OF

DEBATES
HOUSE OF COMMONS

THIRD SESSION—NINETEENTH PARLIAMENT

6 GEORGE VI, 1942

VOLUME III, 1942

COMPRISING THE PERIOD FROM THE SIXTH DAY OF MAY, 1942,
TO THE ELEVENTH DAY OF JUNE, 1942, INCLUSIVE

BEING

VOLUME CCXXXI FOR THE PERIOD 1875-1942

INDEX ISSUED IN A SEPARATE VOLUME

OTTAWA
EDMOND CLOUTIER
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1942

CANADA

House of Commons Debates

OFFICIAL REPORT

Wednesday, May 6, 1942

The house met at three o'clock.

PRIVILEGE—MR. COLDWELL

REFERENCE TO PRESS REPORT OF STATEMENT BY DOCTOR FRANZ KLEIN

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I rise to a question of privilege and to keep the record straight. Doctor Franz Klein gave a statement to the press last night in which he said this—I am reading from the Ottawa *Journal:*

He claimed that any note of dissension in his writings was in relationship only to a difference between his views and those of another Austrian expatriate now in Toronto.

"Mr. Coldwell may regard him as an Austrian leader, since he boasts having been Schuschnigg's press chief. He was one of the junior officials in Colonel Adams', the press chief's bureau. Adams' whole staff was imprisoned by the German invader. Most of them are still in concentration camps. Mr. Coldwell's witness is the only one who owing to his friendship with Schuschnigg's Foreign Secretary Guido Schmidt, was released after a few weeks and allowed to leave Austria."

I wish to say that I do not know the gentleman to whom Doctor Klein refers. I have had no communication with anyone connected with the Austrian or Czech organizations in this city or in the dominion. The information I gave the other afternoon was obtained when I was in England, from the Free Austrian Committee there.

REPORTS OF COMMITTEES

Second report of standing committee on railways and shipping.—Mr. Howden.

RADIO BROADCASTING—CONCURRENCE IN FIRST REPORT

Mr. J. J. McCANN (Renfrew South) presented the first report of the special committee on radio broadcasting, and moved that the report be concurred in.

Motion agreed to.

44561—138

RAILWAYS AND SHIPPING

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, on behalf of Mr. Ilsley I beg to move:

That estimate items Nos. 400, 401, 410 and 411, approved and reported upon by the standing committee on railways and shipping, owned, operated and controlled by the government, be referred to the committee of supply.

Hon. R. B. HANSON (Leader of the Opposition): The report of the committee has not yet been concurred in. I know this is a pro forma motion, but it seems to me to be a little premature.

Mr. MACKENZIE KING: It can stand.

Mr. SPEAKER: The motion refers to items that were taken out of the estimates and referred to the standing committee on railways and shipping, the standing committee has approved the items, and they are now reported back to the house. The usual procedure is then to refer these items to the committee of supply to be dealt with in the usual manner.

Motion agreed to.

RADIO BROADCASTING—CHANGE IN PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Hansell be substituted for that of Mr. Kuhl on the select committee on radio broadcasting.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WARTIME HOUSING LIMITED—CONSTRUCTION AND RENTALS

Mr. NICHOLSON:

1. How many houses were completed by Wartime Housing Limited by April 1, 1942?

2. What was the average cost, including services, per unit?

3. How many completed houses were occupied at April 1, 1942?

4. What were the different rates of rentals charged by Wartime Housing Limited?

5. How many houses have been rented in each of these categories?

Mr. MICHAUD (for Mr. Howe):

1. 3,918 completed, as of April 10, 1942.

2. $3,197 (estimated)—Includes services and cost of land.

3. 3,796 houses as of April 10, 1942.

4. Type H1 and H2. Amherst, Halifax and Prince Rupert, $25.00 per month; St. Catharines-Victoria Park and North Vancouver, $20.00 per month; all others, $22.00 per month. Type H11 and H12. Amherst, $32.50 per month; Hull, $30.20 per month; Halifax, Prince Rupert, $32.00 per month; St. Catharines-Victoria Park, $28.00 per month; North Vancouver, $27.00 per month; all others, $30.00 per month. Type H22. Halifax, Prince Rupert, $27.50 per month; St. Catharines-Victoria Park, $23.00 per month; North Vancouver, $22.00 per month; all others, $25.00 per month.

5. As of April 10, Type H1 and H2, 2,226 houses; Type H11 and H12, 1,117 houses; Type H21 and H22, 453 houses.

W. V. WRIGHT

Mr. WRIGHT:

1. Is W. V. Wright, former sheriff in the Shaunavon district, employed by the Department of Agriculture in any capacity?

2. If so, what remuneration was paid him during the past fiscal year for (a) salary, (b) expenses?

Mr. WRIGHT: I wish to have this question dropped.

Question dropped.

CANADIAN CHARGE D'AFFAIRES FOR FRANCE—VICHY CONSULATES IN QUEBEC

Mr. BRUCE:

1. Is M. Pierre Dupuy, the Canadian charge d'affaires for France, Belgium and The Netherlands, living in Vichy?

2. If not, where does he live and what are his opportunities for direct contact with Marshal Petain?

3. When did he last visit Vichy?

4. Has he had a conference with M. Pierre Laval since the latter's accession to power in France?

5. If not, what advantage will the Prime Minister derive from a conference with M. Dupuy?

6. Have complaints been made to the Vichy minister—M. Ristelhueber—that the Vichy consulate in Quebec was distributing anti-British pamphlets?

7. If so, what action did M. Ristelhueber take?

[Mr. Nicholson.]

8. How many Vichy consulates are there in the province of Quebec?

9. Are broadcasts being sent to this continent, in French, from nazi-controlled Paris?

10. Are broadcasts being sent to this continent, in French, from Vichy?

11. Has any action been taken in respect thereto?

Mr. MACKENZIE KING:

1. No.

2. Mr. Dupuy resides in London. He has had opportunities for direct contact with Marshal Petain on his visits to Vichy.

3. It is not considered in the public interest to give details concerning Mr. Dupuy's visits to Vichy.

4. No.

5. The advantage afforded by conference with one who possesses special knowledge and is widely informed on matters at issue.

6. It is not customary to disclose particulars of confidential conversations between foreign diplomatic representatives and the governments to which they are accredited.

7. Answered by 6.

8. Two, one in the city of Montreal and one in the city of Quebec. The latter consulate is now vacant and is being administered by the Consul General in Montreal.

9. Yes.

10. Yes.

11. Yes.

AIRCRAFT AND ALLIED INDUSTRIES—MORALE BUILDING CAMPAIGN

Mr. DIEFENBAKER:

1. Has E. G. Hirst of Toronto been appointed to organize and conduct a morale building campaign in aircraft and allied industries?

2. If so, when was he appointed?

3. By whom was he appointed?

4. In what business was he previously engaged?

5. Is he still conducting such business?

6. What salary, honorarium, allowance, or other remuneration, is paid to him by the government?

7. If no remuneration is paid to him by the government, by what means is he being compensated for his services?

Mr. HOWE:

1. Yes, in the aircraft industry.

2. December 20, 1941.

3. Director-General, Aircraft Production Branch, Department of Munitions and Supply.

4. Might Directories Limited.

5. He is still Vice-President of Might Directories Limited.

6. None.

7. He is receiving no compensation for his services.

WARTIME HOUSING LIMITED—GREATER MONTREAL

Mr. FAUTEUX:

1. How many dwellings have been erected by Wartime Housing Limited within the area of greater Montreal?

2. What classes of dwellings have been constructed and how many of each kind?

3. What has been the cost, by groups, of each class of dwelling?

4. How many of each kind are actually occupied?

5. What rental is charged for each class of dwelling?

6. Are any restrictions imposed on the different classes of tenants?

7. Do all tenants come within the scope of these regulations?

8. Has the company received from the city of Montreal, or from any of the municipalities constituting greater Montreal, any requests for the utilization of all other dwellings within the limits of the city?

9. What arrangements have been made, if any, with the city of Montreal and the different municipalities constituting greater Montreal, for the leasing of any of these dwellings?

Mr. HOWE:

1. None.

2, 3, 4, 5, 6 and 7. Answered by 1.

8. No.

9. None.

The above questions are answered on the assumption that "greater Montreal" refers to the island.

SALVAGE—WILLIAM KNIGHTLEY

Mr. NICHOLSON:

1. What has been paid to William Knightley, salvage division, national war services, as (a) salary, (b) expenses?

2. What salary and expenses will be paid to him as associate director?

3. What will be paid to C. Laferle, newly appointed director of salvage, as (a) salary, (b) expenses?

Mr. THORSON:

1. (a) $3,720 per annum.

(b) $947.11 from March, 1941, to date.

2. (a) $3,720 per annum.

(b) Actual out of pocket travelling expenses when on departmental business.

3. (a) $5,000 per annum.

(b) Actual out of pocket travelling expenses when on departmental business.

MILITARY SERVICE—APPLICATIONS FOR POSTPONEMENT OF TRAINING

Mr. FAIR:

1. How many men have been called up for training under the National Resources Mobilization Act in each of the provinces?

2. How many applications for postponement of training have been made in each province?

3. How many applications have been granted in each province?

Mr. THORSON:

Provinces	1 Number of men called up for military training under the National Resources Mobilization Act in each of the provinces, and accepted at National Defence (Army) basic training centres, since October 9, 1940, up to March 12, 1942	2 Number of applications for postponement of military training that have been made in each province, since October 9, 1940, up to March 12, 1942	3 Number of applications for postponement of military training that have been granted in each province, since October 9, 1940, up to March 12, 1942
P.E.I.	1,013	549	463
Nova Scotia	4,718	3,010	2,019
New Brunswick	4,567	2,315	1,802
Quebec	38,433	37,163	22,174
Ontario	37,252	19,800	15,953
Manitoba	8,331	3,231	2,442
Saskatchewan	9,424	2,874	1,803
Alberta	9,024	2,534	2,334
British Columbia	7,543	4,443	4,056
Totals	120,305	75,919	53,046

HOSPITALIZATION OF SERVICE MEN OVERSEAS

Mr. CHURCH:

1. What agency is in charge of the hospitalization of service men overseas in Britain?

2. What private organization or auxiliary services are in charge of amusements and sports for soldiers overseas in the various camps?

Mr. RALSTON:

1. The Royal Canadian Army Medical Corps is in charge of the hospitalization of all personnel of the army overseas in Britain.

There is a director of medical services on the staff of the senior officer commanding overseas. This director of medical services administers the hospitalization and Medical Corps in England.

2. Amusements and sports furnished to the soldiers in camps overseas are provided under the direction of the auxiliary services officers by the four national voluntary organizations, namely: the Canadian Legion War Services, Inc.; the Knights of Columbus; the Salvation Army; the National Council Y.M.C.A.

RECOGNITION OF FRENCH NATIONAL COMMITTEE

Mr. CHURCH:

Will the government now recognize officially the provisional government of General de Gaulle of France?

Mr. MACKENZIE KING: The Free French National Committee, to which this question refers, is not a provisional government, and the question of its recognition has not arisen.

EXPORTS OF METALS AND MINERALS TO AXIS POWERS

Mr. CHURCH:

1. What was the tonnage of copper, aluminum, nickel, scrap iron, pig iron and coal exported from Canada to Japan, Germany and Italy for the five years before the war?

2. What amount has been exported to Japan and Italy since the war began?

Mr. MacKINNON (Edmonton West):

1. Exports to Japan, Germany and Italy, calendar years 1935 to 1939.

Year	Item	Unit	Japan	Germany	Italy
1935	Copper	Cwt.	3,526	188,325	66,870
	Aluminum	Cwt.	126,483	79	4,411
	Nickel	Cwt.	17,456	384	31,532
	Scrap iron	Ton	39,186	....	....
	Pig iron	Ton	....	....	....
	Coal	Ton	982	....	2,800
1936	Copper	Cwt.	8,348	261,842	38,903
	Aluminum	Cwt.	88,872	3,374	....
	Nickel	Cwt.	28,821	10,136	24,654
	Scrap iron	Ton	68,011	1,935	....
	Pig iron	Ton	....	....	....
	Coal	Ton	1,038	....	1,504
1937	Copper	Cwt.	69,175	223,408	11,899
	Aluminum	Cwt.	178,405	7,870	9,921
	Nickel	Cwt.	101,342	23,151	17,921
	Scrap iron	Ton	46,948	....	....
	Pig iron	Ton	....	34	....
	Coal	Ton	....	....	....
1938	Copper	Cwt.	311,875	554,897	37,486
	Aluminum	Cwt.	312,250	123,937	....
	Nickel	Cwt.	153,992	20,233	....
	Scrap iron	Ton	41,033	....	....
	Pig iron	Ton	....	....	....
	Coal	Ton	....	....	....
1939	Copper	Cwt.	378,396	58,289	99,644
	Aluminum	Cwt.	421,173	57,964	....
	Nickel	Cwt.	233,107	....	....
	Scrap iron	Ton	46,866	821	....
	Pig iron	Ton	....	....	....
	Coal	Ton	....	....	....

2. Information by countries not available during war period.

SCARCITY OF BEEF

Mr. LACOMBE:

1. Is there a scarcity of beef in Montreal and other Canadian cities? If so, why?

2. Has the government undertaken, or does it propose to undertake a careful inquiry to fix responsibility for such scarcity?

3. What steps does the government propose to take to deal with this situation?

Mr. GARDINER:

1. Some shortage in beef supplies has occurred since April first in some of the larger consuming centres in eastern Canada due to higher prices for certain classes of cattle in the export market than those offered in the Canadian market.

2. No investigation is considered necessary.

3. Proposals have been under consideration but decision has been deferred pending further market developments.

EXPORTS OF BEEF

Mr. LACOMBE:

1. Has Canada exported any beef to the United States since January 1, 1942?

2. If so, what was the quantity for the months of January, February, March and April, 1942, respectively?

3. What quantities of Canadian beef were exported to the United States during the corresponding months in the years 1941, 1940 and 1939?

Mr. MacKINNON (Edmonton West):

1, 2 and 3.

Exports of fresh beef to the United States:

Month	1939 100 lb.	1940 100 lb.	1941 100 lb.	1942 100 lb.
January	1,100	361	304	15,898
February	1,082	226	121	12,204
March	1,803	247	98	13,050
April	352	169	55	951

EMPLOYMENT OF CANADIAN NATIONALS IN UNITED STATES DEFENCE INDUSTRIES

Mr. CARDIFF:

1. Has the attention of the Department of External Affairs been directed to a situation said to obtain in the United States where Canadian nationals in the United States are and have been refused employment by companies in the United States engaged in defence orders?

2. If so, what representations have been made by the department to the government of the United States?

3. What results, if any, have accrued as a result of such representations?

4. If the answer to No. 1 is in the affirmative, is the practice continuing, and if so, what further action does the department propose to take in the premises?

Mr. MACKENZIE KING:

1. Yes. Complaints have been received from various sources.

2. The Canadian Legation in Washington has discussed these complaints with the competent authorities of the government of the United States and the matter has also been discussed at a recent meeting of the Joint Economic Committees of Canada and the United States.

3. The government of the United States is endeavouring to eliminate discriminations against citizens of the united nations and the President, the Attorney-General, the Federal Security Administrator and other officials of the United States government have appealed to employers to stop these discriminations.

4. It is impossible to say how far these measures have been effective. The question is receiving continued attention and is being considered by the Joint Economic Committees as part of the wider question of the most effective use of manpower.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MILITARY SERVICE—AGES 18 TO 30—NUMBERS MOBILIZED, REJECTED OR EXEMPT

Mr. JEAN:

1. According to the latest statistics what is the number, in each province, of (a) young men of 18, 19 and 20 years of age; (b) young men of 21, 22, 23 and 24 years; (c) young men of 25, 26, 27, 28, 29 and 30 years?

2. What is the number in each province of those actually mobilized or in active service in each category?

3. What is the number, by provinces, of those who have been declared incapable of military service?

4. What is the number, by provinces of young men between 18 and 30 years of age who are exempt from military service under the law or by reason of their beliefs?

Mr. THORSON: Return tabled.

PARCELS TO PRISONERS OF WAR

Mr. CHURCH:

1. How many ships are now engaged in carrying parcels to Canadian prisoners of war in enemy and enemy controlled countries?

2. Who charters such ships and have any of them been sunk?

3. Has any official statement yet been published or received by the government from the Red Cross regarding the delivery of parcels to Canadians in all enemy countries?

4. How many parcels per month or week have been delivered to Canadian prisoners?

5. Is the government aware that friends in Canada of our war prisoners have become alarmed by statements in the British press and

criticisms in the House of Commons in Great Britain, regarding non-delivery of parcels to prisoners of war?

6. Is it not a government responsibility to look after our prisoners of war?

7. Does the government accept responsibility for the services provided by voluntary organizations in this respect?

MOTIONS FOR PAPERS

ORDER IN COUNCIL P.C. 1347

Mr. NICHOLSON:

For a copy of memorandum of the Secretary of State recommending P.C. 1347 of February 20, 1942, to the privy council.

Mr. NICHOLSON: I ask that this be dropped.

Motion dropped.

MONTREAL BRIDGE TOLLS

Mr. CARDIFF:

For a copy of all letters, telegrams or other communications, passing between any official of the government of the province of Quebec and any official of the government of Canada with reference to the abolition of tolls on the Victoria and harbour bridges in the city of Montreal.

CONSCRIPTIVE POWERS OF GOVERNOR IN COUNCIL UNDER WAR MEASURES ACT

Mr. CARDIFF:

For a copy of all opinions rendered by the Department of Justice with reference to the power of the governor in council under the War Measures Act to conscript men for service in any theatre of war.

Mr. ST. LAURENT: I ask that this be allowed to stand so that I can have the question considered whether or not this can be complied with without violating the privileges which still exist as to certain communications between the Department of Justice and other departments of the government.

Motion stands.

THE PLEBISCITE

INQUIRY AS TO GOVERNMENT ACTION FOLLOWING THE VOTE

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I desire to ask the Prime Minister when he will make a statement to the house with respect to what the government intends to do, having regard to the final and official vote on the plebiscite and the statement of the Prime Minister on Tuesday of last week that in due course the government will make known to the house what action it proposes to take in the light of the plebiscite vote, and the prior statement of the Prime Minister, in his plebiscite address of April 7, that the only place it can satisfactorily be decided whether a particular step is necessary or a particular measure needed is in parliament—that in parliament the government can state its case and provide the information on which a wise decision alone can be made.

Right Hon. W. L. MACKENZIE KING (Prime Minister): First of all, perhaps I should correct my hon. friend the leader of the opposition (Mr. Hanson) in his statement that the "final and official vote" has been given to the house or is available. However, I do not wish to make any point of that except to be strictly accurate. I would say to my hon. friend that I expect to make a statement to the house in the course of a few days with reference to the matter to which he has referred. In the meantime the government will continue, as it has in the past, to endeavour to anticipate and to meet every situation that arises, in the light of existing circumstances.

VICHY REPRESENTATION

STATUS OF DIPLOMATIC RELATIONS—RETURN TO CANADA OF MR. DUPUY

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I desire to ask the Prime Minister another question. On Tuesday, April 28, the Prime Minister told the house that he had asked Mr. Pierre Dupuy to return to Canada and indicated that "unless some occasion should arise to make it necessary to take action before he returns" he would not make a statement on our diplomatic relations with Vichy until he had had the opportunity of conferring with Mr. Dupuy. I should now like to ask the Prime Minister if the situation at Madagascar is such an occasion as he referred to in his statement, and if so, whether any further action has been taken by the government. Further, I should like to ask the Prime Minister when he anticipates that Mr. Dupuy will be available for conference on this question.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am unable to say whether Mr. Dupuy is in the city at present or not. I expect that he will he here this week if he is not already here. I have not had a chance this morning to ascertain. Until I have had an opportunity of an interview with Mr. Dupuy I prefer making no further statement on the matter.

THE SENATE

INQUIRY AS TO APPOINTMENTS TO FILL EXISTING VACANCIES

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): Mr. Speaker, in view of the urgency of the situation and the desirability of strengthening in every possible way our parliamentary institutions by recruiting thereto men and women of outstanding ability, will the Prime Minister tell the house when he will be in a position to announce the appointment of men and women of ability to the Senate of Canada to fill the many vacancies at present existing?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I shall be glad to take note of my hon. friend's desire to be considered in that connection.

HIS MAJESTY THE KING

DESIRABILITY OF DISPLAYING THE ROYAL PORTRAIT IN RECRUITING STATIONS

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): May I ask the government if it is not possible to have a fine picture of His Majesty the King, the commander of the army, in each recruiting office?

Hon. J. L. RALSTON (Minister of National Defence): I will deal with that when my estimates are under consideration.

TORONTO HARBOUR COMMISSIONERS

EXPEDITING OF BILL ON ORDER PAPER IN NAME OF MINISTER OF TRANSPORT

On the orders of the day:

Mr. J. H. HARRIS (Danforth): In the absence of the Minister of Transport (Mr. Cardin) may I ask the government to be kind enough to expedite the introduction of the bill standing in the name of that minister having to do with the Toronto harbour commissioners. The urgency lies in the fact that the summer vacation of the city council may preclude the possibility of taking advantage of a $5,000,000 debenture issue which is coming due on September 1.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I can promise my hon. friend that the matter will be taken up to-morrow.

INTERNMENTS

ESCAPES OF GERMAN PRISONERS FROM CANADIAN CAMPS

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): I should like to address a question to the Minister of Justice (Mr. St. Laurent). Owing to the escape of two more German prisoners from the internment camp at Bowmanville, as reported over the radio this morning, will the minister tell the house whether these frequent escapes are being investigated by his department and whether provision is being made to stop such escapes?

Hon. J. L. RALSTON (Minister of National Defence): That comes under my department. The guards at internment camps are under the Department of National Defence, and I have constituted a board, composed of Colonel G. S. Stairs, M.C., V.D., of Montreal, Colonel K. R. Marshall, C.M.G., D.S.O., V.D., of Toronto, and Colonel C. M. Edwards, D.S.O., V.D., of Ottawa, who will make a special investigation with regard to the escape of these two prisoners, and any other matters that may be referred to them in connection with the administration of the camp. There have been four different commanding officers there and the escapes which have occurred have occurred under all of them, so that it seems to be a question as to where the responsibility lies. However, the matter is being thoroughly investigated by the officers whom I have named. As a matter of fact I ordered that the district officer commanding should himself proceed to Bowmanville this morning. I did so the moment the report came in and he is on the ground now. The court of inquiry will be constituted at once.

THE "NEW CANADIAN"

VANCOUVER NEWSPAPER PUBLISHED IN JAPANESE AND ENGLISH—PRE-PUBLICATION CENSORSHIP

On the orders of the day:

Hon. N. A. McLARTY (Secretary of State): On Monday the hon. member for New Westminster (Mr. Reid) asked a question with regard to a paper which is being published in Vancouver under the name of the *New Canadian*. It is published in Japanese and in English, and the hon. member inquired whether any steps are being taken to check up on it. I have now secured the necessary information and would advise that the *New Canadian* is still being published in English and in Japanese at 396 Powell street, Vancouver. It generally appears three times a week. Its Japanese section occupies approximately one-quarter of its space and consists entirely of translations of official announcements and notices affecting the Japanese-Canadian population. In regard to the second portion of the question, I would point out that in the early days of the war the *New Canadian* was handled exactly like all other Canadian publications; it was subject to post-publication censorship. However,

the press censors advise me that it is now subject to pre-publication censorship and all copy must be presented to the censor in Vancouver prior to the publication of the paper.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, May 5, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

Mr. HARRIS (Danforth): On several occasions we have been trying to find out what progress has been made with regard to certain recommendations which have been put on the record during the last ten or eleven months. The minister was kind enough to indicate that he would give the committee a fairly comprehensive statement, the idea being that this would avoid the necessity of cross-examination across the floor of the house. Altogether there are close to forty recommendations not enumerated or numbered as such but appearing in the context of evidence which the minister's department and other war departments have had before them. I should be glad to have a statement from the minister.

Mr. RALSTON: I will endeavour as briefly as I can to summarize the action taken, or the comments of the department with regard to some of the more important recommendations. I am sure my hon. friend does not expect me to go into the whole matter, because I presume all the recommendations will come before the war expenditures committee when it meets.

One recommendation has to do with the appointment of a financial superintendent under the jurisdiction of the deputy minister. That recommendation, in the case of the Department of National Defence (Army) had already been carried out. As a matter of fact, there had been a financial superintendent for some years.

With respect to a war establishments committee, that also was recommended, and that recommendation, if it was intended to apply to the Department of National Defence, (Army), is met by the fact that we have had and have a war establishments committee which is functioning, I think, satisfactorily. The director of staff duties is chairman; the director of military operations and intelligence and the director of mobilization and recruiting are members.

The committee recommended that someone from the deputy minister's branch should become a member of the war establishments committee, and the financial superintendent himself became a member of it, although he had been functioning from June 30, 1941. Later, on March 7 of this year, the director of military training was appointed a member. Hon. members will understand that frequently these establishments are related to training centres or to some unit, the training of which needs particular attention and in respect of which, therefore, the knowledge of the director of military training is needed as to establishment requirements.

A recommendation was made suggesting that a staff of highly trained civil servants, with expert background, should assist the financial superintendent in carrying out his duties. Under that, there were to be appointed 21 grade 4 civil clerks, who had had a university course in economics and commerce. That was authorized at a meeting of the committee some time before, for the purpose of assisting the financial superintendent. Of these, ten were appointed in the army service and six were assigned to work on estimates and finance under the financial superintendent.

A recommendation was made with regard to the long and complicated procedure concerning war establishments, suggesting that that be simplified without weakening the financial and constitutional controls of the civil power. I could dilate at some length on that particular recommendation, but perhaps it will suffice to say that we have adopted a plan whereby there will be simpler procedure in certain increases in establishments. I think it is that increases up to 5 per cent, not more than 5 per cent of personnel, are made on the authorization of the minister, and do not go to the privy council at all. The same applies to increases in establishments in England; up to 5 per cent are made on the authority of the army commander without reference to the authorities here. Up to 10 per cent may be made in connection with establishments, if that is done for the purpose of bringing them up to correspond with British establishments. Further than that, a sweeping and thorough examination has been made of departmental procedure in order to shorten the time, if we possibly can, for a file to pass from one branch to another with respect to establishments.

I will not go into details here. I myself have discussed the matter thoroughly with the director of staff duties and with the financial superintendent, and I can assure the committee that a substantial saving of time will be effected in that respect as well. I must say it is pretty difficult to do it and at the same time to preserve the reservation made in the recommendation, that is that we must not

weaken the financial or constitutional control. Obviously, if you stop the recommendation on its way to the minister's office or the deputy minister's office, you leave the recommendation largely in the hands of more junior officials. But I do feel, and have so expressed myself, that for the purpose of getting on with the war we must do that; we must place responsibility on the senior officials in these branches and in the financial superintendent's office to approve the establishments; and if privy council authority is necessary, I have proposed—and I think it will be adopted—that we should get confirmation of those establishments simply by a schedule attached to one order in council, say once a month. That may not be approved by the hon. member for Danforth or by the committee, but there is no way of shortening the establishment procedure unless you cut out some of the officials, and it is very difficult to cut out the service officials, because every one of them in the branches has something to do with the establishment. That is, where a particular individual or a particular number of personnel is necessary, or whether so many trucks or so much motor transport may be necessary or where other equipment is necessary, all has to be passed on by the branches concerned. You cannot shorten that. The only way to shorten it is to have the approval further down the line.

Mr. HARRIS (Danforth): Or split it up.

Mr. RALSTON: Yes, in the case of minor or small establishments, and that is being done. A suggestion was made that each defence deputy minister should be assisted by a civilian director of personnel; that is in force in the Department of National Defence, Lieutenant-Colonel Harris being in charge.

A suggestion was made that consideration be given to the after-war use and disposal of all property, real and personal, acquired by the crown for war purposes. In so far as the Department of National Defence is concerned, at the moment naturally we are acquiring property for war purposes. The real estate adviser does, I know, in selecting property, endeavour if he can to have an eye to post-war conditions, but he has first to comply with the requisitions and requirements of the service people. If he can do that and at the same time pay attention to the comparative post-war value of alternative sites, he does so.

With regard to the matter of salvage generally the Department of National Defence, particularly in the master-general of the ordnance branch, has had authorized by order in council a salvage board. That board has to do particularly with army equipment, not general salvage but army equipment, and the officer in charge is Colonel Bailey who had an extended and detailed experience in the last war in connection with the same sort of thing. That board operates under the master-general of the ordnance. Certain sales require approval of the minister or the deputy minister as the case may be, and we have found it operates successfully with regard to the disposal of this army equipment, compared with the ordinary salvage which is disposed of under a salvage officer.

Mr. HARRIS (Danforth): Does that board include officials of the Department of National Defence for Air?

Mr. RALSTON: I do not think so.

Mr. HARRIS (Danforth): We still have five sets of people doing the same class of work.

Mr. RALSTON: Well, my hon. friend will not expect me to make any apology for the service which has to do with army equipment.

Mr. HARRIS (Danforth): Have the other war departments a representative on this board?

Mr. RALSTON: I do not know whether they have in regard to that type of salvage. As a matter of fact, I would not expect that the air branch would have a great deal of salvage, except destroyed planes, new equipment which has been damaged.

Mr. HARRIS (Danforth): They have clothing, worn-out guns, the same class of material. There should be some coordination.

Mr. RALSTON: They started out with things such as horse transport, of which there was a large quantity in the department. It may be that we shall need some of that before we get through this war.

There was a recommendation with regard to the division of freight between the two railways. That matter has already been the subject of considerable discussion in another committee and I made my statement there. It really has to do with the three services and also munitions and supply.

The system of stock control in operation in naval stores was suggested as being possibly useful in the army and the air branch. I can say that our officers have examined it, and we find it is difficult to apply to the army in view of the continuous turnover of the supply stock.

That is with regard, I think, to subcommittee No. 3. Then there was subcommittee No. 2 which dealt more with medical matters. In reference to the dental services the subcommittee mentioned the efficiency with

which the organization had been set up and, of course, having received that commendation, no one is going to deny it. With regard to medical and hospital services, the importance of cooperation and coordination was stressed, and the principle was laid down that the necessity for care of men above category E should be under the Department of National Defence, that is, until they are placed in a lower category. The Department of National Defence accepts that responsibility, but it has at the same time used, as suggested by the committee, existing hospital accommodation of the Department of Pensions and National Health or civil hospitals. The return of March, 1942, showed the distribution of military patients as being 72·59 per cent in national defence hospitals, 12·04 per cent in pensions and national health hospitals, and 15·37 per cent in civil hospitals.

Then the committee really reiterated that recommendation, that the principle be recognized that the medical services of national defence should be responsible for medical and hospital care of all men in the forces until they are placed in category E.

There was a recommendation that the subject of medical care and hospitalization of men above category E be referred to the interdepartmental committee for further study and report. The report is that the interdepartmental committee has met on several occasions where the different services, including pensions and national health, have hospital facilities and when increased accommodation has been necessary, to study these situations. Just to dilate a little on that matter of the interdepartmental committee on medical services, the report I have is that subsequently to the presentation of the report the interdepartmental committee has been meeting more frequently than in the past. They have held twelve meetings from November 30 to April 22. Although the committee was first appointed for a specific task, it is now in fact becoming to all intents and purposes a permanent committee, and all questions of an interdepartmental nature are referred to the committee at the instance of any director or senior officer of any one of the services. If there are any questions in which civilian interests are involved, representative civilian authorities are called in and consulted. Generally speaking, however, the matter brought before the committee is of a technical and administrative nature involving the three services only.

The committee has had under its constant consideration a review of the system of medical and hospital care in the services. Inspecting officers are continually travelling over the country in order to see that the men of the forces are receiving proper medical care in the services hospitals and that the hospitals themselves are efficiently administered.

The redistribution of existing hospital facilities between the Department of Pensions and National Health and the departments of national defence has not yet been fully worked out, but certain steps in that direction have already been taken. For instance, the army has taken over 200 beds from the Department of Pensions and National Health in Toronto, to operate as a convalescent hospital, and the naval service has taken over from that department the Rockhead hospital at Halifax. Before any hospital project is undertaken by the services, consideration is always given by the committee to existing hospital facilities. The situation is carefully studied, and none of the services proceeds with any such project unless it is found necessary to do so.

I want to add that special attention is given to this matter of hospitalization and medical services generally. A month or two ago the adjutant-general adopted the policy of having liaison officers in his own department representing the various branches of the service. One of those officers, in the person of Lieutenant-Colonel Lebbetter of Yarmouth, Nova Scotia, was appointed special assistant in connection with the matter of medical services. Lieutenant-Colonel Lebbetter works in close cooperation with the director-general of medical services, but if anything comes up in the adjutant-general's office with respect to medical services Colonel Lebbetter, or it may be the artillery officer, or the signals officer, or the infantry officer, is there to act immediately as liaison officer between the adjutant-general and the director-general of medical services, or the chief of the particular branch concerned.

Mr. HARRIS (Danforth): Would the minister feel disposed to direct that minutes of the meetings of this interdepartmental committee be kept as a matter of record? Up to the present that has not been done; there are no minutes of what has occurred.

Mr. RALSTON: I am surprised to hear my hon. friend make that statement, and certainly I see no reason at all why minutes should not be kept.

Mr. HANSON (York-Sunbury): Before the minister leaves this question of hospitalization, I should like to ask him what is the ratio of hospital beds required, we will say in Canada, to the number of men on active service. I was surprised to learn recently that it is considered necessary to have beds

for five per cent of the total number of men. I should have thought that was a very large proportion. When in a given community the number of troops is increased, of course the question of hospitalization arises. I am interested, for personal reasons, in the situation in Fredericton. It now develops that the number of troops in that community has more than doubled. The military hospital accommodation was up to a maximum of eighty beds, which under the original arrangement was considered quite ample; that would take care of some 1,500 troops. There are now about 3,400 troops there, and the present accommodation is not considered sufficient. I would be inclined to agree with that. Then comes the question of new hospital facilities. Apparently the present facilities cannot be increased, and a new building will have to be erected.

That brings me to this point. Would the department of medical services give consideration to increasing the existing facilities of the civil hospital at that point? We have what is to all intents and purposes a brand new hospital, built at a substantial expense, offering accommodation, I think, to the extent of 140 beds, which, of course, is only sufficient for the civilian population. If the department and the hospital authorities could get together and provide increased accommodation of a permanent nature at the Victoria public hospital, it would serve a useful purpose post-war. Instead of that I understand it is considered necessary to construct a brand new hospital for military use only, and abandon the present facilities which have been built and equipped at great expense. I only suggest to the minister that he pass along this observation to the medical authorities, that the present civil hospital facilities at Fredericton be increased to serve both purposes. That is a brand new hospital, classified A-1 in the United States category, one of the best hospitals in the maritime provinces for its size. The accommodation there could be doubled with very little expense, because the central services are all there; all the equipment is there for X-ray work, surgery, and all that sort of thing. What is needed is additional beds; I think that is about all. There are elevator services, dietitian services and everything else for a hospital twice the size of the present one. If this suggestion could be adopted it would remove the necessity of spending a large amount of money on a new military hospital, which would be useless in the post-war period, and a very useful purpose would be served for the whole community of central New Brunswick, where there is a population of, we will say, a hundred thousand people who are more or less dependent upon this one institution for hospitalization.

I commend this suggestion to the minister; I hope his officers will give consideration to it, instead of spending a large sum of money on a new hospital and new equipment which would be scrapped after the war. I think this question of building separate hospitals ought to be considered in the long view. I am not complaining, but I think this is a point which ought to be put forward.

Mr. RALSTON: The general principle which my hon. friend lays down has been pretty well considered, and the hon. member for Danforth will remember that in its recommendations the committee itself felt that it could not lay down any general principle but that each case would have to be considered on its merits, having regard to local conditions. One of those conditions, naturally, is the question of capital expenditure. You build an addition to a permanent hospital, and I think the cost per bed is, in most instances, double what it would be if you built what I might call a hut hospital. There is, of course, the advantage which my hon. friend mentions, if the equipment is sufficient and you do not have to duplicate equipment which is sometimes very expensive. The director-general of medical services tells me that it is the policy of his department to cooperate as far as possible with civilian institutions. I know that in Gaspé they have taken over one floor of the Gaspé hospital. The military doctors are in there, with the orderlies and all the military personnel, just as though it were a separate hospital, but they have the use of the operating room and the other equipment, which I understand is very good.

There is also the other policy of building an addition to an existing hospital. It is very seldom that we build on to a hospital, but where they do not do that they sometimes build near a hospital if they can, making it a sort of annex or wing which may be used by the hospital after the war is over.

Mr. HANSON (York-Sunbury): The situation at Fredericton is such that an addition could be built. The building was designed by a good hospital architect with the idea that it might be added to, and I am told that all the central services now exist for a hospital of 400 beds, though, of course, that may be something of an exaggeration.

Mr. RALSTON: The district officer commanding, Brigadier Anglin, spoke to me about the Fredericton situation when I was there two weeks ago. Of course he was pressing for more hospital accommodation.

If I may add a further word, the hon. member for Danforth asked as to the minutes of

the interdepartmental committee, and I was surprised to hear him indicate that such minutes had not been kept. My information is that minutes are kept of the meetings of the interdepartmental committee.

Mr. HARRIS (Danforth): I am glad to hear that. Are these regular meetings?

Mr. RALSTON: No; they are not held at regular intervals. Some of the dates were: November 30, December 18, January 2, January 22, February 25, March 9, March 14, April 3, April 27. I think they meet whenever there is business to be done, and they meet to deal with special cases as they come up, rather than with routine matters. However, it might be well to consider having them meet more regularly.

Mr. HARRIS (Danforth): It is gratifying to learn that the committee has had thirteen meetings since those recommendations were made.

To get back to hospital matters for a moment, the condition which obtains in the maritimes, and which was so well put forward by the leader of the opposition, also obtains in other parts of Canada. I should not like the impression to go abroad that the cost of construction of civilian institutions is double the cost of construction in the case of hospitals under the Department of National Defence. As you, Mr. Chairman, very well know, the difference arises because of the fact that the cost of heat, light, power, land, depreciation charges and all the other elements which go into the cost of a self-contained civilian hospital, even down to the personnel, do not go into the cost of a national defence institution. Personnel is paid for out of the general vote, whereas with the civilian institution personnel has to be paid for by that civilian institution. I should not like the impression to go abroad that the cost is double; I think the minister will agree with that.

Mr. RALSTON: I had just two figures in mind. I shall not mention them for fear they are not accurate. The figure was at so much per bed, and it was about double. But that was capital expenditure, not maintenance.

Last night the hon. member for Renfrew South (Mr. McCann) spoke about Wassermann tests, and I shall not deal with that matter again.

Then there was a recommendation with regard to the building up in Canada of a blood bank. The subcommittee recommended that the suggestion be given careful consideration; the comment is that dried human serum is now being recommended in lieu of whole blood, in the form of a blood bank, for the treatment of war casualties, and the production of suitable quantities of this product is now well in hand and is being supplied to all military districts in Canada and overseas. In addition, a certain number of personnel have been typed and are available for transfusions, if found necessary.

The subcommittee also made a report and recommendations in the matter of medical stores and supplies. The action taken in that regard is this. A survey of the medical stores branch is now being conducted, and steps have also been taken by the Royal Canadian Army Medical Corps to provide added staff where necessary, and to investigate further possible improvements. I believe there is decided activity in that direction, and I believe the hon. member took a particular interest in it.

Mr. HARRIS (Danforth): There is great room for it, too.

Mr. RALSTON: Then there was a recommendation with regard to meat supplies. The subcommittee recommended that consideration be given to a proposal submitted by the packers for the saving of fat from beef carcasses by having such fat trimmed from the carcass at the packing plant and the purchase of pork in trimmed cuts, leaving with the packer such parts as spareribs, tail, fat, skin, hocks, bones, scrap and belly.

The action taken was that after careful study of this proposal it was decided that to provide the greatest possible variety of meat dishes it would be more advantageous to continue the purchase of beef and fresh pork in sides and carcases. So that there is no waste, steps are taken to ensure the use of all the residue parts of the beef and hog carcases; mincing machines with sausage attachments are provided, together with authority for the purchase of sausage casings, seasonings, et cetera. I remember in that connection meeting with a cook on the Pacific coast who wanted a sausage machine. I promised to get him one, and it has gone to him. The machine is very useful, in fact, from the point of view of dietetics, and also from that of saving.

Recipes have been circulated to all units, giving complete instructions for the making of beef and pork sausage, headcheese, pickled pork and corned beef. The issue of three ounces of lard per man per day has been discontinued, so that cooks are now compelled to obtain this supply from the dripping and rendering of fats of meats to which reference has been made. All other residue of meats from kitchens, such as bones, rough fat, and

kitchen grease is disposed of by sale under arrangements approved by the chief salvage officer.

The next recommendation was that some system should be devised whereby the quality of meat furnished could be passed on by government inspectors prior to the carcase being cut up.

The action taken was this. The question of the inspection of beef at packing houses by Department of Agriculture inspectors to ascertain whether it conformed with the specifications of contract prior to its distribution to the supply depots was under consideration at the time the subcommittee considered this matter of meat inspection. In the spring and early summer of 1941 a system was adopted whereby all beef, destined for the army supply depots inspected at point of origin and found in accordance with departmental specifications was stamped with a Department of National Defence prick stamp which designated that, at the time of inspection, the beef was in accordance with government specifications. This inspection, however, does not in any way relieve the officers of any of their responsibility; they make their own inspection when the beef arrives at their supply depots and, if judged by them to be below contract specifications, their duty is immediately to reject such beef, regardless of the fact that it may carry the stamp of the agriculture inspector referred to above.

Mr. TUSTIN: How many times has beef been rejected?

Mr. RALSTON: I am sorry I cannot say. Does the hon. member mean in a month?

Mr. TUSTIN: Yes, and in Canada.

Mr. RALSTON: The subcommittee recommended that consideration be given to possible changes in the ration to meet the needs of flying personnel in the air force.

I can say that there is a standing committee on nutrition, which was mentioned the other night. That committee is headed by Doctor Hunter of Toronto and has been meeting. I know that lately a new diet scale has been issued and approved. The first meeting was held in Ottawa on January 26, and I know several meetings have been held since. As a matter of fact, the recommendations of the committee have been approved.

Then there was a recommendation from the subcommittee that each branch of the service appoint one officer or board of officers to be responsible for salvage, and that all personnel of the armed forces be made salvage-conscious, particularly quartermasters and supply officers. Periodic inspections were recommended to be made of all stores, and such as are no longer serviceable in any branch of the services are to be turned over to the civilian board for disposal.

The action taken has been that an army salvage and disposal board has been created, with district representatives. All salvageable material including packing boxes, jute sacks, crates, cartons, bags of various kinds, waste-paper, et cetera are collected and disposed of on instructions of this board. Records of sales, such as recoverable invoices, et cetera, are maintained by the district supply and transport officer, or the camp supply and transport officer, as the case may be, who submits to the army salvage and disposal board such reports as are required from time to time by that board.

The subcommittee recommended that arrangements be completed for the transfer of waste oils from the air force to the army for reclaiming.

I may say that that was the subject of a return made to the house the other day. The hon. member asked whether any steps had been taken toward the reclamation of oil used in the army. The answer for the army was that oil reclaimers have been installed at Debert, Sussex, Ottawa, Camp Borden and London, Ontario. So far the operational output has been able to handle only waste oils from army supplies. It has not handled transmission greases and heavier lubricants. The organization of these reclaiming plants is now being carried out to increase their capacity to handle larger quantities of waste oil and, therefore, to be in a position to reclaim air force oils for army requirements up to the quantities the army can use, wherever freight, transport and other charges make it economical to do so.

I may say that I know personally that steps have been taken in connection with that matter. The master-general of the ordnance has had it under consideration. I am not so sure that those reclaiming stations or mechanical installations will be increased. We have under consideration another plan upon which I shall not now enlarge. It is a commercial plan which, it seems to me, will perhaps be more useful, in that it does not call for the expert personnel which are required in these reclaiming installations. That is to say, in the present instance the army has to turn aside from its regular job of training men for the army, and train them in the collection and careful preservation and segregation of the various oils used. I was amazed by the reclamation apparatus installed in these stations. From conversation with those who ought to know I have found that labora-

tory tests are required, when the oil comes in from the garage, or from wherever it may be obtained, to ascertain whether or not it contains Prestone, or anything of that kind, or transmission grease; and it also requires laboratory tests when it goes out to ascertain that it contains no foreign matter which would interfere with its lubricating value. By another system it may be possible that we could have this oil actually cracked so that, regardless of the fact that it may have waste substance in it, it will be clear and good for lubricating uses. This matter is under study by the master-general of the ordnance, along with representatives of the research council; and I expect the extension of that service will be in accordance with whatever recommendation is made. I believe the study will be completed shortly.

The subcommittee recommended that consideration be given to possible savings by more extensive use of the government owned and controlled railway system for transportation, freight, express and telegraph service. That also is a matter up for consideration by a standing committee of the house.

There was the further recommendation that periodic and regular inspection of all stores should be made by the responsible officer of each service to determine if any stores are obsolete or no longer of use. Should this be the case, prompt action should be taken to salvage or dispose of these stores.

The action taken was that left-over materials from construction works are utilized on maintenance services. Data has been compiled on stocks that have accumulated for various reasons, and they have and are being diverted to other construction projects or districts. Condemned materials are submitted to the salvage board for disposal.

Those are the principal recommendations of which I have note.

Mr. HARRIS (Danforth): I desire to record my appreciation of the information which the minister has just given. I have one observation to make. Could there not be more coordination between the different departments of defence—army, navy and air? It is unfortunate that in some respects there are similar organizations in all three departments. The barriers should be broken down that make it difficult for the man in khaki to become intimate with the man in blue. The statement has been made that that difficulty does exist, and it is an unfortunate situation. We are all anxious to have a unified war effort, and I would like to see as much coordination as possible between all three branches of the defence department.

My last observation is this: Let us get on with this war. I could make extended remarks on every item and easily consume three hours in doing so, but this is not the time. Let us get on with the war as fast as we possibly can.

Mr. KINLEY: I desire to bring before the minister and the committee one or two things which I think are important. I was home during the Easter recess and during the plebiscite campaign and I discussed with many alert people in my riding questions of interest in my riding. I found that the farmers of my riding got the impression from radio addresses and from what appeared in the press that they were exempt from military training and therefore from military service, and that this exemption applied also to those engaged in the primary industries who had a background of farming. But I find that it is not so simple as that. The mechanics of it are a little involved. I am glad to say, however, that a press release went out from the Department of National War Services not long ago which I think should be widely distributed and appear in the press to a greater extent. It can readily be understood, after what has been said and broadcast about military service, that when a farmer's son gets a notice to report for medical examination he immediately runs to someone in authority and says, "I thought I was exempt". The actual conditions are very well explained in the press release issued by the Department of National War Services, which states that the farmer's son will be called up for medical examination but that he has eight days within which to put in a claim for exemption as a farmer's son or as a farmer, and that if on the 23rd day of March he was actively and efficiently engaged in agriculture that is all the reason he needs to advance to be granted an exemption. The board has no discretion in that case but must grant him a six months' exemption.

Mr. RALSTON: If he has a prima facie case.

Mr. KINLEY: Yes. But the farmers will not understand that so readily, and the actual conditions should be made plain to them. In my riding we had a splendid "yes" vote on the plebiscite. I think the town of Lunenburg voted "yes" eight to one, but in some outlying fishing districts all along the shore of Nova Scotia there was a considerable "no" vote. Naturally we asked ourselves why they voted no. The people in these districts are fishermen and sailors. A sailor ashore is rather out of his element. These people do not take

readily to the army, but they prefer to go into the navy. When they had to vote on the question whether they should go into the army, naturally there was an inclination on their part to vote no. Some consideration should be given to men who have been trained practically a lifetime as sailors and fishermen, so that they may be allowed to select the navy in which to serve rather than the army. There is all the more reason for that in the fact that they are admirably equipped for service at sea. They are sailors ready-made and are considered perhaps as good as any in the world.

I wish to say a few words also on nationals in exile, because I have had some personal experience with this question. When Germany overran the small countries of Europe, some of which had a splendid mercantile marine and many of whose people had spent their lives on the sea, many of them going fishing in the south seas, I am informed that many of the ships of these countries were directed by the British government to Nova Scotia. They obviously could not return to their own country in Europe, and they came to Nova Scotia ports—a very natural thing for them to do. But when they came here the crews became wards of Canada—not in the financial sense, because fortunately their governments were well supplied with revenue from their maritime activities and could look after these people. We all know that governments in exile have been doing splendid work in training their men for the armed services. I have had personal experience with that, and I know they are doing a splendid job. Their officers and men have received superior training. These governments in exile asked for volunteers from their nationals who are now wards of Canada. Many of these men who came here were good machinists or good engineers. When they were brought to Nova Scotia there was no work for them at the time, but those amongst them who were technically trained men were soon working in the war industries of Nova Scotia, at Lunenburg, Liverpool, Halifax and Pictou, and they are doing a good job. They are good men, well trained in mechanics. For some time the voluntary system prevailed, but recently a call was sent out to these men who were working in the war industries of Nova Scotia to come and register and be medically examined.

I have personal knowledge that one of the governments in exile called up men up to thirty-seven years of age. Some of them were married in their own countries; others married after they came to Canada. As I understand the Canadian law, we call up single men or widowers without children up to thirty years of age, and I think I am correct in assuming, from the statements that have been made in the house and from letters I have received in communication with the authorities, that these wards of Canada are subject to Canadian law and must be treated the same as Canadian citizens, and that therefore thirty years should be the age limit in calling up these men, so long as the Canadian law provides that age limit. Some hon. gentlemen may say: Why don't these men tell their authorities that they prefer to remain in industry, being over the Canadian age call and working on naval repairs.

One can well understand that a man who is a national of one of our allies and has a wife and, perhaps, children in a foreign country might get a black mark from his own nationals if he assumed the privilege of invoking Canadian law in his behalf. The minister said the other day that the matter was still under advisement and an agreement would be made with these nationals. I am aware of that; I have considerable correspondence upon the subject which I will make available to the minister. I believe the agreement should be so drawn that the man who is a foreign national will not have to assert himself, that the Canadian authorities will state what the law is and that we expect these men to be bound by it as so stated, so that the man who is a national of that foreign country need not fear that when the war is over he will be prejudiced because he invoked the law of this country in respect to privileges which are available to our own citizens.

I have only praise for the nationals of our allies in eastern Canada. I want to compliment them; they are doing a splendid job and doing it actively. But I repeat that this is a situation which should be cleared up, that these men who are working in wartime industry throughout Nova Scotia as engineers and machinists and who are over thirty years of age should be definitely told what their obligations and duties are. In this way everything would be aboveboard, and they would feel that they were doing their duty as expected of them.

There is one other matter about which I wish to speak. I was absent in Nova Scotia when the observation was made by the hon. member for Vancouver South (Mr. Green), although I think he later withdrew it, that Nova Scotia members did not have the gumption to speak up for the defence of that province. I want to say here, and I say it advisedly, as a member of this house, that I regard the rights and the benefits of the people I represent as my first duty here, and I would not hesitate to assert them if I believed that they were impaired. The hon.

member for Vancouver South, as a critic on behalf of the opposition, is doing a fairly good job, but he has a different role from that of hon. members who are supporters of the government, and I believe that he could do it effectively without casting any aspersion on our efforts. I am constantly bringing to the attention of the proper authorities the importance of the defence of Nova Scotia. I realize that for this purpose and for other phases of our war effort we must have stability of government, and thank God, we have it better than in any other country I know of; also we must have coordination of effort and planning. If everyone who comes to this house were to put forward and emphasize his ideas as those which should be adopted for defence and for the conduct of this war, we should merely have confusion. So far as the defences of Nova Scotia are concerned, I, living on the coast, am naturally interested. I believe there must be a very comprehensive effort. While some places are defended, there is always a back door, and the back door is the door which has been left open in most cases during this war. So far as Nova Scotia is concerned, the strong places are only as strong as the weakest places, and our defences must be considered from the viewpoint of that part of this country which juts out into the Atlantic, but we must plan with a degree of secrecy. It would be terrible if we had an invasion of our Atlantic coast and you in Ottawa had to send bombers to bomb us who were for a time in the control of a foreign power. We think that, notwithstanding the world-wide effort which we should do everything to support, the defence of the eastern coast of this country is a first duty of our army and our navy.

Few know Nova Scotia better than the minister. During the Easter recess he went to the Pacific coast and flew to the Atlantic coast. I am sure that he has this situation in hand in a way which will bring confidence to the people of our province. So far as the navy is concerned, I have had conferences with my fishermen, and with the admiral in Nova Scotia, himself a Nova Scotian and a fine sailor, and I know that many things are being done, and others being changed, in the interests of coordination and efficiency. The defence effort is growing and will get better as time goes on. The air force, too, is doing a splendid job. If you get up quite early in the morning you will hear them in the air, and if you stay up late at night you will hear them still flying overhead. So that, while the hon. member for Vancouver South, representing the opposition, will naturally look for vulnerable parts of our defence, we who are working in conjunction with the minister and come to him with our problems and tell him what we need and what we expect, cannot stand for anybody saying that we have not the gumption to bring before the government matters which we believe are in the interest of the province.

Mr. HANSON (York-Sunbury): Why do you not come out in the open and say it?

Mr. CHURCH: I always enjoy reading in *Hansard* the remarks of the hon. member for Queens-Lunenburg who has just spoken.

Three ministers have stated here this session that the question of farmers' exemptions is for another department, that boards have been set up, and that it is somewhat a matter of policy and of construction of the law passed. With all due respect may I remind the committee that the enemy is near our doors, and it is necessary to get men into the reserve army and into the army overseas. Yet count up all the exemptions and postponements which now exist under the law.

Mr. FLEMING: There are no exemptions.

Mr. CHURCH: When you allow for the farms, the munition plants, and the reserve army, you have very few of the population left, because there are exemptions yet, for the active army formations and for reinforcements overseas.

Before the resolution is adopted, there are one or two matters I should like to mention. If the minister is not able to clarify them to-day he may be able to do so to-morrow or in a day or two.

First, we have had a great many statements made by the chairmen of the defence board, both in Canada and in the United States, and speeches at banquets and over the radio. I will not dwell on this matter for more than a couple of minutes, for I think the minister has been very patient and has given a great deal of information, which the country will appreciate. But let me ask what is the joint policy on the north American continent in the case of Canada in the event of a surprise invasion? Here we have a joint defence board. The chairmen of both sections have, for over a year, been making a great many speeches—far too many speeches for the good of defence. Their work has been largely board and not much defence in sight yet. The two cardinal principles of this country's military policy and of this resolution are home defence and to protect Canada's neutrality in case our ally next-door is attacked by a foreign power, namely Japan. Could the minister clarify

the statements which have been made, because so far as I can learn, since the start of the session we have yet to have a considered statement as to what will happen in the event of a surprise attack which may or may not come to this country, but is still a possibility. After throwing away our defences and our friends, we cannot expect to get any in a day anywhere in Canada, since we chose to be an unmilitary power.

We have yet to have a considered statement on our side of the border as to what, in the event of a surprise attack, which may or may not come, our allies to the south will do for Canada. Announcements have already been made with regard to advance bases on the Pacific and the Atlantic for joint protection, with regard to the Alaska highway, and with regard to other matters which have been covered separately; but as far as I can see, apart from the minister's statement, we have not been given anything definite by the government as to our real position. I do not ask the minister to go into the matter to-day, but he has two colleagues in the other branches of the service, the navy and the air force, and I submit that some statement should be given to the committee later as to our strategy since we are, like the United States, a non-military power as yet in the making. I should like the minister to make a short radio address or statement later on this subject, telling the people what will be done along this line.

There is one other matter, a most important one, which I wish to bring to the attention of the committee and of the department at this time. I refer to shipment of parcels to prisoners of war in Italy, Germany and the far east. As we all know, in the last war the Red Cross did wonderful work, but their activities at the present time are naturally restricted, in the very nature of things, and in view of the changes in the war made every week. We are on the defensive yet. Yesterday, in Toronto, a representative of the Y.M.C.A.—he states that he is international secretary—contended that parcels were being given out by that organization and delayed. Has the government knowledge of it? At least, that is what I gather from his remarks as I read them in the press. What is the status in enemy countries? It seems to me that the first duty or function of the government is to its prisoners of war, itself, to see that this is done, no matter where they may be and not to leave it to any private organization entirely, although they have done so well. The situation is changing every day, with Laval in control. I have twenty-six questions which I have gleaned from the British newspapers in less than the last six months and from the British *Hansard* as well,, and I may say that in the last three months about thirteen or fourteen questions have been raised by government supporters in the British House of Commons all to the effect that parcels are not arriving and demanding government action, regulation and check up. Ships have been sunk at Lisbon and the way to Marseilles may be blocked. Taking these facts into account, and with the entry of Laval into affairs over there the mechanization and destruction in the air and at sea, and many other matters that tend to dislocation, numerous British members of parliament say that parcels are not reaching our soldiers who are prisoners. A list of camps has been given in the British house to the government there, and the camps are identified.

The whole situation as to Canadian prisoners in enemy and enemy-controlled countries, should be clarified, because a great many families are sending parcels, and it is of the utmost importance that they should reach our men, especially when we know that there is lack of medical attention, food, health regulations and other proper care in the theatres of war overseas and abuse of prisoners by a savage, barbarous foe. It is most difficult for any private organization to meet this situation with any status or right. Everyone in Canada appreciates the work that these private organizations are doing and have done. No criticism is ever intended. We all know what splendid work they did in the last war and in our camps in peace and war, but they cannot go as far in this war because conditions now are different from those in the last war. As I say, the situation is changing every day in Europe, Libya, the far east and elsewhere. The other day in the British House of Commons, the food administrator made an announcement, which I read in the London newspapers and *Hansard* in March. His remarks were reported in the British *Hansard*. He was proposing a policy with regard to parcels, and he stated that he was considering the restriction of parcels to the old country, first, for civilians, and second, in some instances, for the purpose of regulating supplies to soldiers on the continent and Britain. The reason given is the shortage of shipping and the extremely grave situation on the Atlantic having regard to the possibilities of a spring offensive of the axis powers and other matters of that sort. I do not ask the minister to go into this question to-day, because I want to see the resolution adopted if that is possible, but I hope he will be in a position in a few days to make a radio address or statement—I will give

him the pages of fifteen *Hansards*—so that the people may know exactly what to expect and get the real facts. Our first duty is to our prisoners of war and action must be taken. We have had little information that would help to clear the situation up or get the real picture. I should like him to make a statement also telling us what is going to be done if we should have a surprise invasion of Canada, what help is expected, if any, and what help may we expect from our good friends to the south.

Mr. ESLING: Would the minister give his views on a specific case to which reference has previously been made, and some details of which have been handed to him? It is merely for the purpose of determining responsibility in the matter. A young man enlisted in October, 1939, left the base of enlistment at Nelson, British Columbia, and went with his company to Edmonton. He went to hospital, and was discharged from hospital and discharged from the army. From that time on he was five additional months having treatment. The fact is that the man was a diabetic, but he contends that his condition was aggravated by the change of temperature, from the mildness of Kootenay to the extremely cold temperature of Edmonton. His physician certifies to the fact that his parents have paid to one hospital in excess of $400 for his treatment. He is denied treatment at the military hospital in Vancouver. He is denied employment for the reason that he was not physically fit for the army. The government denies responsibility for his case. My contention is that the man having been examined by a departmental physician paid by the government, the responsibility should be placed on someone. Perhaps somebody was responsible for not having made a diabetic test—or was it up to that man to tell the medical adviser that he was a diabetic? He certainly offered his services to the government in good faith because, in order to enlist, he sold his business. He had money in his pocket and in the bank. My question, presented directly to the minister, is this: Does the responsibility rest with the government? Does the responsibility rest with the Department of National Defence, or with the Department of Pensions, or does it rest with the man for not having stated his condition? Will the minister give his views so that we may know what course to pursue. Everyone denies responsibility.

Mr. RALSTON: I dislike more than I can say to attempt to give views with respect to something in another department and with respect to a matter over which only the pension commissioners have jurisdiction. But I should like to give any views that would be of assistance to my hon. friend, although I am afraid I am not going to be very helpful. With regard to the examination, that is army, and I shall certainly find out about that. Did my hon. friend say that he had referred the case to me?

Mr. ESLING: No; I said I had sent a few details to the minister.

Mr. RALSTON: The hon. member did refer the case to me?

Mr. ESLING: Just some details. The minister sent for the details himself.

Mr. RALSTON: What I am interested in is what my hon. friend said at first with regard to the army. The nature of the medical examination that was made is what I am interested in, as to whether a diabetic condition should have been detected on examination.

Mr. ESLING: That seems to be the point. Who is responsible?

Mr. RALSTON: I will look up the file. It seems to me that when a man is being examined, one of the most elementary questions would be whether he had ever been the victim of a diabetic condition. I want to see how that question was answered.

Mr. ESLING: That is the very point. Was not somebody lax? Was not the departmental physician lax in not making a proper examination? Even though the man had not told him he was a diabetic, a proper examination would have revealed that he was; the man would not have been accepted and his condition would not have been subsequently aggravated.

Mr. RALSTON: This is a little harsh, but one must realize that in the case, for instance, of a life insurance examination if a man stated that he was not suffering from a diabetic condition, when he was, and knew it, the insurance would not be collectible. The same rule must apply in connection with pensions—I shall ascertain that. But one would think it was the man's fault. It is pretty harsh to put that fault on him after he has been accepted, but the pension board must have some rule like that. As my hon. friend knows, there is treatment. As I understand it, under the pension commission or the Department of Pensions and National Health, even though they award no pension, if a man's reestablishment in civil life would be helped by further treatment, the treatment may be given. Do I understand that the man's condition is so bad that rehabilitation is not practicable?

Mr. ESLING: The unfortunate part is that the man was denied treatment at Shaughnessy. What is such a man to do? He has offered his services to his country; the military hospital denies him treatment, and he cannot get employment.

Mr. RALSTON: The military hospital would discharge him to pensions and national health. When he was discharged and boarded category E he would be taken over by pensions and national health. Some question was asked when this vote was first up as to what was done to promote liaison between the army and pensions and national health. I have ascertained that a slip goes immediately to pensions and national health. The man is given a note; if necessary he is taken there or guided there, so that he immediately reports to a pensions and national health hospital for examination and treatment until his condition is acertained. If he was not pensionable but still his disability was such that treatment would help him to be reestablished in civil life, they would give him further treatment. My hon. friend says he was not given treatment?

Mr. ESLING: He is denied it.

Mr. RALSTON: So I can only assume that rehabilitation is not feasible. I will, however, look into the file myself. I shall have to get it from pensions and national health.

Mr. ESLING: I can give it to the minister.

Mr. MacINNIS: I should like to crave the indulgence of the committee for a few minutes to go into another phase of a question which has been discussed at considerable length during the time the minister's department has been under review. The question I wish to raise concerns a mother who has two sons in the Royal Canadian Air Force, one in England and the other still in Canada. She says that after investigation she was given a dependent's allowance of $20; that is $10 for each son. She has an invalid daughter. She said that she had done practical nursing to help meet the family's economic needs. In this way she earned about $50 a month. Her case was then investigated and the allowance on behalf of her sons was discontinued. I received this letter only this morning. I am not sure whether this woman is a widow, but I presume she is because no mention is made of a husband. I should like to read how this mother feels about the position in which she finds herself. She says:

> For the life of me I cannot see what this has to do with the government's $20. A wife gets $35 for herself and she is allowed to work. Why not a mother? It costs as much for one to live as the other. What I would like to see is a move made whereby all mothers would be given the same as a wife. These mothers must be dependent on their sons or they would not be receiving their allowance. The government forgets it would have no army if the mothers had not produced the sons.

I realize that there must be some fairly definite regulations covering the matter of dependents' allowance, but it seems to me that the regulations should be such as to cover cases like this. Here evidently is a woman who would be better off if her sons were not in the service of the country; they could give more toward her support. I should like the minister to have this case investigated. I am writing to the dependents' allowance board about it, but I thought I should bring it to the attention of the committee in order to give the minister an opportunity to make some statement as to the attitude of the government or the department on dependents' allowances for mothers who are deprived of their sons.

Mr. RALSTON: The same point was raised by the hon. member for Comox-Alberni the other day; and, as I told him, I had dealt with it when pensions were up some time ago. Briefly the situation is that payment to the wife is what I have described in this house as of right. I find I am wrong in that. Legally it is not as of right, but I have indicated that I believe the payment to the wife should be paid regardless of what income she may have. That principle has been carried out in connection with dependents' allowances and also in connection with pensions. The payment to a wife is, to use the expression I used before, treated as inviolable.

The payment to the mother is in a different category. The mother is not in the same position as the wife as far as dependency is concerned, and the intention of the provision for dependents' allowances, as well as the provision in the Pension Act, is to endeavour to make up to the mother the loss in dollars—not, of course, the loss in companionship or the social loss—which she has suffered by reason of her son having joined the army. If she is receiving other income, that is taken into consideration.

All I can say is that that is the rule and the principle upon which mothers' allowances are paid. It was the principle in the last war; it has been the principle in the Pension Act from 1914 to date, and it is the principle followed by the dependents' allowance board regulations which are in force at the present time. Only a short time ago that $20 minimum was raised; at least the dependents' allowance board were given another $5 margin, so that the maximum is now $25. Whether my hon. friend agrees with the principle or not,

I think it is sound; otherwise you would have dependents of various degrees of consanguinity all receiving pensions on a maximum or fixed basis. I only want to say to my hon. friend that these are paid R.C.A.F. and not army pensions, but at the same time they come under the dependents' allowance board, on which there are two members of the air force, in order to see to it that air force men are looked after.

Mr. DIEFENBAKER: There is one question that as yet has not been answered, and I revert to it at this time in order to get the assurance of the minister that the information will be furnished; that is, the age classes of the 29,000 men who enlisted between January 1 and April 1. When this matter was brought up over ten days ago the answer given was that the information was not then available. When I brought it up again on April 28 the same answer was given. It seems to me that while practically every other phase of the army has been dealt with, one matter of primary importance to-day to the people of Canada as to whether or not sufficient men are being secured under the voluntary system has been neglected. As I said before, it is only by having that information that we can secure a proper perspective of the position of affairs to-day. It is not going to be difficult to get that information, and I repeat that only by having that information can any of us be in a position to determine whether or not sufficient recruits are being secured. Under the regulations now in existence young men seventeen years of age and up, unless they secure the permit provided for in the case of those attending educational institutions, are forced to enlist, by reason of the regulations which do not permit them to be employed if they are over that age provided they are in the restricted occupations.

Mr. RALSTON: Unless they go into other occupations.

Mr. DIEFENBAKER: Unless they go into other than restricted occupations. How many of those 29,000 men were seventeen, eighteen or nineteen years of age? How many were from twenty to twenty-four years of age? The answer given by the minister the other night was but a half answer; he said only some 5,000 had enlisted from the camps after having received their call. But what about the men who enlisted just prior to receiving the call, in order to escape being called up under the draft? There seems to be cooperation between the Department of National War Services and the various militia units; for in some parts of Canada to-day men nineteen years of age are receiving notice from units advising them that in a short time they are going to be drafted and pointing out the advantages of voluntary enlistment. I have here a notice sent to a young man in Prescott from a regiment in Cornwall, which reads in part as follows:

> Information has been received at this office to the effect that you will be called for military service in the very near future. It is thought that probably you would prefer to volunteer for service with Canada's active army before you receive this call.

Then it goes on to point out the advantages of doing this. When that man joins up he does so partly because he does not wish to be drafted, the advantage of which is pointed out to him in the letter. So that before we can say whether or not the voluntary system is in fact a success we should know the number of men seventeen, eighteen and nineteen years of age who are joining up. We should know also those twenty, twenty-one, twenty-two, twenty-three and twenty-four, within the age limit subject to call, who joined before they received any notice, or before they were sent to training units. There would be no difficulty in getting that information, surely.

Mr. RALSTON: Is that not what my hon. friend wants to know?

Mr. DIEFENBAKER: I want the complete information on this situation.

Mr. RALSTON: Let us see just what it is my hon. friend wants. Does he not want to know how many of the 29,000 he mentioned—I think it is nearly 38,000 now—had received a call for service before they enlisted?

Mr. DIEFENBAKER: No. That was the answer the minister endeavoured to give me. That is a part answer, but I want the information as to the number in each age group from seventeen to twenty-four inclusive.

Mr. RALSTON: So what, after that?

Mr. DIEFENBAKER: I am entitled to information regardless of what result may flow therefrom. I do not have to state the conclusion to be based thereon. I want the facts. None of us can arrive at a conclusion until we have those facts.

Mr. RALSTON: I thought perhaps I might get what my hon. friend wants in order to prove or disprove whatever he has in mind, without going into all the age groups up to twenty-four, because as I understand it the proclamation now goes up to the age of thirty, and if we stopped at twenty-four my hon. friend would not have all the information he

wanted. I thought what he really wanted to know was how many of these men had joined from training centres or after being called.

Mr. DIEFENBAKER: The questions I asked the other day do not permit of the interpretation which the minister has placed upon them. They were direct.

Mr. RALSTON: What were direct?

Mr. DIEFENBAKER: The questions I asked, as to the information I wanted; and I intend to insist that this information be given, without being required to let the minister know the conclusions that may be reached from a study of same.

Mr. RALSTON: All right; be as mysterious as you like.

Mr. DIEFENBAKER: Yes, and I will go further and say to the minister that the other night, because I dared make the suggestion that men were ill-treated in training centres, the minister took it upon himself to read me a lecture on the harm I was doing to enlistment by referring to certain cases of coercion. At that time the minister made the statement that there was only one case in Canada that had been investigated.

Mr. RALSTON: I beg pardon; I said only one case was brought to my attention.

Mr. DIEFENBAKER: I shall read what the minister did say, at page 1966 of *Hansard* for April 28:

> I have stated to the committee on previous occasions that when reports have come to me from time to time or statements been made such as my hon. friend made to-night, I have investigated them and have found no grounds for any statement that there was undue or improper pressure except on one occasion. . . .

Mr. RALSTON: That is right.

Mr. DIEFENBAKER: So that the minister investigated a number of these complaints but found only one occasion in which they were justified. I should like him to tell the committee the occasion to which he refers and the information he obtained on that occasion, because within the last several days I have received further complaints along the same line. I am not going to give the names of the informants, because they say they have been warned that if they tell the story they are going to be denied leave. The complaints I received cannot be false, where men say that they have been placed in a position which scarcely fits in with what the minister calls a kind of evangelistic meeting. These men say they have been intimidated. The minister says there was only one case where complaints were justified, and I think we should have information as to that case.

In order to decide or to arrive at a conclusion as to whether or not we are getting enough men, I submit that as a member of the house I have the right and the country has the right to have this information, so that public opinion will know the position, as far as recruitment to-day is concerned.

I now go on to one other phase. I should like to have information as to how many men who received four months training and were then permitted to go home have since been recalled?

Mr. RALSTON: Is the hon. member referring to four months training?

Mr. DIEFENBAKER: Yes. How many of those men, after receiving four months training, and returning home, have since been recalled?

Mr. RALSTON: What does the hon. member mean by "returned home?" Has the hon. member a special case in mind?

Mr. HANSON (York-Sunbury): In the early stages, after four months training the men were allocated to reserve units, and went home.

Mr. RALSTON: I had in mind that the order to report for duty was made within the first four months period, and that they did not return home after the four months period.

Mr. DIEFENBAKER: I know of at least one instance where a man completed his four months training and is now at his home. Those around him who are being called up are asking why this is so.

Mr. RALSTON: I shall be glad to inquire into the matter, because I thought the order applied to all those who were in four months training.

Mr. DIEFENBAKER: I ask whether or not all of those men who received four months training are put in the forces, either active or reserve?

Mr. RALSTON: They would all be active.

Mr. DIEFENBAKER: Then, what cooperation is there between the defence departments and the Department of National War Services? I ask that, because in the past few days a large number of calls have gone out by mail and, to my information, letters have been forwarded to men calling them into service who in several cases have been overseas for a period of over one year. In one instance the man has already returned from overseas service. So far as Saskatchewan is concerned, after these letters are sent out and are returned uncalled for, the mounted police investigate. I suggest that if there were

greater cooperation between these departments, this type of thing would not happen. Here we have a lack of that cooperation which is to be expected. If there is loose organization, then what is to prevent a man called up for service from failing to report for that service?

I should like the minister to give information as to how many men who have been called up for service under the provisions of the National Resources Mobilization Act have failed to answer the call?

Mr. RALSTON: Was there not a return on that point?

Mr. DIEFENBAKER: Yes. How many have failed to report; and of those who have failed how many have had prosecutions lodged against them?

Mr. RALSTON: Did my hon. friend see the return which was filed?

Mr. DIEFENBAKER: Yes, but it did not show the prosecutions.

Mr. RALSTON: I have not seen the return; I intended to look at it.

Mr. DIEFENBAKER: The information I wish is first, in regard to the age classes of the men who have volunteered and joined the army since January 1; second, information in regard to those called up for the four months period and, finally, what is being done to assure of greater cooperation between the Department of National War Services and the several defence departments.

Mr. RALSTON: And, fourth, how many prosecutions?

Mr. DIEFENBAKER: Yes.

Mr. RALSTON: First, with regard to the age groups of the men enlisted, the committee will see the situation. I have just asked the adjutant-general whether these attestation papers upon reaching headquarters are filed from month to month. If they are, I imagine one could have some clerk go through those papers, and look into the ages appearing on them. If they are filed alphabetically, with other papers, we would have to go over a great number of papers. I will find out, however, and see how long it would take to look into the attestation papers. I intended to point out that they are not kept in age groups; I have inquired on that point.

With regard to the number of men allowed to go home after four months training, may I say that, as I said before, I did not know there had been any cases. The call-up was made while the first four months period was on. However, I shall find out about that.

[Mr. Diefenbaker.]

With regard to cooperation between the defence departments and the Department of National War Services, that is a matter of procedure. I have not the faintest idea how the registrars of the Department of National War Services are notified when a man who would otherwise be called up enlists in his district. However, I shall look into that matter.

Mr. DIEFENBAKER: Are they notified?

Mr. RALSTON: The adjutant-general thinks they are.

Then, the matter of prosecutions is really one for the Department of National War Services, except to the extent to which it applies to men called up under the thirty-day provision. They may be dealt with under the Department of National Defence. I do not wish to put that responsibility on my colleague. The committee will understand that I cannot give information on that point to-day. However, I shall see that it is prepared. I should like really to confer with my hon. friend with respect to his first point. We will get the information concerning the others. I should like, however, to remind him and the committee how long it would take.

Mr. DIEFENBAKER: One other matter which has not yet been dealt with is the opportunity given to young men who have taken Canadian officers training corps instructions in the universities, and in particular young men of eighteen, nineteen, twenty and twenty-one years of age who are attempting to qualify for commissions. What is the system at present in effect in the universities? What advantage is there for those who take the course throughout their scholastic years, and what opportunity is given them to secure commissions?

Mr. RALSTON: I have not the regulations before me, and I am speaking only from memory. But without looking up the regulations I believe the rule is that the young man who is training in the officers training corps at a university trains for three years. He may then be recommended to Brockville as a cadet. The training in the officers training corps entitles him to one month off the four months course at Brockville, in order to qualify for his commission. May I ask the hon. member for Lake Centre whether there was any privacy or secrecy about that notice to the young man indicating that he would be drafted?

Mr. DIEFENBAKER: No; the letter in question is dated Cornwall, March 27, 1942, and it is from the second battalion of the Stormont, Dundas and Glengarry Highlanders. It says:

> When you decide to go "active" or if you have already decided to do so, please advise, and transportation will be arranged to bring you in and have your medical examination completed.
>
> Please give this matter your earnest consideration. Your early reply will be appreciated.

That letter is signed by the area recruiting officer.

Now that the matter has been mentioned, I would ask the minister if a list of those who are about to reach an age when they are subject to be drafted is given to officers of battalions throughout Canada?

Mr. RALSTON: I am quite satisfied that this is not the practice, but I shall be glad to look into it. They do not need to have a list to guess at the ages of the young men in their own district.

Mr. FAIR: The animals in the buffalo park at Wainwright were slaughtered or otherwise disposed of and the park turned over to the Department of National Defence with a view, I understand, to a training camp being established there. Would the minister indicate what progress is being made in that direction?

Mr. RALSTON: I am afraid I cannot tell my hon. friend at the present moment. We are not sure which of two projects will be carried on there, but I will try to tell my hon. friend as soon as possible. In view of the expansion which was being made, the property was obtained for camp purposes. We got it with a definite object in mind, but I think we shall change the location of the particular establishment that was going to be there and that we shall use Wainwright for something else.

Mr. GRAYDON: Following up a question which was asked on the orders of the day about prisoners of war, I should like to say a few words. The minister made it clear that the duty of guarding prisoners of war came within the purview of his department. I had hoped that it would not be necessary to bring to the attention of the committee the situation with respect to escaped prisoners of war, but recent happenings at Bowmanville have again brought the matter forcibly to the attention of the public. I realize that the minister has had a very difficult and rather tortuous road to follow in this matter of escaped prisoners. I appreciate his difficulties; nevertheless the storm of public indignation over the escapes some months ago ran so high that one prominent metropolitan newspaper suggested that the government set up a separate "ministry of escaped prisoners of war" because the business had reached such great magnitude. Would the minister tell us the number of prisoners of war who have escaped in Canada since the war began? I should also like to have some assurance from him that the board of inquiry which he announced this afternoon will go more fully into the question of escaped prisoners of war than to inquire only into the escape of the prisoners of war at Bowmanville. I feel that the public should have the assurance from the minister that his department is dealing with this matter in a realistic and effective way, because nothing so disturbs the public mind, as I am sure the minister himself appreciates, as the escaping of enemy prisoners. I do not want to criticize unduly the minister or the department, because I realize the difficulties under which they are working, but at the same time I feel that the public should receive an assurance from the minister that every possible means will be taken to prevent these escapes from recurring in the future.

Mr. RALSTON: I want to say to my hon. friend and the committee that I am not complacent about the matter at all, but I do want the committee and the public to understand that having regard to the class of prisoners which we have in this country, and who were sent here because they were of that certain class, and the difficulties we have had in finding suitable accommodation and getting it fitted up under difficult temporary conditions, the number of prisoners who have escaped in Canada has been, I really think—and I say this advisedly—remarkably small. I want here and now to pay tribute to the veterans guard of Canada who have had most to do in guarding these prisoners. They have proved themselves extremely reliable and vigilant, and they have had to deal with a class of people who have had nothing to do but sit and plan and scheme to escape, for which there is no serious punishment.

Having said that, I want to say to the hon. member and the committee that the moment this escape was reported this morning, since it looked as though there might be something wrong at Bowmanville camp or with the administration there, I had the matter looked into myself and the adjutant-general gave me a report on it. As I have indicated, it apparently does not seem to be the commandant who has been at fault because there have been four commandants at this camp since September 1, 1941, and there have been escapes within the period of administration of each of those four commandants except the second officer. Immediately this escape was

reported, the adjutant-general got in touch with the district officer commanding and had him go to Bowmanville to look into the situation. The camp commandant was up until 4.30 this morning. Instructions were immediately given. The district officer commanding was going to have a district court inquiry, but instructions went from the adjutant-general's office that it was to be a headquarters court of inquiry, composed of officers not associated with the department at all. That was the reason why we asked Colonel Stairs, Colonel Edwards and Colonel Marshall, all experienced officers in the last war, to undertake this inquiry for us. If there is any suggestion that the hon. member or any other member of this committee has to make with regard to escaped prisoners which he would like to have referred to that court of inquiry, and which can within a reasonable time be encompassed, I shall be very glad to have it referred to them. The leader of the opposition and some other hon. members know Colonel Stairs and how thorough he would be in a matter of that kind. Colonel Edwards and Colonel Marshall are respectively known to members from Ottawa and Toronto.

I am sure we are right on this, that everything will be done to see that the greatest possible preventive measures are taken, and if there is anything wrong or any fault to find, or if there has been any neglect, it will be brought to light in this inquiry and be promptly dealt with.

Mr. GRAYDON: Would the minister mind stating the number of escaped prisoners of war?

Mr. RALSTON: There have been eighty altogether in the whole period in which we have had prisoners of war.

Mr. HANSON (York-Sunbury): That is at all camps? How many at Bowmanville?

Mr. RALSTON: It is eighty altogether.

Mr. HANSON (York-Sunbury): Out of how many?

Mr. RALSTON: That figure has never been given.

Mr. GRAYDON: Did I understand the minister to say that all escaped prisoners had been recaptured except these last two?

Mr. RALSTON: Yes, except the one who escaped to England and was reported killed overseas.

Mr. GREEN: What is the system of administering the prisoner of war camps? Do they come entirely under the veterans guard of Canada, or are the various camps under the control of their military districts?

[Mr. Ralston.]

Mr. RALSTON: They are part of the establishment of the particular military district. The veterans guard of Canada, while it is operating in a particular district, comes under that district. I believe my hon. friend has in mind Colonel Alley, who is in command of the veterans guard; but the moment one of his detachments goes to a district, it comes under the district officer commanding.

Mr. GREEN: Might it not improve the situation if more power were given to the veterans guard? Would not that enable them to adopt the same system in each military district, whereas now there are eleven different district commanders who may have eleven different types of ideas about the subject.

Mr. RALSTON: I believe that the officer administering the veterans guard of Canada, Colonel H. R. Alley, has worked out, together with the director of internment operations, who is under the Secretary of State, a uniform system of guarding, and I am sure that the veterans guard commanding officer is given the fullest scope to see to it that there is a uniform system across Canada in connection with guards. It is, of course, no use putting detachments in districts and then controlling them from headquarters. We feel that the only thing to do is to decentralize and put them under the control of the district officers commanding.

Mr. GREEN: Might it not improve the situation if the veterans guard were given wider powers?

Mr. RALSTON: Does the hon. member mean, the officer commanding?

Mr. GREEN: Well, the headquarters.

Mr. RALSTON: The hon. member means, the officer administering? I do not think so. I believe that it has been very fully thought out. For example, the ordnance corps has a head at Ottawa, but when a detachment is in a district it is under the commander of that district. The same with the Royal Canadian Army Medical Corps or any other corps; they come under the geographical district in which for the time being they happen to be. I understand my hon. friend's point, but I believe the matter has been pretty well gone into. We had a complete revamping of the question of internment camps and the respective jurisdiction of the Secretary of State for External Affairs, the Secretary of State, and the Minister of National Defence, and I think the matter was put on a satisfactory basis by the order in council, which placed on the Department of National Defence the responsibility for guarding—which up to that time had been somewhat divided.

Mr. GRAYDON: When the minister mentions Colonel Alley he is mentioning a most efficient and capable officer of our armed forces. The statements which have been made about the veterans guard will surely meet with the approval of everyone in the committee. I am inclined to think, from conversations I have had with men who seem to know something about this matter, that some consideration might be given to the provision of a larger body of personnel from the veterans guard to look after these prisoners of war. The veterans guard can contribute, I believe, more effective service in this type of operation than almost any other personnel one could possibly appoint. What I have heard of the record of the veterans guard in this connection leaves no room for criticism. But I fancy the department could properly give consideration to increasing the numbers of the men who are guarding these dangerous prisoners.

Mr. RALSTON: Some readjustments in connection with establishments, due to some changes in locations, are being made now. I will keep in mind the point mentioned by my hon. friend.

Mr. CASTLEDEN: Have there been any requests from the commanders for increased establishments?

Mr. RALSTON: If there have not been, I would be surprised.

Mr. CASTLEDEN: Have there been requests for increased establishments?

Mr. RALSTON: I have not any record here. I have just asked the adjutant-general, but he does not recall now. If there is one game which is being played with the Department of National Defence all the time, it is the game of asking for increased establishments, and it is played by everybody.

Mr. FLEMING: How many prisoners of war have escaped?

Mr. RALSTON: From this camp?

Mr. FLEMING: From all of them.

Mr. RALSTON: Eighty.

Mr. CASTLEDEN: What is the total establishments of guards for all camps?

Mr. RALSTON: Seven or eight thousand.

Mr. BROOKS: Of the number of prisoners who have escaped, how many have been recaptured?

Mr. RALSTON: All were recaptured except one who died overseas of wounds, and three who were killed.

Mr. HANSON (York-Sunbury): Well, those fellows were captured.

Mr. RALSTON: The guards number in the vicinity of seven thousand officers and men.

Mr. CASTLEDEN: Would the minister care to state the number of prisoners in internment camps?

Mr. EDWARDS: Would the minister tell us who pays for the internment operations of the Canadian government? Is that a direct charge on the Canadian people?

Mr. RALSTON: It is a subject of agreement between the British and ourselves. I do not know that there is any objection to revealing that, but I would rather leave it to the Prime Minister as Secretary of State for External Affairs. It is a matter between the Department of External Affairs and the British government.

Mr. HANSON (York-Sunbury): On this question I should like to say that I think the record has been good. These prisoners are able and dangerous men. Their whole time is taken up with the idea of escape. If eighty out of several thousand have escaped and all have been brought back excepting three who were killed, two who are out now and one man who got away, I would think that the Canadian people ought to be satisfied. At least I am. I do not see any great ground for criticism.

Mr. DIEFENBAKER: There is one other matter on which no information has been given to the committee, in connection with man-power, and that is the notices which are being sent out from time to time by the Netherlands government and by the government of Norway whereby their respective nationals are called to the colours. I ask this question to ascertain whether any arrangements have been made between the Canadian government and the government of either of these countries whereby, upon failure of their respective nationals to report for duty, they are subject to penalties. We know the wonderful work which is being done by these two governments in Canada in mobilizing their respective nationals. The question is so often asked whether or not any penalty follows upon failure to comply with the order.

Mr. RALSTON: That question was asked last evening, and I then said the discussion with regard to it is now going on between the Department of External Affairs and a representative of the two governments. As my hon. friend knows, generally speaking as a matter of international law and comity you do not enforce that sort of law. It is like the

sumptuary laws of other countries, which are not generally enforced. They have not been enforced in Canada. At the present time the whole matter is up in connection with the general question of the right of Canada to call up nationals of these countries, apart from the United States, and I am afraid I cannot give my hon. friend any more information than that at the moment.

Mr. HAZEN: Some time ago some criticism was expressed here about the cost of constructing military camps. I believe it was in October or November, 1940, that the minister told us, in the course of a speech, that he had obtained—I am not quoting his exact words—a very competent engineer, and that this engineer, with certain officers from the quartermaster-general's branch, was going to visit practically all the camps for the purpose of making a comparison between the cost of the camps which were put up by contract and the cost of the camps which were put up by the engineering service of the army. Did the minister ever receive a report as a result of that inquiry, and would he be prepared to tell us what the comparison shows as between the cost of camps put up by the army and the cost of camps put up by contract?

Mr. RALSTON: I have not looked into the matter for months, or even for a year or more, but my recollection is that there was a difference of from eight to ten per cent in the cost of camps under contract, on the one hand, and the cost of those put up by day labour, on the other. According to the engineer's report the explanation is clear. Day labour jobs were done frequently at that time because of the necessity for speed, and you can go ahead with a day labour job without having your plans all complete. If you want to have the work done by contract and have a tender, you must have all your plans, but under day labour you can proceed and make changes as they become necessary and keep on with the work, thus getting it done sooner. Off the bat, without reference to the report, I should say the difference was between eight and ten per cent.

Mr. HANSON (York-Sunbury): I am glad to hear the minister say that. He will remember that he and I had some discussion, perhaps not as pleasant as it might have been, over the cost of army hutments and the like. That, however, is all past, and as far as I am concerned it is water over the dam. But I notice that in all labour construction that has taken place the department has called for bids, and I congratulate the minister on the change of policy.

[Mr. Ralston.]

Mr. RALSTON: We do that if we have more time.

Mr. BROOKS: Does the minister find more satisfactory the work done under contract or the work done through the engineering department of the Department of National Defence? I have had a little experience in that regard, and from what I have seen I should think the work done by the engineering department was more satisfactory than that done by contract.

Mr. RALSTON: I know what happened. My hon. friend is in command of a training centre and he can get the engineer to do a day job—

Mr. BROOKS: Which is necessary.

Mr. RALSTON: —around the training centre which he will not get done by the contractor. I have had some experience as a company commander and I know the engineer will do work which the contractor will not do.

Mr. HANSON (York-Sunbury): The question of extras comes in.

Mr. RALSTON: They do not count as extras when the army engineer does the work. There is no doubt that from the point of view of service the army engineer and his crew of day labourers or engineers will do a job which the camp commandant or the district officer commanding would prefer to a job done the other way; but when I answered the hon. member for St. John-Albert I was only speaking of the actual money difference between the two jobs. I know there is a general feeling that you can get the army engineers to do the odd job and make certain improvements which are necessary or desirable, and which conduce to the health, convenience or efficiency of the camp, which you cannot get the contractor to do.

The hon. member for Témiscouata (Mr. Pouliot) asked about having a picture of the king and queen in the various messes. He spoke of his majesty as commander in chief. That is an error. His majesty is not commander in chief of the Canadian forces; the commander in chief of the Canadian forces is his excellency. I presume, however, my hon. friend is talking about pictures of their majesties. I will take his suggestion into consideration.

Mr. POULIOT: I thank the minister for what he has said, and I am sure it will be welcomed by all those who desire to volunteer. I understand now that His Excellency the Governor General is commander in chief of the Canadian army, and as the Canadian army is only a part of the British army, His Majesty

the King is commander in chief of the Canadian army. Yesterday the leader of the opposition tried to be *fin-fin* regarding a matter to which I had referred, to the effect that someone had gone to the army train and asked a question in French and was told by someone on the train not to speak a foreign language, or that he could not understand a foreign language. Then the minister asked for something more than a clipping from a newspaper. Of course, I have another clipping to send him. I have also two names. Yesterday he asked me to give him a name, and I will be more generous than he wanted me to be. I will send him two names to-day, and there are other names besides those. I hope the matter will be investigated and that we shall be told what the decision of the department is in that regard.

Some hon. MEMBERS: Carried.

Mr. POULIOT: I am greatly surprised to hear some hon. members say "carried" when we have had no precise information at all since we started to discuss this very large estimate. I have asked the minister for some precise information about the cost of each branch of his department, and the nature and functions of each of these branches. It is like the old tale, "Sister Anne, do you see anyone coming?" He has not come yet. The minister has the wonderful ability to avoid answering questions that are asked him unless he is pressed. I do not want to press him; that is not my idea at all. But I am greatly surprised that he has not answered this question on account of the lack of information in the general estimates. Of course, this is a matter of two billion dollars. I asked him for details, and he told me that it was already given in seven figures. That is not enough. We want to know exactly how it works. The motive I have now is to see that each soldier, each airman or each sailor is treated with the fairness he deserves from the Department of National Defence. If, therefore, I ask these questions, it is not to embarrass the minister; it is to help him to understand the working of his own department. Moreover, it would be easier for him because now he has no responsibility whatever in connection with the payments that are approved and made by the Department of Finance. This makes a great difference between the management of his department now and what it was during the last war.

There is something else. During the last war everything was done by legislation, whereas now most of what is done in the Department of National Defence is done by order in council. The powers conferred upon the minister are so great that he is empowered by order in council to extend the period of training for the draftees indefinitely. It was not done exactly that way. When the first draftees were called for training it was done by order in council, and the period was one month. Afterwards the period was extended from one month to four months, again by order in council if I am not mistaken. Then an order in council was passed giving the minister power to extend that training indefinitely.

Hon. members must recollect that at the time the draftees were first called for training an interview was given by the then chief of staff, General Crerar, who is now in command of the Canadian forces in England—

Mr. RALSTON: The Canadian corps.

Mr. POULIOT: I regret I have not always the technical expression, but it does not matter much. I am speaking of a gentleman who is highly respected by all classes, whose son started his military career as a private. This gentleman, General Crerar, gave an interview to the press, or made a statement to the effect that a month's training was enough for the time being.

Mr. HANSON (York-Sunbury): It was a speech before the Canadian club in Ottawa.

Mr. RALSTON: My hon. friend's statement is absolutely incorrect. General Crerar said he advised thirty days' training, but he did not say it was enough.

Mr. POULIOT: I am glad the minister says that. Most of the time I speak without notes; I have not time to write my speeches. My information might be wrong in detail, but the foundation is right. Therefore, whether it was in a statement given to the press or during a speech to the Canadian club here, and whether the general said it was enough or that he recommended it, what is the difference? If he recommended that, it was because he found it was enough, and what difference does the choice of words make? Enough. Taking it for granted that a man of the experience of General Crerar, who has spent his life in the Department of National Defence and who has more military experience than many others in the department, with the background of his military experience and career the general said, "I recommend one month's training." Then I wonder, if it was on the advice of the very same gentleman that the training was extended from one month to four, whether he had changed his views.

Mr. HANSON (York-Sunbury): I thought I recommended it. I got the credit for it anyway.

Mr. POULIOT: Although the leader of the opposition has a fine legal experience, he has not the military background of General Crerar. I would rather suggest to the minister that he appoint the leader of the opposition as judge-advocate-general if there is a vacancy in that office at any time.

Having the information from the leader of the opposition that it was on his recommendation that the training period was extended from one month to four, who was the military genius who advised the Minister of National Defence himself to decide, in virtue of the powers granted to him by an order in council of very wide scope, to extend that period of training from four months to an indefinite time? I do not know if it was done according to the rules of astrology, or table-turning, or inspiration, or by the ouija board, but it was done. What surprises me is the complete indifference of the Canadian people in that regard. There is a rule that is known to everyone; it is that a delegate cannot delegate, *delegatus non potest delegare*. The country has conferred power on the government by legislation, and the government takes advantage of this delegation of power to pass orders in council. But how is it that the government can go so far as to transfer to a single individual powers that were granted to them by parliament, even if that individual is the Minister of National Defence? And the more so because the minister was entitled to decide by a stroke of the pen matters that had previously been decided only by orders in council. It seems strange. But of course the Canadian people do not now have the same interest in constitutional matters that they had at the time of Mercier in Quebec, Mowat in Ontario, and other leaders of earlier days. Then they had information that was much more complete than that of to-day, and they held to the British doctrine and the great British parliamentary tradition.

What is the law? The law is just a sheet of paper. We have no more bound statutes. It takes a long time to secure orders in council of a legislative nature. I think it was my friend the hon. member for Lake Centre who asked for the production of all orders in council of a legislative nature, not of an administrative nature, and he was told that that distinction had not been made and that it would take a tremendous time to secure those orders in council duly classified. Well, sir, I have these rules that have been published in book form, small volumes that are really the law of the land in this country, because the legislation that we are enacting now is only for monetary matters; all the legislation we have which binds Canadian citizens just the same as Gulliver was tied at Lilliput by the dwarfs, is by order in council. The result is to create among the people of Canada disrespect for legislation, as well as to create embarrassment for all those who have to explain the law to either their clients or their constituents. So I regret very much that such wide powers over individuals who do not come within the jurisdiction of the hon. gentleman should have been given to the Minister of National Defence, because his department proper has no authority over the recruits until they are called to the colours and are actually in the army. Those powers, should have been given to the Minister of National War Services, if the government had been empowered by us to transfer such powers to a single minister.

If we do not have order now, what will we have in the aftermath, when the war is over? It is a most incredible situation. Either there is order in the Department of National Defence, or there is not. If there is order, it should be very simple for the minister to give the information requested as to the functions and cost of each of these branches. That is a reasonable thing; there is no libel or slander in that. It is the most ordinary thing in the world; and if there is no such order, then a change is necessary. We cannot get away from that. If the minister sees clearly what is going on in his department; if he has a chart showing the various occupations of those under him here in Ottawa, let him supply that chart to all hon. members so that there may be no embarrassment whatever when they have to deal with anyone in the Department of National Defence. This seems very clear and very easy, but we have not obtained that information from the minister. I am quite willing to sit down and listen to the hon. gentleman if he has no objection to placing such a chart upon *Hansard*, because that will be very informative.

What is the trouble with the Department of National Defence in Ottawa? It suffers from elephantiasis. I need not describe that illness, but when one is afflicted with it some parts of the body grow too large, especially the feet. The feet become bigger than the head, and it is incurable. Of course it is a disease that occurs usually in tropical countries, but since everything under the sun is changed here it is not surprising that it should occur in Canada. We are told at times when we discuss these matters of dollars and cents that we are not patriotic. I should like those who hold this view to repeat that contention before their constituents when those constituents are called upon to pay taxes. Hon. gentlemen will have

to have very sweet tongues to have that suggestion accepted by the Canadian people. I have also been told from high quarters that I have shown disrespect to those who have exposed their lives in an actual theatre of war, when I have complained about some people on the general staff. But even if I were cruel to the branch of the judge-advocate-general, I would not do harm to many who had thus exposed their lives in a theatre of war, because such are scarce in that branch, though the branch is large. There is less reason for the existence of that branch now than at any time previously, for obvious reasons. Previously the main duty of this branch was to draft and examine contracts for purchases made by the Department of National Defence. That was in the old days, before the minister had suffered *capitis deminutio,* a reduction of the head. Like my hon. friend the leader of the opposition, sometimes I feel compelled to use a dead tongue in order to find the proper legal phrase.

During the last war, and until a comparatively short time ago, the Minister of National Defence was responsible for all purchases made by his department. Then the judge-advocate-general's branch was much more important than it is now, and in it were some jurists of considerable legal ability, who were able to draft contracts and give the minister sound legal opinions. Now, however, there are no more contracts of this kind. When a purchase is made it is done by filling out requisition forms, so the Minister of National Defence has no more to do in that regard than any deputy minister or other official who makes out a requisition for what he needs. The purchases are not made by the Department of National Defence. That department must send a requisition to the Department of Munitions and Supply, which obtains whatever is required. Then the bill is paid not by the Department of Munitions and Supply, but by the Department of Finance. Have you ever seen anything like that, Mr. Chairman, in your wide experience as a parliamentarian? Of course this is the way things go, and people are indifferent to it. They say, "Let it go. It is all right. This is war time." Of course it is war time, but we want the government to be as strong in war time as it should be in peace time, and we want order in all departments.

I find that some people are very touchy. It is impossible to say a word of criticism about anyone without having someone say that you not only show bad manners but are also a coward to attack someone who is not present, as though the minister did not represent all those under him. There is no personal grudge against anyone, but we want all those in the Department of National Defence as well as those in other departments to have respect for parliament. It is my idea to preach respect for parliament and parliamentary institutions to all those in the civil service and all high officials who are in the dominion's pay.

What is our business? It is our business here as members of the House of Commons to act as intermediaries between the government and the taxpayers, so that there may be no abuse. When there is a general meeting of the shareholders of a company, any shareholder is entitled to ask the management for information about any expenditure. We are not hard on the minister; we take good care of him, and we want him to have the least possible difficulty in administering his department. I make these observations in accordance with that reference in the Bible where it is stated that the wounds of those who like are better than the kisses of those who hate.

When I say this I am not referring to the leader of the opposition. I only repeat those words of wisdom which have the sanction of time immemorial. I wonder whether the minister is in a good enough mood to give us a charter of the Department of National Defence, and whether he will explain to us the functions of all branches in his department. This is most essential, because over a year ago I asked him to supply hon. members of parliament with the King's Regulations and Orders, as amended. All hon. members know, of course, that those regulations are printed in the *Canada Gazette,* but because of the work we have to do, it is quite troublesome for us to cut the issues of the *Gazette,* and make a scrapbook. That is done in the department, and I therefore ask the minister if possible to supply all hon. members with a copy of the amended regulations. I have asked the same question three times. Finally the minister told me that in spite of the order in council passed years ago, one which is respected by all departments except the Department of National Defence, and is to the effect that upon request any member of parliament may secure not only one but two copies, one in English and one in French, of any matter circulated by the king's printer, it was not the practice of his department to do that. We are not supplied with those important regulations by the Department of National Defence. When the house sits in committee we ask for information, and it is not given to us.

Mr. RALSTON: If my hon. friend would just stop and allow someone to speak, we might get ahead. He has been asking the same thing over and over again. I do not know whether he is trying to talk on this motion until six o'clock.

Mr. POULIOT: No.

Mr. RALSTON: But, so far as I am concerned the hon. member has asked for two things. First, he has asked for the King's Regulations and Orders, and he has also asked for a statement with regard to the expenditures of each department. He has taken twenty-five minutes to ask for those two things.

I want to say first that the accounts are not made up so that one may have all the expenditures of the adjutant-general's branch under one heading. The adjutant-general has to do with promotions, pay, medical services and auxiliary services. Those are some of the most important things with which he has to deal. You would have to take not only the pay of the officers in all the branches, but all the money paid out by those branches, in order to bring the whole expenditures of the department within the terms of those four heads of branches. The same applies to the chief of the general staff.

The chief of the general staff has to do particularly with training and operations. Under him is the intelligence branch, the operational branch and training, in a very large way. He has the job of coordinating the other three chief branches, namely the adjutant-general, the master-general of the ordnance, and the quartermaster-general.

The quartermaster-general has to do with the provision of accommodation for our forces, the provision of engineering services, the provision of transportation, and the provision of food. The master-general of the ordnance has to do with the provision of equipment of all sorts, whether it be for actual fighting operations, for ordnance, munitions or anything of that kind. The accounts are not kept so that you can take any of those branches and find out how much the master-general of the ordnance spent. You would want to find out how much is paid for pay and allowances, clothing, munitions, and things of that kind. The fact that it happened to be paid out under the branch of the master-general of the ordnance means nothing at all, and would give no information of any use whatever.

I say to my hon. friend with regard to the King's Regulations and Orders that the French edition was printed, as I understand it, on April 10, and I shall be glad to see that a free copy is sent to the hon. member, and a copy of the English regulations as well.

Mr. POULIOT: I thank the minister, and I congratulate him. There is progress.

Some hon. MEMBERS: Carried.

Mr. POULIOT: But I do not see why those payments are not indicated in more detail. We should know how much is spent in each branch, and the amount spent for travelling expenses.

Mr. RALSTON: The amount for travelling expenses is $50,396,377.

Mr. POULIOT: That is all right, but it gives no information about travelling of the staff here in Ottawa.

Mr. RALSTON: It does not separate private Jones from anybody else.

Mr. POULIOT: There is something wrong in that. If we have no public accounts, then what is the use of our meeting here? We are here precisely to check expenditures. That would be done in two ways, first, by having a detailed summary of proposed expenditures and, secondly, by the rendering of accounts. We have not that information. With respect to accounts we have no information for amounts under $35,000. That is an intolerable situation. We should have more information than that, and I say that in the best possible spirit. I do not wish to delay the passing of the resolution, but—

Some hon. MEMBERS: Oh, no!

Mr. MACKENZIE (Vancouver Centre): It is six o'clock.

Mr. HANSON (York-Sunbury): I should like to say, so far as the official opposition is concerned, that we would be glad to proceed with the navy to-morrow.

Some hon. MEMBERS: Carried.

Some hon. MEMBERS: No.

Mr. HANSON (York-Sunbury): There is only one resolution. The navy and the air expenditures are to follow.

Mr. POULIOT: I am not bound by what the leader of the opposition has decided. He has only to look after his own conscience as leader of the opposition.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, May 7, 1942

The house met at three o'clock.

TORONTO HARBOUR COMMISSIONERS

DECLARATORY POWERS WITH RESPECT TO DEBENTURES AND BORROWING

Hon. J. E. MICHAUD (for the Minister of Transport) moved for leave to introduce Bill No. 68, respecting the Toronto harbour commissioners.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WARTIME HOUSING—HALIFAX

Mr. ISNOR:

1. How many houses were built by Wartime Housing Limited within the city limits of Halifax?
2. What types of houses were built and how many of each type?
3. What was the cost per unit of each type?
4. How many of each type are now occupied?
5. What rental is charged for each type?
6. Are there any restrictions to the type of tenants?
7. Do all tenants occupying homes come within the regulations?
8. Was an application received from the city of Halifax for the use of any other houses within the city limits?
9. What arrangements, if any, were made with the city of Halifax in respect to renting these houses?

Mr. HOWE:

1. 541 houses.

2. Wartime Housing Limited built within the city limits of Halifax the following number of H type houses: Type H1 and H2—332 houses; Type H11 and H12—162 houses; Type H21 and H22—47 houses.

Note: The above types are four-room bungalows with two bedrooms except type H11 and H12 which are six-room houses with four bedrooms.

3. The average cost per unit for each type of house is as follows: Type H1 and H2—$2,045.60; Type H11 and H12—$2,803.05; Type H21 and H22—$2,196.55 (estimated only).

4. The following number of houses are occupied: H1 and H2—320 houses; H11 and H12—140 houses; H21 and H22—46 houses.

5. The rental rates are as follows: Type H1 and H2—$25 per month; Type H11 and H12—$32 per month; Type H21 and H22—$27.50 per month.

6. Yes, they are rented to men and their families engaged in the manufacture of munitions or engaged on defence projects or as otherwise directed by the Minister of Munitions and Supply.

7. Yes. Excepting where exceptions were made by the minister in the case of the armed services and other government services.

8. Yes.

9. The city of Halifax was offered certain houses for a specific tenancy. No houses were available in Halifax for this purpose when the city desired same; houses in Dartmouth were offered the city of Halifax in substitution but were refused.

WARTIME PRICES AND TRADE BOARD NEWS SUMMARY

Mr. FRASER (Peterborough West):

1. How many are employed on the staff of the wartime prices and trade board for the production of the wartime prices and trade board news summary?
2. Who edits the material appearing in the news summary?
3. What is the, (a) daily cost, (b) monthly cost of issuing the news summary?

Mr. ILSLEY:

1. Two, part-time.

2. This sheet is prepared solely for distribution within the board's staff and its purpose is to keep members of the staff informed as to board orders and press releases, additions to or changes in senior personnel and in brief summary form to direct their attention to newspaper items and articles in the weekly and monthly press that may be of interest to them.

3. (a) $6.75; (b) $175.50.

NATIONAL WAR LABOUR BOARD

Mr. COLDWELL:

1. What is the personnel of the national war labour board and what organizations or interests recommended the appointment of each of them?
2. Who are the members of the executive of the national war labour board and what salary or other remuneration does each receive?
3. (a) Who acts as chairman of the board or executive when the Minister of Labour is occupied elsewhere; (b) how many meetings of the board has each member attended; (c) how many meetings of the executive has each member of the executive attended?
4. What is the exact procedure of the board for the consideration and settlement of cases which come before it?
5. What provision is there for labour unions to present their case before the board through the personal appearance of their representatives and what provision is there for them to appear before the executive of the board?
6. (a) How many cases concerning wage increases or bonus payments have been before

the board to date; (b) how many of these were brought before the board through applications by employers and how many through applications by employees; (c) how many wage increases have been granted by the board on employers' applications and how many on applications filed by employees; (d) how many bonus payments or increases have been granted to each of the two groups of applications; (e) what in each case were the grounds for granting the applications and what were the grounds for refusal in those cases where the application was rejected?

Mr. MITCHELL: The first five questions have been answered. I can answer the sixth if the hon. member who asked the questions will give us time to get the necessary material. We have been under pressure for the last two or three days because of the national boards which are meeting here.

Mr. COLDWELL: Yes, I understand. That is all right.

Mr. SPEAKER: The last part of the question stands.

Mr. MITCHELL:

Members of National War Labour Board

1. Honourable Humphrey Mitchell, M.P., chairman.

Dr. Bryce M. Stewart, Deputy Minister of Labour, vice-chairman.

Name—Position and Address—Nominated by

Bell, John A.—General chairman, Order of Railroad Telegraphers, 139 Pacific avenue, Toronto, Ont.—International Railway Labour organizations.

Deschamps, A.—President, Builders Exchange, 680 Sherbrooke St. W., Montreal, Que.—Canadian Construction Association.

Dunn, W. — Financial secretary-treasurer, Toronto District Labour Council, 404 Merton street, Toronto, Ont.—Trades and Labour Congress of Canada.

Hodge, George—Manager, Dept. of Personnel, Canadian Pacific railways, Montreal, Que.—Canadian Chamber of Commerce, and by Railway Association of Canada.

Jackson, Gilbert—President, Sentinel Securities of Canada Ltd., Toronto, Ont.—Canadian Manufacturers Association.

McClelland, John—Valois, Que.—Trades and Labour Congress of Canada.

Mosher, A. R.—President, Canadian Congress of Labour, 230 Laurier Ave. W., Ottawa, Ont.—Canadian Congress of Labour.

Picard, Gerard—General secretary, Confederation of Catholic Workers of Canada, Quebec, Que.—Confederation of Catholic Workers of Canada.

Stovel, J. H.—Vice-president and general manager, Dome Mines, South Porcupine, Ont.—Canadian Manufacturers Association, and by Ontario Mining Association.

Taylor, H.—Industrial Relations Department, Canadian National Carbon Co. Ltd., Toronto, Ont.—Canadian Manufacturers Association.

[Mr. Coldwell.]

Members of Executive Committee

2. Chairman, Honourable Humphrey Mitchell, M.P.; vice-chairman, Dr. Bryce M. Stewart, Deputy Minister of Labour; George Hodge—serves without remuneration—recouped actual out of pocket expenses; J. A. McClelland—$8,000 per annum.

3. (a) In the absence of the chairman, the vice-chairman presides at board meetings.

(b) Twenty meetings of the National Board have been held. The following is the attendance list:

	Meetings (days)
Chairman	15
Vice-chairman	9
Bell, John A	20
Deschamps, A	18
Dunn, W	19
Hodge, George	20
Jackson, Gilbert	20
McClelland, John A	20
Mosher, A. R	20
Picard, Gerard	20
Stovel, J. H	19
Taylor, H	20

(c) The executive committee has held 53 executive sessions.

The following is the attendance record at the regular meetings of this committee:

	Meetings
Chairman	18
Vice-chairman	46
George Hodge	52
J. A. McClelland	49

In addition the committee has been in conference almost every day.

4. All decisions of the National Board are made by the board itself. Method of procedure in dealing with applications of the board is in accordance with the by-laws as adopted and provided in order in council P.C. 8253. A copy of the by-laws is submitted.

The attached letter of instructions also indicates the procedure followed in giving notice of applications and hearings and recording of decisions.

5. Answered by No. 4.

6. To follow.

The National War Labour Board

By-laws

1. (1) In these by-laws unless the context otherwise requires,—

(a) "bonus" means the cost of living bonus for which provision is made in the order;

(b) "National Board" means the National War Labour Board;

(c) "national employer" means

(i) any employer engaged in

(a) the operation of lines of steam or other ships, railways, canals or telegraphs, including all services ancillary thereto, connecting any province with any other or others of the provinces or extending beyond the limits of the province;

(b) the operation of any system of air, bus or truck transportation connecting any province with any other or others of the provinces or extending beyond the limits of the province;

(c) the operation of any electrical power or transmission works connecting any province with any other or others of the provinces or extending beyond the limits of any province, or serving two or more provinces;

(d) mining;

(e) the operation of any shipyard.

(ii) any other employer who is so designated by the National Board, either specially or as a member of a class so designated, pursuant to the provisions of these by-laws.

(d) "Order" means the War Time Wages and Cost of Living Bonus Order (order in council P.C. 8253 of October 24, 1941, and any amendments thereto).

(e) "Regional Board" means a Regional War Labour Board;

(f) "the administration of the order" includes the administration of order in council, P.C. 7679 of the 4th October, 1941, and the administration of the Fair Wages and Hours of Labour Act, 1935.

(2) Any employer, other than a national employer, who employs persons in two or more regions, shall, for the purposes of the administration of the order, be deemed to be an employer carrying on business as in each of such regions in respect of his employees in each of such regions.

(3) Other words and expressions used in these by-laws shall, unless the context otherwise requires, have the same meaning as in the order.

The National Board

2. (1) The meetings of the National Board shall be held at the call of the chairman, or in his absence at the call of the executive committee, at least once in each month unless otherwise directed by the National Board.

(2) The chairman, or in his absence such other member of the executive committee as he may designate, shall preside at any meeting of the National Board.

(3) The decision of the majority of the National Board at any meeting shall be the decision of the National Board and in the event of a tie the chairman shall have a casting vote.

(4) There shall be a secretary of the National Board who shall keep the minutes of the meetings and the records of the National Board.

3. (1) The chairman, or in his absence such other member of the executive committee as he may designate, shall preside at any meeting of the executive committee.

(2) The decision of the majority of the members of the executive committee present at any meeting shall be the decision of the executive committee.

(3) The secretary of the National Board shall be the secretary of the executive committee and shall keep the minutes of the meetings and the records of the executive committee and shall conduct such correspondence and perform such other duties as the executive committee may direct.

4. (1) The executive committee shall,—

(a) through the chief executive officer, control and direct the staff in the office of the National Board or assigned to the administration of the order in respect of national employers;

(b) report to the National Board on such matters and at such times as the National Board may require.

(2) In any case where any immediate action by the National Board is urgently required and where the executive committee is of opinion that it is not in the public interest to delay such action until the matter can be referred to the National Board the executive committee may act for the National Board and for such purpose may exercise all powers conferred by the order or by these by-laws on the National Board and shall report such action to the National Board at the next meeting thereof.

5. The chief executive officer of the National Board shall carry out the directions of and shall perform such duties as are assigned to him by the executive committee.

6. The chairman, any member of the executive committee, the chief executive officer or the secretary of the National Board may sign any document or communication on behalf of such board.

Regional Boards

7. A regional board may make such rules as may seem expedient for the conduct of its business and preceedings not inconsistent with the provisions of the order or of these by-laws.

8. (1) A regional board shall exercise control and direction over the staff in the office of the regional board or assigned to the administration of the order in respect of employers other than national employers in the region with respect to which such regional board is appointed.

(2) A regional board shall comply with any request of and shall give effect to any order or direction by the National Board.

Administration

9. The National Board shall

(1) control and direct the administration of the order in respect of national employers;

(2) supervise the regional boards in the administration of the order in respect of employers other than national employers;

(3) from time to time issue such rulings and instructions to the regional boards or prescribe such form or forms for use by the National Board or regional boards as may be necessary to ensure uniformity in the administration of the order.

10. The National Board may from time to time designate any employer or any class of employers, not included in the classes of national employers enumerated in these by-laws, as a national employer or as national employers.

11. (1) A regional board shall be charged with all duties and responsibilities in respect of the administration of the order in respect of employers, other than national employers, carrying on business within the region with respect to which such regional board is appointed.

(2) For such purpose a regional board may act for the National Board and shall perform all duties imposed upon the National Board and may, subject to the provisions of these by-laws, exercise all powers conferred on the National Board by the order.

(3) A regional board shall be governed in the performance of such duties or in the

exercise of such powers by any rulings or instructions issued by the National Board and any decision, order or direction of any regional board shall be in accordance with such rulings or instructions.

(4) Where with respect to any matter the opinion of a regional board is divided in respect of the interpretation or application of the order or of any ruling or instruction of the National Board or where in any case in the opinion of a regional board there is doubt in respect thereof, the regional board shall not make any decision or give any order or direction with respect to such matter or in such case until the regional board has referred such question of interpretation or application to the National Board.

Procedure

12. Any application by any employer or employers or any employee or employees or any association of employers or of employees requesting any board

(a) to prescribe increased wage rates; or

(b) to defer payment of any bonus for any period or to adjust the amount of any bonus; or

(c) to determine any dispute as to whether a bonus is payable or the amount of any bonus; or

(d) to exempt any employer from payment, in whole or in part, of the bonus;

shall be required to be submitted in writing.

13. (1) Any application in respect of a national employer shall be referred to the National Board and any application in respect of an employer other than a national employer shall be referred to the regional board for the region in which such employer carries on business.

(2) The National Board or any regional board to which an application is referred shall give notice in such manner, as, in the circumstances, it deems sufficient to any person, firm, corporation or association having an immediate interest in the matter in respect of which such application is made and shall give an opportunity for representations to be made by or on behalf of every such person with regard thereto.

(3) The National Board or any regional board to which an application is referred shall make such inquiries and investigations into the matter in respect of which such application is made as it deems necessary for the proper disposal thereof.

General

14. (1) Any regional board to which notice is given of the modification of any labour agreement inconsistent with the provisions of the order to bring it into conformity therewith or to which notice is given of the suspension of any other condition of work suspended in the interest of war production shall send such notice to the National Board.

(2) The National Board shall keep a record of all such notices and of all notices of a like nature sent directly to the National Board.

15. All meetings, records, deliberations and discussions of the National Board or the executive committee or of any regional board shall be confidential and shall not be disclosed unless such disclosure is authorized by the National Board or the executive committee or by the regional board, respectively, and any such disclosure shall be made by the chairman of the National Board or in his absence such person as he designates for such purpose or by the chairman of the regional board or in his absence such person as he designates for such purpose.

16. Subject to the approval of the Minister of Labour the National Board may from time to time amend these bylaws.

National War Labour Board

To Chairmen and Chief Executive Officers
Regional War Labour Boards.
Administrative Procedure Letter No. 4

Re: Giving notice of applications and hearings, recording of decisions, etc.

A. Notice of Application:

1. Application in writing received. If the material in support of the application is not complete, an opportunity to complete it should be given to the applicant.

2. If application is accompanied by a consent by or on behalf of all parties having any immediate interest in it no notice need be given.

3. If application is not accompanied by such a consent, the chief executive officer of the board to whom application is made shall give notice as follows:

(a) if the application is made by the employer, to all employees having any immediate interest in it either individually or by posting a form of notice (draft form attached) in the office, plant or works of the employer. The employer may be directed to post such notice for such period and in such manner as the board directs and to furnish proof of the posting;

(b) if the application is made by or on behalf of all employees having any immediate interest in it, to the employer;

(c) if the application is by some but not all employees having any immediate interest in it, to the employer and the other employees who have any immediate interest in it.

4. In the event that the working conditions in respect of which applications are made are covered by a collective agreement, it will be sufficient if notice to the employees is given to the signatories on their behalf of the collective agreement.

5. Upon receipt of an application, the chief executive officer will analyse all material submitted with the application and all representations, if any, made in respect thereof and if necessary request further material and make an investigation. A summarized analysis of all material will then be submitted to the board together with any suggestions of the chief executive officer.

B. Notice of Hearing:

If the board considers it necessary, for the proper determination of the questions submitted in the application, to hold a hearing, notice of the holding of the hearing shall be given in the same manner as that outlined in the case of notices of applications and shall state the time and place of the hearing, together with the order of the appearance of the parties, if necessary.

C. Recording Decisions:

The decision of the board will be recorded by a minute in the following manner:

"An application having been received from ....., employer, (or employees or on behalf of employees of ....., employer) requesting the board to
(state question for decision)
and all parties having any immediate interest therein having consented (or—"and an opportunity having been given to all parties having any immediate interest therein to make representations with regard thereto");
The board finds
(state finding of board)
and that it is fair and reasonable to
(state proposal to be made by board)
and prescribes and directs..."
(direct board's proposal to be carried out)

D. Announcing Decisions:

The formal decision of the board shall be given to all the parties concerned in the manner set out above and shall be in the following form or in a form as nearly analogous thereto as the circumstances permit:

"In the matter of the Wartime Wages and Cost of Living Bonus Order, and

In the matter of an application of..... employer (or employees or on behalf of employees of.....employer) for.....
(state briefly the substance of the question submitted in the words of the minute)

Finding and direction

The above mentioned application having been considered by the board and all parties having any immediate interest therein having consented to the granting thereof (or— "and an opportunity having been given to all parties having an immediate interest therein to make representations with respect thereto") the Regional War Labour Board for..... has found.....
(insert in the wording of the minute)
and has found
(insert in the wording of the minute)
and has directed
(insert in the wording of the minute)
Chairman,
Regional War Labour Board for

E. General:

1. In the case of an application to the board to determine whether certain employees are above the rank of foreman or not there will not, of course, be any finding as to fairness or reasonableness or any direction and the decision will be limited to a direct finding.

2. Every finding, decision, determination, order or direction should adhere strictly to the words of the clause in the order under which it is made and the methods outlined above.

3. No reasons for any finding, decision, determination, order or direction are to be given unless authorized by the National Board.

F. Printed Forms:

Printed forms covering notice of application, notice of hearing, and the imparting of decisions are being prepared. Until these are supplied, the use of Regional War Labour Board letterheads containing the wording outlined herein will suffice.

E. R. Complin,
Chief Executive Officer.

Ottawa, Ontario.
January 26, 1942.

44561—140½

Regional War Labour Board
for.....
Notice of Application
under
Wartime Wages and Cost of Living Bonus Order (P.C. 8253)

Take notice that an application to the Regional War Labour Board for.....has been made by or on behalf of.....requesting such Board to.....

Representations in respect of such application may be submitted in writing by or on behalf of all parties having any immediate interest therein to such Regional War Labour Board on or before.....after which date such Regional War Labour Board may, without further notice, give consideration to such application. If the board considers it necessary to hold a further hearing, notice of such hearing will be given.

.....
Chairman, Regional War Labour Board for

EXEMPTION OF DIVINITY STUDENTS FROM MILITARY SERVICE

Mr. CHURCH:

1. Are divinity students in the various theological colleges and universities of Canada exempt from joining his majesty's forces in this war?

2. If so, by what authority and how many of each denomination have been so exempted in each military district?

3. What are the regulations and interpretation given to it by the various exemption boards, what instructions do these boards act on and who instructs them?

Mr. THORSON:

1. No.

2. See answer to 1.

3. Section 6 of National War Services regulations, in so far as this question is concerned, reads as follows:—

"The following persons shall be excepted from being called out:—

(b) Members of the clergy or religious orders.

(c) Regular clergymen or ministers of religious denominations."

All students, including divinity students, taking courses leading to degrees or diplomas in universities or colleges, may complete their studies if they become members of the Canadian Officers' Training Corps or auxiliary training units thereof, where such exist, and undergo the training required of such members to the satisfaction of the military authorities.

RADIO LICENCES

Mr. HANSON (Skeena):

1. What was the total number of radio licences issued for 1941?

2. What was the total amount collected?

3. What was the total cost of collecting such licences?

4. How many radio licences were issued in each province, and in the Yukon Territory, in 1941?

Mr. HOWE:

1. 1,615,473.

2. $3,904,016.

3. $473,115.84 (commissions $275,738.65; administration $197,377.19).

4.

	1941-42
British Columbia	137,363
Alberta	120,930
Saskatchewan	121,084
Manitoba	103,807
Ontario	603,331
Quebec	399,722
Nova Scotia	71,429
New Brunswick	48,425
Prince Edward Island	8,644
Yukon	173
Northwest Territories	565
	1,615,473

Above figures from 1st April, 1941, to 31st March, 1942 (not final for fiscal year).

QUESTION PASSED AS ORDER FOR RETURN

OLD AGE PENSIONS

Mr. JACKMAN:

1. How many pensions are being paid under the Old Age Pensions Act in each of the provinces of Canada as of a recent date?

2. What is the average amount paid to each individual pensioner?

3. What is the aggregate cost to the dominion and provincial governments of all pensions paid under the Old Age Pensions Act during the last available calendar year, or twelve months fiscal period?

4. What would have been the additional cost to the dominion government if the maximum pension had been raised from $20 to $25 per month during such twelve-month period?

5. What would have been the estimated cost under the act to the dominion government during such twelve-month period if the pensionable age had been lowered to 65 years instead of 70 years?

6. What was the cost of administration to the dominion government during such twelve-month period?

7. What amount was recovered by the dominion government during such twelve-month period under, (a) section 9, subsection 2, of the Old Age Pensions Act; (b) section 9, subsection 3, of the Old Age Pensions Act?

8. What would be the estimated cost under the act to the dominion government of granting an old age pension of $25 per month to all citizens of Canada, irrespective of private means, on the basis of the 1941 census, (a) on the basis of the 70-year age limit; (b) on the basis of the 65-year age limit?

[Mr. Hanson (Skeena).]

9. How much was paid to each province by the dominion government under the Old Age Pensions Act during 1930, 1940 and 1941?

10. At what time or times were audits made of the accounts and other records of each province relating to old age pensions?

PRIVILEGE—Mr. CLAXTON

REFERENCE TO STATEMENT OF MR. POULIOT IN DEBATE ON MAY 5

Mr. BROOKE CLAXTON (St. Lawrence-St. George): Mr. Speaker, I rise to a question of privilege. Speaking in the house on Tuesday, the hon. member for Témiscouata (Mr. Pouliot) is reported at page 2166 of *Hansard* to have referred to a report in the New York *Times* of a speech which I made at Williamstown. The hon. member states that I said, quoting this report:

We cannot afford to fight in North America, dominion parliamentarian warns.

The quotation ends, and the hon. member goes on:

Imagine! If the enemy comes here, we must surrender at once.

What I said was:

The only place where we cannot afford to defeat the enemy is in North America. We cannot afford to wait until the enemy is here.

I should think that every hon. member would agree with that sentiment.

VICHY REPRESENTATION

STATUS OF DIPLOMATIC RELATIONS—RETURN TO CANADA OF MR. DUPUY

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may say to the leader of the opposition (Mr. Hanson) that Mr. Dupuy has arrived on this continent to-day and I expect he will be in Ottawa this evening.

Mr. HANSON (York-Sunbury): Good.

CANADIANS IN JAPAN

TRANSFER OF PROTECTION OF CANADIAN INTERESTS FROM ARGENTINA TO SWITZERLAND

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): In accordance with the government's policy of making public as quickly as possible all reliable information received about the welfare of Canadians in enemy hands, a statement about conditions in Hong Kong, received from the British embassy in Chungking, was given to the press last night. It reads:

His Majesty's representative at Chungking reported that he has received information from

sources which are considered reasonably reliable concerning the conditions under which Canadian prisoners are being held by the Japanese.

These reports would indicate that Canadians are receiving a good ration of rice supplemented by vegetables and bread daily, and a small quantity of meat. They are allowed to send out their trucks to bring in their food. They are also reported to have their own ovens for baking bread.

The information which has come to hand further discloses that very little disease exists, with the exception of a few cases of dysentery, and that supplies of quinine are on hand in the camp.

From the same reports it would appear that there is a shortage of warm clothing and blankets.

The house is aware that two days ago the Secretary State for Dominion Affairs made a statement in the House of Commons, London, with regard to a decision taken by the United Kingdom, in consultation with the governments of the dominions and of the other united nations, to transfer the protection of British interests in Japan from Argentina to Switzerland.

The welfare of Canadian nationals in Japanese hands, members of the Canadian forces and civilians alike, has been the cause of anxiety to the Canadian government ever since the outbreak of war with Japan. Throughout this trying period the Argentine has been our protecting power in Japan. The Canadian government deeply appreciate the services which have been rendered by the Argentine government, the Argentine foreign office and, in particular, by the Argentine embassy in Tokyo. As a result of their efforts, they have made progress in their work on behalf of Canadian prisoners of war, despite the refusal of the Japanese government to recognize any neutral government as protecting Canadian or British interests in Hong Kong.

Our government's decision to transfer the protection of Canadian interests in Japan from Argentina to Switzerland has been taken in order that the protection of Canadian interests in axis countries should be in the hands of a single protecting power. As Switzerland has assumed the protection of Canadian interests in Germany and Italy, and territories occupied by Germany and Italy, since the United States entered the war, Switzerland has been asked to take over the protection of Canadian interests in Japan. Canadian interests in Japan and Japanese-occupied territories are inextricably bound up with the interests of the United Kingdom and other parts of the Commonwealth, and it is felt that administrative arrangements for their protection can be effectively centralized in a single protecting power.

Hon. R. B. HANSON (Leader of the Opposition): It is not clear from the statement made by the Prime Minister with respect to persons in Hong Kong whether the increase in diet applies to prisoners of war or merely to internees. Could the Prime Minister enlighten us on that point?

Mr. MACKENZIE KING: The only information that has come to us is from the source I have indicated and the word used is "Canadians". The dispatch did mention the word "camp", which might indicate prisoners of war.

MUNITIONS ASSIGNMENT BOARD

FINANCIAL IMPLICATIONS—NORTH AMERICAN SUPPLY COUNCIL

On the orders of the day:

Mr. J. H. HARRIS (Danforth): I wish to address a question to the Minister of Finance. Can he tell the house what would be Canada's financial implications in connection with the proposed membership in the munitions assignment board of the united nations? While I am on my feet perhaps I might address a question to the Minister of Munitions and Supply. Can he enlighten us as to whether Canada has made any further commitments with regard to the North American supply council? Perhaps hon. gentlemen who were in conference in Washington during the last forty-eight hours might tell the house and the country what has taken place.

Hon. J. L. ILSLEY (Minister of Finance): With regard to the first matter, it is not so far advanced that any statement can be made as to Canada's financial implications. I am not sure that I understand what the phrase means, whether it relates to cost to Canada or perhaps something more, but in any event, as I say, the matter has not reached a sufficiently advanced stage to make possible any statement about it.

Mr. HARRIS (Danforth): It would probably mean a new treaty?

Mr. ILSLEY: I do not know.

Mr. HANSON (York-Sunbury): Will the minister make a statement at a later day?

Mr. ILSLEY: Yes.

Hon. C. D. HOWE (Minister of Munitions and Supply): In the matter of the British supply council in north America, this is a coordinating body for all British supply activities in the United States. It was organized, I believe, in December, 1940. I happen to be a member, not particularly representing Can-

ada, because Canada has no particular business with the supply council in the United States, but it is the connecting link between the British purchasing commission and the British food mission, the British shipbuilding mission, and a number of other missions that are functioning in Washington.

BRITISH COAL SHORTAGE

PROPOSED DRAFT OF MINERS FROM NOVA SCOTIA AND ONTARIO FIELDS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I wish to direct a question to the government and more specifically perhaps to the Minister of National Defence (Mr. Ralston). In view of the serious shortage of coal in England as stated in the British House of Commons to-day, when it was found necessary to take 7,000 men from the army and put them back in the coal fields, and as we have already sent a forestry corps overseas, will the government consider sending a battalion or draft of miners from the coal fields of Nova Scotia as well as miners from northern Ontario, who are among the best trained in the world—

Some hon. MEMBERS: Order.

Mr. BRUCE: —to help in Britain's coal fields?

Mr. SPEAKER: I think that question should be placed on the order paper.

MILITARY SERVICE

CONSCRIPTIVE POWERS OF GOVERNOR IN COUNCIL UNDER THE WAR MEASURES ACT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I wish to ask a question with reference to a motion which yesterday stood in the name of the hon. member for Huron North (Mr. Cardiff) asking for a copy of all opinions rendered by the Department of Justice with reference to the power of the governor in council under the War Measures Act to conscript men for service in any theatre of war. The Minister of Justice (Mr. St. Laurent) asked to have that motion stand on the ground that he wanted to consider whether or not this request could be complied with without violating privileges which are said to exist with regard to certain communications between the Department of Justice and other departments of the government. I would ask him if he has come to any conclusion. If not, when will he come to a conclusion and make an announcement?

[Mr. Howe.]

I may express at least surprise that there should be any question about producing to the house a legal opinion of the Department of Justice on such an important matter of public policy. Heretofore on request I have always been supplied with copies of legal opinions, and perhaps I am not violating any confidence when I say that the minister was good enough to give me this very opinion, though I had no idea that there was any secrecy attached to it. Of course I have not made it public in any way. I think there is an important principle involved. Surely, when the Prime Minister and, I believe, the Minister of National Defence intimate that the government have received such an opinion from the Department of Justice, we ought to know the nature of that opinion. Surely the public are entitled to legal opinions of that kind. I do not think there can be any question about it.

Hon. L. S. St. LAURENT (Minister of Justice): There is no intention of not having this order made or of not producing these opinions, of which there are two. The house will appreciate that the Department of Justice could not produce these opinions, as they are directed to other departments of government. In my view, there are certain communications in the nature of opinions from the Department of Justice to other departments of government which should be privileged. It was only for the purpose of making some reservation and avoiding making that reservation in too broad terms that I asked yesterday that the item stand. As a matter of fact I wish to consult His Honour and the Clerk of the House so as to make a reservation that will not go beyond the practice of the house.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, May 6, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

NAVAL SERVICES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Chairman, not often do I claim the attention of this house or of any of its committees. As a matter of fact, if I were to disregard answers to questions, the tabling of returns and other formal occasions of that nature, I could say

that I have spoken to the house only three times since I have been a member of it, that is, since November, 1940. I have felt that enough speeches were being made on the war without my adding to the number, and I agree with what was said by a newspaper man some months ago that if words could win the war we would have beaten the axis long ago.

It might be of some advantage to the committee if, before any detailed consideration of the estimates of the Department of National Defence for Naval Services be undertaken, I should give to the committee a broad outline of the work of the Royal Canadian Navy. That work is part of the greatest naval undertaking of which history has any record. Every continent in the world, with the exception of south America, is wholly or partly engaged directly in this great struggle. This fact alone implies that men and supplies have to be transported over great distances and that much of that transport has to be over the sea. Five-sevenths of the surface of the earth is covered with water, and since the conflict is now universal or global in character the magnitude of the task of the merchant navies of the allied countries, and of the task of the ships which escort those navies, must be apparent to all.

It is the simple truth to say that if you were to set out by ship from the western shore of Canada across the great Pacific ocean, continue on through the Indian ocean, then around through the Red sea and into the Mediterranean and back into the Atlantic—or you could take the alternative route, down by the island of Madagascar and the cape of Good Hope into the Atlantic—and thence across the Atlantic to the eastern shore of Canada, you would have practically circumnavigated the globe. Over all that tremendous distance, over all that great expanse of water, you would be liable, if you were in a British or allied ship, to attack at any given instant of time. In not a single foot or fathom of those waters could the ship be considered absolutely safe from enemy attack. The allied nations are on the circumference of a great circle, a circle as great as the world; the enemy is within the circle, and he has been and is now able to make sudden thrusts to break the circumference of the circle at any given point. Hence you have thrusts in the Japanese area extending from Australia to the shores of India; you have thrusts by the Germans all along the eastern coast of Europe. It is an easy thing to do; it is a difficult thing to counteract.

Over that 20,000 miles of sea line the ships of the allied countries must ply, carrying men and materials; and where these merchant ships go, escort vesels ought to go also. In the first years of the war the main line to be guarded was the line running between North America and Great Britain. From the very beginning of the war the Canadian navy has cooperated with the Royal Navy in the defence of that line, and while in recent months the conflict has spread to the Pacific ocean, and, in consequence, other supply routes have to be guarded and maintained, still the Atlantic route, linking Europe and North America, continues to be and always will be of prime importance. That line is now guarded and watched by navies of the United Kingdom, the United States, and Canada, and it is guarded in almost equal measure by these three navies.

Historically the role of a navy has been to provide battle fleets and to escort merchant ships. The navy's function was to engage the enemy surface craft in direct combat and to protect merchant shipping. Then in the history of naval warfare two new menaces appeared, the mine and the submarine. So that where at one time we needed powerful ships and powerful guns to deal with surface attack, now new methods of naval warfare have to be evolved. These methods take the form of small but fast craft such as destroyers, corvettes, mine-sweepers, motor torpedo boats and smaller types of ships.

It is along these lines that the Canadian navy has developed. Up to the present our navy has been primarily a convoy navy, and its main purpose has been to match in speed and power the attacks made by enemy ships. But as the enemy improves the speed and striking power of his ships we must at the very least keep pace, and desirably we should outstrip him. It is no secret now that some of the enemy U boats, some of the enemy submarines of the more modern type, are considerably faster and stronger than formerly. It is known also that German submarines can leave their bases on the shores of Europe, cross the Atlantic, spend some time hunting ships along the ocean lanes or along the Canadian or United States coasts, and still be able to return to their bases on the shores of Europe without the necessity of refuelling. It is no secret either that submarine attacks have been carried out within sight of the Canadian coast and within sight of the coasts of the United States within recent months.

Our naval engineers here and in the United States and Britain are constantly on the alert to meet these new threats to the safety of our convoy routes. In spite of all that can be done to ovecome submarine attacks it must be admitted that during this year, 1942, merchant shipping losses have been very heavy, particularly in North American coastal waters.

Mr. HANSON (York-Sunbury): Does the minister mean convoy shipping?

Mr. MACDONALD (Kingston City): I am just coming to that. The reason for this condition is to be found in the difficulty of providing convoys for all ships that ply the seas, and the very fact that the enemy has had such a considerable degree of success against non-convoyed ships is proof of the effectiveness of the convoy system. We must provide merchant ships to replace those that have been lost; but, Mr. Speaker, merchant ships alone are helpless to-day, in a war of this character. To the utmost limit of our ability to produce and man them, we and our allies must turn out fighting ships to guard our freighters, our tankers, our supply ships of all kinds that are carrying the products of our farms and factories over the seas. It would be vain and fruitless for us to speed up and greatly increase our production of war supplies for overseas, unless we could transport those supplies overseas. It would be senseless for us to encourage our farmers to produce more and more food for our allies if we could not carry that food to them.

I come now to the growth of the Canadian navy. I may remind hon. gentlemen that when I first spoke to the House of Commons on naval matters I pointed out that at the beginning of the war the Canadian navy had some fifteen ships available for service; and at the time of my first speech, in November, 1940, I was able to say that this number had increased to 155 ships. At that time I expressed the hope that by the end of the fiscal year 1941-42, that is by last March 31, we might reach the figure of 250 ships. I can now say that this figure has been far exceeded, and that at the end of the last fiscal year there were more than 400 ships flying the white ensign and under the command of the Royal Canadian Navy. These ships range from auxiliary cruisers down to destroyers, corvettes, minesweepers, motor patrol boats, motor torpedo boats, and a large number of other auxiliary craft. So that in ships alone the navy to-day is nearly thirty times as great as it was at the outbreak of war.

What about man-power? When the war began the number of men in the navy was 1,774. In late 1940 we planned to have about 23,000 men in the navy by the end of the then coming fiscal year, that is, by March 31, 1942. That was our estimate of strength at that time, but that figure too has been well exceeded. Instead of 23,000 men, on that date the Royal Canadian Navy had more than 31,000 men, or an eighteen-fold increase over the figure at the outbreak of war. These men have been enlisted in all parts of Canada. Most of them have come from the Royal Canadian Naval Volunteer Reserve, of which there are some eighteen divisions in the dominion, from Charlottetown on the east to Vancouver on the west. Every province has given its share of men, though I am bound to say that the provinces of Nova Scotia, Prince Edward Island and British Columbia, where the tradition of the sea is strong, have given larger numbers per capita than the other provinces. But as I have said, we have had our share of recruits from all provinces. We have had them from the banks of the St. Lawrence and the Quebec seacoasts, from the shores of the great lakes, from the province of Manitoba, as well as from the prairie provinces of Saskatchewan and Alberta, and there is no lack whatever of recruits for the navy; there is still a very considerable waiting list for that service.

Most of our men serve on Canadian ships or in Canadian shore establishments, but more than 1,100 Canadians are serving with the Royal Navy on every type of ship. You will find them in battleships of the British navy, in cruisers, in destroyers, in corvettes, in motor boats, in submarines and in every other type of craft. You will find them on every sea. They have fought in every part of the world—in the Atlantic, in the Pacific, in the Indian ocean and the Mediterranean sea. As a matter of fact when the Royal Navy cruiser *Dorsetshire* was sunk in the Indian ocean a few weeks ago, no fewer than six of her officers were Canadians, among them the son of my colleague the Minister of Munitions and Supply. Fortunately all those young Canadian officers were saved when that ship went down.

The personnel, the man-power of the Canadian navy, depends on several factors. One of these, of course, is the number of men available. In this respect, as I have pointed out, there is no shortage. A second factor is the number of ships. Here for some time the production of ships and the training of men have proceeded at an almost equal pace. But the third factor, which is now beginning to constitute one of the main problems of the navy, is the supply of properly trained officers and petty officers. The training of these men is of necessity, from the very nature of the case, long and varied. They can learn some things on shore, but after they have had all the training that can be given on land there is still a long period of sea training necessary before you have an efficient officer or petty officer. Normally—I am speaking now of peace time—a man would not be given command of a ship unless he had served for some years at a school or shore establishment, then

a period of service at sea, then more time on shore, and then again to sea as a junior officer. In the British navy in normal times it would take a man from twelve to fourteen years, from the time he entered the navy as a youth, before he would be considered fit to command a ship. In war time of course there are many cases in which that time has to be considerably abridged. But with a navy such as ours, which at the beginning of the war had only 1,774 officers and men, it can be seen how difficult was the task and how difficult is the task to-day of providing from so small a nucleus for the expansion which has taken place.

We have been fortunate in having in the country a large number of professional seamen, men who manned our fishing fleets and our mercantile marine, on our great rivers and lakes, and on both oceans. Many of these men have found their way into the navy, and have been of invaluable assistance. But in spite of that, and desirable as that accretion to our strength has been, we have had to rely for our personnel mainly on men who have had no great amount of training in ships. The bulk of our personnel has come from the civilian population—from the clerks, the labourers, the doctors, the lawyers and business men of our cities, towns, villages and hamlets. But just as the Canadian army in the last war was made up largely of this sort of men, and just as that army acquitted itself with such gallantry on the battlefields of Europe, so, I am sure, will the Canadian navy, recruited in much the same manner, continue to prove worthy of itself and of Canada.

Perhaps I should say a word to the committee about naval training. The training of naval ratings, the men on the lower decks, in the ranks, is begun ordinarily at one or other of our eighteen volunteer reserve divisions. At these divisions the rating receives preliminary disciplinary training for a period of about eight weeks. He is then transferred from the division to a coastal area, either on the east or west coast, and he receives there what is called "new entry training." This training lasts for a period of ten weeks. Following this he is drafted to sea. After he has his sea legs he may be brought ashore for more highly specialized training, such as training in gunnery, torpedo work, wireless or anti-submarine work. I may say that every effort is put forth by our officers and petty officers to place technical and skilled men at the kind of work where their qualifications will produce the best results. So much for the training of ratings.

Now to the training of officers. This is usually undertaken in the first instance at one of the volunteer reserve divisions. The prospective officer attaches himself to one or other of these divisions, and undergoes a certain amount of training there. In due course he will be interviewed by a selection board of naval officers who decide whether or not he is likely to become an efficient naval officer. If the decision is yes, he is then called to an officers' training establishment at Esquimalt or Halifax, where he is given a four months' course. During that time he is known as a probationary sub-lieutenant. If he is successful in his course he drops the term "probationary" and becomes a sub-lieutenant, and is assigned to duty either on a ship or in some shore establishment.

I believe the committee will be glad to know —and it is indicative of the very high calibre of the men we have been able to attract to the ranks of the naval service—that no fewer than 512 of the men who entered as ratings, in the ranks, have been promoted to officer ranks since the beginning of the war. Officers in command of ships, and all others charged with the supervision of men, are constantly on the alert to discover among those under their command those qualities of initiative, courage, leadership and resourcefulness necessary for good officer material. There is no bar to advancement in the navy, except the bar of inefficiency.

There are one or two further matters in connection with training which I shall mention. In addition to the training we undertake ourselves directly, in the divisions and at the posts, we have also taken advantage of various training schemes arranged throughout the country to qualify young men in the mechanical trades. The navy has now some 700 young men who have entered upon courses which will last for approximately three years, and which will qualify them for positions as artificers skilled in engine room, electrical and other types of mechanical work. These young men begin the course at about the age of seventeen years; and in due time they will form a reservoir of well-trained, technical men who will be available for the naval service.

In this connection I would point out that several universities across the country have helped us greatly by training naval technicians, particularly in radio and anti-submarine work. With the development of scientific warfare, and with the increasing complexity of its instruments, technical training has become increasingly important. It has been said, and said truly, that a ship to-day is not only a ship; it is an arsenal and a floating machine shop as well.

We require skilled mechanics on ships. We also require skilled mechanics in naval dock yards for the purpose of repairing the ships.

I am sure I need not emphasize the importance of prompt and efficient repair work. A fighting ship is of no value whatever tied to a dock. If she is damaged she must be repaired as quickly as possible and made ready for sea again. Some of this work of course can be done in private yards; but the naval dock yards must be prepared to do their full share. With that in view it may be necessary to increase the establishment at these dock yards.

Not only do we have to consider repairs in our yards, but we have to take account of new inventions which seek to counteract or to anticipate the tactics of our enemies. We have to incorporate these in our ships from time to time, if the ships and their crews are not to be placed at a serious disadvantage. I am happy to say that so far as repairs to ships are concerned, the work carried on in Canadian yards is done in approximately the same time and with the same skill as is shown in the yards of the United States and the United Kingdom.

A new type of service on which the navy is about to embark is to be provided by the women's corps. Like the army and the air force, the naval service feels that there are many posts and positions now being filled by men which could be filled equally well by women, and that immediately new posts arise, they should be filled by women. Accordingly, we propose to establish a women's branch of the service similar to the Women's Royal Naval Service, or "Wrens", as they are called in Great Britain. Some leading members of the British women's service will arrive shortly in Canada to assist in the organization of the branch here. When the organization is fully under way it is expected that several thousand Canadian women will be incorporated into the new branch.

Mr. HANSON (York-Sunbury): What do you propose to use them for?

Mr. MACDONALD (Kingston City): There is a great variety of work that they can do, such as clerical work, decoding, deciphering, car driving, and possibly messenger work.

Mr. HANSON (York-Sunbury): Administrative work.

Mr. MACDONALD (Kingston City): Administrative work and the like. I should like to say that there are women's auxiliaries which in many cases have attached themselves to branches of the naval volunteer reserve divisions throughout the country. These have done a fine work, all voluntary of course, in providing comforts in the way of clothing, reading matter and the like for men at sea. What these women from one end of Canada to the other have done is fully appreciated by the men who have to brave the rigours of the north Atlantic winter. I know they will always remember with profound gratitude the interest and the support of these women's auxiliaries.

Another organization to which I should like to refer is the Navy League of Canada, whose work, particularly on behalf of merchant seamen, has been of great importance and great value. These men are out in all kinds of weather and in all seasons, in the cold of winter and in the heat of summer; their calling is dangerous enough in peace time, but is trebly dangerous now, and anything that can be done for them is well deserved. The navy league has given particular attention to these gallant merchant seamen. It has built hostels in coastal ports and in ports on the St. Lawrence river; it has provided clothing and other comforts for men in many parts of Canada, not only for Canadian merchant seamen, but the seamen of our allied friends as well. The navy league has always taken a special interest in the sea cadets. Last summer the Canadian navy decided to assume fuller responsibility for the sea cadets, and we secured the services of Mr. R. C. Stevenson of Montreal to act as coordinator of sea cadet activities. He is responsible to the Department of National Defence for Naval Services, but he works in close association with the navy league. I may say that there are now 2,700 sea cadets in Canada who range in age from twelve to eighteen years. By the end of the present fiscal year we hope that that number will be increased to some 8,000. We have found from experience that many young men who have had training as sea cadets have been able to shorten considerably the training time ordinarily consumed by new entries into the navy. Many of our best officers and ratings have had training with the sea cadet corps.

One word about the medical services of the navy. I may say to the committee that we now have 170 doctors and some 40 nurses in the Royal Canadian Navy. Forty doctors are with the Royal Navy, so that the total number administering to our own personnel is 130 doctors. I am glad to be able to say that the health of the navy is good. In 300,000 hospital days there have been 23 deaths from illness. Recruits for the navy show a high standard of health; for only 10·3 per cent of those who apply for enlistment have had to be rejected, and after enlistment only about 3 per cent of the personnel have had to be discharged on medical grounds.

The naval service also carries on very extensive research work, some of it under the direction of eminent medical men in this country. Among these I might mention Doctor C. H. Best of Toronto, whose research work with Doctor Banting in the field of insulin brought him international fame. He is now a naval officer, and he and many others are giving their attention to the study of diets on board ship and on shore, even to the study of seasickness, to the study of conditions which affect the eyesight of men, to the problem of the fatigue among technical operators, to the effect of noise on men's nerves and the possibility of eliminating it, and so on.

I think the committee knows in a general way what the duties of the Royal Canadian Navy are. I have often said that they are threefold. In the first place, they guard the coasts of Canada; in the second place, they escort convoys across the seas, and, in the third place, they take aggressive action against the enemy whenever possible. All these three functions very often merge one into the other. For example, if a Canadian vessel is escorting a convoy across the Atlantic and attacks and destroys a German submarine on the way, she is discharging all three functions at once. She is, of course, escorting and protecting her convoy, she is guarding the coasts of Canada by destroying an enemy vessel, and she is also taking aggressive action against the enemy. I think it would be correct to say that up to the present the task of convoying ships has been the main task of the Canadian navy. In a war of this kind the convoying of ships is a matter of the greatest importance. The task of carrying food and other supplies from Canada across the seas falls to the merchant navies of the united nations, and the task of escorting those merchant ships falls to the battle craft of the United Kingdom, the United States and Canada.

Our navy, consisting of a goodly number of small craft such as destroyers and corvettes, is peculiarly suited to the task of convoying. That was the work which we were asked to undertake at the beginning of the war; that was the work that lay nearest to our hand and that is the work we have continued to do for the past two and one-half years. How important that work is to the success of the common cause will appear readily when I say that since the beginning of this war more than 56 million tons of cargo have been carried from these shores across the Atlantic, and that more than 9,000 ships have been convoyed over those waters. I exclude from those figures, of course, troop convoys which have also left our shores and which have had gratifying good luck in their voyages. The work of the convoy has all the dangers of sea warfare—the submarine, the mine, the surface raider, the enemy aircraft—in addition to ordinary perils of waters. All these dangers have to be braved to-day by the men who go down to the sea in ships, and more than five hundred members of the Royal Canadian Navy have given their lives since the outbreak of the war. Seventy-two honours and decorations have been awarded to our personnel.

A word as to our plans for the future of the navy. In the present fiscal year we hope to enlarge our personnel by some 13,000 officers and men. In other words, I hope that by March 31, 1943, the Canadian navy will have a strength of about 44,000, and in the same time I hope we can add not far from 100 ships to our fleet.

Another thing I should mention is the opening of the naval college at Esquimalt, on the west coast of Canada, in September or October of this year. I think everyone will now agree that the closing of the old naval college which was first established at Halifax in 1910 was a most unfortunate occurrence. I have already told the committee something of the difficulty that we experience in providing trained officers and petty officers, and this difficulty has been greatly aggravated by the fact that since 1923 no naval college has existed in this country. It is my fervent hope that this naval college, once established, will be continued forever and will become a training ground for men seeking to adopt naval life as a profession, whether as officers of the Canadian navy or in the mercantile marine. I hope also that after this war Canada will resume and even enhance her position as one of the great trading nations of the world, sending her goods to all parts of the world; and if that is to be so, we must have in this country an establishment wherein men to man Canadian ships can be fully trained.

It is only thirty-two years since the foundations of the Canadian navy were laid. Indeed, many of the men who were Canada's first naval cadets and recruits are still on active service. It is a new navy; in comparison to the sea forces of other great nations it must be called a small navy; but it is shaping its own traditions of valour and service, and it draws much of its inspiration from the Royal Navy itself.

I wonder if there is in any country a fighting service that has had so long, so important and so glorious a place in that country's history as the British navy. Its record goes

back almost to the beginnings of the nation; for the people of Britain realized early that a strong navy was absolutely essential to the defence of their island. The pageant of British naval achievement is great and colourful, and in it at one time or another are to be found some of the great names of England. Drake the Devon man, is there, and Hawkins and Howard and Blake, and Sir Richard Grenville of the *Revenge*, and Rooke and Rodney and Frobisher and Raleigh and Collingwood; and above them all the towering figure of Nelson himself. They are joined in this war by a great and goodly company: by the men of Montevideo, by the naval heroes of Narvik, by the gallant Captain Fogarty Fegen, of the *Jervis Bay*, going to certain death to protect his convoy; by those men who stayed in their ships off the coast of Crete under terrible naval and air attack and who, suffering grievously as they were, nevertheless made good their promise that no German troops would be landed on that island by sea. They are joined by the men who fought against overwhelming odds in Malaya and at other points in the far east; by the men of Dunkirk, where the seamen of England, the fighting ships of England, the merchant ships, the yachts, the tugs, and the motor boats rescued 335,000 troops from irreparable disaster. It has been well said of the British navy by a Britisher:

> Theirs is a great imperial service, a service whose tradition is silence, whose devotion to duty is as unobtrusive as it is instinctive, the graves of whose heroes are recorded neither in brass nor in stone, for they lie in every latitude, in the fathomless depths of the unplumbed, salt, estranging sea.

It is with that service, Mr. Chairman and hon. members of the committee, that the young Canadian navy has the honour to be associated. It is in that service that many of our officers and men have been trained. It is the traditions of that service that we take as our own.

There are some, I know, in the world to-day who look back into history and who raise their eyes from the record to tell a dismal tale of Britain's mistakes and England's misdeeds in the past. Let us admit that she has made mistakes, as what nation has not? What shield is without its shadow? But for my part, as I have said elsewhere, admitting errors and recognizing faults, I take my stand on the words of a Greek statesman, spoken twenty-five centuries ago, "For even when life's previous record shows faults and failures, it is just to weigh the last brave hour of devotion against them all." And against all the mistakes, all the injustices, all the faults of their country's past, I set the heroic stand of the British people in these times, their stand for world freedom, justice, order and decency, and I await with complete confidence the tilt of the scale. The main burden of enemy attack has been borne by the island of Britain for two and a half years. For two and a half years she has had to experience the most ruthless sort of warfare. Her lanes of commerce have been savagely attacked. Her cities and her countryside have been blackened by enemy bombs. Her people, young and old, have experienced the full force and horror of war. Yet she bears herself gallantly, this nursery of freedom, this mother of democracy. She draws on her deep reservoirs of courage and tradition. She kindles the imagination of the present with the torch of the past. She appeals not in vain to the great exploits of other days and her seamen remember the tradition of Drake. Drake dying ordered his drum to be taken to England, declaring that if ever the country stood in dire peril they should beat it and he would come back from his grave.

> Take my drum to England, hang it by the shore,
> Strike it when your powder's runnin' low.
> If the Dons sight Devon, I'll quit the port o' Heaven,
> An' drum them up the Channel as we drummed them long ago.

In that setting, Mr. Chairman, in that background, the Royal Canadian Navy proceeds to its task and moves forward to its destiny.

Mr. STIRLING: I feel sure that the members of the committee have listened with deep attention and very great interest to the account which the Minister of National Defence for Naval Services has given of the affairs of his department. He has touched on the very close association which exists between the Royal Canadian Navy and the Royal Navy. He has referred to the fact that the Royal Canadian Navy draws its officers and men from all the provinces of Canada through certain channels, and it has always appeared to me that we must never omit the expression of gratitude to those who in the earlier days of the Royal Canadian Navy laid plans so well that those plans have been successful in doing exactly what they were intended to do.

I do not go back to the years before the great war. Canada has a naval history beginning then. I refer rather to what happened after the great war, after Canadians of all ages and ranks had served with the Royal Navy for the common purpose. After the great war, when we were settling down into a period of idealism, when we were wading through idealism, and setting up for ourselves ideals that unfortunately have not been attained, plans were laid to maintain

a navy for Canada. It was realized that the way which it might be possible to follow would be to create and to maintain a small permanent force, and it has only been with great difficulty on many occasions that that little Canadian navy has been preserved. For again and again, through those years of peace, there were those in this house and in the public press who endeavoured to belittle the efforts which went to maintain the Royal Canadian Navy. Still it survived, because fortunately successive governments realized that it would not be reasonable to destroy that little naval germ which had been established with so much difficulty in Canada.

That was what one might call the first part of the plan. The second part was to make arrangements for the provision and then the training of those who should enter the Canadian navy. That was a twofold effort: the Royal Canadian Volunteer Reserve, to which the minister has alluded, and the Royal Canadian Naval Reserve, to which he has also referred, explaining that it was formed from those whose work takes them on the sea in the ordinary way in the merchant navy.

I think it is a remarkable thing that the Royal Canadian Naval Reserve, created at a time when Commodore Hose, now Admiral, was chief of the naval staff, and created so that there should be representatives of it in all the provinces of Canada, should have been so successful in retaining the interests of Canadians. For although two of the provinces do not touch salt water, and three others touch it but very little, yet we find that through the interest and the call of the navy, the attraction, history, whatever may be the reason, through all these the Royal Canadian naval volunteer reserves have been successful in keeping up the stream when the pressure of war has come, so that to-day the minister is able, in the third year of the war, to describe the extraordinary increase both in numbers and in tonnage in what was once this little naval germ in Canada.

Of course, the retention of the permanent force, small though it was, was only possible because of the training which was available to our young officers and petty officers in their close connection with the Royal Navy. Our cadets, our midshipmen and sublieutenants took their early training in the Royal Navy. Our vessels were not numerous enough or large enough to give them experience. It was necessary for them to be with the Royal Navy. Ever since the creation of the Royal Canadian Navy these junior officers have gone to the Royal Navy and received the training, yes, and the traditions, beaten deep into them from association with the Royal Navy. Our gunners, our torpedo men, our signallers and petty officers have gone there and received instruction and they with our young officers on their return have imparted that instruction and assisted in the training of what has now grown to the very considerable naval effort of Canada.

I should like the minister to give us a great deal of information in expansion of the bare outline which he did give. I think, if I may say so, he did wisely in touching on a good number of points connected with the navy, but perhaps we had better take them one by one. He might deal with two or three that occur to my mind on which I think we should like to have some information. In the first place the estimated figure for this financial year, is, I believe, $259,000,000. I believe that is $120,000,000 greater than the corresponding figure for last year. Last year the minister divided that into a considerable number of headings. We should like him on this occasion also to divide the amount up, indicating as he goes where the principal increases have gone.

Then with regard to training, the references which he made in his speech appeared to me to cover principally the training which is afforded to the officers and men of the volunteer reserve. I should like also to know what the state of the Royal Canadian Navy entry is. So far as I am aware we are still receiving boy entry and we are still receiving cadet entry both for executive and for pay. I should like him to tell us whether the routine of peace days has in any way been departed from in the training which they receive. For instance, do our cadets go over and receive similar cruiser training to that which they received when the *Frobisher* was the training cruiser?

With regard to the training of the Royal Canadian Naval Volunteer Reserve, the minister referred to the first lot of training and the second lot of training which took place at the sea coasts. I should like him to amplify that and give us detailed description of the training establishments which must of necessity have been set up on both coasts to provide for that training; and also to tell us, on the question of training, with regard to those who enter from the Royal Canadian Naval Reserve, the merchant service and the fishing boats, whether those officers and men also receive refresher courses before they go to sea in the corvettes and the like.

Mr. COLDWELL: We have listened to an interesting outline this afternoon, similar in some respects to the information which was given us on another occasion. I am sure

every hon. member of this house feels a debt of gratitude to the men who are serving in the navy and in the merchant marine, and anyone who speaks at this time, as the minister did himself and the hon. member for Yale a few moments ago, cannot but appreciate the tremendous place which the navy holds in the minds of all our people and the task which it performs in the great struggle in which we are now engaged.

I was interested in hearing the minister recite "Drake's Drum"; for as a boy I was brought up in the district in which that legend originated, in the land of the men to whom he has referred, the men of Devon; great as are the traditions of the navy, those who at this time are engaged in convoying or in operating the merchant ships are perhaps engaged in an even more difficult and dangerous task than that of the men of ancient times who sailed the oceans and brought their ships in safety to the shores of new distant continents.

The hon. member for Yale was asking some questions about training and the establishments that have been set up for training the personnel of the Royal Canadian Navy. I have no doubt the minister will give those answers in a little while. It is interesting to note that many of the men who have joined the navy in recent months came from the prairies, from regions where there is little water, and many a young naval lad's first sight of the sea was the day he began to take training at one of the coasts or on a ship. That they have made good seamen goes without comment, because we have heard it on every hand. When we were in Great Britain we met at Portsmouth some of our Canadian boys who were serving in the Royal Navy, and had an opportunity of chatting with them about their experiences. I wish to take this opportunity, when discussing the personnel of the navy and their training, to express the hope—I am not the first to raise the question; it has been brought up by other hon. members on both sides of the house—that the pay and particularly the allowances to the dependents of our naval men will be increased. Only at noon to-day the wife of an officer who is looking after wives of men who are serving, not in the navy but in the air force, was telling me of the really deplorable conditions under which some of the wives and families of our naval men are living in Montreal and in other Canadian ports. It is a blot upon this country that the allowances to the men engaged in such a difficult and dangerous task are so much less than those given to men in the army or the air force. I would not of course have it understood that I think the allowances made to the dependents of men who serve in the army and the air force are at all adequate in these days of increased costs of living. That they are inadequate serves only to emphasize the point I am making, that the wife of a man serving in the navy, and receiving $15 a month less than the wife of a man serving in the army or the air force, has to live upon a standard that is impossibly low at any time but more particularly in these days of high prices.

I am glad to know that the number of our ships is being increased so rapidly. I realize of course that many of them are small ships. I recall that before the war broke out our friend and colleague at that time, Mr. Grant MacNeil, then the member for Vancouver North, often spoke in this house on the necessity of obtaining fast small boats for coastal patrol work. That policy is being carried out to a degree to-day. And if I may say so, the very fact that we are building many corvettes and many smaller boats and that we have so many of our young men serving in these small ships, is another reason why we should give every consideration to the conditions ashore under which the men and their families live. Those of us who have been on mine-sweepers, or corvettes know very well that the quarters are cramped; the ships are small, and on the stormy Atlantic to live on one of those boats must be indeed uncomfortable to say the least. Everything this house and the government can do to make conditions as favourable as possible for the men who go down to the sea in ships, both of the Royal Canadian Navy and the merchant service, ought to be done. I was brought up by the sea, and have often seen the ships of the Royal Navy anchored in the bay. In Canada I have seen our ships at Halifax in winter time. I realize that difficult and, in bad weather, dirty as the job was along the coasts of Britain, and particularly along the shores of the English channel, it was not comparable to the difficulties and discomforts which the men of our Atlantic coast, in particular, have to undergo. When I saw ships coming into Halifax almost encased in ice I marvelled at the courage and fortitude of the men who had to withstand not only the mighty waves of the ocean but the frigid cold of winter on the Atlantic coast. And when we think that during the past few months they have helped to convoy hundreds of thousands of tons of shipping and supplies across the sea, not only to the beleagured island of Britain but also to our allies in Russia, to our troops in Africa and now across the Pacific ocean, facing not only the dangers of the weather but also torpedoes, bombings from

the air and every devilish device which the ingenuity of man has brought to bear in this great war, we cannot but marvel at their courage. So I say that anything we can do to improve conditions for the men while they are at sea, to provide proper recreational facilities for them when they come ashore in the great ports, and to provide adequately for their families, should be done. I am not going to repeat what I have said so often about Halifax, but we should see that the wives and families of these men are properly housed and provided for.

The matter of housing accommodation is one into which I think the department should look very carefully, and which I think should be strictly supervised by the rent control authorities. I refer to the rent that has to be paid by these seamen—yes, and this applies to the air force and to the men in the army, to some extent—who from time to time have to move with their families from place to place, who have to find new quarters and who therefore are not always protected by the rent restrictions which protect those of us who have been located in the one place for the past two or three years. We should see that these men are not victimized through being charged high rents in the various cities and ports to which they have to move.

As this discussion proceeds I have no doubt that the minister will be asked a great many questions with regard to our ships and our men, and as to the conditions under which those ships operate and the men serve. I do not propose to ask any questions now, but we as a group have some questions in mind which my colleagues and I will be asking as the question period progresses. However, I do want to take this first opportunity of urging upon the government the necessity of seeing to it that these men are remunerated—not properly, because money cannot properly remunerate them—to an extent more nearly commensurate with their services, and that at least their wives and dependents are protected to a far greater degree than they are at present. The other afternoon I said something about the delinquency in Toronto among the children of men overseas and women working in factories. I understand that the same condition exists in Montreal and other seaport and industrial cities. As I said then, each of our defence departments should see to it that the government and the treasury board are made aware of the requirements, so that a suitable appropriation may be made in order that the children of the men and women who serve may be well looked after by the communities in which they live. That will require federal grants and appropriations.

We may be proud of the part that has been played already by the small Royal Canadian Navy, which is expanding month by month. I think we owe a debt, as a parliament and as a nation, to the men who are serving us in many capacities in that navy and in the merchant service of our own and the allied countries.

Mr. BLACKMORE: Mr. Chairman, since the beginning of this war I have derived a great deal of satisfaction from the fact that this country has given so much attention to the navy, and has recognized the necessity for increasing it. I can remember as a small boy wondering why Canada, with the resources which should enable her to build a great navy, should limp along so helplessly in this regard in the great British commonwealth of nations. The history of the British empire and the British people has been intimately and inextricably bound up with the sea, with ships. For over a thousand years the Britishh navy has been supreme, until it has become a tradition, almost an instinct, on the part of British people to expect that their fleet should be able to conquer any other fleet or any combination of other fleets that might be brought against it. Why Canada did not build a powerful and efficient supplement to the British navy, I never could make out.

I welcome the report of the minister indicating that our navy is expanding. There is quite a tendency on the part of many people to believe that when this war is over we are going to emerge automatically into a new order in which we no longer will be called upon to defend ourselves. Judged by all history and all common sense, Mr. Chairman, ideas of that sort are utter nonsense. We should build permanently, build deep and strong, and build for the future. Perhaps men will be able to organize a giant, super-world-state under the canopy or wings of which all nations may be able to rest quiescent, but I see no evidence of it. I should say the first thing for us to do is to be strong. If a great super-state should be built up willing and able to guard the peace and safety of the world, that will be the time to relax our efforts toward making ourselves secure, but certainly we should not do so before such a state has been evolved. We are going, I fancy, into an era of great tribulation. Probably the most war-like time in all the world's history stretches before us within the next generation. I believe the minister and his department should have this in mind, so that they may not build temporarily. They ought not to cease to build when the war is over, but should prepare themselves for an era of perhaps fifty years during every one of which

the ships of Canada and the men of Canada shall be ready and able to go forth upon the seas and meet any enemy which may come.

There will be those who will wonder how Canada could sustain such a programme financially. With that aspect of the question I am not going to deal, except briefly to point out, as has been stated many times already, that what is physically possible can be made financially possible. The number of ships Canada can build and man will depend upon the iron, coal, timber and other necessities for the building of ships which can be found in Canada. It will depend, too, upon the number of men and factories which can be found to build the ships, and the number of men who can man the ships. Let us adopt a progressive policy, one which values children; and I think we shall have no difficulty in raising sufficient Canadians through the years to come, to man and to build as large ships and as many ships as we need.

I should like to add my voice to those who have contended that better pay should be given to those in the navy. We should make the navy attractive not only romantically but economically. I feel that the men who join our forces, whether the army, the navy or the air force, should move among us as select men, as the elite. I see no reason why they should be paid an income so small that they are fearful of the future or, shall I say, hesitant about living generously in the present. I believe it is possible for Canada to provide all her fighting men with all the needs of life, not only while the war endures, but just as long after the war as they shall live.

It is a most shortsighted and destructive policy on our part to neglect the possibilities of the children of our fighting forces. There is no reason why there should not be a good family for every man in the fighting forces, and no reason why anyone should hesitate to marry and to rear children because of financial circumstances and anxieties. We would all grant that those who join the fighting forces are the noblest among us. They are strong; they are courageous; they are healthy. Surely they should be the parents of the generation to come. I would urge upon the minister that he do everything in his power to make it possible for every one of the men under his direction to have a good home, a good family and complete confidence in his economic future.

Mr. ROSS (St. Paul's): Mr. Chairman, I shall have a number of questions to ask as the debate proceeds, but I rise at the present time with only one purpose in view. In the gallery to-day sits the father of one of those fine boys on H.M.S. *Dorsetshire* of the Royal Navy. I do not mind giving the boy's name. It is Lieutenant-Commander Ross Wilson, and his father is Mr. Leslie Wilson. His mother, whose maiden name is Mabel Ross, I have known ever since I was in the kindergarten. She is the daughter of Sir George Ross. His grandfather, Sir George Ross, was one of our greatest Canadians. Although he was on the opposite side of politics from me, I had known him many years, and he was always a great friend of mine.

I speak about Ross Wilson for only one purpose, and that is because he exemplifies to my mind the boys of this country who are serving Canada, and who have been educated at such schools as Upper Canada college, St. Andrew's, Trinity college, Ridley college, Bishop's college school, Lennoxville, Que., Appleby college, Pickering college, or in the collegiate institutes of Ontario. I cannot say enough about the fine performance he has given.

I should also like to point out that a great deal of credit is due to yacht clubs of one kind or another, which have offered opportunities for these young lads to gain experience on the water. I should like to pay a tribute to my own yacht club, the Royal Canadian Yacht Club of Toronto. And while on my feet may I pay a further tribute to my grandfather, George Gooderham, and to my uncle George H. Gooderham, for all they have done for the yachting activities of this country. I believe I am justified in taking this opportunity to pay tribute to these men who have done so much toward manning our Royal Canadian Navy, and I know the minister will agree with my observations in that regard.

There are other matters I should like to discuss. I have taken up some of them privately with the minister, and to some of my inquiries I have not received answers. With respect to those I shall question the minister in committee.

I should like to close my observations by quoting some verses which all Canadians should know—I believe all do know them. These verses really do not mean only England. They go much deeper than that; they include Canada, our way of life and everything it exemplifies. These are the verses:

When Britain first, at Heaven's command,
Arose from out the azure main,
This was the charter of the land,
And guardian angels sung the strain:
Rule, Britannia, rule the waves,
Britons never will be slaves.

"Britons" means us; it means all we stand for in Canada; it means French-Canadians and German-Canadians and it means magna charta. And one more verse:

Thee haughty tyrants ne'er shall tame;
All their attempts to bend thee down
Will but arouse thy generous flame,
But work their woe, and thy renown.
Rule, Britannia, rule the waves,
Britons never will be slaves.

Mr. MacNICOL: Mr. Chairman, as honorary president of the Navy League of Canada, Ontario division, I would be derelict in my duty on behalf of that body if I were not to rise at the earliest opportunity and thank the minister for his very kind references to the work that has been and is being done by that organization. I do so with very great pleasure. What has amazed me since Canada first began to take part in this sea warfare has been the record of the achievements of our various ships. They have done splendidly even though they are not large. Our men have given evidence of being as brave and of possessing as much fortitude as the men in any other fleet. On reading the names of those who have suffered or who have been lost, I have been amazed to see the number who came from the provinces remote from the sea, especially the western provinces of Manitoba, Saskatchewan and Alberta. Later when the minister is ready to give us some figures I should like to have the number who have enlisted from each province. All reports about fighting on the sea have recorded the conspicuous gallantry of these young men. We should expect of those who were born near the sea a love of the sea and a willingness to render excellent sea service, but the record has been the same of those who come from my own province of Ontario and from Manitoba, Saskatchewan and Alberta. It gives a clear indication and example that fortitude and strength and heroism are not confined only to people living close to the sea.

Like others who have spoken, I have been pleased with the expansion in our naval forces as outlined by the minister. In this connection I was glad to hear what the minister said about the personnel of our ships. As he said, there is no use in having ships unless we have the personnel to man them. I believe I first became associated with the navy league in 1917, the year it was founded. A famous man from Portsmouth, one of the great union heads, came here; I believe his name was Peter Wright. He had performed a great work in keeping up the morale of the people in the old country, and he brought with him the same high spirit. I met him on several occasions and I was always thrilled by his bravery.

The navy league has done a splendid work. There are sea cadet corps right across Canada, commencing in Vancouver, then Calgary, Regina and a most excellent corps in Winnipeg. In its day, if it was not the strongest numerically it was certainly one of the best trained corps in Canada. At the head of the lakes there were corps at Fort William and Sault Ste. Marie. Then there was an outstanding and very strong corps at Toronto. This was the headquarters for Ontario as well as the principal branch of the Navy League of Canada. In Ontario there were corps at Welland, London, Kingston, and Ottawa, as well as at Montreal, Quebec, Saint John, New Brunswick, and Charlottetown, Prince Edward Island. There was also an excellent organization at Halifax.

I often think of the splendid men and women who gave their time freely to this work. The women tried to make things comfortable for the boys around headquarters and in the different towns and cities. They provided comforts of one kind and another and occasionally a dinner to encourage the young lads. I think of the men who trained them. The amazing thing to me is that there were so many men who were willing to give of their time and means, particularly of their time, in training these young lads in the way they should go. In years gone by when the present Minister of Pensions and National Health, at that time minister of defence, would bring down the estimates for cadet training I never failed to support them. It always surprised me that there were members in this house who bitterly opposed voting money for this most laudable work of training young men. Cadet training taught them to be civil, to be courteous, to be manly, to do the very things that are so much required to-day by young men in our navy. I thank the minister sincerely for his kindly remarks about the Navy League of Canada and for his support of the league since he became minister.

It may be a little early to suggest it, but I do suggest to the minister that some plan be initiated by the department of naval services to provide some means of living or some plan of living after the war for the thousands of men now in the naval service. The minister has told us that there are some 33,000 in the service, with the number constantly increasing until we may reach perhaps 40,000 or 50,000. Many of these young men never worked at anything else in their lifetime; their only training has been in the naval service. Many of them came from the farms of the west or Ontario, and when they leave the service they will know nothing about the problems of life outside the service. I hope the minister will start now to consider

some plan under which thousands of these fine naval personnel can be placed in permanent positions after the war.

After the last war I went to England as a member of a delegation to interview Lord Jellicoe, who at that time was head of the colonization service, if not of all England in any event of the Anglican church. I was greatly interested in the keen grasp that that great man had of the need of doing something for the thousands of men who had served under him at Jutland and under other admirals during the great war. As a result of that meeting the navy league was successful in placing here in Canada several thousands of those wonderful men; I have just forgotten the exact number. Many of them were placed on farms, and at that time the navy league made it its business to keep in contact with the men who had been placed as a result of the work of Lord Jellicoe and his committee. On many occasions it was my great delight to visit some of these families and observe how they were getting along. They made good. That type of man could not do anything else but make good. I hope the minister will proceed at once to initiate some plan to take care of the personnel of the Canadian navy after the war.

I can remember the bitter debate that took place in this house at the time the naval college was closed. I hope that never again will this parliament have to listen to such tirades as were delivered on that occasion against the men who were interested in maintaining the strength of this empire. I do not blame only those who were in the house at that time; I blame also the pacifists outside the house. Any man who advocated a vote for the sea cadets or for the maintenance of our military institutions was branded a warmonger. I am glad to say that that is all past. Nobody to-day would have the unfairness to charge supporters of the maintenance of our defence institutions with war-mongering. But, Mr. Chairman, this empire would not be in the difficulty it is in to-day, and many thousands of the gallant men of our empire would not now lie dead in Malaya, in the oceans and elsewhere had not dear old England too succumbed to much the same kind of pacifist talk that we in this House of Commons had to endure, and that had such an effect on the estimates of the then Minister of National Defence, now the Minister of Pensions and National Health. I was always glad to support him against such attacks, and on many occasions urged him to increase the grants for cadet training. It is too bad that that was not done.

May I now pay a tribute to another part of the group which constitutes our naval strength; I refer to the men back in the factories—workmen, designers, draftsmen, machinists, riveters, and those who organized the plants for the building of ships. On many occasions in past years I have heard those who operate these plants denounced in this chamber as being everything they should not be. Yet I do not know what this country or Great Britain would do to-day without the men who in years gone by erected plants and factories and organized their businesses to produce what we are making to-day. Reflect on what this country has done since the war broke out. It is a matter for wonder what the artisans in our factories and the men who operate the factories have done. As the minister has said, they have increased the number of Canadian ships from 15 in 1939 to over 400 at the present time. This result reflects great credit on all Canadians engaged in the making and operating of ships; I might even add that it is creditable to the humble man on the street whom we hear calling "Rags, bones, scrap iron", men who gather waste materials. Scrap iron is cutting a big figure in this war. It is by far the most important part of the iron used in steel plate. The men who are working down the iron mines are doing a wonderful job; my heart warms to them, because many a time I have been in the iron mines, and I know they deserve great praise. But without scrap iron it would be difficult to turn out steel with the rapidity with which it is being produced to-day.

Mr. REID: It is almost impossible to carry on without scrap iron.

Mr. MacNICOL: That is true. Those who have knowledge of the achievements of engine factories, without whose product, of course, our ships could not operate, must be proud of what Canadian plants are doing. The Canadian Allis-Chalmers company, a tremendously large concern with branches in several cities of the dominion, has a very large plant located partly in my own riding and partly in that of the hon. member for High Park. It is currently turning out the 1,200 horse-power engines, one each week, which are required to propel corvettes. I am happy to salute with all my heart the men engaged in producing engines in Canada, from the lowliest worker in these great plants to the men in the highest positions. I am happy to say further, from my close connection with many plants, that the majority of the head men in these large institutions came right up from the humblest ranks in the plant. That is a great tribute to the opportunities given to the Canadian worker to advance and the advantage he takes of those opportunities.

I would not omit a reference to the men in the mines of Quebec—at Asbestos, I believe. What could we do without the men who produce the asbestos which not only covers pipes but provides material for the apparel which sailors to-day have to wear to withstand the flames of bombs if they should be unfortunate enough to be on a ship on which bombs fall. The asbestos miner deserves credit too.

Ours is a great country. Every Canadian may well be proud not only of those who man the ships but of those who make the ships.

The minister could, I know, have gone much further than he did in telling of what has been achieved. In making his statement he displayed an eloquence which few men possess, and a power of expression which carries conviction. He could have told us much more about what our men are doing; but, having done it before, I assume he thought it unnecessary to say more about their work in the guarding of convoys, in which I believe that five hundred lost their lives—heroes, every one of them.

Some days ago I went to offer my sympathy to the mother of a young man who lost his life in the sinking of the *Spikenard,* one of our ships from which, I believe, only seven were saved. It would thrill anyone to talk to a heroine like that lady. Her courage, her realization that her boy had made the supreme sacrifice for the maintenance of this empire, exemplifies the spirit which will save the empire. I am one of those who believe that we shall win the war in spite of everything, because our people continue to display the courage which their forefathers have shown down through the ages. I read this boy's last letter to his mother, written from England. It was a fine letter, indicative of the kind of bringing up he had had. His mother's words were always in his mind. It mattered not to him what might happen; he was serving, he believed, in the highest cause to which a man could devote himself. His chum, I believe one of the seven who were saved, later sent a cablegram which showed the unflinching spirit of the boys on the ship. It was addressed to this heroic mother, formerly Mrs. Walker, now Mrs. T. W. Cartmill, living at 117 Lappin Avenue, Toronto, and it read:

Regret Sammy went down with his ship.

Sammy Walker was his name. Well, that is a British tradition, to go down with the ship. That is what Admiral Tom Phillips did on the *Prince of Wales* out there east of Malaya. It is a British tradition, to go down with the ship and not to run away from it—fighting with the ship to the last, and then, if necessary, going down with it. That is the British spirit.

I might add one word to what the hon. member for Rosetown-Biggar (Mr. Coldwell) said in reference to pay and allowances, because from Toronto quite a number of men have enlisted in the navy and many times men have come to me asking why their pay and allowances are not the same as the pay and allowances in the army. I do not know what the rates are, so I cannot speak from knowledge of any comparison, but if they are not paid on equal terms I know the minister will do anything that is necessary to improve the situation.

There was another matter that came to my attention. I am not sure of the facts, but my memory is that if the commander of a ship in Halifax, say, was moved to Victoria he would have to pay his own way out. The minister shakes his head. I am glad to know that has been changed, because that would be manifestly unfair.

And now a last word with regard to recreation on shore. The minister knows there is a bit of conflict going on in Halifax in connection with some club. I am not familiar with the particulars, but I believe, as I think the minister does—and every other hon. member believes it too—that the finest and most comfortable places should be provided for men when they come ashore from their ships. While I am not a drinking man myself—I have never tasted liquor, so that it means nothing to me personally—I realize that many of these men do like a glass of liquor or a glass of beer. It is their business whether they take it or not, and all I say is this. I ask the minister to make certain that where any sailor returns to shore and wants a glass of beer, or something stronger than beer, he will have a comfortable place to which to go, some place where he will not be a prey to strangers of one sort or another, and that he will get the very best that can be provided—not something that is drugged, bootlegged stuff or something that will do him injury. Liquor has its rightful place, and I presume that when the sailor comes in after having been frozen or half-frozen for weeks, passing through storms and terrible times, if he thinks a glass of liquor will do him good he should get it. I expect that he will have that privilege and that he will be given pure, unadulterated liquor under the best possible conditions. The department should see to it that he is not compelled to go to places where his health might be ruined, and unfit him to return to the ship.

The minister has quoted some verses and I was glad to hear him. He has the Scotch flair. What would you expect from a man named Angus Macdonald? It is a Scotch

characteristic to love verses and I, too, have been thinking over some verses I have read. I do not believe the poet's name is known, and I am not quite sure whether the title of this particular poem is "The Sea is His", or "The Sea is God's". Two verses occur to me and I should like to quote them—I do so from memory:

Count me the splendid captains
Who sailed with courage high
To chart the perillous waves unknown:
Tell me where these men lie.
To light a path for ships to come
They moored in Deadman's Quay.
The sea is God's, He made it,
But England shall keep it free.

As I repeat these lines I think of the admirals to whom the minister referred—Frobisher, Hawkins, Collingwood, Nelson, Jellicoe and Beatty, all those gallant men from away back, from the time of Drake, in the earliest days of the navy, when British sailors sailed the seas and founded those harbours and colonies that have made possible the commerce which has built up our empire. The other verse is this:

O little land of England
O mother of hearts too brave,
Men say the trust will pass from thee
Who guardeth Nelson's grave.
Aye, but these braggarts shall learn
Who'd hold the world in fee
The Sea is God's, He made it,
But England shall keep it free.

Canada is doing a noble part to-day to help Britain in keeping the seas free.

Mr. REID: There are one or two questions which I wish to put to the Minister of National Defence for Naval Services, but before I do so I join with those who have given praise to the men who man our ships. Too much cannot be said of those who day after day toil in our Canadian ships. The minister this afternoon spoke about the numbers of men in the navy, and he gave a lengthy resumé, one which we were all delighted to hear. Most. hon. members will be pleased to hear of the great number of ships and the numbers of men that comprise the Canadian navy. I say to the minister, keep up the good work, because the navy, of which the minister is head, is at present doing a splendid service. We have no doubt it will continue to do equally good work. The minister spoke of the training of seamen, personnel and so on. I will make this suggestion. I have met many men in British Columbia who had been in the naval service either with Great Britain or in the Canadian navy during the last war, and these men have said to me: "Why cannot our services be utilized? We were experienced seamen in those days and we did our duty. If the Canadian government wants us, we are ready and willing to do the same again." I think the country could very well make use of the services of these men. They got their sea legs many years ago, and with very little training now they would once more render extremely valuable service.

