to-day. I venture to say that the minute our troops hear what we heard in this chamber yesterday they will be very much surprised, and they will be asking themselves the question as to why they enlisted at all. I say that in this Bill No. 80, from the military point of view and from the point of view of strategy in the war we are taking a gamble of a hundred to one.

The people have not been given the facts. They have not been told the details of the

money that has been spent. Less information is given to the public of this country than of any of the other dominions. On March 21, 1939, I called this to the attention of the house and quoted the statement of the then British Prime Minister over there that if the people "are only allowed to know what the leaders choose to permit them to know, then that people are in danger of being led to embark upon a course which may presently lead them into disaster."

Is this Bill No. 80 the answer to the men at the front, to the men who are flying over Germany to-night? As the Prime Minister has said, this bill will permit soldiers to go to adjacent territories like the United States, Newfoundland, and probably the Aleutian islands and other places, but where are you going to get the men under this bill? I do not intend to discuss the issue raised in the debate yesterday and to-day in connection with the situation in Quebec. In my opinion the soldiers will be greatly disappointed, and the "yes" voters of the country will be tremendously disappointed by the action of the government.

People outside the house, in the constituencies, sometimes tell me that they cannot understand the mentality of the House of Commons. When such measures as this are allowed to go through, as has been the situation in the past, the government must assume the responsibility. I consider it is only cheap political vaudeville and cheaper political burlesque, a declaration to the world that we are not going to do anything. Before the war we relied upon such things as the League of Nations, the Monroe doctrine, the status quo, the Locarno treaty and collective security. It is collective security only when you have an armed Britain. The "yes" voters thought that if the "yes" vote were the majority vote, they would have a total war effort. They find now that there is to be no total war effort.

We face invasion just as much as Australia, New Zealand and South Africa. In my opinion there is no such thing as home defence. The defence of this country will not be decided at Victoria or Vancouver or Quebec or Montreal or Three Rivers or Saint John; it will be decided in the other theatres of the war, in the Mediterranean, in the Atlantic and in the Pacific. If we fail over there, it will be all over. Hitler is the grand master of timing. But our distinguished Prime Minister is a good judge of timing. He is the best politician we have in the country and he is the grand master of political timing in the sense to which I have referred.

The Prime Minister takes his appeasement policy even to the electors. What was the "yes" vote? In my opinion it was a vote to get on with the war. We have had five sets of counts and votes and they are all deposited in the archives. It is a fine way to trust the people by giving them legislation like Bill No. 80. In my opinion the voters will be disappointed at the action of the government because Bill No. 80 will be pigeon-holed in the archives like the rest of these things. To-day is the forty-fifth day since the vote was taken and now it is going to be deposited in the archives. Dust to dust, earth to earth and ashes to ashes.

The address we heard yesterday was an explanation of the plebiscite and we heard that men are not wanted. Why are we taking this circuitous route? There never was a time when things looked so dark. This war can be won only with a large army and an air force and a fleet. We have lost all the battles in this war. In his first spring drive Hitler captured Norway, Luxemburg, Denmark, Holland, Belgium and France. In the second spring offensive he entered the Caucasian mountains, the Balkans and Greece, and Crete fell. This spring offensive he is in the Caucasus and a great battle is raging. Germany has 3,000,000 men and 14,000 tanks, the largest army the world has ever seen. Opposed to him is an army of only 2,000,000. Germany has passed through the worst winter in her history.

In the first two years Britain had to bear the brunt of the struggle and Russia will have to bear it in 1942. This country should bestir itself to send her all production possible and other help, air force and otherwise Many people think that this bill will not get very many men into the army, that the women will be left to do the fighting for the men. That remains to be seen. In my opinion the Prime Minister's speech was appeasement *in excelsis*.

Last Sunday in Toronto, in a driving rain storm, in my constituency at a Sunday service, an appeal was made to the soldiers of this country. The Canadian corps met in Riverdale park, a spot where on former occasions as many as 150,000 people have met together. The service was led by Lieutenant-Colonel the Reverend Canon H. F. D. Woodcock, V.D., who was the chaplain of the Queen's Own regiment. He served overseas for four and a half years during the last war. The son of Sir Allen Aylesworth, who sits in another place, was with him overseas. Canon Woodcock is at Christ Anglican Church, Toronto. I quote from the newspaper report of the sermon:

"You have the country at your service," Canon Woodcock told Mr. King. "All we ask is that you use it totally to win the war." The country expressed an opinion on the request of the Prime Minister to release him from promises, the speaker charged. "With an overwhelming 'yes' we responded to his request."