Another suggestion. While we are waiting for ships, while we have a waiting list of four or five thousand men, it might be advisable to look into the idea of having some of these men placed on coastal ships. We could give them some training, because we have coastal ships in British Columbia which go into the open waters, and many of these men could be put on these ships so as to get their sea legs and gain the necessary experience. During the time we are waiting for more ships of our own, this could be done. It was only natural that the navy should take over a number of vessels and ships at the outset, because we had then very few, having only fifteen in all.

The naval department took over certain fishing vessels from owners in British Columbia. My view regarding that is that they should have been rented from these owners only until such time as more suitable naval boats could have been built. Those boats were splendid for the purpose for which they were built, but they were not built as naval ships. If the minister intends to keep them in the naval service, I am of opinion that they will not give the same service as proper naval vessels constructed for naval work, and I think they could well have been replaced rather than bought outright and retained in the service.

The two questions I have in mind are regarding the naval college at Esquimalt, how many men are attending the college there and how many have graduated from it; also regarding Deadman's island, what development has taken place there in connection with naval training.

Mr. MACDONALD (Kingston City): With regard to Deadman's island, no naval development has taken place there up to the present. It has been suggested that some sort of naval barracks might be established there, and that matter is now being considered.

Regarding the number of men who have attended what my hon. friend calls the naval college, I assume he means what we call Royal Roads, Esquimalt, where officers go to receive the training to which I referred in the early part of my address. At the time of the last record I have here, which is April 1, it shows there were at that place 136 officers and 129 ratings, a total of 265. That

number of officers would be apart from the staff. They would move out about every four months.

Mr. NOSEWORTHY: I am sure every hon. member with the tang of the sea in his blood has been thrilled by the references made by the minister this afternoon to the great historical figures of British naval history. We have also been interested in the glowing picture he has given of a fast and greatly increasing Canadian navy. There are a few points on which he touched to which I should like to make reference and on which I think the committee might be entitled to further information.

The minister told us in round numbers of the increase which has taken place in the Canadian navy since the beginning of the war. He told us we now have a navy thirty times as great, I think he said, as at the beginning of the war. That in itself does not give us very much information, for my recollection of the Canadian navy at the beginning of the war is that it was very small indeed. He gave us the number of ships which have been added to the navy. I wonder if in order to round out that picture, he would be willing to give us a break-down of those figures showing the various classes of ships included in that total.

He spoke also of the duty and the great service rendered by the ships in convoying. We heard of 56,000,000 tons of goods convoyed safely across the ocean, and 9,000 ships. Would it be in the public interest for the minister to give us the other side of that picture? May we have from the minister the total value of ships and cargoes sailing from Canadian ports that have been lost during the war; first, those lost within convoys or while being convoyed, and second, those lost without convoy? That would enable us to get a clearer picture of the work that the navy is performing and the dangers and difficulties with which the navy is faced.

No mention was made by the minister of the future programme pertaining to the building of merchant shipping; that I presume comes under another department. It is a matter very closely related to the navy, since our success in getting our goods delivered to the battle fronts depends to a large extent upon the number and nature of the merchant marine as well as upon the number of navy ships. I trust that at some later time in this debate we may be given a report of the programme for the building of merchant ships as well as ships for the navy.

At two or three points in his statement the minister referred to the matter of research, invention and so on. He gave us some details regarding research being made into such matters as the health of seamen aboard ships, diet and so forth. Could the minister tell us what organization exists to take advantage of Canadian engineering ingenuity and inventiveness for the inventing and production of new and improved types of ships, guns, et cetera, whether there is any organization of that kind or any council of marine and civil engineers employed in that particular field, or whether we take all our designs for ships and equipment and defence from the British navy?

A reference was made to the naval cadets. I should like the minister to inform us whether he and his colleagues in the other defence departments have yet been able to agree upon a basic educational course for the cadets of the three branches of the service. I have some knowledge of cadet training, some knowledge of the confusion which the training of three different classes of cadets is causing throughout the schools of the country at present. There is an undesirable competition and in some cases dissension and jealousy arising between the cadets of the different forces. In one school in Toronto, for instance, we have sea cadets; in another, army cadets, and in another, air cadets. Principals of schools, staffs and educational authorities are finding this very confusing.

I remember sitting in at the council meeting of an educational association over a year ago, when recommendations were sent by it to the military authorities suggesting that the major part of the training in the three cadet branches should be uniform, and that any specialized training should be taken after the period of basic training had been completed. That would enable us to establish a type of school cadets all of whom would receive the same basic training, wear the same uniforms and consider themselves of equal importance in the defence of the empire.

Much has been said already with regard to rates of pay for our seamen. One feature in that connection we must not overlook; that is, the effect which adequate pay and allowances will have upon the morale of our people. I can think of few things that would give our war effort greater impetus than adjustments which would give more adequate pay and dependents' allowances not only to our sailors and seamen but to the members of the other services as well. Over the week-end I met a number of social service workers in my riding who informed me that there were in it a large number of families where

the husbands are in the armed forces, which families to-day are receiving less than they were when the husbands were on relief. That information is authentic; that state of affairs actually exists in connection with enlisted men who left behind them large families. The situation was so acute in York South that social workers were undertaking to raise a sum of money to assist some 250 such families in that one riding, 250 families whose subsistence allowance these workers felt was below the level required to provide a decent standard of living, even the standard maintained by the relief authorities there. Cases of that kind do more to impede our war effort than all the labour strikes we have had.

A good deal was said by the hon. member for Davenport with regard to those who contribute indirectly to the services of the navy. I would simply add to what the hon. member said that what these workers want from this parliament is not praise or eulogy. They want, first, an adequate wage and, second, the right to join their trade union and the right of collective bargaining, a right which will give them some dignity as human beings. That is the need of the men who assist in the building of the navy. That, too, would add to our war effort to a great extent.

Mr. BENCE: When the army estimates were under consideration the other day I asked the Minister of National Defence to make a statement in connection with this question of dependents' allowances, with particular reference to the navy. At that time the Minister of National Defence for Naval Services gave a very short explanation, which appears at page 1947 of *Hansard*. At the same time he stated that he was not in a position to give the figures, but that he was having a conference, I think with the treasury board, on Thursday morning, at which he hoped the whole matter would be adjusted.

I am sure the committee would be interested to learn the result of that conference, and to hear a statement by the minister in regard to it. May I point out to hon. members who are not familiar with the dependents' allowance in the navy, that what are known as service ratings and other ranks, which, as I understand it, means all those in the navy other than commissioned officers, are given a dependents' allowance of $22.50 a month, while the amount paid in the army is slightly more than 50 per cent greater, or, in other words, $35 a month. I am not for a moment suggesting that the $35 a month paid by the army is more than adequate. I join with other hon. members who have expressed their belief that it is not adequate, and that some sort of cost of living bonus should be given to the dependents of those in the army, as it is given to various civilian groups in this country. I would point out, however, that the dependents' allowance paid by the army is 50 per cent greater than that paid by the navy; and if the wife of the man in the army is having a hard time to get along, the wife of the man in the navy must be having a very much harder time. I know the minister pointed out that there were reasons for the difference. Among other things he said that a larger subsistence allowance was paid in the navy to those men living out of barracks. I suggest to him that this is very poor comfort for the wives of the men who are living in barracks, or on board ship. The minister might give us the number of men living in barracks and the number living out of barracks, in order that we may ascertain how many men in the navy are benefiting by the special subsistence allowance to which the minister referred.

In that connection also I think I should refer to the dependents' allowance in the case of naval officers. Hon. members may be interested to learn that for all officer ranks the dependents' allowance is set at $30 a month, with no variation such as exists in the army. So the dependents' allowance paid to the wife of a naval officer is $5 a month less than that paid to the wife of a private in the army. It seems to me there must be some very unusual reason for the fact that the dependents' allowance in the case of naval officers for all ranks from navy sub-lieutenant to navy commander is fixed at a maximum of $30, while army officers have a graduated scale of dependents' allowances, ranging from $45 for an army lieutenant to $60 for an army lieutenant-colonel. I believe the committee should be given some explanation of the reason for this discrimination.

The question of allowances for children is a matter which it seems to me should be of considerable interest to hon. members, because it is of some concern to me. Would the minister tell the committee in what respect the allowances for children were changed as a result of the announcement made by the Minister of Finance last November? At that time the Minister of Finance indicated that so far as the army was concerned, whereas previously an allowance for only two children was paid of $12 a month, it had been extended to provide $9 a month for the third child and $6 a month for the fourth child. The prior arrangement as to allowances for the children of men in the navy was that they should be paid $7.50 a child, up to four children. Would the minister tell the committee what change has been made in that regard?

I have been informed—and I do not know whether my information is correct—that the wives of men in the navy who are under the age of twenty-two years are not entitled to allowances.

Mr. MACDONALD (Kingston City): That has been straightened out.

Mr. BENCE: It has been changed?

Mr. MACDONALD (Kingsston City): Yes, some time ago.

Mr. BENCE: I am glad to hear that.

Mr. MACDONALD (Kingston City): Perhaps I should say something with regard to allowances, because that subject has been mentioned by almost all hon. members who have spoken with respect to these expenditures. It is quite true that there has been some difference between the naval regulations regarding pay and allowances on the one hand and the regulations of the army and the air force on the other. How that arose it is difficult now to say; but there is no doubt, as the hon. member for Saskatoon City has just pointed out, that the condition did exist. For example, for a time the navy paid dependents' allowances of $7.50 to each of four children. For a long time the army paid allowances for only two children. It made no difference if a man had ten children, he was given allowances in respect of only two. In those days the navy was better off in that respect. Then, last November the army and the air force increased to four the number of children who might benefit under dependents' allowance regulations. As my hon. friend has correctly pointed out, the total allowance payable for four children was raised to $39, made up in this way: $12 for the first child, $12 for the second, $9 for the third and $6 for the fourth. The navy allowance remained at $30 for four children.

One of the great problems has always been that the daily pay received by men in one service has not at all times corresponded with the pay received by similar ranks in the other services. Nor has the amount allowed for out-of-quarters allowance in the navy corresponded with the allowance in the army. On that account, when we have come to deal with the question of other allowances it has been pointed out to us that while we were low in one respect we were high in another. The problem of working out these various basic rates of pay, wives' allowances, children's allowances, and out-of-quarters' allowances has been rather complicated.

I have been before the treasury board several times. It is true that only last Thursday I thought I had the treasury board soundly convinced as to the wisdom of a certain course of action. I found, however, on Saturday that I had not succeeded on Thursday as well as I had hoped; and I had to endeavour to convince them again to make some adjustment, to give a little here and to take a little there. But that great body, the treasury board, which is always just, if not indeed always generous, has, I think, seen the light. I hope that by to-morrow I shall be able to say that allowances made to wives of men in the navy and to the children of men in the navy have been put on a parity with allowances to wives and children of men in the other two armed services. I believe I shall be able to say that, so far as the treasury board is concerned, by to-morrow afternoon they will have agreed, and that the matter will have been straightened out. We may, however, have to take a little reduction somewhere else.

Mr. HANSON (York-Sunbury): The minister's statement makes it very apparent that at least up to this moment there has been a disparity between allowances to dependents of those in the navy and allowances to dependents of those in the air force and the army. I have always thought that, and I have pointed it out in the house on more than one occasion. However, I have never got anything definite before from the minister by way of an admission.

Mr. MACDONALD (Kingston City): My hon. friend probably asked the other ministers.

Mr. HANSON (York-Sunbury): We have always been told that there are counterbalancing perquisites, if that is the right term to use, or compensations to members of the naval staff.

I am rather surprised to hear the minister intimate what the treasury board is going to do to-morrow. It seems to me rather like forcing their hand, if I may suggest that to the minister. I was once a member of treasury board, and I have always found—

Mr. MACDONALD (Kingston City): They are not very popular.

Mr. HANSON (York Sunbury): —that members of the treasury board are pretty hard-boiled, when it comes to the other fellow's department. They are pretty stiff-necked when it comes to dealing with allowances for other ministers' departments, but they are not so stiff when they are dealing with their own. I believe that is the history of all treasury boards. During the time I was a member of treasury board that was par-

ticularly so, because money was hard to find. We had not as generous a public behind us in those days, as we have in war time. I can recall with what great glee members would sharpen their pencils and start in to see where they could cut. I remember particularly the question of motor cars for members of the permanent force. A colonel always wanted a Buick car but, so far as I can remember, he never got beyond a Ford—and I thought in days of depression if he got a Ford he was lucky.

I make these observations only in passing. May I add my tribute to the Royal Canadian Navy, and a word of congratulation to the minister upon his eloquent passages in describing the romance of the British navy, of which those of us of British descent are always so proud. I was born by the sea, and until I was twenty-two years of age I sailed the sea, and the turbulent waters of the bay of Fundy. Anybody who has lived down there knows what that means.

An hon. MEMBER: Political waters.

Mr. HANSON (York-Sunbury): No; political waters have always been fairly smooth for me; I am not referring to them. Anyone who as a youth, as I was, sailed the waters of the bay of Fundy knows that it requires some skill. I will say that it is with the greatest possible pleasure I reflect that as a young man I sailed the sea, and it has been a matter of great regret that my search for opportunity to earn a living has meant my leaving it.

I am interested in the Canadian navy. I have always supported efforts to build it up, and I remember with deepest regret how in the early twenties, after the war and when there was a change of government, the activities of the navy declined, particularly in the matter of naval education. To-day we are apt to be tremendously loyal to the necessities of the time. But I recall that the chief objection to naval education and naval training came from my hon. friends to the left—absolutely. Let there be no mistake about that. Not many are here to-day of those who were here then, but their predecessors in office, if I may so term them, those men, and women too, raised their voices on each and every occasion it was possible to raise them against the theory of Canada maintaining a navy and of naval education. Well, time brings great changes. It is not necessary perhaps to hark upon—

Mr. BLACKMORE: May I interrupt the hon. gentleman?

Mr. HANSON (York-Sunbury): I will not include my hon. friend because his group is of a later day and generation. I am referring rather to the men on our immediate left and his immediate right. There were those in this house in the days between 1921 and 1925 who used to boast of the Minister of Mines and Resources (Mr. Crerar) as their leader.

Mr. CRERAR: Not during that day.

Mr. HANSON (York-Sunbury): No, that is not quite correct; my mind is running astray for a moment. It is not worth while harking back to those days. It is a matter of history and history will bear me out. But it is a matter of regret to-day that we did not do more in the days that are gone by. That may be the old story of hindsight and foresight. If we had known what was going to happen, I think we would have all tried to do more.

There is no doubt that the Canadian navy performed valiant service in the days that are immediately behind us, and I know it will perform valiant service in the great conflict in the days that are immediately ahead. Some of us had the occasion to investigate what is being done. We were able to go on board the corvettes and faster destroyers and motor torpedo boats when we were in Portsmouth last September. We were able to see the risks that are undergone by these boats as a matter of course. That is one of the romances of this war.

I should like to pay a tribute to the merchant marine. When we were in England we heard a great deal about the gallantry of the merchant marine at the time of the evacuation from Dunkirk. Had it not been for the merchant marine the number of troops left on the continent would have been much greater. The men of the merchant marine, about whom so little is heard and for whom so little has been done, go down to the sea in ships, and in ordinary times they work for a very small wage. I hope that Canada will build up a merchant marine that will be worthy of the name and that our flag will be seen on the seven seas when this war is over.

Those of us who are laymen ordinarily look upon the vessels of the navy as being fighting vessels. The minister has not indicated as yet, but I hope he will do so before this discussion is over, the break-down of the 400 ships to which he has referred. I am sorry to think that perhaps we have not as many real fighting ships as we ought to have. There is no doubt that great progress has been made in the building of corvettes, mine-sweepers and other small naval craft of that kind. I recall in one discussion held in this house not so long ago that the minister intimated that plans were being made for the building of destroyers

and, if I recollect aright, something in the nature of a cruiser. However, I stand ready for correction on that.

Mr. MACDONALD (Kingston City): I hope it will be that.

Mr. HANSON (York-Sunbury): I know something of the difficulty in the way of building larger war vessels in Canada at this time, especially when we are keeping in mind the need for the rapid building of merchant ships. As a matter of information only, I should like to know how rapid the growth has been with respect to really effective ships of the corvette and mine-sweeper type. The minister will recall that in the early days of the war a large number of pleasure boats were bought in the United States with almost feverish haste. I am not going to criticize that action because I understand the condition that existed at that time. However, it always seemed to me that it was not necessary. I should like to know how many were bought, what money was paid for them and what has been their usefulness. In my own mind I always questioned the usefulness of these yachts. I may be all wrong about it. I am only giving the reaction in my own mind which, I admit at once, may be based upon data that is not wholly adequate. I know that a great deal of criticism reached me about this. In the early days, in an effort to build up a navy, I know there was a great deal of haste without perhaps as much discretion as should have been shown. The minister might give us some information about that.

As I say, I should like to have the breakdown of our ships in order that we may know what are really the effective ships. Not long ago a man told me that in counting the number of ships which composed the Canadian navy they must take in every sixteen-foot rowing boat. I do not suggest that that is true, but the 400 ships mentioned by the minister must of necessity include a large number of small ships in the nature of tenders and that sort of thing. While they serve a useful purpose in the navy, I know it is not contended that they are effective naval vessels.

There are one or two other matters to which I should like to refer briefly before six o'clock. The first is the establishment of the naval college on the Pacific coast. I have no objection at all to that, but I suggest to the minister that he probably will have to reestablish the Halifax naval college if he is to satisfy public opinion on the Atlantic coast. I do not know what thought he has given to this, but it does seem to me that if you are going to train men for the navy, consideration should be given to training them on the Atlantic coast and not removing them to the other coast. I do not mention this in any sectional way at all. There are no better sailors in the world than those who go down to the sea in ships from our Atlantic coast, and in that statement I include those who come from the bay of Fundy, the most turbulent water in that portion of the Atlantic coast. Is the minister ready to make any announcement in regard to the matter?

I should like to know how a young man can get a commission in the Royal Canadian Navy without first enlisting as a rating. How is that arranged? I know that men just out of college do get commissions without having to enlist as ratings, and I should like to know the modus operandi.

Then I should like to ask the minister if he intends to give the committee any information with respect to the future programme of naval training.

One other matter has been referred to, the trouble at the Ajax club in Halifax. Has the naval department as such any responsibility in the premises? There has been a violent controversy in the city of Halifax with regard to that matter. I do not pretend to know the rights or wrongs of it, but I do know that a great deal of feeling has been stirred up over that one incident. Perhaps the minister, if he knows anything about it, will tell the committee and put the position right on paper so that the public may have the official view as to what was the trouble, where the responsibility is, and what is going to be done.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MacINNIS: I want to ask the minister a question, but because of certain points raised in the discussion this afternoon I wish to say a few words before I put the question. I am afraid the naval minister's language was a little too lyrical because I noticed that some of the staid and prosaic members on my right, for instance the hon. member for Davenport (Mr. MacNicol) and the hon. member for St. Paul's (Mr. Ross) burst into verse.

Mr. HANSON (York-Sunbury): They were overcome by emotion from the minister's speech.

Mr. MacINNIS: That is exactly what happened. I realized that, and that is why I think he should have curbed his own emotions a little. It is fine to recite "Rule

Britannia," and "Britons never, never will be slaves." It is a stirring poem. But I have read other poems by equally distinguished poets. For instance, no one would doubt the capabilities of Shelley as a poet—

Mr. REID: And Scottish poets.

Mr. MacINNIS: Yes. I was wondering whether someone would recite "Scots, wha hae." But Shelley did not say "Britons never will be slaves". He said:

Men of England, wherefore plough
For the lords who lay ye low?
Wherefore weave with toil and care
The rich robes your tyrants wear?

Wherefore feed, and clothe, and save,
From the cradle to the grave,
Those ungrateful drones who would
Drain your sweat—nay, drink your blood?

There are two sides to the sailor's life, and we should not allow ourselves to be so carried away by our emotions at a time like this. I do not object particularly to poetry; as a matter of fact I like it, though sometimes I do not like the way it is recited. But this afternoon other statements were made which I think were altogether out of place in this discussion. Attempts were made to apportion blame for Canada's unpreparedness for the war. If we are to have a discussion on that question I have no objection. We in this group are ready to go into the facts and show who was to blame for Canada's unpreparedness. What surprises me is the power and influence of this little group over here.

Mr. HANSON (York-Sunbury): What!

Mr. MacINNIS: The power and influence of this little group over here—that we were able to prevent the government from doing something they were anxious to do. My hon. friend (Mr. Hanson, York-Sunbury) was a member of a government which from 1930 to 1935 had a large enough majority in this house, and a leader who could shove anything he wanted through the house; and instead of increasing the military preparations of the country, that government did nothing about it. I am not blaming them. In the parliament before that, the government had a majority that could do anything if they wanted to do anything, but they rarely did want to do anything. That those governments did not carry out an armament building programme was not because of any obstruction by this group of seven members. But if we are so influential in that regard, how is it that we have failed to get this government and other governments as well to pass progressive legislation which we advocated? We urged for the passing of unemployment insurance legislation year in and year out for years. It was only when the war was at our door, although unemployment insurance had been in the Liberal party's programme since 1919, that an unemployment insurance act was passed. Why have we not better old age pensions legislation? Is it because of obstruction from this group? It is because the government does not want it. That is why. If we are to discuss who is responsible for military unpreparedness, let us have notice, and we shall discuss it at the proper time and in the proper manner.

Tributes have been paid to the merchant marine. I wonder whether my hon. friends who are paying those tributes know the conditions which the sailors of our merchant marine have to endure. Do my hon. friends know that until 1934, when the Canada Shipping Act was passed, though not proclaimed even then, we were operating under the Merchant Shipping Act, which was passed in 1857, and that sailors' wages were reckoned in pounds, shillings and pence? Almost the first thing I did when I came here in 1931 was to move an amendment to the Merchant Shipping Act, proposing an eight-hour day for the men in our merchant marine. The only thing sailors on Canadian ships will get are belated tributes from people who do not expect to give them anything better than that.

Why were we not better prepared for the war? The hon. member for New Westminster (Mr. Reid) knows quite well what I am talking about now because he worked sedulously for better preparation. He knows that ships of the Canadian Pacific Railway plying between Vancouver and the orient, with the exception of the officers, were manned by Chinese. The hon. member for New Westminster and a few others from British Columbia tried year after year to get that changed. Why was it not changed? Was it because governments did not have a majority? No; but because the governments were more interested in the profits of the Canadian Pacific than they were in building up a merchant marine for Canada. When war broke out, all these vessels were manned not by Canadians but by Chinese.

I do not know whether after this war is over, we shall have a country that will be armed to the teeth, but I will say, if that is going to be the state of affairs, if that is going to be the condition in which we are to find ourselves, then we have lost the war. Let us remember that the sentiment throughout the world after the last war was, "no more war," and that a condition of the treaty of Versailles was that the nations should reduce their arma-

ments. But there is another consideration before we can decide whether we are going to have a large army, navy, and air force; in the ultimate analysis all these things depend on our foreign policy, on the relations we build up between ourselves and the rest of the world. It is because we did not build up the necessary relations that we are fighting this war, and not because the nations of the world did not engage early enough in the armament race. It is about time we began to talk sense even if we are engaged in a war. We are engaged in the war reluctantly. I am proud to say that, and when we finish it I hope we shall have sense enough to build a different kind of world, a world in which we can live not by building huge navies or air forces or armies but by abolishing them. Only by doing that can we demonstrate our humanity and the right to be called Christians, a Christian nation.

The question I was going to ask the minister is this. I believe an agreement exists between Canada and Great Britain under which the Canadian government is obligated to maintain the naval port at Esquimalt so that it will be in condition to repair all British naval vessels in time of war. I was informed that some little time ago when the *Warspite* arrived at Esquimalt for repairs they found that the naval people at Esquimalt had failed to install the machinery necessary to operate the main gates of the docks. The result was that the *Warspite,* instead of being repaired at Esquimalt, had to proceed to Bremerton, Washington, where she was repaired. I would ask whether that is the case and, if so, has the situation been remedied?

Mr. MACDONALD (Kingston City): I cannot answer my hon. friend's question with definiteness at the moment, without looking at the record. I know, however, that a very large ship was handled at the dock at Esquimalt—I shall not give the name of the ship—and handled satisfactorily so far as I know. There was, I think, some difficulty on the first day; I think the ship in some way knocked off some of the blocks. But that is a thing that might happen and is not in any sense a reflection on the nature of the dock. As to the particular ship mentioned by my hon. friend, I am not aware of the incident to which he refers, but I shall at once find out about it and report to him.

Mr. GILLIS: I listened with great interest to the minister's presentation. He told quite a nice story respecting the development of the navy, and he eulogized the work being performed by the men of the navy, particularly those serving on the water. If hon. members are sincere in their appreciation of the work of these men, the best way they can show that appreciation is by removing some of the grievances which the men performing that wonderful service have.

I wish for a few minutes to associate myself with the hon. member for Saskatoon City (Mr. Bence) and develop a little further the question of dependents' allowances as applied to men who serve in the navy, particularly the lower ratings. I was pleased to hear the minister make the statement that he is doing everything possible with respect to having these rates revised, at least to conform with the rates paid in the army, and we trust that the treasury board will show their recognition that an injustice is being committed and that they are prepared to show their appreciation in some practical way and not by mere lip-service.

I have before me a table of rates which, for men who are performing services such as those being performed by the men of the navy, are, in my opinion, a disgrace. I want to draw particular attention to them. It may be of some assistance to the minister in his representations to the treasury board. These are dependents' allowances, and the figures come from the minister's own department.

The marriage allowance for the wife is 75 cents a day, and 25 cents a day for each child. For other dependents, such as mother, dependent brother or sister or otherwise, it is 65 cents a day. The foregoing allowances are payable with the proviso that marriage allowance plus dependents' allowances shall not exceed a total of $2 per diem for officers, or $1.75 per diem for ratings. In effect, this means that a sailor who may be supporting a dependent mother, and is already in receipt, of $1.75 per diem by way of allowance, can receive only 25 cents per diem for the dependent mother. That, in my opinion, is something that should be rectified.

Dependents' allowance is graded according to the income of the dependent as follows—I want the minister to listen to these figures because I think there is something wrong with them. If the income per month is nil, the allowance per diem is 65 cents. If the income per month is $15, the allowance per diem is 50 cents. If the income per month is $10, the allowance per diem is 35 cents. According to the table the larger the income, the higher the allowance; there must be something wrong with those figures.

Further, it states that under a recent order in council the board may grant a supplementary award of dependents' allowance of 15 cents per diem to a dependent if, in its opinion, there are extenuating circumstances to warrant it; that at this point the functions

of this board cease, but further assistance might be available to a dependent. In other words, as I understand it, this means that if, for example, the mother or the wife is not completely dependent and is receiving the maximum award under this supplementary assistance, in case of sickness and so forth the board has no authority to grant any additional allowance.

Then there is the dependents' board of trustees. It has a peculiar function. In cases of urgent need it may augment dependents' allowance "by a special grant of an unspecified amount, provided that the dependents' allowance board has conceded dependency and that full award of dependent's allowance has been granted previously. Application for such grant should be directed to that board." As I read that, the dependents' board of trustees has practically no function. It has no regulations to guide it; it is merely a matter of the board exercising its own opinion, without proper regulations to guide it and proper tables set out. In my opinion the board has only a very limited function; the whole thing is on a charity basis, and it is time that we showed our appreciation, at least to the extent of taking care of the dependents of the service we eulogized this afternoon.

I can readily understand the mind of a man who is on the water, and who knows the situation of his family. One case in particular has been brought to my attention, that of a radio operator who is on the water for eight, twelve or more months at a time. He has a wife and one child, and her total dependents' income is $29.50 a month. I do not consider that that woman is receiving an allowance; I say that she is on relief, because on that limited sum she cannot, in view of the present cost of living, maintain a home, including the cost of fuel and everything else in connection with it. The mind of that radio operator at sea must be in constant turmoil when he thinks of his family trying to eke out an existence on an allowance of that kind. I believe there is nothing that can break down the morale of a man any quicker than conditions of that kind. My experience has been that the man who serves in the army or navy is not concerned with himself. He offers himself in the service of his country, and, if necessary, his life is at stake. He is content to fight for his way of life. But meantime he is leaving his dependents in the care of the people at home charged with the responsibility of running the country. The least he can expect is that during the time he is separated from his country, and the time he is prepared to lay down his life, if necessary, the family he has left behind should be at least maintained with some degree of comfort.

Mr. MACDONALD (Kingston City): My hon. friend knows, of course, that in addition to the amount he has indicated, the rating or petty officer, as the case may be, has to assign some of his own pay. That will supplement considerably the amount of $22.

Mr. GILLIS: I quite understand that. However, I was thinking of the comparison of rates between the army and the navy. For instance, the wife of a naval rating receives $22.50 a month, while that of a soldier in the army receives $35. A wife with two children is paid $15 a month by the navy, while the army pays $24. A mother whose son is in the navy receives $19.50, but if her son is in the army she receives $25.

I can see no reason why the rate in the navy should not conform to that in the army. I take off my hat to the boys serving on the water. The two services cannot be compared. In saying this, I am not attempting to underrate service in the army, because I know a little about both.

Another category of men who serve on the water, and one to which this parliament should give full consideration, is our merchant seamen. These are the men who serve on convoys. They do not have uniforms, nor do they enjoy any of the glory attached to other services. But they are performing one of the most essential services of to-day, and certainly one of the most dangerous. Yet they get very little consideration for their work.

I should like to bring to the minister's attention a point in connection with the merchant navy which I consider very foolish. I refer to the practice of drifting around the country. On my way home when the house adjourned for the Easter recess, between Montreal and Halifax I met a trainload of British merchant seamen. They told me they had landed in New York on a boat from the old country. The crew had been discharged in New York, and they were then being transported to Montreal, and from there to Halifax to get another ship. I do not know whether I am correctly informed, but they did say that while they were in transit in Canada the Canadian government were responsible for their transportation. I believe it was $5 a week they were being paid until such time as they got another ship. They were also provided with meals. What I cannot understand is that that crew

had come from the old country to New York aboard ship. They were discharged at that port, and another crew was put aboard that ship while the first crew was transported all over the north American continent in order to get another boat to take a cargo back to England. In my opinion that is poor organization, and there is something wrong when we find drifting of that kind. If a boat comes from the old country with a cargo, I cannot understand why that crew could not take the boat back whence she came. The eastern ports are crowded with seamen awaiting ships and drifting around like that, when they could be better employed on the water. I believe that particular phase of transportation by water should be strictly supervised, and under the direction of the naval department. I am not quite sure, but I have been given to understand that that particular phase of each sailor's life is under the supervision of some other department.

Mr. MACDONALD (Kingston City): The Department of Transport.

Mr. GILLIS: I believe someone should take hold of it, and do some organizing. To my mind, it is silly to have men, after leaving their boats, drifting from one end of the country to the other, looking for other boats.

While I am on my feet I should like to bring the subject of port facilities to the minister's attention. I have corresponded with him for a considerable time concerning wharfage facilities at Sydney. Perhaps hundreds of boats will pass through that harbour this summer, as they have been doing since the outbreak of war. On many occasions boats with cargoes, the vessels having been slightly damaged, enter that port. In order to repair the boat it is found necessary to discharge the cargo. Much delay has been occasioned because of the fact that at Sydney there are no proper wharfage facilities where the boat could be tied up, and where it could be repaired in proper time. That, too, I am informed comes under another department. I believe the matter has been referred to the Department of Transport. The condition has existed since the outbreak of war, and I know it is far from satisfactory, as far as those persons in the naval department charged with the responsibility of directing traffic in and out of that harbour are concerned. Something should be done about the matter.

All these are emergency conditions which have to do specifically with our war effort, and they should not be under the jurisdiction or direction of a peace-time department. In my opinion they should be taken hold of by the Department of National Defence for Naval Services, and that department should see to it that those who are directing affairs in the ports are given proper facilities with which to work.

I understand, too, that an essential repair plant in that harbour has been tied up for some time because of some dispute with respect to noise. Certain people do not want the project to be developed in that place, and their attitude is impairing our war effort. That plant is necessary, and I suggest the minister should not be backward in any way in taking hold of matters of that kind and straightening them out. If we delay long enough, we may be seriously handicapped in the future.

I should like to get some information from the minister. Let us take the case of an army veteran in receipt of war veterans' allowance to the extent of $25 or $30 a month. It is my understanding that if the son of such veteran enlists in the navy and makes an assignment of pay to his father, a deduction to the extent of the assigned pay is made from the allowance.

There is another request I should like to make before I take my seat. A few days ago the Minister of National Defence gave a complete table of the pay and allowances of all ranks in the army, which table appears at page 1925 of *Hansard* for Tuesday, April 28. Would the minister place on *Hansard* similar schedules with respect to naval ratings?

Mr. MACDONALD (Kingston City): I shall be glad to do that. I cannot give them at the moment, but I will place them on *Hansard* for the benefit of my hon. friend.

Mr. GILLIS: Could the minister give us any information as to the question I asked with regard to the war veterans' allowance?

Mr. MACDONALD (Kingston City): I should not think that the situation he mentioned would be the case, but if my hon. friend has knowledge of that having happened, of course I will accept his word on the matter. I should doubt very much that a thing like that would happen. As I understood it, the hon member's question had to do with a veteran of the last war, in receipt of a war veteran's allowance, whose son has now enlisted in the navy and, as a consequence, the allowance to the father might be stopped. I should very much doubt that this would be the case. I know of no such instance, but I will make certain by to-morrow, and if that should be the case I will certainly look into it.

Mr. HAZEN: On November 22, 1940, the hon. member for Cumberland (Mr. Black)

directed the minister's attention to a Canadian Press dispatch, which appeared in newspapers all over Canada, stating that the city council of Halifax had asked the federal government to establish Canada's proposed naval college at Halifax. The dispatch went on to say—I am not quoting the exact words—that the hon. member for Victoria, British Columbia (Mr. Mayhew) had stated that he had been authorized to announce that the college, or academy, as I think he called it, would be located near Victoria. Among other things the hon. member for Cumberland asked these questions. Was the dispatch correct? What reason could the minister give for not locating the naval college at Halifax, and why should not the minister himself make such an announcement, rather than a private member? During the course of his reply the minister said:

> It is true that we acquired a site in western Canada for use in the same way as we have provided accommodation at Halifax, and for the same purpose—a short period of training for officers. That, I think, is what my hon. friend the member for Victoria, B.C., had in mind when he spoke to the press men. They have construed that to mean that a site for a naval college has been selected. That is not the case; a site has not yet been selected for the college.

I understand from the hon. member for Cumberland, who is not able to be present this evening, that Halifax claims the naval college belongs to Nova Scotia, for two reasons. The first, if I understand the matter correctly, is as a matter of right, on the ground that the college was originally established there and remained in Nova Scotia until it was destroyed in the Halifax explosion, when it became necessary to find another location, temporarily at least, and it was moved to Esquimalt. The second reason why they claim it should be located in Halifax is in order that it may be in comparatively close proximity to Great Britain and to the British navy. What is the present position? Has the college been definitely located in British Columbia or, if not, what is the position at the present time?

Mr. MACDONALD (Kingston City): A decision has been arrived at since the statement from which the hon. member has quoted was made. That decision is to establish the college near Esquimalt, British Columbia; and, as I said in my earlier remarks, it will be opened in September or October of this year.

Mr. BRUCE: I should like to make a few remarks in regard to the medical services provided for the navy. A couple of evenings ago the hon. member for Renfrew South (Mr. McCann) expressed the view that there should be one combined medical service for the army, navy and air force. Doctors, of course, are allowed to have different opinions on many matters; therefore I venture to disagree with the hon. member in this regard. I think it highly desirable that the navy should have a medical service of its own. Conditions affecting the navy are different from those affecting the army. Medical men who give their services to the navy will soon become specialists in that kind of work, and I think it is highly desirable for the navy to have its own medical service. I am glad to note that the head of that service is a very competent officer, Surgeon Commander McCallum, and I also wish to compliment the minister and his department upon having been able to secure the services of Doctor Best of Toronto. Doctor Best is well known, as the minister indicated to-day, as the co-discoverer of insulin. He is a man of exceptional ability in research, and I feel quite confident that the work he will do for the navy will be of great value. I presume the minister will have a hospital established on each coast especially for the navy, because I feel sure that will be necessary. We have the experience of Great Britain to guide us in these matters. There is a separate medical service for the navy, one for the air force and another for the army. Many of us remember Netley naval hospital, Portsmouth, which has been established for many years, and where splendid work is done for the navy.

I thought I should like to express my opinion in regard to the value of the services being rendered by the medical men in the Royal Canadian Navy, and as to the necessity for its being a separate service, which I am sure will justify itself before this war is over.

Mr. MACDONALD (Kingston City): I thank my hon. friend for his comments and approval of the course which the navy have taken in regard to its medical services. I may say that hospitals have been established and are in use at each coast. These may be enlarged as necessity requires.

Mr. BLACKMORE: How does it come about that rates of pay in the case of naval ratings' dependents are inferior to those which obtain in the case of the army?

Mr. MACDONALD (Kingston City): I hope that by to-morrow I shall be able to say that the matter has been adjusted. This goes back over a considerable number of years. As I said before six o'clock, there was a time when the navy paid children's allowances up to four children, whereas the army at that time would pay allowances only for two children. Last November the army decided to pay allowances for four children, and the navy remained as it was. The navy

allowance is somewhat lower, being only $7.50 a month per child. A man in the navy who lives out of barracks receives a somewhat higher allowance than a man in the army similarly situated. This is another historical anomaly I have never been able to get to the bottom of, but it is there. There is no good reason for it, but it is so. While some naval men were getting less money in certain respects than the army, other navy men were getting more. We are trying to adjust this matter so that there will be substantial equality between the services. Some naval ratings may have to take a cut, that is, those men who live out of barracks, in order that the wives and children of all may have a little more. I hope the whole matter will be worked out by to-morrow at three o'clock.

The hon. member for Vancouver East (Mr. MacInnis) raised a question about a certain ship. I am informed that there was never any question of that particular ship being sent to that port for repairs. She was at that port but not for the purpose of being repaired. As my hon. friend probably knows, the dock there is not a naval dock; it is owned by the Department of Public Works. After his stay in Esquimalt the captain of that ship wrote to an officer of the department here to say how pleased he was with the treatment he had received in that harbour.

Mr. MacINNIS: Will the minister tell the committee if the *Warspite* was repaired at Bremerton? There must be something wrong because naval men to whom I have talked were very wrath about the matter.

Mr. MACDONALD (Kingston City): The information I have from an officer of the department is that there was never any question of the *Warspite* going to Esquimalt for repairs, although she was at Esquimalt. Any repairs that were needed were intended to be made elsewhere, namely, at Bremerton. In any event the dock at Esquimalt is a public works dock, not a naval services dock. The captain of the *Warspite* wrote to say how good they were to him at Esquimalt.

Mr. DOUGLAS (Weyburn): I am sure the people of Canada and the members of the House of Commons will be glad if the minister is able to make an announcement to-morrow with reference to dependents' allowances. While it is true that those living out of barracks have been getting a slightly higher rate, the men who are at sea and who are taking the greater risk are the ones penalized by this inequality in dependents' allowances. As the minister knows, a large number of his personnel have come from the prairies, particularly from around Regina and Calgary. During the Easter adjournment I had parents come to me about this matter, and I know the minister has been concerned about it. A man with a son in the navy since before the war came to me and said that the wife and one child of this man were receiving dependents' allowances of only $27 a month. This man was working to earn his own living, but he had been sending a sum of money monthly to his daughter-in-law in order to help keep her and her child. She could not begin to live on the allowance she was receiving. I shall certainly congratulate the minister if he is able to announce something to-morrow. Could he give us a break-down of the sum of money we are voting in this resolution for naval services?

Mr. MACDONALD (Kingston City): The hon. member for Yale (Mr. Stirling) asked for that information and there were several other questions asked by him. The total amount asked for naval services is $258,542,713. This is divided into some nine or ten headings, which I can give to the committee in round figures. They are:

Civil salaries and wages	$ 3,768,000
Pay and allowances	53,195,000
Travel and transportation	2,585,000
Operating expenses of properties	1,455,000
Ships: acquisition by purchase, construction, charters, repairs and upkeep	80,153,000
Equipment division components	3,923,000
Purchase of new machinery and repairs to buildings and machinery	2,874,000
Buildings: acquisition, construction and purchase and rental of land and buildings	21,955,000
Stores, equipment and supplies	52,720,000
Armament stores	34,166,000
Sundries	1,743,000

That is the analysis of the total vote asked for by this department. My hon. friend asked, I believe, for a comparison with last year's estimates. I shall give it to him as accurately as I can, but last year there was a slightly different division of these items.

Mr. STIRLING: If the minister could just indicate where the bulk of the $120,000,000 excess has gone—or as he wishes.

Mr. MACDONALD (Kingston City): It was $80,000,000 odd. Last year the estimate was $169,000,000. This year, pay and allowances are estimated to be $20,000,000 more than last year; repair of ships, $7,000,000 increase; repair of buildings, et cetera, about $4,000,000 increase; stores, that is victualling stores and naval stores, up roughly $13,000,000; armament stores, up about $20,000,000.

Mr. STIRLING: That is about $65,000,000.

Mr. MACDONALD (Kingston City): The difference between this estimate and last year's is about $88,000,000. Those are the main items of increase over the estimates of last year.

Mr. STIRLING: Judging by the figure which the minister gives of the increase in the number of ships, I am surprised that the item in this estimate of $80,000,000 is only $7,000,000 bigger than last year.

Mr. MACDONALD (Kingston City): Of course our last year's programme of ship-building was very heavy, probably even heavier than this year's. Last year showed a tremendous development of corvette building. From the opening to the end of navigation last year we commissioned on an average, I think, two ships a week.

Mr. STIRLING: How far can the minister go in breaking down the figure of ships? The leader of the opposition asked if we might have those figures.

Mr. MACDONALD (Kingston City): I can go some distance but not all the way; that is, I do not wish to give exactly the number of any particular type of ship, but I can approximate it. First of all, the leader of the opposition asked how many of these ships were real fighting ships and how many were simply boats. About half of the number which I have named are what might be called "shooting" ships; they are equipped with various types of armament, some of them with depth charges or torpedoes. All of them are ships which are capable of taking the aggressive in an action.

As to an analysis of the total number of fighting ships, let me take corvettes first. On the water to-day there are, let me say, roughly 75 corvettes. That is not the exact figure. There are roughly 45 mine-sweepers. There are more than a dozen armed yachts. The leader of the opposition asked whether the armed yachts were of any use. They are. They are used for patrol purposes along the coast. They are armed with guns, and they also carry depth charges, so that they are ships of considerable value along the coast of a country.

Mr. STIRLING: Are they on both coasts?

Mr. MACDONALD (Kingston City): Yes. Most of them are on the east, but two or three of them are on the west. We have about two dozen of the Fairmile motor launches, between twelve and twenty destroyers; we have several auxiliary cruisers. The precise number is probably known to most hon. members and I will not give it. That is an analysis of the important types of fighting ships in our navy. There are a good many others which I have not mentioned, such as gate vessels, tugs, harbour motor-boats, and so on, that I will not speak of here.

Mr. STIRLING: May I ask with regard to the other half, the 200—roughly speaking—which are not fighting ships. Do they go right down and include 16-foot pulling boats?

Mr. MACDONALD (Kingston City): No.

Mr. STIRLING: Are they apart from those?

Mr. MACDONALD (Kingston City): Yes.

Mr. STIRLING: What is the total of all we have?

Mr. MACDONALD (Kingston City): As I said, we have a total of probably 400 ships of all kinds. They would include tugs, harbour vessels, patrol vessels of one kind or another, fishermen's reserve vessels and that sort of thing, which I have not given in this analysis.

Mr. STIRLING: But the minister does not include such things as pulling boats, whalers and craft of that sort in the 200?

Mr. MACDONALD (Kingston City): No.

Mr. STIRLING: They are in addition to the 400?

Mr. MACDONALD (Kingston City): Yes.

Mr. GREEN: Is it the intention to acquire any more destroyers or larger warships during the current year?

Mr. MACDONALD (Kingston City): Yes. We have destroyers building now, as my hon. friend knows.

Mr. GREEN: In Canada?

Mr. MACDONALD (Kingston City): We have not actually laid the keels. We have acquired quite a lot of material. It is very difficult to get destroyer steel now. I hope that the last bit of essential material will be acquired very soon and that the keels will be laid within a matter of weeks. But there are destroyers being built in the old country besides those I have mentioned here. Some are almost completed, and others are on the ways in the United Kingdom.

Mr. GREEN: Are we acquiring any larger ships such as light cruisers?

Mr. MACDONALD (Kingston City): No; we have none in mind at the moment.

Mr. NOSEWORTHY: The minister in the break-down he gave referred to 150 ships out of the 400. Can he give any indication of the size or type of the other ships?

Mr. POULIOT: I have just a word to say before the minister replies. I was not in my seat, but I listened from the gallery to the discussion both this afternoon and to-night, and I must commend the Minister of National Defence for Naval Services for the way he is bringing forward his estimates. This is the way it should be done. He is not surrounded by the whole navy; he is alone. Besides that, when a member asks for information the minister gives the details and shows good-will. This is the way in which estimates should be piloted through the committee, and it is the way it has been done by most departments. He seems to have nothing to hide. By the way, he was premier of his province for a number of years and is true to the traditions of Joe Howe, the great parliamentarian, the great figure of Nova Scotia. Of course, it is my great pleasure to say things like this. They are much more pleasant than when I have to say the contrary. What the minister has done will set an example which, I think, should be followed by each of his colleagues. The minister is not supposed to know the names of all the sailors, but he does his best, and, as I say, he shows good-will. I commend him very highly. I am delighted at the way in which he is piloting his estimates through the committee.

Mr. MacINNIS: One word in that regard. I do not think that the comparison which the hon. member for Témiscouata (Mr. Pouliot) is trying to make is quite fair. We had the Minister of National Defence (Mr. Ralston) before us for two weeks, and he was the essence of good temper. He gave information and, if anything, he was too ready to give information. He gave it in the fullest way, and I must say for those of us sitting here that while we have nothing to complain about with regard to the present minister, we must certainly commend the Minister of National Defence for the way in which he gave information.

Mr. POULIOT: I am the first to agree that the expression of opinions is free, and if some members are satisfied with the way in which the estimates are piloted through the committee in some instances, so much the better for them. They are not asking for much. What we are here for is, first, to enact legislation and, second, to check expenditures. The expenditures of all departments should be given to us in sufficient detail that we may understand how the department is being run. That is ministerial responsibility to the members of the House of Commons and of the Senate. It is responsibility for all expenditures that are made in the department. I make no comparisons; I have named no one except the minister who is now piloting his estimates through the committee. I say he is doing well, and I am not alone in that opinion. Many of my colleagues have remarked the same to me. I do not change my mind because of different views that may be expressed, however respectable they may be.

Mr. MACDONALD (Kingston City): The hon. member for York South (Mr. Noseworthy) asked for some information regarding the remaining ships making up the round figure of 400. Some of the remaining ships are classified as patrol boats. They are of varying sizes, and a good many fall into that class.

Mr. DOUGLAS (Weyburn): They are not armed?

Mr. MACDONALD (Kingston City): Some are armed to some extent and others are not. Then there are examination vessels, of which there are twelve. Those are not included in the figures I gave of armed ships. Then there are boom-maintenance vessels. There are about twenty of these, which are used in connection with the maintenance of booms across mouths of harbours. There are gate vessels used where submarine nets are placed across gates through which friendly vessels may be allowed to pass. There are twelve or fourteen of these gate vessels. Then we have about five auxiliary tankers. We have tugs to the number of about ten, and we have a large number of harbour craft, probably over 100. These are of varying sizes. Some of them are 48 feet in length and some a good bit longer. There is one which is 107 feet, another 97 feet, another 125 feet. They are used for harbour work. They are not included in the breakdown of armed ships which I gave. There are munition lighters to the number of five and a few diving boats, and there are nine boats that are used for training purposes in the R.C.N.V.R. divisions. These run from small ones of forty feet up as high as boats of 145 feet in length. I think that accounts for the 200 odd boats that I did not include in my first statement.

Mr. GREEN: The information the minister has given concerning the construction of destroyers in Canada is rather discouraging. On November 11 last the minister said, as reported at page 4268 of *Hansard:*

> The plans for building destroyers are well in hand, and we hope to begin that work very soon.

Then in the booklet "Canada at War" for April, 1942, we find on page 13 this statement referring to destroyers:

Two more vessels of the same type are being built in Canada.

Apparently that information is inaccurate, and the keels have not yet been laid. Is there not some way in which the construction of these boats could be hastened? After all, they are the largest fighting ships that Canada has, and it does seem that we should be doing everything possible to hasten the construction of these destroyers.

Mr. MACDONALD (Kingston City): My hon. friend is quite right; the suggestions he makes are sound and commendable. When I stated on November 11 last that we expected shortly to undertake the building of destroyers I spoke correctly. But my hon. friend will remember that on December 7 the United States became involved in war, and the steel for destroyers, or at any rate certain kinds of steel which is not manufactured in this country—steel which we had hoped first, to get from Great Britain and then turned to the United States to secure—that steel was denied us. On the outbreak of war, the United States government and manufacturers naturally decided that they should keep all their steel there until the situation became clearer. We have received certain shipments of steel from the United States; arrangements have been made for the construction of destroyers at Halifax; things are being shaped up, and the keel steel will arrive, I believe, very soon. Make no mistake; every effort is being made to get it. But my hon. friend will understand how difficult it is for a country that finds itself plunged into war, and has a tremendous shipbuilding programme of its own—an inconceivably big programme in the matter of both merchant ships and war ships—to let steel go even to a friendly country such as ours. But I think that difficulty is being pretty well overcome now. We shall have the steel, and the keels of those destroyers will be laid in a very short time.

Mr. GREEN: Can we not produce steel of that kind in Canada? Is it a different kind from that used in corvettes?

Mr. MACDONALD (Kingston City): My colleague the Minister of Munitions and Supply (Mr. Howe) would know more about that, because he has to build the ships. I understand it is specially treated steel processed by a special heat treatment, that is not available in Canada at present.

Mr. GREEN: Can we not produce that type of steel in Canada?

[Mr. Green.]

Mr. HOWE: We can, but it would seriously interrupt our other activities.

Mr. DIEFENBAKER: There is one phase of the work in which the navy is engaged that was not dealt with at any length by the minister in the admirable address he gave this afternoon. Were it not for the fact that from time to time reports are given in the British House of Commons in connection therewith, I would not bring it up. The contribution of the Canadian navy and all it means, the great sacrifices being made by the men of that service and of the merchant marine, after the recital that has been given us to-day will make us all realize even more clearly that the success of the united nations depends upon keeping the sea lanes open. During the past couple of weeks various statements have been made in the United States senate and house of representatives in regard to the problem of keeping the sea lanes open, and in particular to the submarine campaign going on on the Atlantic, designed to prevent shipments of tanks and munitions and aeroplanes to Russia, to the near east and to Great Britain. According to information published in Washington on April 17 last, considerable improvement is taking place as far as submarine attacks on the Atlantic are concerned, and in the issue of the *United States News* which I have before me it is stated that the great problem facing the united nations to-day is to keep the sea lanes open, and that for every two ships now being launched by the united nations, three ships are being sunk by axis submarines. It adds that there has been improvement recently.

I do not want to ask any questions that might in any way tend to endanger the safety of the united nations or Canada. But the other day the senior ranking officer of the navy made a speech in which he pointed out the serious situation on the Atlantic. If that statement be true, the people of Canada should know and realize the condition and the position in which we are. The people of Canada to-day want to know the facts, but only those the revelation of which could be of no assistance to the enemy. Is the minister in a position to-night to tell us whether or not there is an improvement on the Atlantic, whether or not we are winning on the one front where it is necessary to win in order to secure victory on land? I should like him to tell us if he can what expansion, if any, is anticipated in the navy during the coming year. We have heard frequently that the government of Canada has a plan for Canada's part in the war effort. Is that plan the exten-

sion of the army, further expansion in the air force, the extension of the navy or an acceleration of munitions production?

We heard to-day an address eloquent in its terms, inspiring in its viewpoint, telling Canadians what Canadian navy men are doing and the wonderful advances made by our navy. I think all of us are proud of the work that has been done in the expansion of the Canadian navy, proud of the contributions it is making, proud of the acceleration in the service it renders, as the hon. member for Yale (Mr. Stirling) said with the pride that must be felt by a father whose son is in that navy. We are proud of our navy, and we do not want any information that might in any way aid the enemy. But if the situation is bad on the Atlantic, let the people of Canada know it; let them realize what we are up against; for if there is one thing that the people of Canada must have to-day, it is a message challenging them to greater effort, a message from those in authority, a message that has not yet been given. We should know that the challenge we face is of our survival. What are the dangers that we must overcome? What are the sacrifices the people must make individually in order to secure victory? To-day the minister went a long way in giving detailed information. I have refrained from asking some of the questions which the minister has felt free to answer; but without going into any elucidation which could be construed in any way as being of assistance to those who to-day are our enemies, I ask him to let the people know what the situation is and what our responsibilities are, so that we may realize what we are up against and what further responsibilities we must undertake. The men in the factory, the men who produce destroyers and other ships of war, will have a renewed determination if they know the challenge that is before them.

Mr. MACDONALD (Kingston City): My hon. friend has raised a point, I must say, with great fairness and courtesy, and with due regard for the importance of the subject. I could give him an answer now, but I should prefer to wait until to-morrow in order that I may do justice to my hon. friend, to the manner in which he has raised the question, and to the importance of the question itself.

I know the statement to which my hon. friend refers. It was made by the chief of the naval staff a few weeks ago, as to the presence of submarines on our coasts. He expressed the view that this year, submarines might well be found operating in the gulf of St. Lawrence and perhaps in the St. Lawrence river itself. There is no doubt that this is a very distinct possibility. There is no reason why submarines could not get into the gulf of St. Lawrence and operate there. There is every likelihood that they may do so. As I said this afternoon, already they have come within sight of our eastern shores; they have come within sight of the shores of the United States, both east and west, and there is no reason why they may not continue that practice.

As to the general situation on the Atlantic, as I have said I should prefer to give a little thought to such a statement. The Atlantic is a large body of water. The line between eastern Canada and Great Britain is one thing; the coastal lines up and down, north and south, are another. It would be true to say that it is the north and south line, the coastal traffic line, which in the last three months has sustained the most severe attack. More than that I should not care to say at this moment. But to-morrow afternoon, if my hon. friend will grant me that much grace, after a little more preparation, I should like to make a statement.

Mr. HANSELL: Much has been said to-night in respect of the pay and allowances of those in the navy. I do not wish to labour this point, because I understand that to-morrow the minister will bring down a statement which we anticipate will announce at least an increase in the allowances to dependents of those who sail the high seas.

I do not rise to ask a question; I rise to offer a suggestion to the minister. I do not think we should be satisfied if to-morrow the minister's statement gives the dependents of those seamen any less than is given those who are in receipt of allowances as being the dependents of those in the army.

Mr. MACDONALD (Kingston City): Hear, hear; quite right.

Mr. HANSELL: I anticipate that if the minister brings down a statement which shows that there will continue to be a difference in those allowances, a few questions will be asked, and a discussion of the subject will be precipitated. I quite understand that there may be some reason for a difference in pay as between the various ranks in the navy and the comparable ranks in the army. What I have in mind is simply this. I can understand that there may be a difference between the pay of a plasterer and the pay of a carpenter, though they are both engaged in the building and construction industry. But when it comes to the dependents' allowance, I do not see why there should be any difference between the allowance given in respect of the navy and that given in respect of the army. Surely the wife of a seaman eats as much bread as

does the wife of a soldier; surely she wears just as many clothes, so I see no reason for that difference. If, after this statement to-morrow, a difference still exists, I think the minister will have to be prepared to answer this question: What is the determining factor which causes the dependents' allowance in one service to be different from that in another? I want the minister to grasp the point. What is the determining factor which brings about the difference between the dependents' allowance in one service and that in another, since the seaman has a wife and children, the man in the army has a wife and children, the man in the air force has a wife and children, and they are all wives and children. The minister should be prepared to answer that question if the statement he brings down indicates that the allowance to dependents of seamen is to be any less than that to dependents of men in the army.

Mr. MACDONALD (Kingston City): I should like to answer some questions, in the order in which they were asked this afternoon. First there were questions asked by the hon. member for Yale, as to training, the standard of training in the Canadian navy, and whether we are taking in boy seamen, cadets and midshipmen. The answer to these three questions is that at the moment we are not taking in boy seamen or cadets or midshipmen. There is a small number of these men in the Canadian navy, from previous years, but no more are being allowed to enlist for the time being. The hon. member also asked whether naval cadets still went to England for training, as they did in peace time. The answer is no. We believe that our own naval college at Esquimalt will take care of that.

Then my hon. friend asked for a brief description of the training establishments at each coast. I can deal with that matter only in a very general way, but I may tell him that there are barracks at both Halifax and Esquimalt where men are lodged and fed. Unfortunately there is not enough barracks accommodation to take care of all the men, so in the Canadian navy we have some seven thousand men who have to live and eat out of quarters. But we have barracks at these places. We have various training buildings, gunnery schools, torpedo schools, schools wherein submarine detection instruments are studied. We have a signal school now situated at St. Hyacinthe, Quebec. We have one radio direction finding school, where instruction is given in that very important work—and so on—at each coast.

Then, I am asked if the men receive refresher courses before going to ships, such as corvettes. The answer would be, not in all cases. Some men would go right out of their training course, and sign on a corvette.

Mr. STIRLING: That question applied more to the Royal Canadian Naval Reserve. Do we take men from the merchant navy and give them refresher courses?

Mr. MACDONALD (Kingston City): Yes.

Mr. STIRLING: When do they take those refresher courses?

Mr. MACDONALD (Kingston City): Some men might go right in upon entry. A good engineer might go right in. Others might take preliminary training. A very young man might be sent to one of these five or six training schools. But the chief refresher course for any rank would be for the man who had been at sea for a time and who is considered to have special aptitude for gunnery, torpedo work, signalling or anti-submarine work. He would be taken ashore, and perhaps given special training in that type of work.

Then the leader of the Social Credit group (Mr. Blackmore) raised a question as to why we do not endeavour to build up here a navy which would be auxiliary to the Royal Navy. He went on to say that we should be strong and that we must build for the future. I must say I agree very largely with what the hon. member has said. That brings up the point discussed by the hon. member for Vancouver East (Mr. MacInnis), as to disarmament. That subject might hardly come within the scope of this debate, but offhand I would say that disarmament is a splendid thing—if everybody disarms. But it is a ridiculous thing if only a few disarm, and others are allowed to go on arming—as they did in the last ten years. They did go on arming at a furious rate, while countries against whom they were arming did very little but talk about it. World disarmament practised by everybody is excellent. Disarmament practised by a few amounts to something very like suicide for those who disarm.

The hon. member for Davenport (Mr. MacNicol) who, I am sorry to say, is not at the moment in his seat, wanted to know the number of men enlisted from each province. I shall give those figures, and he may get them from *Hansard*. These are the figures for all ranks, up to the end of March. While the figure for Prince Edward Island may seem small, in reality it is probably the best showing of any province, taken on a per capita basis. I believe that applies not only to the navy but to other services as well. The record of that province is equally good with respect

to those services. These are the figures for enlistments:

Prince Edward Island	841
Nova Scotia	3,897
New Brunswick	1,172
Quebec	4,862
Ontario	10,135
Manitoba	2,241
Saskatchewan	1,890
Alberta	2,435
British Columbia	4,480

These figures give a total somewhat different from the 31,000 I mentioned this afternoon, but the figures I gave at that time were round figures. It will be remembered that these are the figures for enlistments, and that among those men, some have been discharged through illness, or for other reasons. The figure I gave this afternoon was the actual strength of the Canadian navy at March 31, 1942.

Recreational facilities at Halifax was another subject mentioned by the hon. member. Some question was raised by the leader of the opposition with respect to the Ajax club. The navy had no official supervision over or association with that club. True, it was a club originally designed for the benefit of ratings of the Royal Navy, and it was later extended to include ratings of the Canadian navy. However, some difficulty arose in connection with the securing of a liquor permit. I had nothing to do with that. The difficulty arose in another place, and the upshot was that the club could not procure a permit. It was not deemed advisable to give it permission to sell liquor. It was located very close to a church, unfortunately, and some objection was taken from that quarter.

I may say, however—and I wish my hon. friend who is honorary president for Ontario of the navy league were here—that the Navy League of Canada has undertaken to do something which I believe will be much better than any club facilities of the ordinary kind could be. They have agreed to take over those splendid athletic grounds in Halifax known as the Wanderers' club grounds. Hon. members representing Halifax will know the location. It is a very beautiful site, with trees growing all around, the whole being surrounded by a high board fence. It has been used for many years as an athletic field for the playing of football, baseball and cricket, and it possesses an excellent running track. It is the intention of the Navy League of Canada to have at that point facilities for sailors, not only to provide them with ordinary canteen facilities for the purchase of cigarettes, and so on, but to provide athletic equipment whereby men coming in from boats may play football, baseball, cricket or bowls, or any of those other sports which should be available to men who have been confined on small ships for long periods of time. I believe that is a most excellent arrangement. I know the grounds well, and I know that the sailors, while there, will be more or less secluded. They will not be on the street; they will not be crowding the sidewalks in any way, and they will have this magnificent opportunity for wholesome sport, and the use of showers, dressing rooms and that sort of thing provided by this magnificent organization.

Mr. HAZEN: Will they have a wet canteen, too?

Mr. MACDONALD (Kingston City): I have no doubt a wet canteen will be there. I do not try to run these things, but from what I hear I would assume there would be a canteen where beer would be provided. I think that covers the matter of recreation at Halifax.

The hon. member for New Westminster (Mr. Reid) raised the question of men who had served in the last war in the naval service being ready to serve now. I may say to him that we shall be delighted to have these men if they are not too old and if they are otherwise fit to serve.

My hon. friend also asked about Japanese boats which had been taken over or bought outright. I think we have some eighteen of these former Japanese fishing vessels in the navy. My hon. friend will understand that the Department of Fisheries has now taken charge of practically all these vessels. Where a small vessel is involved we find it better to buy outright rather than to pay charter prices which in two or three years will amount to the cost of the vessel. We would then have to return the vessel to the owner and probably have to make a lot of repairs in order to restore it to its original condition.

Mr. STIRLING: Who sets the price?

Mr. MACDONALD (Kingston City): In connection with these Japanese vessels there is a board of which Mr. Justice Sidney Smith is chairman. This board controls the whole thing. In the case of ordinary vessels, if the price cannot be agreed upon either for purchase or for charter, there is a board at each coast.

The hon. member for York South (Mr. Noseworthy) raised the question of convoys and the number of ships in convoy that had been lost. I should prefer to leave this question until to-morrow when I deal with the question raised by the hon. member for Lake Centre (Mr. Diefenbaker). It is all part of the same story.

My hon. friend went on to ask whether there was any body of engineers in this country that could take up the question of new mechanical devices or inventions. The only body I know of is the national research council which has an inventions board to consider suggestions which are made or inventions which are offered by inventors or people who consider they have some improvement on an existing device.

In the navy, as in the other two services, men are encouraged to improve things, and they are given certain prizes. I know of a certain young lieutenant who won a prize last year of, I think £10, paid by the British Admiralty for an improvement in one of the gadgets on a ship. I believe it had to do with the machine to bring shells up from the hold of the ship. He improved it in some way, and it was considered worthy of special mention and a gift of £10.

My hon. friend also raised the question of the effect of pay upon morale. I agree entirely with him in that. There is no doubt that if a man is worried about conditions at home, whether his wife and children are being properly looked after, his morale is not as good as it otherwise would be. He spoke of men in factories being allowed to bargain collectively. This may be considered to be a little off the track in this debate, but I may say to him that I agree with him completely. I have always stood for the right of men to bargain collectively. The hon. member for Cape Breton South (Mr. Gillis) will know that four or five years ago the government of Nova Scotia, with which I was then associated, passed a statute giving to labour the right to bargain collectively through unions of their own choice. That law still stands on the statute books of that province. I agree with the hon. member for York South when he says that a labourer is entitled to that right. He is helpless without it, and it should be extended generally throughout the country.

The leader of the opposition (Mr. Hanson) asked if a man could get into the navy without first going into the ranks. He can do that by going to the naval volunteer reserve division in Charlottetown, Saint John, Quebec, Montreal, Toronto or any other centre and seeing the commanding officer of the division. If he is considered suitable, the commanding officer will attach him to the division. He will then appear before a selection board of officers who will consider his fitness to be permanently associated with the navy.

Mr. STIRLING: What educational standard is required in that case?

[Mr. Macdonald (Kingston City).]

Mr. MACDONALD (Kingston City): At least senior matriculation.

Mr. STIRLING: Nothing like as stiff as was required for entry into the Royal Canadian Navy.

Mr. MACDONALD (Kingston City): It is a different type. You mean the cadet entering the Royal Canadian Navy? Yes. I think on the whole it might correspond to that. I think a good matriculant would be able to qualify for the Royal Canadian Navy. It is true that some of the examinations are set in England, and a lot of our boys have trouble because of not having followed the same course of study, but I would think that entry into the Royal Canadian Navy at the age of sixteen or seventeen years—that is about the age a boy gets his senior matriculation—would call for the same general level of education. The hon. member for York South knows more about that than I do, although at one time I did know a good deal about it. I should think that senior matriculation would correspond roughly, although it may be a little off in some subjects from what would be required of an entrant into the Royal Canadian Navy.

Both my hon. friend and the hon. member for Lake Centre (Mr. Diefenbaker) inquired about the future programme of naval training. I intimated that within the next year we hope to add some 12,000 or 13,000 men to the strength of the navy, and also we hope to add not far from 100 ships. I doubt if we can expand very much faster than that. We are going to be faced with the problem to which I referred earlier, that of obtaining trained officers and petty officers. That is the great problem. We can get all the men we need, but it is hard to get officers to command ships of war. Ship commanders require some knowledge of gunnery, some knowledge of torpedo work, some knowledge of signalling, considerable knowledge of navigating, the ability to handle men and to sail a ship. These cannot be obtained overnight. A man must have a certain amount of training on land, and he must have a certain amount of training on the sea. He can get that training only at sea. He cannot be given theoretical training alone. Some of the men who went into the navy in the early days of the war have acquired a wealth and a variety of experience in two and a half years, which in ordinary peace times would take them six or seven years to acquire. They will be a great help to us, but we shall still feel the lack of skilled petty officers and officers. I fear that that will be our greatest problem in the next year or two.

Mr. HAZEN: Is junior matriculation a prerequisite for a rating obtaining a commission?

Mr. MACDONALD (Kingston City): No, not necessarily for a rating who is promoted to a commission. He is considered to have acquired quite a bit of knowledge already. However, that is necessary for a man going straight into a commission.

Mr. STIRLING: The reason why I asked with regard to the training establishments on both coasts is that it is commonly recognized that one of the greatest difficulties is this question of providing the Royal Canadian Navy with the necessary ships' complements. The minister has indicated that there are so many on hand now that they have to live out more or less where they can, and then they have to undertake their training in what training establishments at present exist. Am I not right in believing that there have been one or two fires in establishments of that description, which, of course, must have reduced that quantity of establishments very considerably?

Mr. MACDONALD (Kingston City): I do not think that actual training was much affected. My hon. friend is referring to fires at Halifax. The last fire there was in a hut used for sleeping and messing, so that training facilities were not greatly affected. The fire which occurred about a year ago was in a sort of sleeping-messing hut. I believe there was also a classroom in it, but it was not exclusively devoted to that purpose. It was an old wooden building.

Mr. STIRLING: It was separate from the main barracks?

Mr. MACDONALD (Kingston City): Yes. At Halifax there are well over a hundred buildings of one kind or another. In the whole naval service there are some 500 structures of one kind or another either built, or building, or for which plans are being prepared. Halifax, with well over a hundred, has a greater number than any other place. I do not think these two fires interfered with the actual training. The matter of quarters may have been rather bothersome for a little while.

Mr. STIRLING: The minister referred to St. Hyacinthe as a signal school. Is that the only one, or is there another, a Pacific school? Does he contemplate being able to use St. Hyacinthe for that purpose or is a move in contemplation? If a move is in contemplation does he expect to have to build for that purpose?

Mr. MACDONALD (Kingston City): We do not intend to remain permanently at St. Hyacinthe. We were given the quarters there by the army only out of grace. It is really an army camp, and they have frequently asked us to get out. We have endeavoured to stay on until we had some other place ready, but I understand that the army has a regiment there which wishes to use those quarters as a barracks, and we shall have to get out. A move is contemplated. It is desirable, of course, to have the school on the east coast near a great centre of training, because otherwise you have to be shipping ratings up and down to St. Hyacinthe from Halifax and other ports, and the problem of transportation becomes a very considerable one.

Mr. STIRLING: How many at a time does the minister expect to handle at the signal schools?

Mr. MACDONALD (Kingston City): I believe when the school is going full blast, there will probably be over 1,500, perhaps as many as 2,000, training in signalling. But we have not that number now. The number at St. Hyacinthe at the moment is 1,049.

Mr. STIRLING: Officers and ratings?

Mr. MACDONALD (Kingston City): Officers and ratings. There are 34 officers and 1,015 ratings.

Mr. NOSEWORTHY: Has anything been done to develop a uniform course for the sea cadets?

Mr. MACDONALD (Kingston City): I am glad my hon. friend brought that up. He did so before, and I failed to notice it. I should like to look into it. I think we wrote a letter on that point to the educational services in all the provinces. I am not quite clear as to what they all replied, but I think I can say this. The naval service so far in the matter of cadets has not associated itself so closely with schools as the other two services. I think the great majority of our cadet corps, if not all of them, are made up of schoolboys, and they are in all cases part and parcel of the school life. I do not know that the matter to which my hon. friend refers was of such prime importance to us as it was to either the army or the air force. If my hon. friend will allow me, I will look again into the correspondence with the provinces and make a complete answer later on.

Mr. GRAYDON: Will the minister give us some additional information with respect to the training of the men in the navy? Having in mind that a good deal of the progress and development which have occurred in connection with the training of our army has been the result of close association with the British authorities, can the minister advise the committee to what extent the training of our

naval personnel is proceeding in close collaboration with the British navy? Most of us in Canada have the conviction that the British navy is second to none with respect to its traditions and its achievements all through the years. I believe that the British navy contains officers and men the like of whom the world has never seen in point of real effectiveness on the water. I have no doubt that in Britain the schemes and plans of training of men for the navy are in a highly perfected condition, and I have been wondering whether the Department of National Defence for Naval Services is collaborating with the British naval authorities so that some part of their tremendously important experience is made available to Canadian naval officers and men. I would couple with that an inquiry as to how closely the work of the Canadian navy is joined with that of the British navy in the general war operations at this time. We in Canada are amateurs in naval affairs compared with the seamen of the motherland, and it would seem to me wholly within the realm of common sense that we should seek, wherever possible, to take advantage of the work which has been and is being done by the British government in the development of sea power efficiency, an achievement which, as I have said before, approximates the best that the world has known.

Mr. MACDONALD (Kingston City): I may say to my hon. friend, first, in a general way that there is, of course, the very best of good feeling and the clearest of understanding between the naval officers here and the naval officers in the United Kingdom.

In the second place, a great many of our officers have been trained in the British navy. All senior officers of the rank of captain and above have had experience on British ships, and even some below the rank of captain have done their year or two on British ships of various types—battleships, cruisers and the like. In that way they have acquired close contact with and knowledge of the methods pursued by British officers. Furthermore, we have 1,100 Canadian officers and men now serving with the British navy. Some of these we hope to get back and some we have already got back. They had the advantage of a year or so of serving on British ships of war, and their experience will be very valuable here. As to what is the actual cooperation between the navies, I fancy my hon. friend refers to the disposition of ships on the Atlantic at this time, or something of that sort, rather than the exchange of men.

Mr. GRAYDON: I do not want any intimate details that should not be revealed, but a general idea.

[Mr. Graydon.]

Mr. MACDONALD (Kingston City): Cooperation on the Atlantic is very close as between British and United States ships and our own. The burden of convoying on the Atlantic is shared in about equal proportions by the three countries, Great Britain and the United States doing perhaps a little more because they are bigger and have more ships. But we are doing nearly one-third of the work. I am speaking of convoying now, not of engaging in any great battle with battleships, because we have not the battleships. Our navy is a convoy navy up to the moment, and the distribution of the work on the Atlantic works out roughly at one-third British, one-third United States and perhaps a little less than one-third Canadian.

Mr. GREEN: What is the situation on the Pacific? Is there cooperation there with the United States navy?

Mr. MACDONALD (Kingston City): Yes. Of course, the problem is somewhat different there, but there is close cooperation between naval headquarters on the Pacific coast and the corresponding United States division to the south. In every way there is frequent exchange of signals, intelligence and so on.

Mr. MacINNIS: What kind of armed vessels are used for convoying? I thought the vessels used were larger than anything we have.

Mr. MACDONALD (Kingston City): The common type of vessel used in convoying before the war would be the destroyer, but since the beginning of this war we have developed the corvette, which is cheaper and much easier to build than the destroyer. It has not the speed or the power, but it is a very useful vessel to attack submarines. Even the mine-sweeper, which is very much the same as the corvette in some respects, can be used as an escort ship. Any ship that can carry depth charges and move a little faster than the submarine under water is of some use as an escort for convoys, but I should name the typical escort for convoys as destroyers and corvettes. The great battleship, I suppose, would not be used normally for the escort of convoys unless it was a convoy of exceptional importance, a very large troop convoy, where you wanted a battleship to deal with some other battleship. But if you are not going to deal with battleships but want to hunt submarines, the destroyer and the corvette will do the trick better than the battleship.

Mr. GRAYDON: Is there any scheme of coordination between the work of the air force here and that of the navy, as there has been in so many other countries since the

war began? If one judges the news correctly, the question of air protection in the naval force has reached the position where air protection is practically the most essential part of some of the work the navy has to do. Could the minister tell us what scheme has been adopted between our air force and our navy with respect to any events that may occur in the future which would necessitate close collaboration between the two branches?

Mr. MACDONALD (Kingston City): That is a very interesting question, in answer to which perhaps full details cannot be given in the very nature of things, but I may say this to my hon. friend. Take the east coast where there is a naval establishment and also an air force. There is a very close degree of cooperation. Air patrols go out so many hundred miles over the water daily. Many patrols go out; they report to the naval authorities and naval vessels anything which they see, and that experience in itself is very valuable as a lesson in cooperation. What my hon. friend raises primarily, I think, is the point that has come to the fore so much in recent months, and that is that naval power alone, if attacked by air power, is at a great disadvantage. That, unfortunately for us, has proved only too true in recent months. Torpedo bombers diving down and launching torpedoes which go over the water have proved singularly effective against some of our ships. We have not had that form of attack on our coast. We have not had surface attacks on our coasts, but when it comes I believe the experience which the air force has already gained, and the navy as well, by cooperating with and reporting one to the other, signalling one to the other, and collecting information for their mutual advantage, will be quite valuable.

Mr. DOUGLAS (Weyburn): Have any steps been taken to develop any type of fleet air arm?

Mr. MACDONALD (Kingston City): No, not yet. We have not got that yet.

Mr. HANSON (York-Sunbury): That situation obtains in the United States. Would the minister care to express an opinion—perhaps he would be too modest—as to the advantage of the navy having its own air force, as they have in the United States, compared with following the practice we have of a separate force working in cooperation with the navy? There are two schools of thought about that in the United States, as I have read—and elsewhere too, a colleague of mine suggests. In England I have heard a good deal of murmur, shall I say, on the part of the senior service in the navy that they do not have control of the air force on this patrol work. It is a matter of opinion, I suppose, and I am wondering what the minister's opinion is, if he has formed one. There are two distinct schools of thought about it in the United States and possibly in England. Has Canada developed any thought along that line?

Mr. MACDONALD (Kingston City): I do not know that I have any definite view on that point; I have no aeroplanes in any event. But the British system is, of course, to have an air force, an army and a navy. The navy has some little air force of its own. It has a fleet air arm, and in addition to that there is cooperation between the navy and the regular air force. The United States system does not provide for any separate air force. The army has its own air arm, and so has the navy. There are two views about it. One view is that this new thing, this air force, a new up-and-coming element, should not be checked and held down by the older service, that they should not shackle the new to the old. That view has prevailed in the United States up to the moment, though I cannot say what changes time may bring. I have no definite views on the matter myself. Sometimes one works well, sometimes the other.

Mr. NICHOLSON: Has any thought been given by the minister's department to the question of providing housing for the families of men of the navy? In the United States large appropriations have been set aside for providing suitable houses in locations where large numbers of naval men and officers are stationed. The figures which the minister has placed on the record to-night give some indication of the very serious problem existing in many parts of Canada. For example, he informs us that 10,135 have joined the navy from Ontario, 2,241 from Manitoba, 1,890 from Saskatchewan, 2,425 from Alberta. It naturally follows that men from these inland provinces are going to find themselves at sea eventually, and owing to the very small allowances available hitherto there is not much chance of these men seeing their families very often. I know a critical situation has already developed. Large numbers of people have flocked to Halifax. The Department of Munitions and Supply has assumed responsibility for building temporary houses for people in cities and towns where war industries have been established. In Halifax houses have been built to accommodate people who have gone there for employment in connection with munitions and supply work, but the families of men of the navy are not permitted to occupy these temporary war-time houses. The

Minister of National Defence was asked the other night whether his branch had given consideration to the providing of houses near military establishments, and he stated that so far no such plans had been undertaken. It would seem to me that at this stage, with a navy thirty times larger than Canada had at the commencement of the war, and the very large sums that have been appropriated for naval services, some consideration should be given to what appears to be an essential part of naval activities, that is providing some place for the families of the men and their officers to live.

The figures that the hon. member for Cape Breton South placed before us this evening showed that a wife with three children would be allowed $45 a month. Assuming that she had $20 a month assigned pay, that would provide $65 a month. It is usually taken for granted that not more than 25 per cent of the monthly income should be spent on house rent. Twenty-five per cent of $65 equals $16 and some cents available for house rent. My information is that in Halifax it is impossible to secure any sort of suitable quarters for that amount. It seems to me that since the government so far has not seen fit to permit Wartime Housing Limited to make their houses available for the families of those in the army, the navy and the air force, either these departments must undertake this very essential service, or the necessary changes must be made to permit Wartime Housing Limited to provide a sufficient number of houses in centres to which large migrations have taken place. Is the minister prepared to make a statement as to the consideration that has been given to this question and whether some policy might be outlined?

Mr. MACDONALD (Kingston City): Yes; a great deal of consideration has been given to that problem. For some time the naval authorities at Halifax have been investigating the number of families that are there and in need of housing, or better housing than they have been able to secure up to the moment.

The problem is not very simple; like many of these problems it becomes more and more complex as you get into it. As far as the navy is concerned there are only two points that would trouble it—Halifax and perhaps Esquimalt. Our great concentrations of men are at these points. But the army has, say fifty places in Canada where camps have been set up; the air force has a good many; and at once the question is raised, "Are we to build houses at every place where we have a camp, in order to permit soldiers' families to come there and visit their men?" I think something has to be done for the families of ratings, but I think that must be coupled with this provision, that a soldier who goes to Halifax to get on a ship and perhaps has to wait there a week or two, cannot expect the government to guarantee that he is going to get accommodation for his family at that point. What the Department of Munitions and Supply has done in the case of industrial plants is to say, "These workmen are going to be here continuously up to the end of the war; they have to have their families with them." We may have to say the same thing in the case of workmen in the naval dockyards who are permanently employed there and want to bring their families there. I can see no distinction between the two cases. But I can see a good deal of distinction between that and the case of a sailor who comes to Halifax for a week or two, or perhaps a month, out of the year and wants to have his family there. I think we shall have to say to these people, "No, it is all right for you to come to Halifax, but you cannot expect us to provide a house for your family." In the case of men permanently stationed there, I regard the situation as completely different, and I agree with what my hon. friend said in that respect.

Mr. HAZEN: The hon. member for Lake Centre this evening brought up the matter of the loss of shipping. That is a very important matter. The minister has told us that he will make a statement about it to-morrow. I had intended to refer to it briefly and to ask one or two questions. If the minister will permit me, I will put them on the record. I do not expect him to answer them now. Perhaps he will not consider it advisable to answer them at all, but if he thinks it is not against the public interest to answer them, I hope he will do so when he makes his statement.

The questions have to do with the convoying of ships. If ships travelling along the sea lanes of the Atlantic coast are not convoyed, is the failure to provide convoys for these ships due (1) to lack of cooperation between one defence department and another either here or in the United States? (2) to any lack of cooperation between Canada and the United States? (3) to a shortage of ships in the navy?

Mr. MACDONALD (Kingston City): I think my hon. friend can make a pretty shrewd guess as to which is the correct answer. I should certainly say, as I said before, that when we speak of the Atlantic we must remember that the route from eastern Canada to the United Kingdom is one thing, the north-

south route is another. There is certainly no lack of cooperation between any departments in this country in that regard.

I can answer question No. 1 immediately. As to question No. 2: "Is it due to any lack of cooperation between Canada and the United States?" I should say there is no lack of cooperation between these two countries in that regard. Then as to question No. 3: "Is it due to lack of ships?" I can only say to my hon. friend that he is getting warmer and warmer as he goes along with his questions.

Mr. MacINNIS: A short time ago the minister mentioned naval dock yards and said it might become necessary to provide homes for the workers in those yards. How many dock yards are being operated by the navy department at present, and how many workers are engaged in those yards?

Mr. MACDONALD (Kingston City): It would take me some little time to get the number of men. The main docks, of course, in which the navy is interested, are the dock at Esquimalt; the floating dock at Prince Rupert—of course these docks do not belong to us, but we use them—and the naval dockyard at Halifax. There is also a dock yard at Esquimalt which is ours, in addition to the drydock. Then we are constructing small docks at various points along the eastern coast. They are really marine railways, which can take ships up to 3,000 tons. Perhaps five or six of these are being constructed now. They are really small docks in themselves, for the accommodation of ships from destroyers down, and I think they will prove very useful.

Mr. HANSON (York-Sunbury): Those are principally for cleaning and repairs?

Mr. MACDONALD (Kingston City): Yes, repairs and refits.

Mr. NOSEWORTHY: The minister told us there was no organization within his department for carrying on research into design and construction, or improvements in ships of the navy. Would he tell us by whom and where the ships now being constructed were designed?

Mr. STIRLING: That is very closely akin to a matter about which I was going to ask the minister, if the hon. member will permit me to interrupt. As I understand it, in a general way we have accepted the design and blueprints of the vessels which are being built for us, that is for the navy, by the Department of Munitions and Supply, from the Royal Navy, and those designs are based on the experience they have obtained over the years. When this matter is under discussion with men in the industry, this point has come up again and again. Are we adapting these designs, these working drawings and the materials which are used in the construction, to the facilities that we have at our hand? The question came up with regard to a contract for some boats; I forget the description of them now. The specifications called for copper air tanks, and it was pointed out to me that for the purposes for which these boats are going to be used by the navy, galvanized iron tanks would be just as good, last pretty well as long as the boat itself might be expected to last, and be considerably cheaper, and that the material would be more easily obtained. The same argument applied to the rather expensive use of teak in finishing. Are there not Canadian woods just as good for the purpose? In the case of rowlocks, as another example, on a pinnace, a whaler, or a pulling boat in the Royal Navy, they have had machined rowlocks since away back, but in recent years I believe that in this country we have substituted stamped rowlocks.

These matters would affect not only the economy of the work to be done but also certainly the time which would be occupied therein. This was emphasized in my mind at the time General McNaughton was over here bringing his knowledge of Canadian manufacturing to bear on the contracts which were being carried out in this country. The minister will remember that it was with some pleasure that General McNaughton was able to point out that Great Britain is now becoming more and more interested in changes in design which Canadian engineers and Canadian industry are ready to make so as to adapt the pieces of machinery being made to the method of construction in force on this continent. If that is the case with regard to munitions, using the word in its larger sense, it appears to me that it could well be adapted to the construction of the craft whose design we have taken, I believe in almost every instance, from Great Britain.

Mr. MACDONALD (Kingston City): I may say to the hon. gentleman who asked the question originally that we have not had in this country a constructor branch in the navy; that is, we have not had a branch in which men would be engaged in planning and revising the construction of ships. We are now just beginning the organization of such a branch, under Captain Harrison, and I have

every hope that this branch will expand and become a very useful part of the naval service.

The hon. member for Yale is quite right; up to the present we have had to rely upon the British admiralty for designs; and with the exception of the naval dockyards at Halifax and Esquimalt, where the navy itself might undertake to build whatever small boats it needed, we have followed the British design. Wherever Canadian woods can be substituted for woods that would require to be imported, that is done; but there are cases where that is very difficult. My hon. friend mentioned teak. We have not yet discovered, I am given to understand, a proper substitute for teak, meaning by that a substitute which will embody all the qualities which teak is supposed to possess and which will in every way serve the purpose. I believe that experiments are being carried out all the time. Woods are being tested for this and that, to discover whether they will be suitable as substitutes for mahogany, teak, oak or other kinds of wood that are specified in the British designs. I think that is all I can say in reply to my hon. friend.

Mr. MacINNIS: What is the policy of the minister's department in regard to the transportation of officers and ratings, as between the two railway systems. There are great numbers of naval men travelling at the present time, and I was wondering about the policy of the department with regard to the road over which the men should travel.

Mr. MACDONALD (Kingston City): The regulations I have here state that the railroads are to be used according to the best interests of the naval service. There is always some wrangling between the roads. In the last few days I have had telegrams from one of the railroad brotherhoods saying that there is a hearing taking place before the railway committee, and all that sort of thing. About a year ago the naval service called in representatives of the two roads and said, "Try to agree on some division among yourselves. Agree on a division of territory, or some other division; and let us have your decision." They did agree. Later, some of the senior people of one of the roads said they knew nothing about this agreement. Later still, however, they said, "I guess there was an agreement, and we will accept it."

The agreement worked out so that within a certain territory naval personnel would travel by the Canadian National Railways, and within certain other territory they would travel by the Canadian Pacific Railway. As a matter of fact, the agreement works out so that one railway gets considerably more than the other. However, I cannot go into all the details of the arrangement. One railway says, "We get a little more money, but we have to hand over a good deal of it to the other road. While we sell the tickets, a good deal of travelling is done on the other road." All I can say to my hon. friend is that we have had these two representatives meet with naval officers. They worked out an agreement and signed it and, for the moment, I think we had better let it stand at that.

Mr. MacINNIS: What is the number of naval passengers transported by each road in the last two years, or since the beginning of the war?

Mr. MACDONALD (Kingston City): I cannot give that information at the moment. It would be rather difficult to get, unless a certain year were indicated, say the year 1941. I could give my hon. friend totals, if it would serve any purpose. Last year, in freight, passenger and express receipts the Canadian National Railways got something like $1,250,000 from us, and the Canadian Pacific Railway got something less than $600,000. As I have said, the Canadian National will argue that their business was not profitable, and that they had to give away a lot of this money to the Canadian Pacific. However, they will have to fight that out among themselves. They have agreed to it, and we will let it stand.

Mr. MacINNIS: Did the minister say that the Canadian National got $1,250,000?

Mr. MACDONALD (Kingston City): Approximately that; and the Canadian Pacific got a little less than $600,000.

Mr. HANSON (York-Sunbury): Has the person travelling the opportunity to choose the route, or does he have to go where he is sent?

Mr. MACDONALD (Kingston City): When they are sent on draft they are sent by a certain route, but if they are on leave or travelling alone I believe they would have a choice, and could take either railway.

Mr. BROOKS: It is a pleasure to hear the deserved praise rendered the silent service, as it is often called. We hear very little about the sacrifice made by men in the navy until some tragedy occurs—a ship sinks, or something of that kind.

I should like to ask for some information with respect to recruiting for the navy. In the early stages of the war young men were encouraged at the different training centres throughout Canada to join the navy. In the last year that has not been so, and I know that recruiting for the navy has been more

or less discouraged. Many young men from my part of the country, the maritime provinces, have followed the sea for their livelihood. The hon. member for Queens-Lunenburg (Mr. Kinley) mentioned that point yesterday. These men have a great preference for the navy. They do not feel altogether at home in the artillery, the infantry, or some other branch of the service, and they are disappointed when they are told that there is no opportunity for them to join the navy. In view of the great expansion in our Canadian navy it seems to me that more effort should be made to utilize these young men in that branch of the service. I know the department has been taking younger men from all parts of Canada and sending them to schools. Those young men are given preference over other men who have followed the sea all their lives, as fishermen, and as men engaged in other work along the coasts. Is that situation improved, or is there any possibility of improvement?

Mr. POTTIER: A few minutes ago the minister gave the number of enlistments by provinces. Could he now give the number of applications by provinces?

Mr. SENN: In the course of his remarks this afternoon the minister described how young men who contemplate going into an official part of the navy were educated, and the courses they have to follow. Would he state if there is a waiting list of those young men, and how they are chosen from time to time? I know of one or two cases which have been on the waiting lists for some time.

Mr. MACDONALD (Kingston City): Is the hon. member referring to officers?

Mr. SENN: Yes, officers.

Mr. MACDONALD (Kingston City): There is a very considerable waiting list for officers and men. There are probably 4,000 or 5,000 men whose applications are on file but who have not yet been taken into the navy. The list remains constantly about that figure. Some of those who applied a year ago or six months ago may be in by now. Their places on the waiting list are taken by more recent applicants. Therefore there is that waiting list of 4,000 or 5,000 men waiting to get into the navy.

The same is true with respect to officers. Selection boards which go around the country inform me that if they want thirty officers, usually about 100 apply. It is useless to take more than are needed. The result is that the other seventy have to wait, and take their chances when the next board comes round in a few months. Of course, the seventy may go in as ratings. It is absolutely impossible to take into the navy all who apply.

Mark you, Mr. Chairman, the hon. member for Royal has said that a year ago men were encouraged to go into the navy. However, as far as I know, the navy has never spent five cents on recruiting. I have seen posters showing a picture of an army soldier, an airman and a naval rating; but so far as I know, we have never spent anything on recruiting literature, posters, advertisements or anything of that kind. Still, the number of men is there. We just cannot handle them; that is all.

Nova Scotia has given us about 3,900 naval recruits. That is a very large proportion, larger, I believe, than that of any other province with the exception of Prince Edward Island, where the proportion is slightly higher. That is a much higher proportion than has been given by any other place. A good many of these men have been bred to the sea and have found their way into the navy. Saskatchewan has a greater population than Nova Scotia, and we have had some 1,890 men from there, something less than half the Nova Scotia figure. That is no reflection upon Saskatchewan because it has probably given more men to the army. But it would be a great mistake to confine naval recruiting to the eastern and western shores of this country. Recruits from the prairies make excellent seamen. Their physique is good, and there are really many things to be done on a ship besides sailing it. There is gunnery, torpedo work, signalling work, anti-submarine detection, radio work and mechanical work of all kinds. There is a place on a ship for a man who is accustomed to mechanical work. The navy tries to get men from every province of Canada, but inevitably it will draw more men from the provinces by the sea.

Mr. SENN: I was not clear as to the explanation the minster made with regard to those who wanted to become officers. I think he made some reference to the fact that the younger applicants might take the place of the older ones.

Mr. MACDONALD (Kingston City): I said that there was a waiting list of between three and four thousand men, and a man who has been on the list for six months might finally get into the ranks as a rating. But that does not diminish the waiting list, because we find that for every man we take on there is another fellow outside waiting to get on the waiting list. It is the same with officers. I think we could take in three officers tomorrow for every one for whom we have room. That is the way it runs; if you want ten, thirty are there waiting.

Mr. DOUGLAS (Weyburn): The hon. member for Peel (Mr. Graydon) raised an

interesting question with reference to co-operation between the navy and the air force on the coasts. Could the minister carry his answer a step further and give us some information with reference to the coordination of services on the coasts. Of necessity the navy is primarily concerned with seeing that convoys get safely across the ocean, but there is another task within their jurisdiction, the defence of Canadian shores. In the last few months another stage in the war has developed. There is now the possibility of fairly large surface ships approaching Canada, not so much with the idea of invasion as with the idea of shelling naval installations or even landing marine parties to destroy radio equipment, dock yards and so on. A military commander has been appointed for each of the coasts, and last week the Minister of National Defence (Mr. Ralston) explained something of the co-operation that exists between the military command and the air force.

Would the Minister of National Defence for Naval Services explain how the navy fits into this picture? Will the naval patrol vessels—I suppose torpedo boats would be mainly used against surface craft—come directly under command of the military commander responsible for the defence of the coast, or is there merely some cooperation? The minister said before that there was always cooperation. Naturally we would expect that, but more and more the lesson that this war seems to be teaching the united nations is that in many instances coordination is not enough, that in modern warfare the different arms of the service must be synchronized with the command under one individual when there is a specific task in mind. Could the minister tell us how the naval forces on the coasts tie in with the military command?

Mr. MACDONALD (Kingston City): I should like to think over that question until to-morrow. I may say that General Elkins is in command of the east coast. He is the senior commanding officer there, in complete command of the Atlantic area.

Mr. DOUGLAS (Weyburn): Of all services?

Mr. MACDONALD (Kingston City): Yes. He is recognized as the man responsible for that area. General Alexander is in command on the west coast. That means complete command, but I do not think in either case the general would undertake to dispose of ships. My hon. friend will realize that the best work a ship can do is out at sea, not in harbour. If it is going to fight, it should fight well out, and that is where most of our ships are. General Elkins probably would not have many ships even if he were given command of all the ships in the harbour. They are out on the sea, half way across the Atlantic or all the way across the Atlantic, and they will fight out there if they see anything to fight. So the question of wheher General Elkins is in command of the naval forces at Halifax is not a vital matter. But there is complete cooperation, and I believe there was complete cooperation before we had a unified command. They exchanged signals and information, and they have a combined operations room where maps are available and upon which the disposition of the forces are shown. The association is most harmonious and, on the whole, very satisfactory.

Mr. DOUGLAS (Weyburn): I appreciate what the minister says with reference to ships. Naturally they do most of their fighting at sea, but I notice that in the defence of Bataan, General MacArthur used a number of small torpedo boats, what the British call E boats, in resisting surface craft. These boats made sudden dashes out of harbour and used other similar tactics. These torpedo boats were placed completely at the disposal of General MacArthur. If he decided that an attack should be made to synchronize with some other operation, he had the placing of the naval forces at his disposal. I am not asking the minister to discuss what strategy they have in mind, but I presume that something of that sort would be worked out in Canada and that the two men in charge of our coasts would be given the disposal of such naval ships as were available.

I have one or two other questions I should like to ask the minister. If he is not able to answer them now, he can give me the information to-morrow. The minister mentioned a sum of $21,000,000 odd which was being asked for building. What portion of this amount is to be used for the erection of new buildings and what portion for the purchase of buildings? Then the minister mentioned some twenty-four yachts which had been obtained. I presume that these were pleasure yachts, and I should like to have some idea from whom they were purchased and what prices were paid.

Mr. MACDONALD (Kingston City): I cannot give the exact particulars, because as a matter of fact the transactions occurred some two and a half years ago. The yachts were purchased from various persons in Canada and the United States in the latter days of 1939 and the early days of 1940. I believe in practically every case they were pleasure yachts. They were brought to this country, and necessary changes were made, such as stiffening the decks so that guns could

be mounted. They are used for patrol purposes along the coast. The information must be on the record somewhere. I can get the exact cost of this. I think the question was asked a year or so ago as to the exact amount paid for these yachts.

Mr. DOUGLAS (Weyburn): Were they purchased outright?

Mr. MACDONALD (Kingston City): I understand that all were purchased. The transaction occurred before I came here, and it was carried on by the Department of Munitions and Supply. My distinct recollection is that they were purchased outright from the owners and converted by the department to naval purposes.

My hon. friend asked about the $21,000,000 which were to be used for buildings.

Mr. DOUGLAS (Weyburn): Yes, as to how much of that would be for the erection of new buildings and how much would be for purchasing buildings already erected and for the commissioning of them. I might get the information to-morrow.

Mr. MACDONALD (Kingston City): I shall have to assemble it from one or two places, and it will take a little time.

Mr. HAZEN: With regard to the building which is being erected in Ottawa for this department, could the minister tell us when the department expects to occupy it, whether it is a permanent or temporary building, how many employees it is expected that it will house, the approximate cost, and who is the contractor?

Mr. MACDONALD (Kingston City): The building at Ottawa for naval services is constructed of wood, with a foundation of concrete blocks, so that it is not permanent in the sense that a building of brick or stone would be. It is to cost, roughly, about three quarters of a million dollars. I believe it is being built by the firm of Hill, Clarke and Francis, a well known contracting firm of this neighbourhood. The number of persons employed at headquarters is about 557 officers and ratings, and 1,053 civilian staff; that is, clerks and others who are not in the naval service.

Mr. HAZEN: When do you expect to occupy the building?

Mr. MACDONALD (Kingston City): Well, one hates to make predictions in these days, but my hope is that they will be installed there by August.

Mr. GREEN: There is a question with regard to the dependents of naval men which I should like to have cleared up. On November 14 last, the Minister of Finance outlined his plans for a war allowances adjustment fund from which payments would be made in special cases. That is, if there were more than four children and there were hardships, or in other cases of hardship, this fund could be drawn upon. But in making that statement he said that the navy handled their own dependents' allowances, and I am not clear whether the families of naval men are entitled to get payments from this fund. Incidentally, I should like to wish the minister good luck in his wrestling with the treasury board to-morrow on this question of increasing dependents' allowances. If the ministry had to go out in the ridings and meet these dependents of naval men—and I know of cases where the wife and children of a naval man are living in the same street as the wife and children of an army man, one drawing a larger allowance than the other—they would know that it causes great misgivings, and more than anything else, I believe, has hurt the morale of the men in the navy.

Mr. MACDONALD (Kingston City): Oh, no. The morale is very high.

Mr. GREEN: I admit that, but I think this has been one of their main complaints, and a justifiable complaint.

Mr. MACDONALD (Kingston City): Quite so.

Mr. GREEN: I hope the minister will be successful to-morrow.

Mr. MACDONALD (Kingston City): I thank my hon. friend. I have every hope of being successful. I see some of the treasury board members here, and I know they are impressed with what has been said to-night.

Mr. GREEN: Would the minister answer my question as to whether or not the dependents of naval men can draw on this special fund?

Mr. MACDONALD (Kingston City): We have a representative on the dependents' allowance board, and, while I have never looked into the matter, I have always assumed that they do. But I will make sure.

Mr. GREEN: Could the minister check that up?

Mr. MACDONALD (Kingston City): I will.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, May 8, 1942

The house met at three o'clock.

AIRCRAFT

REPORTED TRANSFER OF CRUMLIN AIRPORT PLANT, LONDON, ONT., TO CANADIAN PACIFIC

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I have just received a telegram from London, Ontario, stating that the press reports that the government-owned aircraft plant at the Crumlin Airport, London, Ontario, now operated by Fleet Aircraft, is to be turned over to the Canadian Pacific Railway to operate. Is this story correct, and if so, why is the Canadian Pacific allowed to add a government-owned aircraft plant to its privately-owned system?

Hon. C. D. HOWE (Minister of Munitions and Supply): I have not been advised of any such change, but the Canadian Pacific Air Services are operating overhaul plants at two or three points. Any well-organized aeroplane company can be called upon in connection with this overhaul work by reason of its skilled personnel. I would not bar the possibility, but I have not heard of the change and I should be surprised if it had taken place.

Mr. COLDWELL: The minister will inquire?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): Is that a government-owned plant or a plant heretofore privately owned?

Mr. HOWE: The plant at London was built by the government as an overhaul plant for planes of the Royal Air Force operating in that section.

LABOUR CONDITIONS

REQUEST OF MIDLAND SHIPYARD WORKERS FOR INVESTIGATION COMMITTEE

On the orders of the day:

Mr. J. W. NOSEWORTHY (York South): I wish to direct a question to the Minister of Labour. Have any steps been taken to set up an investigation committee as requested by Midland shipyard workers on their return to work?

Hon. HUMPHREY MITCHELL (Minister of Labour): No.

[Mr. Macdonald (Kingston City).]

ST. LAWRENCE WATERWAY

INQUIRY AS TO DEVELOPMENTS IN VIEW OF SHORTAGE OF POWER

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): I wish to direct a question to the Prime Minister (Mr. Mackenzie King). In view of the serious shortage of power will the Prime Minister inform the house whether there have been any further developments in the situation regarding the St. Lawrence waterway project—

Some hon. MEMBERS: Order.

Mr. ROSS (St. Paul's): —or whether the government has in contemplation—

Some hon. MEMBERS: Order.

Mr. SPEAKER: That is clearly a question that should be placed on the order paper.

MOBILIZATION ACT

NOTICE OF AMENDING BILL TO APPEAR ON MONDAY'S ROUTINE PROCEEDINGS AND ORDERS

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): I might advise my hon. friend the leader of the opposition and hon. members of the house that the *Votes and Proceedings* of to-day will contain a notice of a bill to amend the National Resources Mobilization Act, and that mention of the bill will appear on the routine proceedings and orders of the day on Monday.

Hon. R. B. HANSON (Leader of the Opposition): May I ask the Prime Minister if that is all? Because according to the news which I have read that is purely a pro forma matter. The government has all the legal power now. What the country wants is something decidedly more than that.

Mr. MACKENZIE KING: My hon. friend speaks without knowing what the bill contains.

Mr. HANSON (York-Sunbury): The question I asked was, is that all, to amend the Mobilization Act?

Mr. MACKENZIE KING: My hon. friend will look at the bill and its contents when it appears before the house and the question can be answered in the regular way.

DEFENCE OF CORREGIDOR

APPRECIATION OF ACHIEVEMENTS OF AMERICAN AND FILIPINO FORCES

On the orders of the day:

Mr. H. R. JACKMAN (Rosedale): I should like to ask the Prime Minister whether

the government of Canada has sent to the people of the United States a message of highest appreciation of and gratitude for the outstanding bravery, tenacity and endurance of the American and Filipino troops in resisting for five months overwhelming Japanese forces in the indomitable defence of Corregidor, and expressing the pride of Canada in being allied with the people of the United States?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Did my hon. friend ask whether we had sent or would send a message?

Mr. JACKMAN: Has the government sent a message such as that to the people of the United States?

Mr. MACKENZIE KING: There has not been a formal message sent to the people of the United States, but through official channels expressions of appreciation of what has been achieved have been given by the government.

SALVAGE

OPERATIONS OF LUNENBURG COUNTY FISHERMEN

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): I should like to bring to the attention of the Minister of National War Services an item which appeared in the *Globe and Mail* of May 8, reading as follows:

> Hon. G. E. Romkey, Speaker of the Nova Scotia legislature, said to-day in a letter to a Halifax newspaper that Lunenburg county fishermen have salvaged 10,000 pounds of lard from the sea, but "the powers that be don't want it and we will have the pleasure of towing it out to sea to dump again."

Has the minister any knowledge of this matter?

Hon. J. T. THORSON (Minister of National War Services): No.

Mr. GILLIS: Would he inquire?

Mr. THORSON: Yes.

Mr. J. J. KINLEY (Queens-Lunenburg): As it relates to my riding may I inform the house that considerable salvaging has been done by Nova Scotia fishermen, especially those from my riding. I communicated with the minister regarding this and was advised that the receiver of wrecks is the man who would take charge of these products. I believe that that organization is looking after it now.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, May 7, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

NAVAL SERVICES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Yesterday there were some questions asked the answers to which I promised to endeavour to bring down to-day. I have some at least of the answers here.

The hon. member for York South (Mr. Noseworthy) asked whether cadet training was uniform in the three services—that was the gist of his question. I have here the syllabus of training issued under the direction of the chief of the general staff. It gives the subjects that are common to the army and air force cadets, and they constitute the great bulk of the subjects. There are a few subjects which are taken by air cadets and not by army cadets, and vice versa. For instance, I find that air cadets give nine hours' study to air frames; naturally the army gives no time to that subject. On the other hand the army gives twenty hours to small arms training, as against only six hours for the air force, and so on. The syllabus of training prepared for the use of sea cadets is considerably different, and I think inevitably so. I find for instance that sea cadets are required to study seamanship, how to sling and lash a hammock, how to lay out bedding, et cetera; the meaning of naval terms, customs of the naval service, bends and hitches, knotting and splicing, rules of the road at sea, the use of the compass and the helm, the use of the lead and line, anchors and cables, and the like. So that there is a great difference between the training of sea cadets and the training of army or air cadets; and on reflection I think it will be seen that it is impossible to have uniformity of training in these three branches as far as cadets are concerned.

Another question asked by several hon. members was in regard to naval pay and allowances. I intimated some time last week that the matter was under consideration by the treasury board, and I think I said again last night that I had been before the treasury board several times, that they were considering the question and were on the point of reaching a decision. I am very happy to announce now that that decision has been

reached, and that from April 1 of this year the dependents' allowances granted to wives and children of men in the naval service will be on a parity with those granted to wives and children of men in the army and air force.

Mr. HANSON (York-Sunbury): So that it would appear that all the criticism directed against the navy in that connection was well founded.

Mr. MACDONALD (Kingston City): I would not say it has been entirely well founded. The navy was better off in some respects than the army, and not so well off in others. We shall have to lower from now on the amount granted to men out of quarters, which will bring it more into line with the army and the air force, and one or two other little adjustments will have to be made. But I think that the present arrangement is, as a whole, more equitable than the former one.

The hon. member for Vancouver South (Mr. Green) asked whether dependents of men in the navy could draw from the war allowances adjustment fund. The answer is yes, they can do so in the same way as the dependents of members of the other armed forces.

A somewhat similar question was asked by the hon. member for Cape Breton South (Mr. Gillis), who put this case: if an ex-army man is in receipt of veteran's allowance and his son joins the navy and gives the father some assigned pay, is the veteran's allowance diminished to the extent of the assigned pay. I am instructed by Colonel Marriott, the secretary of the war veterans' allowance board, that that would not be the case unless the total received by the veteran from the veterans' allowance board and from the son were more than $60 a month. So long as it remains under $60 the veterans' allowance board will not in any way reduce the original grant.

Questions were asked by the hon. member for Lake Centre (Mr. Diefenbaker) and other hon. members with regard to convoys, and I asked that I be given some little time to think over that matter. I have done so, in such time as I have had at my disposal to-day, and I can say first of all that the losses to ships in convoy are generally much less than those to ships out of convoy. I am not speaking of any given day, but taking a period such as a year, we estimate that the losses to ships in convoy run something like one-quarter of the losses to ships out of convoy. The losses on the north Atlantic, the east-west route from these shores to Great Britain, since the beginning of the war, in convoyed ships, still runs less than 1 per cent. I need not give the exact figure, but it is less than 1 per cent for the period of two and a half years. In other words less than 1 per cent of the ships setting out from these shores in convoy have been sunk by enemy action.

Mr. HANSON (York-Sunbury): What is the ratio having regard to the early period of the war and the present period?

Mr. MACDONALD (Kingston City): Does the hon. gentleman mean are the sinkings more serious?

Mr. HANSON (York-Sunbury): Yes, that is really what I mean.

Mr. MACDONALD (Kingston City): I should say that on the east-west route, the ordinary route from this country to Great Britain, the sinkings are not unusually alarming at this time. I do not think they are out of the ordinary. There are heavy sinkings, of course, on the north-south route, as I intimated last night.

Mr. HANSON (York-Sunbury): That is where there are no convoys?

Mr. MACDONALD (Kingston City): Yes. The sinkings there are very heavy, but the percentage I gave previously is about right even for that route. Ships travelling out of convoy and subjected to enemy action we think are four times as vulnerable, or perhaps even more, as ships travelling in convoy.

Mr. McIVOR: The Canadian navy does the convoying?

Mr. MACDONALD (Kingston City): The convoying from here to Britain is done in part by the Canadian navy, in part by the British navy and in part by the United States navy, with the three sharing in about equal measure. Certain sections, of course, are exclusively under the control of the Canadian navy.

Mr. BENCE: I am sure we were all gratified by the announcement made by the minister that adjustments are to be made in the allowances given seamen and their dependents. I wonder if the minister would place the amended scale of allowances on *Hansard*, so that they may be available to all hon. members. When this matter first came up some days ago and I suggested that some adjustment should be made I stated to the Minister of National Defence, whose department was under consideration at the time, that in my opinion the whole matter of the uniformity of dependents' allowances and pay in the various services might well

be gone into. I offer that suggestion to the minister again at this time. Instead of having to equalize rates of pay by means of various amounts payable for subsistence allowances when men are out of barracks, and that sort of thing, the straight rates of pay should be more nearly equal, and the dependents' allowances should be more nearly equal, so that the confusion which now exists in the minds of the public and of the men in the services may be removed, and further so that if the administration should grant the cost of living bonus, which has been so strongly urged by all hon. members of this house, that bonus may be more easily applied, without creating additional confusion.

Mr. MACDONALD (Kingston City): I could not produce at the moment a table showing the new scales of pay, but perhaps the house would permit me to place it on record on Monday.

Mr. MacNICOL: Put it in the *Votes and Proceedings.*

Mr. MACDONALD (Kingston City): Very well. It takes a little time to prepare a new table for all ranks, and the work can only be undertaken to-day.

Mr. DOUGLAS (Weyburn): Perhaps the minister would place it on *Hansard* on Monday, so that it may be generally available. The public do not get the *Votes and Proceedings,* as a rule.

Mr. MACDONALD (Kingston City): Very well.

Mr. COLDWELL: I should like to mention a matter that has not been touched upon as yet. When the subcommittee of the war expenditures committee investigated the methods of handling stores in the various defence departments last summer, we were impressed with the efficiency of the method used by the naval branch. I believe we mentioned that in the report which we submitted to parliament last November. We spent a day in Halifax, where we saw the system in actual operation and had an opportunity of speaking to the men engaged in looking after the stores. I think we all realized that the responsibility of the man in charge of the warehouse containing the stores was very great indeed. Not only did he have several hundred thousand dollars worth of supplies to look after and distribute, but under his care was some of the most confidential and secret apparatus used by the navy. I need not say more about that. But we were astounded to find that the permanent civil servant in charge of those valuable stores and that secret equipment was receiving, I believe, $1,320 a year; and at the time we were there, because for some reason he had been overpaid previously, a deduction of $10 a month was being made from his salary in order to make up that overpayment. This civil servant is a married man with a family, living in Halifax; and, as the minister said the other evening when we were discussing the question of pay, Halifax is not a city in which living is at all inexpensive. We found it difficult to understand why a man in charge of such valuable equipment should be receiving a salary altogether incommensurate with the responsibility which he had to assume. Indeed, we were astonished to find that this civil servant, in that responsible position, was actually receiving less than the men who were doing ordinary, common labour in the warehouse, moving the stores about. Up to the time we presented the report, I understand nothing had been done to rectify the situation. Has the matter been further considered, and has some salary more nearly commensurate with the responsibility been granted to the man in charge of stores at Halifax?

Mr. STIRLING: Could the hon. member say whether or not the man paid rent?

Mr. COLDWELL: Yes; he was a married man with a family, living away from the warehouse, renting his own house.

Mr. HANSON (York-Sunbury): He was not furnished with housing?

Mr. COLDWELL: No.

Mr. ISNOR: I should like to support the representations of the hon. member for Rosetown-Biggar in regard to this matter. I am familiar with the work of the individual mentioned. His name has not been stated, but if he is the man in charge of the stores, I believe he is the same person I have in mind. If I remember correctly, the salary he is receiving is $1,440 and, as has already been stated, he has in his charge many hundreds of thousands of dollars worth of goods. He has been in the employ of the government for a period of about twenty-five years. I am glad to say that since the visit of that committee to Halifax, not because of their representations but because of representations by others, this has been rectified to some extent and that official is now receiving $1,620. I still feel, however, that because of his responsibilities, and because of the efficient manner in which he is conducting his duty, he is far from receiving what he would receive if employed by a private firm in Halifax or any other city.

I wish to pay a word of tribute to the efficient manner in which contracts for stores in general have been administered in the naval dockyard at Halifax. For many years I was closely connected with that work, and was in a position to see the manner in which contracts were let and tenders received. I do not hesitate to say, as I have said to the minister on one occasion, that I cannot see any advantage, so far as the dockyard authorities at Halifax are concerned, in taking away their duties as purchasing and contract agents.

I am very happy to support the suggestion of the hon. member for Rosetown-Biggar that an inquiry be instituted whereby not only that official but many other permanent officials in Halifax may be brought up to salaries in keeping with their duties. In this particular instance two persons were brought into Halifax at greatly increased salaries to carry on the duties of this one official. It was found, however, after a certain period of time that notwithstanding their qualifications and increased salaries they were unable to carry out the duties in as efficient a manner as this permanent official had done. He is now carrying on that work, and I feel in fairness to him that he should receive at least the remuneration of the men from Montreal who were unable to carry out, or apparently did not carry out those duties in as efficient a manner as the present official.

Mr. MACDONALD (Kingston City): Is that Mr. Pitman?

Mr. ISNOR: He is one who is underpaid, and Mr. McNamara is another. I believe the party the hon. member for Rosetown-Biggar had in mind was Mr. "Jock" Matthews.

Mr. MACDONALD (Kingston City): A. A. Matthews?

Mr. ISNOR: No; I believe it is A. J. Matthews.

Mr. MACDONALD (Kingston City): It is likely the same man.

Mr. COLDWELL: I had forgotten what the name was.

Mr. MACDONALD (Kingston City): I have the name of Matthews, but he is down as a clerk, grade 4.

Mr. COLDWELL: The man I had in mind was in charge of the entire main stores at Halifax.

Mr. MACDONALD (Kingston City): The naval stores officer there is Mr. Pitman. He receives a good deal more than the amount mentioned. I believe the amount he now receives is $2,760.

[Mr. Isnor.]

Mr. COLDWELL: I do not think that is the man.

Mr. MACDONALD (Kingston City): Mr. Pitman is receiving that amount now. However, some of those men were undoubtedly underpaid last year, and we have succeeded in getting some adjustments for many of them. This man may have been one.

Mr. ISNOR: There are on record not one but several letters dealing with the dockyards, and I am sure it will be found that representations have been made not on behalf of one but of several who I consider are being underpaid.

Mr. MACDONALD (Kingston City): The hon. member is quite right. He has several times brought this matter to my attention and to the attention, I believe, of the civil service commission. But he knows the problem that has arisen there. It is the old story between the permanent employee, who must advance along a regular scale, on the one hand, and the temporary employee, who comes in only for the duration of the war, on the other. The permanent employee gets certain advantages by way of pension, and the like, which the temporary employee does not get. He also has the advantage of security as long as he does his work. But there have been some glaring cases where men in permanent positions were called on to do work greatly in excess of what they would normally do, and we have adjusted some of those cases. If I had the name of the particular person—

Mr. COLDWELL: I believe the name was Pitman.

Mr. MACDONALD (Kingston City): He is the stores officer, and is now receiving a salary of $2,760. So he is better off than he was last summer.

Mr. HANSON (York-Sunbury): In view of something said by the hon. member for Halifax (Mr. Isnor) about changing conditions with respect to stores at Halifax, the bringing in of a man from Montreal and the interposition of the Department of Munitions and Supply, would the minister tell us what the position now is? Has there been a change in the modus operandi? Does the Department of Munitions and Supply now do the buying and the receiving? What is the inefficiency hinted at by the hon. member for Halifax?

Mr. ISNOR: Oh, no; pardon me—

Mr. HANSON (York-Sunbury): I may have misconstrued the word used; I thought there was a reference to inefficiency or less efficiency.

Mr. ISNOR: I did not hint at any inefficiency, as far as the stores department at Halifax is concerned. Rather do I point out that there was no inefficiency, and I could not understand the change from the purchasing plan which formerly existed to that which is now conducted by the Department of Munitions and Supply.

Mr. HANSON (York-Sunbury): They do the purchasing now?

Mr. ISNOR: Yes.

Mr. KINLEY: Yesterday the hon. member for Cape Breton South (Mr. Gillis), as reported at page 2236 of *Hansard,* made rather extended remarks with regard to what he considered as confusion with respect to the handling of seamen of the merchant marine. I am glad to see the hon. member's remarks were mostly of a questioning nature; he was looking for information, and was told that the matter came under the Department of Transport.

Representing the constituency of Queens-Lunenburg, where I am in the centre of marine activity, I have considerable local knowledge with regard to the movement and activity of our merchant seamen, whom I regard as perhaps the most important and vital of the men who are performing their duty on the Atlantic at the present time.

The hon. member concluded his remarks on the point in this way:

> I believe someone should take hold of it, and do some organizing. To my mind it is silly to have men, after leaving their boats, drifting from one end of the country to the other, looking for other boats.

I thought yesterday the situation was not such as was portrayed by the hon. member, but I waited until this morning and took up the matter with Captain Arthur Randles who is in charge of this matter. He is a seagoing captain of great experience, one who served on the Cunard line, and a man who should know his job thoroughly. I discovered that this movement of merchant seamen was well organized. The men whom my hon. friend met on the train going to Nova Scotia had been members of a crew of a British ship which was being turned over to another nationality. The crew was brought to the eastern coast, to the manning pool. All our manning pools are within Canada, located in eastern Canadian ports.

Men are brought to the manning pools for several reasons. First, they can be properly controlled and looked after. Second, their health can be checked and treatment given, if necessary. Third, they can be given basic pay while waiting for a ship. A ship may arrive in New York and may be two or three weeks in port if repairs are needed or if the return cargo is not ready or for many other reasons. It would be folly to keep the crew alongside that ship for that length of time. It is considered advisable not to allow a crew to scatter in a foreign port; it is thought better to keep them under control and supervision. Therefore they are brought to the manning pool at the rendezvous, the last port before the ships leave to cross the Atlantic. Many ships come there from United States ports with only part crews, and the complete crew is obtained at the port on the Atlantic coast. It is important that a ship which is to be a part of a convoy should not delay the convoy while getting a crew together. Crews must always be available at this special place, and that is why the merchant marine have established these manning pools on our coast.

The manning pools are operated at considerable expense and are vitally necessary in looking after seamen. I am told that the usual seaman's pay on ships is $100 a month, which is little enough. The pay for oil tankers is more because this work is quite dangerous. I do not want the idea to go abroad, and I do not think the hon. member intended that it should, that seamen were carried from one port to another, leaving no crew available for the ship on which they had arrived. Ships are arriving every day. A ship arriving to-day may expect to be in port three weeks. Its crew can be brought to the rendezvous port where they can be checked up and given a rest or put in hospital, if necessary. When the ship is ready to sail, another crew will be available.

I was glad to hear the minister say that in some cases the pay of our naval ratings and junior naval officers is to be increased. The junior officers felt that they deserved a little better treatment. During the last war a position in the navy was considered a rather comfortable berth. During the last war the Canadian navy was not to such a great extent engaged, and the men of the navy did not have to face the constant dangers faced by the soldiers overseas. But in this war, as the minister says, the navy is having the casualties and is facing the rigours of the north Atlantic in winter, the submarine menace and all the dangers of the sea. The men of the navy are facing great hazards, and they should be rewarded accordingly.

I would remind the committee that many seamen are being taken care of on the eastern

coast. Over 500 shipwrecked seamen have been picked up and cared for within the last couple of months. Hon. members can see that it is a lively place as far as merchant seamen are concerned. So the merchant seamen and the navy deserve the best of treatment from the Canadian people.

Mr. COLDWELL: Was the adjustment to which the minister referred in the case I mentioned due to a reclassification of the man's position, or will it apply to other storerooms across Canada?

Mr. MACDONALD (Kingston City): As far as I understand, Mr. Pitman has not been reclassified. He is a naval stores officer. Reclassifications have been worked out in a great many cases, not merely at the dockyard at Halifax, but also at Esquimalt.

Mr. CASTLEDEN: The minister gave us a break-down yesterday which included $52,720,000 for stores, equipment and supplies, and $34,166,000 for armament stores. Will the minister outline to the committee what machinery the department has to make sure that these supplies are up to standard? In connection with torpedoes and other things supplied to the naval department, is there a representative of the department in the armament factories to make inspections? What percentage of materials purchased during the past year were not up to standard?

Mr. MACDONALD (Kingston City): I could not give my hon. friend specific instances, but I may say that we have inspection officers who go around inspecting the many things we buy. These officers insist that the articles be up to specification. If they are not, and cannot be brought up to the specifications by modification, they are immediately condemned. It would take me some little time to find out just how great this condemnation has been, but I can get the information for my hon. friend.

Mr. CASTLEDEN: Are there inspectors in each armament firm producing materials for the navy, or are inspectors located only in some firms? What is the procedure in connection with the condemnation of materials? Is it sent back to ordnance?

Mr. MACDONALD (Kingston City): I imagine it would not be accepted at all. I am not exactly sure whether we have a man in every little place, but the articles are inspected before we accept them.

Mr. CASTLEDEN: Is there an inspection staff for all this material?

Mr. MACDONALD (Kingston City): Yes.

[Mr. Kinley.]

Mr. CASTLEDEN: Is that part of the British purchasing commission?

Mr. MACDONALD (Kingston City): Our organization is not nearly as large as that of the British purchasing commission which has a tremendous organization spread all over the country. However, in a general way the work is similar. All inspection branches are doing pretty much the same sort of work; they examine the material before it is finally accepted. If it is not according to specification, it is condemned unless it can be brought up to standard by some modification. That is what we do on a smaller scale, compared with the army or the British purchasing commission.

Mr. CASTLEDEN: I have the assurance of the minister that all supplies are inspected by the naval authorities?

Mr. MACDONALD (Kingston City): Yes.

Mr. HANSON (York-Sunbury): Before the present system of purchasing through the department of munitions was set up, and perhaps in the early stages of the war when the purchasing board was operating, I think under Mr. Vaughan, the navy did its own purchasing, as did national defence. Then this new system was established whereby the department requiring supplies and munitions and the like requisitioned the Department of Munitions and Supply. That department makes the contract, fixes the price and so forth, but the inspection is carried on by the department making the requisition. Is that not the procedure? Or is there a double inspection? I would not assume there was, but is there?

Mr. MACDONALD (Kingston City): In many cases there is a double inspection.

Mr. HANSON (York-Sunbury): Suppose shells are required for the navy. They are ordered through the Department of Munitions and Supply on requisition from the navy. Does the navy have an inspection staff in the shell plant, or is the inspection done under the Department of Munitions and Supply? I know there is an inspection because I have seen it, but I just want to know the modus operandi.

Mr. MACDONALD (Kingston City): If you ask me about a given plant, I could not say at the moment whether we have inspectors there or not. Some plants do a very minor form of work, and we might not have an inspector there, but undoubtedly we would have supervision over the manufacture of shells. The branch of our department that is concerned with that work is under the particular charge of Captain Wood. Ships

that were being built for us by the Department of Munitions and Supply would be inspected by the officers of another branch of the Department of Naval Services, who would watch their building, attend their trials, and finally pass upon them as having been properly built, and that inspection service would be in addition to whatever inspection the Department of Munitions and Supply might give.

Mr. HAZEN: How many men have been honourably discharged from the navy, and how many discharged for cause since the beginning of the war? Is a man who is partly disabled let out of the service, or does the department find work for him?

Mr. MACDONALD (Kingston City): The total number of discharges from the navy up to the end of last year was 1,537, and the number discharged as medically unfit, 933. We do provide work, where that is possible, for men who are partly unfit. I do not say that that is always possible, but I know we have one man at headquarters here who lost his leg in service, and he is still in the service, wearing an artificial limb. That is what we would try to do wherever possible.

Mr. HAZEN: To revert to the training of officers, are officers training courses being held at the present time on the Atlantic ocean?

Mr. MACDONALD (Kingston City): Yes.

Mr. HAZEN: Would the minister say where they are being held, the subjects taught in those courses, the length of the courses, and whether those schools will be continued after the college is opened near Esquimalt next autumn?

Mr. MACDONALD (Kingston City): Officers are trained to some extent at each one of the vounteer reserve divisions in Canada, beginning at Charlottetown and going on to Saint John, Quebec, Montreal, and so on. Some of the training of the officers would be undertaken there. The next stage in the officer's training if he is accepted, would be carried on at Halifax in the east or at Esquimalt in the west.

The courses themselves are the regular officers courses including seamanship, navigation, signalling, gunnery and the like. These courses will be carried on after the college at Esquimalt is opened, because that college will have a capacity of only one hundred cadets a year. The entry age is as low as sixteen. By itself that college would not at all begin to fill the needs of the Canadian navy, for officers.

Mr. HAZEN: The Minister of National Defence filed a syllabus of training for the officers under his department. Would the minister put on *Hansard* a copy of the syllabus which the naval officers take?

Mr. MACDONALD (Kingston City): I do not have it here, but I shall be glad to do that on Monday.

Mr. MacNICOL: Referring to the *Spikenard,* I believe that several of the pensonnel of the ship were saved. They were picked up and, I presume, taken to England. What happened after they arrived in England? In such cases are the men placed on other Canadian ships, or are they sent home to Canada?

Mr. MACDONALD (Kingston City): They probably received leave after they got ashore. Three or four of the men went to hospital, I think, and three or four did not need to go to hospital. They would get survivor's leave, as it is called. In that particular case the men would undoubtedly be attached to His Majesty's Canadian depot ship *Niobe* and be placed at the disposal of the officer commanding that ship. No doubt he would place them on some Canadian corvette or destroyer and return them to Canada, or they might be permanently attached to some Canadian corvette or destroyer which stood in need of reinforcements. They would come under the charge of the captain of the *Niobe,* Captain Agnew, and he would look after them.

Mr. MacNICOL: If they are given leave to come home, is their transportation advanced to them, or are they allowed any compensation on their way home?

Mr. MACDONALD (Kingston City): That is not a very easy question to answer. In the case of these particular men, if they were given leave to come home to Canada, I should think they would get passage on a Canadian corvette or destroyer. The practice of paying a man's leave from a foreign country to Canada is one that creates some difficulty, and there is no uniform rule about it in all three services. My hon. friend can see what problems it would lead to if we began to pay the transportation of men in large numbers from England to Canada. It would amount to a very great sum. On the other hand, we feel in the navy that if a ship has to put into a United States port—

Mr. MacNICOL: In this case the ship was sunk.

Mr. MACDONALD (Kingston City): I know, and if my hon. friend is speaking of that, that is another story. I thought he was asking whether transportation is paid to men who are given leave to come home to Canada.

We feel that if a ship puts into a United States port for a long refitting and has to be there for a month, it may be better to have the sailors return to their homes in Canada rather than to be kept in that port. They might not be able to sleep on the ship if the refitting was very extensive and would have to pay for quarters ashore. We consider that we should be allowed to pay their way back to Canada in such a case. The air force has very large bodies of men in Newfoundland; so has the army, and in these services whether transportation should be paid to Canada raises a question of some difficulty.

Mr. MacNICOL: Would the families of those who lost their lives on the *Spikenard* be compensated? If so, what is the scale of compensation?

Mr. MACDONALD (Kingston City): I cannot give the scale of compensation, but it is the regular pension. The minister of pensions can give that. If a sailor is lost at sea his dependents receive exactly the same treatment as the dependents of a man killed on the battlefield, but what the scale may be in any given case I do not know. I have not the table here.

Mr. MacNICOL: I have in mind a son who lost his life at the time the *Spikenard* was sunk. His family asked me if his mother would be allowed any compensation. Before he enlisted he had been one of the supporters of the family.

Mr. MACKENZIE (Vancouver Centre): In that case the pension is not a matter of right but is based upon certain principles, one of which is that he would have been the sole support of his parents if he had been saved and had returned home. The principle in regard to a mother or other dependents, so far as pension is concerned, is entirely different from the principle with relation to widows.

Mr. MacNICOL: Suppose at some future time the mother should become dependent on the public for support. What I want to know is, between now and that time, while not receiving anything, what would be her status? Would she be entitled later on?

Mr. MACKENZIE (Vancouver Centre): If he had contributed to her support before serving in the forces and she was not able to earn her own livelihood, she would be considered eligible.

Mr. HANSON (York-Sunbury): There would have to be the two factors, contribution, and the fact that she depended upon him for support.

[Mr. Macdonald (Kingston City).]

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. HANSON (York-Sunbury): Is there not a third principle, that of expectancy of support in her old age from that son? Is effect given to that?

Mr. MACKENZIE (Vancouver Centre): Yes, my hon. friend is right; there are three principles involved.

Mr. HANSON (York-Sunbury): It is hard to make the third principle work.

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. CASTLEDEN: How many merchant ships have been armed by the navy, or does the navy take that responsibility?

Mr. MACDONALD (Kingston City): I cannot tell the hon. member how many have been armed. The naval department, so far as the arming of merchants ships in Canadian waters is concerned, would supervise that work, would put in the guns and generally provide the crews to operate them. How many ships have been armed, however, it is difficult to say, and perhaps it would not be well for me to state the number even if I had the exact figures. The number is considerable, however.

Mr. CASTLEDEN: Does that equipment belong to the naval department or do the owners of the ship buy their own?

Mr. MACDONALD (Kingston City): We have argued a great deal about that, but we were beaten down finally. We have to provide the equipment, and pay for it, so that it is ours.

Mr. CASTLEDEN: Depth charges?

Mr. MACDONALD (Kingston City): Yes. We began in a small way, doing work for them, and ended by paying for the whole thing.

Mr. DOUGLAS (Weyburn): Do not the ship owners make any reimbursement?

Mr. MACDONALD (Kingston City): I do not think so.

Mr. HOWE: The ship owner attends to the strengthening of the ship. We provide the mountings for the guns. The guns are furnished by the navy.

Mr. DOUGLAS (Weyburn): And the service of the crew for the guns?

Mr. MACDONALD (Kingston City): In a great many cases we supply the crew.

Mr. CASTLEDEN: That is not the complete policy. In some cases the owners of the ship may supply their own equipment?

Mr. MACDONALD (Kingston City): Their own crew?

Mr. CASTLEDEN: Their own equipment; I mean the gun itself. Does the department supply all that?

Mr. MACDONALD (Kingston City): Now we supply the whole thing, the ammunition, the gun, and the men to operate it. There might be some cases dating back from early days when merchant ships had their own gun crews, but nowadays we have a large number of ratings on what are known as defensively equipped merchant ships, which are referred to as Dems. There are a large number of these. In the beginning the merchant ships probably had a few gunners of their own.

Mr. MacNICOL: Where Canadians take part in commando raids on enemy territory, if there is no record of any man who does not return who may have been captured or killed in landing or after landing, does the dependents' allowance stop immediately or is it continued until something definite is found out?

Mr. MACDONALD (Kingston City): I am not quite sure on all the points. If he is missing, his pay goes on for the rest of the month. I think that is the arrangement. When he is presumed killed his widow or dependent, as the case may be, falls under the ordinary pension regulations.

Mr. HANSON (York-Sunbury): Is there an interregnum when she does not get anything?

Mr. MACDONALD (Kingston City): I do not think so. I remember an order was signed recently but I do not recall its exact terms. I believe the man's pay goes on until the end of the month, and once presumption of death arises the pension begins automatically.

Mr. MacNICOL: I ask the question for this reason. In the air force it stops immediately. I have in mind a young man who enlisted in the R.C.A.F. and on reaching England was apparently transferred to the R.A.F. He was there only a short time and was sent to Gibraltar or Malta.

Mr. MACDONALD (Kingston City): That is the R.A.F.?

Mr. MacNICOL: Yes.

Mr. MACDONALD (Kingston City): That is not our service.

Mr. MacNICOL: But he enlisted in the Canadian forces. I will bring the matter up later when the minister for air is before us. This young man was reported missing after an attack on an Italian convoy, and the separation allowance was stopped immediately.

Mr. MACDONALD (Kingston City): That is in the R.A.F. That does not come under the Canadian regulations. We have our own regulations which are different from those.

Mr. MacNICOL: This is probably not the right time to ask how he got out of the R.C.A.F. into the R.A.F. I should like to know whether on going into the R.A.F. he lost all rights that belonged to him under the R.C.A.F.

Mr. MACDONALD (Kingston City): There are many Canadians in the R.A.F. Some are on Canadian rates of pay—most of them, I believe. I thought my hon. friend was referring to a Canadian who had joined the R.A.F., becoming an out-and-out member of it.

Mr. MacNICOL: He was transferred to it.

Mr. MACDONALD (Kingston City): He is probably on R.C.A.F. rates of pay.

Mr. MACDONALD (Halifax): There is an anomaly in the pension law which I can best illustrate by taking the case of a member of the naval service. Our pension legislation now in existence came into effect a year ago in pursuance of a report of a special committee under the chairmanship of the hon. member for Queens (Mr. Macmillan). The effect of the legislation on members of the armed forces was to change the pension law as it stood in 1940 when under the terms of an order in council there was in effect the principle that obtained in the original Pension Act of 1919. The feature of which I wish to speak is the so-called insurance principle, sometimes called the "incurred during service" principle. Under that principle, once a man enlisted the country became responsible for him. There was one exception, misconduct, but subject to misconduct the country in effect took the responsibility of insuring the man so that if any injury occurred to him during service he, or in case of death his dependents, became entitled to pension. But instead of that principle there was adopted what is commonly called the "attributable to service" principle, which meant that the injured man, in the event of disability, or his dependents in the event of his death, had to show that his injury or death arose out of or was directly connected with his military service.

Taking the case of men serving in the Canadian navy, if these men are injured or

killed outside the territorial waters of Canada they or their dependents are entitled to compensation. It does not affect the case whether their injury or death was due to accident or to something that occurred in the course of hostilities. If a man in the Canadian naval service is killed while in Canada his dependents will not necessarily obtain compensation, nor in case of injury will he necessarily be entitled to compensation.

Mr. MACKENZIE (Vancouver Centre): Unless it was a result of service.

Mr. MACDONALD (Halifax): Unless that injury or death arose out of or was connected with his naval service. In other words if a man takes influenza or has appendicitis, unless he can show, which in many cases is impossible, that his influenza or appendicitis was occasioned by his service in the navy, he or his dependents are not entitled to compensation. If he is accidentally killed while out motoring, likewise, unless he was on some work connected with his service, there is no provision for compensation. Of course the same principle is also in effect in the army and the air force.

I suggest that whatever may have been the reasons for this anomaly in our pension law in the past, to-day, under the changed conditions, they no longer apply. The war has spread to the Pacific as well as the Atlantic; enemy submarines operate in our coastal and territorial waters. There seems to be no reason why men in the naval service in Canada should be under a disability or be discriminated against in comparison with members of our naval service serving in England or in the West Indies. The same is true of members of the Canadian air force and members of the Canadian army who, while ready to go overseas, die in consequence of some injury contracted during their service but not directly attributable to their service. All these men should have the same protection that was accorded to men who served in the last war. It is almost impossible for a medical man or for anybody to prove to a medical tribunal that a man's death, occurring say in consequence of appendicitis, was attributable to service. Although his service, however, may not have been the immediate cause, the fatality may have been due to the changed conditions under which he had to live when he became a member of the armed forces. In other words some months after a man joins the army or the navy in perfectly good health, he suffers an attack of illness from some internal condition which, while it cannot be shown to have been directly attributable to service, nevertheless may have been occasioned or brought on by changed diet, changed lodging or changed living conditions.

I know it may be said that there is provision for a compassionate allowance in certain cases, but I submit that is not good enough. Members of the active service force who are injured during service should be entitled to pension if disability occurs during service, not on compassionate grounds, not as a matter of charity or hand-out, but as a reward for valuable service rendered to the country. These men or their dependents should not have to prove necessity in order to qualify for compensation, because if they do, in many cases those who are most deserving would not obtain compensation. Their circumstances might be necessitous, but their pride would preclude them from applying on those grounds.

We were all pleased at the minister's announcement to-day that new naval regulations will bring to parity as far as possible the pay of those in the naval service and that of those in other branches of the armed forces. I suggest to the minister that some attempt be made to take up now the question of the compensation to which members of the naval service, as well as those of the other armed services, should become entitled in the event of disability.

Mr. REID: Would the minister care to tell the committee if corvettes are used in convoy work or for protection against submarines?

Mr. MACDONALD (Kingston City): Well, yes, of course they are used in convoy work very extensively, and have been for nearly two years.

Mr. REID: Has the navy department any extensive programme for the building of corvettes?

Mr. MACDONALD (Kingston City): Yes, quite extensive. We are building them, or having them built for us, all the time. There are some on the ways now, and several will be launched this summer.

Mr. STIRLING: Two nights ago there was an appeal over the radio for machinists and fitters for employment at the Halifax dockyard. I wonder whether the minister could tell us whether he has made it a practice to send requisitions for his requirements to the Department of National War Services. I remember that at the beginning of the war we had the voluntary service employment bureau; then there was the registration of 1940; then the registration in connection with unemployment insurance, and then the census. It has never been clear to me whether the other departments of the government have definitely indented on the

information brought to light by these registrations. I should like the minister to tell me, if he can, that it is a definite practice in his department, when men of a certain class are required, first of all to take everything that is available according to the information brought to light by these registrations.

Mr. MACDONALD (Kingston City): The broadcast to which my hon. friend refers was made by Engineer Captain Stephens, I think.

Mr. STIRLING: It was just read over the air.

Mr. MACDONALD (Kingston City): I did not see the text of the broadcast before it was delivered, and I would not care to attempt to answer the question definitely, as to whether the engineering department consulted the Department of National War Services before making the appeal. I could obtain that information. Unfortunately Captain Stephens has gone to the west coast and will not be back until the first of next week. It would be he who would make the appeal, in connection with shipwrights, artificers and dock yard men; it would be he, I assume, who would investigate labour conditions before making the appeal. I can get from him the information on that point.

Mr. STIRLING: I should be glad if the minister would do so, because I should like to be able to establish the point that it is the custom and policy of one department of the government to keep in close touch with those who have the figures resulting from the registration so that when a need appears it can be filled with reasonable speed.

There is another matter in connection with the dockyards as to which I should like some information. No doubt the dockyards are full of work. Proof of that is to be found in the fact that it has been necessary to send certain refitting and repair work to other places to be done. What are the hours of employment at the Halifax dockyard, for instance? Last fall we found that at Portsmouth there were twenty thousand men employed, working three shifts a day, entirely occupied in outfitting, refitting and doing repair work of a major nature. Certainly work in these three categories is required to be done in our dockyards. I should like the minister to tell us the number employed at the Halifax dockyard in that work, and how many shifts are working each day.

Mr. MACDONALD (Kingston City): I am afraid I cannot tell my hon. friend that we do as well as the Portsmouth dockyard, where he found twenty thousand men working three shifts a day. I do not think we can approach that record. I should like to get specific information on that point, and bring it down on Monday.

Mr. STIRLING: Do we work three shifts?

Mr. MACDONALD (Kingston City): I do not think we do. There may be three shifts in some branches, but there would not be three full shifts at the Halifax dockyard.

Mr. HANSON (York-Sunbury): As a matter of fact, to be perfectly candid, speaking generally there is only one shift a day. Things are tied down at twelve o'clock noon on Saturday and there is no work Saturday afternoon or on Sunday, except in an emergency. There is only one shift a day at Halifax, is there not?

Mr. MACDONALD (Kingston City): I think that statement was made the other day with reference to the Halifax shipyard, which is another matter altogether. I am speaking of the naval dockyard. There are not three full shifts a day. On the other hand I would not want to say that there is not one full shift and other partial shifts. I believe one of the problems there is a shortage of skilled foremen, and that sort of thing; but there are not three full shifts. On the other hand, I think it is a little better than one eight-hour shift; but I should like to get the exact information.

Mr. EMMERSON: Are all repairs required to Canadian ships made in Canada, or do some ships have to be sent outside to be repaired?

Mr. MACDONALD (Kingston City): Some are repaired outside of Canada—in Newfoundland, in Great Britain, and some even in United States ports.

Mr. JACKMAN: Could the minister tell us how many corvettes he is going to add to the Royal Canadian Navy this year?

Mr. MACDONALD (Kingston City): I did not want to give exact figures with regard to any particular ships. I said we now had seventy-five corvettes, more or less, and that this year we would add about a hundred ships, including a good many corvettes. I think that is about as close as I should come to it. A good many of the hundred ships that we hope to add during the next year would be corvettes.

Mr. HANSON (York-Sunbury): In regard to operations in Halifax harbour, is there the fullest cooperation between the naval authorities and the Department of Transport, that is the harbour commission authorities? In particular, what was the cause of the inquiry

in respect of the vessel *Claire Lilley,* recently held before Mr. Justice Archibald, which I believe was a secret inquiry?

Mr. MACDONALD (Kingston City): That was not a naval inquiry.

Mr. HANSON (York-Sunbury): No, it was a judicial inquiry before Mr. Justice Archibald.

Mr. MACDONALD (Kingston City): What was the vessel, a merchant ship?

Mr. HANSON (York-Sunbury): Well, I do not know.

Mr. MACDONALD (Kingston City): I am not sure that it was a warship.

Mr. HANSON (York-Sunbury): No, I would not suppose it was, from the name. I understand that if the full details of that inquiry were given to the public it would reveal very interesting information as to the cooperation or lack of cooperation, one or the other, between the Canadian naval authorities and the pilotage service in and out of Halifax. Although I am not specifically informed, I assume it may have been collision. The inquiry was held in secret, and evidence was taken; but I do not think anything has been said about it. There are a number of other cases about which the public are inquiring. I am mentioning only one at the moment, and I suggest that the minister should get information. Unless there is some violation of a military or naval secret, which would be of advantage to the enemy—and I can scarcely think that would be the case, because it all happened within the harbour limits—he should bring down information, and should tell us exactly what the position is, what action was taken and the result of the inquiry.

I am going to leave it at this, that there is a suggestion that there is not the fullest cooperation between the naval authorities on the one hand and, shall I say, the civil governmental authorities on the other. That has raised a nasty situation, one that is not—well, shall I say creditable—with the result that there is not that degree of efficiency in the harbour that there ought to be. Would the minister bring that information down as fully as possible on Monday?

Mr. MACDONALD (Kingston City): I shall be glad to do that. Offhand I have not heard of the case of the *Claire Lilley,* but I shall find out about it. It might not be in my department at all, but I shall get the fullest possible information.

Mr. BLACK (Yukon): A few days ago an hon. member asked what right non-British countries had to order their nationals domiciled in Canada to undertake compulsory service in their own armed forces. I have had occasion to look up the law on this subject, and to hon. members to whom it might be of interest I would refer them to *Hansard* of May 1, 1941, where the Prime Minister gave a conclusive answer to the same question when asked by the hon. member for Rosetown-Biggar. From that answer it appears that such countries can bring the call for compulsory service to the attention of the nationals, but they cannot exercise any compulsion within Canada in order to induce them to respond to the call. The Prime Minister continued:

> The national of the foreign government can refuse to respond to the call, without incurring any penalties within this country. On the other hand he will not be able to embark on a ship flying the flag of his home country or enter its territories without subjecting himself to prosecution in his own country.

That is the situation.

Mr. MAYHEW: I have had the privilege of visiting Halifax harbour and barracks on only one occasion but, since my home is in the vicinity of Esquimalt, I have been there on many occasions. I have noticed at both points that while there is a large number of civilians working, there is very poor restaurant accommodation. Our men have been asking for better accommodation, and I should like to know if the situation has been remedied.

Another matter which seemed apparent was the congestion within the barracks itself. A number of bunkhouses appeared to be built very close to each other. Is there any real necessity for having these bunkhouses, accommodating a large number of men, built side by side. I believe one of the bunkhouses at Halifax harbour has been destroyed since the time of my visit.

Is there any necessity for having hospitals built within that area? It seems to me we are running an unnecessary risk which could be avoided by spreading out a little more. Additional buildings are being erected at Esquimalt, and in my opinion they are being built too close to the other buildings, having regard to protection of our men.

I believe, too, we have not yet any balloon barrages, or any type of protection which should be above these barracks to protect the men as much as possible.

Mr. MACDONALD (Kingston City): I shall look into these matters. I do not believe it is desirable to have the hospitals out of the general area in which the troops are located. It must be remembered that the problem of discipline and the control of men

is always important. While I agree that the buildings should not be crowded closely together, still I think they should all be within the same general area, for the sake of the better discipline which can be effected in that way.

I shall look into the question of restaurant accommodation for civilians at Esquimalt. The balloon barrage does not come within my department. On the assumption that balloon barrage protection is desirable or necessary in some of the coastal cities, a subject concerning which there is considerable doubt, it would not be the duty of the navy, but rather be that of one of the other forces to provide such barrage.

Mr. McGARRY: I understand considerable ship repairing is being done at the port of Louisburg. Is any repairing being done to naval ships at that port?

Mr. MACDONALD (Kingston City): I do not think any extensive repairs are being done to naval ships. There might be some small or running repairs which could be made there; but there is, as far as I know, no dry dock or marine railway at Louisburg. Consequently only light repairs could be made. However, some merchant ships are putting in there, and it may well be that some naval ships, too, have had minor repairs done. I should hope that that would be the case.

Mr. BROOKS: The minister has told us about the elaborate programme for the construction of naval vessels during the coming year, and about the number of vessels constructed during the past year. All hon. members realize the great need for these vessels, and that they should be built as quickly as possible. I believe the public has been quite concerned in the past year over the great number of labour disputes in Canada. Have these labour disputes in any way materially affected the navy's building programme? I realize, of course, that such disputes come under the Department of Labour, but they also affect our war effort. While we realize that the men should and must receive the proper wages for their labour, we have been quite concerned over sympathetic strikes where large numbers of men go out on strike perhaps because some one man has been dismissed by reason of lack of knowledge of the work he is supposed to perform. How many work hours have been lost on naval construction in the past year on account of such strikes in Canada?

Mr. MACDONALD (Kingston City): I shall try to get that information from the Minister of Munitions and Supply. I wish he were here. I know he intends to be here because he expects to reach some of his expenditures. The hon. member will, however, understand that when we want a ship we specify the kind of ship and have the plans drawn up. Then the Department of Munitions and Supply arranges for the building of it. Consequently the matter of days lost through labour disputes would be one within the knowledge of that department rather than of mine. Of course anything that keeps men away from work for two or three days interferes to that extent with the swift and complete building of the ship.

Mr. HANSON (York-Sunbury): I should like to bring up something which perhaps is within the jurisdiction of the Minister of Munitions and Supply (Mr. Howe). I think the ministry should give some indication of what the position is with regard to labour in the city of Halifax, particularly in respect of the shipyards and the longshoremen. I believe a rather disturbing situation has arisen there. While a discussion of this matter may not be germane to the minister's estimates, it may be of some interest to this country to know that as recently as April 30, 1942, order in council P.C. 3511 was passed on the recommendation of the Minister of Labour (Mr. Mitchell), invoking the provisions of both the War Measures Act and the National Resources Mobilization Act. Under this order in council the longshoremen in the port of Halifax are being regimented, or should I say "conscripted", for the first time. The principle of compulsion has been inaugurated, and the order provides for the imposition of fines and penalties for breaches of the order made by the controller.

I do not know the reason for the enactment of this order in council but I do know that it is the most advanced piece of legislation with respect to labour ever passed by this government by means of order in council with parliament in session and without any reference to parliament. I want hon. members to read this order in council over the week-end and to endeavour to understand its implications. I would refer them to the preamble and to the subject matter as covered by section 3.

Mr. MacINNIS: Is it in the *Canada Gazette*?

Mr. HANSON (York-Sunbury): I do not know; I never see the *Canada Gazette*. I get copies of the orders in council passed under the War Measures Act and I read as many of them as possible. When this one reached my desk yesterday I thought it contained most drastic provisions, and I thought some explanation was due to the house

and the country with respect to the underlying policy. I do not say that the position is not justified, for I do not know what the circumstances are. But I do know that the proposals contained in this order in council are the most drastic with relation to labour that have been enacted since the war began or even before. I direct the attention of hon. gentlemen to section 3 which covers the powers of the controller and to section 12 which covers the modus operandi and the allocation of labour to individuals working in the harbour. This section has eight subsections. Section 13 grants protection to the controller and any person acting for or under his authority and declares, under the authority of the War Measures Act and the Mobilization Act, that the controller or any such person "shall not be liable to any person for anything done or omitted in the exercise or purported exercise of any power or authority from time to time vested in the controller." He is made a czar.

Mr. MacINNIS: That is in most orders now.

Mr. HANSON (York-Sunbury): It is a drastic provision.

Mr. MacINNIS: Oh, yes.

Mr. HANSON (York-Sunbury): Section 14 of the order provides:

All persons, companies, organizations, associations or agencies—

I think that covers the whole gamut of human relations.

—directly or indirectly engaged or concerned in shiploading operations in the port—

Meaning the port of Halifax.

—shall in all matters act upon—

That is the compulsion.

—and in accordance with the directions, orders and decisions given or made by the controller under this order.

The first question that naturally arises is: what was the occasion for the enactment of such drastic legislation? I do not say that the occasion did not warrant the action, because I do not know, but I think it is due to the public that the true position should be made known. We should be told why this order was enacted when the house was in session. Was it necessary to act so quickly that parliament could not be consulted? This is a direct regimentation of labour, mandatory in character, with breaches punishable on summary conviction by fine or imprisonment or both. The provisions with respect to punishment will be found in section 16, which reads:

Any person, company, organization, association or agency as aforesaid who, or which, contravenes or fails to comply with any provision of this order or with any direction, order or decision given or made by the controller under this order shall be guilty of an offence and shall be liable on summary conviction to a fine not exceeding $500 or to imprisonment for a term not exceeding three months or to both such fine and such imprisonment.

That may be necessary. I do not know, but I do invite the ministry to tell us why such drastic legislation was enacted by order in council while this house was in session and why the governor in council took upon itself the power to impose fine and imprisonment for a breach of a civil order. Is that to be the policy of the government for the future with regard to labour? I hold no especial brief for labour, but I want to see fair play. Is any other class in the country being dealt with in the same way? Yes, there is. There are other civil provisions in respect of breaches of orders in council which were passed by this government while parliament was in session. There are many of them, but this is the first time that this principle has been applied to organized labour, and the ministry must justify itself. Has organized labour failed in the national emergency? Is it necessary in the public interest that this order should be passed? Let us know the circumstances so that the house and the country may judge. I am not passing judgment on the policy; I am simply questioning the reason for it.

It is our right and duty to call attention to these matters. We should not allow this sort of thing to pass unnoticed. I am not approaching it in a spirit of censure, and I am certainly not approaching it in a spirit of praise. I want to know what the facts are, and I want to approach whatever consideration I give to them with as judicial a mind as I can summon to my support. I invite the minister to tell us the reason why this was done. The Minister of Labour is not at the moment in his seat. He is the sponsor of this thing, but I have no doubt that the demand, if there was such a demand, came from other departments.

So far as I know, organized labour in this country have made their contribution to the war. So far as I understand their position, they are not satisfied with certain things which have been done; they are not satisfied with government policy.

May I pause here for a moment to pay tribute to the work of a man who in the course of a lifetime's performance of duty was suddenly stricken yesterday with illness. I refer to Mr. Tom Moore. I have known him for many years. I am glad to say that I have always found his views with respect to the relations between capital and labour, and the relations of labour with the government, sane

and sound. I regret more than I can say that at this difficult time, in the performance of his duty, in endeavouring to explain matters to those whom he represents, he should have temporarily at least fallen by the wayside. I certainly hope—and in expressing this hope I am sure that it will be the wish of everybody within sound of my voice—that his disability is only temporary.

Labour for the most part, I think, has satisfactorily performed its functions in this difficult war period through which we are passing. There are perhaps exceptions. I have no doubt that there is a left wing in labour, as there is in most bodies, and I certainly have never welcomed certain agents who have come into this country. But that is just in passing.

I think the government owe to this house and certainly to the country an explanation why legislation of this kind is passed by order in council while parliament is in session, legislation confined, if you will, to a narrow basis, to the port of Halifax, and I invite the minister to give us an explanation.

Mr. MACDONALD (Kingston City): I regret that I am not able to comply with the hon. gentleman's request. Matters dealing with longshoremen and labour conditions are matters for the Minister of Labour. I think we should leave them to him to deal with. I believe he could explain the genesis of the order in council, certainly much better than I could. We do not employ longshoremen. If there are naval craft to be attended to, we attend to them ourselves. I do not know whether my colleague the Minister of Munitions and Supply has anything to say about the matter. I think the explanation of the order in council had better be left to the Minister of Labour.

Mr. MacINNIS: Mr. Chairman, in rising to say a word on this matter I should like first to associate myself with the remarks of the leader of the opposition in regard to the sudden illness of Mr. Tom Moore, President of the Trades and Labour Congress of Canada. I have known Mr. Moore for many years and have been associated with him at times in his work, and I join most heartily in the hope expressed by the leader of the opposition that Mr. Moore's illness may be only temporary.

I am glad that the leader of the opposition has raised the question he did because in my own feeble way I have been trying ever since the beginning of the war to impress upon this house and the country that one of the chief obstacles to our war effort has been the refusal of the government to take labour into its confidence and to make it a partner.

When in February last the executive of the trades and labour congress of Canada met certain members of the cabinet to put before them the legislative programme of the congress for this year, the Prime Minister frankly admitted that the government had not cooperated with labour as much as it should have done. But despite that, the government has not changed its policy.

The leader of the opposition has referred to the order in council. I must admit that I have never seen it, and I do not know how the leader of the opposition got it, unless it was sent to him as a special favour or unless he made application to the clerk of the privy council for it.

Mr. HANSON (York-Sunbury): I think all orders in council under the War Measures Act are sent as a matter of courtesy to the leader of the opposition from the registrar of the legislative committee of the cabinet. I am sure I cannot read them all.

Mr. MacINNIS: I hope we shall all get a copy of the order in council at an early date. But let me tell the leader of the opposition and the members of this house that this is not the first order in council of this kind which has been passed since the war began. My hon. friend the member for Royal, I think it was, asked a question in regard to the amount of time lost through strikes. If one considers the non-cooperative policy of the government and the anti-labour policy of Canadian employers, it is amazing how few strikes we have had and how little time has been lost in that way in Canada since the war began. Whenever a little time is lost through a strike we all know about it at once through headlines in the press, but we do not hear of the time that is continually being lost—far more time than is lost by strikes—through lack of proper organization in industrial plants and matters of that kind over which the workers have no control.

Last September, while a number of disputes in shipyards were being heard by conciliation boards appointed by the Department of Labour, that department appointed a royal commission to investigate the shipyards in the provinces of Quebec and Ontario. As I have pointed out before, the members of that royal commission, three lawyers, Mr. MacDonald, of Dalhousie university, Senator Gouin, of Ottawa or Montreal, and Mr. Barlow of Ontario, were appointed without any prior consultation whatsoever with

organized labour. Some time after it was appointed to deal with one or two shipyards, its powers were extended to cover all the shipyards in the provinces of Ontario and Quebec. On November 24 the commission reported to the Minister of Labour recommending an increased wage scale for all the shipyards concerned. This matter was under discussion for some time; then suddenly on January 26 the government, by order in council, on the recommendation of the Minister of Labour, ignored altogether the report of its royal commission and the scale of wages it had recommended, and for the first time in Canada's history, so far as I know, set a wage scale by order in council. Not only did they set the wage scale for certain workers by order in council, but in the same order they gave the Minister of Labour the right to set wages for any category of labour not already mentioned in the schedule attached to the order in council, at whatever rate he might consider fair and reasonable. As I pointed out some time ago, that is doing just the very opposite to what the government at the beginning of the war did by order in council. By order in council P.C. 2685 the government gave its blessing to the principle of collective bargaining; but here, by order in council, it has completely destroyed collective bargaining, because there can be no collective bargaining under an order in council.

If there is anything that is amazing in our whole war effort it is the fact that labour has acted as reasonably as it has done considering the treatment it has received; and undoubtedly the reason that labour has acted as reasonably as it has, is that labour realizes that it has a stake in the winning of this war. There must be some one in the Department of Labour of late, who, whenever a case comes up involving some problem that requires consideration and cooperation with labour, immediately says, "We had better settle it by order in council". There must be someone in the department with considerable influence who takes that attitude. I do not know who the party is but in some way or other that person must be rooted out, or the Minister of Labour will have to take the responsibility for what has been done and is being done in his name. I have not seen the order in council to which the leader of the opposition has referred. I will make it my business to see it as early as I can, and I shall have something further to say about it. This order, I understand, refers to longshore work. I wonder if the Department of Labour has heard what has happened in the old country with regard to longshoremen. Longshoremen to-day are in the service of the government with a stated wage, whether they work or not. That is something that Ernest Bevin won in a dispute in 1921. For a long time it was not given effect to; he had to wait twenty years until he came into office himself before the organization he represented received what they were given by a board set up by the government.

I have mentioned the failure of the government to cooperate with labour. I have in my hand a report by the executive of the trades and labour congress of Canada, of which Mr. Moore is president, on order in council P.C. 8253, the wage-fixing order. In this report the executive states:

> This conference further expresses its regret that any representative of the government should create such a misleading impression in the public mind, that labour had in any manner been a party to the formulation of the policies incorporated in order in council P.C. 8253.

That was in connection with a statement made in a radio address by the former minister of labour that this order had been discussed with organized labour before it was passed. The report goes on:

> At the outset this conference reiterates and wishes to make definite and clear that organized labour throughout the whole of Canada as represented by the trades and labour congress of Canada has pledged its fullest support to the government of Canada in all steps essential to prosecute the war to a successful conclusion to the end that freedom, right and justice shall prevail over the nazi forces of aggression. . . . This declared policy was made in good faith and has been faithfully observed.
>
> It must be pointed out, however, that the unwillingness of the federal government to accept the proffered cooperation of the representatives of organized workers makes it increasingly difficult for them to give effect to that policy.

This is the considered opinion not of a left-wing of the Canadian labour movement, but of conservative responsible officials of the largest labour organization in Canada. Not only that, but they said in connection with the national labour supply council, which has recently been abolished:

> The conference considered that the national labour supply council was not functioning as had been expected,—

But listen to this.

> —but that in many instances it had been used to mislead the public as to the attitude of organized labour respecting the government's labour policies, and in that way the members acting thereon had been placed in a false position. This opinion was expressed in the following resolution which was unanimously adopted:

Whereas the national labour supply council was created by order in council P.C. 2686 of June, 1940, by the present government for the purpose of acting in an advisory capacity regarding matters affecting labour and industry during the war emergency;

And whereas many questions of national importance have been referred to this council for advice, and in many instances, other matters of equal or greater importance have been dealt with in other quarters and the national labour supply council ignored;

Whereas, generally the advice and recommendations of the council have not been accepted by the government or its ministers, which indicates that its services are evidently of no value as further demonstrated by the manner in which order in council P.C. 8253 was enacted.

Therefore be it resolved, that the representatives of the affiliated organizations of the Trades and Labour Congress of Canada herewith request that the order in council under which the national labour supply council was established be revoked.

Could there be a greater condemnation of the government's policy toward organized labour than that resolution? Possibly this is not the time to deal fully with this matter, but that time will come, and I assure this committee that the question of the government's labour policy will be dealt with.

Mr. DOUGLAS (Weyburn): Last night I asked the minister a couple of questions on which he was going to give me information to-day. The first had to do with what steps were taken to unify the command on the two coasts as between the army, air force and naval forces, particularly the naval forces whose task it is to be responsible for the defence of Canada's shores.

The other question was with reference to the $21,000,000 to be spent for buildings.

Mr. MACDONALD (Kingston City): For new buildings the amount is $20,509,000.

Mr. DOUGLAS (Weyburn): Could the minister outline some of the buildings?

Mr. MACDONALD (Kingston City): Naval service headquarters at Ottawa; that is the new building going up here. I think I said last night from memory that the cost would be in the neighbourhood of three-quarters of a million dollars. As a matter of fact it is $890,000.

Others are:

Halifax dockyard	$3,996,000
Halifax barracks	3,606,000
Sydney base	4,469,000
Esquimalt base	78,000
Esquimalt dockyard	1,524,000
Esquimalt barracks	850,000
Royal Roads (that is the site of the new naval college)	535,000
Botwood, Newfoundland, about	730,000
Saint John, N.B., base	635,000

And a large number of smaller sums. There are some twenty to twenty-five projects in all, but I have given the main ones.

Mr. DOUGLAS (Weyburn): Does this amount cover all the buildings to be erected? Are there other buildings put up by the Department of Public Works?

Mr. MACDONALD (Kingston City): This covers all the buildings that we are to erect this year. There are a few buildings to be rented, the rentals amounting, I think, to $166,000. Land to be purchased runs to about $1,250,000, and the whole thing makes up the total of $21,955,000 which I gave last night.

Mr. HANSON (York-Sunbury): What is contemplated at Saint John? Is the estimated cost of $635,000 for new construction? Will there be any land in connection with that?

Mr. MACDONALD (Kingston City): Yes, there is $21,000 for land.

Mr. HOWE: It is a pier at the entrance to the dry dock, in connection with ship repairs.

Mr. HANSON (York-Sunbury): In addition to the present facilities?

Mr. HOWE: Yes.

Mr. MACDONALD (Kingston City): Construction of buildings at Saint John is given at $423,000; purchase of land and buildings, $16,500; rental of lands and buildings, $27,000; carryover from 1941-42, $190,000, making a total of $656,500. The exact detail of the buildings is not given here. It will be in connection with the dock and repair facilities there.

Mr. HANSON (York-Sunbury): I understand from the minister's colleague that there is a new pier near the dry dock or repair facilities now there for the purpose of docking ships in connection with repairs to them.

Mr. HOWE: The extension of, I think, the south bulkhead.

Mr. MACDONALD (Kingston City): The extension of the north and south sides, one of which we pay for and one of which I think the Department of Munitions and Supply pay for.

Mr. HANSON (York-Sunbury): There would not be any land required for that.

Mr. MACDONALD (Kingston City): The pier is very long, I think 700 or 800 feet, in order to enable ships to be taken out of the dry dock quickly without interfering with other ships going in for repairs.

Mr. HANSON (York-Sunbury): Is it of a temporary or permanent nature?

Mr. HOWE: Permanent.

Mr. DOUGLAS (Weyburn): Is the minister prepared to make any statement about the unified command?

Mr. MACDONALD (Kingston City): I have not much to add except that on the east coast General Elkins is in command of the whole area. My hon. friend's question was, I think, particularly directed to whether General Elkins could order ships of the Canadian navy out to sea. In a strict sense he could not do that; I am so informed by the chief of naval staff. I do not know that any army commander would endeavour to designate particular ships, because he is not familiar with the operation of ships. What I fancy might be done would be that the general would say, "I want a combined force of ships, planes and land forces for a certain purpose", and he would ask the naval commander, "what in your judgment would be the correct number of ships and that sort of thing?" That, I imagine, is what General Elkins would do. Strictly speaking, he is in what is called strategic control of the whole coast, but he does not exercise or attempt to exercise powers over the actual disposition of individual ships. That is a matter which is still under the control of the chief of naval staff and the admiral commanding on the Atlantic coast.

Mr. DIEFENBAKER: Mr. Chairman, the leader of the opposition brought up the matter of this order in council, and I think this committee has a right to an explanation from the Minister of Labour in regard to it, because I believe it is just one more step tending to lessen the importance of this parliament in the eyes of the people of Canada. To me this is one of the most unusual of the departures from the ordinary rules of law that have characterized the activities of this government, and I add my protest in support of the stand taken by the leader of the opposition. I protest against the tendency of this government to act with cavalier disregard of and contempt for the rights of parliament. This order in council goes further than any other passed so far. Up to the present time acts of parliament have been suspended, amended in part or in whole, and even abrogated by order in council, and I may add that we on this side of the house have been endeavouring to secure information in regard to the statutes thus affected, but as yet we have been unable to get it, though

the Prime Minister has stated that certain acts of parliament have been effected as indicated.

Under this legislation labour is placed in a position which cannot be justified. I am not one of those who believe in raising class against class, in pointing out the great contribution of labour and at the same time ridiculing the contribution made by the industrialists of this country. Both have contributed to the effort; they have worked in partnership, and I condemn those who would endeavour, in time of war, to secure support for themselves, by pleading for one class as against another or by endeavouring to cast aspersions upon the great industrialists, of whom some are known as dollar-a-year men, who are serving this country fairly and honestly. Labour has done fine work. So have the industrialists. But I do think this piece of legislation is not fair to labour. It reveals a tendency to disregard the rights of individuals engaged in labour which, if not protested against, may well lead to a state of regimentation one does not care to contemplate.

This is the first mobilization by compulsion and by locality. It is limited territorially. The rule of law under which we operate gives every person equality under the law, but this legislation by order in council makes it an offence to do certain things in Halifax, places labour under compulsion in Halifax, while a different law prevails in all the other seaports of Canada. I protest against the principle of an order in council such as this, which is retroactive in part and applicable to only one section of Canada. If it is to be of assistance to the war effort, then make it applicable to all seaports. To make such provisions applicable to only one place; to give any individual the power to control and dictate to labour as to how it shall act, what it shall do, and so on, is a departure from British constitutional principles and a denial of the liberty of the subject. Section 3 of this order in council provides that the controller shall have power and authority—

> —to give directions to, and to make orders, and decisions binding upon, all persons, companies, organizations, associations and agencies engaged or concerned in shiploading or unloading at the port of Halifax with respect to all matters, whether general or special, other than wage rates, affecting working and hiring conditions, practices and methods in connection with shiploading and unloading operations.

Then it goes on and destroys the entire right of the individual to hire as he will. Under the provisions of this order in council men are going to be hired not as individuals but, if I may use the expression, in bulk, for section 12 provides:

The present system of daily hiring of individuals working at the site of the work is hereby abolished and there shall be substituted therefor a new system of hiring which, subject to such alterations as the controller may deem expedient, shall embody the following principles. . . .

Mr. MacNICOL: What controller?

Mr. DIEFENBAKER: A controller set up by the governor in council to control the longshoremen in the city of Halifax. Then it goes on to provide that there shall be set up a central dispatching agency:

The present active working personnel of the port shall be divided into fixed gangs with named gang bosses; longshoremen shall hereafter be hired in gangs and exclusively through the dispatching agency.

Just picture the situation. Only those are to be hired who come exclusively through a dispatching agency set up by the government. This government, which is so fearful of compulsion in so many matters, by order in council has done something which constitutes an invasion of the rights of the individual that in my opinion cannot be justified. When we speak about labour and production—and no doubt we will be hearing more about this—is labour responsible to-day for the decrease in production that has occurred in some parts of Canada? Or is it the lack of governmental organization; is it the bottlenecks which have been created because of the fact that materials are not being received? Members of this house are receiving letters from persons employed in various factories in Canada in which we have been told that men in some war plants have little or no work to do because of the shortage of materials.

Mr. MacNICOL: Only in government operated plants.

Mr. DIEFENBAKER: I am not speaking about government operated plants. I am speaking now of plants engaged in the manufacture of war materials, and I have particularly in mind plants engaged in the manufacture of aeroplanes. We cannot get any direct answer from the government; we are simply told that it cannot be so. I do not believe that statements coming from men working in factories in various parts of Canada that there is no work, or they are working only part time, because of the shortage of materials, would be made unless there is some foundation therefor. I suggest this, that instead of bringing into effect while parliament is in session an order in council which controls the individual and interferes with his rights to such an extent as to render him powerless—instead of introducing legislation like that while parliament is in session, by the backdoor route of an order in council, this government should ask for and would get the cooperation of labour. Canada should be assured that the men engaged in industry and those working in war factories should have the opportunity of contributing to the very limit, by operating a twenty or twenty-four hour day.

The Minister of National Defence for Naval Services to-day said that he needed ships. But he said our factories are not operating full time. I ask the minister what is being done in order to increase the production of ships in Canada. Does the naval department believe there should be wooden ships produced as mine-sweepers, and the like?

Mr. MACDONALD (Kingston City): They are being produced.

Mr. DIEFENBAKER: In Canada? When the minister replies would he say when that production started, to what extent it is being encouraged by the government, and to what extent wooden vessels are being used?

Mr. HOWE: My hon. friend has, if he will forgive me, stepped pretty heavily into my own field of production. I think I should say a few words at this time. I am astonished that a gentleman who only to-day has been demanding conscription, and immediate conscription, objects so seriously to an arrangement which has a certain degree of compulsion as applied to longshoremen at Halifax. In war time the rights of the individual must on occasions be subordinated to the rights of the state.

Mr. DIEFENBAKER: Does the minister say that is conscription of the men in Halifax? Is that what it is?

Mr. HOWE: No. But I say my hon. friend was demanding conscription, and he objects to the orderly feature of compulsion. The position at Halifax is this—and if the Minister of Labour were here he would be the proper man to answer it. A situation arose there that was just as bad for the men themselves as it was for the other interests concerned. The arrangements that were made there were made by mutual consent. In Halifax a tremendous number of boats have to load and unload. The delay of a boat alongside a dock may be just as serious as the loss of one boat. At least the delay of boats for three or four days is as serious as the loss of one boat by submarine sinking.

A situation arose under which too much time was lost in Halifax. I think it was a year ago that by agreement with labour Mr.

Vincent Macdonald was placed in the position of being the arbitrator of all matters of stevedoring. Since that time there has been some improvement, but in recent months we have had crews turn up without key men —certain winchmen and certain labourers who must be with the crew, otherwise the crew cannot function. We have had cases where a crew would turn up, but because of that winchman they would have to be sent home; they could not function. We have had cases where winchmen would turn up, but an insufficient number of labourers would turn up for the crew to function. It was a disorganized state of affairs. Some arrangement had to be made so that we could be sure that when a shift came on it would come on complete, with the proper organization to go to work.

The Minister of Labour went to Halifax and spent some time there consulting longshoremen organizations. He met the longshoremen in mass public meetings, and the result was this order in council. The order in council is an improvement for the men. It insured to the men that when they reported for work in Halifax they would be able to work, and it insured to the ships lying alongside—

Mr. MacNICOL: After reporting for work, if for some reason work was stopped a few hours and the men had nothing to do, they would receive their pay anyway, would they not?

Mr. HOWE: Yes, under this arrangement. A number of concessions were made. The men have always wanted a hiring hall in Halifax. The fact that there were several stevedoring organizations operating there led to the continued lack of a hiring hall. The hiring hall of course helps in the organization and the dispatch of crews.

Mr. MacNICOL: The same as on the railway.

Mr. HOWE: It is not the same as on the railway, but it is the same system as has been working with great satisfaction in Vancouver for a number of years. The arrangements I am sure are much more satisfactory in labour to-day than they were before this order in council was passed.

Mr. MacINNIS: Hitler stated the same thing about what he was doing.

Mr. HOWE: Nevertheless my hon. friends opposite think nothing of conscripting men for the army. Men on the job, when they are under charter, are on pay and under discipline. I know no reason in war time why it is criminal to put key men in industry under discipline, especially if it is done by mutual consent, as this was.

Mr. HANSON (York-Sunbury): Does the minister say this was agreed to by the longshoremen?

Mr. HOWE: Yes, certainly.

Mr. HANSON (York-Sunbury): Does he now state that the policy of the government is to conscript free men for industry in this way?

Mr. HOWE: No; I am talking about a particular situation arranged by mutual consent, and an arrangement concerning which many statements have been made in this house which are wholly uncalled for. It is a policy which is not applied generally; it is applied in a particular place.

Mr. HANSON (York-Sunbury): It is just a beginning, like other steps you take. It is one feeble step at the beginning.

Mr. HOWE: Does my hon. friend object? He is quite convinced, I am sure, that it is quite fair to take certain men and say to them, "You go in the army." Does he say it is unfair to take other men and say, "You must work in industry"?

Mr. HANSON (York-Sunbury): No, I did not say that. But here is a specific case, in a particular area, where men are told they must either go to work or go to gaol.

Mr. HOWE: A man does not need to qualify as a longshoreman unless he wishes to. If he wishes to leave the profession he is free to do it. But as long as he holds a card as a longshoreman, and is paid a longshoreman's rates, and receives recognition by longshoremen, he must accept in every particular the discipline that goes with the work of a longshoreman. If that is conscription, then make the most of it. When a man signs on to work he is subject to the discipline of the job. When he signs on as a longshoreman at Halifax he is subject to the discipline of the longshoreman. There is no law enforcing him, as I see it. He does not have to sign up; if he wishes to quit, he can quit.

Mr. HANSON (York-Sunbury): "Accept it or starve."

Mr. HOWE: Starve! starve!—my hon. friend should apologize for that. Who starves in this country because he does not work on a particular job?

Mr. HANSON (York-Sunbury): I will say this, because that is a challenge—

Mr. HOWE: Quite.

Mr. HANSON (York-Sunbury): I did not wish to engender any heat. But the effect of the policy of this government with respect to a certain class of young men in this country is "get into the army or starve". I have said that in this house more than once, and it is well known to the membership. I put myself in the judgment of the members of this house if that is not a correct statement of the position as a result of the policy of this government with respect to certain of our citizenship. I approached the matter through the front door but the government approached it by the indirect route. The effect of the government's policy is that certain young men must go in the army or starve.

Mr. HOWE: My hon. friend makes the dogmatic statement that certain men must go into the army or starve. There may be one man who has starved.

Mr. HANSON (York-Sunbury): That is beside the point.

Mr. HOWE: You are talking nonsense and you know it.

Mr. HANSON (York-Sunbury): I ask the minister to withdraw that. Am I in the habit of talking nonsense? I place myself in the judgment of the minister. I appeal to him.

Mr. HOWE: Very infrequently.

Mr. HANSON (York-Sunbury): I try to keep my feet on the ground. I try to be fair to the government. I have tried to help this government on many occasions. I tried to help the Minister of National Defence the other night and I am sure he was grateful. I am not sure what is going to happen to me as a result.

Mr. HOWE: Try to help me.

Mr. HANSON (York-Sunbury): Yes, on the proper occasion, of course I will. The minister knows he does not have to appeal to me to do that. My one instinct is to do anything and everything I can to help the war effort. But I tell the minister frankly; I tell this house and I tell the people of Canada that I was shocked when I read the order in council passed in the secrecy of the council chamber and stumbled upon by me. As far as I know, no publicity was given to it in the press of this country.

Mr. MacINNIS: It has not been printed.

Mr. COLDWELL: We could not get a printed copy.

Mr. HANSON (York-Sunbury): It has been mimeographed. You can get a copy.

Mr. COLDWELL: We have a copy now.

Mr. HANSON (York-Sunbury): There may be absolute justification for it. I thought I approached the consideration of this matter with judicial fairness. That was the approach I intended to make. Does the minister say that there exists in the port of Halifax a situation which demanded that this be done?

Mr. MITCHELL: Yes.

Mr. HANSON (York-Sunbury): All right. That is the first question. Was it necessary to put into effect the underlying principle of this order in council because of the attitude of the longshoremen at Halifax?

Mr. MITCHELL: The longshoremen agreed to it.

Mr. HANSON (York-Sunbury): If they agreed to it, why was not the policy of having a round-table conference carried out? Why was not a working arrangement with the men arrived at instead of enunciating the principle contained in this order and making it a criminal act for the men who do not obey it? Why should they be made to submit themselves to the courts of this country as quasi criminals? I simply cannot accept that. It is contrary to my sense of reasoning. It is contrary to common sense. It does not add up. That is why I brought the matter before parliament.

Mr. MITCHELL: It is no different from what they do in Great Britain.

Mr. HANSON (York-Sunbury): That does not excuse us. Have they done it in the United States?

Mr. HOWE: They are not so far into the war in the United States.

Mr. HANSON (York-Sunbury): I cannot reconcile the view that the longshoremen of Halifax accepted this order and knew what they were agreeing to, as the minister suggests. I am not questioning his word, because he should know and I do not. I put my statement in the form of an interrogatory. Did the longshoremen of Halifax know what was going to be in this order in council? I cannot for a moment think they did. Were the terms of the order in council submitted to the longshoremen or to their legal adviser? I assume they had one. Did they properly understand what they were agreeing to?

Mr. MITCHELL: I addressed the owners, and I discussed with the executive board of the union the original, basic order in council. I addressed the longshoremen and we enjoyed ourselves. I have been associated with them all my life; that is, with the rank and

the officials. We discussed the order in council for three hours in a building in the city of Halifax.

Mr. HANSON (York-Sunbury): That does not answer my question. Was the concrete order in council submitted to the counsel for the longshoremen, and did he and they understand it?

Mr. CRERAR: The terms of it were discussed and agreed upon.

Mr. HANSON (York-Sunbury): What does the minister of Mines and Resources know about this?

An hon. MEMBER: What do you know?

Mr. HANSON (York-Sunbury): I am trying to get information. I shall know a lot more about it long before my friend over there does. That interjection was quite uncalled for.

Mr. CRERAR: May I say with great respect to the leader of the opposition that he asked a question. All I know, of course, is the information that was passed along.

Mr. HANSON (York-Sunbury): You have some hearsay information; that is all.

Mr. CRERAR: Not hearsay. I think I can make this comment, that I can claim to know as much about it as the leader of the opposition appears to do.

Mr. HANSON (York-Sunbury): The minister knows what his colleague reported. That is what I would anticipate, and in law that is hearsay evidence. I do not suppose I can make the minister understand what hearsay is technically, but that is what it is to a lawyer. The minister is a layman, and we are dealing with a technical question when we are dealing with the law of evidence. I put it again to the Minister of Labour: Did the longshoremen of Halifax understand the concrete terms of this order in council, and did they understand that for a violation of one of its terms they were submitting themselves to a fine or imprisonment or both?

Mr. MITCHELL: It is a fundamental principle of British law that you cannot have one law for the rich and one law for the poor dealing with—

Mr. HANSON (York-Sunbury): What has that to do with it?

Mr. MITCHELL: Let me finish—dealing with the same subject. This applies both to the shipowners and to the longshoremen. I think it may be stated fairly that in the main the difficulties have been with the shipowners, with the stevedoring companies. You cannot impose a fine on one side and not on the other. This matter was discussed frankly and freely with both sides.

Mr. MacNICOL: The basis of the order in council?

Mr. MITCHELL: The original order in council that laid down the basic principles of this order in council.

Mr. DOUGLAS (Weyburn): Was this one discussed?

Mr. MITCHELL: There was no objection from the longshoremen.

Mr. COLDWELL: Did they know about it?

Mr. MITCHELL: Let the longshoremen speak for themselves. It is fundamental that ships have to be turned round. I went there and saw how they were hiring longshoremen, picking them out like sheep. They were using the system they used fifty years ago. What we have tried to do is to institute a system similar to the one on the Pacific coast. They have hiring halls there, but instead of the hiring halls at Halifax being under the jurisdiction of the employers, they will be under the jurisdiction of the Department of Labour. This is similar to what Mr. Churchill did in connection with a similar situation in Great Britain. As he stated, the safety of the state is paramount. These ships have to be turned round, and it was necessary to reorganize the port of Halifax so that the ships could be turned round. We think this is the first step. The controller, Mr. Vincent Macdonald, has the confidence of the longshoremen, the shipowners and the stevedoring companies. Then we brought a man from Vancouver who has had a great deal of experience in this line on the Pacific coast, and we also had a technical expert, Mr. Green, who organized this system of loading ships by lighter which is being used in the port of Halifax.

Mr. COLDWELL: What is the name of the man from Vancouver?

Mr. MITCHELL: Speaking from memory, Mr. Train.

Mr. MacINNIS: From the employers federation?

Mr. MITCHELL: I would assume so. We have set up an advisory committee, representative of the union and the ship owners, to advise the controller. I think we have been as fair as we possibly can be. Naturally, when you discuss these matters with both employers and employees there is a lot of cross-questioning and some disagreement, but when the thing was finally settled the order in council was approved by the men,

by the shipping federation and by the stevedoring company. After all is said and done, it is something new in this war. We are making a determined effort to turn round the ships that come into the port of Halifax more quickly than they have ever been turned round before.

If certain aspects of the policy do not work out well, we shall have to retrace our steps. But it is something entirely new in the dominion, and I feel—and I said this when I addressed the longshoremen—that it is in their own best interests and in the best interests of industry and of the country. When the thing gets into practical application there may be objections from one side or the other, but I feel sure that this advisory committee, representing both sides, will be able to advise the government of any changes which are necessary in the set-up for the purpose of increasing the tempo of turning round the ships entering the port of Halifax. Anyone who knows Halifax and shipping knows there has been some delay in turning round the ships as quickly as possible. I do not need to tell the members of this house of the tremendous losses of shipping at sea and of the necessity of expediting the loading and unloading of ships travelling the shipping lanes to the old country and other parts of the world in the firing line in order to transport the products of industry and agriculture of the north American continent to where they are vitally needed.

Mr. HANSON (York-Sunbury): There are certain parts of the minister's statement with which I am in agreement. The movement of the ships should be speeded up; nothing should be allowed to impede them; but the minister did not answer my question whether the men knew what they were agreeing to, and whether they knew they were submitting themselves to fine and imprisonment. If the minister will do me the honour to read the remarks which I made when introducing this subject this afternoon, he will see that I approached it from the point of view of interrogation because it seemed to me to be introducing an entirely new principle. The minister himself said that it is a new system but, by the same token, he said they had it in Vancouver—

Mr. MITCHELL: No, I did not say that.

Mr. HANSON (York-Sunbury):—and it seemed to me there was a little inconsistency there. But I may have misunderstood him. I take it that this is the first time in this country that this principle of compulsion with respect to labour has been introduced into our economy?

Mr. HOWE: Not at all. It is in shipping, and always was. A man has to sign articles on joining a ship.

Mr. HANSON (York-Sunbury): That is entirely different. A man signs his articles, goes on board ship and knows that he is amenable to the discipline on board ship. But this is not analogous to that, and the minister will not say so.

Mr. HOWE: I do say so.

Mr. HANSON (York-Sunbury): Then I shall have to differ with the minister, and we do not have very much time to argue it out before six o'clock. I do say this, that when this order in council came to my attention, having read a great many orders in council I decided that this was the introduction of a new principle in our war economy. The minister justified it on more than one ground. First of all he says that it is necessary that the ships which come in and go out of that harbour should be speeded up, and I agree with that. We must do everything to expedite the dispatch of these ships.

But the question I ask the minister, and which I asked before, is this: Is it necessary to resort to this kind of policy at this time at that port, did the men who he says agreed to the underlying principle of this order in council know in fact what they were agreeing to, and were the conditions in the port of Halifax such that it was necessary to resort to a policy of this kind? If the answer to all of these questions is in the affirmative, I have nothing more to say. The minister knows the facts; I do not. But this having come to my attention entitles me, I think, to bring it to the attention of parliament with a view to eliciting the information for which I now ask.