Canon Woodcock said that the vote released Mr. King from "anything to prevent you mobilizing this Canada for total war."

"We are not afraid of regimentation in this great war, when the struggle is for death or victory," the speaker declared.

Commenting that anyone who speaks to-day has a great responsibility, Canon Woodcock said "words must not be empty things in these days."

"I speak especially to these men whom I see before me."

Many of those men had served for four and half years in Flanders and France. I quote:

The speaker said that the dominion was proud of the veterans not only because of their acts in the last war but because of their conduct in those trying days between these two wars.

"They stood for the best traditions of the empire and always stood for imperial relations," Canon Woodcock stated.

"The veterans have been a steadying influence during these years, all of which have not been peaceful ones. And we did need a steadying influence during those days," the speaker said.

"To-day we meet in honour of this great empire. The gates have been set up like Jericho of old. Gates set up in the blood of the younger sons. We claim that we deserve this empire because it was procured at such a tremendous price—the price was blood. So we prize the empire. We idealize it. We think of it as standing for truth, justice, honour and fair play."

Those were the words of a great pastor, great citizen and great leader. When the Napoleonic wars were going so badly against England, Napoleon said:

This government foresaw nothing and only discovered difficulties when brought to a standstill by them.

A hundred thousand men have perished, the artisans of our defeats, the people responsible for our misfortunes, have no business to take any further part in our public life. They ought to remain in retirement and do their best to be forgotten.

To scatter forces in little packets is not the way to make war.

I have read the Prime Minister's speech twice to-day, and while it contains considerable information it fails to show what the objectives are under this bill. What are the objectives of the government during this fateful year, 1942, especially now that we are approaching the darkest hours of the summer. Indecision, after all is said and done, is one of the most fatal mistakes in war time. It is clear that the speech of the Prime Minister fails to let the country know where we are going to land. It is clear also that we have been depending all along, and so has Britain, too much upon American supplies and upon America to defend us. As I said the other day, we need a minister of production in this country, who can and will organize our whole resources and man-power and materials in an all-out drive for production. The work of the present Minister of Munitions and Supply (Mr. Howe) is divided among himself and two other ministers, and I believe that we should have immediately one minister of production in charge of it all, because if Great Britain does not get the supplies she needs, the united nations will soon be in a very grave situation. We need a minister of production who will organize our whole resources for this war. After all is said and done, it is not America, but the mother country herself, that is the great arsenal of democracy to-day. Figures produced in the British House of Commons show that Britain's production is twice that of the United States. The United States, while her heart and soul is in the war, is not a military power, and it will be impossible for it within less than two years to attain the maximum production which is necessary to match the axis powers.

This country seems to be entirely lacking in anything like a war mentality. We are fighting the best organized enemy in the history of the world, and the most cruel and barbarous of all times. I would like to see commando empire troops raised and trained in the dominion. Commando in modern warfare are like armoured shock troops in their application, and are only in their infancy. But to send them to the continent alone would be a mistake, because they are useful only following in the wake of powerful tank brigades, which in turn must follow powerful fleets of bombers and fighters, with a fleet back of them. So far we are wanting in this, because our fleet is now being used in the war of survival to safeguard the lines of supply from America; but the job is now to see that these units of commando dreadnoughts, by divisions, are ready. Canada is the logical place to train them and to recruit them from all parts of the empire, as is being done under the air training plan. Our job should be to see that these units are forthcoming to aid Russia and Britain. Canada has produced magnificently in aircraft and munitions of various kinds, and I believe that we could contribute greatly by training commando troops in Canada.

I believe that this country is not doing its duty to those across the sea at the present time. This war is approaching the most critical days in the history of civilization, and yet Bill No. 80 is, in my opinion, merely a lot of window-dressing and shadow-boxing. It will not fool anybody. It is just a smoke-

screen, added to the delay that was caused by holding the plebiscite, for the mistakes which were made in disarmament before this war and for which the government of the day is responsible.

This country is not doing its duty. There should be no more political conduct of this war. We could have had a million men trained for the army under the voluntary system if we had not been acting on the on-again-off-again principle. Recruits came forward all over this dominion at the beginning of the war and were told that they were not needed for the army. The ambition to serve was there, but these young men were told they were not wanted and that there was no room for them in the army. It was difficult to get into the army then, but they could get into the air force and into the navy without limit.

This is a life and death struggle and I should like to know why in a democratic country like Canada there is not equality of sacrifice. In this country from coast to coast we have spent millions of dollars on free education, free textbooks, free dental and medical inspection. Is it, then, too much to ask our youth to do something which has been done ever since the creation of the world, to undertake the defence of one's own country? That is the first duty of a citizen. But in some of our schools and state universities long before this war started they were preaching pacifism and that it was immoral to defend one's country, with the result that when the war came, pacifism had almost got control of the government.

I believe that Russia is very badly in need of men and materials. The "yes" vote in the plebiscite urged the government to wage total war. We have forgotten to think out loud in Canada and let the people know that this country is less democratic in matters of defence than the totalitarian nations whose armies are composed of every ablebodied man between certain ages, who come at the call of duty to serve the state. That is regarded as the highest form of social service. Our educational system has been lacking in that respect. It has not taught the children of the land that their first duty is to defend the realm. Our troops will suffer as a result of pacifist doctrines and policies. We were not ready for this war. The real facts of our situation have been withheld from the people of Canada. It is absolutely useless to send untrained men up against trained men. Are we going to send our young men without sufficient training to Russia and Europe, because there will be another peninsular war sooner or later, to fight the highly trained soldiers of the axis powers? Munich gave this country and the world a year's respite. That respite had to be purchased by Britain and France from Germany because either singly or together they were then no match to meet Germany as both Britain and France had disarmed. This respite was turned into an ultimatum, and this country stayed sound asleep and did nothing about the matter.

The result of the vote on the plebiscite shows the spirit of our people, and proves that the Canadian people are ready to make greater sacrifices if they are told that those sacrifices are necessary to win the war. Britain can no longer rely on the English channel and the Atlantic ocean as her sufficient protection; and the day is not far distant, unless we bestir ourselves and rid our strategy of politics, when we shall be facing a very grave peril. This is a life and death struggle, and nobody knows where it is going to end.

The mistakes which have been made in the far east show the immediate necessity of an empire war cabinet. There is no more important topic before the world and the British empire to-day, because without a war cabinet the war cannot be won. We have evidence of the need of it in the mistakes which have been made in the far east. The Prime Minister need not be in attendance; he can have a representative there. In the last great war the war council did very useful work. It led to coordination of effort and cooperation in strategy, in place of every country pursuing a strategy of its own. I hope that the matter will be reconsidered and that action will be taken in this direction.

Britain did not want war, but she will stand higher than any other nation in the verdict of history. As in the parable, while the lawyer, the priest and the Levite illustrated the hollowness and sham of their profession, it was the much maligned Britain that alone came forward, voluntarily, and acted the part of the Good Samaritan to stand in the breach and save the world from slavery. Britain has acted the part of the Good Samaritan in this war. She has been the protector of the weak the world over. She entered this war voluntarily. There was no selfish reason why she should have entered it, and by her stand and the heroism of her people after Dunkirk she saved the whole human race. She has been the bulwark of freedom, religion and civilization; to her will go the main credit in history.

I believe the Prime Minister will have the united support of the whole house for his bill. I know, as a member of the opposition, that he has received pretty good support from our leader. The splendid speech which the leader of the opposition (Mr. Hanson) made yesterday will be remembered as one of the best

which has been made during this war or the last. My leader has measured up very finely to his responsibilities during this war. He has given the government good, independent support. I hope that, notwithstanding the mistakes which have been made, the government will press on with the prosecution of the war and give our troops in all theatres the help they need and deserve. It should certainly consider the training of additional regiments for use when the new peninsular war begins in Europe, because it is there, not in Canada, that the battle is going to be.