Mr. MACDONALD (Kingston City): The hon. member for Lake Centre asked how many wooden ships were being built in Canada. There are 28 wooden ships of substantial size—I am speaking only of the larger type of ships, not about the smaller boats at all—being built in Canada for the Canadian navy, and in addition there are 24 wooden ships being built for the British navy. These are all wooden ships, minesweepers and of that general class.

My hon. friend the leader of the opposition asked about the expenditure at Saint John, and I gave him the main expenditure in respect of a fitting-out berth on the south side of the dockyard. There are some other expenditures which perhaps he would like to have. An administration building is to be

built at a cost of some $25,000, barracks at a cost of $40,000, and a recreation building at a cost of $7,000.

Mr. HANSON (York-Sunbury): In connection with training purposes?

Mr. MACDONALD (Kingston City): We have at Saint John some 169 naval personnel in addition to the divisional strength.

Mr. HANSON (York-Sunbury): And not much in the way of facilities at the present time.

Mr. MACDONALD (Kingston City): That is right. We are also building a workshop and ordnance store combined at a cost of some $45,000, and then there are some odd amounts for fencing, roads, waters, sewers, and so forth. The main item is for the fitting-out berth at the south side of the dockyard. It is a very long berth; I am not sure whether it is seven or nine hundred feet long.

Mr. HANSON (York-Sunbury): Will these works be built by public tender?

Mr. MACDONALD (Kingston City): Again I must refer my hon. friend to the Minister of Munitions and Supply, who builds the works. I think it is the desire of that department to proceed by public tender as far as possible, but there are cases where that is rather difficult when the work has to be done in a hurry.

Mr. HOWE: It is our policy to proceed by public tender if it is possible to get competitive tenders, but my hon. friend will understand that the construction industry is very busy—

Mr. HANSON (York-Sunbury): Not so busy in New Brunswick.

Mr. HOWE: If it is not busy in New Brunswick I can assure my hon. friend that it will be done by public tender. But sometimes there is only one contractor available to do the work.

Progress reported.

On motion of Mr. Crerar the house adjourned at six p.m.

Monday, May 11, 1942

The house met at three o'clock.

THE MINISTRY

RESIGNATION OF HON. P. J. A. CARDIN—TABLING OF CORRESPONDENCE

Right Hon. W. L. MACKENZIE KING (Prime Minister): I regret to inform the house of the resignation to-day of the Hon. Mr. Cardin as a minister of the crown. The circumstances of Mr. Cardin's resignation and of its acceptance by His Excellency the Governor General will appear from the following correspondence.

On Saturday afternoon, Mr. Cardin personally handed to me the following communication:

Office of the Minister of Public Works
Ottawa, May 9, 1942.

My dear Prime Minister,

As a result of the decision arrived at during the meeting of council yesterday, where I once more expressed my point of view and my reasons for not agreeing with the new policy of the government, I respectfully tender my resignation as Minister of Public Works and Minister of Transport.

I feel that there is no necessity for repeating here the arguments which, I sincerely believe, justify my action. Suffice it to say at present that, as far as Canada is concerned, since the question of the plebiscite was first discussed and since the vote has been taken, nothing has been said nor anything established to indicate that the war situation has rendered necessary, just a few days after the vote, the introduction of a measure containing the principle of compulsory military service for overseas.

The presentation at this time, of an amendment to abrogate clause 3 of the National Mobilization Act is not, in my judgment, in accordance with the attitude taken and the views expressed in the speeches and declarations made soliciting an affirmative vote on the plebiscite.

I desire to express, my dear Prime Minister, my deep appreciation of your personal consideration, goodwill and friendship.

Most sincerely yours,
P. J. Arthur Cardin

The Right Honourable W. L. Mackenzie King,
Prime Minister,
Ottawa.

To Mr. Cardin's letter I made the following reply:

Office of the Prime Minister
Ottawa, May 11, 1942.

My dear Cardin,

In your letter of the 9th instant, which you so kindly handed to me personally, you state that you are tendering your resignation on the ground that you are unable to agree with the new policy of the government. You also give certain arguments which you feel justify your action.

Had the government adopted a new policy, a policy with which you were unable to agree, I could take no exception to your tendering your resignation. Indeed, it would be the only right and proper course for you to take. There has, however, been no change of policy. No new policy has been adopted.

The decision of the cabinet to seek from parliament an amendment to the National Resources Mobilization Act, deleting clause 3 of the act, does not denote any change in government policy. The sole purpose of the proposed amendment is to obtain for the government the freedom of decision and action with respect to the method of raising men for

military service overseas which, in the recent plebiscite, the government itself requested, and which, by a very large majority, the people of Canada have said they desire the government to possess.

The statutory restriction contained in section 3 is the one remaining restriction on the government's freedom of decision and action in all aspects of Canada's war effort. The section was included in the National Resources Mobilization Act at the time the bill was before parliament because of a commitment arising out of promises and pledges from which the government and members of parliament have been released by the results of the recent plebiscite.

As you are aware, the government might have proceeded in this matter by order in council under the War Measures Act. Having regard, however, to its responsibility to parliament, the government has felt that such action as is necessary to bring existing legislation into conformity with the will of the people expressed in the vote on the plebiscite should be taken, not by order in council under the War Measures Act, but by act of parliament. In thus proceeding, the government is, before any amendment to the National Resources Mobilization Act is made, providing members of parliament with the fullest opportunity of considering the effect of every aspect of the amendment.

You will recall that, in my broadcasts, I stressed the fact that, despite the magnificence of Canada's war effort, the quite unfounded impression was being fostered in our own country and among other nations that, because of a restriction upon the powers of the government, Canada's effort was not, and could never be an all-out effort.

I gave the strongest reasons why this false impression, and the injustice being done Canada in the eyes of our own people and in the eyes of the world, should be ended as speedily as possible. In those reasons and in the fact that already it is desirable to extend the scope of service under the National Resources Mobilization Act to other parts of this continent and adjacent islands, you will find, I believe, wherein the war situation has rendered necessary the introduction, without delay, of the proposed amendment to the National Resources Mobilization Act.

In view of the grounds on which you have tendered your resignation, I cannot but feel that you have given to the decision of the government a significance it was never intended to have. I therefore feel that before taking any action on your letter, I should place before you, anew, the situation as I see it. You may feel that, in the light of what I have said, you would care to reconsider the request of your letter. I shall gladly await any further consideration you may wish to give the matter.

With kindest personal regards,

Yours very sincerely,

W. L. Mackenzie King

The Honourable P. J. A. Cardin, M.P.,
Minister of Public Works,
Ottawa.

44561—145

The letter I have just read was delivered to Mr. Cardin this morning. Shortly thereafter I received from Mr. Cardin the following reply:

Office of the Minister of Public Works
Ottawa, May 11, 1942.

My dear Prime Minister:

Your communication of this morning with reference to my resignation reached me but a short time ago, and is one more indication of your kindness to me and of your friendship, which I greatly appreciate and thank you for most sincerely.

On perusing the letter, I find, however, that it merely presents anew the arguments, interpretations and viewpoints put forward during the discussion which preceded the decision arrived at in council, on Friday last.

I regret, therefore, my inability to change the views conveyed to you in the letter which I personally handed you on Saturday afternoon.

With the expression of my warmest personal regards, I am, my dear Prime Minister,

Yours very sincerely,

P. J. Arthur Cardin

The Right Honourable W. L. Mackenzie King,
Prime Minister,
Ottawa.

On receiving Mr. Cardin's letter I sent to him the following reply:

Office of the Prime Minister,
Canada

Ottawa, May 11, 1942.

My dear Cardin:

It is with great regret that I have learned of your decision not to withdraw the tender of your resignation. In the circumstances, I have had no alternative but to inform the governor general of the correspondence which has passed between us, and to advise his excellency to accept your resignation. I have now to let you know that your resignation, as a minister of the crown, has been accepted by his excellency.

Since the passing of Lapointe and Dandurand, you have been, in years of association, my oldest colleague in the cabinet. We have been together in parliament for many years. For thirteen of these years we have shared the responsibilities of office. Over all these years, our political and personal associations have been so close and so friendly that the severance of the relationship which your retirement from the government involves, means, I can assure you, not less to myself than I know it does to you.

I thank you for the words of appreciation and personal friendship conveyed in your letter. They are most warmly reciprocated by myself. I wish to thank you in equal measure for your unfailing loyalty and constant and helpful cooperation in the work of the administration, during the years we have shared its tasks together.

May I express the hope that release from the responsibilities and anxieties of office which are so very great at this most critical of all times, may serve further to restore your health and strength from the impairment it suffered some months ago, from which, fortunately, you have steadily recovered.

With renewed expressions of my warmest personal regards and with my best wishes,

Believe me, my dear Cardin,

Yours very sincerely,

W. L. Mackenzie King

The Honourable P. J. A. Cardin, M.P.,
Minister of Public Works,
Ottawa.

Hon. R. B. HANSON (Leader of the Opposition): Before the Prime Minister takes up the next item, will he table the correspondence; and when will he announce the next resignation?

Mr. MACKENZIE KING: I regret to have to take exception to my hon. friend's last remark; I think when he reads it in *Hansard* and reflects upon it no one will regret it more than himself. I shall be pleased to table copies of the correspondence.

THE PLEBISCITE

STATEMENT OF PRIME MINISTER AS TO RESULT OF VOTE

Right Hon. W. L. MACKENZIE KING (Prime Minister): The results of the plebiscite on April 27 are now all but complete. Although final official returns are not yet available, the most reliable figures indicate that on the question asked there were over 2,926,856 persons who voted in the affirmative, and over 1,618,730 persons who voted in the negative; in other words 64 per cent of the voters answered in the affirmative and 36 per cent in the negative.

The total number of votes cast on the plebiscite is an impressive demonstration of the importance which the electors of Canada attach to giving to the government a free hand at a time of war.

The question on which the people of Canada were asked to express an opinion was:

Are you in favour of releasing the government from any obligation arising out of any past commitments restricting the methods of raising men for military service?

By their vote, the people have decisively expressed the view that the government should be released from any such obligation. In other words, there no longer remains any issue which the government or members of parliament, because of past promises or pledges are restricted from considering, discussing and deciding on its merits, in the light of what is best for Canada and for Canada's war effort.

The question in the plebiscite was of equal concern to all citizens of Canada. The result is a national expression of view on a national issue. It should be so viewed in all its aspects. In all of the provinces, and for that matter, in every constituency, affirmative and negative votes were cast. The vote was taken in a democratic fashion. It will be recognized throughout the country that, in a democracy, the will of the majority should prevail.

The vote in the plebiscite shows that the people generally recognize that the war has taken a course which was altogether unforeseen; that conditions wholly unexpected may yet arise, and that, in consequence, there should be no restriction upon the freedom of the government apart from its constitutional responsibility to parliament.

In the plebiscite, the electors were not called upon to vote for or against the government. The result, therefore, is not to be construed as a vote for any political party. In fact, the plebiscite was selected by the government precisely because it afforded the best known means of obtaining an expression of the views of the people on a specific question, regardless of political parties, or party considerations.

As, in some quarters, an effort has been made since the plebiscite to interpret the result as a mandate for conscription for overseas service, it is necessary for me to repeat that, in the plebiscite, conscription was not the issue. The government did not ask the people to say whether or not conscription for overseas service should be adopted. That was not the issue before the people. With respect to the issue of conscription, the result can only rightly be construed as leaving to the government and to parliament entire freedom to deal with that question on its merits.

MOBILIZATION ACT

AMENDMENT TO REPEAL SECTION 3 PROVIDING LIMITATION IN RESPECT OF SERVICE OVERSEAS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved for leave to introduce Bill No. 80, to amend the National Resources Mobilization Act, 1940.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, before the Prime Minister proceeds I would ask that you have the Clerk Assistant read the bill in the manner provided for under standing order 42.

(The bill was read by the Acting Clerk Assistant as follows):

An Act to amend the National Resources Mobilization Act, 1940.

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as the National Resources Mobilization Act Amendment Act, 1942.

2. Section two of the National Resources Mobilization Act, 1940, chapter thirteen of the statutes of 1940, is amended by striking out in the first line thereof the words "Subject to the provisions of section three hereof."

3. Section three of the said act is repealed and sections four, five and six are renumbered three, four and five respectively.

Mr. MACKENZIE KING: Mr. Speaker, the purpose of the amendment is to give to the government, by the deletion of section 3 of the National Resources Mobilization Act, the same freedom of decision and action with respect to the method of raising men for military services overseas which, in the recent plebiscite the government requested, and which the people of Canada have said they desire the government to possess.

Section 3 contains the one remaining restriction on the government's freedom of decision and action in all aspects of Canada's war effort.

This section was included in the National Resources Mobilization Act, at the time the bill was passed, because of a commitment arising out of promises and pledges from which the government and members of parliament have now been released.

In presenting the issue of the plebiscite to parliament and to the people, I repeatedly stressed the importance of removing any restriction, or even the appearance of any restriction, on the powers of the government to effect a total effort for total war. I pointed out that Canada's war effort was being placed in a false light because of the existence of what appears to be a restriction upon an all-out effort. If the amendment is adopted, Canada's war effort will appear thereafter in its true light; an effort in no way hampered by any moral or legal restrictions. By their vote in the plebiscite, the people have expressed their readiness to have the sole remaining restriction upon the government's freedom and decision of action removed.

The removal of section 3 of the National Resources Mobilization Act is, in other words, the logical consequence of the vote on the plebiscite. Since the people have indicated that they do not desire any restriction on the freedom of action of the government, there is the strongest of reasons why parliament should be asked to remove any shadow of restriction which remains.

In the plebiscite, the people were asked to give full powers to the government, not to meet a then immediate situation, but to provide against a future emergency. The National Resources Mobilization Act is only enabling legislation. The extent of the use of such power as is conferred upon the government by its provisions is and has, from the outset, been a matter of government policy, to be decided in the light of all relevant circumstances. This will remain true of the unrestricted powers which the amendment, if enacted, would afford.

The government might have proceeded in this matter by order in council under the War Measures Act. Having regard, however, to its responsibility to parliament, the government has felt that such action as is necessary to bring existing legislation into conformity with the will of the people expressed in the vote on the plebiscite should be taken, not by order in council under the War Measures Act, but by act of parliament. In thus proceeding, the government is providing members of parliament, before any amendment to the National Resources Mobilization Act is made, with the fullest opportunity of considering the effect of every aspect of the amendment.

Mr. HOMUTH: Then the government takes full responsibility?

Some hon. MEMBERS: Order.

Mr. SPEAKER: Is it the pleasure of the house to adopt the motion?

Some hon. MEMBERS: Carried.

Mr. POULIOT: On division.

Mr. LACOMBE: On division.

Motion agreed to on division and bill read the first time.

PRIVATE BILLS

FIRST READINGS—SENATE BILLS

Bill No. 69, to change the name of the Saskatchewan Life Insurance Company to Fidelity Life Assurance Company.—Mr. McNiven (Regina City).

Bill No. 70, for the relief of William Milroy Davidson.—Mr. Bercovitch.

Bill No. 71, for the relief of Audrey Meredith Mann Harrison.—Mr. Bercovitch.

Bill No. 72, for the relief of François Henri Drack.—Mr. Bercovitch.

Bill No. 73, for the relief of Gladys Irene Dale Weston.—Mr. Hazen.

Bill No. 74, for the relief of Ruth Ufland Fishman.—Mr. McIlraith.

Bill No. 75, for the relief of Norma Brown Stevenson.—Mr. Claxton.

Bill No. 76, for the relief of Mary Cummings Bullock.—Mr. Whitman.

Bill No. 77, for the relief of Elizabeth Gertrude De Serre Gould.—Mr. Bercovitch.

Bill No. 78, for the relief of John Clifford Stanley Darbyson.—Mr. Bercovitch.

Bill No. 79, for the relief of Celia Reynolds Schellenberg.—Mr. McIlraith.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

WHEAT ACREAGE REDUCTION BONUS

Mr. HANSELL:

1. On what dates were the amounts paid to the seven persons or companies who received cheques amounting to $5,000 or over for wheat acreage reduction bonus?
2. How many applications were made for wheat acreage reduction bonus?
3. How many applications were paid up to March 31?
4. How many remained at that date, to be paid in each of the provinces?

Mr. GARDINER:

1. Marie Wilson, final payment, October 4, 1941. Canada Permanent Mortgage Company, interim payment, December 29, 1941; final payment, February 27, 1942. G. H. Wesley, interim payment, November 15, 1941. Noble Farms Limited, interim payment, December 29, 1941; final payment, April 14, 1942. J. T. Heninger, interim payment, November 18, 1941; final payment, February 17, 1942. N. Neufeld, interim payment, November 15, 1941; final payment, March 8, 1942. W. Kynock, final payment, October 25, 1941.

2. 186,893 claims.

3. 151,763 fully paid claims, 29,330 partly paid claims.

4. Alberta—8,008 claims; Saskatchewan—16,911 claims; Manitoba—4,411 claims.

DR. RICHARD REDLER

Mr. NICHOLSON:

1. Is Dr. Richard Redler, formerly commissioner of police in Austria, employed by the dominion government?
2. If so, in what capacity?
3. What allowances are paid to him for (a) salary, (b) expenses?

MR. THORSON:

1. Yes.

2. Examiner, Postal Censorship, Post Office Department.

3. (a) $1,560 per annum plus cost of living bonus. (b) None.

[Mr. Lacombe.]

FOOD PRODUCTION—CREDITS TO FARMERS

Mr. MARSHALL:

1. Have any arrangements been made by the dominion government for farmers to obtain, quickly and adequately, credits from banks and other financial institutions, at a low rate of interest so that they can play their part in the essential task of food production in this country?
2. If so, what general arrangements have been made?
3. If not, why not?

Mr. ILSLEY: No special arrangements have been made and no information is available to indicate that credit-worthy farmers cannot obtain adequate credits at reasonable interest rates in order to enable them to play their part in the essential task of food production in this country. The chartered banks are believed to be fully cognizant of the important part agriculture is playing in Canada's war effort and to be granting short-term loans to farmers regularly in the usual course of their business. Long-term and mortgage credit is available through the facilities of the Canadian farm loan board.

GERMAN REPARATIONS—FIRST WORLD WAR

Mr. HANSELL:

1. Were moneys paid to Canada as a result of reparations imposed upon Germany after world war No. 1 put to the account of consolidated revenue fund?
2. If so, how much was paid into this fund from that source?
3. How much of this money, if any, was paid to Canadian prisoners of war in Germany?

Mr. McLARTY:

1. Yes.
2. $26,672,246.06.
3. Total amount of money paid to military prisoners of war for claims allowed, $273,952.47.

EXPORTS TO SWITZERLAND

Mr. MARSHALL:

1. Have any goods been exported to Switzerland since the outbreak of the present war?
2. If so, what is the nature and value of such goods exported for each year commencing with 1939?

Mr. MacKINNON (Edmonton West): In keeping with our established policy, during the war, it is not possible to give the details of exports by countries. (Ninety-five per cent of the exports to Switzerland have been Red Cross supplies, particularly for prisoners of war in enemy territory).

EXPORTS OF LOGS

Mr. REID:

1. Are exportations of fir, cedar, balsam, hemlock and spruce logs still permitted?

2. If so, what have been the respective exportations of these during 1941 and up to the end of April, 1942, and to what countries?

Mr. MacKINNON (Edmonton West):

1. Fir logs—exports at present being curtailed.

Cedar logs—no restriction on exports.

Balsam logs and hemlock logs—under export control but export permits being granted freely from crown grant lands. British Columbia provincial laws prohibit export of all logs from provincial leased and licensed timber except under special dispensation.

Sitka spruce logs—exports not permitted from British Columbia.

Other spruce logs—under export control but export permits being granted freely from crown grant lands. British Columbia provincial laws prohibit export of logs from provincial leased and licensed timber except under special dispensation. Export of spruce pulpwood logs from Alberta east is permitted to those United States mills which have been regular purchasers of pulpwood from Canada. Such United States firms are permitted to purchase up to the amounts of their average annual purchases for the past seven years providing that sufficient quantity is produced to allow for this as well as for the normal requirements of Canadian manufacturers.

2. In keeping with our established policy, during the war, it is not possible to give the details of exports by countries.

The total exports of logs as specified, during the calendar year 1941, and period January 1 to March 31, 1942, were as follows:

	Calendar year 1941	Jan. 1 to March 31, 1942
	M ft.	M ft.
Logs, cedar	23,274	5,160
Logs, Douglas fir	86,195	622
Logs, hemlock	148,801	30,165
Logs, spruce	10,537	124
Logs, balsam	not classified	

1942 VICTORY LOAN

Mr. CASTLEDEN:

1. What is the total amount subscribed in the 1942 victory loan?

2. What were the expenses in connection with the floating of the loan, including advertising, commissions and other expenses?

Mr. ILSLEY:

1. Cash subscriptions, $845,360,300; conversions subscriptions, $152,143,000; total, $997,503,300.

2. Estimated expenditure actually incurred and paid to April 30, 1942, $4,907,965.28. Certain other expenditures have been incurred but have not been paid to date. Complete figures will not be available for some time.

RELEASES FROM INTERNMENT

Mr. CASTLEDEN:

How many persons have been released from internment camps in Canada during each month since April 1, 1941?

Mr. McLARTY: The number of persons released from internment camps, Canada, during each month since April 1, 1941, is as follows:

April, 1941	34
May	12
June	26
July	37
August	37
September	20
October	29
November	15
December	37
January, 1942	32
February	12
March	63
April	9
Total	363

ENLISTMENT OF INDIANS IN SASKATCHEWAN

Mr. PERLEY:

How many Indians have enlisted in his majesty's forces from each reserve in the province of Saskatchewan?

Mr. CRERAR:

(Reserves grouped by Indian Agencies.)

Duck Lake Agency		
One Arrow's reserve	4	
James Smith's reserve	5	
Beardy's reserve	16	
John Smith's reserve	8	
Moose Woods reserve	1	
	—	34
Battleford Agency		
Little Pine reserve	4	
Poundmaker reserve	2	
Meadow Lake reserve	4	
Mosquito reserve	5	
Red Pheasant reserve	4	
Sweetgrass reserve	2	
Thunderchild reserve	7	
	—	28
Carlton Agency		
Sturgeon Lake reserve	2	
Little Red River reserve	5	
Wahpaton reserve	1	
Mistawasis reserve	19	
Muskeg Lake reserve	21	
Atakakup (Sandy Lake) reserve	8	
	—	56
Crooked Lake Agency		
White Bear reserve	6	
Kahkewistahaw reserve	6	
Cowesses reserve	16	
Ochapowace reserve	5	
	—	33

File Hills Agency		
Peepeekesis reserve	25	
Okanese reserve	10	
Starblanket reserve	2	
Little Black Bear reserve	1	
	—	38
Pelly Agency		
Keeseekoose reserve	5	
Key reserve	6	
Valley River reserve	1	
Cote reserve	24	
	—	36
Onion Lake Agency		
Onion Lake reserve	2	
	—	2
Touchwood Agency		
Gordon reserve	12	
Poorman reserve	5	
Day Star reserve	1	
Fishing Lake reserve	3	
Nut Lake reserve	1	
	—	22
Qu'Appelle Agency		
Muscowpetung reserve	4	
Piapot reserve	6	
Pasqua reserve	3	
Carry-the-Kettle reserve	6	
Standing Buffalo reserve	3	
	—	22
Total		271

The above information has been obtained from Indian agents and is as complete and up-to-date as can be reported by the Department of Mines and Resources. Some Indians live off reserves or are located some distance from the agencies and for these reasons the agents may not become aware of Indian enlistments for some time after they take place.

ROBERT SIMPSON COMPANY—EMPLOYEES IN GOVERNMENT SERVICE

Mr. MacINNIS:

1. How many persons, whose last employment or position was with the Robert Simpson Company, Limited, of Toronto, have been appointed to government boards or have been or are employed by boards or departments under the jurisdiction of the dominion government?

2. How many such persons are at present in the employ of the government, and, (a) what are their names, (b) what is the salary and/or other remuneration paid to each?

Mr. McLARTY: I have discussed this question with the hon. member for Vancouver East, and I understand that he is willing to have the question dropped in order that it may be reworded. In its present form to produce the information asked for would entail a tremendous volume of work.

Mr. MacINNIS: I understand that the question is rather difficult to answer in its present form, and I am willing that it be dropped for redrafting.

Question dropped.

*SOLDIERS' DEPENDENTS HOSPITALIZATION

Mr. MARSHALL:

1. Is there a separate board apart from the present dependents' allowance board, which deals exclusively with the hospitalization of dependents of men in the fighting forces?

2. If so, when was the said board set up?

3. What are the names of the personnel, their general qualifications and their salaries?

4. How many applications, by provinces, have been received by this board for consideration since the outbreak of war and what disposition was made of each?

Mr. RALSTON: I should like to answer this question verbally. There is no board which deals exclusively with the hospitalization of dependents of men in the fighting forces. There is a board which includes a portion of that work under its special authority, that is, the dependents' board of trustees which was referred to by me on page 1932 of *Hansard*. This board was appointed by order in council P.C. 18 of January 2, 1942, and one of its powers is to pay supplementary grants or give special assistance to relieve misfortune and meet domestic emergencies, including serious illness of a member of the family.

NEWSBOYS AS AGENTS FOR SALE OF WAR SAVINGS STAMPS

Mr. AYLESWORTH:

1. Has the attention of the Minister of Finance been directed to the practice in the United States of having newsboys act as agents for the sale of defence stamps?

2. If so, has any consideration been given to the institution of a similar practice in Canada?

3. What decision has been reached?

Mr. ILSLEY:

1. Yes.

2. Yes.

3. This matter is receiving consideration.

CHARLOTTETOWN-MAGDALEN ISLANDS AIR SERVICE

Mr. ROY:

1. How many trips has the Maritime Central Airways made between Charlottetown and the Magdalen islands during the winter of 1941-42?

2. What is the distance covered on the round trip between Charlottetown and the Magdalen islands?

3. What was the total weight of mails carried by the above named company to the Magdalen islands during the past season?

Mr. MULOCK:

1. Nineteen round trips were flown with mails between Charlottetown and the Magdalen islands during the winter of 1941-42.

2. 212 miles.

3. 21,802 pounds.

ORDERS IN COUNCIL

Mr. JEAN:

1. How many orders in council have been adopted since September 1, 1939?

2. What is, in alphabetical order, the subject matter of such orders in council?

3. When orders in council affect provincial laws, are they submitted, before adoption, to an advisory committee versed in the laws of each respective province in order to coordinate them with existing provincial legislation?

4. If so, who are the members of such committee?

Mr. MACKENZIE KING: Dropped.

PLEBISCITE—SOLDIERS' VOTE

Mr. BRUCE:

Would the government give a breakdown of the soldiers' vote by separate provinces?

Mr. McLARTY: In view of the procedure laid down in the Canadian service voter plebiscite regulations, it is not possible at this stage to classify by provinces the votes counted under such regulations.

SIROIS COMMISSION—STATISTICS OF DOMINION AND PROVINCIAL FINANCE

Mr. CARDIFF:

1. Is it the responsibility of any governmental agency to keep up to date the statistical computations of dominion and provincial public finance compiled by the Sirois commission?

2. If so, what agency?

Mr. MacKINNON (Edmonton West): The continuation of the compilations on public finance made for the report of the Rowell-Sirois commission is being carried on in the finance statistics branch of the dominion bureau of statistics.

BRITISH COAL SHORTAGE—DRAFT OF NOVA SCOTIA AND ONTARIO MINERS

Mr. BRUCE:

Is a battalion or draft of miners from the coal fields of Nova Scotia, as well as from the mines in northern Ontario, being formed and despatched overseas to assist in the coal fields of Britain?

Mr. MITCHELL: No information.

TRANSPORT OF FEED FROM HEAD OF LAKES TO EAST

Mr. HAZEN:

1. What has it cost the government to date to transport feed grains and other feed from the head of the lakes to eastern Canada?

2. What companies and persons have been paid for doing this work, and how much has each received?

Mr. GARDINER:

1. The amount of money paid as freight assistance on the movement of grain originating in western Canada, and upon feeds produced from such grains, is as follows:

Up to and including May 8, 1942—$3,781,264.70.

2. The grain and feeds have been transported through the regular channels of trade, wholesale, retail, cooperative organizations and individuals, and it is not considered practicable to furnish details regarding all companies, organizations and individuals involved in the movement of feed grains for which assistance has been given. The administrative work in this connection has been under the direction of the Department of Agriculture and the staff involved is paid in the regular way through the treasury office.

QUESTIONS PASSED AS ORDERS FOR RETURNS

WARTIME PRICES AND TRADE BOARD—LAWYERS

Mr. DESMOND:

1. How many lawyers have been appointed to positions under the wartime prices and trade board since October 1, 1941?

2. What is the name of each such appointee?

3. Where did each such appointee engage in practice prior to his appointment?

4. What length of experience at the bar had each such appointee?

5. What salary and/or allowance is paid to each such appointee?

6. What are the duties in which each such appointee is engaged?

7. By what authority was each such person appointed?

8. In how many cases was it certified pursuant to order in council P.C. 4759 that the appointment of a particular person was in the public interest?

9. Are any of these persons carrying on a private practice in addition to their duties with the wartime prices and trade board?

10. If so, what are the names of such persons?

SIR EDWARD PEACOCK

Mr. POULIOT:

1. Did Sir Edward Peacock come to Canada on or about June 25, 1941?

2. If so, did the hon. Minister of Finance meet him?

3. If not, was he met by other members of the cabinet?

4. If so, by whom and in what capacity?

5. On that date, was there an acting Minister of Finance?

6. If so, who was he, and for how long did he so act?

TERMINAL GRAIN ELEVATORS

Mr. ROSS (Souris):

1. How many terminal grain elevators are there in Canada?

2. Where are they located and by whom are they owned? What are their respective storage capacities?

3. By whom are they operated?

Mr. MacKINNON (Edmonton West): Return tabled.

MILITARY TRAINING—FARMERS AND AGRICULTURAL EMPLOYEES

Mr. LACOMBE:

1. During the present seeding season does the government propose to take the necessary steps to stop the calling up of farmers, farmers' sons and agricultural employees for obligatory military training?

2. Has the government given, or does it intend to give to divisional registrars the necessary instructions to that end?

3. If so, what arrangements has the government made for this purpose and what instructions will it give, or has it given to the registrars?

4. Has the government advised, or will it advise regimental commanding officers who find farmers are imperatively required in their districts, to bring before the appropriate commissions immediately all requests for delay submitted by the farmers referred to?

5. If so, what are the views or instructions that the government has given, or proposes to give, to regimental commanding officers?

MANUFACTURE AND USES OF ALCOHOL

Mr. BLACK (Cumberland):

1. How much cane or beet sugar, crude or refined, was used in Canada in each of the calendar years 1939, 1940 and 1941, in the manufacture of alcohol?

2. How much cane or beet sugar molasses, crude or refined, was used in the same years for this purpose?

3. What was the total quantity of alcohol manufactured from sugar and molasses in Canada in the above years?

4. What was the quantity of such alcohol used in each of the above years in Canada in the manufacturing of war materials?

5. What was the quantity of alcohol used in each of the above years for the manufacture of, (a) wines, (b) beers, (c) liquors?

6. What was the quantity of such alcohol used for other commercial purposes?

7. What was the total quantity of alcohol used in Canada for all purposes in each of the calendar years 1939, 1940 and 1941?

[Mr. Pouliot.]

MILITARY SERVICE—RECRUITING IN ONTARIO AND QUEBEC

Mr. BRUCE:

1. What is the population of the eastern part of the province of Ontario, which is included in military district No. 4, Montreal?

2. In computing returns of recruiting in the province of Quebec, are the recruits from this part of Ontario included?

3. How many recruits have been secured from the provinces of Ontario and Quebec respectively, for, (a) active service anywhere; (b) service in Canada only?

JAPANESE IN CANADA

Mr. HANSELL:

1. How many Japanese immigrants entered Canada during each year from 1930 to 1941, inclusive?

2. What was the Japanese population in Canada as at the census of 1931 and the census of 1941?

3. How many Japanese became naturalized during the years from 1930 to 1941, inclusive?

CANADIAN FORCES—FINANCIAL SUPERINTENDENTS

Mr. MARSHALL:

1. What are the names, ages, addresses and qualifications of the financial superintendents who have been appointed in each branch of the three fighting services?

2. Are these persons members of his majesty's forces, or civilians?

HEALTH INSURANCE COMMITTEE

Mr. DESMOND:

1. Has a committee been established to study the question of health insurance and to formulate a health insurance plan?

2. If so, who are the members of such committee?

3. What are the terms of reference to such committee?

Mr. MACKENZIE (Vancouver Centre): Return tabled.

MOTIONS FOR PAPERS

ST. JEROME, QUE., MILITARY CAMP

Mr. BERTRAND (Terrebonne):

For a copy of all letters, telegrams, agreements and other documents exchanged between the government, the federal departments and any person or persons, with respect to the construction of the military training camp at St. Jerome, Quebec. Also a copy of all invoices and paysheets in connection with this construction.

Mr. RALSTON: I understand that with the consent of the hon. member this motion is to be dropped.

Motion dropped.

BRITISH WHEAT PURCHASES, 1939-42

Mr. FAIR:

For a return showing the price paid by the British cereals import board or any department of the British government for wheat purchased from the Canadian wheat board during the crop years 1939-40, 1940-41 and 1941-42 to date.

Mr. MacKINNON (Edmonton West): Mr. Speaker, on several occasions in this house and elsewhere I have been asked this question and I have explained that we would be glad to give this information if we were allowed to do so. We have sold wheat to the British ministry of food on various occasions and one of the terms and conditions of those sales has been that the price be not revealed. I am sorry that it is impossible for me to give further information in connection with this request and I would suggest that the motion be dropped.

Mr. COLDWELL: Can the minister tell us why the British cereals board does not wish this information to be given to the people who owned this wheat in Canada?

Mr. MacKINNON (Edmonton West): If I told that I might just as well give the whole answer; that is tied up with the request that the information be not made public.

Mr. FAIR: As the mover of the motion I want to lodge a complaint against this information being withheld from the farmers who produced the wheat. Like the Minister of Trade and Commerce I have been asked for this information on several occasions and have had to say I am informed that to give it would not be in the public interest. If this information were of any benefit to Hitler or the Japanese I would certainly not ask for it, but I cannot see any reason in the world why it should be withheld. We are told what we are getting for our beef and our pork and all that kind of thing, but information on wheat is withheld. I do not believe it is democratic to have this information withheld.

Mr. PERLEY: I wonder if the minister will permit one question dealing with this matter? In the report of the 1940-41 crop there is a statement on page 2 with respect to sales made in the month of May, totalling 120 million bushels odd. Then in the monthly statement issued later you give the price at which wheat was offered, showing each month of the year, and for that month the price was over 90 cents. In one report the sales made are given, and then in the monthly statement the prices paid; why then can this information not be made available?

Mr. MacKINNON (Edmonton West): I cannot help it if the hon. member for Qu'Appelle (Mr. Perley) wishes to draw conclusions from information published by the department in connection with the handling of the wheat crop. I cannot add anything to what I have already said. We have been asked by the British government not to reveal this price, and unless the house wishes me to go back to the British government and ask them to reconsider their stand, I think the question will have to be dropped.

Mr. PERLEY: The price quoted in the monthly statement is correct, is it not?

Mr. CRERAR: It does not refer to the same thing at all.

Mr. HANSON (York-Sunbury): May I request the minister to go back to the British government and ask them if they will release the prices paid to Canada for the wheat during the years covered? If they definitely refuse to do that, I do not think we can pursue the matter any further. That has never been done so far as I know.

Mr. MacKINNON (Edmonton West): I have stated definitely in this house that I personally requested the British government to consider giving this information. I told them that this house and particularly the wheat producers of western Canada were anxious to get the figures and asked if they would not reconsider their decision and allow me to give the information. They came back with the request that the information be kept secret in accordance with the terms for the purchase of wheat by that government.

Motion dropped.

AIRCRAFT AND ALLIED INDUSTRIES—MORALE BUILDING CAMPAIGN

Mr. DIEFENBAKER:

For a copy of all letters, memoranda, or other documents addressed by the director-general of aircraft production, or any official of the aircraft production branch, and directed to any official of an aircraft industry or company engaged in whole or in part in the production of aircraft or parts thereof, with reference to the appointment of E. G. Hirst of Toronto to undertake a morale building campaign in the aircraft and allied industries; and in particular with reference to the manner in which his out-of-pocket expenses for travelling, organizing and office assistance are to be paid.

Mr. MICHAUD: Because of the unavoidable absence of the Minister of Munitions and Supply (Mr. Howe) I would ask that this motion stand until his return.

Mr. HANSON (York-Sunbury): That cannot be the real reason. This is not an unimportant matter and the questions asked are quite clear. The other day when the minister

was here he asked to have it stand. It may take some time to bring down the information but I should like to see this motion passed and then we can get the return later. Unless there is some real reason why it cannot be passed to-day, I ask that the motion be put.

Mr. MICHAUD: There is no special reason for asking for delay, but the minister of munitions is not here and I do not know whether there is anything objectionable in the motion. However, if the house wishes to pass the motion, it must be with the reservation that anything of a confidential nature will not be brought down.

Mr. SPEAKER: Carried, with the reservation made by the minister.

CONSCRIPTIVE POWERS OF GOVERNOR IN COUNCIL UNDER WAR MEASURES ACT

Mr. CARDIFF:

For a copy of all opinions rendered by the Department of Justice with reference to the power of the governor in council under the War Measures Act to conscript men for service in any theatre of war.

Mr. ST. LAURENT: I have been advised by the departments of government concerned to say that they do not object to the production of the opinions mentioned in this motion, but it will be done without prejudice to the general rule which is stated in Bourinot, at page 250, as follows:

As a rule the opinions of the law officers of the crown are held to be "private communications" when given for the guidance of ministers, and may be properly refused by the government.

Mr. HANSON (York-Sunbury): The question is largely academic now.

Mr. ST. LAURENT: With that reservation, for the convenience of hon. members I table the return at once.

MUNITIONS AND SUPPLY—POOL CONSTRUCTION COMPANY CONTRACTS

Mr. CASTLEDEN:

For a return showing—1. What contracts have been let by the Department of Munitions and Supply to the Pool Construction Company, Limited, Regina, Saskatchewan, since September, 1939, and the dates of such contracts.

2. In which cases there was a call for public tenders.

3. The amount of tender in each case.

4. The total amount paid by the government to this company.

WARTIME HOUSING LIMITED, HULL, QUE.

Mr. NICHOLSON:

For a return showing the plans, specifications and contracts in connection with the building of houses in Hull, Quebec, by Wartime Housing Limited.

[Mr. R. B. Hanson.]

COMMITTEE ON RECONSTRUCTION

Mr. CARDIFF:

For a copy of the basic memorandum which constitutes the agenda of the committee on reconstruction referred to by the Minister of Pensions and National Health, at page 26 of the evidence of the select committee of the house on reconstruction and reestablishment.

Mr. HANSON (York-Sunbury): Has this memorandum been delivered to members of the committee? I think it has been, and I think it should be distributed to all hon. members.

Mr. MACKENZIE (Vancouver Centre): I am informed by the chairman that that has been done, and the return will be tabled to-morrow.

THE MINISTRY

REPRESENTATION OF THE PROVINCE OF QUEBEC—PORTFOLIO OF PUBLIC WORKS AND TRANSPORT

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains): Mr. Speaker, may I direct a question to the Prime Minister? Is the government still considering the opportunity to give proper representation in the cabinet to the province of Quebec? I should like to direct a second question to the Prime Minister: Are any changes contemplated in the cabinet to replace Hon. Mr. Cardin?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may say to the hon. member that the leader of the opposition (Mr. Hanson) has already been taken to task for a similar question, and I think he will find that the public will take him to task for asking that particular question at this time.

RELATIONS WITH RUSSIA

INQUIRY AS TO EXCHANGE OF DIPLOMATIC REPRESENTATIVES

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, may I ask the Prime Minister whether he can tell us when it is anticipated that the projected exchange of diplomatic representatives between Canada and the U.S.S.R. will be effected? The Prime Minister announced some weeks ago that such an exchange would take place.

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend will appreciate that there are many matters to be considered in connection with the selection of a minister for a position of the kind, and that correspondence between the governments takes considerable time. I can only

say that the matter has been receiving consideration and we hope to be able to announce an appointment as soon as possible.

SYNTHETIC RUBBER

PRODUCTION FROM GRAIN ALCOHOL PRODUCED FROM SURPLUS WHEAT AND CORN

On the orders of the day:

Mr. A. G. SLAGHT (Parry Sound): Mr. Speaker, I should like to direct a question to the Minister of Agriculture in which the Minister of Munitions and Supply will also be interested, arising out of a dispatch carried in the New York *Times* of Saturday in which the following statements occur:

Secretary of Agriculture Wickard, appearing before a Senate agriculture subcommittee, urged a partial extension in the government programme of making synthetic rubber from grain alcohol produced from surplus wheat and corn. He stated that 80 million bushels of grain would make about 200 million gallons of alcohol—

Mr. SPEAKER: Order. This is a question that should properly be placed on the order paper.

PRIVILEGE—MR. KINLEY

SALVAGE—OPERATIONS OF LUNENBURG COUNTY FISHERMEN—LARD

On the orders of the day:

Mr. J. J. KINLEY: (Queens-Lunenburg): Mr. Speaker, the Ottawa *Citizen* of this morning contains an article headed "Salvage On The Sea Front," with a quotation from the Halifax *Herald*. Reference is made in the article to a letter written by my friend and constituent, the Hon. Gordon Romkey, Speaker of the Nova Scotia House of Assembly. Mr. Romkey cites the fact that fishermen off the coast of Nova Scotia have brought into port a considerable quantity of lard salvaged from the sea.

Mr. SPEAKER: Is the hon. member speaking on a question of privilege?

Mr. KINLEY: Yes, Mr. Speaker. Mr. Romkey's letter has been given prominence both in the local press and throughout Canada.

Mr. THORSON: I might ask the hon. member a question.

Some hon. MEMBERS: Order.

Mr. KINLEY: I am speaking on a question of privilege. This matter was brought before the house last Friday.

Some hon. MEMBERS: Order.

Mr. KINLEY: It relates to something which occurred in my constituency. This morning I had a telegram from Mr. Romkey which is as follows:—

Mr. SPEAKER: Will the hon. member state his question of privilege?

Mr. KINLEY: The question of privilege is this. I made a statement in the house last Friday that I was advised that the matter would come under the receiver of wrecks. May I explain that I have a telegram from Mr. Romkey to-day saying:

Receiver of wreck could not handle it. Holding since April twenty second with no buyers Stanbury provincial organizer had offer from Lever Bros St. Stephen Saturday. Packing to-day in four hundred pound casks for shipment.

An hon. MEMBER: That is not a question of privilege.

Mr. KINLEY: Mr. Speaker, I am told that lard is used as an insulator for certain perishable products going overseas.

Mr. HOMUTH: It is used for grease, too.

Mr. SPEAKER: What the hon. member has just stated is not a question of privilege.

Hon. J. T. THORSON (Minister of National War Services): If I may go back to the question of this lard: on Friday the hon. member for Cape Breton South (Mr. Gillis) asked me concerning the disposal of ten thousand pounds of lard salvaged from the sea by Lunenburg fishermen, and I told him that I would make inquiry with regard to the matter. The information which I have is that, through Mr. H. N. M. Stanbury, provincial salvage organizer for Nova Scotia, inquiry was made with the result that Lever Brothers, Limited, St. Stephen, New Brunswick, made an offer for the lard which was accepted as satisfactory by those responsible for salvaging it from the sea.

It may be of interest to members of the house to know that three weeks ago, 90,000 pounds of lard were salvaged from the sea, in the eastern passage, and satisfactory arrangements were made for its disposal.

It would appear that in the case of the 10,000 pounds of lard salvaged by Lunenburg fishermen, all possible avenues of disposal were not explored before publicity was given to the matter.

LABOUR CONDITIONS

UNITED FISHERMEN'S UNION—PROPOSED JOINT PRODUCTION BOARD

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): Some little time ago the United Fishermen's Union of Vancouver wrote to the Department

of Fisheries with regard to the setting up of a joint production board. I am in receipt of a telegram with regard to this matter, and I should like to know from the minister whether the department has given the subject any consideration. I am sorry I did not get this wire in time to hand it to him.

Hon. J. E. MICHAUD (Minister of Fisheries): In reply to the hon. member I may say that the department has given and still is giving consideration to this matter.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, May 8, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

NAVAL SERVICES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I should like to table two documents containing information asked for on Friday last in this committee: first, a statement showing the rates of pay and allowances for officers and men in the Royal Canadian Naval Service; second, a statement showing the syllabus of training followed in the training of officers on the east and west coasts.

Mr. HANSON (York-Sunbury): Has the minister been able to get any information with respect to the case of the *Claire Lilley*?

Mr. MACDONALD (Kingston City): The *Claire Lilley* is a merchant ship, not a ship of war. She ran aground at the entrance of Halifax harbour some weeks ago. The whole matter is being investigated, as my hon. friend pointed out, by a commission of which Mr. Justice Archibald is the chairman. As I have said, she is not a naval vessel, and we have nothing to do with her except that, after she ran ashore, the naval craft in the harbour and naval officers and men put out a rescue boat and did actually rescue some of the crew with the assistance of the coast guard.

Mr. HANSON (York-Sunbury): The minister has had, I suppose, the report of the commission?

Mr. MACDONALD (Kingston City): No. I do not think it is completed.

Mr. HANSON (York-Sunbury): Perhaps this question is premature, but I wished to ascertain whether there was a lack of cooperation between the naval authorities and the harbour commission authority. I believe that was involved in the inquiry.

[Mr. MacInnis.]

Mr. MACDONALD (Kingston City): I think the hon. gentleman had better wait until the report comes in.

Mr. STIRLING: When the committee was examining the details of the estimates of the minister's department there was a question I wanted to ask with regard to armaments. To what extent are the armaments, including the munitions, used in the Royal Canadian Navy, of Canadian production? Do we supply all our armament requirements ourselves, or do we still have to go outside for some?

Mr. MACDONALD (Kingston City): Speaking of munitions?

Mr. STIRLING: No—armaments in the wide sense of the term; all the weapons as well as the munitions.

Mr. MACDONALD (Kingston City): I should say, roughly, that the greater part of the armament is manufactured or produced in this country. Some of it is not, the reason being that the demand is hardly great enough to warrant the setting up of a special plant. I can tell my hon. friend at a later date what some of these things are.

Mr. POULIOT: I have in my hand a telephone directory of the Department of National Defence, Naval Service and Army. There are about forty-four pages of names, the total number being between twelve and thirteen hundred. Of course this directory must be in the hands of everyone who has a telephone in both departments, and therefore it must be easily available to those who are inside. I have two questions to ask of the minister. First, of that total number of approximately twelve or thirteen hundred, how many are bilingual? Second, out of that total number how many officials, both civil and military, of both departments have been living in this country for the last five years? I should like the minister to tell us also the total number of people who have a telephone to-day.

Mr. MACDONALD (Kingston City): This book I understand contains the names of army and air force personnel as well as naval personnel. The number of navy personnel will be considerably smaller than the number in either of the other two services.

As to how many are bilingual and how many have lived here at least five years, these are questions that I shall have to spend a little time upon before attempting to answer. I shall get the answers for my hon. friend.

Mr. BLACK (Cumberland): Would the minister explain the nature of the naval developments which I understand have been taking place on Grand lake, Nova Scotia, and

why a fresh water lake, the largest in Nova Scotia it is true, is being used? Also can the minister give any further particulars as to the naval college which was definitely announced on Thursday or Friday as being established in British Columbia? Why was this college removed from Nova Scotia, and what naval instruction is it proposed to carry on in Nova Scotia? It is with some regret that the people of Nova Scotia see the naval college which was located for a considerable time in that province being removed. It is one of the unfortunate developments that a great deal of the war activities operating in Nova Scotia are only temporary and will cease at the termination of the war. Very little is being developed there which will have a survival value. The naval college was one of the departmental activities that is not only necessary at the present time but should continue after the war as a permanent institution.

Mr. MACDONALD (Kingston City): The Grand Lake development is a matter which has not yet been decided on affirmatively. There may be no development there. If there were it would be in the nature of a school for the training of men in signalling, which could be carried on quite conveniently at Grand Lake.

As to the naval college, the decision has been made to re-establish it at or near Esquimalt, British Columbia. It is true the college was established in Halifax at the beginning. It was destroyed in the great explosion, set up again for a time at Kingston as part of the Royal Military College, and finally at Esquimalt until it was closed in 1923. After very careful thought the decision was reached that, all in all, Esquimalt offered unusual opportunities. The property there, one square mile in area, was acquired at a very reasonable rate; it contains a very fine building already, and it was felt that on account of the favourable western climate the college would be better established there where year-round training in boat work can be had.

Mr. BLACK (Cumberland): I appreciate the minister's explanation. The intention appears to be definite to reestablish this naval college on the Pacific coast. Nova Scotia, however, does not willingly relinquish its claim to the location of this college. By the removal of the college the prestige of the province as the centre of naval activities and naval developments is diminished. The people of the province feel that they have certain rights in the matter, and the opinion is definitely held there, and I believe it is shared in other parts of Canada, that Nova Scotia is the proper location in that it is in closer contact with the mother country and with the development of naval service in Great Britain in conjunction with what is or may be done in that regard in Canada. It is believed that the Atlantic coast is a more appropriate location for the college so that it might operate in conjunction with the British naval authorities. It was unfortunate that the old college was destroyed in the explosion, but the province should not suffer on that account. I do not question the attractiveness of the location on the Pacific coast, but speaking for Nova Scotia I do not yield the claims of that province to location and reestablishment of the college on the Atlantic coast. As I say, it is unfortunate that so much of the development in Nova Scotia that has arisen out of the war, such as transportation by water and by rail, and work in the coal mines, and other activities, will cease on the termination of hostilities, which we hope will not be long delayed. We feel that a permanent asset or institution such as the naval college should not lightly be taken away from Nova Scotia.

Mr. MACDONALD (Kingston City): All I can say to my hon. friend is that I hope there will be laid next week in Nova Scotia the keels of two destroyers, the first time that the building of ships of war of that size have ever been undertaken in this country. If there is to be a navy at all in Canada after the war, as I hope there always will be, destroyers will form a necessary part of it, and the natural and proper place to build them, at least a very suitable place, I think, is in Nova Scotia. The building of destroyers is from the point of view of the province a much more desirable thing than the establishment of a college. After all the college will contain no more than 100 students at any one time, fifty a year coming in. It is about the same as if fifty more students were added to the enrolment of Dalhousie or Acadia, or any of the maritime universities. I do not think that is to be compared to the prospect of a permanent destroyer-building programme in Nova Scotia.

Mr. KINLEY: Is there not considerable naval training going on at Halifax with King's college as a base, and are there not also many young Canadians who have been instructed as officers in the Canadian navy there?

Mr. MACDONALD (Kingston City): Yes, there is training going on at King's, and there has been training for officers going on at other points since the beginning of the war. That is a shorter course, covering four months. We are speaking now of the college, which has a two-year course.

Mr. GREEN: Would the minister explain the requirements for entry to this new naval college, and also the age standards that have been set? We have had some complaints to the effect that the age limit is so low that young lads in some of the provinces cannot matriculate in time to qualify for the college, and it is felt that the result may be that boys from these provinces never will get into the college.

Mr. MACDONALD (Kingston City): I do not think there is anything in that. There has been some complaint from British Columbia that the age limit is not satisfactory to them, but it is impossible to get exact equality of educational training in all the provinces. It is impossible to find students reaching the same point in their educational progress at exactly the same time. I think the superintendent of education in British Columbia made some complaint, but he was interviewed by the naval director of education and it was explained to him that we did not believe that any bright boy in British Columbia would be handicapped as a result of the age limit. Taking July 1, 1942, as the vital date, the requirement is that a boy must be over sixteen and not more than seventeen years and eight months as of that date, and he must have what is commonly called junior matriculation in order to enter. That is the general standard of admission. For the first year, that is for this year, we are making an exception, however. Boys can enter for one year only, taking a one-year course, who are beyond those age limits. They may enter even if they are up to the age of nineteen, I think, or perhaps it is eighteen years and eight months. In the paymaster branch they may enter up to twenty. But the standard age for entry will be over sixteen and under seventeen years and eight months. That has been arrived at after consultation with the departments of education of the nine provinces, and it is felt to be a reasonably fair and proper age limit to set.

Mr. GREEN: Would it not be possible to make some special allowance in a case where the provincial educational regulations make it impossible for a boy to be that far ahead at that age? They are very strict in British Columbia in not allowing a youngster, no matter how bright he may be, to skip grades; and the result may be that it will be almost impossible for a young chap from that province to get into the naval college.

Mr. MACDONALD (Kingston City): Well, I do not know. Are there many bright boys—

[Mr. Macdonald (Kingston City).]

I am only talking of bright boys; we are not interested in the dullards, because there would be no reason for their going there—

Mr. GREEN: I hope the minister does not mean to suggest that there are no bright boys in British Columbia.

Mr. BLACK (Cumberland): That is another reason why the college should be located in Nova Scotia; they are all bright there.

Mr. MACDONALD (Kingston City): Will there be any bright boy in British Columbia who will not have received his junior matriculation by the age of seventeen years and eight months? I should think nearly all these boys would be that far on. I am given to understand that the number of those who might be hampered or prevented from entering the college as a result of the age limit would be very small.

Mr. GREEN: I am told that under our school regulations it is almost impossible for a boy to be that far along at that age. I would ask the minister to look into the situation again and, if he finds it impossible for a boy from British Columbia to get into the college under the present regulations, some special allowance should be made, because it is not the fault of the boy.

Mr. MACDONALD (Kingston City): My hon. friend may rest assured that we will do right by British Columbia.

Mr. HAZEN: I believe the regulations concerning the Royal Military college provide that a certain number of students shall be allotted to each province. Are there any such regulations in respect to the new naval college?

Mr. MACDONALD (Kingston City): Yes, there is provision to the effect that we shall try to divide the number of students among the provinces, in proportion to the number of applications coming from the provinces.

Mr. MAYHEW: High school students in British Columbia are required to take a four-year course. That does result in some of them getting through a little later; but the correspondence referred to by the minister, with the superintendent of education, will show that the percentage of boys who are not through at the required age is very small, and in conversation with myself the superintendent stated that this really was not a serious point.

With reference to the question of the location of the college I have a suggestion to offer. I know that the hon. member for Cumberland is a very reasonable gentleman, as

are most people who come from that wonderful province. I would invite him to come to Victoria and let us show him the new Royal Roads college. If, after he has visited the place and has seen the kind of deal the government were able to make, he is not quite satisfied that the minister did the right thing in selecting that site for the college, we will have to do something very handsome for him. I am sure, however, that nowhere else in Canada could he find surroundings equal to those at Royal Roads, and that nowhere else could the government have obtained for a very few thousand dollars property valued at something over a million. It is an excellent location, close to the Esquimalt harbour and with year-round facilities, and I am sure that after he has seen the place the hon. member will be satisfied that the minister made the proper choice.

Mr. FRASER (Peterborough West): Has the minister considered the possibility of this country having a seaman's manual of its own, instead of the out-dated manuals the boys have to use at the present time? They are now using volume 1, 1937, and volume 2, 1938, and these volumes are unrevised. In the United States the navy department is issuing "Knight's Modern Seamanship", which is revised right up to March, 1942. That manual is right up to date: it covers everything, oil burners, depth charges, torpedoes, bombs, up-to-date anti-aircraft guns, and everything else. The manual we are using in Canada is the one issued by the British admiralty, and it is dull. A moment ago the minister was speaking of bright boys, but even bright boys find that manual dull, and I believe the Canadian navy should have a manual of its own.

While I am on my feet I should like to say something else. If a boy wants to join the navy and he lives in the Stratford district, for example, he has to go to London to enlist. They tell him there that they are full up, and he will have to wait. In Hamilton or Toronto, however, the quotas may not be filled. Could not the navy look after that boy, instead of making him wait perhaps months before he is permitted to enlist?

Mr. MACDONALD (Kingston City): It is true that the seamanship manual used is the manual of 1937, as prepared by the British admiralty. It is not up to date, but after all is said and done we have turned out some pretty good seamen with this manual.

Mr. FRASER (Peterborough West): I acknowledge that.

Mr. MACDONALD (Kingston City): While other manuals may be a little more modern or more interesting, I think our manual still is good. However, I shall be glad to look into the point, and I thank my hon. friend for having raised it. As to the second point, it is true that the navy does its recruiting through these volunteer reserve divisions. The nearest to Stratford would be the one at London, and it is quite possible that boys seeking enlistment at London might find the complement there filled. I think that is very likely to happen. The complement everywhere is filled—in fact more than filled. There are some four to five thousand young men throughout Canada waiting to get into the navy. Some of those young men are no doubt in Stratford, some in Toronto, some in Halifax and others at centres of considerable size throughout the country. If a man has special aptitude in a trade, or anything of that sort, I am sure he would instantly be taken in. If he were not taken at London his name would be sent to headquarters and he would be drafted into the navy at once. However, I shall pass on my hon. friend's suggestions to the proper officers.

Mr. BROOKS: I understood the minister to say fifty students a year would be taken into the naval college at Victoria when it is in operation. On what basis does he arrive at that number? Does he consider that that is all who will be required by the navy? Since the beginning of the war the navy has been greatly expanded, and there is still a great deal of expansion going on. Fifty a year seems a small number of students if we are to have any sort of navy.

Mr. MACDONALD (Kingston City): We will not rely on the college for the great body of our officers—not at all. We will continue the training of officers at Halifax and at Esquimalt for the four months period under which they now undergo training.

Mr. STIRLING: Through the Royal Canadian Naval Volunteer Reserve?

Mr. MACDONALD (Kingston City): Yes. The college will be for the younger lads between sixteen years and seventeen years eight months. That will go on after as well as during the war. But even after the college is established, the vast majority of officers will come in the way they come to-day, namely through one of these divisions. They will receive a short period of training there, then four months' training at the coast, and then they will be sent to sea for further experience. That is the main source from which we will continue to get our officers during the war. After the war the naval college will form an excellent training ground

for young men who wish to make their careers in the navy or who wish to enter the merchant marine. Then, it may be used by young men who have no desire for life in either the navy or the merchant marine, but who may wish, or whose parents may wish them, to have the benefit of the discipline and the instruction given by the naval college. I believe it will be of invaluable assistance not only to the navy but to the merchant marine, and to our people as a whole. The training given at the college will be excellent in every way, because we have a splendid staff of instructors. The traditions of the Royal Canadian Navy, following those of the Royal Navy, are high. It would be classed with the Royal Military college at Kingston, which we have had for many years.

Mr. BROOKS: What rank would a young man have when taken on in the navy after graduating from the school?

Mr. MACDONALD (Kingston City): He would have to start at the bottom of the ladder. He would be a cadet, then a midshipman and then a sub-lieutenant.

Mr. STIRLING: Leaving the college he would be a sub-lieutenant, just as in earlier years he would be a sub-lieutenant upon leaving the training cruiser. I believe the college is a substitute, is it not? The young man enters as a cadet, does his work as midshipman, and qualifies at the college to go out as a sub-lieutenant.

Mr. MACDONALD (Kingston City): I believe it is probably something like that, although I should not like to speak without the prospectus before me. I am not sure whether he comes out as a cadet or as a sub-lieutenant. Some would come out when they have barely reached the age of eighteen. Those who go in at sixteen would probably be out a few months before they were eighteen. Then they have to do a year's cadet training. Certainly the rank of sub-lieutenant would be the highest they could possibly hope for on leaving the college.

Mr. BRUCE: I have heard it stated that although corvettes are thoroughly seaworthy, in the case of one corvette, owing to the fact that the hatches did not fit properly, water got down into the hold, and there was constantly a foot of water in the room in which the men slept. Secondly, I believe it is a regulation that after six months of service a man is given leave. Is it a fact that after two years some have not been able to get leave to go home, and does that condition arise from lack of men to fill their places?

[Mr. Macdonald (Brantford City).]

Mr. MACDONALD (Kingston City): I shall look into the first point respecting the corvette. Of course water may get into these ships in various ways, but I should doubt the correctness of the report that the condition arose because the hatch did not fit closely. However I shall look into the matter and find out if there is anything in it.

As to the second question, leave in the navy is usually given to officers and men when the ship comes to a Canadian port for refitting. That is a suitable time, because the ship is laid up anyway, and the officers and men are usually given leave at such times. I know of no cases where men have been at sea for two years without leave. There may have been men living in Toronto or Montreal at the beginning of the war who, perhaps, served a year or so at Halifax and then some further time at sea. But I doubt if there are any cases where a man has been constantly at sea for two years, without leave. However I shall look into the situation, and get the information for the hon. member.

Mr. BRUCE: The men in question have not been continuously at sea during that period. We will say that their base is Newfoundland, and that they proceed from there to Iceland, or wherever they are bound to go. On returning to their base for refitting they would have shore leave, of course; but do they have the opportunity of going from their base to their homes in St. John, Halifax, Montreal or wherever they may live? I understand certain of the men have not had that privilege for two years.

Mr. MACDONALD (Kingston City): I am sorry if that is so. I shall make inquiries and give my hon. friend the information.

Mr. GILLIS: Overlooking the naval station at Sydney, Nova Scotia, there is a group of five houses which were purchased some two years ago by the Department of Transport. Last year there was some trouble, because the people were ordered out. Eviction notices were served, but there was no place for the occupants of these houses to go. The housing situation in Sydney is deplorable. Last year I succeeded in having the matter straightened out, with the aid of the Minister of Transport. But a new order was issued some three weeks ago and I understand that the naval authorities now desire the removal of these buildings. There are five families affected, thirty people in all. During the last two weeks I have had several letters from different persons in the city, including the mayor, pointing out that there is no room to be had in the city.

During the past week or so I have taken the matter up with the Department of Transport, but I have had no success in getting a reply. I wonder if the minister would see what can be done with respect to leaving matters as they are until such time as room can be found for the people affected.

Mr. MACDONALD (Kingston City): I thought there were only three families, but my hon. friend says there are five. These houses are located on a bank overlooking the naval buildings at Sydney.

Mr. GILLIS: That is right.

Mr. MACDONALD (Kingston City): I understand the occupants of these houses have been in there for some years and I do not think they have ever paid much rent.

Mr. GILLIS: Not since the Department of Transport took over.

Mr. MACDONALD (Kingston City): The houses are old, and because of their position with regard to the naval buildings, sewage and other drainage I understand seeps down into the cellars of the buildings. I think it is very desirable that these houses should be torn down. I do not know just how I can help my hon. friend. What does he suggest? I know it is hard to get houses in Sydney and I know the city authorities are reluctant to evict people at this time, and have been for some years, because of the housing shortage. If any reasonable method can be found of meeting the situation in order not to inconvenience unduly these poor people—I understand they went in there more or less as squatters—I shall be glad to consider it.

Mr. GILLIS: The minister is not correct when he says that they more or less squatted there; they have occupied these houses for years. After the establishment of the naval station, the Department of Transport bought them. There is one thing the minister could do: he could intercede with the Department of Munitions and Supply to consider a prefabricated housing scheme for that city. So far as the city is concerned, they have been trying it for the past two years. Many houses might be made available in that way. As the mayor points out in his letter, if these people are evicted there is no place for them to go except on the street. Last year the Minister of Transport stayed execution, but I notice it is a new magistrate handling this matter this time. Evidently the chap who handled it last year would not tackle it again. The Minister of Transport made an offer last year to the city that if the city would provide land he was prepared to give the buildings as they were to the city which could move them to the new locations. The mayor's letter is an S.O.S. for a stay of execution until such time as they can find other quarters.

Mr. MACDONALD (Kingston City): Does the mayor suggest anything that could be done?

Mr. GILLIS: No.

Mr. MACDONALD (Kingston City): That is the usual type of letter; they suggest that everything should be done by Ottawa. Let the Department of Transport do it, or the Department of Naval Services. I am not referring particularly to Sydney, but many of these cities are very poor at helping themselves or their own people.

Mr. MacNICOL: Good at passing the buck.

Mr. MACDONALD (Kingston City): Exactly, passing the buck. The problem is really one for the city. As I understand it, these people are not war workers, and surely the city of Sydney has some degree of responsibility for its own citizens. Every city expects the government to build houses, to put in water mains and sewers and to provide all sorts of facilities and conveniences, disregarding entirely the fact that they themselves are enjoying a fair amount of prosperity as the result of war orders of one kind or another. That seems not to weigh in the balance at all; the whole desire seems to be to pass anything to some other government. However, that is not the fault of my hon. friend, and I shall be glad to look into this case. I know something of it myself, and if any way can be found out of the situation, I shall be glad to consult my hon. friend.

Mr. FULFORD: There is a matter I should like the minister to bring to the attention of the Minister of National Revenue (Mr. Gibson). I understand that like the army and the air force, when a man goes active in the Canadian navy he is automatically exempted from paying income tax. I presume this is done to recompense him for the dangers that he may encounter. I understand, however, that a man in the Canadian merchant marine is not granted this privilege, although the risks may be just as great as those faced by a man in the army. I have in mind an officer on one of the Imperial Oil tankers. I cannot imagine a more precarious job in this war at the present time than bringing oil from south America to Canadian ports. Surely this man is entitled to the same consideration as is given to men in the navy.

Mr. FRASER (Peterborough West): At the present time Canada has no marine corps,

although practically every other country has found that such a corps is necessary. I believe it would add to Canada's naval prestige if we had such a corps, and I should like to know if the minister is going to do anything about it. The marine corps in the United States really acts as a commando corps. They also have a marine corps division of public relations in the United States which permits of the maximum cooperation between newspapers and the navy department. Has the minister anything to say in that regard?

Mr. MACDONALD (Kingston City): We have not considered a marine corps in this country.

Mr. STIRLING: We have no battleships.

Mr. HANSON (York-Sunbury): There is not room for them on our warships.

Mr. MACDONALD (Kingston City): As my hon. friend knows, our navy started in a rather small way, with only 1,700 officers and men two and a half years ago. It is doubtful that we will feel it necessary to start the formation of a marine corps for some little time, but perhaps some day we may have such a corps.

Mr. FRASER (Peterborough West): A young man from Peterborough joined up some months ago, and when the destroyer he was on was sunk, he was transferred to a British ship. The Westclox club in Peterborough sends out twice a month to all its members parcels containing cigarettes, pipes and other little things that will be appreciated by the men. But the cigarettes are always taken out of this man's parcel. He gets the pipes and whatever else they send him, but the cigarettes are not there. This man is paid by the Canadian navy.

Mr. MACDONALD (Kingston City): Who takes them out?

Mr. FRASER (Peterborough West): I do not know, and they want to know. The Western Clock people send these parcels to all men who have enlisted from their plants. Will the minister look into this?

Mr. MACDONALD (Kingston City): It is a large order. I shall find out from my hon. friend the name of the man and what ship he is serving on and endeavour to do something about it. It may be due to some roguery on the part of those handling the parcels; I suppose cigarettes are quite precious in certain parts of the world just now. If my hon. friend will give me the name of the ship and the name of the man I shall see what I can do. The Postmaster General (Mr. Mulock) would probably be the proper person to handle this.

[Mr. Fraser (Peterborough).]

Mr. FRASER (Peterborough West): When a Canadian joins the imperial army in England he cannot get cigarettes, but in that case he is paid by the British government. This man is paid by the Canadian government, so that his case is slightly different.

It has been suggested to me that perhaps the navy could take a great number of the men who are rejected by the army because of flat feet. In the navy it does not matter, but in the army I know it does.

An hon. MEMBER: Can you walk on the water?

Mr. FRASER (Peterborough West): They do not use their feet on the water. If they cannot be taken on in the navy, can they be taken on in the merchant marine?

Mr. MACDONALD (Kingston City): That is a medical question. I should not like it to be understood that we are taking on those who have been rejected by the other services, but if there is some useful task that they can do, I know that we should be glad to consider them. As to the merchant marine, there are some old skippers between sixty and sixty-five years of age at sea now who are a good deal over the army or navy age, but they are men of long experience on the sea. If these are the men to whom the hon. member refers, I think it would be considerably easier for them to get into the merchant marine, where the medical standard is not as strict as for the navy or army.

Mr. FRASER (Peterborough West): At page 2265 of *Hansard* the minister said, in reference to a man who is missing:

> If he is missing, his pay goes on for the rest of the month. I think that is the arrangement. When he is presumed killed his widow or dependent, as the case may be, falls under the ordinary pension regulations.

If the man is a prisoner of war his pay continues for six months and then the allowance to the wife or other dependent is stopped. I know it is so in the air force; is it so in the navy? If a man is not presumed dead for six months, the allowance is cut off for the full six months. Can the minister give any information on that?

Mr. MACDONALD (Kingston City): I can get that information for my hon. friend.

Mr. JACKMAN: A question was asked last week as to buildings that were being put up for the navy by the Department of Public Works over and above the $20,000,000 expenditure for buildings which the navy itself is putting up.

Mr. MACDONALD (Kingston City): I think I answered no to that question when it was asked last week. The $20,000,000 covers all the buildings that are being built for the navy this year. It does not matter who is putting them up, because we have to pay for them and provide for them in our estimates. The $20,000,000 is the total cost of the new buildings that we are asking for this year.

Mr. JACKMAN: I have been asked questions from time to time which indicate that people do not understand why it is that the navy is setting up a naval college at Royal Roads after thirty-two months of war when we have got along all this time with the present facilities and without such a college. And where is the navy going to get competent instructors and other personnel for this college? Can the minister enlighten me so that I in turn may enlighten those who ask me?

Mr. MACDONALD (Kingston City): That comment has been made about every new undertaking since the beginning of time. You would never start a new college or institution of any kind if you paid attention to comments of that sort. If we had not started a naval college I think there would have been a great deal more criticism. We would have had people saying: Why are you not doing something to get ready? It is true that for the purposes of the war, assuming it will be over in two or three years, we could get along without a naval college. The naval college will not begin to turn out students until 1943, and then it will begin to turn out fifty or sixty young men a year. In the meantime, hundreds of young officers will have been trained through the shorter four months' training courses. But I do not think there is anyone in this country who will deny that we need such an institution. Four months is a short period within which to train a naval officer. The naval college will be a place to which a young man can go who wants to adopt the sea as a career. He will receive there two years of good solid training fitting him for permanent service in the navy or the merchant marine. I do not think any Canadian who looks at the problems which this country will have to face at the end of the war will challenge the wisdom of establishing such an institution.

Where are we going to get the instructors? That is a question that seems to be based on very little thought. We have as head of the college Kenneth Ketchum, the former principal of St. Andrew's college. Is there in all of Canada a man who enjoys a higher reputation in the teaching of boys and young men? I do not think there is. He is well known, I am sure, to my hon. friends from the Toronto area, and indeed to many people throughout Canada. He is to head the academic staff of the college. He will have with him some men who were formerly at the Royal Military college, which, as hon. members know, has been closed for the duration so far as its ordinary purposes are concerned. Three or four of its instructors are going to assist us temporarily in the foundation of the naval college. We shall also have some naval officers, Captain Grant and several others of experience.

Mr. HANSON (York-Sunbury): Is he to be the commandant?

Mr. MACDONALD (Kingston City): Yes, he will have charge of discipline and the like, and Kenneth Ketchum will be in charge of the academic instruction. There is no dearth of available men to man the college, and man it well. I am sure it will be a credit to this country.

Mr. DOUGLAS (Weyburn): Is the Wassermann test given to young men who want to join the navy?

Mr. MACDONALD (Kingston City): We probably do what the other two services do. Is it given in the army?

Mr. DOUGLAS (Weyburn): It is optional in the army, I understand.

Mr. MACDONALD (Kingston City): I will find out about that.

NATIONAL WAR SERVICES

Hon. J. T. THORSON (Minister of National War Services): Mr. Chairman, it was intended that I should follow the Minister of Munitions and Supply but it was impossible for him to be here this afternoon. In order, therefore, to save the time of the house and of the committee I shall commence with my statement.

With the permission of the committee I should like to make a general statement with regard to the national war services regulations, their operation, their results, the main amendments that have been made since last I addressed the committee on this subject, and then give some comments on criticisms that have been made. That general statement might then serve as the basis for questions from members of the committee.

Last November I gave a brief resumé of the procedure that is laid down under the regulations from the time that the Department of National Defence sends its requisition to the Department of National War Services and the man who is called up reports to the training

centre. I do not think it necessary to review that procedure again. Roughly, the relationship between the Department of National Defence and the Department of National War Services is that the Department of National Defence sends a monthly requisition to the Department of National War Services. The nature of that requisition was explained to the committee by the Minister of National Defence on May 4. The requisition states the number of men required to report to the training centre; it gives the total number of men required for the month. The detail of how that requirement is broken up is contained in a schedule attached to the requisition. It is indicated, for example, how many men are to report to the various training centres across the country. The requisition not only gives the total number of men required for the particular month and the date on which the men are required to report, but it also breaks down the requisition into the various training centres and administrative divisions.

Mr. GREEN: Which department decides what age the men are to be?

Mr. THORSON: The matter of age is settled by a proclamation which is issued under the provisions of the national war service regulations.

Mr. HANSON (York-Sunbury): That is a matter of government policy.

Mr. THORSON: It is a matter of government policy from time to time. A proclamation is issued. The most recent one called men up who were born in the years from 1912-1922, I believe. Then it is the duty of the Department of National War Services to comply with the requisition which comes from the Department of National Defence and to call men up for training in accordance with the requisition.

Mr. MacNICOL: By mail?

Mr. THORSON: We send out notices to the men in the various administrative divisions.

Mr. HANSON (York-Sunbury): That is, the notice is sent out by the divisional registrar?

Mr. THORSON: It is sent out by the divisional registrar. We operate the regulations through thirteen administrative divisions. In general these administrative divisions coincide in geographical outline with the military districts. There are two exceptions in that regard. Each one of these administrative divisions is headed by a board which consists of three persons. The chairman of the board is a judge of the superior court or other court of the province in which the greater portion of the administrative division is located, and there are two other members of the board. There is also a divisional registrar, who is the administrative officer of the division. In addition to the members of the board there are four persons who have a right to be present at hearings of the board and to make representations to it. These persons are respectively, a representative of the Department of National Defence, of the national war labour board, of agriculture, and of the director of national selective service. These four representatives are not actually members of the board, but they have the right to be present at all hearings and to make whatever representations they deem fit.

Mr. BLACKMORE: What is the basis on which the representative of agriculture is selected? Is he chosen from among the farmers?

Mr. THORSON: The desire is to find a person who thoroughly understands the agricultural situation in the administrative division and will see that those interests are safeguarded as far as possible.

Mr. HANSON (York-Sunbury): Well, he is named by the minister.

Mr. THORSON: He is named by the minister.

Mr. HANSON (York-Sunbury): Certainly. He represents the minister.

Mr. MacNICOL: And they act only when an appeal is being made to the board?

Mr. THORSON: They appear before the board when the board hears applications for postponements.

Mr. BLACKMORE: On whose advice does the minister name the representative of agriculture? Does he listen to any of the agricultural organizations?

Mr. THORSON: Yes, he listens to them.

Mr. DOUGLAS (Weyburn): Does he pay any attention to them?

Mr. THORSON: That, generally, is the relationship between the Department of National Defence and the Department of National War Services.

Mr. HANSON (York-Sunbury): Who is the representative of the department of agriculture in the province of New Brunswick?

Mr. THORSON: Mr. T. Allen Best. He is a farmer and returned soldier of Stanley, in York county, New Brunswick.

Mr. HANSON (York-Sunbury): Is there a man by the name of Barker on that list?

Mr. THORSON: No.

Mr. HANSON (York-Sunbury): Best is the man?

Mr. THORSON: Best is the representative of agriculture.

Mr. PERLEY: Who is the representative for Saskatchewan?

Mr. WRIGHT: Would the minister give the names of the representatives of the prairie districts?

Mr. THORSON: As yet only five representatives of agriculture have been appointed. If it is desired that I shall put their names on the record, I shall be glad to do so: administrative division E, with headquarters at Montreal, Anatole Gascon, a farmer of St. François de Salle, Quebec; administrative division F, with headquarters at Quebec, Mr. J. A. DeBlois, insurance broker, of Beauceville East.

I have given the name of the representative of agriculture in New Brunswick. Then for administrative division I with headquarters at Charlottetown, P.E.I., Mr. Gordon Holmes, who is a barrister located at Charlottetown. For division N, headquarters at Edmonton, Mr. Walter Bissell, a farmer of Viking, Alberta.

Mr. ROSS (Souris): When will appointees be selected for the other provinces—Manitoba for instance?

Mr. THORSON: I cannot say when the other appointments will be made. Representations are being made from time to time. The matter is perhaps not quite as important now as it was prior to March 23, when the new regulations relating to persons wholly or mainly employed in agriculture came into effect. But consideration is being given to the subject.

Mr. BLACKMORE: Did the minister consult the provinces?

Mr. THORSON: In some cases yes. There is no fixed procedure in regard to the matter.

Mr. WRIGHT: Have all the representatives of labour been appointed?

Mr. THORSON: I think they have, but I am not sure about that. They are not appointed by the Minister of National War Services, of course; they are representatives of the national war labour board.

Mr. DIEFENBAKER: What control if any has the minister over the several national service boards in the various provinces with a view to securing uniformity of interpretation and application of the regulations?

Mr. THORSON: I pointed out that the divisions are presided over by a board the chairman of which is a judge. The decisions of the boards on applications for postponement are final. The boards have exclusive jurisdiction in the matter of either granting or refusing an application for postponement. The subject of uniformity of decision has come up again and again. The hon. member for Lake Centre will appreciate that the decisions on these applications for postponement are decisions on questions of fact, and I do not see how you could have uniformity of decision on questions of facts when the facts vary in different cases.

Mr. HANSON (York-Sunbury): There could be uniformity in guiding principles, could there not?

Mr. THORSON: Yes. With regard to uniformity in practice, every effort is made to bring that about as far as is possible in view of the fact that the decisions are decisions on questions of fact. We held a conference in Ottawa on April 3, 4 and 5 of the chairmen of the boards and the divisional registrars. They held three sessions on Thursday, two on Friday and two on Saturday. The purpose was to have a general conference on the administration of the regulations, to discuss suggestions for improvement in the regulations, and to consider the kind of matters that the leader of the opposition has just referred to, that is, general principles of practice and the like. I think that is about as far as it is possible to go when the boards are dealing with questions of fact.

Mr. HANSON (York-Sunbury): What action is being taken by the department or the local divisional boards with respect to reexamination of rejects? There has been drawn to my attention in my own province the fact that there is a fairly large number of rejects, 10 per cent or more of those called up. A man is entitled to go to his family physician. It is no reflection on the medical profession to say that if a man who does not want to respond to the call goes to his family physician there is a suggestion at least that he might be treated with some leniency. One case came to my attention where a big strapping young man, capable to all appearances of shouldering a barrel of flour, went to his family physician and was rejected on the ground that he had a weak heart. It is almost impossible for me to believe that was the case, and it became the talk of the community. His name was submitted to the local divisional registrar for a recall, and the local official thanked his informant very earnestly and said: "That is just the sort of thing we want." But it should not be left to mere chance. There should be some systematic effort to determine

whether the medical examinations in the first instance were correct or not. What is the minister doing about this matter? I called his attention some months ago to this very thing, and I had hoped there would be a systematic method of reviewing rejections. I think the minister will have to change his policy. The question of calling up men for military service has now reached the stage where the men should be examined by a military board. That may cause a little inconvenience and some expense, but at least we would have the assurance that nobody is going to play any favourites. I recommend that course to the minister if he has not already adopted it, and the sooner he adopts it the better.

I should like some information from the minister as to how many rejects have been reexamined, clear across Canada. Has there been a systematic effort in that regard, and what are the results of reexamination?

Mr. GILLIS: I rise to a point of order. The minister stated that he intended to make a statement to the committee. Is it the intention to proceed with this department the way we did with the other two? Hon. members are now making statements rather than the minister. I should like the minister to explain to the committee what his department is doing. Is it the intention that we should cross-examine the minister without any knowledge of what the department is doing, or to proceed as we did with the other ministers? This is the most important department of government to-day, handling, as it does, the national selective service programme, and we know nothing about it.

Mr. HANSON (York-Sunbury): I do not think there is any point of order involved. Any hon. member is free to ask a question in committee at any time. I do not take kindly to the lecture the hon. member has just administered to me.

Mr. GILLIS: I still pursue my point of order and ask for a ruling.

The ACTING CHAIRMAN (Mr. Bradette): In committee considerable latitude is given. The minister is here to explain the activities of his department and is willing and ready to answer any questions. If he is willing to do that I believe he is perfectly within his rights; but it is left in the hands of the minister himself.

Mr. HANSON (York-Sunbury): Of course if the minister objects to the question I shall wait, but I may not be here on another occasion, and I do not want to miss the opportunity to ask a question on this very important point which I have suggested, and which arises naturally out of the sequence of events which the minister has been detailing.

Mr. THORSON: I had intended to deal briefly with the various questions raised by the leader of the opposition I think on March 25, among which is the matter to which the hon. gentleman has just referred. At that time I indicated that I would welcome any constructive criticism that would make these regulations more workable and better adapted to the purposes for which they were devised because, as the hon. member for Cape Breton South has said, these regulations are of great importance at the present time.

I noted that the leader of the opposition made the suggestion that all men should be examined by army medical boards instead of being examined by physicians of their own choice. I think that when the hon. gentleman considers the whole situation he will agree that his suggestion is not practicable, for two reasons. In the first place the men get their notices at their places of abode. In countless places it would not be possible to have an army medical board, since many of them are far removed from any centre where such a board could sit. So the requirement is that in the first instance, when the man gets notice to report for a medical examination, he may go to the physician of his own choice. But the matter of his medical category does not rest there, and of course it is agreed by everyone that it should not rest there. If the man is category A, then of course there is no further question. If he is below category A, then his case may and should be reviewed. The medical adviser in the division goes over all the medical certificates that come back from the physicians and reviews and checks them. He may direct that a man should report to some other doctor for medical examination, and frequently he does.

Mr. HANSON (York-Sunbury): How frequently?

Mr. THORSON: On many occasions. I could not indicate the number, but a very careful check is made of the answers given by the examining physician. There is a very complete form which the examining physician is required to fill out as a result of his medical examination, and very frequently the medical adviser, in looking over the answers, comes to the conclusion that the physician was in error in his final decision as to the category of the man, and may change that category himself to a higher category; or if the answers of the examining physician cast any doubt as to the

category of the man, the adviser may direct that the man report to another doctor for examination.

That does not conclude the matter, but before dealing with the revision boards I should indicate my second reason for stating that the suggestion made by the leader of the opposition that army medical boards examine all these persons is impracticable; that is, that there are not enough doctors available in Canada to constitute sufficient army medical boards for the examination of these recruits.

Mr. HANSON (York-Sunbury): Is that not an argument for a board? They have them at every district depot, for instance.

Mr. THORSON: Then I think another argument could be presented. It by no means follows that the examination by an army medical board would be better than an examination by a practising physician in the country. Many of the army medical boards are composed of men who graduated only comparatively recently from medical colleges.

Mr. HANSON (York-Sunbury): What is that?

Mr. THORSON: Many of the army medical boards are composed of fairly young practitioners. I think it will be generally agreed by those who have been studying this procedure, which was worked out in cooperation with the Canadian Medical Association, that the present system, of a preliminary examination by the physician of the man's own choice; a review of that examination by the medical adviser in the division, and then a subsequent review by a revision board, in the main is working out very satisfactorily. I think it is also agreed, however, that the mere fact that a physician has found a man to be below category A should not be regarded at any time as a final categorization of that man, because a man who is B to-day may become A in two or three months. I agree with the leader of the opposition that in respect of persons in categories below A, they should be continuously the subject of review, except of course in respect of those ailments because of which a man could not possibly become A.

Mr. HANSON (York-Sunbury): Patent defects.

Mr. THORSON: Yes, and others of a much more serious nature, even, than patent defects. Under the regulations we have provision for the establishment of civilian revision boards, which are being set up across Canada as rapidly as possible. The purpose of these revision boards is to review the cases of persons who are below A and who might be raised to a higher category than that set by the examining physician or by the medical adviser in the division. It has taken some time to establish these revision boards; they are not completely established as yet, but a very large number have been set up.

I have a statement of the men who have been reexamined as of March 30, 1942, by medical revision boards. With the leave of the committee I will put this table on *Hansard*, because it indicates the manner in which the boards operate, and the results obtained It is as follows:

Men Reexamined by Medical Revision Boards as of March 30, 1942

Original Categories		Revised Categories							
Medical Categories	Number of men	A-1	A-2	B-1	B-2	C-1	C-2	D	E
A-1 } *A-2 }	256	124	5	22	7	19	11	17	51
B-1	538	275	16	61	18	47	27	6	88
B-2	181	76	8	15	9	22	12	5	34
C-1	226	80	3	19	6	43	15	3	57
C-2	254	90	3	21	7	21	33	3	76
D	219	96	..	20	8	23	17	13	48
E	483	127	5	24	16	59	44	20	188
No category	12	7	..	..	..	3	1	..	1
Total	2,169	869	40	182	71	237	160	67	543

* Medical category A-2 was established only on October 4, 1941. As a result, very few men have been placed in this category and none of these was sent before a medical revision board.

Mr. DOUGLAS (Weyburn): What was the total number raised?

Mr. THORSON: The total number reexamined is 2,169.

Mr. DOUGLAS (Weyburn): How many of those have been raised to category A?

Mr. THORSON: Of that number 909 were raised to or confirmed in medical category A.

In some instances, as the table will show, those originally in category A were revised downward by the revision boards, and in other cases lower categories found originally by the physicians first examining were raised by the revision boards.

Mr. DOUGLAS (Weyburn): How many were lowered?

Mr. THORSON: It is a matter of arithmetical calculation. Of the group taken, 256 were found by the examining physician to be in category A-1. That group came before the revision boards and the boards found there were in that class only 124 in category A-1.

Then, the original examining physicians placed 226 in category C-1. Reviews by medical boards disclosed that 80 of those men were properly in category A-1. The table shows the results of revisions, but it also shows something else of great interest, namely, the human element involved. The same is found in regard to army medical boards. With respect to those army medical boards there is no certainty of complete uniformity in medical categorization, merely by the device of using such boards. There are differences of opinion.

Mr. BRUCE: Are these so-called revision boards composed only of medical men?

Mr. THORSON: Yes, exclusively of medical men—the best civilian medical men we can find. Each is recommended and selected by the Canadian medical association.

Mr. DOUGLAS (Weyburn): One board for each district?

Mr. THORSON: No; there are numerous boards. It seems to me that each week I am signing approvals with respect to members of revision boards. We are appointing such boards as rapidly as we can set them up. A great number of men are now serving on them. I am informed that every person on these revision boards has been recommended by the Canadian medical association.

Mr. BROOKS: Are they permanent appointments?

Mr. THORSON: No.

Mr. BROOKS: They have no fixed salary?

Mr. THORSON: No; they are paid a per diem allowance for the days they sit.

Mr. DOUGLAS (Weyburn): How do these men come before the boards? Does every man come before a board at some time or another?

[Mr. Thorson.]

Mr. THORSON: No, not every man. Section 12 (4) of the regulations states that whenever doubt may arise as to the accuracy of the "medical examination and certificate form" completed by an examining physician, the divisional registrar may notify the man concerned to submit himself for another medical examination by a medical revision board, of three examining physicians, appointed by the minister, at such time and place as the divisional registrar shall indicate.

We are proceeding as rapidly as circumstances permit with the reexamination of men in categories lower than A-1. Up to the present there has not been a tremendous need in that regard from the point of view of filling the requisitions sent to us by the Department of National Defence. But we are not losing sight of the fact that men found by one doctor to be in one category may really be in another higher category; and it is our desire that there shall be the closest scrutiny of the matter of medical categories.

Mr. GREEN: What about the reconditioning, under order in council P.C. 2229?

Mr. THORSON: That was provided for by an order in council presented to the house on March 24. The provisions are found in an appendix to the *Votes and Proceedings* of that date. There has not been a great deal done as yet under the provisions of that order in council. Perhaps I should state that too much should not be expected from the reconditioning of these men. There is a general opinion, for instance, that comparatively few operations can be performed which will raise a man's category from below category A to category A. There is a good deal of doubt, for example, with respect to the curing of hernias by operations.

Mr. ROSS (Moose Jaw): Will it be possible for the men who might be operated on and raised to higher categories to choose their physicians, or must that be done by some physician nominated by the department?

Mr. THORSON: The actual reconditioning will be done under the auspices of the Department of Pensions and National Health. I assume it will be done by doctors of their choice, but there is no compulsion in the matter. No one is compelled to undergo surgical treatment. If a man does not want to undergo surgical treatment at the hands of a doctor of the Department of Pensions and National Health, there is no obligation upon him to do so.

Mr. ROSS (Moose Jaw): Would it not be well for the department to consider allowing the applicant to have his own physician, one he knows himself, carry out the operation under the same scale of fees that are paid by the Department of Pensions and National Health? This would enable the doctors throughout the community to carry on some of this work for the government.

Mr. THORSON: I shall be glad to bring that suggestion to the attention of my colleague.

Coming back to the question raised by the hon. member for Cape Breton South, I dealt with the subject of medical examination because the leader of the opposition raised the question this afternoon. I had intended to deal with it later, but if members of the committee will permit me I should like to give a general statement as to the operation and results of the national war services regulations.

The total number of men requisitioned by the Department of National Defence in fifteen training periods from October 9, 1941, to March 12, 1942, was 123,840. Of that number, 88,100 were requisitioned for the first three training periods when the training period was for only thirty days duration, leaving 35,740 requisitioned for the full four months training period, with the trainees subsequently being held in the service of the Canadian army by reason of a ministerial order of the Minister of National Defence (Mr. Ralston). Those are the totals of the men requisitioned by the Department of National Defence. We sent out the necessary notices, heard applications for postponement, sent out notices to report and there actually reported for those fifteen training periods 131,619 men, of which 90,218 were the thirty-day trainees, leaving a remainder of 41,401 who reported to the camps for the full period of four months training and subsequent service in the Canadian army for the duration of the war.

In order to indicate whether we have actually lived up to the requisitions, I shall give another set of figures. The number of men who were actually accepted at the training centres and who underwent training was 120,334, of whom 82,893 were thirty-day men and the remainder of 37,441 being four months and subsequent service men. If hon. members will look at these figures, it will be seen that the total number of four months and subsequent service men requisitioned by the Department of National Defence was 35,740 and that we sent 37,441 fit men who were accepted for training and who actually underwent training, or a surplus of 1,700 over the number requisitioned. I think we can say that our department has filled all requisitions sent to us by the Department of National Defence.

In addition to the four months period men, we also act for the Department of National Defence in recalling men who had thirty-day training. It will be recalled that the men who finished the thirty-day training period were taken on the strength of the militia units and became members of the reserve army, and since that time they have been subject to the reserve army regulations. We act for the Department of National Defence and in the name of that department recall these men for further military training and subsequent service. We received requisitions for the recall of 13,650 thirty-day men. We called up these men, heard their applications of one kind or another and actually sent 14,387 to the training centres. At the training centres 12,539 of the men that we had ordered to report were found to be fit. It will be remembered that when the thirty-day training period was in effect we sent men to the training centres with categories lower than A-1, whereas now in respect of the four months men the Department of National Defence asks us to send to the training centres only category A-1 men. That generally is a review of the operation and results of the regulations from the point of view of whether we have complied with the requisitions that came to us from the Department of National Defence. I think I may properly say that this performance speaks well for the administrative divisions. I believe it will be generally agreed, although there are some criticisms of individual cases, that the administrative divisions have performed in an excellent manner the difficult task that has been assigned to them.

If I might pass from that subject, I should like to deal with the main amendments which have been made to the national war services regulations, since I spoke on this subject last November. Much the most important amendment is the one that was made by order in council P.C. 2252, dated March 21, 1942, relating to persons wholly or mainly employed in agriculture. That amendment to the national war services regulations was made necessary by the stabilization of employment in agriculture regulations, 1942, as enacted by order in council P.C. 2251. Both of these orders in council are set out in full in the appendix to the *Votes and Proceedings* of March 24. These amendments constituted a

very important departure from the base of the regulations as they had existed up to that time.

There was some misunderstanding as to the effect of these amendments and as to their application to persons who are wholly or mainly employed in agriculture; that is, those persons who on March 23 were wholly or mainly employed in agriculture. In view of that misunderstanding I thought it desirable that I should issue a press release as to the effect of the amendments and their application to the persons who were to be covered by the regulations. With the leave of the committee I should like to put this press release on *Hansard* so that it may become part of the records of this discussion.

Mr. DOUGLAS (Weyburn): Is it just being released now?

Mr. THORSON: No. This release was issued by me on April 17, and I gave instructions that a copy of this release, which was issued in both English and French, should be sent to every member of the house and of the upper house. I take it that leave to put this release on *Hansard* is accorded, and I suggest that members who represent agricultural areas might read it and then subsequently, when I am before the committee again, put such questions as they may desire to ask. The release is as follows:

Ottawa, April 17, 1942.

Press Release by Hon. J. T. Thorson, Minister of National War Services.

There still appears to be some misunderstanding of the effect of the national war services regulations, 1940 (recruits) as amended by order in council P.C. 2252, dated March 21, 1942, and their application to persons who are "wholly or mainly employed in agriculture".

The national war services regulations, 1940 (recruits), govern the subject of calling up men for compulsory military training. They were amended by order in council P.C. 2252 in order to give effect to a fundamental alteration in government policy as laid down by the "stabilization of employment in agriculture regulations, 1942", enacted by order in council P.C. 2251, dated March 21, 1942.

The national war services regulations are administered by thirteen administrative division boards, each board consisting of three members, of which the chairman is a judge of a superior or other court of the province in which the larger part of the administrative division is situated.

The amendments to the national war services regulations contained in P.C. 2252 apply only to the persons who are covered by the term "person wholly or mainly employed in agriculture". The term "person wholly or mainly employed in agriculture" is specially defined in the amended regulations. The term applies only to the following two classes of persons; it means

(1) any person, who on the 23rd day of March, 1942, was wholly or mainly employed or engaged in agriculture, and it includes

[Mr. Thorson.]

(2) any person, who on the said 23rd day of March, 1942, was employed or engaged, but only seasonally, in a primary industry, but whose last employment or occupation immediately prior to such seasonal employment or engagement in a primary industry was wholly or mainly in agriculture.

For the purposes of the amended regulations, the term "agriculture" means the production of field crops, fruits, vegetables, honey, poultry, eggs, live stock, milk, butter or cheese, and the term "primary industry" means and includes lumbering and logging, forestry, fishing and trapping.

The amended regulations do not apply to any other classes of persons. They do not apply to any persons, who, prior to March 23, were engaged in activities other than agriculture or seasonal primary industries, as defined in the amended regulations. Consequently, any persons who left their occupations after March 23, 1942, with a view to returning to or engaging in agriculture in order to obtain postponements of military training until further notice will not be able to do so. All such persons are still subject to the national war services regulations as they stood before the recent amendments. Such persons may still make applications for postponement of their military training, but such applications for postponement will be dealt with by the divisional boards in the same manner and subject to the same principles as heretofore.

The procedure for administering the national war services regulations, as amended, may be briefly summarized, so far as they relate to the classes of persons covered by the amended regulations, as follows:

(1) "Notices—medical examination" under section 12 of the regulations will be sent out by the divisional registrars in exactly the same manner as heretofore. There will be no change in this procedure.

These notices must not be disregarded. Failure to comply with the requirements of the notices, namely, to report for medical examination, will render the person guilty of such failure, liable to the penalties imposed by law.

(2) On receipt of the "Notice—medical examination" the person to whom the notice is addressed may, if he wishes to do so, apply for a postponement order, but he must do so in writing to the divisional registrar who sent him the notice within eight clear days of the date appearing on the notice.

(3) If the person who receives the notice is a "person wholly or mainly employed in agriculture" as defined in the amended regulations, he may apply for a postponement order on the ground that he is a person wholly or mainly employed in agriculture within the meaning of the amended regulations. He need not assign any other ground for his application.

(4) The application will then be dealt with by the divisional board as it deals with other applications for postponements.

There is, however, this fundamental difference, namely, that if the applicant is a person wholly or mainly employed in agriculture within the meaning of the amended regulations, the board, subject to certain exceptions hereafter mentioned, shall grant him a postponement order until further notice and such postponement order shall be an allocation of such person to agriculture.

It is this direction to the board, namely, that the board shall grant him a postponement order until further notice, that constitutes the "fundamental alteration of the policy regarding compulsory military training and service where such service touches persons wholly or mainly employed in agriculture," referred to by the Prime Minister in his speech in the House of Commons on Tuesday, March 24, 1942.

Previously, under subsections (1) and (2) of section 14 of the National war services regulations, it was provided that the board "shall have power to grant an advancement or postponement order when it is of the opinion that it is in the national interest to do so," but there was no obligation upon the board to grant such orders. The matter was left to the discretion of the boards.

It was also provided that "no postponement order may be made for more than six months, but, upon reviewing the application, the board may grant one or more extensions." It was also provided that in respect of certain applications for postponement, such as by a man engaged in farming, fishing, lumbering, trapping, etc., "the board shall take into account the supply of labour available and the importance of the particular applicant's occupation to the national economy."

There has therefore been a fundamental change of base in the regulations. It is not a question of greater latitude having been given to the boards in the matter of granting postponement orders. Nor is it a matter of preferential treatment. The amendments go much further and constitute a fundamental change of approach, both by the applicant and by the board. When the applicant has shown that he is a person wholly or mainly employed or engaged in agriculture within the meaning of the amended regulations, he is prima facie entitled to a postponement order until further notice. He does not have to prove, as was the case formerly, a special case for postponement of a fixed duration.

The fundamental change in the character of the amended regulations may be stated as follows. Under the regulations as they stood prior to the amendments, the applicant had to make out a special case for postponement. The granting of a postponement order was within the discretion of the board and the postponement order was only for a fixed period of time. The applicant was still regarded as being a person primarly required for compulsory military training when his period of postponement was concluded. Under the amended regulations the situation is entirely changed. When the applicant has shown that he is a person wholly or mainly employed in agriculture within the meaning of the amended regulations, it is mandatory upon the board, subject to the exceptions hereinafter mentioned, to grant the postponement order. Furthermore, the postponement order is until further notice and it constitutes an allocation of the applicant to agriculture rather than to military service.

Precautions have been taken against abuse of the regulations and their undue extension to persons not intended to be covered by them. The board is not required to grant a postponement order until further notice to an applicant if it is established to the satisfaction of the board, either (1) that the applicant is not an essential worker in agriculture, or (2) that the applicant has at any time subsequent to March 23 ceased to be actually employed or engaged in agriculture or in a primary industry. The onus of proof in each of these cases is not upon the applicant. These safeguards against the undue extension of the amended regulations to persons not intended to be covered by them are within the exclusive jurisdiction of the divisional boards.

Where a person is wholly or mainly employed in agriculture within the meaning of the amended regulations and has been granted a postponement order until further notice, there is an allocation of such person to agriculture.

The effect of the amended regulations will therefore be as stated by the Prime Minister in the House of Commons on Tuesday, March 24, 1942, "Under new regulations, farmers, farmers' sons and agricultural labourers will normally not be obliged to undertake compulsory military training and service."

At hearings of the boards, representatives of the Department of National Defence, of the national war labour board, of agriculture and of the director of national selective service are entitled to be present and to make such representations as they may deem fit. Their presence and their right to make representations to the boards are intended as guarantees that all interests connected with the war effort and the manpower requirements for the war effort in each aspect of it will be safeguarded.

The divisional boards have since their inception dealt in a judicial and sympathetic manner with applications for postponement made by farmers and other persons engaged in essential activities. In some agricultural areas of Canada, particularly areas close to large cities with large concentrations of war industries, the agricultural situation was becoming serious as the result of a number of causes, such as a large flow of agricultural labour into war industry, extensive voluntary enlistments with the armed forces, and, to a lesser degree, the calling of men for military training, and the ability of the country to carry out its agricultural commitments in the matter of essential food production was being threatened. It was therefore necessary to enact the "stabilization of employment in agriculture regulations, 1942." The essential purpose of these regulations is to prevent the agricultural situation in Canada from deteriorating beyond its present position and to enable the country to carry out the important food production aspect of its war effort.

The purpose and objective of these regulations and of the amendments to the national war services regulations were stated by the Prime Minister in the House of Commons on Tuesday, March 24, 1942, in the following terms:—

> The policy of stabilizing employment in agriculture represents what, in effect, is a block allocation to agriculture of the persons best fitted for food production. It constitutes a form of large scale selection for national service which should go far to ensure the supply of manpower essential to the food production aspect of the national war effort.

Care has been taken to provide against abuses of postponement orders until further notice. A person who has been granted such a postponement order and has thus been allocated to agriculture may lose the right to such postponement and allocation if he ceases to be actually employed or engaged in agriculture or in a primary industry and such fact is brought to the attention of the board by any of the representatives above referred to.

Persons who are not wholly or mainly employed in agriculture within the meaning of the amended regulations should not leave their present employment in the hope of obtaining postponements until further notice. If they can establish a case for a postponement of military training on sound grounds, they are still free to make application for postponement under the regulations as they stood prior to the recent amendments and the divisional boards will deal with such applications upon their merits. If, indeed, such persons leave their present occupations in the hope of obtaining postponements until further notice and their occupations are essential occupations, they may forfeit whatever claim they may have had otherwise to postponement under the regulations as they stood before the amendments.

A conference of the chairmen and divisional registrars of the thirteen administrative divisions will be held in Ottawa on April 23, 24 and 25 for the purpose of discussing the amended regulations and other matters connected with the administration of the national war services regulations generally.

I would point out that these regulations apply only to persons who are wholly or mainly employed in agriculture. That term was specifically defined in the amendments to the regulations and must be read in the light of that definition.

I should also like to make clear that under these amendments the notices to report for medical examination go out in exactly the same way as notices went out before the amendments came into effect. That is, of course, absolutely necessary in order to keep track of the men, for it is impossible to determine without a review of the case whether the man is wholly or mainly employed in agriculture within the meaning of that particular term. It is necessary to keep track of the men, and they get their notice to report for medical examination in the same way as notices go out to anyone else.

There is another point, and I think this may answer what my hon. friend the member for Weyburn has in mind. The regulations are made applicable by the boards to the persons who apply for a postponement order until further notice. The reading of the order in council makes that perfectly clear. The important section of order in council P.C. 2252 is made subsection 3 of section 14 of the regulations, and it is clear from section 5 of the order in council that the applicant must first make application before the board can deal with his case, apply the regulations to his case and give him a postponement order until further notice, as referred to in the amendment.

Mr. DOUGLAS (Weyburn): Would the minister explain the position under the regulations of those who were called up on April 9?

[Mr. Thorson.]

Mr. THORSON: My understanding of that point which the hon. member raised when my colleague the Minister of National Defence was before the committee is this. The regulations came into effect on March 23, but they came into effect only in respect of persons who made application after that date, so that if persons had been ordered to report before March 23 but had not in fact reported, those persons could, immediately after March 23, when the regulations came into effect, have made application on the ground that they were persons wholly or mainly employed in agriculture. Then they would have brought themselves under the regulations. If they did not make the application, then of course there was no way for the board to deal with their cases.

Mr. SENN: In that connection, what provision was made for acquainting these young men, at the time they were called up or any time subsequent to the passing of the order in council, that this course was open to them; and, if they were not aware of that course until they appeared before the boards, were they made acquainted with it then? Is there any provision for that being done?

Mr. THORSON: This is one of those questions which involve difficulties. When you make changes in the law it takes a certain amount of time for everyone to become familiar with them. I believe a great deal of publicity was given to the changed policy as a result of the Prime Minister's statement in the house on March 24, and the manner in which the press carried that news. Indeed, if we are to believe the newspaper reports, a tremendous number of men flocked back to the farms. All the administrative boards were notified immediately of the amendments, and I think, by and large, as much publicity was given them as possible.

Mr. NICHOLSON: What date did you give your press statement?

Mr. THORSON: I did not issue my press release until April 17. I was absent in the west prior to that time for some days.

Mr. HANSON (York-Sunbury): As a matter of fact, there was not any notification given to each individual—

Mr. THORSON: Oh, no.

Mr. HANSON (York-Sunbury): —as he came up in answer to the call?

Mr. THORSON: Oh, no. Notifications were not sent to individuals.

Mr. HANSON (York-Sunbury): I did not say that. He was not told when he reported for duty that he had certain rights and what could bring him within those rights?

Mr. THORSON: I do not know what happened at the training centres.

Mr. MacINNIS: But would it make any difference whether he had been notified for an examination if on the 23rd of March, 1942, he was engaged wholly or mainly in agriculture? I have in mind paragraph (jj) of section 2 of order in council 2252. I assume that paragraph means what it says, and if it does it would not make any difference whether he had been notified before this went into effect or afterwards, if he was engaged wholly or mainly in agriculture.

Mr. THORSON: Subsection 5 of the same order in council requires a person who is wholly or mainly employed in agriculture to make an application. If he does not make application, how is he to get his postponement order until further notice? The board grants postponement orders until further notice only in respect of persons who have applications for them.

Mr. BLACKMORE: What would be the position of a young man who had been called from agriculture four or five months prior to the passing of this order in council of March 23, and would have been entitled to postponement of military service had the order in council been passed before he was called, but who has gone into the army, taken his training, and been detained for military service? What can that young man do in order to qualify for postponement of service? Is there any way in which he can get back to the farm?

Mr. THORSON: No; there is no way in which he can get back to agriculture, either permanently or indefinitely, unless the Department of National Defence lets him out.

Mr. HANSON (York-Sunbury): Then they do not let him out permanently.

Mr. THORSON: The Department of National Defence does not let him out permanently except in cases of discharge, the number of which is very limited.

I may be able to say something which will satisfy the hon. member for Lethbridge. The purpose of the regulations relating to the stabilization of employment in agriculture, 1942, was to prevent the agricultural situation in Canada from getting any worse than it was. In some parts of the country it was a good deal more serious than in other parts, agricultural labour having almost vanished from those districts. But it was felt that by and large across the country, Canada, from the point of view of its agricultural commitments as part of its war effort, could fill those commitments provided there was not any further undue strain on the ranks of agriculture. Therefore the essential purpose of the regulations was to prevent the agricultural situation in Canada from deteriorating from its then position. It was to make sure that there would be enough agricultural labour left on the farms to enable this country to carry out the agricultural objective of our war effort, namely, to raise as much in the way of essential food supplies for Britain and our other allies as could be transported overseas, and also enough to maintain the life of the nation. That was the essential purpose of the regulations.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. BLACKMORE: When the committee rose at six o'clock the minister was explaining to some extent what should be done with respect to a soldier who had been called up for training some months prior to March 23. He had made it clear that the regulations of that order did not apply to that soldier. Would he explain whether or not a soldier who had been called up, say four or five months prior to March 23 and had applied to the Minister of National Defence for consideration, which had been granted, would have to apply to the minister's department afterwards?

Mr. THORSON: This matter was dealt with quite extensively by the Minister of National Defence, and a number of questions have arisen out of the discussion that took place when that point was up for consideration.

When a man who has been called up under the national war service regulations reports to the training centre he is out of the jurisdiction of the Department of National War Services and is subject to the jurisdiction of the Department of National Defence. On March 12 of this year order in council P.C. 1916 was passed, by way of amendment to the reserve army (special) regulations of 1941. Under section 23 of these regulations as amended, provision is made for an application for leave being made by the R recruit, as he is termed. He makes that application to his commanding officer, in writing, showing the reasons and facts upon which it is based,

together with statements corroborating the facts made by statutory declaration or attestation under oath. The commanding officer forwards the recommendation to the district officer commanding. The district officer commanding may forward the application, with whatever recommendation or representation he may see fit, to the appropriate national war services board. It is not obligatory upon the district officer commanding to forward the application for leave to the national war services board. The reason for not making it mandatory for the district officer commanding to forward the application is to discourage frivolous applications. I think hon. members can rest assured that every bona fide application, every application with merit in it, will be referred by the district officer commanding to the national war services board.

The reason why this arrangement was arrived at was, in the main, to secure uniformity of treatment in dealing with applications for leave coming from persons who were soldiers by reason of the fact that they had reported to a training centre and were subject to the jurisdiction of the Department of National Defence. In the regulation that I have cited, No. 23 of the reserve army (special) regulations of 1941, referred to in order in council P.C. 1916, it is provided that leave may be granted upon such circumstances, reasons or grounds being established as would have entitled the applicant when called out *ab initio* to postponement before the commencement of his training. The idea was that the district officer commanding would forward these applications for leave to the national war services board, and the national war services board would deal with these applications for leave upon the same circumstances, reasons and grounds as would govern the board in dealing with an application for postponement of military training. That was the purpose, to get uniformity.

The boards hear these applications. They may investigate the case and, after a review or rehearing thereof, may make recommendations to the district officer commanding. On receiving a recommendation of the board the district officer commanding will grant leave for the period recommended by the board. It is mandatory upon the district officer commanding to grant the leave in accordance with the recommendation of the board. That, of course, is subject to the exigencies of the military situation, which might require that that leave be curtailed or refused. Apart from that, the recommendation made by the board is binding upon the military authorities.

[Mr. Thorson.]

Mr. BROOKS: What is the effect of the recommendation of the commanding officer? Why is it asked for?

Mr. THORSON: I suppose it is asked for in the ordinary run of procedure. The man makes his application for leave to his own commanding officer in the training centre or whatever unit he is attached to, and his application goes to the district officer commanding.

Mr. BROOKS: Does the minister not think it is the policy to follow the recommendation of the commanding officer rather than of this board? Is not that what is developing?

Mr. THORSON: There have been two schools of thought on the subject. It has been thought that since the man is a soldier he should be dealt with in the ordinary way as a soldier, make his application for leave to his commanding officer and let his commanding officer determine the granting or refusing of the application. But it was represented that in connection with these applications for leave made by R recruits, the Department of National Defence did not have the machinery for dealing with them in a uniform way across the country, whereas the national war services boards have had long experience in hearing applications and, knowing the conditions in the districts from which the young men come, perhaps would be better able to deal with the applications from the point of view of the national interest. I should point out, of course, that these applications for leave may come from the R recruit at any time within three months after he is enrolled and commences training. If he has been at the training centre for longer than three months, these regulations do not apply to his application. That is the explanation of the regulations.

Mr. BROOKS: I do not want to interrupt unduly, but does the minister not think this places too much responsibility on a commanding officer, who has men under him from all over the district? He does not know the particulars, except as they are presented to him in affidavits by people in certain sections of the district or province, and he has to make his recommendation to the district officer commanding. There should be a more thorough investigation by the board, and perhaps the commanding officer should not be asked for his recommendation. That is the point I was making, that he might simply forward the application to the board and let it make a more thorough investigation than he is capable of making. I think in most cases the recommendations of the commanding officers

are being accepted, and those recommendations are made without knowledge of all the facts.

Mr. THORSON: There may be some merit in the suggestion of the hon. member for Royal. The officer commanding must transmit the application to the district officer commanding.

Mr. WEIR: Just on that point, this R recruit may have been enrolled, say in military district No. 10, but before completing his three months training he may be moved to another military district, where he makes his application for leave. Which officer deals with his application, and to which board of review is it referred?

Mr. THORSON: That question has been the subject of some discussion as between the various chairmen. It was the general view that the application for leave should go to the division which called up the man, because that is where his registration card and file would be, and where the board would know about his individual case. But the general opinion, I think, is that the application might well be referred in the first instance to the board in the district in which the man actually is located, so that the applicant for leave may appear before that board in person and make his representations. Then, if that board is perfectly satisfied that the application is in order, it may grant the application in order to speed things up. If, on the other hand, it is not completely satisfied that the grounds for the application are sound, it can refer the application to the division which called up the man in the first instance, in order to get information which is on that man's file in the administrative division which handled his first call up. I think it is working out not too badly.

Mr. McIVOR: I know the standard of morality is higher now than it was in the last war, but human nature is still human nature, and so I should like to ask the minister if there is any opportunity for an advocate to go before a board in order to plead the case of a young man and get him off for a fee. That was the case in the last war, and I think it should be guarded against.

Mr. THORSON: Section 16 deals with the point raised by the hon. member. That section provides:

> All hearings of the boards shall be in camera, and no person shall be entitled to be represented by council, advocate or solicitor—

Mr. SENN: If the minister has completed his statement—

Mr. THORSON: No, I have not. I have only started.

Mr. SENN: I wanted to make a few general observations about a matter which I think is of great importance, but if the minister would prefer to have me wait I shall do so. I thought that when he sat down he had completed his statement, as such.

Mr. THORSON: If the hon. member for Haldimand does not mind, I did intend to go on with my general statement.

Mr. SENN: I do not want to interfere with that.

Mr. THORSON: Then that might become the basis for such questions as hon. members might care to put.

Mr. ROSS (Souris): While the minister is dealing with the call-ups, would he explain how the quotas are arrived at in the various military districts? In some districts young men from twenty-one to thirty are called up, while in others young men over the age of twenty-five are not called up. How are these quotas arrived at, or how are the different ages fixed?

Mr. THORSON: My understanding is that the Department of National Defence makes its requisition, which it breaks down into administrative divisions on the basis of population. But the reserve of man-power available for call for military training may vary in the different districts by reason of factors of one kind and another. For example, there would be a smaller reserve of man-power available for the purposes of these regulations in areas contiguous to districts where there are large concentrations of war industries. That is one illustration. Then areas in which voluntary enlistments have been greater than in other areas also would show a smaller reserve of man-power available for call under these regulations. Another factor that is going to be of some consequence will result from the recent regulations relating to persons wholly or mainly employed in agriculture. When we have had some experience in the application of these regulations we shall be in a better position to rearrange the basis for setting the separate quotas in the thirteen different administrative divisions, in the light of the knowledge that we shall have as to the reserves that are available for call under these regulations. It is true that there is at present an unevenness. We are making greater inroads on the reserves in some administrative divisions than in others.

Mr. MacINNIS: How has that worked out in the last call made for men. I understand that in military district No. 3 the men called

are in older age groups than those called up in some of the other districts. Has the minister the figures for the various districts, on the basis of the last call?

Mr. THORSON: No; I do not think I can get those figures for my hon. friend. It will also have the complicating factor of the recent regulations regulating persons wholly or mainly employed in agriculture. I think when we have had the experience of the application of those regulations we shall be in a better position to review the reserves left.

Mr. MacINNIS: Is there any uniformity in the method as it is applied? I understand that we began with the 21-year olds, and then went up to 24 and 25. When they have been called up, do we take the 26- and 27-year olds, until we have completed the list, or is there some other way of doing it?

Mr. THORSON: Up to the present time the system has been to take the youngest age group, and to go through that group before going into the next one. That is, the men are called by age groups according to juniority of age. The hon. member for Vancouver East will recall the Prime Minister's statement of March 24 that we intend to change that method of calling men, and to make the call applicable to all the men in all the age groups covered by the proclamation. That is to be done by a system of drawing by lot. Back of that is the view that that would be a more equitable manner of making the call. At present all men up to 30 years of age are covered by the proclamation, and are liable to call. It is now proposed to call these men by lots, and all the men in all the age groups subject to the proclamation will take their chances in the draw. The new system will come into effect as soon as the administrative arrangements can be worked out. As soon as such arrangements are worked out I shall make a detailed announcement with regard to the new method of calling men by lot rather than by age groups.

Mr. DUPUIS: Does that include farmers' sons?

Mr. THORSON: The position of men wholly or mainly employed in agriculture, within the meaning of the definition in the recent regulations, will be the same as it is now. That is, they will have to pay attention to the notices to report for medical examination. When they receive those notices they will have the right, if they wish to exercise it, of applying for a postponement order on the ground that they are wholly or mainly employed in agriculture within the meaning of the regulations. It is mandatory upon the board to grant these postponement orders until further notice, unless the board is satisfied that the man is not essential to agriculture.

I stated this afternoon that I had issued a press release relating to this very subject, in which I had pointed out the fundamental change that has taken place with regard to the regulations, so far as they concern persons who are wholly or mainly engaged in agriculture. I suggested to hon. members that they should read this press release with care, and that perhaps at a later date when I shall be before the committee again they might ask such questions as they may wish.

Perhaps at this juncture, since the subject has been raised, I should make special reference to two paragraphs in the press release of April 17. I said this:

> There has therefore been a fundamental change of base in the regulations. It is not a question of greater latitude having been given to the boards in the matter of granting postponement orders, nor is it a matter of preferential treatment. The amendments go much further, and constitute a fundamental change of approach, both by the applicant and by the board. When the applicant has shown that he is a person wholly or mainly employed or engaged in agriculture within the meaning of the amended regulations he is prima facie entitled to a postponement order until further notice. He does not have to prove, as was the case formerly, a special case for postponement of a fixed duration.

Then I went on to say:

> The fundamental change in the character of the amended regulations may be stated as follows: under the regulations as they stood prior to the amendments, the applicant had to make out a special case for postponement. The granting of a postponement order was within the discretion of the board, and the postponement order was only for a fixed period of time. The applicant was still regarded as being a person primarily required for compulsory military training, when his period of postponement was concluded.
>
> Under the amended regulations the situation is entirely changed. When the applicant has shown that he is a person wholly or mainly employed in agriculture, within the meaning of the amended regulations, it is mandatory upon the board, subject to the exceptions hereinafter mentioned, to grant the postponement order.

That is, the board must do so.

> Furthermore, the postponement order is until further notice, and it constitutes an allocation of the applicant to agriculture rather than to military service.

That is what I mean by saying that there was a shift of base.

Mr. DOUGLAS (Weyburn): What does the minister mean when he says the board must do it? The board is both judge and jury?

Mr. THORSON: It is mandatory in the regulations. The regulations impose the duty upon the board unless, as I pointed out, the board is satisfied either that the applicant is not an essential worker in agriculture or that the applicant has at any time subsequent to March 23 ceased to be actually employed or engaged in agriculture or in primary industry.

Mr. DOUGLAS (Weyburn): There is no appeal from the board; the board is both judge and jury; it has only to satisfy itself.

Mr. THORSON: The board carries out the regulations.

Mr. MacINNIS: In the calling up of men for the next draft will the men who were called up for the thirty-day period and who have gone back to their employment be subject to call before the older age groups are reached?

Mr. THORSON: In the case of each requisition the Department of National Defence specifies the number of new men who are to be called up; that is, those who have not had any military training, and the number of men who have had thirty days training, who are to be recalled.

Mr. MacINNIS: I have a particular reason for raising this point at this time. A few days ago I had a wire from a young man in Vancouver, a labour organizer who was organizing the employees in a government industry in that city. I brought up this matter in this house. He was born in 1912 and consequently is in the thirty-year age group. Application was made or was about to be made to a conciliation board. A day or so following that, he was visited in his hotel by two detectives of the Royal Canadian Mounted Police who asked to see his registration card. He showed his card and they went away. He then got in touch with me and told me that he had a hunch that this was a prelude to calling him up for active service. He told me that he was in the thirty-year group and that there were lots of younger men who had not been called up. He told me that he would not be surprised if he received a call in a few days. His hunch was right, for in a few days he was told to report for service. There is this peculiar fact. This man was not registered in Vancouver; he was registered in Toronto which was and still is his home address.

The government will have to make out a good case to satisfy me in this instance. They should find some better way of opposing organized labour, or they should find some better way of showing their good faith in the principles of P.C. 2685 and not go about picking up a labour organizer and forcing him into the army. When this man's proper time comes and he is taken up in the regular way, he has no kick nor have I, but to take him now just because he is trying to organize the workers in a government-owned plant is not just playing the game.

Mr. THORSON: I would not accept the statement that the government or the board went out of its way to pick up this man in advance of his time. If the hon. member will give me the particulars I shall be glad to make inquiry into the matter. I think that the new system when it goes into effect—

Mr. MacINNIS: The new system is not yet in effect.

Mr. THORSON: It will be very soon. When it goes into effect everyone who is subject to the proclamation will be called up in the order in which his number is drawn. In that event there cannot possibly be any ground for complaint of the nature that my hon. friend has mentioned. If he will be good enough to give me the particulars of the case he has mentioned I shall be glad indeed to look into the circumstances.

Mr. MacINNIS: I shall give the minister the facts of the case. I drew the attention of the Minister of Justice (Mr. St. Laurent) to the case, and he was good enough to give me a full report on it. But that report does lead me to believe that the powers were anxious to get this man out of the way.

Mr. NICHOLSON: I do not think the question asked by the hon. member for Fort William (Mr. McIvor) was answered to the satisfaction of all hon. members. On April 21 I drew the attention of the minister to a case in my constituency. A young man had applied for postponement through the regular channels, but it had not been granted. He then interviewed a lawyer in my constituency who is a strong supporter of the administration. For a consideration of $50 the lawyer agreed to handle the case. The man paid $25 cash and the remainder was to be paid when postponement was granted. The minister's reply of April 22 referred me to the section he quotes, and he concludes as follows:

> It is not at all necessary for a man called up for military training and service to go to a lawyer for advice, but if he does so, it is entirely a private matter between the man called up and the lawyer concerned—both as to the point of legal advice being sought and the understanding as to the fee to be paid for such advice.

I wrote to the minister again on April 28, as follows:

I understand that the young man in question made his representations to your board in the regular manner, and was unable to secure postponement. But he has been able to secure postponement after getting the services of a strong party supporter who received a $25 fee to commence representations and later received another $25 after postponement was granted.

As a result of the very serious abuses which developed during the last war, I feel that it is important that some department of government should be concerned about discouraging such procedure as I have outlined. I think you can understand that this sort of thing will have a very disturbing effect in families where applications for postponement have not been granted.

I should appreciate it if you would reconsider this question and inform me regarding your conclusions.

I have no idea how general this sort of thing is, but the minister should give us something more convincing than his letter to me of April 22.

Mr. THORSON: I have yet to hear that the members of the board in Saskatchewan are friends of the administration. I wish to point out to the hon. member that it is the board that grants applications for postponement, not the district registrar. The chairman of this board is Mr. Justice Embury, who is not known as a Liberal. One of the members is Mr. Carl Stewart, who certainly is not a Liberal, and the other member is Mr. George H. Bickerton, president of the United Farmers of Canada, Saskatchewan section. There is not a single Liberal on the board. My information from Mr. Justice Embury is that the board has been unanimous in dealing with the applications that have come before it. If the person to whom the hon. member has referred employed a lawyer, it was very foolish of him to do so because he need not have done it. He could have made his application which would have been heard by the board in both a judicial and sympathetic manner and considered in the light of all the facts. His case would have been considered by the board in Saskatchewan which is composed of the members I have mentioned, not one of whom is a friend of this administration politically.

Mr. NICHOLSON: The members of the committee will recall that I did not say a word about the members of the board.

Mr. THORSON: It is the members of the board who grant applications for postponement and nobody else.

Mr. DOUGLAS (Weyburn): It was the lawyer who got results.

[Mr. Nicholson.]

Mr. NICHOLSON: The minister has failed to grasp my point. This man applied through the regular machinery, through the board, and his application was refused. But after he retained the services of a lawyer who is a supporter of the administration, he was able to secure postponement. The point is that he was able to get the desired results by engaging counsel for $50, a counsel who is a supporter of the administration.

Mr. THORSON: What is the suggestion made by the hon. member? Is he attacking the integrity of the board that grants the application?

Mr. NICHOLSON: My letter of April 28 to the minister set out what I thought should be done. It is important that some department of government should be concerned about discouraging the sort of procedure I outlined in my letter. The minister's letter to me of April 22 indicates that his department is not concerned about that sort of procedure.

Mr. THORSON: We cannot stop a man from employing a lawyer if he wants to, but there is absolutely no necessity for anybody employing a lawyer in connection with an application for postponement.

Mr. NICHOLSON: But in this case he was not able to get a postponement until he engaged a lawyer and paid him his fee.

Mr. THORSON: He could have come and put his own case before the board.

Mr. HANSON (York-Sunbury): He did do that.

Mr. THORSON: It is a matter for the board to deal with in each case. If the man wants to employ a lawyer he may do so, but he does not have to.

Mr. NICHOLSON: The minister has not followed me. I stated that this man had already used the machinery provided by the government and had found that he was not granted a postponement.

Mr. DUPUIS: Was he refused a postponement.

Mr. NICHOLSON: Yes, and he then retained a lawyer, a supporter of the administration.

Mr. THORSON: What has that to do with the matter?

Mr. DOUGLAS (Weyburn): That is what we want to find out.

Mr. NICHOLSON: That is what I want to know. I should like to know whether the minister is concerned over this type of abuse

being allowed to develop in this country without some department of the government paying attention to it.

Mr. THORSON: If the person who was engaged was able to present new facts which had not occurred to the applicant, that is a matter for the applicant; but the fact that he engaged a Liberal lawyer, friendly to the administration, had no effect on the board that granted the application. Probably that was just proof of the fact that the lawyer was an assiduous digger after new facts to present to the board.

Mr. NICHOLSON: So the applicant would be better off if he had a lawyer?

Mr. HANSON (York-Sunbury): On behalf of my profession I ask the minister, how could a country boy, the son of a farmer, put into the form of a statutory declaration the facts that would carry conviction with the board without employing somebody skilled in that sort of thing to assist him?

Mr. THORSON: He can do so if he wishes to.

Mr. HANSON (York-Sunbury): Is it not almost a necessity that he should do so?

Mr. THORSON: Not at all.

Mr. HANSON (York-Sunbury): The regulations absolutely provide that the evidence must be submitted by statutory declaration.

Mr. THORSON: No.

Mr. HANSON (York-Sunbury): Then I misunderstood what the minister read.

Mr. THORSON: That was in connection with applications for leave.

Mr. HANSON (York-Sunbury): Then I was wrong and I withdraw the whole thing, but I suggest this to the minister, that while it is quite proper to keep lawyers out from before the board, a good lawyer, if he is an honest man—and most of them are—will tell the man what he should do and start him along the right road. I do not think the fact that the lawyer in Saskatchewan was a Liberal had anything to do with the board's decision, but the lawyer evidently knew what he was doing and collated the facts and presented them in such a manner that the board granted the application.

Mr. THORSON: I must say that the board acts in the most informal way possible. In connection with these new regulations, for example, the boards are adopting this procedure: When they send out the notice to report for medical examination, they also send out a questionnaire for the applicant to fill out. The boards deal with the majority of applications for postponement in the most informal way when they are satisfied that it is a bona fide case.

Mr. CASTLEDEN: When did they start that procedure?

Mr. THORSON: The procedure is of recent origin in connection with these amendments to which I have just referred, because the amendments themselves are of recent origin. But that would be the general procedure.

Mr. BROOKS: Judging from the number of applications approved, would the minister not say that the applicants have made out a pretty good case all over this dominion, and particularly in some sections?

Mr. THORSON: I think good cases have been made where the boards have granted postponement. Knowing the work the boards have done and the patience with which they have discharged their duties, I certainly do not wish to set myself up in judgment over the boards because I think that, by and large, they have done a very difficult job in a very judicial, sympathetic and understanding manner.

Mr. HANSON (York-Sunbury): I have said they are good boards.

Mr. THORSON: I think it is generally conceded that they are very good boards.

Mr. CASTLEDEN: Who is permitted to appear for an applicant?

Mr. THORSON: There is not any fixity about it. The boards can hear anybody who can give evidence relating to an application for postponement. If a person applies for postponement on the ground, for example, that he is essential to some war industry, someone connected with that plant can give evidence as to the facts. There is no fixity as to who may come and give evidence. The board has the power to find the facts.

Mr. CASTLEDEN: Have the boards the power to refuse permission to anyone to appear on behalf of an applicant?

Mr. THORSON: It is not so much a question of appearing on behalf of an applicant as of giving evidence or statements relating to the application.

Mr. MacNICOL: Can the minister give, by provinces, the number of applications made throughout Canada and the number granted?

Mr. THORSON: Yes. For the convenience of hon. members I might lay on the table certain documents relating to the operation of the regulations, and the results.

Mr. MacNICOL: Would the minister give the total?

Mr. THORSON: I can give the total.

Mr. DOUGLAS (Weyburn): Put the documents on *Hansard*.

Mr. MacNICOL: Yes; why not put them on *Hansard?*

Mr. HANSON (York-Sunbury): If they are not too long.

Mr. THORSON: I was going to suggest having them incorporated in an appendix to the *Votes and Proceedings*. There are quite a number of tables. They give the whole record of the operation of the national war service regulations up to date, and the results, and if I put them on record it would perhaps serve to reduce the number of questions that might be asked. The statistics will be found in the tables.

Mr. HANSON (York-Sunbury): Better put them on *Hansard*.

Mr. THORSON: If it is the desire of the committee I will put them on *Hansard*. The tables follow:

TABLE I

NUMBER OF MEN REQUISITIONED BY THE DEPARTMENT OF NATIONAL DEFENCE (ARMY) SINCE THE INCEPTION OF THE FOUR MONTHS TRAINING PLAN, COVERING TRAINING PERIODS FROM MARCH 20, 1941, TO MARCH 12, 1942

Only Category "A" men are accepted by the Department of National Defence (Army)

Mr. DUPUIS: Does table VIII show the numbers by provinces?

Mr. THORSON: Not that particular return. All the other returns are by administrative divisions and by provinces.

Mr. DIEFENBAKER: Would the minister allow a question? One set of statistics apparently is omitted—how many called failed to report.

Mr. THORSON: I can put that on *Hansard* as well. It is a statement of men unaccounted for since the beginning of operations up to March 31, 1942, by administrative divisions and by provinces. The total of such men, according to this statement, is 11,568 since the beginning of operation of the regulations.

Mr. HANSON (York-Sunbury): What percentage would that be of the total called?

Mr. THORSON: The total number of persons to whom medical notices were sent out in the course of that period of time was 311,825. The percentages can be worked out from that. But this figure is subject to certain observations. A good many of the men who are included in this list have enlisted.

Mr. HANSON (York-Sunbury): They would be accounted for if they had enlisted.

Mr. THORSON: They have not been accounted for yet. I am giving that just by way of illustration. We keep these lists of persons who have not reported circulating continuously throughout the thirteen administrative divisions, with a continuous follow-up. We send them continuously to the three national defence departments. Recently one of these lists came back from one of the divisions; it contained 244 names, and it was reported back that sixty-five of these persons had enlisted. It is a rule that when a person is reported as not having given attention to the notice to report for medical examination, a list of such persons is turned over to the police for investigation. I can assure my hon. friend that every effort is being made to run these persons down and follow up the cases of persons who have failed to report. When I speak of this list as being a list of men unaccounted for, I might by a stretch of language describe them perhaps as possible delinquents. But the reality of delinquency is very much less. The observations and general opinion of the mounted police are that real delinquents are not much over 1 per cent.

Mr. HANSON (York-Sunbury): How many convictions have there been?

Mr. THORSON: I find the number of convictions in one of the tables. They total 242. That table is included in the list I mentioned a moment ago. The record of delinquency is a record of comparatively small numbers, and we are anxious that the number should be as small as possible.

Mr. McGARRY: With regard to the privileges granted to farmers, providing special postponement or exemption, how does that apply to the young man who is engaged partly in farming and partly in fishing? Does the same regulation apply in such a case?

Mr. THORSON: Before dealing with that question may I point out that another ground for unaccountability is changes of address and movement from one part of the country to another. But gradually we pick those people up.

Mr. DOUGLAS (Weyburn): Would the minister give those by provinces?

Mr. THORSON: They are given by provinces.

Mr. DOUGLAS (Weyburn): Will the table be put on record?

Mr. THORSON: Yes. The table is as follows:

Men unaccounted for (possible delinquents) since the beginning of operations up to March 31, 1942.

Province	Administrative Divisions	No. of Men	
Ontario	A	762	
	B	1,141	
	C	411	
	D	244	
			2,558
Quebec	E	1,577	
	F	3,309	
			4,886
Nova Scotia	G		123
New Brunswick	H		40
Prince Edward Island	I		46
Manitoba	J		780
British Columbia	K		1,406
Saskatchewan	M		240
Alberta	N		1,489
			11,568

Mr. DIEFENBAKER: The minister says there are 11,568 missing, or possible delinquents. How many of those in that class have actually been picked up; and of those picked up, how many have been prosecuted? It is important to know the degree of enforcement that is taking place.

Mr. THORSON: All who were picked up and who were possible delinquents have been prosecuted. With regard to persons who have been located in various ways who previously had not reported for medical examination when they were called up, it is not possible to give the figures. But a standing order is given to the divisional registrars with each requisition that goes out to them saying that they are to call up men who have been located in their divisions who had been reported to them as not having paid attention to the notice to report for medical examination. There is a continuous effort to locate those men and bring them in. We look upon our job in the department as having for its purpose the putting of men in training centres rather than in gaol. I should be glad if any cases of possible delinquency were brought to my attention, because I am as deeply concerned as I can possibly be—and I am sure my officers share the same view—that these regulations, dealing as they do with human lives, should be administered with the utmost integrity. I would welcome any information or particulars coming from any source as to failure to report either for the medical examination or to the training centres.

Mr. MacINNIS: In view of the fact that the minister just now made a point that these regulations should be administered with the utmost integrity and care, I think insufficient attention is paid to the principle involved in the case that was raised by the hon. member for Mackenzie. This is not merely that the man engaged a lawyer and got his exemption; it goes much deeper than that.

Mr. THORSON: Does my friend know anything about the facts of that case?

Mr. MacINNIS: No, not at all, but I have no doubt that the hon. member for Mackenzie knows all the facts, and evidently he has put them before the minister before bringing them up in the committee. I do not think the facts in the matter are disputed.

Mr. THORSON: They apparently were disputed.

Mr. MacINNIS: Besides that, the minister knows what happened in Saskatchewan during the last war, when lawyers followed like vultures the men who were called up—

Some hon. MEMBERS: Oh, oh.

Mr. HANSON (York-Sunbury): I never heard of such things.

Mr. MacINNIS: All right. Our lawyer friends have started now. Would it not be possible to have the regulations provide that no one could appear for an applicant? My attention is drawn to the fact that no one is supposed to appear now. Section 16 states:

(1) All hearings of the board shall be in camera and no person shall be entitled to be represented by counsel, advocate or solicitor: Provided that at hearings of the board the representative of the Department of National Defence, the representative of the national war labour board, a representative of agriculture and a representative of the director of national selectiye service shall be entitled to be present and to make such representations as they may deem fit.

(2) The board shall consider all applications and the decision of the board shall be final and conclusive and binding upon all concerned.

That does not fit in with the statement of the minister that counsel could appear.

Mr. THORSON: I said that counsel could not appear.

Mr. MacINNIS: Did the minister not also say that if a man wanted to pay somebody $25 to put other facts before the board, which the man did not place before the board himself—

Mr. THORSON: Counsel cannot appear on behalf of the man.

Mr. MacINNIS: Then how is he going to place facts before the board?

Mr. THORSON: He can write.

Mr. MacINNIS: That is quibbling with words. Surely, if a person is allowed to write a letter, he is making representations. It does not matter how he makes those representations; he is appearing before the board, unless it is specifically stated that he cannot appear by writing. The point is that this man evidently had $50 with which to pay a lawyer.

Mr. DUPUIS: He is free to do that.

Mr. MacINNIS: Quite so, but supposing he has not the $50? He is free also not to have it, in which case his application will not receive the same hearing. Evidently that is what happened. If a person can stipulate that he is to receive $50 for pleading a man's cause, then he may stipulate that he shall receive $100 or $500, and it will depend upon how much money a man has and how much he is willing to pay. I submit that the spirit of section 16 should be carried into effect—

Mr. THORSON: It is.

Mr. MacINNIS: —and that no one should be allowed to appear in any way for an applicant; that is, as solicitor or lawyer. A boy's father could appear; an employer could appear to state the functions being performed by a person in that particular industry, but certainly the principle is wrong that a solicitor may appear and charge a fee for appearing on behalf of an applicant. If that is to be allowed, it would be much better for the government to employ its own counsel in each particular district.

Mr. THORSON: I must reply to the hon. member for Inverness-Richmond, who has been waiting patiently for an answer to a question he asked some time ago. He asked what would be the position with regard to the case of a person who was a farmer and a fisherman. I should point out to the hon. member that the term, "person wholly or mainly employed in agriculture" includes two classes of persons. In the first place it means:

. . . any person who, on the 23rd day of March, 1942, was wholly or mainly employed or engaged in agriculture . . .

It also includes:

. . . any person who, on the said 23rd day of March, 1942, was employed or engaged, but only seasonally, in a primary industry but whose last employment or occupation immediately prior to such seasonal employment or engagement in a primary industry was wholly or mainly in agriculture.

Everyone knows that there are a great many people whose basic occupation is farming but who, in the fall and winter, may engage in a primary occupation such as lumbering, forestry, fishing or trapping. The term "primary industry" is also defined in the regulations, so

that if this man was in the main a farmer and in winter time was a fisherman, he would be covered by these regulations, on the ground that these primary temporary occupations are really carried on by the man in conjunction with his occupation, as being wholly or mainly employed in agriculture.

Mr. HANSON (York-Sunbury): How about this case? In the bay of Fundy, where the tide ebbs and flows twice in twenty-four hours, many of the fishermen own and fish what are known as weirs for sardines. These men live on the land. In the summer they are engaged in fishing for half the time and in farming the other half. Surely these men would be classified as farmers, which I think would be the proper classification for them, and surely they would be exempt.

Mr. THORSON: I should think in the main they would be. The persons whom I was attempting to describe were those only seasonally employed in a primary industry. The person described by the leader of the opposition is a man who is perhaps a farmer all the year round, and during the summer he is a fisherman.

Mr. HANSON (York-Sunbury): He is a fisherman the whole year round, and a farmer in the summer.

Mr. THORSON: In such a case it becomes a question of fact, and I do not think I should go any further than to say that the circumstances in each case would be looked into, all the facts being taken into consideration.

Mr. HOWDEN: I have a case in point, in connection with which I was going to ask the minister a question. This man is undoubtedly a farmer, has done nothing else all his life, has done it all the time, but I have reason to believe that on March 23 he was in a training camp. Would he be eligible for postponement, under those circumstances?

Mr. THORSON: No. He is in the army, and he is not covered by the regulations to which I have been referring. I indicated that the purpose of these regulations was to prevent the agricultural situation in Canada from deteriorating beyond its then position. The only persons who are covered by these amendments are those who, on March 23, 1942, were wholly or mainly employed in agriculture, within the meaning of the regulations, or primary industries as being incidental to agriculture. If one might use rather loose phraseology, those are the persons who are frozen in agriculture, in order to prevent agriculture from deteriorating beyond its then position, and it is only the persons who were frozen in agriculture and who remain in agriculture who come within the ambit of these amendments.

Mr. HOWDEN: In other words, they must have been employed in agriculture on March 23 in order to come under these regulations?

Mr. THORSON: Yes.

Mr. DUPUIS: In reference to the remarks of the hon. member for Vancouver East with regard to the employment of lawyers, although the regulation states that it is forbidden to do so—

Mr. DOUGLAS (Weyburn): He is not forbidden to hire a lawyer; that is what we are objecting to. The lawyer cannot appear in person.

Mr. DUPUIS: He is not allowed to appear.

Mr. DOUGLAS (Weyburn): That is correct.

Mr. DUPUIS: I have had experience not only as a member but also as a lawyer. Although it is easy to reach the board, the recruit does not usually know how to approach it in the proper way. Of course the board would tell him to make a sworn declaration stating the facts which would plead on his behalf to obtain postponement. Generally speaking, however, those recruits prefer to see their members or their lawyers in order to have a draft declaration prepared, and to study the law as it stands to-day, so that in the declaration all the facts relating to the postponement may be set out. My experience has shown me that if the farmer's son makes his own declaration, he may forget the main point which would bring about his postponement.

For instance, it is pointed out that if the father is sick and has only one son. it is necessary that the recruit bring a doctor's certificate. In practice, however, that does not suffice; he has to bring a sworn declaration from the doctor. All these facts lead me to the belief that it is much wiser for a recruit to consult not necessarily a lawyer but certainly some educated person such as a minister of the church, a notary or a member of parliament, who may draft his declaration. Under those circumstances he would certainly have a greater chance of obtaining some consideration—although he has not much chance.

I have had many experiences, because I have helped all those who have come to my office to draft declarations. I have told them what to do. I can say, however, that not many of them received postponements. I have in mind all those sons who before the

war were permitted and even encouraged by their parents to work in industry in neighbouring towns and cities. Since the beginning of the war those young people have worked in some war industries in the fall and winter months, so that they might earn a few dollars to help the father meet his mortgage payment, taxes and other necessary expenditures. Farmers' sons have always done that. But the interpretation of the law as it stands to-day is that if a farmer's son were working in a war industry on March 23, or working in any place other than a farm, he has lost his right to ask for postponement.

Mr. THORSON: Who said that?

Mr. DUPUIS: I was told that. This is why I should like to have an official answer. I have many individual names where, due to the fact that those farmers' sons were not on the farm on March 23, although they were primarily or mainly engaged in agriculture, they were refused postponements.

There is another point I should like to clear up. When the government announced its four-months programme for trainees it was stated that those men would train for only four months. As far as I am concerned—and I am sure many representatives of farming constituencies were in the same position—I thought sincerely that it was for a period of only four months. Not only did I encourage the young boys to go, but I tried to offer every possible argument to induce them to become acquainted with military exercises and orders. I told them that their training was very important; that we were in a war; that it was our duty to do whatever we could do, and to be ready whenever—God forbid—we were invaded or had to defend our own homes.

But as soon as they were enlisted another declaration was made whereby these four-months trainees were informed that they would have to remain for the duration of the war. I know of many farmers' sons who were the only help on their fathers' farms in Quebec. Those were farms of 120, 200 or 300 acres, or arpents, as we call them. The father would be left alone in the fall and winter, when the young men chose to take their training. But at the end of four months the young men were kept at the camps, and the fathers were left alone—and they are still alone—to cultivate their farms.

I am one who believes that this war will not be won by soldiers with empty hands and empty stomachs. We have to produce food. We have to produce armaments and munitions not only for our own army but for the allied armies. I recall some observations in an address by Mr. Eric Knight, an Englishman who stated, among other things, "Well, gentlemen, in the morning you get your toast, with a square of butter which you very easily use at breakfast time. In England that square of butter is our ration for a whole week."

If it is true—and I believe it is—that the English and many other people are rationed to that point to-day, then I submit strongly that farmers should be permitted to produce not only the quantity necessary to permit the English people to have a proper ration, but that they should produce more and more, as do those men working in the dry docks who build more and more ships to carry the food necessary for those glorious and heroic people who are now the defenders of civilization, and who are now preventing the invaders from coming to our shores.

That is my conviction. I say that if there were those who did not make any request for postponements when the four-months system was announced, or when they were called to pass their medical examinations, those requests were not made because they believed that after four months they would be through with their training, and that they would have learned something which would help them in the defence of their country, if the need arose.

The minister has just announced a new policy whereby the men are to be chosen by lot. If a farmer's son is chosen, will he be bound to report to the training centre pending the decision of the board, or will he be permitted to remain on the farm with his parents?

Mr. THORSON: I have already answered the question put by the hon. member for Chambly-Rouville (Mr. Dupuis). The position of a person wholly or mainly employed in agriculture will be the same as it is now, notwithstanding the fact that the method of calling men will be by lot instead of by age groups. If his lot should come up and he should happen to be a person wholly or mainly employed in agriculture, he may under the regulations apply for a postponement on these grounds.

Mr. DUPUIS: But in the meantime he will stay at home?

Mr. THORSON: There has not been any call upon him up to this time. I hope I have made that clear to my hon. friend.

The hon. member raised two other questions. He referred to the man who was ordinarily a farmer but who on March 23 was working in a munitions plant. Sometimes I despair of trying to write press releases with precision that will cover all points that occur to me, because hon. members do not read

them. The point to which my hon. friend refers is covered by the press release. These persons are in exactly the same position as they were before the regulations were amended. If any one of such persons could make out a sound case for the postponement of his military training when he receives notice to report for medical examination, he can still do so. His position is no worse and no better than it was before. He is not deprived of his right to apply for postponement. If his case merits ordinary postponement, ordinary postponement will be granted, but it will be a postponement for a fixed period of time, subject to extension if the circumstances warrant.

The other point raised by my hon. friend had to do with those persons who were called up for four months but who expected that when they served their four months they would be permitted to return home to pursue their ordinary activities. Soon after the four months' period was put into effect the Minister of National Defence announced that when these men had finished their four months' training they would be held for service with the active army in Canada for the duration of the war. The minister made that statement on April 26, 1941. Prior to that time there had been two calls to report for four months, the first to report on March 20 and the second to report on April 17. Then came the announcement of the Minister of National Defence that these men would be held for the duration of the war.

The boards were instructed to visit the training centres. The boards dealt with the applications of all men who had been called up for four months' training without knowing that they would be held for the duration of the war and who wanted to place their cases before the boards. These cases were dealt with on the same basis by the boards as they would have dealt with applications for postponement if they had been made in the first instance before the men were ordered to report to the training centres. My understanding is that the various divisional boards made a thorough review of the cases of men who were called up on the understanding that they would be required for only four months' training, in advance of the announcement made by the Minister of National Defence that they would be held for the duration.

Mr. MacNICOL: Did the boards visit every camp?

Mr. THORSON: I would not go so far as to say every camp, but they reviewed the applications of those who wanted to make application for postponement and had been called up under these circumstances.

[Mr. Thorson.]

Mr. SENN: We have had considerable discussion to-night about postponements and the method to be adopted by young men who have been engaged in agriculture to get postponement and exemption. It seems to me that in all instances these young men have been endeavouring to do what they considered was in the best interests of the country and of their own particular occupation. This whole discussion has raised an important question. There are three main considerations which we must observe if we are to be successful in winning the war. The first one, of course, is the obtaining of young men for the active service forces and the other forces that are being created throughout the country. The second is the manufacture of munitions. The third, which I think is of equal importance, is the production of foodstuffs, not only for the people of Canada but for overseas as well.

A serious situation has arisen in the dominion in the form of a shortage of man-power for agriculture. Everyone realizes that we must have men to man our armed forces, but I am sure that everyone realizes equally that we must have foodstuffs in abundance. So serious has this shortage of man-power been throughout Canada that a great many farmers heard with considerable disappointment and some consternation the statement the other day by the Minister of National Defence that men could obtain leave from the units only on compassionate grounds and only in very exceptional circumstances.

That there is an acute shortage of man-power in agriculture throughout Canada, I think no one will seriously deny. In February and March a survey of agricultural conditions in Ontario was undertaken by the federation of agriculture assisted by the Ontario department of agriculture. Part of that survey was carried on in my own county and I understand it is now complete. I have under my hand a paper entitled "Preliminary report of Haldimand county farm survey." It gives some figures covering the first 108 farms that were surveyed in that county which I think are indicative of conditions that prevail throughout the sections of Ontario where mixed farming is carried on. There were 108 farms in the preliminary survey, and those 108 farms average 120 acres in extent. They have a population of 391 persons, but of those 391, only 143 were male adults, or an average of about 1·3 male adults per farm. Anyone who has very much knowledge of farming operations knows that is not sufficient man-power to enable such farms to produce as they should produce.

Moreover, it was shown that during 1941 at least one-third of the hired help on those farms left, either to enlist or to go to the cities and work in manufacturing industries of one kind or another. It was further shown that to-day there are at least forty-five men urgently required on those 108 farms. It was also stated by a number of farmers with insufficient help that production on those farms could be increased anywhere from 50 to 75 per cent if they had sufficient labour.

The average age of the male adults on those 108 farms was fifty-three years, which means that quite a percentage were anywhere from sixty-five to seventy years of age and over, and therefore not in a position to carry on farming operations as actively as younger men could do.

The survey also showed that wages since the beginning of the war had increased by 80 per cent, which makes it almost impossible for farmers to engage hired help of any kind, because farm prices have not increased nearly to the extent of price increases of other commodities.

I might give the committee one instance that came under my observation. It is my very next-door neighbour; I live on the farm myself. He is a young man, thirty-five years of age, with a wife and two children. He owns 150 acres of land and has a dairy herd, some twenty-five milch cows and a number of young cattle, besides other stock. He has been endeavouring since last fall to carry on operations on that farm alone, except for the assistance of his wife. The other day I found both him and his wife out in the field trying to get their seeding done, while the grandmother was looking after the children in the house. That is the condition which prevails in large areas of Ontario. I think it may safely be said that those conditions are somewhat general, particularly in those areas in Ontario in which mixed farming of one kind and another is being carried on, dairy production, the production of live stock, fruits, vegetables and so forth.

Mr. THORSON: In western Ontario particularly.

Mr. SENN: We will include western Ontario particularly. There are three causes for the present situation in regard to the lack of man-power on Canadian farms. The first cause I have already indicated, namely the exodus to the city of so much farm help and of so many farmers in areas mostly surrounding the large manufacturing cities, lured there by high wages and the shorter hours of labour than those which obtain on the farm at the present time. I may refer to that a little later.

The second great cause of the conditions that have arisen has been the voluntary system of enlisting. I hesitate to say that it has been an entire failure; I do not think it has. I would be reluctant to make such a statement because I honour more than words can tell the loyal young men and women who from a high sense of duty to their country and the empire have enlisted to fight its battles. I believe, however, that a cause of general disappointment has been the administration of the mobilization act as it exists to-day. The disappointment is that a system of selective service was not inaugurated immediately after registration was completed. I believe it would have been much better. The great majority of the Canadian people think it would have been much better, if our men and women had been placed in their proper categories, having regard to their qualifications for labour, and if the man-power of this country had been regimented and placed in the particular occupations for which they were best fitted. The voluntary system has been objectionable because it has taken from the farm many young men who were more usefully engaged in the production of foodstuffs than they could ever possibly be in either the active or the reserve army.

The third cause I would assign is the fact that a large number of young men have been taken from the farms to man the reserve army and the trainee camps.

The government undoubtedly have been aware of this increasing shortage of man-power on the farm. They have been warned about it on a great many occasions. About a year ago or a little earlier I had the honour to move in this house a motion, on going into supply, asking for a parity between farm prices and prices of other commodities. At that time I instanced clearly that there was a decided shortage of labour on the farm. I pointed out that farmers were unable to compete in the labour market with other industries. In making this presentation I was ably seconded by other hon. gentlemen such as the hon. member for Qu'Appelle, the hon. member for Lake Centre, and many others. But the government took no action whatever. As a matter of fact, the motion was voted down.

Again early this year the Canadian federation of agriculture met the government and laid certain facts before them. As reported in

the Ottawa *Journal* of January 28, 1942, Mr. Hannam, president of the Canadian federation of agriculture, had this to say:

> The challenge of increased production to agriculture could only be met:
>
> 1. If farmers are assured the fullest possible quota of skilled man-power "consistent with a balanced allotment of Canada's available man-power between the active forces, agriculture and industry";
>
> 2. If farmers are assured an income adequate to pay skilled help, maintain and increase farm equipment and increase herds and flocks;
>
> 3. If farmers are given guidance on production goals, looking ahead more than a year with the assurance that returns will enable them to meet the cost involved.

There he laid down three principles. First, we must have increased production, and we have from time to time been asked for increased production by the Minister of Agriculture and others representing the government. But if we are to have increased production, we must have skilled man-power on the farm in greater numbers than we now have it.

Second, we must have parity of prices because the disparity between prices of farm products and prices of other commodities lures men living on the farm into other industries in which they can find more lucrative employment. Third, Mr. Hannam mentioned that we must have leadership, direction as to the classes of commodities we should produce on the farm. I made that abundantly clear last year. The government have failed in their duty in this regard, that the farmers are not put in a position to know what it is necessary to produce either for export or for consumption within our country. We have a Department of Agriculture, and we have a board set up for the very purpose of studying problems of this kind and to give leadership because the farmers must know a considerable length of time ahead what is required of them, for they have to make their plans at least a year or more before the finished product comes on the market. Unless they are given leadership, which they have not had from the beginning of this war, it is impossible for them to carry on as they should be allowed to carry on and as they are willing to carry on if the opportunity presents itself.

A third occasion on which the government were warned of the situation was just the other day when the Ontario agricultural council came to Ottawa and interviewed members of the cabinet. The gentlemen on the Ontario agricultural council are representatives of the county councils—most of them rural councils—throughout the province, and they know very well the position in which agriculture is placed in Ontario. I listened to a part of their presentation; I have read their brief, and it seems to me that they presented a very strong case to the government and showed clearly that conditions were not as they should be and that the supply of labour on the farm at the present time is not adequate.

I want for a moment or two to refer to order in council P.C. 2252 and what is known as the freezing of farm labour on the farms as of March 23. I was very much interested indeed when the minister mentioned his press release of April 17. There is one sentence which I should like to read to the committee and comment upon:

> The essential purpose of these regulations is to prevent the agricultural situation in Canada from deteriorating beyond its present position and to enable the country to carry out the important food production aspect of its war effort.

From that it is clear that the minister realizes that the production of food is essential, but I do not agree with the idea that there is sufficient labour on the farms at the present time "to carry out the important food production aspect" of our war effort. In fact it seems to me that the laying down of the principle of stabilizing employment of men engaged in farm labour on March 23, while to a certain extent it helps the situation, is something like locking the stable after the horse has been stolen. Any action which the government took should have been taken much earlier. The minister has given enough figures to show that, under the situation as it exists, and with the shortage of farm labour, there are altogether too few people in Canada to increase production as they have been asked from time to time by the Minister of Agriculture to increase it. I fully realize that it is necessary that it should be increased, because the quotas of different classes of farm products have been enlarged owing to the agreements that were made with Great Britain this year, and I am sorry to say I fear greatly that Canada is going to fall short of its quotas unless some extra provision is made for farm labour at the present time or before the year is over.

I fully agree with what the president of the federation of agriculture stated, that the farmers should have a greater income if they are to be able to procure labour at all. The fact remains—I think it is generally true all over the dominion; at least it is in Ontario—that farm wages have risen very much more than the income from the products of the farm. One has only to travel through Ontario to see that there are farms lying idle at the present time. Many other farms have been

gradually going back to grass, and the farmers are living there and producing only enough to maintain themselves, because of that shortage of labour.

The farmers of Canada are just as loyal as any other class. They realize as keenly as any other class the danger in which this country stands and in which our liberties are at the present time. They are being asked, as I said before, to increase production. We do not need to have any fear that they will not produce to the limit of their capacity, but that capacity is definitely limited. It is limited by lack of man-power, a condition which in some measure is due to lack of policy on the part of the government at a time when it should have taken action.

Following the registration of 1940, immediate steps should have been taken to allocate man-power to the different branches of industry, including agriculture. Only by such a scheme could maximum production be secured and maintained and the ranks of our military forces filled as they should have been. I suggest to the minister that men are in the active service force and in the reserve army to-day who should never have left the farms; they would be of infinitely greater service to the cause of freedom and to the war effort were they producing necessary foodstuffs. I therefore urge the administration to act promptly and to act before it is too late and before our capacity to maintain our quota of foodstuffs becomes hopelessly demoralized and wholly unattainable.

I have nothing further to say. More consideration should be given to this topic and further efforts should be made on the part of the administration to supply a greater source of labour to the farmers of this province and of the dominion.

Mr. THORSON: The hon. member for Haldimand has in his usual able manner indicated the needs of agriculture in this country and the desirability of seeing that we can fulfil the agricultural commitments which are part of our war effort. Undoubtedly it is one of our war objectives to produce in Canada as much in the way of essential foodstuffs as can be transported to Britain and our other allies.

We feel that the fulfilment of that part of our war objective must be safeguarded. Each purpose of our war effort has its man-power requirements, and it is essential to safeguard the man-power requirements of the agricultural portion of our war effort programme. When we were studying the situation we were able to form an estimate that between August, 1940, and January, 1941, approximately 130,000 men had left agricultural production in order to go into some other field of activity. Others were of opinion that that estimate was too low and that the figure should be 160,000 men. Those men had left agriculture for other activities, as indicated by the hon. member for Haldimand. There had been a great rush from the farms into the cities to engage in war activity of one kind and another. There was also a very large drain on agriculture as the result of extensive voluntary enlistments.

There was also the lesser drain as the result of the calling up of men for military training It was felt that this drain should cease, if we were to fulfil our agricultural commitments. It was also felt that we would be able to fulfil our agricultural commitments by and large across the country if we prevented further undue drain of agricultural labour. That does not mean to say that the situation is wholly cured in every part of the country, but by and large we believe that this large scale allocation of labour to the essential purpose of the production of food will serve that purpose of our war effort and will safeguard its fulfilment. It may be that the production of a certain commodity will fall in one part of the country, but it will probably increase in another part. The areas that were hardest hit were areas like western Ontario and the territory contiguous to Montreal; indeed, all the milkshed areas contiguous to large cities or cities where there were large concentrations of war industries. In some of those areas the depletion of agriculture has been so great as to be quite serious. In other parts of Canada it is not so serious. All the facts that the hon. member for Haldimand referred to were, I believe, taken into account by the government in framing this policy. We decided that if we took the men who on March 23 were wholly or mainly employed in agriculture and in a sense "froze" them in agriculture, we would be allocating to the essential purpose of agricultural production practically adequate man-power, taking it by and large across the country. That was the case which was presented to us; that is some of the background of this policy, and those are some of the reasons for making this allocation of man-power to the essential purpose of agricultural production as part of our war effort.

Mr. SENN: Does the minister not think there is an element of unfairness in compelling men to stay on the farms at this time, where they are getting a comparatively low wage for long hours of labour, while men who left the farm prior to March 23 are in the cities enjoying much higher wages and shorter hours of labour? It seems to me that the government should make some provision to remunerate

men of that class for staying on the farm, whether it be by way of bonus or some other way. It seems to me only fair that something should be done to put those men on an equal basis with their brothers and cousins who have gone to the cities and are enjoying much higher wages.

Mr. THORSON: There is definitely that element of unfairness, I am free to admit. We did give some consideration to the question of a bonus, but it was felt that it would be almost impossible to work out any kind of bonus scheme that would be at all adequate. If you fixed a certain amount, in one part of the country it would be a pure gift; it would be much too high. On the other hand, in some areas that I have particularly mentioned, if a bonus were paid to farm labour to keep men on the land or attract them to the land, it would not be enough to counterbalance the superior attractions of high wages that would pull men from the farms into war industries.

But there were some other factors involved in the consideration of the whole question, one being that to a certain extent the drain from the farms into war industries was coming to an end. Then there is the exceedingly difficult, if not impossible, conception of equality of sacrifice in time of war. I do not think there can be equality of sacrifice and maximum effectiveness at the same time. What equality of sacrifice is possible between the airman whose days may be numbered from the day he enlists and the man who works in a munition plant or on the farm? What equality of sacrifice is there between the soldier, sailor or airman who offers his life, and the person who does absolutely essential war service? You can perhaps have equality of contribution to the effectiveness of the war effort; I do not think you can have equality of sacrifice.

Mr. BROOKS: There is not even equality of pay.

Mr. THORSON: No. But there is a difference between equality of contribution to the effectiveness of the war effort and equality of sacrifice. I cannot think of any scheme that can bring about equality of sacrifice in time of war and at the same time make for maximum effectiveness. There is not equality of remuneration or reward either. There is no equality of remuneration between the soldier, sailor or airman, and the young man who works in a war industry at a high rate of pay; or between the man in the war industry and the man on the farm who has his difficult task to perform. They are all essential to the effectivenes of the war effort, but there is not equality of remuneration and there is not equality of reward. The man who enlists voluntarily has his own remuneration and his own reward. It is inside him. He knows that he answered the call of his country when the call came. When this conflict is all over he will remember, even if everyone else has forgotten, that he answered when the call came. That is his reward, and that reward cannot go to anyone except the volunteer. So these conceptions of equality of sacrifice and equality of remuneration are easy to talk about, but the thing with which I am sure every hon. member is concerned is maximum effectiveness, even though that has to be achieved at the expense of such things as equality of sacrifice.

Mr. CHURCH: I have seen the operation of this act and these regulations in Toronto and district, the main recruiting city of this dominion, and in my opinion the act and the regulations have been weighed in the balance and found wanting. I would point out that conditions have changed a great deal since the last war. With this act and all the rules and regulations with regard to delinquents, postponements and so on, I do not know how you are going to get an army, at least in Ontario. The farmers did not object when their sons voluntarily went into the air force or the navy. Both those services have long waiting lists, and it is only the army that has had trouble in getting recruits under this cumbersome system. That is not the fault of the minister; it is the result of the system. I took the same ground previously, before the minister was in charge of the department, and objected strongly to this act. These boards are headed mostly by judges; but if courts took as long to choose twelve jurors as these boards require to get twelve soldiers, the jury system would have been abolished long ago.

To those who represent farming constituencies I say that Ontario is taking action. I think almost 30 per cent of those attending the secondary schools of Toronto have gone on the farms already. The other night I handed the minister a thirty-six page extract from a *Hansard* debate in the British House of Commons concerning women in the old country, where they are doing a great deal of farm work, and in which regard they are far ahead of us in this country. These boards meet; they receive applications, and business is conducted as in a court of law. With the way they meet, and all the postponements that are granted, I do not know how you are going to get very many men into the army. How are we going to fight Hitler, in his third spring offensive, when we have

all this trouble in getting an army in Ontario and the other provinces, with all the clamour and agitation going on for postponements and exemptions? Everyone wants somebody else to go into the army and fight for them.

Large numbers of boys from the farms of Ontario have gone to the cities and towns, where they are working in munitions plants. They will not work on the farms. I was talking to one of the judges who preside over these exemption boards, and he said that something should be done. In some cases two or three sons have gone to the city from one farm. Even high school boys in huge numbers have gladly gone from the city to the farm, although they can make five times more in munitions work than they can on the farms, and as a result we have not the number of men on the farms that we need, although the city help has gone to assist them. The whole system under this mobilization act is wrong; it is too cumbersome and too circuitous, costly and inefficient. We never should have introduced it. The old method of recruiting was better. No wonder the military authorities are complaining. We could have had a million men under the voluntary system, but recruiting was not given a chance with it, on again, off again, on again, just according to the season. The sources of recruits for the army, which is the only service to which this act applies, were dried right up from the start with all the postponements, evasions and antiquated methods, and the way the recruiting under the voluntary system was handled. Canada is lagging away behind, as far as the army goes. The lack of one division of infantry to oppose Japanese infiltration brought about the loss of Singapore. It was the old simple system that took that island; the rifle, the bayonet, the machine gun, the tommy gun, and especially the infiltration of the infantry led to that great disaster. In Australia they are handling the farm and army situation better than we are, though they had a hundred thousand men overseas, and though they lost many men in Crete, Greece and Libya. If Hitler should appear off our coast or in the St. Lawrence, or if we should be invaded by the Japanese, we would hear less talk about these exemptions.

These boards move in a mysterious way their wonders to perform. They meet; they postpone; they talk, and as I have said, I wonder that we got as many men in the army as we did. Recruits are needed; that is primary, not secondary. Men are needed in the army, and you are not going to get them by going about it in this way. In my opinion the entire act should be repealed and abolished. We have three war departments, and we never should have divided them up. They should be reunited in one department, because this separation has led to untold waste, duplication, and the spending of a mint of money. Even in the Department of National War Services, think of the number of forms and stationery and the amount of waste-paper. I do not know how many vaults are needed to house it all, but in Toronto I have seen the billboards, the advertisements, the literature and all the rest of it. In spite of all that the act has been a complete failure and, in my opinion, should be repealed. We should go back to the old system. If we had the three departments brought together again, I am sure we would bring about greater efficiency and economy, because we need action and time is most important since we were an unmilitary dominion.

I do not know how we are going to get the men we need for our army this year. The enemy are at the front door, the back door, the side door and all the other doors, but our men are not going into the army. They shun it for the air force and navy. I think we should have a better, more simple and modern system. I have some sympathy for the minister. I am not unfriendly toward him. Perhaps he has done the best he could, but I think the system is altogether wrong. The minister might evolve a better system which would get far better, surer and quicker results than have been obtained so far. I have seen the operation of this act in the city of Toronto, and I say we are not getting the recruits. One employer may say, "I need this key man." The answer is, "well, we will try to get you a postponement." Probably the man sees his member of parliament or some city official; they see the board, and action to aid a postponement is taken accordingly. How are we going to get the men? We are now more than half through the third year of the war, and the situation is not as it should be in regard to recruiting. No wonder voluntary enlistments have fallen down. They have none of this trouble in the navy and the air force, as I have said; we hear very little from the farmers in opposition to their sons going into those services, and there is no demand for postponement there.

In my opinion this farm situation is largely a provincial rather than a federal matter. Agriculture is something in regard to which there is concurrent jurisdiction between federal and provincial authority, but in war time a great deal of the farm work should be gone into and controlled by the provinces. I believe the first duty of a citizen is to defend his country and the defence of the

realm, and, if necessary, to leave his farm, his business, or his job. I admire what the farmers of this country have done. During the last war many boys from the finest farms of Ontario went to the war without coaxing; they have done the same in this war, and many do not want to farm and stay at home.

Mr. GREEN: As I understood the minister's explanation of the policy of the government with regard to farm labour, it is that there is no need to provide for more farm labour, but that what is required is to prevent any further decrease in the farm labour available. It is possible that this policy will not go far enough, that the government may have to make some provision for increasing the available supply of farm labour, and I should like to know whether any consideration has been given to plans having that object in view.

I have one or two suggestions which might be considered by the minister. First of all, there is order in council P.C. 2250, which prohibits the employment of men from seventeen to forty-five inclusive in non-war jobs. As I read that order in council, it is designed to force these men into the armed services, or into war jobs. There is apparently no intention of forcing these men into agriculture. It may be that the government has some order in council, or could take some step which would help channel those men who leave non-war jobs in industry into agriculture. At any rate, I would suggest that the minister give consideration to some move of that kind.

The other suggestion is with regard to women. As I read the announcement made by the government on March 24, it had in mind using more women in war industry. However, no mention at all was made of using women in agriculture. It may be that that would be another source from which quite a large body of agricultural help could be obtained.

Mr. MacNICOL: May I ask the minister, in reference to the discussion which has been going on, if the government or his department is taking any notice of the fact that the farmers will have great difficulty in obtaining large tires and gasoline for their tractors. Unless they are able to obtain tires, tractor repairs and gasoline to operate the tractors, of which nearly every farm in the country has one or more, many more men will be required on the farms than are now there.

Mr. DOUGLAS (Weyburn): The minister has not yet answered the question I put to him before supper, and one which I asked the Minister of National Defence some time ago. I asked what happens to the men who were called to report on April 9. My interest is not that of having any man kept out of training, if he ought to be in training. My interest is that the whole question of calling up men for military service shall be as fair and impartial as possible, so that people will not feel that there is any discrimination, or that any particular person or group of persons is being penalized.

With reference to the men called on April 9, there was a piece of serious muddling somewhere. I do not know who was responsible. However, I am asking the minister to look at the facts. Order in council P.C. 2252 was passed on March 23 and tabled in the house on March 24. It was passed along with other orders in council. They were not generally made known throughout the country until March 25. The minister knows just as well as anyone that there are hundreds of little hamlets throughout Canada where the people get their mail only once a week. There are thousands of people, particularly in western Canada, who do not get even a weekly paper. Many of these people knew absolutely nothing about the new regulation. Those who did know did not properly understand it. As a matter of fact, the newspapers generally inferred that the exemption for men on the farms was automatic. Proof of that is that the minister himself subsequently issued a press release trying to clarify the situation.

Even those who did understand the regulations were in a quandary. When I returned home for the Easter recess many of these men came to me, or called me by telephone. They were men who had made applications for postponement, but who had been refused postponements on the ground of the regulations as they existed prior to March 23. I telephoned the board and they said, "Why, not only can we not consider postponements under the new regulations, but we have hundreds of applications for postponements under the regulations as they were before March 23, and we have not been able to reach them yet." Some of those cases were still being heard on the morning of April 9. Some men were granted postponements, turned round and went back home.

The other evening I asked the Minister of National Defence a question along this line, and his reply was much the same as that made a little while ago by the Minister of National War Services. The Minister of National Defence said at that time, as reported at page 2154 of *Hansard:*

> He should have made his claim then. The rule is that if he does, and shows that he was wholly or partly engaged in agriculture at

that time, the burden is on someone else, I suppose the army authorities or the Department of National War Services, itself, to show that he was still, even though wholly or mainly engaged in agriculture, not essential thereto. I do not know why he has not made that application. Perhaps he has.

Then he went on to say:

If he has not made that application and has gone into the service he may still apply to the commanding officer, who will refer the application to the board through the district officer commanding.

But that is a totally different thing. Then the minister is reported as follows, on the next page of *Hansard:*

My hon. friend is under a misapprehension when he speaks of a provision having been made. The only provision which has been made is the provision that when an application is made for compassionate leave—not for seeding, but for leave under special circumstances—the commanding officer makes a recommendation, whatever it may be, and passes it on to the district officer commanding, who sends it to the board.

These are two different things: the one—postponement from military service; the other—leave on compassionate grounds for a stated period of time.

I would not want these men to feel that they had been misled by anybody. But they made reference to members of parliament and to the board, and said, "We have been called. Some of us have asked for postponement and have been refused. Some of us did not ask for postponement because, under the regulations as they existed prior to April 23, we were not eligible. Now comes a new postponement, two weeks before we are due to report. What are we to do?" In every case they were told, "Unless you get word not to report, you should report. Otherwise you are liable for action under the war services regulations." These men came in and reported. If some young man stayed at home and said, "I am not going to report until I have had a decision regarding my application under the new regulations for indefinite postponement", he still has a chance to get a postponement. But these other men are now out of the jurisdiction of the Department of National War Services and under the jurisdiction of the Department of National Defence. They cannot obtain postponements now. But they can apply on compassionate grounds for leave to do spring work. It is a pretty serious situation. In some ways these men were almost enticed into Regina under false pretences. They were brought there under the impression that it was impossible now to apply for leave under the new regulations.

The secretary of the board told me frankly, "We have hundreds of applications made under the old regulations. We cannot begin to deal with the new regulations at the present time." Yet, according to both the Minister of National Defence and the Minister of National War Services, these men were eligible to make application. Nevertheless the board was not in a position to hear their applications or proceed with their cases.

I believe with reference to this group that something ought to be done. Either the regulations passed on March 23 should have been held over until after April 9, or they should have been brought down early enough so that these men would have had some opportunity to make their representations to the board. It is a serious matter for the men, because this is not a matter of training for thirty days or even for four months. It is a matter of service until the end of the war. I believe the impression will be prevalent in some quarters that these men were called in and told to report without being informed, as they should have been, that they had the right to make an appeal for postponement.

One other question I should like to ask the minister has to do with the press release. He says that a definite change has taken place with respect to this order in council. I am not clear as to where the fundamental change is. As the regulation stood prior to March 23, if a man were called he had the right to make an application for postponement on certain grounds. The onus was on him to prove that he had the right to such postponement. The board was to decide, and its decision was final. It seems to me the change is that instead of the man having to satisfy the board as to his right to postponement, the board must satisfy itself that he has that right.

The minister said a little while ago that these regulations were mandatory. They are mandatory only on the board to satisfy itself. It is the prosecuting attorney and the judge.

Mr. THORSON: I may say that it is mandatory upon the board to grant the postponement order, whereas previously the granting of a postponement order was within the discretion of the board.

Mr. DOUGLAS (Weyburn): It is only mandatory upon the board to grant a postponement order if the board is satisfied that it should be issued. In other words, the decision is still with the board; the onus is not on the board to do anything except satisfy itself that the man does or does not deserve postponement. It seems to me that there has been no fundamental change at all, the situation is exactly as it was before except probably that the board has a wider basis for

granting postponement. Whereas before it granted postponements only on compassionate grounds, where it could be shown that it worked a hardship on a man's family if he were taken away, because the father and mother were incapable of carrying on—

Mr. THORSON: Has the hon. member forgotten section 14, that it is in the national interest? Applications for postponement are not granted solely on the basis of hardship on the applicant.

Mr. DOUGLAS (Weyburn): It has been granted in many cases for that reason. It was granted in a particular case where a father already had three sons overseas and they were taking his last son. The father was blind, and the board decided to grant a postponement because they felt it was warranted. I think that was quite fair and proper. The only difference is that it has been placed on a more factual basis. I am not complaining about that, but I do not think the minister is correct when he says that there has been a fundamental change. There has been no fundamental change. A man still has to apply to the board, and the board must still decide in its own wisdom, without any appeal, whether or not the man is essential to agriculture. There is no appeal; it is merely up to the man to prove, or for the board to disprove, that he is essential to agriculture. Personally I cannot see that any great change has been made. I should like to ask the minister to give some consideration to those men who were called on April 9 but who were never properly informed about this regulation. Even if they had been properly informed, they were never given sufficient time to make proper representations to a board and have their cases heard, as they had a right to do under P.C. 2252.

Mr. THORSON: I shall be glad to take note of what my hon. friend has said, but I cannot add anything to what was said by the Minister of National Defence and what I stated this afternoon when the point was raised. There was nothing before the board after March 23 to indicate that the person desired to apply for postponement under the terms of that order.

Mr. DOUGLAS (Weyburn): Did the boards have these orders in council?

Mr. THORSON: Almost immediately after they were published.

Mr. DOUGLAS (Weyburn): How many postponements were granted on the basis of these regulations?

[Mr. T. C. Douglas.]

Mr. THORSON: I would not have any return as yet on that particular subject. I have no doubt that a good many persons who were called to report on April 9 had not any intention of applying for postponement.

Mr. DOUGLAS (Weyburn): Many of them had been rejected already.

Mr. THORSON: Many had made their applications for postponement and had been rejected.

Mr. DOUGLAS (Weyburn): On the basis of the old regulations.

Mr. THORSON: On the basis of the old regulations. In the case of the western boards, the Saskatchewan board particularly, I think the record of performance in respect of applications for postponement from farmers indicates that they are fully seized of the importance of agriculture to the national economy. I filed tables showing the applications made. The tables show also the grounds of the applications and the extent to which they were granted or otherwise. I wonder whether there are as many cases as my hon. friend would indicate. I shall be glad to look into the question further. Thus far not many cases have been brought to my attention. The answer is the one I gave this afternoon, that the amendments apply to the person who makes the application under them and not otherwise.

Naturally there would be some confusion in view of the fact that the call was fixed for April 9 and the regulations were not announced until March 24. If the course suggested by the hon. member for Weyburn had been followed, namely, that we should have postponed the announcement of our regulations until the April call was filled, I am satisfied that a great many persons who have had the benefit of the regulations, if it is a benefit, would not have come under the regulations. Perhaps it is as broad as it is long. Whenever any change of this sort is made in procedure, a certain amount of adjustment must of necessity take place. Every effort was made to meet the situation and comply with the requisition that was sent from the Department of National Defence. I shall be glad to look into the question which my hon. friend has brought to my attention.

Mr. CASTLEDEN: Will the minister explain how the boards confirm any statements made to them by applicants for postponement?

Mr. THORSON: There is no fixed method, but there are various sources of information available to the board. Frequently a board is satisfied with an application on its merits, or it may inquire of prominent people in the

district or make use of other reliable sources of information that are open. If the board thinks a case looks doubtful, it may refer the file for police investigation. There is no fixity about it. I think the beauty of the system is its flexibility and the informality with which the board deals with the applications.

Mr. CASTLEDEN: I think too much flexibility might not work in the best interests of the applicants and the country. You must be careful who the informants are and what the information is.

In the administration of the act there are several features which I think are objectionable and which lead to a degree of discrimination and therefore of injustice, which should be avoided. But it is perhaps only natural when things of this kind are done by order in council. This government has been an order in council government, and the objections to that have been numerous and very strongly expressed, certainly from this side of the house. What the hon. member for Weyburn said this evening is only too true. People are not familiar with the regulations; they are not familiar with the orders in council. Members of the house know from their own experience that it is difficult enough for them to try to keep up with all the orders in council that are being passed. Then press dispatches are put out, and there are press releases, and amendments to the regulations. People do not know the regulations, and certainly they do not understand the procedure. I have found in my own experience that a vast number of people who have been called up have no idea how they should proceed in presenting their case before the board. The boards are not sufficiently approachable, and the recruits do not understand their rights and privileges.

One of the main tasks of a department that is being administered as this one is, with orders in council constantly changing the basis of approach to the problem, is to see that the people are completely informed. There seems to be a lack of imagination on the part of some officials to realize that many of these people who are being called up do not read very much, and that there are people of different languages and different races who cannot read the English language any too well. The department should do more towards informing these people fully and seeing that abuses do not arise. In the house this evening we have had recorded a serious case where one kind of justice was meted out to a man who could hire a lawyer to conduct his case and where a different decision had been handed out when the man had presented his own case. Was that not the case that was presented here this evening, the case of a man who failed when making his own application for postponement which was afterwards granted when a lawyer appeared for him? The facts of the case have not been denied.

Mr. THORSON: No facts of the case were given.

Mr. CASTLEDEN: The facts of the case were given very clearly, and there was certainly no indication that the administration was going to take any steps to remedy that situation. When there can be one law for those who have money to engage somebody to present their case for them, and another law for those who cannot afford to engage help, conditions in Canada are in a very serious state, and when that happens in the conscription of men it is a sad reflection on the administration. I am only saying what I am saying in the interests of having that fairness and even-handed justice which should prevail. If justice is not even-handed, it is not justice, and the duty of every member should be to see that everything is done to maintain justice.

I know personally of the case of a man on a half-section of land who applied for postponement and received it. He made a second application and got one month's postponement. He was then called up and further postponement was denied him. That man then had to go back to his farm, and he took all the stock he had into town and sold it for whatever he could get. His cattle were not finished, and he suffered a terrific loss. He had to abandon his farm, and the latest report I had was that no one was working that land. It was left without any cultivation and without any protection even for the buildings and machinery the man was forced to leave there.

Another case was brought to my attention of a man farming a large tract of land. His father had 900 acres of land under cultivation, also 100 head of cattle and thirty-five head of horses. The father was fifty-eight years of age, and the boy, twenty-four years old, had been most useful in operating the farm. He understood how to run a tractor, and he was really a key-man in agriculture if anyone can be considered such. That boy made application for postponement. He probably could not present his case as well as he might have done had he had more education and been more familiar with the English language. His efforts to get a postponement were not successful. He was called up, and the father was left to operate the farm as best he could. These are actual cases where men have been called up. I only hope that where there is less ground for postponement than in these cases, the applications have not been granted.

There are one or two constructive suggestions I should like to leave with the minister. First of all, I would say: Keep the people informed and see that all those who are liable to be called are fully informed as to their rights and privileges. Second, I would say that the boards should be made more approachable, more easily accessible. Third, they should be enlarged. Other persons than employers might be permitted to present the case for any man. The instructions that are sent out to those being called up should be complete and in full detail. There should also be some form of central board of appeal from the decisions of the local boards. I know the minister says that it is entirely up to the boards of the various provinces. The reason why I have not brought more of these matters to the attention of the minister has been that his attitude has been that it is entirely the responsibility of the various provinical boards.

Mr. THORSON: That is correct.

Mr. CASTLEDEN: I also say this, that in cases where men are called up, the period in which they might be granted the right to appeal their case should be extended beyond what it is at the present time.

Mr. THORSON: Is the hon. member referring to the eight days from receipt of notice?

Mr. CASTLEDEN: No. Sometimes these men get called up before they realize their rights in the situation. Some men have been granted their postponement on condition that they enrol in the reserve army. That was the procedure.

Mr. THORSON: I have not heard of any such case.

Mr. CASTLEDEN: That was common procedure in Saskatchewan for some time.

Mr. THORSON: I have not heard of such a case.

Mr. CASTLEDEN: I shall be glad to give the cases to the minister.

Mr. BROOKS: That was the thirty-day training.

Mr. CASTLEDEN: This man was granted postponement from service conditional upon his enrolling in the reserve army.

Mr. BROOKS: If he made up his thirty days by enrolling in the reserve army, he would be exempted from the thirty-day training.

Mr. CASTLEDEN: This was a postponement granted this year.

[Mr. Castleden.]

Mr. THORSON: I have not heard of any such case, and I would be interested in having the particulars.

Mr. FLEMING: It is quite common.

Mr. CASTLEDEN: It was quite common in Saskatchewan. I know that there is a regulation form put up. This was printed in red ink at the bottom, that this postponement is granted conditional to the person who has been granted the postponement enrolling in the reserve army. I am not complaining of it. But that immediately takes the matter of an appeal or an application for further postponement out of the hands of the local board. Then the man, if he wishes to obtain postponement, must apply, I understand, according to the regulations, to his commanding officer within three months of the time he enrols. Then his application goes in front of his commanding officer. In case a man has enrolled or enlisted in the army he is granted three months, is he not, from the time he enlists, in which he can make further application for postponement or another hearing? A long enough period should be granted to each man so that he will have time to place his application before the proper authority.

These are the suggestions I offer to the minister.

Mr. THORSON: I thank the hon. member for his suggestions. I was going to deal with the more important amendments, and there is just one other in which I think hon. members will be interested. When persons were found to be conscientious objectors or Mennonites or Doukhobors, the boards had power to direct these persons to alternative service in substitution of the military service to which, on religious grounds, they objected. Originally that alternative service was limited to four months, by reason of the fact that that was the regulation at the time the four months training was put into effect for men who were called up. Recently we amended the regulations and made the alternative service of conscientious objectors of the same duration as military service.

Mr. STIRLING: For the duration of the war, that is?

Mr. THORSON: For the duration of the war, so that with regard to persons who take objection to military service on the grounds of being Mennonites or Doukhobors or conscientious objectors within the meaning of the regulations, if their contentions are maintained, their military training is postponed and they may be directed to alternative service for the duration of the war. Recently I entered into an agreement with the minister of lands of

British Columbia under which a very large number of conscientious objectors will be doing, in lieu of military service, alternative service of an important national character, namely the prevention of forest fires in that province.

Mr. GREEN: Would the minister give the approximate number?

Mr. THORSON: We have undertaken to send to British Columbia up to a thousand of these conscientious objectors, provided they are available.

Mr. ROSS (Souris): On what basis will they be paid?

Mr. THORSON: They will be paid on the same basis that they have been paid for the alternative service. My recollection is that they got fifty cents a day.

Mr. STIRLING: The minister is not sending any more Doukhobors to British Columbia?

Mr. THORSON: We will watch the Doukhobors for the hon. member for Yale, and not send them as forest fire preventers. They are not included in the list which we shall furnish to the minister of lands of British Columbia.

Mr. DOUGLAS (Weyburn): Are they issued with clothing in addition to the fifty cents a day?

Mr. THORSON: No.

Mr. DOUGLAS (Weyburn): They buy their clothing out of the fifty cents a day?

Mr. THORSON: So far they have bought their clothing.

Mr. CASTLEDEN: Was the system of granting postponement conditional upon enrolling in the reserve army condoned by the Minister of National War Services?

Mr. STIRLING: He never heard of it.

Mr. THORSON: It is a practice of which I am unaware. I shall be glad to look into that matter as well as into the other suggestions put forward by the hon. member for Yorkton.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, May 12, 1942

The house met at three o'clock.

WHEAT ACREAGE REDUCTION BONUS

REQUEST THAT PAYMENTS BE EXPEDITED TO PERMIT PURCHASE OF SEED

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I have received a telegram from Mr. John Vershagen, reeve of the municipality of Blaine Lake, Saskatchewan, stating that farmers in that municipality are unable to purchase seed with which to carry on their operations because they have not received their bonus payments. Will the minister endeavour to have these payments expedited?

Hon. J. G. GARDINER (Minister of Agriculture): Yes, Mr. Speaker. Of course it will be necessary for us to have the names of the persons involved. There must be very few who have not received their payments to date, unless a township is in dispute.

HONG KONG COMMISSION

INQUIRY AS TO PRESENTATION OF REPORT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Prime Minister whether any report has been received with respect to the Hong Kong commission.

Hon. J. L. RALSTON (Minister of National Defence): I understand that on account of the illness of the gentleman who was nominated by my hon. friend, briefs were not filed, and further time has been allowed. A date has been fixed within which the briefs are to be filed, I think within one week from now; and I presume that immediately afterward the matter will be dealt with.

Mr. HANSON (York-Sunbury): I thank the minister for the information. Personally I have made no inquiry as to the matter, but I understood that briefs had been filed. I did not know there had been any delay.

LABOUR CONDITIONS

BANQUE CANADIENNE NATIONALE—APPLICATION OF OFFICE AND PROFESSIONAL WORKERS FOR HEARING

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I should like to direct a question to the Minister of Labour, through the Secretary of State. I am informed by the Montreal local of the office and professional workers organizing committee that in December last they made application for a hearing before the Quebec regional war labour board on behalf of the employees of the Banque Canadienne Nationale. Their brief was presented on January 13, 1942, but as yet they have received no award, nor have they had a reply. I wonder if the minister could make a statement on the matter.

Hon. N. A. McLARTY (Secretary of State): My colleague the Minister of Labour (Mr. Mitchell) is unavoidably absent from the house

this afternoon on official business. I regret that the hon. member for Vancouver East did not give notice of this question, and I am afraid I shall have to ask him to allow me to treat it as notice of his intention to ask it. I shall direct the question to the attention of the Minister of Labour immediately upon his return.

Mr. MacINNIS: I did send notice to the office of the Minister of Labour, though it was rather short notice.

Mr. McLARTY: Then I regret that my hon. friend's notice was not brought to my attention. However, I think it is a matter that may well be allowed to stand until to-morrow, in view of the general nature of the question.

LOCKOUT AT KITCHENER, ONTARIO—DUMART PACKING PLANT

Mr. CLARENCE GILLIS (Cape Breton South): I too should like to direct a question to the Department of Labour, through the Secretary of State, based upon a telephone conversation this morning with one of the union representatives from Kitchener, Ontario, where a lockout is in progress at the Dumart packing plant. Is the Department of Labour aware of this situation and, if so, what steps are to be taken to compel the operators to reopen the plant?

Hon. N. A. McLARTY (Secretary of State): The hon. member for Cape Breton South was kind enough to send the Minister of Labour notice of his intention to ask this question, which notice was forwarded to me. I am advised that there is to be a meeting between the employers and employees this afternoon at 3.30, at which a representative of the Department of Labour will be present, when it is hoped that the difficulties will be ironed out.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, May 11, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

AIR SERVICES

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, I do not propose to-day to make any formal statement on the affairs of the Department of National Defence for Air. I hope, following the custom which we have adopted with respect to this department, to cover in a fairly comprehensive way the principal activities of the department.

I may begin by giving approximately the number of men in the Royal Canadian Air Force. When last I spoke to the house, in November, 1941, the strength of the R.C.A.F. was approximately 90,000 men. At the present time it is over 115,000, inclusive of approximately 3,000 women's division, and exclusive of Australians, New Zealanders, Royal Air Force and civilians.

With respect to the man-power situation as it affects the Royal Canadian Air Force I am glad to say that it is what might be described in commercial language as easy. I believe it was in July 1941 we recruited something over 8,000 men, including ground crew and air crew. The figure gradually decreased as our needs for men decreased. At the present time we average something like 4,000 men per month. For instance, in January 1942 the number was 5,052; in February, 2,556; in March, 3,497 and in April, 3,683. As time goes on the necessity for raising recruits, other than air crew, will gradually be lessened. At present we have sufficient staff by way of ground crew and mechanics to man, or pretty nearly man, all our schools. We have also a very fair proportion of the number required to man our squadrons overseas, or in the course of preparation. And unless we take on other responsibilities, either arising out of this conference, or arising out of other demands to be made upon us by our partners in the plan, it is not likely that it will be necessary for us to keep up this rate of recruiting—for ground crew at any rate.

Perhaps it might be of interest to the committee to know that a portion of these recruits came from the army R recruits. The number is approximately 4,000, and about a quarter of these were air crew. Perhaps my colleague the Minister of National Defence will pardon my being indiscreet enough to say that he would prefer that we do not go into the army camps to take men away from him. As the committee knows, the arrangement is that up to the end of two months' training the Royal Canadian Air Force may recruit in army training camps. I do not think there will be any further necessity for our drawing upon the army recruits, so far as ground crew is concerned. With respect to air crew, my colleague the Minister of National Defence and myself will, I think, be able to work out a satisfactory arrangement.

It might be of interest to the committee to know something about the average age of the recruits we take into the air force. It has been fairly difficult to get at the ages of ground crew, but with respect to air crew I can say that in the period from August 1941 to January 1942, out of some 18,589 medical examinations, 24 per cent of those who entered as air crew were under 20 years of age, 53 per cent were between 20 and 24 years, 17 per cent were between 25 and 29 years and 4 per cent were 30 years or over.

With respect to our requirements for air crew, I believe it was over a year ago—in March, 1941—that I stated we had six months' supply ahead of us. At that time I expressed the fear that at some time our supply of men having sufficient physical strength and educational qualifications for air crew would dry up. I had before me statistics to indicate that the total potential matriculated high school graduates amounted to only something like 13,000 per annum in Canada. Those figures I gave to the house at that time in good faith. I also stated that there must be some kind of backlog of young men between 18 and 25 years, the ages I considered most desirable for air crew. Well, whether our recruits come from that backlog or not, the fact is that a year after my statement we still have a six-months' supply ahead of us, and the schools have not as yet graduated. If the experience of last year is duplicated, thousands of young men who have matriculated will flock into the air force. So that the time has not as yet come when there is any apparent falling off in our potentials, or even in our applications.

While I do not want to paint too rosy a picture, I must point out that in any case for the moment we have another reasonably good supply of air crew in those young men who early in the war, without knowing very much about the difference between air crew, ground crew, mechanics and pilots, joined the air force, almost willy-nilly. We have some thousands of young lads in the air force as mechanics, and some as standard duty men, who have the educational and I assume the physical qualifications to become air crew. As time goes on we are bringing them up and, if they so desire, remustering them in order to take on air duties. So that that is one reserve on which we can draw.

Secondly, there is the process of preenlistment education under the war emergency training programme, a joint enterprise of the Department of Labour and the provincial governments, wherein large numbers of young men who have not attained the required standards of education, that is to say the matriculation standard, can be brought up to our educational requirements. Schools with a capacity of 1,265 have been established across Canada. At present the enrolment in these schools total, upwards of 1,300; and to date 900 have graduated and enlisted in the air force as pilots or observers. We have an arrangement with them under which they are medically examined and interviewed by our people, and if selected they agree to enlist in the air force upon graduation.

We are making use of the Canadian legion educational service for candidates within the service. May I say that the air force is extremely grateful to the legion for the efforts which they have put forth in bringing a very large number of men in the service up to the requisite standard so that they could be remustered. We also have university training corps arrangements, to which I referred last year, whereby an opportunity is given to university students to undergo ground training during the period of their career at college, the ground training to be equivalent to the course which they would take in our initial training school. At the end of their college career they will have attained sufficient knowledge of navigation and kindred air subjects to be allowed to enter our elementary flying schools. Squadrons have been formed at McGill university, the university of Toronto, Queen's university, the Ontario agricultural college and the university of Western Ontario. Finally, we have as a very important potential source of air crew the air cadets of Canada. The air cadet movement was organized under the auspices of the air cadet league. We have found it advisable, while leaving certain functions to the league itself, to take over most of the training of these air cadets. At the present time we have something like 130 squadrons, with an enrolment of nearly 600 officers and 15,000 air cadets.

So much for the future of our air crew. I cannot give any assurance to the committee that the supply is everlasting. In a small country like ours it must be inevitable that some day sooner or later the field will be so narrowed that we will run short of air crew. But for the present, and with the means which we hope to take, we can look forward to a considerable time during which we will have little difficulty in obtaining the men which we require to make pilots, observers and gunners.

With respect to the estimates themselves, they are divided as follows:

Joint air training plan.....	$344,267,745
Home war.....	247,139,903
Overseas war.....	33,905,244
Departmental administration.	150,000
	$625,462,892

This total would be less the cash payments which we expect to obtain and which we are obtaining from Australia and New Zealand to the extent of approximately $40,000,000. This means that we are asking the house at the present moment for $585,462,892. These estimates were prepared to conform to the limitations provided in the War Appropriation Act. I may say that these are cash requirements, and whether more cash will be required in the fiscal year 1942-43 will depend upon the deliveries of armaments, munitions, equipment, planes and certain parts of our home war building programme. If complete deliveries could be obtained in the fiscal year we would require additional cash up to at least $300,000,000. After consultation with the officers of the Department of Finance and considering the record of deliveries in 1941-42, this extra amount has not been included, but if deliveries can be accelerated we will require from the treasury an additional amount.

For the information of the committee and in accordance with the custom which we have inaugurated, I have had a statement prepared indicating the highlights of the estimated cash requirements of this year as compared with the actual expenditures for the fiscal year 1941-42. With the consent of the committee, I shall just mention some of these and then have the statement placed on *Hansard*; it is a lengthy document. For instance, the cash requirements this year for construction and improvements for the joint air training plan and the home war establishment are $54,000,000 odd, while the actual cash expenditures last year were $68,000,000. I may say that to that $54,000,000 must be added an estimated expenditure of something like $42,000,000 for the building of defensive aerodromes in Canada in connection with the new policy of the defence of Canada. I hardly expect that that will all be expended this year.

We expended $87,000,000 last year for aircraft engines and spares and this year we expect to spend $171,000,000. Clothing and necessaries, last year $10,000,000, this year $18,000,000. Miscellaneous stores last year $11,000,000, this year $22,000,000. Rations, last year $6,000,000, this year $16,000,000. Arms and ammunition, last year $4,000,000, this year $17,000,000. Gas and oil, last year $9,000,000, this year $20,000,000. Overhaul of engines, last year $9,000,000, this year $34,000,000. The statement follows:

[Mr. Power.]

R.C.A.F.
Estimates 1942-1943

	Estimated cash requirement	Actual cash expenditure for fiscal year 1941-1942 (not final)
Pay and allowances—		
B.C.A.T.P.	$106,217,454	$69,222,743
H.W.E.	25,505,615	10,861,079
Overseas	26,034,937	2,050,837
Total....	$157,758,006	$82,134,659
Construction and improvements—		
B.C.A.T.P.	$ 25,966,199	$39,537,408
H.W.E.	28,877,825	28,631,324
Total....	$ 54,844,024	$68,168,732
Aircraft, engines and spares—		
B.C.A.T.P.	$ 36,785,986	$42,044,147
H.W.E.	134,969,419	45,155,671
Total....	$171,755,405	$87,199,818
Clothing and necessaries—		
B.C.A.T.P.	$ 15,081,560	$10,030,689
H.W.E.	3,322,505	491,133
Overseas	6,240	545
Total....	$ 18,410,305	$10,522,367
Miscellaneous stores—		
B.C.A.T.P.	$ 12,083,550	$ 9,191,386
H.W.E.	10,171,669	2,457,948
Overseas	3,000	371
Total....	$ 22,258,219	$11,649,705
Rations—		
B.C.A.T.P.	$ 14,008,888	$ 5,251,399
H.W.E.	2,782,475	662,946
Total....	$ 16,791,363	$ 5,914,345
Bombs and ammunition—		
B.C.A.T.P.	$ 10,843,950	$ 1,962,392
H.W.E.	6,363,222	2,165,080
Total....	$ 17,207,172	$ 4,127,472
Aero gas and oil—		
B.C.A.T.P.	$ 16,721,610	$ 8,200,773
H.W.E.	3,918,000	948,649
Total....	$ 20,639,610	$ 9,149,422
Overhaul of aircraft and engines—		
B.C.A.T.P.	$ 27,206,609	$ 8,975,373
H.W.E.	7,645,774	500,449
Total....	$ 34,852,383	$ 9,475,822

To revert to the first item in the order in which we have taken up these items, we are asking $247,000,000 for the home war establishment, plus, as I said, $42,000,000 and also plus certain other amounts should we be able to obtain the necessary aircraft. As is well known, the work of the home war establishment consists of guarding the security of Canada. The functions carried out are those of reconnaissance far out to sea to spot the enemy before he approaches our shores, convoy patrol in order to guard our sea lines and the sea lines to the United Kingdom, and anti-submarine patrol. This work has become increasingly difficult and increasingly important as the enemy comes closer and closer to our shores on the Atlantic coast and is a greater menace on the Pacific. We must see to it so far as we can that we keep enemy ships from possible bombardment of our east and west coasts and keep away from our Pacific and our Atlantic coasts enemy seaborne and airborne forces.

If we had been faced this time last year with the situation with which we are faced to-day we would have been almost helpless. It would have been extremely difficult for us at that time to provide increased submarine sweeps, more bomber reconnaissance off Newfoundland and the Atlantic coast and at the same time provide certain protection on the Pacific coast. Fortunately at the present time we have a large number of trained pilots, more than we had last year since at that time they were beginning to go overseas. We have more aircraft—not sufficient by any means—than we had, and our construction development of defensive aerodromes has progressed to a much greater degree than it had at that time.

I have always, when mentioning the home war establishment, endeavoured to pay my tribute to the pilots and other air crew employed on this most forlorn, most lonely and most unglamorous, if I may use that word, of duties. Day after day they go far out to sea over the Atlantic in all kinds of weather. They go out from Newfoundland, sometimes as far as Greenland. They go out through the fog of the Pacific. There is little glory, little renown and perhaps very little credit given to them, but I think the house and this committee should know that they are carrying on a very important work for the defence of Canada and the empire.

In respect to the joint air training plan, so much has been said about it that I hardly think it is necessary for me to go into the details of it here. The full plan is now in operation. Perhaps I might give a very short summary of the situation.

The parties to the agreement are the United Kingdom, Canada, Australia and New Zealand. The date of the agreement was December 17, 1939. I cannot give the number of the annual output of pupils, but I can say that the original plan, which provided for a "blank" number, has now been enlarged to a plan which provides for the production of 25 per cent more. The date of full production originally planned was April 27, 1942. The date of full production of the present plan, with the 25 per cent increase, was reached by December 15, 1941.

We commenced aerodrome construction on April 24, 1940. We commenced training on April 29, 1940, with an intake of 169 pupils. Our first pupils were graduated in November, 1940. I cannot mention the total number of graduates.

The estimated cost of the original plan was $642,000,000. The present plan is estimated to cost $824,000,000, with a United Kingdom contribution in kind estimated at $193,000,000, leaving a balance of $630,000,000. The agreed proportion which Australia is to pay is $51,000,000, and New Zealand, $36,000,000, a total of $87,000,000, and the present estimated balance which Canada will pay is $542,000,000, or just short by $100,000,000 of what the total plan was to cost originally. The actual expenditure up to the present, including commitments up to March 31, 1942, is $447,000,000.

We are now producing to full capacity. We have our schools built, our aerodromes built, and our establishment built in such a way that the output can be increased if necessary. We have only to add further accommodation. We have sufficient training aeroplanes for our training needs at the present time, and we believe that full provision has been made for future supplies. The technical staff is well trained, and we do not appear to be in any danger of being held up on that score. The Joint Training Plan has now achieved twice its objective, and air crew are being turned out in such numbers that not only are the immediate needs being met but we can absorb a surplus in our home war establishment at the present time. We are now presented with the opportunity of giving additional training in Canada by employing our pilots and wireless operators in a way that will afford them valuable air operating experience under good weather conditions before sending them overseas. As a result of this experience they will be better fitted to undertake more confidently operational training and active service operations in England.

There has been—and I do not think it is any secret—a change in the methods and character of warfare. Originally when we started this plan only three types of student graduates were to come out of our school, namely, pilots, observers and wireless air gunners. Not long ago we added gunners. At the present time we are preparing, so to speak, to change over our plant to some extent, to shift about certain schools and devote them to other specialties. We are now training ten different types of air crews; the single-engine pilot, the twin-engine pilot, the co-pilot, the flight engineer—we are not training any in Canada at the present time—the pilot's mate. All these are new nomenclature in our air training plan. Then there is the air observer—we had him before—navigator, air bomber, wireless operator (air observer), wireless air gunner, air gunner, radio observer. So that there will be considerable of a shift in our training syllabus and in our training schedules, but we hope to be able to meet that situation as we met the situation which confronted us before.

The house will ask me where these men are. Some have been ploughed back into the plan as instructors. Some few in the early days were kept for the home war establishment. But the vast majority have gone overseas. Some are in our own twenty-two squadrons, but thousands more are in the Royal Air Force in every quarter of the globe. They are in every raid, in every sortie; they are in every attack on Germany. Wherever the British forces are attacking, there you will find graduates of our joint air training plan. When this summer's air offensive is carried on, it will be found that there will be hardly a squadron in the entire Royal Air Force which will not have its proportion of men who were trained in and graduated from the Canadian schools.

It may be interesting to the house to know that Canadians in this air war, that is graduates of the joint air training schools, have won fifty-one awards for gallantry. The total number of awards to Canadians for gallantry, including those won by Canadians in the Royal Air Force, is 166.

So far as casualties are concerned, I need hardly mention to this house that not a day goes by but there is a list of the dead, or missing, or prisoners of war. Unfortunately there are very few listed simply as wounded. Hardly a day, not one day so far as I know, goes by without a very heavy casualty list of young Canadians serving in the Royal Air Force or in our own squadrons. A casualty list brings distress and tears but it also brings a legitimate pride to the parents of these Canadian boys. The number of casualties to date, including casualties in Canada and overseas, is 2,035.

I come now to the discussion of a matter of the utmost importance to all Canadians—the united nations air conference to be held in Ottawa next week, beginning on May 18. On April 16 the press of Canada and the United States carried the following announcement:

The Prime Minister of Canada and the President announced to-day that, at the invitation of the Prime Minister, a conference in which all of the united nations with air training programmes under way, either in the United States or Canada, would be invited to participate, would be held in Ottawa early in May.

The purpose of the meeting lies along the lines of further united military efforts. The meeting in Ottawa would extend the air programmes to take in the training of personnel to operate the military aircraft to the end that the most effective use will be made of all resources of personnel.

Great progress has already been made in pooling the aeroplane production of the united nations.

Plans for the conference developed out of the recognition of the desirability of more closely coordinating the British commonwealth (including Britain, Canada, Australia and New Zealand) air training plan with the greatly extended air training programme undertaken by the United States and others of the allied nations. In addition these would include China, Norway, the Netherlands and several others which are already at war with the axis.

The swiftly-moving events of the war—the Coral sea battle, Madagascar, Burma, and our own intense preoccupation with internal affairs—have perhaps served to divert attention from what is an important event in Canadian history, an event characterized by the *Financial Post* under the title "Tribute to Canada"—

Malcolm MacDonald told Britishers last week that the only martial exercise in which Canada is not well trained is in "blowing its own trumpet".

He referred to our magnificently trained troops; the miraculous growth of our navy and the British commonwealth air training plan whose efficiency had doubled the expected output.

Even if Mr. MacDonald had not graciously paved the way, there are three news events bearing on Canada's war effort which deserve more than a trumpet note at this time. One is:

1. The forthcoming united nations air conference at Ottawa on May 18.

It is well known that the United States wanted greatly to have the air conference held at Washington. But Canada's outstanding job in pioneering the training of airmen, made Ottawa the logical and inevitable choice. Every nation now recognizes (and will do so increasingly after May 18) that Canada has set the pace in this sphere.

There is much more to be done before this war is won. There is little time for self-congratulation or complacency. Yet proper

recognition of achievements such as these, by Canadians themselves, by fellow members of the united nations, and indeed by our enemies, is far from amiss.

This, to my mind, is the most important conference which has come to Canada since the imperial conference of 1932. It is one of the most important to be held by the United nations since the war started. There will be present representatives on a high level of the United Kingdom, the United States, Australia, New Zealand, South Africa, India, Southern Rhodesia, China, Norway, Poland, Belgium, Czechoslovakia, Jugoslavia, Greece, the Netherlands—

Mr. ROWE: What about Russia?

Mr. POWER: —in fact all the nations now fighting for freedom with the exception of the Union of Soviet Socialist Republics. They have been invited, but so far I have no news of their acceptance or otherwise of the invitation. The conference meets under the high sponsorship of Roosevelt, Churchill and of our own Prime Minister. It meets here because—and I say it advisedly and without either false modesty or vain boasting—Canada, of all the nations now engaged in fighting this war, has made the greatest progress in training men to conquer the air and to wrest the supremacy of the air from the enemy so as to pave the way to victory.

These delegates come here to observe what has been done, to note the methods followed, to consult with us as to the means to be taken, to endeavour to coordinate our efforts and those of our commonwealth partners into a world-wide united nations programme. This, as the newspaper has said, is indeed a tribute to Canada. And when I say "Canada" I mean, all Canada; for Canada has been the administrator of the greatest undertaking ever instituted within its territory. It has been successfully carried out, may I say in all frankness and all sincerity, not by the Department of National Defence for Air, not by the government, not even by the Royal Canadian Air Force, but by the people of the whole dominion, every section of which has made its contribution. From the very inception this plan has been non-political and non-sectional, and all parties in this house and the entire press have joined in making it a success. It is unique, I will say, as an instance of a great undertaking which hitherto has escaped political or sectional criticism.

At the very moment when the united nations are meeting here to discuss this great project of our united Canadian nation, we are in the midst of an internal crisis the gravity and seriousness of which I would and should be the last to minimize. When one has campaigned and marched and bivouacked and fought for twenty-five years with friends, it is a sad wrench indeed to be separated from them, even temporarily. Our own country is apparently torn asunder, not on the question of the war itself but on the methods to be employed by Canada in waging war. There is, I am glad to say, no difference of opinion with respect to the air war, either as to the raising of men or money or the spheres of action. I wonder if, during the time the representatives of all our allies are here, it would be possible to call a truce to our internal dissensions and show by a united front, temporary if you will, our determination to join with them in the defeat of the common enemy.

Mr. GRAY: We have listened to-day to a report of the progress of the air force under the Minister of National Defence for Air. At the close of his remarks he made an appeal for unity in this country. May I say to him as an old soldier, and speaking I believe for most of us in this chamber, that no matter where we march or where we bivouac we shall find that, under the Minister of National Defence for Air, we shall go forward in the great effort which he is making in furtherance of this project. To-day he has given us concrete evidence of what has been accomplished, beginning as it did in a very small way. To-day, as he has stated, we are on the eve of a conference of the united nations. Under his leadership this enterprise, so soundly based, the British commonwealth air training plan, is certain to develop rapidly and with increasing success.

I have only one or two remarks to add to what has already been said. I wish particularly to refer to the system of air cadet training, which has developed from one of the minister's own policies. Looking at it from the viewpoint of my own province and as I have observed it elsewhere, I feel that, once established by the department, it has been left rather in the position of an orphan. We have been loath to give these organizations the blessing of the department while we have been willing to say to them, "You go out and do it." If we are prepared to accept the air cadets in Canada, as I am sure we are from the minister's remarks and from what has been said; if we are prepared to have them established, then we should establish air cadets as part and parcel of the air scheme of the dominion. We should assist them and give them the support that is necessary and not put them on the basis of some service plan, as has been done. I believe that if the minister will look into the matter he will find that the air cadets proposal, supported by himself and promulgated

by his department, has not been given the support by the government that it should have received. If the air cadets are to be part and parcel of the air force, let us make them so. Do not let us have any half measures whereby we make them cadets for one purpose and not for another. The Minister of National Defence for Air will be the first to admit that they should be made part and parcel of the air force.

The other matter I have to urge is in connection with the air crew, to which the minister has referred. I have watched, as I have no doubt other members have watched, the graduation of air crews from various schools throughout the country. I am told that ninety schools have been established, and day after day we see men walking our streets, pilots, gunners, and observers and other members of the crews to whom the minister has referred. I want to make a plea as a man who served as an ordinary private soldier in the last war, and it is this, that these men who are worthy of wearing wings, whether they be pilots, observers, gunners or whatever they may be, should be commissioned in the air force and should not be put into the ranks as sergeant observers, sergeant pilots, or sergeant gunners, as the case may be. I urge that they be given equal rank and that they be not classed on the basis of 50 per cent of this particular class or that particular class. Those of us who have gone through schools will know that in one particular class there may be 90 per cent who may be worthy of a commission, whereas in some other class there may be only 40 per cent or 30 per cent. It is my opinion that so long as you leave it to the officers commanding the various schools there will be discrepancies that should not exist. If a man is capable of graduating from a school and worthy of his wings, whether he be pilot, observer or gunner, then he is worthy of being commissioned in his majesty's service. I urge upon the minister that this discrepancy be abolished, because I know it must have given him more than one headache. Take two buddies graduating from an air force school about to leave the country. They are on their last leave, arranging to meet at a certain port to go overseas, arranging to occupy the same quarters on the same transport. One receives word while he is at home that he has been commissioned, the other receives no such news and will go over as a sergeant pilot. You cannot expect absolute team-work under those conditions. I know the minister will agree with me that in this great service, the air force, the important thing is team-work, and you cannot get it unless you ensure that two men who are going forth in the same service shall be in the same rank if they are doing the same job. When they graduate from a particular school they should be on the same level. It is not fair or worthy that some commanding officer should be allowed to say to one, "You shall be a commissioned pilot", and to another "You shall be a sergeant pilot".

I urge that this question be given careful consideration at the forthcoming conference of the united nations—the United States, Canada, Great Britain and the other countries who will meet here. They will recognize the lead that Canada has given, and I hope that out of that conference there will emerge the principle of equality with regard to the men who graduate from our schools, whether they be pilots, gunners, observers, or whatever they may be. So long as they are worthy of going into the air and operating planes they should be put on an equality. We see men walking around the streets to-day and we know that this equality does not exist. This has been a source of trouble to the minister, I am sure; it has been one of the headaches from which he has suffered. I say to him that instead of cutting down 50 per cent, or 30 per cent or 20 per cent of the graduates of a class, every man who is worthy to wear the wings should be a commissioned officer in his majesty's services.

Mr. BENCE: There are one or two matters I should like to bring to the attention of the minister, and I want to ask some questions in connection with the statement that he has just made. Before I do so, however, may I congratulate him on the complete and at the same time the concise manner in which he has given us the information which he has put before us this afternoon. The minister painted a glowing picture of the commonwealth air training plan, and I am sure that all hon. members will agree with him that Canada is indeed proud of the contribution it is making in this regard. Certainly to most of us it is our greatest contribution. In any event, it is certainly the most romantic, one of the most interesting, and one which we in Canada are eminently fitted to make. The tragedy of our reverses in the war up to the present time has been unfortunately the result of lack of air strength or air superiority. Unquestionably if we had had that air superiority we would not have suffered the reverses we did in Crete, we would possibly be in command of the situation so far as the far east is concerned, and we would not be faced with the gigantic problem we have in connection with the shortage of rubber and matters of that kind, which I am sorry to say is crippling a part of our war effort.

In the course of his comments the minister made no reference, as he did last year, to the headaches that bothered him at that time. I presume that most of those difficulties have been solved.

Mr. POWER: No, I was expecting hon. members to tell me. I have new ones.

Mr. BENCE: Last year the minister referred to certain headaches, as he called them, in the plan, and out of this discussion and the questions that will be asked here, I have no doubt that we shall ascertain how many of these headaches are still there and how many have disappeared. In connection with the commonwealth air training plan itself the minister indicated last year, and I believe he corroborated it in his statement this afternoon, that the new plan had been pretty well completed and we are now in the process referred to last year as being "levelled off". If I am wrong in that regard he will correct me. May I ask him whether or not the $344,000,000 which has been appropriated for the joint commonwealth air training plan is the figure which he estimates will be required annually for the carrying on of this plan, or is there in that figure a sum which has been set aside for the purpose of extending the plan? Has he completed the whole picture with respect to establishments across the country?

Mr. POWER: Yes.

Mr. BENCE: I refer particularly to air training schools.

Mr. POWER: No new aerodromes, if I can help it. That is a headache.

Mr. BENCE: That was one of the first headaches I was going to refer to. My question is whether or not a part of that $344,000,000 is intended to be used for extension, whether the minister had in contemplation, as a result of the coming conference, any extension of the plan in Canada; whether he had in contemplation setting up any additional schools and aerodromes across the country. I know the minister, as he stated last year, has been greatly concerned over the pressure that has been brought to bear on him and on the department with respect to the establishment of such schools, and that sort of thing, and my thought was that if he did contemplate an extension as a result of this conference which begins next week; if he should decide to build more aerodromes and set up more service training schools and the like in Canada, he might very well state at the outset that matters of representations, and what we might call pressure, will receive not the slightest regard as far as the selection of these places is concerned. I feel sure the minister has paid very little attention to that sort of thing in the past; but if he should expand the plan I believe that by announcing in the first place that pressure of this kind would have no effect, he might head off this deluge of delegations, representations by boards of trade, members of parliament and that sort of thing, and thereby save himself and probably the country a very great headache.

During the course of his remarks the minister made some statements in connection with recruits and the number of men now being turned out by the air force. Among other things I think he said there were now some 115,000 men in the R.C.A.F. When the minister makes a further statement during this discussion I should like him to indicate, on the same basis that he indicated last year, the proportion of the men in training in Canada who are Canadians and the proportion who come from Australia, New Zealand and Great Britain. At the same time he might indicate, if he will, in greater detail what is being done in connection with this reserve that was set up last year. At that time the minister referred to the fact that there was a six months' reserve on hand. Again this year he has referred to the fact that there is a six months' reserve on hand. What is being done with these men? As I recall it, last year they were being enlisted two or three months ahead of time and being put on guard duty, and that sort of thing. But conditions must have been altered to some extent by the calling up of men under the National Resources Mobilization Act and by the pressure that is being exerted in connection with recruiting for the army. What steps are being taken by the department to ensure that the reserve, which the minister called a "precious" reserve, is maintained, to be called upon as soon as the training facilities are available?

There are so many questions to be asked in connection with the minister's department that I intend to mention only one or two now, hoping later on in the debate to be able to put specific and categorical questions to the minister. In connection with repairs and equipment, the minister stated that at present he had enough planes to meet the requirements. From this statement I presume that the deficit from which he suffered last year, particularly the shortage of twin-engine machines, of which the minister said last year he had only 46 per cent of what was required, has been made up. At the same

time I should like the minister to give us some indication, if he would, of how far his department has advanced toward the objective of 6,000 planes for training purposes, which he said would be required by 1943. At the time the minister spoke last year he said they had 2,400 machines on hand. Now, after a year's progress, and with the passing of half the period mentioned by the minister, I should like to know how many planes he has on hand for training purposes, and whether he anticipates that he will obtain the required number of 6,000 by 1943.

There is another point that seems to me most important. Last year the minister said the matter of repairs, replacements, spare parts and so on, was giving him a great deal of concern. He did not mention that matter this afternoon. In view of the fact that the United States, from whom we obtained a great many of these spares, is now in the war, has its own training plan, and is producing aeroplanes for its own use, has the situation been alleviated or made more difficult than before? If it has become more difficult, what safeguards does the minister anticipate putting into effect in order to make sure that accidents in training, for example, do not occur, and that the men who are training in Canada have the very best of equipment and the very safest facilities, in order that they may complete that training?

With further reference to the matter of recruiting, the minister mentioned that he had obtained a considerable number of men who had been called up; I think he referred to them as R recruits. I presume he meant men who, after they had been called up, in some way had been brought into the air force. Was that as a result of the air force or the army going to these men and inquiring whether or not they wanted to join the air force, or was it because after they were called up they indicated a desire to join the air force?

Mr. POWER: After they were called up.

Mr. BENCE: In that connection the minister mentioned last year that he was very much in favour of what he called "combing the mane to sharpen the tooth," I think borrowing an expression used by Mr. Churchill—in other words obtaining recruits from the active army. Is there any question of canvassing the active army, to determine whether or not there are men in it who are particularly qualified to become pilots, gunners, and so on, and who would be of more value to Canada's war effort if they were trained as such? In that connection I can understand that the minister might come in conflict with the Minister of National Defence, who naturally would not want to lose any men from the army. But I suggest that there are in the air force a great many men who enlisted for general duty. The minister mentioned that some of those men were being reclassified, but there must be a great many of them who are not qualified to become pilots or air crew, but who at the same time are physically fit and who could go on active service. I suggest to the minister that he might consider taking up with his colleague the Minister of National Defence the possibility of working out some system under which these general duty men could be transferred to the army, and men taken from the army who could be trained to become air crew. After all, I take it that maintaining a sufficient number of recruits for air crew is the most important part of the whole plan, because if you have not the men the plan becomes completely useless. I should think the minister could replace a great many of these general duty men—and I understand this is being done to a certain extent—with medically unfit men, ex-service men perhaps, and particularly with the new branch which has been set up, the women's branch of the air force. As I understand it, that was the original purpose in setting up this women's division, and perhaps the minister would give us some idea of the extent to which these women are replacing men in the air force and permitting them to be transferred to more active theatres of war.

I should like to offer a suggestion to the minister with regard to a matter which has been brought up on several occasions during the discussion of this war appropriation bill, with particular reference to the army and navy. It has to do with the question of the pay and allowances of men in the air force, particularly with respect to the fact that a distinction is made between the air force and the army in the case of men who are missing. So far as the air force is concerned, the dependents' allowance is cut off at the end of the month during which the man is reported missing, whereas in the army the pay and allowances are continued for a longer period of time. The other day the Minister of National Defence told us that in the army, pay and allowances are continued until the man is either presumed dead or it is definitely established that he is dead.

So far as the air force is concerned my information, which I have reason to believe is accurate, is that if a man is reported as missing in the middle of the month his pay is computed until the end of the month and sent to his wife. Thereafter however she is immediately put on straight pension, and her income is consequently immediately reduced to the $60 a month provided for the

wives of those up to and including the rank of flying officer. It seems to me that that is a discrimination which the minister should take in hand and remove. The wife of a man reported missing suffers a terrific shock, and she is at the same time faced with considerable financial difficulty, particularly if her income is immediately cut down. I have known it to be cut down by as much as $25 or $30 a month. I have known of children being born to wives of men overseas after their husbands were reported missing. The fact that their income is cut down during that time makes it very difficult for them to carry on and pay the cost involved in the birth of a child, as well as meet other obligations they may have entered into.

In view of the hardships thus being suffered by the wives of these men, I suggest that the minister consider this matter, and very soon, in order to rectify what I believe to be a discrimination. I am not the first hon. member to bring this matter before the committee. It has been raised on several occasions before. I commend it to the minister's most serious attention.

Mr. POWER: Perhaps I should answer at once the questions of the hon. members for Lambton West and Saskatoon City, so that these questions will not pile up.

First may I say that the air cadets are now to all intents and purposes part and parcel of the Royal Canadian Air Force. We have retained our connection with the air cadet league so that the league might function as a propaganda organization and, with the help of public-spirited citizens, arouse interest in the air cadets. To all intents and purposes we now supervise the work of the air cadet corps, because we consider it one of the most important fields for obtaining recruits in the future, particularly air crew recruits.

Mr. GRAY: Does the department finance it?

Mr. POWER: Yes—perhaps not entirely, but to a very considerable extent.

Mr. HANSON (York-Sunbury): And the training?

Mr. POWER: We are giving them training, too. As a matter of fact that has caused another headache. We are taking them to some of our schools and the question naturally arises whether we will give the boys rides in aeroplanes. Well, if we have 7,000 cadets, as I expect we will have this summer, it would take a good many flying hours to take them up one by one. I suggested to some of our pilots that we might take five or six at a time in big machines. But one of them said, "Would you like to have a lot of squalling brats crawling all over you in the machine?"—and I said no. As a matter of fact we would have difficulty obtaining permission from parents, and one thing and another; and I believe to take them up in aeroplanes would be too great a risk for us to take. However, all that is by the way.

Now with respect to commissions, I share the views of the hon. member for Lambton West. The situation is that when this air training scheme was inaugurated part of the plan was that 50 per cent of the pilots and observers should obtain commissions. The wireless air gunners were supposed only to become sergeants. It was also arranged that 33 per cent of these commissions were to be granted on graduation, in accordance with the marks attained by the pupil, as in any other school. The other 17 per cent were marked as recommended for promotion.

Well, these lads all went over. Many of them became attached to the Royal Air Force; some of them were in the middle east. We have many hundreds of our men in the middle east. As a matter of fact I have forgotten the figures, but we have a squadron of our own in the far east, and more than one in the middle east, in addition to many hundreds —perhaps thousands—who are connected with the Royal Air Force. The boy who is twenty-first on the list, the twenty preceding him having obtained commissions, may be away off somewhere in Syria. I am sure his commanding officer is not aware of the recommendations made by the commanding officer at Uplands, and I have always felt that that recommendation in many instances was of no value whatsoever. The records do follow the men, in theory; but I doubt if they do in practice.

We had a great deal of difficulty in getting commissions for the 17 per cent who were promised, as part of the plan. Commanding officers in fighter groups, fighter squadrons, bomber groups or bomber squadrons are not apt to worry very much whether Canada has obtained the full 50 per cent of commissions to which it was entitled under the plan. If an individual sergeant is serving in any part of the world his commanding officer may find him to be a good sergeant. But there may be other sergeants of the Royal Air Force who in the opinion of the commanding officer are more worthy of promotion. The officer is not particularly concerned whether Mr. Sergeant, Canadian, comes in under the 17 per cent which would bring the total up to 50 per cent. The result was that for many months we were not getting the quota to which we were

entitled. One of the objects of my visit to Great Britain last year was to insist that somehow or other we be brought up at least to that 50 per cent. It took a long time, but I am glad to say that since December some 350 to 400 of our graduate sergeants have obtained commissions, to bring us up to the 17 per cent. These are rough figures; if required I could put the exact figure on *Hansard*. However we are away off the total number we should have at the present time.

One of the matters I took up at that time, and which I hope to take up in the forthcoming conference, is the advisability and the absolute justice of making every member of air crew an officer. We are bound at the present time by our undertakings under the joint air training plan. Possibly treasury control in Great Britain has something to do with it, because, as is well known, Great Britain contributes the pay and allowances of the men attached to Royal Air Force squadrons, with the exception that we bring the pay up to the Canadian rate. That means an addition of about one-third more. That may have had something to do with the reluctance of the British treasury to do anything further at the time the plan was inaugurated.

I read in British *Hansard*—and I believe this appeared in the Winnipeg *Free Press*—an account of a bomber returning from a raid over Germany. The pilot of the machine was a sergeant while the observer was an officer. They had been together for eighteen to twenty hours and had gone through a veritable hell of flak fire. When they returned the man who brought the machine home walked into the sergeant's mess and the fellow that he had carried home went into the officer's mess. As one labour member in the British house put it, one walked into the players' and the other walked into the gentlemen's room. There is neither rhyme nor reason or common sense about that.

Mr. DOUGLAS (Weyburn): It is a hangover of a past age.

Mr. POWER: It may be a treasury matter, but so far as I am concerned it will not be a a treasury matter in Canada. It is one of the matters to be taken up at the forthcoming conference. May I say, in case I have given an unfavourable impression of the feeling of the high command in Great Britain, that I have spoken to some of the highest officers in the Royal Air Force and they are in entire agreement that every member of the air crew should be an officer. It might have been better if we had called them all ensigns or had adopted some kind of intermediate title indicating that they were not fully graduated as officers in the sense of having gone through an officers' course such as one has to undergo in the infantry or in the artillery. Except in certain instances, they are not taught to lead men. A man who is running his own machine, perhaps a single-seater fighter, may be the finest pilot in the world, but until he becomes a flight commander or squadron leader or wing commander he need not necessarily have the qualities of leadership which may be required in a man who leads, let us say, a platoon or a company of infantry. Nevertheless in a machine they all take the same risks. As the hon. member for Lambton West has pointed out, in many instances they left home as buddies, went through the same school, and because of a difference of one or two points, one has to be a gentleman and the other has to be a player. I can assure the committee that we will see that that is not done, if I can help it.

With respect to the many questions asked by the hon. member for Saskatoon City, I may say that of the $344,000,000 in the estimates, some will be required for the construction of additional accommodation. It seems to me that we are always building something or other. Even with the shift that we expect to make, the changing of certain areodromes and schools from one destination to another, this will be necessary. Certain elementary schools will disappear and be replaced by operational training schools. We are extending the scope of our training so that in many instances a man will be fully trained operationally on operational machines. Other schools will be doubled, and some will be tripled. But with all that, I do not visualize any extended programme of building or the establishment of new schools this year. It may be necessary to add two or three schools in order to balance the new set-up, but that I think will be mostly in the way of location of additional aerodromes this year. It must be understood that this refers only to the joint air training plan. We have located— one of the reasons for my recent trip to western Canada was this—a certain number of aerodromes on the Pacific coast and elsewhere in spots where they will be most useful for the defence of the coast. There will be new aerodrome construction on both east and west coasts for defence, but not for air training purposes.

Mr. HANSON (York-Sunbury): Is consideration being given to the abandonment of other plans? I have heard some statement that perhaps Pennfield Ridge will be abandoned.

Mr. POWER: Perhaps I am not supposed to say so, but that school was used for astral navigation. In that part of the world they

never seem to see the sun, so that we are using it for another purpose, one for which it is well fitted indeed. The climate there is somewhat similar to the climate in certain parts of the old country, and some of the work which has been carried on in the old country can be transferred to Pennfield Ridge.

Mr. HANSON (York-Sunbury): I was not thinking of its being abandoned, I was thinking that some change might be contemplated. I hope the committee will not take the minister's statement too literally, that we never see the sun in the county of Charlotte.

Mr. POWER: It was the stars I meant. The hon. member for Saskatoon City wanted to know what had become of our reserves. The reserve we have at the moment is probably not very large; I think about 1,000 men are on leave without pay to report at a certain date. We have a considerable number on what we call tarmac duty, which was formerly called guard duty, and on guard duty.

Mr. BENCE: Is that the extent of our reserve?

Mr. POWER: At the present time I would say that we probably have three or four months ahead of us. We also have a reserve of those who are undergoing youth training. I think I said there were 1,300 under youth training. Then we have those whose applications have been completed and others whose applications are incomplete. We anticipate no great difficulty in obtaining recruits, certainly for six months. Then based on last year's results a large number of boys will have matriculated from high school and will come in during the summer. Figuring on that, I think we are well away for the next year anyway.

With respect to the number of planes that we have, I believe I committed an indiscretion in stating the number which we should have for training. I am only too willing to renew it by saying we are so close to 6,000 now it is no fun. Spares will always be a problem. Only recently I was speaking to a friend of mine in the army who is closely connected with a munitions assignment in the United States. He tells me that there, as in Great Britain and as in Canada—perhaps it is better now—no matter what it is they wish to procure, whether it be tanks, trucks, guns or rifles, it is difficult to get the manufacturer to make spares. They all want to be able to say that they have turned out so many of such and such an article. I think our spare situation is easier than it was. We are still meeting with difficulties, but there is no chance of our being bogged down now as I felt there was over a year ago.

Mr. BENCE: Are they producing more in this country?

Mr. POWER: We are making more and more as time goes on. I was told a year ago that there were certain spares that could not possibly be made in this country. I was informed only a few days ago that they are being made, and made in reasonably large quantities.

With regard to our recruits from those in military camps who have been called up under the mobilization act, the Department of National Defence under an arrangement made a year or so ago, or at all events early in the war, permits us to recruit these men if they have not been with the army for more than two months. At the end of the two months the army says: You have had a chance to get these men for two months, and you have not taken them, so now let us carry on with them. After all, the army has been spending money on them, and it would not be fair for us to take them away from the army after that length of time. We have no arrangement at present for taking men out of the army in Canada because it does cost the army a lot of money to train the men and it would hardly be fair to allow a man whom the army has trained for six months in some trade to change his mind and come over to us. But we have made arrangements with the Canadian forces overseas to take from the army a certain number who wish to join the air force. Presumably they did not have the same opportunity of joining the air force in Canada early in the war, when it was almost impossible for many men to get into the air force. So that the men serving overseas with the army, if they so desire, have the opportunity of transferring to the air force.

With regard to pay and allowances of the missing, I was not in the house when my colleague the Minister of National Defence spoke of the different treatment between the army and the air force in regard to members of the forces who are missing, and I use the word "missing" advisedly because they must be declared missing. Furthermore, I do not know of anyone in the army who has been declared "missing" as yet.

Mr. HANSON (York-Sunbury): They have not yet got to that stage.

Mr. POWER: No. I will say this. The British government have the same system as we follow in the air force whereby almost immediately, or at least at the end of the current month, members of the forces who are missing are listed as missing even before they are listed as presumed dead. In our own case, in the air force, I have here a memoran-

dum from the dependents' allowance board which I took the trouble to get—the hon. member for Davenport had asked the question, which I looked up in *Hansard,* and the ruling of the dependents' allowance board applies to both the army and the air force. Their memorandum is as follows:

When a member of the Royal Canadian Air Force is reported as missing the following procedure is carried out in regard to his pay and dependents' allowance.

(1) Any assigned pay, or assigned pay and dependents' allowance which is in payment is continued to the end of the month in which the casualty is reported and then ceases as such.

(2) From the end of this month the dependents' allowance board immediately institutes a special temporary allowance to the dependent in an amount not greater than the amount to which the dependent would be entitled as pension if the man were reported as dead. This allowance continues until the fate of the man is definitely decided.

(3) If the man is reported alive, either as prisoner-of-war interned in a neutral country, or having returned to duty, service pay and dependents' allowance is reinstated retroactively over the period during which he was reported as missing.

(4) If the man is officially reported as dead pension ruling is immediately given by the pension commission. Arrangements are made so that the allowance paid by the dependents' allowance board ceases as soon as pension is in payment.

(5) Where assigned pay only, and no dependents' allowance is in payment it is considered prima facie evidence that the recipient of the assigned pay is not dependent on the man and the payment of the assigned pay therefore ceases at the end of the month in which the casualty is reported.

(6) Members of the Royal Canadian Air Force who are reported as casualties while serving with the Royal Air Force receive the same treatment, and at the same rates as if they were serving with their own force.

That is the situation with respect to the missing, and from my information I would say that it applies as well to the army as to the air force. The situation is this. Hardships may arise, depending on the amount of pay which the man assigns. Let us say that the wife of a pilot or sergeant receives a dependents' allowance of $40 a month—I do not know the exact figure, I think it is $35; but for the sake of illustration we will say $40—and that the pilot assigns $40 more to her. That makes a total of $80 a month. If he is posted as missing, at the end of the month his wife receives $60 a month, which is the maximum she would receive by way of pension, and of course she loses his assigned pay. So that there is a difference of $20 between the $60 a month she receives when he is missing and the $80 a month she was formerly receiving. The reason for that—I am speaking subject to the information I received from the dependents' allowance board—is that the board does not want to pile up against the man's wife, in case he should afterwards be declared dead, $20 or $30 or $40 more a month than she would be entitled to by way of pension.

Mr. BENCE: Not if the board would have to ask for it back.

Mr. POWER: But the crown would have no right to pay the salary and allowance of a man who was dead, to be quite frank about it. If a man were not posted as missing but was known to be dead, his dependent would go on pension and the presumption of death, I take it, would be retroactive. That would be my interpretation of the regulations after many years of playing around with pension law and regulations in that regard. I know that that is done by the dependents' allowance board, and I would think it the logical if not the sympathetic way of interpreting the regulations. I know it may strike the members of the committee as not being the right thing to do, but I do not know what else could be done unless the house were to vote a certain sum of money to be allocated to dependents of the missing until such time as they were presumed dead.

Mr. CRUICKSHANK: Paragraph 5 of the memorandum which the minister has just read deals with the cutting off of assigned pay when a man is reported as missing. I have in mind a specific case of that kind. What is the mother to live on until some adjustment is made?

Mr. POWER: It is assumed, I take it, that if the man has not arranged for his mother to receive a dependents' allowance she is not a dependent, and if he does not ask that she shall receive a dependents' allowance the question naturally arises: Should the state do so?

Mr. CRUICKSHANK: In the particular case I have in mind the man was assigning $50 a month to his mother. He was reported missing on the seventeenth of the month. She received no assigned pay for that month, none for the previous month, and none of his regular pay, and she had nothing to go on with. The man had been assigning $50 a month to his mother, who is a widow, and it should be assumed by the board that he is her support, since his pay, including his assigned pay, was being sent to her.

Mr. POWER: I am under the impression that in order to establish dependency a man must at least advise the board that his mother is dependent upon him.

Mr. HANSON (York-Sunbury): He has to apply on her behalf.

Mr. POWER: Yes. I get $20 a month assigned pay from my boy in the Royal Air Force. If I am not mistaken, they are allowed only to send a certain amount of money, and perhaps they send it to their parents in order that their parents can return it to them in pounds. The fact of assignment would not necessarily mean dependency on the part of the parent. If I am not mistaken, a great many young fellows in the air force draw only Royal Air Force rates of pay in England; the pilot's Canadian rate of pay is deferred, and they get the Canadian rate of pay forwarded to their parents and the parents send it back.

Mr. BENCE: But that, as I understand it, is not permitted unless it is established that the mother is a dependent. As a matter of fact cases have been referred to the Minister of National Defence in which there was a refusal to allow a release of the money because it was not established that the mother was dependent. Investigations are constantly being made by various associations which are affiliated with the dependents' allowance board to determine whether the mother is dependent and should get this assigned pay.

Mr. POWER: I do not think that in our service there is any rule against anybody assigning pay to a relative; I do not know about assigning it to an outsider. If you do not want to attach dependency to it, that is no crime. Perhaps the army rules differ in that respect from ours, because I gather that in the army there is a deferment of pay, that they do not permit the man to receive immediately the entire amount on his arrival here from the other side. So far as we are concerned, when a man comes back from the other side, if he has a credit coming to him he has not much trouble in getting his deferred pay if he wants it; we do not keep it until after the war.

Mr. ROSS (Souris): Would the dependents' board acknowledge a power of attorney? I know of a case similar to that mentioned by the hon. member for Fraser Valley. Two boys in the air force assigned portions of their pay to parents who needed the money, but never applied for any other assistance. There was a third boy who has, I believe, become a prisoner of war in Java. A power of attorney was given because the father had had a partial stroke and the lad thought that something more serious might happen to him. The board however refuses to allow the father to cash the cheque under his power of attorney. They are very independent people, but there is a real need, and it is creating hardship.

Mr. POWER: I hope I shall not be brought into a discussion concerning the dependents' allowance board, which is not my baby, but so far as it relates to the air force, once a man has established dependency I believe the right is admitted. Perhaps conditions are freer and easier in the air force than in the army.

Mr. McIVOR: I congratulate the minister on the sketch he has given us of the work of his department. He assured us that he is a real pilot, that he knows his chart, and that he goes places from which he expects to come back.

There are one or two things I should like to suggest. First, there is the matter of entertainment. Any group of men who are under great strain need to have a bit of good clean fun. I noticed a trainer who had been for a ride, because the recruit was the one who was doing the flying; he came back from about six hours in the air and sat down and just looked at space. These men need the best kind of entertainment so that their vision will be clear and their nerves steady and in such shape that they can stomach anything they may encounter. Therefore I compliment the minister on the splendid entertainment which he has given not only to the air force but to all Canada in sponsoring hockey, here in Ottawa and all over the dominion. Any hockey team which can defeat a team from the head of the lakes, whether Fort William or Port Arthur, must know its stuff. We believe that we at the head of the lakes have the best amateur team in Canada. Instead of being criticized the minister should be commended for taking young men who were formerly professionals and putting them in line again to show the young fellows how to play the game. It is true that they met their match when they ran up against the Bearcats of Port Arthur. This provides entertainment of the right kind, because the boy who is a good athlete and keeps his body and mind in right shape will make a great aviator.

Another thing. There are 422,000 in the volunteer forces of Canada, and if it takes fifteen men to keep one man equipped, it is gong to take about 6,300,000 persons outside of the forces busy to keep those men at the front equipped. Therefore I would ask the minister if he expects to displace a great many men, who are working in the air force,

by young women. They will not have the same risk as the fighting men, and it would free men in the force for other work.

I do not suppose there is one man in this chamber who does not wish to heaven he were on the young side of thirty so that he could take a course as an air pilot. I know that I would like it immensely. Of course some of us will have to go up in the air in other ways. But no one can overestimate the tremendous risks which these young fighters incur. I have been informed by men who have been overseas that a large percentage of those who make the first thirty trips over to Germany do not come back, and less than 11 per cent of those who make the second thirty trips come back. When you think that 89 per cent of those young men will not return, you realize that it is the duty of Canada to uphold in every way possible the hands of the men who are taking to the air and fighting for us. We must see that they are properly equipped in every possible way. I am sure also that the minister will see to it that they have the opportunity of plenty of entertainment and fun and those things which they need to help them to live through their times of quiet.

Mr. FRASER (Peterborough West): Further in regard to missing pilots, may I refer to a letter from a lady in Peterborough. She states that her son was in the air force stationed at Gander, Newfoundland, and continues:

> Last December 29, 1941, I had a telegram telling me that my dear son was missing. That was December 29 last. I received his allowance on December 30 and have received nothing since. On February 6 I wrote to the officer commanding about his personal belongings, and I happened to mention about the allowance being stopped. I will have to wait six months before Ottawa declares my son dead. They are not sure of his death yet, but they have stopped my allowance.

I understand that if the man had been a prisoner of war the allowance would have kept on, but owing to the fact that he is missing it has stopped. Here is a woman whose husband is seventy. Her son was giving her $20 a month before he left and now that is stopped and they have nothing to live on.

Mr. POWER: Assigned pay or allowance?

Mr. FRASER (Peterborough West): Assigned pay.

Mr. POWER: Not dependents' allowance?

Mr. FRASER (Peterborough West): No, assigned pay. These people are absolutely in want.

[Mr. McIvor.]

Mr. POWER: I have no idea why he did not make an assignment, why he did not arrange to establish dependency on her part.

Mr. FRASER (Peterborough West): I have a letter from her in which she says that she does not think the boy knew how to do it or understood it.

Mr. POWER: That would be a case to put before the dependents' allowance board itself. If my hon. friend will send me the letter I shall be glad to see that some of the officers of the department make a claim on the dependents' allowance board and get the law and the prophets on it, whatever it may be.

Mr. MACDONALD (Brantford City): I join with other members who have commended the minister for the splendid and concise statement he has given the committee. It is indeed in keeping with the two statements already given by the other ministers of national defence who preceded him. Now we have a perfectly clear picture of the defence departments of Canada. Personally I should like to do away with the word "defence". We must have more of the fighting spirit if we are going to win the war. Staying back in Canada and hoping to win the war by merely defending Canada will never bring success to our arms. We must go out and meet the enemy and fight him wherever he can be found. Therefore I would prefer that instead of designating these ministers as ministers of national defence we call them "ministers of war".

I join with the hon. member for Lambton West (Mr. Gray) in the suggestion regarding commissions for all men who are part of the air crew. I was very happy indeed to hear the Minister of National Defence for Air say that he also was in sympathy with this suggestion. It is quite natural that he should agree with it; for hon. members will recall that he himself enlisted in the last war as a private and went through the ranks, finally becoming an officer. He does not believe in keeping commissions for the favoured few, and I do hope that the day will soon come when all members of the air crew will be commissioned officers.

There is one class which I hope will receive commissions fairly soon. I refer to the young men who are now in Britain who fly night after night over Germany. In Britain there are officers flying aircraft over Germany and there are also sergeant pilots, sergeant observers and sergeant air gunners. These men risk their lives every time they fly over Germany, and any man who is gallant and courageous enough to fly over that country should be a com-

missioned officer and should be entitled to the very best that this or any other nation can give him. Therefore I suggest that one of the first things the minister should try to do should be to forget the rank with which these men graduated from the air schools in Canada, whether they came first or last, because they are now in England flying over Germany and they should take second place to none; they should all be commissioned officers.

These men who fly over Germany are entitled to the best that can be given them in Britain. It was my privilege last fall to visit Britain. It was my privilege with five other members of the house to visit certain stations from which men fly over Germany. I recall visiting one of these commands one morning about nine o'clock. Two nights before the men from that command had flown over Germany. Did we find them living in comfort, men who had come back after risking their lives? I do not want to paint a picture of hardship as applying to the conditions under which they live, but I do not believe they are living in the comfort in which they should live after making such hazardous trips. An hon. member who preceded me referred to hockey teams in Canada. I would say without hesitation that the men who play on a hockey team live more or less like kings compared to the men who fly by night over Germany. I do not think that is right. The men who man the aeroplanes should get the very best treatment, the treatment that is given any athlete. They should be treated as our hockey players or baseball players or other athletes are. What do we find however? I recall that visit. It was a rainy morning, dull and cold. We entered a so-called sergeant's hut, not at all comfortably furnished, and there we saw three men huddled around a stove in one corner of the hut with blankets wrapped around them, trying to keep themselves warm. The other members with me on that occasion will recall our comments. We said, "These men are entitled to something better than this." I believe they are entitled to something better than that and I trust that something better can be given them. I trust that the best that can be provided will be theirs.

There is one other matter to which I would refer, namely, the airfields which we have in Canada. We are very happy indeed to have in the neighbourhood of the city of Brantford two airports, and I can only speak in the highest terms of the personnel of those schools. The commanding officers, the officers, the instructors and the young pilots and the ground crew have all established for themselves a place in the hearts of the people of Brantford city and we are indeed happy to have them in our midst. The air schools are both beyond the limits of the city of Brantford. Let me refer first to No. 4 wireless school in the township of Brantford. As I said, we are glad to have these schools in our midst, but I would point out to the minister that the land on which they are located is exempt from taxation. No. 4 wireless school is in the township of Brantford in school section No. 7. The total number of acres exempt is 374. The total assessment of that school section is $289,900, while the assessment for the land and buildings of the school, which are exempt, is $17,300, or approximately 7 per cent of the total. The tax rate in that section is 2·9 mills, and there is no outstanding debt. The amount lost in taxes is $401.07, or 7 per cent of the total amount of taxes.

Then the Burford airport, which is also in the township of Brantford and which is known as No. 5 service flying training school, comprises 582 acres, all in school section No. 9. The total assessment of that school section is $340,795; the assessment of the lands and buildings of the school, which are exempt, is $28,400, or approximately 8 per cent. The amount of taxes lost on that airport is $787.65. So that the total amount of taxes lost to the township of Brantford by virtue of these airports is $1,118.72. That does not seem a large amount of money, but in these two school sections it is a fair proportion of the total, amounting to 7 per cent in one case and 8 per cent in the other. Someone has asked what the school sections get out of it. They get very little out of it in dollars. As I said before, they are happy to have these airports located there, but after all an airport does not bring only happiness to a district. It is not a pleasant thing for those in the vicinity of these airports to have aeroplanes flying a few hundred feet over their buildings all day and almost all night.

Mr. POTTIER: Better than bombing.

Mr. MACDONALD (Brantford City): Much better than bombing, and they are very glad to have those airports; let me make myself clear on that. The people in those districts welcome the airports, but I still say it is not the most comfortable thing for those living in the immediate vicinity of these airports to have aeroplanes flying over their houses and buildings all day long, whether they are awake or asleep. As we all know, when these aeroplanes land, they come very close to these buildings. I see some hon. members smiling and laughing, but I ask those hon. members how they would like to sleep in a building adjoining an airport and have aeroplanes flying only a few hundred feet

over their heads day in and day out. And more than that, it is not altogether a pleasant sensation to have the beacon lights flashing in your windows every few seconds all night long, every night of the week. The people are not complaining about having these airports in their districts, but there are two sides to the story. We sit here in comfort. We do not have the aeroplanes, flying over our heads while we are in this building; the lights are not flickering all night long, and we must be fair with the people who live in these districts. I think, as I have said already, that we should express our deep appreciation of the way they have welcomed these airports, in spite of the discomfort that has resulted.

The point I should like to make is that something should be done in regard to the payment of taxes to the townships in which the one hundred airports in Canada are located. It would not amount to very much money for the government to pay, but every person living in these districts pays taxes; why should not the dominion government also pay taxes on these airport properties? I ask the minister to consider the suggestion. I ask him to consider whether it would not be fair for the dominion government to pay taxes, just as taxes must be paid by any person who happens to live in the township.

Mr. CRUICKSHANK: I should like to offer a solution to the minister in this connection. In my riding I have no war industries, and I suppose they have two or three hundred industries in Brantford. If it hurts their feelings to have aeroplanes flying overhead, and if they are too tired to pull down the blinds to keep out the light, you can put all the airports you like in my riding, and we will not care about the $1,188 in taxes.

Mr. MacNICOL: First I want to thank the minister for having answered a question which I asked some days ago. I believe at the time he was away on some other business, but the fact that he answered my question is just another indication of his meticulous attention to duty.

With the others who have spoken I honour these wonderful young men of the air force, many of whom, including the sons of my three immediate neighbours, have come from my riding. Certainly they have held high the honour of Canada, as the minister has said, on every field of battle throughout the world. I only wish we could double, treble or quadruple our efforts. I am not finding fault with what has been done. I think we have done splendidly; but if we could greatly extend our facilities for training these wonderful young Canadian aviators I am sure they would help bring the war to a conclusion in a much shorter time.

[Mr. Macdonald (Brantford City).]

Two years ago, and again last year, when this subject was before the house, I said that aeroplanes would either win or lose the war. When we have such wonderful young men in Canada, and when we have plants producing areoplanes, I do not see why we cannot greatly increase our facilities both for training aviators and for making aeroplanes. Only to-day the latest reports indicate that three British destroyers have been sunk in the Mediterranean by axis areoplanes. If we had an abundance, a superabundance, of aeroplanes not only in the Mediterranean but in every other field of battle, our destroyers would not be sunk, nor would the *Repulse* and *Prince of Wales* have been lost off Malaya. Both those battleships were sunk because of the lack of air protection. And even more recent than the sinking of the battleships we had the loss of two cruisers, at least one of which had a very distinguished record, having taken part in the sinking of the *Graf Spee* or the *Bismarck*. Both these cruisers were sunk through lack of air protection. I am wondering, with all the minister's ability and energy, if he could do more than he has done. Perhaps no one else could have done as much, but it is possible that he could do more to train more aviators here, and also order more planes.

Mr. POWER: I am sorry to say we have so far fulfilled our contract that they do not want any more at the present time.

Mr. MacNICOL: Well, that passes all comprehension.

Mr. POWER: It is not my business.

Mr. MacNICOL: Whether anybody wants them or not, they should be built. If the British do not want more planes and more aviators, I would feel that some one wants to lose the war, and I cannot conceive that they want to lose the war. I am convinced that they want to win the war, although sometimes it looks as if somebody in behind is blocking the winning of the war—but not intentionally; rather it is through something they do not have in their hearts or heads. However, that does not affect the minister.

Mr. POWER: No; they got all the pilots they could hold, for the moment.

Mr. MacNICOL: Let us consider a case in point. Last year the aeroplane factory in the constituency of Fort William, the representative of which spoke a few moments ago, ceased making bombers. That factory was building hurricane bombers. I believe they were turning out about a hundred a month.

They may have been turning those planes out for an English order; I do not know. However, for lack of orders they shut down on bombers, and remained shut down for six or seven months. This means that aeroplane facilities, for both defence and attack, for Great Britain and her allies, are short by six hundred or seven hundred bombers they should have had—and could have had. Those bombers could have been made in Fort William. The plant has now started again producing at the rate of a hundred a month. We are not responsible, of course. I believe that the planes manufactured there were sent to Great Britain. But could we not have taken any extra planes they could supply? Could we not have put them in stock? Could we not have sent them out to the east?

Only recently we have learned that after displaying wonderful valour our troops retreated through Malaya. They retreated three or four hundred miles. We learned that they had to retreat because they had not sufficient air protection. Then, when they retreated out of Malaya into Burma, the same story was told us in the press. We are told now that they have retreated a distance of three or four hundred miles north, up along the Irrawaddy river. What is the reason given? They have not sufficient aeroplane protection.

Somebody is responsible for the fact that British troops everywhere have not sufficient aeroplane protection. If Canada can produce aeroplanes—and we certainly produced the pilots and the air crew—then we should produce them.

Our young men are thrilled with the story of Bishop and those other Canadians who distinguished themselves so much in the last war, and who so brilliantly electrified Europe with their ability to shoot down our enemies. Canadians could do it again. Why, then, can we not give them the planes—thousands of planes, and air crew in thousands and thousands, so that our brave sailors on the seas will not have their ships sunk from under them through lack of aeroplane protection, and our brave troops on land will not have to retreat because of lack of aeroplane protection.

I am convinced that if the minister were given a carte blanche order to turn out another ten thousand aviators, no matter what the cost, he would do so. I have every confidence in his ability and in the organization of his department to build more training fields, and to turn out any number of aviators required. Then, since we are not to blame, who is to blame for the fact that everywhere we have not the aeroplane protection we should have?

Something was said a short time ago about repair parts for aeroplanes. Perhaps there is a reason for the shortage along that line. That is not in the minister's department, and I would not criticize the Minister of Munitions and Supply (Mr. Howe) because he, too, has done a splendid job. But somebody, somewhere, is to blame for the whole aeroplane industry not having been producing more. The men at the head of it are big enough to organize it. I know many of them. I have the background of what is behind the fact that they have not been turning out more planes, so I will not criticize anybody. But the fact is that they could do infinitely more. Why, Canadian plants did not get into really high speed until after Japan came into the war. Between the time of the outbreak of war and the fall of France our aeroplane companies were running, I presume, at about 20 per cent capacity, and between the fall of France and the advent of Japan in the war they were turning out not more than 75 per cent, at the outside.

So I should hope that through the minister's energy and ability something will come about whereby Canada will produce thousands more planes and thousands more crews to man those planes. If that happens, the war will end just that much more quickly.

I should like to thank the minister for a reply he gave me yesterday in writing. I had received a long wire from Drumheller, a place I visited last summer. It is a very beautiful town in Alberta, in fact one of the most beautiful I have been in. It is a town to which I would recommend anyone who travels to the west to visit. In that vicinity are great resources of coal. The wire intimated that if the government intended extending the building of fields in the west, Drumheller might be considered. In that vicinity they produce about a million and a half tons of coal a year. I am happy to say that a large proportion of that coal comes to Ontario, and I hope much more of it will come here. In the production of that coal there is a great deal of slack. While out there I learned with keen interest how cheaply they can produce power from their slack coal. Therefore, if the minister in future extends air facilities in the west, I would submit he should consider the vicinity of Drumheller as a place where he could have an air field. The cheap light and power would be one inducement, I should think, and the vast abundance of coal in the vicinity would be another.

Mr. POWER: Will I send the hon. member for Brantford City to Drumheller to explain the disadvantages?

Mr. MacNICOL: My suggestion is a fair one, since the hon. member for Brantford City is not altogether too pleased with all that is happening in Brant county. If you do happen to move them out of the county of Brant, you might put one or two in the county of York. We have quite a number, but we could take one more. Then you could send some of the surplus ones out to Drumheller.

Mr. MACDONALD (Brantford City): I stated that the county of Brant was very happy to have these air ports in its midst.

Mr. MacNICOL: I know it is. I know the county of Brant pretty well.

I happened to come across a number of complaints yesterday. It may be that they are not worth while talking about, but if they are real complaints I know the minister will take steps to clean them up. A father told me a few days ago about his boy, who had enlisted in the air force. At two camps, and perhaps a third one, the boy had been acting as guard, and had been doing scrubbing, and work of that kind. This boy graduated as a senior matriculant. Perhaps in passing I might mention that he is an only son, although I realize, of course, that that point has no particular bearing. I have known this boy quite well, and in my opinion he is a bright young man. The father came to see me and pointed out his distress at the fact that after being in the Royal Canadian Air Force that length of time the boy had not been posted to anything other than scrubbing or guard duty. Of course, that may be part of the training; I do not know. If it is, then all right. But if there is such a surplus of young men around air training camps, there should not be. Certainly there should not be a surplus so great that they have to be put at scrubbing, cleaning and guard duty. They should be thoroughly trained and trained as quickly as posible so that they can get into the work for which they have joined the army.

I should like to know how men in the Royal Canadian Air Force are posted to the Royal Air Force. I have in mind a young man who recently went overseas as an aviator —perhaps this is the case to which the minister referred a short time ago—and was in England only a short time when he was sent to the Royal Air Force in Gibraltar. The next day he was in Malta and the next day he was shot down. The question is whether or not he was thoroughly trained to go on a bombing expedition of that kind. Are our men trained sufficiently in Canada so that when they reach England they can go immediately on bombing expeditions? Do we plan to train our men in Canada to the same extent as our cousins to the south do? When their men leave the United States they are evidently trained 100 per cent and can go into action immediately, as they demonstrated with such daring over the Coral sea during the last few days.

I have just one further point to raise. A few days ago the picture of a hockey coach appeared in our papers. I shall not give the name of this man, but he had been quite active in sports, about which I know very little. It may have been thought desirable that such men should be kept physically fit, but the fact is that when he was sent to the air training camp he was posted immediately to the administrative department. The father of a boy in the same camp wrote me a letter inquiring why his son who had been there for a long time and had applied on various occasions for a promotion to some administrative post could not get that promotion whereas this coach was immediately placed in an apparently preferred position. I wonder if every one who joins the air force is treated exactly the same? I hope later on, when the Minister of Munitions and Supply is before us, to try to work out some way so that the minister may have ten planes for every one he has now? I heard him say in the course of his remarks that he has more men trained for the air than there are planes in which to put them.

Mr. POWER: On the other side.

Mr. MacNICOL: In Great Britain, but not here. That bears out a remark I heard when I was in an aeroplane plant a short time ago. They told me that they had more planes here than we had men to man them.

Mr. POWER: I did not say that. I said that our output has been more than sufficient to meet all the requirements we undertook to meet on the other side, so much so that there is a surplus. That is where we want our men.

Mr. MacNICOL: A conference is to take place later on this month between the heads of the air forces of the allies. I should like to see some arrangement made whereby they can collectively produce planes more rapidly and in greater numbers than is being done to-day, and at the same time train crews for those planes so that in the not long distant future the skies above Germany will be black with British planes and the skies above Russia

will also be black with British planes supporting our ally. Throughout the world, in Libya, in the Mediterranean, in Bengal, in the Coral sea, in Australia and elsewhere we must have clouds of planes in the skies to act against the enemy and to support our ships and our men on land.

Mr. CASTLEDEN: This is the third arm of Canada's defence service which has presented its report, and I think it is only right that a tribute should be paid to the men who yesterday sat in our high schools and played on our ball fields but who are to-day flying the fortresses and combat planes in the skies wherever the allied forces are meeting the enemy. Canada's achievements in connection with each one of her armed forces are the object of pride to the Canadian people. I think Canada is particularly proud of her air force. One feature of the air force which warrants considerable tribute is the fact that it has been able to adapt itself to rapidly changing technique. Anyone following developments realizes that as bombing tactics are changed, as the effects from bombing are found out from bitter experience, as the form of fighting changes, rapid changes must be made in training, in the arming of aeroplanes and in the construction of aeroplanes. I think the Canadian air force and the Department of National Defence for Air deserve a tribute for what has been done in this connection.

It must have been satisfying to all of us to hear the minister state that we are now sending men to Britain in numbers sufficient to equal any demand that she may make. Almost every hon. member knows scores of lads of yesterday who are now fighting, or who have paid the supreme sacrifice. It was also with considerable satisfaction that we learned from the minister that he has plans for expanding the air training scheme and that the expenditures for this arm of the service are to be expanded this year.

When the records are tabled covering the number of flying hours put in, I think it will be found that the western provinces have proved to be particularly suitable for elementary training. This is due to the clear skies and the type of terrain which are to be found in that part of the country. It is hoped that the airfields in the west will be expanded in order to meet any further commitments. The record of the commonwealth air training scheme is one of which we can feel justly proud. One thing that mars it in my opinion is the fact that there appear to be almost limitless expenditures in order to get the job done. At times it seems to me that there is a wasteful procedure in connection with certain phases. When the minister was making his statement last year he told us that they had had to pay rather high prices for materials and services because they wanted aerodromes and other services constructed with the greatest possible speed.

I had a return brought down in the house a short time ago, and I was rather sorry to learn from it that there is no departmental repair depot for engines in Quebec, that some private concern was doing this repair work for Quebec and parts of Ontario. It is to be hoped that private enterprise is not to enter to too great an extent into the services in connection with our armed forces. I was pleased to hear the minister state this afternoon that they are going to take away the elementary training schools from private companies.

Mr. POWER: Pardon me, I never said that. I did not mention them at all, but if I were to say anything, I would say we are going to enlarge.

Mr. CASTLEDEN: I am sorry if I was wrong, but I understood the minister to say that he was going to reduce the number of the elementary training schools.

Mr. POWER: On the contrary, if I had the opportunity I would enlarge the scope of private enterprise in the elementary schools. I can prove by figures that it pays us much better.

Mr. CASTLEDEN: Is it not true that it was recommended in a recent report that the net profits from flying hours be reduced?

Mr. POWER: Oh, yes.

Mr. CASTLEDEN: And that too much profit has been made by the elementary training schools?

Mr. POWER: They turn the profits back.

Mr. CASTLEDEN: And the minister would extend these schools, probably to give larger profits. That would probably be the policy of the minister.

Mr. POWER: I do not think it is fair to say that. I do not know of one elementary school that actually takes any profit. I think I could show by comparative figures, if the committee would permit me, that the comparison is all in favour of elementary schools under civilian auspices compared with elementary schools operated by the Royal Air Force.

Mr. CASTLEDEN: Is that the Royal Air Force of Canada?

Mr. POWER: Yes.

Mr. CASTLEDEN: I hope that the minister will place those figures on the record so that they will be available to all.

With regard to training air crew, I am sure that it has been of inestimable value to have a large staff of British officers come over to Canada to assist in the setting up of the plan, but I hope that as soon as possible the minister will take advantage of the opportunity to replace them by trained Canadians who have had experience in actual combat, and in control work, in administration, in training and instruction in the old country and in various theatres of war. The minister stated this afternoon that he thought the treasury board had probably as much to do with it as anybody that he was restrained from carrying out the policy of granting commissions practically to everyone who was trained in Canada to fly.

Mr. POWER: Not our treasury board, but the British treasury board.

Mr. CASTLEDEN: I am referring to the British treasury board, and I should like to have a statement from the minister showing to what extent the British treasury board does exercise control over here, over the policy of his department and administration, and the precise nature of that control.

Mr. POWER: They do not exercise control over my department. They pay these pilots when they get overseas, and they do not want to pay out officer's pay when they can get a man as a sergeant. These men are handed over to the Royal Air Force when they get over there.

Mr. CASTLEDEN: But the minister said that in his opinion every member of an air crew should have a commission.

Mr. POWER: Certainly.

Mr. CASTLEDEN: Would the minister's department not be able to grant the commission and make up the difference in pay?

Mr. POWER: Not under the agreement made in 1939, whereby only 50 per cent could be granted commissions. That agreement was made between the four partners in the deal. I had nothing to do with that.

Mr. CASTLEDEN: Those were the details I wanted. I wanted to know to what extent the minister was prevented from carrying out policies that he thought would be advantageous.

Mr. POWER: Read the agreement.

Mr. CASTLEDEN: I hope the minister will inform the committee in complete detail of the arrangements which are made at the forthcoming air conference in Ottawa. We should have access to information as to how the money which we spend will be distributed over the various branches of the whole scheme, and know what control we have over these expenditures. I hope that without saying anything that might prejudice the success of the conference the minister will present to the committee complete details of the arrangements that may be reached. The men who are manning these aeroplanes in every theatre of war are giving everything they have. They look forward to no profit and no gain, and one cannot help feeling that it would be a shame to blot the record of the Canadian departments of war or any phase of Canada's war effort with any evidence of corruption or profit-making. When Canadian companies or individual persons in aeroplane production, in air-training or in any other phase of our war effort, are following the fine example of these men who are to-day dying for us in the army, in the navy and in the air force, then we can truly say that we are winning this war gloriously.

Mr. DIEFENBAKER: The Minister of National Defence for Air is one minister who invariably commands the attention of the house and of the committee because when he refers to what is being done in the air he invariably says "Canada" is doing this or that, for which "Canada" should be proud, instead of referring to the great efforts that have been made as if they were a party or partisan affair. As I listened to his magnificent peroration this afternoon, to his outline of activities of his department and to his plea to the members of this house for an armistice on political partisanship during the period in which the united nations air conference is to meet in Ottawa, it seemed to me that the arguments he advanced in that behalf were equally applicable to times when the air conference is not meeting, and they constituted a very fine commendation of the necessity for a national effort in Canada to-day by a government divorced from political or partisan considerations whose one aim would be victory on behalf of the empire.

There are two or three matters I would bring to the minister's attention. He very frankly agreed with the contention of the hon. member for Lambton West that airmen who have won their wings in the air force should receive commissions. I think that would do very much toward improving the attitude of the men serving to-day in the air force. A few days ago en route to Ottawa I talked with a number of Australians. They have the same system, of course, under the British commonwealth scheme that we have. They mentioned an instance such as was portrayed in the house this afternoon, of the return of our men after flying over Germany, and then the sergeants going to their mess and the officers to theirs. They said that a new scheme had

been adopted in the Royal Australian Air Force in the east whereby, instead of having an officers' mess and a non-commissioned officers' mess, officers and men met together in what is known as an air crew mess. I think the adoption here of such a scheme would do much to improve morale. It is hard sometimes to see young men, friends through collegiate, friends through university, taking their courses as airmen to be together, followed on graduation by separation, some becoming officers and others non-commissioned officers.

When officers take to the air they get, I understand, $2 a day flying pay, whereas non-commissioned officers who take to the air receive only $1. Is there any reason why officers and non-commissioned officers over Germany or anywhere else, doing identical work, should receive any difference in compensation as flying pay? I suggest that if it is impossible under the British commonwealth scheme to make all the crews who have earned their wings commissioned officers, at least the discrimination, if I may call it such, as far as flying pay is concerned, should be done away with.

There is one other matter to which I should like to refer. The hon. member for Yorkton spoke of elementary training schools, to which the minister replied, and rightly, that there is no profit other than 5 per cent paid to those who contribute as shareholders to the establishment of elementary flying training schools. But that is not the position of affairs in air observer schools, which are set up, managed, and operated in various parts of Canada by civilian companies. The elementary schools, with I believe three exceptions, are sponsored by flying clubs. The distribution of profits earned in the operation of elementary flying training schools is that, after 5 per cent is paid to the shareholders—generally members of flying clubs—the remainder is set aside in a common fund and at the conclusion of the contract or of the war will be turned over to the flying clubs setting up the respective schools. That is not so in the case of the air observer schools.

Under the contracts which were made between the government and the air observer schools there was provision for a profit of $1 per flying hour. Recommendations were made by the committee on national war expenditures for a reduction of that profit to 35 cents. Would the minister explain whether when, I believe on April 1 of this year, new contracts were drawn with the air observer schools, an alteration was made in the provision relating to profit as far as profit per flying hour is concerned.

There are at the present time—I speak subject to correction—about ten air observer schools in Canada. These schools, set up and constituted for the purpose of training observers and air crew, are owned by private corporations, and there are no controls on the profits which the private companies operating these schools may earn. The position is that they receive a very large amount per month as management fees, and in addition, at the conclusion of the contract they receive 25 per cent of the saving upon maintenance provided for in the target price as set by the department. Be it also noted that these air observer schools are situate in the most strategic parts of Canada. When this war is over there will necessarily be a tremendous expansion of civilian air transportation. It is of great significance to know in whose control these air observer schools are. To-day, if I understand aright, none of them is owned by the Canadian National Railways, but several are owned by the Canadian Pacific railway or its subsidiaries—

Mr. POWER: Six.

Mr. DIEFENBAKER: —and I think it is only fair that, if a system of private ownership is to continue, some of these should be turned over to the Canadian National Railways, or that railway should be given an opportunity to operate them, so that when the war is over, control of civil aviation will not be exclusively in the hands of one corporation. I have no criticism to offer of the operation of these six schools by the Canadian Pacific railway, but there should be provision made now that when hostilities end, the entire control and maintenance of civil aviation in Canada should not be vested in one transportation corporation. I wish now to ask a series of questions of the minister which, I trust, will clear up the situation as far as these schools are concerned.

What restriction, if any, is there upon the profits to be earned by air observer schools?

How many air observer schools are there in operation?

Are any of them owned or controlled or operated by the government or by the Royal Canadian Air Force?

What are the names of the companies operating these various schools?

What is the capitalization of each of the companies operating these schools?

How much did each of said companies receive, during every lunar month since it commenced operation, as the management fee?

Mr. POWER: Will my hon. friend send me a copy of these questions before the recess?

Mr. DIEFENBAKER: Certainly. It is impossible to take them down as I am reading them?

Mr. POWER: I am not a good stenographer.

Mr. DIEFENBAKER: What expenditures were made by each under the head of management for each lunar month since the commencement to date?

How much did each of said companies receive for each twenty-four hour period since commencement of operations, for operation and maintenance, and what was the disbursement for each of said periods under this head?

Mr. POWER: For each twenty-four hour period?

Mr. DIEFENBAKER: For each twenty-four week period.

Mr. POWER: I was getting a little worried.

Mr. DIEFENBAKER: It would be a fairly substantial sum for each twenty-four hour period, too, but I am asking for the amount for each twenty-four weeks.

Mr. POWER: It was the trouble of digging it up that I was worrying about.

Mr. DIEFENBAKER: I would point out in connection with operations and maintenance that a company operating an air observer school receives 25 per cent of the saving thereon.

What profit per flying hour is now provided in the agreements between the government and each of the said companies?

If a reduction has taken place, when was the reduction made and has it been accepted by all the companies?

I mention the air observer schools because the other evening, and again to-day, there was apparently a misapprehension in so far as the difference is concerned between the operation of elementary training schools and air observer schools. The elementary schools provide for no profit for the shareholders beyond 5 per cent; air observer schools allow unlimited profits.

I also wish to ask whether consideration has been given by the minister, and a decision has yet been arrived at, as to the continuance of air observer schools under private ownership.

Mr. POWER: I have not the entire list, but in so far as the decision to continue to operate air observer schools under private ownership is concerned, not only will we continue to operate them but we will double their capacity. There are ten air observer schools in Canada. The cost to the crown per graduate pupil is $1,260. The original estimate of the cost per pupil intake was $1,650 while the actual cost to the crown at the present time is $1,075. The net annual profit remaining to each operating company after making provision for income taxes approximates $5,000. The operating efficiency of all these schools is of a high standard, both as to training and as to maintenance of property and equipment, as well as from the economical point of view.

As regards the six companies operated by the Canadian Pacific, and the question as to why the Canadian National does not operate any, my hon. friend will remember that when these contracts were given out—if I remember rightly it was in 1940—a large number of these independent companies had not as yet been absorbed by the Canadian Pacific Railway. The Canadian Pacific, as I recollect, came into the airways field only after these companies had obtained their contracts. Some of the companies are the Yukon Southern and Prairie Airways. I do not know whether it has a contract or not. At any rate, there are six such companies, so that in so far as the Royal Canadian Air Force is concerned it is not our fault if the Canadian Pacific happens to be in a strategic position with respect to airline traffic after the war. I do not know, because I was not in the department at the time, whether T.C.A. was offered contracts, but I presume it was not, because most of these companies were at that time independent; these independent companies were naturally anxious to get into this field, and the department was anxious to have them since they had at their disposal at that time a comparatively large number of trained pilots. It is true that since the plan has been expanded, the pilots as a rule are men who are trained by ourselves, so that what we get mostly is management, knowledge of maintenance, knowledge of the way in which to run aircraft, in perhaps a more efficient manner than would be possible if we did it ourselves. So much have the Royal Air Force been impressed with the work done by civilian companies that they have asked many of these companies to take over the proposed R.A.F. schools in Canada on the same basis as the J.A.T.P. are operated at the present time. With respect to the Canadian Pacific, leaving aside the question of strategic position, which could be discussed more properly in the railway committee because it really has not much to do with the R.A.F., Mr. Coleman wired me yesterday, or rather to the financial adviser, to the following effect.

Mr. HARRIS (Danforth): It is rather late to discuss T.C.A. affairs now in the railway committee when the report has been tabled.

Mr. POWER: I was not aware of that.

Mr. GRAY: I agree with the hon. member for Danforth (Mr. Harris).

Mr. POWER: This is the wire addressed to the financial adviser of civilian flying schools:

Confirming conversations and our suggestion made some two months ago concerning operation of air observer schools—

Mr. GRAY: I agree with the hon. member for Danforth.

The CHAIRMAN: Is the hon. member rising to a point of order?

Mr. HARRIS (Danforth): The point is that the minister suggests that this matter might be reviewed by the railway and shipping committee when they are considering the report of Trans-Canada Air Lines, but that report has been considered, dealt with and reported by the hon. member for St. Boniface (Mr. Howden), and there is no opportunity now, nor will there be for the rest of the session, to deal with it. I hope that the minister will not pass by that particular feature of our review of this situation by just suggesting that it might be considered by that committee. The point of order is that the minister should withdraw the suggestion that we have an opportunity to consider that particular matter, and leave the matter open for discussion in this chamber in due course.

Mr. POWER: I had not thought of the railway committee at all.

Mr. HARRIS (Danforth): Trans-Canada Air Lines—

Mr. POWER: I said that the question of the strategic situation of the Canadian Pacific vis-a-vis Trans-Canada Air Lines was a matter that did not concern the Royal Canadian Air Force.

The CHAIRMAN: There is no point of order. In the first place, the matter can always be referred to a committee by special reference of the house. Even if the committee had discharged its obligation with respect to a previous reference, the house is always at liberty to make a new reference to any committee, and therefore I do not think the point of order is well taken.

Mr. HARRIS (Danforth): It is not necessary to have this referred to the committee on Trans-Canada Air Lines.

Mr. POWER: It is not my concern as R.A.F. to discuss the strategic position of C.P.R. air lines, vis-a-vis Canadian National air lines, because at the time the Royal Canadian Air Force originally entered into contracts, these companies, as far as I am aware, were independent concerns. May I read the telegram before the committee rises:

Confirming conversations and our suggestion made some two months ago concerning operation of air observer schools on non-profit basis. Canadian Pacific desires to confirm its intention to operate schools under present contracts on non-profit basis and to return all accrued surpluses and reserves to the crown at termination of contracts or earlier at minister's option.

Mr. DIEFENBAKER: Are those elementary schools?

Mr. POWER: No; air observer schools operated by the Canadian Pacific.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. CLEAVER: Mr. Chairman, just before six o'clock the hon. member for Lake Centre returned to his attack on the air observer schools, in respect of their profits and in respect of the fact that they are being operated by civilian companies. I think the time has come when these attacks, which I consider rather unfair, should be answered.

The committee will recall that the whole question of civilian operated air training schools, that is elementary flying training schools and air observer schools, was referred to the war expenditures committee, which in turn passed on that part of its work to subcommittee No. 1. As chairman of that subcommittee I think I should remind the hon. member and the committee of a few of the facts. His first charge or attack was that these schools are being operated by private companies, and his contention was that they should be operated by the service. I should like to remind my hon. friend that he was a member of subcommittee No. 1, which on June 2 last brought in a unanimous report, in which the hon. member himself concurred. I should like to read what that subcommittee had to say with regard to the fact that these air observer schools are being operated by privately owned companies:

The training command of the Royal Canadian Air Force express their complete satisfaction in the training results of the elementary flying training schools and the air observer schools operated by civilian companies, and they stated any attempt to place the responsibility of this type of training upon schools operated by the service would place "an intolerable burden on the service", in which statement the committee concurs. The committee recommends that we should continue to take advantage of the services of these civilian flying companies, and that the services rendered by them be extended to their full capacity.

Up to that time the subcommittee had not had an opportunity to look into the profits being made by the air observer schools, but the committee continued its studies during the summer months and as a result brought in a further report with respect to air observer schools. I should like to remind my hon. friend of part of the contents of that report, first as to the efficiency of the operation of the schools:

The subcommittee finds that the air observer training schools are being very efficiently managed. The operating cost was originally estimated at $1,653.57 per pupil. The actual operating cost as of March 31, 1941, is $1,001.27 per pupil. With something over ten million miles flown to date these schools have had no casualties of either trainees or operating personnel.

That is truly a remarkable record, I submit, and one which could not have been attained except under the most efficient management.

Then my hon. friend complains of the size of the profits which were being made by the air observer schools, and of the fact that those profits were being earned by civilian shareholders. As he well knows, the whole question of profits was thoroughly gone into by the committee, and in this connection I should like to read another short extract from the report:

The subcommittee has carefully considered the question of profits which will be earned by the operating companies. Partly on account of highly efficient management and partly on account of the pupil intake as fixed by the contract being increased without proportionate increase in management costs it was found that substantial profits were being earned. The following examples of lunar monthly profits from one of the schools show an average profit of $1,112. . . . This would indicate a yearly profit from that school under favourable conditions of $14,456. In this instance the profit is being earned by private individuals and while the contract restricts the declaration of dividends to 5 per cent annually yet at the conclusion of the contracts there would then be a distribution of accumulated profits. The subcommittee fully appreciates the fact that the air observer schools are being very efficiently managed and that these schools are performing an important war task and also appreciates the fact that measures of economy should not be permitted to slow up our war effort but as the actual circumstances have altered sharply since the contract was first entered into the subcommittee decided that a conference should be called of executive officers representing all of the schools, that the facts should be frankly placed before them and their cooperation invited. The conference was held on June 4 and as a result the operating companies have all voluntarily offered to agree to a reduction of what is described in the agreement as flying hour profits from $1 per flying hour to 35 cents per flying hour.

That was a voluntary effort by the operating companies.

[Mr. Cleaver.]

The subcommittee recommends that the contracts should be amended accordingly and expresses its appreciation for this commendable attitude on their part. The subcommittee fully appreciates the fact that even after this reduction in profits is made, efficiently operated training companies will still earn net profits of approximately $5,000 annually after payment of taxes at existing rates, but believes that under the special circumstances surrounding these training agreements the recognized yardstick of measuring profits by their relation to capital employed is not an accurate system to use. In this instance the department is not purchasing goods or commodities but, on the contrary, is purchasing skill and experience. As to all existing professions, tariffs of fees have been established by practice but there are no tariffs available to guide your subcommittee in reaching a correct decision with respect to the present problem. In the light of all the surrounding circumstances the proposed change will satisfactorily meet this problem.

In view of the fact that these operating companies came to the committee voluntarily and offered to reduce their profits to the point where they would earn only $5,000 annually, for all of their services, I do suggest to my hon. friend that these continuous attacks on civilian owned companies, which are doing such a wonderful war task, should cease.

Mr. CHURCH: In the last war the headquarters of the Royal Air Force were in Toronto; there was no Royal Canadian Air Force then in Canada, and during the course of that war over 16,000 air cadets and mechanics were trained. This training was carried on with headquarters at Toronto and suburbs and at camps at Leaside, Armour Heights, Camp Borden, Beamsville, Trenton and many other places. The headquarters of No. 4 school of military aeronautics was at the university of Toronto and affiliated colleges, and the city which supplied and gave all their buildings and grounds and affiliated colleges. Some very fine pilots were turned out. Among those who were trained there were a large number of young Americans, many of them from United States universities and from California and the other Pacific coast states.

Those air men, when they went home, did not do like the Canadian people did. They did not forget all about the war, the air and all that kind of thing. They went into commercial aviation business, with the result that when the Chamberlain government announced its programme of aeroplane development and rearmament a few of these persons in commercial aviation got large contracts. I must say that Colonel Barker, V.C., Colonel Collishaw, M.C., D.S.O., the present Air Marshal Bishop, V.C., and another one named Frank McGill, now air commander at Trenton, urged the authorities of the day to continue

aviation in a commercial way, and also by way of rearmament. But very little was done until shortly after this war broke out, because the pacifists seemed to have control of almost everybody in Canada.

Even some of the school boards abolished the cadet movement, which has always been the backbone of the three arms of his majesty's forces in recruiting. In London, England, the present home secretary, Mr. Morrison, as head of the London county council, refused to give the use of one of the schools in the evening to the Royal Air Force, or allow Jellicoe's speech to be distributed. The same thing happened in Canada. It happened in Glasgow, where they would not allow signs to be put up in street-cars, for air force and army recruiting, because the pacifists reigned.

In 1939 a first return was presented to the house showing the numbers in the army, the navy and the air force, asked for by me before the war. That return, dated April 24, 1939, showed that the Royal Canadian Air Force was composed of only 257 officers and 1,927 airmen. A return was placed on the table two weeks ago and, if the minister would be good enough to look into it, I should like to have it placed on *Hansard*. It shows the pay and allowances, and other emoluments of the officers and men of all ranks in the air force. The Minister of National Defence supplied this return at my request on an order of the house for all the services, and a number of hon. members have asked for a copy of the air part of the return. I should like now to hand it to the minister to have it checked up, and to see if it can be placed on *Hansard*, as has been done on occasions by the Minister of National Defence and for the women's army. When war broke out I had a resolution on the order paper, and the return, No. 44, came down for all his majesty's forces and the women's army on March 24, 1942.

Mr. POWER: If the committee permits the hon. member to place this on *Hansard*, I would have no objection; but I have no right to permit the hon. member to do so.

Mr. CHURCH: Possibly the minister could check it up to date.

Mr. COLDWELL: Are the rates the same as at present in effect?

Mr. POWER: Yes.

The CHAIRMAN: The placing of something on *Hansard*, without first reading it into the record, requires unanimous consent. Do I assume the hon. member has unanimous consent?

Mr. COLDWELL: I suggest that any table of pay and allowances now placed on the record should be brought up to date, and I believe that is what the hon. member desires. I suggest this return should not be placed on *Hansard*, if it is not up to date.

Mr. POWER: I gathered it was a return which had been tabled recently.

Mr. COLDWELL: I thought it was 1939.

Mr. POWER: If the committee wishes to have a table of 1939—an obsolete table—placed on *Hansard*, I have no objection.

Mr. HANSON (York-Sunbury): I believe the hon. member is asking the minister to have the table checked by his officials, brought up to date and then placed on *Hansard*.

Mr. POWER: I should be very glad to do that. I thought the hon. member wanted my permission to place it on *Hansard*, and my reply was that I have no objection to his placing anything on *Hansard*.

The CHAIRMAN: I understand the hon. member has not the unanimous consent of the committee?

Mr. POWER: From what the hon. member said I understood he wished me to have the return checked by my officials, so that it might be placed on *Hansard* after it has been checked.

Mr. HANSON (York-Sunbury): And brought up to date.

Mr. POWER: Yes. This seems to be a return of March 24, 1942, and would seem to be pretty well up to date.

Mr. COLDWELL: I thought it was 1939.

Mr. CHURCH: Any action taken with respect to the recent return will satisfy me. It is the pay of all ranks in the air force. It may have to be brought up to date, a few days. I acquired it from the clerk of records.

Since war broke out I have had a resolution on the order paper asking for better allowances and better protection to the men of his majesty's forces and Canada's soldiers, including the air force, and asking specially for a system of life insurance on all soldiers, so that they will be taken care of after leaving the forces at the conclusion of the war and for sickness and unemployment insurance. I have asked, too, for a cost of living bonus for dependents, and free fares and better accommodation on trains and ships, and a bill, No. 6, to amend the Railway Act (free fares). I hope that some effort will be made to carry

these suggestions into effect, and that special consideration will be given to supplies to the air force.

Before the war broke out, municipal, provincial and federal authorities had spent nearly a billion dollars on the dole, during the period of depression and unemployment. In the years 1936, 1937 and 1938 I urged on the government on my motion as a private member that it should adopt a system whereby young people out of high schools would in an apprenticeship system of three years learn military drill, get pocket money, clothing, lodging and deferred pay by signing up for from three to five years and work as apprentices in industry or mechanics in eight or nine key industries. If that had been adopted we would have had about 25,000 skilled mechanics from these industries when war broke out and nearly that number of air mechanics. I am sorry it was not adopted. The money was spent, anyway, on the dole and wasted, and when the war came we found that we were away behind in our preparations.

Many of our young Canadians were overseas a year or two before the war. Some of them had to go at their own expense or on cattle boats to enlist, and that matter has been discussed here. There was some discussion as to whether we should send them over a year before we took part in the war, at Canada's expense, for the Royal Air Force. I know of one young man at Belleville who was helped out of gaol on my request by the Minister of Pensions and National Health. The young man told the magistrate at Belleville that he was sixteen when, in fact, he was only fourteen. The minister interested himself in the young man, and he was released. He was only fourteen, but gave his age as sixteen or seventeen so that he could go overseas in a cattle ship to the old country in order to serve.

I have been pleased to see the work done in connection with cadet services. The school boards of this country deserve a great deal of credit. Long before the South African war, in fact after the Fenian raids, school boards and boards of education supported the cadet movement in the schools of Canada. That movement was the backbone of the militia in the last two generations; it is the backbone of the reserve army, air force and the naval cadets to-day. Boards of education in Canada have done good work in that connection.

I was sorry that five or six years ago parliament struck out the vote for the cadet movement. As I have said to some hon. members, I think it would have been far better if the government had left the air force the way it was; that is, actively connected with the army and the navy, through the school boards. In that way I think we would have had a unified cadet system under public control. True, some say that private citizens and organizations furnish equipment. That may be so, but cadet air services receive, I believe, a $25,000 grant.

One of the most ardent workers in connection with air cadet training has been Right Reverend Bishop Robert J. Renison, of St. Paul's Anglican church, Toronto, a veteran of the great war. I believe that at the annual air cadet service there were 1,200 of all cadet denominations at his church. He was a leader in education and military matters. His son went to the old country in 1938, at his own expense, and joined the Royal Air Force in England. He was a young varsity student and is now a prisoner of war in Bonn. The bishop, one of Toronto's leading citizens, has done a great deal of work in connection with the air cadet services. His other son is with the 48th battalion in England.

A return was brought down in the British parliament in connection with the help given by the women's army, as far as the air service is concerned. I believe that in the pay service, and in many other occupations they could be used to displace some of those between the ages of seventeen and forty-five and release some for overseas and home defence.

An air force return was brought down by the minister, No. 29, on February 26, 1941, with reference to sickness in the manning pool at Toronto. It seemed that the air force got the horse palace and cattle stable buildings there, good modern brick buildings, and the return states that in one there were 864 cases of respiratory throat trouble as well as many other illnesses. Now that the government has taken over this property, on which $23,000,000 had been spent on grounds, buildings and permanent exhibits by the city, the air force should get better equipment and buildings on these grounds like the navy have, and better than they have in connection with the present manning pool.

The empire training scheme has been commented on very favourably many times. Complaints have been made, and I know the minister is doing everything he can in connection with them, about the accommodation on Canadian trains as well as on boats in the ocean service. The minister has been most sympathetic toward these complaints and I know he is doing everything to have an improvement made in better transit accommodation and cheaper meals and all along the line, and as to fares my bill asks for free fares.

I should like to say a word about the losses and deaths in training that have occurred in the air. Of course these losses cannot be compared with the loss of life occasioned by the motor car. In the city from which I come 107 people were killed last year in motor car accidents, and the losses all over Canada from motor cars are most appalling. When a loss of life occurs in connection with the air training scheme I think a copy of the evidence taken at the inquest should be made available to the relatives. These inquests are not civil inquests; they are military inquiries carried on under the regulations of the department. Civil inquests are in public. I have no complaint to make, but the families should have a copy of the evidence and findings and I would offer the suggestion that greater care should be taken to prevent accidents to young pilots in the Royal Canadian Air Force.

I know the authorities have been careful and that accidents are likely to happen when we have such a large number of camps spread all across the country, with a great variety of climatic conditions, but I think every care should be taken. Many of these young men come from other empire countries such as New Zealand and Australia and the most extreme care should be taken. These young pilots are placed in positions of responsibility and accidents will happen. I realize it is not fair to draw rash conclusions; we must compare our losses now with those that occurred in the last war and take into consideration the hours of flying, miles travelled, and so on. Everybody admires these young pilots who fly the skies after a great deal of training, after weeks and months of study. While some of them have the necessary skill, many of them do not have the confidence they should have. The government should see that the camps have the best equipment available, and have rigid inspection of pilots, equipment, and over flights.

I hope that great care will be taken to prevent accidents. We should take into consideration, not only the climate but the position of the camps. I understand from what the minister said last session that he does not locate these camps, that that is done by the Minister of Munitions and Supply. In the case of some of these camps great difficulty has been encountered in getting sewers, water and transportation facilities. Some of the camps in the west and in other parts of the country are not located where they should be. The climate and weather conditions are important factors. Many of these young men who come to this country are not used to our fogs and prevailing climatic conditions, and they may not have as good judgment for distances in bad Canadian winter weather and other matters as they should have. Referring to this question of accidents in the British House of Commons, Captain Balfour, joint under-secretary for air, said the other day in the house on a discussion of this very matter of air training:

> I was very glad indeed that the hon. gentleman raised the question of accidents, because one of the tragic aspects of the administration of a service department such as the air ministry, which my right hon. friend and myself have to face, is that the air, even in peace time, has always taken its toll of human life and that in war the toll is much greater. I can assure him that we regard accidents as incidents which must be investigated and sifted to the uttermost. We are always anxious about accidents; we can never be happy or complacent or satisfied so long as accidents, which might possibly be avoided, occur. We have a complete accidents branch; we sift out statistics of all accidents with a view to finding out whether a particular type of aeroplane is more prone to accidents than to others and whether a particular age group is inclined to be more prone to accidents than another; we study meteorological conditions and get a series of cross sections of all the circumstances attending accidents.

A member inquired about the operational work being carried out with monoplanes, and Captain Balfour replied:

> I will gladly answer that point. Biplanes are used to any extent in the training of pilots, only at the elementary stage, and at this stage the biplane has been found to be satisfactory and economical in use. It is our experience that pilots receiving their initial training on biplanes show no variation in skill, as compared with pilots who have received elementary training on monoplane types. I cannot agree that the biplane is inefficient or wasteful, or is not giving our young men a fair chance. On the other hand, the biplane has not got all the modern developments associated with the low-wing monoplane.

I am satisfied that here in Canada a great deal of care is being taken but, when accidents do occur, I think the parents should be informed immediately and be provided with a copy of the evidence taken before the military court and its finding. I am sorry that the universities of this country have not received more support from the government in their air programmes and syllabus. The technical school at Toronto applied for a new wing, but their request was not granted. They have been doing a great deal of work in training students, both in the day time and in the night time, in order to qualify them to work in munitions plants and other plants manufacturing aeroplane equipment and all that kind of thing. I believe something should be done to help them because it is essential war work of the greatest national value for total war.

Have any experiments been carried out, either by the government or by the Canadian National Railways, in connection with the use of air ambulances? These flying schools are located all over Canada, and I am sure that many lives could be saved if we had a proper system of aeroplane hospital ambulances and nursing services. I think this is worthy of immediate consideration. When this war began there were some cardinal errors made in connection with lack of bases and protection of the air force and their aerodromes overseas. Britain was not ready. The pacifists in government were to blame. There are three elements which have caused a heavy loss of life in the air in this war by our naval disarmament. I refer to the reduction in our cruiser strength from seventy to fifty by the Washington treaty, which reduction was contrary to all Admiralty advice. This has led to great losses of life in connection with flying. Then there was the limitation of our destroyer flotillas on the incorrect assumption that flotilla strength should be determined by the submarine strength of the other powers. Also there was the abandonment of the bases in Ireland. All these have caused a considerable loss of life in connection with the battle of the Atlantic on land, sea and in the air.

Canada should study the effect of the development of the air arm in the conduct of war at sea. We might have some statement about that. After two and a half years of war it should be possible for this country properly to value and assess the part that air warfare has played so far in this war and what is expected of it to the war's end. It has had some successes in this war and some failures, some successes which were least expected and some failures where success was anticipated. To-night we hear of an enemy submarine sinking a freighter in the St. Lawrence. The enemy is at our front, side, and back doors.

We can learn lessons from the bombing of Britain. Blackouts, per se, are of little value alone. In the daylight attacks on Britain the enemy were favoured by good long-range conditions and by having a ring of bases all round Britain from which their bombers could attack the island, and industries and dense population all together, but the British people withstood the attack. The daylight bombing was a failure. The combination of the Royal Air Force fighters and the anti-aircraft guns broke up the daylight attacks. The guns broke up the German formations, and the fighters of the Royal Air Force concentrated on the scattered enemy units. That was responsible for the wide difference in the figures of losses given out by the Germans and the British. At night the only defence Great Britain had at first against attack from the air was the barrage balloons, which prevented dive-bombing on moonlit nights by the German air force. At first neither the British anti-aircraft guns nor the fighters were effective against the German bombers at night. There were two main reasons why all the cities of Britain did not suffer the fate of Coventry. First, the enemy did not have sufficient heavy long-range bombers available, and there was, secondly, difficulty in routing their formations flying at high speed on dark nights and bad weather from widely separated bases. But the night bombing by the German air force was overcome in time through defence improvements and the British defence of radio location, together with anti-aircraft gunnery. The May blitz on London was the worst, and it was also the most costly for the attackers, and in the result the invasion in the air was on the whole a failure, though a lot of lives were lost and there was heavy civil damage.

I appreciate what has been done in the commonwealth air training plan. The type of recruit offered is most excellent, and we have had no difficulty in getting recruits for the air force as well as for the navy, under the voluntary system. If the proper methods had been adopted from the very beginning of the war, there would have been no difficulty in getting recruits for the army and under voluntary recruiting I think a million men could have been obtained, but as I said when the war started it was almost as difficult to get into the army as it was to get into the Rideau club, which is supposed to have a long waiting list. The policy at that time in getting recruits for the army was on-again, off-again, on-again. If we had had a better system, I believe we would have got the recruits. The military authorities did all they could, and I am not criticizing them at all, far from it, because they are a very fine body of men, and in that tribute I would include the three good ministers of the war departments of his majesty's forces and the Minister of Pensions and National Health, who are all experienced, trained soldiers. I still say, however, that if we had had a proper system of voluntary recruiting for the army at the start we would have done very much better than we did.

Mr. McCULLOCH: Mr. Chairman, I am not in the habit of taking up very much of the time of the house, but some three years ago an airport was started in New Glasgow and the town was asked to buy a large tract of land, which it did and deeded the same to the

government. At that time the government spent in the vicinity of $20,000 in levelling off this field and putting it in shape for hard surfacing. In the last four months four planes have crashed in this vicinity, one at Lismore, which plane was damaged considerably. One landed at the airport and stuck in the mud; another one landed to help it, and I understand that they are both there yet. Three weeks ago another one crashed at the Allan shaft within two miles and a half of the present airport. If this airport had been in condition these planes probably could have landed safely at it.

The damage done to the first plane at Lismore would have more than paid for the hard surfaces of this airport. Planes are flying over New Glasgow night and day. Not having an airport to land at when they are in trouble they may crash, as occurred in the instances of which I have spoken, and at any time there may be loss of life.

I want to read a few paragraphs from a letter I received from Mr. L. D. Payzant, chairman of the airport committee of the New Glasgow board of trade. He says:

> Since writing you the above letters, disaster has taken place to three more planes in this area, largely I believe due to the fact that the government have no adequate airport here which means that they did not implement their contract signed with the town of New Glasgow on March 1, 1940.
>
> The additional accidents to which I refer are, I think, familiar to you. Several weeks ago a plane landed on the airport, which of course lacks hard-surfacing, and in the muddy condition of our spring it was injured. A second plane came to its rescue and was likewise mired in the mud, and so far as I know both planes are still there awaiting weather that will dry up the surface of this field. Such a situation is really pathetic when a few thousand dollars would have put the field in shape for emergency use.
>
> On Saturday last another disaster took place. A military plane had to make a forced landing at the back mines just about three miles from our air field which, of course, he probably did not recognize as there are no markings on it whatsoever and no record in the manual supplied to flyers. If the difficulty to planes mentioned herein and those referred to in my letter of January 12 continue, and they are likely to do so as flying around this district seems necessary, it seems the height of folly on the part of the department to ignore the contract with the town. All we are asking for at the present time is to have this field hard-surfaced and made available for planes in emergency.

I submit that for the minister's consideration.

Mr. ADAMSON: First of all, I should like to congratulate the Minister of National Defence for Air upon one particular phase of the excellence of the joint air training plan, and that is that I have never at any time heard any complaints in any way, shape or form that the slightest tinge of politics was mixed up with this magnificent plan.

There are one or two suggestions I wish to make, possibly from a military point of view. It has been my privilege to discuss the campaign in Libya not only with air force officers but also with army officers and with United States observers of that campaign. Nearly all of them have said this one thing, that a break-down was caused by lack of co-operation between the two forces, the air and the army. They simply did not think in terms of each other's weapons.

I suggest to the minister that here we have a great air training scheme, as well as a military training scheme, and eventually the army and the air force will have to fight together. It seems to me that at the coming air conference some suggestion should be made for using Camp Borden, where we have an air force training school and the Canadian armoured corps, to train the two forces to cooperate and learn the characteristics of each other's weapons, so that as far as the army is concerned, we shall know what we look like from the air, and the air force will know some of the difficulties, the lack of vision, the peculiarities and the strain upon drivers of armoured vehicles in the army. I have made a similar suggestion before. Both the air and the army authorities have invariably agreed that this would be a good idea, but the air force said, "We have not the pilots to train these men, nor have we the machines." I suggest that this is one of the essentials. We should send both our army and our tank crews overseas with some knowledge—you cannot make it extensive, but at least it can be a basic knowledge—of each other's point of view. In this way you will start off with a cooperation which you must have in any mobile war.

There was an announcement in the press the other day that His Majesty the King was pleased to assent to the formation of a Royal Army Air Corps. I have seen nothing further about it, and I should like to know whether there is any foundation for the statement.

Mr. POWER: I do not know anything about it. It is not my business.

Mr. ADAMSON: I believe it was a Canadian Press dispatch, and appeared in a Toronto paper.

There has been considerable discussion this afternoon and this evening concerning commissioning of air crew personnel who have graduated. The minister suggested that they should become ensigns. The difficulty, I believe, is that after a certain period, when

they go through and get their wings, the highest fifty per cent are commissioned and the rest are made sergeant pilots. I suggest to the minister that he consider giving all graduates the king's warrant—making them all warrant officers—until they have had so many hours combat flying. I suggest that as an idea which might work, because I realize a difficulty arises. Because one boy gets 86 per cent and another gets 84 per cent, the one becomes an officer and the other a sergeant. I believe that is an unfair system. Perhaps there are difficulties about making them all officers where there are large bomber crews containing as many as eight men. But this discrimination seems to me bad and undemocratic in principle.

There are two or three more suggestions I should like to make to the minister. A large number of Royal Air Force personnel proceeded here from England and trained in the United States. They came back, and we met them. All of them had a certain amount to say. A large number were failed, and they believe they had been failed unfairly. This is an administration matter, but I must point out that these stories were general; we talked to many who came back. Was there any reason why so large a number did not qualify as pilots in the United States?

Before a man can join the air force he undergoes an aptitude test. I believe that is general, applying to both the ground crew and the air crew. In my opinion there should be an aptitude test for every recruit before entering any branch of the fighting forces, and it would be interesting if the minister would give us some information or suggestions about how this test has worked for his air crews and his ground crews.

Mr. POWER: All I can tell the hon. member is that the minister tried it himself, and failed.

Mr. ADAMSON: I was afraid to try it. But I should like to know whether, after the experience of a year or so, it has proved a success. The psychologists thought it would.

Mr. POWER: They say it has been successful.

Mr. ADAMSON: The air crews—pilots, observers and air gunners—go through the schools and train until they get to their combat planes. I believe the committee would like to know what percentage of their training they get in Canada before they are capable of engaging the enemy in a combat plane. I understand they go to a combat centre in England and then to their fighter aerodrome. How much more training could we do in Canada? What percentage of the finished article is made in Canada? What is left to be done in England?

If section 3 of the National Resources Mobilization Act is done away with, a great deal of time and effort might be saved by having joint recruiting stations. Frequently a man in the army, particularly at a basic training centre, thinks he is unfairly dealt with because he has not had an opportunity to go into the air force, and the military authorities have quite a lot of trouble in convincing him that the air force is full up as regards ground crew and that he has not the qualifications for air crew. I believe it would be a saving if joint recruiting offices for the three services were set up, wherein each applicant would be tested and sent to the service with which he was going to fight. He could then go on, knowing from the very beginning that he had had his chance of joining whatever service he wanted to join. He would not continue during weeks and perhaps months of training with the psychological handicap of wishing that he was in some other service.

I leave these three or four suggestions with the minister, and I would again particularly stress cooperation between the air and the army. We feel that we are kept in the dark about air matters, and there is a certain amount of resentment in many sections because it is believed that the air force does not cooperate with us. I dare say the fault is partly ours, but I think this is a war of three dimensions and, no matter what weapon we fight with, we have to be conscious of air warfare. I would suggest most earnestly to the minister that during the coming conference, right from the basic beginning, cooperation between the army and the air be taught, and taught in such a way that the army will become air-minded and that those in the air force will have a better understanding of our problems on the ground.

Mr. MacINNIS: I think the eulogy of the flying schools by the hon. member for Halton (Mr. Cleaver) is likely to lead the committee astray. I was on the war expenditures committee last year when the second report was made, and when the subcommittee, of which the hon. member for Halton was chairman, presented its report to the main committee it was not accepted but was referred back to be amended. I see no reason why the commendation should be so effusive even if the flying schools are doing a fairly good job. Why they should make any profit at all is the amazing thing to me. After all, the civil aviation schools put only a very nominal

amount of money into these institutions. All the capital is provided by the government. To set up a school complete, requires, I understand, some $800,000. The original shareholders in the aviation schools provided $35,000, on which they are allowed a dividend of 5 per cent. Why they should make any profit over the 5 per cent paid on the invested capital is quite beyond me.

Let us look at the fourth report of this subcommittee, concurrence in which has not yet been moved in this house. I find this:

> The subcommittee finds that in every instance all of these clubs and companies are devoting their entire effort to the war training work. They are highly efficient and are carrying on their task without any thought of profits to the company or to private individuals.

That appears on page 593 of the minutes of proceedings, and two pages further on I find this:

> In regard to profits to be earned by the training companies under the agreement, the amount of profit which would accrue under the agreement was determined as accurately as was possible at the time, but there was no previous experience on which to base an estimate. The subcommittee has carefully checked the profits which are being earned and finds them to be excessive, due to increased flying hours necessitated by increase in pupil intake.

Here is an organization which the committee says is carrying on without any thought of profit, and yet in the next breath it finds that the profits that are being made—mind you, by an organization which is working without thought of profit—are excessive. I wonder what the profits would be if they were operating for profit. Certainly they do wonderfully well when they are interested only in performing a public service. I mention this because I refused to accept the recommendation made by the subcommittee when the report was submitted. The government, as I have pointed out, provides the buildings, the planes, the gas, the oil, the food and everything. All that the schools provide is the management, for which they are allowed so much for salaries.

The report, a copy of which I have here, states that the companies operating the flying training schools are doing so under an agreement the terms of which were negotiated after conferences with the Canadian flying club association. It says:

> Under the present contract the crown supplies the site of the school and all necessary buildings and equipment. The training company furnishes all management and operating personnel excepting a small supervisory air force personnel resident at the school to maintain proper discipline of the trainees and to see that the syllabus of training is adhered to.

Let us see what the government supplies. The first item is management:

> This item includes salary of manager, secretary-treasurer, office staff and all items of management. This payment is a fixed amount of $1,400 per school, per lunar month.

Then there is operation and maintenance:

> This item includes the salaries of all instructors, instructor pilots, engineers, electricians, mechanics, labourers, etc., and also includes cost of all spare parts and material used in connection with the maintenance of the aeroplanes. This item also includes heat, light, insurance, etc. The agreement calls for payment of a monthly target price, which in the first agreement was $16,000.

Then flying hours:

> This item covers payments for three separate items. A monthly target price is set up to pay for cost of gas and oil. Any surplus earned as to gas and oil is the property of the crown and there is no profit feature to the company in regard to this item in any way.

Then messing:

> The sum of 90 cents per man per day is paid the training company for messing. As no provision is made elsewhere in the contract for costs of the caretaking of quarters and for laundry, the training companies are paying for these services out of the amount allowed for messing, and in most instances the messing is sublet to a firm of reliable caterers.

Here we have the whole cost paid for by the government. And remember that in the first instance all the capital that the flying schools supplied was $35,000, whereas the capital required for a school is some $800,000 or more. Despite that, I find in the fourth report something to which I objected at the time the second report was being prepared, and which was not included in that report:

> The subcommittee has already recommended that all profits should be invested in non-interest bearing Dominion of Canada bonds so that all profits earned will be available for war purposes until the end of the war. Most of the companies are already following this practice. The subcommittee has already recommended that the agreement should be amended making this compulsory. If this is done and if all the common stock of the training companies is held in trust for the flying clubs sponsoring the training company with federal charters in the terms recommended in this report then the question of profits is adequately protected.

Let me remind you, Mr. Chairman, that this common stock was given to the owners of the original $35,000 capital, and they did not pay anything for it. So the government of Canada is paying dividends or profits on common stock that did not cost the shareholders anything.

Mr. POWER: Oh, no.

Mr. MacINNIS: That is the principle to which I am objecting in this instance. It is a crime and a shame, and for the life of me I cannot see how the committee could recommend such a procedure.

Then the hon. member for Halton made much ado about the fact that these companies voluntarily agreed to reduce the flying hour cost, I believe in the case of the observer schools from $1 to 35 cents. I cannot see where the voluntary part comes in? They agreed, when the committee had satisfied itself that the profits they were making were excessive. I believe the profit being made by the observer schools was 66⅔ per cent; and though they had been carrying on for months it was not until they were brought before the committee, and told by the committee what facts had been discovered, that they agreed to reduce the flying hour cost from $1 to 35 cents. The same thing applies to the elementary flying training schools, which reduced their cost from 50 cents to 25 cents. There really was nothing voluntary about it. It happened in this way. The committee said "We believe your profits are too high and will not bear inspection. If we bring in a report to the house showing these profits, there will be a hullabaloo over it and they will be reduced anyway," so the schools "voluntarily" agreed to reduce their flying hour cost. The mere fact that this reduction was made, to the extent of two-thirds in the case of the observer schools, shows that the original costs were excessive and had been excessive for a long time. I think all that the committee to which I refer is doing is acting as a sort of advertising agency for the observer schools and the elementary training flying schools, and we should expect better than that of a committee on war expenditures.

Mr. GRAYDON: My remarks this evening will be on a different subject and perhaps of a different nature from those which have been made by previous speakers, but I find it difficult to keep my seat when a matter so important to the country generally as the air force of Canada is under discussion.

I believe the Canadian people have a very deep sense of appreciation of the tremendous sacrifices that are being made by a certain group of our citizens, that is, the men who risk their lives day and night in the air crews of the Royal Canadian Air Force and the Royal Air Force itself. It seems to me that if ever a truth was self-evident it is the fact that when the actual testing time comes to our people, the youth of our country always measures up to the very best traditions of both age and experience. Those of us who have carefully watched the work of the men of our air crews are brought to our feet to pay a well merited tribute to these men who night and day sweep the skies over Germany, over the desert sands of Libya and over the expanse of the oceans from one end of the world to the other, who take risks perhaps greater than those taken by any other branch of our armed forces, and I say that without desiring to cast any reflection upon the dangers faced by those in our other armed services. But it does seem to me—and I am sure this must have occurred to many members of this parliament as I know it has occurred to many people throughout the country—that if we are to have some approach to equality of sacrifice in this war, and if some men are to be paid more than others, it should be the members of these air crews who face perils and dangers night and day, whose lives at best are very short, and of whom the Prime Minister of Great Britain said in those memorable words which will echo down the corridors of time, "Never was so much owed by so many to so few."

So it seems to me that, while there may be good reasons why in committees like this questions of pay should not be unduly emphasized, at the same time since there is a difference in the amounts paid to the men serving in the civilian as well as in the military branches of our war effort, we should review once and for all the whole question of pay in order to make proper recognition of the dangerous activities which we ask these men to undertake. I know something of the difficulties with which the minister is faced in connection with many of these matters. There are some things for which I do not give the minister credit, but I do believe he is sympathetic to the men in the air force of which he is the head. So I appeal not only to his mind but to his heart, to see to it that these men of the air force are given some sort of return which will compensate them in some measure at least for the tremendous risks and the great dangers which they must face day and night for you and for me.

I should also like to offer a suggestion to the minister in regard to a matter which has come to my attention on more than one occasion, as I am sure it has come to the attention of the minister and other hon. members. It is in connection with the embarkation leave, which particularly to the members of the air crews is a very significant and important leave. It seems to me we should take into consideration the vast distances in this country, and see to it that each man secures his clear fourteen days leave in every instance. I understand that is not always the case in some branches of the service, and I hope that when the minister scrutinizes his own regulations carefully he will make the necessary adjustments. I ask the minister to consider this matter seriously, because nothing less than the best should be given to these men. I

know the minister will see that that is done, after he has given the matter that attention which I suggest it so richly deserves.

What I am about to say, in closing my remarks, was to a great extent prompted by what was said by the hon. member for York West (Mr. Adamson), when he spoke of the desirability of having the three branches of the service united in some kind of joint enlistment bureau. I have no doubt that from time to time the minister has received complaints to the effect that young men attempting voluntary enlistment in Canada have a difficult time in trying to assess the position in which they find themselves. They have difficulty in locating the type of service into which they wish to enter. I have always felt that as a country we have not done enough to provide information leading to the objectives these young men wish to reach. Even if it is rather late, it seems to me that something might still be done. It is better late than never. I believe we could provide voluntary enlistees in Canada with more information as to the available types of service, and the work which may be open to them when they wish to enter any of the three branches.

I am sure the minister has had young men come to him—I have had the same experience—and say, "Well, I do not know where to go. I am depending upon a rumour here, and a story there. I am told it is best to go into this branch of the air force, or that branch of the army." It seems to me that the government should take some steps, before it is too late, to see that these men learn through some authoritative channels the types of services and the openings available in the three branches of our armed forces.

Therefore I would supplement what the hon. member for York West had said, with the further suggestion that we might properly have some kind of information bureau to carry out the suggestions which have been made. While at this time I do not wish to tread upon dangerous ground in connection with our present defence position in Canada, there are one or two questions I should like to ask. Of course the minister will be careful in his answers to any questions I may raise in this connection. However, there has been in the minds of many people in Canada the thought of the imminent possibility—perhaps not imminent, but certainly a possibility—of air attack on the dominion. I remember having brought this matter to the attention of the Minister of Pensions and National Health a year ago. I really went quite a piece with him, because I suggested the setting up of a new ministry of home security. I pointed out at the time that the minister knew I was making no reflection upon him, because, having regard to the fact that he is a bachelor, there was no use in giving him home security to look after.

I made the suggestion seriously, however, because I felt, as did many Canadians, that there was a definite possibility of air attack on the dominion. I believe the situation is more imminent to-day than it was then. There are many citizens—you may call them armchair critics, if you like, and among the number you may place me—who think that the dominion should have the assurance that if we are attacked from the air we have in our air force in Canada sufficient combat planes with the necessary equipment, guns and power to see to it that whatever does come across the seas, either from aircraft carriers or otherwise, will be dealt with in the manner in which we as Canadians would want our nation defended.

I would therefore ask the minister to give the house and the country some assurance that every possible precaution is being taken, not only in connection with our coastal anti-aircraft defences, which I know are being developed, but also with respect to interceptor planes and other types of combat planes. I know we have plenty of trainers; but, on the other hand, that would not be sufficient, provided we were subjected to air attack. Would the minister consider that question and, if possible, satisfy our people by an assurance that the air force in Canada is reasonably able to take care of any emergency such as I have outlined.

Mr. POWER: No minister in any country in the world can give the assurance that there is adequate air protection at any time. As to telling my hon. friend as to the combat planes and bombers, or interceptor planes we have on hand he knows very well I cannot tell him that.

Mr. DIEFENBAKER: Just prior to the evening adjournment I asked the minister a number of questions which, I realize, he has not yet had an opportunity of answering. However, the hon. member for Halton took it upon himself to answer the questions I had asked. I do not wish to enter into any controversy with that hon. member in regard to what took place in the committee on war expenditures, and for that reason I am not going to answer many of the statements he made this evening.

I do, however, wish to point out that no attack was made on any system. The

stand I take now and the one I took last summer was that in a time of war there was no justification for profiteering on the part of any company or any individual in Canada. If the answer to the questions I have asked reveals that there was in fact no profiteering, then of course the entire answer has been given to the questions I asked. This evening the minister said that in so far as air observer companies were concerned, after payments of all income tax and the like the average profit had been $5,000. That, of itself, signifies little. It shows that after all expenses have been paid and all deductions made, these companies have been receiving a net profit of 10 per cent in connection with the doing of work, the producing of air observers, for our flying forces. Let me say that what the true profit is can be determined only when there is an answer to the question I asked as to how much money was paid by the operating companies to the parent companies. The present set-up in some cases is this: There is the parent company. Then there is the company which receives the contract from the government. I suggest to the minister that the records will show that one or more of these companies with contracts, when arriving at a net profit of $5,000, failed to take into consideration sums of money running up to $12,000 and $14,000 which were paid to parent companies that existed before the war. Therefore the true state of affairs is not revealed by the statement that the net profit is merely $5,000.

This afternoon the minister stated that, either yesterday or the day before, the Canadian Pacific Railway company agreed voluntarily to continue the operation of air observer schools without profit. That attitude on their part deserves the highest commendation. The work they are going to do in connection with the training of air observers is the type of service which was so highly spoken of by the hon. member for Peel (Mr. Graydon), and they are going to do it without profit. The object of the questions I asked this afternoon was to place before the minister and the country the situation which prevails in so far as certain companies operating air observer schools is concerned. They are permitted to make profits on an average of $5,000 after having deducted large sums of money which were paid over to parent companies. I understand that, in addition to that profit, 5 per cent has been guaranteed to each shareholder.

The present position is that these companies which were set up by private individuals received contracts from the government, under which they first received a management fee of $2,700 a month. On the basis of that management fee and the savings thereon, a large portion of their profits is determined. Then there is a maintenance and operation account on which they receive $17,500 for every period of four weeks. At the expiry of their contract they receive 25 per cent of the surplus savings under this particular head. Finally there is the flying profit. Previously they received $1 and then it was reduced to 35 cents. The hon. member for Halton says that this was done voluntarily, but I do not intend to enter into a discussion of the definition of "voluntarily". However, I would point out that the operating companies agreed to do this only after the matter had been discussed before the committee. I ask the minister to furnish the committee and the house with information to which the members of the committee cannot refer because the evidence was given behind closed doors. Will he furnish answers to the following additional questions? What was the gross profit of each company operating an air observer school?

Mr. POWER: Are these the questions the hon. member sent me this afternoon?

Mr. DIEFENBAKER: I shall send these over to the minister. First, I want to know the gross profit of each company operating an air observer school in Canada before the deduction of any taxes. I want to know which companies operating air observer schools paid anything to parent companies for experience and the like. How much was paid by each company to its parent company during the first year of operation? The answers to these questions and to those I asked this afternoon will afford an opportunity to this country and the committee to know whether the contention of the hon. member for Halton is correct or whether the contention I am placing before the committee is correct, namely, that some of these companies are taking an unfair advantage of this country's being at war. I am glad to note the patriotic attitude of the Canadian Pacific Railway.

Mr. REID: Better watch the C.P.R. too.

Mr. DIEFENBAKER: I have the assurance of the minister that the C.P.R. is not getting any profit, and I take it that they are not going to expect any profits from the inception of their contract.

Mr. REID: They have other things in mind.

Mr. DIEFENBAKER: The hon. gentleman may cover that. I say again what I pressed this afternoon, namely, that the Canadian National Railways should have an opportunity of having air observer schools and the like so

that, when the war is over, our two transportation systems will be on an equal footing in so far as the development of post-war air transportation is concerned. I am asking the minister to answer these several questions so that the situation with regard to air observer schools will be known to this committee and to the country.

Mr. POWER: Rather than indulge in an acrimonious debate with my hon. friend with respect to this matter, I have taken the liberty of asking the officials who are most familiar with it to prepare categorical replies to his questions. I do not know that it would serve any useful purpose for me to controvert the statements made by my hon. friend, although perhaps if they go out to the press to-night it will be found that a great many of them are not in accord with the facts. However, I am not going to discuss them. I am sure I shall be able to answer every one of my hon. friend's questions in such a manner that he himself will have to admit that some of the aspersions which he casts on either the companies or the department, I do not know which, were not founded on fact. I have not my papers before me, but I am quite sure that there are no profits paid to parent companies by the operating companies. If I am not mistaken, most of the air observer companies have no parent company; they are dealing directly with the department.

Mr. DIEFENBAKER: The minister has said that I made statements which were incorrect.

Mr. POWER: I think so.

Mr. DIEFENBAKER: If he does not know, then I wish to point out to him that there are companies which have parent companies that have received varying amounts, as high as $13,000 or $14,000, from the companies holding contracts with the government and paid for experience and other services.

Mr. POWER: I will check.

Mr. DIEFENBAKER: I think the minister was most unfair to me when he said that I was casting aspersions that would not be borne out by the facts, when I simply asked questions for the purpose of having the situation determined.

Mr. POWER: It is not fair for the hon. member to draw conclusions from his questions until he has had the answers. That is the only objection I have.

Mr. GOLDING: I think my hon. friend wants to be fair to both the elementary and the observer schools. He was a member of the war expenditures subcommittee along with myself, but there is one thing in connection with these schools that has not been pointed out. They had contracts with the government for three years, and the rate per flying hour was based on forty-eight pupils. After the collapse of France things were stepped up and this number was doubled, with the result that with a few more personnel and a few more planes they were getting a larger number of flying hours per lunar month than was expected when the original contracts were let. When we came to investigate their profits, I must say that I was proud of the men in both the elementary and the observer schools because they came here and assured us that it was not profits they were after, and they voluntarily offered to reduce the flying hour profit in the elementary schools from fifty to twenty-five cents, and in the observer schools from $1 to thirty-five cents. It was the increase in the number of pupils which they had to handle that was giving them the greater profits which we considered too much. I do not think that has been brought to the attention of the committee before to-night, and I think in all fairness to the schools it should be mentioned.

Mr. NOSEWORTHY: Mr. Chairman, I want first of all to commend the minister for having built up from scratch an excellent department. I am quite sure that the Canadian people appreciate the great work that is being done by the air force of this country under the minister's direction.

I want to pay tribute to the thousands of young men, mostly from the high schools of this dominion, who have gone into the air service, and particularly do I pay tribute to several hundreds of those boys who have gone from my own classes in my own school. To-night I should like to pay especial tribute to the memory of one of those boys, Flying Officer McCormick, who was reported killed in a crash a few weeks ago. He had flown his thirty trips over Germany and had been decorated for bravery, and then he had the sad misfortune to be killed while engaged at a training school in England. While paying this tribute to the courage of these young men and to the great work they have done, I repeat that I am confident that the country as a whole is proud in the main of the work of this particular department.

What I want to say to-night is not by way of criticism but rather to ask for information. Would the minister tell us whether there is any collaboration between his department and the Department of Transport in the location of training schools and aerodromes? We have heard of the great part that aviation will play in civil life when the war is over. Canada is spending vast sums of money on the construction of these schools, and it seems to me that

the taxpayers of this country have a right to expect that these schools, as far as military exigencies will permit, shall be so located that when the war is over they can become a part of a great government-owned commercial air service. But I have been informed that many of our government-owned training schools and aerodromes are being built in waste places where, when the war is over, they will probably be left to fall into dilapidation. I think we have a right to expect that there should be cooperation between the two departments in the location of these schools, and it has been suggested to me that, wherever possible, they should be located where they can easily form part of a government-owned commercial air service after the war.

The second point on which I should like information is this: To what extent does the minister's department collaborate with the Department of Munitions and Supply in the letting of contracts? Actually the only criticism I have heard of the service now under discussion pertains to the letting of contracts.

Mr. POWER: If I may answer at once, we do not let any contracts at all. The Department of Munitions and Supply are our contractors.

Mr. CASTLEDEN: Does the minister's department not give advice in the matter?

Mr. NOSEWORTHY: My question was that to which the minister has given answer, whether his department was responsible in any way for the letting of contracts.

A few weeks ago I visited one of the factories near Toronto, a comparatively small plant, and I found that it was working at that time on five different contracts. The walls and ceiling of that plant were littered with wings and other parts of planes made for types of machines which had been abandoned. I was told just this week-end that one of the plants near Toronto is now engaged in manufacturing a machine, many of the parts of which have to be brought from England. That appears to be handicapping to some extent the building up of our air arm, and I have heard a great deal of criticism on that point.

The third matter to which I would direct the minister's attention does not rightly belong to his department but is one in which I think he should be interested. We have a plant at Malton, situated fifteen or twenty miles from the city of Toronto. The roads to that plant are probably among the worst in Ontario. The Department of National Defence, the province of Ontario and the municipalities through which these roads run have been engaged ever since that plant was built in childish quibbling over whose responsibility it is to keep those roads in good repair. On the night of February 8 of this year those roads were snowbound, and on February 9 the plant was closed down entirely on account of the condition of the roads. During a light snow-storm just before the Easter recess, the last snowfall we had in Ontario, the roads to that plant were so impassable that an official of the company stated to me that 5,000 man-hours were lost because of the road conditions—enough time to build one aeroplane. I have a letter from a representative of three thousand employees in that plant, sent just a week ago, relating that as a result of the rains that had fallen the road to that plant was almost impassable. The wear and tear on tires and springs and the extra use of gasoline made necessary because of the nature of that road are something of which either the minister's department or some other dominion authority should take control. It is definitely hampering our war effort.

We heard an excellent appeal from one of our members that the men engaged in the air force should receive the best possible treatment the country can afford. With that I agree. I have heard from a number of the younger married men in the force who are concerned because the government has not granted to their wives and dependents a cost of living bonus. I should like to call that to the attention of the minister and ask him to let us know what consideration has been given to the matter. Unquestionably the dependents' allowance fixed for these men was fixed before the cost of living bonus came into effect. Since that date the cost of living has gone up; it is costing the wives of our airmen as much to live as it does the wives of our civilians, and there is a feeling abroad among the members of the air force that their wives are as much entitled to a cost of living bonus as are the wives of civilian workers.

There is one—final—matter to which I should like to call the minister's attention. This, I believe, comes under his department: I have had correspondence with his department on this matter. It pertains to the wages paid to a group of civilians known as messmen, employed by the air force. According to information from the minister's department these men are paid $50 a month, plus $1 a day subsistence allowance. From that the sum of $2.50 a month is deducted, I think for superannuation. These men get $78.50 a month. For three months following August, 1941, they received a cost of living bonus. Then it was discovered that their subsistence allowance had been increased at some time

since what is known as the basic period; and, after having this cost of living allowance for three months, it was cut off without notice, in October, 1941, and has not yet been restored. My correspondence from the minister's department states that representation has been made to the treasury board. Apparently the treasury board's interpretation of the conditions under which a cost of living bonus is to be granted precludes the department of air from paying that cost of living bonus. I should like to call the minister's attention to the fact that a great many of these men are returned men. Many of them are unable to serve their country in any other way; they went into this work feeling that here was one humble manner in which they could serve. My correspondence from the minister's department has this remark, which I am quite sure the minister himself will not approve. It calls attention to the fact that these men are receiving more than stenographers, typists and clerks in class grade I under the civil service commission. There should be no comparison between either the type of work these men are doing or the responsibilities that most of these men undertake—

Mr. POWER: That is not much of an argument, I will admit. Whoever wrote that letter is not very logical.

Mr. NOSEWORTHY: Many of them are returned men, and I think they are entitled to more consideration than stenographers and typists in the civil service.

Mr. POWER: I agree.

Mr. NOSEWORTHY: May we have the assurance of the minister that the plea of this group of workers will be given consideration?

Mr. POWER: I shall be very glad to. I hope I did not write that letter; I certainly would not want to write any letters in which I gave as an argument for a low wage to these men that they are getting as good a wage as stenographers and typists. I will not use that argument, anyway.

Mr. CASTLEDEN: Relative to the matter of which the minister spoke just now, regarding cooperation between his department and the Department of Munitions and Supply in the letting of contracts, I asked for a return with regard to the construction of an auxiliary airport in my constituency, and in the return, P.C. 9252, in giving a record of the proceedings, it is stated:

That following the receipt of tenders, the Department of National Defence (Air Service) has advised that an additional 20,000 cu. yds. of cut and fill would be required and that cedar shingles would be used throughout; and negotiations were carried on with Waterman-Waterbury Manufacturing Company Limited;

That this firm has offered to perform the additional cut and fill at a price of 35 cents per cu. yd. less a reduction of $490 for the change in shingles. This firm has also advised that there is an increase of $2,750 over the original tendered price owing to the lateness of the season.

Apparently it was on the advice of the Department of National Defence for Air that the contract price was increased by something over $9,000.

Mr. POWER: In all probability, if we required more work to be done we advised the Department of Munitions and Supply to get it done. We increased our specifications, I assume. That is done every day. If I must have 20,000 more cubic yards of fill, I simply tell the contractor to go ahead and do it. I do not know the cost.

Mr. CASTLEDEN: It was just in reply to the statement the minister made that he gave all contracts to the Department of Munitions and Supply and did not give any advice in regard to them.

Mr. POWER: I said that the Department of Munitions and Supply was our contractor. When we want a job done or when we want to buy something we simply turn it over to them and ask them to do it or to buy it for us, but we must at least specify what we want and the kind of thing we want and provide specifications of the buildings and the runways or whatever it is we require. We do not ask them to specify for us; we specify, and they carry out the contract.

Mr. CASTLEDEN: That is the very thing that an hon. member was asking here.

Mr. POWER: No, he did not. He asked me if we did the purchasing. We do not do the purchasing. We ask the Department of Munitions and Supply to purchase certain supplies for us, and they do so. If we ask them to manufacture aeroplanes for us, they enter into contracts with the aeroplane manufacturers. We do not go near the aeroplane manufacturers.

Mr. HANSON (York-Sunbury): You do the requisitioning.

Mr. POWER: We requisition; that is all.

Mr. NOSEWORTHY: Who is responsible for determining what type of aeroplane a certain factory shall make, and when it shall cease to make that type and start on another?

Mr. POWER: We are responsible for determining what types of aircraft we require. We requisition a hundred or a thousand aircraft of

a certain type, and my good friend the Minister of Munitions and Supply goes and gets them made wherever he likes, as far as I am concerned.

Mr. CARDIFF: First, I should like to congratulate the Minister of National Defence for Air upon the statement he made this afternoon about his department. I think he is to be congratulated upon the success of his department, and I sincerely hope that continued success will attend his efforts for the duration. Coming from a county that has four airports I am naturally air-minded, and I cannot say that the people in that county are not like the hon. member for Brantford City (Mr. Macdonald). I have not heard any complaints in the county of Huron about the nuisance of aeroplanes. In fact, we welcome the drone of the engine to put us to sleep. They fly constantly over my house and, since they are in the air they do not interfere with us on the ground. If Brantford wants to get rid of some of its training schools, the schools can easily be moved to Huron and we will accept them with the ones we have.

I want to ask just a few questions. Take a man being drafted to the army. If he prefers to enlist as a pilot, or elsewhere in the air force, can he be transferred?

Mr. POWER: Hitherto a draftee or trainee has had two months after joining the army in which to make up his mind whether or not he wishes to join the air force, provided we require a man of that particular category or that particular type. The request has been made by the army, however, that we no longer exercise that right since it is not likely that we shall be needing very many more men of types other than air crew.

Mr. CARDIFF: I understand then that after a man has been sixty days in the army he cannot be transferred into the air force. What has been done by the interdepartmental committee set up by the minister to coordinate all medical services in the army, the air force, the navy and the pensions department? Why have there not been regular meetings?

Mr. POWER: Is that in connection with the war expenditures committee's report?

Mr. CARDIFF: Yes.

Mr. POWER: I happen to know something about that committee, because at one time, when the present Minister of National Defence (Mr. Ralston) was away, there was some dispute between the air force and the army, and as I was a bit bothered about it I thought that the best thing to do was to dispose of the question in the old-fashioned, time-honoured way of setting up a committee. This committee turned out to be a good one. One of the members was a representative of the Department of Pensions; another represented the navy, another the army and another the air, and the committee functioned for the purpose not only of coordinating the work but of endeavouring to avoid duplication. I do not know that it was set up as any particularly stable and formal governmental body, but I do know that whenever the occasion requires, this particular committee functions. I do not remember having seen any reports within the last three or four months, but the Minister of Pensions and National Health says he has seen such reports. I do know, however, they were excellent, and in many instances they saved a great deal of duplication in different departments.

Mr. CARDIFF: They do keep reports of the different meetings?

Mr. POWER: Any time my department is interested I receive reports.

Mr. CARDIFF: Why are there separate medical offices and clinics and separate R.C.A.F. personnel, as well as Australian and New Zealand?

Mr. POWER: Australia and New Zealand are separate countries.

Mr. CARDIFF: But we have Australian pilots in our commonwealth air training plan, and so has New Zealand as well.

Mr. POWER: They attend the schools of the commonwealth air training plan in the same way as Canadians.

Mr. HANSON (York-Sunbury): The hon. member is asking if they have separate clinics of their own.

Mr. POWER: There is only one clinic.

Mr. CARDIFF: I mean, separate from the army and navy.

Mr. POWER: Oh; that is another matter. That involves a large question with regard to separate army and air force medical corps. There was a great deal of discussion at the time the air force decided to separate itself from the army in this regard. The experts inform us that there is a specialty in air force medicine. As far as ordinary medical care of the men is concerned, I suppose they could get along very well, but there is such a thing as air force medical specialty. They study such questions as air pressure, blackouts, the effect of high altitude on pilots and so on, and I am informed by our medical

people it is essential that we have special studies and special courses in medicine. I am speaking purely as a layman in that matter. It took a long time for me to become convinced that there should be a separate air medical corps, but after a considerable time and perhaps a great deal of pressure and a lot of argument I came to that conclusion. At that time I was Minister for Air, I was also acting Minister of National Defence, and it was a long time before I became convinced of the value of a separate air medical corps. Since then the knowledge, as well as the experience, which I have gained, leads me to believe that it was a very wise measure for us to take. I cannot give the medical reasons. The hon. member for Parkdale (Mr. Bruce), who knows more about it than I do, will possibly controvert the reasons which have been advanced by the men in the air force, but they are quite satisfied that the very best thing that could have been done for the air force itself was to have a separate medical corps.

Mr. CARDIFF: I appreciate that answer. Are the courses for training the same for the Royal Canadian Air Force, in connection with the commonwealth air training plan, as for the Royal Air Force?

Mr. POWER: The R.C.A.F. administers and manages the joint air training plan. All the pilots who now become members of the home war establishment of the R.C.A.F.—I think this is what my hon. friend means—go through the joint air training plan.

Mr. CARDIFF: Have these men the latest types of machines for their training, at each camp?

Mr. POWER: We have established certain types as being those required for training, some at the elementary schools, some at the service flying training schools, some at wireless schools and some at bombing and gunnery schools. Possibly someone else has developed better or more advanced types. I do not know, but my officers advise me that the planes we use are as good as any in the world for the purposes for which they are used.

Mr. CARDIFF: The only reason why I asked that question was that I understand they are getting new machines at Sky Harbour, though I have not had any report on the matter lately.

Mr. POWER: What is the name of Sky Harbour in my language? Is that No. 12 school at Goderich?

Mr. CARDIFF: The elementary training school at Goderich.

Mr. POWER: Some time ago we decided to use a new type, what is known as a low-wing monoplane called the Freshman, to replace the Fleets and Moths. This is because we believe it will be more convenient to have a low, single wing than what we had formerly. This is a change of type which was decided upon well over a year ago. It is now coming into production, but that does not mean to say that the Fleets and Moths, in which our men were trained formerly, are in any way unsafe or undesirable from the point of view of training. The new machines are perhaps a more modern type of training plane, but the Moths and Fleets are similar to the machines on which the British have been training for many years. The Freshman is a United States designed plane which will come into production very shortly.

Mr. CARDIFF: I have only one further question to ask the minister. Why does the R.C.A.F. need a special refrigeration and cold storage plant at manning pool, Toronto?

Mr. POWER: I have no idea whether they have or have not one.

Mr. CARDIFF: I have been informed that this cold storage plant is used to store garbage, which garbage is then sent to the piggeries. Is that correct?

Mr. POWER: I shall be only too glad to find out. I am sure the Minister of National War Services would be glad to learn that we took that much care of our garbage, and that we were saving our garbage for salvage all over the country. However, I shall certainly inquire.

Mr. HAZEN: There is a matter which, while not of vital importance, might well be given some consideration, so I should like to bring it to the attention of the minister. During the last war many young men who enlisted in the R.F.C. and the R.A.F. did not get overseas, though they completed their training in the aircraft of the day. There were many crashes. Many of these men suffered injuries and many were disfigured for life, but when they left the service they received no decoration or service medal of any kind. Some of them are again in uniform, but they are unable to show any indication of the fact that they were in the service in the last war of their own free will. Yesterday I received a letter about this matter which pretty well explains the situation, and I should like to read a portion of it to the minister:

> There is another complaint that has come to my notice several times lately. . . . This is the recognition of those men who volunteered for service in the last war and through no fault of their own did not get overseas. A

half dozen such men have mentioned this to me, mostly friends of mine in the R.F.C. or R.A.F. who rejoined the army or air force in this war and are not permitted to wear any service ribbon. Two of these are disfigured for life on account of air force accidents. Yet the government does not permit them to wear any recognition or ribbon, whereas boys who had a lovely trip and saw England but no war service can do so, although they did not go under any particular danger. . . . I feel flying those old Jennies, with all the crashes, represented as much danger, and yet I cannot wear even one ribbon. I was talking to-night with . . . He is medical officer in the air cadets, and I imagine later on will be asked to wear a uniform for certain inspections, etc. He is lame and broken nose and jaw, etc., due to crash in the camps last war. Yet he cannot wear a service ribbon of any kind. I think he should be privileged to do so, or any other who volunteered for service in 1917. There must be hundreds of such cases in Canada and it does not seem fair or right. Besides, I think it adds to a soldier's or officer's morale and prestige to be able to wear some recognition of the fact that he was in the service of his own free will.

This matter, which affects those who served in the last war, should, I think, be given consideration. I believe the same circumstances will arise at the end of this war. I realize the minister has a great many other duties to perform, but I would ask that he make a note of this point and see whether some recognition cannot be given these men.

Mr. POWER: So far as my recollection goes, the right to wear medals or decorations is a matter of royal warrant. I speak subject to correction, but I am under the impression that neither the Department of National Defence, the Department of National Defence for Air nor even the government of Canada has the right to specify the persons who may wear decorations from the last war. What the authority is in connection with this war I am unable to say, but I think I am pretty accurate when I say that this was all laid down by royal warrant or by a decree of the war office at the end of the last war. My colleague the Minister of Pensions and National Health says he thinks that was the case, but I shall be very glad to look into the matter for my hon. friend.

Mr. BRUCE: A moment ago the minister referred a question to me, and I should like to answer him. The medical problems connected with air service are highly specialized, and in my judgment warrant having a separate medical service. I think the minister for air is fortunate in having such a capable officer as Air Commodore Ryan as head of that service. He has spent many years in the study of the problems connected with air flights, and is thoroughly competent in every branch of that work. He has gathered around him an excellent staff of specialists which ensures that everything possible will be done that medical science can devise for the health and welfare of our airmen.

I might add that the late Sir Frederick Banting did a series of experiments in connection with flights, and particularly as to how changes in altitude and pressure affect airmen. He was taking the result of his work to England, when he met with the fatal accident. That work has been carried on by others, and I am informed that as a result a special apparatus is now about to be made, if it has not in fact already been completed, which will protect men doing the hazardous task of dive bombing. Formerly many of those men became unconscious while engaged in that operation. It is possible now to maintain pressure by the new apparatus in such a way as to prevent this disaster from happening. I have no doubt that it has been called to the minister's attention.

I wish to commend the minister for his discernment in the selection of the men he has gathered about him to do this particular work and in establishing a separate medical service for the air.

Mr. WARREN: The hon. member for Huron North discussed a question which reminded me of something that is happening at Petawawa camp. He spoke about garbage being kept in a refrigerator. I do not know anything about that, but I do know that at one of these camps the disposal of garbage was found most expensive. However, the authorities got busy, and during the past year they discovered a farmer about thirty miles away from the camp who succeeded in relieving the condition. This farmer was engaged in feeding hogs on an extensive scale. His pens passed inspection; and with the addition of new pens, the purchasing of a couple of trucks and the establishment of a boiling system at the camp, the garbage, instead of being handled at great cost, is handled under more favourable conditions. I believe that formerly the camp authorities had to arrange for digging trenches and burning the garbage. Under present conditions, however, it is boiled, and either once or twice a day it is taken to the farm. The man is feeding from 600 to 800 hogs. Instead of the refuse from the camp being wasted, that food is now being turned into bacon.

The farmer assures me that after being fed the garbage his hogs have made better gains than they did before from the feeding of grain, and his bacon receives a better grading. The waste food which was formerly thrown away is now being turned into thousands of pounds of pork. I do not know whether that

is being carried on in other camps across Canada, but certainly it is a plan worthy of consideration. In this particular instance it is working out exceedingly well. It is a great pity that good food should be wasted when it could be turned into bacon for shipment overseas.

Mr. TUSTIN: Are the Royal Air Force stations manned by Royal Air Force personnel part of the commonwealth air training scheme?

Mr. POWER: No.

Mr. TUSTIN: Are any officers of the Royal Canadian Air Force posted to any of those Royal Air Force stations?

Mr. POWER: The Royal Canadian Air Force has a kind of general control over the Royal Air Force schools, and it so happens that frequently—I cannot say the number of occasions—officers and men of the Royal Canadian Air Force are posted to Royal Air Force schools, in the same way that Royal Air Force men are frequently posted to us.

Mr. TUSTIN: Then, as I understand it, when the United States entered the war there were many United States citizens in the Royal Canadian Air Force. At that time they were given the option of remaining in the Royal Canadian Air Force or of being transferred to some service in their own country. I have in mind a specific case of a man who came from the United States, enlisted in the Royal Canadian Air Force and was given a commission. When the United States entered the war that officer applied to his commanding officer, and offered him his resignation. This was a Royal Air Force station, by the way. The resignation was accepted, but for some reason this man has been kept running back and forth between his home in the southern United States and Ottawa. He has had to run between the Royal Air Force station where he was stationed, and Washington; and for a period of three months—

Mr. POWER: Did this United States citizen happen to be a member of the Royal Air Force or the Royal Canadian Air Force?

Mr. TUSTIN: The Royal Canadian Air Force. He was kept running back and forth, and as a result was put to great expense for three full months before his discharge from the Royal Canadian Air Force became effective. Meantime he found himself unable to enter any of the services of the United States because—the minister shakes his head, but I have this on the authority of the man himself—the authorities at Washington could not take this man into the United States service until his discharge from the Royal Canadian Air Force became effective.

I bring this to the minister's attention because I believe that when a man comes from another country, offers his service and his life to fight for this country, and is then given the option of transferring back to his native land, it certainly does not reflect any gratitude on our part to place him in a position where he is kept out of all service and, as I understand, without pay, for a period of three months. I draw this matter to the attention of the minister in the hope that it will not recur in the future.

Mr. POWER: I should be very glad if the hon. member would in confidence send me the name of the officer, so that I could check up. But the whole question with respect to the return of United States officers and men in the Royal Canadian Air Force has been definitely settled. Negotiations went on for some time. I may add that from the moment the United States entered the war instructions were given in a broad and general way that, provided the United States government held out something for the individual to do, there would be no objection to the United States citizen returning to his own country.

Since then, I believe about two or three months ago, a general agreement was arrived at with the United States government whereby United States citizens serving in the Canadian forces who wished to transfer to the United States forces could signify their desire before a certain date, either the 1st of April or the 1st of May. As a consequence of this agreement a travelling board of officers of the United States forces is going through the country interviewing members of the forces to ascertain just how they will fit into the United States forces. Up to the present time, out of 4,451 United States citizens in the Royal Canadian Air Force, 1,961 have signified their desire to transfer to the United States forces. The cases of these men are being looked into by this travelling board of United States officers, to which I believe some of ours are attached.

Mr. GERSHAW: The minister has made it quite clear that there will be no new air schools built in the immediate future. However, quite often we see in the papers that the commonwealth air training scheme is to be expanded and new schools opened. This always brings up the question of where they are to be located. Some hon. members have complained about the roads to the schools; others have complained about the noise and about the taxes; but I can assure the minister that if there is any possibility of developing schools in a large portion of southern Alberta, there will be no trouble about roads and taxes and there will be nobody to kick about the noise.

There are places there which feel that they have been overlooked in the location of war activities. There are many places with good water facilities, and there are other sections where the government itself has land reserves, like Bassano, Bow Island and Foremost, in Alberta.

The minister stated that some of the present air schools may be enlarged. I hope, when that matter is being considered, he will take into account the success which has been achieved in certain schools. Sometimes we wonder why some schools are located where they are with the wind and snow and rough country and so on. Other schools with more suitable flying conditions have been able to show a greater number of flying hours. Would the minister suggest what the considerations will be in determining what schools will be enlarged?

Mr. COLDWELL: The minister has said that the general supervision of the R.A.F. establishments in this country was given to the R.C.A.F. I have heard boys who were in the R.C.A.F., serving at some stations with the R.A.F., complain that the food is not as good in the R.A.F. station as it is in our own. Apparently the food in our own establishment is excellent in every respect.

While I am on my feet I want to say how pleased I was to hear the minister say this afternoon that he hoped some steps would be taken to eliminate the distinction between sergeant pilots and pilot officers. I do not know if any other member of the party which was in England has mentioned this before, but when we were there we visited a bomber station one evening and met a number of pilot officers who approached us and asked us, when we had an opportunity, to endeavour to persuade the authorities to establish a joint mess. The officers and the sergeants flew together, lived together and sometimes died together, and yet when they got back to the base they were separated. They wanted a place where they could meet together, talk over operations and generally be comradely after the show was over. We took the matter up in London with Mr. Massey and, I believe, also with the British authorities. I am bringing this to the attention of the minister so that if nothing can be done in the other matter, that is with the imperial authorities, at least at our own stations some arrangement may be made whereby the sergeant pilots and the pilot officers can be together.

Mrs. CASSELMAN: I want to commend the minister for the enlistment of women in the R.C.A.F. I think this will help to solve the question of food wastage. He is enlisting trained dietitians who have been accustomed to buying and preparing and serving food in the proper manner, giving it to the men in the way that will appeal to their appetites. There is a dietitian in charge at the initial training school at Edmonton, and it has been found that there is little waste to feed pigs or anything else after the men have had their meals. I think it will be good for the health of the men to have skilfully prepared meals, and I look forward to there being less waste in the future, when trained dietitians are more fully in charge of this department.

Mr. EMMERSON: I should like to ask a question with regard to the difference in pay of men in the R.C.A.F. and men in the R.A.F. Is the difference in the pay of our men attached to the R.A.F. credited to their account, or is it paid to them during their service on the other side?

Mr. POWER: Credited to their account.

Mr. EMMERSON: Our pilots are trained with single and multi-engined planes, but is there any intention of training glider pilots in Canada? This has been done on the other side, and since it has been mentioned in the press, I think this information is public property.

Mr. POWER: The matter is receiving our most urgent consideration at the moment.

Mr. ROSS (St. Paul's): In view of the announcement made by the Minister of National Defence for Naval Services (Mr. Macdonald) about the sinking of a freighter in the St. Lawrence river, and in view of what has been said about cooperation among the navy and army and air force, would the minister care to say a few words?

Mr. POWER: We do cooperate on both coasts. Recently a supreme commander to coordinate the efforts of all three services has been appointed on each coast. General Elkins has been appointed on the east coast and General Alexander on the west coast.

Mr. GREEN: Has consideration been given to setting up an air command for the St. Lawrence region?

Mr. POWER: We have an eastern air command which covers the whole of our defensive aerodromes on the east coast, including the St. Lawrence river.

Mr. GREEN: Would it be better to have the St. Lawrence command separate?

Mr. POWER: I hardly think so.

Mr. ROSS (St. Paul's): I should like to express my appreciation of the manner in which the minister reviewed the activities of

the air force so comprehensively and without encumbering his statement with too much detail. His statement to-day, following the one he gave last fall, furnishes the basis for a few questions. But first I should like to pay tribute, like so many others have done, to the gallant boys of the Royal Canadian Air Force. Just in passing, I might say that I was at a service on Sunday of the Upper Canada college boys, and old boys, where it was announced that over 650 of the boys and old boys of the college are now in the service of their country.

An eloquent plea has been made by the hon. member for Peel and several other hon. members that the dependents of the boys in the air force should get the cost of living bonus. I heartily concur in their suggestion. I feel it is a great pity that there should be that gap following the time a man is reported missing during which no allowance is paid. It is the mothers of the boys who are joining the air force that I have particularly in mind. Remember, these lads in the air force are younger than the men in the army. We have persistently argued that a dependent mother should be treated, in the matter of allowance, in the same way as the wife, and it is a great pity that that so far has not been done. I know of a young lad in the air force whose mother has been supported by his brother and sister. They have their home, but the father is out of the picture. The boy in the air force is giving his mother $20 a month; I presume that is assigned pay. But now the brother who has been helping to support the mother has been called up. He had wanted to enlist but felt himself unable to leave his mother in her present circumstances. I do not know what will happen now, because there is only the sister left at home. It seems to me that we should not approach this question of an allowance from the point of view of giving charity or asking ourselves: What is the least we can get away with? But that is the way we are treating the mothers to-day, and it must be remembered that it is mostly the mothers who are the dependents of the young boys in the air force. I do not think we should consider how small an amount we can give to the mother who has been dependent on her boy who has joined the air force.

The Minister of National Defence asked the other day: "What are we depriving her of?" That seems to be the basis the government goes on. But I would point out that not only the mother I speak of, but many others are going to be deprived of $20 a month, plus the boy's assigned pay of $20 a month, and that is something which certainly should receive further consideration by the minister and the government.

44561—151½

Another matter has been drawn to my attention. A mother had not heard from her son for a long time. She wrote to me, and I took the matter up with the minister's secretary. She did not know where to get hold of her son or how she could communicate with him. I received a letter from her to-day by special delivery. I am sure that there are many more mothers in her position, because the air force is so widespread in its operations that mothers have difficulty in knowing just where their sons are. This particular mother has not heard from her boy in the air force for seven months. I should be glad if the minister would tell the house and the country how that mother can reach her boy by cable in England or some other place. I have told her where she could write, but after not hearing from him for seven months she wants to send a cable.

Last year I put a question on the order paper with reference to the grounding of planes for overhaul and repair, and the minister gave an interesting reply. I have not the figures here, but he will no doubt remember. It would be interesting to know how much shorter is the period now required for overhaul and repair, with the modern methods and new equipment of to-day at the various schools. Perhaps the minister, without going into too much detail, would pick out a few types of planes and state for how long a period they now have to be grounded for overhaul and repair.

The special committee on war expenditures presented a report on "salvage" and said, referring to the chief salvage officer:

> The officer above referred to stressed the point that salvage is not chiefly a matter of disposal of waste goods but in the better sense is a saving of these goods by repair for further use.
>
> The board has only recently come into existence and its work has just commenced, and therefore the committee was not able to pass any final judgment on the work being done by this board, but is of the opinion that if the programme as outlined is carried out it should result in very substantial economies.
>
> It was indicated to the subcommittee that this board will function solely in the army, that it is somewhat of an experiment, and that should it prove successful, its programme would be extended to include the air force and the navy.

The people of this country, to-day particularly, in view of the shortage of oil, rubber and other products, want to see no waste, and I would ask the minister whether the air force is functioning in cooperation with this salvage board which has been set up.

Mr. POWER: We have a salvage organization of our own and, I understand, a very good one.

Mr. ROSS (St. Paul's): The suggestion in the committee's report was that the air force,

the army and the navy should all cooperate with this salvage board, and I was wondering whether that was being done by the air force.

Mr. CLAXTON: I have one hope which I should like to express to the committee and which I trust all members will share. It is suggested by two remarks which have been made during the course of this debate. The first was made by the minister, when in his fine speech he quoted the Right Hon. Malcolm Macdonald, British high commissioner, as paying high praise to the work of the Canadian air force, but, he added, we did not perhaps blow our own trumpets enough. The second remark was made by the hon. member for Davenport (Mr. MacNicol) when he referred to the exploits of Colonel Bishop and others during the last war. He said, quite properly, that they had electrified Europe. I have the feeling that the hon. member for Davenport would have liked to put his tongue to the names of some Canadian heroes of this war if they had come quickly to his lips. But the fact is that they did not, and I suggest to the committee that this brings home to us that we are not making enough of the heroes of the air on whom our whole survival depends to-day. This war is unlike any other war in this respect, that to-day our very existence, the existence and continuation of our institutions, depend not so much on great masses of armies working blindly, but on hundreds and thousands of individual feats of heroism such as have never been matched in the history of the world. I suggest to the committee that we have been carrying on a kind of a Maginot line attitude in respect of our acclaim for the men on whom we depend for our survival. Hon. members will remember that we began the war in a very drab way, without bands and without flags; we did not think they were necessary; we thought they were undesirable. We are finding out how wrong that was. But there is still a hangover in some respects, and I suggest that there is such a survival in respect of the attention being paid to particular exploits of individual heroism by our fliers. The fact that the hon. member for Davenport did not bring his tongue to the name of one Canadian pilot who distinguished himself in this way clearly proves what I have said.

We are proud of what our air force have done. We know that they are doing magnificent things. But I believe that we would be still more proud if we knew the individual exploits of individual fliers, if we knew how many planes they had to their credit. Not long ago I had to make a speech in the United States, and I thought it would be interesting to them if I could pay tribute to some of their great fliers,—O'Hare and others. I knew how many planes they had to their credit; and I made inquiries of the public relations officers of our air force to find the number of planes that Canadian fliers had to their credit, so that I could tell our United States friends and ask them to share our pride as we shared theirs. But I could not get the number of planes that Canadian fliers have to their credit, because the numbers are not given out, I was told, by the Royal Air Force.

Already we know that we have some magnificent heroes of the air. There is the man who came back only in the last few weeks and who is now in Ottawa, Larry Robillard, whose record as told in the newspapers is one of the most astonishing of this or any other war. I am informed that not half the story has been told to the newspapers; it cannot yet be told. There are people like Pilot Officer Dougall of Montreal; Pilot Officer Morin of Ottawa; Pilot Officer Blair Russell; Pilot Officer John Fauquier; Wing Commander Timmerman; Sergeant Duffield.

Mr. POWER: Pat Christie.

Mr. CLAXTON: Pat Christie, and dozens of others who are more or less known by reason of casual mention in the press, but whose names do not mean so much to us Canadians as do the names of the men that appear week by week in the great United States magazine *Life*. I suggest that is not good for us. We share the pride of the United States in the exploits of her sons. We need to have pride in our own, and in order to have that pride we must have knowledge. The knowledge must be related to the individual, and it must be given quickly, while the matter is new. I suggest to the minister that the whole machine for getting news from the fighting front into the minds and into the hearts of the people of Canada, who need the cheer which the tale of heroism will give, can well be improved. The importance of this is shown by the way in which our own hearts respond to the story of heroism whenever we hear it. Most hon. members must have heard President Roosevelt's great speech on April 28. They must have observed how the last third of his speech was not given to a discussion of great events, great battles; it was not given to a discussion of high policy. He told three simple stories of heroism. He told of Doctor Wassell; he told of the crew of the *Squalus*, and he told of Captain Hewitt T. Wheless. He closed his three stories by saying of the last named, Captain Wheless, "I hope he is listening"; and twenty or thirty or forty

million people listening in to President Roosevelt hoped that. Our hearts were cheered by those stories of heroism. We know that our own Canadian air force is the equal of any air force in the world. We have a right to be told about it, told about it freely, promptly and in a way which gives full credit to their exploits. It may be said of them as it was said of another fighting force by A. E. Housman:

> Their shoulders held the skies suspended,
> They stood, and earth's foundations stay.

Mr. POWER: May I thank my hon. friend for drawing my attention to that. I have often thought that we do not give the credit which we should give to these young heroes of the air force.

One reason is because of the British passion for anonymity. When I was over in England last year I did my very best to induce them to permit our press to get the latest possible news on the deeds of our men. I think the situation has improved to a considerable extent. It was with something of the same idea in mind as my hon. friend who has just spoken had, that I had a list compiled of the commanding officers of the Canadian squadrons overseas. There is hardly a child in this country who does not know the names of the generals, the officers commanding divisions, even officers commanding brigades in the army, but I am willing to wager that not one man in this house would be able to give me the name of one commanding officer of a Canadian squadron overseas; and the Canadian squadrons are doing the fighting. Therefore, with the permission of the committee—I have torn off the numbers of the squadrons, because we are not permitted to give the numbers—I will insert in *Hansard* the names of the officers commanding the Canadian squadrons overseas. It will be noted that all but four of them are either Royal Canadian Air Force or Royal Air Force Canadians:

Wing Commander H. W. Kerby, R.C.A.F.
Squadron Leader A. G. Douglas, R.A.F.
Squadron Leader R. E. Morrow, R.C.A.F.
Squadron Leader C. N. S. Campbell, D.F.C., R.A.F. (Reported missing 27-4-42)
Wing Commander P. H. Woodruff, R.A.F. (Can.)
Wing Commander J. E. Fauquier, R.C.A.F.
Wing Commander D. G. Morris, D.F.C., R.A.F.
Wing Commander A. C. Brown, D.F.C., R.A.F. (Can.)
Wing Commander A. C. P. Clayton, D.F.C., R.A.F. (Can.)
Wing Commander P. Y. Davoud, R.C.A.F.
Squadron Leader M. Lipton, R.C.A.F.
Squadron Leader R. B. Newton, R.A.F.
Squadron Leader R. C. Weston, R.C.A.F.
Wing Commander J. D. Twigg, R.C.A.F.
Wing Commander D. M. Smith, R.C.A.F.
Wing Commander E. L. Wurtele, R.A.F. (Can.)
Squadron Leader L. V. Chadburn, R.C.A.F.
Squadron Leader P. B. Pitcher, R.C.A.F.
Wing Commander G. H. Gatheral, R.A.F.
Wing Commander J. Fulton, D.F.C., A.F.C., R.A.F. (Can.)
Wing Commander D. A. R. Bradshaw, R.C.A.F.
Squadron Leader F. W. Kelly, R.C.A.F.

Mr. McNIVEN: Is that right from the beginning?

Mr. POWER: I have them only for the present time.

Mr. ROSS (St. Paul's): The minister suggested last fall in the House of Commons that he would issue a bulletin. I was reading it to-day, and I wondered why he stopped it.

Mr. POWER: Unfortunately we receive our bulletins a little too late so that they are no longer news. They are not what is called "hot news." I should like to give a sample of these bulletins to indicate the work done by some Canadian squadrons overseas. I happened to be reading one last night, and I said to myself that if the opportunity presented itself I might give some of the highlights to the house. This is a Spitfire squadron, and the period mentioned is 12-4-42 to 26-4-42; that is twelve days. During those twelve days their operational flying time was 442 hours, and the number of pilots—the Spitfire is a single pilot machine—is only twenty-three. I figured it out, but I have not the figure at the moment. That makes—

Mr. COLDWELL: Twenty hours each.

Mr. POWER: Yes. I find in the bulletin, for example, under date of April 12, convoys carried out. April 13, aircraft were scrambled to such and such a place. April 14, aircraft part-time formation flight over France, in such and such an area. April 15, 20,000 in the air, five miles inside the French coast, so-and-so's engine failed and he landed safely at such and such a place across the channel. April 16, squadron with wing acted as escort cover to eight Hurricane bombers whose target was Dunkirk. April 17, squadron acted with wing as close escort to six Boston bombers whose target was a parachute factory at Calais. April 18, a wing sweep to such and such a place, recrossing the coast at such and such a place. April 19, convoy patrols carried out. April 24, a sweep of such and such an area was performed. April 25, a squadron acted as escort cover to eight Hurricane bombers. April 26, squadron acted as escort cover to nine Bostons whose target was such and such a place; and so forth. There are two pages of it;

they are out every day. We do not hear a word about it, and this particular squadron is composed of an air crew 95 per cent Canadian and ground crew of 92 per cent Canadian. It is unfortunate, I submit, that it is not possible for us to give a more detailed story of the deeds of these young men who are carrying on in our behalf.

Mr. JACKMAN: When I visited the old country last November I gathered that the R.A.F. does not wish to publicize the deeds of individual aviators or individual members of the air crew because, if they do, it will tend to weaken the esprit de corps in the rest of the personnel of the force. Does the minister agree with the official R.A.F. point of view, or does he agree with the point of view that I would put forward, namely, that the publicizing of individual exploits would do a great deal to build up the morale not only of the R.A.F. or the R.C.A.F., but of the people generally. Will the minister fight for a change-over generally as far as R.C.A.F. pilots and aircrew are concerned?

Mr. POWER: I definitely and most emphatically disagree with the air ministry, perhaps by reason of our education and our proximity to the United States. The fact is that we are a people who read headlines, though perhaps we do not read enough of what appears under the headlines. At any rate, we make our heroes readily. We can learn to love or hate a person when we are not particularly interested in institutions. The R.A.F. as R.A.F. or the R.C.A.F. as R.C.A.F. does not mean much to us, but O'Hara, or O'Shea, or Corbett—

Mr. MacNICOL: Or Mackenzie.

Mr. POWER: Yes, or any name like that, means a lot to us, and, as I say, perhaps because of our Hollywood upbringing, we are prone to read headlines. It may not be our fault; it may not be logical. However, we must take the people of Canada as we find them; and I sincerely believe that, to the utmost of our ability, we should make heroes of those of our boys who are heroes, for the sake of the morale of the air force and particularly for the sake of the morale of the Canadian people, who probably need it more than the air force does.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Power.]

Wednesday, May 13, 1942

The house met at three o'clock.

SHIPPING LOSSES

SINKING OF SHIP IN ST. LAWRENCE RIVER AS A RESULT OF ENEMY ACTION

Mr. J. S. ROY (Gaspe): Mr. Speaker, on a question of privilege, as the representative of the constituency of Gaspe I should like to ask whether or not it is the intention of the government to comment on the statement released to the press yesterday concerning the sinking of a cargo ship in the St. Lawrence river as a result of enemy action.

Mr. SPEAKER: That is hardly a question of privilege.

STANDING COMMITTEES

AGRICULTURE—CONCURRENCE IN FIFTH REPORT

Mr. W. G. WEIR (Macdonald) presented the fifth report of the standing committee on agriculture and colonization, and moved that the report be concurred in.

Motion agreed to.

BANKING AND COMMERCE—CHANGE OF PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. MacInnis be added to the standing committee on banking and commerce.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

R.C.A.F.—SPARE PARTS

Mr. JACKMAN:

1. How many planes of the Royal Canadian Air Force are grounded for lack of spare parts as of February 28, 1942?
2. Has the schedule setting forth the requirements for spare parts been increased or decreased recently?

Mr. JACKMAN: With the permission of the house I should like to withdraw this question.

Mr. SPEAKER: Dropped.

DEPUTY MINISTER OF NATIONAL DEFENCE FOR AIR

Mr. MacINNIS:

1. Is S. L. de Carteret, deputy minister of National Defence for Air?
2. If so, (a) when was he appointed, (b) what is his present salary?
3. What was his business, trade or profession before accepting his present position with the government?

4. Does he continue active connection with his former business, trade or profession while in the employ of the government?

5. If so, what part of his time is given to his duties with the government and what part to his former business?

Mr. POWER:

1. Yes.

2. (a) February 1, 1941; (b) No salary or allowance from the government.

3. Mr. S. L. de Carteret, Vice President and General Manager, Canadian International Paper Company; President, Continental Paper Products Limited; President, Masonite Company of Canada Limited; President, International Fibre Board Limited.

4. Yes.

5. Full time service with the government and a portion of his spare time thereafter is devoted to the general supervision of his former business.

NATIONAL WAR LABOUR BOARD

Mr. COLDWELL:

(a) How many cases concerning wage increases or bonus payments have been before the national war labour board to date; (b) how many of these were brought before the board through applications by employers and how many through applications by employees; (c) how many wage increases have been granted by the board on employers' applications and how many on applications filed by employees; (d) how many bonus payments or increases have been granted to each of the two groups of applications; (e) what in each case were the grounds for granting the applications and what were the grounds for refusal in those cases where the application was rejected?

Mr. MITCHELL: (a) From the establishment of the National War Labour Board to May 6, 1942, one hundred and fifty-two applications have been received. Findings have been made in ninety-six cases, of which seventy-five had relation to wage increases or cost of living bonuses.

(b) Of the seventy-five applications dealt with, fifty-three were initiated by employers, ten by employees and twelve were made jointly by employer and employee representatives. Of these applications, sixty-three had relation to wage increases and twelve to cost of living bonuses.

(c) Wage increases, in whole or in part, were granted in forty applications filed by employers, in nine applications originating with employees and in twelve cases in which joint applications were made. In one employer and one employee application in connection with wage changes, application was refused.

(d) Cost of living bonus payments or adjustments were authorized in ten applications originating with employers. In one application for relief from payment of additional bonus, the application was granted under the provisions of section 13 of the order. In one application by employer to adjust bonuses, permission was refused.

(e) In twenty-six applications filed by employers, in one by employees and in seven jointly made, wage increases were approved under the terms of clause 11 (2) of the wartime wages and cost of living bonus order, as existing wages were found to be low compared with wage rates generally prevailing for similar work in like localities.

In two applications by employees wages were found to be low, and the board ordered an increase in some occupational classifications and wages were found to be not low in other classifications.

In two applications by employees wage increases were granted in part but not in full in order to bring basic rates into conformity with rates generally prevailing for similar work in like localities.

In one employee application an increase in basic wage rate was refused by reason of the fact that existing rates were not low within the meaning of the order.

In one application filed by employer proposed changes in salesmen's compensation plan was refused, the proposal being regarded as being in contravention of the provisions of the order.

In fourteen applications (with the concurrence on behalf of employees affected in cases where collective agreements were in effect), wage increases were approved in order that basic wages to employees in Canada might conform with rates being paid by the applicant companies to employees in comparable employment outside of Canada under collective agreements or by established practice. In all such cases it was stipulated that cost of living bonuses would not be paid.

In five applications by employers overtime payments were approved when employees were required to work more than the number of hours constituting a normal week's assignment.

In one joint application a wage increase was approved to take the place of piece work rates.

In one employer application a range of wage rates submitted was approved as not being excessive and having been in effect prior to the date of the order.

In one employer application standardization of basic wage rates was approved for air pilots employed in pooled operations.

In one joint application, following a collective agreement, permission was given to apply a bonus on an equivalent hourly rate basis, exclusive of overtime.

In ten applications originating with employers, payments of cost of living bonuses were approved on the ground that such payments would be "fair and reasonable" under the provisions of section 12 (b) of P.C. 8253.

In one application by an employer to be relieved of payment of additional cost of living bonus the application was granted on the basis of submissions that the undertaking in question was being conducted at a financial loss.

In one employer application for permission to make adjustments in cost of living bonus, the application was refused because proposed adjustments were inconsistent with the terms of the order.

COLONEL BELCHER HOSPITAL BUILDING, CALGARY

Mr. HANSELL:

1. How many years has the Colonel Belcher hospital occupied its present quarters on 8th Avenue West, Calgary?
2. Does the government own this building?
3. If so, when was it purchased and what was the purchase price?
4. If not, what is the yearly or monthly rent, and what is the total rent paid since it was first occupied?
5. What has been paid in addition to rent, for any and all alterations, or other matters, connected with the occupancy of this building?

Mr. HOWE:

1. Since July 1, 1926.
2. No.
3. Answered by No. 2.
4. (a) $17,404 per annum for a total floor area of 22,076 square feet from July 1, 1926, to December 31, 1927. $22,750 per annum for a total floor area of 28,016 square feet from January 1, 1928, to November 21, 1929. $26,730 per annum for a total floor area of 37,016 square feet from November 22, 1929, to March 31, 1938. $17,820 per annum for a total floor area of 37,016 square feet from April 1, 1938, to date. Previous to April 1, 1938, any increase in taxes over the 1926 rate levied by the city after July 1, 1933, was paid by the crown. Since April 1, 1938, all taxes are paid by the lessor. (b) $371,305.15 including taxes paid by the crown.
5. Improvements and repairs, $32,978.01. Sundry supplies and maintenance, $1,819.56.

WARTIME HOUSING LIMITED—SALARIES AND EXPENSES

Mr. NICHOLSON:

What amounts have been paid to the general manager and directors of Wartime Housing Limited to date as: (a) salary, (b) expenses?

[Mr. Mitchell.]

Mr. HOWE:

	Name	(a) Salary	(b) Expenses
	J. M. Piggott	Nil	$2,856 89
(*)	V. T. Goggin	$10,547 84	2,304 19
	W. L. Somerville	Nil	463 11
	Charles David	Nil	755 04
	Major W. E. Tibbs ..	Nil	616 85
	Hedley C. Wilson	Nil	538 20
	Ernest Ingles	Nil	Nil
	Robert J. Gourley...	Nil	Nil

Note:—(*) is for period March 10, 1941, to March 31, 1942. All other figures are for the period from date of incorporation to March 31, 1942.

STEEL PRODUCTION AND CONTROL

Mr. CASTLEDEN:

1. What steps are taken under the steel controller to allocate the available supply of steel to the various war industries?
2. What is the total tonnage capacity of the steel furnaces and castings from foundries in Canada for 1941 and 1942?
3. What was the total in tons of the production from the steel furnaces and castings from foundries in 1941?

Mr. HOWE:

1. Mill rolling schedules are supervised, to provide continuity of steel supply for production of articles for direct war purposes, and arrangements made for steel required for plant expansion for war purposes to synchronize with actual use. Production for other indirect war purposes and essential civilian uses is scheduled to best advantage without interference with direct war needs.

2. Rated capacity for steel ingots is more or less nominal and does not furnish an accurate guide as to production, as this exceeds the rating in many cases and may be less where more difficult steels are involved. In respect to castings, production depends upon the nature of the castings to be produced, the size and weight, carbon or alloy steel, and other factors.

3. Production in 1941: Steel ingots, 2,583,253 net tons; steel castings, 123,248 net tons; grey iron castings, 351,809 net tons; malleable castings, 75,395 net tons.

BOOKLET "JASPER NATIONAL PARK"

Mr. MACDONALD (Halifax):

1. Did Canadian National Railways in 1941 issue a booklet entitled "Jasper National Park"?
2. If so, how many copies were printed and at what total cost?
3. Were tenders called for this work?
4. If so, who submitted tenders and what figure was submitted by each tenderer?
5. Who was the successful tenderer?

Mr. HOWE:

1. Yes.

2. 61,805 copies; total cost $6,723.93.

3 and 4. Tenders were called in 1940, and in reprinting for 1941, contract was negotiated and closed with Mortimer, Limited, Ottawa, who were lowest tenderers.

5. See answer to 3 and 4.

SCARCITY OF BEEF

Mr. LACOMBE:

1. Considering the large increase in the export of beef by Canada to the United States since January, 1942, does the government intend to impose an embargo on such exports?

2. In view of the beef scarcity in the principal cities in eastern Canada, will the government take all necessary steps to relieve the present situation?

Mr. GARDINER:

1. The government will announce its policy from time to time.

2. Supplies of beef in eastern markets have increased during the last two weeks and are expected to increase further following the completion of the export quota to the United States.

W. J. SMITH

Mr. WRIGHT:

1. Is W. J. Smith, former sheriff of Shaunavon district, employed by the Department of Agriculture in any capacity?

2. If so, what remuneration was paid him during the past fiscal year for (a) salary, (b) expenses?

Mr. GARDINER:

1. No.

2. Answered by No. 1.

NATIONAL STEEL CAR CORPORATION—
MARTIN BOMBERS

Mr. NOSEWORTHY:

1. On what date was the National Steel Car Corporation at Malton authorized to proceed with the production of Martin bombers?

2. Was this authorization given by the Canadian or British government authorities?

3. On what date was this project abandoned?

4. How many man hours of time were spent on this project?

5. What was the total public expenditure on this undertaking?

6. What were the financial arrangements with the abovementioned company for this undertaking?

7. How many Martin bombers were there produced?

8. Why was the project abandoned?

Mr. HOWE:

1. April 26th, 1941.

2. Canadian government authorities.

3. Advance notice of cancellation was given on November 26th, 1941. Final cancellation was given on December 29th, 1941.

4. An audit has not yet been made on this project and man hours have not been determined.

5. The total expenditures on this project is $781,907.37 a considerable amount of which is recoverable as follows: (a) By usage of material bought for the Martin B-26 contract on the Lancaster bomber contract let to the National Steel Car Corporation; (b) By the sale of jigs and tools not useable on Lancaster bomber contract.

6. The contract placed by the department with the National Steel Car Corporation was a target price contract.

7. None.

8. The manufacture of the Martin B-26 in Canada was abandoned because it developed that a very substantial amount of re-engineering had to be done before the plan would be satisfactory—involving perhaps six months delay. Meanwhile the United Kingdom government was pressing us to build a new four-engine bomber and as an inducement agreed to provide us with all required Martin B-26's from the United States earlier than we could produce them in Canada.