Mr. ARTHUR J. LAPOINTE (Matapédia-Matane) (Translation): Mr. Speaker, the Right Hon. Prime Minister (Mr. Mackenzie King) wishes by means of Bill No. 80 to strike out section 3 of the National Resources Mobilization Act, and thus do away with all barriers to conscription of men for overseas service. This measure is, to my mind, one of the most important and critical to be submitted to the commons since the great war. The discussion may even become violent, unless hon. members of this house exercise a great deal of good-will and moderation. That is why I intend, during these brief remarks, to respect the opinion of those who differ with me on the burning issue of conscription. In critical times such as these, when everyone is highly keyed up, it is important to discuss calmly the grave issues with which we are faced. Mr. Speaker, since 1935 when I first entered this house, I have been loyal to my party, for I had no serious reason to do otherwise. I have always had faith in the right hon. prime minister, believing then as now in his utmost sincerity. It is therefore with the deepest regret that I find myself obliged to take issue with him on so grave a measure. The dictates of my conscience leave me no other choice.

During the 1917 election campaign, I was serving in the trenches as a volunteer. Then, as now, I did not believe in conscription for overseas service and voted against the government. Two years ago, thinking that I might once more be of service to my country, I joined up, this time again as a volunteer. The prime minister does not intend perhaps to resort immediately to conscription for overseas service, but through this bill he is nevertheless asking us to accept the principle of such a measure. After that, the road to conscription would be wide open. If I am so strongly opposed to the measure, it is because I am convinced that this system, far from helping our war effort, will cause deep dissension among the people of Canada and undoubtedly destroy national unity, which is so essential to the success of our common cause.

I know the people of my constituency whom I have had the honour of representing in this house for almost seven years. They are willing to sacrifice everything to victory, but they are averse to compulsion and they will never condone the implementation of such a measure. So far, the people of Matapedia-Matane, together with the whole population of Gaspé have very generously answered the call of their country. Their sons have enlisted in large numbers and I am positive that were conscription to be enforced very few conscripts could be found in many parishes of my part of the country, for all able-bodied men have enlisted voluntarily and have generously answered the call of their country. They wished to follow in the footsteps of two great heroes, Brillant and Keable, both of whom used to live in my constituency and both of whom have been awarded the Victoria Cross. They were the only two French Canadians ever to receive such a distinction which they have bought with their lives.

Mr. Speaker, I have absolute confidence in the efficiency of the voluntary system of enlistment. I am convinced that it will provide for all the needs of our various forces, as long as it is properly administered and supported by all people of good-will. I am convinced that were the supporters of conscription to put forth as much effort to promote voluntary enlistments as they have done, especially in the last few months, to organize their campaign in favour of conscription, we would have, at the present time, many more volunteers than we could use. I do not wish to cast any doubt on the sincerity of certain supporters of this method of enlistment, but nevertheless I cannot help but feel that many of them are much more interested in causing trouble for the Right Honourable Prime Minister than in promoting the war effort.

The hon. Minister of National Defence (Mr. Ralston) has stated that the voluntary system is adequate to supply all present needs of our various armed services, even taking into account the imminent entry of our troops into battle. In that case what is the use of reviving, every once in a while, this national bone of contention?

Mr. Speaker, about two years ago, the powerful German war machine was achieving extraordinary successes in Europe. The French army, considered as one of the best in the world, had sustained the greatest military disaster in its history. Germany, elated by its victories, was hastily organizing

the battle of Britain, in order to loose its swarms of barbarians on the rest of the world.

It seemed at that time that the collapse of a civilization was near and that nothing could halt the dreadful scourge. Across the channel the British people were in constant fear of invasion, but nevertheless feverishly organizing the defence of their country. In the course of the succeeding months England was to know every form of horror and anguish. After the defeat of France, Hitler thought, in his boundless conceit, that English morale would soon be broken by his powerful air force. That was his first great mistake. In spite of thousands of tons of explosives and incendiary bombs strewn over the English cities, in spite of the slaughter of innocent people, in spite of the destruction of their oldest and most beautiful monuments, the British people remained stoical amid their ruins and did not lose heart. On the contrary, the indomitable courage shown by them through those cruelly testing hours moved every nation of the world to admiration. This incredible tenacity through this trying period allowed those people who were still free to recover from the shock and organize resistance. By her example, by her indomitable courage and with the support of her formidable navy, England then saved the world from slavery of the worst kind.

If our country has not so far been invaded, if we have not hitherto experienced the brutish cruelty of the Gestapo, if we are not as yet at the mercy of the most brutal and most inhuman soldiery one can imagine, if we still are a free people, here in Canada, we owe it mostly to Britain. For the last two years, my military duties have prevented me from taking part in the debates of this house, but I wish to take the opportunity which is afforded me to-day to express my heartfelt admiration for my king, the queen and the British people, whose courage and steadfast determination are so aptly symbolized by the British bulldog in the person of their admirable Prime Minister, Winston Churchill.

Mr. Speaker, Canada would not have this war. The citizens of this country were quite willing to live in peace, but circumstances over which we had no control have thrust this war upon us. We are fighting to-day beside nations which were still free and anxious to defend that which they hold most dear and most sacred. We are fighting in order to defeat the strongest imaginable conspiracy of evil forces to enslave the nations of the world. We are fighting to defend our christian ideal. We are fighting for the defence of those liberties which are nearest our hearts. We are not fighting for China, for Russia, for the United States or for England but, as the late lamented Right Honourable Ernest Lapointe was wont to say with such aptness, we are fighting at their sides for Canada, our own country. This war is therefore our war and we must win it at all costs and, in order to do so, it is imperative that we maintain the unity of our country.

It has been stated by Sir Norman Birkett, speaking before the Canadian club in Montreal, on June 5th, that England's greatest achievement since the war started was the preservation of its national unity. Since we joined the conflict, our war effort has been wonderful. We have exceeded our expectations in all fields. Yet, despite the whole nation's tremendous efforts, despite the amazing results so far achieved, certain people claim that we have not yet accomplished anything, while others claim that we have done far too much. And there are at present in this country two groups of extremists who are causing considerable harm to our war effort and who are busy sabotaging our national unity. Do they realize to what extent they are playing into the enemy's hands? Nothing could so please Hitler as to see strife and disunion reign among his opponents. This was, moreover, a favourite method of his and one to which he invariably resorted before attacking any country. He weakened it first of all by having his agents of the fifth column spread class hatred throughout the nation. When he saw that prejudices, disunity and discord reigned supreme, the country was ripe for invasion. This was his strongest weapon in all the countries he vanquished. There are, at the moment, in this country two extremist factions who are playing into the enemy's hands. It seems to me that the government and the hon. Minister of Justice (Mr. St. Laurent) should take vigorous steps to put an end to this bickering. It is high time that this campaign of prejudices and disparagement was checked on both sides, for its only result is to engender hatred and discord which can lead our country to the worst disasters. There is no time to quarrel with one's neighbour when one's house is afire. This does not mean that French Canadians have no grievances in need of redress. On the contrary, we have many. But this is not the time to settle old accounts. While the enemy is at our gates, let us forget our quarrels, unite in the face of our common foe.

Before I resume my seat, Mr. Speaker, allow me to recall briefly to the memory of the house the most outstanding example of

cooperation between races that it has been my privilege to witness. It was during the last great war, on the Lens front, in 1917. The enemy had just started a wild night attack and a very heavy bombardment of our trenches was in progress. The 25th Nova Scotia battalion was in the firing line and the 22nd was supporting them. Suddenly a messenger from the front line brought us the news that the 25th battalion, weakened by the fierce battles of the two previous days, was assailed by forces greatly outnumbering them and were in great need of support. The older members of the 22nd recalled to their younger companions the services rendered them by the 25th battalion at Courcelette in similar circumstances. "Let us go," they said, "this is our opportunity of paying the debt we owe the 25th battalion." In a few moments, the commanding officer had more volunteers than he needed. The fighting was fierce, and a great many lost their lives in the fray. However, the enemy was beaten back with heavy casualties. Later, when relief came, nothing was more touching, I can assure you, than the sight of these soldiers of the 22nd and 25th battalions marching arm in arm, although they could not understand their respective languages, but who, from that time, became, for life, the best friends in the world.

In these tragic days, we should take inspiration from such an example and such a lesson. This war may perhaps not last as long as we imagine and Canadians of every origin should join and march on hand in hand. I trust that each and every one of us will be able to do so with a clear conscience. If we do this, Mr. Speaker, we shall be able with good understanding between us, with cooperation from every race, to build a truly great country, a truly great nation for which generations to come will hold us in grateful memory.

On motion of Mr. Crète, the debate was adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.