*RUBBER, GASOLINE AND OIL SHORTAGE—
OTTAWA EXHIBITION

Mr. BRUCE:

1. Is there a shortage in Canada of rubber for military purposes?

2. If so, how serious is this shortage?

3. Is there a shortage of oil and gasoline?

4. Will the government urge upon the directors of the Ottawa exhibition association to cancel their fair this year?

Mr. HOWE: Perhaps I could answer this question orally. There is no present shortage of rubber for military purposes, although our supplies of course are limited. There is a shortage of gasoline. As to question No. 4, government policy will be known in due course.

Mr. HANSON (York-Sunbury): In the course of his statement on the resolution now before the house, would the minister be good enough to give the country a little more extended report on the gasoline situation? There is no doubt that the curtailment is substantial, and the people ought to understand why. I am not at all disagreeing with the curtailment that has been made, but the position might be elaborated a little to show how it is going to work out and how serious the situation is.

Mr. HOWE: I shall be very glad to do that.

DIRECTOR OF SALVAGE

Mr. NICHOLSON:

1. Has the government information as to the salary formerly paid to Mr. LaFerle, director of salvage, as traffic manager for the Robert Simpson Company?
2. If so, what salary was paid?
3. Is Mr. LaFerle carrying on his duties for his former employer? If so, at what salary?

Mr. THORSON:

1. No.
2. See answer to 1.
3. No; he is a full time employee of the Department of National War Services.

CANADIAN SHIPPING LOSSES—USE OF EIRE BASES

Mr. CHURCH:

1. What has been the estimated loss, since the war began, of Canadian shipping in tons, and also in lives, of Canadian nationals or soldiers, off the coast of Eire during this war?
2. What Canadian ships have been lost in that zone?
3. What is being done to secure the immediate use of these empire bases?

Mr. MACKENZIE KING:

1. It is not deemed in the public interest to give information regarding losses of ships and men in particular theatres of war, or with respect to the use of empire bases.

2 and 3. Answered by No. 1.

SUPPLY OF PLANES TO NEUTRAL COUNTRIES

Mr. COLDWELL:

1. Have any planes, particularly Fleets 16, been supplied since June 1, 1941, to countries which were, or are, neutral?
2. If so, to what countries and in what numbers?

Mr. MACKENZIE KING:

1. Since June 1, 1941, one export permit has been granted for the export of aircraft from Canada to countries other than the British Empire and the United States. The permit in question was granted on August 23, 1941, and covered eighteen Douglas bombers owned by the Royal Norwegian Air Force and sold by them to the government of Peru. The planes were at no time the property of the government of Canada, and were only exported after being found unsuitable for the purposes of the R.C.A.F. and R.A.F., to whom they were first offered when the Royal Norwegian Air Force found them not suited to their requirements.

2. Immediately prior to June 1, 1941 (on May 29), an export permit was granted for the export of ten model 16 fleet trainers to Portugal for the use of the Portuguese navy. This export was made, following consultation with the government of the United Kingdom, in view of the friendly relations existing with Portugal.

It would not be in the public interest to disclose the extent and nature of aircraft exports to the United States.

INDUSTRIAL DISPUTES—CALLING OUT OF ACTIVE MILITIA

Mr. BLACKMORE:

1. At what dates since 1915 and in what localities has the Canadian active militia been called out by order of the governor in council or otherwise, for the purpose of quelling riots or disturbances arising from industrial disputes?
2. In each case, out of what particular dispute did the riot or disturbance necessitating that the militia be called out, arise?
3. What were the immediate causes of the disturbance in each case?
4. What were the general causes of the disturbance in each case?
5. If the disturbance resulted from a strike, what were the causes and the final result of the strike?
6. In what cases (if any) did the disturbances relate to political matters and discontent with government?
7. What overt acts were committed by the persons responsible for the riot or disturbances?
8. What was the strength of the militia force on each occasion?
9. For what length of time was the militia on duty on each occasion?
10. Where was the militia force which was called out on each occasion stationed before the disturbances; after the disturbances?
11. How many casualties (if any) resulted on each occasion that the militia was called out, among militiamen? Among civilians?
12. How many arrests were made of alleged rioters, et cetera, on each occasion that the militia was called out in this way?
13. What were the charges laid against each arrested person on each occasion?
14. How many convictions were made of those arrested on each occasion? Where were the trials held? Are there reports of these trials?

Mr. RALSTON: I want to ask the hon. member who has placed this question on the order paper if he really thinks we should go back twenty-seven years to discover not only the instances in which the active militia has been called out but also the particular dispute; the immediate causes of the disturbance; the general causes of the disturbance; whether there was a strike; the result of the strike; whether it related to political matters; what overt acts were committed by the people responsible for the riots or disturbances; the strength of the militia unit on each occasion; the length of time the unit was on duty; where was the military force which was called out stationed before and after the disturbance; how many casualties resulted, including militiamen and civilians; how many arrests were made on each occasion; the charges laid against each person; the convictions made, where the trials were held and whether or not there are reports of such trials.

Some hon. MEMBERS: Dropped.

Mr. BLACKMORE: In view of the fact that questions play such a large part in our proceedings in this house, I think I am perfectly justified in asking for that information.

Mr. RALSTON: I did not catch what my hon. friend said, but I do suggest that before this is made an order for return the hon. member might give it further consideration. We are doing other things than examining the records for twenty-seven years back to get details such as these. I submit to my hon. friend that on the face of the question at least, in a period such as this, he is putting upon the department unjustifiable work which would take an unjustifiable amount of time.

Some hon. MEMBERS: Dropped.

Mr. BLACKMORE: I do not think it should be dropped. It might stand.

Question stands.

USE OF STEEL IN BUILDING FOR J. FRANCESCHINI

Mr. FRASER (Peterborough West):

1. Has the priorities branch of the Department of Munitions and Supply issued permits for steel to be used in the construction of a building or a house for J. Franceschini, recently released from internment?

2. If so, how much steel has been allotted to this building?

Mr. HOWE:

1. No.

2. Answered by 1.

EXPORTS TO JAPAN AND TURKEY

Mr. ROY:

1. Did Canada export any cereals, metals or other products to Japan and Turkey in 1940 and 1941?

2. If so, what quantity of each commodity has been exported to these two countries and when?

Mr. MacKINNON (Edmonton West): In keeping with the policy announced by the Minister of Trade and Commerce in the House of Commons on February 2, 1942, page 201 of *Hansard,* information is not available concerning the Canadian imports and exports of commodities by countries during the war period.

EXPORTS TO SPAIN

Mr. ROY:

1. Did Spain import any cereals or metals from Canada in 1941?

2. If so, what quantities of wheat, nickel, aluminum and other metals, and scrap iron, were exported to Spain during the first six months of the year, and what quantities during the last six months?

3. Since January 1, 1942, have there been any exports from Canada to Spain and if so, what were they, and in what quantities?

Mr. MacKINNON (Edmonton West): In keeping with the policy announced by the Minister of Trade and Commerce in the House of Commons on February 2, 1942, page 201 of *Hansard,* information is not available concerning the Canadian imports and exports of commodities by countries during the war period.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CONSCIENTIOUS OBJECTORS—EMPLOYMENT IN WAR INDUSTRIES OR SERVICE IN WORK CAMPS

Mr. CRUICKSHANK:

1. What is the government's position in respect to the employment of conscientious objectors on wartime projects?

2. Are any of such persons employed in war industries and projects and do they receive the regular rates of pay?

3. If any of the above class of military age are employed in war industries may they now be called upon to serve in a work camp for the duration of the war under section 20 of the National War Services Regulations, 1940 (Recruits) (Consolidation 1941)?

GASOLINE RATIONING

Mr. DIEFENBAKER:

1. How many gallons of gasoline were sold in Canada (a) by retail, (b) by wholesale, in each of the years 1938 to 1941 inclusive?

2. (a) How many gasoline ration books have been issued to date; (b) what is the number in each category; (c) how many gallons may be purchased per month or year in each category?

3. If the limit permitted under the ration books issued to date was in fact purchased during the year what would be the consumption of gasoline during the year commencing April 1, 1942?

4. What amount of gasoline does the oil controller estimate will be consumed during the year commencing April 1, 1942, by persons or companies who are not required to have ration books?

CONTRACTS FOR SALE OF USED LUBRICATING OIL

Mr. PERLEY:

1. What contracts have been placed or let for the bulk sale of used lubricating oil at each of the air training centres and army training centres in the province of Saskatchewan?

2. What persons or firms have such contracts and what are the terms of each?

COMMITTEE ON RECONSTRUCTION

Mr. DESMOND:

1. What are the names and qualifications of the individual specialists who have been engaged by the committee on reconstruction headed by Dr. James, and what remuneration is paid to each?
2. Will their reports be published?
3. Will their reports be made available to the House of Commons?

Mr. McLARTY: Return tabled.

ECONOMY IN USE OF PAPER

Mr. BRUCE:

1. Does the government consider there is any shortage of paper in Canada, (a) at the present time; (b) likely to be in the future?
2. Have any steps been taken to ensure economy in the various departments of the government and, if so, what steps have been taken?
3. Is the government aware that literature is being sent out from the Department of Public Information, in triplicate?

WAGES OF JOURNEYMEN CARPENTERS, PAINTERS AND PLUMBERS

Mr. ROY:

What are the scales of wages paid to journeymen carpenters, painters and plumbers employed by the Departments of Public Works and National Defence?

LABOUR CONDITIONS

LOCKOUT AT KITCHENER, ONTARIO—DUMART PACKING PLANT

On the orders of the day.

Mr. CLARENCE GILLIS (Cape Breton South): Following my question of yesterday with reference to the dispute in the Dumart plant, may I ask the Minister of Labour whether it is true that at a meeting in Kitchener yesterday the management refused to agree to any kind of arbitration and also refused to reopen the plant? Is the minister prepared to make any further statement on the matter?

Hon. HUMPHREY MITCHELL (Minister of Labour): I think I can make a statement on that matter. My hon. friend will appreciate that I have just returned to the city, but I can say this. In the first place there was an illegal strike called in Kitchener the day before yesterday.

Mr. HOMUTH: An illegal strike?

Mr. MITCHELL: Owing to the discharge of two employees. The department immediately sent a conciliator there in an endeavour to compose the differences. The company at the moment takes the position that these men are discharged.

What the hon. member says about arbitration is quite true. The plant will be opened and the management will take back whoever in their judgment should be taken back. The men did ask that they be permitted to go back without any discrimination. My hon. friend may rest assured that so far as the department is concerned every effort will be made to compose the differences in that plant.

Mr. MacINNIS: Was there not a lockout at the Dumart plant, and will the Department of Labour refer this matter to the Department of Justice for proper action, as was done in connection with the Midland shipyard strike?

Mr. MITCHELL: My hon. friend may have more information than we have on that.

Mr. MacINNIS: It is your department.

Mr. MITCHELL: When I said it was an illegal strike, I meant that it was an illegal strike. My hon. friend can call it a lockout, but I do not think it is.

Mr. MacINNIS: Can these employees go back?

Mr. MITCHELL: I have given the assurance to the member for Cape Breton South (Mr. Gillis) that anything and everything that our department can do to compose the differences will be done. The hon. member for Vancouver East (Mr. MacInnis) appreciates the difficulty of labour negotiations and that sometimes, when you are almost on the point of composing differences, questions are asked in the House of Commons that make it very difficult to bring about a settlement.

Mr. MacINNIS: Who is making it difficult?

Mr. MITCHELL: I am not suggesting that the hon. member is.

JAPANESE NATIONALS

INQUIRY AS TO MOVEMENT OF MALES FROM PACIFIC COAST TO CAMPS

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): I wish to direct a question to the Minister of Labour. Will he state when Japanese males will be moved from the Pacific coast to fill the camps now prepared and capable of accommodating several hundred men?

Hon. HUMPHREY MITCHELL (Minister of Labour): As soon as these camps can be filled they will be filled, but the British Columbia security commission advises me that priority is being given to the movement of Japanese to the beet fields in Alberta and Manitoba, and further, that they expect to have the camps filled by the end of this month.

Mr. CRUICKSHANK: May I ask a further question?—because I am particularly interested in view of what has happened on the eastern coast. Am I to understand that the sugar interests are to have priority over the safety of the Pacific coast?

Mr. MITCHELL: I would say that public opinion generally throughout British Columbia is in favour of having the Japanese moved from that province.

Mr. CRUICKSHANK: The camps are empty.

Mr. MITCHELL: Just a moment. The British Columbia security commission advises me that it is moving with all expedition, in conformity with public opinion in British Columbia, giving priority to the movement of Japanese to the beet fields in Manitoba and Alberta. So far as the big interests are concerned, they have no voice and no decision in the matter.

Mr. HOMUTH: And no jobs.

Mr. MITCHELL: I would not like the impression to go out that the big interests have anything at all to do with the matter.

Mr. CRUICKSHANK: Mr. Speaker, on a question of privilege, I never mentioned the big interests. I do not want something put into my mouth by the minister. I am quite capable of speaking for myself. I said the sugar interests.

FOREIGN POLICY

GENERAL DE GAULLE, EIRE, AND THE VICHY GOVERNMENT

On the orders of the day:

Mr. T. L. CHURCH (Broadview): May I ask the Prime Minister to tell later what his foreign policy is regarding recognition of General de Gaulle, Eire and the Vichy government?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government's foreign policy is to do everything possible to win the war and not to do anything to prevent that end from being attained.

CANADIAN ARMY

REFERENCE TO STATEMENT OF HON. MR. HANSON AS TO EXTENSION OF TRAINING PERIOD

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, referring to the statement of the hon. leader of the opposition (Mr. Hanson) at page 2203 of *Hansard* to the effect that he had recommended the extension of the period of training from one month to four months and had got credit for it, I wonder if that is officially and technically correct.

INQUIRY AS TO POST-DISCHARGE BENEFITS PENDING EMPLOYMENT

On the orders of the day:

Mr. J. W. NOSEWORTHY (York South): May I be informed, please, how many men with dependents and how many single men, discharged from this war, are now in receipt of post-discharge benefits pending employment?

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order. This is a question that should properly be placed on the order paper.

SHIPPING LOSSES

ANNOUNCEMENT OF SINKING OF SECOND SHIP IN ST. LAWRENCE

On the orders of the day.

Mr. J. R. MacNICOL (Davenport): May I ask the Minister of National Defence for Naval Services whether the rumour is true that another ship has been sunk in the St. Lawrence?

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Speaker, I had intended to make a statement on that matter and rose for that purpose, but yielded the floor to my hon. friend.

Yesterday I gave a statement to the press declaring that a freighter had been sunk in the St. Lawrence river by an enemy submarine. That statement was completely accurate according to the information at that time in my possession or in the possession of the department. I also stated that it would not be the policy to make an announcement of any future sinkings in this area, in order that information of value to the enemy may be withheld from him. That is the policy I must pursue. But inasmuch as the whole event really constitutes one incident, I think

I should tell the house that another ship was sunk in the same general locality, at about the same time. While in future I must stand by the statement made yesterday, that we are not going to give information to the enemy which may be of assistance to him, nevertheless, these ships having been sunk in about the same waters and at about the same time, I think I can regard it as one incident and not come within the scope of the prohibition which I laid upon myself yesterday.

Information such as this cannot and will not be given in answer to questions in the house or elsewhere, and in no circumstances will it be given unless we are satisfied that the enemy will not benefit therefrom. To hon. members who are inclined to be critical of the censorship regulations and the silence that is observed with regard to these matters, I may say that German broadcasts are heard in the department, and this morning the German radio announced with great glee that a ship had been sunk in the St. Lawrence by one of their submarines; that this was the greatest distance from home their submarines had ever operated; that the whole thing had produced tremendous consternation in Canada; that the department had declared that no further announcements would be made; that this was an indication of our consternation, and generally they played the news up to the utmost degree. It is obvious that if they attach such importance to the matter, we also should attach similar importance to it, and we cannot dash around, giving out information which may in any way endanger the safety and lives of our men or the safety of our own or allied property, for the sake of gratifying any group of people, no matter how important they may be. But I think I should say that, while we had not the knowledge at the time the announcement was made yesterday, a second ship has been sunk.

QUESTION AS TO USE BY ENEMY SUBMARINES OF ST. PIERRE AND MIQUELON WATERS

Mr. T. L. CHURCH (Broadview): With reference to the statement which the Minister of National Defence for Naval Services made, may I ask whether he is aware of the invasion by German submarines over the past year of the deep creeks and inlets and harbours of the islands of St. Pierre and Miquelon and flashing from the shores signals at night to sink shipping?

Mr. SPEAKER: I think the question should be put on the order paper.

Mr. CHURCH: I will put it on the order paper, if that is desired, but you can get no information in reply to questions put on the order paper. Here is a question I put on the order paper—it was answered to-day—about German bases in the Atlantic off Ireland and the losses of allied shipping. Information as to Atlantic losses is given almost every month by the British admiralty but the Prime Minister refused to-day to tell this house what the losses there were. I may have to bring the matter up on a motion to adjourn the house, also the Vichy question and the lack of recognition by Canada of General de Gaulle who is helping us at these islands.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Would my hon. friend let me see the question and the answer to which he has just referred? I think I should read the question and the reply that was given. They are as follows:

1. What has been the estimated loss, since the war began, of Canadian shipping in tons, and also in lives, of Canadian nationals or soldiers, off the coast of Eire during this war?
2. What Canadian ships have been lost in that zone, as a result?
3. What is being done to secure the immediate use of these empire bases?

My answer was:

1. It is not deemed in the public interest to give information regarding losses of ships and men in particular theatres of war, or with respect to the use of empire bases.
2 and 3. Answered by No. 1.

My hon. friend will find that that answer does not differ in any essential particular from the information given out by the British government. Furthermore, it is in accord with the expressed desire of the British government that information as to what happens in particular theatres of war if likely to be of any service to the enemy is not to be made public.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Speaker, I think I should make some reference to the question asked by the hon. member for Broadview. I am not sure that I heard him correctly, but I think he said: Is the minister aware that German submarines over the past year have had bases in inlets on the Canadian coast.

Mr. HANSON (York-Sunbury): Inlets in the French islands.

Mr. BLACK (Cumberland): St. Pierre and Miquelon.

Mr. MACDONALD (Kingston City): And on the St. Lawrence, I think he said. I should like to know what is the basis of my hon. friend's statement that German submarines have had bases on

the seaboard of this continent over the past year. I have now before me his written question. It is as follows:

Is the government aware that for nearly the past two years German U-boats have been sheltering in the deep creeks, inlets and harbours of these islands, St. Pierre and Miquelon, where they flash signals at night from the shores to sink Atlantic shipping?

Does my hon. friend state that to be the case?

Mr. HANSON (York-Sunbury): He is asking you.

Mr. MACDONALD (Kingston City): There has to be something more in this house than mere innuendo and suggestion.

Mr. CHURCH: Where was your navy when all this was going on in the St. Lawrence?

Mr. MACDONALD (Kingston City): I will answer my hon. friend with the statement that I do not know, and he does not know, and no reputable authority knows that there is a German U-base on this side of the Atlantic. I have stated before several times in this house that we knew definitely that German U-boats could leave European bases, come over to this side, operate for some days off the American coast and get back to their bases in France or Germany or along the conquered coasts without the necessity of refuelling. I have no knowledge whatever that there are any such bases. There are no very deep inlets in the harbours of St. Pierre and Miquelon. But I should like to know what foundation, if any, my hon. friend has for his suggestion.

Mr. GRAY: I think we are entitled to know what hon. member made the statement.

Mr. MACDONALD (Kingston City): The hon. member for Broadview.

Mr. HANSON (York-Sunbury): No. He asked a question. Let us be perfectly frank. All this seems to be out of order.

Mr. CHURCH: I also ask, what steps will be taken to support the splendid work of General de Gaulle, to protect Canada from a nest of axis pirates operating there; what action will be taken to recognize and support the general in protecting Canada from pirate U-boats at St. Pierre and Miquelon which are known to be operating off our eastern shores? I have the authority for it. Further, will all papers regarding these islands and axis U-boats be published?

Mr. SPEAKER: I think this whole matter is out of order on the orders of the day.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, May 12, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Vien in the chair.

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, last evening just before six o'clock the hon. member for Lake Centre (Mr. Diefenbaker) presented me with a series of questions. All evening and all this morning the officers of my department, accountants and others, have been trying to get answers to these questions, and I have not yet received them. I think from what they tell me that it may take a day or so; therefore it will not be possible for me to proceed at this time along these lines. But while I am discussing that matter I want to tell you, Mr. Chairman, and the committee, that I owe an apology to the hon. member for Lake Centre for having to some extent doubted the statement which he made with respect to air observer operating companies having a parent company. I was under the impression that that was not the case, but my information this morning is that the statement made by my hon. friend is perfectly right.

Mr. HANSON (York-Sunbury): Is it not so that at least in one case the same set of shareholders hold the stock in both companies, so that it is hardly fair to say there is a parent and subsidiary, that one is subject to the other in some degree, but that the observer company does pay a fee to the other company, contributing to the stockholders of the other company, the shareholders being the same in each? That is a state of affairs which, I think, should not exist.

Mr. POWER: I am under the impression that the statement which the leader of the opposition makes is substantially correct. I am having that looked into.

Mr. HANSON (York-Sunbury): And how many there are?

Mr. POWER: And how many there are. I had in mind one company which has an observer school of the same name as the parent company, and I was sure that we were dealing directly with the parent company, with the operating company. That is how I came to make the mistake.

Mr. DIEFENBAKER: I want to thank the minister for the courtesy he has shown, which is in keeping with the manner in which he is administering his department.

Mr. TUSTIN: Yesterday I asked the minister whether the Royal Air Force stations were included in the commonwealth air training scheme. He advised me that they were not. A little later he said that the Royal Canadian Air Force had a sort of general control over the Royal Air Force schools. I also asked him then if the Royal Canadian Air Force posted men to these Royal Air Force centres. He advised me that they did. He went on to say that sometimes Royal Air Force men were posted to Royal Canadian Air Force schools. In view of the statement the minister has made that he has a kind of control over these Royal Air Force schools I think he should make a statement indicating clearly what the control is. When he has answered that question, I should like him to state how the difference in pay is made up if men from the Royal Air Force schools are stationed at Royal Canadian Air Force schools, and vice versa. I understand there is considerable difference between the pay of the Royal Canadian Air Force and that of the Royal Air Force.

Mr. POWER: With respect to control by the Royal Canadian Air Force over the Royal Air Force, we have a control with respect to both discipline and command. I must admit that at the present it is somewhat nebulous. I expect that as a result of the conferences which are to be held in the near future that situation will be clarified.

With respect to pay, I am very glad that that matter has been brought to my attention, because for months it has been stated in the press and on the public platform that the Royal Air Force schools received rations different from those of the Royal Canadian Air Force, and that as a result they are obtaining a lower standard of rations. Men of the Royal Air Force whose pay was lower than that of the Royal Canadian Air Force, according to the story, were having a very hard time to make both ends meet. The true story is that the Royal Air Force, wherever they may be in Canada, receive exactly the same rations as the Royal Canadian Air Force from the army service corps. That is number one. Number two is that their men receive the same pay as the Royal Canadian Air Force, with the exception perhaps of certain trades. Some trades are graded higher in the Royal Air Force than in the Royal Canadian Air Force, but that is a difference of administration by the different forces. But the standard or basic rate of pay of the Royal Air Force is brought up to that of the Royal Canadian Air Force when the men come to Canada.

Mr. FRASER (Peterborough West): Does the minister intend to take over the cadet training in all the high schools where the army has cadets now, or what is the procedure? How is the instruction to be carried out?

Mr. POWER: A statement was issued by the Minister of National Defence, the Minister of National Defence for Naval Services, and myself, to the effect that we hoped to be able to arrive at a satisfactory arrangement. So far as Ontario is concerned, and I assume my hon. friend is speaking of Ontario, the latest development is that the provincial government is establishing compulsory training of some kind, and the cadets will be joint cadets, but with the arrangement that when they reach a certain age, I think it is seventeen, students will have the option of joining either the army or the air force.

Mr. FRASER (Peterborough West): They will carry on, then, as navy, army and air; or will the navy be in it at all?

Mr. POWER: The navy is not in it in many places; it is, I think, in Ontario. There will be no difficulty as between the navy and either army or air. I do not think there is any real difficulty as between army and air either, except that some school boards wish to put the onus on either my department or that of national defence to say whether we want them to be army or air, and invariably we say, "Take your choice"; whatever the board wants is quite satisfactory to us. So far as I am concerned, so long as I have at least my place in the sun I think we shall be able to get the cadets.

Mr. FRASER (Peterborough West): At present army officers are helping along with that training. Is it intended to put in air force men to help that training?

Mr. POWER: No.

Mr. SENN: Yesterday the minister, in reply to a question asked by the hon. member for Saskatoon City (Mr. Bence), stated, no new aerodromes. I know that in the county in which I live, and in the adjoining county, areas have been surveyed and staked out, and I should like the minister to make a statement in regard to them because there is a certain amount of uncertainty in the minds of the people in the areas that have been staked out and surveyed as to whether they wil be taken up. Many people have asked me this question on several occasions and I have not been able to answer.

Mr. POWER: We never know when requests will be made to us to enlarge the plan or to find aerodrome sites for transferred schools, so that during the past year we have requested the Department of Transport to look over the ground in every part of the country. The result is that I am very often told by members of parliament and boards of trade, "Oh, you will have an aerodome in my constituency because there was a survey party there." The survey parties carry out preliminary surveys in order that we may be ready to site aerodromes in case the need arises instead of being left to get them in a hurry if we are obliged to.

Mr. CHURCH: I am sure the minister must be greatly encouraged in his work by the wide approval of the good work which the air ministry has done in Canada. During the debate last night a great many members referred to the inequalities in pay and the difference in rank among those who go to the same school. I hope the minister will take up this matter at the coming conference, because I have discussed it with a great many people who have been at these camps and, while they are loath to express an opinion, I am sure the minister is moving along the right line in the answer he gave to the hon. member for Lambton West and the hon. member for Brantford City yesterday. There is a wide discrimination between those who are doing the same work and who are equally qualified for ground work or work in the air as the case may be. These pay injustices and inequalities in the army, the navy and the air force have given rise to widespread discussion not only among members in the House of Commons but in the country as well, and I would ask that we have a statement similar to that which the minister in charge of the army has given, which was placed on *Hansard* last Monday. There was tabled on March 24, 1942, a return which is up to date with regard to pay and allowances and other emoluments of officers and men of the three services. I would ask that this return, which has already been tabled for me be put on *Hansard*.

Mr. POWER: Here is a return laid on the table of the house and in the hon. gentleman's possession and he wants me to place it on *Hansard*. If he wants to have it on *Hansard*, all he has to do is to get permission of the house to have it put there. I have no objection, but I do not see why I should have the onus of asking for permission to put on *Hansard* something that is in possession of the hon. gentleman.

Mr. CHURCH: In that case I would ask for permission to place it on *Hansard*, because I think it is in the public interest that these inequalities should be made known. Unless I can get the unanimous consent of the committee, and I would ask for that consent, I shall have to read it.

The CHAIRMAN: Is it the pleasure of the committee that the hon. gentleman have leave to put the return on *Hansard?*

Mr. POWER: I have no objection.

Some hon. MEMBERS: Read it.

Mr. POWER: I do not object.

Mr. CHURCH: The return is as follows:

(Part of sessional paper No. 254)

Inquiry of the Ministry by Mr. Church—*Votes and Proceedings* No. 44
March 24, 1942—Page (i)

Questions:

1. What is the pay, sustenance allowance, and all other emoluments of officers and men of His Majesty's three forces?

2. What is paid also to officers and members of the women's army?

In so far as the Royal Canadian Air Force is concerned:

Note: The following scale of pay and allowance is based on active service rates. However, as the Active Service rates of dependents' allowances are more beneficial, the small number of personnel (mostly of the lower ranks without dependents) still remaining on permanent force rates, are gradually transferring to active service rates as they marry or acquire increased rank.

Answers: 1 (A) Pay.

(i) Officers:

Pay of rank

	General flying list	Non-flying list	Medical branch
Air Commodore	$19 00	$17 00	....
Group Captain	15 00	13 00	....
Wing Commander	12 00	10 00	$11 00
Squadron Leader	9 75	7 75	9 25
Flight Lieutenant	8 50	6 50	7 50
Flying Officer	7 00	5 00	5 00
Pilot Officer	6 25	4 25	4 25

Additional pay	Per diem
Officers in command of units	$1 00
Adjutants	50
Officers employed as A.F.H.Q. or Command Headquarters	50
Flying pay for officers not on the general (flying) list for authorized flights	2 00

(ii) Airmen:

Pay of rank and group

Rank	Groups "A"	"B"	"C"	Std.
Warrant Officer, Class I	$4 95	$4 70	$4 45	$4 20
Warrant Officer, Class II	3 85	3 60	3 35	3 10
Flight Sergeant	3 25	3 00	2 75	2 50
Sergeant	2 95	2 70	2 45	2 20
Corporal	2 45	2 20	1 95	1 70
Leading Aircraftmen	2 25	2 00	1 75	1 50
Aircraftmen, Class I	2 15	1 90	1 65	1 40
Aircraftmen, Class II	2 05	1 80	1 55	1 30

Pay of Rank

Air Crew Graduates

	Pilots, Air Observers, and Observers (Radio)	Wireless Operators (Air) Gunners	Air Gunners
Warrant Officers, Class I	$5 70	$....	$....
Warrant Officers, Class II	4 60	....	....
Flight Sergeant	4 00	3 75	3 25
Sergeant	3 70	3 45	2 95

Additional Pay	Per Diem
Flying Pay	$ 0 75
Flying Pay for crew of aircraft (Crew Pay)	0 75

(B) Subsistence Allowance

	Quarters	Rations	Subsistence
Officers of air rank	$1 00	$....	$1 00
Other officers	1 20	0 50	1 70
Airmen	0 50	0 50	1 00

(C) Dependents' Allowance

To wife, or if there is no wife to the female relative maintaining a home for his children:

	Per Month
Officers above the rank of Squadron Leader	$60 00
Squadron Leader	55 00
Flight Lieutenant	50 00
Flying Officer	45 00
Pilot Officer	45 00
Warrant Officer, Class I	40 00
All other airmen	35 00
First dependent child	12 00
Second dependent child	12 00
Third dependent child, of ranks below W.O. I	9 00
Fourth dependent child, of ranks below W.O. I	6 00

Other dependent relatives	Maximum
Officers above the rank of Squadron Leader	up to $30 00
Other officers	up to 25 00
Airmen	up to 20 00

Dependents' allowance cannot be claimed for more than three dependents except in the case of ranks below Warrant Officer, Class I, who may also claim for their third and fourth dependent children.

(D) Other Allowances

(i) Outfit allowance for officers of $150 on appointment.

(ii) Outfit allowance for Warrant Officers, Class I, of $150 on appointment.

(iii) Transport and travelling allowances when travelling on duty.

(iv) Transport and travelling allowances to their residence prior to enlistment when discharged.

(v) Civilian clothing allowance on discharge of $35, if service less than six months, $27 in winter, and $17 in summer.

(vi) Rehabilitation grant of thirty days' pay and dependents' allowance, if six months' service completed.

[Mr. Church.]

2. The R.C.A.F. (women's division) receives pay at two-thirds the rates for officers and airmen of the force. They receive no additional pay, such as headquarters' pay, flying pay, etc. They receive the same subsistence allowance as officers and airmen, and in addition, are entitled to all those other allowances shown in para. (D). Furthermore, they are given an underclothing allowance of $15 upon enlistment, and this is supplemented each quarter by an allowance of $3. No dependents' allowance is paid on their behalf, and any dependents' allowance which they were receiving prior to their enlistment, is stopped when they become members of the force. Their emoluments may be summarized as follows:

(A) Pay.

(i) Officers:

Pay of rank.

Officers	Daily rate
Wing Officer	$6 70
Squadron Officer	5 20
Flight Officer	4 35
Section Officer	3 35
Asst. Section Officer	2 85

(ii) Airwomen:

Pay of rank.

Other ranks	"A"	"B"	"C"	Std.
Under Officer I	$3 30	$3 15	$3 00	$2 80
Under Officer II	2 60	2 40	2 25	2 10
Flight Sergeant	2 20	2 00	1 85	1 70
Sergeant	2 00	1 80	1 65	1 50
Corporal	1 65	1 50	1 30	1 15
Leading Aircraftwoman	1 50	1 35	1 20	1 00
Aircraftwoman I	1 45	1 30	1 10	95
Aircraftwoman II	1 40	1 20	1 05	90

(B) Subsistence allowance.

	Quarters	Rations	Subsistence
Officers	$1 20	$0 50	$1 70
Airwomen	50	50	1 00

(C) Underclothing allowance.

An initial grant of $15 is provided to purchase underclothing, toilet articles and necessaries. A quarterly allowance of $3 is paid for the purpose of replenishing these articles.

(D) Other allowances.

(i) Outfit allowance for officers of $150 on appointment.

(ii) Outfit allowance for under officer, class I of $150 on appointment.

(iii) Transport and travelling allowance when travelling on duty.

(iv) Transport and travelling allowances to their residence prior to enlistment when discharged.

(v) Civilian clothing allowance on discharge of $35, if service less than six months, $27 in winter, and $17 in summer.

(vi) Rehabilitation grant of thirty days' pay, if six months' service completed.

I come from a city and district that have given almost one-third or one-fourth of the cadets to the dominion, and naturally I want to ask one or two questions in regard to cadet services. There was a return to an order of the house in connection with cadet services in the air force. A lot of trouble is caused by having outside organizations of a private nature engaged in this work. They have done good work, I admit, but I object to having the whole policy of Canada upset in connection with the cadet services, which we have had from the days of confederation.

Take this particular branch of the department. An order was given, which will be found in *Votes and Proceedings*, order No. 9, February, 1942, with regard to this particular cadet services department, in which it was shown that a private organization had been given rights and privileges, formerly the functions of school boards, in this matter. Apart from a few subscriptions, the department is paying for 7,000 cadets going to camp, and when the country pays for them it should have some control over the matter. This league is getting a grant of $25,000 a year, and it is going into the schools, some for the army, some for the navy and some for the air force. Toronto is spending $12,000,000 in connection with maintenance charges for

schools, and I suggest that the school boards and teachers should have some control and be consulted first. There are many men who served in the great war and some who are in this war, who are teachers in the public schools and high schools, and in the separate schools as well. In the constituency of York South represented by my hon. friend (Mr. Noseworthy), there is a large collegiate, Vaughan road. Now you will have rival organizations, one for the army, one for the navy and one for the air force all in the schools and interfering with studies, using this private medium. I am not opposed to them, but they should be coordinated. They have done a lot of good work and I freely admit, as the minister said last night, that they are public-spirited citizens. I suggest, however, that there should be some coordination. The minister has put in a good deal of hard work on this question and he knows more about it than I do. I am one of those who appreciate what he has done and the league so far. He commanded a Toronto unit in the last war and is much respected there. The provincial minister of education at Toronto has stated that they want to train 50,000 cadets in Ontario at the expense of the municipalities and the schools of the province. I should like to find out what authority they have for that from this government and how this will affect the air league. Have they received requests from the army, navy or air department or from other departments of the government to do this, and why? What is the scheme? Does it not also supersede and interfere with the cadet league system? There are a great many of my own personal friends, whom I have known for many years, splendid patriotic citizens, who belong to the league. I know most of them. They are public-spirited, and I think something should be done to explain the situation in view of Ontario's entry into it. They have an air league secretary in Ottawa who issues communiques almost daily, but I do not know what is being done. He has a new flag and has obtained the royal assent for it, by what authority I do not know, with parliament in session. My hon. friend the member for Davenport (Mr. MacNicol) is one of those who have been behind protecting strongly the flag which shelters us, and while perhaps matters of this kind should not, in time of war, be mentioned, I think attention should be drawn to this situation. I am glad that the hon. member for Davenport is aware of the change of flag proposed.

[Mr. Church.]

Mr. MacNICOL: I am always aware of what is going on.

Mr. CHURCH: I know, but he may find the new flag over us before the league gets through. They have plenty of leagues in this country. Who authorized the changing of the flag of the air cadets without the knowledge of parliament? How many of these separate flags have already been introduced in Canada's forces. I am not objecting, but under what authority? What sums of money does this league get?—$25,000 I understand. For what purpose do they get it, and who are the officers? They are using public property, school buildings, for drills and meetings, and there are not enough schools to go around for all this war cadet service. The minister who has been interested in education for many years, will appreciate that I am not objecting to the work of the league, there are many good people in it, but there should be some cooperation, and surely when parliament is meeting they should not be doing this without control. On what grounds of public policy were these services taken out of the control of school boards and boards of education in Canada, which have had control in the past? And do not forget, it was done without the authority of parliament, and is different from the navy and the army.

In view of the great record which the minister's department has made, for it has made a great record in an empire sense, I urge that he look a little further into it and get some control over it.

As to the summer air and other cadet camps, they are going to interfere with the migration of cadets to farms and with everyone who wants to be a farmer. The cry used to be, "I did not raise my boy to be a farmer but I raised him to be a hockey player", but since the war came all that is changed now. In view of the attempt to get the high school boys out on the farms there will be some interference with the league work. The minister used to be a star hockey and lacrosse player himself, I remember, and he was a great player who could give and take with the best of them. He should look into the whole situation. I was talking to the head of one of the largest collegiates in the dominion last week, and he said from a quarter to one-third of the students are now on the way to the farms. They used to go for four or five weeks, but now it is extended to eight or nine weeks. If we keep on, every one will want to be a doctor of agriculture; we are going to turn the city men instead of into doctors of law into doctors of agriculture, and make our collegiates agricultural

colleges in cities. If we have no control over some of these things we might as well go home. Since the dollar-a-year men have got control, all the affairs of the country are under their control and that of the bureaucratic boards. It seems to me that the cabinet and parliament are compelled to do goose-stepping to these dollar-a-year men who pass conscription orders without the knowledge and consent of parliament. The country is controlled by a bureaucracy. I do not seek to interfere with the thousands who want to go on the farms. I am glad the schools are helping, because it is primary. I am not a farmer myself, but I have just as much knowledge of farming as some hon. members who pose as farmers, although I do not remember whether there are fifty-six or sixty pounds to a bushel of buckwheat, barley or timothy seed. I have seen many farms five and ten miles out of Toronto on the highways where the city and the province spent a good deal of money on roads and to furnish cheap light and power and transportation, but the farms are now deserted and untilled, and many are vacant.

But I hope the minister will look into the powers and functions of this league and other private organizations. During the last war when I was one of the heads of the city of Toronto, we had the air force cadets there and they did a tremendous work. Over 16,000 were trained as R.A.F. cadets and mechanics.

I hope some consideration will be given at the conference next week to the representations made last night by the hon. members for Brantford City, Lambton West, Lake Centre and others, and that the question of air force regiments will be taken up. They are in their infancy in England, they cooperate with the army and the navy; they are badly needed in this country, the territory of which stretches from ocean to ocean. One of the main reasons why some of these regiments should be formed is to guard the proposed new aerodromes and the camps and cooperate with the army and navy and the land and ocean services. Notwithstanding the lecture of the Minister of National Defence for Naval Services to the municipalities last night, I can tell him that the municipalities of Canada have done more than those in any dominion of the empire in the way of giving to the government buildings and grounds free until they have no room for any expansion of their ordinary municipal utilities, and the universities also. Look at what Toronto did in the last war and in this war to help cooperate, even to closing its annual fair, which helped in war to keep up morale.

Mr. DOUGLAS (Weyburn): I wish to ask some questions of the minister along the lines of those I asked last year. When a man joins the Canadian army he does so as a Canadian soldier; he goes overseas as a Canadian soldier to operate under the Canadian army which in turn is attached to the Canadian corps. The same is true of a man who joins the Royal Canadian Navy; he goes over in a Canadian ship, and although his unit may be cooperating with a British squadron, nevertheless he is operating under Canadian officers and the Canadian general staff. But in the air force a man joins the Royal Canadian Air Force; he goes overseas, and it is understandable why in the early stages, when there were not many of them, they were scattered through the Royal Air Force. The minister said last year that an attempt was being made to set up a Canadian squadron. I think he said yesterday that some twenty-two of these all-Canadian squadrons have been set up. But are the government and his department moving toward setting up the Royal Canadian Air Force as a separate entity overseas operating under its own general staff? It seems to me we ought to be moving in that direction for two reasons. One is that I think the men would prefer it. That is no reflection on the Royal Air Force, but it is the same matter of principle that was fought out in the last war. Those who have read Sir Robert Borden's memoirs will remember that it was proposed that Canadian units should be dispersed throughout the British armies and operate under British commanders; but the Canadians were adamant on that issue, insisting that Canadians should operate as a Canadian army, and I think that stand was amply vindicated. The operation of that Canadian corps forms one of the proudest pages in our history. Has the time not come now to form a Royal Canadian Air Force overseas under a general staff responsible to the minister here?

Another reason why that ought to be done is because of the matter I mentioned when the army estimates were up. That is, since the Canadian corps has been formed under General McNaughton, there must be an increasing attempt to allocate to the army corps sufficient air power to sustain it when it goes into action. One of the most tragic pages in British history has been written in the last few days. Hon. members will have read the reports from correspondents in Burma telling how some of the finest units in the British and Indian armies have been cut to ribbons for lack of air support; a pitiful story of men who for three months fought a rearguard action, bombed and machine-gunned from the air with practically no air support. We are not in a position to say where the fault lay or what could have been done about

the matter, but the people of Canada will never forgive this government or those responsible if Canadian troops have to go into action on the continent without adequate aerial support, and they certainly would prefer that that aerial support should come from the Royal Canadian Air Force. The air force is no longer, as I understand, merely a bombing or fighting or interceptor force, it is a great deal more.

In modern war the air force has become, in some respects, the artillery of a mobile army. It is used to break up strong points of resistance. By dive bombing it is used to break up enemy troop concentrations, as well as for reconnaissance, and in conjunction with artillery being directed by the divisional commander on the ground. There will have to be the closest cooperation with and the best possible support of the Canadian corps by an air force, and preferably the Royal Canadian Air Force, when they go into action on the European continent. If this is to be done, it can be done only if there has been constant cooperation, coordination and practice between the different forces.

It seems to me it is not sufficient in modern war for appreciations of situations to be made and operational orders to be issued to the different services, and then to try to work them out on paper. There will have to be constant cooperation between land and air forces, and that can be done only if the Royal Canadian Air Force is operating under or in very close conjunction with the Canadian corps. I should like to see the Royal Canadian Air Force, with its own general staff, operating with General McNaughton's general staff of the Canadian Army Corps. It may not be possible to do that right away. It may be that the taking of Canadians out of different squadrons of the Royal Air Force would upset the set-up over there, and therefore it cannot be done too quickly or suddenly. But certainly it will have to be done some time, and I would ask the minister if he and his officers are moving toward that goal. I would ask him if there is any possibility at the conference to be held next week of his discussing with British air officials the possibility of setting up the Royal Canadian Air Force under a separate command in Great Britain, and working in close conjunction with General McNaughton and the Canadian corps.

Mr. POWER: I wish to thank my hon. friend for bringing this matter up, because there is nothing in the whole department more dear to my heart than the Canadianization of the Royal Canadian Air Force. I should like to get all the support I can in parliament. I do not know when I have had a greater sense of frustration than in my attempts to Canadianize the Royal Canadian Air Force overseas. I might explain that under the joint commonwealth training scheme the scheme was to train individual pilots for the Royal Air Force. In that connection I shall read section 14 and following under the heading "Training for R.C.A.F. merged with joint training":

14. It is agreed that the government of Canada may, out of the Canadian pupils who complete their training under this scheme, fill vacancies which occur in the home defence squadrons of the Royal Canadian Air Force.

That is, fill vacancies out of the graduates, in Canada.

All the other pupils, on completion of their training, will be placed at the disposal of the government of the United Kingdom—

Then there is the saving clause, added by the government of Canada:

—subject to that government's making the arrangements indicated in article 15 and bearing liability, as provided for in articles 16 and 17 of this agreement.

Then there is the clause which to some extent protects the Canadian character of the pupils:

The United Kingdom government undertakes that pupils of Canada, Australia and New Zealand shall, after training is completed, be identified with their respective dominions either by the method of organizing dominion units and formations, or in some other way, such methods to be agreed upon with the respective dominion governments concerned. The United Kingdom government will initiate inter-governmental discussions to this end.

Then follows article 16, to which reference is made; and article 17 deals with pay and allowances, and has nothing to do with the matter under discussion.

As a result of the sentiments my hon. friend has so well expresed the dominion government took up with the government of the United Kingdom a year ago last January, through my colleague the Minister of National Defence who was then in Great Britain, the question of identifying Canadians by the creation of a certain number of Canadian squadrons. That was only so far so good, because there were too many of our pilots to fit into only twenty-five Canadian squadrons. However, it was at least a start.

Unfortunately—and I am saying this without blaming anybody—there was not always the same enthusiasm, if I may put it in that way, on the part of the air ministry, and particularly on the part of the officers of the Royal Air Force, for the Canadianization of our squadrons.

Perhaps I had better go one step further. A large number of officers of the Royal Canadian Air Force, having been trained in the old Royal Flying Corps or Royal Air Force, naturally had their roots more deeply embedded in the traditions of the Royal Air Force than in those of the Royal Canadian Air Force. Therefore there was—perhaps obstruction is too strong a word—some resistance—

Mr. HANSON (York-Sunbury): Some difference of opinion.

Mr. POWER: Perhaps it would go beyond that. There was some resistance both on the part of the senior officers of the Royal Air Force—though I must say that eventually, after my visit last summer, the air ministry came around to what I call the Canadian point of view—and among the officers of our own Royal Canadian Air Force. Therefore, even the Canadianization of our twenty-five squadrons has been somewhat difficult, although we have all the men required to fill them—and many times more than enough.

Even to-day some of those squadrons contain only 30 per cent or 40 per cent of Canadians. Of course some have gone up as high as 80 per cent and 90 per cent, and there was the squadron I mentioned last night with 98 per cent. Another complaint—perhaps I should not say it was a complaint—another representation which I made while in England, and which I propose to make again at the conference, is that even apart from these squadrons it should not be very difficult as far as possible to keep Canadians together. There is undoubtedly the feeling both in this country and beyond it, that it is to the general good to mix people from all parts of the empire. To that theory I subscribe, to a certain extent.

On the other hand, I maintain that these men in squadrons are a team, and it is easier to play on a team with men you know, men of your own kind, men from your own home town, than to play on a team with men from another town, even though you may be the best of friends and have the greatest respect for one another. Therefore, for that reason I have been devoting a great deal of my time, considerable energy and some little argumentative ability to endeavour at least to achieve a step along the line my hon. friend has mentioned.

There are operational difficulties in the way of having a wholly integrated Canadian air force. Bombers would be attached to bomber commands. Fighters would be attached to fighter commands. Other types would be attached to coastal commands. Army cooperation squadrons would be attached to the army.

As a matter of fact the Canadian army has Canadian squadrons attached to it for army cooperation work and, I hope, will have more as soon as it is possible to form the other squadrons provided for by the Ralston-Sinclair agreement. That agreement provided for twenty-five Canadian squadrons, in addition to the three then in existence. I was hoping to have those twenty-five squadrons well established, and then ask for more. At the moment we have twenty-two. Some of them are attached to the Canadian army and work as army cooperation squadrons, with General McNaughton. There are many more details; there is a long history of struggle and discussion connected with this matter. I think we are on the way to where I know I want to go, and where I hope the majority of the members of this house and the people of this country want to go; that is, to make our squadrons overseas as much Canadian as possible, having regard to the difficulties of operation.

Mr. JACKMAN: Would the minister enlighten the committee as to the financial responsibility as between Canada and Great Britain for Canadian airmen serving outside Canada? It may throw some light on the matter now under discussion. Also in this connection I would point out that a considerable number of Canadians are serving with the Royal Air Force, who enlisted with that organization and who receive the British rates of pay, which, as has been stated already, are much lower than those in our own air force. Inasmuch as they are serving in Great Britain, some of them also are subject to payment of income tax. At one bomber squadron I met a squadron leader, a Canadian boy, who stated that his net income, after payment of income tax in Great Britain, was equal only to that of a pilot officer in the Royal Canadian Air Force, and naturally this causes a great deal of ill feeling, particularly where these men are serving with units which have some Royal Canadian Air Force men attached to them. If it is possible to have these Canadians, who, instead of coming back to Canada when war broke out, immediately enlisted with the Royal Air Force, brought within our own air force, that would do away with these difficulties. I think they should be remustered in the Royal Canadian Air Force and receive the same treatment with regard to pay and, I suppose, with regard to pension if they should meet with ill fate.

Mr. POWER: With respect to pensions, the Minister of Pensions and National Health

tells me that this is looked after, that the pension will be on the same basis as that of members of the Royal Canadian Air Force, provided they went to England within a period of four years prior to the war. With respect to remustering them to the Royal Canadian Air Force, a great many of them would not want that. A great many of them prefer to remain with the Royal Air Force. I say that very frankly to my hon. friend, though I have been just talking about trying to keep Canadians together. They have their associations in the R.A.F.; some of them have achieved some distinction. My hon. friend speaks of a squadron leader. If he joined up at the beginning of the war, he has done pretty well. They have got along fairly well; probably they are attached to a particular squadron or group, and I should say a great many of them would prefer to remain with the R.A.F., though I do not suppose they would refuse Canadian rates of pay.

Mr. JACKMAN: If I may give the minister an example, one case that I recall is that of a young medical man who was taking post-graduate work in the old country and who, on the outbreak of war, immediately enlisted in the Royal Air Force. It is true that he is now a squadron leader, but that is not an exceptionally high rank for a medical practitioner who was doing post-graduate work. He told me that his net return was only about the same as that of a pilot officer, two or three steps below him in rank, serving with the Royal Canadian Air Force. I can assure the minister that he was very much dissatisfied, because there were both Canadians and Englishmen attached to this squadron, and I do not think they make any distinction between R.A.F. and R.C.A.F. There was also a young Canadian squadron leader there who had won the distinguished flying cross, and he felt the same way about the matter. Of course I did not have an opportunity to obtain a general consensus, but at the particular place where the subject matter was brought up there was certainly a distinct feeling that they would much rather remuster in the Royal Canadian Air Force and receive rates of pay equal to those of their comrades from home.

Mr. POWER: This matter has been brought to our attention on several occasions, and up to the present we have not felt that we should remuster them to the Royal Canadian Air Force or place them on Canadian rates of pay. It is really something worth considering. The attitude our people take is, I suppose, that they joined the Royal Air Force, so why should they not stay with it. On the other hand, some of these men may want to return. The list of commanding officers of Canadian squadrons indicates that several of them are with the R.A.F. For instance, there is Wing Commander Woodruff. He is a Canadian who is with the R.A.F.; he is in command of a Canadian squadron, and I have not the slightest doubt that his pay and allowances in the R.A.F. would be lower than those of his second in command, who is a Canadian. There is an anomaly there that I think we shall have to go into and try to correct.

Mr. JACKMAN: It is the British income tax that affects these men particularly.

Mr. HANSON (York-Sunbury): With regard to the very important matter brought up by the hon. member for Weyburn and discussed at some length by the minister, I hesitate to express any opinion, and I really am not going to do so. But I wish to ask the minister a question. This is not a matter of sentiment, though I can quite understand that for sentimental reasons these boys would like to be kept together. There is, of course, the question of team work which the minister has mentioned, which I should think was much more important than any mere question of sentiment. But is there not a paramount consideration, namely the unification of the operational activities of the whole air force in Britain and radiating from Britain or any other theatre of war? Is that not the paramount factor and consideration, and are we here in Canada in a position to express a really intelligent opinion upon it? I ask myself that question, and personally I must answer it in the negative.

Mr. POWER: The argument presented by my hon. friend is the argument with which I have had to contend right along. It is not all plain sailing. Certainly there is something to be said for unification of operations, if I may so put it, but this is what happens. The Americans are over there, in fewer numbers than we are. They have some kind of independent command, though they operate with the R.A.F. and, I take it, are pretty well under the general command of the R.A.F. But I should like the R.C.A.F. to have at least the same status as the Americans have. Let us say they have a bomber squadron or a bomber group of their own. I doubt very much if it would be possible for them to select their own objectives, let us say, without at least consulting the higher British command; but still they could remain together as a bomber group. As a matter of fact, what we have been aiming at as our first objective is a bomber group for Canadians. Then you can send a whole group together. Of course the objection to that is that if the

group gets into trouble, then you have a very large number of Canadian casualties, whereas, interspersed as they are now with others, the casualty list becomes less glaring. But I am hoping to attain pretty well the same status that the Americans have attained with respect to internal operations, always of course under the command of some supreme British authority with regard to operations generally. I am speaking now probably out of turn, not knowing very much about the tactical end of the matter, but I doubt if we could ever achieve a completely independent command in the sense that the Canadian army is an independent command. Our international relationships with groups, commands, and so on are so close that it would be almost impossible to have what might almost be called an independent air force, but it would be possible to have a better grouping and a greater grouping of Canadian squadrons working together.

Mr. HANSON (York-Sunbury): I am obliged to the minister for telling me his ambitions and his objective, and I think it is quite right that he should, after he learns what the position in Britain is, strive if possible to attain that objective, if it is possible to do so. But it would seem to me irrational that the Royal Canadian Air Force should operate on its own in Britain.

Mr. POWER: Absolutely on its own, no.

Mr. HANSON (York-Sunbury): Or anything approximating that. There must be coordination of effort. I am speaking as the merest layman, knowing absolutely nothing about these matters, but my reason tells me that it would be out of the picture entirely for the Royal Canadian Air Force to operate on its own. Or the Canadian army. It is kept together as a unit of course; but when the final testing time comes, when a second front, let us say, is opened on the continent, if the Canadian army is part and parcel of the expeditionary force that goes there, it will have to be under one unified command in charge of the whole expeditionary force.

Mr. POWER: They have to be under somebody.

Mr. HANSON (York-Sunbury): The minister can pursue the thought he has in his mind up to a certain point, but there he must stop. I say that with great deference, and perhaps I am making a misstatement altogether, but I am just thinking out loud.

Mr. POWER: I think my hon. friend is right. One thing I certainly hope to achieve is more grouping of Canadians and less dispersing of Canadians all over the world, even to the point of filling up Royal Air Force squadrons with Canadians, if necessary. I was told of squadrons of one of our partners in the commonwealth air training plan, 90 per cent of the pilots of which were Canadians, but working in a squadron, that went by another name.

Mr. JACKMAN: If you do that, you do not get the senior commands for Canadians.

Mr. POWER: That is an objection. If the Canadians remained all together as an integrated unit in the Canadian air force, the chances of promotion for our men would be less than when they were spread all through the Royal Air Force, because in the Royal Air Force, spread out as it is, Canadians have chances in any number of squadrons, whereas in our own squadrons they would have chances of promotion only in the limited number of squadrons we have.

Mr. JACKMAN: But vice versa, if you have Royal Air Force squadrons composed 90 per cent of Canadians, you will find that the senior officers are Royal Air Force men, not Royal Canadian Air Force men.

Mr. POWER: The argument of the non-Canadians, if I may put it in that way although I do not really mean that, is that if they are not distinctly Canadians belonging to a Canadian unit, they should be looked upon as Royal Air Force and profit by the chances of promotion which come to any Royal Air Force officer. As a matter of fact, a great many of my officers argue in all sincerity that it would be detrimental to our men to form wholly Canadian units. They argue against purely Canadian units because they think our men have a better chance of promotion in British units. There are two sides to the story, but I still stick to mine.

Mr. FRASER (Peterborough West): Will this new set-up affect the advanced training of our Canadian boys in Britain?

Mr. POWER: No.

Mr. FRASER (Peterborough West): Not at all?

Mr. POWER: No. This is when you get into operational squadrons, not into operational training squadrons. Of course if our force is almost an integral part of the Royal Air Force, our men, after they have served a certain time in active operations, may be put in charge of Royal Air Force operational training. As a matter of fact, after they have done a certain number of hours on operational work, they are brought back to act as instructors or put on ground work for a certain length of time in operational training.

Mr. FRASER (Peterborough West): Then it would be better as it is, as far as the advanced training of our men is concerned?

Mr. POWER: The training is the joint air training plan as we have it in Canada, or in some cases advanced training in Britain, but that has nothing to do with the matter one way or another. We could have the advanced training here, and in all probability we shall have it here very shortly. The only reason why we did not have it here before was that the operational types of aircraft were required urgently on the other side, and they did not want to send them over here but wished to keep them over there to fight as well as to be used for training purposes. It would be a long journey for them to come over here and go back again when they were urgently required. That is why operational training units were established in Britain. That situation does not obtain to the same extent to-day, and now it will be quite possible to give operational training in Canada.

Mr. HANSON (York-Sunbury): Would the minister care to state how far our training goes in Canada, and how much training has to be given in Britain? I take it that the operational training is all given in Britain.

Mr. POWER: That has been the case, but it is not now.

Mr. HANSON (York-Sunbury): Is it proposed to give more of the training in Canada, to train them here for a longer period? It would seem that if they were trained in operational work here, it would be much more advantageous, and then within a limited time after they went overseas they would be ready to go into action.

Mr. POWER: Under the joint air training plan we brought them up to a certain stage. That was part of the plan, and until very recently it was not possible to have operational training here because we could not get the operational type of planes, since they were required both for fighting and training in Britain. There is no point in sending fighting planes over here when they are needed badly over there. But that situation has eased, and there are now operational units in this country and will be many more of them here. One of the shifts, as I called it yesterday, that we are now undergoing is to enable a longer period of training to be given here, to train men in operational work so that there will be little or nothing in the way of training required when they reach overseas and have to use the biggest or fastest type of machines.

Mr. HANSON (York-Sunbury): That is the objective?

[Mr. Power.]

Mr. POWER: Yes, and we are on the verge of reaching it. But it could not be done earlier, and it was not part of the joint air training plan anyway.

Mr. FRASER (Peterborough West): The hon. and fair member for Edmonton East (Mrs. Casselman) last night mentioned what the women in the air force were doing in her part of the country. Would the minister be good enough to explain how the training of the women is carried on? I think the ladies would like to know that. There are over 2,600 women in the air force. Are there women medical officers on the strength who check over these ladies before they are accepted?

Mr. POWER: We are training women at Havergal college and other places. I can tell the hon. member what we are training them for, but I do not know how it is done.

Mr. GRAYDON: Perhaps the Minister of Pensions and National Health could tell us that.

Mr. POWER: I think what the hon. member for Edmonton East was speaking of is the new system of dietitians. Diet was one of our great troubles. I am glad the Minister of National Defence is not here. I always say that you can feed foot-sloggers with pork and beans and bully beef, but the gentlemen of the air force, who really are university students during the time of their training, do not have to do the arduous physical work that the foot-slogging infantry man has to do. Therefore we found that the ration issued by the army service corps was too heavy for these young lads, and we had to get to work to see if we could not provide them with more vitamins, or calories—I do not know which—and, particularly in the summer time, more fruits, vegetables and salads.

Mr. HANSON (York-Sunbury): That is proteins.

Mr. POWER: I do not know. I shall have to get some medical man to correct this when it goes into *Hansard*. In any event, we found that the diet was too heavy for men doing the type of work required of our personnel. We had many meetings with army officials, and finally we have reached the place where the army diet and our own are approximately the same. We came to the conclusion that we should obtain the services of the best dietitians available in Canada. We went to Eaton's, Toronto, and obtained the services of a dietitian who was being remunerated at much more than we could afford to pay to her as a serving officer in the women's division: the difference, however, has been made up by a patriotic person in Toronto. We applied to other places of this kind, and

now we have seven, or perhaps eight, women dietitians, carefully selected by Doctor Tisdale, a Toronto dietitian, and others, including Air Commodore Ryan of the medical corps. We hope the results will be not only a saving of food, but that, the food being better cooked, the quality will be improved and the health of our men will be very much better.

Mr. HANSON (York-Sunbury): In other words, you are summoning modern science to your aid.

Mr. POWER: Why not? The air is the most modern of all arms of war; why not summon the help of modern science?

To come back to positions in the Royal Canadian Air Force, women's division: clerks, equipment assistants, telephone operators, general duties, cooks, nursing orderlies, fabric workers, transport drivers—those are about all the positions which are at present available.

Mr. FRASER (Peterborough West): No technicians at all?

Mr. POWER: Technicians in the sense of mechanics and so on?

Mr. FRASER (Peterborough West): Yes.

Mr. POWER: Not at present. I do not see any.

Mr. FRASER (Peterborough West): I know that in England, according to the last report received, there are only a hundred. I wondered if we had any here.

Mr. POWER: Not yet. We expect to replace 15,000 men by 15,000 women within a year or a year and a half.

Mr. FRASER (Peterborough West): Can the minister answer as regards women medical officers?

Mr. POWER: Yes, we have women medical officers. I cannot tell the hon. member how many.

Mr. CRUICKSHANK: There are two questions I should like to ask with reference to this women's division of the air force. First, are they replacing any of the men in one of the minister's offices—I do not know how to describe them, because I resent the expression used by the minister to describe the infantry—the men who will eventually win this war as they did the last war, the "foot-sloggers"? If he wishes to use that term about the finest branch of the army, I might use one in connection with his branch in at least one part. Are any of the these females used to replace the petticoat army we have had in the Jackson building?

Mr. POWER: I rather resent the expression "petticoat army we have in the Jackson building". Our men are doing a good job there.

Mr. CRUICKSHANK: What clothes are issued to this women's army?

Mr. POWER: We are doing a good job in the Jackson building, and I think the officers of the force there deserve great credit for the work which is being done on the empire training scheme. We are replacing a great many of the men in clerical positions in the Jackson building by women—clerks, telephone operators and others who are in the women's division.

Mr. CRUICKSHANK: I am glad to hear that.

Mr. POWER: We propose to do that right along. As a matter of fact, on stations 136 women take the place of 126 men, as messwomen, on general duties, as telephone operators, fabric workers and transport drivers—which is not a bad average when you come to think of it—releasing men to go overseas or to lonely stations along the Pacific coast or up in Labrador, and those are jobs which are not easy for any men, even for "foot-sloggers".

Mr. BROOKS: Like the hon. member for Fraser Valley, I rather resented the expression used by the minister a few moments ago. I know, however, it was not intended to hurt.

We have been pleased indeed with the report of the minister, and I think there is every reason to believe that his branch of the service is in very good shape. Upon that, of course, the minister and all those connected with his department are to be congratulated. However, the fact that two boats have been sunk in the St. Lawrence river may indicate that considerably more needs to be done. I believe the minister himself said yesterday that he is not satisfied by any means that all had been done that could be done.

Mr. POWER: Not, that could be done; that might be done.

Mr. BROOKS: Our services overseas are doing well. He explained the work of our airmen who are travelling through the northern part of this dominion on patrol work.

The commonwealth air training plan, known as Canada's greatest contribution to the war so far, is also recognized as a success not only by the people of Canada but by our allies. There is no reason why it should not be a success. We have heard praise—well deserved praise—heaped on the minister here. He has been called very efficient, and I am sure we all agree. That is the first essential of a successful department. Also he is the head of

the most popular service in Canada, more popular than the navy and, certainly, than the army. He has all the money he requires; whenever money is needed for the air force it is always forthcoming. All the men in his branch are active service men, not, as in the army, a hybrid, partly active and partly reserve. All these factors contribute to make a very satisfactory and efficient service. Men are more anxious to join the air force than any other branches of the service. One reason, possibly, is that they get more action. The minister said yesterday that the Canadian air force was the fighting force, I think, in Europe at the present time as far as Canada was concerned. That is the meaning I attached to his remark that they were doing all the fighting; I did not understand him to mean that they were doing all the fighting and that the British air force was doing none.

Mr. POWER: Oh, no.

Mr. BROOKS: He meant that they were doing all the fighting that the Canadian forces are doing apart from the navy. Well, young men like to get into the service for action. There is also the matter of the uniform; the air force uniform is more attractive to young men than is the army uniform.

Mr. REID: It was a mistake to do away with the kilts.

Mr. BROOKS: There is a Scotsman speaking. If someone would do away with his bagpipes on Saturday afternoons—

Mr. MacNICOL: I would rather see him have two bagpipes.

Mr. BROOKS: The air force also have better camps and better accommodation. The minister said a few minutes ago that they are the gentlemen's service. There is no question about that. It has been the gentlemen's service. They get everything they need, and about that I have no complaint.

Mr. MacINNIS: And everything they want.

Mr. BROOKS: Yes. I heard an hon. member say yesterday that they had cold storage for their salvage. From reports I have heard, it would be very much in keeping with the way in which they are treated.

Mr. POWER: I have an answer to that. Our medical officer insists that the garbage be placed in cold storage; otherwise it might contaminate the surrounding area.

Mr. BROOKS: I do not wish to introduce any discordant note into the discussion, but there is a certain amount of discrimination. To the public every man in the air force blue is a hero. I do not think they realize that for one man who is up in the air there are fifteen on the ground. Is that not correct?

Mr. POWER: Twelve to fifteen.

Mr. BROOKS: Yes; but to the public every man who wears the air force blue is a hero. I know of towns and other places in the dominion where there are both air force men and men in khaki, and the air force receive very different treatment from that given the men in khaki. There is great discrimination. It may be that the public should be educated in a matter of this kind, for it is most unfair. As regards the air crew, I listened with much pride yesterday to the minister and others as they detailed the exploits of our airmen. I know that in the last war it was a matter of pride for all of us to read accounts of such men as Bishop, Barker, Collishaw, McKeevor, Carter and other R.A.F. heroes; and the men in the present war are living up to the reputation then established. I was pleased to hear the minister say that we in Canada do not perhaps advertise the exploits of our heroes as much as we should. I remember Rickenbacker, the great United States airman, whose exploits certainly deserve great credit, but we have many Canadians whose deeds were just as great. In my own province we had an airman named Carter who in a few months made as good a record as did Rickenbacker. But while Rickenbacker's name is a household word in the United States, and indeed in Canada, for every school boy knows it, I doubt very much that Carter's name is known except to a few people in the community in which he lived. That is the difference. Therefore the minister's idea of advertising the exploits of our men is a particularly good one. But all men are not in the air. There are ground crews, those engaged in general duties and others, fourteen or fifteen men on the ground to one in the air.

There is one criticism I have to make in this connection. The attraction of the air force has, I believe, taken from the army men who should have remained in the army. It has been my experience that when representatives of the air force came to the training centres, and it was generally known they were there, a great many young men wished to see them. A good many of them went to the air force thinking they would be pilots or would be in the ground crew, but eventually most of them found themselves being used for general duties. I know of young men who, I believe, would have given far better service to the country had they remained as infantrymen or artillerymen, instead of, as I

heard one hon. member say yesterday, being used to wash dishes and sweep floors in messes and other places.

Mr. POWER: In order to get my hon. friend's opinion, as I said yesterday there is a very strong feeling that the air force should no longer go into training camps to get recruits. What does my hon. friend think?

Mr. BROOKS: I am rather of that opinion.

Mr. POWER: What about the air crew? The question is being discussed, and I am asking my hon. friend for his opinion.

Mr. BROOKS: In the basic training centres the district officers commanding ask that the R.C.A.F. be given every opportunity to get the men they need, and that policy was followed out. It was after they found that a great many of these men going to the R.C.A.F. were not making good, particularly as ground crew, or not having any opportunity of being in the air, that the difference came. They were retained in the R.C.A.F., but were used for menial jobs. All these men could and would have made good infantrymen and some might have been non-commissioned officer material.

Mr. POWER: We should certainly keep out of the standard duty field, should we not?

Mr. BROOKS: The minister said yesterday that the Minister of National Defence (Mr. Ralston) and his department were getting together on that question, and I think that is something which should be carefully considered by the different departments of our services. A good many of these men become disillusioned. They have written to me stating that they were very much disappointed that they did not get the work for which they thought they were best suited. The minister yesterday referred to the question of manpower. If I understood him aright, he said they would soon run short of air crews.

Mr. POWER: Not soon.

Mr. BROOKS: But there was the possibility of it. I believe he also stated that there were about 13,000 young men, graduates of high schools and colleges, who were available each year. Is there no possibility—as a matter of fact I think the minister mentioned it—of promoting young men from these ground crews and then bringing in men from the outside for their particular work. There is also the matter of the exchange of men from the army. I mentioned a moment ago that there were men in the air force who, in my opinion, should not be there, and I think there are also men in the army who would be better in the air force. If there were some liaison along this line there could be an exchange of men to the benefit of both services.

I have a number of questions which I intended asking, but most of them have already been asked by other hon. members. Last year the minister told us that he hoped that by September, 1941, he would have twenty-five squadrons, called Canadian squadrons, in the R.A.F. I understand he has twenty-two. I have been very much interested in the debate as to whether these Canadian squadrons should be R.A.F. or should be Canadian. I appreciate the arguments which the minister has presented to us both for and against this possibility.

One thing he did not mention in that connection occurs to me. We read continually, as an almost nightly occurrence, of the Royal Air Force having made a trip over Europe. But we never read that the Royal Canadian Air Force has made a trip over Europe. The minister says that 90 per cent of the men in some squadrons are Canadians; yet it is always called a Royal Air Force squadron that went over and bombed Germany. That is the report which appears in the papers of the United States and other countries. It would be a splendid thing, and would give our allies a better conception of what we are doing, if we had in England a separate Royal Canadian Air Force, and if our men received credit for the work done by them.

Mr. POWER: On many occasions when some of our twenty-five or twenty-two Royal Canadian Air Force squadrons take part in a raid it is always announced as a Royal Air Force raid, although only two or three squadrons in the raid might be Royal Air Force. That is one good reason for Canadianization.

Mr. BROOKS: That is the point. Last year the minister told us these Canadian squadrons were using British ground crews. Are we using Canadian ground crews at present?

Mr. POWER: They are pretty well filled up now. We are sending them over continually.

Mr. BROOKS: I think the minister also said last year that Britain still supplies our squadrons with aeroplanes and other necessities at a flat rate of $3,000,000 per squadron. Does that still hold?

Mr. POWER: They are still supplying the aircraft. We do not ship aircraft from here directly to our squadrons.

Mr. BROOKS: Another thing I think the minister should do is give a breakdown of the figures given yesterday, $344,000,000 for the joint air training plan and so on.

Mr. POWER: What particular breakdown does my hon. friend want? I gave some kind of breakdown showing the principal items on the following page of *Hansard*.

Mr. BROOKS: That is what I want; I had not noticed it. There is one other matter which appealed to me in the minister's address yesterday. In closing, he said he hoped that there would be a truce to our internal dissensions while the united nations air conference is meeting in Ottawa. I am sure we all agree with that sentiment. In fact I see no necessity for dissension at that time or any other. I can say this to those responsible for dissension —someone must be responsible, but it is not my intention to try to fix responsibility—that such people are doing a great disservice to the cause which they think they are championing, a great disservice to Canada, which should be united at this time from coast to coast, and a great disservice to the cause of liberty, their liberty, the liberty of Canada and the liberty of the world, which is in deadly peril. I see no reason why there should be any dissension in this country at a time of crisis such as the present.

Mr. CASTLEDEN: With regard to the breakdown mentioned, I notice in the pay and allowances the amount is twice as great as the figures for last year; whereas in regard to clothing it is $18,000,000 as against $10,000,000. With regard to rations the estimate is a little over two and a half times as much; ammunition, over four times as much, which may be readily understood; and gas and oil, over twice as much, but for engine overhaul it is four times as much. Would the minister give a statement regarding the item of engine overhaul? How much is done by the aircraft repair depots and how much let to private corporations, and is it the intention of the department to do all this work through their own repair depots, or to continue the policy followed heretofore?

Mr. POWER: I do not think it is our intention ever to do it all through our own repair depots. I cannot give the particular reason for the increase except that we have more planes flying this year than we had last. It seems to me that the civilian contractor's organization has a distinct and definite function in this joint air training plan. It would cost us a great deal more to run all these service repair depots right across the country. The civilian contractors are, I believe, mostly manufacturers of aircraft. They carry on the work in conjunction with their work of manufacture. We could not possibly be expected to manufacture aircraft. It appears to me a logical thing to go to the manufacturer when we require spare parts or repairs.

Mr. CASTLEDEN: Gas and oil is $20,000,000 this year as against $9,000,000 last year, but overhaul is nearly four times as much—

Mr. POWER: I suppose more machines require overhaul.

Mr. HOWE: If I may interject, since this work is mostly in my department, the older a plane gets, the more overhaul it requires. A new plane does not require any overhaul for several months; then it requires heavier overhaul each period it is in service.

Mr. CASTLEDEN: Yes; I understand that. Then, with regard to the home war establishment under overhaul, I notice that the amount is increased manyfold, while for the British commonwealth air training plan for this year the estimate is almost three times as great as last year; the purpose being, I presume, to provide defence for Canada.

Mr. POWER: More for the defence of Canada, and our supply of training planes being pretty well up to date.

Mr. CASTLEDEN: Then I notice that clothing and necessaries for the home war establishment are increased from less than half a million to three and a third million.

Mr. POWER: There are more men, more squadrons.

Mr. CASTLEDEN: But the pay and allowances are only twice as great, whereas the other is six times as great.

Mr. POWER: You have me now. I will find out.

Mr. BLACKMORE: One matter was not dealt with to my satisfaction yesterday afternoon when the hon. member for Davenport was questioning the minister concerning increased production of planes and increase of airmen. The minister made several remarks which are hard for me to understand. The hon. member for Davenport said, as reported at page 2352 of *Hansard:*

> Perhaps no one else could have done as much, but it is possible that he could do more to train more aviators here, and also order more planes.
>
> Mr. Power: I am sorry to say we have so far fulfilled our contract that they do not want any more at the present time.
>
> Mr. MacNicol: Well, that passes all comprehension.

I second the motion as to that. Then the minister said:

> Mr. Power: It is not my business.

Who is it that gives the orders with respect to the construction of planes in Canada, and with respect to the number of men who are to train? Is Canada acting at the instance

and under the direction of some committee that is over all the united nations and telling Canada how much she can do? Is that the idea behind the minister's statement?

Mr. POWER: If my hon. friend had understood what the joint air training plan is, he would have understood that it is a plan under which four of the nations, namely Great Britain, Canada, New Zealand and Australia, got together in order to train a certain number of pilots, gunners and observers. Canada is the administrative manager of the scheme. We undertook to turn out so many pilots, gunners and observers per month or per year, whichever period the hon. member wishes to fix. We have turned out not only the number we contracted for in the specified time, but so many more. At the present time these men must be fitted into the planes. They must have the planes on the other side to put them in. Whether they have them there or not, I cannot say. But at the present time we have a certain surplus over and above our contract. Fortunately we are able to use them for training in Canada, for the defence of Canada. With respect to the purchase of aircraft, I have nothing at all to do with that. I order the aircraft necessary for training, or for the defence of Canada, but not of Great Britain. The Minister of Munitions and Supply finds them.

Mr. BLACKMORE: What I get out of what the minister says is something like this: The general committee in charge of these four nations—

Mr. POWER: No, the four nations of the British commonwealth made a bargain three years ago to do such and such a thing at such and such a time. We have done it, and done more. That is what we claim. Unless I were to continue to expand to such an extent that I could not get the pupils in, I cannot expand my plan any further at the present time. These schools require people to come into them. If I were to double the number of training schools or the number of planes, where in the world would I get the air crew to put in to train them?

Mr. BLACKMORE: I hope the minister will not think I am criticizing.

Mr. POWER: I only wish the hon. member to understand.

Mr. BLACKMORE: I think the minister is deserving of high praise. I have not spoken previously in this debate, but I am expressing my thoughts at this time. Nevertheless, as a member of the British commonwealth of nations, and realizing, as several hon. members have said already that we are losing battles every day because we lack aeroplanes and pilots to man them—

Mr. POWER: No, we do not lack pilots. We have pilots. I have given them pilots. That is the point I am making.

Mr. BLACKMORE: Do we lack aeroplanes?

Mr. POWER: I do not know. I have nothing to do with aeroplanes. I have to give them pilots.

Mr. HOWE: Perhaps I can clear the atmosphere by saying that Canada is making all the aeroplanes it can make. We are supplying planes on government order from Great Britain and on government order from the United States. Our planes are going to several countries besides Canada. But the industry is expanding as rapidly as we think it can be expanded.

Mr. MacNICOL: But were we not shut down in the making of Hurricanes in Fort William last year?

Mr. HOWE: No, we were not.

Mr. MacNICOL: Yes, we were, for several months.

Mr. HOWE: I was asked a question and I answered it. I am now told my answer is untruthful. Fort William is within three miles of my own riding.

Mr. MacNICOL: I know that.

Mr. HOWE: That plant has never had less than 5,000 men employed in the last year.

Mr. MacNICOL: I asked a question, but the minister is always very prompt; he is always very sharp at giving answers. I have it on the authority of one of the heads of an aeroplane company, whose name I will not give, that during last year for five or six months the manufacturers of Hurricane bombers in Fort William were not making bombers because they did not have the orders. I understand the minister to say now that last year the company manufacturing Hurricane bombers at Fort William was running at capacity, and was making Hurricane bombers every month. If so, I will take *Hansard* and send it to the gentleman who gave me the information. Either that gentleman is wrong or the minister is wrong, one or the other.

Mr. HOWE: The Fort William plant received an order for Hurricane planes late in 1940. It still is working on the order for Hurricane planes. It has been running continuously. It has never been closed down one day for lack of orders. It has had orders.

The hon. member for Fort William is here and, if you like, he will confirm it if my word is not good enough. I think it is disgraceful to peddle that sort of gossip. There has been too much of it here, and I am going to say a few words about it when I speak—just put a few statements on *Hansard* and give the real facts.

Mr. MacNICOL: I resent the minister's use of the word "gossip". The information was given to me by the head of one of the aeroplane companies in this country.

Mr. HOWE: Will you give his name?

Mr. MacNICOL: I will mark the word "gossip" and send it to him.

Mr. HOWE: Mr. Chairman, if the information is untrue, having said so much I think the hon. member should give the name of the man who told him.

Mr. MacNICOL: No, I will not give the name of the man, but he is a good friend of the minister.

Mr. HOWE: It is gossip. It is a statement that is untrue, but it is stated in this house as a fact.

Mr. McIVOR: I think the committee wants to get into the Department of Munitions and Supply and let the minister for air come down out of the air.

Mr. BROOKS: Why not come down yourself sometimes?

Mr. CARDIFF: I think all hon. members will agree that the progress which the Royal Canadian Air Force has made in the past two years is evidence that the minister's heart and soul are in his work. Last year he advised us with respect to alterations in the length of some of the training courses, and indicated that in some instances they had been shortened. Will he advise the committee what changes, if any, have been made in the last year in this respect, and give us the reasons therefor? I have particularly in mind that the observer course had been altered, and that the period of training with respect to navigation—

Mr. POWER: May I interrupt the hon. member. I am not permitted to give details as to the length or duration of courses. I am asked not to, and therefore I would ask the hon. member to cut short his question, right at that point.

Mr. CARDIFF: Very well.

Mr. POWER: I have been asked by higher authorities not to discuss the length of courses, because one might give information which might be of value to the enemy.

Mr. BLACKMORE: I am relieved to hear the minister say that we have more pilots than we have planes.

Mr. POWER: I should not like that to be said, because it would not be fair. It would not be quite fair to put it exactly in that way. May I put it in this way: We have fulfilled our contract. That is to say, we were asked by the British commonwealth to deliver so many pilots at a certain time. Not only have we fulfilled that, but we have done more than that. I do not wish to go any further, if my hon. friend would permit, in that connection. Perhaps I was a little indiscreet to say what I did say yesterday, anyway.

Mr. BLACKMORE: Far be it from me to ask the minister to say anything which would in any way embarrass the people who are carrying on the war, but a member of parliament has some things brought to his attention which it is his duty to look into. I was told by a man, who I thought should certainly know what he was talking about, that they already had more planes than we had pilots to man them.

Mr. POWER: If I may interrupt my hon. friend, I would very much prefer it if he would come to my office at six o'clock, when I will discuss this matter fully with him. I know I am probably as much to blame as anyone for having brought up the matter in this house, but I do think it is a matter that should not be further discussed here. I am sorry to have to ask my hon. friend not to proceed further; but if he will come to my office I shall be only too glad to give him in confidence all the information I have at my disposal. I should prefer that the matter be not further discussed here, because I think really I am at fault for having gone as far as I have already.

Mr. BLACKMORE: The minister will realize, I think, that what is already on *Hansard* has caused considerable anxiety.

The CHAIRMAN: Order. I should like to point out to hon. members that when a minister of the crown states on his ministerial responsibility that in the public interest he cannot go beyond a certain point, it would be out of order to press him any further.

Mr. BLACKMORE: I was not going to ask the minister any further questions. I was merely going to explain why I had been pressing up to this time. If it would be in order to ask the minister this, I just want to know whether, if the quota of Canadian trained pilots is filled, the minister allows that to affect the number of men who are going through. In other words, does he keep these schools running at full capacity all the time?

Mr. POWER: Oh, yes.

Mr. BLACKMORE: Then that relieves my mind.

Mr. POWER: We can use these men in Canada, for the defence of Canada. We have plenty of room for them here, and we shall have plenty of planes for them shortly, if we have not already. I say my quota is full for the moment, but there is no reason why we should not keep on turning out men according to plan, as fast as we can. But I cannot double it.

Mr. BLACKMORE: I appreciate greatly having that on *Hansard,* because it does explain away something that raised a real difficulty in my mind.

Has the minister all the money he needs to run his department? Is the amount which has been apportioned to him out of this $2,000,000,000 appropriation as much as he feels he can economically use?

Mr. POWER: I am always asking for more. Last year I think I spent $400,000,000. I asked for $420,000,000, but I imagine I probably committed myself for another $200,000,000, so that is the position. I do not think there is any disposition on the part of the government to stint the department in any way, when we ask for things that are considered legitimate. They must always go through the treasury board and the war committee, and the funds are checked, but I do not think this department has ever been denied the funds which it legitimately required to carry on its operations.

Mr. BLACKMORE: That is also a good thing to have on *Hansard,* and I am relieved to hear that the minister is not being stinted in any way. We are in an age in which no minister should be stinted in any way—

Mr. POWER: Hear, hear.

Mr. BLACKMORE: —with respect to the conduct of the war. I was interested to find out whether the minister was being treated as he should be.

Mr. HANSON (York-Sunbury): There is a question of principle raised by the suggestion of the minister. Of course there are times when in the public interest he cannot divulge information to the house; but if he invites to his office a private member and gives him in confidence information that is denied to other hon. members, does that not raise a matter of principle at once?

Mr. POWER: The only answer I could give—

Mr. HANSON (York-Sunbury): I should think that would not be a desirable situation, and I am saying this in a kindly way. If information of a confidential nature is given to the hon. member for Lethbridge, why should it not be available to every hon. member? That is the question I raise.

Mr. POWER: Here is the information I get, after having raised that very point. I am told that information placed on *Hansard,* which is an official document, is considered to be of far more value to friend, enemy or whoever is looking for information, than that which appears in the newspapers, let us say, as the result of a press conference or a public speech. It is for that reason that I am told I should not place on the pages of *Hansard* some of the things which I might say, perhaps indiscreetly, in a public speech or at a press conference. If there is any distinction, that is it. I am told that the crime, if there is any, is in making official statements rather than in issuing unofficial statements or making statements in speeches. Does the hon. gentleman see what is meant? I do not know why anyone who knows *Hansard* would give it any greater value than anything else, but perhaps foreigners would do so.

Mr. HANSON (York-Sunbury): I think that is a distinction without a difference. If it appears in *Hansard* it will also appear in the public press, if it has any news value, but I do not think the mere appearance in *Hansard* itself would be very harmful. It all goes back to the primary question of whether the information should be divulged at all. If the nature of the information is such that it should not be divulged, certainly it should not appear in *Hansard* or in the newspapers. Then why should it be given to a private member in confidence, and not to other hon. members?

Mr. POWER: The hon. gentleman may be right; I am not prepared to argue that.

Mr. HANSON (York-Sunbury): It is a moot question.

Mr. POTTIER: As reported at page 2339 of *Hansard,* in referring to expenditures, the minister gives the amount of $447,000,000 as the total actual expenditures up to the present, including commitments up to March 31, 1942. Prior to that he referred to what is going to be the total Canadian expenditure, indicating that under the plan it will be $542,000,000. What is included in the $447,000,000. Is that Canadian expenditure, or is it the expenditure of all parties? If it is the expenditure of all parties, does it include contributions in kind by the British government?

Mr. POWER: Oh, no.

Mr. POTTIER: What does the $447,000,000 cover?

Mr. POWER: If I am not mistaken, that is the expenditure by Canada; I will have to check that. That is either the expenditure by Canada or the expenditure by this country on behalf of Australia and New Zealand; I would have to find that out. Certainly there is no expenditure there on the part of Great Britain, because that is payment in kind.

Mr. POTTIER: Then there is a reference to the cost of the plan. As I understand it, that plan expires in March, 1943.

Mr. POWER: Yes.

Mr. POTTIER: What is going to happen when March, 1943, comes round.

Mr. POWER: That is what we are having a conference for next week.

Mr. JACKMAN: Would the minister enlighten the committee just a little more on the division of expenses for Royal Canadian Air Force personnel and equipment outside Canada? Possibly if I had a better understanding of the agreement dealing with the commonwealth air training plan, I might not need to ask some of these questions. For instance, do we pay for all our personnel in Great Britain and the other fighting fronts, for the aeroplanes which they use and the cost of maintaining them? If not, what is the quid pro quo that we give in return? Do we give it under the air training plan? I notice in the estimates which the minister brought down, that the amount allotted for expenses overseas is relatively small compared with the total. I do not think the people of Canada have very much understanding of how much of the expense of the commonwealth air training plan is borne by the Canadian people, and how much of the expense of maintaining our boys fighting overseas is borne by us and how much by Britain. Would the minister make a general statement as to the division of expenditure?

Mr. POWER: Our headquarters overseas and our three original squadrons are paid and maintained, as to both equipment and aircraft, by us. That is Canada's direct contribution—the headquarters overseas and the three original squadrons. We pay for the aeroplanes, pay and allowances, and everything else connected with that.

With respect to the empire training plan, that is a training organization, and every graduate, from the moment he is posted overseas, belongs to the Royal Air Force. They are Royal Canadian Air Force, but they belong to the Royal Air Force. Under clause 15 which I read some time ago, the Royal Air Force pays them, and we make up the difference out of our own bounty, so to speak.

[Mr. Pottier.]

Articles 16 and 17 of the agreement read:

16. The government of the United Kingdom will, subject to the provisions of article 17, provide the pay, allowances, pensions and other non-effective benefits, maintenance and other expenses of the pilots and aircraft crews who are trained in Canada (other than those made available for service with the Royal Canadian Air Force in accordance with the provisions of article 14)—

Those are the men who stay in Canada.

—with effect from the dates of their embarkation in Canada for service with, or in conjunction with, the Royal Air Force. The government of the United Kingdom also undertakes to arrange for those pupils who are made available for service with, or in conjunction with, the Royal Air Force, to be embarked as speedily as possible after the completion of their training, and to defray the cost of their passages to the stations to which they are appointed on leaving Canada.

17. The pay, allowances, pensions and other non-effective benefits, maintenance and other expenses, for which the government of the United Kingdom undertakes liability under the provisions of article 16 will be as laid down in Royal Air Force regulations. If it should be decided by the government of Canada, the government of Australia, or the government of New Zealand to supplement the amounts so issued, any such supplement will be borne by the government concerned.

That is what we are doing. Our own men are paid by the Royal Air Force, and we supplement the amount with regard to the aircraft and the twenty-two squadrons. The aircraft is supplied by the United Kingdom government.

Mr. JACKMAN: Who pays for it?

Mr. POWER: They pay for it.

Mr. JACKMAN: How do the financial accounts really stand, if you can determine them at all? We gave a billion dollar credit to Britain recently, but now we learn that our boys who are fighting in the old country are maintained at the expense of Britain and, in some instances, paid by Britain.

Mr. POWER: Oh, yes.

Mr. JACKMAN: Is there any way of computing just what Britain's contribution is for maintaining and servicing Canadian fighters overseas whom we look upon as our fighters, and what is Canada's contribution? Is there any way of putting a dollar sign on Britain's contribution so that we can equate that against the billion dollar gift we have recently approved?

Mr. POWER: All I can say is that the balance is on our side as far as the dollars are concerned. I have been trying to get the matter straightened out in my mind and in other people's minds for a long time. Personally I think we should call the accounts

all square, say that we have spent here so much, and they have spent there so much, and let it go at that. That would be my personal view. I do not think it would hurt anybody, but of course that is unorthodox finance.

Mr. HANSON (York-Sunbury): Better keep the accounts straight.

Mr. POWER: It will take two or three generations of accountants to untangle the snarl in which these accounts are by this time.

Mr. JACKMAN: We have stripped Great Britain of all her Canadian dollar securities, and we think we have done a grand thing by giving her a billion dollar credit, but now we find that there are offsetting factors. I am not trying to raise anything contentious at all, but I think we are entitled to know and the people of Canada are entitled to know, as far as possible, how things stand. If that cannot be done, as the minister has just indicated, we must all look upon it as a joint war in which we all are glad to do what we can.

Mr. ROSS (St. Paul's): We pay the dependents' allowances for the Royal Canadian Air Force. A pilot earns $197.50 a month, I understand, and he is paid over there. What portion of that amount is he allowed to send out of Britain to his family in Canada?

Mr. POWER: I do not know. He is paid at Royal Air Force rates. I suppose he could assign as much as he likes, but there may be some limit. I think the hon. member for Royal would know what the limit is.

Mr. BROOKS: The point is how much money he is allowed to send out of Britain, in view of the exchange situation.

Mr. POWER: His British pay? I could not say.

Mr. NOSEWORTHY: Last night I asked the minister whether in locating aerodromes for the air training plan any consideration was given to the possibility of their being used in a commercial air service after the war. Would the minister care to answer that question?

Mr. POWER: I do not think consideration was given to that. On two or three occasions I have read into *Hansard* statements indicating the factors which governed in the choice of aerodromes, and the considerations were largely military. I do not think any consideration was given to what one might call the salvage value of these aerodromes after the war.

Mr. NOSEWORTHY: Is it not true that the private schools to which the minister referred are strategically located so that they can be of value after the war?

Mr. POWER: Perhaps that word was wrongly used. We might say that they are, but not deliberately so. Some of them are. I would not think the aerodrome at St. Johns, Quebec, would be strategically located from that point of view, nor would the Chatham location be particularly well strategically located.

Mr. HANSON (York-Sunbury): That is the air training school?

Mr. POWER: The air observer school. The question is, are they strategically located so as to be of commercial value to these companies after the war? I do not know that Chatham and St. Johns are particularly well located for that purpose. I suppose that, as far as the west is concerned, almost anywhere on the prairies would be a strategic location for an aerodrome.

Mr. HANSON (York-Sunbury): What the minister is saying is that they were not located in the first instance having that factor in view?

Mr. POWER: No.

Mr. HANSON (York-Sunbury): While I am on my feet I want to refer to the Pennfield Ridge station. The minister yesterday indicated that the field could not be used for the purposes for which it was designed because of lack of sunshine.

Mr. POWER: Stars, I think it was. Astronavigation.

Mr. HANSON (York-Sunbury): I understand the position was that it was not advantageous to use the location because of the height of the clouds.

Mr. POWER: That is right.

Mr. HANSON (York-Sunbury): That is an entirely different matter. I should like to have that made absolutely clear.

Mr. POWER: I stand corrected.

Mr. HANSON (York-Sunbury): Because the clouds there are two or three miles high, too high for the operational training which was going on there. I would not want to have it understood that it was lack of sunshine or that the stars were too far away. I understand that the school has been moved to Rivers, Manitoba, where another condition obtains. What use is being made of the very expensive plant?

Mr. POWER: It is going to be put to full use.

Mr. HANSON (York-Sunbury): It cost a tremendous amount of money. The work could have been done a good deal cheaper if it had been done by tender. However, I am not criticizing.

Mr. POWER: That is true. I am willing to agree with that.

Mr. HANSON (York-Sunbury): But speed is the important factor, not the dollar cost. What is it being used for now?

Mr. POWER: It is being put to very good use.

Mr. HANSON (York-Sunbury): The minister does not care to say.

Mr. POWER: It is being used for operational training.

Mr. McIVOR: Since the questions to the Minister of National Defence for Air are now pretty well completed, I should like to say on behalf of the Thunder Bay district, which has two leading cities, Fort William and Port Arthur, that we are extremely proud of the Minister of Munitions and Supply. When anybody honours him we appreciate it, and when people criticize him without sense we watch them and pity them. We at the head of the lakes, and I am sure every hon. member in this chamber, will congratulate the minister upon having received from Clarkson college the degree of Doctor of Engineering.

An hon. MEMBER: He is being educated by degrees.

Mr. McIVOR: We wish him good success under the direction of the Great Architect of the Universe, that he may be long spared to carry on and keep things running smoothly, because he has always command of a sufficient quantity of oil for troubled waters.

Mr. BLACK (Yukon): What are the various ranks in the fighting air force called? For instance, what is the highest rank to which a man can attain in the air force?

Mr. POWER: I think it is Air Chief Marshal of England, and I believe it can be held only by His Majesty the King. But I am not sure of that.

Mr. BLACK (Yukon): Is it equivalent to general, or admiral, or what?

Mr. POWER: I believe that Air Chief Marshal of England is the very highest rank. I am not sure if that is the correct title.

Mr. HANSON (York-Sunbury): Then is there not an air vice-marshal?

[Mr. R. B. Hanson.]

Mr. POWER: Then there are air chief marshals. Really, I cannot tell the hon. member; I do not know. I shall never attain to those titles, in any event.

Mr. BLACK (Yukon): What are the rates of pay of the various ranks?

Mr. HANSON (York-Sunbury): Speaking of Canada.

Mr. POWER: I happen to have a list here, because the hon. member for Broadview handed it to me last night. The whole story was filed by the hon. member and it will be in *Hansard* to-morrow. The highest rank appears to be air commodore. If he is on the general list, his pay is $19 a day, and if he is on the non-flying list, it is $17. Other ranks are:

Rank	General list	Non-flying list
Group Captain.....	$15 00	$13 00
Wing Commander....	12 00	10 00
Squadron Leader....	9 75	7 75
Flight Lieutenant....	8 50	6 50
Flying Officer.....	7 00	5 00
Pilot Officer.....	6 25	4 25

Mr. BLACK (Yukon): That is, per day?

Mr. POWER: Per day. It runs about the same as in the army. I believe there is some arrangement whereby the pay is much the same as that of equivalent ranks in the army.

Mr. HANSON (York-Sunbury): Would an air vice-marshal get about the same as a major-general? We have one or two air vice-marshals.

Mr. POWER: Yes; he is paid about the same as a major-general. The only air marshal we have is the chief of the air staff; he is on a consolidated rate of pay, just as are the head of the navy and the head of the army.

Mr. CRUICKSHANK: What do the schoolteachers get?

Mr. POWER: I do not know.

Mr. CRUICKSHANK: I mean, the persons who are appointed to teach mathematics and who are made flight lieutenants and so on.

Mr. POWER: It depends on the rank.

Mr. CRUICKSHANK: Are they classified as officers?

Mr. POWER: It all depends whether the man has a commission. I do not know.

Mr. CRUICKSHANK: I cannot see the reason for such a proceeding. I know that men require this type of training, but I cannot see why a schoolteacher who goes into the air force for three or four months is promptly

made a flight lieutenant, while the men whom he teaches are flying over Berlin soon afterwards at a sergeant's rate of pay.

Mr. POWER: Why does an officer in the army who remains in Canada as an instructor get a commission as a lieutenant or a captain if he remains here for instructional purposes? I suppose, for the same reason. There is no difference in principle.

Mr. HANSON (York-Sunbury): We have an air officer attached to the Washington legation. What is his rank and what are his duties?

Mr. POWER: The air attache? Walsh?

Mr. HANSON (York-Sunbury): Walsh, yes.

Mr. POWER: He is air attache.

Mr. HANSON (York-Sunbury): What is his rank; what are his duties, and what is his pay?

Mr. POWER: I think he is an air commodore.

Mr. HANSON (York-Sunbury): Well, he is a pretty high-up officer. He gets a high salary.

Mr. POWER: Probably he gets the same salary as a military attache. I think, as a matter of fact, that is arranged. I do not remember what his name is. The naval attache is Brodeur. The military attache was Major-General Letson. I am not quite sure who is the military attache now. Their pay is all on a par anyway.

Mr. HANSON (York-Sunbury): What are the duties of an air attache? Are they really important?

Mr. POWER: I always thought they were. The duties are, liaison officer between the services. I have heard it said, and I do not repeat it in any derogatory way, with reference to various foreign powers that air attaches were spies in uniform to keep the home government informed of military developments in the country to which they are assigned.

Mr. HANSON (York-Sunbury): Is that the only method of securing information? Surely we have some better and more direct contact, now that the United States is in the war, than through an officer attached to our legation at Washington. Is there any interchange of information between the two air forces direct, or does it have to go through this diplomatic route?

Mr. POWER: I do not know. We get a great deal of information through him. There is a United States air attache in Ottawa.

Mr. HANSON (York-Sunbury): I suppose there is. That seems to be the system.

Mr. POWER: A great deal of our information comes through our air attache, in the same way that military information comes through the military man. I have never looked into the details of their functions, but they must have a distinct function because every nation in the world that has a minister seems to have attaches in the different branches. Whether that is a relic of the old days I do not know. I know that Mr. Walsh has been doing good work.

Mr. HANSON (York-Sunbury): What was his career? Was he in the air force before the war?

Mr. POWER: He has been in the permanent force. He was officer commanding in the United Kingdom early in the war and returned and became officer commanding in Montreal and was sent to Washington.

Mr. BLACK (Yukon): Is the cost of building and maintaining airports in Canada paid through the department of the minister?

Mr. POWER: Yes; the cost of maintaining aerodromes in Canada, that is military aerodromes, not Trans-Canada Air Lines. We have nothing to do with that. Certain other aerodromes are operated by the Department of National Defence for Air and a great many by the Department of Transport.

Mr. GREEN: Is there any scheme for training airmen and army men in cooperation in the two coastal areas? These two areas are supposed to be on a war basis now. Is there any scheme by which the air force train with the ground troops?

Mr. POWER: Yes; there is.

Mr. GREEN: Is that being carried out as though they were actually in fighting areas?

Mr. POWER: The extent to which it is carried out I do not know, but we have army cooperation squadrons.

Mr. GREEN: On the coasts?

Mr. POWER: They do work with the army.

Mr. GREEN: Is the air force taking steps to prepare for the training of paratroops?

Mr. POWER: I know that in the old country that is the army's job. We are not doing it.

Mr. GREEN: But is the home war establishment of the air force in a position to train paratroops?

Mr. POWER: I hardly think so. We have not been asked.

Mr. FRASER (Peterborough West): Have we any planes that could carry them?

Mr. POWER: I do not know.

Mr. CRUICKSHANK: Are the members of the air force or of the army stationed at either coast regarded as being on an actual war footing?

Mr. POWER: I do not know what my hon. friend means.

Mr. CRUICKSHANK: What I am leading up to is this. When a soldier is overseas—I do not mean in Newfoundland—he does not pay the national defence tax, and I cannot see why men in British Columbia should pay it.

Mr. POWER: I am not sure about the national defence tax, but there was a lot of difficulty about the income tax. It was considered that when a man was in an actual theatre of war he would not pay income tax. The Atlantic coast was considered to be an actual theatre of war and, I believe, the Pacific coast also. But that was not satisfactory because there were so many changes, and they got it down to the basis of so many flying hours. I cannot explain it to my hon. friend. It has been explained to me ten times and I do not understand it. It is based on the number of flying hours, and the question of income tax and the national defence tax, perhaps, is on a similar basis.

Mr. CRUICKSHANK: I have yet to see anything that the minister could not explain.

Mr. POWER: If I cannot understand it myself I cannot explain it.

Mr. CRUICKSHANK: The minister might find an explanation that would not be satisfactory to me, but he would find an explanation. I had a letter yesterday in that connection from some of his own people. We are doing as good work in patrolling the Pacific and the Atlantic for submarines and what have you, as anyone else is doing, and I cannot see why these men should not have exemption from national defence tax. If they patrol hundreds of miles out on the Atlantic or the Pacific they are taking the same chance as other men.

Mr. POWER: I think they are getting it, but I do not know in what form.

Mr. NOSEWORTHY: The minister told us yesterday that the air force was experimenting with the use of gliders. In view of the hazards of shipping our fighter planes overseas, has it considered the possibility of using gliders to carry extra fuel in order that our fighter planes may travel under their own power? I understand that has been worked out by the axis powers and is used extensively.

Mr. POWER: I do not know, but if I did I am afraid I could not tell my hon. friend anyway.

Mr. GREEN: A few weeks ago we had complaints on the Pacific coast that men of the ground crews, mechanics and other skilled men, were being used at some of the coast bases for making roads. There might have been some reason for that, but on its face it does not seem reasonable. Perhaps labour companies or some similar formations should be set up to do that type of work. Why are trained men, skilled mechanics, used in that way? It is hard on the morale of the men in the force, and it is difficult to explain to the general public.

Mr. POWER: I cannot tell my hon. friend, but I am sure that if they were used to any great extent I would have heard about it.

Mr. GREEN: You are hearing now.

Mr. POWER: I have no explanation of it. I am sure we are not using skilled mechanics to make roads unless there is a good reason, and I am sure that the man who told my hon. friend about it said that there was no reason at all and that he was badly treated. They usually tell me that when they write to me.

Mr. BROOKS: If they are not busy at something else, would it hurt them to build roads?

Mr. POWER: Not a bit.

Mr. GREEN: But when mechanics are so badly needed, if not in the air force at any rate in the army, they should not be put on that work.

Mr. POWER: They may not have a steady job working at mechanics the whole day. If they have six aircraft that do not go up for six days because of six days of fog, they might just as well do a little bit of work on the roads while the fog is on. There is fog in British Columbia too.

Mr. NOSEWORTHY: Would the minister answer a question I raised regarding the cost of living bonus to the dependents of airmen?

Mr. POWER: That is a big question. I would have to take it up with my colleague, the Minister of National Defence, and particularly with my colleague the Minister of Finance. He is the man to answer that question.

Mr. JACKMAN: Since speaking about the situation of those Canadians who are enlisted with the Royal Air Force, I find that some 500 or 600 approximately left Canada at the outbreak of war and enlisted in the R.A.F. in the old country. I suppose there are many men there who feel this discrepancy of lower rates of pay plus the British income tax. The number must be considerable, and these men are not able to speak for themselves. I hope the minister will give serious consideration to the matter. It is possible that some men do not wish to remuster in the R.C.A.F. but to those who do—and some do prefer to remuster—I hope every consideration will be given because these men have shown, if you will, an excess of loyalty. They were the first to volunteer when the war broke out, and everything should be done to put them on an equal basis with those who have gone over since.

I would bring to the attention of the minister a point raised by the hon. member for Broadview (Mr. Church) as to whether or not consideration is being given to forming a Royal Canadian Air Force regiment such as they have in the old country for the protection of aerodromes. I am not stating that there is a positive need for this at the present time, but I should like to hear from the minister what consideration has been given to the matter of protecting our aerodromes against possible raids, say from aircraft carriers, and whether any consideration has been given to the formation of a regiment.

Mr. POWER: At the present time we look after internal security within the perimeter of the aerodrome, sabotage and that kind of thing, while the army defends us against anything else.

Mr. HANSON (York-Sunbury): On the question of remustering of Canadians, I have in mind a very gallant young Canadian who went over on his own before the war. I think I told the story in this house when I came back from England. He is now a squadron leader. He has won the distinguished flying cross. In a conversation I had with him he wanted to know what future there was for him and men like him in Canada after the war. Certainly there will not be much opportunity for him in England, unless he wins great distinction there and gets further promotion, because there are so many in competition with him. If such a young man, coming back to this country after a distinguished career, could be allowed to remuster into a Canadian force, he would have a chance for the future, which he thinks lies in that direction. I merely mention him as an illustration of many boys who, like him, went over on their own before the war. Let them get into the Royal Canadian Air Force. Then, when the war is ended, if they are fortunate enough to be alive they will come back to Canada as members of the Royal Canadian Air Force. It seems to me that a unique opportunity to consider and discuss this matter is afforded in connection with this coming conference.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, May 14, 1942

The house met at three o'clock.

PRIVILEGE—Mr. CHURCH

ENEMY SUBMARINE ACTIVITIES OFF THE ATLANTIC COAST

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I rise to a question of privilege growing out of the remarks yesterday of the Minister of National Defence for Naval Services (Mr. Macdonald). The minister asked me for information and he mentioned something about innuendoes. I have the information referred to now. I shall not read all this information, but I will state where it can be found. First, it can be found under my name in the indices of *Hansard* 1937 to 1940, where I urged rearmament. During these years I brought up the submarine menace and the coming war with Italy, Germany and Japan, and stated that submarines could cross the Pacific without refueling. Second, I gave a statement, the same years, about the submarine menace to Canada and urged the government not to wait until they came up the St. Lawrence. Third, there are the references in Washington and London newspapers to General de Gaulle and the status quo with Vichy. Fourth, the subjects considered by our defence board. Fifth, the visit to Ottawa of the naval heads of this country and the speeches made by them about the coming invasion in the St. Lawrence. In addition, there is *Hansard* and the returns which have been made to this house in connection with metals sent to axis countries, such as copper, nickel, pig iron, scrap iron, aluminum to make U-boats. It was with the view of helping the minister and encouraging him that I brought up this matter. I only want to help the minister.

The minister was under a misapprehension until he got the note I sent him yesterday. I did not say the Germans had "bases" in the St. Lawrence or on these islands. I said

they sought shelter and hiding in the inland creeks. During the debates this session I referred to Hitler's spring offensive for 1942, already begun, and my remarks will be found in *Hansard*. I said that he would seek a knock-out in 1942 on the Atlantic to cut Britain's life line. I referred also to the menace to the American continent from the Atlantic and Pacific with perhaps an invasion of Canada from our front, side and back door. The extract I wish to read is from one of the most able papers in Great Britain, the *National Review*. I shall read just the relevant parts of this article which appeared in the February issue, page 121. The writer is the ablest man in this war; he has predicted everything that has happened so far. Referring to St. Pierre and Miquelon, he says:

Some weeks ago, Admiral Muselier, the commander of free French navy, did the allies the signal service of landing on St. Pierre and Miquelon, two French islands near Newfoundland, and taking them over in the name of General de Gaulle. He did this in response to a request from the inhabitants, who found themselves at odds with the Vichy officials who were still governing them. The sturdy descendants of Breton fishermen who live on the other side of the Atlantic had no mind to see their islands used against Canada and the British in the event of Vichy turning them over to Hitler.

Then follows reference to the same matter to which I referred, and the article continues:

During the ruthless German attack on our Atlantic shipping, it was criminal to leave such a nest for pirate-protection free to work its mischief. We do not know whether the attention of the British and American governments was called to what was going on. It seems probably that it was, for the activity of the Vichy friends of Germany was well known, not only to the fishermen on the islands—there are several thousands of them—but to the British in Newfoundland, barely twenty miles away. In any case nothing was done, the Monroe doctrine being invoked to defend inaction, while an agreement that there should be no disturbance of the American status quo during the war, was further used to produce inertia.

The last sentence reads:

Seeing that there would be no betterment in the affairs of their island from the two great powers, the inhabitants of St. Pierre and Miquelon appealed to General de Gaulle, who acted with military promptitude, and sent Admiral Muselier to seize the islands in the name of free France. This was done. The United States of America protested at once, and their press supported them, while certain elements in Canada were doubtful. A valuable passage in Mr. Churchill's Ottawa speech brushed away the anti-de Gaulle talk. The names of the Free French, he said, "will be held and are being held in increasing respect by nine Frenchmen out of every ten."

I think this is sufficient explanation. Further, I believe it is correct. I should like to give the minister some other papers along the same lines, but they are in Toronto. I would point out also that various matters the minister speaks of as being private were known to the axis powers, as everything we do is known; so why the secrecy? I refer him to Ribbentrop's speech and radio talks about Canada since the war began, about the great lakes and the lack of defence on our two coasts. He lived here for years and got all the information.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): As I understand the statement made yesterday by the hon. member for Broadview (Mr. Church) it was a statement of fact, namely, that for nearly the past two years German U-boats have sheltered in the creeks, inlets and harbours of St. Pierre and Miquelon where they flashed signals at night from the shores in order to help to sink Atlantic shipping. I asked the hon. gentleman yesterday if he were prepared to make that statement as a statement of fact on his responsibility as a member of this house and I have not been able to gather to-day that the hon. gentleman takes that responsibility. Does he state that he knows it to be a fact that there were German U-boats sheltering in the creeks and inlets of St. Pierre and Miquelon for the last two years?

Hon. R. B. HANSON (Leader of the Opposition): He states it on the basis of an article in the *National Review*. No one member of this house could give it as his own personal information, but he states it on the basis of what he considers is reliable information. It may not be true, I do not know.

Mr. MACDONALD (Kingston City): I regret to say that I was not able to understand everything the hon. member for Broadview said. Does the article in the *National Review* state definitely that there are bases in St. Pierre and Miquelon?

Mr. HANSON (York-Sunbury): I think that is correct.

Mr. MACDONALD (Kingston City): I hould like to see the *National Review* and the other documents referred to by my hon. friend before attempting to give an answer.

Mr. HANSON (York-Sunbury): I think that is fair.

Mr. MACDONALD (Kingston City): I have never seen it stated anywhere that German U-boats were sheltering in these islands. It may have been stated, but I have

never seen it. I stated yesterday, and I repeat it to-day, that we know that German U-boats can cross the Atlantic, pursue their nefarious trade on this coast, and return to their European bases without the necessity of refuelling.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

1942 VICTORY LOAN—BANK LOANS TO INDIVIDUALS AND CORPORATIONS

Mr. QUELCH:

What amount was loaned by the chartered banks to individuals and corporations for the purchase of victory bonds in the 1942 campaign?

Mr. ILSLEY:

Loans as at March 31, 1942

Instalment subscriptions under the official plan	$ 50,594,437
Loans against security of second victory loan bonds...	159,209,496
	$209,803,933

N.B.—The above figures include those for the Montreal City and District Savings Bank.

MONTREAL DISTRICT MARKET GARDENERS—SHORTAGE OF LABOUR

Mr. JEAN:

1. Is the government aware that the market gardeners of the district of Montreal are suffering from a labour shortage?

2. If so, have any steps been taken to deal with this situation?

3. What is the nature of such measures?

Mr. MITCHELL:

1 and 2. Yes.

3. The appropriate provincial authorities have made a survey of the situation and have conferred with the Ministers of Labour and National War Services. The plan being followed is to enlist voluntary assistance from senior students and other sources to work under the leaders of various group organizations. Assistance has been asked from the Department of National War Services in the matter of giving special consideration to requests for postponement of the period of military service of certain group leaders and such special consideration has been arranged. At the interview with officials of the provincial governments and those actively engaged in the solution of this problem it was stated that the granting of consideration along the line above referred to would permit of the shortage being met to a reasonable degree.

"CANADIANS ALL"—A PRIMER OF CANADIAN NATIONALITY

Mr. CHURCH:

1. On whose instructions was the pictorial book written, "Canadians All"—A Primer of Canadian National Unity—by Watson Kirkconnell, M.A.?

2. What were his instructions, what was the cost of the book, how many copies were distributed, and what were his qualifications for such a task?

3. In how many languages was this book written, and what was the number of copies printed in each language?

4. Is the writer a returned soldier, and in what theatre of the great war did he serve overseas?

5. How many editions of this book have been published, was any part of it expunged in later editions and, if so, what parts?

Mr. THORSON:

1. On the instructions of the Director of Public Information.

2. (a) Instructions were to prepare a booklet suitable for distribution in connection with the Public Information series of radio broadcasts entitled "Canadians All"; the main theme being to emphasize the importance of national unity in time of war and to educate Canadians of every racial group concerning the contributions to our national culture and welfare being made by other groups.

(b) $16,465.26.

(c) 296,000.

(d) Professor Kirkconnell is internationally recognized as one of the greatest authorities on ethnology, particularly with reference to Canadian problems.

3. (a) Two: English and French. Section 1 of the booklet was published in both languages. Section 2 appeared only in the English edition. The French counterpart of Section 2 was published in the French-Canadian newspapers.

(b) English: 232,000. French: 64,000.

4. (a) Yes.

(b) No information.

5. Two. Following Russia's reorientation in world affairs, in June, 1941, certain passages on page 16 were revised. Also new sections dealing with Canadian Indians and Eskimos were added and the section referring to the Norwegians was rewritten. This additional copy made it necessary to delete one unessential paragraph from the section dealing with the Czechs and Slovaks.

USE OF INVENTIONS FOR WAR PURPOSES—PATENT RIGHTS

Mr. ESLING:

If pending patent applications are made secret under defence of Canada regulations, is there any provision for an inventor applicant to maintain his rights when an invention is turned over by the government to commercial concerns for the manufacture of war equipment?

Mr. McLARTY: Rights of an inventor applicant, in application made secret under the provisions of the defence of Canada regulations, are protected under the provisions of subsections (3) and (4) of regulation 19, defence of Canada regulations.

If and when a patent is issued, compensation for use may be fixed under section 19 of the Patent Act, 1935.

Attention is also called to order in council P.C. 6982, 4th December, 1940, printed in vol. 3, proclamations and orders in council, passed under the authority of the War Measures Act, at page 163.

GAS REDUCTION CARBURETTORS

Mr. ROY:

1. Have any carburettors for motor cars, capable of reducing the amount of gas consumption, been invented and patented in Canada since 1930?

2. If so, on what date, by whom, and how many?

3. Have any of these carburettors, whether patented or not, been sold to the Canadian government or the government of the United Kingdom, or to private individuals, or firms or foreign countries?

4. (a) By whom were the sales made, (b) to whom, (c) at what price, (d) where are they used?

Mr. ROY: I ask leave to withdraw this question in order to reword it.

Mr. SPEAKER: Dropped.

INTERNMENTS—RELEASE OF L. FRANCESCHINI

Mr. DIEFENBAKER:

1. When was Leonard Franceschini interned; what was the date of his release?

2. Upon what ground was his release granted?

3. Was his case considered by an advisory committee; if so, what was its recommendation?

4. On what date did the said committee report to the Minister of Justice?

Mr. ST. LAURENT:

1. Leonard Franceschini was detained on September 7, 1940, he was released on June 27, 1941.

2. He was released on the ground that it was not considered that he was likely to act in any manner prejudical to the public safety or the safety of the state.

3. Yes; its recommendation was for release.

[Mr. Thorson.]

4. The committee made its first recommendation under date of March 17, 1941; further material was supplied and a second recommendation confirming the first made under date of April 25, 1941.

NATIONAL AND REGIONAL WAR LABOUR BOARDS

Mr. MacNICOL:

1. Has the national war labour board and/or a regional war labour board authority to order an increase in a basic scale of wages paid by an employer?

2. If the national war labour board and/or a regional war labour board has such authority, under what conditions may it be exercised?

3. Has the attention of the government been directed to any decisions of a regional war labour board in which such board has exceeded its authority?

4. Has the national war labour board the power to annul decisions given by a regional war labour board?

Mr. MITCHELL:

1. Yes, under the provisions of section 11, subsection (2) of order in council P.C. 8253.

2. Answered by No. 1.

3. In three or four cases it has been claimed that the decisions of regional boards have not been in accordance with the provisions of the order but it has not been shown that a regional board has exceeded its authority.

4. No, but under the by-laws of the national board if opinion of the members of a regional war labour board is not unanimous, the case is to be referred to the national war labour board for guidance before decision is made by such regional board.

BACON—SHIPMENTS TO BRITAIN—RESTRICTION OF SALES IN CANADA

Mr. BRUCE:

1. What is the bacon quota which Canada is expected to supply England this year?

2. How much of this has already been shipped?

3. Will it be possible to complete the balance of the quota?

4. If not, has the government considered restricting the sale of bacon in Canada?

Mr. GARDINER:

1. 600,000,000 pounds.

2. During the first thirty-one weeks of the present contract period, 382,000,000 pounds have been purchased for shipment.

3. It is expected that the contract for 600,000,000 pounds will be closely approximated.

4. Answered by No. 3.

QUESTIONS PASSED AS ORDERS FOR RETURNS

WARTIME PRICES AND TRADE BOARD—SPEAKERS

Mr. CHURCH:

1. How many employees, men and women, has the wartime prices and trade board in each province out delivering speeches, lectures and radio addresses, and writing material to be used by them, supporting policies of that board, at public meetings and banquets and at lectures?

2. What are their names, salaries, hotel bills, travelling expenses and all other expenses?

3. Who instructs the speakers, and do they state government policy at these meetings?

ROBERT SIMPSON COMPANY—EMPLOYEES IN GOVERNMENT SERVICE

Mr. MacINNIS:

1. How many persons, whose last employment or position was with the Robert Simpson Company, Limited, of Toronto, have been appointed to government boards or have been or are employed by boards or departments under the jurisdiction of the dominion government from September 1, 1939, to April 30, 1942?

2. How many such persons are at present in the employ of the government in, (a) Department of Finance, (b) Department of National Defence, (c) Department of Munitions and Supply, (d) Department of War Services, (e) Department of Labour?

3. What are their names?

4. What is the salary and/or other remuneration paid to each?

SHIPPING LOSSES

POLICY AS TO MAKING ANNOUNCEMENTS OF SINKINGS

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I desire to ask a question of the Minister of National Defence for Naval Services.

On May 12 the minister gave a statement to the press in relation to the sinking of a freighter in the St. Lawrence by enemy action. Yesterday the minister in reply to the hon. member for Davenport (Mr. MacNicol) further stated that a second ship had been sunk by enemy action in the same general locality at about the same time. In both statements the minister indicated that in future it would be the policy of the department not to make any announcement of any further sinkings in this area, on the ground that to do so might convey valuable information to the enemy; that such information cannot and will not be given in answer to questions in the house or elsewhere and in no circumstances will it be given unless the government is satisfied that the enemy will not benefit therefrom.

In view of the fact that the enemy must have information of these sinkings, and that the government of the United States are announcing their losses from time to time, and that periodically Britain has announced similar losses, I desire to ask the minister to review this policy. I suggest to him that such a policy is not good for the morale of the people of Canada. They hear these stories, in most cases well authenticated. Now and hereafter the press is censored and the public is not allowed to know the truth, and the stories grow in repeating them. Isolated sinkings in the St. Lawrence estuary are not like the sinkings on the Atlantic or in the Mediterranean, or even in the far east, in which last named locality the reports of sinkings have been published at least in the United States and in Canada. Personally, I cannot conceive that the publication of true reports of these sinkings is of any particular value to the enemy or that the censorship now imposed will prevent the enemy from knowing of the sinkings.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Speaker, the leader of the opposition (Mr. Hanson) gave me a copy of his question just before three o'clock, and in reply to what he has just said I must say that I see no reason whatever for changing the policy announced yesterday and the day before.

My hon. friend and the house will understand me when I say that if I were to begin to explain the reasons for the policy, that in itself might be of some aid and comfort to the enemy. If I said why we are withholding this information, or if I said when would be the proper time to announce a sinking, that explanation in itself might give information to the enemy.

The government of the United States, it is true, have released from time to time news of the sinking of ships, but I think in recent weeks the policy of that government has become a little more rigid in that regard, and a great many of the reports that we see in the newspapers here of shipping losses by the United States originate, I think, in the press and news agencies of that country.

My hon. friend says that Britain announces losses. In due course they do; I agree. But the time of these announcements may vary. The loss of the *Prince of Wales* and the *Repulse* was announced almost immediately because ships of that type, of course, are easily recognizable by the enemy and the information was already in their hands. Whenever we are sure that they have a certain amount of information and the actual facts,

there is no reason why we should withhold the news, but until we are certain of that we might help the enemy by giving out the information.

My hon. friend says that sinkings in the St. Lawrence estuary are on a similar basis to sinkings in the Mediterranean or in the far east. I cannot agree. There are reasons which I could disclose in private to my hon. friend, but which I do not think I should make public, why sinkings in an area like the gulf of St. Lawrence or the estuary of the river St. Lawrence are in a very different position from sinkings, say, on the high seas.

I do not think I should say any more. I have discussed the matter with the intelligence branch of the Department of Naval Services. I discussed it again with them this morning, and I had the great benefit of having present at the conference this morning a member of the intelligence staff of the British Admiralty, who is now in this country. He agrees entirely as to the great necessity for very careful censorship of any news regarding U-boat sinkings, and the reasons he gave and the reasons the members of my own staff gave appeal to me very strongly. Consequently I feel that at this time it would be unwise to make any further statements regarding sinkings in the St. Lawrence.

POSTAL SERVICE

ANNOUNCEMENT OF NEW ISSUE OF POSTAGE STAMPS

On the orders of the day:

Hon. W. P. MULOCK (Postmaster General): Mr. Speaker, I wish to advise the house that it is expected that a new series of postage stamps which will replace the present issue will be released about July 1.

The new designs will reflect Canada's share in the war, with special emphasis on the armed forces, production of munitions and war supplies, and agriculture. The new postage stamp issue will consist of the following denominations and subjects:

One cent, green, portrait of His Majesty the King, in naval uniform.

Two cents, brown, portrait of His Majesty the King, in military uniform.

Three cents, red, portrait of His Majesty the King, in air force uniform.

Four cents, gray, Canadian grain elevators.

Five cents, blue, portrait of His Majesty the King, in naval uniform.

Eight cents, sepia, Canadian farm scene.

Ten cents, brown, parliament buildings, Ottawa and union jack.

Thirteen cents, dark green, ram tank, Canadian army.

[Mr. Macdonald (Kingston City.)]

Twenty cents, purple, Canadian corvette ready for launching.

Fifty cents, brown, Canadian munitions factory.

One dollar, blue, destroyer, Royal Canadian Navy.

Six cents air mail, blue, British commonwealth air training plan.

Ten cents special delivery, green, Canadian coat-of-arms and flags. The flags are: union jack, representing the army; the naval ensign; and the Royal Canadian Air Force flag.

Also at the same time a new sixteen-cent stamp will be issued to cover combined air mail and special delivery service. This stamp will bear a picture of a trans-Canada aeroplane in flight, and will be bluish-violet in colour.

JAPANESE NATIONALS

DISTURBANCE AT VANCOUVER IMMIGRATION BUILDING—STATEMENT OF PROCEDURE IN RELOCATION

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): I desire to ask certain questions of the Minister of Labour, based on a dispatch which appeared in the Ottawa morning *Journal* of to-day, under date Vancouver, May 13:

Army guards with fixed bayonets to-night patrolled the railway tracks in front of Vancouver's immigration building where Japanese, awaiting removal to the interior, earlier staged their first outbreak of violence since war came to the Pacific.

Late to-day, the Japanese housed in the waterfront building smashed windows, pushed an iron grating to the street and turned a fire hose upon a guard and into the street where crowds gathered.

The outbreak, described by Austin C. Taylor, chairman of the British Columbia Security Commission, as "more playful than anything else" was quickly quelled.

To-night, however, there was more unintelligible shouting and rolls of paper unfolded from the second and third storeys, Japanese faces peered from smashed windows.

Mr. Taylor said the trouble apparently resulted from refusal to allow the Japanese to converse daily with friends outside. Until to-day, Japanese women had been allowed to stand at a distance and talk to the men through the iron-grated windows. The commission chairman added that the Japanese would be removed from the building soon to road camps in the interior of the province.

"There was nothing malicious about the trouble", said Mr. Taylor, whose commission has evacuated hundreds of Japanese from the vital Pacific coast defence zones. "It was more playful than anything else. Some of the Japanese just got a little fed up about being kept in the building and got a little exuberant. There was more yelling than anything else."

Scores of passers-by were attracted to the building by the shouts that accompanied the smashing of glass. Guards on a nearby viaduct

kept onlookers at a distance as the Japanese turned a firehose out through one of the broken windows, directing the stream of water to the ground.

Although this was the first outbreak of violence, Japanese housed at Hastings park "manning depot" prior to being sent to road jobs in the interior, previously staged what they termed a "sit-down strike". They protested against the breakfasts at the local park where several thousand Japanese are housed. The following morning they ate their food and all was quiet.

Evacuation of the more than 23,000 Japanese men, women and children in British Columbia was ordered by the dominion government last January. Shortly afterwards, the B.C. Security Commission was formed to handle the evacuation and since then hundreds of Japanese have been rounded up and sent away from the coast. Some have gone to the interior and to other provinces.

My questions are: (1) what action does the government intend taking in connection with this outbreak; (2) will steps be taken to guard against any further disturbances, (3) has the present security commission any intention of removing the Japanese east of the Cascades or is it preparing a permanent camp at Hastings park, Vancouver?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, the men involved in the fracas of which my hon. friend has just spoken will be immediately interned. That is the answer to question number one. As to question number two, the guards will be increased. In reply to question number three, the security commission is removing the Japanese east of the Cascades as rapidly as possible. The camp at Hastings park is not permanent and is simply a clearing depot. The real estate adviser of the national defence department plans on using the buildings at Hastings park for the purposes of the national defence department as soon as the Japanese are removed.

In view of the fact that this question has been raised, I think I might give a statement as to the progress which is being made with this very difficult problem.

The number involved totals 22,084, distributed as follows:

	Males	Women and children	Total
Canadian born.....	3,378	2,689	6,067
Naturalized Canadians.	1,873	4,656	6,529
Japanese nationals....	3,499	5,977	9,476
United States citizens..	12	....	12
	8,762	13,322	22,084

The plans developed so far are:

(a) Move all families off Vancouver island and other "vulnerable" locations at once.

(b) Use Hastings park exhibition grounds, Vancouver, as a clearing station, feeding depot and hospital. There is accommodation there for 12,000 people.

(c) Place 4,000 male Japanese nationals in road camps in interior of British Columbia.

(d) Place 3,000 Canadian-born males in road camps in Ontario, later clearing them out to bush camps, et cetera, as opportunity offers.

(e) Repair buildings in abandoned towns of Kaslo, Greenwood, Slocan City and Sandon for housing 5,000 women and children.

(f) Place 500 families—approximately 2,500 individuals—on Alberta sugar beet farms.

(g) Place 500 families—approximately 2,500 individuals—on Manitoba sugar beet farms.

(h) Approximately 1,000 individuals have means to support themselves and arrangements are being developed to provide locations at Christina Lake, Bridge River and Minto in order that these persons can be given housing facilities only.

This is the progress made:

(a) The task of moving families off Vancouver island and other vulnerable points has been practically completed except for a few cases where there are special problems such as bed-ridden individuals.

(b) Hastings park exhibition grounds clearing station has been completed and buildings are in good shape. The number housed changes from day to day. On May 11 there were 2,555 individuals at the park.

(c) and (d) Road camps are working satisfactorily, and on May 11, 1942, there were adult males in camps as follows: Blue River-Yellowhead project, 1,290; Revelstoke Sicamous project, 417; Hope Princeton project, 237; Schreiber project (Ontario), 341; total, 2,285.

(e) Repairs to buildings in abandoned towns are proceeding and the movement to these towns has commenced. As at May 11 there had been sent: Greenwood, 812; Kaslo, 185; Slocan City, 22; Sandon, 2; total, 1,021.

(f) and (g) Sugar beet fields: 1,635 individuals have been moved to Alberta and those who are employable are working. The movement to Manitoba is well in hand and 720 have been located. Total to sugar beet fields is 2,355.

Arrangements were made for the location of a number of families who have undertaken to support themselves if assisted in finding a location. Movements already completed of this class are: Christina Lake, 80; Bridge River and Minto, 150; Lillooet, 51; Westwold, 35; a total of 316.

In addition to that we have what we call miscellaneous employments in commercial

undertakings, and these have been approved in British Columbia, Alberta, Saskatchewan, Ontario and Quebec. The approval of the provinces was first obtained. Individuals placed under this plan are summarized in the following table:

British Columbia	374
Alberta	47
Manitoba	8
Ontario	60
Quebec	28
Saskatchewan	8
Total	525

Arrangements are being worked out by the Ontario government for the placement of 500 men in Ontario sugar beet fields.

Summary

Moved from vulnerable locations		4,300
Placed in road camps	2,285	
Placed in abandoned towns	1,021	
Placed in sugar beet fields	2,385	
Placed in self-supporting locations	316	
Miscellaneous approved employment	525	
(a) Placed in internment camps	96	
(b) To be interned, now in immigration hall	130	
		226
Temporarily housed in Hastings park	2,555	
Total		9,313

Mr. MacINNIS: What class of Japanese were held in the immigration sheds? I understood when I was on the coast last winter that only those held for internment were in the immigration shed. How long were they there?

Mr. MITCHELL: Those were Japanese who refused to go to the road camps in Ontario. They were more or less on a sit-down strike. We have to be fair about that. It was thought that probably they had changed their mind, but apparently they had not and they went on the rampage last night.

FLOODS IN ALBERTA

REPRESENTATIONS AS TO EMERGENCY CONDITION AT HIGH RIVER

On the orders of the day:

Mr. E. G. HANSELL (Macleod): I wish to direct a question to the minister in charge of public works, on the basis of a telegram I received this morning:

> Serious emergency exists in High River owing to river in flood changing its course, flooding main business section permanently. Original federal dyke holding. This needs extending. Disastrous condition needs your immediate attention.
>
> H. B. MacLeod,
> Mayor, town of High River.

Has the government been advised of this? If so, what action has been taken?

[Mr. Mitchell.]

Hon. J. E. MICHAUD (Acting Minister of Public Works): Just a few minutes before three o'clock a letter directed to the Deputy Minister of Public Works was brought to my attention. In substance it contains a copy of the telegram which the hon. gentleman has read. This, I am informed, is the first intimation that has reached the Department of Public Works with regard to the conditions described in the telegram. I have asked the deputy and the chief engineer to look into the matter and as soon as the report is complete I will bring it to the attention of the hon. member. In the meantime, I am led to believe that this is a matter that should come under provincial jurisdiction.

PRIVILEGE—MR. POULIOT

REFERENCE TO STATEMENT OF HON. MR. HANSON ON MAY 13

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): I rise to a point of order and a question of privilege. Referring to the last page of *Hansard* of yesterday I see a statement by the hon. leader of the opposition (Mr. Hanson) to the effect that we have taken up national defence and the navy and finished them. My point of order is that that statement is inaccurate. The department of the navy was finished but national defence was not. My question of privilege is this. I deny the leader of opposition the right to say anything on my behalf.

Mr. HANSON (York-Sunbury): I stand corrected by the hon. gentleman.

LABOUR CONDITIONS

QUESTION AS TO LACK OF ORDERS AT INVERNESS, N.S., COAL MINES

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): May I be permitted to direct a question to the Acting Minister of Transport (Mr. Howe) arising out of a telegram received from the district secretary-treasurer of the united mine workers of Nova Scotia setting out that the condition at Inverness coal mine is due to lack of orders. In view of the fact that the Canadian National Railways supply the main market for Inverness coal, can the minister explain to the house why a mine employing some four hundred men should be idle at this time?

Hon. C. D. HOWE (Acting Minister of Transport): My hon. friend gave notice of the question but I received it only a few

minutes before coming into the house. It will be necessary to get the answer from the railway offices. I will do so immediately and give it as soon as I can.

BANQUE CANADIENNE NATIONALE—APPLICATION OF OFFICE AND PROFESSIONAL WORKERS FOR HEARING

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): On Tuesday, in the absence of the Minister of Labour, I asked a question in regard to the application for a hearing before the Quebec regional war labour board on behalf of the employees of the Banque Canadienne Nationale. Has the minister the information in regard to that matter?

Hon. HUMPHREY MITCHELL (Minister of Labour): The Department of Labour is aware that they made application, but we have not been informed by the regional board regarding the details.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, May 13, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

Mr. POULIOT: I am not going to take up much time to-day as the minister is busy. I wish to praise a few officers of his department, especially Squadron Leader Stewart, Mr. Malcom McLean, one of our former colleagues, and also his secretary Mr. Sharpe and Miss Gough, who is an admirable private secretary. They help us at times in connection with the transfer of French-speaking men in the air force when they are isolated among people who do not speak their tongue. I wish to give credit to them for what they do in that regard.

There are two things I want to say to-day and I shall be brief. I have before me a headline in the Ottawa *Journal* of May 12, "U-boat sinks freighter in St. Lawrence." It is a big headline across the first page of the *Journal*, and of course it was also a front page headline in all the papers of the country. That headline ought to have been "U-boat sunk by R.C.A.F." I do not say that to be critical of the R.C.A.F. but what I complain about is that we have not sufficient defence in this country. The Germans should be informed that whenever they have the audacity to come inland in the St. Lawrence river, so close to us, they will meet with proper defence and that they will not be allowed to go back home. That is the first thing I want to say.

The second point is that in the united nations air conference which will take place next week, the minister should have no inferiority complex towards the delegates from any part of the world, considering the work that is being done by the R.C.A.F. jointly with the Royal Air Force in England and elsewhere in the theatres of war. I hope there will be no more commitments to send any more of our own men outside of this country before the defence of this country is assured and completed.

Mr. FRASER (Northumberland): I should like to make one or two observations in connection with the remarks of the hon. member for Brantford City (Mr. Macdonald) as recorded on page 2351 of *Hansard* of May 12. The hon. member indicated that the people of Brantford were disturbed and inconvenienced by the movement of the aeroplanes connected with the airport and flying school located near Brantford, and the flashing of the rotary beacon on that air base. I am prompted to refer to the hon. member's remarks, first because of the press publicity they have received and second because those remarks to me are indicative of an attitude of a great many Canadian citizens in connection with the prosecution of this war and the seriousness of the crisis with which this country is confronted. I have the privilege of living in a town close to the largest air training base in Canada, if not in the world, and I want to tell this committee that I lie in my bed at night listening to those planes rising from that air base day and night—

(The hon. member for Edmonton East—Mrs. Casselman—in the chair):

Mr. MACKENZIE KING: If my hon. friend will excuse me I wish on behalf of the committee to express the pleasure it gives to us all to see a lady member (Mrs. Casselman) occupying the chair of the deputy speaker of the house for the first time in its history. I extend as well congratulations to the house on having a lady member acting as chairman of the committee.

Mr. HANSON (York-Sunbury): May I add a word to what the Prime Minister has said, and say how pleased I think every hon. member is to see you, Madam Chairman, occupying with great dignity the chair in committee of the whole.

Mr. FRASER (Northumberland): May I add my words of congratulation to those already spoken. As a private member I consider it a great honour to be the first humble back-bencher to speak under the chairmanship of a gracious lady in the person of the hon. member for Edmonton East.

I was saying that as I lie in my bed at night next to that airport—

Some hon. MEMBERS: Oh, oh.

Mr. FRASER (Northumberland): I see that hon. members fully recognize the import of the statement I have just made. As I listen to those planes operating day and night, winter and summer, I thank God that these young men who are offering their services and their lives for Canada are part of Canada's contribution to this war.

Mr. McNIVEN: And that they are friendly planes.

Mr. FRASER (Northumberland): And that they are friendly planes, and that the sound of changing the pitch of the propeller is not the noise of enemy bombs dropping on Canadian soil. I repeat that it seems to me the hon. member's remarks are indicative of the complacency of the Canadian people in the present serious situation. I want to compliment the Minister of National Defence for Air, who is in charge of the Royal Canadian Air Force and the air defence of Canada; but I suggest that the sooner the citizens of Canada develop a complex of hate and revenge and determination against our enemies who perpetrate such atrocities as those of Hong Kong and who are sinking ships and murdering innocent seamen in the gulf of St. Lawrence, the sooner we are going to get a proper grasp on the seriousness of this war and the sooner the Canadian people will be willing to sacrifice their all in connection with our participation in the struggle.

There is not only too much complacency in Canada, there is too much individual selfishness, too much of the spirit indicated by the remarks of the hon. member for Brantford City as to inconvenience and disturbance by a beacon light on a defence air post keeping people awake. We are thinking too much of self and have not enough realization of the desperate life and death struggle in which this country is engaged. Therefore I could not refrain from making this reference to the remarks of the hon. member.

In my opinion our greatest contribution to this war effort is that made by the Royal Canadian Air Force under the empire training scheme. Next to me in the town of Trenton lives a family of which one son, one of the finest types of young Canadians, who was in the Royal Canadian Air Force, was killed the other day bombing over France and Germany. This boy gave his life to protect my home and the homes of other Canadians, and although my home is adjacent to that air base I say to my hon. friend and to every hon. member that that boy's parents thank God every night that other young Canadians have the national spirit and the guts to fly through winter and summer learning how to bomb our enemies. And I should feel myself remiss in my duty if I did not try to impress upon hon. members the necessity of taking a different point of view of this whole situation and getting away from this petty sense of inconvenience, of being disturbed in their sleep by the light of a beacon or the noise of changing pitch of a propeller. If they are kept awake they should get out of their beds and kneel down and thank God that those young Canadians are willing to give their lives for the protection of Canadian homes.

Mr. PERLEY: Madam Chairman, I am delighted to join with the Prime Minister and the Leader of the Opposition in expressing the pleasure I am sure of all hon. members in seeing you for the first time in this very responsible position. We, the members of the opposition, shall be happy to see you there often; for we know that we shall get fair and impartial treatment from the chair. I am confident you will do credit not only to yourself but to the women of Canada whom you represent in this house.

I desire now to take a moment to express my admiration of the Minister of National Defence for Air for the frank way in which he has dealt with matters relating to his department in giving information to this committee, not only in the general statement he made but also in answering the many questions put to him. I was unable to be present in the house yesterday because I had to attend another meeting, but I have looked through *Hansard*, and I followed the proceedings the previous day, when I was here most of the time. Many of the questions I had intended to put to the minister already have been answered, so I need not take very much time this afternoon.

Right at the outset I should like to join in what has been said already by the hon. member for Peel, the hon. member for St. Lawrence-St. George, and the hon. member who just took his seat and others, in paying tribute to the gallant members of the air force both in Canada and overseas, who at all times, day and night, face great dangers. As members of parliament we cannot adequately express our admiration for these

young men. The whole of western Canada has made a wonderful contribution to the air force, and within the last ten days my own district has been very severely hit. In the first place we had a military funeral, for the first time in our history. A young man who had been overseas and who had been returned to Canada fell ill in Montreal, was taken to the hospital and died. They gave him the honour of a military funeral at Wolseley; some forty members of the air force were there; the ceremony was very inspiring and gave great comfort to the mother, who is a widow with two other sons also in the air force. On Sunday last in that same town they held a memorial service for a young man who was killed while flying over France; his death was reported in the Ottawa papers of the day before yesterday. Only to-day I received word by air mail that the son of my opponent in the last election crashed and was killed yesterday while training near Yorkton. These incidents just go to illustrate that these men are in danger all the time, whether flying over France, over the Pacific or in training in Canada. I pay my tribute to the gallantry of the members of our air force.

The minister has dealt with the three branches of his department—the home war establishment, the overseas war establishment, and the commonwealth air training plan. The minister stated the number of trained men being turned out each month under this plan, and I was pleased to see that this number is 25 per cent greater than the estimate he gave last year when his department was under review. That is encouraging, and I hope it will continue. It is important that it should, because I believe the air force is going to play a very important part in the winning of this war—and we are going to win it.

The previous speaker referred to the remarks of the hon. member for Brantford City (Mr. Macdonald) who outlined some of the nuisances which had to be endured in the vicinity of an airport. When the minister was asked whether there were to be any further aerodromes established in Canada, he said there were not. Well, he has his department well in hand; I believe he knows what is best, and if we are getting the necessary number of trained men, that is all right with me. But in passing I may say that the people in some parts of my own district were encouraged a year ago, by the number of survey parties in that area, particularly those looking over some of the fields already surveyed and in use by Trans-Canada Air Lines. I can assure the minister that if it becomes necessary to establish more training centres, we will gladly put up with any inconvenience, noise or anything of the sort that may be incidental thereto. We in Wolseley are near Regina and only about sixty miles from Yorkton. We hear the drone of aeroplanes at night, but that has never caused me any particular discomfort, nor have I lost a wink of sleep as yet.

I was encouraged to hear the statement of the minister that according to his estimate there are sufficient men available to meet the requirements of the air force at least for the next six months and perhaps for the next year. I have received many letters, and have been visited by several young men, complaining that they have been examined and accepted but that sometimes they have to wait a long time before being called up. This tends to make them discouraged. I know of some young men who were very anxious to get into the air force but had to wait so long before being called up that they went into the army instead. In this connection there is one point I should like to bring to the attention of the minister, though I believe it was pretty well discussed a day or two ago. There must be a number of men in the ground crews of the air force, with good education, who could be used to advantage in the army. They are not getting ahead very quickly in the ground crews, and I think some of them are dissatisfied.

I was pleased to read what the minister had to say with respect to equalizing the pay and allowances of the members of the air force, particularly as between sergeant pilots and commissioned officers. I am sure this will make for a much better spirit on the part of these young men, because we all agree that when they are in the air, whether they are observers, gunners, pilots or anything else, they all face the same dangers and should be treated alike. This matter has been so well dealt with, however, that I need not take up further time on it.

I have just one word of complaint to offer in conclusion, with respect to some of the training centres in Saskatchewan. I have in my hand a return which I requested on February 20, with regard to the water supply at some of the air fields and training centres in my province. According to this return, contracts were let for the drilling of wells, with gravel walls, at $15 and $18 per foot; and in addition there was a contract at $2 per foot for the test hole, a small hole about two inches in diameter. Those rates were altogether out of reason. The original contract was sublet. I appreciate the fact that the minister

cannot look after every one of these things, that someone else must do it for him, but there should be some check. Certainly a contract of that kind was out of all reason and proportion.

I was going to deal with the question of the salvage of oil, but on looking over *Hansard* I find that it has been dealt with already. A question of mine dealing with this matter was passed yesterday as an order for return, and I should have the information in due course. But I do think some attention should be given to the matter of salvaging lubricating oils and so forth at these airports.

There is one other matter which perhaps the minister should take up with some other department, possibly the Department of Mines and Resources. The government should investigate the possibilities of producing gasoline from the tar sands in the northern part of Saskatchewan and Alberta. I ask the minister to keep this in mind. This war may be won or lost because of oil supplies. There is a wonderful field in that part of the country and I trust it has not been neglected. I believe there are possibilities of producing gasoline which would mean a lot, not only to this country but to the empire.

Madam Chairman, I am not going to take up any more of the time of the committee as I know the minister is anxious to get away. I want to express my appreciation of the frank manner in which he has answered our questions. I have had occasion at times to deal with his department and I have always found the officials there ready to display the same frankness the minister has displayed here. I hope other departments will take a little tip from him. If they would, it would help to establish confidence, not only on the part of members of the house but throughout the dominion generally.

Mr. ROSS (Souris): Madam Chairman, may I first of all pay a tribute to you on the occasion of your being the first lady to assume the important duties involved in the chairmanship of the committee of the whole.

I want to say just a word about the remarks of the hon. member for Brantford City (Mr. Macdonald) as to the position in which his municipality has been placed. There is a municipality in my constituency which has offered the department clear title to two sections of land if they will establish an airport in the immediate vicinity. We believe that more airports should be established in southern Manitoba. We do not know why there are not more there, because our people are ready to play their part.

I should like to pay my tribute to the gallant airmen who have done so much for us during this war. I think the record of southern Manitoba is equal to the rest of Canada in the number of young men who have enlisted in the air force. I am sorry to say that many of them have already made the supreme sacrifice. Many of these boys come from my constituency, and I know their families personally. They have offered their all, and we cannot measure the debt we owe them.

In this connection I should like to ask the minister if the courses have been accelerated or reduced, whether these men are trained in the same period of time as before or in a shorter period. I am referring particularly to air crew.

Mr. POWER: I would prefer not to give any answer with respect to the length of courses or their extension.

Mr. ROSS (Souris): Another matter has been raised; I believe the hon. member for Lambton West (Mr. Gray) brought it up first, and I have had questions on the order paper about it. I have never been able to get it clear in my mind just how commissions are granted when these young men graduate. I cannot understand why one man is given a commission and another only a sergeancy. I should like to see this matter brought up at the coming conference. I believe the young men who are members of the air crew should hold the same rank; they should all be commissioned if possible.

Mr. WOOD: I feel I would be somewhat remiss in my duty if I did not come to the defence of my colleague, the hon. member for Brantford City (Mr. Macdonald). I think it is unfair that so much publicity has been given to certain parts of his address the other day by certain sections of the press, especially here in Ottawa. They referred only to certain parts of his speech, which seems characteristic of some of the press. This is done in an effort to have people believe the things they want them to believe for certain purposes of their own. I am proud to say that our local paper, the Brantford *Expositor,* does not put any unfair interpretation upon the remarks of my colleague. I am very happy to say that that is probably characteristic of the people that he and I have the honour to represent. They try to face issues and facts fairly and clearly.

I read the speech of the hon. member and I could not read into his remarks any complaint from the people of Brantford. The fact of the matter is that on page 2352 of *Hansard* he made this statement:

> The people are not complaining about having these airports in their districts, but there are two sides to the story.

It is only fair to the hon. member for Brantford City to say that he emphasized the two sides of the situation. The hon. member for Souris (Mr. Ross) has justed stated that he would like to have some of these airports in his constituency, and that only brings to light the desirability of this privilege. However, for every privilege we receive there is a corresponding responsibility, and the hon. member for Brantford City pointed out that the people of Brantford welcomed the opportunity of accepting the responsibility that goes with that privilege.

I feel I should refer to the remarks of the hon. member for Northumberland, Ont., (Mr. Fraser) and the hon. member for Souris. There have been no people more anxious to serve in this war effort than the people of Brant and the people of Brantford whom the hon. member and I represent in this house. The record of enlistments from this particular community will compare favourably with that of any other section of the dominion. I do not want to boast, but the fact is that in the little town of Paris in my constituency, which takes in part of the city of Brantford as well, 8 per cent of the population has enlisted. That is evidence of their desire to serve. From now on the less said about these remarks the better, but if anything is to be said I hope that mention is made of both sides of the case.

Mr. MacNICOL: What are the two sides?

Mr. WOOD: The privilege and the responsibility. The hon. member was just emphasizing that there were two sides. I might mention that one of these military camps is situated on property which was donated to the Department of National Defence by the Six Nations Indians. There has been little or no comment about that. There will be no taxes to be paid by the government, in fact there is no obligation whatever upon the government. This is characteristic not only of the people of the Six Nations but of the people of the city of Brantford. I might say also that the Six Nations council donated $1,000 annually to the Red Cross from their meagre funds. I ask hon. members, therefore, to familiarize themselves with some of the contributions made by the people in this district before they make any criticism of them.

Mr. CHURCH: Madam Chairman, there are one or two matters I should like to have the minister keep in mind when the air conference meets next week. I know he is anxious to get away and I shall be as brief as possible.

In his statement the minister made reference to his recent visit to Great Britain. As I see it, the war situation to-day has changed since then and since the battles in the far east; we have lost the command of the sea in the Pacific, and I would ask the minister to bear that in mind at the air conference next week. I believe that that conference will be the forerunner of what Australia has been asking for from the British authorities for six months, namely, a war cabinet on which Britain and the dominions will be represented, as there was in the last war, for quick and united empire action. The situation so far as Australia, New Zealand and South Africa are concerned has changed greatly through Japanese command of sea power in the Pacific and the way Japan is roaming around there. These three dominions are in grave danger. Mr. Curtin has spoken very strongly of the need of Australian representation where empire policy is being discussed, and Mr. Menzies, the former prime minister, also referred to it in this chamber and since. Those two very able prime ministers of Australia pointed out that empire policy decisions with respect to the war, and affecting all these dominions, were being made in the far east and other theatres when they were not present, decisions which went against them, and that they were not consulted on what empire policy should be. I think that is shown by the loss of our supremacy of the sea in the Pacific and by the battles in the far east. In the last war the empire war cabinet was a great success. Each dominion prime minister or his nominee was a member. It saved the war from being lost. I hope the minister will bear this in mind and not press too strongly for anything different at the air conference next week or for Canada to act separately from the other dominions.

We are all proud of what Canada has done so far in the air. It makes a glorious page in the history of the empire, but I hope that the minister at that conference will listen to Australia and New Zealand and the mother country because I believe that the most important matter to be decided at the conference is whether or not the dominions are to have a say in empire policy in the far east, in the Pacific and on the Atlantic and other theatres of war—to act together to save the empire—and of course air power is intimately related to the command of the sea, as well as command of the land. Australia and New Zealand, after the losses in the far east, made a strong appeal to the United States for help, and they are getting it. Canada should qualify for aid on the same status also, for its empire training scheme.

The defence policy of this country has two cardinal points: one is home defence, and the other is to protect Canada's neutrality in case

the American continent is attacked by a foreign power, meaning Japan; and Japan has already made that attack at Pearl Harbour, an attack which shocked the civilized world. In my opinion, if Australia and New Zealand can get aid under the lease-lend or other bills of the United States, and aid as allies, and they are getting it, so should Canada; for this country has helped the united nations war effort by building advanced air bases on both oceans and by the empire air training scheme. If any country is entitled to qualify for aid under the lease-lend and other aid bills it is Canada, and I hope that these matters will be remembered at the air conference next week.

I trust that something will also be done to rectify the inequalities of pay in the air force, which are very serious. Some civilian members of the air force are in uniform as pilot officers—a misnomer—and receive higher pay than pilots, sergeants, gunners and observers who are flying over Germany. I think the minister himself, who is a good business administrator, will agree with me that changes should be made in that respect immediately and these inequalities removed.

I should also like to see a change made in the syllabus and schedule of training at the manning pool in Toronto. In the last war the men remained at the manning pool for only two or three days, but in this war some of them have been there for weeks and months, some of them from last September, and for over a year have had only guard duty and infantry drill. Perhaps the minister has given some explanation of this, but I know that it is very unsatisfactory to the men, many of whom gave up good positions expecting to get overseas at an early date, to have to stay at the manning pool doing precision drills, infantry drill, marching up the Humber and back, and doing guard duty. It is far too much for them; it is a waste of time where training is costly and should be speeded up.

As I said when the Minister of Munitions and Supply introduced his first bill in connection with the Trans-Canada Air Lines, I wanted him to take over the pioneers, the civilian clubs. I appreciate what the civilian flying clubs did before the war. I said in the last parliament, when I was sitting where the hon. member for Lake Centre now sits, that the civilian flying clubs did great work before the war in giving flying instruction and in educating the people to become air-minded at a time when Canada was sleeping. I think these schools should be united now in an empire air training scheme with the two great railway systems of this country, because civil aviation after the war is going to be the greatest thing in the world, particularly in Canada. That is one of the great issues in England to-day, and the air minister for Great Britain made a statement about it after there had been a prolonged debate in parliament. I hope the minister will bear these matters in mind at the air conference next week.

Mr. MacINNIS: I should like to refer to a question I had on the order paper for a couple of weeks and which was answered yesterday by the Minister of National Defence for Air. My question had reference to the deputy minister of national defence for air. I will read the question and the answer and then point out what I believe to be a wrong condition of affairs.

My question consisted of five parts. Question 1 was:

Is S. L. de Carteret, deputy minister of National Defence for Air?

The answer to that was "yes." Question 2 was:

If so, (a) when was he appointed, (b) what is his present salary?

The answer to that was:

(a) February 1, 1941; (b) no salary or allowance from the government.

Question 3 was:

What was his business, trade or profession before accepting his present position with the government?

The answer to that was:

Mr. S. L. de Carteret, vice president and general manager, Canadian International Paper Company; president, Continental Paper Products Limited; president, Masonite Company of Canada Limited; president, International Fibre Board Limited.

Question 4 was:

Does he continue active connection with his former business, trade or profession while in the employ of the government?

The answer to that was "yes." Question 5 was:

If so, what part of his time is given to his duties with the government and what part to his former business?

The answer to that was:

Full time service with the government and a portion of his spare time thereafter is devoted to the general supervision of his former business.

I think it is wrong policy to have what is generally termed a dollar-a-year man in the position of deputy minister of a department as important as the Department of National Defence for Air. This department is important enough to have a deputy minister who would be free to give his full time to the work of the department, without being distracted in any way by business concerns of his own. It

should be a matter of policy for the government that no business man shall be put in an important civil service position and continue at the same time to attend to his own businesses. I do not know whether the minister knows it or not, but there are two things which I should like to tell him. First, the people of Canada generally are very much disturbed about the influence of big business in the government.

The people of Canada have not forgotten the exposure of big business methods made by a special committee of this house which was later appointed as a royal commission, in 1934; I refer to the price spreads and mass buying committee and commission. Secondly, I tell the minister that the present government of Canada, despite professions it may make to the country, has an exceedingly bad name with organized labour. Organized labour is convinced that the hostile labour policy of the government is influenced by these big business men who have unlimited access to the government. I could name quite a number of them—men I have known over the years—who have opposed consistently every attempt by the workers to better their condition and every item of social legislation which was brought forward in either this parliament or any of the legislatures of the provinces.

With regard to the deputy minister of the Department of National Defence for Air, it has been brought to my attention that the employees affiliated with one of the Canadian congresses have been negotiating with Continental Paper Products Limited since November, 1941. The agreement has been before Mr. de Carteret since early in March of this year, and they cannot get any action on their negotiations because he says he has not time to deal with the matter. The Department of Labour advise this organization that they are quite powerless to compel Mr. de Carteret or anyone else to negotiate with or recognize labour organizations. What I want to point out is, that this government has gone on record as favouring the principle of collective bargaining; it passed an order in council to that effect and gave it a great deal of publicity, but that order in council has not only been ignored by the heads of industry generally throughout the dominion but has been particularly and flagrantly ignored by business men in high positions in the government, or if you like, in the civil service. Therefore I think we have a right to insist that deputy ministers in charge of departments such as the one under the Deputy Minister of National Defence for Air should be civil servants, without any outside business ties or obligations. There is no doubt that a person qualified to do that work can be found, and I insist that we adopt that principle and see that the government is not influenced by persons who are acting directly contrary to the very principles for which we are fighting.

Mr. POWER: I am sorry that I have not the time to go into a discussion of this matter with my hon. friend. I can only express my regret that he takes advantage of the opportunity presented by the presentation of service estimates, an appropriation of many millions of dollars to get on with the war, to endeavour to influence negotiations between the man who happens for the time being to be the deputy minister of this department and a labour union. In my opinion that is entirely irrelevant to the present discussion.

Mr. MacINNIS: No, Madam Chairman. The minister has no right to impute motives to me. I have not imputed motives to the minister; I have been dealing with the facts; and the minister cannot get away from those facts by imputing a motive to me. I ask the minister to withdraw the imputation.

Mr. POWER: I am dealing with facts. The facts set forth by the hon. gentleman are that certain labour organizations—

Mr. MacINNIS: I insist that the minister withdraw his imputation.

An hon. MEMBER: Order. The Chairman is on her feet.

The ACTING CHAIRMAN (Mrs. Casselman): The minister has the floor, I believe.

Mr. MacINNIS: But is the minister going to withdraw his imputation?

Mr. POWER: I have not made any imputation.

Mr. MacINNIS: Oh yes, you have. You said I took advantage—

The ACTING CHAIRMAN (Mrs. Casselman): The minister has the floor.

Mr. MacINNIS: But, Madam Chairman, the minister has not the floor until he withdraws the statement to which I object. That is a rule of this house, that no one can impute motives to anyone else.

Mr. ROWE: Who is chairman?

Mr. MacINNIS: I do not care who is chairman; I have my rights in this chamber.

The ACTING CHAIRMAN (Mrs. Casselman): The minister has denied that he imputed any motives to the hon. member for Vancouver East.

Mr. MacINNIS: But the minister said that I took advantage of this occasion to influence labour negotiations.

Mr. POWER: Well?

Mr. MacINNIS: Well, I insist that the minister withdraw the statement.

The ACTING CHAIRMAN (Mrs. Casselman): Will the hon. member for Vancouver East please state what words he is objecting to?

Mr. MacINNIS: The minister said that I took advantage of this occasion when this appropriation was before the committee to influence the negotiations in a labour dispute. Now, I insist that he is imputing a motive to me, and that he must withdraw.

Mr. POWER: I suppose I may speak to the point of order. My hon. friend stated that the question at issue between a labour union and a company of which my deputy is, I take it, the head, had been before my deputy for several months, or since the month of March, and that my deputy would not listen to the representations of labour. I think that is stating fairly what the hon. gentleman has said, is it not?

Mr. MacINNIS: No, I said he had always said he was too busy to deal with the matter.

Mr. POWER: All right; whether he said he was too busy to deal with the matter, or would not listen to them, makes no difference to this argument. And upon that, I reply to my hon. friend by saying that I regret that he should take advantage of these estimates to endeavour to influence negotiations between a labour union and a company with which my deputy is connected; and I think that that is perfectly in order. I do not see anything wrong with it.

Mr. MacINNIS: Oh, no. That is an imputation. I want the minister to withdraw it.

Mr. ROWE: It is a statement of fact.

Mr. POWER: Yes, it is a statement of fact.

The ACTING CHAIRMAN (Mrs. Casselman): I think this is an imputation of motives, and would ask the minister to withdraw it.

Mr. POWER: This is indeed an historic occasion. First, I withdraw. I must say that in a long career in this house I have rarely been called to order. And I have never been called to order in a manner which I appreciate so much as I do in this case. I unreservedly withdraw my imputation whatever, at your request, Madam Chairman, and simply say I suggest that a discussion of this matter at the present time is, to say the least, irrelevant—which I hope will not be considered as imputing motives to my hon. friend.

[The Acting Chairman (Mrs. Casselman).]

Mr. de Carteret is not what might be called an ordinary big business man. Up to seven or eight years ago he was a forestry engineer employed by smaller companies, but owing to his ability he was taken into the organization of the International Paper company. He is an extremely able man, accustomed to business and to the carrying on of work in connection with business questions, rapidly, expeditiously and efficiently.

Mr. HANSON (York-Sunbury): And large business too.

Mr. POWER: And large business. When a year ago I needed a deputy minister very badly I went to Mr. de Carteret, who had been a friend of mine for years. In years gone by he was not so closely connected with what is called big business. I went to him and begged him to come here. At first he refused because he said he had his own affairs to look after and that he was not familiar with matters connected with the air. At the urgent solicitation of the Prime Minister of Canada himself, who had checked, as other members of the cabinet had done, on the qualifications of Mr. de Carteret, Mr. de Carteret consented to come here at his own expense, paying every cent of his hotel and travelling expenses, at no cost to the government. Since that time he has worked night and day. He has spare time. Is there any man in this house who has not spare time, who sometimes does not play golf, who sometimes does not go fishing, who sometimes does not play bridge? Well, during that time, instead of doing that, Mr. de Carteret looks after the details of the business. It so happens that he is president, vice-president or director of some company in which there are the makings of a labour dispute. I do not know the details about it but I still do not think that they should be brought up on these estimates. I still do not think that should be a reason for attacking him personally. Anyone who knows him or has had business dealings with him knows that Mr. de Carteret has come here from the highest and most patriotic motives, and if there is a dispute between labour and himself, let them fight it out between them. That is their business. In all sincerity I ask my hon. friend not to drag that dispute into these estimates when the

whole matter of the air training scheme and the fighting of the air battles of the empire is concerned. I ask him if he really thinks that is the right thing to do. Here we are with the enemy at our gate. We are trying to get these estimates through, trying to pass a war appropriation, trying to explain to the house what we are doing in connection with the war, and our attention is being diverted by attacks on a deputy, not for any lack of efficiency in his job, but because he and my hon. friend or my hon. friend's friends do not agree on some subject which is altogether outside the matter at present under discussion. I do sincerely ask my hon. friend if we cannot drop this thing. I have no objection to his making a speech and telling me all about it, but I say to him, will you drop attacking de Carteret for the moment and let me get on with my job.

Mr. MacINNIS: Mr. de Carteret is in the Department of National Defence for Air and as such is a subject for discussion here. I have said that the principle is wrong of having civil servants as a gift, if you like. The Dominion of Canada should be able to pay for the services of its civil servants or those who serve it and there is no reason why we should have this state of affairs. No matter how clever a man may be there is no reason why we should be obliged to take his services. I am saying that the relation between the government and the workers in industry in this country is just as bad as it can possibly be and there should not be people in important positions in the government who are influencing its policy. That is not a good thing.

Mr. POWER: He does not influence the policy of the government. He might influence the policy of the department but he has nothing to gain. His concerns are not interested in anything the department of air does.

Mr. COLDWELL: In my opinion the point made by the hon. member for Vancouver East (Mr. MacInnis) is well taken. In acquiring the services of big business men who still retain their connection with their private businesses the government is making a grave mistake. Whether the point is well taken or not, the policy is a mistake.

Mr. POWER: That is a matter of fair discussion.

Mr. COLDWELL: I will not argue it further. In view of the conference next week I want to reiterate, if I can assist in strengthening the hand of the minister, what I said the day before yesterday about the Royal Air Force schools in this country and the treatment the boys are getting in the matter of food. Since then I have heard further regarding that situation and I urge upon the minister that he endeavour next week to obtain control for this dominion of the schools that are being established here. I think the Prime Minister was on sound ground years ago when he took the stand that if schools were to be established in Canada they ought to be Canadian schools. The other afternoon the minister stated that he trained here pilots and other members of air crew and air force personnel and that when they went to Britain they were no longer in Canadian squadrons but were drafted into the various R.A.F. squadrons. If that is what is done in Great Britain the minister has a perfect case for asking that men coming to this country should be under the control of our own department during their period of training. If that is not granted, the minister has a much better case for asking that the boys who go from this country be retained in Canadian units, under the direction of course of the supreme command, and utilizable for any service that may be required in connection with the war effort. None the less there should be Canadian squadrons overseas controlled by Canadian officers and directed jointly of course by the grand strategy of the united nations. Supervision of training schools is quite a different problem. That is the feeling of a number of members of this house. We do not like the present situation. We should much prefer that Canadian boys, who after all come from a different environment, should be with their friends when they go overseas. The environment abroad is different; they meet young men coming from another environment that is strange to them, and therefore they are not as happy as they might be. I have reason for emphasizing this particular point. We of this group wholly agree with the point of view that so far as possible our boys overseas should be retained in their own Canadian units, flying together, working together and acting together generally. Never mind who pays them. My hon. friend very rightly says "and paid for." After all, I think the British people understand pretty well that Canada is paying handsomely for her part in this war. The substantial gifts we have made to Great Britain of our own free will are greatly appreciated by the British people, but that does not mean we should forget that a few people there still regard us as colonials. This is a self-governing dominion, and as such it ought to control its own nationals wherever they may be.

Mr. NOSEWORTHY: I wish to bring to the attention of the minister and the committee certain information tabled on May 13 when I received answers to the following questions as recorded at page 2385 of *Hansard:*

1. On what date was the National Steel Car Corporation at Malton authorized to proceed with the production of Martin bombers?

The answer was "April 26, 1941." My second question was:

Was this authorization given by the Canadian or British government authorities?

The answer was: "Canadian government authorities." I presume, from the answer the minister gave to a question I asked two days ago, that that contract would be authorized or requisitioned from his department. The third question was:

On what date was this project abandoned?

To which the answer was given:

Advance notice of cancellation was given on November 26, 1941.

I call attention to the fact that that was eight months after the project was authorized. The answer continues:

Final cancellation was given on December 29, 1941.

A full nine months after the beginning of the undertaking.

The next question was:

How many man hours of time were spent on this project?

I am surprised at the answer to this question, in view of the assurance given us by the Minister of National War Services some days ago that the committee investigating war expenditures last year was satisfied with the checks provided in this matter. The answer is:

An audit has not yet been made on this project—

—although that was completed five months ago—

—and man hours have not been determined.

My own information from the plant is that as many as 500 or 600 men were engaged on that project for the eight or nine months. The fifth question was:

What was the total public expenditure on this undertaking?

The answer is:

The total expenditure on this project is $781,907.

There is then an explanation that some of this expenditure will be recovered by using material bought for this project on a later project on which this company is engaged, and also by sale of jigs and tools that were prepared for this work. The next question is:

What were the financial arrangements with the above mentioned company for this undertaking?

The answer was:

The contract placed by the department with the National Steel Car Corporation was a target price contract.

The next question was:

How many Martin bombers were there produced?

The answer was none. The next question was "Why was the project abandoned?" And the answer:

The manufacture of the Martin B-26 in Canada was abandoned because it developed—

That is eight or nine months after the project had been under way.

—that a very substantial amount of reengineering had to be done before the plan would be satisfactory—involving perhaps six months' delay.

In view of the fact that the British government was pressing for another type of bomber and that this particular type could be obtained in the United States in less time than it took to produce it in Canada, the plan was changed.

I think the people of this country are entitled to know why it required eight or nine months to discover that a certain process of reengineering was required on this project, after well over three-quarters of a million dollars had been spent. Here you had hundreds of men working and this expenditure made at a time when the planes were needed. The minister should give the committee some further explanation. Nothing caused more distrust in the vicinity of greater Toronto of the ability of the government to produce in our factories the things needed in our war effort than the outcome of this experiment. These workers were all working in the greater Toronto area, and everyone was asking: Why is it that the government has to engage hundreds of men for eight or nine months on a project and then abandon it? When I visited this plant a couple of months after they had ceased production of this particular aircraft, the jigs which had been prepared for the work were lying all around outside. Engineers of the plant told me that these jigs were absolutely valueless for the production of any other plane. Would the minister enlighten us on this subject?

Mr. POWER: I do not know that I can enlighten my hon. friend very much. It was one of those deals that are often made, we started to get into production of the Martin

bomber, and I think my colleague the Minister of Munitions and Supply knows more about the imperative reasons why, at the request I imagine of the British government, we switched to another type of aircraft which was perhaps more needed in view of the fact that Martin bombers were, I take it from the reply, being produced in large quantities and more efficiently in the United States.

It may also have been that the conditions of warfare had changed, that the Martin bombers were perhaps not as much required as the new type which is now being produced. It is almost impossible from day to day, with the changing conditions of warfare, to see just what should be produced at a given time. We endeavour to give forward orders as far as possible, but changes occur so frequently that it is difficult for me, close as I am to the picture in my own department, to keep up with them. Sometimes we have ordered a certain type of machine, only to find that the bugs were not out of it as yet, that it was not being produced as rapidly as we desired, or something else, and we had to turn round and produce another type. In combat and bomber machines frankly I see nothing incongruous in spending even the large amount of money mentioned by my hon. friend and then deciding to go into something else.

Mr. NOSEWORTHY: On a visit to this plant nearly three months after this project had been abandoned, I found that the same company was working on no less than five different contracts, in a small plant, and that they were just considering tooling up for the Lancaster bomber, three months after they had abandoned the project mentioned.

Mr. POWER: I would not know about the five different types being manufactured there. The Minister of Munitions and Supply probably will be more familiar with the whole transaction than I am. I shall inquire so far as the air force is concerned, and if my colleague does not give a satisfactory answer I will tell my hon. friend just why we abandoned the project, if I can do so without endangering security. I do know we abandoned it. I do know that in my estimates last year we had an amount of $40,000,000 set apart for it. We did abandon it, and I take it that this would not be done because we wanted to do so, but must have been done on the best advice of our technical officers.

Mr. CASTLEDEN: Could the Minister of Munitions and Supply give us any statement about the matter?

Mr. POWER: Please let me finish first.

Mr. GREEN: Toward the close of the sitting yesterday afternoon I asked the minister whether or not Canada is preparing to train parachute troops. From his reply I understood there were no plans in contemplation for that type of training.

Mr. POWER: No plans in my department.

Mr. GREEN: Well, the air force would have to cooperate with the army in such training.

Mr. POWER: I presume so.

Mr. GREEN: The minister is very progressive, perhaps more so than many of his colleagues. I think he realizes that above all things Canada must be up to date in her war preparations. The progress of the war to date has shown quite clearly the importance of parachute troops and also of carrying troops by air. I understand that the British are training many troops for work of this type. It seems to me that Canada would be an ideal place to carry on such training.

Mr. POWER: I have put in requisitions for many transport planes, but it is going to be a long time before I get them.

Mr. GREEN: Surely this question is of the utmost importance to the British army—

Mr. POWER: It is.

Mr. GREEN: —and to the Canadian army, and it seems to me that these men, not only Canadians but also British troops, could be given this sort of training in Canada. Furthermore, we need parachute troops for our army in Canada, which may have to defend this country, and also our troops here should have training in being transported by air. Would it not be possible to take steps without further delay to get training of this type under way? Perhaps we could send some of our men to the United States in order to get this training started. It does seem to me that Canada has been slow in preparing for this modern way of fighting. There has been too much of the 1918 complex. I should like to see the minister take the lead in this matter. It involves his department; I feel that if he were to take the lead we would get results, and results along these lines are of vital importance to Canada at this time.

Mr. CASTLEDEN: Yesterday the minister said he would find the reason for a discrepancy which existed in the figures with regard to the home war establishment—

Mr. POWER: I have not that information yet. At some future date I will place on *Hansard* answers to several questions, particularly those concerning the training schools. I hope it may be done before this appropriation bill is put through, but if it is necessary to have the training schools discussed, I will undertake to find an opportunity whereby that may be done.

Mr. DIEFENBAKER: Has the minister any idea as to when? Would it be two weeks from now?

Mr. POWER: Well, I thought it would be the following day, but yesterday morning they told me that it would take three or four days anyway. It may not be until next week.

Mr. FRASER (Peterborough West): Are parachute troops being trained in the United States?

Mr. POWER: I have no idea. I do know we have plans for transporting troops by air and possibly using gliders. The matter is now being studied, transport by gliders and transport by planes, but transport planes are the hardest things in the world to get.

Mr. FRASER (Peterborough West): Could we send some of our men to the United States to see how that training is carried on, so that we might be prepared when the time comes?

Mr. POWER: I do not know whether or not they have that training in the United States.

MUNITIONS AND SUPPLY

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Chairman, since I last reported to the house on the work of the Department of Munitions and Supply, the nature of our problems has changed considerably. I may say that up to the present time the department has placed contracts totalling in excess of $4,000,000,000, which is a sum considerably larger than the national debt of Canada prior to the outbreak of war. Our programme is by no means frozen, as is evidenced by the fact that capital assistance granted in the month of April exceeded $25,000,000. Capital assistance granted up to the present time amounts to about $380,000,000, or slightly less than 10 per cent of the total orders for munitions placed by the department.

The last time I reported, the majority of our plants were still in the process of tooling up and expanding production. To-day by far the greater part are fully tooled and staffed, and are producing at something like the maximum rate. We have had some very satisfactory results from these plants. In nearly every case we have found that the output considerably exceeds the objective for which the plant was built. Our explosive plants are, I think, producing something like 75 per cent over the estimated plant capacity. There has been some balancing up carried on, but it has been possible to step up the production of these plants to this extent. One gun plant is producing two and a half times the guns that we anticipated it would produce, or that we provided machinery for. In general, our preliminary estimates of production have been found to be conservative, and we have very little to apologize for in that connection.

Another satisfactory feature of the programme is the cost of our products, because costs are a sure index of efficiency. We find that where a plant is in full or nearly full production, the cost of our product compares favourably with the cost either in the United States or in the United Kingdom. We find also that our quality has been all that can be desired. Frequently I have been told officially that the ammunition we sent to England, both small arms and artillery, is placed in the preferred category and is eagerly sought after. We used to mark our small arms ammunition "suitable for use by air force," but we received objections from the other services that the air force was being given preference with our ammunition. We now label it without reference to the air force in order that all three services may share in it.

I might run briefly over the operations of the department and perhaps prepare the way for any questions that hon. members may desire to ask. In the matter of production, speaking generally with reference to the criticisms that have been made in this house of management holding back production or of inefficient management, I think the executives of my department can now stream-line a plant as well as any executives in Canada. We can show you, Mr. Chairman, some of the finest organizations to be found anywhere, plants of which any manufacturer would be proud. But I must say that it is impossible to stream-line a plant and plan work for the various units while the plant is expanding rapidly.

As an example of this, I would point out that the aeroplane industry has expanded its personnel forty times since the war began. The average intake of new men into this industry exceeds 2,000 a month. These men come from the farms and the schools without any mechanical training, and it is necessary to teach them to do the work they will ultimately perform. For that reason, any one going through an aeroplane factory often sees men standing around who seem to be idle. The fact is that they are studying the work

of the men in front of them; they are, in fact, learners. We also have men who say that they could turn out more work, but we find that we must insist on less speed and more care at the start. I recall one very bright man who went into an aeroplane plant full of zeal and ambition but with absolutely no mechanical knowledge. The foreman stayed over him the first day to teach him one particular process, but on the second day he was placed on his own. He decided that he would show the foreman what he could do. He turned out a tremendous amount of work, but it was found that he had destroyed over $3,000 worth of stock and had produced nothing which would be useful in an aeroplane.

I could cite a number of examples of the difficulty of organizing a plant while it is being started up or where it is subject to rapid expansion. If any hon. members go through a new plant and hear stories of that kind, I hope they will assess the full picture. I hope they will ask: "Is it a plant being expanded, or is it a plant that is up to capacity and should be running efficiently?" When hon. members hear stories of men who can do more work, I hope my hon. friends will take that into account.

The same thing, of course, applies to plants that are retooling. It is an obvious sequence of war that the type of weapons changes from time to time. A shell that is needed to-day may not be needed to-morrow. If that is the case there is only one thing to do, tear down your tooling and tool for the type of shell that is required. The type of air fighting changes, and it is necessary to change the type of aeroplane or perhaps introduce modifications on the type being built.

We go out of the production of domestic motor cars, and it is necessary to stop production lines to change the tooling and accept a loss of time, even amounting to several months, before the production line can be turned over to the new product. Everyone who has been associated with the motor car industry is well aware of this situation. Ever since motor cars have been built by mass production, the industry has expected a lay-off of from two to three months in the summer while the production lines are being changed for the new models. The production of a new model is started over a year in advance of the first car being produced. That is incidental to mass production. It is not a situation confined to motor cars. It is true of almost every article that depends upon mass production for its output.

Just to run over the progress in the various fields, as hon. members will appreciate, our shipbuilding industry is still expanding rapidly. We have perhaps two yards in Canada that are fully manned; the other seventeen yards are still in progress of expansion. One new large six-berth yard in Montreal laid down its first keels last week. At the present time we are launching a 10,000-ton merchant ship every four days, and we expect later on to bring this period down to three days. The yards of the great lakes and some of the yards on deep water are full-out in the production of corvettes and mine-sweepers. Those yards are still being expanded; new berths are being built, and that type of construction is getting near the objective as far as output is concerned. In the small boat field I think we have built some 14,000 small boats since the war began, and this field is fairly active, particularly in connection with the wooden Fairmile, the wooden mine-sweeper and smaller craft.

In the matter of aircraft, our production is now stepped up to about 400 planes a month, and we have plants that are not in production. A large plant on the west coast that is building PBY boats is just coming into production. I believe the first plane is being test-flown at about this time. We have three other plants which are working on new types of planes and which will not be in production for some months. The plants that have been standardized on certain models and given unlimited production are beginning to step up their production to very satisfactory proportions. I may say that at the commencement the aeroplane industry was quite small, and orders for our own air force were small. The industry was then dealing direct with England and taking small orders from there. We had orders of fifty, one hundred and two hundred planes in process, and many changes in tooling were necessary. We have now reduced our production to nine types of planes, and the plants are cleaning up old orders and concentrating on one type of production for each plant with accordingly improved results. At the present time we are looking after all the requirements of the air training plan. We are building operational planes for our own air force, and we have accepted substantial orders for operational training planes from England and from the United States.

I should like to speak particularly of Federal Aircraft company. That company has been criticized severely in this house, and recently a number of newspaper and other articles have appeared reflecting on its work. I think the work of this company is more outstanding than any other item of aircraft production. The reason for starting the company, as hon. gentlemen will remember, is that at the time of Dunkirk, we suddenly received notice that

the promised Anson planes for our air training programme could no longer be sent from England. The company was formed in July, 1940. It had no plant. All the plants at that time were loaded with orders up to their then very small capacity, and the company was told to go out on the highways and byways and find manufacturing capacity for the planes it was to build.

The company had also a big redesigning job on hand. The Anson plane was suitable for English production and designed to English standards, and it was impossible to break that plane down and have it built to English standards in the small shops of Canada. While this redesigning job was going on, numerous changes were made in the plane. Originally it had a fixed undercarriage, but the design was changed and a retractable undercarriage put in. A new type of motor was also put in the plane, and numerous other changes were made in the fittings to make the plane suitable for Canadian training requirements. That redesigning job was carried through, and the first plane was ready for flight in June, 1941. Production of the Anson has reached well over 600 planes. We planned for a certainly monthly production, and I may say that the actual production has run 50 per cent over the planned production and could be speeded up more than that. We have not only filled the requirements of the Canadian air force but have accepted orders from purchasers elsewhere, and we expect that the industry which has been established by Federal Aircraft, which carries some fifty or sixty plants in all parts of Canada, will be a continuing industry for a very considerable time.

Mr. JACKMAN: Does the minister mean after the war?

Mr. HOWE: No, but certainly until the end of the war.

In automotive vehicles the industry is going full-out. Over a quarter of a million vehicles have been produced and shipped abroad. I think our vehicles have been in every area of active combat. The most interesting of all the vehicles is the universal carrier. Its production has been stepped up to a very large output indeed, many times the output that was first contemplated.

In tanks, the Angus shops are running at a very uniform pace, meeting the objective that was set for that company. No week goes by, I think, when the required number of tanks is not produced. We made certain commitments on tanks and other equipment for Russia, and at the end of the first three months we were exactly even with our commitments, having shipped on the due date every tank and every piece of equipment that had been promised.

Our other tank arsenal, which is the second largest tank arsenal on this continent, is not up to capacity. There has been delay in obtaining delivery of transmissions. That has been the main difficulty. The output of transmissions for all tanks on this continent was organized in the United States, but the manufacturers have not lived up to promises, with the result that for the last several months every transmission as it is received can be put into a tank and the tank driven away at once. If a transmission comes into the factory in the morning, it goes into a tank, which is driven out of the factory the same afternoon. All the problems connected with the design and production of tanks have been solved, and to-day it is just a matter of assembling the necessary material to bring our big tank arsenal up to its objective.

Mr. DIEFENBAKER: Any production of engines in Canada?

Mr. HOWE: No; the engines are not made in this country.

Mr. DIEFENBAKER: Transmissions?

Mr. HOWE: Nor transmissions, except the infantry tank transmissions. They are made in this country. The Ram transmissions are not.

In the production of naval guns great progress has been made. We are making quite a list of naval guns. I think all of them are in substantial production, except a factory in Vancouver which is just getting into production.

We have had particularly good results with the production of gun mountings and the fittings that go with the gun, which are more of a mechanical problem than the gun itself. In every case our gun-mounting programme is ahead of the manufacture of the guns themselves.

We have also carried out a very considerable programme, for both our own navy and the British navy, of producing special radio equipment and accessories such as firing mechanisms for naval ships.

In the matter of field guns and small arms our programme is almost completely in production. We have one plant at Windsor making automatic guns for tanks, which is not yet in production. We intended that plant for a different type of production, but due to changing requirements overseas we had to retool, which has rather set back production. But that plant will be the last of

our big automatic gun plants to go into production. The Inglis plant—we have expanded that again and again, and any figures I have given in the past about the production of the Bren gun, the Colt-Browning and the Boys anti-tank gun, have been greatly exceeded. Unfortunately I cannot give actual production figures because I have agreed that we shall not give even approximate figures for this type of production.

The government arsenal making rifles—Lee-Enfields—and Sten guns is getting up to capacity. It is not at capacity with respect to rifles but is stepping up at the present time at the rate of 4,000 rifles a month, and we hope to get capacity by August. In the matter of Sten guns the production is very large indeed, and is stepping up by a thousand or more each month.

As regards field artillery, the 25-pounder guns are being produced at more than fifty per cent over the rated capacity of the plant. The 3·7 anti-aircraft guns are coming into production. A substantial number of guns and mounts were shipped last month as complete and tested, and it is expected that the output will step up by geometrical progression as we go on. That is the largest and most complicated gun that we have undertaken, and the bringing of it into substantial production is a major feat of our gun programme.

The Bofors gun programme, which was delayed because of production troubles, is now swinging along very well. The one hundredth gun was produced last month; the number will be very substantially increased this month, and we expect to bring that plant up to full production about September. All present needs—certainly all needs in Canada—have been supplied, and we are now taking care of export requirements.

In the tank and anti-tank gun field, as I mentioned before, output has greatly exceeded our plans, and we are in a most comfortable position in both those supplies. We are making a very large number of bomb-throwers, several sizes, rocket-guns, and almost everything in that line, and all in very substantial quantities.

In the matter of ammunition we have forty plants at present turning out artillery ammunition, and it is being produced at the rate of millions a month. Types have changed frequently, which caused interruptions, but in general the production is well over the planned capacity.

We are also turning out aerial bombs, trench-mortar bombs and anti-tank mines in very considerable quantities.

The chemicals and explosives branch is still being expanded as requisitions for new explosives and new chemicals come to us. This has been a most satisfactory branch of the work of the department. As I said some time ago, many of our explosive plants—I believe practically all of them—are producing some 75 per cent over the original planned capacity. Our chemicals are being expanded to keep up with the increased rate of production, and we are really turning out ammunition—sufficient to do all our own shell-filling, of both small arms ammunition and artillery ammunition—and bombs, and we have a very large surplus which is shipped to the United Kingdom.

In the matter of small arms ammunition we are getting up over a billion rounds per annum. Our own arsenals, and government plants under private management have all come into production in a very satisfactory way. We are still expanding very largely in the small arms ammunition field. It seems to be one field in which Canada excels all countries. We have been pressed continually for more production and a wider variety of production. We are taking on new lines as rapidly as we can absorb them, and I think we can say that the expansion of that type of production will go on for a considerable time.

The industry and subcontract coordination branch is making steady progress. This is a most helpful branch of our department in the present situation. It is making a specialty of helping displaced industries, and remarkable results have been accomplished. I will not say for a minute that the branch is able to take care of all displaced industries. Many peace-time industries are not equipped to do useful war work, and these cases present a real problem. But the industry and subcontract coordination branch have done much to help to fill up the small machine-shop, and a great deal to put war work into displaced peace-time industrial plants.

The construction division is extremely active. I believe that both in the field of buildings and in that of airport construction the year 1942 will be the largest building season we have had. Each season we think the next season will see a slackening off, but the needs of our air training plan for operational airports, and for new training centres for both the military and the air force, seem to pyramid rather than to decline.

The wartime industries control board is a matter of great interest at the present time. I will follow my notes in discussing the work of that board.

The intensification of the war has reemphasized the importance of the part played by the system of economic controls centralized and coordinated by the wartime industries control board. Within the Department of Munitions and Supply there are twelve controllers, whose duties are to ensure that the materials or services within their respective productions are forthcoming for war needs in adequate quantities. Each of these controllers is therefore endowed with wide powers appropriate to his particular function. Each controller, broadly speaking, exercises powers to do two things: first, to see that the necessary productive facilities are expanded as far as possible; second, to limit and, where necessary, to prohibit production for civilian use in the case of those materials which are scarce in relation to war and essential demands.

I might say that the difference between the industries control board in my department and the wartime prices and trade board in the Department of Finance is that my controllers interest themselves only in materials and supplies which are urgently required for war, whereas the other board deals with peacetime commodities.

It will be readily realized, however, that if the difficult and complex task of diverting production away from civilian toward war use is to be accomplished in an effective, orderly manner and without unnecessary dislocation, a high degree of coordination of policy and procedure is necessary. The necessity of such coordination and control is the more apparent now that we have reached the stage that restrictions on production for civilian purposes must in many instances be severe, and when in some cases outright prohibitions are necessary.

Accordingly, since its reconstitution in August, 1941, the wartime industries control board has existed to promote coordination and integration of the functions of the twelve controllers and also to provide a centralized point of contact between the control agencies of this department and other governmental agencies dealing with related problems.

The board is structurally designed to facilitate such coordination. It is composed of the chairman, who is also the director-general of the priorities branch of the Department of Munitions and Supply, and twelve controllers; the chairman of the wartime prices and trade board and the president of the commodity prices stabilization corporation.

No order of an individual controller having general application is valid until it receives the consideration and signed approval of the chairman of the board, and if the order involves the imposition of a production quota the minister's signature is also required. Any order involving price fixing requires in addition the signed concurrence of the chairman of the wartime prices and trade board.

The board holds regular meetings for the formulation of control policy and for the consideration of problems of individual controllers in relation thereto. In addition, an opportunity for day-to-day discussion and exchange of information is provided through the office of the chairman and through the board's secretariat. Liaison with the wartime prices and trade board is particularly close since the chairman of each board sits as a member of the other board and because action by controllers with respect to price requires the concurrence of the wartime prices and trade board.

Recently, with a view to avoiding duplication of administrative machinery, a working arrangement has been concluded whereby wartime industries control board controllers have agreed to extend their spheres of interest and to perform additional duties as administrators for the wartime prices and trade board. Also, with a view to avoiding duplication, the wartime prices and trade board has made available to the wartime industries control board the use of its regional office facilities and its investigatory and policing organizations.

As custodians of materials required for the war programme, the wartime industries control board is directly interested in the matter of exports. Accordingly, the chairman of the board as well as the metals controller sit as members of the advisory committee on export control, and the board is also directly represented on the executive subcommittee of that body. In like manner the board has direct representation on the shipping priorities committee, which committee is concerned with the provision of shipping space for the importation of essential materials into Canada. Contact with other governmental agencies is maintained on a less formal basis, but is nonetheless effective. In addition, the board may and does make recommendations to its minister from time to time with regard to specific problems as they may arise.

I do not propose to review all the individual orders issued by the controllers and approved by the chairman of the board since the board's inception. There have been over 100 of them. It may, however, be of interest, as an indication of the manner in which the board is dealing with the problems that confront it, if I review briefly the high lights of recent actions taken primarily as a result of the conditions created by the extension of the war into the Pacific.

Immediately upon the outbreak of hostilities in this new theatre of war, the board met with a view to effecting such additional control measures as appeared necessary by reason of the threat to our Pacific supply lines. Immediate action was, of course, taken to conserve vital supplies of rubber. As an initial temporary measure an order was issued by the controller of supplies freezing dealers' stocks of tires and tubes and suspending the processing of raw rubber generally for other than defence or munitions projects. Acting concurrently, the motor vehicle controller prohibited the supplying of spare tires and tubes as motor vehicle equipment. Subsequently the processing of rubber has been permitted for the time being only in the case of an extremely restricted list of clearly essential uses. The use of crude rubber for civilian purposes has been so restricted that the volume so conserved has been reduced by over 70 per cent in the past two months. I may say that very much less than 30 per cent is being used for civilian purposes at the present time.

The manufacture of tires for passenger automobiles was discontinued on December 12 last. The sale of new tires and tubes to the general public has been prohibited completely and may be made only in the case of a very much restricted eligible list of essential public services, and only then under permit and on delivery by the purchaser of a used tire or tube, as the case may be, for which no allowance or payment may be made.

Supplies of used tubes and tires have also been brought under control by establishing appropriate restrictions and requirements of proof of necessity.

While on the subject of rubber, I should mention two noteworthy developments on the supply side. With the cooperation of the wartime industries control board, arrangements have been made for the establishment of a governmental corporation known as Tolymer corporation to produce synthetic rubber in Canada. Work is under way on the preliminary plans and specifications, and it is expected that production will begin before the end of 1943. When the plants are working at capacity, the output will approximate 27,000 tons a year.

I should be careful to point out that this synthetic production will in no way relieve the civilian shortage, since every last ounce of the synthetic product will be earmarked for war purposes.

We have also set up a scrap rubber division of the Department of Munitions and Supply, which will devote its entire time to the collection of scrap rubber throughout Canada. Arrangements have been made for the government to absorb freight charges in connection with collection so that the price paid for scrap rubber will be the same in all parts of Canada. The scrap rubber so acquired will be used for the manufacture of reclaimed rubber which, in turn, will be employed in the manufacture of war materials and vitally necessary civilian articles.

The automotive industry normally consumes large quantities of steel, rubber and oil, as well as other essential materials. Hence production of passenger automobiles for civilian use has ceased completed as of April 1. This has meant that the total number of passenger cars produced in Canada in 1942 for civilian use will be approximately 7,900 units compared with approximately 81,700 units in 1941 and 94,633 in 1940. Out of the automobiles completed from parts already fabricated, the motor vehicle controller is establishing a bank or reserve supply of some 4,000 cars to be drawn upon only for essential use as occasion may arise in future. As from March 14 the production of motor trucks for other than defence and munitions purposes has been prohibited except under permit from the motor vehicle controller. The transit controller has also issued an order banning the operation of buses for sightseeing tours and prohibiting all charter trips of a non-essential nature except those which may be directly identified with the war programme.

With regard to gasoline, it is, I think, fortunate that the basis of a civilian rationing programme had been established prior to the extension of the war into the Pacific and the recent serious increase in tanker sinkings along the Atlantic seaboard. Organizational work in connection with the rationing plan has now been satisfactorily completed and, as hon. members know, rationing was effective as from April 1. I may say that the results to date indicate a reduction of about 40 per cent in the gasoline which we expected to have consumed in that month without rationing, which, I think, is a fairly satisfactory reduction.

Mr. HANSON (York-Sunbury): Forty per cent less than the minister expected would be consumed?

Mr. HOWE: Yes. In comparing it with the month previous there must be taken into account the fact that in the months of January, February and March there was a substantial increase in use over that of the corresponding months of last year. The actual decrease in April of this year compared with April of last year is 34 per cent, but taking

account of the normal increase as indicated by the first three months I think the reduction is estimated at about 43 per cent.

Mr. FRASER (Peterborough West): That is civilian?

Mr. HOWE: Yes.

Mr. FRASER (Peterborough West): Not the army?

Mr. HOWE: No. That reduction is, I think, due largely to people being careful about the manner in which they use gasoline rather than to the size of the unit, which at the moment is a fairly generous allowance.

Mr. HANSON (York-Sunbury): There is another factor: many people have not obtained licences for all the cars they have.

Mr. HOWE: In other words people are conscious of the fact that gasoline is scarce, and they are being careful.

Mr. NICHOLSON: What is the increase in the first three months of this year as compared with the corresponding months of last year?

Mr. HOWE: I think it is about 12 per cent.

Mr. NICHOLSON: Is there any special reason for that?

Mr. HOWE: No; just greater business activity.

Mr. FRASER (Peterborough West): Would the minister explain the shortage of gasoline?

Mr. HOWE: My hon. friend asked me if that was pleasure driving or commercial. As far as civilian use is concerned it is both. It does not apply to the military, but gasoline for both commercial and pleasure purposes must be bought through authorized pumps, and it is to consumption from those pumps that I am referring.

Mr. FRASER (Peterborough West): That 40 per cent saving would not take care of the air force?

Mr. HOWE: No; the air force requirements are growing, as are those of the military. That is not under the control of this department.

Hon. members are, of course, aware that there is no shortage of petroleum in the western hemisphere; the matter is wholly one of transportation. Therefore the position varies in different parts of Canada. The prairies are largely self-sufficient through the production of the Turner valley and importations from adjoining states. That situation is quite stable. On the Pacific coast we had a serious situation. We diverted part of our tanker capacity so that we could look after that coast with our own tankers. There has been no serious inconvenience through losses of ships on that coast, and the position of the Pacific coast can now be said to be normal.

The position in Ontario, particularly southern Ontario, depends on a pipeline from the midwest field, and the usual supplies have been coming in by that pipeline. The pipeline has been operated to full capacity every moment for at least a year, and it is still operating at capacity. Where we are finding great difficulty is on the Atlantic seaboard and in Quebec, which is supplied from the Atlantic seaboard.

Mr. REID: How long is the pipeline that brings in the oil from across the line?

Mr. HOWE: Into Ontario. It comes from Oklahoma. I do not know the mileage. It is fed from the Oklahoma and midwest field.

Mr. MacNICOL: It comes to Sarnia, does it not?

Mr. HOWE: Yes. All of us who read the papers appreciate that the sinking of tankers on the Atlantic has been a very serious matter. Also the loss of certain oil fields in the far east has made necessary the diversion of tankers on voyages from that area. The result is there is a serious shortage of tankers. The situation for the maritime provinces, Quebec and eastern Ontario is far from satisfactory. The needs of the army, navy and air force are reasonably protected, but civilian use is running on an extremely thin margin.

Mr. BLACK (Cumberland): In view of the shortage of oil and gasoline in the maritimes has the department taken any steps to investigate the possibility of developing very large oil shales in different parts of Nova Scotia; Pictou, Antigonish and other counties and on Cape Breton island; also Albert county in New Brunswick where there is a very big shale field?

Mr. HOWE: I am attempting to make a statement. Would my hon. friend be kind enough to ask me that later? I can hardly keep to the thread of my discussion and answer questions of that kind at the same time.

Mr. McIVOR: The minister should be allowed to complete his statement.

Mr. HOWE: The purpose of rationing is to have the gasoline situation under control, as far as the commercial and domestic field is concerned, and to be able to divide equitably among the users such gasoline as we have. I wish those who speculate about the future of the gasoline ration would keep that in mind. When it is necessary, in order to divide fairly

such gasoline as we can obtain, to reduce the amount deliverable on a coupon that will be done, but it is very bad for the morale of the people for the newspapers to be constantly forecasting cuts which are not under contemplation. When a cut in the amount issued on gasoline ration tickets is necessary it will be made immediately. There will be no forecasting; before anyone can have time to forecast what will happen to-morrow, the thing will be done. Therefore I hope that there will be less speculation about the future of the gasoline coupon. Its purpose is to divide the available gasoline fairly, and it will be used for that purpose.

Mr. HANSON (York-Sunbury): There has been a cut already, has there not?

Mr. HOWE: No.

Mr. HANSON (York-Sunbury): Then the newspapers are wrong.

Mr. HOWE: Quite. The newspapers have forecast cuts in gasoline coupons many times, but there has been no cut. When there is a cut it will be because there is not enough gasoline to go round, and by cutting the amount deliverable on a coupon we shall spread more fairly what is available.

Mr. STIRLING: Have not the B category books been called in?

Mr. HOWE: No, but there have been certain reclassifications. In the issue of coupon books we had to scratch an organization together in short order. We called for the help of the provinces. It was cheerfully given and an attempt was made to do a good job. But the application forms for the higher categories have been reviewed to see whether the necessity was real, and we found that many people had obtained needlessly high categories. In these cases the books are being called in and proper categories issued. But that is not a change in the system; it is simply an attempt to perfect the system.

Mr. COLDWELL: Then there is no truth in the statement that everyone is to be placed in category A?

Mr. HOWE: No. If I were doing the thing again, I would do it in that way, because experience shows it would be a better way, and then, by another book, make special provision for those entitled to it. When we started with this system we did not foresee the zeal that people would show in order to get higher categories. When the books are issued for 1943, I think we shall have a much better system.

Mr. COLDWELL: There should be some system of numbering.

Mr. HOWE: Yes, and better binding. But the thing was done hurriedly. We were pioneers. We deserve some credit for that. The United States are following our system and will probably improve it, but for a pioneer system it works pretty well.

Steps have also been taken to conserve further the use of essential metals. The metals controller has prohibited the sale of pig-tin for civilian use without his permission, and has drastically restricted or prohibited the use of tin and tin alloys in certain products. The controller of supplies has taken action with respect to a long list of non-essential metal products. Production of some of these articles has been prohibited entirely, while manufacture of the remainder which possess some degree of essentiality has been materially curtailed. Further curtailments have been made in the production quotas of refrigerators and washing machines, while in the case of radios production for civilian use ceased entirely after January 31, except under permit from the controller.

Also as part of a programme aimed at the conservation of essential materials, manila hemp, sisal and kapok have been brought under the jurisdiction of the controller of supplies and appropriate conservation measures effected.

Since the end of January, the powers of the controller of construction have been enlarged to give him jurisdiction over the entire construction field with the exception of equipment, plant or buildings owned or financed by the federal government. Prior to that date, the jurisdiction of the controller did not apply to one-, two- and three-family dwellings, structures erected in connection with certain primary industries, churches, public hospitals, educational institutions or buildings financed by or under the control of any provincial government, which categories were, as of January 30, brought under his control. Under his powers as revised, in the case of any building other than a plant, all projects in excess of $5,000 must be licensed by the controller before being undertaken. In such case, the cost of construction, repairs, alterations, additions and installation of equipment, if forming part of one project must be considered together as one amount in calculating the maximum value permitted without licence. In the case of a plant, equipment to the value of $5,000 may be installed without a permit, in addition to a total value of $5,000 so allowed for construction, repairs, additions and alterations. The controller has

also been given jurisdiction over production and use of construction materials and facilities.

In this as in other areas of control, the broad powers of the controller are exercised to the end that non-essential projects involving the use of scarce materials shall be postponed for the duration of the war. This basic principle of control serves the twofold purpose of conserving materials now vitally needed for the prosecution of the war and of building up a backlog of deferred civilian projects which will, in due time, be of considerable value in helping to cushion post-war readjustments.

The foregoing remarks will, I trust, give some indication of the structure of the war-time industries control board, and of the scope of its activities. By reason of the board's existence, control measures proposed by any one controller have the benefit of consideration from all relevant aspects; orders when issued are not at cross purposes with those of other controllers; and, finally, the whole control programme is kept in line with its basic objective, which is the effective mobilization of economic resources.

Just to hurry on and finish my statement before six o'clock, I may add that Canada is, of course, producing munitions far in excess of the requirements of our own troops or the requirements for the defence of Canada. We are shipping these munitions to every area of warfare in the world. The largest shipments are, of course, to the United Kingdom, but very large shipments are being sent to the middle east, Russia, Australia, New Zealand, India, and South Africa; and during the campaign in Greece we sent large shipments to that country. We are very large shippers to China. The first aid received by China from North America, as Doctor Soong stated in a public address some time ago, came not from the United States but from Canada. It was a very substantial shipment of Bren guns, ammunition and some items of artillery. Since that time, every month has seen sizeable shipments made to China. We were also large shippers to Singapore, Malaya, Java and the Netherlands East Indies.

It seems to me that in the munitions programme Canada is taking part in the war on a world-wide scale. The main objective for Canada is to keep the war away from Canada. That, I think, is the only protection we have for our Canadian citizens. Therefore I think shipments of arms to China is a worth-while contribution to the defence of Canada. There are several hundred million Chinese people. For six or seven years they have been putting up a splendid resistance to better equipped and better trained Japanese forces; and, properly armed, China is in a position to play a very important part in the future of this war. Again, I think our shipments to Russia have been worth while. Here also we have a population of some 160 million people fighting a most gallant battle against better equipped and perhaps better trained troops; and anything we can do to reinforce the effort of the Russian people is another way of keeping the war from Canada. The same thing applies to India. We have been a large shipper to that country since the beginning of the war, and we are continuing to send large shipments. Here again we have a large population immediately subject to attack, and here again we are in a position to defend Canada by sending arms to the other side of the world. I am happy to say we have made substantial contributions to our sister dominions, all of which are, I think, more immediately subject to attack than is Canada. I am always delighted when we can make substantial shipments of arms, munitions and radio devices to those countries. Therefore, while we think of Canada's munitions effort as auxiliary to Canada's armed services, in a way those munitions are going to a wider front, in that they are playing a part on every battlefield of the war, than the nature of the war thus far has made it possible for our armed services to do.

I think this concludes what I have to say by way of statement, but when we reassemble I shall be very glad to explain any points in which hon. members may be interested.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. ROWE: Mr. Chairman, when the committee rose at six o'clock the Minister of Munitions and Supply (Mr. Howe) had just concluded a brief but rather comprehensive survey of the activities of his important department. We realize that probably at no time in the history of Canada has any department been charged with greater responsibilities than that of the Minister of Munitions and Supply at this particular time. The administration of his department involves responsibilities of tremendous dimensions and, as he has stated in his remarks, it indeed causes extensive repercussions on our whole economic system. To keep the wheels of our munitions and supply industries going is an unprecedented

challenge to our human and natural resources. However, it is with considerable alarm that one observes the tremendous financial obligations on our country that are involved.

As the minister has well said, it involves the coordination of control and the curtailment of civilian consumption. As he has stated, this is necessary if we are to wage an all-out war. The change from civilian consumption and production to war-time production is no small task. I am not going to discuss the details of the administration of his department because I realize that the minister has worked and laboured very hard. He has more than ordinary native ability; he has had long experience, and I know there are many contentious features to be met with in the administration of a department of that size. My only purpose in rising at this time is to offer such constructive help as I can to the government in order to create a better plan by which our people may play a fuller part in the gigantic task that now challenges every freedom-loving nation in the world.

If we are to justify our place in this democracy in which we live we must wage a total all-out war with all its bitter consequences. We must include in our many sacrifices the temporary surrender of personal privilege and accept more or less the regimentation of our total war necessities. Never in our country's history has our task been so clear; and, so long as our liberty stands at bay, Canada must march in war rather than stand in defence. It is agreed that the task of the Minister of Munitions and Supply to furnish all the machines, munitions and other equipment that our resources can supply as a striking force is fundamentally a responsibility of government.

As the minister has said already, civilian consumption must be curtailed; indeed, civilian consumption must take what is left. The less we consume at home, the more we can fight abroad. We should not be satisfied with our war effort until we have a total output for war as high as it can be organized and a consumption of civilian goods at home as low as it can be endured. The extent to which we reach such objectives will reflect the greatness of the democratic way of life for which we fight. Amidst the blood, sweat, toil and tears that must be endured there at the present time is a glorious opportunity for this government to lead the country in reforms that will reduce inequalities of sacrifice in time of war as well as inequalities of happiness in the peace that we hope may soon follow. This cannot be achieved by merely meeting unexpected emergencies with hastily employed expediencies It cannot be met either by a gunshot prescription of price fixing, rationing of goods, restricted sales, cramped business and high taxes.

The production of the necessary volume of munitions and supply creates subsequent problems for our whole economic system. We must have less chance and more design. Therefore, at this late date I hasten to urge the government to inaugurate a more basic war-time plan that may be more generally and universally applied to this gigantic problem. The mobilization of money as well as of men must be adopted. We have a two billion dollar vote before us now. We must find the money before we can produce the goods. Perhaps there are those who would prefer to call it conscription of wealth. However, many months ago I stated in this house that the government should have given consideration long ago to a policy of compulsory saving of a certain percentage of all the net wages and income above a reasonable living allowance. That is, above a reasonable living allowance for our people who are engaged in this great war problem.

May I, therefore, as I urge the government to take action again, be permitted to give a few reasons why I make this statement. First, I believe it would provide funds for the immediate prosecution of the war and the provision of the munitions and supply we are now discussing. Second, it would curtail as well the increasing purchasing power for non-essential civilian goods, referred to by the minister. Third, it would avoid inflation, and everybody shudders to think what inflation might do to our general economy. Fourth, it would more evenly distribute Canada's debt so that many war workers and soldiers would have, after the war, a source of income that they might not otherwise have. During the last year or two we have learned a good deal about the tendencies that are now developing.

In April last there appeared in the press a report by Mr. Spinney, chairman of the finance committee of Canada, with reference to our war loan issue. This statement announced that the final figures for the last victory loan which opened on February 16 showed that one out of 6·5 of Canada's population purchased bonds, whereas in the first victory loan in June, 1941, one out of every 12·02 bought bonds. Notwithstanding the fact that this loan was originally floated for $600,000,000 and then approached $900,000,000, this announcement is quite significant. It is indicative of the distress signal over controls already employed to check inflationary trends in our war economy.

Failure to recognize this could, to my mind, give rise to social and economic dislocations which, if allowed to continue, not only would impair the progress of our war effort but might affect our whole democratic economy following the war. Increased employment coupled with wages higher than those that prevailed prior to the war, and the huge governmental spending for armaments that we are now discussing, all create increased purchasing power at a time when the transition from peace-time to war-time economy is decreasing the supply of civilian goods which can be purchased. To meet this inflationary trend we have adopted measures of price fixing, wage and price controls, rationing and restriction of sales. All these measures, while they have in themselves contributed materially to curtail inflationary trends, do not measure up to the gigantic problem that is facing this country at the present time, which I fear is all too often lost sight of.

By means of increased taxation the government has endeavoured to divert as much as possible of the excess purchasing power created by huge government expenditures in almost every field of endeavour as a result of the war.

Notwithstanding the increased taxation and the prices and wage controls exercised by the government, there has been a very substantial increase in the real wages earned by Canadians since war began.

It would appear, Mr. Chairman, that the large group which has received large increases in purchasing power as a result of the war is not being effectively reached by our bond issues or our various war savings campaigns. A continuation of this situation is most dangerous to our economy because, unless some action is taken to reduce still further the increased purchasing power now in the hands of would-be purchasers, the inflationary forces so much feared will become a reality. As time passes and our war effort progresses, the amount of consumer available goods will diminish, and at the same time government spending will be increasing tremendously.

The volume of goods for civilian consumption is at the present time below the 1933 level, whereas the national income this year is over twice the income level of 1933, due in no small degree to our production of munitions and supplies.

It is obvious that notwithstanding the measures of price freezing and wage control already employed, further restrictions on the volume of purchasing power must be initiated if inflation is to be avoided.

The ever-widening gap between increased purchasing power in the hands of the public and the ever-diminishing supplies of consumer goods will have to be met by more effective measures. This can be approached either by increased taxes or compulsory savings, or by a combination of both; but some aggressive action must be taken to control the excess consumer purchasing power created by our war-time economy.

No one should expect to gain from the war in increased net returns from profits, dividends, rents, wages or prices. There can be little disagreement with this principle, which has been recognized in our excess profits tax policy. The wage earner or the business man, enjoying comparative safety in Canada, who may reluctantly pay new taxes and hesitate to lend his savings should pause and consider the many who are cheerfully offering their lives and hopes, without financial gain, to save this critical day. That everyone should pay something toward the cost of the war is, I believe, a principle acceptable to the Canadian people, because all should be willing to make their contribution toward bringing this conflict to a speedy and successful conclusion.

Excepting those whose standard of living is already at a low figure, I believe that every man, woman or child in Canada who has an income would willingly pay 5 to 10 per cent of it as a war contribution in the form of compulsory savings withheld at the source.

This money would then be made available to the government for the prosecution of the war and would be repayable to the individual in instalments during the period of rehabilitation that will follow the war.

The latest figures I have been able to secure from the bureau of statistics on the distribution of the national income cover the years from 1930 only up to the year 1938, but even these are quite significant. I shall not weary the committee by reading this table but would ask permission to put it on *Hansard*. I will cite only the figures for 1930. In that year salaries and wages amounted to 59·6 per cent of the total national income; other labour income, 2·2 per cent; net dividends, 4·6 per cent; net interest, 4·4 per cent; withdrawals, 33·5 per cent; net rentals and mortgage interest, 5 per cent. The figures for the succeeding years show a similar range. The complete table is as follows:

Percentages of National Income

Year	Salaries and wages per cent	Other labour income per cent	Net dividends per cent	Net interest per cent	Withdrawals per cent	Net rentals and mortgage interest per cent
1930.....	59·6	2·2	4·6	4·4	23·5	5·7
1931.....	58·6	3·2	4·7	5·0	22·2	6·3
1932.....	58·2	4·5	3·7	6·5	21·4	5·7
1933.....	57·3	5·4	3·3	7·2	21·8	5·0
1934.....	58·0	6·2	3·3	6·9	21·4	4·2
1935.....	58·1	6·1	3·6	6·6	21·2	4·4
1936.....	58·7	5·6	3·6	6·0	21·2	4·9
1937.....	59·7	5·3	3·8	5·4	20·9	4·9
1938.....	59·4	4·8	3·9	5·4	21·1	5·4

These figures show that salaries and wages accounted for 59·4 per cent of the national income in 1938. This figure of 59·4 per cent, and other labour income of 4·8 per cent, combined with the withdrawals, which constitute largely the income of farmers, merchants, distributors, et cetera, withdrawn from their business as personal expenses and listed as 21·1 per cent, in all totals 85·3 per cent. This means that the percentage of the national income derived from the so-called "rich" in dividends, interest, rents, and mortgages combined, accounted for only 14·7 per cent of the total national income in 1938.

While recent figures are not available, it is reasonable to assume that under our present accelerated war economy, coupled with the restrictions applied to control rents, dividends, et cetera, the percentage of the national income in the class of earned income is to-day a higher percentage than at any previous time in our history.

Any effort to reduce the purchasing power in the hands of the people must be directed toward where the national income is greatest, because the heart of any anti-inflation policy is the restriction of spending, particularly in non-essential consumer goods, by the great majority of our people, as well as by the 15 per cent of the few so-called "rich".

Recognition of this fact is evident by the campaign to induce the Canadian people to purchase war savings certificates. Doubtless there are a great many wage and salary earners who are not contributing in any measure to this effort, and it is unlikely that the voluntary appeal can achieve much greater results than the national objective of ten million dollars a month.

In war time compulsion is often a necessary step. While compulsion may be temporarily distasteful to a democratic people, it is necessary if a democratic people are to succeed against a totalitarian group of nations where everything in the interest of the state is done by compulsion.

I would suggest to the government that consideration be given at once to the adoption of a policy of compulsory savings as an essential and integral part of our war supply policy.

This is important, not alone because of the revenue that would be made available for the immediate prosecution of the war, but as well in view of the anti-inflationary effect such a measure would have on our entire war economy. The principle of voluntary choice in the purchase of war savings certificates should be retained; indeed, the publicity campaign should be accelerated, so that every dollar that can be saved over and above what may be involved in a compulsory savings plan may be made a fighting dollar. The vital war obligation of the hour demands, however, that this economic necessity must not be left to chance or voluntary choice alone.

Our present voluntary plan should accordingly be supplemented by a general loan levy, such as I have proposed, not only to increase the government fighting loans for to-day, but to equalize the war savings of our people for to-morrow. We have endeavoured to control inflationary trends by measures of price and wage controls, but these constitute only half-measures to cure inflation, and do nothing to prevent the disease itself. Unless compulsion is exercised to curtail this increasing tide of purchasing power, it is doubtful that the tremendous problems confronting us can be controlled. I would suggest to the government that legislation be introduced at this session of parliament to make operative by July 1 next a policy of compulsory savings, deductible at the source of income and repayable in instalments after the war.

While such a measure would entail considerable administrative detail work, the larger part of this work could be done by the employer in a manner similar to the national defence tax deductions now made at the source. The advantages of such a policy would be many.

First, this would constitute a definite anti-inflation step because the increased purchasing power would be withheld at the source. Second, the amount withheld would be in the form of non-transferable savings, repayable after the war. Third, repayments could be made in instalments during the period of rehabilitation when the war wage-earner might be unemployed and in need of state assistance. Furthermore, such a policy would give the wage-earner a certain security for the future, rather than permitting a limited few to hold the bonds of Canada's increased debt.

To make savings a compulsory deduction from every source of earned income in specific percentages would have the effect of making everybody contribute something for the prosecution of the war. The money raised would, through compulsory savings, be available to the government and would take the place of money loaned from chartered banks. This is important because it would place as much as possible of the federal debt in the hands of the people outside the chartered banks. A payroll deduction plan would assure a steady flow of funds for the prosecution of the war; it would cut down consumer spending, and, in the final analysis, it is the soundest kind of savings plan for the individual. The withholding of income at the source would assist in shifting our material and human resources to military uses without creating an excessive demand for non-essential civilian goods. It would mean the purchase of savings certificates from income rather than from accumulated savings in the banks as has been the practice in the past. The purchase of savings certificates from income rather than from accumulated savings would leave more money for the banks to purchase government bonds if the need should arise. It would provide the best means of building up national security for the element of our people most likely to need assistance during the post-war period of adjustment which must be anticipated.

I realize the problems of the government. I have endeavoured to give constructive assistance to the minister and to the government in the heavy task that is theirs at this time. However, as I conclude may I be permitted to warn the government of certain dangers in the trends that are being established by the expediencies with which emergencies are being met, and have to be met, from day to day.

[Mr. Rowe.]

Since before the fall of the Roman empire the lesson has been plain that economic liberty and civil liberty stand or fall together. We must, therefore, preserve as much freedom of choice for the individual consumer as it is possible to preserve in our way of life.

Universal price fixing and rationing, and all these regulations of a totalitarian and bureaucratic nature which we are now developing as expediencies to meet these emergencies, are to no small extent a product of totalitarianism itself; but that is not so in so far as Canada is concerned, and we do not want them to be the introduction to totalitarianism. I do not believe that we as a people who are fighting for democratic freedom should let a totalitarian system take root so deeply in this country that it will eventually destroy democratic freedom itself.

Even if such uncertain schemes were successful enough to control consumption completely, as the Minister of Munitions and Supply has indicated is his desire, so that a substantial fraction of our earned incomes could not be spent, the result would not be different—only more extravagant than if the incomes had been deferred from the outset, as I have suggested.

Accordingly, with a more limited purchasing power that would be brought about by such a policy, more free choice could be left with the individual. It would not be necessary for the government to ask the housewife to be a detective watching over her neighbour's consumption and purchases of her daily bread. In other words, it would tend to enable us to maintain through this crisis those basic principles that have enabled freedom of enterprise and individual initiative to give life and vigour to our democratic progress.

I urge the government in all fairness to give careful consideration to what, to my mind, is a basic essential in this war, a war-time plan which we have not yet had. It is all very well to organize an industry, all very well to get high-class dollar-a-year men here to carry on an industry, but we must find ways and means to maintain that industry. As the minister well said this afternoon, part of his duty is to mobilize all the great natural resources of this country, but if we are to mobilize them soundly I believe we had better start at the root of the trouble and meet these realities. Then we shall have a more effective way of financing the war and a sounder way of meeting after-the-war problems.

Mr. DIEFENBAKER: I do not intend to follow the hon. member for Dufferin-Simcoe (Mr. Rowe) in the argument he has advanced this evening, but I believe the ideas which he has placed before the committee merit the most serious consideration of the government.

My purpose in saying a few words at this time is generally to open the subject of munitions and supply with a view to obtaining some information from the minister regarding his department.

At the outset I commend him for the advances which have taken place during the past year. Munitions from Canada have found their way to the battlefields of China and Russia, and, as he says, to every allied front in the world. This afternoon he uttered one thought which I wish were understood all over this dominion, namely, that our duty as a country to-day is not to await the coming of the enemy to our gates but to see to it, as a nation and a parliament, that the enemy is kept from our gates. He has related some of the actions taken by the government and some of the drastic changes which have occurred.

The hon. member for Dufferin-Simcoe has mentioned the necessity of a curtailment of civilian purchases. I realize that there has been an expansion in munitions production since the war, that to-day 600,000 men and women are engaged in war production, and that about one million people are employed now who were not employed at the outbreak of the war. But one significant matter which must not be lost sight of is that we have 337,000 men and women in industry, supplying civilian requirements and wants, in addition to those who were so employed at the outbreak of war.

He told of the curtailments which were necessary to preserve rubber and gasoline. I could understand that there might be some who would raise objection thereto, but I have not yet heard of them. The people of Canada are ready for curtailments; they are ready to accept drastic reductions in their way of living; they are ready to make sacrifices; but they demand a lead on the part of the government. I believe that the attitude of the people to-day is that it is time for Canada to get tough. It is time to do things we have not done before, to the end that our efforts, our maximum efforts, shall be canalized or centralized into the war effort. In connection with aeroplane production—and that is what I will deal with in the main this evening—we should consider the question of immediate expansion. I will not go into a survey of what the minister has said, or an analysis of his speech. Before doing so, I shall wait until to-morrow when I shall have had an opportunity of reading in detail what he said. Let me point out, however, that if he is optimistic for 1942 and 1943, he was just as optimistic in 1940 and 1941, and yet he has to come to-day before this committee and say that some of the promises he then made were not justified by subsequent developments.

Mr. HOWE: When did I say that?

Mr. DIEFENBAKER: I listened to-day to what the minister said. He said, "I cannot say we did as well as we had expected."

Mr. HOWE: Does the hon. member think he can find that in my speech?

Mr. DIEFENBAKER: If the minister did not say it, at any rate that is what I understood him to say; and it is not the first time he has said that something he had in fact said had been misinterpreted. I ask him this question: Is it not about time for him, speaking about the expansion that has taken place in so far as assistance to industry is concerned —almost 400 million dollars—to tell the house and the country what the intention of the government is in regard to the assistance that has been given to industries which have been established? What does the government intend to do therewith after the war? What is the plan? In 1940 he announced in this house that the government had a plan with respect to the disposal of these industries, but as yet no explanation has been given along that line.

The opposition, desirous as it is to assist in the war effort, has made suggestions which have been adopted. The suggestions leading to many contributions to the war effort which the minister boasts about to-day originated in many instances on this side of the house. He spoke to-day about the production of tanks. Well, I look back two years ago and recall the ridicule that was heaped upon the hon. member for Parkdale (Mr. Bruce) when he first suggested it. The minister told to-day about the shipbuilding programme and the development of the industry in this dominion. I look back to a time less than a year ago, and I remember the scorn that was poured upon the hon. member for Cumberland (Mr. Black) and the hon. member for Vancouver South (Mr. Green) whenever they endeavoured to suggest that something along that line should be done.

While to-day a number of aeroplanes are being assembled in Canada, is it not about time that some progress be made in the production of engines for aeroplanes and parts, in order that there may be complete assembly in this country? Two years ago, if I remember rightly, he said that such a scheme would take about two years. It is about time we started in that direction. A year ago, six months ago, the minister said, when the hon. member for Cumberland asked that something be done toward the production of wooden ships, that it

could not be done. He ridiculed the arguments in that behalf of the hon. member. The other day the Minister of National Defence for Naval Services (Mr. Macdonald) announced that wooden ships were being built and that a very extensive programme had been undertaken in that regard.

Our attitude is this. We as an opposition believe that we have two duties to perform. One is to make suggestions to the government with a view to the creation of public opinion and to spurring on the government to action along various lines. Proud as the minister is of the record that has been achieved by his department, there is room for a good deal of improvement. He speaks of the fact that aeroplane factories have been expanded some two hundred times their previous extent. I suggest to him that something should be done to prevent hold-ups in aeroplane factories in this country to-day, hold-ups such as were referred to yesterday by the member for Davenport (Mr. MacNicol), who contended that there were delays of three months or more in one factory in the production of Hurricanes. Surely we have arrived at a point when delays like that should not be tolerated unless they are due to the fact that there is a shortage of steel and materials; and if there is a shortage of steel, is it not time to stop unnecessary building for civilian purposes in Canada?

Recently I asked a question in this house as to how much construction had been gone ahead with since construction control had been adopted. On February 23 I asked this question:

How many licences have been granted for the erection of buildings other than those required for war industry since construction control has been adopted?

The answer was that there were 3,150 licences.

Records covering do not differentiate between war and non-war industries. A clear line of demarcation is not possible.

Then I asked:

What is the total amount in value of the steel that went into such buildings?

The answer is that the information is not available. Why the necessity for a permit unless it is to control the expenditure of building materials so that they will not be used unfairly and unnecessarily to the detriment of our war effort? Did the minister give a reasonable answer, an entirely frank answer, when he said he had no such information? If there is one thing we on this side of the house intend to demand it is this: Circumscribed only by the necessities and exigencies of war, when we ask a question we have a right to a fair and honest answer to that question. Let me tell you this—

The CHAIRMAN: Order. It is not permissible under the rules of the house to suggest, by implication or otherwise, that any statement by a minister of the crown or any member of the house is lacking in honesty or frankness.

Mr. DIEFENBAKER: Mr. Chairman, I bow to your ruling; I say, an incomplete answer. Some time ago, for some reason or another, it became necessary for the Minister of Munitions and Supply to appoint a man to increase morale in aeroplane production.

Mr. HOWE: I appointed no such man.

Mr. DIEFENBAKER: All right. The minister has certainly not arrived at the point where appointments made under his department are not made by him, he accepting responsibility before parliament. Surely the minister does not suggest that when an appointment is made in his department and the public money of Canada is being expended in connection with that appointment, he did not make it. On May 6, 1942, I asked certain questions in regard to Mr. E. G. Hirst of Toronto, and I would call the attention of the committee to the answers given. To say the very best for these answers, they were entirely incomplete. Here are the questions:

1. Has E. G. Hirst of Toronto been appointed to organize and conduct a morale building campaign in aircraft and allied industries?

The answer is:

Yes, in the aircraft industry.

The minister being in charge of that department, I presume he accepts responsibility for the appointment.

2. If so, when was he appointed?

The answer is:

December 20, 1941.

The next question is:

3. By whom was he appointed?

The answer is:

Director-General, Aircraft Production Branch, Department of Munitions and Supply.

An official, one of the controllers referred to this afternoon by the minister.

4. In what business was he previously engaged?

The answer is:

Might Directories Limited.

He is still vice-president of Might Directories Limited.

Then the next question:

6. What salary, honorarium, allowance or other remuneration, is paid to him by the government?

The answer is:

None.

That is very definite; no allowance, no honorarium, no payment is made to this man. Then the next question, so that there would be no doubt about it, was:

7. If no remuneration is paid to him by the government, by what means is he being compensated for his services?

The answer is categorical and clear:

He is receiving no compensation for his services.

Nothing could be more definite than that. Hon. members who ask questions have a right to an answer which is more complete than that, when the facts definitely establish that he was being paid, and not so indirectly either. The unequivocal answer of the Minister of Munitions and Supply was "He is receiving no compensation for his services" —no salary, honorarium, allowance or other remuneration.

Then, because that did not seem to fit the facts that were known, production of certain documents was asked, and the production was made to this house yesterday. The motion that was passed reads:

For a copy of all letters, memoranda, or other documents addressed by the director-general of aircraft production, or any official of the aircraft production branch, and directed to any official of an aircraft industry or company engaged in whole or in part in the production of aircraft or parts thereof, with reference to the appointment of E. G. Hirst of Toronto . . . .

Then the next material part is:

. . . and in particular with reference to the manner in which his out-of-pocket expenses for travelling, organizing and office assistance are to be paid.

That was perfectly clear. It required production of the letters. I shall now read the letter signed by the director-general of aircraft production which was sent to a large number of aircraft companies, I would say some twenty in number:

December 20, 1941.

Mr. E. G. Hirst of Toronto has just undertaken the responsibility of organizing and conducting a morale-building campaign in the aircraft and allied industries through the year 1942, and I bespeak your whole-hearted cooperation for him in making this campaign an outstanding success.

Mr. Hirst will act as chairman of a dominion-wide committee and will probably associate local committees in each community where work of this character is to be carried out.

It is estimated that the work will involve Mr. Hirst being absent from his own business at least three-quarters of his time, and his volume is therefore bound to suffer.

I have pointed out that his position is vice-president of Might Directories of Toronto.

If you can, therefore, place with Mr. Hirst your printing account for the year, it should go a long way toward maintaining sufficient volume in his own business, so that he will not have to worry, and I would appreciate your sympathetic and generous consideration of his interest in this connection, it being understood, of course, that any business so placed with him will be on a strictly competitive basis.

I ask you, what business has a department of government to call upon private manufacturers to give their printing to a private individual, whether on a competitive basis or otherwise?

But that is not all.

In order to cover his out-of-pocket expenses for travelling, organizing and such office assistance as is required I have put your firm down for the amount noted at the foot of this letter.

Some got put down for $500, many others for $250. There are eight put down for $500 and the rest to make up $9,000 at $250 each.

Will you please send your cheque for this amount to Mr. P. C. Garratt, Managing Director, de Havilland Aircraft of Canada, Ltd., Postal Station L, Toronto. Mr. Garratt has kindly consented to act as honorary treasurer of the dominion committee. All Mr. Hirst's bills will be paid on behalf of the industry only through Mr. Garratt.

Authorizing a private individual to go out in order to build up morale for which services he is to be paid by donations from the different aircraft manufacturers, and in addition to which he is to get their printing "upon a competitive basis," is bad enough. But the next paragraph is the one to which I raise the most strenuous objection, and which in my opinion shows whether or not the answer given in this house on May 6 was in fact correct:

This sum is, by arrangement with treasury, chargeable to overhead in connection with your aircraft contracts.

The companies were to pay out $500 or $250, as the case may be, and they were to give their printing to him "on a competitive basis"; but they are not to be out anything on the contributions made; the people of Canada are going to pay it. And these men were to conceal payments under "overhead."

Why the necessity to cover it up? Why not appoint Mr. Hirst in charge of this very commendable work as director of morale and put him on a salary? But no; it is not done in that way. The aeroplane companies are

told to pad up or add up the amount in their overhead and to charge it to the treasury of Canada.

The letter goes on:

Most of you will realize that the work which Mr. Hirst is now taking over has, in the past, necessitated a considerable portion of my time which should be devoted to other matters. I am sure that with someone now able to give practically full time to this work, this important phase of personnel relations will receive an impetus that will be felt throughout the entire industry, and I know that I can count on you to give Mr. Hirst every possible help and assistance.

Let each of us individually and all of us collectively determine that 1942 is going to produce results in the aircraft field that will literally amaze this country.

Cordially yours,

Ralph P. Bell,
Director-General of Aircraft Production.

There is a letter from "Phil"; it does not say who he is, but evidently the managing director of the de Havilland Aircraft of Canada Limited. It is dated January 3, 1942, addressed to Mr. Bell. He says:

In connection with the Morale-Building Campaign and the activities of Mr. E. G. Hirst, I would like a little bit clearer outline of the activities, if that is at all possible, just in order that as far as I am concerned I will not be deviating from your policy.

One question I have been asked so far is who the officers might be, if I am the honorary treasurer.

Up to the present time about $4,000 have tumbled into the coffers and Mr. Hirst has engaged an office at $40 a month, is procuring furniture, and I have advanced him $150 on account of expenses. I presume this is all in order and that I am just to comply with whatever requests Mr. Hirst makes.

Then there is a letter to Mr. Garratt directing him:

You will pay out to Mr. E. G. Hirst money on his requisitions.

Why was this house and this committee not given the information when it asked for it on May 6? Why was it necessary to conceal from the people the fact that Mr. Hirst's $9,000 expense account was coming out of the treasury of Canada? I should like the minister to explain this. I can understand, as the hon. member for Dufferin-Simcoe said, that in the interests of the war effort it may be necessary to depart from some of the ordinary democratic principles. It is necessary to set up controllers; but I do insist that whoever is set up as a controller shall remain responsible to parliament. I do insist that no controller whose salary is concealed in the overhead expenses of those producing aircraft or other products shall draw money from the coffers of the people of Canada. I am going to ask the minister.

[Mr. Diefenbaker.]

when he explains the circumstances in connection with this matter, whether it is or is not a fact that there are others in the position of Mr. Hirst. The reason why I ask that question is this. If the opposition had accepted the answers that were given on May 6, no one in this house or in this country ever would have known that Mr. Hirst was drawing $9,000 as expenses. It all would have been concealed. The only thing known about him would have been that he was a man who was giving his services to the high purpose of increasing and extending aircraft production in Canada. I think parliament has a right to be assured that steps such as this, which constitute an advance toward a hidden bureaucracy, no longer will be tolerated; and I ask the minister to give the assurance that answers such as were given on May 6, 1942, no longer will be permitted, for in my opinion answers such as those fail to reveal the true circumstances and are an affront to parliament itself. If we cannot ask for information, without the necessity of having everything at hand to check up and see whether it is correct, as an opposition we only play act; we can only go on fishing expeditions, depending on the government to give us answers that are correct. Carry on that sort of thing very long, Mr. Chairman, and we will need a morale minister in this government to convince the people of Canada that all answers being given are in accordance with the facts.

I ask why it was necessary to go beyond the ranks of the civil service, to hunt up a man whose qualifications were that the published a directory, in order to build up morale in Canada? We have a Department of National War Services under which we have all the various branches dealing with public information, radio and all those other organizations that furnish information, whose purpose is to instil and maintain morale among our people. Why was it necessary to go outside a department of government to secure the services of a man whose qualifications, according to the record, do not appear to be such as would contribute much to morale in the aircraft industry? Why was it necessary for a department of government to answer that this man was not receiving any salary, that he was receiving no emolument or consideration whatsoever? I ask the minister to give this house and the country a frank explanation in regard to this most unusual case.

Mr. HOWE: Well, Mr. Chairman, my hon. friend has given the committee quite a display of histrionics over a rather simple matter. I was told some time ago about this matter. I may say I discovered the letter

about which my hon. friend speaks about the time it was handed to him. I heard that it was handed to him, or rather that it was handed not to him but to a member of his party, and I know by whom it was handed. It was given to me at the same time.

Mr. DIEFENBAKER: I rise to a point of order.

Some hon. MEMBERS: Sit down.

The CHAIRMAN: What is the point of order?

Mr. DIEFENBAKER: My point of order is that the letter was never handed to me, and I demand a withdrawal of that statement.

The CHAIRMAN: There is no point of order in that.

Mr. HOWE: I said it was handed to a member of the hon. gentleman's party, and the leader of that party told me two hours ago that he had it, confirming information which I received some time ago. So on a point of order I would ask that my hon. friend keep his seat until I finish this explanation.

The CHAIRMAN: There is no point of order. It is a statement of fact, which cannot be denied.

Mr. HANSON (York-Sunbury): I think the minister has it right, now.

Mr. HOWE: I think so. To continue, Mr. Chairman, I heard about this letter some time ago. Naturally my reaction was somewhat similar to that of the hon. member for Lake Centre. It is one of those things that occur, and after it is discovered you only do what you can about it. I made very sure that no insurance was placed as suggested in the letter, and I also made sure that the payments would not become an element of overhead cost on the part of any of the subscribers.

Mr. DIEFENBAKER: When was that, may I ask?

Mr. HOWE: That was some two months ago, as I remember it, or perhaps a month ago.

Mr. DIEFENBAKER: Before May 6?

Mr. HOWE: I think so. I can check that. Is the letter dated May 6?

Mr. DIEFENBAKER: No; the answer to parliament is dated May 6.

Mr. HOWE: Of course the question that was asked was a trick question; the answer was known. This man is not on the payroll of my department. The answer states that he is employed by the industry, which is a fact. He is not employed by the department; he does not appear in the records of the department.

Mr. BROOKS: Just paid by it.

Mr. HOWE: Just a moment; I would appreciate it if I could make my statement.

The CHAIRMAN: Order.

Mr. HOWE: The situation is that the letter was written some time ago. I heard of it two or three months after the letter was written. As I say, I took such steps as I could to set the matter straight. The question that was asked was handled by the department in the ordinary way. An officer of our department is assigned to the duty of furnishing information in reply to these questions. He obtains his information from the records of the department. The name of the gentleman in question, Mr. Hirst, does not appear in the records of the department; but I suppose my officer dug around and found that this man was employed by the industry, so he gave the answer accordingly. I hand in these answers, naturally assuming them to be correct; I do not personally go through the records of the department. The answer is correct, according to the information in the records of the department. The explanation I received from the director of aircraft production, when the letter was produced, was that the industry had decided that work of the kind for which Mr. Hirst was employed was necessary.

Mr. HANSON (York-Sunbury): Why was it necessary?

Mr. HOWE: I do not know that it is necessary. I may say that if I had been asked to make this as an official appointment, I would not have made it. I do not believe in this kind of propaganda in an industry. However, it was represented to me that the industry decided this was a desirable thing to do. I was told that certain members of the industry—I do not say that all were represented—agreed to contribute to the expenses of this man. Had the payment been sponsored by anyone but the director-general of aircraft production I would have found very little to criticize about it, but obviously the director-general of aircraft production should not have had any part in the payment of a man to be employed at the expense of the industry.

I am quite willing to say that the letter was a wholly improper letter. As I say, I considered it as such and I did what I could to correct the situation. I am bound to say that my department is not made up of experienced civil servants; it is made up of men from industry, men who have a different point of view from that of men with experience in the public service. I could have

done two things. I could have dismissed my director-general of aircraft production because I thought he had done an improper act or, on the other hand—

Mr. HANSON (York-Sunbury): Nobody has suggested that.

Mr. HOWE: What else could I do except what I did? I had to weigh the fact that he came in full of enthusiasm, took an industry that was moribund at the time and built it up into a most excellent industry to-day. It has expanded by forty times. But his methods are not always the methods that I would have used. I am more methodical generally than my director-general of aircraft production; nevertheless I do not know that I could have made as good a job of that industry had I taken it over at the time he did. We have the facts. There is no use in trying to explain the inexplicable or to excuse the inexcusable. That letter was a most improper letter; nevertheless it was written, and written without my knowledge. As I say, I learned about it some two months later, and I did what I could to straighten out the situation. Money had been collected, and the man was at work and apparently doing a very good job. He was working with the industry and at the expense of the industry. I see nothing to get hysterical about. These things happen, I suppose. This is a most unpleasant incident, and if my hon. friend has any suggestions as to what I should do about it at this stage, I shall be very glad to take them into consideration.

Mr. DIEFENBAKER: Now that the minister has made his explanation, the answer that was given on May 6 does become inexplicable. The question asked then was, "If no remuneration is paid to him by the government, by what means is he being compensated for his services?" The answer was, "He is receiving no compensation for his services".

Mr. KINLEY: From the government.

Mr. DIEFENBAKER: Yes, from the government, when all the charges that were made were ultimately paid by the people of Canada by an addition to overhead in the contracts?

Mr. HANSON (York-Sunbury): They are deductible from overhead.

Mr. HOWE: No; they are not. They were at the start, but they are not now.

Mr. DIEFENBAKER: I just want to ask the minister one question. If he stopped this thing, where are the letters putting an end to it? The last letter is dated January 15, at which time $4,000 had tumbled into the coffers. What has happened to that $4,000? Has it been returned to the aircraft companies? In whose possession is it to-day? Possibly the minister will be able to explain what does not appear in the record.

Mr. HOWE: I explained that I stopped any possibility of any advertising being diverted, and I also stopped any deductions being made, or any charges being made against overhead on this account. As I said, the money had been paid in part, and it had been expended on this campaign which is still going on and which is still going to expand. As far as the answer from the department is concerned, I have told how it happened. I said that my hon. friend asked a trick question and his trick worked. He got the answer he expected.

Mr. HANSON (York-Sunbury): I do not think the question was a trick question.

Mr. HOWE: He had the letter in his hand.

Mr. HANSON (York-Sunbury): And I do not think the answer was a very candid answer. The whole thing is a most regrettable incident.

Mr. HOWE: Quite.

An hon. MEMBER: The minister said that.

Mr. HANSON (York-Sunbury): Will the hon. member hold himself in patience? The minister asked for certain suggestions, and I rose to give them to him. It is a most regrettable incident. It was a matter of indiscretion on the part of a gentleman whose friendship I have held for many years and who has done, in my view, a most wonderful work in connection with aircraft production in Canada. Let that be said. However, his methods in respect of expenditures are not just according to Hoyle. Perhaps without being concerned, or, shall I say, without realizing the implications of the statement that subscriptions made to the fund could be recouped by deductions from overhead, he endeavoured to raise this money. While the government was not paying anything directly, it was paying the full $9,000 indirectly.

This letter came to us from one of the manufacturers who paid because he felt he dare not refuse, and on its receipt the first question I asked myself was: why was it necessary to build up morale in the aircraft industry in Canada? The minister has not yet elucidated that point. I do not know what the necessity was. Was there strife in the industry? Was not there full cooperation on the part of the

men in the industry? My impression is that the men in this industry are among the best paid in Canada. I have sent many boys from my community in New Brunswick to Montreal to engage in this industry. Universally they have been successful, and many of them are making very high wages to-day. What was the necessity for building up morale? The minister says that there was not any necessity, and he ought to know. My first suggestion to the minister is that Mr. Hirst should go back and attend to his knitting, which is the building up of a directory in the city of Toronto.

I approve the minister's action entirely in seeing to it that not one dollar of this money shall be paid out of the national treasury by an indirect method. I give my unqualified approval to that. The next suggestion I make is that this money or that part of it which has not been spent be returned to the industry. Then I think the chapter can be closed.

In view of the answers that were given to questions asked earlier this month, I really was surprised to see that we got the correspondence as we did. But the correspondence was brought down, and it was a proper return to make to the motion. One thought that naturally arises in one's mind is this: In connection with government industry or industry engaged on large government contracts, is this the first or isolated case in which this practice has been pursued? I do not know. If it is not, I should like the minister to give an undertaking that this sort of thing will stop and stop immediately. If it is necessary to do a job in industry in order to build up morale, if it is necessary to do any kind of job in industry, there is ample opportunity to appoint men to do that and to pay them an honest wage. I would not object at all if it were established that a morale building campaign were necessary in the aircraft industry. Then an appointment should be made of a proper man under the proper circumstances, and he should be paid a salary and expenses out of the public treasury. I would assume that those who appointed him, those who understood the necessity for the appointment, those who understood the necessity for the operation, would believe that it was in the public interest to do so. That is the open, candid way to do this sort of thing. I must say that I am as regretful as the minister that anything like this occurred.

I should like to have the minister's assurance that, as far as he can prevent it, nothing of this kind will ever occur again, and that if it has occurred in connection with other persons who have contractual rights with the government, the practice will be stopped immediately. Every hon. member within sound of my voice knows this, that men engaged in operations for the government, when a request of this kind or something similar in scope comes to them, are afraid to say no for fear it will injure their business. There are manufacturers who are afraid to come to my office to see me for fear that even a social visit may be misconstrued. That ought not to be.

Mr. McCANN: Tell them it is not so.

Mr. HANSON (York-Sunbury): I try to tell them so, but they say: "I wish you well but I cannot come because I am engaged on a government contract." I do not say that there is any system of espionage or any system set up whereby these men would become marked men. But human nature is human nature.

An hon. MEMBER: You are too guarded.

Mr. HANSON (York-Sunbury): Maybe I am, and other people may not be so guarded. But it is true that people are afraid to give me information on this very matter. I do not regard this as a major instance, but I do regard it as a very regrettable instance, and I am glad to have the minister's assurance that it will never occur again. But I ask him to go further than he has suggested and to see that this money is returned. It ought all to be returned, and Mr. Hirst, if he is not required, should be sent back to his own business. Furthermore, no scheme of this kind should be permitted to be carried on by any official of the government. I am sure that no civil servant would do it, and no experienced agent of the government and in its employ should do it, because I think we are all agreed that it is not the right method to pursue. If the minister will take the proper steps to correct the position, he will hear no more about it from me.

Mr. REID: Mr. Chairman, we listened with a great deal of interest to the statement made by the Minister of Munitions and Supply this afternoon, and I believe that most members were pleased to hear of the great strides which have been made in producing in this country munitions of war. I want at the outset to compliment the minister upon what has been accomplished under him in his department.

May I, however, say to him and the committee, that if there is some uneasiness in the minds of some members of parliament and of many outside this house throughout Canada, it is because in this year of life-and-death struggle a considerable feeling exists that we are not doing all we should and can do. There are many lines of munitions production in which we have perhaps reached,

shall I say, our peak, but there are other lines in which we have not. Some time ago when I asked a question of the minister, on the orders of the day, regarding the building of wooden ships he was extremely curt with me —I say that in all kindliness—and told me that the question of building wooden ships was a closed book. On May 9, the evening *Citizen* of Ottawa contained an article which, I believe, sets out the viewpoint of many of us regarding the building of ships of all kinds. It is by A. C. Cummings and comes from London. Here is the viewpoint of the people of Great Britain regarding Canada's shipbuilding programme:

London—Expansion of Canada's shipbuilding programme to 172 vessels with a three-shift working day on the Pacific coast is welcomed in Great Britain, for no need is greater among the united nations this spring than that of ships—more and yet more ships.

Shipping is the key to the whole allied strategy just now. Given plenty of ships Japan could be checked in the Pacific within a few months. Ships carry fighter aircraft and if there were enough of these in the far eastern war zone the enemy could not hope to invade either India or Australia.

Ships carry troops and tanks, too—and these are wanted all over the globe.

It takes five tons of shipping to convey a British soldier and his mechanized equipment overseas. Some units have to travel thirteen thousand miles—six months out and back for a convoy.

Unfortunately, Britain began the war short of ships, for in 1935 seven million tons—more than the Japanese have had for their huge conquests in the Pacific—were considered "redundant", that is, could not earn freights and so were sold, broken up or otherwise disposed of. At the same time, British shipyards were "rationalized", which meant, in plain language, that they were dismantled and shut down. To-day, because of this and because the United Kingdom has to concentrate on new warships, Britain's output of cargo-carriers is only about one million tons.

True, the United States shipbuilding programme is immense and a year hence will be of enormous aid to the allies.

But the urgent need of the moment is ships now—this spring—and although construction in the British empire and the United States combined is already roughly equivalent to sinkings in the Battle of the Atlantic and in the Pacific, what is wanted is to double the present output.

"At this time we could do with literally millions more tons of ships", a high authority told me. "Every ton that comes from a Canadian shipyard this year is worth more than five tons a year hence."

This afternoon the minister placed on record a statement regarding the building of steel ships in Canada and, of course, we are doing a splendid job in the building of these vessels. I may be wrong, but I am of the belief that because of the great shipbuilding programme of the United States and, shall I say, with the limited output of steel, it will not be possible to expand our steel shipbuilding programme much further than what is now being done. I have here a statement made by Admiral Land of the United States, and I just wish that some of our people and officials in this country were imbued with the same spirit. Referring to the United States shipbuilding programme, which contemplates building 2,900 ships in 300 days, Admiral Land was reminded that these ships might not last long. He swore when he was reminded that the ships now being built by the United States might not last five years, and he said, "We will take the goods across to Great Britain if we have to row them over there. I don't care a damn how long the ships last. Our duty is to build the ships so that Great Britain may be supplied with all the goods she requires."

We have on both our coasts, but particularly in British Columbia, many men available for wooden shipbuilding. When I was out on the Pacific coast at Easter I paid a visit to many manufacturing plants, and I found queues of men waiting to put down their names for work. True, most of the artisans have been picked up and are at work in machine-shops and in our steel shipyards; but when I think that during the last war in British Columbia we had twenty-seven shipyards operating, four of them building steel ships as well as wooden ships on the Fraser river, and to-day we have only a total of seventeen operating, I just wonder whether we are doing all we can to build ships with which to carry our products to the beleaguered people of Great Britain. While I am not going to make a definite charge against the officials of the minister's department, I am going to lay a serious complaint against what has happened, and I am going to give one instance of what has kept orders from British Columbia, while orders for wooden ships are being placed in the United States.

Just before I left home at Easter, those connected with the shipbuilding industry of British Columbia, and particularly with the building of wooden ships, asked me if I would meet them in conference, which I did in Vancouver on the day I left. They made the definite statement that some official in Ottawa of the Department of Munitions and Supply had been asked by the British authorities if British Columbia, Canada, could build wooden mine-sweepers, and the official from Great Britain was told by Canadian officials that it could not be done. Later, this British official whilst in New York discussed the matter with United States officials, and was told that wooden mine-sweepers could be built on the United States Pacific coast. What is happening now is this: fifty miles from the border, south

of Vancouver, at the city of Bellingham, wooden mine-sweepers are being built to the order of the British government, and British Columbia is supplying most of the lumber.

Mr. HANSON (York-Sunbury): Is that true?

Mr. REID: That charge was made by six shipbuilders. I asked if I could make that charge, and they said, "Yes, you can make that charge—that a British official came to Ottawa with a view of placing orders for wooden mine-sweepers, and was told that British Columbia could not build wooden mine-sweepers, and to-day there are seventy wooden mine-sweepers being built in the United States, mainly on the Pacific coast, and we are supplying most of the lumber for the building of those ships." I say in all seriousness that if that statement is true—and these men gave it to me on good authority, because they had spent a long time in Ottawa endeavouring to procure orders for British Columbia—it is most serious. I am drawing this to the attention of the minister; but particularly do I want him to view this war in a different aspect and not close his mind against the building of wooden ships. We have men who can build ships in plenty. Hundreds of men are idle in British Columbia who could go into these wooden shipyards and help to construct these vessels. We have lumber in abundance. With a statement such as I have given, and in the light of the crying need for ships of every kind, we need not tell the people of British Columbia or the people of the country in general that we are doing everything we can to help Great Britain and help our allies, in this war.

Mr. HOWE: There seems to be some confusion when we talk about wooden ships. We are building wooden ships; we have been building them since the first day of the war. What we were discussing a year ago was wooden cargo ships, which is a particular class of ship. We have not built wooden cargo ships. The difference between a wooden cargo ship and a steel cargo ship is largely in the material which makes the hull. There is very little difference in the material which goes into the boilers, the engines, the steering gear and various other fittings. The question is, is it good business to build steel hulls or wooden hulls? That is the question in regard to the cargo boats. All our experts tell me that there is more value in the steel hull. I have said that if we could augment the work in any way and if we could find a user for wooden cargo ships, we would be pleased to make them. I have made that offer quite freely. I asked the private trade, if they wanted to enter into a lease-operating arrangement for wooden ships, to let us know, and I received no offers; I have had no interest from any ship user in wooden ships. Obviously, my department builds for someone, and we can hardly build wooden ships unless we can find someone who wants those ships.

Wooden mine-sweepers, wooden Fairmile boats and wooden tugs are quite a different matter. We build them. We have been building them. No officer of mine could possibly have told my hon. friend that these could not be built on the Pacific coast because we have been building them for a long time. My officers are quite familiar with what can be done, and so are the British. British shipbuilding experts go every month to British Columbia. An admiralty mission has been resident in Canada for a year and a half; they know Canada as well as I do. I suggest to my hon. friend that he should not make a statement like the one he has made unless he can give me the name of the officer and afford me a chance to trace it down. If he will do that, that is all right. But if it is simply a sweeping statement that some officer said so-and-so, I would say that that could not possibly be so, because my officers are familiar with both coasts and have arranged for a great deal of shipbuilding to be done on both coasts.

Mr. REID: I have been in this house since 1930, and I have never made a statement which I could not back up. The minister asks for the name. Would the committee grant me this courtesy, that I supply the name in confidence to the minister rather than put it on *Hansard*?

Mr. HOWE: No; put it on *Hansard*.

Mr. REID: I know how difficult it is for the official, how unfair it is just to blame the official and place the name on *Hansard*. But I have it with me.

Mr. MacNICOL: Give it to the minister.

Mr. REID: It is strange that we are only now beginning to think of building mine-sweepers in British Columbia, seeing that orders for seventy for the British admiralty have been placed in the United States for some considerable time. Can the minister tell us if the statement appearing in the press is correct that they are going to build thirty-five mine-sweepers in British Columbia? We can get no confirmation, and it is a very important matter.

Mr. HOWE: I cannot say at the moment, but I should be glad to make inquiries.

Mr. ROSS (Souris): I listened this afternoon with some degree of pride as the minister told us of the efforts which have been put forward by his department on behalf of Canada and of the other allied countries of the world. But I have one matter in mind which I think should not be lost sight of. We are to a large degree losing responsible government in this dominion. In my opinion, responsible government by the elected representatives of the people has been largely superseded and control handed over to the dollar-a-year men who are big business men in this country. The other day I read a return from which it appears that there are 272 dollar-a-year men now handling the affairs of Canada. Many of them have very considerable interests of their own, and the tendency of such appointments is to establish in this country a bureaucracy, which has many dangerous aspects.

I rose, however, to ask a question or two pertaining to gasoline. The minister said that in the matter of gasoline the prairie provinces were more or less self-sufficient. In that respect, in the part of the country in which I live, one of the most prominent oil companies in Canada is running a very large fleet of trucks from Moose Jaw through southern Saskatchewan and southern Manitoba, delivering its products to distributing stations in that manner and paralleling the railroads. At a time like this, to say the least, this is a very bad example to other people who are asked to save gasoline and tires. I believe there are tank cars available on the railways, but this great fleet of trucks comes down the highways every day delivering their product on that basis. I trust the minister will be able to explain that.

Then there is the matter of the sale of gasoline from seven in the morning to seven in the evening. I do not know whether he realizes what that means to the agriculturists of the prairie provinces at this time of year and from now till the snow flies next fall, but in any centre in the prairie provinces, most of these people usually do their trading on Saturday evenings. That is the time when they go to town to do their shopping and buy their gasoline. I have not any idea what number of man-power hours would be saved to agriculture in the western provinces if they were allowed to purchase their gasoline until nine or ten o'clock on Saturday evening, but certainly it would be a good deal. I have received many resolutions from cooperatives asking that the hours of sale be extended for their benefit, at least on Saturday evenings. As I say, throughout the entire prairie provinces agriculturists have to quit their work early in the day in order to reach their trading centres to procure gasoline before seven o'clock. It would be a great saving and immensely help our war effort if on Saturday evenings the hours of sale could be extended until nine or ten o'clock. I am sure that by this time the minister must have some information on the matter, if he would care to give it now.

Mr. HOWE: I shall be glad to call my hon. friend's remarks to the attention of the oil controller.

Mr. POTTIER: I want to make a few remarks with regard to wooden mine-sweepers. Either there is some misunderstanding or some difficulty must have been found in British Columbia which has not been experienced on the Atlantic coast. We have on the Atlantic coast building for the British admiralty, I believe, some thirty mine-sweepers. A number are being constructed in two yards in my constituency.

Mr. REID: I am told that British Columbia is supplying lumber for these.

Mr. POTTIER: I do know about supplying the lumber. The lumber that goes into these mine-sweepers is coming in large measure from the districts in which the mine-sweepers are being built.

Mr. HOWE: The hon. member for New Westminster (Mr. Reid) referred to the great many men unemployed in British Columbia. I should like to get to the bottom of that. I receive alarming reports of the shortage of operators in the aeroplane spruce industry. I suppose there is no more vital industry in connection with aeroplane production in this country than the aeroplane spruce industry. I am told that only 40 per cent of the required cutters in that industry can be engaged in British Columbia. The production of copper in British Columbia dropped very sharply in the last two months and is still dropping, again through the shortage of men in the mines of the province. I receive complaints from various industries in British Columbia that the cut will be short this year because of a shortage of workers. Let us not talk glibly about the great unemployment in British Columbia.

Mr. REID: The minister need not try to be discourteous to me by saying that I am talking glibly. There has been a shift of labour in British Columbia. I know that, when I left, there were in one yard seventy-five men who were idle. I visited the Boeing aeroplane plant, and I could hardly get near

the desk, because such a great number of men and women were endeavouring to register. I visited three plants, and some told me that they had as many as 250 men on the list. There are vacancies in the woods. Many of these men have been coming to the shipyards, but that does not dispose of the statement I made, and it was not a glib statement.

Mr. MacINNIS: I wish to return to the question raised by the member for Lake Centre (Mr. Diefenbaker). There was one point in Mr. Bell's letter that was quite disturbing to me. I quite appreciate what the minister said about the condition in his department. I have been complaining about it for the last two years. These business men who are manning his department have been running their own business as they jolly well pleased for years and there was no one to say them nay. They expect now to do the same thing with the government's business. Their attitude has been a constant bone of contention since the war began, and I have not been able to get any satisfaction when I have complained of it. In Mr. Bell's letter I find this sentence:

> This sum is, by arrangement with treasury, chargeable to overhead in connection with your aircraft contracts.

I was on the war expenditures committee last year. I was on committee No. 1 that went into the matter of treasury control, and we were given to understand that everything was so iron-clad that one could not get a nickel past the treasury. The members of the treasury department are there for the purpose of protecting the interests of the people of Canada as represented by the crown, and, unless they consulted with the minister—and even if they had consulted with him—were not looking after their business in the proper way, when they would allow an arrangement of this kind to be made. It seems to me that this is a most serious charge against the officials of the treasury. They certainly failed in their duty when they allowed an item of this kind to be covered up in overhead. They are being paid to see that such a thing does not happen, and no controller or anyone else should be able to tell any industry that he has made an arrangement with the treasury department that you can hide this or that amount in your costs. We should have fuller explanation of this than we have had.

Mr. HOWE: I am not the minister in charge of treasury.

Mr. CRUICKSHANK: I have tried to look through *Hansard*, but I have not had time. I should like to refer to the remarks made by the minister in connection with spruce. It is to our credit, and it is to the advantage of Canada, that we happen to have a monopoly in Sitka spruce, which is most essential for aeroplane wings, particularly bombers. The third largest logging concern in British Columbia is threatened with a shut-down to-day, and that is something of serious consequence to that province, though it is not half as serious to that province as it is to the dominion and to the war effort as a whole. The reason, as I gather from information that came to hand no later than yesterday, is the fact that the logging concerns, which, I suppose, are expected to produce at a normal profit, just as any other business does, are not able to compete with the shipyards in the right of way for labour. It has been questioned that there is any shortage of labour in that province in view of the fact that there are men who are unemployed. Does the minister expect that a logger will go up to Queen Charlotte islands—and there is no harder work in Canada than logging—when he can get the wages that are being paid in the shipyards on the cost-plus basis? The hon. member for Vancouver East (Mr. MacInnis), I suppose, knows better than I do about these matters, but I do not believe, from my own personal knowledge, the stories that are going around that the shipyard employers are leaning against one another. Work in a shipyard is a far easier form of employment than logging on Queen Charlotte islands.

The hon. member for New Westminster (Mr. Reid) pointed out that we have not had orders for building minesweepers. In 1940 it was pointed out by five different members from British Columbia that we had all the materials; that we had unemployed, skilled and otherwise, in that province, and that we were capable of building these ships. If my memory serves me aright, the idea was poohpoohed that we could build suitable wooden ships in that province. When it is said that because we have unemployment it should not be necessary to shut down logging, to me that does not make sense. Everyone cannot be a logger. I am sure the minister is not aware of the fact that in one riding in British Columbia to-day there are over fifty lathes idle, with all the mechanics to man them. Plant after plant has not been turning a wheel in that province. We have heard about total war effort and a shortage of power, shortage of gas and so on in other parts of Canada. I repeat, in one riding, there are over fifty lathes standing idle, with mechanics to man them and ample power going to waste. I do not think the minister is justified in his statement. The hon. member for New Westminster needs no assistance from me to defend him,

but the minister is not justified in his statement, and I say that speaking for my own riding and I have authority to speak for that riding at any rate until such time as the people there decide to send someone else here. I say unequivocally that in my opinion and in the opinion of my riding there is no total war effort in Canada when hundreds of skilled mechanics are unemployed and their lathes standing idle in British Columbia. That being so, we are not at total war, and nobody can convince me that we are.

Mr. HOWE: I am sorry to disagree with my hon. friend, but I cannot feel terribly upset about a condition of unemployment when our essential industries in British Columbia cannot operate to capacity, and needed capacity to make the war go, because they cannot get men.

Mr. CRUICKSHANK: If the minister would like, I can give him dates and names. I do not like to do this for the simple reason mentioned in other cases; human nature being what it is, it is quite possible that these firms might be discriminated against. But I have the dates when these firms appeared before what is known as the "bits and pieces" department, although as far as British Columbia is concerned that is not the name I would use for it.

Mr. HOWE: All right.

Mr. CRUICKSHANK: I am expressing the opinion of my riding, and I am entitled to do so. That riding is as much concerned in this war effort as any other riding in Canada. It is just as patriotic, as is proved by the voluntary enlistments to date. When I am told that this "bits and pieces" programme means anything I must dispute the minister's interpretation. I have every confidence in the minister and his ability. I am not quarrelling with him. I know he is doing the best job anyone here could do in a difficult position. But it is my duty as a member to point out to the minister, who cannot possibly have a grasp of all the details of his department, that owners of machine shops, wood-working shops and so on in my riding have gone again and again to his representative in the marine building—I do not know who owns the marine building, but it has its fair share of these notorious and useless dollar-a-year men in it—time after time and have been told to fill out a form, everything from the colour of their eyes to the date their grandmother was born. And nothing happens. Yet all these lathes are standing idle; all these mechanics not doing a tap to help Canada's war effort, and power going to waste. If I am given a guarantee that they will not be discriminated against, I can give the names of people who have told me that two or three primary contractors in British Columbia have said, "We fought day and night, month in and month out, to get these contracts; do you think we are going to share them with you people?" The only factory at work in that entire riding, a riding with over fifty lathes standing idle, is employing three men in putting out a little brass angle. When I hear that, just because the logging camps cannot get sufficient help, because ship yards can and do pay higher wages, we have not the unemployed that we are supposed to have, I say that I cannot, and do not intend to go back to my riding and say that we have a total war effort, that we are doing our utmost to defeat Hitler, as long as there is a man, skilled or unskilled, idle in British Columbia, as long as there is power not being used that should be used, as long as there is a lathe not turning that should be turning, no matter what anyone in the minister's department says. I am firmly of opinion that it is time the minister changed his advisers in British Columbia, particularly in regard to the "bits and pieces" programme, and put in a few practical men, and I suggest that among these practical men should be a representative of labour and a representative of agriculture.

Mr. MacINNIS: This question of labour power is, in my opinion, going to become a difficult one before very long. This does not mean that there are not many people unemployed at present. I believe the latest figures available from the unemployment insurance commission, those for April I think, show some 35,000 to 36,000, of whom some 8,000 are women. It is not stated how many of these were employables and how many unemployables; but since these figures come from the unemployment insurance branch, I take it that only a very small number would be unemployables. There are other unemployed not in industries covered by the unemployment insurance branch. I believe the number is estimated as something over 100,000. As I said, there are no definite figures as to the number of unemployed; we are still in the same mess we have been in since 1931. It is quite possible, probably correct, that the Sitka spruce industry has difficulty in keeping their employees. That is a situation not altogether due to the better wages paid in the shipyards and other industries, although that may be a factor. If the Minister of Labour were present, he could substantiate the statement that I took up with him on, I think, the very first day he came into the house, the refusal of the employers in the logging industry on Queen Charlotte islands, where the spruce is cut, to deal or cooperate with their organized employees in any way.

The last letter I had from these employees complained that the dining-room was closed to them because they were half an hour late through attending a union meeting. Men will not stay in an industry operated on that basis when there is employment offering in other places.

I do not know whether any hon. members have ever been in the Queen Charlotte islands in the summer. It is not a nice place to work. The ground is soggy, wet; the men are walking around on wet ground all the time; there are mosquitoes and black flies, and many other things to make life miserable even if the employers did not help to make it still more miserable. It is no wonder the men leave there to work in the shipyards where they have some say as to the conditions under which they work. If this government wants to get men in the various industries and do it without having to adopt the methods of Hitler, they must do it through cooperation between employers and employees. There is no other way of doing it except the way our enemies are doing it. If we have to resort to that sort of thing we might as well stop the war, because we shall have reached the stage where our enemies were before we went into the war. I believe the director of national services, who has recently been appointed, has some good ideas in this direction; I hope he will be given an opportunity to try them out.

Mr. McGARRY: When I hear individual members of this committee advocating things that are regional, things absolutely of advantage to their own political security, it amazes me to think that at other times they may say that we are now undertaking a unified effort in Canada. When I hear individual members rise on behalf of local aggrandizement and undertake to carry on a campaign of belittlement against our Minister of Munitions and Supply, who is recognized to-day as the most proficient man in that capacity in perhaps the entire commonwealth, I do not see where our effort is so unified as some of these hon. members profess it to be. I come from a constituency in which there is not one war project. I am not protesting against that. I believe the men who are at the head of affairs, in laying out these projects, take heed of the economic and strategic factors entering into them as far as our war effort is concerned, and I am perfectly satisfied. I may not be able to judge for myself, but from what I gather, not only in Canada but abroad, our Minister of Munitions and Supply is doing a wonderful job, and I am not particularly concerned over any local grievance, or because I cannot do something for my constituency which possibly would mean my return to parliament. I am concerned with this war effort, and I do not like to sit around and listen, and pretend to be an appreciative audience when individual members rise in their places and carry on a campaign of belittlement because certain things have not been done in their constituencies, out of the multiplicity of things that have to be done in our war effort, none of which has been done in my constituency.

Mr. REID: I rise to a question of privilege. I am not sure whether the last speaker intended his remarks to apply to the speech I made here this evening, but I am one of those who mentioned local matters, and I am asking the hon. member to withdraw that statement if it referred to myself. Certainly I said something about a local matter, but it was constructive. I have taken the attitude, Mr. Chairman, that we need ships now and more ships. I endeavoured to point out to the minister that the production of steel has reached a point beyond which perhaps it could not be very much expanded. I pointed out that Great Britain requires ships, if she requires anything, and I urged that wooden ships be built in British Columbia. I ask the hon. member to withdraw his statement if it applies to me, because it is untrue as far as anything political in my remarks is concerned.

Mr. McGARRY: My statement was general.

Mr. CRUICKSHANK: I must ask for a withdrawal, too, as far as I am concerned, and it is not enough to say that the statement was general: If the maritimes are satisfied, we from British Columbia are not, as to Canada's war effort, as has been said before by some members from British Columbia. We are not talking for our own ridings. I have not a shipyard or anything at all in my riding, not even lobsters; I have only people who are interested in Canada's war effort, and so I ask for a withdrawal as far as my riding and myself are concerned.

The CHAIRMAN: I think by this time the point is quite clear. The hon. gentleman did not address his remarks to any particular member of the House of Commons.

Mr. REID: But it was evident whom he meant.

Mr. CRUICKSHANK: There were only three previous speakers.

The CHAIRMAN: Order. His remarks contained a statement of fact, which has been

challenged, and I think the record speaks for itself. There was nothing in the remarks of the hon. gentleman that was unparliamentary.

Mr. REID: I did not say there was anything unparliamentary in what he said. I said there was an innuendo; and I dispute your suggestion, Mr. Chairman, that it was a statement of fact.

The CHAIRMAN: My ruling is not debatable.

Mr. REID: But you cannot prevent me from saying so.

The CHAIRMAN: Order, please. The incident is closed.

Mr. REID: You just think it is.

The CHAIRMAN: I hope the hon. gentleman does not challenge the authority of the Chair, or desire to be unruly. I would simply say that his remedy is an appeal from the decision of the Chair. My humble person is not involved; it is only my effort to be the servant of the committee in applying the rules. I am sure my hon. friend is an old enough parliamentarian to understand that.

Mr. CRUICKSHANK: I should like to withdraw a statement I made.

The CHAIRMAN: Order, please; the incident is closed.

Mr. CRUICKSHANK: But I want to withdraw a statement.

The CHAIRMAN: Order.

Mr. CRUICKSHANK: On a point of order, I want to withdraw.

The CHAIRMAN: Order; the incident is closed.

Mr. QUELCH: Mr. Chairman, the question of immediate importance, in my opinion, still appears to be how we can most rapidly bring about the expansion of the production of certain war materials, such as ships, aeroplanes and tanks. To me that appears to be of greater importance at the present time than how we can expand our army overseas. I make that statement because in the theatres of war to-day the real shortage is not so much in men as in machines. For instance, in Russia they have tremendous reserves of men, but they are lacking in aeroplanes and tanks. From what we can gather, the loss of Singapore was brought about not so much by any lack of men, because apparently we had superiority in man-power over Japan, but because Japan had overwhelming air superiority. According to the statement of the editor of the Sydney *Daily Telegraph,* in Australia to-day there is a corps of first-class, front-line airmen waiting for planes from America. If I were in the front line again I would far rather have a few men, well backed up by tanks and aeroplanes, than a large number of men without that support. So surely the principal question should be how we can most rapidly expand the production of these essential war materials. For that reason I take strong exception to the statement made over the air quite recently by the Minister of Munitions and Supply, when he said:

> It is difficult for me to believe that many situations will arise where it can be shown, to the satisfaction of any board, that a young man cannot be replaced by industry. I appreciate the fact that newer industries, such as aircraft production, depend greatly on young men who have been trained for work in that particular industry, but I cannot support the view that industry is entitled to their services, in preference to the active service forces.

In my opinion to apply such a policy to aircraft production to-day would be criminal folly. Not long ago I was speaking to the manager of a propeller factory in Montreal. He told me that he was having great difficulty in holding his skilled men, who were being called up for service; and he pointed out that as far as propeller factories are concerned, they need a far larger proportion of skilled men than do other industries. During the Easter recess I visited a number of aircraft factories around Montreal. There is no doubt that the production of many of these factories could be greatly expanded at the present time, utilizing only the machinery they now have.

For example, the president of one of the three large plants in Montreal told me that he was very critical of the policy of the government in the past. He explained to me how at first he had been tooled up for an order of five aeroplanes, and then an order for seven planes was placed. He said that he was in the position where he had to hound the government continually for an expansion of business, whereas in his opinion it should have been the other way; the government should have been hounding industry to maintain production at the maximum level. He told me there was no trouble with labour, and he emphasized the fact that if he could have additional floor space he could double his production without any new machinery. He said that labour would be available for that purpose. I was told, on authority that I would not hesitate to accept, that the question of whether or not that floor space should be expanded depends upon whether or not sufficient business could be obtained to warrant the expansion. That is something I find it very hard to understand. A few minutes ago the minister said that we

were producing more than we needed in Canada for our troops. On the other hand, we are supplying planes to Russia and soon will be sending planes to Australia. Surely there is no danger of producing more planes than those people need. I cannot understand why there should be any question of whether or not we should expand the production of any plant for fear there might not be enough business to warrant that expansion.

I understand that, apart from the engines, practically all the parts which go into an aeroplane are being manufactured in Canada, and the minister has assured us that we can get enough engines to install in the planes we build. The production of planes could, no doubt, be expanded by applying the surplus labour still available for that purpose. At every plant I visited I was told that there was no shortage of labour, and I visited about nine plants in Montreal. The first question I asked when I went to a plant was: have you any trouble about labour? I was always told that there was no shortage of labour. They told me that whereas in the past forty or fifty men used to turn up every day looking for work, only ten or twelve turned up to-day. Labour would be available for that purpose. I must admit that I was very much surprised to receive that statement from the plants in view of what was said by the Minister of Munitions and Supply to the effect that our production was rapidly reaching its peak because of a shortage of skilled labour.

Mr. HOWE: My hon. friend has said that he visited a number of plants and was told that there was no shortage of labour. Will he accept a list of plants from me to visit and see what he finds there?

Mr. QUELCH: I visited the three large plants in Montreal: Canadian Car and Foundry, Canadian Propellers, Noorduyn and Fairchild.

Mr. HOWE: They are quite small operations. I suggest that the hon. member visit the aluminum company and the nickel company and see some larger operations.

Mr. QUELCH: I am talking about aeroplane plants in Montreal, not about mines. The manager of one of the main plants there emphasized the fact that he could expand the production of his plant 100 per cent if he were given additional floor space, and he could do this without additional machinery.

The international association of machine workers, lodge No. 712, have an agreement with the three main plants in Montreal. They urged the managers of those plants and Mr. Bell that they should go over to a 168-hour production week, running three 8-hour shifts with a swing shift in order to give the men a one-day holiday a week. In order to be fair to them I should just quote from the brief which they submitted to the managers and Mr. Bell. I quote:

Accelerating the rate of present production schedules of "planes on order" is possible immediately. Our proposal that the industry chart a course to go over to the 168 hours per week production schedule (3 eight-hour production shifts per day and the seven-day working week) points the way to substantial speeding-up of the present schedules of production of "planes on order" and is also necessary to gear the industry for any contemplated upward revision of aircraft production plans by the government. To-day, we estimate that approximately 7,000 Montreal aircraft workers are engaged on the day-shift, with approximately 3,000 on the so-called night-shift. Our estimation is that Fairchilds is operating on the basis of around one and one-half production shifts per twenty-four hour day. Noorduyns about the same; that Vickers when in full production operates about the same; Federal Aircraft about the same; Aero about the same; and that the Pointe St. Charles plant of Canada Car operates between one and one-half to two production shifts per day, while their Turcot plant operates one eight-hour production shift per day.

Assuming that supply problems can be solved to bring up to assembly points all necessary material, and that cooperatively we can organize the necessary extra workers and personnel and that the plants go over to three eight-hour production shifts per day, a conservative estimate would be that production figures can be increased by at least 100 per cent upon this basis.

And again:

Personnel problems arise out of our proposal above, and it may be assumed that the gearing of our industry to the 168 hour production schedule will call for between 18,000 and 20,000 workers, that is, 8 to 10,000 additional people.

I notice that Mr. Ralph Bell gave a statement to the press in reply to that, reading as follows:

The question of whether or not the aircraft plants in Canada shall or shall not work twenty-four hours per day, seven days a week does not depend on whether or not the men and women operating these plants are prepared to work such schedules, but rather, and entirely on two points:

1. Whether or not it is possible to procure for expanded production schedules adequate quantities of all of the materials and thousands of parts, accessories, et cetera, of which there is already a shortage and without which the manufacture of complete finished aircraft is impossible, and

2. Whether in an industry in which personnel has been expanded forty times in the short space of two and a half years, it is possible to develop sufficient competent superintendents, foremen and lead hands to staff three shifts, as against the two shifts on which the bulk of the Canadian industry is now being operated.

I would point out that they are not really operating two shifts because the night shift is only aproximately half the day shift, in other words they only operate about one and one-half shifts. In so far as the first part of this letter is concerned, as to whether or not we can get materials and parts for these planes, the fact is that these parts are being manufactured in Canada. We have the surplus labour, and surely it would be only a question of applying that surplus labour to the production of these parts to make them available for a larger production of planes.

The manager of Noorduyn was quite emphatic that you could get more efficient work from the men and a greater production from the plant with a five-day week for the men, keeping the plant going the full seven days. These plants are now operating a 10-hour shift and, with so many young girls working in the plants, I can easily understand why there is so much sickness. It is not easy for these young girls to stand up to a 10-hour shift. Surely by having three 8-hour shifts, we could reduce the amount of sickness and the number of absentees which is one of the curses of all industry to-day.

Apparently no steps are being taken at the present time to expand the training of men and women in order to make it possible to go on a three 8-hour shift programme. As was pointed out, that would require an additional 8,000 men. Surely, until that maximum production has been attained, there should be no question of withdrawing trained men from these industries and supplanting them with girls. In regard to the possibility of expanding production, the hon. member for Vancouver East (Mr. MacInnis) referred to a statement in a sessional paper to the effect that 34,000 men and women were unplaced by the unemployment insurance commission. Probably most of these people will be untrained, but in view of the fact that we are approaching a crisis in which it is so essential that we have more planes, more tanks and more ships, we should not hesitate to withdraw skilled labour from the gold mines of this country because they are certainly not essential to our war effort. The United States has classified gold-mining as a non-essential industry, and I think it is high time that we took a similar stand in this country. Would the minister explain why it is not considered sound or feasible to run the various aircraft plants on a 168-hour basis?

Mr. HOWE: As I said before, the aeroplane industry is expanding very, very rapidly. Since the war began, it has been taking on men at an average rate of 2,000 men a month, but there is a limit to how fast men can be taken on and absorbed in an industry. Our objective is a seven-day week and three eight-hour shifts, and we have achieved that in a number of factories, also in two plants in the shipbuilding industry. But it takes a very highly organized and well-equipped plant to operate on that basis. In the first place we must have, not three shifts, but four shifts of supervisory staff to run that sort of operation. That means, of course, a great many more foremen and more supervisory staff.

There is another thing. The aircraft industry, as my hon. friend has seen it, is an assembly plant, and back of the assembly plant there are a great many factories making component parts which have to be first developed to a stage where they will permit the assembly plant to proceed on the kind of intensified three-shifts-a-day basis that he urges. I can tell him of a number of plants which have been organized to the point where they are working on three shifts a day. The Bren gun plant, for instance, has been working seven days a week, and three eight-hour shifts a day, for over a year, and I could name many more, but there you have an integrated industry where everything except the raw materials is made on the premises. It is much easier to organize that sort of plant on a high-pressure basis, seven days a week and twenty-four hours a day, than a plant which is in reality an assembly plant, back of which there are many hundreds of small shops manufacturing component parts. But we shall, I think, as time goes on, bring the aircraft industry up to that point. We have one plant that is not far away from that now. It is pretty well organized, and I think we shall eventually get the industry on a seven-day week and three-shifts-a-day basis. But it takes time. If we could stabilize the industry and say, "we will keep to the models we now have and make no further changes," and stop expanding floor space, we could bring the industry up to the stage my hon. friend suggests. But it is an expanding industry in many ways, and we have not yet reached that point.

Mr. QUELCH: Until we have done so should we not hesitate to withdraw skilled labour from the industry for the army because that is bound to retard production? On the other point, that we should not hesitate to give a plant enough business to warrant an expansion of floor space, do I understand the minister to say that it does not matter whether we get the United States to buy these planes from us, to make them available to England or Russia under the lend-lease plan?

Mr. HOWE: Not at all. There is not a plant in Canada that has not sufficient work to last until the end of 1943.

Mr. QUELCH: At the present rate?

Mr. HOWE: They can produce as fast as they like. They have ample orders. There is no restriction on anyone producing all that their plant can produce to-day. If they do not do so, they are missing a golden opportunity and are out of pocket on that account. There is no lack of orders to-day. It has taken time to organize our plants for continuous production, but there is not a plant in Canada to-day that cannot tell you what planes they are going to be making this time next year.

My hon. friend says that once a man goes into the aeroplane industry, he should be kept there and not be taken out for the army. I do not consider that a man who has spent six or eight months in the aeroplane industry is a skilled mechanic who must not be taken out of the industry for the army.

Mr. QUELCH: You would lose the benefit of eight months training because you would have to put a new man in the industry in his place.

Mr. HOWE: Perhaps so, but the armed services require mechanics too. The air force, for instance, requires mechanics just as badly as does the aeroplane industry, and if they cannot get them from industry they have to train them. It is just as easy to train a mechanic in an aeroplane plant as in a training school.

Mr. QUELCH: The army will not need mechanics unless they get the machines from industry.

Mr. HOWE: The army is not badly off for machines to-day. It is all very well to theorize, but after all it is only fair to take an industry and see what it was a year ago and what the trend has been since then up until to-day. To-day the aeroplane industry is vastly stronger than it was a year ago or even six months ago, and a year from now when we have been able to stream-line the industry we shall have a greater ratio of employment, but as long as my hon. friend says that there is great unemployment, and keeps insisting on that, I cannot agree with him that it is improper to take men from any industry if they are needed for the army.

Mr. QUELCH: The minister will not dispute the figures tabled in the house by the unemployment insurance commission, which show 34,000 men and women unplaced.

Mr. HOWE: I have 34,000 jobs to-day which I cannot fill. I think we had better get together.

Mr. QUELCH: I think so. The unemployment insurance commission has been set up for the purpose of getting these people jobs.

The minister has referred to the fact that we have had a fairly rapid expansion of industry. I think the government are altogether too prone to emphasize the fact that the production of war materials has had to start from scratch, and that they have been handicapped by lack of skilled men, tools, plants and equipment. Whose fault was it that that situation existed? Have the men who were responsible for that position being in existence upon the declaration of war been removed from office? If they have not been, have we any assurance that they are not still to-day retarding our war effort? From 1935 to 1939 we continually hounded this government to take the necessary steps to develop the resources of this country, and members here who were in the house at that time know the kind of response we got from the Minister of Finance. Always his reply was: "There is no money available". So I think the government is not in a very good position to-day to give the excuse that it has not been able to achieve a more rapid expansion of industry because it had to start from scratch, because, in other words, it allowed the resources of this country in man-power and in industry to be systematically sabotaged during the five years preceding the war.

I should like to ask the minister two or three questions regarding the road along the Lachine canal. I have seen the Canadian Car and Foundry works, and I have seen some pretty bad roads in the west, but I have seldom seen a worse road than the particular road which is servicing that war plant. Just a week before I went there, a load of aluminum had gone over into the canal, and there have been a number of accidents. There is, I understand, a dispute between the city of Montreal and the transport department, as to responsibility for the road, but surely in a matter as important as this the government should go ahead under the War Measures Act, fix the road and argue responsibility afterwards. The road certainly should be fixed.

Mr. HOWE: That road is a private road. It is not part of the canal property. It has been a moot point. The Canadian Car and Foundry have tried to bring pressure to bear on the department from this side of the house and from the opposite side, and I am glad to

see that they have gone down now to the far corner. Nevertheless the question of responsibility has been looked into, and it is not the responsibility of the federal government. The federal government will have nothing to do with that road. The sooner the Canadian Car and Foundry Company appreciate that fact, the sooner they will get a road.

Mr. QUELCH: Do I understand the minister to say he is going to allow the condition of the road to impede or hamper the production of planes, as it is doing at the present time? He can take the necessary steps to see that the road is repaired, and fix the responsibility afterwards.

Mr. HOWE: I think my hon. friend would be very well advised to stick to matters he understands. He is not an engineer; he is not a highway man; he is not an expert on municipal authority, and he had better speak on more general questions.

Mr. QUELCH: The minister says I am not an authority on road-building. He would probably be surprised to know the amount of experience I have had, and the number of years I have spent on contract work building not only railways, but highways. I know a good deal about the condition of that road. It would not cost very much to fix. It has a hard bottom and is full of holes and ruts. He should be a little more careful about the remarks he makes when he says I do not know about roads and highways. I spent a good deal of time on subcontracts before the war.

Mr. EDWARDS: Where?

Mr. QUELCH: On the Grand Trunk line, and the Goose Lake branch line, Twining and Youngstown.

Mr. BLACKMORE: Whose business is it, anyway?

Mr. QUELCH: I do know that this condition is having a serious effect on our production. At the propeller factory of the Canadian Car and Foundry company there is an open sewer running right through the grounds.

Mr. HOWE: The property it is running through is owned by Canadian Car and Foundry Company Limited. I understand they are making fair returns on the contracts they have. The hon. member could suggest to them that they might fix it.

Mr. QUELCH: It is not their sewer. The responsibility must be with the city of Montreal or some other authority, and I think the minister should be sufficiently interested in the workers in that industry to see that action is taken regarding that open sewer. One can imagine what it is going to be like near that factory in the hot weather. I am not discussing whether or not it is the responsibility of the federal government or of the city of Montreal. It is near a factory engaged in producing war materials, and for that reason the minister should have an interest in the remedying of that condition.

Mr. NICHOLSON: I have understood from statements of the minister on several occasions that shortage of steel is one of his major concerns. I have a letter from H. Gauvin, manufacturer, of Ottawa, advising that:

> Four million pounds of metal and five hundred thousand dollars could have been saved to date by the government on their low cost housing since the war, simply by using Enamel-Steel-Bathtubs.

I am not advertising this particular ware, but the manufacturer of these bathtubs wrote on April 1 to the director of national housing under the Department of Finance regarding this particular bathtub, and apparently it had sufficient merit to warrant a reply from the director as follows:

> Having seen your new all metal bathtub I feel that it has sufficient merit to warrant us asking you for definite quotations and as discussed with you a few days ago I wish you could arrange to give us definite quotations based on: 1,000 tubs 5′ long; 5,000 tubs 5′ long; 10,000 tubs 5′ long.

This brings me to the question I have in mind. This manufacturer was advised that Wartime Housing Limited was the department to be interested in this particular invention. The manufacturer informed me:

> I wish to state that I have repeatedly offered the entire use of my patent covering my low cost enamel steel bathtub to the government for the duration of the war, with or without my services, on their own terms, for the saving of metal, with no answer.

I cannot verify that statement; but the claim that four million pounds of metal and four hundred thousand dollars can be saved would seem to me to warrant at least a reply to this letter. I took the trouble to write to Wartime Housing Limited on February 26, after giving some consideration to this man's representations, and I said to them:

> Mr. H. Gauvin, 26 James street, Ottawa, has been discussing with me his Steel-Enamel-Bathtub. He discussed the use of this tub with the national housing administration here, prior to the establishing of Wartime Housing Limited, with a view to using this type of tub in the low-priced houses which were to be constructed. He has given me a copy of his file and, apparently, has not received an acknowledgment to a number of letters sent to you.
>
> I am enclosing copies of eight letters, and would appreciate a reply from you, commenting

on this particular type of tub and whether the saving in material, which he claims would be effected, would warrant his applying for special consideration from the steel controller in connection with the manufacture of these tubs.

I might say that, having visited the temporary houses being built by Wartime Housing Limited, it is my considered opinion that these tubs would last much longer than these temporarily built houses will last.

Mr. MacNICOL: Are these tubs made in Ottawa?

Mr. NICHOLSON: He had his quotation from a reliable firm in Ottawa to manufacture in these quantities: 1,000, 5,000 and 10,000.

Mr. MacNICOL: They are not making them yet.

Mr. NICHOLSON: No. He has his patent, but he cannot manufacture until he gets permission from the steel controller.

I failed to get a reply from the government-owned company which has already undertaken to spend thirty million dollars of public money, so I had occasion to discuss the question with the minister. After doing so, he assured me he would get a reply, and so the day after the interview I wrote the minister as follows:

As suggested during our interview yesterday, I am writing you in connection with correspondence between Mr. H. Gauvin of Ottawa and Wartime Housing of Toronto, and also regarding a letter I sent to Wartime Housing on February 28 which has not been acknowledged to date.

You intimated you would find out why these letters have not been acknowledged, and let me have a report at a later date.

That letter was written on March 18, and to date I have not had a reply from the minister, so I assume that he did not have any reply from his government-controlled company, Wartime Housing Limited.

I have a letter from Mr. Gauvin, dated May 1, the last paragraph of which reads as follows:

About a month ago, a gentleman called on me saying that he represented the Wartime Housing Ltd. and wanted to inspect my Steel-Enamel-Bathtub and make a report to the Wartime Housing Ltd. I gave him all the information he wanted and he inspected the product, and it turned out he was a representative of Crane Limited acting for Wartime Housing Limited.

That is a strange set of circumstances, that Wartime Housing Limited, after this long delay, finally sends to inspect this particular bathtub a representative of a rival firm.

Mr. HOWE: Might I point out that there is a difference between Crane and my hon. friend's friend, in that one makes bathtubs and the other does not. Is that not true?

Mr. NICHOLSON: Yes; but the minister is not going to laugh away this question as easily as that. I am not contending that this bathtub is everything it is represented to be, but at least I think the manufacturer is entitled to a statement from some responsible official of this government.

Mr. EDWARDS: What manufacturer? There isn't any manufacturer.

Mr. NICHOLSON: Oh, yes; the manufacturer is H. Gauvin, and his bathtub is available for display, I understand, if any member of parliament wishes to see it. I again wrote the minister, on May 5:

On March 18, I wrote to you following an interview on the previous day in connection with Mr. H. Gauvin.

I still have not had any acknowledgment from Wartime Housing Limited on the letter I wrote to them on February 28. Mr. Gauvin has written to me again, and I have just advised him that my letter of February 28 has never been acknowledged—

I think the people of Canada are not going to be satisfied with Wartime Housing Limited failing to answer a letter from a member of parliament regarding a claim of this sort. I merely asked them for a statement that this proposal was "all haywire" or that it had some merit in it. I have not had even the courtesy of a letter. For Wartime Housing Limited to send a representative of Crane to report on this particular project, and even after that has happened, being unwilling to reply to a member of this parliament, who in turn is responsible to the people of Canada for national expenditure, simply is not good enough. I ask the minister to tell this committee why Wartime Housing Limited cannot reply to letters of this sort and why they have to engage employees of Crane to pass an opinion on a matter of this kind.

Mr. HOWE: Rightly or wrongly, the department takes the view that articles should be sold on their merit and that they should not be high-pressured by members of parliament. I do not like to say that to hon. members, but frankly we do not like—

Mr. MacINNIS: High-pressured by Crane.

Mr. HOWE: —members of parliament to act as high-pressure purchasing agents. My hon. friend is very much interested in housing. I have had many talks with him about it. I asked about this project, and requested him to get a report on it himself, whether there was any merit in this thing. My hon. friend cannot demand a reply from me on behalf of the salesman of a product to the Department of Munitions and Supply. He is not entitled to do that, and he cannot demand

it of any member of my staff. It is not the privilege of members of parliament to interfere in the purchasing of the Department of Munitions and Supply, and every member of parliament knows that except my hon. friend.

Mr. NICHOLSON: I have no interest in this firm or in this individual in any shape or form.

Mr. HOWE: Well, the hon. gentleman has written a great many letters about him. He is selling a commercial product to a buying department of the government.

Mr. NICHOLSON: According to the information, he can provide—and the minister has not contradicted it—a saving of four million pounds of metal and $500,000. That has been claimed, and a reliable firm in Ottawa has submitted quotations. According to the quotations to the national housing administration, which also is a government-owned concern, he is offering 1,000 bathtubs at $15.10 a bathtub, 5,000 at $13.90 and 10,000 at $13.15.

Mr. HOWE: Was this tender accepted?

Mr. NICHOLSON: No, for the reason that he cannot get the materials until he gets permission from the steel controller. Any hon. member who will visit the houses in Hull will agree with me that $15 a bathtub is quite good enough for those houses. I cannot see any reason for the minister taking the stand he does, that a member of parliament is not entitled to a reply to letters such as I have written, as to whether there is merit in the man's claim. All I ask for is a statement to the effect that his bathtubs are not acceptable and his claims are extravagant.

Mr. HOWE: I will call my hon. friend's sales talk to the attention of my purchasing department.

Mr. NICHOLSON: That is not good enough. On March 18 the minister took a different attitude from the one he is taking to-night. My understanding then was that my request was legitimate, and I thought I would receive the information. Would the minister tell the committee why wartime housing has refused to answer my letters in this connection? I should like to have an answer to that question.

Mr. HOWE: Frankly, all I can say is I do not know why they refused. I shall be glad to ask them to give an answer.

Mr. MacINNIS: The minister should withdraw the statement that the hon. member's speech was a sales talk. I do not think that is a dignified statement or is consonant with the decorum of the house, and the minister certainly should not use his privilege as a minister to call the speech made by any member a sales talk. I suggest, Mr. Chairman, that you demand a withdrawal of that statement.

Mr. HOWE: I withdraw with pleasure.

Mr. JOHNSTON (Bow River): There are one or two matters to which I wish to call attention, but before I do so I would refer to a remark made by the minister in reference to the member for Acadia (Mr. Quelch). He suggested that the hon. member was overemphasizing the unemployment situation, and I think he implied that there was no unemployment problem. A return was brought down in connection with the unemployment situation. It was asked for by the member for Macleod (Mr. Hansell), and it was tabled on May 6. It had to do with the unemployment question. The first question was this:

What is the number of unemployed in each Canadian city of a population of 10,000 or over?

The answer to that question would not by any means give the total unemployment, because this was simply the unemployed registered with the unemployment commission for cities that had a population of 10,000 or over. The answer is:

Attached hereto is a statement showing applicants registered for employment on April 23, 1942, at employment and claims offices of the unemployment insurance commission in cities with a population of 10,000 or over.

The total number of unemployed was 33,449; total males, 25,277, and females, 8,172. That was simply those registered in cities with a population of 10,000 or over. The next question was:

How many in each of these cities are receiving direct relief?

The answer was:

No information in possession of the unemployment insurance commission.

In reply to a further question the information was given that the number of unemployed who have registered for employment is not a matter of record. There are two points there of which the minister should take note. There is a large number of available unemployed who are already registered with the unemployment insurance commission. The minister should know that over 33,000 have registered, and that only in cities having a population of 10,000 or over, so that it would be safe to say that there would be double that number if you took the country at large. I do not think the minister is aware of that situation.

Let me refer to the Minutes of Proceedings and Evidence, No. 3, of the standing committee on railways and shipping, wherein the minister, speaking to the committee on the question of unemployment, is reported as follows:

As a matter of fact, gentlemen, there is no unemployment in this country. If you can show me a thousand men unemployed to-day I can tell you exactly where they can be employed at very excellent wages.

I suggest that he has been told where there is a large number of unemployed. I am sure the people registered would be exceedingly gratified to know that they will be employed at excellent wages. I continue to quote from the minister's statement:

This country is short of employment from end to end.

According to the statement, there is not a city in Canada with a population of 10,000 or over that has not some unemployed who are registered with the unemployment insurance commission, and I have them all here in detail, giving every city with a population of 10,000 or over. I think it would be of advantage to the minister to check this over if he is short of labour—and it is not only skilled labour he wants. Then I continue:

Mr. Maybank: All right.

Mr. Shaw: Mr. Chairman, I should like to ask Mr. Howe if his statement applies to unskilled as well as skilled men.

Hon. Mr. Howe: Both.

Mr. Shaw: That seems contrary to a recent radio broadcast that said—and I believe it is a censored broadcast—that unemployment in this country had increased by 5 per cent since January.

Mr. Donnelly: Who said that?

Mr. Shaw: It came over CFBN—

I think that should be CFCN.

—in Calgary in a news broadcast about three weeks ago, and if that is correct, I would not say that your figures with regard to unemployment would stand up.

Hon. Mr. Howe: If you can deliver me a thousand men at Ottawa I will be very pleased to use them at Sudbury to-day. If you deliver me five thousand I can use them at Arvida.

Apparently the minister is looking around for men. There they are. Evidently there is lack of coordination somewhere. I am not trying to imply that the minister was insincere when he made the statement, but the evidence produced by the department itself is contrary to what the minister has in mind. I believe, as the hon. member for Acadia just mentioned, that many difficulties of which the minister is probably not aware could be straightened out. Take, for example, the road referred to. Regardless of the fact that the minister intimated that that was not his responsibility, the fact remains that the poor condition of that road is definitely interfering with our war effort. The minister should take the officers of that company out and—I would go so far as to say—horsewhip them. That is not putting it too strongly when anybody stands in the way of our war effort. The minister should not dilly-dally with them; he has the authority and the power, and it is his responsibility to see that they produce 100 per cent.

Another matter to which I wish to refer is the matter that was brought up to-night by the hon. member for Lake Centre in regard to certain expenditures being charged up to production and consequently coming out of the public revenue. A war expenditures committee has been set up by this house this year, and there was one last year. I have said before that I think the members of that committee a year ago did a great deal of hard work and were sincere in their efforts. But if that committee had had proper facilities, I tell the minister that such a condition as was brought to his attention to-night would never have existed. I believe that every hon. member who is on that committee this year and every hon. member who was on it last year is and was endeavouring to assist the government in its war effort. Saving money was one of their major objects. This year the question of production comes in. If the committee is given every facility I believe it will greatly assist the minister. But I do not believe that the committee, as now constituted, can do that work of checking up such details as were brought to the attention of the minister to-night. The committee which sat a year ago, working as energetically as they could, did not have the legal or technical advice of men independent of the government to enable them to investigate a case like that. What should have been done is that the committee should have had a secretariat. That is, they should have been permitted to employ a man who could give them sound legal advice, a good lawyer independent of the government or of members of parliament. They should also have had at their disposal a first-class accountant and a good statistician. The minister may say, "Oh, well, you cannot spend so much money."

Mr. HOWE: Do not put words in my mouth. I am saying nothing.

Mr. JOHNSTON (Bow River): I did not say the minister said it, but he looked as though he might have said it. I am not trying to attribute anything to the minister; I am suggesting that he or someone else might raise the question of expense. But the matter spoken of to-night was an excellent example

of how a large amount of money might have been saved to the government. After all, if the employment of a secretariat such as I have mentioned would help the government save money and would in any way increase the present production of our war machine, it would be money well spent.

The question might be raised, "What do you want a lawyer for when you have several lawyers on the committee?" The subcommittee that I happen to be on is dealing with contracts and production. There are lawyers attached to the committee; but regardless of what anyone may say, there is a political tinge, and the endeavour should be to get away from politics entirely. That can be done by sitting in camera. But there must be some person who can give legal advice. On these committees are many who are not lawyers. I think a lawyer is good in his place, and that would be one place for him. Certainly the committee should have the services of an accountant. How can ordinary laymen delve into these matters and find out such a thing as was brought up to-night in regard to this morale-building matter?

The minister is missing a wonderful opportunity if he does not insist that the war expenditures committee be given a secretariat so that they can search diligently into this department. I had an example of the need the other day. I put a question on the order paper asking for the production of papers in regard to the Ottawa Car and Aircraft company. I received a telephone call from the department. Mr. Marsh informed me that there were two wheelbarrows full of correspondence—I think it was two. He said, "Surely you do not want me to copy all this and send it over to you." Well, if he had done it, I would not have had time to go through it. So I said, "No, that is not what I want." He said, "Well, if you will tell me just what you want, I will try to get it." There is the difficulty the committee will find themselves in, and that is just one small company—two wheelbarrows full of correspondence. I suggest that no committee can go into such a matter with the intention of assisting the department and thereby assisting our war effort unless they have someone that they can call upon in such matters, someone absolutely independent of the department. If such were the case now, it would be a very easy thing to say to a chartered accountant and perhaps an experienced lawyer, "Now, you fellows go into that department and get all the material we want." I am sure the department is not trying to hide anything. I am sure Mr. Marsh, who telephones me, would do his best to get the material I require, but how does he know what we want? I believe that if the committee is to do the work it should do, it should be given a secretariat which would efficiently and effectively go into these departments and get the information we are trying to get. If you keep the committee sitting in camera it will not be a case of publicizing the thing in order to get publicity; it will be a case of doing the job efficiently. Then, when we get through, members of the committee will not have to rise in the house and say, "We did not have an opportunity to go into that department. We did not have the time, and we did not have the facilities at our disposal."

The CHAIRMAN: I do not want to interfere with the hon. gentleman, but he is discussing a matter of procedure before a committee of parliament. I do not believe this is the proper time or place for that. The matter of procedure in a committee must be discussed in that committee. The committee may report to the house and request the remedies suggested by the hon. member, but it is not in order to discuss the procedure or the powers of a committee, or the assistance the committee should receive, when we are considering the resolution now before the committee of the whole.

Mr. JOHNSTON (Bow River): I was referring to the war expenditures committee of last year, Mr. Chairman. I think that can be discussed now, can it not?

The CHAIRMAN: No; this is not the proper time or place to discuss even a committee of last year.

Mr. JOHNSTON (Bow River): Well, Mr. Chairman, my only desire in bringing up this matter is to endeavour to avoid a repetition of what occurred to-night.

The CHAIRMAN: I have indicated the procedure to the hon. gentleman. I am not here to suggest ways and means, but I have indicated the procedure to which the hon. gentleman may have recourse, before the committee itself. Then, if the committee at present sitting on the very subject being discussed by the hon. gentleman—

Mr. JOHNSTON (Bow River): Just what would be the procedure in the committee? Would you tell me, sir, how I could do that in the committee? What would be the procedure?

The CHAIRMAN: The committee itself could deal with that question. If the committee feels that it needs assistance, it is for the members of the committee themselves to discuss how they should go about getting it.

Mr. JOHNSTON (Bow River): I quite agree, Mr. Chairman, that it is the privilege of any member of the committee to discuss in the committee what he thinks should be done. But even you, Mr. Chairman, I do not think would overlook the fact that with its present set-up, with a large majority of government members, it is doubtful whether the committee would accept any such suggestion.

The CHAIRMAN: At the moment I am not interested in that, except to say that it would not be in order now to discuss the procedure of the committee. If, when the report of the committee is drawn up, the minority members do not feel satisfied with the procedure, they can bring in a minority report.

Mr. JOHNSTON (Bow River): Well, Mr. Chairman, I venture to say that no report will be brought back to the house for some little time. I am suggesting to the minister—

Mr. HOWE: What has the minister to do with a committee which is investigating the Department of Munitions and Supply? It is not my committee; I am not a member of it.

Mr. JOHNSTON (Bow River): I think it would be to the minister's interest to suggest—

Mr. HOWE: Never mind the minister. You are a member of the committee; you do what you like. It has nothing to do with me.

Mr. JOHNSTON (Bow River): Then how does the minister expect that minority members of a committee will be able to do what they like in that committee?

Mr. HOWE: I do not care what they do. I am not a member of the committee.

Mr. JOHNSTON (Bow River): I am just about coming to that conclusion. But I think the minister would do well to demand that a secretariat be placed at the disposal of that committee, so that a proper investigation might be made of his department.

The CHAIRMAN: Any discussion as to the composition of the committee is altogether out of order. This matter was dealt with when the motion setting up the committee was before the house. It is out of order to discuss either the composition or the procedure of the committee now.

Mr. JOHNSTON (Bow River): I shall abide by your ruling, Mr. Chairman, and we will do the best we can. When the report is made, we will see what can be done.

Mr. HOWE: A few days ago the hon. member for Bow River brought up a subject which I would not reopen but for the fact that I have had protests from both the management and the employees of the Calgary rolling mills because of the statements made by my hon. friend. Those rolling mills are in the constituency of Bow River, and I should think we might expect any statement made by the hon. member to be accurate. As reported at page 2028 of *Hansard* for April 30, the hon. member said:

> Within the last little while I have heard the Minister of Munitions and Supply say there was a shortage of steel. I do not believe that.

I do not quarrel with that; I would not expect the hon. gentleman to believe me.

> I think that statement is absolutely incorrect—

Again I am not surprised.

> —and I am going to tell you why. The rolling mills in Calgary quit work at five o'clock every afternoon. One of the men in the factory told me that they could produce three times the supply that they are producing.

It has been brought to my attention, officially and otherwise, that since the Calgary rolling mills opened they have been working seven days a week, three shifts per day. I have the production figures of the mill from the time they started in September. They are as follows:

	Gross tons
September	1,409
October	1,195
November	1,455
December	1,192
January	1,738
February	1,523
March	1,644
April	1,743

I have had the output checked by our steel expert, and I am told that this is top capacity for a mill of that size. I think, in justice to his constituents, my hon. friend should apologize to the house for a misstatement of that kind.

Mr. JOHNSTON (Bow River): I have absolutely no intention of apologizing to the house or to the minister, because I believe the statement I made will bear investigation. The minister has now gone to a great deal of trouble to investigate this situation. Why did he not do some investigating when we were pressing to have the mill opened? Surely there was enough criticism in this house about not opening it, but the minister was not in any great hurry then to open it. I want to ask the minister a question or two about the mill. I should like to ask how many blast furnaces are in operation at the mill.

The CHAIRMAN: Eleven o'clock.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, May 15, 1942

The house met at three o'clock.

SHIPPING LOSSES

REQUEST FOR SECRET SITTING OF THE HOUSE TO CONSIDER RECENT DEVELOPMENTS

On the orders of the day:

Mr. J. S. ROY (Gaspe): Mr. Speaker, in view of the close proximity of the coast where enemy submarines are now operating, and by reason of particulars I possess and desire to share with the house, but which it would not be wise to disclose publicly, I would ask the government as the representative of the constituency in the vicinity of which these enemy submarine activities are taking place that an immediate secret session of the house be held to consider these most important war developments which are taking place as far as 300 miles within our Atlantic border. These events are of such gravity that it seems to me that the people's representatives should be made aware of all details concerning the attacks and be given an opportunity to take part in deliberations on the means to protect our threatened country.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my hon. friend could hardly expect the government to regard what he has just stated as a question, but I shall be pleased to read what he has said in *Hansard*, and I can assure him that it will be carefully considered.

Mr. M. J. COLDWELL (Rosetown-Biggar): I think the hon. gentleman is asking for a secret session of the house at which he can divulge some information which he has in his possession. It seems to me that in view of the circumstances it might be wise for the government to grant his request.

Mr. MACKENZIE KING: The matter will have to be considered in the light of what a secret session would involve. My attention has just been drawn to the fact that the hon. member for Gaspe (Mr. Roy) mentioned that he had some information that he wished to impart in a secret session. Might I suggest to him that he give the information immediately to the Minister of National Defence for Naval Services (Mr. Macdonald). That will assist the government in reaching a conclusion as to what further steps should be taken.

Mr. ROY: I shall forward my information to the minister, but I would still appreciate the holding of a secret session, as there are many things which should be discussed by the house.

[Mr. Chairman.]

1941-42 VICTORY LOAN

On the orders of the day:

Hon. W. E. ROWE (Dufferin-Simcoe): Mr. Speaker, I wish to make a correction in the report of my speech last night. I am not suggesting that it is the fault of our efficient *Hansard* reporters, but at page 2442 of *Hansard* I am reported as having said that, according to a press report, in the last victory loan "one out of 6·5" of Canada's population purchased bonds whereas in the first victory loan in June, 1941, "one out of every 12·02" bought bonds. What I intended to say was that in the last victory loan 6·5 per cent of our population purchased bonds whereas in the previous sale of victory bonds 12·02 per cent of our population bought bonds.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, May 14, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

Mr. HOWE: Mr. Chairman, with regard to the discussion initiated last evening by the hon. member for Lake Centre as to the director-general of aircraft production, it would appear that the aircraft industry has been in convention in Ottawa yesterday and to-day, and they have sent me a document which I should like to read to the house and place on *Hansard*. It is dated May 15, 1942, and reads:

Representatives of every phase of the aircraft industry in Canada, assembled in convention at Ottawa, do hereby unanimously resolve that:

1. They are familiar with the facts connected with the organization of the morale-building campaign, which has resulted in the setting up of a series of advisory committees from coast to coast, consisting of citizens of the highest standing in their communities, and are satisfied that there have been no improper actions taken, and that Mr. E. G. Hirst has received no direct or indirect benefit from his activities in connection with this matter.

2. They consider this activity to be a well-planned effort to build up and maintain the morale of all workers in the aircraft industry and that its continuance is a vital necessity, in the national interest.

3. That whereas in the past, this activity has had to be carried on in a somewhat informal manner, funds should be provided to enable it to continue on a formal basis.

4. They wish to bring to the minister's attention that Ralph P. Bell, as Director-General of Aircraft Production of the Department of

Munitions and Supply, and his organization, have brought the aircraft industry in Canada from a low condition to its present high standard.

5. That Mr. Bell has given unsparingly of his time and energy to this important phase of the war effort and that he has set a standard of patriotic devotion and duty which is an inspiration to all who have contact with him.

This document I think shows definitely that Mr. Bell has been proceeding along the right lines, although his methods in this instance do not commend themselves to myself, or I believe to the house. Apparently there was no doubt that the industry were fully agreed that an officer of the type appointed by Mr. Bell was necessary, and that the organization which is being built up by this officer has been doing most efficient work. You will notice that all firms in the aircraft industry urge that the work be not discontinued, but rather formalized and carried on in an expanded way.

I noticed in reading *Hansard* that the suggestion was made last evening that Mr. Hirst received a salary from the industry which was charged indirectly to the government.

Mr. HANSON (York-Sunbury): No, no; nobody said that.

Mr. HOWE: I think I should make it clear that he has received only out-of-pocket expenses.

Mr. HANSON (York-Sunbury): Nobody said he was receiving a salary. What was said was that he was being reimbursed by business.

Mr. HOWE: The hon. member for Lake Centre made a remark which led me to believe that that was meant.

Mr. HANSON (York-Sunbury): Nobody said that.

Mr. HOWE: In any case I want to make it clear that he received no salary and no indirect pay through advertising.

Mr. DIEFENBAKER: So far as I am concerned there is no argument about the fine work that is being done and has been done by Mr. Bell. But the minister in bringing this matter up again has not answered the contention which I made last evening that the action taken by the department in this matter was improper. Only a few moments ago I received a telegram which bears out the contention of my leader last evening when he referred to the dangers inherent in this kind of thing. There has been no answer yet to one question which was asked last evening, and to which I think we should have an answer, arising out of that portion of the letter written by the director of aircraft production to the aircraft companies, which reads:

This sum—

That is, the sum advanced by these companies.

—is, by arrangement with treasury, chargeable to overhead in connection with your aircraft contracts.

Before I read the telegram may I ask the minister now when the arrangement with treasury was made, who made it, and generally all the circumstances touching on that arrangement.

My criticism last night was twofold: first, why conceal this item; second, why not have revealed the circumstances to parliament when the question with regard thereto was first asked? Last night my leader pointed out the dangers inherent in this thing, and he asked the minister specifically whether this was the only case of its kind; are there others? As yet there is no answer to that.

The telegram which I received to-day is dated May 15 and is from Toronto. It reads as follows:

A letter signed "Bell" of Department Munitions and Supply soliciting business for E. G. Hirst was sent not only to aircraft factories but to commercial firms including a

number of our customers. We have reason to believe we lost at least one substantial contract from an organization which needs government good will because of this letter.

Millways, Toronto.

First, why the concealment; why was not this man shown on the records as receiving a total amount of $9,000 in expenses? It was being paid by the government of Canada. Second, are there others in the same position as Mr. Hirst? Third, why was this course adopted instead of revealing the matter either by showing his name as an employee or showing that his expenses were chargeable to the people of Canada?

Mr. HOWE: I think it has been made perfectly clear that I did not know of the transaction. As a matter of fact I knew of it about a week after the leader of the opposition knew about it. An employee leaving the company sent a letter to the leader of the opposition, and the new incumbent sent it to me because it had been sent to the leader of the opposition. That is the first I knew of it.

Mr. HANSON (York-Sunbury): I shall have to correct that. Nobody sent me the letter. It was sent to a colleague of mine who brought it to me.

If the minister will allow me—I have to go in a minute—I should like to say that nobody at any time has attempted to disparage Mr. Bell's activity as aircraft director. I want to make that perfectly clear. I agree entirely with the minister that the method he adopted was reprehensible and that the practice should be stopped, and stopped at once, and the money returned to everybody who contributed. If they want to build up a morale campaign let them go about it in the right way and do it in the right way, but do not let the cost of it be smuggled into the expenditures of the taxpayers of Canada under the guise of an addition to overhead. If it is a necessary expenditure, by all means let us make it.

How many other schemes of this kind are being financed indirectly, secretly, by the treasury of Canada, the taxpayers not knowing the slightest thing about it? If there are any, let us have the names at once; if there are none, then let us know.

Mr. HOWE: I know of no others. I did not know of this one until it turned up by accident, but I do not think that after the impropriety was called to Mr. Bell's attention there will be the slightest possibility that it will be repeated. As I said last night, it was not a matter of charging expenditures to overhead. Instructions had gone out that that should not be done and it has not been done. I think this matter should be dropped. The only purpose would be further to smear his name across the headlines of the country. It has gone from coast to coast, and I doubt if it adds to the war effort. However, it was done. I made it clear that what was done was done with the acquiescence of the trade, and the results won the endorsement of the trade as indicated by the statement I have put on *Hansard*.

Mr. MacNICOL: During the time the Department of Munitions and Supply will be before the committee I am going to try to find out if it is possible, first, to increase aircraft production; second, what the situation is with regard to the production of synthetic rubber; third, what the situation re magnesium metal is; fourth, whether by some means Canada can bring about the production of oil in a big way.

I had intended commencing with No. 1, aircraft production, but in view of what took place yesterday and again to-day I will delay my remarks on that subject and begin by discussing the possibility of producing oil on a large scale in the dominion. I believe that either the branch of the oil controller published a number of advertisements on December 2, or that such advertisements were published on their behalf. I have one here which reads:

The empire's mechanized forces rolling on to victory need oil, war's greatest weapon.

The advertisement illustrates a couple of tanks and is well adapted for attracting the attention of people to the necessity of conserving oil. On September 25, 1941, the director of public information issued a bulletin in which these words appear:

Oil and the war.

"The Battle for Oil" is the title of the latest film release of the national film board. One of the "Canada Carries On" series, it shows the vital part played by gasoline and oil in modern war.

Then the minister's own department on the 12th instant issued a bulletin in which I find these words:

Canada's gasoline inventory is steadily becoming worse.

On March 24, the minister himself made a speech which was reported in the *Globe and Mail*. I do not know the name of the club or the body whom he addressed, but his speech was reported in the *Globe and Mail* and he made a frank statement on the subject. He said:

If I tell you frankly that we are likely to lose the war unless we can get enough oil and enough rubber you will understand how very serious our position is.

That was a frank statement which should command the attention not only of the people of Canada but of all those who are interested in the production of oil, which, as I read a moment ago, is the war's greatest weapon. Then in *Hansard* of November 20, 1940, the minister made a statement which indicated that at that time he had in mind the production of oil in Canada. As reported at page 268 of *Hansard* of November 20, 1940, he said:

> The oil controller first of all addressed himself to the problem of ascertaining the exact position of the petroleum industry in Canada, with a view to assuring an adequate supply of petroleum products for military purposes, and also to determine the production capacity of Canadian sources of supply, which are largely confined to the province of Alberta.

From that it is clearly evident that the subject of oil production has been under the consideration of the minister and his department almost from the beginning. What has been done since that statement was made in 1940 or since the war broke out to bring about the production of oil in Canada on a large scale?

I believe that some time around 1914 oil was discovered in Turner valley. Perhaps it was earlier than that, but that was about the time the first well was tapped. A fine job is being done there. Relatively speaking, it is a small field, comprising about 10,000 acres with a capacity, I am told, of approximately 10,000 barrels an acre or a total capacity of 100,000,000 barrels. Comparatively 100,000,000 barrels would be considered a small oil field, as I say, they are doing a fine job and their oil is good. Their products are good. I have been over the plant, and I think they are producing about 26,000 barrels a day. Naturally, owing to the size of the field, I believe they are proceeding in the right direction in not trying to develop all their oil at once. I believe that during the last few years various oil companies have been drilling in different areas of Saskatchewan, and others in Alberta. Some oil is being developed near the Alberta-Saskatchewan boundary at a place called Vermilion. The quantity produced is not large but it is developing. In Ontario, oil was first sought for in 1859 near Collingwood, but nothing has ever come of it. I am told, however, that recently oil geologists have been in the area again trying to ascertain if there is any source of oil there worth tapping. The counties of Lambton and Kent in the early sixties did produce quite a quantity of oil for those days. I believe it was about 1861 that they commenced producing oil in the county of Lambton; it spread into the county of Kent, and for three years they produced a total of approximately 3,000,000 barrels of oil. Many hon. members have been through that area and have seen oil-well derricks still standing. They have been standing there for many years. Lately, attempts have been made to tap a few more wells there, and I believe they are producing oil, but not very much. I am told that at present oil geologists are in New Brunswick, as were oil geologists in 1858 and thereabouts. At that time the place was called Baltimore. I am not just sure of the location. I talked to one engineer who was familiar with the oil shales of New Brunswick, and he said he thought something might come out of investigations there.

Last summer I made a trip to the Peace River area and learned that some years ago, about 1921, oil wells were discovered not very far from the town of Peace River, but not much came of that. I have read the reasons but will not take time to relate them now. From what I read in a letter from Mr. H. A. George of Peace River I would say there is a fair amount of oil in that neighbourhood.

During the last few years oil has been found at Fort Norman on the Mackenzie river and is being produced, although not in a large way. I tried to go to Fort Norman last summer but did not. I expect to go this summer if the house rises in time for me to obtain transportation down the Mackenzie river. The oil wells there produce first-class oil. There is a small refinery there. I believe the product is largely consumed by the mines roundabout. Geologists tell me a large amount of oil is obtainable there.

This brings me to the area about which I desire to speak at some length, the oil sand area at present being developed on the Horse river about a mile and a half from Fort McMurray and extending down the Athabasca river for some sixty miles and on the Clearwater river and the Christine river, but the focal point, as far as I can see from investigations covering some days up and down these rivers, is near Fort McMurray. Later I am going to ask the minister—I will ask it now to give it more emphasis—to request the appointment of a board of engineers from government departments to investigate thoroughly all data pertaining to the oil possibilities of the Athabasca river area, and if they are found to be, as so many say they are, of tremendous importance, that the government take steps to bring about production of oil in that area in a large way. I intend to say more on that later. I know some of the departments, particularly the Department

of Mines and Resources, have as capable oil geologists as there are anywhere in America. I have had many conversations with Doctor S. C. Ells, and in my opinion there is not a better oil geologist anywhere or one who has made more extensive surveys and studied the subject of production of oil more than Doctor Ells. There are other men maybe as good, but I am better acquainted with Doctor Ells. What I suggest at present is that these men in the government service, who must know whether there is oil in a big way at or along the Athabasca river and how those oil resources can be developed, be asked to promote that development as a board or committee or however the minister decides.

It is no wonder that the oil controller's branch, or whoever publishes the advertisements under that branch, said that oil is war's greatest munition. It is because of that fact and because their oil requirements are so tremendous that the Germans are to-day sending their legions through the Kerch peninsula on their way to the Caucasus. Prior to the war the German requirements were about seventy million barrels a year; to-day they exceed two hundred million barrels, and unless the Germans have a tremendous reserve beyond all conception they must be nearly out of oil. I hope they are. But if they are getting nearly out, that of course would be their incentive in driving toward the Caucasus mountains.

What are our own requirements. The Canadian army is not of very great size yet. It will be larger. But the "Imperial Oil Review" of recent date states that we have 23,500 military vehicles burning gasoline, and they estimate the requirements of Canada's 23,500 vehicles at 100,000 gallons a day, whether they are operating or not. I presume they mean that when those vehicles are operating it will take a great deal more than that, but to lay up reserves they estimate 100,000 gallons a day.

Mr. HOWE: That is the army in Canada alone, I take it.

Mr. MacNICOL: I am saying what the "Imperial Oil Review" states, that Canada's army is rolling along on 23,500 vehicles.

Mr. STIRLING: In Canada or out?

Mr. MacNICOL: I do not know. They are not rolling much outside yet.

Mr. HOWE: We have a far larger number of vehicles overseas with our army.

Mr. MacNICOL: I am glad to hear that. That makes the demands on Canada's oil production evidently greater than 100,000 gallons a day.

[Mr. MacNicol.]

Mr. HOWE: Yes. I want to make it clear that that refers to the figure for Canada.

Mr. MacNICOL: That means all the more necessity for Canada to obtain oil of its own if it can. The same article states that an infantry division to-day requires 249,000 horse-power, which is twice the horse-power used in the industries of the city of Hamilton, and that an armoured division requires 387,000 horse-power, about the equivalent of that used in Toronto for peak-load light and power. This goes to show that the demand is tremendous and is bound to increase, because we as a country have not yet done anything as far as equipment being in active combat is concerned. When it does get into active combat it will render as good an account of itself as any.

Some days ago I read a statement that the average battleship, 35,000 to 45,000 tons, would require at one refuelling from 750,000 to 1,000,000 gallons of oil. Therefore ships on the water are going to require a tremendous amount of oil.

The other night the Minister of National Defence for Air (Mr. Power), whom I always like to see in his seat and to hear when he is piloting his estimates through the house, because he is always so courteous and so willing to answer questions, said that the present air demands for gasoline have increased from $9,000,000 last year—in Canada I presume?

Mr. HOWE: In Canada.

Mr. MacNICOL: —to $20,000,000 this year. If we now require $20,000,000 worth a year in Canada, turned into barrels that is quite an item.

In Regina there is a very capable engineer, Mr. C. Gower of Regina, with whom I had the pleasure of being last summer in the Athabasca oil area vicinity, who estimates that the amount of gasoline that will come from 600 barrels of raw oil is 270 barrels. Using that as a basis, it means that $20,000,000 worth of gasoline would be the equivalent of approximately 4,444,444 barrels of oil. That is more than one-half of Canada's production to-day. In other words, approximately one-half of the oil produced in Canada to-day would be required to operate the aeroplanes the minister was speaking about. If he did not include the aeroplanes that are in Europe, then it would be much more. There is a tremendous necessity to use our resources to the utmost.

I referred a moment ago to what the Germans required, 200,000,000 barrels a year. I have no doubt that Great Britain requires

approximately the same amount. Great Britain has been getting her oil from several sources, the Dutch East Indies, her own supplies in Sarawak, from Burma, Borneo, from Bahrein island, from Iran and Iraq and some from Egypt. What is the position of the oil supplies from these fields to-day? Apart from prosecuting the war, the main reason the Japs went south was the need for oil. Japan produces only about 2,500,000 barrels of oil a year, but it is quite likely that her war machine requires half as much as the German war machine. An additional supply of 75,000,000 to 100,000,000 barrels would be worth while to Japan. What did Japan gain by taking Java, Borneo, Sarawak and Burma? She gained all that production, and if she gets into India she will get a little more. All those supplies are now lost to the allies.

I hope the Germans will not win in their mad race toward the Caucasus but perhaps it would be worth while to conjecture what would happen if they get through. In the Caucasus they would be able to get 225,000,000 barrels a year. If they got that far, it is quite possible they might get into Iran and Iraq, where another 105,000,000 barrels a year would be available. If they got into Iraq, they would probably get Bahrein island, which produces about 7,000,000 barrels a year. Then they might even get into Egypt, where another 6,000,000 barrels a year is produced.

I like to look the situation in the face. If the Germans get all these countries I have just mentioned they will have available 343,000,000 barrels a year which is now available to the allies. The only supplies left to the allies then would be north and south America. On these continents the British have only Trinidad and the Canadian production. The Canadian production now is about 9,000,000 barrels a year, while the Trinidad production is approximately 20,000,000 barrels a year. Outside of that combined production of 29,000,000 barrels a year they would have to go to Venezuela, Peru and the United States. Happily the United States produces more oil than all the rest of the world, her production being something like 1,350,000,000 barrels a year. If Great Britain must rely on the production in Canada and Trinidad, which is only 29,000,000 barrels a year, it is all the more imperative that Canada should produce all the oil possible.

In the early days of the last century and up to now oil came from wells. I remember not so many years ago that gold was taken only from the mouths of rivers, from the sands. Then someone discovered the cyanide process which permitted gold to be taken out of the rock, and since that time more gold has been produced than in all the world's history. We have some very bright engineers in our departments; some of them may discover a method of extracting oil from sand faster than at present, and this process may have the same effect upon the production of oil from the oil sands as the cyanide process had upon the production of gold from quartz.

During the last two or three years I have read everything I could find about the production of oil from sand, and I consulted with as many engineers as I could come in contact with. Last summer I went to see these oil-sand areas. I like to see things for myself; I never can get very enthusiastic about anything unless I can see it. What did I find? I found a small plant on the Horse river near Fort McMurray. This plant has since burned down, but I believe it has been erected again and is now in operation or will be shortly. Last summer it was producing about 250 barrels a day. These oil-sands are quite black, as hon. members can see from the piece I have in my hand. I was present when this particular piece was blasted. If one holds a piece in his fingers for a moment they become covered with oil. It is made up of millions of minute pieces of sand, with a small film of oil around each piece.

At Fort McMurray the sands are about forty feet thick. The engineers told me, and this has been confirmed by the departmental engineers, that in the immediate vicinity of the plant there are several million barrels of oil that can be taken out by the open cut method. The top soil, which is ordinary dirt, is removed with a steam shovel, and you come at once in contact with a depth of forty feet of solid black oil-sands, every cubic yard of which contains approximately one barrel of prime crude oil.

In order to make sure that it produced prime diesel oil I went down to Great Slave lake and lake Athabasca where they told me that the oil is being used in their diesel engines. The engineers at the mines on Great Slave lake, in the vicinity of Yellowknife, and the engineers in the mines at Goldfields on lake Athabasca, told me that there was no better oil anywhere, and that they had given orders to the producing company to ship them every barrel of oil they could. That convinced me that it was good oil. If it were not, these engineers would not have asked for it. If there were anything wrong with the oil it would ruin the engines. I brought down a small bottle of the diesel oil. You see it is black, but it is mighty good stuff. I also brought down a small bottle of the gasoline. It is amazing, when we realize that gasoline

comes out of a solid black sand like that. This is 70 octane. They can raise it a good deal higher, as other companies do; but they tell me it comes through at about 70. Whether that is so or not, I cannot say; I am just taking their word for it.

This shows, however, that the material is in those sands. The question is as to the quantity and whether it would be worth while for the government to assist somebody in producing oil there in a big way. In reply to a question, I heard the minister say on February 18:

I have a very exhaustive report on the subject of tar sands, and I should be very glad to let my hon. friend have a copy of it. It indicates, however, that the location of the sands and the possibility of development is too remote to be of any great use in this war.

Mr. REID: Can they produce high-testing gasoline?

Mr. MacNICOL: Yes. What I have read is the minister's opinion, and I find no fault with it; it is not mine. Fort McMurray is 305 miles from Edmonton. By direct pipeline I suppose it is not more than 250 miles. At sixty miles down the river it would be only about 300 miles from Edmonton, and that is not far for a pipeline. It is, in fact, a short pipeline. We are bringing oil now from Oklahoma to Sarnia, a distance of not much less than a thousand miles. The British pipeline from Iran and Iraq to Beirut is not, I should think, any less than a thousand miles.

If we have the heart to produce oil in Canada, and if it is there—and our engineers say it is—then we should be producing it. We are now producing only about 9,000,000 barrels or less a year from all our fields, and I believe we have over 10,000 wells in Canada—or, I should say, we have had that many. I believe there are not as many now, but the fact is that from all our wells in Canada we are now producing about 9,000,000 barrels a year. However, we are buying not less than 50,000,000 barrels a year. A little later on I shall quote a great engineer's statement to the effect that the time may come when the oil wells will stop flowing. Let us remember in that connection that the oil sands would not stop producing their oil. According to our own engineers, their supply is inexhaustible.

What does our own expert, Doctor S. C. Ells, have to say on the subject? May I say in passing that he is one of the best officials with which any government has ever been blessed. I could enlarge upon that statement by saying that the more I meet our permanent civil servants, the more I am convinced that Canada has in her civil service very fine men and women. They are as good as the best, and thoroughly seized with the desire to serve Canada.

Doctor Ells says this:

Commencing in 1913—

I believe that is when the doctor commenced to make the investigation.

—the writer undertook an investigation of the bituminous sands of northern Alberta. The results of this work, subsequently extending over a period of some fifteen years, have appeared in numerous publications issued from time to time by the mines branch. The work undertaken and the results obtained, supplemented by laboratory studies by officers of the fuel testing division, may be briefly summarized as follows:

(a) The general character of the bituminous sand over a large area has been studied and many samples taken. These samples have been analysed and the physical and chemical characteristics of the sand and of the associated bitumen determined.

(b) Detailed topographical surveys of areas aggregating 1,260 square miles adjacent to Athabasca river and its tributaries have been completed.

That is a fairly extensive investigation. I believe that since that time some 10,000 to 15,000 square miles have been covered. I do not mean that the whole 10,000 or 15,000 square miles are rich in oil, like the sands at Fort McMurray. They are not, in fact; but there is a lot of oil in them. Whereas at Fort McMurray some of the sand fields are only forty feet deep, in other areas they extend to depths of 100, 150 or 200 feet. This goes to show that it is by far the most stupendous oil field in the world.

To quote further from Doctor Ells:

Upwards of 5,000 tons of bituminous sand has been excavated by the mines branch in connection with experimental work, affording information as to the methods best adapted for the mining of this class of material.

That was fairly good ground with which to experiment. At the present time the oil-sand in the area at Fort McMurray, on the Horse river, is being blasted. The engineer in charge while I was there, a man named John Byrum, for whom I developed a warm regard, seemed to be thoroughly posted. He told me that only a period of two minutes elapsed between the time I saw the sand in the pit until I saw the oil being taken off. Then, in about twenty minutes the oil is poured back to the refineries, and within seventy minutes it is refined. This goes to show that it is a very rapid process, almost as fast as pumping oil out of a well. I do not want anyone to think I am not proud of our oil wells in Canada, because I am. I would not want anyone to think I am opposed to taking oil from wells, because I am not.

If we have oil in sands, and can produce it, then I maintain we should produce it.

Doctor Ells goes on to say:

A study has been made of a number of processes designed for the recovery of the hydrocarbons from bituminous sand and results indicate that recovery can be readily effected by the use of heated water.

That is the way it is done. It is, in fact, a very simple process. The sand goes into a large revolving tank containing hot water at about 180 degrees. The tank revolves, and the hot water has a disintegrating effect on the oil sand. The product then goes into settling basins where it is again agitated, and in due course the oil comes through. Doctor Ells continues:

In the light of information now available it is clear that bituminous sand should be seriously regarded as an important potential source of solid and liquid hydrocarbons—

And of a long list of chemicals which follows in its wake. One of these chemicals is the ingredient required in connection with the production of synthetic rubber, which I shall discuss at a later stage.

He continues:

Actually it is as yet impossible to estimate accurately the potential production of petroleum products that may ultimately become available from Alberta bituminous sands. It is however known that that area underlaid by bituminous sand is not less than 1,500 square miles and the total area extent of the deposit is probably much greater.

And then the following:

Meanwhile results of field investigations by the mines branch indicate that at least 750,000,000 tons of bituminous sand can be mined by open-cut methods.

All these reports must be available to the minister. Perhaps these are the ones to which he referred the other day. Doctor Ells continues:

On a basis of 12 per cent bitumen content this is equivalent to 90,000,000 tons of bitumen or 500,000,000 barrels.

That has been enlarged to a billion barrels of oil.

Then, Mr. Max Ball, president of Abasand oil company, makes the statement in quoting Doctor Ells that the area contains a hundred billion barrels of oil. He is referring not to the Fort McMurray area, but to the whole area as far as the Peace river. He goes on to quote the United States bureau of mines, which places the figure at 250,000,000,000 barrels of oil. I think I have quoted enough to justify the statement that there is an enormous quantity of oil there, constituting a most valuable resource if a 100 per cent economical method is found to get it out. I make no comment on that, but they say that they can produce refined oil at $1.36 a barrel at the mines. Then taken out to Edmonton, it might reach a couple of dollars. Perhaps I should not quote these figures because I am not certain of them. Several other authorities have visited the area, including Doctor T. O. Bosworth, who was chief geologist of Imperial Oil, Limited, and he made the following statement:

In the district of McMurray on the Athabasca river, we have the largest natural exposure of oil in the world. It is interesting to consider the amount of oil in this territory. For this purpose we will suppose the area to be 15,000 square miles—

That is higher than Doctor Ells' estimate.

—and the average thickness fifty feet.

That is a lot of oil. The Alberta government estimates the bituminous sands of northern Alberta to contain 100,000,000,000 barrels of oil, while the United States bureau of mines places the figure at 250,000,000,000 barrels. An engineer named Gustav Egloff, of the Universal Oil Products company, in a speech delivered to the American Institute of Chemical Engineers at Birmingham, Alabama, had this to say:

One of the greatest known hydrocarbon deposits in the world to-day is that of the Canadian Alberta bituminous sands. The known bituminous sand deposits are estimated to contain over 100,000,000,000 barrels of bitumen.

I think I have quoted sufficient to indicate that men who should be competent to judge, including our own engineers, are convinced that there is a very large deposit of oil there. I see my time is about up, and I shall conclude with just one more quotation. Referring to drilling for oil wells, the chief geologist for the Anglo-Iranian Oil company is quoted as saying in January, 1940:

Using all geological and geophysical assistance, the average chance of success cannot be rated on a basis of experience, as better than one in ten. The new interest now being taken by American companies is based on the belief that American oil resources will not stand the present rate of production for many years.

Nobody can tell how long because oil wells give out. Again I would urge the minister to have the best engineers in the government service get together to make a survey and study the possibilities of developing oil in immense quantities from the sands of Alberta. I have talked with a number of them and I know they would be glad to do it. It is, of course, immaterial to me personally who develops these resources. I believe the government engineers should cooperate with the oil producers and say to them: "Here, gentlemen, are our reports." The government should then say to these producers: "We will give you so many square miles of these oil

resources, and you can go to it and produce the oil."

With regard to getting the oil out, it is not far, only 305 miles, to Edmonton. A pipeline of 250 miles in length would cost about $2,500,000. Again, it is only 800 miles to Prince Rupert. Calgary is only 450 miles away. The oil could be piped to Calgary, it could be pumped to Winnipeg, 700 miles away, and refined there too. The oil could also be taken to Churchill by pipeline; then taken by tankers to Moosonee, at the south end of James bay, and from there it could be brought by pipeline to Toronto, 900 miles away. We have in these oil deposits hundreds of billions of barrels of oil, but even if it were only hundreds of millions it would pay this country to develop these resources and become an exporter instead of an importer of oil.

One last word, Mr. Chairman, and I thank you for your courtesy. Before this war broke out there was an article in the press which stated that the German government or somebody representing the German government desired to run a pipeline from the oil fields of western Canada to the Pacific coast. Manifestly they had no intention of running a pipeline from Turner valley because no one would put in a pipeline of that length to transport 100,000,000 barrels of oil. I had the good fortune to meet a Mr. Goffatt who told me he had met the German oil geologist who investigated here in Canada after the geologist had just returned from the Athabasca area. They met on the train from Edmonton. During the course of their conversation the German geologist became tremendously excited over the immense possibilities that he saw in that region. That was in 1911 or 1912. The German geologist went back to Germany and came out again to this country in 1914; he was about to plan oil production when the war broke out, and that put an end to the matter as far as the German geologist was concerned. But the point I make is that the German geologist had been searching for oil all over the world and had arrived at the conclusion that this was the greatest deposit of oil anywhere in the world. I am not an oil engineer or an oil geologist, but I am interested in investigating and I do not mind what it costs me to travel in the course of an investigation. The only reason why I am here at all is to try to serve my native land. There is nothing in this personally for me. If I cannot do something for Canada when I am here, I am going to quit this house. I have no interest only to serve the country itself in which I was born.

[Mr. MacNicol.]

I do not ask the minister for an answer now, but I do ask him to think over what I have said and look over the reports he has, and then to appoint a board of our own engineers to investigate these resources. If the deposits are there in such immense amounts as we are informed they are, let us take any legitimate means under the sun that are required to bring about the production of oil in Canada so that we may become an exporter instead of an importer of oil, and further, in order that we may be of vital help to the empire in the event of all other sources of oil being cut off except those within the empire itself.

Mr. HOWE: I wish to thank the hon. member for Davenport for the constructive contribution he has made to the debate and for the valuable information he has put on *Hansard*. The position of oil development within Canada has, of course, been changed considerably by the events of recent months. I think most people had looked upon the tar sands of Alberta as a great reserve of oil for some future period when the more easily accessible oil resources would have been exhausted. But to-day we think of that same area as a source of immediate oil production, provided the problems connected with its development can be solved rapidly and with some degree of certainty.

An intensive study of the tar sands is under way at the present time. That study was organized by my department, and we have interested in it the leading oil engineers of this country, not only men in the public service and on the staff of the national research council, but also oil engineers from industry. We have interested Consolidated Mining and Smelting, who have had a good deal of experience in meeting mining problems in that area.

I may say that the mining of the sand itself is one of the major problems that has not yet been fully worked out. We have asked all these interests to prepare a report for the government and advise whether a development should be undertaken at this time and the extent of development which the conditions would warrant, whether we should proceed with a pilot plant or whether the situation is such that we can immediately develop on a considerable scale. I am expecting the report shortly, and appropriate action will be taken.

The government is also exploring the New Brunswick shale deposits to which reference has been made. The difficulty with this deposit was that until recently it was under the control of private interests. However, the

New Brunswick government have now secured the title, and the federal government is in partnership with the provincial government in making a thorough exploration of these shales to determine the probable quantity of oil available and the pertinent facts in relation to its development.

Arrangements have been made to develop further the wells on the lower Mackenzie at Fort Norman. Additional wells are being drilled, the refinery capacity is being increased, and a short pipeline is being installed to bring the oil across to the location of the Alaska highway.

There are proceeding with the government of British Columbia conversations which, we hope, will lead to an immediate and thorough exploration of the Peace River block of British Columbia, which is regarded as a very probable source of oil, and which is conveniently located to the railway for use on the Pacific coast.

I mention this to indicate that I share my hon. friend's interest in finding oil within Canada, and we hope that some constructive progress can be made before I report to parliament again.

Mr. McIVOR: Mr. Chairman, may I first congratulate you upon your gracious act yesterday in giving place to one of the fair ladies of this house? We in this corner say, "Do it again".

Before I came to this house I thought a good deal and said much about public ownership and who should share the profits. I knew then, as I know now, that any enterprise must have four parts: there must be the money or the capital to put into the enterprise; there must be the brains or the management to run it; there must be the men who will do the work, and there must be the consumer. I still believe that the man who toils should have his share of the profit; and my first observation with regard to the Department of Munitions and Supply is that I appreciate very much the way in which they have branched out into public ownership. There was nothing like it before in Canada: we now have full-fledged government owned companies manufacturing munitions, chemicals, aircraft equipment, and building ships. These are known as:

1. Allied War Supplies Corporation.
2. Fairmont Company Limited.
3. Plateau Company.
4. Small Arms Limited.
5. Federal Aircraft Limited.
6. Toronto Shipbuilding Company.
7. Wartime Merchant Shipping Limited.
8. Atlas Plant Extension Limited.
9. Wartime Housing Limited.
10. Research Enterprises Limited.
11. Melbourne Merchandising Limited.
12. Citadel Merchandising Company Limited.

I would say that these are the twelve apostles in pioneering along this line, in doing a job and filling a gap which could not have been filled by private enterprise, and I understand that there is more to follow.

Another thing I like about this department has to do with the announcement which was made the other day when the committee on war expenditures was being set up. The note was sounded, and very clearly, by two ministers, the Minister of Munitions and Supply (Mr. Howe) and the Minister of National War Services (Mr. Thorson), that "we have nothing to hide." I am sure the people of Canada welcome that statement.

I wish to make a suggestion which touches a tender spot. Somebody else has thought along the same lines, but perhaps it has not been put forward in the right way; perhaps, too, I may not do so. Near our aeroplane manufacturing plant at Fort William we have across the road a military training centre where there are about 300 men. There are two chaplains, one Protestant and one Roman Catholic, to look after these men. Just across the street is this plant, with about 5,000 men and women. I know that they have in this plant a splendid staff of matrons, good and efficient women. But I do believe that since these men, because of their work, which is done on Sundays as well as week days, are unable to get the benefits which are available to the ordinary citizen, there might be men appointed—call them chaplains if you will—by the Department of National Defence or the government of Canada who would meet these men at the noon hour and talk good Christian democratic common sense to them and give them something to think about which will encourage them to sweat up to their jobs and do the work the minister expects them to do.

Another thing I should like to speak about is the way in which these plants are looked after from headquarters. First, I would mention a small shell factory, the only one which was opened up locally since the war started. It has a contract to turn out 1,000 shells of about fifty pounds each a day; it has been turning out 1,500 a day, and those in charge are anxious to extend the plant. Why are they capable of this production? It is because the workers have the will to work and the management have the heart to back up the men in their work. There is thorough co-operation. The only difficulty I ever noticed was when two young ladies of the inspection staff said that they thought they should be paid more money—and I agreed with them. They were getting 33 to 35 cents an hour while other girls were getting 45 cents up,

and money paid by the government does not go any further than money earned in any other way. However, thanks to the action of the Minister of Labour, as soon as a girl is competent to earn, she will be paid according to her efficiency.

I know something about the car works. I practically grew up with its development. I believe it was in November, 1935, that I received an announcement from the late president that the plant would be opening. Of course I was anxious that it should be opened, because in 1935 we had many idle men; I did everything possible, and I bothered the Minister of Munitions and Supply a good deal. He was always courteous, and just as anxious as I was to have the car works opened. A year later, I believe early in 1937, the plant was being prepared for the building of aeroplanes. There were great difficulties to be overcome. They had great difficulties in the first year or two. It was not much better than a big school training young fellows from Fort William, Port Arthur and the surrounding districts, and they did it well. They wanted to make planes for Trans-Canada Air Lines, and I shall not forget the remarks of the minister when the executive in room 16 met him. He said, "If you can get the right to make a plane that has been tested and tried you will get an order; we are not out to take any risks with Trans-Canada Air Lines." He was wise.

I have found the management of Canada Car most courteous, kind and trustful toward me. In fact, they will allow me to visit that plant any day I have time and they will not send a guard to see that I conduct myself properly. I have seen a big corner at one time where young people were taken in and trained and paid 25 cents an hour, and when they were fit to do filing metal parts properly they were taken into the plant and their wages were increased. They cooperated thoroughly with the vocational school, and lent them equipment, and at one time the vocational school contracted to give them 1,500 partly trained young people by the first of June, 1941. The vocational school measured up splendidly and has been doing that ever since.

There is a union in that plant which has been doing things I never knew a trades union to do before. When anyone is ill and needs to go away they take charge, if necessary, and pay all his expenses. I have known them to pay sickness and funeral expenses in several instances. That shows that union 719 has a heart. It is also progressive. They produce a paper called *The Effort,* and one of the fine literary contributors has been, or at any rate will be, the present Minister of Munitions and Supply.

The first Hurricane that was made in Canada was made in Fort William, and it compared favourably with any made in England. I was proud to be at the testing of that plane, because it was a thrilling moment.

Certain things have been said about Canada Car which bother me a little and I am not satisfied until I see my way through anything. I have great respect for the member for Davenport (Mr. MacNicol). I think he has fine judgment and he has made many worthy contributions to this house. I hope he will be long spared to do the same. But I should like to quote what the hon. member said as reported at page 2352 of *Hansard*:

> That factory was building Hurricane bombers. I believe they were turning out about a hundred a month. They may have been turning those planes out for an English order; I do not know. However, for lack of orders they shut down on bombers, and remained shut down for six or seven months. This means that aeroplane facilities, for both defence and attack, for Great Britain and her allies, are short by six or seven hundred bombers they should have had—and could have had. Those bombers could have been made in Fort William. The plant has now started again producing.

I think I know the car works in Fort William, and if they stopped making bombers I am sure I would know about it. I do not think they have ever done so, but I am ready to stand corrected. I received a letter from the highest authority along this line after the announcement of the new order that came to Canada Car for 1,000 Curtis navy dive bombers. He writes:

> The production of new aeroplanes will require extensive tooling which will be placed in hand immediately.

That was January 24.

> Pending bringing the new planes into production, the Fort William plant will continue to produce the maximum number of Hurricane aircraft.

That means that they have not stopped. I have no doubt, however, that the minister can answer this much better than I can. I have heard members say in this house that there were idle workers. I know there are men in the Canada Car who must be idle, because you cannot keep them busy all the time. Take young fellows who run from one part of the plant to another carrying materials; you cannot keep them always busy but they must be there to carry on. They have to obey their orders promptly when issued. I have stood in an elevated position and looked down on those massive works, and I am sure that if anyone could

see much idleness there I would have seen it. I congratulate the management of that plant upon the splendid work they have done and the harmony that prevails in the plant at the present time.

The minister took time off to meet the executive of union 719. They had some difficulties because they had heeded certain rumors, but they showed wisdom in going to the minister, and he had no trouble in dispelling the rumors. The result was that they went away satisfied and said, "We have a great Minister of Munitions and Supply".

The other day I listened to the member for Témiscouata (Mr. Pouliot) as he said something about a submarine in the St. Lawrence. I am surprised at him when I think how the Department of Munitions and Supply is furnishing materials for every part of the world that is engaged with us in the war. If the hon. member for Témiscouata knows the manly art as I know it, he must know that when a man squares up to you, you will not let him get near enough to trip you up but will hit him before he gets close. That is what we ought to do, and the hon. member for Témiscouata and the group associated with him should change their minds and attack the enemy before he gets into the St. Lawrence. He should be stopped before he gets there. I suppose that if a submarine came up the Rideau canal his attitude would be different.

We must cooperate with the Department of Munitions and Supply with a view to keeping the enemy at a distance. I congratulate the minister upon the work he has done, and I hope he will take as coolly as possible any criticism which I may offer.

Mr. COLDWELL: I am not going to follow the hon. member who has just spoken except to say that the more aeroplanes we can turn out at this particular time, the better it will be for our war effort. I was disturbed some time ago by stories I had heard of the export of planes from Canada to countries that are neutral now but that may not be friendly neutral, or even neutral, if Hitler should march toward them. In order to clear up these rumours I asked some questions which were answered recently. The questions were:

1. Have any planes, particularly Fleets 16, been supplied since June 1, 1941, to countries which were, or are, neutral?

2. If so, to what countries and in what numbers?

I was surprised at the answers that were given because I was inclined to believe that the stories I had heard were merely rumours. They questions were answered thus:

1. Since June 1, 1941, one export permit has been granted for the export of aircraft from Canada to countries other than the British empire and the United States. The permit in question was granted on August 23, 1941, and covered 18 Douglas bombers owned by the Royal Norwegian Air Force and sold by them to the government of Peru. The planes were at no time the property of the government of Canada, and were only exported after being found unsuitable for the purposes of the R.C.A.F. and R.A.F., to whom they were first offered when the Royal Norwegian Air Force found them not suited to their requirements.

It strikes me as strange that Douglas bombers of any type could not have been used somewhere in connection with our own war effort. Having regard to the stories of the fighting at Singapore, Rangoon and elsewhere in the far east—we were told that on one occasion shortly before the fall of Singapore a fighter pilot went into the air in a machine described as an old crate and endeavoured to fight up-to-date Japanese machines—I felt that if we had in Canada planes of any type we should surely have used them in our own war effort rather than allow them to be sent to some other country.

Secondly I was told that immediately prior to June, 1941, a permit was granted for the export of ten model 16 Fleet trainers to Portugal for the use of the Portuguese navy. This export took place following consultation with the government of the United Kingdom, in view of the friendly relations existing with Portugal.

The question arises whether the policy followed in this matter by our government over a considerable period was a proper one. For years we were exporting raw material to countries with which we are now at war. Only recently we were permitting large quantities of copper, scrap iron and nickel to go to Japan. Now, of course, having sown the wind we are reaping the whirlwind. In my opinion, until the needs of the united nations are completely met, we have an excellent reason for refusing to supply neutral countries with war equipment that we may need ourselves. A few minutes ago the hon. member for Fort William (Mr. McIvor) referred to the complaint of the hon. member for Témiscouata (Mr. Pouliot) the other day that we had not been able to sight and stop the submarine in the St. Lawrence river. Perhaps such criticism is not fully justified; there is something in it. Surely planes of the kind to which I have referred, or at least the engines of those planes, could be utilized for patrol work along our own coasts, even if they were

not suitable for use in battle across the seas. I urge upon the government that they put a stop to this policy of exporting to neutral countries equipment and supplies which we ourselves may need.

We are not permitted to be given the figures as to exports of vital materials. We have been disturbed, for example, about shipments of antimony to neutral powers which at some time in the not far distant future might embarrass us because of their attitude in this war. We have no guarantee that some of these raw materials are not being transhipped from neutral countries or are not replacing similar material that is being shipped to nations with which we are at war. As one who was in Portugal for a few days last November I could not help observing that in the city of Lisbon there was a large number of Germans, with whom from time to time we rubbed shoulders, and that propaganda theatres were operating, open only to neutrals or nationals not unfriendly to the Germans. The hon. member for Rosedale (Mr. Jackman) and I one Saturday afternoon tried to get into a theatre to see a German propaganda film that was being shown to Portuguese officers and civilians, but because we were obviously English-speaking we were refused admittance. When we inquired of a Portuguese officer who spoke English as to the reason, he replied, after making inquiry at the wicket, "You are English." We replied that we were North Americans, and he said, "Well, that is the same thing." We were not permitted to enter. I say therefore that when we have equipment of this kind we should be very careful where we send it.

The government was quite right in answering the third part of this question by saying that it would not be in the public interest to disclose the extent and nature of aircraft exports to the United States, and I shall not make any further inquiry as to that.

I turn now to something which concerns this country. In April I was in the United States. I had been invited to address certain meetings, principally a teachers' institute in Michigan. While I was there I was much disturbed to learn that the prestige of Canada was not as high as it should be. There was a tremendous amount of criticism of this country. Just before I went to the United States I had read in the newspapers of an attack upon Canada by two commentators in Washington who complained of our attitude in relation to the Alaska highway and in relation also to air routes, for what I thought to be United States military aeroplanes, into the northern part of Alberta. I made some inquiry of the Department of External Affairs before I left here, so that if the matter did come up while I was there I would be in possession of the facts. I was glad I had done that because I found that the statements to which I refer had been widely publicized and were based on an entire misrepresentation of the truth.

The minister will recall that on March 13 a story appeared in some of our local newspapers with regard to a transportation problem that had presented itself, and I asked the minister a question about it on the orders of the day. The question was, as recorded on page 1288 of *Hansard* of March 13:

> I should like to direct a question to the Minister of Munitions and Supply. Has he seen an article in to-day's issue of the Toronto *Globe and Mail* blaming him for impeding the flow of war materials by United States trucks to eastern points across Canadian highways? If so, will he inform the house regarding the matters complained of in the article?

In his reply the minister gave the background of the story and the problem. I entirely supported the policy that was followed prior to the war, and will support that policy now if it is shown to be in the interests of Canada and the war effort of the united nations.

I hope the minister will not regard what I am going to say as personal criticism or even criticism of the policy. I say it merely because I want to get this situation cleared up. I believe and have always believed and have often said in this house that the railways of Canada are the lines of communication upon which this country has been built, that the railways are the bands of steel, as it were, which bind the provinces together and that we cannot afford to allow our railways to fall into disrepair or to be deprived of the sort of business that will enable them to handle the heavier and unprofitable freight that must be carried from one end of this country to the other. I have said, and I want to repeat, that I believe that the whole transportation system of this country should be under public control, and that when buses and trucks operate they should not be permitted to compete with and destroy the railway system upon which this country must depend for its major problems of transportation. They should be used to feed the main lines of traffic; they should be used to supplement rather than to compete with the railways of this country.

A violent attack was made in the House of Representatives of the United States a few days ago upon Canada and upon the Minister of Munitions and Supply in particular. I suppose their procedure is different from our own, because I imagine that if a member here were to begin to make an attack upon a public representative in the United States he would

be stopped. It would be considered to be a breach of the courtesies due to a friendly people. I am not going to read all this statement; I do not know whether the minister has seen it, but I shall give him the copy from which I read and ask him to explain the situation. If the explanation is satisfactory, then I think publicity should be given to the minister's reply. This statement was made by Representative John D. Dingell in the House of Representatives a few days ago.

Mr. MITCHELL: They do not necessarily have to make speeches; they can file them.

Mr. COLDWELL: That is probably what happened in this case. However, his remarks received quite wide publicity in the Detroit *News* and other newspapers. As I said before, I think there is much misunderstanding on the other side of the line of the situation in this country, and, if I may say so, something should be done about it. Every member of parliament and every public man in this country who receives an invitation to address a public body in the United States should feel it his duty to accept the invitation. I think that should be done by all of us who receive these invitations from time to time. The statement reads in part:

It must be evident and startling to the patriotic American people and their Canadian friends to the north, to learn that this one-man opposition—

That is the minister.

—is responsible for the loss of time in transporting essential war materials urgently needed at the front and that the time lost via the longer roundabout way along the southern shore of Lake Erie between the points mentioned of Port Huron, Detroit, and Buffalo amounts to anywhere from six to ten hours per trip, and it is conservatively estimated that there is a waste of 35,000 transportation days per annum, plus millions of tire miles and an additional uncalculated loss in the consumption of gasoline. The savings in mileage, mind you, between Detroit and Buffalo over the Canadian route, as compared with the longer all American route, is the difference between 261 miles and 365 miles or a saving over the Canadian route of 104 miles per one way trip. The difference between Port Huron and Buffalo, using an all American route, as compared with the short and direct Canadian route is the difference between 210 miles and 420 miles or a saving of exactly fifty per cent or 210 miles per one way trip.

That is the story told to the American people. I continue:

Why should the American people sacrifice the use of their automobiles, tires and gasoline? Why should they forego the comfort of oil heat in their homes this coming winter only to have these essentials squandered needlessly because of an unpatriotic, autocratic, and brazen attitude on the part of a railroad spokesman clothed in the official robes of Minister of Munitions and Supply? This selfish railroad opposition, centered in Mr. Howe as regards this question, is the very same opposition which stood in the way of the completion of the Alaskan highway so essential to the defence of the entire west coast of continental North America and which was only recently broken by the rising tide of adverse public sentiment. The delay incurred has caused incalculable loss and exposed our peoples to great danger.

At another point he said:

American tankers, and more important, American lives are being sacrificed every day to supply the deficiency caused by the useless consumption of millions of gallons of gas which could be saved by the use of the approved Canadian route.

Toward the end of his remarks he went on to say:

I think it is timely to suggest that this problem might become one for the congress to investigate. I am thinking, Mr. Speaker, that it may be well to consider the appointment of a select committee of the house with the power to summon such witnesses as Lieutenant-General William S. Knudsen, J. B. Eastman, Director of Defense Transportation, Milo Perkins, Chairman of the American Section of the Joint War Production Committee of the United States and Canada, and others, in order to obtain first hand information with regard to the stricture which exists. In concluding my remarks, Mr. Speaker, I want to make it clear that every responsible official—

I draw attention to this.

—of the governments of the United States and Canada who has examined the problem has agreed that this short Canadian route is essential and must be utilized.

The point I wish to make now is that on March 13, in reply to a question asked by me, the minister pointed out quite briefly the background of the situation. Ever since 1937 when our railways were in the doldrums and when we had cars of all kinds to spare he said that this organization of trucking interests has been endeavouring to get the right to transport across Canada goods which originate in the United States and are destined to points in the United States. The minister said, as reported on page 1288 of *Hansard:*

I may say, however, that the representations have always come from parties interested either in building the trucks or in selling the gasoline or operating a toll bridge or toll tunnel. I have never seen representations from potential users of the service.

Mr. STIRLING: Was any official reply to that statement made in the House of Representatives?

Mr. COLDWELL: Not that I know of. This was sent to me and I know of no official reply to it. Accompanying it was information to the effect that this important subject is and has been for some considerable time under consideration by the joint war production

board of the two countries, and that on January 26 our own Canadian section of the board approved the suggestion.

Mr. HOWE: Not true.

Mr. COLDWELL: Not true?

Mr. HOWE. No.

Mr. COLDWELL: And on March 16 the joint board approved the suggestion on the ground that the United States railways and highways cannot handle the war material originating in Michigan and destined for Buffalo and points beyond.

I express this opinion: If it is true that the United States railways cannot handle the traffic; if our Canadian railroads cannot handle the through traffic and there is a material saving in mileage and in every other way in transporting munitions by the Canadian route, we should give not only every consideration to but every facility for the movement of war goods by a Canadian route. I do not know what the railway situation is in this country. I have with me a statement showing that there is a shortage of railway cars, trucks and so on in the United States, for the movement of such goods. I understand that recently the United States railways asked congress for 218,000 additional cars for this year to enable them to move the material which must be moved at this time. My information is that they were allowed 18,000, as a matter of fact, and that this year they have notified Mr. Eastman that they require 380,000.

I do not know what our railway situation is. I do not know whether the Canadian lines from Detroit east to Buffalo are able to cope with an additional amount of traffic of this description. But I do think that if the situation is as has been outlined in this representative's speech, that is to say that the American roads are congested, the railways overburdened, and the haul 50 per cent greater through the United States, some plan should be worked out to give them the right to move these goods through Canada via a Canadian route. But may I add that under no circumstances should any group be allowed to use the war as a lever to get into this country and to utilize the Canadian route for their own purposes when the war is over. If they have a case in this time of war, and if the statement as I have read it to the committee can be substantiated, I am sure we should do something to meet the traffic congestion and to assist them by the use of the Canadian route.

This I want to say again, that we should do nothing at this time which would in any degree alienate the sympathy or opinion of any of the people of the United States. I feel that there has been misunderstanding—and graver misunderstanding than I was aware of until very recently. This kind of thing, allowed to go unanswered if it is wrong, and unmet if it is right, is doing a grievous injury to Canada, to the relations between our two countries and to our war effort generally. I hope the minister will be able to clear up the points which have been raised in the United States House of Representatives.

Mr. HOWE: I find myself a little confused by the statement of my hon. friend. I thought he was strongly pressing for the opening of the route for United States trucks, up to the last two or three minutes of his speech, at which time he seemed to reverse his position.

Mr. COLDWELL: No, no; I was not doing that at all. I thought I had made my position clear.

Mr. HOWE: Does the hon. member suggest they should go through?

Mr. COLDWELL: I am drawing attention to it only in the public interest. I am not in a position to judge as to the merits of the case, and I am not taking any sides.

Mr. HOWE: I see.

Mr. COLDWELL: I wish the minister to understand that clearly. I believe the matter should be cleared up in the public interest.

Mr. HOWE: All right. I have given a brief outline of the position to which my hon. friend has referred. Of course the bringing of my name into the discussion, so far as the press from outside is concerned, is purely gratuitous. As Minister of Transport from 1935 to 1939 I presented to the government the views of the railroads. I was myself virtually a railroad man at that time. In 1939 I was transferred to the Department of Munitions and Supply, and the subject does not affect in any way that department. It is a matter really for the Department of National Revenue. An order in council or a change in customs regulations is necessary, and I assume the only possible opposition to it would be from the railways. But certainly, incidental to my position as Minister of Munitions and Supply, I have no views at all. Whether a change in the customs regulations was made or not would not affect by one iota the operations of the Department of Munitions and Supply. The view, of course, has been that of the government, and to single out one particular member of the government and call him a one-man bottleneck is more or less gratuitous.

The fact of the matter is that a group of Canadians are promoting this monopoly in transportation across this particular stretch

of territory. They were very active in Canada for two or three years, and then they discovered that much more effective propaganda in Canada could be carried out from the United States, with the result that for the past two years the headquarters of the organization has been in Washington.

The inventor or sponsor of this project was a man named Corelli, a Canadian born in Winnipeg, and associated with the automotive business, first in Montreal and I believe later in Toronto. He conceived the idea that a material saving in transportation costs could be worked out by diverting highway traffic between Buffalo and Detroit over the Canadian highways, and that the shorter distance would permit a profit being made by whoever had a franchise to operate the shorter distance. He organized a company called International Highway Forwarders Limited. I believe his principal associates were the British American Oil Company, General Motors, and one or two others. I mention the fact that they were interested in selling gasoline or motor trucks. I believe everyone concerned had some rather direct interest in the affairs of the company, in that way.

Representations were first made in 1936. In the session of 1937 a bill changing the customs regulations was introduced in the senate. It did not however emerge from the senate. I believe it was 1936-37, although it may have been 1937-38, that I appeared before committees of each house and, as it was my duty to do as Minister of Transport, expressed the views of the railways. When the company moved to Washington some United States interests were added.

I think one man is either the president or the director of the Peace bridge, and there are other interests of a similar nature. Arrangements have been worked out, I think, under which International Forwarders Limited have a contract with a very large number of trucking concerns in the United States. The first plan was that the Canadian company would have its own trucks and drivers and convey the vehicles across Canada, but I think the present arrangement is that International Forwarders Limited will furnish the drivers for the American trucks and drive those trucks across Canada for a fee.

There are other features besides competition with the railways. There are five lines of railway between Buffalo and Detroit, operated for the most part with Canadian crews. In a time of depression it is something to think about, to set up a competing line of trucks with no investment in the route and a free franchise to divert as much traffic as possible to the highways. It is also something to think about to set aside a certain section of our country to be a bridge between two large industrial centres. The passage of trucks across this strip of territory would bring no prosperity to that territory. The people there would simply be residents on a bridge between two large cities. The highways there were not built for traffic of the kind, and various opinions are expressed as to whether they are suitable for continuous heavy truck traffic. I believe a report has been produced on the other side of the line which indicates that the highways are suitable. The chairman of the transport commission is making an investigation now on behalf of the Canadian government of all aspects of the situation and I assume his report will express an opinion on this subject.

It is a situation that has some very attractive features. On the other hand I do not like—this is only a personal view, and I have never expressed it as a reason why I do not want to see this traffic—a little group of citizens setting up a monopoly on our highways. I do not think that is a desirable way to use the public domain. I also dislike very much condemning people who live along the highway system which would be used under this proposal to be faced with a steady stream of heavy trucks over the highway which their children must cross, and which they also must use for access to other places. These are the objectionable features. Whether they are sufficient in a time like this to be maintained, I cannot say. The government has asked the chairman of the board of transport commissioners to conduct an inquiry into all phases of the situation and report to the government what action ought to be taken. That report will be presented shortly, and the government will take such action as it may consider wise.

Mr. BROOKS: Have any official representations been made by the United States government that this traffic be allowed?

Mr. HOWE: No official representations. Unofficial representations have been made from rather high quarters, but nothing in an official way.

Bringing in the Alaska highway was, of course, purely gratuitous. The facts about that highway are these. We received an inquiry from the United States as to whether arrangements could be made to survey a route across Canada. We answered promptly, almost the same day the inquiry was received, and gave a favourable reply. We were ready with our tractor trains to take in gasoline to permit the survey to be made as soon as a decision was arrived at. As soon as the United States decided to make a survey we cooperated in

every way possible. There was never a doubt in anyone's mind that if the United States wanted a road across Canada, Canada would do all it could to make that road feasible, and that is being done. Canada has acquired the right of way for the road and is assisting the United States in every way to carry out its plans.

So far as the use of the airways to Alaska is concerned, it has been understood from the time Canada entered the war that the Alaska air route, which was built by Canada—the airports are the property of Canada and have been developed as part of a very important air route—should be free for the use of United States military planes. There is an international convention which provides that if a civilian plane wishes to use that route permission must first be obtained from the state department of the other country. A plane from the United States entered Canada without any permission being asked. It had radio equipment, and it was announced at Winnipeg that it was to do transport work for the United States government between Edmonton and Alaska. We thought we would like to know a little more about this, so we grounded the plane at Edmonton and made inquiry of the United States government and asked what this was all about. I happened to be going to Washington at the time and I made personal inquiries there. I found that everybody there had assumed that someone had asked Canada for permission for this plane to fly, and it was explained that the army wished to engage this air line to do certain transport work. The necessary permission was given that very day. I telephoned back to Ottawa and was able to convey full permission to the army to use this civilian transport company. The whole delay amounted to only about four days, and was caused by the fact that no one in the United States had advised Canada what she wished to do in that connection. My hon. friend knows how these stories get abroad. Canada was in the war when the United States was at peace, and the isolationist element in the United States thought it good business to advance their cause by very unfair criticism of Canada and its war effort. But I think that everyone in an official position in the United States fully appreciates what Canada is doing in the war. I may say that we have been able to be very helpful to the army and navy and air force of the United States from the fact that we had been in the war longer than they had, and had our production of munitions and war equipment further advanced than theirs. I think that that help has been appreciated as the finest sort of cooperation in war production between Canada and the United States. We confer with the United States authorities frequently and have a number of joint committees which are working on common problems. But there is a weakness in our publicity arising from the activities of the isolationist press before the United States entered the war.

I agree with my hon. friend that no opportunity should be lost by Canadians visiting in the United States to correct any wrong impression that might prevail over there, either by speaking in public or otherwise. I myself spoke before the Boston chamber of commerce three or four weeks ago in an address which was broadcast over the New England network, and I received an astonishing number of letters from people who were surprised by what I was able to tell them about Canada's war effort. Hon. members will do a real service to Canada if they accept every opportunity to do likewise.

I hope I have covered the ground my hon. friend wished me to cover. The matter to which he refers is being examined in the light of the war situation. Of course he will understand that any army truck or any war truck can pass freely. It is purely a matter of shipping merchandise in bond over that route.

Mr. COLDWELL: It would be war material, would it not? That is what I had reference to.

Mr. HOWE: I suppose it would be any material; it is any material that would be required to pay duty in Canada. Of course there are certain classes of war material that could pass in any event, because the goods would not be dutiable, into Canada. Any goods can move that way if those concerned are willing to pay duty at one end and get a refund at the other end. It is simply that they wish to pass the goods through in bond. But I understand the permission that is being asked for is for any goods to move from one point to the other, whether war materials or not; and I do not know whether we can distinguish between what are war materials and what are not, because most materials may be used either for one purpose or the other.

Mr. COLDWELL: Merchandise consigned to wholesale or retail companies doing business in other than war materials would not be war materials. Goods consigned to factories or organizations doing war work might be considered as such. All I can say is that I hope consideration is being given to this matter, and that if it has merit, the request will be granted; if it has not, I hope it will be refused.

Mr. ILSLEY: I do not think I can add anything to this, but I am going to give something of my own experience in this matter.

As the committee knows, I was Minister of National Revenue between 1935 and 1940, and it was upon the Minister of National Revenue that the lobby converged for the concession desired. There is a section of the Customs Act which provides that goods can move in bond in Canada only on railways. That is an old section, and it has been argued that it is obsolete and should be amended. On the other hand, the customs officials of the Department of National Revenue have always felt that there were solid reasons for the maintenance of that section in its present form. The reasons are these: that if goods move in bond on a railway the cars are sealed; the minimum crew of a train is five, I think; the train is always on the tracks and you always know where your goods are; whereas, if goods were permitted to travel around in Canada, and through Canada, by truck coming in at one point and going out at another, the danger of goods on which duty had not been paid going into circulation in the country would be very greatly increased. That was the argument which was always advanced by the officials of the customs division, when I was Minister of National Revenue, against any change. Added to that was the undoubted wish of the railways, and I may say that the representations were not all on one side. In the year when this lobby was at its height we received numbers of resolutions from railway workers' locals along the line of the railways; and I know the Canadian National Railways were very much disturbed at the prospect of an alteration of the rule that foreign goods on which the duty has not been paid, which have not entered in customs, should not move other than on the railways—and this for obvious reasons.

In two years the representatives of the interests who wanted to get this concession came to Ottawa and did everything they possibly could to have that section of the Customs Act amended. I remember that on one occasion they brought along a large red truck, parked it outside the parliament buildings here, and invited myself as Minister of National Revenue, and perhaps other ministers, to inspect the truck and satisfy themselves that it was safe to move goods across the country in that type of conveyance. There was one year when a bill was introduced in the senate; it went before one of the senate committees, and conflicting representations were made. But the view of the government always was that the relevant section of the Customs Act should not be amended.

As my colleague has said, there is no reason in the world why he should be singled out for attack in this manner. The natural target is the Minister of National Revenue, although I am not suggesting that he should be attacked. I believe I took full responsibility during the years when the matter was before the government for deciding not to recommend an amendment of the act. Whether there has been a change in conditions recently which would justify a change in the law I do not know, but the committee should not be under the slightest illusion as to the reasons behind the agitation. The only reason I have for speaking now is to add my testimony to what my colleague has said. The reasons behind this agitation are those of men who want to make money out of getting the use of these highways for the running of their trucks.

Mr. COLDWELL: May I interject this? I am not asking that anything should be done that would give these people entry into Canada. If we can assist in the movement of war goods across Canada, well and good. Anything which is done will be done, I hope, only as a war measure and for the duration of the war, and then only if we cannot handle it in any other way.

Mr. ILSLEY: There are two other matters to which I want to refer briefly. The hon. member for Dufferin-Simcoe (Mr. Rowe) this afternoon, on the orders of the day, corrected a statement which he made last night in reference to the number of subscriptions for victory loans. His speech of last evening, while not precisely accurate in regard to the figures, was substantially so; but the correction he made this afternoon is substantially incorrect. I have had a word with him, and I think he is satisfied that that is so; it was an inadvertence on his part. I should like to put on record the true figures. I am assuming that the population of Canada is 11,420,084: that is the preliminary census total as released by the dominion bureau of statistics. On that basis the ratio of subscribers to population for the first victory loan was 8·48 per cent, and for the second victory loan, 14·72 per cent. The number of subscriptions in the first victory loan was 968,259, and in the second victory loan, 1,681,525.

The other matter I wanted to mention is one which was being discussed early this afternoon, and that is an alleged agreement between an official of the Department of Munitions and Supply, the director-general of aircraft production, and treasury officials or the

treasury, to the effect that certain expenditures by companies would be allowed as part of their costs of production or part of the overhead. I made very careful inquiry, and I am assured by the comptroller of the treasury that no agreement of that kind was made. He has made inquiry also of his officials; and therefore all that I can say is that there must be some mistake about there having been any arrangement with the treasury that these particular expenses would be allowed as part of the overhead. It may be that they would have been on general principles, and it may be that some discussion of general principles took place or some assurance in regard to the general rule was given; but that is a matter as to which an opinion could not be formed until the actual expenditures, whatever they were, came in. They would be subject to review, subject to audit by the officers of the treasury, but I do not want it to go out to the public that this particular class of expenditure was the subject of any agreement between the treasury and anybody.

Mr. BLACK (Cumberland): First of all I wish to congratulate the hon. member for Davenport (Mr. MacNicol) upon his constructive address this afternoon dealing with the oil resources of Canada and the possibility of developing oil sands. He has gone to a great deal of trouble and taken a good deal of time, and altogether he shows commendable interest in personally examining these oil resources. I am glad that the minister has taken steps to see if these can be developed as a war necessity, as a great Canadian resource for the future. I am also pleased that the minister and his officials and engineers are investigating the oil shales of New Brunswick. I hope they will also be developed. I pointed out yesterday that there were also extensive oil shales in Nova Scotia, which to some extent have been explored. They are to be found in different parts of that province, in the county of Pictou, in Antigonish and other places. I believe there are great possibilities.

While discussing the matter of oil and gasoline, I think the minister should make a statement—I do not believe it has been made officially yet by the oil controller—as to the position of tourists entering Canada, more particularly in the maritime provinces. Some publicity has been given to the statement that they will be allowed only twenty gallons of gasoline on coming to Canada. If that is correct, it will mean that they can cover only three or four hundred miles, and that would completely destroy the motor tourist traffic in Nova Scotia, Prince Edward Island and other parts of Canada in the coming year. If that is necessary owing to the exigencies of the war we shall have to abide by it, and the traffic will have to be diverted by rail; but it would be well for the minister to make a definite statement. There are many people depending on the tourist traffic, and they have to make provision for the coming season.

I wish to refer now to the discussion with respect to Mr. Ralph Bell, director-general of aircraft construction. May I pay him my respects and express my appreciation of the wonderful energy he has shown and the great accomplishments he has achieved in connection with the aircraft industry of Canada. Canada, the empire and democracy the world over are under great obligations to certain men. Among these are Lord Beaverbrook and, in a not much lesser degree, such men as Mr. Ralph Bell. There may have been some indiscretions; his methods may have been a little more direct than others, but his purpose cannot be questioned. When one realizes the responsibilities that have rested upon him since he has been in this position, one must be amazed at what he has accomplished.

The minister said that the aeroplane industry had increased four hundredfold.

Mr. HOWE: I should have said forty, and I had the correction made.

Mr. BLACK (Cumberland): I would almost accept four hundredfold as correct, because in some particulars it is correct. Even if it is only fortyfold, it is an immense expansion, and that falls largely under the responsibility of Mr. Bell. One cannot realize the difficulties under which he and those associated with him have laboured in this connection, building these plants from the very beginning, having them established, with one or two exceptions, as new plants, getting the personnel together, accumulating the materials, and so on. This has been a great undertaking. After the designs have been fixed upon, jigs constructed, materials obtained, delays and disappointments overcome, the planes are constructed so that they will be worthy of the Minister of National Defence for Air Services and our splendid airmen, who are in the forefront of the fighting wherever our battles are to be won.

The immensity of the work carried on by the aircraft industry can be realized only when one considers the total figures. I go to the *Financial Post* for these figures. I am sorry that many of them are not available to hon.

members. We are under obligations to the *Financial Post* for much information that is adduced in the house. In the edition of April 25, just a few weeks ago, it was reported that the aircraft industry had already totalled $391,719,381, and that the new orders that have been placed since the beginning of the year, the first three months of 1942, total the enormous sum of $86,500,000. Mr. Bell's purpose was to build up the morale of the aircraft industry, and we are all in agreement with him in that purpose.

In the town of Amherst we have accomplished a great deal. We were the last, I believe, to undertake the construction of the Avro-Anson, and we were the first to have machines, built in that plant, flying. I have been waited on from time to time by representatives of the workmen there, and one of the last statements they made to me was that without additional help they would be prepared to increase the output of that plant very materially if they could get the materials in sufficient quantities and if a few changes were made. They are as anxious as the minister and the director-general of aircraft production to get production, and while a pep-up of morale may help the industry in Amherst, I do not believe it is necessary. I believe they are anxious to do all they possibly can.

We are all agreed that one of the greatest responsibilities rests on those who have to supply materials and direct the aircraft industry, and we are deeply obligated to Mr. Bell and his associates for what they have done, for the present programme, and for what we expect they will do before the termination of the war.

The minister in making his statement gave figures of capital assistance to war industries. He stated that it had reached 380 million dollars. About a year ago I understood him to say that capital assistance to war industries amounted then to 268 million dollars. In November in his statement to the house it was 550 million dollars. So I do not reconcile the figure of 380 million dollars. I do not think he gave the portion of the two billion dollar appropriation that is earmarked for the Department of Munitions and Supply. It was stated that 997 million dollars was earmarked for the army, 259 million dollars for the navy and 585 million dollars for the air force, plus 40 million dollars contributed by the other members of the commonwealth air training plan, a possible additional 300 million dollars which the Minister of National Defence for Air (Mr. Power), said would probably be required, and 21 million dollars for sundries. I see the minister's figure is in this report of March 17, 335 million dollars for the Department of Munitions and Supply.

These are enormous figures, but hon. members willingly vote these estimates if they are being used for the main purpose, that is winning the war. The minister also reported that he had expended, from the beginning of the war up to the present time, four billion dollars. These are enormous sums and the people of Canada have accomplished a great deal. I am not in entire agreement with the hon. member for Inverness-Richmond (Mr. McGarry)—although I usually agree with him—when he said that sufficient consideration has been given to the outlying parts of Canada and to Nova Scotia in the distribution of war industries. Much more could have been accomplished, and I believe that in fairness much larger expenditures should have been made in Nova Scotia and other outlying parts of Canada. At this time the minister and the government could very well adjust the inequalities in industrial enterprise in Canada by locating industries in the maritime provinces, that have suffered grievously in regard to industrial activity. Twenty-five years ago there were many small industries in Nova Scotia that were more or less prosperous. They have carried on under great disadvantages in recent years, due to the growth of mass production in central Canada and the tendency of the big industries to absorb our smaller industries and to dump their products in the outlying parts of Canada, making unfair competition for our local industries. There are many industries necessary in a time such as this to produce special war supplies, industries that would have some surviving or permanent value after the war, industries that must be sponsored or encouraged by the government; such industries should be located in places like Nova Scotia.

With regard to the matter of shipbuilding, while much has been done in the last six months or so I still feel that sufficient consideration has not been given to the old shipbuilding province of Nova Scotia. I agree with the statement of the hon. member for New Westminster (Mr. Reid), that ships and more ships are needed to-day. Last session I repeated the call made by Lord Beaverbrook to the four corners of the earth that ships and more ships are required, appealing to the people everywhere to supply ships. I said at the time that more consideration should be given to Nova Scotia in respect of shipbuilding, wooden shipbuilding, using Nova Scotian raw materials rather than teak, mahogany and imported woods, and using diesel-engine power. While we do not want to waste money

or make unnecessary expenditure, I believe it is in the interest of the situation we have to face that more activity be shown in this connection.

Senator Duff protested against the refusal of the department to undertake a wooden shipbuilding programme in Nova Scotia. He said, as reported in the Halifax *Chronicle* of March 26, 1941:

With proper men in charge of the effort, there was no reason why fifty Nova Scotia shipyards "from river John around to the Parrsboro shore" should not be started on wartime shipbuilding within a month's time. . . .

The senator advocated the building in Nova Scotia of not only wooden corvettes, minesweepers and patrol boats, but also "small cargo boats propelled by sail and diesel engines capable of carrying between 1,500 and 2,500 tons of cargo." Despite the preference for steel ships, the urgency of the situation would undoubtedly make a place for wooden cargo ships in the war effort, he said.

Wooden ships have three great advantages in the present crisis, Senator Duff argued.

I quote Senator Duff because he has spent his life in connection with shipping and the sea.

I want to commend the minister, although he was perhaps a little later than some of us would have liked, for what has been done in resurrecting the steel plate mill in Sydney. That mill, I understand, is now producing plates for shipbuilding. I hope that further shipbuilding yards will be established in Nova Scotia. I understand there is one in construction now, perhaps two, and if more interest had been shown earlier in the war I believe steel shipbuilding in Nova Scotia could have been increased manyfold.

We have no record of what has been done in the different parts of Canada as regards shipbuilding, and I was disappointed that the minister refused to give any reply to a question that I asked in the house on this subject. On March 25 I made these inquiries with respect to shipbuilding, as reported on page 1615 of *Hansard*:

1. What is the number, the total tonnage and the estimated cost of all ships ordered built by the government of Canada or by any other government to be built in Canada of 100 tons capacity or more for commercial purposes, since September 10, 1939, in each of the following provinces, (1) Nova Scotia, (2) New Brunswick, (3) Prince Edward Island, (4) Quebec, (5) Ontario, (6) British Columbia?

2. What is the number and the total tonnage of all ships launched in each province to March 14, 1942?

The minister's reply was:

This question asks for total production in a certain line of war effort. I have no objection personally to giving the information, but we have been asked specifically by the British government, and an agreement has been entered into on the part of the British government, the United States government and the government of Canada, not to give total production figures of war materials.

This is information to which hon. members are entitled. I do not see, in view of the announcements made concerning the shipbuilding programme, why hon. members are not entitled to at least some information in respect of this very important matter.

In the *Financial Post* that I quoted a few minutes ago it was stated that the shipbuilding being undertaken in the first three months of this year represents an expenditure of $86,500,000. I have here a semi-government publication, at least one that is sponsored by the government, that is issued under their patronage. The April issue of the *Canadian Geographic Journal* states that 154 cargo boats, 153 life-saving craft, 1,059 life boats, 614 light craft, 300 steel naval craft and 925 patrol boats have been built. These figures include 154 cargo boats of 10,000 tons deadweight, and 18 cargo boats of 5,000 tons. The total cost was $275,000,000.

They indicate where these ships are being built. It would seem that information is given out indirectly through these government or semi-government publications and through newspapers and periodicals which we are denied in the house. I feel we should have this information, at least to a greater extent than we have up to the present. There are many places in Nova Scotia and the maritime provinces where shipbuilding activities could be undertaken and I believe splendid results would be obtained.

I am most sympathetic with the minister in solving the problems that arise in connection with the Department of Munitions and Supply. The people of this country and the members of this house have given him unbounded support. I think the members of the house have been of assistance to him by pressing for further activities with respect to shipbuilding, with respect to tanks, with respect to aeroplane engines, with respect to aeroplanes and many other war manufactures. It is the task of the members of this house and the members of the official opposition to be helpful to the Minister of Munitions and Supply and to all the defence ministers in carrying out their responsibilities in this war. If there has been any criticism it is that they have not proceeded fast enough, that they have not done enough, that they have not been as frank with us as they should have been in giving us information as to the requirements of the army and the other services. The members of the opposition are anxious to contribute to the uttermost in assisting the government in the

responsibilities that are theirs in carrying on the war. I am appreciative of what the Minister of Munitions and Supply has done. I sympathize with him in the responsibilities that have arisen and I often wonder how one small head can hold all that the minister knows.

Mr. ROWE: Mr. Chairman, on a question of privilege, the Minister of Finance has made a statement, and before he made it I discussed with him the remarks I had made. In looking over my notes and in looking over the press report I am now in the position of asking that a correction be made of a correction. I now find that the figures I gave last night were as reported in the press, and I therefore ask that they remain as given. However, I thank the minister for the official information he has given.

Mr. HOWE: I think I should reply to the hon. member for Cumberland (Mr. Black) particularly in regard to the gasoline situation in the maritime provinces. I have no personal knowledge of the Nova Scotia shales, but I shall be glad to refer his remarks in that connection to the oil controller with the request that he send me such information as is available. With regard to tourists, the present situation is that the tourist will be given a book containing four coupons when he crosses the border. My hon. friend says that he is to be given twenty gallons of gasoline, but that does not follow automatically; he will be given four standard coupons.

Mr. BLACK (Cumberland): To-day that would be twenty gallons?

Mr. HOWE: Yes, but to-morrow not so good. I am sorry to say that the situation in the maritime provinces has deteriorated to such an extent that the oil controller finds it necessary at midnight to-night to cut the value of coupons in the maritime provinces to two gallons. We hope that this will be temporary and that the value of the coupons can be increased. But there just is not enough gasoline to go around.

Mr. BLACK (Cumberland): Does that apply only to the maritimes?

Mr. HOWE: Yes, that is all. In order to work out the situation without hardship, in order to distribute fairly what gas is available to the motorist, it is necessary for the time being to honour coupons only to the extent of two gallons. The authorities in the United States quite reasonably take the view that if they are curtailing their travelling for pleasure in the United States, it is not desirable for United States citizens travelling in Canada for pleasure to have any better treatment than they would receive at home. Similarly, I think our own citizens would resent the use of gasoline for pleasure purposes by tourists when gasoline for pleasure driving in Canada is being severely restricted. What can be done for the tourist beyond the four coupons that he is given at the border will depend on circumstances. If he has come to Canada simply for pleasure driving I doubt if anything further can be done for him, but if he is travelling to a summer home in Canada, it is probable that provision may be made to take him to his home and bring him back by his giving the proper information to the nearest representative of the oil controller. I do not wish to be too definite about that, but I believe that is the present situation.

I am glad my hon. friend has mentioned the director general of aircraft production, and I think that every word he said about Mr. Bell is well justified. It is unfortunate that a man with the temperament of Mr. Bell finds it difficult to abide by the conventions of government business. He occasionally makes an indiscreet slip of the type which has been discussed by the committee, but those slips are made wholly from his desire to get on with the job. He is a little impatient with our red tape, and I think hon. members should view the situation in its true light, which is just that.

With regard to shipbuilding in the maritimes I may say that we are anxious to build more steel ships there than we are building. We find it impossible to get sufficient staff to man the two largest shipyards, the Halifax shipyard and the Saint John shipyard, in order to enable ship construction to proceed while ship repair work is being done. We have made every effort to bring these staffs up to the point where both shipbuilding and ship repair work can proceed. Experience has taught us that up to this time this has not been possible. Naturally when repair work is required it must take precedence. The quickest way to get merchant tonnage is to repair the ships you have, rather than to divert men to the building of new ships. I cannot believe there is any supply of shipbuilders in the maritimes that has not been tapped. If there are such men able to work on ships, men who might be called ship mechanics, I urge them to report to Halifax, Saint John or Pictou, where they will be welcomed. They are badly needed in the existing yards and will be put to work immediately. I can see no purpose whatsoever in opening additional shipyards, when we cannot man the yards we have.

Mr. BLACKMORE: If the men so report, will provision be made to cover their expenses from wherever they happen to be to the point of operations?

Mr. HOWE: I think any shipyard in the maritimes would be glad to pay their fares there. The Saint John Dry Dock Company advertised in every western paper that they would do that for anyone in the west. I believe inquiries should be made, however, as to whether they are still willing to do it, and I would suggest that if my hon. friend knows of anyone who wishes to travel there he should ask that person to communicate with the Saint John Dry Dock company.

Mr. BLACKMORE: It would relieve the men of all that anxiety if they would also pay their fares back, in the event of their being rejected.

Mr. HOWE: I do not know that that is exactly fair. The men offering themselves should be fairly sure they are able to do the work, before they put the company to the expense of transportation to the maritime provinces.

Mr. BLACKMORE: Otherwise the men would have to bear the brunt.

Mr. HOWE: We do not like people to come down as tourists. If they can do the work, then they should work. We do not want to encourage the tourist industry in that way, simply by saying that if they do not like the looks of things they may go back, and have their fares paid.

Mr. BLACK (Cumberland): There is one thing I do not understand in connection with the shipbuilding programme. We are very grateful to British Columbia for what has been done there, but I do not understand why there should be seventeen of these yards established in British Columbia, when in Nova Scotia this work is so belated. It places eastern Canada at a great disadvantage, and I do not understand it.

Mr. HOWE: Offhand I would say there are more yards in Nova Scotia than in British Columbia. I believe there are more than seventeen yards building some kind of ships in Nova Scotia at the present time, and I understand those yards have been busy continuously since the shipbuilding programme was begun. Many ships have been built in the maritime provinces—although I have not the figures before me. I dislike breaking down the figures by provinces, because, after all, this is Canada's war effort, and it does not matter much to Canada's war effort whether they are built in one place or another.

Mr. BLACK (Cumberland): We are grateful to British Columbia for what they have done, but I think more might have been done in Nova Scotia.

Mr. HOWE: But I say if there is any man in Nova Scotia able to work on a ship, he could do the war effort a great deal of good by reporting to one of the three big shipyards, where we have been continuously short of men.

Mr. GILLIS: Would they have to be skilled men?

Mr. HOWE: If they are able-bodied they can be trained; that is my opinion.

Mr. McGARRY: I understand that in these days ministers responsible for the prosecution of the war are looking around for facilities, and for raw and manufactured materials to contribute to the war effort. Is the minister aware of the fact that at Glencoe, in my constituency, there is a large deposit of magnetic ore proved, by analysis, to be of very high quality? A man has been paying the rentals on the leases for several years. Last year the Dominion Coal company became interested in the area, did some work and, in fact, produced some ore. I was talking to the engineer of that company, and he told me that a large amount of the ore could be recovered by surface mining.

A few days ago I received a letter from the man holding the leases stating that the Dominion Coal company have given up their interest in the property, and that he is now prepared to produce a thousand tons weekly. I have no doubt he has made the same submission to the hon. member for Cape Breton South who, I am sure, will have something to say on the matter. The man in question is seeking some assistance from the Department of Munitions and Supply and, as he points out, that assistance would not need to be very great. If assistance is not given it would appear that this man, who has been carrying the leases for a number of years, will likely have to surrender the property to the Dominion Coal company.

I would ask the minister to take the matter under consideration, and see if something could be done, or some assistance could not be given this man who has continued to hold on to this valuable property.

He is not asking for very much to-day, but wishes only the initial facilities necessary to bring about a production which, I have no doubt, can be greatly increased in the future. Has this matter been brought to the minister's attention?

Mr. HOWE: I have no personal knowledge of the iron deposits mentioned by the hon. member, but I shall be glad to obtain a report from my steel controller, and consider what can be done to bring that iron ore into the war effort.

Progress reported.

On motion of Mr. Crerar the house adjourned at six p.m.

Monday, May 18, 1942

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

SS. "GEORGE WASHINGTON"

Mr. CHURCH:

1. Did the government purchase a ship called the *George Washington* in the United States?

2. If so, when, what was the cost thereof, and who were the former owners?

3. For what purpose was it bought, who reported on the seaworthiness and utility, and was an inspection made to establish the state of its repair?

4. What was the cost of additions or repairs to it after purchase?

5. What uses have been made of it?

Mr. HOWE:

1. No.

2. 3, 4 and 5. Answered by 1.

INDUSTRIAL DISPUTES—CALLING OUT OF ACTIVE MILITIA

Mr. BLACKMORE:

1. At what dates since 1915 and in what localities has the Canadian active militia been called out by order of the governor in council or otherwise, for the purpose of quelling riots or disturbances arising from industrial disputes?

2. In each case, out of what particular dispute did the riot or disturbance necessitating that the militia be called out, arise?

3. What were the immediate causes of the disturbance in each case?

4. What were the general causes of the disturbance in each case?

5. If the disturbance resulted from a strike, what were the causes and the final result of the strike?

6. In what cases (if any) did the disturbances relate to political matters and discontent with government?

7. What overt acts were committed by the persons responsible for the riot or disturbances?

8. What was the strength of the militia force on each occasion?

9. For what length of time was the militia on duty on each occasion?

10. Where was the militia force which was called out on each occasion, stationed before the disturbances; after the disturbances?

11. How many casualties (if any) resulted on each occasion that the militia was called out, among militiamen? Among civilians?

12. How many arrests were made of alleged rioters, et cetera, on each occasion that the militia was called out in this way?

13. What were the charges laid against each arrested person on each occasion?

14. How many convictions were made of those arrested on each occasion? Where were the trials held? Are there reports of these trials?

Mr. RALSTON: I have already asked my hon. friend to reconsider this question and have expressed my own view that it should not be pressed on account of the multiplicity of detail involved in giving an answer to the question as it stands. My hon. friend has called "stand" on two or three occasions when the question has been called. I do not know whether he has given further consideration to the matter or not, but I would ask that he do so.

Mr. BLACKMORE: I have given it consideration, Mr. Speaker, but I think the house is entitled to this information. If the minister desires to have the question stand to-day, I will consult with him to see in what respect the amount of detail involved could be cut down. But I do feel that this information is important and that the house should have it.

Mr. RALSTON: I suggest to my hon. friend that he put his question as a notice of motion for papers. Then it can be discussed. It is not properly a question.

Mr. SPEAKER: The suggestion is made that the question be put in the form of a notice of motion for papers and that the question be dropped now.

Mr. BLACKMORE: I will do that, Mr. Speaker.

Mr. SPEAKER: Dropped.

*CANADIAN FORCES IN ENGLAND—BEER AND SPIRITUOUS LIQUORS

Mr. CASTLEDEN:

1. What quantity each of beer and spirituous liquors have been sent, prior to April 30, 1942, to the Canadian forces in England?

2. From whom were these supplies purchased?

3. What amount of money was paid to each of the brewing or distilling firms for these supplies?

Mr. RALSTON: Mr. Speaker, may I make an oral reply? The answer to question 1 is: None by the Department of National Defence, and so far as I know, none by any other governmental authority. Questions 2 and 3 are answered by the answer to question 1.

NATIONAL WAR SERVICES BOARD, REGINA

Mr. FLEMING:

1. What are the names of the members of the national war services board, division M, Regina, Saskatchewan?

2. What salary, per diem allowance, or expenses have each received since its inception?

3. How many of a secretarial staff are employed by this board, what are their names, salaries and expense accounts?

4. How many in each of the following classes have been called up through this office, (a) farmers, (b) farmers' sons, (c) agricultural workers?

5. How many, (a) farmers, (b) farmers' sons, (c) agricultural workers, were refused postponement up to April 30, 1942?

Mr. THORSON:

1 and 2.

. Members of the board	Salary	Per diem allowances	Travelling expenses
Brig.-Gen. the Hon. Mr. Justice J. F. L. Embury, C.B., C.M.G., V.D., Chairman....	Nil	$1,166 00	$745 31
Mr. A. Carl Stewart, K.C., M.I.A.....	"	2,330 50	359 27
Mr. George Bickerton.....	"	2,112 00	550 60

3. (a) One.

(b) Miss E. G. Cannon, stenographer, Grade 1, does secretarial work of the board and assists on the staff of the registrar when not engaged on this work.

(c) Salary: $65 per month, plus cost-of-living bonus.

(d) Travelling expenses: Since employment commenced, February 1, 1942, $65.05.

4. It is not possible to answer this question. Men are not called up for military training by occupations or trades; therefore, no complete statistics are kept as to the number of farmers, farmers' sons, agricultural workers, etc., who are being called for military training.

5. The total number of farmers, farmers' sons, agricultural workers, called out who applied for the postponement of the period of their military training was 2,992.

The total number of such applications granted by the board, division "M" was 1,854.

The total number refused was 1,138.

TRADE AND COMMERCE PUBLICATIONS

Mr. BRUCE:

1. How much does the Department of Trade and Commerce spend annually in its distribution of publications, (a) for all the provinces, (b) for each province?

2. Would the government consider greatly reducing these publications or eliminating them altogether for the period of the war and thus save labour and paper?

[Mr. Speaker.]

Mr. MacKINNON (Edmonton West):

1. (a) $113,800.75—printing and distribution. This figure includes such publications as annual reports, etc., which are required by statute.

(b) Information not available by provinces.

2. The publication, and circulation, of certain statistics has already been withdrawn, and every consideration will be given to further economy, insofar as the need for statistical and other services may permit.

RELEASES FROM INTERNMENTS

Mr. CASTLEDEN:

How many persons were released from internment camps in Canada in each month from October, 1939, to April, 1941?

Mr. McLARTY:

	1939	1940	1941
January	..	21	11
February	..	16	23
March	..	21	24
April	..	26	..
May	..	3	..
June	..	3	..
July	..	4	..
August	..	4	..
September	2	2	..
October	6	21	..
November	18	18	..
December	30	31	..
	56	170	58

Total—284.

PRISON CAMPS—OFFICER PERSONNEL

Mr. BRUCE:

1. Did a British officer resident in Canada, with extensive experience in large prison camps in the last war, offer his services to the government in this war?

2. If so, why was this officer not employed?

Mr. RALSTON: Since the outbreak of hostilities, approximately 40,000 offers of service have been dealt with in this department. It is, therefore, not possible to identify the individual referred to or to furnish the information unless the name of the officer in question is supplied.

TOURIST ADVERTISING

Mr. BRUCE:

1. How much does tourist advertising cost?

2. Have the provincial governments got similar services?

3. In view of the necessity for conserving rubber and gasoline, would the government consider the abolition of this tourist department as a war measure?

Mr. THORSON:

1. For the fiscal year 1941-42:

Advertising	$345,373 21
Publications	20,337 57
Total	$365,710 78

2. All provincial governments maintain tourist development departments for the purpose of promoting tourist traffic into their respective provinces.

3. In view of the existing war-time conditions, the activities of the Canadian travel bureau have been greatly curtailed. The abolition of the Canadian travel bureau is a matter of governmental policy, which will be made known in due course.

WORKERS IN ST. PAUL L'ERMITE WAR INDUSTRIES —TRANSPORTATION

Mr. FERLAND:

1. Is the government paying the cost of transportation of Montreal workmen who are employed in the war industries at St. Paul l'Ermite (Plant Cherrier)?

2. Is the government paying for the transportation of workmen residing in the counties of Joliette, L'Assomption, Montcalm and Berthier, who are employed in the same shops?

3. If not, does the government propose to accord the same treatment to all these workpeople and to reimburse those living in the four counties named for the cost of their daily transportation retroactive to the commencement of the enterprise?

Mr. MICHAUD:

1. Yes, partially. The company supplies free transportation service from Ontario Street East, Montreal, to the plant at Cherrier, a distance of 15¼ miles. Workers who use this free transportation service pay their own transportation charges from their homes to the railway depot at Ontario Street East and return.

2. No, except that all workers in the plant, from whatever district they come, work eight hours per day and are paid for 8½ hours to compensate, in part at least for transportation costs. Workers who live east of the plant do not receive any free transportation except as stated above.

3. The department does not propose to assume transportation costs in addition to those already in effect and especially on a retroactive basis. Such a course of action would involve heavy expenses and similar arrangements in other plants.

DR. H. H. CHRISTIE

Mr. DOUGLAS (Weyburn):

1. Is Dr. H. H. Christie, formerly of Esterhazy, Saskatchewan, employed by the dominion government?

2. If so, in what capacity?

3. Did his appointment receive the endorsation of the Canadian Medical Association?

4. What salary, travelling expenses, and other forms of remuneration has he received since being employed by the dominion government?

Mr. THORSON:

1. Yes.

2. Supervisor of medical services, Department of National War Services.

3. Such endorsation was not requested. Dr. Christie is a past president of the Saskatchewan branch of the Canadian Medical Association and he resigned from the position of member of the health services board of the province of Saskatchewan to accept his present appointment.

4. Salary at the rate of $5,000 per year and $881.22 for necessary travelling expenses from September 10, 1940, to the date of this reply.

POST-DISCHARGE BENEFITS TO EX-SOLDIERS

Mr. NOSEWORTHY:

How many men with dependents and how many single men, discharged from this war, are now in receipt of post-discharge benefits pending employment?

Mr. MACKENZIE (Vancouver Centre): Men with dependents, 314; single men, 348.

CANADIAN ARMY (RESERVE)—DEPENDENTS' ALLOWANCE

Mr. CRUICKSHANK:

Are members of the reserve army, when serving in the annual 2-week camp, allowed dependents' allowance, and if so, what is the rate of allowance.

Mr. RALSTON: Members of the reserve army do not receive dependents' allowance

when performing annual training. They are paid under the provisions of pay and allowance regulations for the permanent and non-permanent active militia 1937, which govern the army when not placed on active service.

RESTRICTIONS ON TRAVEL BETWEEN UNITED STATES AND CANADA

Mr. BRUCE:

Will the government institute the necessary proceedings to overcome the present restrictions on free travel between the United States and Canada?

Mr. MACKENZIE KING: Restrictions on travel between Canada and the United States have been and are being studied by the joint economic committees and by other agencies of the two governments. It is the desire of both governments that these restrictions shall be removed as soon as conditions make such a step feasible, and that, in the meantime, they shall cause as little dislocation as possible in legitimate and necessary travel between the two countries.

EXPORTS OF BACON TO BRITAIN

Mr. WRIGHT:

1. What was the total amount of bacon exported during the first six months of the 1940 bacon agreement?
2. What was the total amount of bacon exported during the first six months of the 1941 bacon agreement?

Mr. GARDINER:

1. 247,651,000 pounds of bacon were purchased for shipment during the first six months of the 1940 bacon agreement.
2. 325,675,000 pounds of bacon were purchased for shipment during the first six months of the 1941 bacon agreement.

PLEBISCITE—VOTE IN BASIC TRAINING CENTRES

Mr. CASSELMAN:

What was the total vote, (a) yes, (b) no, in each basic training centre in Canada in the recent plebiscite?

Mr. McLARTY: The votes cast by Canadian service voters at the plebiscite were not classified according to basic training centres. The votes of Canadian service voters stationed in Canada were counted by voting sections with the following result:

	Affirmative	Negative
Nova Scotia, New Brunswick and Prince Edward Island	41,720	5,821
Ontario and Quebec...	93,203	20,341
Manitoba, Saskatchewan, Alberta, British Columbia, and Yukon ...	55,721	11,016

[Mr. Ralston.]

QUESTIONS PASSED AS ORDERS FOR RETURNS

PLEBISCITE—SOLDIERS' VOTE

Mr. BRUCE:

1. What was the total number of soldiers in Canada and overseas entitled to vote on the recent plebiscite?
2. What number of these cast their ballots, (a) in Canada, (b) overseas?
3. Were precautions taken to ensure the secrecy of the ballot?

CAMP BORDEN—PURCHASE OF COAL

Mr. DIEFENBAKER:

1. From whom was coal purchased for use at Camp Borden from January 1, 1941, to date?
2. How many tons were purchased; what were the various kinds of coal supplied and the price paid for each of them?
3. Did the successful vendors secure the contract by tender? If so, what other persons or companies tendered and what prices were asked by the unsuccessful tenderers?

Mr. MICHAUD: Return tabled.

PETAWAWA CAMP—PURCHASE OF COAL

Mr. DIEFENBAKER:

1. From whom was coal purchased for use at Petawawa camp since January 1, 1941, to date?
2. How many tons were purchased; what were the several kinds of coal supplied and the price of each of them?
3. Did the said company or companies secure the contract to supply such coal by tender?
4. If so, what other companies tendered and what was the price asked by each?

Mr. MICHAUD: Return tabled.

MILITARY SERVICE—POSTPONEMENTS

Mr. CASTLEDEN:

How many postponements were granted prior to April 10, 1942, by each of the national war services boards in which the postponement was given conditional to the applicant enrolling in the reserve forces?

PLEBISCITE—PRESS ADVERTISING

Mr. BRUCE:

1. What was the cost of advertising the recent plebiscite campaign, (a) in all daily and weekly newspapers in Ontario, (b) in the protestant religious press, (c) in the Roman Catholic press?

MILITARY SERVICE—FARM LEAVE

Mr. FERLAND:

1. How many military recruits have applied for farm leave in military districts 4 and 5 since March?
2. How many have been granted leave for harvesting and other farm work?
3. Is it true that some of these men have obtained leave for six weeks only?

PURCHASE OF DUNSMUIR HOTEL PROPERTY AT VANCOUVER

Mr. MacINNIS:

1. Has the government purchased the property known as the Dunsmuir hotel at Vancouver, British Columbia?

2. If so, who was the registered owner of this property at the time of purchase by the government?

3. Did the government purchase the property from the registered owner or from the holder of an option on the hotel?

4. If from the holder of an option, what is the name of such person?

5. What was, (a) the purchase price, (b) the terms of payment?

6. What was the assessed value of this property at the time of purchase, (a) land, (b) buildings?

SUBSIDY TO NOVA SCOTIA MILK PRODUCERS

Mr. PURDY:

1. Has the bonus which was formerly paid to producers of fluid milk in Nova Scotia been discontinued?

2. If so, has any increase in retail price of milk in Halifax and other centres or other assistance to milk producers been authorized or arranged for to offset this?

3. Have protests been lodged with the government by Mr. Harold A. Reid, Shubenacadie, secretary of the United Milk Producers' Association, and other organizations with respect to this situation, pointing out that unless an adjustment is made promptly there will be a milk famine in the district?

4. What is the present ceiling retail price for fluid milk in, (a) Halifax, (b) Saint John?

5. Will the government investigate the situation promptly?

6. What was the price per ton Fort William at the end of each month during 1941 and 1942 to date, for carload lots of: (a) bran, (b) shorts, (c) middlings, (d) barley meal, (e) oat chop?

7. What is the freight per ton on feed grain from Fort William to (a) Saint John, (b) Halifax?

CONTROLLERS

Mr. SHAW:

1. How many controllers have been appointed since September, 1939?

2. What is the name and address of each controller?

3. What was the occupation or profession of each such controller at the time of or immediately prior to his appointment as controller?

4. Were any or all controllers obliged as a condition of appointment to sever connections with the business carried on privately at the time of appointment?

5. What rates of salary, wages, living allowances, travelling expenses, etc., are paid to controllers, and what amount or amounts have been paid to each controller from appointment to date?

6. What specific commodity (or commodities) is controlled by each controller?

7. Where is each central control office located?

8. How many regional control offices have been set up since September, 1939?

9. What is the name and the address of each official in charge of a regional control office?

10. What was the occupation or profession of each regional control officer at the time of or immediately prior to the time of his appointment?

11. How many regional controllers still continue to carry on the businesses in which they were engaged at the time of appointment?

12. What are the names of those regional controllers who still carry on private businesses?

13. What rate of salary, wage, living allowance, etc., is paid to each regional controller?

PLEBISCITE—ADVERTISING IN CHURCH PUBLICATIONS

Mr. FAIR:

What amount of money was expended by the government for plebiscite advertising in publications of the following churches, (a) United, (b) Presbyterian, (c) Baptist, (d) Church of England, (e) Roman Catholic, (f) Salvation Army, (g) other churches, specifying same?

VOLUNTARY RECRUITING FIGURES

Mrs. NIELSEN:

What are the figures for voluntary recruiting for, (a) March, 1941, March, 1942, (b) April, 1941, April, 1942, (c) May, 1941, May, 1942, to date?

MILITARY SERVICE—FARMERS AND FARM WORKERS

Mr. RAYMOND:

1. Is the government aware of the growing scarcity of farm labourers?

2. Since the statement of the Prime Minister in the House of Commons on March 24 last, relative to the military service of persons employed on farms, have any farmers and their sons and agricultural labourers generally, been called up for compulsory military training? If so, how many?

3. How many farmers, sons of farmers and farm employees generally, were, by virtue of the Mobilization Act of 1940, actually undergoing training on March 23, 1942, and have since applied for leave of absence to resume their farm work, (a) to how many has such leave been granted; (b) to how many has it been refused?

ATTESTATIONS AT BASIC TRAINING CENTRES FOR ACTIVE SERVICE

Mr. CASSELMAN:

What percentage of "R" recruits have gone active while receiving their training at each basic training centre since March, 1941 (by training centres)?

MOTIONS FOR PAPERS

NOVA SCOTIA INDIAN RESERVATIONS

Mr. BLACK (Cumberland):

For a copy of all letters, telegrams, petitions, agreements and other documents, (a) supporting, (b) protesting the consolidating of Indian reservations in Nova Scotia into two or a lesser number than now exist; also a statement giving (a) the name, location, acreage of each present reservation, and number of Indian residents on each, (b) the name, location and acreage of proposed consolidated reservations, (c) the number of Indians not now living on reservations, but under the control of the government, (d) the number of Indians living in Nova Scotia not on reservations or under the direct control of the government; also the total number of Indians living in Nova Scotia, (a) males, 21 years and over at last census, (b) females, 21 years and over at last census, (c) number of males under 21 years of age at last census, (d) number of females under 21 years of age at last census.

Mr. BLACK (Cumberland): The Minister of Mines and Resources (Mr. Crerar) has provided me with such information as I require, and I would ask that this motion be dropped.

Mr. SPEAKER: Dropped.

CONSCIENTIOUS OBJECTORS

Mr. SENN:

For a copy of all letters, telegrams or other communications and replies thereto which have passed between members of the House of Commons or the provincial legislature and the Department of National War Services, or any official thereof, or between such members and the divisional administration of the national war services board of the province of Saskatchewan regarding the subject of conscientious objectors.

ORDERS IN COUNCIL AMENDING OR SUSPENDING STATUTES

Mr. DIEFENBAKER:

For a copy of all orders in council passed since the outbreak of war which amend, suspend or otherwise alter the operation of any statute or statutes passed by the parliament of Canada, and a list of all statutes so effected.

Mr. MACKENZIE KING: The clerk of the privy council informs me that amendments or suspensions of the nature asked for by my hon. friend are very few and they are resorted to only in cases of emergency. On the other hand, approximately 24,000 orders in council and 13,000 treasury board minutes have been passed since the outbreak of war. The production of papers requested in this notice of motion would involve a prohibitive amount of time and labour as it entails the consultation of each individual order in council. The motion which my hon. friend moves is very similar to a question asked on May 19, 1941, which was acknowledged. I would suggest to my hon. friend that he have a talk with the clerk of the privy council about the matter to see if in some other way he cannot get the information he desires, but certainly to pass the order as it stands would involve an amount of labour which I do not think would be justified at this time.

Mr. DIEFENBAKER: Naturally I do not want a list of all orders in council. I am not trying to find out the orders in council that have been passed pursuant to statutes, but orders in council that have the direct result of altering statutes passed by parliament. As there are only very few of these I should think it would be possible to get that information.

Mr. MACKENZIE KING: If my hon. friend means any orders in council that specifically override certain statutes, it might be possible to get that information.

Mr. DIEFENBAKER: Yes.

Mr. MACKENZIE KING: He must realize, however, that there may be sections in statutes that are quite obscure and nevertheless may have been overriden by some orders in council of which no one had any knowledge or idea at the time. What I will ask, if it will suit my hon. friend's purpose, is that the ministers of the different departments look over any orders that they are aware of, or that their staffs may be aware of, that have been passed, overriding statutes, and have them brought down in the form of a return. Subject to that modification the order may be passed.

Motion as amended agreed to.

IMPORTS OF COAL—DUTY PAID AT TORONTO

Mr. NOSEWORTHY:

For a statement showing the amount of duty paid, at the port of Toronto, by Toronto firms importing coal from the United States, on each day between the 15th of April and the 15th of July (inclusive), 1940.

Mr. GIBSON: It has always been the policy of the government to refuse to divulge information concerning the personal affairs of an individual taxpayer. Under the circumstances I cannot consent to produce figures showing the customs duties paid by individual importers.

Motion dropped.

GASOLINE

REDUCTION IN VALUE OF RATION COUPONS IN MARITIME PROVINCES

On the orders of the day:

Mr. A. J. BROOKS (Royal): I had a question to direct to the Minister of Munitions and Supply (Mr. Howe). I see he is not in his seat, but possibly some other minister can give me the information.

At midnight on Friday May 15, the oil controller for Canada cut the value of gasoline coupons in the maritime provinces from five to two gallons. I should like to ask the minister the following questions: (1) Is it not possible to regulate the distribution of gasoline in Canada so that the maritime provinces will not be discriminated against? (2) Is gasoline reshipped from the maritime provinces to other points in Canada? (3) How long will it be before the gasoline coupon will again be worth five gallons in the maritime provinces?

I sent notice of this question to the minister.

Mr. SPEAKER: This will be considered as notice of the question.

LABOUR CONDITIONS

EMPLOYMENT OF YOUTHS OF SEVENTEEN IN WAR INDUSTRIES

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): In view of the promise made by the Minister of National Defence (Mr. Ralston) with respect to the employment of boys of seventeen years of age in industries engaged in war work but not declared essential industries, that he would take this up with the interested minister, could the Minister of National War Services give the house an answer to-day? These boys are now leaving school and are more or less out on a limb as a result of this statement and so are the industries.

Hon. J. T. THORSON (Minister of National War Services): The administration of the order in council to which my hon. friend refers is with the Department of Labour and the director of national selective service. I understand that the matter was dealt with at a conference that was held last week, but what the decision was I personally am not aware. I shall bring the question immediately to the attention of my colleague the Minister of Labour.

Mr. HOMUTH: Might we have an answer to-morrow, in view of the urgency of the matter?

Mr. THORSON: I shall bring it to his attention immediately.

Hon. J. L. RALSTON (Minister of National Defence): May I interpose to say that I did refer to the matter the next day? Perhaps what I said was not satisfactory, but I immediately took it up with the director of national selective service and found that the regulations were such that almost automatically permits were granted to young men seventeen years of age to accept employment for their vacations. That was covered by a direction issued by the director of national selective service, which seemed to solve the problem. I am sorry I cannot give the page of *Hansard* on which the statement is to be found, but the regulation is there. I read it.

Mr. HOMUTH: I remember the minister's answer, but it does not solve the problem.

PRAIRIE FARM ASSISTANCE

INQUIRY AS TO PAYMENTS UNDER BONUS PLANS

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): I wish to direct a question to the Minister of Agriculture (Mr. Gardiner). I have received numerous letters in regard to farm bonus payments, over the last week-end I received thirty-two from my constituency. Most of the wheat acreage reduction payments are made, but the great difficulty is the payments under the prairie farm assistance and prairie farm income plans. Would the minister say what action is being taken to get these cleared up?

Hon. J. G. GARDINER (Minister of Agriculture): As the hon. member has stated, practically all the payments under the wheat acreage reduction have been made. I suppose it would still be possible to get thirty-two letters from certain sections of Alberta where payments have not been completed.

Mr. JOHNSTON (Bow River): This was over one week-end.

Mr. GARDINER: Under the prairie farm assistance plan there will be some townships not yet passed—that is where there is a dispute as to whether the payment should be on the basis of eight to twelve bushels or four to eight bushels per acre, or between other categories, or where appeal has been made by the council against the decision of the board. Individuals from those townships may be complaining, and may have some

reason to complain, as to payments not having been made, but the matter cannot possibly be completed until the appeals are settled.

Mr. JOHNSTON (Bow River): What about the prairie farm income?

Mr. GARDINER: Those payments are based on the decision made in connection with prairie farm assistance so far as individuals are concerned. Payments in townships on prairie farm income are not made until prairie farm assistance payments are passed on.

HOUSE OF COMMONS

REQUEST FOR WEEKLY SECRET SITTINGS

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): In reference to what was said on Friday by the hon. member for Gaspé (Mr. Roy) may I ask the government if it would not be possible to have a secret sitting once a week until further notice? It could be easily done on any day of the week, preferably Wednesday. Its establishment as a weekly custom would prevent the Canadian people from thinking there was any special emergency, and it would give hon. members opportunity to seek from the government information that could not be disclosed in the press.

Mr. HOMUTH: There is too much secrecy now.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Possibly the hon. member for Waterloo South has given expression to a view that a large section of the public holds, and I think it is a point of view that has to be very carefully considered. The reply made to the hon. member for Gaspé last week was that he should give the information which he had to the minister of the department concerned, and if the minister thought the information to be of a kind which rendered a secret sitting advisable it would be so arranged by the government. I am advised that the information conveyed to the minister, in his opinion and the opinion of the cabinet—I can speak for the cabinet because I was present at the discussion—does not warrant the calling of a secret sitting.

As to my hon. friend's suggestion that we should have secret sessions at stated times, I think the public would be inclined to take the view that so far as sittings can be open they should be open, and that the government should resort to secret sittings only where there appears to be the strongest of reasons.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, May 15, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. McCann in the chair.

NATIONAL WAR SERVICES

Mr. BLACKMORE: On May 11 the minister made certain remarks, recorded on page 2328 of *Hansard*, which seem to me to deserve some comment.

The hon. member for Haldimand (Mr. Senn) asked the following question:

It seems to me only fair that something should be done to put those men—

Referring to the men working on farms.

—on an equal basis with their brothers and cousins who have gone to the cities and are enjoying much higher wages.

The minister replied as follows:

We did give some consideration to the question of a bonus, but it was felt that it would be almost impossible to work out any kind of bonus scheme that would be at all adequate. If you fixed a certain amount, in one part of the country it would be a pure gift; it would be much too high. On the other hand, in some areas that I have particularly mentioned, if a bonus were paid to farm labour to keep men on the land or attract them to the land, it would not be enough to counterbalance the superior attractions of high wages that would pull men from the farms into war industries.

Again the minister used the following words:

But there is a difference between equality of contribution to the effectiveness of the war effort and equality of sacrifice. I cannot think of any scheme that can bring about equality of sacrifice in time of war and at the same time make for maximum effectiveness.

May I interrupt this quotation just long enough to ask the minister why he has come to that conclusion. Why should maximum effectiveness be any more easily attainable when men are not making equality of sacrifice? I utterly fail to follow the minister's line of thought there.

There is not equality of remuneration or reward either. There is no equality of remuneration between the soldier, sailor or airman, and the young man who works in a

war industry at a high rate of pay; or between the man in the war industry and the man on the farm who has his difficult task to perform. They are all essential to the effectiveness of the war effort, but there is not equality of remuneration and there is not equality of reward. The man who enlists voluntarily has his own remuneration and his own reward. It is inside him. He knows that he answered the call of his country when the call came. When this conflict is all over he will remember, even if everyone else has forgotten, that he answered when the call came. That is his reward, and that reward cannot go to anyone except the volunteer. So these conceptions of equality of sacrifice and equality of remuneration are easy to talk about, but the thing with which I am sure every hon. member is concerned is maximum effectiveness, even though that has to be achieved at the expense of such things as equality of sacrifice.

Again the idea in the minister's mind seems to be that in order to obtain maximum effectiveness you must depart from the principle of equality of sacrifice. I do not agree with the minister in any respect with regard to that matter. Surely it is not going to add to the effectiveness of our war effort if we are to have inequality of sacrifice, inequality of remuneration, and inequality of reward. The minister speaks as though the problem had been taken up and found difficult, and therefore had been left unsolved and neglected or laid aside. That is simply not good enough in this country at the present time. It may be impossible to bring about equality of sacrifice or equality of reward, but certainly it is not impossible to give adequacy of reward. There are altogether too many people who have the idea that only our fighting men should be sacrificed; that without earning any great reward, they should be expected to face a future over which they have no control whatever. The idea seems to be that the next in line for sacrifice without reward is the man on the farm. Where such nonsensical ideas had their origin I cannot understand. These people, our fighters and our farmers, are of the greatest value to the country; these are the people who should be most adequately rewarded.

I feel that right now, without waiting for this session to close, we should definitely lay down the principle that every man who serves in the armed forces of this country must be guaranteed the means of establishing and maintaining a home. The pittance that these men receive at the present time certainly will not enable them to do that. Canada must have homes. How on earth can the British race survive, in competition with other races that have sense enough to realize the value of children, if the British race will not likewise realize the value of children and will not enable their people to raise them? It is time we woke up, as a race, before we are eliminated from the competition. Canada must have homes and children. Those children must have the opportunity of growing into useful citizens. I feel that what the minister has said requires a great deal of explanation.

Hon. J. T. THORSON (Minister of National War Services): There is not a great deal that I can add to what I stated on May 11, when I made the remarks to which the hon member for Lethbridge has referred. Our war effort is not a onesided effort. We have set our war objectives very definitely; we have indicated the various purposes of that war effort. Perhaps I might state them again. In the main they are threefold. We should raise the strongest armed forces possible, in the army, the navy and the air force, both as to number and as to quality of personnel, so that our fighting forces may be as effective as possible both in defensive and in striking power. That, I think, might be stated as our war objective as far as the armed forces are concerned. To send armed forces overseas without the necessary equipment would be the height of folly. Therefore we have another war objective. We must produce as much in the way of ships, planes, tanks, guns and other munitions of war and war supplies and equipment as it is possible for this country to produce. We have a double duty now in this regard; for not only do we have to produce munitions of war for our own armed forces, but we have entered into an obligation to supply Britain with a billion dollars' worth of munitions and supplies for her armed forces. Thirdly, we have set as a war objective the production of as much in the way of essential foodstuffs as can be transported overseas.

I have stated three war objectives, one relating to the armed forces, the army, the navy and the air force; the second relating to the production of munitions of war, and the third to the production of essential foodstuffs. Each of these objectives must be attained if this country is to make an all-out war effort, and we must move toward the attainment of these objectives concurrently.

Now, having stated the objectives and the necessity of moving forward to these objectives concurrently in the interests of the maximum effectiveness of our war effort, I am able to reply further, if any reply is necessary, to the hon. member for Lethbridge with respect to the matter of equality of sacrifice. If these

objectives of our war effort are to be attained, it must be done through the use of adequate man-power for the respective purposes of these objectives. I would ask the hon. member for Lethbridge what equality of sacrifice is possible between, let us say, a young man who enters the air force as a member of a fighting crew, whose days may be numbered from the very moment he enlists, and the young man or older man who works in a munitions plant at $5, $6, $7 or $8 per day. What equality of sacrifice is possible between our airmen, our soldiers and our sailors who offer their lives, and the farmer, who while he is doing his essential work is on his farm? What equality of sacrifice is possible under these circumstances? Yet we must have men in our fighting services, and we have—I say it to the credit of Canadian youth—men volunteering their services in the fighting forces, in the army, in the navy and in the air force. The sacrifice they make is the greatest sacrifice of all; for they offer their lives; many of them have given their lives.

In order to have maximum effectiveness of the war effort we must also have the production of the necessary munitions of war. We must also have production of the necessary food supplies, not only to keep our own nation alive, but also to supply Britain and our other allies. These are essential war purposes without which this country could not make an all-out war effort. But there is no equality of sacrifice in the matter. The farmer, while he is performing his essential work in that part of our war objective, is not making a sacrifice equal to that of the airmen or the soldiers or the sailors I have mentioned, and no farmer in this country would claim that he is. He knows he is not. Nor is any person who is working in a munitions plant making a sacrifice equal to that of the airman, the soldier or the sailor. To say that men in the munitions plants are in the front line in the same way as the soldiers, sailors and airmen is nonsense.

Mr. GILLIS: Why the difference in wages, then?

Mr. THORSON: I am dealing with equality of sacrifice. There may be equality of contribution to the effectiveness of the war effort, and that is very necessary indeed. But there is a difference between equality of contribution to the effectiveness of the war effort and equality of sacrifice.

Mr. DOUGLAS (Weyburn): Some are getting paid for very little contribution.

[Mr. Thorson.]

Mr. THORSON: Men do not enlist for pay; men enlist for other reasons. They enlist out of a sense of duty. They do it in the air force, they do it in the army, they do it in the navy. They are not thinking of equality of sacrifice; they are ready to make the greatest of all sacrifices. They did it in the last war, and they are doing it in this one. I am getting tired of the expression "equality of sacrifice". If it could be brought about, yes; but the very nature of war makes it impossible, because the sacrifice the one makes is in a field where he offers his life, and the one the other makes is in another field. Both are necessary for the purposes of war. One man gives of his best through his skill and labour. There may be equality of contribution to the effectiveness of the war effort, but that is a vastly different thing from equality of sacrifice.

There cannot be equality of sacrifice in war and maximum effectiveness in the war effort at the same time. Let me illustrate what I mean. Take for example two young men in a war industry, both of whom are of the same age, both physically fit, and both of the highest possible value, let us say, to the armed forces. One of them has been in the plant for years, and has become a highly skilled and trained precision tool man who could not be replaced in that plant by anyone else in less than two or three years. The other young man has been in the plant only a short time. He is not essential to war industry, nor to that purpose in the war effort that I mentioned.

It is the purpose of selective service to place persons in that field of activity in which each can make the greatest contribution to the war effort. If we are thinking of the maximum effectiveness of the war effort we will take the man who recently came into the war industry and place him in the armed forces. We might for the same reason leave the other man in war industry, because he is essential to it. Each of those men makes an equal contribution to the effectiveness of the war effort.

Mr. JOHNSTON (Bow River): They should be paid the same, then.

Mr. THORSON: But their equality of sacrifice is not the same.

Mr. JOHNSTON (Bow River): Should they not be paid the same, though?

Mr. THORSON: The question of pay is a totally different matter.

Mr. JOHNSTON (Bow River): But there is discrimination.

Mr. THORSON: I am dealing with the expression "equality of sacrifice", and I should like to put that phrase before the Canadian people so that they will stop talking about equality of sacrifice in war and maximum effectiveness of war effort at the same time. The two ideas are inconsistent with each other. If we could have equality of sacrifice in time of war, I would be in favour of it, but the very nature of war makes impossible equality of sacrifice among all persons who make their contribution to the success of the war effort.

Mr. MacINNIS: Are we not all—

Mr. THORSON: Do not interrupt me, please. War demands of its youngest and strongest men the greatest of sacrifice—unfortunate, indeed; but that is war.

Mr. BROOKS: Many of them are in the factories.

Mr. THORSON: If we are to make the most effective war effort these are facts we must recognize. I want to make a distinction between equality of sacrifice in time of war and equality of contribution to the effectiveness of the war effort. We can have in a war equality of contribution to the effectiveness of the war effort, but I for one cannot see how we can have equality of sacrifice.

Mr. POULIOT: I have two duties to fulfil. In the first place I wish to congratulate the minister upon what he has just said and upon the way he has acted as the head of his department. He has had fine legal training and besides that he possesses a deep knowledge of parliamentary traditions. When hon. members ask for information he tries to get it if it is available. In the second place I wish to express my deep gratefulness to my colleagues for the kindness they show to the member for Témiscouata whenever he rises to speak or to ask any questions.

Mr. HOMUTH: They are very proud of you.

Mr. POULIOT: This spirit of fraternity is shown by them all, including the hon. member for Wateloo South (Mr. Homuth).

I should like to ask the minister to see that a correction is made in the translation of paragraph 3 of C.P. 2252. The English text reads:

No male person wholly or mainly employed...

The French text reads:

Aucune personne de l'un ou l'autre sexe...

A correction should be made.

If it is possible to secure it, I should like to have some information about the French-speaking boards which are now sitting in the various camps. This may come under the Department of National Defence, but if it happens to come under the minister's department, I would ask him to let me have the information. Until it is changed, the law regarding defence in this country is section 3 of the National Resources Mobilization Act. I shall not discuss this section because an amendment is to be brought before us. One thing I regret deeply is that "O Canada" is not considererd any longer as the national anthem, but was considered in that way, although semi-officially, even when conscription was decided upon in 1940.

I hold in my hand the first edition of the national war services regulations of 1940. The present minister was not in charge of the department at that time, since he was sworn in on June 11, 1941. These regulations were submitted to council on August 27, while information regarding the farmers was reported to the minister in charge only two weeks afterwards, on September 12. A number of the higher officials of various departments contributed to that report, especially the deputy minister of agriculture, the deputy minister of fisheries, the deputy minister of mines, the deputy minister of transport and the timber controller. The report is dated September 4, but it was sent to the registrars only on September 12.

There is a difference between the Militia Act, which is to be found on the statute book, and the 1917 conscription act and regulations and the 1940 regulations. In the first place there were exemptions, and now there are mostly postponements. I have a list of the general exemptions under the Militia Act and under the 1940 regulations. They covered the physically unfit, members of the clergy, the judiciary and the army. Exemptions were provided for members of police forces and fire brigades, for wardens and officers of prisons and lunatic asylums, members of the Royal Canadian Mounted Police, and Mennonites, Doukhobors, and conscientious objectors. In the Militia Act, exemptions were provided for eight other classes of people, such as the members of the king's privy council, members of the executive councils of the provinces, deputy ministers of the federal and provincial governments, telegraph clerks when actually employed, officers and clerks regularly employed in the collection of the revenue, professors in colleges and universities, and teachers in religious orders, the only son of a

widow being her only support, and pilots and apprentice pilots during the season of navigation.

I have the particulars of a case which is even more deserving than that of the only son of a widow. This is a boy whose father and mother have died. The details of this case are set out in a memorandum which I will send to the minister. He has three grounds for postponement. First, he is the only support of his younger brothers and sisters; second, being a mechanical technician his services are indispensable in industry, and third, his health is bad. The other day I phoned to Quebec city to ask the national war services board to reconsider its decision in this case. The member of the board who answered me told me that he was looking after war industry only. I asked about the other member, and he told me that he was looking after farm hands and farmers only. I asked about the chairman of the board, and he told me that he was away for three weeks. I have nothing to say against the members of this board, but the point is that at the present time there is a quorum of two members only to do its work. When one member is away it is easy for the other two to reconsider any case that might be submitted to them.

I find that there were exemptions worth considering in the Borden conscription act of 1917. This act was based upon the British Military Service Act of 1916, being chapters 5 and 6, George V. This act deals with exemptions which were considered to be in the national interest. The grounds of exemption were as follows:

(a) That it is expedient in the national interest that the man should instead of being employed in military service be engaged in other work in which he is habitually engaged;

(b) That it is expedient in the national interest that the man should instead of being employed in military service be engaged in other work in which he wishes to be engaged and for which he has special qualifications;

(c) That it is expedient in the national interest that, instead of being employed in military service, he should continue to be educated or trained for any work for which he is then being educated or trained;

(d) That serious hardship—

This is another consideration:

—would ensue, if the man were placed on active service, owing to his exceptional financial or business obligations or domestic position;

(e) Ill health or infirmity.

Then it goes on to deal with conscientious objectors. The two reasons mentioned in the clauses I have just read are surely deserving of consideration, because very serious hardship may fall upon the dependents if they have no other means of livelihood.

There is another exemption which is not precisely mentioned as such, although in practice it works out that way. Section 4 (1) of the national war services regulations provides:

Subject to the provisions of these regulations, every male British subject who is or who has been at any time subsequent to the first day of September, 1939, ordinarily resident in Canada—

—shall be liable to undergo military training; but the phrase "ordinarily resident" is not defined in section 3 of the regulations which deals with interpretations. I think it is important that the phrase should be defined so that we shall know just what length of residence in Canada is required. According to section 16 of the interpretation act;

No provision or enactment in any act shall affect, in any manner whatsoever, the rights of His Majesty, his heirs or successors, unless it is expressly stated therein that His Majesty shall be bound thereby.

That is right. It means that the law of the land shall apply to all of us in this country except his majesty and the royal family. Therefore it is of the utmost importance to have a ruling on this point, I would thank the minister for a clear interpretation of "ordinarily resident", so that there may be no misunderstanding whatever about the phrase. In my humble view the national war services regulations should apply to every British citizen who is now resident in Canada or who comes here for the duration of the war. I can see no reason why any British citizen should not be subject to these regulations.

I think the regulations should also provide exemption in cases where there are already three or four members of the family on active service. I know an old gentleman who is a general store keeper in the country, and a farmer as well. He has one son in charge of his business and three other sons in the army, one being in England, one in Nova Scotia and the other in Newfoundland. Of course a postponement has been granted to the son who is at home, but in cases of this kind where many sons of the family are in the service, postponement should automatically be granted for the son remaining at home.

There is another reason why the Borden act was better than these regulations, and that is that it provided for an appeal from the decisions of the board, and not merely one appeal, but there was a possibility of a third appeal in case the second appeal did not render justice to the applicant. Under these regulations the decision of the board is final and conclusive. The decision of the

board is always final, of course, but it is not always conclusive, and there is a reason for my saying that. Without wishing to say anything unpleasant about anyone I may point out that it is impracticable for a judge who has to sit at various places and preside for two or three weeks in the month over civil or criminal courts to hear all the cases under these regulations that come before him as the chairman of the board. It would be very easy for the department to appoint for this purpose some retired justice of the king's bench or superior court, an older gentleman who is not now on active duty on the bench, and who would have enough time to consider each case on its merits.

Of course all applications for postponement are not equally deserving. There are some that deserve particular consideration, and a judge who is absent for two or three weeks during the month from the place where the board sits finds on his return that his desk is piled so high with files that it is physically impossible for him to go through them all and get the true picture in each case. I therefore make two suggestions to the minister in that regard. The first is that he replace all the judges now on the boards by retired judges of either the superior court or the king's bench, so far as the province of Quebec is concerned, and by retired judges of similar tribunals in the other provinces. My second suggestion is that at least one court of appeal be provided where the applicant can have any wrong redressed by a superior tribunal. If the government were under the impression when these regulations were passed that they would have less trouble if no provision were made for an appeal, by now they must realize they were mistaken because they have probably had more trouble and more representations by reason of the fact that the rulings of the board are final.

I wish to impress upon the committee the fact that farmers have a case which is most deserving of consideration. I entirely agree with what the minister said about equality of sacrifice. I know personally a number of young men who would like to enlist but who cannot on account of the responsibilities they have at home. They are like the boys who have beautiful sweethearts but cannot marry because they have to look after their parents. If they leave, the padlock will be put on the farm because the aged people will find it impossible to cultivate the land.

An excellent article has been written on this matter by a journalist of note, a former president of the press gallery, who I believe is a personal friend of the minister, Mr. Emile Benoist of *Le Devoir*. He wrote at full length on the matter and expounded very well the case of farmers and fishermen. This is a serious matter. It has been discussed by the Minister of Agriculture (Mr. Gardiner) himself, and among other clippings I have one from the Montreal *Gazette* of February 27:

> Canadian farmers asked to produce more foodstuffs; Agriculture Minister Gardiner urges maximum capacity at Breeders Banquet at Mount Royal Hotel, Montreal.

I have already had occasion to emphasize to the minister the fact that farming should not be considered a seasonal occupation. The minister will remember that my contention received support. I am sure there were representations by many other members, but to my personal knowledge my representations were supported by the Prime Minister and by the late minister of justice, and he agreed to it. Now farming is not considered as only a seasonal occupation but is described as a seasonal and essential occupation. In the province of Quebec it is essential but it is not seasonal, or rather it is seasonal in all seasons. The minister knows that in our part of the country the farmers are those who rise earliest and go to bed latest, and it is a full-time job the year round. They have a lot to do and their work is different from that of the farmers in some other parts of the country who have no cattle and work with tractors. After the harvest their year is finished. At home, however, the animals are not like camels; they have to be fed every day and it takes a long time. The farmers have all sorts of things to do, and their work keeps them busy all the time.

I have received very instructive letters on this subject and have sent copies to all ministers to inform those who were not so familiar with the farm problem regarding the work of our farmers. Of course, the statement that was made by the Prime Minister on March 24 brought some relief to the farmers and they expected that it would be easier for them to have their case settled in the future. I greatly appreciate the support I have received from the minister and the Prime Minister in connection with this problem, which is vital not only to the civilian population but also to the army and to our allies. The farmers were greatly disappointed when another statement was made by the Minister of Labour in relation to the one that had been made a couple of days before by the Prime Minister. Then the Minister of National War Services made a statement—if I am wrong I hope he will correct me—that those on the land on March 23 were to be considered prima facie farmers, and evidence to the contrary had to be brought against

that presumption. This is what was understood from his statement, which was widely publicized in the country. A boy was on the farm on March 23. He was prima facie a farmer, and it was up to the Department of National Defence or anyone else to show that on that day he was not a farmer and was not essential to agriculture. But the interpretation we have now in some cases is that the board decides of itself that although the man was on the farm on that very day his services are not required for agriculture. That is a very bold thing, because the importance of the man on the farm is obviously relative and when I say that I want to explain myself. You cannot always judge the importance of the farmer's work by the number of his horses, the number of his cattle, or the number of his sheep. Not only that; it is important to see whether the farmer is a bona fide farmer, and if he is he should qualify for postponement, at least, as he has no right to exemption now. He should be qualified for postponement. I have here a communique given by the minister on April 17. I have not the English text, but the French. On page 2 I find the following:

> When the applicant has shown that he is a person wholly or mainly employed in agriculture within the meaning of the amended regulations, it is mandatory upon the board, subject to the exceptions hereinafter mentioned, to grant the postponement order. Furthermore, the postponement order is until further notice and it constitutes an allocation of the applicant to agriculture rather than to military service.

And it goes on. That was the change. In the first place, the *onus probandi* was against the farmer applicant, and now it is against the state; therefore it is up to the state not only to show but to establish that the farmer is not necessary to agriculture if his request for postponement is to be denied. This is the way it works in Montreal. I am informed that an adjournment is granted by the board, or by the registrar for the board, on the sworn statement that a farmer's son or farm hand was working on the farm on March 23. In my view such procedure is in accord with the statement made by the Prime Minister and the Minister of National War Services when they interpreted the regulations or the law. Therefore the regulation should be amended. Too much discretion is given to the board. Subsection 3 of section 14 of the regulation reads:

> Unless it is established to the satisfaction of the board that such person is not an essential worker in agriculture.

It is very difficult for the board to decide upon a thing like that. As soon as the formality is completed I do not see how the board can say, without asking for further evidence, that a farmer is not an essential worker in agriculture. Of course the matter is most delicate, and I understand the difficulties of the minister, because there are some draftees who are under him until they go to the army, and then if while they are in the army they ask for leave, their case is decided by the board, which is under the authority of the minister. It is a most difficult situation; I understand the difficulties of the minister and I sympathize with him. Many a time I have been sent by his department to the Department of National Defence and by the Department of National Defence to his department, just to know who was responsible. Of course I understand very well that the registrars, who are far from Ottawa, have not the same opportunity to telephone to both departments in order to come to some agreement about it.

If I understand the matter aright the men are under the Minister of National War Services so long as they have not gone into the army, and when they are in the army they are under the Minister of National Defence.

Mr. THORSON: That is correct.

Mr. POULIOT: When they ask for leave and the leave is granted by their commanding officer it is of course a shorter leave, but then I presume they are still under the Department of National Defence. What I want to know is this: When they first get into the army and when they get leave from the national war services board, during that leave are they under the Minister of National War Services or the Minister of National Defence?

Mr. THORSON: If the application for leave comes from an R recruit, that is a person who has actually reported to a training centre, the leave is not granted by a national war services board but by the national defence unit. The application has come to the board for its recommendation; the actual leave is granted by an officer of the Department of National Defence, and the person who is on leave is still subject to the jurisdiction of the Department of National Defence, because he is still a soldier in the reserve army.

Mr. COLDWELL: May I be permitted a supplementary question? I received a letter this morning from a young man in Saskatchewan who had served one month in January, 1941. Lately he was recalled, and he applied to the board in Saskatchewan for a postponement, which was refused. Am I right in telling that young man to apply to the commanding officer of the unit to which he has now been called, or what is the situation?

Mr. THORSON: As soon as the thirty-day man had done his thirty days he was taken on the strength of a militia unit and thereby became a member of the reserve army, and subject to the reserve army regulations. Then each month the Minister of National Defence breaks up his requisition for men into so many new men who have done no training at all and so many who have done the thirty-day training but are to be recalled. When we recall a thirty-day man we do so for the Department of National Defence and in the name of the Minister of National Defence. It is a service we render for the Department of National Defence. We are authorized to deal with his application for postponement.

Mr. COLDWELL: How do these young farmers know? This is a young farmer who owns his own land in Saskatchewan; apparently he does not know where to apply for postponement.

Mr. THORSON: He will get his notice; it will be sent to him actually by our board.

Mr. COLDWELL: He has had that.

Mr. THORSON: And he may apply to our board for postponement.

Mr. COLDWELL: He has done that.

Mr. THORSON: Then if his application for postponement has been heard by the board and has been refused—

Mr. COLDWELL: That has been done.

Mr. THORSON: —that means he automatically is recalled and must report to the training centre. He is still however a member of the reserve army, of the militia unit to which he was attached when he finished his thirty days. There is nothing to bar him from applying to the commanding officer of his unit for leave, and as I see it he is the only person to whom he may apply for leave.

Mr. COLDWELL: What about the order in council of March 21?

Mr. THORSON: Order in council P.C. 1916, passed I think on March 12, applied only to persons who had been in the reserve army for less than three months. I do not think those regulations apply to the thirty-day men. But while they technically do not apply I believe the boards have heard applications for leave from those men. There is a difference between an application for postponement, which the board does determine, and an application for temporary leave. I hope I have made it clear to my hon. friend.

Mr. COLDWELL: Not quite. If the hon. member for Témiscouata will forgive me for pursuing this point, the order in council does not apply to the thirty-day men.

Mr. THORSON: I would not think so, because it applies specifically only to R recruits who have been in a training centre not more than three months.

Mr. COLDWELL: This man has been in a training centre less than three months.

Mr. HOMUTH: But he has belonged to a unit for more than three months.

Mr. THORSON: But immediately after the thirty-day training period was over he became attached to a reserve militia unit and therefore became subject to the reserve army regulations. Perhaps I should refer to the specific order in council.

Mr. COLDWELL: There is a great deal of confusion about this. Here is a young man who thought he came under the order in council, so he simply applied for postponement. Now he is doing his spring seeding, looking after his cattle and horses. He is alone on his farm. As a neighbour he has his father, who is a sick man. Suddenly he is called up; apparently he has applied for postponement and has been refused. He wants to know what he can do next. He is wondering how on earth he can dispose of his cattle and horses, and comply with the regulations.

Mr. THORSON: He has applied for postponement, and his application has been refused by the Saskatchewan board?

Mr. COLDWELL: Yes, although he is a genuine farmer, owning his own land.

Mr. THORSON: Well, I would imagine that is the end of it so far as that man is concerned.

Mr. COLDWELL: I can hardly conceive that this is the end of it so far as that man is concerned.

Mr. FLEMING: Did the minister not make the statement that all would be frozen in agriculture who were in agriculture as of a certain date?

Mr. HOMUTH: No, Mr. Chairman; the hon. member for Humboldt is absolutely wrong, and he should not answer for the minister. What the minister has said is that any boy who was unfortunate enough to be engaged in agriculture, who was called up for thirty-day training and did not belong to a reserve unit for more than three months—

Mr. FLEMING: He did not say that.

Mr. HOMUTH: —did not belong to a reserve unit for more than three months, had the opportunity of getting a postponement.

Mr. THORSON: I made no reference to persons engaged in agriculture in the case about which I was talking.

Mr. HOMUTH: The hon. member for Rosetown-Biggar was asking about it. Now then, if he had been called two months ago it would have been impossible for him to take the thirty-day training, because it is now four months' training; but anyone called up who was given thirty days of training and who belonged to a reserve unit automatically came under the Department of National Defence and was no longer under the Department of National War Services. The minister said so, in so many words. The only chance the man had was to appeal to his commanding officer.

Mr. FLEMING: Are you the new minister?

Mr. HOMUTH: No, but I could not do any worse. The situation is that the Prime Minister rose in this house and tried to explain the changes.

Mr. FLEMING: He did explain them.

Mr. HOMUTH: He did not explain them very clearly, because within a few weeks the Minister of National Defence rose and said those were not the regulations. Hon. members left this house for the Easter recess with the idea that men who already had been called to the army but who were required on the farms could go to their commanding officers or to some tribunal and be sent back to the farm. Well, it does not work out that way in this province. In Ontario these men appealed to the commanding officers. For three weeks the commanding officers said they knew nothing about it, that they had no authority. Finally the men were told that if they got a letter from the reeve of the township, or from a doctor, to say that their parents were unable to carry on, or from responsible citizens saying they were required on the farm, they could submit such letters not to the district tribunal but to the commanding officer. To-day commanding officers in Ontario are being driven nearly crazy trying to adjudicate these cases, because the department is putting it up to them. They say, "No, we are not going to let you off," and they refuse to release these boys. That is the situation in this province. I have had many cases of extreme need, but the commanding officers still say no. The whole thing has been passed from one to the other; it has been a case of simply passing the buck, until it has been passed right back to the commanding officer. He wants to keep his unit full; he is going to keep it full, and how can he decide whether or not a man is needed on the farm simply by some letters he may have before him? The result is that the men are not released; they have to remain with their units. That is the situation we have in Ontario.

Mr. THORSON: I dealt fully with the subject of applications for leave coming from persons who were under the jurisdiction of the Department of National Defence. It is all provided for by order in council P.C. 1916, dated March 12, 1942, which makes amendments to the reserve army (special) regulations, 1941, which govern these men. Section 5 of the amending order in council which amends section 23 of the reserve army (special) regulations, 1941, is the applicable section. In the first place it provides that a man called out for training in pursuance of the national war services regulations, 1940, and amendments thereto, may make application at any time within three months after having been enrolled and after having commenced his training as an R recruit, for leave of absence.

Mr. HOMUTH: Application to whom?

Mr. THORSON: Just a moment. Subsection (b) of the same paragraph outlines the procedure that he must follow and to whom he must make application. It specifies that the applicant must first apply in writing to the officer commanding the unit. The application must show the reasons and facts upon which it is based, together with statements corroborating the facts. These are to be made by statutory declaration or attestation under oath. The officer commanding will then transmit the application, with his recommendation, to the district officer commanding. The section goes on to say that the district officer commanding may forward the same; he need not do so. It is not mandatory upon him to forward the application; and the purpose in not making it mandatory is, as I explained last Monday, to guard against frivolous applications. But I also think I can say that any application with merit will go to the appropriate national war services board.

Mr. HOMUTH: What assurance has the minister in making that statement?

Mr. THORSON: My knowledge of the facts of the situation.

Mr. HOMUTH: Well, the knowledge of hon. members is just as clear, and perhaps more so.

Mr. THORSON: Will my hon. friend please keep his seat while I am making a statement in reply to him? The officer commanding may forward the application, with whatever recommendation or representation he may see fit to make, to the appropriate national war services board.

Let us assume that the application is now before the board. The order in council indicates the general principles that shall govern the board in dealing with these applications. They are stated in the order in council, section 23, subsection (a). It is pointed out that these applications are dealt with upon such circumstances, reasons or grounds being established as would have entitled the applicant when called out, *ab initio,* to postponement at the commencement of his training. In other words the national war services board deals with these applications for leave upon the same principle as it deals with applications for postponements. Then that board makes its recommendation in the matter.

The order in council provides that on receiving the recommendation of the board the district officer commanding will grant leave for the period recommended by the board. That is done, subject to one proviso, namely that whenever the exigencies of the military situation require that such leave be curtailed or refused, he may refer the board's recommendation to national defence headquarters for final decision. In other words it is mandatory upon the district officer commanding to act upon the recommendation made by the national war services board, apart from military exigencies. If such military exigencies arise he must refer it to national defence headquarters.

Mr. COLDWELL: The board may decide the application for leave on exactly the same grounds as if it had been an application for postponement, under the other regulations?

Mr. THORSON: Yes, exactly.

Mr. COLDWELL: If that is so, why is it that the young man in the position I have just described is not granted leave by the board?—unless the board refuses to recognize the decree of the government of Canada. That is what it amounts to.

Mr. THORSON: No; one would have to know the facts of the case, because each of the recommendations made by the board in respect of these applications for leave is a recommendation based upon facts before the board. I have no doubt that in refusing a person's application for leave the board would be governed by the same considerations as would have governed it in refusing an application for postponement. In other words, if it is the kind of case in which they would have granted a postponement, they would in all likelihood grant an application for leave. But if it is not, then they would not make any recommendation in favour of granting of leave. That is what is meant by the order in council.

Mr. COLDWELL: I do not know anything about this case, except that the facts, as presented to me are these. The young man who bought the farm in 1939 proceeded to farm and to stock it. He lives near his father, who is a semi-invalid. Therefore he farms also his father's land. The order in council provides that farm labour of an essential sort shall be frozen on the farm. If it provides that farm labour shall be frozen on the farm, would it not be logical to suppose that a young man of the type I have mentioned—and I am dealing with the facts as represented to me in a letter; I do not know the young man—would come under the postponement provisions?

Mr. FLEMING: He did have a postponement.

Mr. COLDWELL: No.

Mr. THORSON: I wonder if I might suggest to the hon. member for Rosetown-Biggar that a discussion of individual cases, in the absence of knowledge of specific facts, is perhaps not helpful. I should be glad to look into any facts or any cases of the kind the hon. member has mentioned.

Mr. COLDWELL: I have already written the minister with respect to this case, and he will probably receive my letter to-morrow or the next day. I seldom bring individual cases before the committee but I mention this one because it strikes me as the type of case an explanation of which might enable us to understand the regulations. I confess I do not understand them. I am asked for advice. According to what the minister now says, I gave wrong advice regarding a case of this kind when I was in western Canada at Easter.

Mr. THORSON: I have been dealing with applications for leave from persons under the jurisdiction of the Department of National Defence. Ordinarily of course it is a most anomalous situation to find that a person subject to army discipline should have his application for leave referred to a civilian board, or to an authority outside the actual

army. Ordinarily the army looks after applications for leave. However, the reasons for embarking upon this policy are as follows. First, it was desirable to deal with these applications for leave as uniformly as possible across Canada. No matter how great an effort is made it is not possible to obtain absolute uniformity. Second, the Department of National Defence said they were not equipped with the machinery to hear applications for leave in large numbers. Then there was a third consideration, that the boards had the files, knew the circumstances and the facts in the districts and had information with regard to the matters involved. Under those circumstances it was thought they could best pass upon the merits or otherwise of applications. Consequently an arrangement was worked out between the Department of National Defence, under whose jurisdiction this matter comes, and the Department of National War Services, whereby these boards might be placed at the disposal of the Department of National Defence to make recommendations with respect to applications for leave. These were the general reasons for working out the arrangement between the two departments. The order in council to which reference has been made is one amending the reserve army (special) regulations, 1941.

Mr. FLEMING: What instructions were given to the divisional registrars after the Prime Minister's statement was made in the house? It will be remembered that the divisional registrars came here to Ottawa. What instructions were given to the various boards?

Mr. THORSON: Would the hon. member for Humboldt be more specific and indicate what particular subject he has in mind? Perhaps I would then be able to deal with his question.

Mr. FLEMING: It was based on the statement of the Prime Minister that men were needed in agriculture and that if these men were called up by the various boards, the onus would be upon the board, not upon the men. But when you go to the Department of National War Services to discuss this matter you are told one thing, while the boards tell us that they have another set of instructions. There seems to be some difference between the instructions given to the various boards which came down here a month or so ago and what we find out when we interview the department.

[Mr. Thorson.]

Mr. THORSON: Perhaps I can reply to the hon. member for Humboldt and the hon. member for Témiscouata at the same time, because they have both raised the same points.

I issued a press release dated April 17 which I placed on *Hansard* a week ago today. As soon as that press release was issued I sent a copy to every member of the House of Commons and every member of the Senate, as well as to all administrative divisions. As I indicated last Monday, we had a conference in Ottawa on April 23, 24 and 25 of the chairmen of the boards and the divisional registrars. The purpose of that conference was to consider the regulations, to suggest amendments and to consider administrative matters; in other words, to see whether the regulations could be improved in order to make them more workable and more adaptable to the specific purpose for which they were designed. At that conference there was a full discussion of the national war services regulations which were put into effect by order in council P.C. 2252. The hon. member for Témiscouata has referred to a particular phrase in the order in council. I think I should deal with this, and in so doing I think I may be able to answer the hon. member for Humboldt as well. Section 5 of order in council P.C. 2252, which becomes section 14, subsection 3 of the national war services regulations, contains this provision:

> Notwithstanding the provisions of subsections (1) and (2) of this section,—

That is section 14.

> —the board shall, from time to time upon the application of a person wholly or mainly employed in agriculture, grant him a postponement order until further notice,—

That is the mandatory part of the order in council. It will be noted that the person must apply. It will be noted also that the person referred to in this subsection is a person who is wholly or mainly employed in agriculture. It follows, therefore, that if such person who is wholly or mainly employed in agriculture within the meaning of that term as defined in order in council P.C. 2252 makes application for postponement, the board shall grant him postponement until further notice. The purpose of the order in council is contained in that mandatory direction to the board contained in the regulation.

However, I should go on and deal with the proviso which the hon. member for Témiscouata referred to in his remarks to the committee. I have read the first part of section

5 of order in council P.C. 2252. If I may proceed from where I left off, the section goes on to say:

. . . unless it is established to the satisfaction of the board that such person is not an essential worker in agriculture, or that such person has at any time subsequent to the 23rd day of March, 1942, ceased to be actually employed or engaged in agriculture or in a primary industry.

The purpose of that proviso is curative. It is not the governing part of the regulations; it is intended to ensure that persons who ought not to be covered by the regulations will not be covered by them, and it has no other purpose. Consistently with government policy in the matter, the intent of the regulations is that all persons wholly or mainly employed in agriculture, as the term is defined in the regulations, shall be held for the purposes of agriculture, held for the particular purpose that I mentioned earlier this afternoon. But it is not intended that persons shall get in under the wing of those regulations who should not do so, and therefore this proviso is put in. It is curative so that there will be no abuse of the regulations.

Mr. FLEMING: What if the board does not act?

Mr. THORSON: Please allow me to proceed. The intent of the regulations was set out by the Prime Minister in the speech that he made in this house on March 24, and the intent is also contained in the regulations. I think I have indicated the intent in the remarks I have just made. This means, as I think I clearly stated in the press release, that there has been a fundamental change of approach with regard to persons wholly or mainly employed in agriculture, within the meaning of that term. Previously the regulations were based upon the idea that the man who was physically fit might be postponed as to his military training on one ground or another, but that when that period of postponement was concluded he was meant for the armed forces of this country. These new regulations make a change in that approach; for they provide that when this man gets his postponement order, until further notice he is allocated to the purposes of agriculture. That is the intent of the regulations. There has been a shift of base with regard to the regulations. That is now the governing policy.

Individual cases will come up. A man who is wholly or mainly employed in agriculture must make his application for postponement if he desires postponement; when he shows that he is wholly or mainly employed in agriculture he has established a prima facie case, and he is prima facie entitled to a postponement order until further notice.

Mr. COLDWELL: In the case of R recruits—

Mr. THORSON: Let us not complicate the situation, if my hon. friend will permit me, just for the moment.

Mr. COLDWELL: I am quite willing.

Mr. THORSON: In most of the cases that come up, I would say in the vast majority of cases, there are no difficulties at all. But there may be individual cases. Let us take some individual cases, the kind or type of case that might come up, just as an illustration.

Suppose there is a family of five sons, and one of the sons is called up. He makes his application for a postponement order until further notice on the ground that he is wholly or mainly employed in agriculture. His case comes before the board. An investigation shows that he is really a person of comparatively little importance so far as that farm is concerned. That does not altogether dispose of the case. The board must grant that man's application for postponement unless it is established to the satisfaction of the board that he is not an essential worker in agriculture. The onus is a negative onus, which is very often a difficult onus to discharge. Essential to agriculture does not necessarily mean essential to a particular farm. "Not essential to agriculture" is a question of fact, to be found by the board in the light of all the circumstances. I do not think I could go further than that, after indicating what the policy is and also indicating, as I wish to do specifically, that the proviso is purely curative, purely for the purpose of preventing possible abuses of the regulations. The proviso is not the governing part of the section. All the questions under that are questions of fact, to be found by the board in the light of all the circumstances concerning that particular person's case. It may be an easy fact to find on one set of circumstances, and a difficult fact to find on a different set of circumstances. Circumstances may be of such a nature that if they were submitted to one jury, one jury would find one way, and if they were submitted to another jury it might find differently. That is true with regard to questions of fact. It is left to the board to find that question of fact, namely, "not essential to agriculture." I do not think I can go further than that.

Mr. COLDWELL: The Prime Minister did not give that impression to the house when he spoke on March 24.

Mr. THORSON: I think he did.

Mr. COLDWELL: The Prime Minister, on March 24, at page 1567 of *Hansard,* used these words:

Under the new regulations, farmers, farmers' sons and agricultural labourers will normally—

Mr. THORSON: Yes, normally.

Mr. COLDWELL: It goes on:

—will normally not be obliged to undertake compulsory military training and service.

Mr. THORSON: That is correct.

Mr. COLDWELL: It goes on:

It is realized, however, that in a limited number of cases, men on the farms are not, in fact, essential agricultural workers.

Mr. THORSON: That is right.

Mr. COLDWELL: But:

If it is established to the satisfaction of the national war services boards concerned that such persons are not essential workers in agriculture, they will continue to be called for service in the appropriate age groups.

The point I was trying to have made clear, so that we may be able to advise those who make inquiry of us, is this. I am not arguing whether it is right to exempt a class as a class; in fact, I am a little doubtful of that myself, but it is being done. The question I raised I wish to have clarified, and it is not clear yet. The statement of facts I have given may be wrong, but let us suppose it is right. Here is a young farmer who has owned and operated his own farm since 1939—he did not buy it to get out of military service—and at the same time has been assisting his father who is partly incapacitated. This young farmer is called up, after having done thirty days' training in January, 1941.

Mr. THORSON: But he is in the army.

Mr. BROOKS: Was his father incapacitated in 1939?

Mr. COLDWELL: I could not tell you.

Mr. BROOKS: Quite a number bought farms to escape military service.

Mr. COLDWELL: Assume that the facts are as I have stated them. He bought this farm before war broke out. He has done his thirty days' training. He applies to the board for postponement, he tells me, and is refused. Now he is faced with the necessity of selling his stock and equipment, and his farm, if he can dispose of it. The minister says he should apply to his commanding officer for leave, and that the commanding officer "may"—not "shall"—

Mr. THORSON: The commanding officer must forward the application to the district officer commanding.

Mr. COLDWELL: Well, the district officer commanding "may"—not "must"—refer the case to the war services board for a decision.

Mr. THORSON: Yes.

Mr. COLDWELL: He "may"—not "must". In other words he may be the last word if he wishes. But suppose he does refer it. Then the minister says the case should be decided on the same grounds as though it were a case of application for postponement.

Mr. THORSON: That is right.

Mr. COLDWELL: This young man did not know to whom to apply. Who is the commanding officer to whom he should apply?

Mr. THORSON: His militia unit.

Mr. CASTLEDEN: May I ask, with regard to the mandatory part of the regulations—

Mr. THORSON: Before my hon. friend puts his question, may I make this statement.

Mr. COLDWELL: I should like to have the interpretation of the Prime Minister's statement.

Mr. THORSON: I think what I have been saying this afternoon is exactly in line with what the Prime Minister said on March 24. The Prime Minister, as reported on page 1567 of *Hansard,* used these words, which were quoted by the hon. member for Rosetown-Biggar:

Under the new regulations farmers, farmers' sons, and agricultural labourers will normally not be obliged to undertake compulsory military training and service.

I put it this way, that the first part of the subsection which I quoted was mandatory, namely:

Notwithstanding the provisions of subsections 1 and 2 of this section, the board shall, from time to time, upon the application of a person wholly or mainly employed in agriculture, grant him a postponement.

That was the main statement of the policy.

Mr. COLDWELL: What is the minister's interpretation of "normally"?

Mr. THORSON: I would say that that is the governing principle. If a man is wholly or mainly employed in agriculture, the board shall grant him a postponement order. We are dealing with a specific point.

Mr. COLDWELL: But it is realized that in a limited number of cases men on farms are not essential to agriculture. For instance, if a man has three or four sons on a farm.

Mr. THORSON: I had in mind a limited number of cases, and that is what I meant by saying that the purpose of the proviso was purely curative and to prevent abuses, and was not the governing part of the section. I put in different phraseology exactly the same ideas as were announced by the Prime Minister, that the normal rule is that the man should get his postponement order. It is only in the exceptional cases that he should be regarded as not essential. In each case it is a question of fact. There may be more persons not essential to agriculture in one locality than in another. Let me make this statement by way of illustration. A man might be in one agricultural area; he might be one of five sons. The farm might possibly be quite competently run with two or three sons. It does not follow of necessity that the remaining two sons, say, are not essential workers in agriculture; they may be needed in agriculture somewhere else.

Mr. COLDWELL: No dispute about that.

Mr. THORSON: A question of fact might come into the discussion. In one district there might be a great demand for agricultural labourers, and the two sons in the family I have mentioned, who might not be necessary at all for the purposes of that particular farm, might be necessary in the area. Well, they are not unessential to agriculture.

Mr. COLDWELL: Take the case I have mentioned to the minister. There is one son, farming and helping his father. Is he not essential? Is that not a prima facie case?

Mr. THORSON: I know the hon. member will not wish me to express an opinion with regard to a question of fact without knowing all the surrounding facts. That is why I invited him to let me have the particulars so that I may have the case looked into.

Let me, however, continue with the illustration of the point we have been discussing. In another area there might be five sons and only two of them are required for that farm. The other three are not needed for that farm, may not be needed for any agricultural purposes in the neighbourhood or in the district and may not be able to go anywhere else in Canada where perhaps they might be absorbed. These are the facts that would have to be taken into consideration, and it might be quite proper to regard one person in one of the situations I have mentioned as being not essential to agriculture and quite improper to say of another person in a different locality that he is not essential to agriculture.

I have sought to illustrate what I have in mind by examples, and I think I have indicated this afternoon precisely the same matters the Prime Minister stated on the floor of the house. May I say to the hon. member for Humboldt (Mr. Fleming) that if he will give me the cases he has in mind I will have them looked into. I have investigated a tremendous number of cases from the hon. member for Humboldt, but I shall be glad to have those he has in mind looked into.

Mr. HOMUTH: Why should that be necessary?

Mr. THORSON: It should not be necessary.

Mr. McDONALD (Pontiac): Has any man, other than the farmer called under the act, the right to ask for postponement?

Mr. THORSON: Oh, yes.

Mr. McDONALD (Pontiac): Let me submit a case that happened in one district within the last week. I do so to call attention, not to a special case, but to ascertain if the conduct of the officer in that district as cited in this instance is exemplary of all of them. Anybody who makes application for postponement there is simply wasting his time. The firm with which this young man is employed gave him a letter addressed to the registrar of the district. He proceeded to the registrar's office and asked to meet the registrar to whom the letter was addressed. He was met by an official, some understrapper, who had the nerve and audacity to say to him, "There are too many of you fellows looking for postponement." I submit, sir, that he had no right to make that statement. Had I been present I would have said to this gentleman, "It is absolutely none of your business." However, he proceeded to tell this man, "You will be advised in a day or two; the committee will sit on your case to-morrow." He left there, returned home and—a curious coincidence—by the time he arrived home a letter was received in the mail by the firm with which he was employed informing him that postponement could not be granted and that he was to report for duty on a certain date.

I contend that the case was never submitted to the registrar or the board, because the date of the letter corresponds exactly with the time of the young man's departure from the office; the arrival of the letter at its destination coincides with the time that would elapse for its dictation immediately

after his departure, and it is signed not by the registrar personally but by a stamp with the initials of the other individual who told the young man that there were too many making applications for postponement.

It has been said here that every young man called for service receives a notice indicating that he has so many days within which to make an appeal. I am not going to contradict that statement except to this extent. I personally investigated at least five of these notices and failed in any instance to discover that these young men were notified to that effect. Only last Saturday I had a visit from a farmer whose only son was called for service. Another son is overseas. This farmer came to ask me if I could do anything for this son who was still on the farm. I said, "Absolutely nothing; submit your case to the registrar of the district in Montreal. But your son should send in notice making application for postponement." This young man has been always on the farm, and by virtue of the order in council of March 24 he is entitled to exemption. I studied the order that young man received, and I did not see any notice informing him that he had eight days within which he had a right to make an appeal. I do not want to be critical; but if the case I have cited is at all indicative of the treatment young men are receiving in that office, the officials there are going far beyond their duty, and it is not a system conducive to confidence in the administration of the regulations.

Mr. FLEMING: The minister made a statement about certain cases that would be mandatory. But if the board pay no attention to that, what is the answer? In Saskatchewan—I am sure there are hon. members here from Saskatchewan who will bear me out—there are dozens of cases called up in that way having the attributes that the minister has pointed out make it mandatory that the board grant postponement, but they refuse to grant it. What is the answer?

Mr. HOMUTH: You are sunk.

Mr. FLEMING: Should one instruct these people not to report? That is what I have been thinking of doing.

Mr. THORSON: Certainly not. I would point out that each of these boards is composed of three persons. The chairman in each case is a judge of the superior court or other court of the province in which the major portion of the administrative division is located. At hearings of the board four representatives have a right to be present and make representations to the board: a representative of the Department of National Defence, a representative of the national war labour board, a representative of agriculture and a representative of the director of national selective service. To these boards we entrust the task of deciding upon applications for postponement of military training. We do our best to pick a board presided over by a superior court judge. We have had two conferences of these boards for the purpose of discussing how best we can make these regulations work, how we can make them most adaptable to the purposes for which they were devised.

The hon. member for Humboldt has put to me a question which I could not answer if his premise is correct. Whether or not his premise is correct I cannot judge. I cannot agree with him with regard to it when I know that a great many applications for postponement have been made and have been granted. I am not going to assume that a board is going to flout the regulations and act in the teeth of them when I know the manner in which the boards have attempted to carry out these regulations across Canada. After all, the purpose of the boards is to fill the requisitions that come to the Department of National War Services from the Department of National Defence; it is not the primary purpose of the boards to grant applications for postponement. The remarks of a number of hon. members seem to indicate that that is their view.

With regard to the statement of the hon. member for Pontiac about the notice containing no statement that the man has a right to apply for postponement within eight days, my understanding was that the notice to report for medical examination is a printed notice and that it contains a statement to the effect that he has that right. If my hon. friend will give me the particulars of this case I shall be glad to have it looked into, because I am exceedingly anxious that these regulations shall be administered with the utmost integrity. If there is any case in which any hon. member feels that an injustice has been done, if he will bring that case to my attention I shall have the facts looked into.

Mr. HOMUTH: I do not want to interrupt the minister, but might I say—

Mr. THORSON: Will my hon. friend please sit down while I have the floor?

Mr. HOMUTH: If the minister does not want to extend any courtesy, go ahead, I would expect that from him anyway.

Mr. THORSON: I am anxious that these regulations shall be administered with integrity. I am anxious that they shall not be used

for any purpose other than that for which they are designed, that of calling up men properly for military training. I think the boards have dealt with applications for postponements judicially and, I believe, sympathetically. The thought I want to leave with members of the committee is that these regulations are part of a law for mobilization, not for demobilization or the granting of postponements. Though there may be criticism of certain individual decisions, I think there will be general agreement that the boards have administered these regulations well.

Mr. HOMUTH: I am not going to ask the minister a question, because I would not expect an answer; but the more I hear him try to describe this matter, the greater the fog becomes. His answer to the question asked by the hon. member for Pontiac indicates that apparently he does not himself know what the notices contain. The medical notice is the one in which the man is notified that he may ask for a postponement, but he must do so within eight days. The notice of call does not so state. I am just answering the hon. member for Pontiac, because apparently the minister does not know.

Mr. POULIOT: When the hon. member for Waterloo South rose I was just in the act of writing him a note, which says, "Your previous remarks were to the point. Why do you spoil the effect?" I have been dealing with the minister enough to be able to tell the hon. member for Waterloo South that the best way to deal with him is for my hon. friend to adopt his sweetest voice and talk agreeably, and I am sure he can do that without any effort.

I have no complaint against the government, but I do complain about the pressure of work on certain officials so that they are unable to give sufficient time to each case coming before them. I fully agree with what was said by the hon. member for Pontiac; there are cases like that, and cases such as those mentioned by the hon. member for Waterloo South have also occurred in my own constituency. There are young boys who are posted as deserters just because they took it for granted that farmers were exempt from training until further notice. The statement that in future farmers would be practically exempt from service was given wide publicity in the newspapers, until the correction was made, not by the Prime Minister, not by the Minister of National War Services, but by the Minister of Labour, who said that the Prime Minister's statement should not be interpreted in that way. Therefore it seems to me that the authorities should be very lenient with regard to boys who have acted in good faith, who have completed the first part of their training and who have been induced into error because of the headlines which have appeared in the press.

Of course the trouble with the boards is that they wait too long in sending out their notices. They wait until the last moment, and then the young men have not sufficient time to present their cases to the board and supplement them with the required evidence. There should be a joint sitting attended by the Minister of National War Services, the Minister of National Defence and the Minister of Justice, in order that we might have a definite interpretation not only of the national war service regulations but also of the reserve army (special) regulations. This is a new kind of regulation, which is not part of King's Regulations and Orders; it is new because of the fact that trainees or draftees are called up by the Minister of National War Services and later come under the jurisdiction of the defence minister. I have before me the remarks of the Minister of National Defence on April 23 with regard to farming. He made himself very clear about the importance of farming when, as reported at page 1896 of *Hansard,* he said:

> I do not know of any occupation in Canada —I think I am correct in saying this—the utility and usefulness of which in connection with the war activity has been so recognized as the farming industry.

This was the general tenor of the statements made by everyone with regard to the farming industry. But when it came to the farmers who were in the army, under his own jurisdiction, the Minister of National Defence adopted an entirely different tone. The hon. member for Lake Centre and a member of the Cooperative Commonwealth Federation group asked questions, and, as reported at page 1897 the minister said:

> But no matter what the facts are, I shall have inquiry made, because if there is anything understood by the Department of National Defence it is that we have not much call on the agricultural community from now on as far as calling up men under the National Resources Mobilization Act is concerned.

Then a little later he goes on:

> But I do feel that members of the committee ought not to expect me, as head of the Department of National Defence, endeavouring to mobilize, train and prepare an army for operation, to allow men in large numbers to go even for seeding operations. They are members of the army now; they had opportunity to apply for postponement; they did not, and I submit it is not fair at this time to ask that I simply issue a blanket order and say to the men, "Go home and do your seeding and then come back."

It is to my personal knowledge, as it must be to the personal knowledge of the Minister of National War Services, that the Minister of National Defence was wrongly informed. He says they did not apply for postponement. They did, in a very large number of cases. The answer of the board was, "You had a first postponement. We can give you a second, which will be the last". Then, when they got the second they were told, "You may have a third, but it will be the last".

The minister will recall that on many occasions I have brought the matter to his attention. I asked him for a ruling, sir, and to notify the board. The matter was definitely stated by the minister in the house. He set out the regulations, but I had to ask him to get in touch with the board, in order to give them a definite interpretation.

Mark you, the minister was in a false position because the ruling of the board was final. He had no authority over the board, but could only appeal to it. No one can appeal from such a board; he is limited to an appeal to it to reconsider a case. If the board cares to reconsider, all right. On the other hand, if it is as bold as the commissioner to whom I spoke at the end of last week, the commissioner who told me that it was final—finished—the situation is somewhat different. I asked him, "Will you reconsider it?" He said, "I cannot do that; I look after only war industries." I said, "Well although the chairman is away, two of you are together, and form a quorum; you could reconsider the case." He said, "The other one looks after farmers." Imagine! The case was a most meritorious and deserving one. It is precisely the one I mentioned to the minister not long ago involving an orphan who supports the family. His father and mother are dead, and this boy looks after his little brothers and sisters. He is an expert mechanic.

I hold in my hand a certificate from a man for whom I have the most profound respect. I refer to the Reverend E. P. Roy, an elderly gentleman who is the parish priest of both the boy and myself. His letter, dated at Rivière du Loup on May 16, 1942, may be translated as follows:

> I, the undersigned parish priest of St. Patrick's Rivière du Loup, certify that Mr. L. P . . . , since the death of his parents, is the only support of a family of five children, who are absolutely without any other support, and who will have to beg for their bread if they cannot rely on him. This would be definitely an error. I consider in justice and charity that that young man should be exempted.

The letter is signed by the Rev. E. P. Roy, parish priest.

[Mr. Pouliot.]

Then, I have a doctor's certificate, and a sworn statement by the party concerned to the effect that he is the only support of the family. I send these to the minister, and I do so in public; I have nothing to hide. I am sorry to have to trouble the minister about this matter, but when I am turned down by a commissioner who knows nothing about his business, a commissioner like the one I spoke to over the long-distance telephone, I find it very sad. This is a case of serious hardship, and one worthy of consideration. Are these children to be sent to an orphanage because a man is not given consideration by the board? On the file I sent the minister there is a certificate from the young man's employer. Already several of his employees have gone into the army. The only ones left, besides his mechanic, are those men who are unfit for military service.

Therefore I say there are three counts to consider. I called this man, who was not appointed on my recommendation, but who was bold enough to answer in the way I have described. That is not the way to answer members of parliament. We make no money from this kind of work. We seek no fee, but do it just to help our people. I protest strongly against the decision reached by one of the ministers in the early days of the war, when he said that all persons, except members of parliament, should look after cases of this kind.

Is there any man more widely known—I would not say better known—in his constituency than the member of parliament? When there are any difficulties about federal matters the people go to him in confidence. I receive Tories as well as Liberals—if there are any Tories left in my constituency. I receive them just as freely as Liberals, and try to help them. I am always available to help them in matters like this. I believe it is my duty to do so, and I do not do it to get votes. When they say to me, "I will vote for you at the next election," I say, "Do not make any such promise. If you feel like voting for me, all right. But do not make that promise, because you are exposed to betraying your promise if you feel later that you have made a bad bargain." It is my duty to help my constituents, and I am delighted to do so. We are now told that members of parliament have not the right to make representations as members. They have the right as doctors, mayors, lawyers or solicitors, but as members of parliament they have not that right. They cannot act when people come to them precisely because they rely on their members to give them a hand in such cases.

I would ask the minister and his colleagues to consider the case I have brought before them, so that there may be an appeal from the board. If the matter is rectified he will have much less trouble in his department than he might have, through grievances which may arise. These men may be honest, but they are not infallible. There is more genius in two heads than in one, and when there is the right to appeal there are better results from two boards, than from only one. That was done during the last war, and it worked out very well.

There is a further point to consider. If these regulations were drafted in this way, and if the subtitle of section 14 referred to seasonal occupations such as agriculture, fishing, et cetera, the reference was made precisely because after the capitulation of France it was thought that our enemies would invade this country, and that all men of military age should have some training and be ready to repel an attack or invasion. That was the spirit of the law, and precisely the reason why there was a short time for training, and why farmers were classed as those having seasonal occupations. Afterwards the period of training was changed from one month to four months and, in spite of what had been declared by General Crerar, farmers were told that one month's training was not enough, and that they would need four months. They were told, "Afterwards you will be free to go back on the farm." But that was changed by the Minister of National Defence himself, in virtue of an order in council giving him wide powers. It changed completely the condition in which farmers found themselves.

Farmers were ready to leave for a month. They made the sacrifice of going for training for that length of time. Afterwards, however, they could not leave the army. The general staff found a new way to evade the law. They did not leave those trainees in their districts, but moved them to the Pacific and Atlantic coasts, in order to change the district, in which they would train.

How can men who are not in the active army, who are just trainees or draftees but who are located either in British Columbia or in Nova Scotia, get leave from their commanders when they are told that they must transfer their requests for leave to the boards? What does a board in British Columbia or in Nova Scotia know about the conditions that face a farmer in Quebec, or that face a hundred or a thousand farmers in that province? They may know something about their own provinces, but they know nothing about the conditions that face the farmers in our county. It happens also that the commissioners know very little about what happens in their own provinces. Here is a sad case. If the Minister of National Defence is going to refuse draftees the right to have leave, it should be said openly so that we may know. He should not say that a chance will be given to the farmers when he is unwilling to give them that chance. He went on to say, as reported on page 1900 of *Hansard*:

> That would be taking into consideration another matter altogether, namely, the national interest. They find a man in the army, and they do not take him out on compassionate grounds because of the fact that he has to operate a farm.
>
> Mr. White: What does the minister mean by "compassionate grounds"?
>
> Mr. Ralston: That is a general term used in the army in connection with leave, and may cover half a dozen cases.

It is not compassionate grounds; it is a question of national interest, as the minister rightly said a moment ago. It is a matter of national interest that farmers should operate their farms; it is not a matter of compassion. Then the Minister of National Defence went on to say, as reported on page 1901 of *Hansard*:

> I want to say to my hon. friend that he and the hon. member for Lake Centre are the first two I have ever heard say that the Prime Minister said anything about leave to men already in the army.

Then he went on to say:

> But if my hon. friend or the hon. member for Lake Centre has a statement by the Prime Minister where the Prime Minister said that leave was to be granted from the army for men to go on farm leave, I should like to see it.

There was a statement by the hon. member for Hastings-Peterborough, and then the minister continued:

> I have said that I have no idea of a single case having been granted. I have said, too, that Mr. Bickerton, the president of a farm group in Saskatchewan, is the only one whose communication has come to my attention.

It seems that the Minister of National Defence makes a distinction between trainees who have not come to the camp and who ask for postponement and draftees already in the army who ask for leave. In the first instance, he says that they should ask for postponement, and in the second instance, he is reported on page 1902 of *Hansard* as saying:

> I said about those cases that if they were men who were in farming occupations wholly or mainly, I would take the matter up.

He promised he would take the matter up, and it is important that it should be taken up. I have already quoted the case of a young man who had six months leave and was sent to Nanaimo, and I was told that the department would look after him. But that is only

one case among many, and it is important to see that these abuses do not occur again. It is all right to say that one loves the farmer, but love should be more practical than that. The Minister of National Defence, when he filled out his registration card, said that he had milked cows for three months, but when he ceased to do that after the three months he ceased to be indispensable as a farmer. But other farmers do that the year round; their usefulness does not stop, and they deserve consideration. I submit these matters to the minister in the hope that he will take them under consideration, and I may have two or three question to ask him later on.

Mr. DIEFENBAKER: In view of the attitude taken by the minister that he would welcome any suggestions that might be offered to improve the operation of the regulations under which men are called for service and under the provisions of which postponements are granted, I have a few suggestions to offer. When the Prime Minister (Mr. Mackenzie King) spoke in the house on March 24 he left the people of Canada under the impression that in so far as farmers were concerned, they would be entitled generally to postponement. This same idea was conveyed in the April, 1942, issue of "Canada at War", where it is stated at page 8:

> Emphasizing the vital role being played in this war by food, farmers, their sons and farm labourers are granted an indefinite postponement of compulsory military service if they are doing essential farm work.

Without entering in any way into a discussion as to whether or not the announcement made by the Prime Minister was generally acceptable to those engaged in agriculture, I do say that such principle was enunciated by him and restated in "Canada at War". What is being contended this afternoon, and as I contended on April 23, is that the major complaint is to the "un-uniformity", if I may use that expression, of the administration of the regulations, and it is to this that criticism is being particularly directed. The regulations are all right, but there is nothing in them whereby any board can be required to live within their terms. There is only one way in which an individual may insist under our law on the performance of a duty by an administrative body, and that is by way of mandamus or by way of one of the prerogative writs. All those rights have been taken away by the regulations. Therefore, when it is said that the regulations are mandatory, that means nothing. It just means that something shall be done, but if it is not done there is no right on the part of him against whom there has been discrimination to enforce his legal rights. In other words, if a person had all the rights in the world and was not in a position to enforce those rights, they are non-existent unless the administrative body charged with the administration of the law is prepared to follow the law.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DIEFENBAKER: Just before six o'clock I was dealing with the regulations which establish the rights of persons who are called up for service to seek postponement. I think we shall all agree that when postponements are to be granted they should be granted in an equitable manner to the end that in the interpretation and administration of the regulations there shall be as nearly as possible uniformity in all the provinces. As the regulations stand to-day, the only appeal that can be taken is an appeal to the board in each of the provinces, the decision of the board being final. The result of that may very well be that in one province the board will interpret the regulations in a manner different from the interpretation given in another province. As the regulations are, while in one province a man may be granted a postponement when he applies, on the basis of being a person "wholly or mainly employed in agriculture", in another province the board may not see fit, on similar facts and under similar circumstances, to grant such postponement.

It was stated by the minister that the wording is mandatory, that is to say, that the board "shall from time to time, upon the application of a person wholly or mainly employed in agriculture", grant him a postponement. True enough, the section is mandatory; but there is no provision whereby a person entitled to his postponement and denied that postponement may make further application either by way of appeal or to the courts. Under the regulations, section 8 provides:

> No proceeding authorized or pending before an appeal board, and no decision of a board, shall by means of an injunction, prohibition, mandamus, certiorari, habeas corpus or other process, issuing out of court, be enjoined, restrained, stayed, removed or subjected to review or consideration on any ground whether arising out of alleged absence of jurisdiction in an appeal board, nullity, defect or irregularity of the proceedings, or any cause whatsoever, nor shall any such proceedings or decision be questioned, reviewed or reconsidered.

A reading of that section establishes clearly that regardless of the merits an individual may have to obtain a postponement, he is denied that right, and the prerogative writs that ordinarily prevail under British law to assure to a person, who is entitled to the mandatory performance of an act, have been denied under that section. The result is that in parts of the country, a strict and stringent administration is taking place, while in other provinces, upon similar facts, postponements are being granted.

I think the minister will agree that if one thing must be insisted on, it is that in the administration of these regulations there should be, as nearly as humanly possible, uniformity; otherwise the result may well be that a feeling of suspicion may be aroused. In my opinion the minister should consider the setting up of a final appeal board similar to that provided by the Military Service Act in 1917, whereby, by appointment of the governor in council, one of the judges of the Supreme Court of Canada should act as a central appeal judge. In that way, if any provincial board is failing to carry out properly the provisions of the regulations, or in so doing is discriminating against any person within its jurisdiction, there may be an appeal to the central authority. Only in that way can we secure uniformity of administration consistent with the proper application of the law.

While in the matter of appeal it might be argued that if it was not necessary for men called up for service to have to report until such time as the decision was handed down, the difficulty that might arise on appeals being taken could very well be obviated by a provision denying a stay of proceedings pending the decision. This afternoon someone suggested that if a man was called up and was entitled under the regulations to postponement, but had been refused and failed to report and was prosecuted, he would then have the opportunity of stating to the court that he had been wrongly called, being entitled to his postponement and could successfully defend himself. But a reading of section 30 shows otherwise:

> Every man called out pursuant to these regulations who fails or refuses to submit himself for medical examination within the time limited by and in accordance with the terms of any notice given to him by the divisional registrar requiring him to submit himself for medical examination shall be guilty of an offence.

Section 31 provides:

> Every man called out pursuant to these regulations and placed by an examining physician in a category in which men so placed are considered fit for military training who fails or refuses to report within the time limited . . . shall be guilty of an offence.

Therefore the position of affairs is this. Regardless of the merits of his case a man has no right to-day to ask the crown or the military authorities to show cause on an appeal to a central appeal court or by resort to a prerogative writ that he is not entitled to postponement. It would have been much better, instead of having the National Resources Mobilization Act administered under regulations, to have made provision by statute as was done in the Military Service Act of 1917. The regulations as they are to-day are so worded that they deny to many the right to postponement, who are entitled to that postponement and, on the other hand, might operate against the crown where postponement might be granted arbitrarily by the provincial board, whereas under the facts of the case postponement ought not to be granted.

I suggest that the minister give consideration to the establishment of a judicial final tribunal here in the city of Ottawa. It is not going to be a costly proceeding. It will do no harm, nor will it delay the military effort of this dominion, but it will assure one thing and that is that the man who lives, say in Prince Edward Island and is called up to service will know that the same type of administration is going to be applied in his case as is being followed in British Columbia. To have any other basis of administration may raise suspicion as between province and province, denied as a man is to-day those rights of British jurisprudence which assure him the performance of mandatory rights under the law. To-day a man who is called up for service has certain mandatory rights under the regulations, but if they are denied to him he has no recourse at law. He cannot go to the minister and say, "There has been a decision made against me and I am entitled to a postponement". The door is closed to the most definite rights provided for by regulation.

If the idea that I suggest is accepted, the minister will be relieved of the many hundreds of applications that are to-day being made to him. If I understood him aright this afternoon, representations are made to him regularly, and upon receiving them he communicates with the provincial boards. In that case, where one man in consequence of representations made by the minister secures postponement, while another man under similar circumstances who does not make application is ordered up for service, there is bound to be suspicion which might very well be obviated by the simple expedient of appointing as a judicial final tribunal composed of a judge of the Supreme Court of Canada.

I would suggest, too, from a reading of these regulations that they contain many incongruous provisions, and they might very well be

submitted, if not to parliament itself, with a statute introduced in that behalf, at least to a committee of parliament to the end that equality will be secured among all the people across this dominion and that uniformity of administration will be ensured.

Mr. THORSON: I should like at the outset to express my great appreciation of the contribution to the discussion made by the hon. member for Lake Centre. He has put forward in a clear-cut manner the argument that there ought to be established a central court of appeal or board of appeal which would hear appeals from all the divisional boards across Canada with a view to obtaining uniformity of decision. I appreciate very much indeed the argument that he has put forward and the clarity of his statement of the grounds for it.

The general opinion thus far has been against the setting up of a central court of appeal, and in coming to that view the authorities had in mind the experience of the last war—the Military Service Act, with its great multiplicity of tribunals, and its appeals ending with an appeal to the Chief Justice of Canada. Some of those appeals dragged on for months. It was with the deliberate purpose of avoiding a repetition of what occurred then that the divisional boards were set up, each one presided over by a superior court judge or a judge of some other court in the province where the major portion of the administrative division was located.

I imagine it was for that reason also that provisions were put into the statute to the effect that the decisions of the administrative boards should be final, that they should not be reviewable by mandamus or injunction or the other various procedures to which the hon. member for Lake Centre referred. He has quoted two sections of the regulations, sections 8 and 30 which, I think, make that intent clear.

The expectation was that the questions involved in an application for postponement are questions of fact. I do not think any questions of law are involved. Perhaps when I make that statement I make it a little too broad. Let me content myself by saying that in the main all the questions that come before these boards are questions of fact. Questions of fact are not all the same. The considerations operating in each one of the provinces are not all the same. But if you ask a board presided over by a superior court judge to deal with questions of fact that come before the board you go a long way toward uniformity, perhaps as far toward uniformity as it is possible to go when you are dealing with questions of fact.

It is quite true that when you have questions of fact coming before boards, one board may attach greater weight to one particular fact than another board might do. Then, too, considerations in the various provinces differ. One province may be mainly agricultural, with the board thoroughly understanding the importance of agriculture. In another province the main activity may be industrial, with the board in that particular case having a thorough appreciation of, let us say, the needs of war industry. All of these considerations may affect the board in its dealing with the facts of each case as it comes before it.

We have had two conferences with the chairmen of the boards and the registrars. There was a conference fairly early in the history of the regulations, and then on April 23, 24 and 25 we had a three-day conference with a view to having a general discussion of the regulations and their administration. Conferences of that sort will, I think, go a very considerable way toward bringing about uniformity. I doubt whether uniformity could be any more effectively brought about by a court of appeal. If questions of law were involved, certainly it would be desirable to have a central court of appeal. But when each case is really dependent on questions of fact I do not see how the establishment of a central court of appeal could bring about uniformity. That is my view. But I appreciate very keenly the necessity of uniformity of administration of the regulations across Canada as far as that is possible in the light of the fact that the decisions in these cases are made by tribunals which are judicial tribunals, on the basis of the facts of each individual case.

We held this conference of chairmen and registrars of divisions. We sat for three days. I was present at all the sessions, and I can assure hon. members that a great deal of useful work was done. It was the view of that conference, indeed, it was the view of the department, that the regulations should be gone over from beginning to end, and it was suggested that a committee should be struck for the purpose of going over the regulations. A number of regulations that are still in the brochure of regulations as printed are spent, by reason of the facts that they were meant to cover being no longer applicable. For example, certain regulations in regard to students were applicable only to the state of affairs that existed when we called men for only thirty days. Some of these regulations should be struck out. Then it was the general view that the Minister of National War Services might appoint a committee for the purpose of going through the regulations from start to

finish. It was my hope that there would be placed before that committee the various views expressed by the conference and also the views expressed by hon. members of this committee in discussing the regulations. I hope that as soon as possible after this debate is terminated that the committee will proceed with the work of combing over the regulations, and I assure hon. members that representations made by them will be brought to the attention of the committee.

Mr. DOUGLAS (Weyburn): Does the minister mean a departmental committee?

Mr. THORSON: What was in mind was a departmental committee. The reason for that was that there are a great many administrative details to be worked out. I am not wedded to the idea of a departmental committee; my opinion is that it might have advantages over some other kind of committee, but in any event I would assure hon. members that their representations will be brought to the attention of the committee. These regulations are of great importance and are becoming of even greater importance. It is therefore essential that they should commend themselves in both their substance and content and also in their administration not only to this house but to the country generally.

There are difficulties involved in individual cases, but those difficulties arise from the facts of each particular case. If I were completely satisfied that the establishment of a central court of appeal would produce uniformity, I would not hesitate in recommending such establishment. But the experience of a central court of appeal in the last war under the Military Service Act was not a happy one, and we hope not to run into a similar experience again in this war.

When I was before the house last Monday I was in course of making a statement, but I did not get anywhere near through. Perhaps it is just as well. It does not really make much difference what form the discussion takes, whether it takes place after a general statement or in the course of making that general statement. I am in the hands of the committee as to which course the committee would prefer.

Mr. DIEFENBAKER: Before the minister proceeds would he permit one or two more questions arising out of his statement?

Mr. THORSON: Certainly.

Mr. DIEFENBAKER: The minister agrees that if there is one thing more than another that is necessary it is that there be as nearly as possible equality in the administration of this act in every province of the dominion. He states that if an appeal were allowed it would be an appeal on questions of fact, and for that reason it would be impossible, or at any rate difficult, for a central court of appeal to look into the decisions of a provincial board. But has the minister given consideration to this, that up to March 24 the granting of postponements was a matter to be decided upon the individual case; but on March 24 in consequence of the announcement made by the Prime Minister, provision for the granting of these postponements was made, on a basis, not of the individual circumstances, but of the occupation of the particular individual; and individual considerations were to have effect only in the event that the crown could not show that such person was not an essential worker in agriculture. Therefore the position of affairs to-day is this, that those in the particular occupations he mentioned, and in particular agriculture, after that date were prima facie to be entitled to a postponement.

Mr. THORSON: On application.

Mr. DIEFENBAKER: On application being made; and the onus rests to the crown to establish that the individual does not come within the purview of the general postponement provision.

Mr. THORSON: Or should you say the onus passes away from the applicant?

Mr. DIEFENBAKER: Yes, and that is exactly the point I am endeavouring to bring to the attention of the minister, that once the onus passes away from the applicant, then it is not a question of fact in an individual case; the postponement is an en masse proposition. Everyone is entitled to it who comes within the purview of the regulation unless the crown can show that the applicant is not an essential worker in agriculture. This afternoon the hon. member for Rosetown-Biggar pointed out a case, and the minister refused to say what his decision would have been in that case.

Mr. THORSON: I have not the facts.

Mr. DIEFENBAKER: True enough; but if the facts were as stated by the hon. member, clearly that man came within the regulation entitling him to postponement. The government saw fit to grant postponements to a class engaged in agriculture, and took upon itself the onus of proving whether or not a man should be denied the benefit of that regulation.

The minister says that what took place in 1917 was one of the reasons why a central court of appeal was not established. I would ask him to amplify that statement. Why could not provision be made whereby appeals

could be allowed to a central court only after that court had been applied to and had granted the right of appeal? I do not believe there should be an automatic appeal, but I think there should be provision for appeal, to the end that those entitled to rights under the law may obtain those rights. To-day, as matters now stand, the people of Canada may find themselves in the position that in one province men will be granted postponements while in another province under similar circumstances men will be called to service. It was never intended that regulations should be interpreted in a manner that would discriminate in favour of one province as against another. An appeal body would bring about uniformity in the interpretation of the regulations. This afternoon the minister stated that the regulations were mandatory; that the applicant had his rights; that they were not declaratory rights but were rights assured to him. So I put this proposition to the minister. If in any province, as a result of the predilictions or the attitude of a board, the provisions of the regulations are deliberately flouted and disregarded, what rights has an individual so affected? As I see it, he has none. He has been denied the prerogative rights such as writs of habeas corpus and certiorari. He has been denied any appeal. He has rights, but he has no method of enforcing them.

Then take the other position, in which the board would grant postponements without regard to the regulations, deliberately flout the regulations in the other direction, allowing everyone postponement without regard to whether or not, under the law, they are entitled to it. Is there any provision whereby the crown may prevent that abuse of power? There is nothing whatever under the regulations as they stand to-day; and with all the sincerity that I can put in my words I say to the minister that the enforcement of these provisions must be done equitably and fairly. To-day we find ourselves in this position, that in one province 2·3 per cent of the young men are being called up, while in another province, in proportion to population, 5·7 per cent are being called up. Continue this course and the result will be not chaos but the destruction of national unity. As I see it, there is only one way of preventing such a condition of affairs, and that is through a uniform application of the law to every person in Canada, without regard to provinces or the boards having jurisdiction in the several provinces. As the regulations are, in Saskatchewan—and I speak of that province because I represent a constituency there—every man engaged in agriculture might be called up and ordered to report, even with the regulation as it is, and there is no power whatsoever to interfere with the actions of the board. That would amount to a denial of justice, a denial of fairness, a discrimination against those entitled to postponement, and there is no right on the part of those who are discriminated against to appeal to the courts of this country.

It is true that in 1917 the prerogative rights were denied. I can understand the reason for that, because if it were left open to those called for service to take advantage of legal technicalities, they would do so; they would appeal by way of certiorari, habeas corpus or anything else available. But there remained the right of appeal. To-day there are no rights, either to the men who are being called up, to assure them of fair treatment, or to the crown, if a board should deliberately flout the regulation. While I have mentioned Saskatchewan, I think it only fair to say that in doing so I was not referring to that board. The Saskatchewan board is composed of three reputable gentlemen: the chairman of the board, Mr. Justice Embury, who was a brigadier-general in the last war, with a distinguished record; Mr. Bickerton, president of the United Farmers, and Mr. Carl Stewart, K.C., a member of the legislative assembly.

Mr. THORSON: Might I ask the hon. member which board he is referring to when he uses the phrase "flouts the regulation?"

Mr. HOMUTH: It would apply to any board.

Mr. DIEFENBAKER: That is the point. I mentioned Saskatchewan as an example of what might take place, because Saskatchewan is mainly agricultural. I could have mentioned any other province, but that was why I came back to point out that I was not specifically referring to the board in Saskatchewan. I do ask the minister to give consideration to this matter. As the regulations are, there is not a lawyer anywhere who could advise anyone as to his rights under these regulations. I do not understand why men called up were denied representation by counsel before the provincial boards, but that is what the regulations provide. If a man is denied legal representation, at least he should not be denied those ordinary rights that British subjects everywhere have enjoyed for the past two hundred and fifty years. I do not believe in wholesale appeals; I do not believe that every one should be free to appeal to a central appeal board; but I do believe that if and when a provincial national services board is not carrying out the provisions of the law, the opportunity should be given applicants to appeal by leave to a central board composed of a judge of the

Supreme Court of Canada who would give uniform administration of the regulations, and would give to each case a uniform, proper application of the principles upon which postponement is provided for under the regulations.

Mr. THORSON: The hon. member for Lake Centre has presented his case powerfully, and I would be prepared to say that there is a great deal of merit in what he has put forward, if I were prepared to accept the basic assumption upon which his argument is made, that boards are flouting the regulations.

In the course of the months I have had to do with the department I see nothing to suggest that boards are flouting the regulations. While the prerogative writs are done away with in these regulations, as they were done away with in 1917, we are concerned with getting finality. The judgments of the boards are stated by the regulations to be final. I propose to submit an amendment to the regulations in order to give the boards power to reconsider. That was a matter which was discussed at the recent conference, and it was generally agreed that that power should be in the boards. It may be that they inherently have the power already; I would not go so far as to say that they do not.

I should point out that in addition to the composition of the boards, there are four representatives who have the right to appear before the boards; one representing the Department of National Defence; one representing the national war labour board, and one representing agriculture. Those three representatives are supposed to be the representatives of the three war purposes to which I referred earlier this afternoon.

Mr. TUSTIN: Are those representatives appointed by the government?

Mr. THORSON: The representative of the Department of National Defence is a serving officer of the Department of National Defence. The representative of the national war labour board is appointed by that board.

Mr. DOUGLAS (Weyburn): Have they been appointed in all the provinces?

Mr. THORSON: I think the representatives of the national war labour board are operating in all the provinces.

Mr. DOUGLAS (Weyburn): Who is the representative in Saskatchewan?

Mr. THORSON: I do not know who it is in Saskatchewan.

Mr. WRIGHT: Who appoints the representatives of agriculture?

Mr. THORSON: The minister appoints the representatives of agriculture.

Mr. COLDWELL: Have they been appointed in all the provinces?

Mr. THORSON: No. Last Monday I put on *Hansard* the names of the five representatives of agriculture who have been appointed. That is perhaps not as important now as it was earlier, or as it was before the new regulations with regard to agriculture came into effect.

Mr. COLDWELL: In view of the discussion to-day it would seem to be important.

Mr. THORSON: No, there has been very little by way of expressed dissatisfaction with the decisions made by the board. If one were to listen only to what has been said this afternoon he might think that there were thousands of cases of dissatisfaction. As a matter of fact only a very few cases are brought to our attention.

Mr. COLDWELL: It is wrong to have even a few cases, if they can be adjusted.

Mr. THORSON: I quite agree, and that is my reason for saying that if hon. members have brought to their attention cases which strike them as being those which have not been fully considered, or in which all the facts have not been dealt with, I invite them to bring such cases to my attention, notwithstanding the additional work involved. I would publicly welcome having those matters brought before me. Actually the number of cases which have come to my notice is quite small.

Mr. MacNICOL: Has the decision been reversed in any of them?

Mr. THORSON: In some of them the boards have reviewed the facts and have granted postponements.

Mr. STIRLING: So the boards have power of revision?

Mr. THORSON: I thought I had covered that point when I was addressing my remarks specifically to the hon. member for Lake Centre. I think they have the power. But to put it beyond dispute we propose to make an amendment along the lines I mentioned a moment ago. There must, however, be some finality in these matters, and I must again stress the fundamental purpose of these

regulations, namely to enable the Department of National War Services to fulfil the requisitions sent to it by the Department of National Defence.

An hon. MEMBER: And do so equitably.

Mr. THORSON: And do so as equitably as possible. As a matter of fact I think hon. members will be interested in the considerations which govern the assignment to a civilian rather than a defence department of this particular task of calling men for military training. I believe I can say that the Department of National War Services and the national war service boards regard as individuals all persons coming before them as a result of the notice relating to medical examination. Then those persons are turned over to the training centres if they have not made out a sound case for postponement, made out a case for postponement on either of the two broad grounds, the one of hardship or the other of national interest. When they are turned over to the training centres they become soldiers subject to military discipline and subject to the law of the army. Up until that stage, up until they are being turned over to the training centres they are under the jurisdiction of our department which regards them as individual persons, giving consideration to their individual cases. It is that principle and that attitude of mind which I wish to preserve.

If there could be absolute uniformity of administration or decision as to the facts it would be highly desirable, but it would be a mistake to look at percentages only, because back of the percentages are many other factors and many other considerations that every one would have to assess in order to arrive at a true interpretation of whether there is uniformity. The hon. member for Lake Centre referred to the percentage of postponements, and I should like to put on the record now what I intended to put on at the outset this afternoon but which I did not because of the run of questions that started before I could complete the statement I had in mind.

Mr. DIEFENBAKER: I did not speak of percentages of postponements; I spoke of the percentage of those called up, the R-recruits.

Mr. THORSON: I quite appreciate what my hon. friend said. In the Ottawa *Citizen* of May 15, 1942, there appeared an editorial entitled "Figures on Draftee Army." This editorial indicates the folly of making statements without looking closely at the facts. I should like to put it on *Hansard* with the leave of the committee. It starts off as follows:

Some interesting and revealing figures concerning men called up for military service under the mobilization act were given in the House of Commons the other day. Robert Fair, M.P. for Battle River, had asked a question as to the number of men drafted, the number of applications for postponement of training and the number of applications granted.

Mr. Thorson, Minister of National War Services, furnished the following figures, covering the period from October 9, 1940, to March 12, 1942.

Under the heading "Men called up", figures are given for each of the provinces. Figures are also given for each of the provinces under the headings: "Asked for postponement" and "Granted postponement".

	Men called up	Asked for postponement	Granted postponement
P.E.I.	1,013	549	463
Nova Scotia	4,718	3,010	2,019
New Brunswick	4,567	2,315	1,802
Quebec	38,433	37,163	22,174
Ontario	37,252	19,800	15,953
Manitoba	8,331	3,231	2,442
Saskatchewan	9,424	2,874	1,803
Alberta	9,024	2,534	2,334
British Columbia	7,543	4,443	4,056

Then the following comment is made in the editorial:

What will first of all open the eyes of most people is the extraordinary high percentage of applications for postponement of training, and next to that, the high percentage of postponements granted.

Then there follows this statement:

Among other things the figures reveal is that only a little more than half the men called up under the compulsory home defence law get into the army right away.

The figures which were given in reply to the question put by the hon. member for Battle River, and which appear in *Hansard* of May 6, reveal no such thing. Another statement is made in the editorial as follows:

During the period covered, 120,305 men were called up and accepted. But only 67,259 got into uniform. A total of 75,919 asked for postponement of training and in 53,046 cases it was granted.

That statement is wholly erroneous. If the writer of that editorial had read the answer which I made to the question put by the hon. member for Battle River, he would have seen that the total of 120,305 appeared under the heading entitled:

Number of men called up for military training under the National Resources Mobilization Act in each of the provinces, and accepted at national defence (army) basic training centres, since October 9, 1940, up to March 12, 1942.

The whole of that number of 120,305 went into uniform. What the writer of this editorial has done is to deduct the number of applications for postponement of military training that have been granted, 53,046, from the total number who were called up and accepted, 120,305, arriving at his total of 67,259, which he stated were those who got into uniform. That is entirely erroneous. All men referred to in the first column of my answer, or 120,305, got into uniform over and above the 53,046 whose military training had been postponed. The figure 120,305 does not include the figue 53,046. I do not believe the writer of this editorial would have fallen into this error if he had read with greater care the headings of the various columns. Having fallen into that error, the writer of the editorial then falls into another error when he makes this statement:

> In Quebec about 97 per cent of men drafted asked for postponement and approximately 60 per cent were granted postponement. In Ontario 53 per cent asked for postponement and 43 per cent got it. Saskatchewan, with 31 per cent asking for and 19 per cent obtaining postponement, has the lowest percentages.

All those figures are erroneous for the reason I indicated before.

Mr. HOMUTH: Does the figure of 120,305 mean that that number of men stayed in the army, or does that figure include those who had the thirty days training and then got out of the army?

Mr. THORSON: The figure I have given includes the thirty days training figure.

Mr. SENN: How many out of the 120,305 took the thirty days training?

Mr. THORSON: I put those figures on *Hansard* last Monday, but I have them here. In that figure of 120,305, there are included 82,893 who were called up in the three 30-day training periods.

Mr. HOMUTH: That makes a different picture altogether.

Mr. THORSON: It does not affect what I have just been pointing out.

Mr. HOMUTH: But is it not a fact that the thirty-day trainees did not ask for postponement?

Mr. THORSON: Oh, yes, a great many of them did.

Mr. DUPUIS: And a great many of them were called up again.

Mr. THORSON: Yes, a great many.

Mr. HOMUTH: Actually how many of the thirty-day trainees asked for postponement? I think the percentage was very small.

Mr. THORSON: All those figures are available. The figures of application for postponement and the number of applications for postponement granted have been kept with very great care from the outset, and I could obtain for the hon. member for Waterloo South the particulars exclusively for the three calls for thirty-day training but I would have to work the figures out separately. I have with me here only the grand totals covering the fifteen training periods.

The writer of this editorial in the *Citizen* falls into the same error when he arrives at his percentages. Let me indicate, if I may, how he falls into error. Take, for instance, the province of Quebec. Under the heading as given in the editorial, 38,433 men were called up and 37,163 asked for postponement. Then the writer jumps to the conclusion that out of the 38,433 men who were called up 37,163 asked for postponement, and in that way he gets his 97 per cent. Nothing of the sort. All of the 38,433 men called up went into uniform and none of them got any postponement. They all went to the training centres and they were all accepted.

Similarly, by the same erroneous inference, he makes the statement that in Ontario, on the other hand, 53 per cent asked for postponement and 43 per cent got it. That would indicate that there was a treatment or an attitude of mind in one province different from the treatment or the attitude of mind in another province. I do not know whether the writer of that editorial was trying to indicate any particular attitude of mind in the province of Quebec compared with the attitude of mind in Ontario or any other province, but the writer certainly draws wrong conclusions as between the provinces. As a matter of fact, if the writer will look at the second of the two columns he will find that in the province of Quebec 37,163 persons asked for postponement and 22,174 postponements were granted. That is a percentage of roughly 59 per cent.

Mr. BOUCHER: Would the minister state how many were called up? We would then have the complete picture.

Mr. THORSON: I shall be glad to give all the facts. To continue with this editorial for the moment, in the case of Ontario, the editorial shows that 19,800 men asked for postponement and 15,953 applications for postponement were granted. That is 70 per

cent. In Saskatchewan, 9,424 men were called up; 2,874 asked for postponement, and 1,803 applications for postponement were granted. That is 62 per cent. Therefore the province of Quebec, instead of having, as the writer of the editorial would have it, the largest percentage of postponements, has really the lowest percentage of postponements granted in respect of applications for postponement.

Mr. DOUGLAS (Weyburn): How does the percentage of postponements compare with the number called up?

Mr. THORSON: The true basis of calculation should be the number of applications for postponement in relation to the number of notices sent out to report for medical examination.

Mr. GILLIS: Would the minister mind putting on the record the same figures for all the provinces. There are other provinces besides the three that I hear mentioned so often.

Mr. THORSON: I mention them only by reason of the figures in the editorial. Ordinarily I do not pay a great deal of attention to the Ottawa *Citizen*.

Mr. CASSELMAN: If the minister would permit me, the argument he is making to show that the editorial is wrong could, I think, be put in another way. The question that was asked was this:

How many men have been called up for training under the National Resources Mobilization Act in each of the provinces?

In the first column the figures given do not answer that question.

Mr. THORSON: I think so.

Mr. CASSELMAN: Very definitely not—

Mr. STIRLING: Certainly not.

Mr. CASSELMAN: —because the heading above the figures given in the first column is:

Number of men called up for military training under the National Resources Mobilization Act in each of the provinces—

That was what the question asked for, but then the heading over the column goes on to add these words:

—and accepted at National Defence (army) basic training centres.

I think that is the answer to the whole difficulty.

Mr. THORSON: That may possibly be the explanation. But the answer given gives the information in respect of the persons who were effectively called up.

Mr. CASSELMAN: Called up—and taken into the army

[Mr. Thorson.]

Mr. THORSON: That is fit persons. In order to get correct percentages one would have to have another set of figures showing the number of persons to whom notices to report for medical examination were sent. That is the first notice that goes out, and if hon. members would like to have that for the whole of the country, for the same periods, I will put that table on *Hansard* so that the comparisons may be made. In respect of the four months men, that is, the really effective persons, I will put that table on *Hansard*. I have it by administrative divisions, but I will table it by provinces.

Mr. BOUCHER: Do the tables placed on *Hansard* by the minister last Monday show how many were called up by provinces under the 30-day plan and otherwise; how many asked for postponement, under the 30-day plan and otherwise; and how many postponements were granted under the 30-day plan and otherwise, by provinces? That would settle the question and enlighten the people in that regard.

Mr. THORSON: The tables I put on *Hansard* last Monday relate only to the four months plan because those are the persons who are effectively put into the Canadian active army for home defence. The tables show the number of men requisitioned by the Department of National Defence; the number of men who reported to basic training centres; the number of men rejected for medical reasons upon reporting at basic training centres; the number of men accepted at basic training centres; the number of men examined by civilian physicians, showing the number placed in each medical category since the inception of the four months training plan up to March, 1942. Then table VI shows applications for postponement, and table VII shows applications for postponements that were granted. I think these tables will answer the questions of my hon. friend with respect to persons who were called up for four months training and held for the duration.

Mr. BOUCHER: Why could the minister not couple that with those called for 30-day training? Some called for 30-day training would be included in those for the four months.

Mr. THORSON: No, not in the figures I gave. The figures I gave in the tables cover only persons who were called up for four months and do not include the persons who served thirty days and were recalled. I gave those additional figures earlier in the day, and I pointed out that in respect of the

30-day men our department acts for the Department of National Defence and we call them up in the name of the Department of National Defence, because those men are members of the reserve army and therefore under the jurisdiction of the Department of National Defence. In respect of those persons who were called for thirty days and recalled, I gave those figures: the total number that were requisitioned by the Department of National Defence, 13,650; the number who reported to training centres, 14,387; the number of men who were actually accepted at training centres, 12,539.

Mr. BOUCHER: That is the point. The minister does not tell us the number who were called. He tells us the number who were requisitioned, the number who reported, and the number who remained after rejections had been taken up, but he does not give us the number who were called.

Mr. THORSON: The total number of notices for medical examination sent out for the same training period was 312,649. That is the total covering the operation of the regulations from their inception, and includes the thirty days and the four months men.

I have in this table, by administrative divisions, the number of men to whom notices to report for medical examination were sent. The figures by provinces are as follows:

Prince Edward Island	1,846
Nova Scotia	12,319
New Brunswick	12,627
Quebec	117,425
Ontario	84,678
Manitoba	20,721
Saskatchewan	19,780
Alberta	20,739
British Columbia	22,519

Mr. BOUCHER: But that would not be the number called to report, because some of those called for medical examination might be in a category that would not be called, so we still do not have the picture.

Mr. THORSON: Quite so.

Mr. DOUGLAS (Weyburn): Before the minister leaves the discussion of the regulations, I wish to say a few words in support of the position taken by the hon. member for Lake Centre. Last year the minister will remember I strongly opposed the removal of regulation 14, which took away from the applicant the right of appeal to the minister as a final court of appeal.

Mr. THORSON: Where is that in any previous regulation?

Mr. DOUGLAS (Weyburn): Clause 14 was withdrawn, the clause appointing the minister as final court of appeal.

Mr. THORSON: It is news to me.

Mr. DOUGLAS (Weyburn): It is not news to the minister that the boards became the final court of appeal, that no appeal to the minister was allowed any more.

Mr. THORSON: There was no appeal to the minister.

Mr. DOUGLAS (Weyburn): In the original regulations there was.

Mr. THORSON: No.

Mr. DOUGLAS (Weyburn): I will not argue the point now. The minister has just said that these regulations are important and that they are becoming increasingly important. That is true, because these regulations are the machinery under which Canada proposes to requisition the lives of its citizens. As the minister acknowledged, it is most essential that these regulations and the administration set up under them shall be carried on in the most impartial manner possible. The protest has been made before and was made again to-day that there is lack of uniformity in the administration of the different boards. Last year some reference was made to a hockey team as an illustration. There are other illustrations, some of which I shall draw to the minister's attention in a moment. In my opinion it is bad practice to set up across the country quasi-judicial bodies and give to them arbitrary power under regulations which they themselves are the sole authority in interpreting. Under these regulations wide powers are given; there are blank spaces under them where it is not clear exactly what course is to be followed. In these cases the board becomes a law unto itself, and there is danger, especially if the minister lacks time for supervision or lacks firmness, of these semi-judicial bodies becoming little czars in their own domain.

Not being a lawyer, I am not sure that the procedure suggested by the hon. member for Lake Centre, that a final court of appeal here in Ottawa would meet the situation, would be the best. It may be that it would. Certainly I think this would help to meet it, that first of all these administrative committees, national war services boards, ought to be conducted to some extent on the basis of court procedure.

A board is set up in Saskatchewan, for instance, with three men on it. A young man comes before that board making application

for postponement. The only representative that I know of who has ever gone before that board in addition to the person making the application is the representative of the Department of National Defence. I do not know of any representative of the labour supply board; I do not know of any representative of agriculture other than one of the members of the board. The young man is in a court in which the Department of National Defence has a person functioning practically as prosecuting attorney, and is left to defend himself and present his own case. Most of us know what it means to be suddenly placed before a committee; the average person, if he has no experience in presenting facts, if he is timid about answering questions, can trip himself up in a very few minutes. It seems to me that if the board is made the final court of appeal, there ought to be a person, say the judge, in this case the chairman, as referee; there ought to be someone in that board presenting the case for the Department of National Defence, and there ought to be someone there who will examine the facts concerning the applicant and present the facts for him.

The average young man has not a chance in the world in presenting his own case; he is entirely at the mercy of the mood, the persuasion or the mental outlook of the men on the board. If they are considerate, thoughtful; if they examine his case carefully, help him in bringing out the facts, he may get a fair deal. If they are not that kind of men, the situation is quite different.

The set-up of these boards might well be changed. There ought to be, but as far as I know in Saskatchewan there is not, a representative of labour selected and recommended by labour; there ought to be a representative of agriculture, suggested by agriculture. In the case of Saskatchewan there is one who, I am sure, is quite satisfactory to agriculture in that province; I do not know anyone who would fill the position better. But someone on that board ought to appear on behalf of the applicant, someone who will examine his case and present it. The representative of the Department of National Defence is there, who is very naturally prepared to present many reasons why the postponement should not be granted; it is his job to get as many persons into the army as possible. Certainly someone ought to be there to present the other side of the story. If these boards are to continue to have the tremendous powers that have been given them, there ought to be some set-up to make them more judicial in character and to guarantee to the persons going before them the best possible presentation of their case.

[Mr. T. C. Douglas.]

The minister says that one or the reasons why it would be impossible to set up a final court of appeal is that these are cases founded on fact, not on interpretation of the law. That is correct. But I would ask the minister what machinery is set up by his department for the collecting of these facts. It may be better now; I have some reason to believe it is, but I know that for quite a while the facts were collected in the strangest manner. I had a young man come to my home one morning with his grandmother, whose sole support he was alleged to be. They had made an application for postponement on the ground that if this young man should be called up, the grandmother would have to leave the farm, dispose of the stock, move into town and live alone. The postponement was granted. A few days before the time to report, however, the young man was notified that the postponement had been cancelled. He came to see me; I told him there was nothing I could do, that this was the decision of the board, but that I would telephone the board and find out why the postponement had been cancelled. I called the secretary of the board, and again I have no quarrel with that gentleman. He has always been very courteous and fair to me, and he is the servant of the board, not responsible for the policy pursued. He said, "Yes, we did grant postponement, but on the basis of certain information given to us in the last few days we have cancelled that postponement." I said, "Well, that is fine, except that I should like to know the source of that information." He replied, "We are not going to tell you the name of the person." I said, "I do not want to know the name of the person, but I do want some assurance that the information reached you through proper channels. Was it secured for you by the mounted police? Was it secured for you by any officer or employee of the government?" His reply was, "No. This information was telephoned to us by some individual in the community in whom we have confidence." Well, Mr. Chairman, if you ever start to collect your facts on that basis you are taking the most dangerous ground possible upon which to administer selective service. If the government is going to turn certain people in the community into official informers, it is storing up a lot of grief for itself. There is not a community anywhere in which there are not at least two or three people who like minding the business of other people better than their own, who specialize in sending anonymous letters, making anonymous telephone calls, or sending messages about somebody else whom for some reason or another they do not like. In all fairness I must say that in a number of cases

with which I am familiar the investigation was made by the mounted police. With that I am in complete agreement; the machinery for collecting these facts ought to be official machinery. Facts ought to be collected through the proper agencies, the mounted police, the local magistrate, or some person in an official capacity who has training in sifting facts and presenting evidence.

A few moments ago I said that these boards had wide powers and that there was always the danger, in connection with semi-judicial boards of this kind, that they might become little czars in their own communities. They are pretty well the final authority; they make the decisions as to how the regulations shall be interpreted. Let me give one illustration of that; I refer to the method by which conscientious objectors have been handled, particularly in Saskatchewan. I know the subject of conscientious objectors is not a popular one; but the test of any democracy is how it treats its unpopular minorities.

Mr. THORSON: Hear, hear; I entirely agree.

Mr. DOUGLAS (Weyburn): I want to direct the attention of the minister to the regulation which, as he knows, is No. 19. It states:

> Any man who claims that he conscientiously objects to bearing arms or to undertaking combatant service may, at his own expense, apply for an order or direction of the board postponing his military training which order or direction may be given by the board to the divisional registrar if the board is satisfied that such man conscientiously objects to bearing arms or to undertaking combatant service.

I direct the attention of the committee to the words, "if the board is satisfied," which is a wide discretion. Then regulation 20 provides:

> Notwithstanding anything contained in the next two preceding sections, the board, of its own motion or on application made by the minister or any person representing the minister, in the case of any person entitled to postponement of military training, either as a Mennonite or as a Doukhobor or as having been found by the board to object conscientiously to bearing arms or undertaking combatant service, may direct that such person, if medically fit for military training, be required to report as or after his age class has been called out to carry out such alternative training, service or work as the board may direct. . . .

From what information I can gather—and of course the minister will correct me if I am wrong, because he is in a position to know all the facts in reference to every province, while I can speak only with reference to my own province—the treatment of this particular group has not been uniform in the various provinces. As an example I mention two young men whom I have known for fifteen or twenty years. They are twins, students at the theological seminary of the United Church, studying for the United Church ministry in Saskatoon. Both made application to the board in Regina, claiming that they had religious scruples against the bearing of arms and offering to do any type of alternative service the board might prescribe. One young man was granted postponement on the ground that they considered him to be a sincere—and I underline the word "sincere"—conscientious objector. The other young man, for some reason I have never been able to find out, was not considered by the board to be a sincere conscientious objector and, with a number of others, had his postponement refused.

They went back to the university and made an offer to the board that they were prepared to do anything else. At the university other students who normally would be called out with their age groups are given an opportunity to take the R.O.T.C. course during their spare time in order to not break into the university year. These young men asked that they be given some alternative training during their spare time, instead of the R.O.T.C. course. That was refused in Saskatchewan, though my understanding is that at the university of Toronto such training is provided for students who conscientiously object to the bearing of arms. There I believe they are given an opportunity to take alternative training in some other line. But these young men were refused that opportunity, though it is expressly provided in regulation 20 that the board may prescribe some alternative training or service.

Mr. THORSON: If they are found to be conscientious objectors.

Mr. DOUGLAS (Weyburn): Yes, but they must have found them to be conscientious objectors, because they did not insist on calling them up for military training. They said, "All right. You will not take the R.O.T.C. course; you do not want to report for military training, therefore you must stop your university year right now and go up to Banff national park," to work in a labour gang building highways, at 50 cents a day, out of which they must buy their clothing and all the other things they require. I know of one young man who was within a few months of finishing a chemistry course, which would have enabled him to do great service to this country in our war effort. Several of these young men have been taken out of the university in the middle of their year, and sent up to Banff national park. As I said before, and wish to make perfectly clear, I have no objection at all to these young men doing alternative service. My contention is that any man who lives in this country is in the position

where the state has the right to demand from him in this emergency some form or another of service.

Mr. BROOKS: Practical service.

Mr. DOUGLAS (Weyburn): Yes, practical service.

To go back to the young man to whom I referred, he went to the board and said, "I am quite prepared to go to England with a fire-fighting group. I am prepared to go to England or anywhere else to drive an ambulance." But they replied that they had no arrangements for that sort of thing, and that they could not do that. The result is that we send a man to a labour gang, building roads, when it seems to me there are far more useful things we could do with young men of that kind.

I wish to repeat that I do not propose to be placed in a false light when I present this case to the minister. I have never held, and do not now hold, the view of the conscientious objector. I myself took the reserve officers training course when I was at university. In talking to these young men I have told them that in my opinion they should take the course, and that they could do so without violating their principles. I have told them that the course would do them a world of good. But I do insist that whatever one may think of the point of view of the conscientious objector, no man or group of men should be allowed to vent any sadistic tendencies they may have against any person with whose particular point of view they happen to be in disagreement.

Simply to take a young man out of a university, when hundreds of others are being left in the universities, and send him to a labour camp where he is not needed, because he antagonizes those who do not agree with his point of view, is not fair. It seems to me we are on very dangerous ground when we do that sort of thing.

Questions with respect to conscientious objectors—and I use that purely as an illustration—along with many other parts of these regulations ought to be clarified so that there will be uniform application in the administration of the regulations. There ought to be a final court of appeal, or there ought to be provision for farmer and labour advocates on the boards to present the cases of these young men in a proper and judicial manner.

Just one other point. The other evening I drew the attention of the minister to the young men who reported for training on April 9, and I pointed out then that there was a great deal of confusion in view of the fact that on March 25 the newspapers of Canada carried a statement that they were exempted—that was the term used—and that postponement had been granted. The term used was that they were exempted from military training. I hold in my hand a clipping from the front page of a western newspaper. It is headed, "Main points of new programme" and is dated at Ottawa, March 24. It opens with these words:

> Following are the high-lights of the national selective service programme, as announced in the House of Commons to-day by Prime Minister Mackenzie King.

Then follows a long list of the key-notes in the announcement, and No. 8 in the list is as follows:

> Exemption from compulsory military training for essential farm workers, and prohibition against farm workers quitting jobs for non-essential work.

Mr. HOMUTH: That is just a misunderstanding.

Mr. DOUGLAS (Weyburn): Yes, but it was a misunderstanding that had disastrous effects. As I said the other day, if one young man read that and did not report, he could still make application under the new order in council P.C. 2252. If he could substantiate the fact that he was working on the farm, or had been a farmer on March 23, he could get his postponement. But the other young man, who had not time to make the application, was in a different position. Even if he had time, the board had not time to deal with it, because they already had hundreds of applications made before March 23 with which they had not dealt. The young men who did report are no longer within the jurisdiction of the national war services board, and they cannot be dealt with at all.

I believe it was last Monday I raised the matter, and at that time the minister said he was going to look into it and see what could be done. Has he been able to think of any procedure which can be taken to deal with these cases? Has he decided if it is possible to examine these cases, in view of the fact that there was considerable confusion at the time the arrangement was made?

Mr. THORSON: I think there is some merit in the observations of the hon. member for Weyburn with respect to the class of persons, who, prior to March 23, had received their notice to report for training, and who, after March 23, did not make any application for postponement, by reason of the fact that they did not know they had any right to do so. I should like to give further consideration to the group of persons covered in that interval of time, and to have an opportunity of discussing the matter carefully with

my colleague the Minister of National Defence, by reason of the fact that they are now in the training centres. I say to my hon. friend that that situation is under review.

Mr. DOUGLAS (Weyburn): Would the minister make some statement with regard to conscientious objectors? On what basis is a board supposed to make a decision as to a man's sincerity or insincerity? Is there provision for alternative training for these men, and provision for alternative service, either in or outside the universities? Is it entirely within the discretion of the board to decide whether a young man shall remain in a university, whether he shall take alternative training or whether he shall simply be put into alternative service without any choice as to the type of alternative training for which he shows the greatest aptitude?

Mr. THORSON: I do not know whether it is the wish of the committee that I should deal generally with the subject of conscientious objectors, and the manner in which that subject is being handled to-day by the department. I am in the hands of the committee. I had intended to make an opening statement which unfortunately I have not yet been able to complete. Then, a number of questions were raised by the leader of the opposition, some affecting the reserve army, some affecting students, and a number of other subjects. He commented, too, upon the administration of the regulations. I do not wish to deal with those particular subjects in his absence.

If it is the wish of the committee, however, I shall be very glad to deal with the subject of conscientious objectors, and give the committee a view of the whole subject. It is a subject with which it is not easy to deal, because the number of classes and kinds of persons is so varied. We cannot speak of conscientious objectors as being one class of person. In the main, conscientious objection is an individual objection toward taking human life. It varies with people. Certain persons have no objection to using force, depending upon the person against whom they may have to use the force. Some Jehovah's Witnesses believe in the use of force if it is for the purpose of defending another Jehovah's Witness, but otherwise they may be against the use of force. There are varieties of views, but generally speaking we deal with the subject of conscientious objectors under three sections of the regulations. I dealt with this at some length last November, but I shall review the situation briefly as it is and then deal with the steps that we have taken with regard to conscientious objectors. Section 18 (1), which deals with Mennonites and Doukhobors, reads:

> Members of the denomination of Christians called Mennonites and members of the community of Doukhobors who immigrated to Canada pursuant to the arrangements evidenced by the order in council of August 13, 1873, and by the order in council of December 6, 1898, respectively, or the descendants of such immigrants who have continued without interruption to be members of the aforesaid sect or denomination of Christians or of the aforesaid community of Doukhobors and who have resided without interruption in Canada, shall be entitled, subject as provided in these regulations, to the postponement of their military training.

That section deals with two classes of persons, Mennonites who come under the order in council of August 13, 1873, and Doukhobors who come under the provisions of the order in council of December 6, 1898. Persons who come within the provisions of section 18 are entitled to postponement of their military training. Applicants who come within the terms of this regulation must apply and must show, first, that they are descendants of these immigrants; second, that they have continued without interruption to be members either of the aforesaid sect or denomination of Christians, that is Mennonites, or of the aforesaid community of Doukhobors, and, third, that they have resided without interruption in Canada.

Mr. ESLING: It is doubtful if the minister has the information at hand, but perhaps he will make it available before this discussion closes. The minister is putting some figures on *Hansard*, and I should like him to tell the committee how many conscientious objectors of the Doukhobor sect residing in British Columbia have been exempted from military service. How many such conscientious objectors were ordered for employment on public works, and to what projects were they to be sent? How many of them have refused absolutely to accept any orders from the government for either military or public service, and what steps have been taken to make these conscientious objectors obey the edict of the government?

During the past year there has been a noted movement of Doukhobors from Saskatchewan to British Columbia, to my district particularly. Conditions there are very favourable because they are able to live on improved land tax free, and naturally a Doukhobor does not overlook anything in the way of getting ahead of the next one. When our young men are called up for service and they find these conscientious objectors exempted from any kind of service, and going to work in the lumber camps or accepting other well-paid positions, it stands to reason that there cannot be much of enthusiastic loyalty among our Canadian boys. The point is simply this: Is the government going to

permit these young Doukhobors simply to flaunt defiance at the orders of the government?

Mr. THORSON: I cannot give the hon. member for Kootenay West (Mr. Esling) answers to all the questions that he has asked because we do not have a separate breakdown for each province of the different kinds and classes of persons who claim to be conscientious objectors. However, in so far as the information is available, I shall give it to my hon. friend.

Last fall I dealt at considerable length with the painful subject to which my hon. friend has referred, namely, the Doukhobors in British Columbia and particularly that sect known as the Sons of Freedom. There is not much that I can add to what I said on that subject in November. Without overlooking what my hon. friend for Kootenay West has asked for and assuring him that I shall come back to some of the questions that he has placed before me, perhaps I may be permitted to continue with my general description of the manner in which the regulations relating to Mennonites, Doukhobors and conscientious objectors are enforced. I have dealt generally with the persons called Mennonites and the persons called Doukhobors and indicated what facts those two classes of persons must prove in order to come within section 18. Section 19 deals with conscientious objectors generally, and subsection 1 reads:

> Any man who claims that he conscientiously objects to bearing arms or to undertaking combatant service may, at his own expense, apply for an order or direction of the board postponing his military training which order or direction may be given by the board to the divisional registrar if the board is satisfied that such man conscientiously objects to bearing arms or to undertaking combatant service.

The matter of conscientious objection is a fact. The question as to whether a person is a Mennonite or a Doukhobor within the meaning of section 18 is also a fact. If the applicant for postponement is able to produce the facts that bring him within the provisions of section 18, if he is a Mennonite or a Doukhobor within the meaning of that section, or if he is a conscientious objector within the meaning of section 19, he is entitled to postponement of military training.

I agree with the hon. member for Weyburn in not understanding the point of view of the conscientious objector, but I am likewise satisfied that the bona fide conscientious objector has that point of view. If he has it, I for one am prepared to recognize his viewpoint, and I agree that the principle is sound that his military training should be postponed. As to the Mennonites and the Doukhobors we have a national obligation of honour that binds us to respect the conditions under which their fathers and mothers came to this country.

[Mr. Esling.]

Under section 20 it is generally provided that if the board has found a person to be a Mennonite or a Doukhobor or a conscientious objector, and has postponed his military training, the board may direct him to alternative service of a nature that will not involve the bearing of arms or the taking of human life. We started off with alternative service for a period of four months, that being the period of time for which men were then called up for military training. We have now made the period of alternative service equal to the period for which a man is called up for military training and subsequently held for service in the Canadian army for home defence; that is, for the duration of the war.

Mr. DIEFENBAKER: Were not the Doukhobors who served for a period of some four months in the national parks during 1940 and 1941 definitely promised that they would not be subject to any further call for any type of service during the period of the war? If they were not so promised, have any of them been called up since? Has there been an amendment of the regulation and if so, when was the regulation changed?

Mr. THORSON: I have heard it stated that some kind of statement such as the one suggested by the hon. member for Lake Centre had been made to some of them, but whether that is so or not I do not myself know. We made the amendment comparatively recently. It was done by order in council P.C. 2451, dated March 30, 1942. If that is so, then that is the law regarding the alternative service of these persons.

Mr. DIEFENBAKER: Is it not a fact that the national war services boards in certain of the provinces definitely promised the Doukhobors and Mennonites in 1940 and 1941 that if they served for a period of four months on road construction work and the like, that was the termination of their service? The minister has said that he has had information or has heard that someone made such a representation. Then he must have been informed who made the representation. If the representation was made, is it the intention of the government to recall those who have served for a period of four months to continue their service for the period of the war?

Mr. THORSON: My hon. friend will not expect me to state what will be done if something else has been done when I do not know whether that something else has been done or not. I will say to him that I have heard it stated that some kind of representation was made, but whether it was made or was not made, I do not know, and whether it was made with authority or not, I do not know. But I draw this to the attention of the hon. member, that we first announced the period of military training as for thirty days. Then we said that the 30-day training plan had passed out of the picture and men would be called up to serve four months. Later the Minister of National Defence stated that when the men had finished their four months training they would be held in the Canadian active army for home defence for the duration of the war. Similarly the same attitude may be taken with regard to the Doukhobors. The power is there by the amending order in council to call these persons up.

Mr. DIEFENBAKER: All that is required is the enforcement.

Mr. THORSON: The way in which the whole situation has worked out has varied considerably in the different provinces by reason of the fact that the circumstances in each of the provinces are different. In Manitoba the problem relates mainly to Mennonites. In Saskatchewan the problem is one that relates mainly to the Doukhobors. Last year, at first the Doukhobors were quite rebellious at the idea of alternative service. There were many prosecutions and many convictions; I forget how many, but I think it was around one hundred or thereabouts. Then they went into the alternative service work camps and did a considerable amount of road construction, and I believe they did it very well.

Mr. STIRLING: Where was that?

Mr. THORSON: I think in the northern part of Saskatchewan.

Mr. STIRLING: It does not apply to the British Columbia Doukhobors.

Mr. THORSON: No; I am travelling westward. My understanding is that while there was, at the outset, a good deal of trouble in Saskatchewan with the Doukhobors over this system of alternative service, that difficulty has disappeared, and my information is that we shall probably not have any great difficulty with the Doukhobors in Saskatchewan. In Alberta there has been no great difficulty with either the Mennonites or the Doukhobors. In British Columbia—

Mr. GREEN: Before the minister comes to British Columbia, will he say whether the Mennonites and Doukhobors on the prairies are now working for the duration of the war? Were they released at the end of the four months period?

Mr. THORSON: The ones who were in the camps are all held for the duration of the war. I announced, with regard to conscientious objectors, that I had entered into an agreement with the minister of lands of British Columbia under which I undertake to send him up to 1,000 conscientious objectors for the purpose of preventing forest fires in that province which might result from enemy action.

Mr. COLDWELL: Where are they being sent from?

Mr. THORSON: They are sent from the various work camps.

Mr. GREEN: Is this the position, that the Mennonites, Doukhobors and conscientious objectors have been called up for the duration of the war and that, as the younger Mennonites and Doukhobors and conscientious objectors reach the age at which other British subjects are called up and put into the army, these young Mennonites and others will also be put in the work camps and have to work until the end of the war?

Mr. THORSON: That is the understanding.

Mr. CHURCH: Is the minister going to talk all night?

Mr. THORSON: I am in the hands of the committee, but I am in the very trying position of endeavouring to give a statement with regard to the Doukhobors—

Mr. COLDWELL: That is a strange question from the hon. member for Broadview (Mr. Church).

Mr. THORSON: Yes, I think it is; and when I try to make that statement five or six other members wish information. I should like to be able to answer all at once, but I am afraid I cannot do so. I will therefore continue answering the questions put to me by the hon. member for Weyburn (Mr. Douglas) with whom the hon. member for Yale (Mr. Stirling) has now united forces, because we have reached British Columbia where a painful situation exists with regard to the Doukhobors, particularly that sect of Doukhobors called Sons of Freedom. I admitted last year that I did not know what to do with the Sons of Freedom, and I do not know any more to-day what to do with that painful sect.

Mr. GREEN: They are a small group of the Doukhobors of British Columbia. Are the others in the same category as far as service is concerned?

Mr. THORSON: There is a difference between the Sons of Freedom and other Doukhobors.

Mr. GREEN: Some are bad and others are worse.

Mr. THORSON: There may be more truth than fiction in what the hon. member says.

Mr. STIRLING: Perhaps the hon. member for Vancouver South (Mr. Green) will inform the committee how many Sons of Freedom there are.

Mr. GREEN: There are quite a number.

Mr. THORSON: Nobody knows. It was suggested that we should intern them all. I do not think that would be a solution. An attitude of that kind was adopted once before by the previous administration in 1932. They took all these Sons of Freedom, wives and children, lock, stock and barrel to an island in the Pacific, but they could not do anything with them and brought them all back.

Mr. MacNICOL: They were free all right.

Mr. THORSON: They were freed, and I must confess that I do not know what to do with the Sons of Freedom. I do not think anybody else knows what to do with them.

Mr. STIRLING: The minister should admit that for a good many years after the Piers island experiment there was peace and quietude in that part of British Columbia from which they came.

Mr. THORSON: After they came back or while they were away?

Mr. STIRLING: After they came back.

Mr. THORSON: I wish I could tell members of the committee some of the difficulties we have had with these Sons of Freedom.

Mr. GREEN: Go ahead.

Mr. THORSON: No. I quite agree with the hon. member for Yale that I must not do so.

Mr. CASSELMAN: The Prime Minister once had a solution.

Mr. THORSON: Yes, he proposed to call in the hon. member for Kootenay West.

Mr. STIRLING: No. He was going to call in the right hon. gentleman who used to sit here.

[Mr. Thorson.]

Mr. THORSON: Yes, and if that did not settle the question, then he would call in the hon. member for Kootenay West. With regard to the other Doukhobors in British Columbia I do not believe the situation is hopeless. I think we shall make a good deal of progress in the matter of alternative service with these Doukhobors in the light of the favourable experience we have had in connection with road construction in Saskatchewan.

Mr. COLDWELL: Are any educational facilities provided? If so, would it not be possible to get some young teachers from Doukhobor homes and families to do work among them in British Columbia? As a matter of fact, the university-educated young Doukhobor in Saskatchewan had a considerable influence on the Doukhobor community in that province.

Mr. THORSON: That might be true with regard to Doukhobors in British Columbia who are not Sons of Freedom, but the Sons of Freedom will not go to school or do anything. If they would content themselves with being passive resisters, it would not be too bad, but they are militant passive resisters and will not have any schools. They will not do anything.

Mr. GREEN: They would burn down a schoolhouse.

Mr. THORSON: May I assure hon. members from British Columbia that I will not send any Sons of Freedom to assist in forest fire prevention in that province.

Mr. GREEN: Have any British Columbia Doukhobors been taken into service?

Mr. THORSON: I do not think so.

Mr. GREEN: Sons of Freedom or sons of anything else?

Mr. THORSON: I do not think so, yet. There is the situation. I think we shall have some success with the Doukhobors, other than Sons of Freedom, this year, in the light of the reasonably favourable experience we had with the Doukhobors in Saskatchewan last year after the outset of this scheme.

Mr. ESLING: Would the minister permit me to correct one statement. We look upon the original Doukhobors who came to Canada as making up many of the Sons of Freedom. Those to whom I refer are good, strong, healthy young men of training age. The minister must admit the humiliating situation of having these young men, when assigned to other service such as road building, simply say to the government, "We are not going into training or to do any other service; what are you going to do about it?" That is the situation.

Mr. THORSON: Yes; I agree.

Mr. ESLING: It is unfortunate, and it does not develop any spirit of enthusiasm among the young men who are asked to enlist in the various branches of the service.

Mr. CHURCH: I gladly gave way a few minutes ago so that the hon. member for Kootenay West might ask a question. Half an hour has now expired. When the National Resources Mobilization Act came in, I opposed the last clause, namely that the government should have power to make rules and regulations. I opposed that because, with the exemptions and rules, I knew what was going to happen, that the act would be simply a political football, and the results have so shown. Are we here to get a total war or not? That is the question which the people of this country want answered. A great deal of the time spent here could have been more profitably spent. There is no reason why we should have this antiquated system of rising to ask questions about one thing and another. We should have the British system under which we could ask all these questions on the orders of the day, and the minister would save his time and the time of the house.

Two years ago I brought up this matter of conscientious objectors. I was at it for three months and nothing was done because it turned out that under the rules and regulations, which have the force of statutes, it would take a long time to act. The conscientious objectors have votes, and they are a class of voters that get what they want if they go after it.

Mr. THORSON: They have no votes in British Columbia.

Mr. CHURCH: I belong to the Church of England which in one of the thirty-nine articles says that "it shall be lawful for Christian men at the command of the magistrate to bear arms and serve in wars." That made the mother country the great country it is to-day. Under these rules and regulations we are taking a different system, with the exemptions proposed by the government, and the department created for that purpose. How does it come about that we have a different system? We have the enemy at the door on our eastern coast; we have lost the command of the sea at the other door; we do not know where we are to-day. As far as all this talk about exemptions and boards set up to exempt farmers and others, amending the rules and regulations, and difficulty in getting orders in council acted on, is concerned, if Hitler comes here there will be no such things as boards, judge advocates and all that to further postponements. It seems to me that this department is nothing but an omnibus department. It gets out a lot of picture and information books after the fashion of Christmas time; it is largely in fact a Santa Claus department handing out information books, picture books and other gifts here and there, with the result that the war, instead of being primary, is the last thing thought about and is secondary to a lot of rules and regulations. There is a great deal of political undercurrent in this and other debates. I have seen it ever since the war started. When a debate opens, matters are raised which are not related to the war at all, and are secondary.

I have as much respect for and have had as much to do with farmers perhaps as any man in this house. I see their difficulties, and with two wars and a depression in between, I sympathize with them as much as any man in this house. But with this world war on which may engulf all the dominions, with the enemy now at the front door of three dominions, Australia, New Zealand and South Africa, and at our own door, we should not be spending our time in discussing such matters as this, and rules and orders in council to exempt farm labour. I sympathize with the minister in having taken over such a department, but he is attempting the impossible. With the rules and regulations and exemptions it is utterly impossible for him to do his duty to the army. With few exceptions the navy and the air force have no difficulty about farmers' sons; they are just running there trying to get in.

On May 6, an answer was given to a question asked by the hon. member for Battle River and answered as follows.

Military Service—Applications for Postponement of Training

Mr. Fair:

1. How many men have been called up for training under the National Resources Mobilization Act in each of the provinces?

2. How many applications for postponement of training have been made in each province?

3. How many applications have been granted in each province?

Mr. Thorson:

Provinces	1 Number of men called up for Military training under the National Resources Mobilization Act in each of the provinces, and accepted at National Defence (Army) basic training centres, since October 9, 1940, up to March 12, 1942	2 Number of applications for postponement of military training that have been made in each province, since October 9, 1940, up to March 12, 1942	3 Number of applications for postponement of military training that have been granted in each province, since October 9, 1940, up to March 12, 1942
P.E.I.	1,013	549	463
Nova Scotia	4,718	3,010	2,019
New Brunswick	4,567	2,315	1,802
Quebec	38,433	37,163	22,174
Ontario	37,252	19,800	15,953
Manitoba	8,331	3,231	2,442
Saskatchewan	9,424	2,874	1,803
Alberta	9,024	2,534	2,334
British Columbia	7,543	4,443	4,056
Totals	120,305	75,919	53,046

There is the answer to the call from the farms. Further, we have to look for cause and effect in the supply to agriculture. In the United States to-day there is a carryover of 600,000,000 bushels of wheat; it is a drug on the market. At the end of September they are going to have another 600,000,000 bushels, the crop of 1942, as well, with no place to put it and no market for it. In this country the estimate I see is about 400,000,000 bushels for this year's crop. Men are wanted in the army more than on the farm if we are to beat Hitler. The call is urgent. I know that in the Toronto district many farmers' sons and daughters are going to the city to work in the munitions plants. The school boards have taken the matter up; about one-third to one-quarter of the high school population is going to the farms to help agriculture, and a great many from the public schools. In the mother country the women are working on the farms and doing a large proportion of the farm work. Are we going to let the women do the fighting at the front for the men of this country? That is one of the issues I see. Are the women going to get in the front ranks and do the fighting while the men stay at home? I say no. In 1812 the farmers fought at Queenston, and the same in the great war. Large numbers of farmers' sons in Ontario in the last war did not want to be exempt; many of them went to the front voluntarily. and I believe that if the voluntary system had been supported and modern methods adopted, we would not have had all this trouble. We could have had a million men under the voluntary system, with the money that has been spent by this department. It is one of the most mischievous departments we have ever had in war or peace. I do not blame the present minister for that; he has not been master all the time, but it has been so from the start. It was never intended to be anything but a political department for the benefit of certain sections of the country as against others. Here we have the granting of exemptions to conscientious objectors, all kinds of farm exemptions, munitions workers, divinity students and so on; we have boards set up, and all the rest of it. Well when Hitler comes here he will end all this very quickly; and he is not far away at the present time, if we are to believe what we are told. We face the possibility of all this.

I appeal to the minister: let us put some common sense into this system and these rules and regulations. In the first place, an act like this should have been construed strictly for all the people of Canada. The conscription act of the government which was in power during the first great war was construed in a definite, clear way. This act is not. This act has rules and regulations off it, loopholes, exemptions and all the rest of it. We have boards set up headed by judges, so that one would think one was in a court of

law, and now they are advocating that applicants for exemption should have the assistance of a lawyer, and that there be a judge advocate for the board to aid him to get off service. There are no lawyers in Germany getting exemptions for people; the firing squad takes care of that. I have just as much sympathy as any man in the house for the people of the prairie provinces, who have had to go through two wars and a depression. They deserve a great deal of sympathy, but with the enemy at the gate what are we going to do about it?

We have a lottery system in connection with the calling up of recruits. Surely that was never intended under the act or to have such rules and regulations off it. Lotteries are illegal under the criminal code; yet under some of the provisions of this act numbers are put into a hat and drawn to determine who shall be called up. Such a farce! No wonder there is dissension in the securing of recruits, and favouritism. I have spoken to a number of soldiers, and they complain that some men are allowed to come home to the farm while others are not. City men must stay. Only last Saturday one young soldier told me that one man in his unit, who had a brother and sister working in a munitions plant in the city, was going to get an exemption in order to go home and work on the farm. The Grenadiers, the Queen's Own and the other regiments crossed lake Superior in the dead of winter, with the weather 46 degrees below zero, to save the prairie country, and Canada from being dislocated, and they never had any such system as this. They were volunteers. I believe the first duty of a citizen is to defend the realm.

I do not like to bring other matters into this discussion but this is the only chance we have. I am not to blame for the system. The minister's department relates to the war, the mobilization of troops, exemptions, conscientious objectors, farm workers, and others. It also has a large publicity branch known as the information bureau which beclouds the issue. That is about the only humour I have heard since the minister took office, calling it an information bureau. This information bureau is a misinformation bureau; at least I can get no information from it and a lot of such information as is given is not correct. All it does is send out tons of literature. I think a building the size of the Toronto armouries would be required to store all the paper that is wasted by this department. The press are complaining; a great many of the editors have said they consign this literature to the waste-paper basket. This department is costing the country a huge amount of money. For instance, at a time like this, they put out a booklet of all racial origins in Canada and dealing with farmers in the war, entitled "Canadians All" by a gentleman named Doctor Watson Kirkconnell, M.A., Ph.D. I do not know what he is doctor of, music or literature or what, but I think he is a doctor of philosophy. He is a philosopher, if you please. Well, we have had a great deal of philosophy in connection with this act, and Hitler has a philosophy of his own. This booklet—260,000 copies—has been circulated all through Canada and England, and has greatly hurt this country there. It seems that everything must have stamped on it, "Issued by authority of the Honourable J. T. Thorson, Minister of National War Services," and all that sort of thing. It must be remembered that any money required for this department comes out of the estimates or out of this $2,000,000,000 resolution. Separatism is rampant; one would almost think we did not belong to the British empire.

I have here another booklet, in which they quote a celebrated gentleman, Mr. L. W. Brockington, official recorder of Canada's war effort. He told the people of England and the United States, and it is on the top of another pamphlet of the department:

> King George VI of England did not ask us to declare war for him; we asked King George VI of Canada to declare war for us.

Did you ever hear anything like that in all your life, raising such a separatist status issue with the war on, after we in this house had agreed to put aside all party politics for the duration of the war and some time after, and to think of nothing but the war? Is it any wonder the business men are wondering about the awful cost of this sort of thing? To return to Doctor Kirkconnell's booklet, what does this gentleman say about the Japanese? I will read just one sentence, at page 25:

> In Canada, especially on the west coast, we have 23,000 Japanese . . . Our Japanese show a lower crime rate (1931 census) than any other group in Canada.

That is a deliberate misstatement of fact, and I challenge it right now. This book is issued for one purpose, as I see it: political propaganda, and the glorification of the foreign-born in this country at the expense of the British-born, for disunity. I agree that the foreign-born make fine citizens, but I object to any publication being issued to set class against class, those of one racial origin against others, something which no decent citizen would do in this country, and it is mischievous, when war is on, to suggest all this in book form and raise the question. That cry is raised on every page of the booklet. Then the author goes on to refer to some people

whom I consider friends. I have not very many of them in my constituency, but I have known a great many during the course of my experience, and I have found them to be splendid, loyal citizens. I refer to the Jewish citizens of Canada. The information given about them in this booklet is not correct. Some time ago the Minister of National Defence laid on the table the figures in connection with recruiting, and according to those figures this class of the community had about 0·51 per cent of the population in the army. But this is the statement which appears at page 39 of this booklet:

> However, the people of Canada will not lend their aid to this particular activity of enemy agents, because the evidence is all around us to prove overwhelmingly that our Jews in Canada are conscientious, industrious and loyal citizens.

Of course they are; who has suggested otherwise in war time but the author? With our soldiers getting $1.30 a day to fight the Germans, they do not need this gentleman, who never was in the army overseas, who received $16,000 of the money of the people, to publish an unneeded book like this in war time. Almost all our foreign-born people have made good citizens, and they do not need any boosting like this. It is done for political propaganda. They are welcome in this country. We are glad to have the various classes he names. They are among some of our finest citizens. They are hard working, and we owe a great deal to them for what they have done in the exploration, settlement and development of this country. The author of this booklet goes on, as I see it, to insult the British-born and the members of the Canadian army of British origin. He says:

> While the percentage of male Canadians of all origins, twenty-one years of age and over, who served in the C.E.F., was 31·02, the figure for Canada's Jews stands distinctly higher, at 37·81 per cent.

Another misstatement of fact. I do not know whether the present minister was in the government when this book was started; I do not think he was The book was a mistake. It continues:

> While, moreover, only 3·38 per cent of all Canadians in the C.E.F. received declarations for bravery and distinguished conduct, 4·52 per cent of the Canadian Jews in the C.E.F. won such declarations.

Then, he is criticizing the situation in Great Britain. Enlistments, according to the figures of the Minister of National Defence were ·051 per cent, and those figures are not correct. So much for that book. I fail to see why the people of Canada pay for it.

Not being satisfied with that, this same gentleman appeared at a meeting of the Royal Canadian Institute held in Convocation hall at the university of Toronto in December, 1941, and said:

> "Canada is no longer an Anglo-Saxon country in terms of national origin, and there is little likelihood that any large-scale immigration from the British isles will take place after this war is over," Professor Watson Kirkconnell told the Royal Canadian Institute in Convocation hall on Saturday night.

That statement has done untold injury in the old country. I have seen it in newspapers from the old land, and they are wondering what is the matter with Canadians, who are putting up with all these conscientious objectors, and publishing books like this in war time.

In my opinion this particular department is attempting to do the impossible. I believe in what Wordsworth said of Milton of the time of the Napoleonic wars. It is reported that Wordsworth said, "Milton, thou shouldst be living at this hour; England hath need of thee." I would substitute for that, "Gilbert and Sullivan, thou shouldst be living at this hour; Canada hath need of thee to describe what is going on in all this playing at war and with all these picture books, with the difficulty of getting men into uniform, and all that kind of thing." No wonder recruiting lagged, on again, off again, on again!

I ask: Where is the treasury board when all this is going on? We have a treasury board, and if the treasury board is not meeting I understand the minister now has power to take action and spend money anyway like water. The dead-hand of the treasury is on this department—because that is all it is, a dead-hand. They can spend money like water; they are spending all kinds of money like water; a mint of money is wasted, and yet all this kind of thing is going on in this department.

They are not satisfied with one thing. No; they have got out a proclamation in connection with the anniversary each September of the declaration of war, to come again on September 10. I do not even see the king's name in it, in connection with the proclamation. Here is a celebration of an anniversary of the war, and the king's name is not in it. More separatism. We all know that the war started the day Great Britain declared war, because when Britain is at war, so is Canada.

Mr. THORSON: It started the day Canada declared war.

Mr. CHURCH: When Hitler and his axis ships approached the *Athenia* he did not say, "Oh, you have not declared war, yet." Hitler did not pay any attention to our proclamations; he just sank the *Athenia,* with 130 Canadians on board.

I do not wish to be unfair to the minister, and I will say that I believe he is conscientious, hardworking and did not initiate this legislation. I do not know him as well as some do, but I believe he is trying to do his duty. But he is trying to do it under impossible conditions and an impossible system.

There is another gentleman in the department, the director-general, Mr. Lash, who is giving talks over the radio. One can scarcely turn on his radio without hearing this gentleman who is supposed to be the director. I asked a question on May 6 as to who authorized these Santa-Claus books, and under whose instruction this particular book was written. The answer was that it was written under the instructions of the director of public information. It is the work of the director and all his regiment of hussars. One cannot turn on the radio at night without hearing them. I shut off my radio, because I do not wish to listen to those people talk and give wrong information about Ontario recruiting. What has he been doing?— spreading seeds of disunity between Ontario and Quebec by his talks. He has given figures on active recruiting. I will say to him the figure was given last week in the above return showing that of 38,000, there were 37,000 who applied for exemption from one province. Those are the figures, whether he likes them or not.

No wonder people are groaning under heavy taxation. They wonder where the trouble is, but we allow these expenditures to go on in this manner.

Mr. DOUGLAS (Weyburn): To-night the minister challenged a statement I made, and on a question of privilege I should like to draw his attention to—

The CHAIRMAN: Just speak to your question of privilege.

Mr. DOUGLAS (Weyburn): The minister challenged a statement I made earlier, and I suggest I should be given an opportunity of placing the facts before the minister, before the committee rises.

The CHAIRMAN: That is not a question of privilege. A question of fact stated by an hon. member can be challenged by any other hon. member. If it were a personal statement made by an hon. member, or if words had been incorrectly stated, there would be a question of privilege. But there is no privilege in challenging the accuracy of certain facts which have been stated. They can be challenged. There is nothing personally affecting the hon. member when he challenges facts.

Mr. DOUGLAS (Weyburn): The accuracy of the statement was challenged, and I merely wished to check up on it.

The CHAIRMAN: I promised to recognize the hon. member for Témiscouata.

Mr. POULIOT: One point in these regulations that I cannot understand is this, that the man who is usefully engaged as a farmer may be refused an exemption, while the parasite who says he is a conscientious objector may enjoy exemption. That seems unfair. On the one hand we have a good farmer who brings his case to the board. The board says, "No; we can do nothing." And there is no power in the minister or in the government to change the decision of the board, except by abolishing that body. On the other hand there is the fellow who is always in a poolroom, and who does not work. He is a parasite, and says he is a conscientious objector. That fellow will not go to work.

It is said that in 1873, in the days of Sir John A. Macdonald and, later on, at the time of Sir Wilfrid Laurier, some concessions were made to the Doukhobors and the Mennonites. This, again, I cannot understand. I remember on one occasion, when a former Liberal government was in office, I asked a minister why the government did not remove the exemption from tax-free bonds in 1922, as soon as they took office. He told me that they thought they had to respect a contract. Well, I find it immoral in war time to grant an exemption to Mennonites and Doukhobors, on account of some silly enactment made in the past.

It is a defiance of the people of the land to grant exemptions to these conscientious objectors. There are people who should not be given these exemptions and yet who enjoy them by virtue of the regulations and by virtue of the law. However, these regulations are no worse in that respect than was the Militia Act and the Borden conscription act of 1917. The minister will always have this matter brought up every time the farmers are dissatisfied.

The hon. member for Broadview (Mr. Church) referred to the information bureau. Everyone knows my views about that. I suggested that it be reformed by abolishing it. The hon. member for Broadview gave the Toronto viewpoint, and I shall give the viewpoint of the province of Quebec. The French director is a fascist and a neurasthenic and he is not qualified to be on the bureau. His stuff is silly; his letters are absolutely silly; it is all a waste of paper. I have complained about getting no information from this bureau. We did get some data from the Department of Munitions and Supply, but there was always something lacking. We were given the names and the amounts of money that

were spent, but we were never told the quantity of goods furnished and therefore it was an impossibility to know the cost. Moreover, it was given to us in such a way that a member of parliament would need ten secretaries and ten adding machines to know how much the packers were paid in a month or something like that. It was impossible to get any real information; it was simply a list of names and the disbursements of money—the quantities were never shown. It was so bad that the mayor of Ottawa complained about it and suggested it was useless. Now that we do not have anything, we are just as well off as we were when we had those figures.

All we get from the information bureau is data about rubber and gas and oil. It is simply a detective novel published in instalments. We hear something about Mr. Cottrelle and Mr. Berkinshaw; it is simply a clearing house of matters regarding the Department of Munitions and Supply. Sometimes the literature that comes out of this office is provocative and the minister may have trouble with the people because of it. So I join with the hon. member for Broadview in asking the minister to abolish this department.

I think the minister should define the phrase "ordinarily resident". Outside of the provisions that relate to Doukhobors, Mennonites and conscientious objectors I cannot say, as does the hon. member for Broadview, that this is political legislation. I believe that under the present minister the regulations will serve the purpose for which they were drafted. What the minister needs is cooperation from the boards. He must be the guiding star of the boards. Simply because they have the right to make final decisions is no justification for their acting in contravention of the spirit of the law. The minister is the lawmaker, and when he gives an interpretation of the regulations, that interpretation should be followed. When the boards do not do that, the only recourse is to change them.

I do not complain about all cases, but there are some in which decisions were given without sufficient consideration to satisfy public opinion. I hope the minister will take action. He is the boss of his department and he does not need advice from any of his colleagues regarding the operation of the regulations. Members of parliament know more about the operation of the regulations in their own constituencies than do any of the ministers except the minister in charge of this department. When members of parliament make representations that are in the public interest I hope the minister will consider them as such. I have great admiration for him and he knows it. I want his support so that we shall have the least possible trouble in that regard.

Sometimes we have to fight to get men into the army when they want to join, but when a man is indispensable on a farm it is the duty of the board to keep him there until conditions change. This is the interpretation of the law that is expected by all. I want the minister to take what I have said in the spirit in which I have said it. My only desire is to have everything in his department run as smoothly as possible, to see that justice is given to all. When I know of some unfairness or injustice I cannot do otherwise than ask the minister to help me to redress the wrong.

Mr. THORSON: I would say to the hon. member for Témiscouata that I have noted his request for a definition of the phrase "ordinarily resident in Canada." That will cease to have anything but an academic interest in view of the announced policy of the government that the regulations will be made to apply to all residents of Canada, whether British subjects or otherwise. The Prime Minister made that announcement of policy, and it is merely a matter of working out the intricate arrangements that are involved.

The hon. member for Pontiac (Mr. McDonald) raised a question with regard to the notice relating to medical examination and stated that in certain cases the person receiving the notice was not told of his right to apply for postponement. My information is that along with the notice of medical examination goes a set of instructions and that those instructions definitely indicate to the person who receives the notice what he has to do and what are his rights. In order that it may be a matter of record in the same *Hansard* in which is reported the remarks of the hon. member for Pontiac, I should like to put these instructions on *Hansard*. They are very brief. With the leave of the committee I shall do so. The instructions are as follows:

Department of National War Services
Instructions

Upon receiving the enclosed "notice—medical examination" you will proceed, within three clear days, to any duly licensed doctor in your village, town or city, or at the nearest point to you. Show the doctor your "notice—medical examination" and be sure to sign the "medical examination and certificate" form used by the doctor who will examine you. You are reminded that you must proceed to the doctor at your own expense and that the department

will not pay any transportation in connection with your medical examination, but the department will pay the examining physician for examining you. Any question which you may wish to take up should be taken up in a letter addressed to your divisional registrar. His address appears in the upper left hand portion of the "notice—medical examination". You are also reminded that you must notify your divisional registrar immediately if you are a student at some university or college, or a member of the navy, the army or the air force, or of a non-permanent active militia unit. Should you have reason to make application for the postponement of your period of military training, do it right now to your divisional registrar. Your divisional registrar will not receive any application for postponement after eight clear days of the date appearing on the enclosed "notice—medical examination". If you are notified to report for military training you will receive a transport warrant covering only the distance from your stated place of residence to the training centre to which you will be notified to report. The department will pay no other transportation. By following the above instructions you will be serving your best interests.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, May 19, 1942

The house met at three o'clock.

SHIPPING LOSSES

REQUEST FOR SECRET SITTING—STATEMENT OF MR. ROY

Mr. J. S. ROY (Gaspé): On a question of privilege, in his answer to an interpolation of the hon. member for Témiscouata (Mr. Pouliot) yesterday in respect of my request for a secret sitting, the Prime Minister (Mr. Mackenzie King) said this—I quote from *Hansard* at page 2500:

> The reply made to the hon. member for Gaspe last week was that he should give the information which he had to the minister of the department concerned, and if the minister thought the information to be of a kind which rendered a secret sitting advisable it would be so arranged by the government. I am advised that the information conveyed to the minister, in his opinion and the opinion of the cabinet —I can speak for the cabinet because I was present at the discussion—does not warrant the calling of a secret sitting.
>
> As to my hon. friend's suggestion that we should have secret sessions at stated times, I think the public would be inclined to take the view that so far as sittings can be open they should be open, and that the government should resort to secret sittings only where there appears to be the strongest of reasons.

What I said in my statement of last Friday was this—I quote from *Hansard* at page 2470:

> In view of the close proximity of the coast where enemy submarines are now operating, and by reason of particulars I possess and desire to share with the house, but which it would not be wise to disclose publicly, I would ask the government as the representative of the constituency in the vicinity of which these enemy submarine activities are taking place that an immediate secret session of the house be held to consider these most important war developments which are taking place as far as 300 miles within our Atlantic border. These events are of such gravity that it seems to me that the people's representatives should be made aware of all details concerning the attacks and be given an opportunity to take part in deliberations on the means to protect our threatened country.

My request of Friday last for a secret sitting of the house was not based upon the necessity of having such a means of conveying my information to the Department of National Defence, but rather to the house, as I very clearly stated, to permit members of parliament to discharge their duties towards our endangered country. I am prepared to present to hon. members of this house the information which I possess and which I deeply feel should be shared by all members in order that they may truly understand at least some of the perils to which our country is exposed at the present time. In my opinion it would be wiser to discuss that very important matter in secret, and there are more than sufficiently strong reasons, as stated by the Prime Minister, when our country is being attacked as it is, for members to be given an opportunity to look after the greatest interest of all in the protection of the whole country—

Some hon. MEMBERS: Order.

Mr. ROY: Just a few more words and I shall have finished.

Mr. SPEAKER: I have allowed the hon. member to proceed with his statement but he has really gone farther than he could reasonably go on a question of privilege. However, he may continue and conclude what he has to say.

Mr. ROY: Thank you, Mr. Speaker, I hope that the Prime Minister will see that due consideration is given to the request for granting a secret session as soon as possible.

DEFENCE OF CANADA REGULATIONS

DETENTION OF JAPANESE NATIONALS ON RECOMMENDATION OF SECURITY COMMISSION

On the orders of the day:

Hon. L. S. St. LAURENT (Minister of Justice): I lay on the table of the house report pursuant to paragraph 3, regulation 21, defence of Canada regulations. This report

shows, first that the number of persons detained under orders made pursuant to the above regulation from April 21 to May 18 inclusive is 202, all persons of the Japanese race, detained on recommendation of the British Columbia security commission. It also shows that there were no cases in which the Minister of Justice refused to accept a recommendation made by an advisory committee.

GASOLINE

REDUCTION IN VALUE OF RATION COUPONS IN MARITIME PROVINCES

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): In reply to a question asked yesterday by the hon. member for Royal (Mr. Brooks) and other questions asked privately by the hon. senior member for Halifax (Mr. Isnor) I should like to make a brief statement as to the position of our gasoline and oil supplies in the maritime provinces.

Under normal conditions, refineries in the maritimes receive their crude oil by tanker ship from south America. Over a period of months I have had occasion to discuss the increasing gravity of the transportation problem with respect to crude oil. I sometimes fear that my warnings have gone unheeded, for now that we are faced with an acute situation in the maritimes, there is some surprise and considerable indignation that this should be so. The sinking of tanker ships by enemy submarines has greatly reduced the amount of crude that can be delivered to maritime refineries. At the same time there has been a great increase in the requirements of the armed services, particularly the navy, which is using large amounts of fuel oil. To meet this situation, we have had to change refinery runs from automobile gasoline to heavy fuel oils. Since the first of February last we have been able to refine very little automobile gasoline in the maritime provinces. In recent weeks the loss of tankers became so severe that shipping on the Atlantic coast was tied up for a period of ten days. This further aggravated the supply position. For some weeks now, we have been supplementing the supply of fuel oil that is available from maritime refineries by shipments in tank cars and tanker ships from Sarnia, Toronto and Montreal. At the present time we have all the tank cars that can be mobilized engaged in this service.

When the rationing system was established we deliberately fixed on a unit that would permit variation in the amount of gasoline that could be purchased. We did this because we expected that the amount of gasoline available for civilian use would vary from time to time. The reduction of the content of the unit from five gallons to two gallons in the maritimes was not an arbitrary move but is based on the amount of gasoline that is available in those provinces for sale to the ordinary user. If we had left the unit at five gallons, we should have had a situation where those who reached the gasoline station first would have obtained their supplies and the balance of the population would have gone without gasoline. The suggestion has been made by the premiers of Nova Scotia and New Brunswick that the amount of the unit should be reduced in the whole of Canada. I do not see what useful purpose would be served by this as there would be no way of transporting to the maritimes the surplus gasoline which would be available in other parts of the country. All the tank car and tanker ship capacity that can be mobilized is now carrying fuel oil to the maritimes for the navy and the merchant marine. Undoubtedly the reduction in the unit will work much inconvenience and hardship. I do not see what alternative there is to this if we are to meet the needs of the armed services. I am sure that when the facts of the situation are known, the people of the maritime provinces will accept this privation with their customary good spirit and patriotism.

With regard to curtailment in other parts of Canada I may say that the situation in Canada is exactly parallel with the situation in United States. There the area along the northern portion of the eastern states is very severely rationed, whereas all areas of the United States outside of that zone have no rationing in force at this time.

Mr. A. J. BROOKS (Royal): There is a feeling that gasoline is being shipped from the martime provinces to the province of Quebec, and that if we are to have curtailment in the maritimes there should also be curtailment in Quebec, or the gasoline should be left in the maritime provinces.

Mr. HOWE: No gasoline has been shipped from the martime provinces to Quebec to my knowledge. But I may say that in the past five weeks large quantities of gasoline have been shipped from the province of Quebec to the maritime provinces. So that I think my hon. friend should not cast aspersions.

Mr. BROOKS: I want to correct that; I am not casting aspersions. It is not my opinion; I have heard that report. It is the opinion of some people in the maritime provinces.

LABOUR CONDITIONS

EMPLOYMENT OF YOUTHS OF SEVENTEEN IN WAR INDUSTRIES

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): The hon. member for Waterloo South (Mr. Homuth) asked a question yesterday with respect to the employment of young men of seventeen years of age. The answer is that there is nothing in the selective service regulations that prevents a seventeen year old boy from getting work in any non-restricted industry, even without a permit. To enter a restricted occupation he has to get a permit, but permits are granted almost automatically to enter restricted occupations if war work is not available. There is nothing in the regulations, or in the application of the regulations as far as we know, which would keep a seventeen year old boy out of work. If hon. members will bring specific cases to our attention we will undertake to deal with them. Or if they can provide us with specific information as to any selective service officer not carrying out these principles, we shall be glad to investigate.

Mr. HOMUTH: Do I understand the minister to say that they must have a permit to work in a restricted industry?

Mr. MITCHELL: Yes.

Mr. HOMUTH: From whom do they get the permits?

Mr. MITCHELL: They get them from the selective service officers. There is one in the hon. member's district.

VICHY REPRESENTATION

REQUEST FOR STATEMENT AS TO RELATIONS WITH OCCUPIED FRANCE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): The Prime Minister said he hoped to be able to make a statement regarding our relationship with occupied France. Is he prepared to make such a statement now, or may we expect it within a few days?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I might say to my hon. friend and hon. members of the house, first of all that a minister is not accredited to any government; he is accredited to the country to which he goes. In considering the position of the French minister in Canada and the position of Canada's representative to France, who at the present time is the chargé d'affaires of our legation, that circumstance of necessity has had to receive a great deal of very careful consideration. We have had to consider as to whether it would be wise to give to the people of France, 95 per cent of whom I believe are thoroughly opposed to the present administration in France, the impression that this country had found it necessary to sever its relations with France by reason of a particular government being in office there at the moment, which government may be out of office to-morrow or a little later. That is a matter which I am sure my hon. friend and other hon. members will see should be most carefully considered.

The government have had the benefit of an exchange of views with the governments of the United Kingdom and of the United States. We have had here in consultation with the war committee of the cabinet Mr. Dupuy, who has been and is at the present time chargé d'affaires of our legation to France, and Mr. McCarthy, the Canadian minister at Washington, who has had the benefit of sharing in discussions at Washington bearing on the matter. Considering all points of view very carefully the government have thought it inadvisable at the present time to make any immediate change.

There are reasons in addition to those that I have given to the house in this way that are all-important, but which it would be inadvisable to disclose. But I have given a reason which I think hon. members will realize is one of very great significance, particularly where it is most desirable to sustain in every way possible the morale of the French people, as distinguished from any mark of approval of a particular government.

In saying what I have said I should like to emphasize with respect to the present government at Vichy that no one in this country so far as I am aware has other than the strongest of feelings against the present administration in France.

SHIPPING

REPORT AS TO ESTABLISHMENT OF FURTHER SHIPYARD FACILITIES IN NOVA SCOTIA

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): I should like to ask a question of the Minister of Munitions and Supply arising out of an item in the Halifax *Herald* of May 14, in which Premier MacMillan of Nova Scotia makes the announcement—I shall not read it all because it is quite lengthy—that he had been in conference in Montreal with Mr. H. R. MacMillan, head of Wartime Merchant Shipping Limited, and that Mr. H. R. MacMillan had intimated to him that there was a possi-

bility of the establishment of another shipyard in the province of Nova Scotia. Since that item appeared in the press I have received many letters inquiring where the yard would be located. Has the minister any knowledge of this matter, and is it the prerogative of Mr. H. R. MacMillan to make announcements of this kind on behalf of the department?

Hon. C. D. HOWE (Minister of Munitions and Supply): I have no knowledge whatever of the conversation referred to. I think I am the one who is entitled to make announcements for the department, and I have not authorized anyone else to do so.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, May 18, consideration in committee of a resolution to provide sums not exceeding $2,000,000,000 for the year ending March 31, 1943, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

MUNITIONS AND SUPPLY

Mr. JOHNSTON (Bow River): The Minister of Munitions and Supply has just drawn to the attention of the house a certain aspect of the gasoline situation, and in his remarks he referred to the situation in the United States, which I think needs commenting upon. The minister's remark was to the effect that the gasoline situation in Nova Scotia and the maritime provinces was about the same as in northern New England. I have here an item taken from the Ottawa *Journal* of May 15, 1942, being a dispatch from Washington, dated May 14, as follows:

Senator Sheridan Downey (Dem.-Calif.), asserting the United States is "approaching a desperate condition on gasoline and rubber," told the Senate to-day that all tankers normally plying between Gulf of Mexico and Atlantic ports had been ordered into harbours.

Downey did not say what was the source of his information and there was no confirmation from the navy that tanker movements along the east coast had been halted.

Axis submarines apparently have made tankers a primary objective of their campaign.

In peace time, tankers transported about 95 per cent of the east's oil requirements.

I think it is important to realize that the oil situation is becoming desperately acute, and unless we give a great deal of attention to the gasoline and oil supplies of this country I greatly fear that conditions will become much worse than they are at present. I remember speaking at some length on this question of oil production away back on March 14, 1941, when I pointed out that the oil situation at that time was very dangerous. I said that the oil supplies in the far east, in the Persian fields, in Iraq and Iran, were in great jeopardy, and that it was not beyond the realm of imagination that we should lose those oil fields, and the oil fields of Burma as well. I made that statement as early as 1939, and it seems now that I was right, in part at least. The situation is extremely grave, because both the British fleet and the United States fleet may become desperately in need of oil supplies, and we are not in a position to assist them. It is a shame that we are not in a better position than we are in to-day as regards gasoline and oil, because the facts were quite clear to all of us when the war first broke out. I pointed out then that consideration should be given to building a pipeline from, say, Turner Valley to the head of the lakes, and from Alberta to the Pacific coast. We had the materials and the labour then, and had that been done our present transportation problem would not be nearly as serious as it has been stated by the minister to be. A tremendous amount of gasoline is being used, and the situation is such that I think even to-day the whole field should be reviewed with a view to taking drastic measures to build up oil resources. I have an extract here from a Fort Erie paper, in its issue of January 8, 1942, which I think would be of interest to hon. members. It is headed "Gasoline a Vital Necessity," and reads:

Although recognized in a general way, the vital importance of gasoline supplies in modern mechanized warfare is better realized when figures of consumption are taken into account.

Army cooking for each 9,000 men involves the use of gasoline stoves which burn up 720 gallons of fuel a day. An army of 1,000,000 men would need some 80,000 gallons daily for cooking purposes alone.

Big tanks—such as the 12-ton models—consume a gallon per mile. For every mile traversed, a mechanized brigade uses 100 gallons for its 112 small tanks plus 615 other motor vehicles.

Planes, especially when in combat action, are huge consumers of gasoline. One with a single motor might operate under cruising conditions for an hour on 45 gallons; but it will eat up more than twice that much while in actual combat.

A big bomber consumes as much as 240 gallons in a single hour when flying at top speed. A five-hour raid by 600 bombers would use up 720,000 gallons.

In a single hour 500,000 gallons would be burned by a modern air armada, consisting of 2,400 bombers and 1,600 fighter planes.

Available supplies of petroleum may yet prove to be a deciding factor in this war; for, if it lasts long enough, the side which exhausts its supply first will be compelled, automatically, to acknowledge defeat.

That was written on January 8, 1942. The last paragraph of it points out quite clearly that the "available supplies of petroleum may yet prove to be a deciding factor in this war." I think when that article is read by all the members, and they realize the tremendous amount of gasoline that is being consumed every day, the importance of new production will be thoroughly impressed upon their minds. Gasoline and oil supplies will be the vital factor in this war, because clearly this is a mechanized war, and one much different from any other we have had. Time is possibly one of the greatest factors contributing to our success.

I remember back in 1940 having asked the question:

What steps are being taken by the government to increase the production of oil in Alberta and other parts of Canada?

This was the answer from the Minister of Mines and Resources:

Mr. Crerar: Production of oil can be increased only by drilling and by finding new oil fields, or the extension of old oil fields. The finding of new fields and the extension of old fields is in a large measure a geological problem, and field parties of the bureau of geology and topography are attacking this problem in the two main producing regions.

There is probably some room for criticism, when the emphasis is laid on the fact that the oil fields could be got only by drilling. I realize that the drilling of holes in the ground is probably much more inexpensive than some other processes by which oil may be obtained. But that was away back in 1940. What increase in production has there been in Canada since then? I think there has been a very small amount of actual increase in production. There has been a good deal of survey work, but so far as actual increase in production in oil wells is concerned, I think it is rather negligible. Probably there has been a good deal of ground and survey work, but no real practical results have been achieved.

The next question was:

Is anything being done by this government to construct a pipeline from Alberta to the Pacific coast or the head of the great lakes?

The answer was:

Officers of the department have conducted an investigation into the economic feasibility of the pipeline movement of Turner Valley oil to Ontario, and this is now being studied.

I do not think anything has been done on that score. It was under consideration at that time, so the minister pointed out. But again there was procrastination, and nothing has been done. I am sure that if we now had a pipeline from Alberta to the head of the lakes or to the Pacific it would be of great assistance to the Minister of Munitions and Supply. I say that because I imagine oil supplies would be more necessary along our coasts than in the central provinces, because of the proximity to the danger zone.

The next question I asked at that time was:

How much additional survey and exploration work will be carried on in Alberta and other parts of Canada in an earnest endeavour to increase our oil output?

This was the answer:

The increase of effort this year has been made in Alberta and bordering parts of Saskatchewan where the geographical and topographical field parties have been increased from six to seventeen.

While these questions were asked of the minister, and while he said that investigations were being made, so far as actual increase in production is concerned nothing of real importance has developed. The time has come when we have to do something more than merely investigate. If thorough investigation was made at that time the minister should now be in possession of sufficient information to start immediately something worth while in this regard. I can well realize the minister's attitude with respect to the development of further fields, from the point of view of its being more economical to drill wells than, say, to develop the tar sands of Alberta. But I take it the main concern should not be the expense involved, but rather the question: Can we get the production?

I believe I was not far wrong in the statement I made a while ago to the effect that the actual output of production did not increase to any appreciable degree, that it was practically the same. Especially I believe is this true in Alberta. There is an increase of a few thousands of barrels a day. When the war started it was something like 26,000 barrels—the minister will correct me if I am wrong—and it was increased by a few thousand.

I have an article before me which makes comment on that situation. This is taken from the *Monetary Times* of January 3, 1942. Under the heading "Crude Output Stays Constant", it says:

The output of crude petroleum and natural gasoline from Canadian wells maintains a fairly constant average as disclosed in reports covering operations for the months of September and

October, yet at the same time showing a sizeable increase over production one year ago. The Dominion Bureau of Statistics reports the output of crude petroleum and natural gasoline for October last as 871,491 barrels; for September the total was 878,782 barrels.

There is not a great deal of difference there.

In October, 1940, the output of the wells was 817,596.

Again it is practically the same.

Taking the aggregate for the ten months ended October 31 the totals are: for 1941, 8,370,968 barrels; for 1940, 7,086,161 barrels.

Alberta's contribution to this yield was 856.191 barrels of which 844,407 came from the Turner Valley field, 991 from Red Coulee field, 1,302 from Wainwright-Ribstone field and 6,900 from other fields.

As a new source of supply it is recorded that 2,591 barrels of crude oil were extracted from the tar sands of northern Alberta during the month of October.

I believe that statement fairly well bears out what I said. I suggest it reveals that the tar sands present a great potential source of supply. It may be said that production from those sands would involve too much time, and that too great an expenditure would be required to get an appreciable amount of production. But no matter whether that be true or not, if we can increase production, that is the thing we should make every effort to speed up. My information leads me to believe that there is a tremendous amount of fuel oil there.

On February 18, 1942, I raised the following question in the house, as reported at page 686 of *Hansard:*

I should like to ask a question of the Minister of Munitions and Supply. In view of the serious situation in the far east, and the possibility of our losing our far eastern oil supply, what is the government going to do to cause an actual increase in Canadian production of oil?

Hon. C. D. Howe (Minister of Munitions and Supply): Various steps have been taken. The tax structure was revised at the last sitting of the house to encourage drilling for oil throughout Canada. That revision had a very stimulating effect in the direction indicated. At this time steps are being taken to develop small oil areas for specific uses.

Those negotiations are going on at the present time. I do not know that we have gone further than that. But I can say that we think we are developing considerably the production of oil. I have no suggestions to make to the government to enlarge our operations in that respect.

Mr. Johnston (Bow River): Is anything being done with the tar sands?

Mr. Howe: I have a very exhaustive report on the subject of tar sands, and I should be very glad to let my hon. friend have a copy of it. It indicates, however, that the location of the sands and the possibility of development is too remote to be of any great use in this war.

[Mr. C. E. Johnston.]

The Minister of Munitions and Supply made available to me the report to which he referred. I read it, but I must say I was not very much impressed by the recommendation or the suggestion which would be left to the minister in that regard. The report was confidential, and I have no intention of referring to its terms. However, the fact that there has been considerable production from these tar sands and that the minister knows definitely that oil is there makes it imperative that something should be done, and without dalay. In fact, it should have been done a long time ago. As the minister said:

It indicates, however, that the location of the sands and the possibility of development is too remote to be of any great use in this war.

The minister has possibly changed his views, at least to some extent, since that time, because when he was speaking in the house the other day he had this to say, as reported on page 2478 of *Hansard:*

The position of oil development within Canada has, of course, been changed considerably by the events of recent months. I think most people had looked upon the tar sands of Alberta as a great reserve of oil for some future period when the more easily accessible oil resources would have been exhausted. But to-day we think of that same area as a source of immediate oil production.

I am pleased that the minister has apparently changed his views and now is of the opinion that something should be done immediately with the tar sands in Alberta. He continued:

—provided the problems connected with its development can be solved rapidly and with some degree of certainty.

An intensive study of the tar sands is under way at the present time. That study was organized by my department, and we have interested in it the leading oil engineers of this country, not noly men in the public service and on the staff of the national research council, but also oil engineers from industry. We have interested Consolidated Mining and Smelting, who have had a good deal of experience in meeting mining problems in that area.

I may say that the mining of the sand itself is one of the major problems that has not yet been fully worked out. We have asked all these interests to prepare a report for the government and advise whether a devlopment should be undertaken at this time and the extent of development which the conditions would warrant, whether we should proceed with a pilot plant or whether the situation is such that we can immediately develop on a considerable scale. I am expecting the report shortly, and appropriate action will be taken.

There are two suggestions there which I think are worth mentioning. The minister

has in mind the possibility of starting a pilot plant. I believe the plant already there has been doing good work in that regard, but the minister may have in mind the starting of a government pilot plant. Surely the work which the Abasand people have done in that area should be sufficient to indicate definitely to the minister whether or not it would be practicable to start a plant. His views seem to have changed, and it would be a shame if even at this late date the minister should not decide to go in there, even though it was necessary to put up a government plant. I think that idea is quite commendable. It will probably cost a lot of money to establish a plant which can make speedy production of this greatly needed fuel, but the minister would be well advised to continue to keep in mind the possibilities of putting up a plant.

There is also the suggestion which I made to the Minister of Mines and Resources (Mr. Crerar), that a pipeline be laid to the Pacific coast, either from Turner Valley or from the tar sands themselves. A military road is now being put through that part of the country, and it might prove to be of great assistance either to bend the road a little so that it would touch the tar sands or to build a feeder road from the tar sands to the main road. Airports are being constructed all through that northern country, and something should be done immediately with these tar sands so that the fuel required for the planes using the airports may be provided by these sands. The time is long past when this development should have taken place. Even though we are three years late in doing it, I hope the minister will see the urgency and the necessity of starting something immediately.

Mr. BLACK (Cumberland): I should like to make one or two inquiries of the minister with respect to the tourist situation in Nova Scotia and with respect to the position of the garages in the maritime provinces. I think I speak for most of the people of Nova Scotia and the maritime provinces when I say that as a war necessity they are willing to submit to any inconvenience and do without gasoline if necessary, but they naturally do not want to be discriminated against as compared with the rest of Canada. During this session we have heard a great deal about parity prices and so on, but there must of necessity be a feeling in the maritime provinces that there is not a parity of sacrifice or inconvenience when they are reduced to two-fifths the quantity of gasoline allowed to the people in other parts of Canada.

The tourist business is very important to the maritime provinces, but as things stand at present this business is practically ruined for the coming season, unless the minister can make an announcement within a reasonable time indicating that the situation has been eased and that gasoline will be available for tourists to enable them to visit Prince Edward Island and Nova Scotia. New Brunswick is also affected, but not to the same extent. If the minister cannot do this, he should make a definite declaration as soon as possible that the situation will not improve, I am sure the people interested in the tourist business will submit and make their plans accordingly.

The next appeal I have to make is with respect to the garages in the maritime provinces. Their car business has been destroyed, their tire business has been restricted almost to the vanishing point, and their gasoline sales amount to hardly anything. I appeal to the minister to extend his programme of "bits and pieces" so that some war business may be assigned to the garages. There is a feeling in these outlying parts of Canada that they are not getting a fair share of the enormous war expenditures such as are being made in central Canada. I suggest to the minister that he assign some senior official or outstanding business man to a study of the requirements of the bits and pieces programme in order to determine what business can be allocated to the garages in the maritime provinces. This would compensate them in part for their regular business destroyed by present war conditions. They have splendid workmen in most of these garages who would very quickly adapt themselves to different processes of manufacturing. I feel, Mr. Chairman, that this is due these people in the maritime provinces who find themselves on the verge of ruination. The Department of Munitions and Supply will receive a gratifying response and get excellent value for any business so placed.

Mr. HOWE: Answering my hon. friend's question about equality of sacrifice, I might emphasize again that it is not a question of levelling out supplies across the country; I wish that could be done. For example, in the United States, Texas, Louisiana, Indiana and Illinois are flooded with gasoline and oil, whereas the eastern seaboard is down to scratching the bottoms of the tanks. That, of course, is a matter of transportation. We might have all the gasoline in the world in the Turner valley and yet be short in the maritimes; in fact, it would probably be much easier in the ordinary course of events to get gasoline from Louisiana than from Alberta.

It is simply a situation which has arisen unexpectedly. Who in this country would have believed that tanks could not ply between Halifax and the gulf of Mexico? Yet for a considerable period of time they did not travel that route; they were all tied up.

We believe that the situation is temporary. In the meantime we are using all the railway equipment that is available to serve that territory. I believe that every tank car that can be mobilized is in service between Sarnia and Montreal and the maritime provinces. The pipeline from Montreal to the seaboard has been closed down completely for a very considerable period. Added to that is the fact that in the maritime provinces are located our most important seaports; the demand there is heavy for the navy and the armoured services, and we are bending every effort of course to protect these needs.

The department has had a great deal of concern for the garages. We appreciate that their situation has been made difficult. I might point out, however, that since the sale of automobiles has stopped the repair business of most garages has risen considerably, and probably it will continue to rise. As cars get older they will require more repairs. But where a garage has some equipment and desires to get into war work, to the exclusion of other work—naturally we cannot mix war work with repairs of automobiles—we have provision under which in most cases something can be done for those establishments.

Mr. MacINNIS: The hon. member for Bow River (Mr. Johnston) discussed the question of oil. I want to discuss for a few minutes the subject of another kind of production.

The united nations at this time are at a stage of the war in which we shall have to put everything we have got into it if a decisive result is to be achieved this year. So far the obstacle to better military results has always been a shortage of materials. We are now reaching the point of attaining a superiority in war equipment, yet most people will agree that equipment remains our great lack. I have in my hand a statement made by Lord Sherwood, Joint Under-Secretary of State for Air, in the House of Lords last January. It is true that that is four months ago, but I believe that what he then said still holds true. Winding up a debate on air defence, the under-secretary said:

> The British authorities believed their defence system to be better than that of the Germans.
>
> "Of course there is the difficulty there always has been about weapons in this country, because we are still a long way behind what you would properly call a real preparation for a war. We are short of weapons but we shall get these weapons."

I believe we have made very material progress, and I do not want the minister to construe anything I say to-day as criticism either of himself or of his department. I have criticized him and it on occasions, but never with relation to his ability, his energy and his capacity to organize and get production under way; I believe those qualities of his are recognized throughout the country.

But there are obstacles to greater production in Canada which only government action can remove. Our industries are not producing to capacity. They have not done so since the war began. As I mentioned in this chamber the other day, there has been much ado about the slowing down of industry by the workers, but I expect to show before I sit down that that has not been a great factor in curtailing production.

I have before me a brochure on steel production in Canada, prepared by the executive director of the steel workers organizing committee, Mr. C. H. Millard. The figures which I am going to give the committee will be based on information contained in this publication.

For the year 1939 our production of steel was 1,384,870 tons, or 68 per cent of capacity. In 1940 there was an increase; our production was 2,012,294 tons, or 85·1 per cent of capacity. In 1941 there was a still further increase, the production being 2,280,000 tons or 93·3 per cent of capacity. The estimated production for 1942 is, I believe, 2,800,000 tons, or 90·7 per cent of estimated capacity. The figures for 1940 and 1941 are taken from a bureau of statistics publication.

Mr. HOWE: As my hon. friend knows, steel comes in various ways. I suppose he means billet steel.

Mr. MacINNIS: I imagine this is the steel in its raw state.

Mr. HOWE: Forged billets.

Mr. MacINNIS: Yes.

Mr. HOWE: Because the pig iron figures are somewhat larger.

Mr. MacINNIS: Yes. At this rate of production, in 1940 we produced some 375,000 tons of steel less than our capacity; in 1941 we produced some 250,000 tons less than we could have produced; and according to the estimate for 1942—and production, judging from what has already taken place, will I think likely be larger than the estimate—we shall be short some 300,000 tons of our

capacity. These 300,000 tons translated into tanks, ships, corvettes, and other war equipment of the kind make a presentable array of material. Members of the committee who have made any study of these matters are aware that there is a definite shortage of steel in Canada for our war production.

H. R. MacMillan, President of Wartime Merchant Shipping Limited, was reported in the *Financial Post* of February 6 of this year as having said:

> Within another six months construction on the current shipbuilding programme will reach its peak. Greater speed would be possible were it not for the shortage of ship plates of which Wartime Merchant Shipping is currently using 15,000 to 20,000 tons monthly.

On February 27 of this year the steel controller said:

> The shortage of steel is now so acute that its use for articles required by the Department of Munitions and Supply and the armed services is being curtailed wherever possible.

The acuteness of the situation has been developing since the war began. The Canadian Press carried a statement by the Minister of Munitions and Supply (Mr. Howe) under date of November 24, 1941, in which he said:

> Since the outbreak of war Canada has added considerably to its steel production but the expansion programme has not kept pace with the demand of war-time industry, one reason being a disinclination to spend time and money on plants that would be uneconomic in peace time. During 1942 Canada will require two million tons of steel from the United States, it has been estimated here, to supplement its own production. Most of this tonnage represents types that are not rolled in Canada.

I am not at all sure that we are taking advantage of all our resources for steel production in Canada any more than we have taken advantage of our capacity for producing oil. I will show that there are at least possibilities that should be investigated. But the fact of the shortage of steel is curtailing production not occasionally but almost continuously. The member for Weyburn (Mr. Douglas) put some questions on the order paper which were answered on March 4 of this year. He asked:

> 1. Has the shell shop of the National Steel Car at Hamilton been closed?
> 2. If so, for what reason?
> 3. What type of shell was being produced at this shop?

The answers given by the Minister of Munitions and Supply are:

> 1. The National Steel Car Corporation Limited, Hamilton, is making four types of shell.

He states the kinds of shells, and then he goes on:

> A section of the 4·5 AA shell shop was closed from February 12 to February 23, 1942.

That is a shutdown of eleven days. In answer to the second question he gives the reason for this shutdown, namely, lack of steel billets and the difficulty of securing tonnage of steel to the extent required. Since that date employees in the National Steel Car plant have been idle again. My information is that in the first three months of this year they have not worked more than two-thirds of the time. Possibly that is not true of all sections of the plant, but I am told that they lost thirty days in the first three months of the year.

I think we should pay some attention to the statement I quoted from the Minister of Munitions and Supply, or at any rate the statement that was attributed to him on November 24 last, that one reason for the shortage of steel is a disinclination to spend time and money on plants that would be uneconomic in peace time. I submit that we cannot carry on the war while thinking of what may happen to industry when peace comes. If we do not win this war it does not matter much what happens to industry when it is finished, because we shall have nothing to say about it. I am convinced that we should not allow persons with vested interests to retard the war effort by thinking of what is going to happen to this or that industry when the war is over. There has been far too much of that already and it has had disastrous effects on the war industry of the allied nations.

When I saw this item attributed to the Minister of Munitions and Supply I thought of the statement made by him in the house on May 22, 1940. We were discussing then, as we are now, the war appropriation resolution, and the minister—then minister of transport—said this, as reported on page 128 of *Hansard:*

> In the last war, Canada's chief production was shell cases. We are now tooled up to produce this type of equipment far in excess of our own needs, but to date British orders have not been forthcoming in a quantity proportional to our industrial capacity. . . .
>
> This has been disappointing to our manufacturers, who have been building on the precedent of the last war. I can only say that this war bears little resemblance to the last one in the nature of the requirements from Canada. The fact that to date Britain and France have been satisfied to rely largely on their own production and mechanical equipment and have not been disposed to encourage Canadian production of heavy equipment to the extent of furnishing up to date plans and specifications has undoubtedly prevented Canadian industry from playing its full part in mechanical warfare. I am happy to say that there are now indications that this will not continue.

This was on May 22, 1940, when the German armies were riding roughshod over France. Evidently it took that event to bring the

private capitalists of Great Britain and France to their senses. But it was too late to save France. We had better learn a lesson from what happened in France. It happened to a large extent because war production in those countries was under private control, and they were thinking far more of the profits they would make and the state of their industries than they were of building a machine to overcome Hitler's army.

The president of the Steel Company of Canada, Ross H. McMaster, is reported in the *Globe and Mail* of March 19, 1942, to have said:

> It was felt that further outlays, designed to expand capacity far beyond any discernible future needs, could only be undertaken in the national interest—

Evidently these people in normal times are not working in the national interest.

> —and, therefore, the company should be supported in such expenditures by the dominion government.

He went on to report that the government was financing the construction of a new blast furnace and additional open hearth furnaces. But at that time there were in one of our steel plants in Canada both blast furnaces for the production of pig iron, and a rolling-mill; but the capacity of the blast furnaces was some 20,000 tons more than the rolling-mill could handle. In about a year from that date the government I understand came to an agreement with the company and the rolling-mill facilities in that plant have been increased.

Now we have the same story in Great Britain, in Canada and in the United States. See the information brought out by the Truman committee of the United States senate and the Tollen committee of the house of representatives. It is high time this parliament took steps to see that we no longer allow private interests to interfere with Canada's war production. We have taken complete control of the lives of the young men of this country. They cannot move around without permission; they can be picked up anywhere, at any time, and ordered to report for military service; their lives may be snuffed out at any moment. Since we are doing that with human beings, surely it is time we should see to it that industry is brought under the same or even more effective control.

Mr. EVANS: Would the hon. member be satisfied to have labour conscripted too?

Mr. MacINNIS: Labour is conscripted to-day.

Mr. DONNELLY: To work for $1.30 a day?

[Mr. MacInnis.]

Mr. MacINNIS: I have heard plenty about that $1.30 a day. If one takes into account the pay and other things that a soldier receives, dependents' allowance, et cetera, you will find that he is receiving more than the average worker in industry. I hear a lot about the $1.30 a day but I do not hear much about the officers' pay. It is always the $1.30.

Mr. DONNELLY: What are your miners getting—ordinary labourers?

Mr. MacINNIS: Well, what are they getting? In the first place they are not getting it every day, and in the second place those are largely the higher paid workers. We might as well be clear on this. If my hon. friends refuse to conscript industry, and continue to allow industry to interfere with and slow up our war effort, that is their affair; but it is time the people of this country knew it. It is time the people of this country knew that my hon. friends opposite put steel and coal and lumber before human life.

Some hon. MEMBERS: Oh, oh.

Mr. MacINNIS: All right; you asked for and you got it. Now find your way out of it.

I want to say a few words in regard to the possibilities of the production of steel. In 1937, I think it was, the government of British Columbia made a sale or lease of an ore mine to a Japanese syndicate. I think it was on one of the Queen Charlotte islands. The last I heard of it was that this syndicate was running a railroad from tide water to the mine. I do not know whether any development work has been carried out, but if the minister's department has not investigated the matter this would be a good time to do so, because I believe there are possibilities for a steel industry in the province of British Columbia.

An item appeared in the *News Herald* of Vancouver, of January 28, 1942, reporting Doctor J. F. Falker, deputy minister of mines for British Columbia, as follows:

> Certain eastern interests oppose establishment of a steel smelter here, but several others are definitely interested. We could be rolling steel from scrap within 15 months in a coast plant, and within two years we could be producing from B.C. pig iron. The industry could be established for $20,000,000. No. 4 seam at Comox produces coal which would provide adequate coke, and there is lots of lime at Texada and elsewhere. A British Columbia steel industry could be established in time to be of definite aid in the war effort and would be of great value in post-war reconstruction, serving as far east as Alberta and western Saskatchewan.

I suggest to the minister that if his department has not already looked into this matter it is well worth investigating. My opinion is that some development work has already been done there.

I want to say a word or two about the slowing down of industry, caused not by the workers going on strike but by employers simply closing their plants. On my way east I stopped off at Winnipeg. I met a young man who was working in one of the aircraft plants there, Macdonald Bros. Aircraft Limited. He told me that that plant had been closed down from 3.30 p.m. on April 2 until 3.30 p.m. on April 5, and that some parts of the plant did not reopen until April 6. I was interested, because when I was on the coast there was a dispute over overtime in the shipyards at Vancouver and the press was strongly condemning the workers for the shut-down on Good Friday. Inquiring into the reasons for the shut-down at Macdonald Bros. Aircraft Limited I found in the Winnipeg *Tribune* that the president of the company said that the shut-down over the long week-end was because the plant was ahead of schedule. I cannot understand what "ahead of schedule" means in war time.

Mr. HOWE: Perhaps I might explain. Macdonald Bros. is largely an overhaul plant. I presume they had caught up on their overhauls. It is not a manufacturing plant.

Mr. MacINNIS: It does not say here. As a matter of fact the person who was talking to me said that there was plenty of work to be done there. According to the Winnipeg *Tribune,* Mr. Macdonald went on to say that some employees had been working seven days a week and needed a rest. I do not believe, Mr. Chairman, that you can get the best results by working employees seven days a week for more than a couple of weeks at the most, because a person needs a day of rest to recuperate after five or six days' work.

As I said before, I am not bringing these matters up particularly by way of criticism of the minister, but because they are matters which this committee and parliament must heed if we are to get a full-out war effort this year.

Mr. POTTIER: I think it is generally realized that we are facing a very perilous situation in regard to rubber and gasoline. Hon. members will, I am sure, agree with me that we have seen the shadows approaching of what is going to take place in the very near future. We have seen our gasoline supplies dwindling, then a rationing system established, and we are faced to-day with a cut in the unit value. More than that, we see that in different parts of Canada there is to be a further cut for one reason or another. Every day we read in the newspapers of some new regulation to take care of the growing shortage of rubber. We also learn from the press that the people of the United States are taking a very serious view of what is happening and are afraid of what is going to happen. I read in the New York *Times* last week that one of the members of a committee of the United States senate made the following statement in regard to the tire situation:

> One year from to-day there will be no rubber available for general civilian use, and those in essential civilian pursuits will have to take what they can get.

I think that accurately reflects our Canadian rubber situation. Here we have in this country some 1,300,000 to 1,400,000 automobiles, each with four tires weighing anywhere from twelve to twenty pounds. Each tire has a substantial portion of reclaimable rubber. Yet every day over our highways, here there and everywhere, this rubber of which we are short, perhaps not acutely short at the moment but of which in the future we will be acutely short, is being burnt up by motor cars speeding along at rates even above the government regulation of forty miles an hour—and for what purpose? For pleasure and other non-essential purposes. And that is being done in the face of the best information we can get that we have no further supply of rubber to draw upon. Some people may say "Oh, but what about synthetic rubber? That is coming." I am afraid that too many people are looking to substitute for rubber. Let us see what the possibilities are. I quote again from the evidence given before the United States senate committee only last week—and I take this to apply to our situation in Canada:

> Those motorists who look hopefully to the operation of synthetic rubber plants to supply them with tires later, Senator Reynolds said, were simply indulging in wishful thinking. All rubber for the United States, as well as every pound that could be made available, he asserted, must go to the army.

I am afraid that that is our position here; yet we are burning some of this rubber for purposes that have nothing to do with our war effort. It may be said, "You are just burning some of it; you are just using a small proportion of it—the outer thread." I realize that, and I have discussed it with officials. But notwithstanding that fact, we are using some, and in fact we are using a substantial quantity of it. Then, further, the older a tire gets and the more it is worn, the less value there will be in the rubber one gets from that tire. When we take all this into consideration it seems to me we are facing a perilous situation, and one we have to be prepared to meet, not only in shadow but in fact.

Coupled with that is the gasoline situation. With respect to automobiles generally, what do we find? At the outset I referred to

changes made from one month to the other, if not indeed from one day to the other. There is restriction and cutting down as time goes by. Why? Because the supply is getting shorter and the situation is growing more serious.

Let us understand what the men who bring in gasoline by tankers have to go through. Let us realize the hazards they have to face in order to bring gasoline to people who travel the roads for no purpose other than their own entertainment. I have heard of a letter from a man on a tanker travelling along the Atlantic coast, in which he said: "We followed the coast night after night, and we could see automobiles going back and forth, and their lights travelled while we, in the tankers, were risking our lives just because it was thought that we should keep them on the move." This particular tanker was torpedoed; some of the members of the crew were lost, and the survivors had a most distressing time.

I do not think a gallon of gasoline which might be used for pleasure or for non-essential purposes should be brought by tanker. I urge upon the minister and the government that they give this matter serious consideration with a view to bringing about a change in that regard. Let us see what the benefits would be. To begin with, it would save money which could be diverted into war loans and used to defray our war expenditures—money which is now used for no useful purpose at all. We would save space for railway transportation by making railway facilities available for the carrying of munitions and the like. We would save the loss of tankers and thereby cut down our shipping losses. We would eliminate the necessity for some of our naval patrol, which could then attend to other spheres of battle. We would have more gasoline for our own military purposes—for the army, the navy and the air force. We would have more rubber, and that surplus rubber could be taken to supply our armed forces. In addition we would save a certain number of lives hazarded by bringing this oil, gasoline and other supplies to Canada.

Taking all these points into consideration I say the time has come when the Canadian people, who have been living in what I believe can be truly said to be the best country in the world, having in mind our food supplies and our liberty of movement and action, are prepared to do away with private cars for pleasure or non-essential purposes. A few selfish ones might criticize, but this is not a time when we can think of selfishness, or when selfishness can be tolerated or listened to. If we lose this war—and I do not mean that we are going to; I do not think we are; in fact I am convinced we are not—what would be the value of motor cars and the like? Let us throw them on the altar of sacrifice, and be prepared now—not wait for a year—to adopt a policy under which all pleasure and non-essential driving shall be done away with.

[Mr. Pottier.]

Mr. FRASER (Peterborough West): The hon. member for Vancouver East (Mr. MacInnis) mentioned the great need for steel and the shortage of it. The minister knows about that shortage, and that is why we are asked to take part in salvage campaigns to collect steel, iron and scrap. Is it true that anyone wishing to erect a building in which steel is used must have a permit?

Mr. HOWE: Over $5,000.

Mr. FRASER (Peterborough West): If that is so, would it be possible for a firm, say in Toronto, to ship steel beams to some other plant, and have them cut there to specifications and sent to a building which had not a permit?

Mr. HOWE: No.

Mr. FRASER (Peterborough West): That would not be possible?

Mr. HOWE: No.

Mr. FRASER (Peterborough West): That was what I believed the situation to be. May I point out that on May 13, 1942, the following question was answered in the house:

1. Has the priorities branch of the Department of Munitions and Supply issued permits for steel to be used in the construction of a building or a house for J. Franceschini, recently released from internment?

2. If so, how much steel has been allotted to this building?

The answer to No. 1 was "no", and No. 2 was said to be answered by the answer to No. 1. I now have information to the effect that Francheschini had steel beams shipped from his plant, or from the plant in which he is interested in Forest Hill village, to the Dominion Bridge company at Lachine, and that there this steel was cut and bored to specifications for a garage in the Laurentians mountains for Franceschini, a man who has been interned—and many people believe he should still be there. I suggest the minister should investigate the matter and see if there is any truth in the suggestion. There have been many reports to this effect. I have received telephone messages and other communications.

Mr. HOWE: Where in the Laurentians is this mysterious house? I have read a newspaper article about it, and had our people trace it down, but we can find absolutely no indication that Mr. Franceschini is building a house anywhere in the Laurentians. Has the hon. member the address of the house?

Mr. FRASER (Peterborough West): I have it in my room.

Mr. HOWE: I wish the hon. member would give it to me.

Mr. FRASER (Peterborough West): It is down by Lucerne.

Mr. HOWE: We will look into it.

Mr. FRASER (Peterborough West): I understand it is a very large place. I should also like to know if his firm has been given two contracts in the last week or so for airport construction.

Mr. HOWE: What firm?

Mr. FRASER (Peterborough West): The firm with which Franceschini is connected, the Dufferin Construction company.

Mr. HOWE: The Dufferin Construction company, to us, is just like any other construction company. I believe Mr. Franceschini has a stock interest in it. At one time he was general manager of the firm, but he no longer holds that position. A good many Canadian citizens also have a stock interest and a bond interest in Dufferin. We use Dufferin Construction company just as we use any other construction company. We use it to the limit of its equipment. I have no knowledge of their having had a contract in the last two months, but I know of no reason why they should not if they were the low bidder. If their equipment was desired, I have no doubt we used it.

Mr. ROSS (St. Paul's): First of all I want to congratulate the minister and the manufacturers and men of this country upon the work they are doing. The minister is held responsible for the size and scope of our production effort. At times he is praised, and sometimes he deserves it; at times he is criticized severely, and quite often he deserves that. Sometimes the manufacturers are blamed, but so far as the minister is concerned, in my opinion a good deal of the criticism he receives is deserved, because he has too much to do.

Just think of all the minister has upon his shoulders—and then he has added to them questions such as this Franceschini matter. What is his job? I am going to say a few words about that. He is purchasing agent for the army, the navy and the air force. He arranges the production of weapons and military equipment. He is the purchasing agent for Great Britain, Australia, New Zealand, India and the United States. He is the sales manager for Canadian production in the United States. He has done a good job in selling goods over there, which has helped to maintain our dollar balance. What is the sum of our production to-day? It is just the orders placed by our forces and by the allied governments.

What more does the minister do? He supervises the wartime industries control board, which includes twelve controllers who try to ensure that materials and services shall be forthcoming. He supervises the consumption of materials, and prohibits consumption when materials are scarce or essential for war demands. Every order of a controller involving the imposition of a production quota must have his signature. He supervises the administrative machinery of the wartime prices and trade board and the priorities branch. He has virtual charge of all harbours and shipping. One has only to glance at the chart which he placed on *Hansard* of February 26, 1941, at page 1042, in order to appreciate the magnitude of the job he had then, his duties have since been considerably increased.

He has told us about the magnitude of our war production, which totals in the neighbourhood of $4,000,000,000—a very creditable performance. All this production must be carefully supervised. Have we wasted any money where waste could have been avoided? I know that economy and speed do not go together in war time, but has there been reasonable economy? Has there been extravagance only when speed was essential?—and we know how necessary speed is to-day. Could we have done more if the minister had had other ministerial assistance? Could our planning have been better? I think so. We used to make comparisons between the production in this war and the production in the last war, but really no comparison can be made.

The minister has another task, the mobilization of Canada's full productive capacity for the manufacture of munitions and so on. He still exercises control over the licensing of radios. I believe he has never calculated, certainly so far as this house is concerned, the present output in terms of what could be done. Have we reached our capacity? If not, when will we reach it? The minister said on May 14, as reported on page 2441 of *Hansard:*

> I may add that Canada is, of course, producing munitions far in excess of the requirements of our own troops or the requirements for the defence of Canada.

But on page 2055 of *Hansard*, the Minister of National Defence (Mr. Ralston) is reported as saying:

We cannot issue complete sets of the most modern weapons to the basic training centres.

In effect the minister said that we have not sufficient armaments, not sufficient anti-aircraft guns, coast defence guns, and so on. Is that producing munitions in excess of our requirements? Have we reached our limit? The minister says we are expanding as fast as possible; but are we? Who is doing the planning? The minister has said this sort of thing before. In 1940 he told the hon. member for Parkdale (Mr. Bruce) that we could not make tanks and that we could not roll armour plate more than an inch and a half in thickness, I think it was. But we can now and we could then. He told the hon. member for Vancouver South (Mr. Green) and others that we could make only a few ships, that shipbuilding was a peace-time job. What are we doing now? We are doing it, and I congratulate him upon what he has done. Can we do more? He ridiculed the idea of wooden ships. Necessity is the mother of invention, and we are making them at the present time. Are there other things we can do?

There is the question of oil production. Of course we did not appreciate the fact that we would be short of oil because of torpedoings on the Atlantic coast, but that danger was always there. There are the tar sands of Alberta, and hon. members from the maritimes have been talking about producing oil down there. It seems to me that something should have been done about this before now. I do not want to detract from any of the accomplishments; they have been most creditable, but some of them have been just a little bit late. The answer is that the minister has too much on his shoulders. He has much too much work to do. He is the government liaison officer. He is a member of the war committee of the cabinet. He is on the committee on scientific and industrial resources, the business committee of the government, and the treasury board. All these are very important duties. I might remark in passing that had it not been for the pressure which was exercised by the opposition in this house with respect to a number of these activities, I doubt whether our productive war effort would be what it is to-day. In these matters we have always tried to be constructive.

That the minister is a general executive minister and policy maker and cabinet liaison officer is a big enough job in itself. He cannot do all that is required of him. I know that he is a pretty big man; he has a pretty big ego as well and thinks he can do these jobs. He has complained two or three times of being attacked, but as I have said before, it is his own fault. He has said that his health is perfectly good, that he is the one to worry about that Well, all of us are worrying about the minister's health. Remember that the country is worrying as well, and that is where the attacks are coming from; because he said in the first place that certain things could not be done, whereas they have been done. He just has too many things to do.

Mr. McNIVEN: And he did them.

Mr. ROSS (St. Paul's): He has done some of them. I am giving him credit for the things he has done. Also I am criticizing him for things which I will not particularize—some of them have been mentioned to-day—which either have not been done, or have not been done soon enough.

He has never calculated the present output in terms of what could be done. He has never declared whether we have reached the limit of our capacity. The productive problem has not been tackled from the point of view of all-out production As demands come in, the minister fills them, whether they be for the army, the air force, Great Britain, or some place else; he is the purchasing agent. But there needs to be more than that. There needs to be force behind the mobilization of production in this country Moments are precious, and regardless of orders, we have to make every gun, every tank, every aeroplane that we can produce, and accelerate our production to its maximum.

Mr. McNIVEN: Did the hon. member read last week's *Maclean's* magazine?

Mr. ROSS (St. Paul's): Yes, I read last week's *Maclean's* magazine. It is a very creditable showing.

Mr. HOWE: The hon. member did not believe it, I suppose.

Mr. ROSS (St. Paul's): Will the hon. member tell us that that is all we can do? The job has never been tackled in terms of all that we can do. It is always dealt with in terms of what we have done; and the point is, when shall we know what our capacity is?

A great deal of the executive work which falls to the minister should be taken off his shoulders. He should be free to mobilize and plan and develop industry. He is the only executive officer engaged in this vast programme who is responsible to parliament. We took certain duties from some of the other

ministers because we thought they had too much to do, and gave them to the Minister of National War Services. There is a precedent; why should not the Minister of Munitions and Supply be relieved of some of his present duties? There should be another minister engaged in this work, responsible to parliament. He might be assigned to take charge of supply. I would not venture to suggest to the committee, because I do not know enough about it, just how the work should be redistributed, but I am sure that this should be done, because the public know that the present minister has too much to do.

Mr. BLAIR: Mr. Chairman, I do not rise to criticize the minister; I rise to congratulate him upon his wonderful power of endurance. I do not see the necessity of our sitting here and listening to all the nonsense which we have been hearing too long already. In my opinion a party which has denounced for years all war expenditure and every preparation for war, which has declared that not a single man or a solitary dollar should be devoted to the defence of the British empire, and made other statements of the same kind, should rise now to proclaim the entire inefficiency of the war effort of the Canadian people.

Mr. MacNICOL: To what party does the hon. member refer?

Mr. BLAIR: Nor do I think that the Tories of Toronto should send up written speeches to be read in this chamber. We are sick and tired of this kind of thing. I say, if you want to say something get up and say it and don't be reading your speeches. The ruling was given a while ago that speeches should not be read, but the practice still goes on.

Most hon. members are in sympathy with the government. I appreciated the remarks of the hon. member for St. Paul's (Mr. Ross) in which he expressed sympathy for the Minister of Munitions and Supply. He suggested that the minister should be given time and opportunity to do his work. What time is left to him when he has to sit here day after day listening to speeches? Do you think, Mr. Chairman, that he is helped by the talk which we have had during the last three or four days? It is utter nonsense. I think too that some consideration should be given by the speakers to other hon. members who are busy men, men with their own work to do at home, men employed outside this house in many and various ways. Have we to sit here listening to all these foolish speeches at this critical time of war, when all of us are needed in our homes and in our own districts to carry on with the work of this country? Are we to be held here day after day by such nonsensical speeches as we have been listening to?

I do not wish to criticize exclusively hon. members on the opposition side. There is a section of our own party of which we are heartily ashamed; I wish some of them were here so that I could not be accused of talking about them behind their backs. I admit that they are a nuisance; they are a fly in the ointment.

The CHAIRMAN: I am afraid that a remark of that kind may be offensive to hon. members, and I would ask the hon. member to refrain from such expressions.

Mr. BLAIR: I take no offence, nor would I give it. I am expressing an honest opinion. I hope that we shall have no more of this blathering—that may not be a parliamentary word but it expresses my idea. A man can say what he has to say in one-quarter of the time which has been spent in this debate. Why indulge in all this circumlocution and then tell the minister that he should take more time to prepare his work? What time remains to him after he has had to sit here day after day listening to this nonsense?

I do not like to criticize; maybe I am out of order, but I suggest that a resolution should be passed to the effect that no hon. member shall be permitted to speak a second time in the same debate. I am not blaming one party more than another. There are those of my own party who have risen a second and a third time and delivered themselves of long speeches when they had no business to do so. The bane of democracy is too much nonsensical talk. It would be well if there were some restriction, so that others would have a little more freedom. There has been a great deal of pointless talk from all parts of the house. I trust that the minister will soon be free to carry on his work and get on with the war instead of listening to so much nonsense.

The CHAIRMAN: I do not believe that it is in order for the hon. member to say that speeches by other hon. members are nonsensical.

Mr. BLAIR: I will withdraw that statement, and say that if there is any sense in them I cannot see it. Maybe I am a little dense, but I could not see anything sensible in the remarks of a lot of the speakers. They are appealing to the minister to get on with his work and at the same time they are detaining him with speeches that have no value.

Mr. GILLIS: At the risk of offending the hon. member for Wellington North (Mr. Blair), I wish to make one or two observations with regard to an interjection by the hon.

member for Wood Mountain (Mr. Donnelly) when the hon. member for Vancouver East (Mr. MacInnis) was discussing the necessity for a greater mobilization and organization of the country's industrial capacity. I make this comment now for the reason that when any member in this house or anyone outside the house seeks to drive a wedge between the armed forces and the industrial workers, such person, in my opinion, comes directly under the defence of Canada regulations wherein it is stated that such an offence shall be punishable by internment—any offence that causes disaffection in his majesty's forces. When a member begins making comparisons between the rates of pay received by soldiers and the rates of pay received by the industrial workers, and makes such comparisons in the way in which they have been made, that sort of thing creates friction, dissension and a great deal of misunderstanding. What prompts me to make this statement now is the observation of the hon. member for Wood Mountain in comparing the rates paid to miners with those received by the armed forces, and he takes the low rate of $1.30 a day paid to soldiers. I know a little about both the army and the miners and their rates of pay. I drew the lowest rate of pay in the army and did the dirtiest jobs that could be done there, both behind the lines and at the front. I have also been a miner. I wish, therefore, to make this brief observation, that when an hon. member makes the bald statement that the soldier is working for $1.30 a day while the miner is paid $7 or $10 a day, such a statement is absolutely misleading and not in accordance with the facts, and it is time somebody clarified it in the interests of the general public. The miner's basic rate in the industry in Nova Scotia is $3.70 a day, and in order to get that $3.70 he has to crawl out of bed at five o'clock in the morning. To earn $22 a week he has to work six days a week, and to earn $1,154.40 a year he has to work six days a week every week of the year. That is the basic, the low rate paid in the industry. According to a table put on the record by the Minister of National Defence (Mr. Ralston) on April 28, the rate to which reference was made by the hon. member for Wood Mountain is set out, and if one takes the $1.30 a day allowances and so on, in a year the soldier earns $1,547.50 with allowances for two children. That is the lowest amount paid in the army, if one takes allowances into account. I know of no industrial worker who is working on a datal rate who earns that amount of money.

Mr. HOWE: Oh.

Mr. GILLIS: There is no "oh" about it. Anywhere it will be found that on piece work they are paid more than that. I am talking, however, about the lowest rate paid, the basic datal rate, and an examination of the earnings of industrial workers prior to the outbreak of the war will show that the average was somewhat under $1,000 a year.

An hon. MEMBER: Away below that.

Mr. GILLIS: It was under $1,000. I am speaking from memory and it is some time since I saw the figures. I am not suggesting that the soldier is paid enough; I certainly know that his dependents are not getting what they should. But as I have heard the matter discussed in this house, I know that it is driving a wedge between the armed forces and those who have to produce to keep the forces in the field, without which production they are absolutely helpless.

Mr. HOWE: I do not like to doubt my hon. friend. I am the one who said "oh," because I did not understand what he said. He said that no man working for wages was getting as much as $1,500.

Mr. GILLIS: I am speaking of the fixed, datal rate. Where a man gets so much an hour and works sixteen hours a day the wages run up. Take the miner who cuts, shoots and loads the coal and who is paid on the basis of 69 cents a ton in Nova Scotia, which is the lowest rate paid for cutting, shooting and loading coal. Forty per cent of the men employed in the mining industry do this kind of work.

Mr. HOWE: The ordinary shipyard worker gets 75 cents an hour.

Mr. GILLIS: He is paid by the hour.

Mr. MacINNIS: What is an ordinary shipyard worker?

Mr. HOWE: Shipyard mechanics.

Mr. MacINNIS: They are not ordinary shipyard workers.

Mr. HOWE: Who is the ordinary shipyard worker—the boy who carries the water?

Mr. GILLIS: They are to be found in shipyards working for as low as $3.50 a day. That is a fixed, datal rate. The man who says that the soldier works for $1.30 a day and leaves it at that is making an incorrect statement, a statement which is misleading as far as the public is concerned, and it only tends to build up resentment in the minds of the boys in the army against the fellows who have to do the producing. As I said before, I have done both, and if I had my choice to-morrow of going back to a coal mine or putting on the uniform and crossing the Atlantic ocean I would go over the ocean. I

have no illusions about it. There is no one else on the face of the globe who earns his money the way a coal miner earns his or who takes more chances with his life, and he is getting very little for it. The average person in central Canada imagines that because he pays $15 a ton for his coal the miner gets the money. The miner gets 69 cents a ton for cutting, shooting, blasting and mining the coal, 1,000 feet underground and five miles under the Atlantic, and he lasts about ten years at that work. If the boy in the army is shot up he gets a pension. When the coal miner is through he goes on relief. There are as many industrial cripples across the country as there have been war cripples in the last twenty-five or thirty years, and the former get very little compensation for it, except in the relief lines. They are the forgotten men, too young for old age pensions, too old to earn a living, just relegated to the scrap heap. But that is not what I rose to say. I was prompted to make these remarks because I have listened to that kind of talk bandied across the floor from time to time, and it is not good for either the army or the industrial worker. My intention in raising the question at this time is to bring it briefly to the minister's attention in order that he may perhaps avoid some of the mistakes made in the past. I think it is the job of a member of parliament to bring such matters to the attention of the minister. It is not done for the purpose of criticizing. I appreciate the minister's work and the job he is doing.

The first matter I should like to stress is that raised by the hon. member for Inverness-Richmond (Mr. McGarry), with respect to the development in that area of a deposit of magnetic iron ore by a man named McMillan. There are several reasons why I think the minister should take hold of that and find out whether there is sufficient iron ore there to be worthy of consideration. The main reason is that we need the material. Second, that particular section of Nova Scotia for the past twenty years has taken the greatest economic beating of any section of Canada. There is nothing in that whole county except a worn-out broken-down coal mine operated by the provincial government on a relief basis; they pay the lowest rate of wages on the north American continent, and the mine just staggers along giving the people depending on it a bite to eat.

Mr. MacNICOL: The provincial government pays the lowest wages?

Mr. GILLIS: It is more or less a relief matter.

Mr. MacNICOL: They should not be allowed to do that.

Mr. GILLIS: The Minister of Finance (Mr. Ilsley) a few days ago announced certain tax concessions to prospectors to give men an incentive to go out and seek metals and minerals necessary to our war effort. This man has discovered what he believes is a deposit of iron ore in sufficient quantity to guarantee operation. According to my information he has spent some $1,200 in probing it. According to a letter I have from him, he is prepared to go ahead and produce up to 1,000 tons a day. I understand he is now in this position: he is not financially able to go ahead and develop the project. According to his lease the property must be worked a certain number of days per year in order that the lease may be held. He has had engineers from the Dominion Coal company carrying on boring operations there for some time. I understand this is crown land. Just a few days ago he was notified that the coal company are pulling out and not carrying on any more work there, which means that he is not going to be able to put in the required working time to hold the lease. He is of opinion that the Dominion Steel and Coal company are ready to step in and take it themselves. This individual is well qualified, according to his credentials; he knows metal mining, having been an official in metal mines in the United States and in western and central Canada. If there is ore there in sufficient quantity to mean something and if it is on crown land and he needs a little financing to put it into production, I see no reason why the minister should not go ahead and at least investigate the situation. If we can advance money to industries, some of which are very well off, in order to expand their plants, I cannot see any reason why the same thing should not be done in this case where it would serve the purpose of opening an industry in a section that is in absolute need and of assisting a man who has proven himself a responsible citizen and is doing something for his country to the extent of spending some $1,200 to $1,400 on the project. In addition, he would be producing materials that Canada needs badly. It is a matter that the minister should consider from every angle.

Mr. HOWE: I shall be glad to get a report on it.

Mr. GILLIS: Another thing I should like to bring to the minister's attention is the letting of contracts. I obtained a return in relation to the Sydney airport. The estimated cost of erection of the buildings was about half the

final cost. There was a great deal of controversy about the matter in that end of the country, but the situation was not as bad as reported. There is, however, something wrong with the engineers who estimated the job, or there was a great deal of waste in the construction. The estimate of the engineers was that the cost of the buildings would be about $445,178. The final figures are not yet available, but to date the cost is double the original estimate, and the buildings are not yet completed.

The reason why I mention that again is that I think there is a system on the part of the contractors, recognizing that these things are not too closely checked, that when government engineers estimate that a project should cost, say $100,000, one contractor puts in a bid of $96,000, another $92,000, the lowest tenderer gets it, and I am safe in saying that on the basis of this airport return, when the project is completed it will probably cost twice the amount of the lowest tender. I think they are deliberately underbidding because they know that the precedent has been set; that they are not too closely checked and that they can throw in another building here and there and make money out of the job. I know the minister's department is very competent. I know he has not the time himself to scrutinize all these matters with the care required. I am in hopes that the recently appointed committee on war expenditures will pay strict attention to the manner of letting contracts, because from evidence we have had from time to time I am reasonably sure that things are not as they should be. I am not blaming the minister for that. There is no individual who could check that matter as closely as it should be checked.

The next matter I wish to bring to his attention is wartime housing. I am not going into it from the national aspect, but I shall refer briefly to the housing situation in Sydney. As I have pointed out from time to time I think the Dominion Steel and Coal corporation are practically running the province of Nova Scotia. In a return I had of correspondence that passed between the city of Sydney and the department on the question of wartime housing I know the situation is bad. Anyone residing in that city knows it. Perhaps 1,000 additional men have gone to the steel plant. In addition, the plate mill, when going at capacity, will employ 400 to 600 men. Many public works projects have been undertaken in that area. There is a big one now in progress at Point Edward just across the harbour. There are thousands of men in the city and area that were not there when the war broke out. I notice in this correspondence between the city of Sydney and the Department of Munitions and Supply that the city had no say with the representative who was sent there to make a probe. He spent twenty-four hours in the city, and I think he spent twenty-three of those hours with Dominion Steel and Coal corporation officials. The officials of the city of Sydney were ignored absolutely. According to this return the whole report is based on the fact that this man was advised by the officials of the Dominion Steel and Coal corporation that wartime housing was not necessary, that there was no importation of labour, that practically everyone employed in the war industries there was taken from local labour. That is not true. I know that from Inverness county, Richmond county and other parts of Nova Scotia and other parts of the country, many men have come into the city to work in war industries, aggravating the housing situation. There are also thousands of merchant seamen in the port, and there is also a large airport. Airmen from all over Canada are coming there with their wives, and hunting all over for a place where they can stay.

The report states: "We are not responsible for the influx of people belonging to the army, navy" and so forth. Technically they may not be, but certainly it should be someone's responsibility to provide homes for those in the armed forces. Those employed in industry are very likely going to stay there and they have an incentive to build their own homes, but the men in the armed forces are not going to build homes for themselves, and accordingly they rent. There is no control over the renting of rooms, and prices are terrible. There are wholesale evictions in that city. I suggest that in future when a representative of wartime housing is sent to make an examination of the requirements of a city he should secure his information from those who are responsible for the civic administration. Dominion Steel and Coal corporation are not affected by these wholesale evictions, but the mayor and council are, and they are badly affected at the present time. I may be suspicious, but at all events I am of opinion that the company wish to have a clear field for themselves, because they are in the housing game. They have thousands of houses—

An hon. MEMBER: Shacks.

Mr. GILLIS: Yes; they are not houses, but the company are getting rents and profits from them, and are endeavouring to keep the field clear for themselves.

There is another point I wish to make in that connection. Apart from the fact that the houses put up by wartime housing are a waste of money, they are not constructed properly and will be torn down after the war. They will not stand longer than ten years. If wartime housing is a project to enable those employed in industry to have a house fit to live in, the houses should be constructed properly, and furthermore $26 and $30 a month rent is too much to ask a working man to pay because the great majority of them cannot afford to pay that much. If the government is going to put up simply shacks for the duration of the war, it might as well put up tents, and then there would not be so much money wasted, as there will be when these houses are torn down after the war. I am really ashamed of that project. I have been in some of these houses in Halifax and Dartmouth, and if the minister happens to visit the island of Cape Breton I should like him to look at the homes that are being built there under a cooperative plan for around $1,800. They have complete radiation, six rooms, and they are being built by the people themselves in groups. If the average contractor were to erect a house of that kind, he would ask not less than $6,000, but the people who are putting up these houses cooperatively are doing the job themselves for $1,800. There are five groups building their own little village on that basis. If the minister will then look at the houses in this wartime housing project, he will see the difference, and I think he will get that cooperative group, instead of Wartime Housing, to put up the houses in future. Wartime housing is, in my opinion, an absolute waste of money.

I have read many documents and listened to many speeches since the outbreak of war, and I have heard economists on the radio and in committees making speeches, all stressing the fact that if we are going to build for the future, any housing project undertaken now should be related to our peacetime economy, with a view to the houses being used after the war. Just the opposite is true of wartime housing. I was very much encouraged to sit on the rehabilitation and reconstruction committee. I think the government has chosen excellent men who are writing excellent reports, but what is actually being done does not dovetail with those reports at all.

Another matter I would bring to the minister's attention is the need for a greater utilization of our resources. There are deposits of dolomite at New Campbellton in Nova Scotia on the Cape Breton island end. I have here quite an article about it which appeared in the Halifax *Herald*. Evidently there was some work going on there; at one time the government were interested in it, and it was expected that an industry would be established there and that dolomite could be used for machine tools and so forth. But our government apparently lost interest in it. Then some United States firm became interested in it, but later dropped out. If the minister does not know anything about this matter, I shall be glad to send him this clipping. I do not want to read it because it is lengthy. The matter is important, however, and some people are very much disappointed that the development is not being gone ahead with.

To turn to another matter, officers in the army certainly seem to require some very elaborate furnishings. Recently in Halifax I was handed a duplicate invoice from the T. Eaton Company Limited for the fitting up of officers' quarters and, according to this, there are rugs on the floor costing as high as $195 apiece.

Mr. HOWE: Who is paying for them?

Mr. GILLIS: The Department of Munitions and Supply. I will give the minister this invoice.

Mr. HOWE: The officers furnish their own mess.

Mr. GILLIS: This invoice bills the Department of Munitions and Supply, and I see that one rug costs $195; another, $130.50; another, $214.75, and another, $130. The total bill is $746.25 for rugs.

Mr. HOWE: Will the hon. member send the invoice over to me, please?

Mr. GILLIS: Yes. I do not know whether this expenditure can be justified, but it certainly seems exorbitant to me.

Mr. HOWE: I should like to see the bill.

Mr. GILLIS: I will send it over to the minister and he might check up on it.

I do not want to occupy any more time, but I felt I had to make these few observations. I realize that no minister is able to keep track of all these matters himself, and when some members rise in their places and deprecate the fact that other members take up the time of the house, I say that there is not enough time for members to take up provided that they utilize it in the proper way. There are 245 members of this house. My opinion is that each one of them is responsible for a certain section of the country, and it is his job to do a job for that section. If there is anything that is not right, it is the member's job to assist the minister in correcting what is wrong. I think each

and every member, if he does his job conscientiously, can be the greatest asset any minister or government can have through the cooperation members can give in making constructive suggestions—not merely criticizing for political purposes.

This afternoon the hon. member for Vancouver East (Mr. MacInnis) drew attention to a memorandum on steel put out by the steel workers' organizing committee. I suggest that every hon. member should read it, because I understand all have it. It would be interesting to some of our hon. friends who from time to time make the statement that the C.I.O. is a sabotaging organization, or something of that sort. The committee to which I refer took the trouble to send their national director across the country to every steel plant in order to meet the employees of those steel plants. I happened to have the privilege of sitting in with them at Sydney, when the memorandum was being prepared. The men in the plant, through the medium of their unions, or through whatever medium he could reach them, have attempted to find out if ways and means could be devised to meet the steel situation. They know much better than we do that there is a shortage, and that it is going to continue. I saw the director sit in with these union committees, and organize production committees of men in the plants, to devise ways and means on the job of improving the situation.

I should like to draw attention to the significance of scrap material. They point out very definitely in their memorandum that to the average man scrap is just junk, and serves no useful purpose. In the last analysis, however, it is found that it is one of the most important war materials we shall have to get. They point out that in 1939 Canada's foundries and furnaces used 1,293,877 tons of scrap and that in 1940 they used 1,819,162 tons. To put it even more strikingly, 65·8 per cent of the materials which went into the foundries in 1940 was scrap, and of all the ingredients used in the steel furnaces during the year 55 per cent was scrap. Thus the proper collection and distribution of available scrap becomes of vital importance to our war effort.

I do not wish to read all the memorandum, because it would take too much time. I would point out, however, that they make definite recommendations with respect to the organization of committees to gather scrap, and to see that it is placed in the hands of those who need it. They indicate one very pertinent fact, that one plant—it is located in Nova Scotia—has two years supply of scrap material ahead, while another plant has only seven weeks supply. They recommend that some organization be set up to distribute that scrap material to those sections where it is essential, and where there is a shortage of it. There is no reason why one plant should have a two years supply, and another plant a supply which would last only seven weeks. The plant with only the seven weeks supply will either close down or be put on short time. Amherst is an example of that. It has been closed for some time, although it may be operating to-day; I am not sure. It was, however, closed down for the want of scrap material, despite the fact that another plant has a supply sufficient for two years. Amherst should have had some of that scrap.

There is no doubt that large quantities of scrap across the country are not being salvaged. There are thousands of tons of steel rails in the different cities of Canada. The cost of reclaiming this might be a little high, but it could be salvaged. I know that around coal mines in Nova Scotia there are thousands and thousands of tons of scrap, which is not being salvaged at all. In fact, in the mines there are thousands of tons which could be taken out and used. I have in mind one mine which has been closed up and, as far as I know, has not been used for some time. I know of an old mine in Inverness county, the Mabou mine, which was operated thirty years ago, and in which there are a couple of miles of rails. Someone by the name of Stewart in New Glasgow has an option on that mine. He is not doing anything with those rails, and he has refused to allow anybody to lift them. It seems to me that they are still there; at least they were there last summer, because I was there and saw them.

In view of the necessity for raw material and for scrap to-day, nothing like that should stand in our way. If scrap is needed, then the fact that someone holds a piece of paper written in 1895, or some such time, giving him an equity in those rails, is no reason why that paper should hold good. That material belongs to the country; it is necessary and it should be taken. However, I shall not say any more about that, because the minister has the report.

There are many recommendations made in the report of that organization. They are practical recommendations and, if applied, will solve the scrap and other problems. I should hope that they would be considered by those who are directing the war effort. The steel

workers' organizing committee ought to be commended for the time they took and the money they spent in bringing that material together. I know for a fact that the director travelled across the country.

I now come to the rationing of gasoline in the maritime provinces. I heard the minister's statement, and I realize the necessity for what is being done there. If we cannot get gasoline there, then we shall have to ration what is available. My suggestion to the minister is that all the available gasoline in the maritime provinces should be rationed on the basis that every non-essential car be taken off the road. Seventy-five per cent of the gasoline being used in Canada is, in my opinion, being used only for pleasure driving. Anyone who may be travelling on the roads at two or three or four o'clock in the morning knows that there are thousands of cars travelling back and forth that are certainly not performing a useful service as far as the country is concerned. If war is as serious as people say it is, and as I know it is, then this should be our first consideration. I do not consider it any hardship to walk a mile or two miles to my work. I drove a car for twenty-two years, but I have not taken the wheel of one since war broke out, and I do not intend to.

The basis that I have suggested is the one on which gasoline should be rationed, if there is a shortage. But if we are going to be rough and tough about the matter, then we shall have to be absolutely certain that no favouritism is shown. What about commercial travellers and insurance agents, who are in a special category? A car is not necessary to an insurance agent, any more than it is to me—and probably not as much. Cars are not essential to insurance agents, because their districts are not so very large that they cannot be travelled on foot or by other conveyances. They always did that, until a few years ago. I do not think it is too great a sacrifice to ask of them; it will do them good, and make them healthy.

Mr. HOWE: While they are in a special class, they must show necessity before they get anything better than category A. They may make a case for themselves, but I believe only a small proportion are getting better than category A.

Mr. GILLIS: There are homes in which there are two or three cars in one family, all holding ration books. That is something which should be curtailed. I have received telegrams in protest against the curtailment of gasoline in the maritimes, and I have some understanding of the situation. If the gasoline is not there in sufficient quantities, then we shall have to ration what we have. As I said a moment ago, however, the rationing should be done on a basis of essentiality. One man may want more than two gallons, whereas another man who really does not need his car is wasting gasoline by running it. Until the basis I have suggested is adopted, the government will have trouble. I am sorry to have taken up so much time, but I did want to make these observations.

Mr. MATTHEWS: Mr. Chairman, I had prepared an address which was to have taken the whole forty minutes, but after the remarks of the hon. member for Wellington North (Mr. Blair), I have condensed it from forty minutes to four minutes. I do not intend to make any general remarks because this has been attended to quite well by other speakers, but I do want to bring two or three suggestions to the attention of the minister, and I do not do this in any critical spirit. Notwithstanding any remarks to the contrary, and for the most part they have been given in a fine spirit, I want to congratulate the minister upon the full, frank and exhaustive résumé which he has given of the work of his department. That department started not long ago from scratch, and in a marvellously short time it has built up all across this country an edifice of which the average Canadian citizen is not fully aware. It has done this with a speed and with a degree of stability that is simply astounding to those who study what has been done—600 contracts in a day, 400 planes in a month, 600,000 Canadian citizens working in war-time production. That is the record of which any minister might well be proud. As I said, however, I did not rise to speak in general terms.

A few days ago I received a resolution which I should like to bring to the attention of the minister. This was adopted by the rural municipality of Daly, Manitoba. I think I know all the members of this rural council, and they are not the critical type. They desire to help, and anything they say in this resolution is with that end in view. We keep coming back to this gasoline question, which is a burning question in more respects than one. The resolution reads:

> Whereas farmers are not allowed to buy gasoline by the barrel under the oil ration regulations and in numerous cases must travel many miles to procure same, thereby losing valuable working hours and wasting gas travelling to and from town unnecessarily, therefore the council of the rural municipality of Daly respectfully request the oil controller to allow farmers to buy gasoline by the barrel as heretofore, having the coupons deleted from their ration books, which action would prove a saving on gasoline and allow farmers more time to attend to their farming operations.
>
> Respectfully submitted.

Some of these things may not appear important to many hon. members, but with respect to rural conditions they are of prime

importance. These men are all short-handed for farm labour, which is also an important question. In many instances farmers have to leave their work on the farm, go perhaps two or three miles to their homes, prepare for their trip into town, take a chance when they go out to their cars on having a flat tire because of the poor quality of tires now being used, try to get into town at least half an hour before the closing hour, and then find a congestion of other cars waiting to be served. They would like to be able to buy gasoline by the barrel against their coupons, and I am placing their request before the minister.

There is another matter, one which I think has been raised by other hon. members. I have received a good many letters urging that some change be made in the regulations so that farmers can go in and buy gasoline at least two evenings in the week at an hour later than that prescribed by the regulations. The farmers find they have to lose too much time when they must reach the station before the present closing hour. As I say, they are not making this suggestion in any critical spirit; it is only in an effort to conserve time and gasoline, which is, I think, a most praiseworthy motive.

Another suggestion I have to make is that the department take some steps to see to it that certain service station operators and many of those in other lines of business who have been practically put out of business because of the present regulations should be taken care of in some other line of work. These people have claims upon the public; they have built up their business over a term of years, and some of them are now forced to close their doors. There is other work that most of these men can do to advantage, and I suggest that in any openings which may be available they be not subject to the regulations of the civil service commission. In saying that, I am casting no reflection upon that commission; I have no reason to do so, but I think the tests should be reliability and ability to do the job. Any man who can pass these two tests should get preference.

I was glad to hear the minister say that as far as possible smaller companies, garages and others who have suffered severely because of certain restrictions, will be given every preference possible. I have always been a believer, and I am more so to-day, in the decentralization of industry. I do not think it is a healthy condition for any country to have its industries centralized. I am glad to know that the minister is aware of the advisability of taking care of these smaller institutions as far as is practicable. That is all I have to say.

[Mr. Matthews.]

First, I suggest that our farmers should be put to the least possible inconvenience in filling their gasoline requirements. Second, I suggest that service station operators who are suffering because of the present regulations be given some preference whenever the occasion offers. Third, I suggest that the smaller repair and manufacturing companies in this country be given an advantage wherever possible over the larger centres of industry.

Mr. HOWE: I have a brief statement to make which perhaps I should have made before. A number of hon. members have suggested that provision be made in rural areas to permit gasoline stations to remain open in the evenings for the convenience of farmers. I may say that arrangements have been completed whereby gas stations five miles distant from a city will be authorized to keep open one evening a week. Arrangements can probably be made so that gasoline will be available two or three evenings a week to farmers coming into town.

Mr. FRASER (Peterborough West): Will that be only for farmers?

Mr. HOWE: It will be available to anyone who comes along.

Mr. DOUGLAS (Weyburn): What about purchasing by the barrel?

Mr. HOWE: That cannot be done.

Mr. BLACKMORE: I have listened with a great deal of interest to the discussion with respect to the minister's work and his share of this $2,000,000,000 appropriation. I am not by any means satisfied that our resources are being used to the degree to which they could be used. I am not disposed to find fault with the minister.

I think he attempted a colossal task, a task probably beyond the power of any one human being, and I believe that he has wrestled with it heroically. I may not be deemed, in saying that, a very good opposition member, but I do not see why a man should not have a little credit when he has earned it. At the same time it is well for us to bear in mind that there is in our keeping, perhaps right in this chamber, perhaps in the minister's department, the future of six hundred and fifty million people—the people of the whole British empire and of the United States. If we fail to produce the armoured cars—the tanks, the aeroplanes and the other necessities of war to the degree to which we can produce them, in whatever degree we fall short we shall jeopardize the future of all those free peoples who constitute our friends.

I am not at all satisfied with respect to the gasoline matter. I simply cannot be convinced that everything has been done which could be done to provide this country with gasoline and other fuel. I firmly believe that there are people, organizations, with ulterior motives, deliberately preventing the development of the fuel supply of this country, blocking the efforts of the minister to produce the maximum.

The committee which the minister mentioned, which has been selected from his own department to examine into the possibility of producing oil from the Athabaska sands, should be able to get right to work and produce results, and produce them quickly. This business of dawdling along, waiting until next year, hoping that the war will end before they have to produce oil, is not to be tolerated. That is exactly how I feel about the matter. I do not think the committee is on its job. I do not believe it is producing results. As we say out in the west, "I don't believe it is cutting the mustard." I think it ought to be told to get right to work and make a report soon. I should like to know who these committee people are, and when they are to hand in their report. What is it about the Athabaska tar sands that they do not now know? They have been studying the Athabaska tar sands for many years. Voluminous reports are to be had. What they do not know, it seems to me they could find out very soon if they chose to do so. The minister, in his reply to the hon. member for Davenport (Mr. MacNicol), spoke of a number of problems, but very vaguely. I do not see why those problems could not be detailed to this committee so that we could know exactly what they are. One is likely, of course, to hear rumours that are not entirely correct; nevertheless I do not think that all is well with the Athabaska tar sands situation.

The minister mentioned that he had taken into counsel certain companies and is expecting them to advise him whether it is well to go ahead. Has the minister chosen companies which can be entirely trusted? There are some companies from whom I certainly would not take advice with respect to the development of gasoline in this country. I believe that some of them have ulterior motives—just as we learned the other day is the case with certain companies in the United States. The rumour is prevalent in several parts of Alberta that oil wells were drilled in times past, discovered to be good producers, and deliberately capped and taken out of production. These rumours are persistent. I do not know whether there is any truth in them. Obviously, no member of this house has time to investigate. The minister himself has not time. Would it not help matters if he were to insist that every company which has drilled for oil in Alberta or any other part of Canada should produce a detailed account of every drilling it has made and what was done as a result—to make sure that there has been no sabotage? I have heard, from men whom I would not dare to doubt, that wells are deliberately kept out of production.

There is another matter which gives me some concern. Is the minister afraid that if gasoline were produced from Athabaska tar sands, it would cost a few cents more than we are now paying for gasoline? Let it be clearly understood that if we lose this war, we shall never have any further anxiety about the cost of gasoline in the Athabaska tar sands. The issue to-day is one of winning the war or losing it; the result might easily be determined by the quantity of gasoline we did or did not produce in any one year, and that year might be the one upon which we are entering at the present time.

Has the minister at his disposal all the money he needs? Is he restricted in any respect? If I could be completely satisfied on that score, my mind would be more at rest. Why worry about the cost of the gasoline? Let us ask this question: if one Adolf Hitler had control of the Athabaska tar sands, does anyone believe for a split second that he would be worrying about the cost of producing the gasoline? How much is Hitler paying in the effort to get through to the Caucasus? What does anybody imagine will be the cost of the gasoline when he gets there? Cost is not entering into his consideration; what he wants is to get the gasoline; and that, Mr. Chairman, is what we must have, too.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. BLACKMORE: When the committee rose at six o'clock I had been discussing briefly the question of mobilizing our fuel resources in Canada, and I had expressed serious doubt whether any really earnest measures were being taken to meet the danger of a shortage of fuel. I consider that this government's neglect of our fuel supply is altogether reprehensible. I do not believe that any government can possibly be excused before the people to-day or before future generations for neglecting the fuel interests of this

dominion, and I say that for three main reasons, the first being that we have gone mechanical. All over the land, especially in the four western provinces, practically every farmer has gone into mechanized equipment, which means he has probably traded his horses for a car; he has bought an interest in a combine; he is depending on gasoline engines; he has disposed of his pasture. The result is that he has gone into mechanized equipment in such a way that it is impossible for him to get back into a position where he can use horses. This has put our whole economy, particularly agriculture, on a precarious basis; and under such circumstances, to neglect to provide for an adequate fuel supply in Canada is not only a blunder but comes near to being a betrayal.

I maintain that our fuel supply has been neglected. Especially am I led to suspect this by reason of the fact that we have almost entirely neglected alcohol. Alcohol can be made successfully from potatoes. Have we had any potato-made alcohol? Have we had any plants established for the production of alcohol from potatoes? Has there been any programme for the growing of potatoes for that purpose? None that I have heard of, notwithstanding the fact that Canada, from coast to coast, is eminently adapted for the production of potatoes. Then, in regard to wheat, I am informed that good alcohol can be made from this grain. We have had a good deal of talking about making alcohol from wheat; but talk is as far as it has gone, and now the farmers of the maritimes are limited beyond endurance in the matter of gasoline, while in the west we are getting far less gasoline than we need. Still, only talk. Alcohol can be produced from beet sugar molasses.

Mr. McIVOR: Does the hon. member not think it would be a waste of wheat to make alcohol from it?

Mr. BLACKMORE: We might have a billion bushels of wheat in this country and yet, if we ran out of alcohol, we might be beaten by Hitler. What does the hon. member think about that? It would then have paid us to turn 400 or 500 million bushels more of wheat into alcohol. Bear in mind that we are fighting for our very existence, and when we are fighting for our existence we must have alcohol fuel. I do not see why so many hon. members seem to do their thinking all in one compartment. They do not think over the whole field. They simply do not realize that we are in danger of being defeated because we lack alcohol or because we lack gasoline. Sugar beets will produce alcohol, and the molasses from such beets can be used to advantage. Have we seen any evidence of a desire to increase our beet sugar production so as to allow for the possibility of producing alcohol from molasses secured from beet sugar? No evidence at all. All these things serve to indicate that the government must be asleep as far as alcohol and gasoline are concerned. Either that, or it must be under the influence of someone or another who has an ulterior motive. I hope I am wrong, but the evidence seems to indicate that I am only too right.

I wish to turn now for a few moments to another aspect of the question. I am worried about the controllers we have. I know only one or two of these gentlemen; in fact, I hardly know any of them. I do know, however, that the set-up we have under these controllers, twelve of them, each possessing almost absolute power over the particular industry over which he has been placed, is in a position to do this country irreparable harm. Take lumber control. I know nothing about the lumber controller; I have never met him though I think I know his name. But I have heard that prices have been set on lumber at such a figure that many mills that could produce lumber and would do so have been caused to go out of business; prices were fixed at such a level as would enable certain types of mill to succeed but would squeeze out certain other types. If there has been a deliberate design on the part of the lumber controller to accomplish that end, then I say that man has been very unkind to Canada. If lumber mills have been squeezed out of existence at the very time when we need lumber in Canada, and then if, after the lumber controller has destroyed a good deal of the productive power of Canada in connection with lumber, we turn round and say that there is not sufficient lumber to build the houses the people want to build, obviously we have been thrown into a position so false as to appear grotesque.

Mr. HOWE: We have kept prices down so that people can build houses. I know of no mill in Canada that is closed. If my hon. friend knows of one, I wish he would let me know. To the best of my knowledge the mills are working full out, with a market in the United States for any surplus at better prices than in Canada. I would say that the lumber situation is in a very satisfactory condition at the moment.

Mr. BLACKMORE: I am glad to have the minister tell us that. One reason why I am saying this is to give him a chance to deny. But from remarks I have heard—and I have definite information from two or three men who, I am sure, knew—there are mills

in British Columbia and certain parts of Alberta that were closed during the past winter because prices were too low.

May I pause here for a moment on the question of price. The minister says that we have kept prices of lumber down in Canada so that people can buy the lumber. That is a most laudable object, entirely commendable. But we can render lumber available to the people of Canada at a low rate without keeping the price to the producer down. That is a fact which is yet to be learned by a considerable number of hon. gentlemen who sit on the government benches. They do not seem to realize that it is possible to do what I am told is done in England, for example with respect to eggs. The producer can be paid 75 cents a dozen for eggs, and the eggs be sold to the consumer at 50 cents a dozen. The government absorbs the 25 cents. The application of that principle is coming; it must come. It will seem strange to people trained entirely in orthodox thinking, but one of the greatest dangers that confront us to-day is the orthodox thinking which prevails everywhere. If we insist on managing our affairs according to orthodox thinking, and our enemies and competitors follow another kind of thinking, they get ahead of us.

With respect to lumber, there is no reason why the price cannot be made sufficiently remunerative to enable every lumber producer in Canada to produce to the full and yet the lumber be sold at a low rate to the consumer. I use lumber merely as an illustration to show that the set-up is exceedingly dangerous to private industry and may result in so much destruction of our production as will subject us to the danger of inflation because of a shortage of goods. This is a result of the system of controls that we have. I am not sure that any controller is abusing his power, but I would feel very much safer if there were a system of supervising controllers so that we could be sure that no controller is taking advantage of his position to help his friends at the expense of other producers.

I turn now to another matter which is causing a good deal of difficulty in my constituency and other parts of western Canada. There have been restrictions in regard to automobiles. We have been told that we can have only so many tires; that only so much gasoline is available; that no new cars are being produced; the result is that many people who have come to depend entirely on cars for transportation are at their wit's end to know what to do.

I call this to the attention of the minister in case he has not noticed it. Twenty years ago before the coming of the automobile every farmer had his buggy and his wagon. There were plenty of buggies, plenty of wagons, in the stores of the implement dealers. There are now no wagons on many farms. In many instances there are no buggies on the farms. There are no wagons or buggies to speak of in the hands of the dealers; men do not know where they are going to buy wagons and buggies. I wonder whether provision has been made for the manufacture of wagons and buggies to take the place of the automobiles.

This is a most serious situation. It is difficult to get harness; it is difficult to get horse-drawn machinery, where men have gone in for ploughs that require a tractor, not to mention the difficulty of getting horses. When men have put all their working capital into automotive equipment and machinery they have no capital with which to buy horses and horse-drawn vehicles. The result is that farmers in many parts of Canada are faced with a situation which to them appears utterly impossible. I wonder whether the minister is taking precautions to see that that situation is met.

These are some real difficulties which I have presented to the minister. I think it would relieve us if he could tell us that all is well.

Mr. HOWE: We are taking special precautions to try to give the farmers the tires they need to carry on business. As far as the gasoline situation in the prairie provinces is concerned, we are fairly secure because we have a local source of supply partly in Alberta and partly in the neighbouring states.

Mr. BLACKMORE: Is anything being done regarding the manufacture of alcohol from potatoes or wheat?

Mr. HOWE: We have an ample source of alcohol so far. All the distilleries in the east and in the west have been turned fairly well to the production of alcohol. We can step up our production of alcohol as much as is needed for any ordinary purposes.

Mr. BLACKMORE: Has the minister any means for supervising the work of the controllers so as to make sure that they are not abusing their powers?

Mr. HOWE: Yes; the chairman of the control board has a staff for that purpose, and of course the deputy minister and I exercise authority over the board. No order can be issued without my examination, approval and signature.

Mr. BLACKMORE: Has the minister any means whereby a man might be able to send in a complaint? Suppose a lumberman finds

prices are being set in such a way as to discriminate against him; is there provision whereby he can write in and complain without endangering himself?

Mr. HOWE: He can, and does very frequently. We get plenty of complaints.

Mr. NICHOLSON: The other day when the minister was before the committee he informed us that since the commencement of the war he had awarded contracts totalling over $4,000,000,000. I envy him his ability to discuss in this house, with very few references to his notes, such a wide variety of expenditures. I might remind the committee that total expenditures in connection with the last war, together with disbursements in connection with demobilization, amounted to $1,695,000,000, or only a fraction of the amount handled by the minister's department. If we add all expenditures chargeable to the consolidated fund, chargeable to capital, all railway subsidies, all other charges and the cost of war demobilization from confederation up to 1935, the total will be less than three times the amount of money being spent by this one department.

It is physically impossible for members of this house to follow intelligently all the expenditures of this large department, but this evening I wish to discuss one company which is under the supervision of the minister, and which, in my opinion, has not received sufficient consideration here. I refer to Wartime Housing, Limited. Unfortunately, at the commencement of the present war Canada was in a very bad way as far as housing our people was concerned. At the commencement of the last war we had, in most cities, vacancies of from 7 to 15 per cent of the total, while at the commencement of the present war less than one house out of every one hundred was vacant in most of our cities. Unfortunately, during the years prior to the outbreak of the war the cities of Canada did not carry out regular, thorough surveys to ascertain the exact condition of housing within their limits. I have a report coming from the city of Halifax and issued in 1932 in which are set forth the conditions prevailing there. From the investigation made it would appear that 11,197 men, women and children were living under conditions believed to be serious enough to be included in a special survey. The most recent survey available from Montreal is one which was published in 1935, which admits that 18,000 persons in that city need rehousing, and that a total of 70,000 dwellings were required at rentals below the levels which private industry could afford. An excellent report was prepared on conditions in Toronto when the hon. member for Parkdale (Mr. Bruce) was lieutenant-governor of Ontario. According to that report, not only were bad housing conditions discovered but the presence of a serious housing shortage was also detected. The report goes on to say:

A surplus of households is at present absorbed by doubling up and overcrowding. If reasonably full employment were to return, and marriages delayed by depression were to take place, it is probable that a shortage of some 25,000 dwelling units would become apparent.

The most comprehensive report available comes from the city of Winnipeg, where they have been so fortunate as to have a public health department which each year conducts a very thorough investigation and submits a full report. In the most recent report we find that they have reached an all-time low in the number of vacancies, which means that more and more families are having to crowd together. The report goes on:

This condition is, of course, in conflict with our health and other by-laws, but it is evident that there is little we can do about it.

And further on:

During the past five years, the total dwellings and suites provided was 1,886, while during the same period, there were 18,322 marriages—one dwelling or suite for approximately every ten marriages. Of course many of the marriages are of people from outside the city, but if three-fourths of the marriages were of city people, the rate would be only one dwelling or suite provided for approximately every seven marriages.

I believe hon. members will understand what a serious problem is presented by these figures. Since this report was made, a great many of the young men who have joined the forces have married. These young men are risking their lives to fight for their homes; yet on coming back to Canada many of them find that we have not homes available for them. Their families find it impossible to secure housing in many of our larger cities within the price range they can afford. The report concerning Winnipeg goes on to say:

Surely our present housing shortage cannot continue much longer. The risk to health of our substandard housing, not to mention that of the fire hazard in our nondescript tenements, may be brought home to us with painful remorse.

This report gives an idea of how costly it is to maintain these large slum areas in our cities. A few years ago a survey was carried out in Winnipeg, for the purpose of which they divided the city into three areas, numbered one, two and three. Areas one and two included the worst slum districts, while area three included the rest of the city. The report indicates that the arrests per thousand of population in area No. 1 was 21·1; in area No. 2, 52·2, and in the rest of the city, 6·5.

Cases handled by the children's bureau per thousand of population in area No. 1 was 9·1; in area No. 2, 9·2, and in the rest of the city, 4·2. Juvenile court cases per thousand of population, in area No. 1, 16·9; in area No. 2, 23·7, and in area No. 3, 11·5. St. Boniface out-patients per thousand of population: in area No. 1, 22·9; in area No. 2, 34·2, and in area No. 3, 5·3. Hospital public ward admissions per thousand of population: in area No. 1, 91·1; in area No. 2, 101·4, and in area No. 3, 52·9. Scarlet fever and diphtheria: in area No. 1, 13·6; in area No. 2, 15·7, and in area No. 3, 7·5.

This report gives the comparative cost to the city of social services in the two special areas compared with the rest of the city, indicating that in terms of dollars and cents it is an expensive business to allow these large slum areas to exist. The report goes on to say that with regard to seven essential services the cost to the city in the two special areas was $639,000, while the cost for the rest of the city was $612,000; but if the cost for these slum areas had been at the same per capita rate as for the rest of the city, that cost would have been $189,000. In other words, there was a yearly cost in areas Nos. 1 and 2 of $450,000 in excess of the cost for the rest of the city, which means that it cost the people of that attractive city nearly half a million dollars yearly to maintain this large slum area. It was estimated that if a million dollars had been spent in slum clearance, it would have been possible to amortize this amount over a twenty-year period at an annual cost of $77,000, which would give the city a saving of about $350,000 a year.

I might direct attention to an interesting report that was presented to this house in 1935, when a special committee was set up to look into the housing situation. I am sorry to say that only three of the members of that committee are still here: the hon. member for Broadview (Mr. Church); the hon. member for Lambton West (Mr. Gray), and the hon. member for St. Boniface (Mr. Howden). In this report there is a statement showing the cost of the slums in the city of Cleveland:

> According to an intensive survey made in Cleveland of a slum district where two and one half per cent of the population lived, 22 per cent of the murders were committed, 6·8 per cent of boy delinquency, and 12½ per cent of the tuberculosis deaths occurred in this area. Although the per capita cost of fire protection in the city of Cleveland is only $3.12 the cost in the slum area is $18.72. Although the total tax income of this area is only $225,000 the total municipal expenses are $1,356,000, leaving a deficit of $1,131,000, which must be made up by the rest of the community. If you add the contribution of the various unofficial agencies, such as visiting nurses association, maternity hospitals, etc., we add $615,000, so the total deficiency is $1,740,000.

In the same report a table is submitted showing what proportion of the family income should be spent in rent. White-collar workers, receiving an income of from $1,000 to $1,500, might spend one-third of the income for rent, or $34.70 a month. Artisans, receiving an income of $850 to $1,025, spent one-quarter or $19.60 a month. Semi-skilled workers could not spend over one-fifth, or $12.50 a month on the average, and unskilled, on the wages they were receiving, could not spend more than $9.20 a month. The committee submitted recommendations which have received consideration by subsequent governments, but unfortunately the recommendations have not been acted upon to as great an extent as might have been expected. In the evidence it is emphasized that:

> A national emergency will soon develop unless the building of dwellings be greatly increased.
>
> The formulation, institution and pursuit of a policy of adequate housing should be accepted as a social responsibility.
>
> There is no apparent prospect of the low rental housing need being met through unaided private enterprise, building for profit.

This report was submitted in 1935. Unfortunately since that time very little consideration has been given to achieving this general objective. I am very glad to say that the government has recognized that the housing of people in our industries is an essential part of our war effort. In the United States the same policy is being followed.

I have in my hands a copy of *Business Week* for January 3, 1942, in which it is stated that the President of the United States in the previous week had signed an appropriation to bring housing money up over the billion mark. It mentions that defence housing has gained recognition as a major war project. During the last war United States industry found that they had wastages of as much as 10 per cent, as a direct result of being unable to find for their workers housing adjacent to factories. We are already experiencing similar difficulties in Canada.

Recently I visited one of the munitions industries in the Toronto region. The people of Canada have invested over $5,000,000 in providing plant and equipment in this particular factory, and I must congratulate the minister upon the excellent work that has been done there. As far as I could see they are doing a very good job, but the management informed me that they are now experiencing a problem which apparently had not been anticipated. There are men who are coming as far as fifteen miles to work. During a

time of unemployment men will travel fifteen or twenty miles, if necessary, to find employment; but during a time of nearly full employment, if a man can find work within three blocks of his home, even if it is in a non-essential industry, he is likely to find an excuse for being dismissed from the essential industry. I am informed that this particular company has submitted a brief to the department suggesting that consideration be given to the providing of houses in that particular area.

A little over a year ago the minister persuaded the government to agree to set aside $10,000,000 for the purpose of going into the business of building houses. Since that time I understand commitments have been undertaken which will require at least $30,000,000. I am not criticizing the minister for the amount of money that is being spent. As a matter of fact I do not think he is spending enough money on this particular phase of the war effort. If we assume that it is going to cost a billion dollars a year to produce the munitions, it is conceivable that we shall have a wastage of 5 per cent or even 10 per cent. We suffer a loss of $50,000,000 to $100,000,000 a year as a direct result of not having adequate housing available in the areas the men are employed. Therefore I am not criticizing the minister for spending too much money on this very important project.

I do feel, however, that the projects are open to criticism, on two grounds. In the first place we are building potential slum areas under Wartime Housing, Limited. I know the minister has stated that these houses are to be demolished when the war is over. Past experiences in every country however, have demonstrated that temporary houses will not be torn down as long as there are in the various communities less desirable houses being occupied. If the moneys spent on wartime housing were being spent in isolated places where industries have been established—industries which will be demolished when the war is over—I would not be so concerned. But if we look over the returns which have been brought down to the house, we find that large sums of money have been spent in Halifax, Hamilton, Vancouver and other cities in Canada where there is a very serious shortage of permanent housing.

Therefore, in deciding a policy of wartime housing the government should consider first of all the amount of labour available in Canada, the amount of material available, and the time element—whether there is an immediate hurry to have these houses built. As far as cost is concerned, the pronouncement by the Prime Minister, the Minister of Finance and the Minister of National Defence should be the policy of the government, namely, that whatever is physically possible will be made financially possible. That being so, if it is physically possible to build permanent houses, then by all means let us make it financially possible. We cannot afford in Canada at this time to spend $30,000,000 on the building of potential slum areas. I submit that the temporary houses which are being built are going to become potential slum areas.

I feel the department is open to a second criticism, on cost and on construction. Hon. members have been invited by the minister to visit houses in Hull built by Wartime Housing, Limited. Some hon. members have accepted his invitation, and I think all who have made the visit will agree with me that the taxpayers of Canada have paid a great deal of money for flimsily constructed houses. A return brought down recently placed the cost of these houses at $3,379.

In Ottawa within the last year permanent houses have been built by the national housing administration, under the Department of Finance. I urge hon. members who are interested in housing to visit the wartime housing buildings in Hull, and then to visit the national housing administration houses in Ottawa. A return was brought down on March 27 giving information respecting the building done by the national housing administration. My first question was: "How many single housing units were built under the supervision of the national housing administration during the period September, 1939, to December, 1941?" The answer was "12,852 units." That is a valuable contribution toward solving our housing problem. It is not yet enough, but it is over 12,000 more than we might have had. Then I asked as to the average cost per house, and it was shown that the average cost was $3,750. My next question was as to how many low-priced houses had been built by the national housing administration at $2,500 each, and the answer was "2,433."

I have some plans before me showing the type of houses built under the national housing administration. I refer particularly to a house twenty-four feet by twenty-four feet with two bedrooms, a good sized living room, an attractive kitchen with built-in cupboards and so on and two windows, and a bathroom. This is a permanent house with a full-sized basement, containing a furnace. I recently visited one of these homes in Ottawa, and I was advised by the owner that this house was secure by his making a cash payment of $250 and monthly payments of about $20

including interest, principal and taxes, over a twenty-year period. Actually these people are getting a house of this kind for $250, because their monthly payments are no greater than the rent which would be asked for a similar house. They are paying $16.35 a month for twenty years to retire principal and pay the interest, and the taxes bring up the payments to around $20. Recently a change has been made requiring the amount borrowed under the national housing scheme to be repaid within a fifteen-year period. Under this plan, during the first five years when only small expenditures would be required for repairs, the payment amounts to $19.62, and for the next ten years payments drop to $14.60.

The point I am trying to make is that people who are living in these homes are home owners. They take pride in their flowers, trees and lawn; they take pride in owning their first home, and that is a very important consideration. In the basement of this particular home a ping-pong table had been in use during the winter months. This was a fine place for them to spend their evenings. In contrast to this, we have the type of house erected in Hull, built of inferior materials, without a basement or furnace, erected by Wartime Housing Limited. Strange as it may seem, people in Hull are paying $30.20 a month for a house that they will never own, a house that will never give them the source of pride which they would otherwise have.

Speaking in the house last November the minister made reference to having met someone who was living in one of these wartime houses who would not exchange it for a brick-veneer house built some years ago at a cost of $5,200. I do not, for a moment, doubt the minister's word, but he did not mention where that man lived. I think he must have lived up in the territory represented by the hon. member for Yukon. I cannot conceive of a person in Hull or Welland or Hamilton being willing to exchange a $5,200 brick-veneer house for a house built by wartime housing. I can conceive of a man who had built a house in Hudson Bay junction, where I lived for ten years, or in the Yukon or Churchill or the Pas, and who found that he was compelled to live in another province, being willing to trade a $5,200 house for a house of that sort. But I cannot understand anyone being willing to exchange a house that had cost $5,200 for any house built by wartime housing in the same area.

Recently I received from Vancouver an illustrated booklet showing three houses which had been built there under the national housing administration scheme. These houses are quite attractive looking, nicely painted, with brick chimneys, lined flues, full-sized basements, furnaces, hardwood floors and modern conveniences. They were built at a cost of $2,500 each. In the same booklet there is a picture of houses built by wartime housing. When the booklet was prepared it was assumed that these houses were being built at a cost of around $2,000, but the return I have states that these temporary houses, without basements and without furnaces, were built at a cost of $2,996.97. I cannot understand how permanent houses can be built in greater Vancouver for a down payment of $250 cash and $20 a month for a twenty-year period, when other workers are required to pay from $20 to $30 a month for inferior houses which will never become their property.

There is one other point I want to make before I conclude. So far the government has not given consideration to the building of houses which will be available for the families of men who are with the navy, the army or the air force. From what has been said in the house, I gather that the Minister of National Defence (Mr. Ralston) does not consider that the building of houses is his concern. I find that on April 28, as reported on page 1942 of *Hansard*, he stated what unfortunately appears to be the position of the government. He said:

> I must take this position—it is the position taken by my colleague the Minister of Finance—that this question of housing the citizens of Canada—not people moving transiently—is the problem of the municipalities rather than that of the federal government.

As I mentioned earlier, hundreds of men from every part of Canada have joined the air force, the navy and the army, prepared to go any place in the world and to risk their lives. The relatives of some of these men are coming to our civic authorities and saying that their husbands are away fighting for their homes, but they have no homes; they complain that they cannot secure houses. The wife of a private with two children receives a monthly allowance of $79. I should like to know where in Ottawa or Toronto or Hamilton or Winnipeg the wife of a soldier would be able to rent suitable quarters for one-fifth of that amount, or $15.80.

The Minister of Munitions and Supply is in charge of the building programme for the government, and I think he should give careful consideration to the building of low-priced houses to be made available to the relatives of those who are with our forces. Air force camps have been built in many small communities, and the relatives of many of the permanent staff would like to find

living quarters so that they could see their husbands or fathers. Consideration should be given to the building of temporary houses in many of these areas. The Minister of National Defence for Naval Services dismissed lightly the question which I asked a few nights ago. He said it was unthinkable that a house should be provided for a wife who was going to Halifax to see her husband off. Large numbers of people are going to be stationed at places away from their homes for the duration of the war and, if the raw materials and labour are available, I think it is the duty of this government to see that houses are made available for our people.

I should like the minister to follow me and make a statement regarding the policy of his department in connection with wartime housing, indicating what their plans are. I understand from the press that commitments have been made for about $30,000,000. Will the minister indicate whether that is about all the money he expects to spend, or whether consideration has been given to the building of houses in areas where the forces are stationed? I should like him to make a statement as to why the cost of wartime houses appears to be so high compared with the cost of houses built in the same areas under the national housing scheme. Why should a wartime housing house cost $3,379 in Hull compared with a cost of $2,500 for a permanent house built in the city of Ottawa under the national housing administration?

Mr. HOWE: I think I have explained this several times, but I shall be glad to go over the ground once more. The national housing policy presents quite a different problem from that presented by wartime housing. The money for national housing is available and has been continuously available to anyone who cares to take advantage of it. It has been used largely by speculative builders who took advantage of the terms quite legitimately in order to build houses, and sell them on a rental basis.

Mr. NICHOLSON: Where has that sort of thing been done?

Mr. HOWE: The town of Port Arthur is one place about which I happen to know something.

Mr. NICHOLSON: They are built by speculative builders?

Mr. HOWE: They are sold on a rental-lease basis. The owner is seldom the initial borrower. Frequently he is, but I think the majority of these houses are built on a speculative arrangement.

[Mr. Nicholson.]

Mr. NICHOLSON: I think the minister is misinformed in that connection. As I understand the act, the owner must be the borrower.

Mr. HOWE: Well, we will not argue that; my hon. friend may be better posted than I am. But I know that in my own town the arrangements at least are made as a rule by a builder, perhaps for an owner, and the owner may be brought into it before the house is started. Usually these houses are built, not singly, but a number at the same time, in my own town.

I believe the mortgage is made by the owner direct with the department; I am not sure of the mechanics of the thing. This arrangement is, of course, for a house built by a man who lives in a community in which he expects to remain for many years. Wartime housing is not for that sort of an owner. As my hon. friend knows, we have moved great numbers of our population from one city to another, from the prairies to the cities, from the cities to plants built in small communities; and wartime housing is built to take care of the man who has been so dislocated. That is all that it was ever intended for. It is quite different and distinct from houses built under the National Housing Act.

For this purpose we have provided a type of construction which, while giving the owner every comfort, is not expensive. My hon. friend speaks of "inferior materials". He is quite mistaken. The housing materials which go into the wartime housing project are the best that are used in building generally. They are not elaborate, but there is nothing shoddy about the wartime housing house.

Mr. NICHOLSON: Has the minister seen the houses in Hull?

Mr. HOWE: The houses in Hull are like those elsewhere. Has my hon. friend seen a wartime housing development which has been in existence for a year or two? I went to Windsor yesterday and saw wartime houses there. I found that there was a wartime housing improvement association of tenants putting in shrubs and building playgrounds. I may say, as one who has something to do with this, that I felt quite proud of that community. I have yet to hear a complaint from a tenant. I visit these housing projects wherever I can, and I have heard plenty of criticisms from dealers in lumber, from dealers in hardware, and from people like my hon. friend, but I have yet to hear a complaint from a tenant; in fact some very nice remarks have been made by tenants of these houses. It is always a pleasure for me to visit them.

My hon. friend asks why they cost—as he says—more than permanent housing. I doubt

very much if they do. But I would point this out. The builder of a home under the National Housing Act becomes a permanent citizen of his community and he is entitled to the rights of a citizen. He goes on a street which is developed; he attaches to the existing sewerage system and the existing water mains. The city pays part of his local improvements and he pays the remainder in taxes over a period of years. He is a taxpayer; he is entitled to the use of the services of the city, to everything which is the right and privilege of the taxpayer. But wartime housing is a temporary invader of the community. It does not become a citizen; it does not pay ordinary taxes, but it relieves the city of any expenditure on its account. When we go into a city we very often build our own streets, our own sewerage systems, our own water systems. Sometimes the expenditures for these purposes are very considerable. There is a case in Hamilton, I believe, where we have built almost a complete sewerage system and a complete water system. All that is charged against the houses. Our tenants do not pay taxes. We, as owners, pay the city the school taxes, and something more, by an arrangement we have made in all the provinces and which has been approved by the provincial governments and accepted by the cities in which we build. Therefore the tenants of our houses pay their rents, but no taxes.

As to the reason why these houses are constructed as they are. We do not wish to establish populations permanently where they are to-day. It is not desirable. The city of Windsor, I suppose, has almost twice the population it had at the beginning of the war. These people came from farms; they have houses elsewhere; we hope that after the war a goodly number will go back to their farms; that is, to their permanent residences. We have built sizeable communities around war plants which we know definitely will close down after the war—for instance, plants manufacturing ammunition and plants filling shells. These are temporary war projects and must necessarily be sold. There is no post-war use, that I know of, of an ammunition plant or a shell-filling plant. We had them during the last war, and when it was over the buildings were torn down. I doubt whether these plants will be demolished, but they cannot, I believe, be adapted to any other useful purpose. This means that these communities will disappear after the war. The advantage of the present method of construction is that the tenants can take these houses with them if they like. They are easily demountable, easily removable. They can be put upon permanent foundations, and first-class houses can be had with a very small additional expenditure. We hope that by building this class of house we can, after the war, if there is a movement of population elsewhere, take care of them. We have not a number of houses which, my hon. friend says, are bound to grow into slums. Nothing of the sort. If there is any tendency of that sort, the houses will be removed. In case the houses are needed where they are to-day, it is the simplest thing in the world to jack them up, put a permanent basement under them, install a central heating system, and thereby have as good a house of that class as can be obtained.

The type of house which we use is the type which is being used to the south of us for the same purpose. Demountable houses are being constructed there. Inquiries lead us to believe that the housing situation in the United States is not being met in as orderly a way as it is in Canada. We have been able to keep up to reasonable requirements, and we intend to continue doing so.

We do not lead the way in housing. We like to have a demand before we build, but we are reasonably keeping up with the demand. Officials of wartime housing are constantly studying the various centres of war industry to determine the housing needs. We have local committees who also study the question. If we have a considerable number of applications for wartime housing, there is no delay in starting a new project. In Windsor there are now, I believe, 1,300 houses. In addition, there are about 700 applications, and we are starting immediately to build another 500 houses in that city.

Therefore we are keeping reasonably up to the requirements of our war industries. As far as the ordinary civilian population is concerned, that is a somewhat different story. It is not the purpose of wartime housing to look after them. We still have the National Housing Act which can be used, and if, as my hon. friend says, it is so much better and cheaper, it is surprising that more people do not take advantage of it. In any event, we have the National Housing Act. We have helped out on occasions in many cities. If there is a demand of the type to which my hon. friend refers, we make available to the city, by arrangement, a certain number of war-time houses. I believe that in Hamilton we have made twenty available. Usually five or ten are all that are required. Windsor is exceptional. There, in addition to the twenty I have mentioned, we intend to make a few more available.

I assure my hon. friend that, where there is wartime housing, no conditions are allowed to rise which the city itself considers to be a condition of distress. We have always been quite willing to help a city in circumstances of that kind. I think wartime housing has served a useful purpose, and I am not at all ashamed of the type of houses we have built. As temporary houses go, I think they are first rate. We have a list of satisfied tenants, and I have yet to hear a direct complaint from one of them. The houses are well looked after by local committees, and on the whole I must say that the enterprise has turned out quite as well as I hoped it would when the work was first planned.

Mr. NICHOLSON: The minister has not fully dealt with the question regarding the cost in Hull. The sum of $3,379 appears to me to be a very high cost. I agree that in areas where the population will not be located permanently there is a real place for wartime housing, but these houses in Hull will be occupied, for example, by people employed in the Ottawa Car and Aircraft, and the situation here is that we need permanent houses, and a great many of them. If the time factor were of importance I could understand that some of these houses might be built, but in the return brought down the other day it was shown, with regard to the houses in Hull, that they were supposed to be completed, some by October 17 and all by December 17. I was there the other day and only thirty-four or thirty-six were occupied by the 1st of May, which would indicate that there has not been a very great demand for houses immediately for the people considered to be in war industry. These houses cost $3,379, and I submit that in Ottawa better houses have been built for $2,500. It is true that these minimum cost houses have only two bedrooms while the others have four, but how is the difference in cost to be explained? There are lots available in Ottawa where houses could be built, where it would not be necessary to go to the expense of providing the services that are furnished in Hull. Taking into consideration the needs of the community in Ottawa and Hull, I cannot see why the people of Canada should embark upon a programme of building houses, paying $3,379 for temporary houses, when better permanent houses might have been built for the same sum or less.

Mr. MITCHELL: I was interested in what the hon. member said, but it must be remembered that in the $3,300 there is included $20 a foot for right of way, $17 a foot for the sewer, and all the other things. They are all included in the price.

[Mr. Howe.]

Mr. DOUGLAS (Weyburn): They are included in the $2,500 too.

Mr. MITCHELL: The hon. member said, I understood, $3,300.

Mr. DOUGLAS (Weyburn): Those things are included in the cheaper houses too.

Mr. MITCHELL: Then there is construction. If the sewer goes through rock that is something that enters into the cost.

Mr. NICHOLSON: But all these things are known by wartime housing.

Mr. MITCHELL: The chairman of Wartime Housing, Limited, is a personal friend of mine, one of the ablest builders and contractors in the dominion. After all, every man after his own line. I will, however, say this about the houses. They are better houses than I lived in when I was first married, when I spent the happiest moments of my life.

Mr. DOUGLAS (Weyburn): That does not prove anything.

Mr. MITCHELL: It does prove everything, I may say to my hon. friend the member for Weyburn. I have lived in cities all my life and I know something about cost of construction. I was in the building trades; I was raised in them, and I know something about the cost that enters into these houses, the cost of building roads, sewers, sidewalks and all the other services that are required. I know something of costs spread over a term of years, in taxes and so on, in an organized community, and all these things are included in the cost of houses. Wartime housing services industry; the service must be rendered quickly; and, as the minister pointed out, in the very nature of things it cannot be permanent. All one has to do is to go back to the last war and see what happened not only in Canada but in the country to the south of us. See what happened in the New England states. When the war was over and various industries collapsed, as they will, then there was another shift of population back to ordinary peace-time pursuits. I think we should take a long view of the matter. One thing that is necessary when the war is over is that we should have a cushion for the construction trades, and I do not know of a better cushion than the building industry. I should like to see a tremendous building programme when the war is over. That will be the time to embark upon a long-term building programme in houses of a permanent nature such as those to which my hon. friend refers. As I say, we should have a tremendous permanent building programme under the direction of the government when the war is over.

I have a vivid recollection of coming back from the last war and seeing the kind of houses that were built for the men who returned from overseas, and I hope that when this war is concluded we shall have a better type of construction for the soldiers who will come back from overseas than we had after the last war.

Mr. DOUGLAS (Weyburn): But the minister has not explained the difference of $800 between the two types of houses.

Mr. HOWE: We are not preventing anyone from building the other kind of house. If a man wishes to build under the National Housing Act, he can borrow 90 per cent of the money from the government and go ahead and build a house of that kind. If he can do so, why does he not?

Mr. DOUGLAS (Weyburn): The minister is begging the question. The fact is that this is the Canadian people's money, and if we can build a good house for $2,500 we should not spend $3,300 to build an inferior one.

Mr. HOWE: The proper place to investigate the cost of housing is in the committee on war expenditures, where all costs are laid on the table and one can see where the money goes. It is no use arguing with me that this is an expensive house when I say it is a cheap house. I know what materials cost. I know what labour costs. I know what sewage and land cost. I know the houses are well built, built by an expert builder, and at reasonable cost. My hon. friend can debate all night that the houses are expensive, but if we lay the costs on the table it will be necessary for him to show where the money was wasted. I love to hear people who have no possible way of knowing anything about the building business, in this case, two gentlemen of the Gospel, which is a fine pursuit, arguing with me, who have been all my life in such business and know something about the facts, and telling me that these houses are too expensive. It is hardly an even argument, and we could go on arguing for some time.

Mr. DOUGLAS (Weyburn): The minister mentioned the committee on war expenditures. That raises a very important question. Let me point out to him that the war expenditures committee has been selected, and when it was set up the Prime Minister said that it could be enlarged. Three subcommittees were set up. We tried to get that committee to arrange that there should be one representative from our group and one from the Social Credit group on each subcommittee, but we have no representative on the subcommittee investigating wartime housing. The minister therefore cannot throw the responsibility upon us. The minister says that certain men are clergymen and therefore do not know as much about houses as he does. That is possible. But even a clergyman knows the difference between a house with a basement and a house without a basement, a house with a furnace and a house without a furnace, and if the latter costs more than the former then an explanation is needed. As far as this group is concerned, we have one representative on the war expenditures committee, and the supporters of the government prevented us from having representation on the subcommittee investigating wartime housing.

Mr. CHURCH: I have a few words to say in connection with this housing proposition. This was a Conservative policy in 1935 at a time when hon. gentlemen of the third party did nothing about it. During the dark days of the depression in 1935 when the Bennett government was in office a motion on the subject of housing and reconstruction was made by me when the construction industry was down and out. The resolution was debated for two days; a housing committee was appointed by our then leader, and after sitting for three months it presented a comprehensive report to the house. Under this resolution wartime housing only is before the committee at the present time. I am not going to discuss housing except to say that during the last war I had a great deal to do with the housing situation in Toronto and the many suburbs and municipalities clustered around that city with a population of 1,100,000 people. The city took over the street railway radials and started the buses, because the housing problem is largely a transportation problem, and provided good municipal services, water, roads, sewers, and other services. If you have the transportation and the sewers, water supplies, lights and heating, then the housing will go ahead. Twice the number of houses were built at that time than in the years after the war, and shortly before its close by the city building civic car lines.

Our housing committee made its report to the house in 1935. The Bennett government adopted it but was defeated in the general election of that year, but the main part of the report was adopted by the present government which came in and some $76,000,000 have been spent. That is permanent housing work. I wrote Mr. Pigott, the chairman of wartime housing, a couple of weeks after his appointment and asked him if he would make a survey of the houses needed in the Toronto district. He did, but the municipalities have to apply to them for wartime houses, or the use of them for soldiers. I found that the

wartime houses are of little value, and I think the money spent will in the end be largely wasted. One has to consider not only transportation but sewers and health regulations; it is an involved municipal matter. We should see that the money is not misspent—I do not mean in the literal sense of that word, but see that economies are effected, by the construction of a better class of house that will last, with all conveniences.

This is the sixty-seventh day of this session. I have been asking the government to announce what their policy is in connection with housing. The city of Toronto has been a leader in giving transportation, hydro, water, roads, sewers and other services. It took over the street railway and the radials, giving service to the surrounding districts, with the result that the city has expanded greatly. The Postmaster General knows well that on Avenue road north of Havergal college in his riding a very large district has been built up by the bus lines which have been established by the city, north, east and west. These bus lines were established in advance of the building of houses. The people went there and some have no other form of transportation. The northern growth of the city was largely due to the extension of civic car lines, and the taking over of radials; the building of these lines out into the suburbs brought about the development of housing.

The minister has given a great deal of study to this question, but I believe it will be found that the money spent on the present type of wartime houses will in the end be very largely wasted. I know that is the opinion of many people in the building and construction industry. I believe the government would be well advised if they announce a vast housing scheme for this country, not only for the cities but for the small towns and rural places and the farms as well. I referred to this in 1935 when I visited the northern part of Ontario and saw the condition of the farmers and small market gardeners as to housing. Modern housing is a great factor in national public health. I hope the government will make some announcement at once on housing. I believe the government should build houses, because after the war the soldiers' families and the munition factory workers cannot live forever in the type of houses now being built by wartime housing, or forever in some unfit for habitation, with the climate we have in this country and the need for fire and fuel for heating some eight months in the year compared with five or six in the olden days.

I wish now to say a few words about the present minister. I have known him since he was a young engineer and have had a great deal of respect and liking for him and for his wide experience since I was chairman of the Toronto harbour board. I should like to see his title changed to that of minister of production. Such a minister has been appointed in the old country. I do not know how the minister's health stands the hard work he has been doing. It is the general opinion in and out of this house that in view of the very grave situation of the war we have not been getting all the production we should, although good so far. We have lost the command of the sea on the Pacific. The minister should have full power to coordinate whatever authority is divided among other ministers in relation to production. He should be able to take a long range view of the situation, because the war is getting worse all the time; we have had very little success up to the present. I am fair enough to say that the minister has done a splendid work so far, changing this country from a peace economy to a war economy. Mistakes have been made; they will always be made in times of war; they were made in the days of Pitt and Napoleon and in the last war, for we were an unmilitary power. Large sums of money will, no doubt, be wasted. The minister has had a very hard task and it grows harder, but I believe that what has been done will form a splendid chapter in the history of this country when we get a total war effort. I would add, however, that the government has been led to embark on great expansion of this production work by the urgings of members of this house and the people of Canada, because the public and the rank and file of members of this house have been ahead of the government and on many occasions have forced the government, through public opinion, to take the action they did. Canada started two and a half years ago from scratch and a great deal has been done, but there is much more to be done.

In 1936, 1937, 1938 and 1939 before the war started I wanted a survey of the industries of this country, large and small, to see what could be done in rearmament, also a national selective service registrar. That was not done.

We should have a vast shipbuilding policy for this country which I wanted, and should have opened civil plants on the great lakes when that industry was pretty nearly down and out, but no action was taken. At the time of the last imperial conference in 1937 there was a shipping conference, but Canada opposed it and said, "We have no commitments; parliament will decide." Our delegates at the Pacific conference of 1937 knew

that Britain had two thousand fewer ships than she had in 1914 to carry food, with five million more mouths to feed. Yet nothing was done until the very outbreak of the war. The lack of ships may lose us our dominion. The establishment of a shipbuilding industry in Toronto during the great war gave a large amount of work. I was then the head of that city and for some time chairman of the new Toronto harbour commission. When we came here to see the very able minister, Hon. Mr. Hazen, Minister of Fisheries, the splendid father of the splendid member for St. John-Albert to-day, he was most sympathetic to Toronto. He was a great war-time leader then in shipbuilding. I think some eighteen wooden ships were built as well as other classes of ships, at the foot of Bathurst street, giving work to many skilled mechanics of all kinds who had been having a very difficult time. I am sorry that the government have not so far brought down a national merchant marine shipbuilding policy to build wooden ocean cargo ships of 8,000 to 10,000 tons in the great lakes as in the last war. I believe they will be necessary before the war is over, in view of the very grave situation that now exists in the shipping industry, and I believe there will be a great demand for them after the war is over, for we shall not be able to get along without them, because we were the fifth nation in trade and commerce.

In my opinion the house has been very anxious that this production should be increased not twofold or tenfold, but one hundredfold. It has been stated here that our production is two or three times what it was in the last war. One might just as well say it is one hundred times greater than it was at the battle of Hastings. It would be just as good an argument. In view of the "yes" vote I believe the government would be well advised to move a little faster; since the war began it has always been a little behind public opinion in these matters. We should review what has been done and what has been left undone and what we ought to do in the way of production; the drawbacks, the restriction of supply, the absenteeism, the lack of parts, and the general speeding up of the service accordingly. We are told that we have efficient administration, but while they say there is a demand for men in the country, there are still thousands of men over fifty years of age who seem to be the forgotten group, who are out of work, who have had long experience in many industries now connected with our war, both as executives and as mechanics, who cannot get jobs of any kind. Why not seek them out and put them to work on production? I should like to see these men given some consideration.

We on this side of the house urged that Canada should produce many kinds of instruments used in the war, but the government turned a deaf ear to us for many months. After Dunkirk, however, and after Pearl Harbour we in this house noticed that there was a great endeavour to speed our war effort, and that is all to the good. We now realize that our country has not been pulling its full weight for a total out-and-out war effort, and we should get on with the production as quickly as possible. This house and the country need leadership, something we have not always had. The people are sick and tired of being asked to do this and do that, for they have always been ahead of the government in regard to production and in advocating an all-out effort for victory in order to get the war over as soon as possible, and a victory. It is no easy task. The road is hard; there is no royal road to victory, and it is not ours by divine right.

What have we done to aid Russia? Very little, as far as I know. Of course we have helped in the air to a limited extent, but Russia is bearing the brunt of the war in this critical year 1942 as Britain did for the first two years. The war is becoming more awful every day, and it is becoming more and more imperative that Canada should have an aggressive spirit, a real total war spirit both in industry and in the fighting services. So far it has been a long series of nothing but withdrawals and defeats all along the line, and the people are getting war weary. Where is Canada to-day? The right spirit is in Canada, but it needs leadership. Let us not sit back any longer. Look at the awful defeats, reverses and withdrawals we have suffered during this war: Norway, Greece, Crete, Hong Kong, Singapore, Burma, Java and the Pacific, and the war is now at the very door of the four dominions. We have been told that these defeats were due to two causes: first, the lack of equipment and, second, the lack of production. If that is so, we had better awaken. We were unprepared and were totally disarmed and an unmilitary power, and we in this house must accept responsibility for that situation. As I see it, the position is very grave, and Canada should bestir herself at once. The war in the Pacific will be decided by command of the seas. Japan's initial success was the invasion of British, American, Dutch, Australian and other territory. They have captured the whole southwestern Pacific and the China sea and have invaded the Indian ocean to south Africa's shores by being prepared, and by possessing supremacy of the sea. That supremacy is undisputed. All this shows us the dire need of ships and an awakened public opinion to get them before the war is lost.

So I urge upon the government a vast shipbuilding scheme, and not an hour or a day should be lost. We are not yet able and will not for a year yet be able to challenge the supremacy of Japan in the Pacific. Japan now has the same command over the Pacific that Germany has over the Baltic when the Russian ports are closed by ice, and in the Black sea. Japan does not need to establish a military blockade of the main forces of her enemies to keep them away from the areas she has seized so far. She is able to hold them without that. She is there in sea command. Japan is pursuing her campaign in an area stretching over fifteen thousand miles, going from island to island like a circus, but this cannot go on forever. I believe once she loses command of the sea she cannot supply or reinforce her scattered garrisons or draw from the conquered territories those supplies for which she entered the war. There is only one road to victory for the allies; that is, to reestablish command of the Pacific, as effectively as we now have command of the Atlantic. But command of the seas can be achieved only by the destruction or neutralization of the blockade being maintained by the Japanese navy.

I believe it is largely the fault of Canada that Japan is in her present position, because, up to the hour she declared war on us, we exported large quantities of copper, aluminum, nickel, pig iron, scrap iron and so on to enable Japan to build her fleet. At one time Canada had a magnificent merchant marine, built by the government during the last war and since. What did we do with it and the Canadian National Railway Merchant Marine? In 1935, when Hitler was rearming, he was getting his base materials for the manufacture of war equipment largely from Canada and other countries. On March 23, 1938, *Hansard*, page 1614, appears an answer to a question by Viscount Bennett, showing the Canadian National Railways ships that had been disposed of, their size and the amount received for them, as follows:

Name	Tons deadweight	Sale price
Canadian Cruiser	10,500	$50,077
Canadian Constructor ...	10,500	50,077
Canadian Challenger	8,390	40,013
Canadian Highlander ...	8,390	40,013
Canadian Britisher	8,390	40,013
Canadian Leader	8,390	40,013
Canadian Scottish	8,390	40,013
Canadian Conqueror	8,350	39,823
Canadian Victor	8,350	39,823
Canadian Planter	8,340	40,061

Some of those boats cost a very great deal, a million dollars and more. The Princess type of boats also were sold, or thrown away, by the Canadian National Railways for a trifle, together with many other ships which could be used very well to-day because war came two or three years after their sale. In addition, many of the scrapped national railway cars were sold by the maintenance department of the Canadian National to private dealers, who in turn sold them to Japan to enable that country to get on with its preparations for war.

I suggest that there might be some reorganization of the work in the production department. Indeed, I have some suggestions. Would it not be well to arrange now to establish regional executive production councils in the provinces, who could decentralize this work of production. They could meet weekly in regional centres and thereby ensure administrative decentralization, acceleration of decisions and economy of money and man-power. Supply departments and all appropriate government services would be represented. There would be a reorganization of production, by regions, instead of having centralization of everything here in Ottawa and so speed up production in all departments. Such a committee would include representatives of employees' organizations, the federation of manufacturers, and the trades union councils of this country.

Regional boards such as I suggest would meet in a panel, and questions of production of all kinds in factories, including defects in organization for the laying out of the plant, difficulties in connection with labour or staff, the misuse of labour or machine tools, financial or labour difficulties, or the existence of administrative obstacles, would be dealt with. Statistics would be furnished to aid industry in connection with munitions plants to show where production is behind. Any complaint could always be dealt with on the ground. This would show things up in the organization and administration and strategy of production.

I was glad to note that the hon. member for Davenport made such a fine speech the other day on the development of our resources. I read it in *Hansard*, and I have in mind a somewhat similar subject, namely the national coal supply and the use of an oil pipeline, brought up by me on May 3, 1929. I have had that subject of a national fuel supply before the house for many years. It is only in the last hundred years that science has discovered the power inherent in coal, oil and falling water. I believe the points raised by the hon. member were well taken, and that we should do everything we can to try to develop production of the

natural resources of this country along the lines indicated, including a pipeline to Ontario.

Mr. HOWE: In connection with shipbuilding I might give the committee some information which would be of interest. Tonight at midnight two west coast yards are each launching a 10,000-ton freighter. One of them was completed at the yard, in every way, in eighty days from the time the first piece of steel was laid for the keel. That is a record up to this date. Those two shipyards have just begun a three-shift, seven-day-week operation. They are the only two yards we have been able to staff up fully. I expect that later launchings will show a still shorter time of construction up to the point of launching. However, as I have said to the committee, we are at the present time delivering one ship, complete for sailing, every four days.

Mr. CASTLEDEN: May I return to the subject of housing? I am interested in this matter as a citizen of Canada, and as one who is interested in seeing that the people of Canada get value for their money spent. There is upwards of $30,000,000 I believe, being spent on this project, and it is only about half-way through.

After studying the matter I am of opinion that we are not getting value for our money. I went through several of these houses in different parts of Canada, and in every one of the cases the story is just about the same. I might cite an experience I had this last week-end when I visited some friends in St. Catharines. I went through a wartime housing project, and I gathered some facts. I took with me an experienced lumberman and a man who is a plumbing contractor. Both of those men know their business.

One of these houses is twenty-eight feet by twenty-four feet with no basement, no foundation. The frames which the minister talks about are laid on posts which are driven into the ground. The construction outside is asphalt shingle, and it is spun rock wool insulated in the walls. The inside of the house is gyproc board, and it was very poorly put on, shoddily built—

Mr. HOWE: Just a minute; is that my hon. friend's opinion or an expert opinion; and, if so, who is the expert?

Mr. CASTLEDEN: It is not necessary to give that.

Mr. HOWE: I have yet to know that these are shoddily built houses, and I cannot accept my hon. friend's word unless he gives authority.

Mr. CASTLEDEN: I will accept—

Mr. HOWE: I will not accept it. I know something about the plan of these houses, and I know the men who build them. The hon. member is giving an expert opinion.

Mr. CASTLEDEN: If you are—

Mr. HOWE: I suggest that the hon. member withdraw the term "shoddily built."

Mr. DOUGLAS (Weyburn): Withdraw nothing—ridiculous.

Mr. CASTLEDEN: I ask to be permitted to complete my statement. The evidence upon which I based the fact that this gyproc was poorly put on was the fact that the plaster supposed to be placed in the joints of gyproc was falling off.

Mr. HOWE: Give me the street and address of that house, and I will bring a photograph of it.

Mr. CASTLEDEN: I shall be very glad to do that on the minister's commitment that there will be no persecution or intimidation of the people who live in that house.

Mr. HOWE: The people who live in the house I am sure did not tell the hon. member what he has stated.

Mr. CASTLEDEN: I was in the house with the people.

Mr. HOWE: And they told the hon. member, did they?

Mr. CASTLEDEN: No; I saw the plaster falling off; I saw it on the floor.

Mr. HOWE: Why, then, would I intimidate the residents of the house?

Mr. CASTLEDEN: I know perfectly well it is not wise to give people's names in this house.

Mr. DOUGLAS (Weyburn): We have learned that by experience.

Mr. HOWE: Just a moment. Give me one name that has been used in this house, following which there has been persecution. People are using loose language over there in that section of the house, and I do not care for it.

Mr. DOUGLAS (Weyburn): The minister is using loose language himself, and I do not like it, either.

Mr. CASTLEDEN: I will give the minister the address, and he can have an investigation of the matter. I will be very glad to receive the report of the investigation. It is at 84 Grass street, St. Catharines. There is no furnace in the house; there is a furnacette, series DB. The plumbing, complete, as done by a private contractor—and this man estimated it—would be about $185. The contractors, as they are doing here, are putting up three or four hundred houses, and I should think that in large quantities it would be much less.

There was an electric heater in the kitchen tank, and the wiring was done without switches. There were pull sockets in the kitchen and bedroom. The floors in this house were finished with a poor grade of spruce. There was no fireplace in the living room, and no brick chimney. The outside of the house was asphalt shingle; there was no eavestrough, and there was an open porch. I have asked for a return showing the cost, but I have not received it. However, the average cost of these wartime houses runs between $2,500 and $3,200 in other places.

In the same city I went to another house which had been built by a private contractor under the national housing scheme. The people were living in that house. It was thirty-two feet by twenty-two feet. There was an 8-inch double brick wall, plastered on the inside, strapped and lath and plaster interior. The cellar was full size, with a 7-foot wall. There is a 10-inch cement block wall. There is a pipe furnace complete, valued at $165. The plumbing was of a superior kind, and the joints were hidden in the floor as they should be. They were not exposed, as they were in wartime housing building. There was a cement laundry-tub, a hot-water tank and a coil. There was a built-in bathtub, with shower. The wiring was complete, with double switches, centre lights, a nice fireplace in the living room, and a good chimney. There were double floors done in oak, and inlaid linoleum on the kitchen and bathroom floors. The outside was of rug brick and asphalt shingles. There was a cement walk and an outer porch. It was graded, and a lawn had been sown. I asked a number of people to compare the values, and one said that he would rather pay $3,500 for the house built under national housing than $800 for the house built by wartime housing. I have great respect for the minister's knowledge of construction. The construction company he headed has a reputation throughout Canada, but I think he is mistaken when he states that the houses built by wartime housing are built so that they can be taken down and the people can take them with them. He says that everything is demountable in sections, but perhaps I may be permitted to give my opinion. I cannot see how one would be able to take asphalt shingles off these houses. The floors are laid across the different sections, and they could not be removed. The salvage value of what would be left would not be very much.

This lumberman told me that the salvage value would be about $400. That is what he would bid if he were figuring on buying. I do not see how it can be said that they are demountable in sections when one would have to take up the floor, tear out the gyproc and take off the asphalt shingles. As I say, this lumberman estimated the value of the lumber in the house at about $400. If the price of these buildings is anything like the price of the rest of the houses—I have a question on the order paper to-morrow asking for the cost of these houses—I think it is time that the matter was investigated.

Probably the real explanation was given by the Minister of Labour who, I think, settled the matter when he said, first, that he had not lived in a house as good as these when he was first married. That has no bearing on what it is costing the people of Canada to put up these houses. Second, he said that he was a personal friend of the president who, I believe, is Mr. Pigott, a dollar-a-year man, and of the general manager, Mr. Goggin, who is receiving $10,000 a year as head of wartime housing. This wartime housing is a government company with the central managing point in Toronto, and it lets contracts to various contractors. I think the Minister of Labour put his finger upon the point when he said, third, that the main thing to look forward to at this time was that the construction industry should have a cushion after the war. I think it is far more important that the people should see that this administration gives value for the money expended. We should not be providing soft cushions for any industry at the expense of people living in homes like these.

Mr. HOWE: I think when my hon. friend said that he went through the houses with a lumber dealer he told the whole story. Naturally the lumber dealers are not fond of wartime housing because all the lumber is bought wholesale in carload lots.

Mr. CASTLEDEN: That should make it cheaper.

Mr. HOWE: It makes it so much cheaper that the local lumber dealers can not handle it.

Mr. CASTLEDEN: There was no competition. This man was an independent man; he was not interested in contracts, and he was not going there with that idea.

Mr. HOWE: My hon. friend said that he was a lumber dealer. I suppose he will not change his mind on that?

Mr. CASTLEDEN: I am not changing my mind on anything I have said.

Mr. HOWE: We will settle that he was a local lumber dealer.

Mr. CASTLEDEN: I said that he was an experienced lumberman.

Mr. HOWE: Not a lumber dealer? Surely my hon. friend should know whether he was a lumber dealer. He said he was a lumberman. What does a lumberman do? Does he deal in lumber?

Mr. CASTLEDEN: He understands lumber.

Mr. HOWE: Does he deal in lumber? Can my hon. friend say yes or no?

Mr. CASTLEDEN: Yes; he deals in lumber.

Mr. HOWE: All right, thank you. The construction of these houses are let by competitive tender. Every reputable contractor in the country has a chance to bid, and the contract is given to the low bidder. The materials are bought in carload lots at controlled prices. If my hon. friend cares to sit in on the committee on wartime expenditures he will find that the prices will be laid on the table. He will then see that they are very attractive prices indeed for materials. As I say, the materials are bought in carload lots with every discount that the trade can possibly stand. My hon. friend complains that his group is not allowed to attend this committee, but I have a note here which says—

Mr. DOUGLAS (Weyburn): The minister should not put words in my mouth and say that we were not allowed to attend the committee. I said that we had no representative on the subcommittee investigating wartime housing.

Mr. HOWE: I understand that you are allowed to attend and take part in the deliberations, and I am told that when hon. members found that it was not a public meeting, they left the subcommittee. That is my information.

Mr. DOUGLAS (Weyburn): I rise to a question of privilege. The minister ought to get his information from the same expert authority he has been demanding that other people should get theirs from. He certainly ought not to base remarks made in this house on notes handed to him unless he knows the note has some basis in fact. This group have never left any committee. I should like to point out to the minister that we have only one representative on the wartime expenditures committee, and there are three subcommittees. Consequently we have only a representative on the one subcommittee, No. 3, and we have no representative on subcommittees Nos. 1 and 2. Any hon. member may sit in on the committee, but we have no representation on those two subcommittees.

Mr. HOWE: Nevertheless the first speaker attended the committee.

Mr. DOUGLAS (Weyburn): He is not a member of the committee.

Mr. HOWE: He attended for a while.

Mr. DOUGLAS (Weyburn): He attended one or two meetings, but it was made very clear to him that if he attended any sittings in camera he was bound to secrecy regarding information given there when discussing matters such as the one before this committee now. The point I want to make to the minister is this: He says it is up to the committee on war expenditures to investigate these prices, but our group has no representation on that committee. Despite the promise of the Prime Minister that the membership of that committee would be increased, the supporters of the government, eighteen out of twenty-four, turned down a motion moved by the hon. member for Bow River (Mr. Johnston) to increase the size of that committee so that we might have representation on the subcommittees. The only place where we can get any information in connection with wartime housing is in that committee because we have no representation on the subcommittees investigating the matter. We have never left any committee at any time, nor have we refused to sit on any committee in the discharge of our duties.

Mr. GOLDING: I think the hon. member for Weyburn (Mr. Douglas) wants to be fair with the members of this committee and with the members of the committee on war expenditures. That committee was set up on the same basis as all other special committees are set up. I understand that there were eight special committees sitting to-day, and there are eight or nine cooperative Commonwealth Federation members. As hon. members have said time after time, it is simply impossible

to attend all these special committees, the three subcommittees of the war expenditures committee and the sittings of the house.

Mr. DOUGLAS (Weyburn): We will take care of that.

Mr. GOLDING: My hon. friend appreciates that. With reference to the hon. member for Mackenzie (Mr. Nicholson), he was invited to sit in. We were glad to have his opinion and he was permitted to ask questions. When the committee decided to sit in camera the hon. member withdrew, as it was his privilege to do. I do not think he felt that he was being treated unfairly by the committee. He had every opportunity of sitting there and listening to the evidence given and the questions asked in connection with this matter now being investigated by that committee. We hope to bring in a report on the matter.

The ACTING CHAIRMAN (Mr. McCann): We are entirely out of order in discussing the work of a committee before it has presented its report.

Mr. GOLDING: I quite appreciate that, Mr. Chairman, but it is unfortunate that you did not call others to order before now.

Mr. NICHOLSON: I should like to ask the minister about the policy followed to fix the rentals of these wartime houses. I have here a dispatch which appeared in one of the Ottawa papers last month, reading as follows:

> Replying to aldermen who alleged that rentals of Wartime Housing, Limited's houses in Hull of $30.20 a month are too high, Mayor Brunet said last night the reason was that representations were made to rent them at that figure to wartime housing officials. The representations were made so as to protect Hull property owners.

Are these rents fixed to protect property owners, or are they fixed on a basis of retiring the government investment over a period of five or ten years, or just what policy is followed in deciding that the rent shall be $30.20 a month? I understand the house has four bedrooms.

Mr. HOWE: It is not a four-bedroom house.

Mr. NICHOLSON: The only houses that are being rented in Hull are, I understand, the four-bedroom houses. The others, I understand, are not yet completed. Anyway, the press report says that the rent is $30.20. What policy is followed in relation to the item which I read?

Mr. HOWE: My hon. friend is not correct. The standard four-room house is—

[Mr. Golding.]

Mr. NICHOLSON: It is a six-roomed house. I said four bedrooms.

Mr. HOWE: The six-room house is rented at $30. Of the four-room houses, what we call the smaller four-room is rented at $22, the larger four-room at $25, and the six-room house at $30. These amounts were fixed on the basis of reasonable amortization of the cost, but were lowered somewhat to be in keeping with the average salary paid to the class of tenant that we get. It is somewhat below the amount required for amortization.

Mr. NICHOLSON: When the original order in council, P.C. 1286, was passed on February 24, 1941, it contained this provision:

> Such agreement shall have no effect until it has been approved by the governor general in council; and upon such approval the company may exercise the powers and shall discharge the duties set forth in such agreement; and also may exercise and shall discharge such other powers and duties as may in such order in council, or from time to time be conferred or charged upon it by the governor general in council.

On the 24th of April another order in council was passed adding:

> or by the Minister of Munitions and Supply under the authority of the Department of Munitions and Supply.

In other words, when the first order in council was passed it must have been thought desirable to refer these agreements to the governor general in council. Later, that position was reconsidered, and apparently they just refer them to the Minister of Munitions and Supply. Why the change in policy?

Mr. HOWE: As projects are approved, each individual project is approved by order in council and the appropriation is made. As a matter of mechanics, the individual contracts are signed by munitions and supply. It is thought unwise first to get the project approved and then go back and get the individual contracts approved. Personally I see nothing sinister in that; if my hon. friend does, perhaps we shall change it back again.

Mr. NICHOLSON: I am merely asking for information. I think I am entitled to it.

My next question is this. Section 4, paragraph (c) of P.C. 1286, reads:

> (c) it may draw upon the personnel and upon the economic and other technical resources relating to housing presently available in the government service, and in particular shall utilize the services of the housing branch of the Department of Finance.

Valuable work has been done in this field by the national housing administration, by the Department of Pensions and National Health, and by the national research council. The research work done over a period of

years could be made available for wartime housing, and particularly they should use the services of the housing branch of the Department of Finance. I find that the later order in council, P.C. 2842, deletes this paragraph. What was the reason for the deletion?

Mr. HOWE: A considerable part of the staff of the national housing branch was moved in with wartime housing. They seemed somewhat unhappy about the arrangement, and gradually drifted back to Ottawa, and I doubt if any of them are left. But such information as was at hand was supposed to be placed at the disposal of wartime housing, and I daresay it was.

Mr. NICHOLSON: My information was that no advantage had been taken of the work done by the national research council, or by the Department of Pensions and National Health. I know that similar information can be obtained, over a period of time, but it seems to me that the provision in paragraph (c) of section 4 was a valuable one, enabling the company to "draw upon the personnel and upon the economic and other technical resources relating to housing presently available", and I cannot see any good reason why, on the 24th of April, it was decided that they should not take advantage of that information.

Mr. HOWE: I am sure they have drawn on all the information that could be of any value to them. The question was thoroughly studied. Mr. Somerville, one of the directors, is an architect of wide exeprience, who has always interested himself in housing projects. The other directors are men of considerable experience, and I know that in the course of their work they have consulted not only our own institutions, but various authorities in Washington and elsewhere. I believe that no lack of study has been given to these houses.

Mr. GREEN: Perhaps we can take up another subject for a few minutes. The minister has made statements which would lead one to believe that the government is now thinking of embarking upon a policy of finding oil in Canada. Of course the reason is quite easy to see: there is a great shortage of oil.

Mr. HOWE: There is no change of policy.

Mr. GREEN: Could the minister explain in what way the government proposes to carry out that policy? For example, does the minister propose to encourage private companies to do the exploring for oil and to undertake the research work, or will such companies be subsidized by the government, or is it the intention that the government itself will drill the wells and take whatever other steps are necessary to try to find more oil in Canada? That is one question I should like the minister to answer.

Another is with regard to power. He told the committee last year that it was not the policy of the government to aid in the development of power. In the intervening period, I believe, some assistance has been given to certain power companies in the way of allowances for taxation purposes. I do not know whether that has been done extensively, but I understand that it has been done in some instances. It would be of interest to the committee to know the present policy of the government with regard to power.

The third question has to do with shipbuilding. The minister said the other day that we are launching a merchant ship every four days, and that he hoped that the programme would be accelerated until we were launching a ship every three days. Of course, this merchant shipbuilding is of vital importance to the united nations, and it would seem to be a matter of going the limit—we must build every ship we possibly can. Is it the intention to provide more berths in the present shipbuilding yards, or are new yards to be developed, or what is the policy of the government with regard to the extension of the shipbuilding industry?

In that connection the minister might explain the new government company which has been set up to take charge of the operation of these ships. I think it is called Park Steamships Limited. It would be interesting to know the details as to just what that company is supposed to do, whether it is to operate all the ships that are being built, or whether some are to be turned over to Great Britain. Can the minister give us a report on the developments that have taken place recently along that line?

Mr. HOWE: It has not been the policy of the government to date to invest directly in the development of oil. We have encouraged drilling by permitting a write-off of development expenses of a well before the earnings of the well become taxable, and that has been a stimulant to drilling. We have extended the work of the geological surveys. The government is now in partnership with the government of New Brunswick and is making a thorough investigation of the oil shale deposits in that province. Conversations are going on with regard to the development of the Peace

River area of British Columbia. The government of that province undertook some time ago to develop this field with public funds.

Mr. GREEN: They are still drilling.

Mr. HOWE: They are still drilling, and it seems to us that while it is a sound way to proceed, perhaps it is too slow to meet the present situation and we are suggesting other means of doing it. We have not arrived at any conclusion, for which reason I will not say much about it. As regards the Alberta tar sands, I do not know whether I can announce a policy at the moment. This field is being thoroughly studied, and we hope to formulate a policy after we have determined what the problem is. There has been a small pilot plant operating on the tar sands, but its operation has never been wholly successful. There are several problems there which have never been worked out in a way to encourage development on a large scale, and one of the principal difficulties is the mining of the sands themselves. That is being extensively studied, and I hope that before the middle of June we shall have a report on it which will enable the government to evolve a policy. The path seems fairly clear, and it is reasonably certain that the government investment will pay, or at least that we shall get something worth while. We may, in the case of the tar sands, invest directly in the development. I offer that as a possibility only, because no decision has been arrived at and the complete facts are not available at the moment.

Mr. STIRLING: Considerable survey work has been going on for a long time.

Mr. HOWE: Yes; but the problems have not been worked out. The use of the pilot plant is to help to develop a satisfactory operation which will warrant large scale developments, and while that plant has been in operation there are a good many problems that require further development before a large scale plant will be warranted; that is, a plant running into tens of millions of dollars.

Mr. MacNICOL: It produced 17,000 barrels last season.

Mr. HOWE: Yes; but that is not very much oil.

Mr. GREEN: That large scale plant would have to be financed by the government?

Mr. HOWE: Probably.

Mr. JOHNSTON (Bow River): Is the plant at Alexander being operated on an economic basis?

[Mr. Howe.]

Mr. HOWE: It was burnt down, but my information is that it was never operated on an economic basis. It is a pilot operation. I may say incidentally that a plant of that size has a much better chance of being on an economic basis because the output would be used on the ground. A large development involves transportation to rather distant centres to find a market.

Mr. KINLEY: Has the minister taken into consideration the oil shales in Nova Scotia?

Mr. HOWE: We have not studied the shales in Nova Scotia, but we have been studying intensively the oil shales in New Brunswick and, if the results are favourable, we shall look farther on.

Mr. KINLEY: Years ago I was a member of the Nova Scotia government, and it was being considered by the department there.

Mr. HOWE: We have that in mind for further study. In the matter of depreciation on power developments, I would point out the wartime depreciation board does not come under my jurisdiction. What write-offs there have been, I do not know. I know of no direct capital assistance to power development. I do not know of any write-offs except in the case of the development of the Aluminum Company of Canada, worked out in conjunction with aluminum contracts.

Mr. GREEN: Consolidated too.

Mr. HOWE: Yes; they got a write-off from the wartime depreciation board for development incidental to their work, a development that could not be justified as an ordinary peace-time operation, but which was valuable to the war effort. Ordinarily we have not gone extensively into the development of hydro-electric power.

Mr. GREEN: What is the situation in regard to power?

Mr. HOWE: All available power is all being used. Every spare kilowatt in Quebec is being taken to Arvida to make aluminum, and that will continue to be the situation. There is no shortage at the moment, but next winter we shall be short of power. Any worth-while hydro development usually takes two years to construct, and we are bringing in about one million horsepower for the next twelve or fourteen months; but even that is spoken for. We shall continue to use every kilowatt we produce, and we shall still be short.

Mr. GREEN: Are there any plans for developing more power?

Mr. HOWE: Plans are under way, but not by this government. I have seen an announcement of the Ontario government's scheme, and there are plans for increasing developments at Beauharnois, Shawinigan and one or two other points. I have forgotten what my hon. friend's question was with regard to shipbuilding.

Mr. GREEN: I am not clear whether the government proposes to expand its shipbuilding programme. If it is to be expanded, is it to be done by building new berths in the present yards, or will new yards be developed, or what is the scheme for expanding the shipbuilding industry?

Mr. HOWE: The industry is constantly expanding. We never close the door on any industry; we are always expanding. We have laid keels in a new six-berth yard within the last week or two in Montreal. We are expanding berths at Vancouver island, and we are also bringing in new berths at Pictou and Sorel. We attempt to fully staff one yard before we start on the next. We have made mistakes; we have opened new shipyards too soon. Once a yard is fully staffed and on a full-time basis—we have only two yards in the country on that basis—it may be worth while to start another yard; but while a yard in a locality is expanding, it is not considered good business—and we were so warned by experts from the United Kingdom—to start another yard. We are expanding at the moment. We have in mind expansions for the future, but no definite plans. Future expansion will depend on how soon we shall be able to fully staff existing yards.

Mr. CASTLEDEN: Can the minister give the number of wooden ships being built, boats and vessels, and so on?

Mr. HOWE: The debate seems to have become a general discussion of wooden ships. I thought what we were discussing was wooden cargo ships. It depends on what you call a ship. We have built some 14,000 since the war began, beginning with lifeboats, rowboats, motor launches and up to wooden mine-sweepers, wooden Fairmiles and all sorts of wooden naval craft. But of wooden cargo ships the number built is zero.

Mr. CASTLEDEN: I was thinking of the smaller boats.

Mr. GREEN: What is the situation in regard to wooden mine-sweepers? Is the government building them up to the capacity of the yards, or is it simply a case of ordering a limited number?

Mr. HOWE: We can hardly build to the capacity of the yards unless somebody is prepared to man the boats when built. The department does not just run wild on a particular type of boat. If, during the next eight months the plan is to train men for, say, twenty boats, we build the twenty boats. Britain may ask us to build fifty for them; we do it. We sell some to the United States. But we cannot build ships just to build ships, except merchant ships; they are a recognized standard type and we are building them as fast as we can. But that is the only type that one might call a readily saleable commodity.

My hon. friend asked about the Park Steamship company. The government is building a number of ships for Canadian operation. It is intended to follow the practice followed in Britain; the government will own the ships, place them for operation in charge of steamship lines that are operating boats in the particular service. For instance, boats to Australia we place for operation with the Manx line; if they are operating to south Africa we would put them perhaps with Furness Withy, or whoever happened to be operating there. The steamship line is paid a small fee for operating the ships and they are operated for the account of the government. All the earnings are paid to the government. The Park Steamship company accepts ownership of these ships on behalf of the government and assigns them to the various lines, attends to the accounting and protects the interest of the government in the operation.

Mr. GREEN: The government itself will not be operating any of these ships?

Mr. HOWE: No.

Mr. GREEN: They will all be operated by private firms?

Mr. HOWE: That is right.

Mr. GREEN: Are all those merchant ships to be Canadian ships, or are some to be turned over to Great Britain?

Mr. HOWE: We are building quite a number for the British government, some for the maritime commission of the United States and some for Canada.

Mr. GREEN: Would it be disclosing information that should not be disclosed if the minister told us the number for Great Britain, for the United States and for Canada?

Mr. HOWE: I would rather not do that. By mutual arrangement we do not disclose any figures in connection with business with the United States. I think it would be unwise. All

I can say is that we are building all the ships we can; we are keeping for Canada as many as we think we can get Canadian crews for, and disposing of the others.

Mr. GREEN: Is there anything in mind as to what should be done with those Canadian boats at the end of the war, or is that looking too far ahead?

Mr. HOWE: I think it is. I do not know what the policy will be. We hope to have them considerably written down by earnings during the war. We may turn them over to the Canadian government merchant marine, or leave them in private hands, or dispose of them outright to private companies. I suppose that is a situation which must be left to the government of that day.

Mr. GREEN: The lines the minister mentioned as operating these ships are not Canadian lines?

Mr. HOWE: No; so far as I know, there are no Canadian lines except the Canadian Pacific.

Mr. GREEN: So that at the moment they are practically all being operated by lines owned in other countries?

Mr. HOWE: That is right.

Mr. McNIVEN: About two years ago the Saskatchewan government entered into an arrangement with two joint stock companies to search for oil in Saskatchewan. By virtue of that agreement these companies undertook to spend a certain amount of money, about $400,000, in a seismographic survey of Saskatchewan for oil. I believe that a substantial part of that sum has been expended during the past two years, and that some showings or evidences of oil deposits have been discovered. Within the last few weeks drilling for oil with the most modern equipment obtainable, has commenced at Ceylon, Saskatchewan, and at Radville, Saskatchewan. I believe that the survey for other showings of oil is continuing.

I should like to know from the minister whether, being familiar with that survey and that development, he is satisfied that sufficient progress is being made. I should also be glad to know whether, being familiar with other outcroppings or possibilities, the government would undertake to give some assistance? At a point thirty miles south and a little west of Regina a well was sunk to a depth of 2,500 feet and was not drilled further on account of lack of funds. That well was located as a result of advice from eminent geologists both in this country and across the line. Again, showings of gas have been found at Shaunavon in southwestern Saskatchewan, at Riverhurst on the Saskatchewan river, at Unity in northwestern Saskatchewan, at Church Bridge in northeastern Saskatchewan; two wells have been drilled at Simpson, ninety miles north of Regina, one to a depth of 3,300 feet and the other to a depth of about 2,000 feet, and I believe a number of wells have been drilled on the Alberta-Saskatchewan boundary around Lloydminster. There is a substantial showing of gas and production of low gravity oil. Would the minister consider favourably governmental assistance in finding out whether there are substantial oil deposits at those points?

The minister also referred to an anticipated shortage of power in the coming winter. I understand that in the immediate future Neon lights and other users of electrical energy for purposes not regarded as essential will be substantially curtailed. I gather from what the minister has said that the power development on the Saguenay river will all be required for undertakings now under way. I understand also that it will take about two years to develop the Carillon site in Ontario. Would the minister favourably consider developing the lignite coalfields in Saskatchewan as a source of power? There are twenty billion tons of coal, and that is a lot of coal. The overburden varies in depth from forty to one hundred and fifty feet, and for some ten years now that coal has been mined as a steam shovel proposition. The overburden is cleared by a steam shovel; the coal is picked up by a steam shovel, loaded on flat cars and taken to a plant where it is sized. At the mine mouth an electrical plant has been in operation for ten years.

Mr. REID: What grade is the coal?

Mr. McNIVEN: It is a lignite coal, with from 7,400 to 7,800 b.t.u. Compared with Alberta or British Columbia coal it is not as good commercially, but power is developed there, and I understand it can be done very cheaply. I understand further that in the United States there is a surplus of steam equipment for producing electricity, due to the fact that many hydro plants have been brought into operation recently as a result of undertakings in the United States, and these steam plants have been discarded. I do not profess to be an electrical engineer; my knowledge of the subject is most superficial; but I appeal to the minister, who has a practical knowledge of matters of that kind, to learn whether a steam plant of large proportions could not be constructed in Saskatchewan in much less time than would be required for the construction of a hydro plant.

May I assure the minister that if such an enterprise were to be undertaken it would have a definite post-war use. What is most urgently required in Saskatchewan is a large head of power that will be available as an inducement to industrial enterprise to come to that province. As hon. members know, ours is a badly balanced economy, and anything the minister can do consistent with Canada's national war effort to help us to balance our economy will materially assist in settling a very serious post-war problem.

Mr. FRASER (Peterborough West): Is the minister going to have the government do the boring for oil in the Peace River district or, if not, who is going to do it? While I am on my feet I should like also to ask the minister if the government has any intention of constructing an industrial alcohol plant for the production of alcohol to be used together with gasoline. I understand that this is done in England and Australia, and that there is a plant in Detroit producing over 12,000 tons a day. Have we any idea of doing anything along that line?

Mr. HOWE: The government has not developed any oil wells, and I hope it will not be necessary for it to do so while I am minister, because my hon. friend has indicated the difficulties of a minister who undertook to finance oil wells. Of course in time of war the government would not be justified in drilling in anything but a proven field. We are after materials in a hurry, and naturally in spending government money we cannot take too many chances. We do encourage oil companies to drill because they have the experience and the equipment. We have encouraged them, as I say, by tax concessions, with which the committee is familiar. So far we have not gone beyond that. We are very much interested in the Peace River section of British Columbia. We need oil in northern British Columbia, and the reports indicate that the possibilities there are very good. I do not know what we will do, but certainly it will not be a direct government effort, and I doubt whether we shall subsidize a private company. However, we do hope some arrangement can be made to speed up the exploration of that area.

Mr. MacNICOL : May I ask the minister if at the same time the department is going to look into the oil possibilities at the town of Peace River? Away back in 1921 they had producing wells there but for some reason or another, whether the wells were damaged or interfered with in some way, those wells were capped. That is not very far from the Alaska highway, either. I am told on the best authority that there is oil at the town of Peace River, and last summer I saw the old wells that were there; I think there are five or six capped wells.

Mr. HOWE: We have nothing in mind in that direction. At the moment we are particularly interested in getting all we can out of Turner valley; we are extending the operation at Fort Norman; we want to have a very good look at the Peace river section of British Columbia, and we are making a very thorough examination of the oil shales of New Brunswick to determine their extent and the development that will be necessary. I think that is the extent of our oil explorations at the moment.

Mr. MacNICOL: And the oil sands also.

Mr. HOWE: Yes, the tar sands; we are going into that very thoroughly, to see what is required there.

With regard to the matter of power, as I have explained we have not invested any money directly in power plants. Two cases have been mentioned to-night in which special depreciation has been authorized by the wartime depreciation board, due to special circumstances, but I do not think the government will invest directly in power plants. I am well aware of the lignite coal situation. I promised the house that we would use a certain amount of lignite coal in our explosives plant at Winnipeg. I tried to buy some this winter, but was unable to do so. I was told by the fuel administrator that this coal was not for me, that it was too badly needed in other places. But I think I can guarantee to take all the coal that can be produced in that area. To build a power plant there, however, would be to overlook a number of other situations that are urgent. Just as in connection with drilling for oil, a government policy of building power plants hither and yon would be a very difficult policy to administer. I think the government will avoid direct investment in power plants. Was there another question I have overlooked?

Mr. FRASER (Peterborough West): Industrial alcohol.

Mr. HOWE: We are producing considerable quantities of industrial alcohol. We are not using it for high test gasoline; we are using alkylate, which is also a petroleum product. We have three large alkylate plants under construction, with one at Calgary nearing completion, but, as my hon. friend knows, industrial alcohol is used in a great number of war operations. We are using a very considerable part of the distillery capacity

of this country to produce industrial alcohol. We will continue to do so, and will continue to expand the operation as the demands increase.

Mr. REID: I should like to ask the minister two questions, one having to do with gasoline and the other with rubber. Gasoline rationing is now in force throughout the country and, generally speaking, I think it has been well received as long as it is applied fairly. But I am wondering if any restrictions have been placed on cities and municipalities to prevent the use of gasoline and oil in the construction of new roads. I am not citing this particularly against the city of Ottawa, because I think this is general throughout the country, but I notice that in connection with the asphalt pavement to be laid in the Riverdale section of Ottawa, it is estimated, according to the Ottawa *Citizen* of Friday, May 15, that 10,000 gallons of gasoline will be used in the construction of that new piece of asphalt pavement. I may be wrong, but I should think that asphalt pavement will not be in such great demand in the future, because the cars will be fewer in number. It will cause a great deal of heart-burning among those who are curtailed in their use of gasoline, if they see cities and municipalities extending their road-building programmes, and using gasoline and oil in connection therewith. Is there any restriction on cities and municipalities? Have they been prohibited from entering upon extensive programmes?

Mr. HOWE: Yes; there are very severe restrictions. My hon. friend is receiving protests about the use of asphalts, and I am receiving protests from cities which would like to use tarvia. However, they are not permitted to do so, because restrictions are severe with respect to the use of petroleum products on roads. I was surprised to read that asphalt pavements are being laid. I had thought that was prohibited, but I may be wrong. I shall be glad to get the regulations and advise my hon. friend as to what the prohibition is. But tarvia, and products of that kind, cannot be used.

Mr. REID: A regulation is in effect, I believe, whereby those having two spare tires have to report the same to the wartime prices and trade board. A request came in to me the other day, and when I made an inquiry from Mr. Williamson's office, who is in charge of rubber control, I was told that a party having two spare tires would have to report to the wartime prices and trade board. My question is this: I am wondering where this overlapping is going to lead. The wartime prices and trade board have control of the handling of rubber. In a notice issued to-day the whole question of tire rationing is set out. I should like to know what anyone in the wartime prices and trade board has to do with looking after tires. I thought their duty was in connection with prices of various articles. I am pointing out to the committee that we had better keep our eyes on some of these boards, because if you give them an inch they will take ten miles.

Mr. HOWE: The wartime prices and trade board has charge of the control of peace-time articles, whereas the wartime industries control board deals with strategic materials for war, and the materials necessary for war production. The tire situation is rather involved. Of course rubber is a strategic material for war. It is under the jurisdiction of the controller of supplies, who is attached to the Department of Munitions and Supply. But the enforcement of the regulations has been turned over, by arrangement, to the enforcement officer of the wartime prices and trade board. This board has an enforcement department represented in all parts of the country, under the direction of Mr. McGregor. The enforcement of the rubber rationing regulations is carried out by that branch of the wartime prices and trade board.

The regulation as to trucks is, by arrangement, handled by the wartime prices and trade board—by Mr. Stewart. The regulation of buses, strangely enough, is handled by the transit controller in the Department of Munitions and Supply. There are reasons for each of these divisions. Perhaps one reason why trucks were regulated by the wartime prices and trade board is that I was once bitten and twice shy, and I was not anxious to undertake that branch of control. However, there is a pattern to it, and it seems to be working reasonably well.

Mr. BROOKS: I was pleased to hear the minister say that they are investigating the oil shales of New Brunswick, and that there would probably be some developments there. It seems unfortunate that it took a war to bring about those developments, because we have known in New Brunswick for a great many years that we have rich oil shale in that province.

The minister also stated that it was not his intention to develop power plants. I had intended to ask if he would consider enlarging the power plant at Grand Lake in New Brunswick. I understand that one reason why we have not more industries in New Brunswick is our lack of cheaper power, and I believe

this plant could have been developed. An extension could have been made very cheaply and, in justice to my province, I believe we should have more developments there, more munitions plants and other war activities.

However, it was not my intention to speak particularly along that line to-night. There was another matter I wished to bring to the attention of the minister. I believe we have now exhausted the subjects of housing, wooden ships and oil. We have also discussed the scarcity of rubber, metal and other commodities, and have considered the provisions being made to see that enough is salvaged for our war needs.

I wish now to ask the minister some questions regarding the scarcity of paper in this country. I would ask first whether there is a scarcity of newsprint and paper? I ask this question knowing the great effort that is being made, from one end of the country to the other, to salvage paper. In every city and every town school children and organizations are gathering up scrap paper. I know that in military camps we are instructed to collect all paper, and as a result every little scrap of paper is collected and saved. I wish the minister would tell us the situation in Canada regarding this commodity. It does seem strange that while we are spending so much time salvaging paper in Canada, we do not seem to have any curtailment in the use of newsprint. I have not noticed that our newspapers are cut down in the quantity of paper they are using. When one buys the Saturday editions of newspapers he will find that they consist of forty or fifty pages, and I believe that in war time five or six pages would be sufficient. It is a strange anomaly that every schoolboy in every community is being asked to salvage paper, while at the same time we permit this great waste of paper throughout the country. I believe the government is setting a good example in many cases by using both sides of paper in its correspondence. Orderly rooms at military camps are instructed to use both sides of the paper in preparing their orders. Everything is being done to try to save paper, and we are told that such saving is necessary because paper is scarce.

Another matter which might very well be mentioned at this time is the export of paper from Canada. If there is a scarcity of newsprint, why is it that a paper such as the Chicago *Tribune* can have exported from Canada thousands of tons of paper used in the publication of that newspaper which, as hon. members know, was anti-British before the United States entered the war? It never loses an opportunity even now to disparage our own Canadian effort in the war. It disparages the efforts of Great Britain and of the whole British empire, and still we in Canada are exporting a commodity which must be scarce. If it is not, then why do we have these provisions for the collection of salvage and scrap paper?

These are questions I should like the minister to answer. I have hesitated to bring them to his attention at so late an hour in the day. After such a long and trying day, however, possibly these questions will appear much easier to answer than some which were propounded to him this evening.

Mr. HOWE: Yes. As a matter of fact I have enjoyed the discussion very much. I am glad to give what information I can on the subject. I think there is a misunderstanding as to why campaigns for the collection of paper are necessary. This is not done because of a shortage of newsprint for the purposes for which newsprint is usually used. As a matter of fact there is spare capacity for the production of newsprint, because some of our mills are working only four or five days a week. But there is a great need for pulp or rough cardboard, wood pulp pressed into sheets for the packing of shells and finished rounds of ammunition. Newspapers or paper of any kind are just as good for that purpose as pulp made from newly cut timber. It is really to save a drain on our lumber mills and to prevent waste that we are collecting newspapers and using them for that purpose. I do not know whether there would be a shortage of paper if we had to use freshly cut pulp for packing shells, but there very likely would be. At the moment we are able to fill our own needs for newsprint, satisfy the export demand and still have some surplus capacity. Nevertheless I want to impress upon all hon. members that the salvage campaign for old paper is well worth considering.

As far as writing paper goes, there was a shortage of that at one time and it may still exist. I believe the campaign to use both sides of a sheet of paper for official documents is worth while, and I think it will carry on after the war. I see no reason why we should write only on the one side of a sheet of paper, and I think this habit of thrift is well worth cultivating.

As far as the oil shales of New Brunswick are concerned, my hon. friend probably knows that they were under private control for a long time. It was only after they were restored to the control of the province that it was worth while for governments to spend considerable sums of money investigating them.

Mr. MacINNIS: There has been a great deal of discussion to-night about oil shales. Among the many other things that we have in British Columbia are some deposits of oil shale. I brought the matter to the attention of the minister who brought it to the attention of the oil controller. He wrote me to say that he had investigated it last summer when on the coast, and he did not think there was very much in it. However, apparently some one in the department has changed their minds since then because I have a letter from the assistant oil controller asking me where further information can be obtained. I am glad to know that this matter will be investigated.

In connection with gasoline I agree with what was said by the hon. member for Cape Breton South (Mr. Gillis), that we should accept these restrictions, not reluctantly but with good grace in order to assist the government to conserve gasoline for the purposes we have in hand, and that none should be wasted for pleasure purposes while there is a need for our war effort. One of the difficulties that I find in getting people to see the necessity for saving gasoline is the fact that the regulations do not seem to operate equitably. I have received several letters about this, and I have one from a man who has a light delivery truck. He tells me that he has a wife and four children and, since he cannot afford a private car, he takes his family out in the truck on Sundays to the beaches or other places. It was intimated to him that he could not use his truck for driving around on Sundays, that he might have his permit cancelled if he did so. He feels rather badly about this. He states that if he could afford a private car he could get a category A card for it and use it on Sundays. He enclosed the letter he received from the regional office manager for the oil controller in Vancouver. This letter was most reasonable, and I think I should read it. It reads:

> I have your letter of April 30 and although as yet there are no specific regulations which prohibit the use of your panel delivery truck for personal driving, I must point out to you that the commercial category books have been assigned to you for commercial purposes and in view of the serious shortage of gasoline you are not expected to drive such long distances as from here to White Rock and return for private purposes any more than the owner of a passenger automobile.

Are owners of private automobiles going to be restricted from driving long distances? Of course, if they do drive long distances their ration cards will not go so far. If some way could be found whereby people who cannot afford a private car, or two or three cars, can be made to feel that they are not being discriminated against while other people in better circumstances are allowed their ordinary pleasures, I think it would be much easier. I do not know just how that could be done, but if it could be done it would help a great deal.

I should like to say a word on the matter of saving paper. I think a great deal of paper would be saved if there were less advertising. There is a lot of what appears to me to be the most useless kind of advertising, and I am sure it comes to every hon. member in reams. I have before me an advertisement by the Firestone Rubber company. They have no commercial rubber to sell because I imagine the government takes it all for war purposes, but yet here is a most expensive advertisement, on expensive paper in colours. This all takes time and materials; it needs skilled labour to produce, and it seems to me that we are not putting everything into our war effort when we allow what appears to be waste. I saw an article recently, I think it was in the *Financial Post*, to the effect that the Aluminum Company of Canada, although it did not have a pot or a pan or any other article of aluminum to sell, had provided an appropriation of $1,000,000 this year to advertise these articles. I also have under my hand a full-page advertisement by Dominion Foundries and Steel Limited, Hamilton, Canada, which appeared in the *Financial Post*. These people do not need to advertise their wares at the present time. It takes time and it consumes materials to put out such advertising. There are many ways that we have not touched yet in which we can save waste and add to the efficiency of the work we have in hand.

Mr. HOWE: Mr. Chairman, every effort is being made to eliminate unfairness in rationing. I was told—in fact the gentleman concerned himself told me—of a motorist who was driving out of Toronto some time ago when he was stopped by an enforcement officer, who asked where he was going. He said he was going fishing. Where was he going? He gave the destination. The enforcement officer asked to see his category, found that he was in category C, and pointed out to him that that was a business category for business purposes, and that if he could go fishing on that category he did not need a C rating. The next day his book was exchanged for a category A book.

We are trying to bring all those who use their cars for pleasure into category A. In

fact it is quite possible that there will be a category lower than A for people who use cars exclusively for pleasure. We are trying to eliminate unfairness; that is, we are not giving high categories to people who do a good deal of pleasure driving.

Whether we like it or not, pleasure driving is going to be a real luxury. Gasoline is for those who have a real use for it in connection with the war effort. We are going to try to take care of people who must go to war plants; business executives; producers in the war effort, such as farmers, and other people who have a real need for gasoline. But the man who simply drives from here to there for pleasure is going to be without gasoline shortly.

So, I think, my hon. friend's acquaintance who had the truck was simply getting the same kind of treatment that the man in a business category who is using his car for pleasure is getting as the enforcement officers catch up with him.

Mr. ROSS (Souris): What about the man with two cars in the family? I suppose that will be checked, too. I know of people who have two cars in a single family, and while I doubt whether their business entitles them to better than category 1A, through some agency they have obtained category C.

The other day I asked for an extension of the hours of sales of gasoline to farmers. I am pleased that the minister announced to-day that this request had been granted.

I also spoke of a certain oil company—I think I had better mention that it was the British-American—trucking their own products from Moose Jaw through southeastern Saskatchewan and southern Manitoba. Since I spoke on this matter I have had a letter from the secretary of one of those towns pointing out that in twenty-four hours ten very large trucks with trailers went through that town. He estimated that those trucks used fifty gallons a day; they had very heavy tires on their trucks and trailers, and they were paralleling a railway line. The Canadian Pacific railway agent there tells me that they can obtain tankers along that line. Also the man-power situation comes into the matter, because each of those trucks requires a driver, whereas the use of a tank car on the railway would eliminate that. To what extent this practice is carried on I do not know, but it is a serious wastage. Further, it sets a bad example to the people in those towns, who wonder why they should curtail their own small supplies while those companies are allowed to carry on in this way. I trust the minister will look into the practice and prohibit it.

Mr. HOWE: The matter of trucking oil was mentioned in this chamber a while ago, and at that time I sent a marked copy of *Hansard* to the controller for his action.

Mr. DOUGLAS (Weyburn): I wish to associate myself with the hon. member for Regina City in the excellent appeal he made for our province with reference to having a part to play in the economic aspect of our war effort. The hour is too late for me to say very much about the matter now, but it seems to me that there are two factors to which some attention might be directed.

The first is the one he has mentioned, and to which the minister has already replied—the possibility of developing power, either in the north, where we have considerable water power, or in the south where there are very large coal deposits. I can appreciate the point of view expressed by the minister. Nevertheless there is a strong feeling that a greater use could be made of the industrial resources of the prairie, rather than draining off the population, as has happened in the last year or two.

The other factor in the contribution which we might make has to do with the bits-and-pieces programme of the department. The minister has not made any detailed statement on it, and it is too late to-night, but I wonder if he would do so to-morrow. This afternoon he made a statement with reference to garagemen. He said that provision would be made for the type of establishment which was equipped to do something. My understanding of the set-up does not lead me to believe that that is taking place. Mr. Pyne, who has been handling the subcontract coordination branch in Winnipeg for western Canada, does not, I understand, place subcontracts direct from the government; he acts as a sort of employment agent for firms who have contracts and want to know of people who can take subcontracts. He does not place contracts; he only directs firms which have contracts to people who might take subcontracts. I believe that they are not making full use of the people who could be doing more in our bits-and-pieces programme. I am not going to take time to elaborate that to-night. I know that a survey was made of the provinces of Manitoba and Saskatchewan. When I was west I saw a copy of the survey. I hesitate to quote from it from memory, but I believe there are 277 machine tools which were listed in the two provinces and which were not being used.

They would, of course, vary in size. I know a number of such cases. One man in particular with a small aluminum foundry has done some excellent work. But these people do not seem to have been able to make any contacts. They go to Mr. Pyne, who says, "I should be very glad to give you something to do, and as soon as some firm asks us for a subcontractor we will direct them to you." But that is not very satisfactory, and for two years these people have been twiddling their thumbs; either they have to move east and get a job there, or stay where they are and continue to do commercial work.

I would appreciate it if the minister would give us to-morrow some outline of the bits-and-pieces programme, whether it is his intention to expand it, and how it would be possible for these men who think they can play some part in Canada's industrial effort to be brought more directly in contact with the government and those places where there are contracts.

Progress reported.

At eleven o'clock the house adjourned without question put, pursuant to standing order.

Wednesday, May 20, 1942

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*DESTRUCTION OF BANANAS IN HALIFAX HARBOUR

Mr. ISNOR:

1. Is it a fact that large quantities of bananas were dumped at pier 40 at the port of Halifax, Nova Scotia, on or about May 2, 1942?
2. If so, what steps have been taken to ascertain who was responsible for such action?
3. Has any action been taken to prevent such wastage in the future?
4. Has the national harbours board taken measures to prevent such action by individual firms, ship owners or ship agents?
5. Will the minister responsible take action to make an inquiry into this apparent waste of fruit?
6. Was a free offer of this fruit made to the military authorities at Halifax or Debert?
7. Was a free offer of this fruit made to the naval or Royal Canadian Air Force headquarters at Halifax?

Mr. AYLESWORTH:

1. Is it true that tons of edible bananas were destroyed in the last few months at Halifax harbour?
2. If so, what action has been taken or will be taken by the government to prevent recurrence of this waste?

[Mr. T. C. Douglas.]

Mr. NICHOLSON:

1. Have large quantities of bananas recently been dumped in Halifax harbour?
2. If so, what quantities have been so dumped?
3. Are there any government regulations dealing with the destruction of foods in Canada?

Mr. PURDY:

With reference to the alleged dumping of a large quantity of bananas in Halifax harbour, is it the government's intention to hold a full investigation and place the evidence, with a report, before the house?

Mr. HOWE: I will make one oral answer to these four questions, all of which concern a shipment of bananas alleged to have been dumped at pier 40 at the port of Halifax.

On April 30 there reached Halifax a cargo of bananas, a considerable portion of which was in an overripe condition and proved to be unsaleable and unshippable. The spoiling appears to have been due to war shipping conditions, causes entirely beyond the control of either the exporter or the importer. I understand that part of the shipment was given away by the owners to certain charitable institutions. None of the shipment was dumped in the harbour proper. The spoiled bananas were removed from the wharf by the harbour board and put in a special dump at pier 40. It may be possible that some of the bananas were removed from pier 40 by truck drivers entirely without the consent of the harbour board. I understand it is reported that some even turned up in the northwest arm. If so, I am assured by the harbour authorities that they were moved by truck drivers or other unauthorized persons from the harbour dump and placed there.

UNEMPLOYMENT INSURANCE—ADMINISTRATION—EMPLOYMENT OF RETURNED SOLDIERS

Mr. DIEFENBAKER:

1. How many men have been employed in connection with the administration of the Unemployment Insurance Act in each of the provinces of Manitoba, Saskatchewan and Alberta?
2. How many are returned soldiers?

Mr. MITCHELL:

1. Manitoba 45, Saskatchewan 33, Alberta 45.
2. Manitoba 18, Saskatchewan 15, Alberta 23.

Note.—These figures do not include limited period nor casual book renewal employees.

ANNUITIES BRANCH PUBLICATIONS

Mr. BRUCE:

1. How many copies of a 16-page booklet from the government annuities branch of the Department of Labour have been circulated throughout Canada?
2. Does the department consider the printing of 16-page booklets at this time and sending them all over the dominion, is justified?

Mr. MITCHELL:

1. 60,000.

2. During the fiscal year ending March 31, 1942, 4,766 persons took out annuity contracts and approximately $16,000,000 in purchase money was received and the superintendent of annuities attributes considerable of this increase to the circulation of the booklets. It is considered that the issuance is justified by the facts. However, with a view to effecting economy from a monetary standpoint as well as in the use of materials and labour a leaflet, which it is intended should largely take the place of the present descriptive booklet, is now in the hands of the king's printer.

GASOLINE RATIONING—FARMERS

Mr. MATTHEWS:

Is it the intention of the government to arrange for any concession to farmers whereby, while remaining under the coupon system, they could secure gasoline by the barrel as heretofore?

Mr. HOWE:

No. The farmer is allowed to buy gasoline by the drum for his truck but not for his motor car.

ST. CATHARINES STEEL COMPANY CONTRACTS

Mr. DOUGLAS (Weyburn):

1. What contracts have been let to the St. Catharines Steel Company of St. Catharines, Ontario?

2. What is the total value of these contracts?

3. What articles are being manufactured for the Canadian government or on British account?
